EDF1005 - Introduction to Education

Overview

Subject code
EDF

Catalog Number
1005

Course Title
Intro To Education

Career
Undergraduate

Course Description
This course provides an overview of Florida's educator certification pathways and career options in education in accordance with Florida statutes. Topics include: key educational philosophies; professional ethics; legal responsibilities, including mandatory reporting for child abuse and neglect; the Florida educator accomplished practices (FEAP); key instructional practices associated with effective teaching of students with exceptionalities; Florida's state academic standards; and historical, legal and financial foundations of the Florida education systems. Students will explore effective teaching strategies in classroom management, educational technology and the foundations of all student learning needs. Includes a minimum of 15 hours of required clinical experience in a variety of school settings.

EDG3944 - Practicum in Teacher Preparation

Overview

Subject code
EDG

Catalog Number
3944

Course Title
Practicum in Teacher Prep

Career
Undergraduate

Course Description
This practicum course is a component of the elementary education teacher preparation program. It provides pre-service teachers with an immersive experience in an elementary school classroom where they will observe, assist, and teach under the mentorship of an experienced teacher. It bridges the gap between theoretical knowledge and practical application that include classroom management, lesson planning and instructional strategies to meet the multiple and varied learning needs of students.

EEE

Catalog Number
4343

Course Title
Intro Digital Elect

Career
Undergraduate

Course Description
This course focuses on digital electronics. BJT as a switch, CMOS and other advanced logic-gate circuits, data converters, switched capacitor filters, and semiconductor memories.

EEE4393C - Wearable Electronics

Overview

Subject code
EEE

Catalog Number
4393C

Course Title
Wearable Electronics

Career
Undergraduate

Course Description
Introduction to charge transport in inorganic and organic semiconductors and low-dimensional carbon. Design of devices and sensors using different classes of materials for wearable electronics. Prerequisite: EEL 3110C or permission of the instructor.

Credits

Minimum Credits:
3

Maximum Credits:

EEE4421C - Introduction to Nanofabrication

Overview

Subject code
EEE

Catalog Number
4421C

Course Title
Intro to Nanofab

Career
Undergraduate

Course Description
This course will give the students an introduction to micro/nanofabrication tools and techniques. It includes lab sessions where the students design, fabricate and test selected micro-scale devices. Prerequisites: EEL 3110C or permission of the instructor

Credits

Minimum Credits:
3

EEE4510 - Introduction to Digital Signal Processing with AI

Overview

Subject code
EEE

Catalog Number
4510

Course Title
Intro to DSP with AI

Career
Undergraduate

Course Description
Modeling of DSP systems, Z transform, Algorithms for convolution, correlation functions, DFT, and FFT computation. Digital filters design, and engineering applications. Interaction of DSP techniques (e.g., Spectrogram) with deep neural networks as an implementation of AI systems.

EEE4717 - Introduction to IoT Security

Overview

Subject code
EEE

Catalog Number
4717

Course Title
IoT-Sec-Intro

Career
Undergraduate

Course Description
In this class, the students will learn the introductory topics related to the security of IoT by gaining hands-on experience on real IoT devices. This class involves significant programming. Prerequisites: EEL 2880 or COP 2210 or COP 2250 or equivalent

EEE4761 - AI Embedded Hardware Design and Implementation

Overview

Subject code
EEE

Catalog Number
4761

Course Title
AI Embed Hardware Design

Career
Undergraduate

Course Description
This course will provide hands-on experience in the hardware design and AI implementation of an edge device using Eagle/ Autodesk PCB design software. The students will understand the design constraints and learn the AI hardware optimization under constraints in the schematic and board designs.

EEE4763 - Embedded Programming for AI Application and Implementation

Overview

Subject code
EEE

Catalog Number
4763

Course Title
AI Embed Program

Career
Undergraduate

Course Description
This course will provide hands-on experience in the software design and implementation of a typical AI application on a customer-made AI edge computing platform of CyberSens-EDU with TI's CC3200 or AM62/68A, a Wi-Fi-embedded microcontroller system. This course will provide solid embedded system programming experience on essential AI edge components including wireless communication (TCP/IP and UDP), sensor interfacing, and communication (ADC, USART, I2C, and SPI).

EEE6764 - Platform Design, Testing, and Validation for IoT Applications

Overview

Subject code
EEE

Catalog Number
6764

Course Title
Platform design for IoT

Career
Graduate

Course Description
This course will be able to fabricate, assemble, and design driving firmware of thecustom-designed IoT system/device and hand-on experience on the IOT hardware platform design, optimization, testing. Prerequisite: Permission from instructor (No hardware design experience is required)

Credits

Minimum Credits:

EEE6765 - Advanced Embedded Systems Design and Implementation for IoT Applications

Overview

Subject code
EEE

Catalog Number
6765

Course Title
Adv Embed Sys & IoT

Career
Graduate

Course Description
This course will provide hand-on experience on the hardware design and implementation of a typical IoT system/device using Eagle/Autodesk PCB design software. Prerequisite: EEL 3110 (Circuits Analysis) and EEL 3110 (Circuits Lab) or permission from instructor (No hardware design experience is required)

EEE6766 - Algorithm Design and Firmware Implementation for IoTSensing,NetworkConnectivity, Closed-Loop Control

Overview

Subject code
EEE

Catalog Number
6766

Course Title
Algorithm for IoT Systems

Career
Graduate

Course Description
This course will provide solid firmware programming experience on essential IoT components including wireless communication, sensor interfacing (ADC, USART, I2C and SPI) and digital signal processing. Prerequisite: Permission from instructor (Basic programming experience is required)

Credits

EEL3110C - Circuit Analysis and Lab

Overview

Subject code
EEL

Catalog Number
3110C

Course Title
Circuit Analysis and Lab

Career
Undergraduate

Course Description
Introductory circuit analysis dealing with DC, AC, and transient electrical circuitanalysis and the general excitation of circuits using the Laplace transform. Hands on Lab with weekly activities are included. Prerequisites: MAC2312 or MAC2282, PHY2049, PHY 2049L Corequisites: MAP2302

EEL3200 - Electrical Energy Systems

Overview

Subject code
EEL

Catalog Number
3200

Course Title
Energy Systems

Career
Undergraduate

Course Description
Introductory course on topics related to electrical energy systems. Energy requirements, resources, and sustainability. Conversion of non-renewable and renewable energy sources to electric energy. Principles of electric power delivery. Principles of electric energy processing and conversion. Prerequisite: EEL 3110C

Credits

EEL3370 - C++ Programming for Embedded Systems

Overview

Subject code
EEL

Catalog Number
3370

Course Title
C++ Prog Emb Sys

Career
Undergraduate

Course Description
Object-oriented programming in C++ with emphasis on evaluation of alternative program design strategies. Class design, recursion, linked and dynamically allocated structures. This class will also include data structure concepts and applications.

EEL3660 - Introduction to ROS-Based Modeling and Simulation for ECE

Overview

Subject code
EEL

Catalog Number
3660

Course Title
Robot Simulation

Career
Undergraduate

Course Description
This course will provide an introduction to the principles behind robot simulation for wheeled rovers and manipulators using the Robot Operating System (ROS). Students will analyze foundational concepts of robot modeling and apply them to state-of-the-art open-source modeling software to create realistic movements for varying tasks. Prerequisite: MAP 2302, EEL3664

EEL4160 - Introduction to VLSI Systems and Design

Overview

Subject code
EEL

Catalog Number
4160

Course Title
Introduction to VLSI Sys

Career
Undergraduate

Course Description
This course provides an introduction to the fundamental concepts and techniques used in the Very Large Scale Integration (VLSI) systems design. It covers a basic overview of VLSI system design with its impact on the semiconductor industry. The objective is to familiarize students with the key aspects of VLSI systems and the fundamental relationship between VLSI Chip design and fabrication processes. Practical experience with industry standard CAD tools is also an integral part of the course.

EEL4476 - Radiation Detection and Measurement in ECE

Overview

Subject code
EEL

Catalog Number
4476

Course Title
Radiation Detection and Mea

Career
Undergraduate

Course Description
This course provides an introduction to the principles and applications of radiation detection and measurement. Students will explore the physical interactions of radiation with matter, various types of radiation detectors, signal processing techniques, and radiation spectroscopy. Topics include gas-filled detectors, scintillation and semiconductor detectors, neutron detection, radiation dosimetry, and applications in medical imaging, nuclear security, and environmental monitoring.Prereq:PHY2048

EEL4495 - Introduction to Applied Electromagnetics for Safety Analysis

Overview

Subject code
EEL

Catalog Number
4495

Course Title
Appl EM&Safety Analysis

Career
Undergraduate

Course Description
Course applies EM theory and problem solving for Safety Analysis. Topics include safety schemes, lightning hazards, electrostatic discharge, and electromagnetic radiation. Prerequisites: PHY 2049, MAC 2283, and MAP 2302.

EEL4652C - Smart Sensors and Transducer Systems

Overview

Subject code
EEL

Catalog Number
4652C

Course Title
Sensors & Transducers

Career
Undergraduate

Course Description
The course introduces the principles, design, and application of modern sensors and transducer systems. Topics include the underlying phenomena that give rise to sensor response, operating characteristics and selection of sensors, transducer modeling and design principles, signal conditioning, ADC, filtering, and noise reduction techniques. Prerequisite: EEL3110C

EEL5426 - RF Circuit Design

Overview

Subject code
EEL

Catalog Number
5426

Course Title
RF Circuit Design

Career
Graduate

Course Description
Transmission lines, guided EM propagation, microwave circuits, resonators, impedance matching, passive components, thin-film circuits, filters, two-port networks, measurements, advanced simulations. Prerequisites: EEL 3135 and EEL 3110.

Credits

Minimum Credits:

EEL5427C - Electromagnetic Modeling of Radio Frequency (RF) Structures

Overview

Subject code
EEL

Catalog Number
5427C

Course Title
EM Modeling

Career
Graduate

Course Description
The goal of this course is to teach modeling RF, terahertz and photonics structures using electromagnetic full-wave solvers. The class will use commercial EM solvers to model state-of-the-art problems. Prerequisite: EEL 3135, EEL 4410

EEL5467 - Antennas for Wireless Communication Systems

Overview

Subject code
EEL

Catalog Number
5467

Course Title
Ant Wireless Com Sys

Career
Graduate

Course Description
Antenna principles, wire antennas, printed antennas, antenna arrays, and measurements. Full-wave simulation software is used for the design and analysis of antennas for wireless communication systems. Prerequisite: EEL 4410 or permission of the instructor.

EEL5607 - Advanced Physics-Based Robot Simulation for ECE

Overview

Subject code
EEL

Catalog Number
5607

Course Title
Advanced Robot Simulation

Career
Graduate

Course Description
This course will provide a comprehensive understanding of the principles behind robot simulation based off physical models and real-world parameters. Students will apply robot modeling concepts to create realistic movements with rigid body and soft continuum robots that can perform tasks with different materials in various simulated worlds. Prerequisite: MAP 2302 or equivalent, EEE 5772 or permission from the instructor.

EEL6485 - Advanced Radiation Detection and Measurement in ECE

Overview

Subject code
EEL

Catalog Number
6485

Course Title
Adv. Radiation Detection

Career
Graduate

Course Description
Advanced course in Radiation Detection and Measurement explores the principles, techniques, and applications of radiation detection in electrical and computer engineering (ECE). Topics:interaction of radiation with matter, detector types and their operational principles, signal processing for radiation measurement, and applications in nuclear engineering, medical imaging, and security. The course integrates theoretical concepts with hands-on laboratory experiences. Prerequisite:PHY 2048

EGS6039 - Leadership for Engineers

Overview

Subject code
EGS

Catalog Number
6039

Course Title
Leadership for Eng.

Career
Graduate

Course Description
This course is an interactive exploration of leadership and management skills and challenges specific to the engineering profession. Structured specifically to address the crucial competencies for leadership development outlined in the American Society for Engineering Management (2023), the course emphasizes leadership theory and models as it specifically applies to engineering management roles and disciplines and discuss how they apply in the day-to-day work of engineering managers in industry.

EMA6665 - Polymer Processing and Engineering

Overview

Subject code
EMA

Catalog Number
6665

Course Title
Polymer Process Eng

Career
Graduate

Course Description
Standard and advanced processing methods, characterization of morphology, and reaction processing. An industry-based case study analysis integrates heat and mass transport, and fluid flow during materials processing; and the economics of materials processing and recycling.

EMC4102 - Introduction to Chemical Engineering Thermodynamics

Overview

Subject code
EMC

Catalog Number
4102

Course Title
Intro to CHE Thermo

Career
Undergraduate

Course Description
This course introduces the principles of thermodynamics as they apply to chemical reactions and reacting systems. Students will explore fundamental concepts such as energy, work, heat, and entropy, along with the first and second laws of thermodynamics. Emphasis is placed on thermodynamic properties of pure substances and mixtures, phase equilibria, chemical reaction equilibria, and the thermodynamic analysis of processes. Prerequisite: CHM1045, PHY2048, PHY2049, EGN3343

EMC5160 - Heat and Mass Transfer

Overview

Subject code
EMC

Catalog Number
5160

Course Title
Heat and Mass Transfer

Career
Graduate

Course Description
This advanced course delves into the principles and mechanisms of heat and mass transfer, with an emphasis on theoretical analysis and mathematical modeling. Topics include mass transfer in single and multicomponent systems and their interaction with transient heat. The course integrates analytical methods, numerical techniques, and practical considerations into engineering design. Prerequisite: EML 4140 or Permission by Instructor

EML

Catalog Number
4561

Course Title
Elec Packaging

Career
Undergraduate

Course Description
Introduction to mechanical packaging of electronic systems. Integrates concepts in mechanical engineering to the packaging of electronic systems, such as hybrid microelectronics.

EML4576 - Design Optimization

Overview

Subject code
EML

Catalog Number
4576

Course Title
Design Optimization

Career
Undergraduate

Course Description
Conceptual formulations and methods using gradient-based and evolutionary algorithms for single-objective and multi-objective unconstrained and constrained optimization. Use of response surfaces and commercial software.

EML4601 - Principles of Refrigerating and Air Conditioning

Overview

Subject code
EML

Catalog Number
4601

Course Title
Principles Refrg Air Cond

Career
Undergraduate

Course Description
Refrigeration cycles. Psycho-metrics. Thermal comfort. Load and energy calculations. Pump and piping design. Fan and air distribution. Heat exchangers design. Refrigeration systems and applications. Prerequisite: Permission of the instructor.

EML5289C - Design and Validation of Microfluidic Systems

Overview

Subject code
EML

Catalog Number
5289C

Course Title
MICROFLUID SYSTM DESIGN

Career
Graduate

Course Description
This course provides an in-depth exploration of principles, application, and emerging technologies in microfluidics. Topics covered include the fundamental theory, computational tools, and fabrication of microfluidic devices. Design, simulation, fabrication, and validation of microfluidic devices are an integral part of the course.

Course Title
Nuclear Reactor Simulator

Career
Undergraduate

Course Description
This course introduces nuclear reactor simulators, covering fundamental principles, simulation techniques, and applications in education, training, and operational analysis. This course provides a comprehensive introduction to nuclear reactor simulators, with a special emphasis on their role in education, training, and operational analysis. The course covers the fundamentals of reactor physics, simulation methodologies, and hands-on experience with IAEA PC-based reactor simulators.Prereq:PHY2048

ENU4150 - Fundamental Instrumentation and Controls I for Nuclear in ECE

Overview

Subject code
ENU

Catalog Number
4150

Course Title
Fund. I&C I for Nuclear

Career
Undergraduate

Course Description
This comprehensive course provides the latest innovative research on the design of effective modern instrumentation and controls (I&C) systems for both existing and newly commissioned nuclear power plants, along with information on system implementation. I&C fundamentals are covered, and the most advanced research in control systems technology are explored, and topics such as the human machine interface (HMI), control room redesign, and control modeling are covered.

ENU6116 - Advanced Nuclear Reactor Simulators in ECE

Overview

Subject code
ENU

Catalog Number
6116

Course Title
Nuclear Reactor Simulator

Career
Graduate

Course Description
This advanced course focuses on the modeling, simulation, and analysis of nuclear reactors using computational methods. Students will explore the principles of nuclear reactor physics, thermal-hydraulics, and control systems while utilizing advanced simulation tools to analyze reactor behavior under various operating conditions. Topics include neutron transport, reactor kinetics, fuel cycle modeling, and safety analysis. Prereq: PHY2048

Course Title
Adv. I&C II for Nuclear

Career
Graduate

Course Description
This advanced continuation course delves deeper into the design, implementation, and optimization of nuclear instrumentation and control (I&C) II systems. Building on foundational knowledge, students will explore advanced topics such as fault-tolerant control, sensor fusion, and predictive maintenance. Students will engage in hands-on projects, utilizing industry-standard tools and modern computational techniques to develop innovative solutions for nuclear reactor monitoring and control.

ENV5406 - Water Treatment Systems and Design

Overview

Subject code
ENV

Catalog Number
5406

Course Title
Water Treatment

Career
Graduate

Course Description
Course emphasizes water quality, quantities, treatment and distribution systems particularly as relates to municipal water supply. Requires laboratory project. Prerequisite: Permission of the instructor.

Credits

Minimum Credits:
3

Maximum Credits:
3

ESC1000 - Introduction to Earth Sciences

Overview

Subject code
ESC

Catalog Number
1000

Course Title
Intro to Earth Science

Career
Undergraduate

Course Description
Using the scientific method, critical thinking skills, and data analysis, this course will examine the fundamental processes of the earth system, composed of an atmosphere, hydrosphere, lithosphere, biosphere, and exosphere, through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize earth's connections with humans. Students cannot get credit for both this course and GLY1010.

ESI6460 - Methods for Algorithm Development for Industrial Engineering Applications

Overview

Subject code
ESI

Catalog Number
6460

Course Title
Methods for Alg Dev

Career
Graduate

Course Description
Methods for algorithm development for Industrial Engineering applications, with emphasis on powerful optimization techniques and analysis tools. Prerequisites: ESI 3314 or permission of instructor. Inactivated per 2024 SCNS review. Last term offered spring 2009.

FES3000 - Disaster Risk Assessment

Overview

Subject code
FES

Catalog Number
3000

Course Title
Disaster Risk Assessment

Career
Undergraduate

Course Description
Risk assessment is a process that identifies potential hazards and analyzes what could happen if an incident occurs. Understanding the interaction of hazards, exposure, and vulnerability is crucial to effective disaster prevention. Risk assessment, therefore, is an integral part of decision and policy-making processes to keep communities safe from manmade and natural disasters.

Course Title
Financial Crime

Career
Undergraduate

Course Description
The course provides a solid understanding of the crimes committed in financial markets. The origin and development of financial crimes will be covered. The foundation of the course will be based upon a study of the following: identity theft, mortgage fraud, money laundering, foreign exchange crimes, check cashing and wire transfer companies, capital flight issues, tax evasion, import duty fraud, insurance fraud, underground economy, insider trading, terrorist financing, Hawala banking, international trade-based money laundering, and illegal offshore center activity. Also the role of all domestic and international regulatory/enforcement agencies in detecting and preventing financial crimes will be discussed.

GIS2000 - Cartography & Mapping in Geography

Overview

Subject code
GIS

Catalog Number
2000

Course Title
Cartogr, Mapng in Geograp

Career
Undergraduate

Course Description
Introduction to the history of cartography and map production. Descriptions of map errors, maps as science and as art. Also more technical map creation with aerial photography and satellite images.

Credits

Minimum Credits:
3

Maximum Credits:
3

GIS4119 - Building Geodatabases and Geoprocessing Tools for Earth and Environmental Data

Overview

Subject code
GIS

Catalog Number
4119

Course Title
Geodatabases and Geotools

Career
Undergraduate

Course Description
An advanced course in the import and design of geospatial data in ArcGIS including the use and creation of geoprocessing tools with the Model Builder and Python scripting. Metadata and documentation. Prerequisite: GIS 2040 or GIS 3043 or GIS 3043C or GIS 3048 or CGN 4321 or any other introductory course in GIS

GIS4303 - Geospatial measurement techniques in Earth and Environmental Sciences

Overview

Subject code
GIS

Catalog Number
4303

Course Title
Geospatial measurements

Career
Undergraduate

Course Description
Students will be introduced to state-of-the-art field geospatial measurement techniques that will prepare them to conduct advanced research in their senior year and graduate school.

GIS4390 - Advanced Spatial Analysis of Earth and Environmental Data

Overview

Subject code
GIS

Catalog Number
4390

Course Title
Advanced Spatial Analysis

Career
Undergraduate

Course Description
An advanced course in the analysis and modeling of geospatial data. Topics include: point, line and raster pattern analysis, geostatistical surface estimation, map algebra, and suitability modeling. Prerequisites: GIS 2040 or GIS 3043 or GIS 3043C or GIS 3048 or CGN 4321 or any other introductory course in GIS

GIS5620 - Surveillance, Intelligence, and International Relations

Overview

Subject code
GIS

Catalog Number
5620

Course Title
Surv, Intel, & INR

Career
Graduate

Course Description
This seminar focuses on the role of advanced technology in obtaining information via orbital or land-based surveillance systems on issues of international relations such as warfare and globalization. Prerequisites: Graduate standing or permission of the instructor.

GLY1010 - Physical Geology

Overview

Subject code
GLY

Catalog Number
1010

Course Title
Physical Geology

Career
Undergraduate

Course Description
Using the scientific method, critical thinking skills, data analysis, this course will examine the fundamental processes of the Earth system, composed of an atmosphere, hydrosphere, cryosphere, lithosphere, biosphere, and exosphere through time. The course will also explore interactions between these spheres, including critical analysis of scientific theories and emphasize lithospheric connections with humanity. Students cannot receive credit for both this course and ESC 1000.

GLY3034 - Natural Disasters

Overview

Subject code
GLY

Catalog Number
3034

Course Title
Natural Disasters

Career
Undergraduate

Course Description
A geological look at catastrophic events including earthquakes, volcanoes, tsunamis, mass movements, hurricanes, floods, and desertification. Emphasis on the geologic setting in which these natural disasters take place. Special attention will be given to compare similar disasters in the geologic past. Prerequisite: Physical science at the high school level.

GLY3157 - Elements of Caribbean Geology

Overview

Subject code
GLY

Catalog Number
3157

Course Title
Elements Carib Geol

Career
Undergraduate

Course Description
A survey of the geology of the Caribbean and neighboring regions in view of current data and modern concepts of global tectonics. The course summarizes the important points of Caribbean and Central American geology in their relation to mineral and energy resources; natural environmental disasters, especially seismic zones; agriculture; and the geologic potential for future development and industrialization.

GLY4791 - Field Geology and Geologic Mapping

Overview

Subject code
GLY

Catalog Number
4791

Course Title
Fld Geo & Geolgc Map

Career
Undergraduate

Course Description
A three-to six-week field instruction and practice in methods of constructing stratigraphic sections, structural cross sections and geologic mapping using topographic base maps, aerial photos, and surveying equipment.

Credits

Minimum Credits:
3

Maximum Credits:
6

GLY4822 - Introduction to Hydrogeology

Overview

Subject code
GLY

Catalog Number
4822

Course Title
Intro Hydrogeology

Career
Undergraduate

Course Description
Principles of groundwater flow, determination of aquifer properties, geologic factors influencing groundwater flow and quality, legal/regulatory framework for hydrogeology.

Credits

Minimum Credits:
3

Maximum Credits:
3

GLY4823 - Florida Geologic and Hydrologic Systems

Overview

Subject code
GLY

Catalog Number
4823

Course Title
Flor Geol & Hydrol

Career
Undergraduate

Course Description
Survey of geological formations of Florida and their relationship to hydrologic and mineral resources. Sedimentary facies in relation to their hydrologic properties.

Credits

GLY4881 - Coastal Hazards

Overview

Subject code
GLY

Catalog Number
4881

Course Title
Coastal Hazards

Career
Undergraduate

Course Description
Focus on the processes responsible for tsunamis, storm surges, coastal erosion, land subsidence, sea level rise, etc. and their mitigation.

GLY4937 - Senior Seminar in Geological Sciences

Overview

Subject code
GLY

Catalog Number
4937

Course Title
Senior Seminar Geol Scien

Career
Undergraduate

Course Description
Geosciences topics are researched, presented and discussed by students. Students develop knowledge of current research trends and written and verbal science communication skills. Prerequisite: Permission of instructor.

Credits

PERM - INSTR (Permission of the instructor)

GLY4947 - Internship in Geoscience

Overview

Subject code
GLY

Catalog Number
4947

Course Title
Internship in Geoscience

Career
Undergraduate

Course Description
Practical geological, geophysical, or hydrological work experience at local companies, non-profits, or government agencies supervised by a faculty member. May be repeated for credit. (Pass/Fail Only) Prerequisite: Permission of Instructor.

GLY5245 - Water-Rock Interaction

Overview

Subject code
GLY

Catalog Number
5245

Course Title
Water-Rock Interac

Career
Graduate

Course Description
Survey of geochemical processes at the water-rock interface. Topics include absorption of inorganic and organic ions, colloid stability in groundwater, mineral dissolution and precipitation. Prerequisites: CHM 1046, MAC 3312, GLY 4822 or permission of the instructor.

GLY5266 - Stable Isotope Biogeochemistry

Overview

Subject code
GLY

Catalog Number
5266

Course Title
Stable Isotope Bgch

Career
Graduate

Course Description
Application and theory of stable isotope approaches to biogeochemistry. Topics: Introduction to IRMS machines, C/N/O/H/S (biogeochem. processes), sampling/lab. prep., and recent advances. Prerequisites: One year of chemistry or permission of the instructor.

GLY5457 - Earth and Environmental Data Analysis with Python

Overview

Subject code
GLY

Catalog Number
5457

Course Title
Earth Env Data Anal Pyth

Career
Graduate

Course Description
Provides analytical skills needed to solve numerical problems in Earth and Environmental sciences. It combines some theory, development and usage of numerical methods (algorithms), and application. Prerequisite: Permission of instructor.

Credits

GLY5475 - Exploration Geophysics

Overview

Subject code
GLY

Catalog Number
5475

Course Title
Exploration Geophysics

Career
Graduate

Course Description
New in depth review of geophysical methods used in exploration and environmental geophysics. Digital data processing; Seismic methods; potential fields; electrical and EM methods; ground penetrating radar. Prerequisites: MAC 2312, PHY 2049 or PHY 2054.

Credits

GLY5786 - Advanced Field Excursion

Overview

Subject code
GLY

Catalog Number
5786

Course Title
Adv Field Excursion

Career
Graduate

Course Description
A study of the geology of a selected region of the world followed by 10-12 day field trip in order to study the field relationships of the geologic features. Special emphasis is given to stratigraphic, structural and tectonic relationships of lithic package. Prerequisite: Permission of the instructor.

GMS6964 - Dissertation Proposal Seminar

Overview

Subject code
GMS

Catalog Number
6964

Course Title
Proposal Seminar

Career
Graduate

Course Description
After completion of the Qualifying Examination (QE) and Dissertation proposal approval the student must present his proposal to the Dissertation Committee. The student will give a PowerPoint presentation the proposed research to the members of the dissertation committee. The dissertation committee will specifically evaluate the following: (i) Has the student demonstrated the ability to design a feasible project? (ii) Has the student shown a reasonable knowledge of the literature regarding the project? (iii) Has the student presented the proposal (both written and oral) in a scholarly fashion? (iv) Has the student demonstrated competent scientific knowledge with respect to overall fundamental principles and applications in biomedical science? and (v) Does the proposed research constitute an acceptable and feasible dissertation project? This will be achieved through an oral question and answer component within the scheduled time of the dissertation proposal exam meeting. The chairman of the dissertation committee will (i) insure that the proposal exam is held to a reasonable length of time; (ii) insure that the student is evaluated fairly and rigorously; and (iii) see that a written evaluation is promptly prepared and sent to the student and to the director of the graduate program. Prerequisite: HWCOM Graduate School Enrollment. Corequisites: Completion of GMS 6961, GMS 6963, and permission of the advisor.

GMS7603 - Anatomy of the Musculoskeletal System

Overview

Subject code
GMS

Catalog Number
7603

Course Title
Anatomy - MSK System

Career
Graduate

Course Description
This course gives Doctor of Physical Therapy (DPT) students a solid working knowledge of the functional anatomy of the back and limbs, including bones, joints, muscles, nerves and blood vessels. This will form the anatomical basis for an in-depth understanding of related pathological conditions, clinical examination and therapeutic interventions. Course objectives will be delivered by lectures and different types of laboratory sessions. Prerequisite: Admission into the Doctor of Physical Therapy Program. Corequisite: GMS 6605.

IHS6116 - Interprofessional Health Ethics

Overview

Subject code
IHS

Catalog Number
6116

Course Title
Interprof Health Ethics

Career
Graduate

Course Description
This online course will introduce graduate students in health sciences and biomedical engineering to ethical issues that emerge in teams which contribute to or support health care delivery, services, promotion, research, and the design, manufacture and marketing of health products (e.g. drugs and devices). In five modules, students will have the opportunity on their own and in interprofessional groups to engage critically with controversial topics in clinical ethics, research ethics and public-health/population health, such as assisted reproduction, transplant and regenerative medicine, research integrity and false claims to authorship, the marketing of drugs and medical devices, the treatment of infectious diseases, personal responsibility for health, and social determinants of health. In addition, students will learn the ethical commitments of their own and other health professions to determine where they overlap and where differences in scopes of practice may lead to ethical dilemmas. Prerequisites: Admission to a graduate program in health sciences at FIU or permission of the instructor.

ISM4545 - Advanced Machine Learning For Business

Overview

Subject code
ISM

Catalog Number
4545

Course Title
Business Machine Learning

Career
Undergraduate

Course Description
Machine learning is changing the way business gets done from how banks detect fraud and manufacturers prevent downtime, to how retailers understand customer behavior. This course helps you discover how companies in finance, operations, marketing, and manufacturing use advanced machine learning to make faster, smarter, and more profitable decisions. You'll work with real-world datasets, explore practical tools, and learn how business leaders are using machine learning to solve tough problems. Prerequisite: (A) 60 credits earned; and (b) ISM 4420 with a grade of "C" or higher; and (c) Business Students or Business Analytics Minors only (d) ISM 3230 with a grade of "C" or higher

ISM4601 - Generative AI Applications in Business

Overview

Subject code
ISM

Catalog Number
4601

Course Title
Generative Business AI

Career
Undergraduate

Course Description
This comprehensive course explores the fundamentals, applications, and implications of Generative Artificial Intelligence (Gen AI) in business contexts. We explore the transformative role of Gen AI in modern business environments and ecosystems. Students will gain both theoretical knowledge and practical experience in implementing Gen AI solutions across various business functions. The course combines lectures with hands-on assignments and case analyses, culminating in a project using Gen AI. Prerequisites: (A) 45 credits earned; and (b) ISM 3011 with a grade of "C" or higher; and (c) Business Students or Business Analytics Minors only.

ISM6128 - Business Process Design

Overview

Subject code
ISM

Catalog Number
6128

Course Title
Business Process Design

Career
Graduate

Course Description
This course focuses on the fundamental concepts, frameworks, principles, and techniques for improving business performance through the analysis, modeling, and design of the as-is and to-be business processes. It also covers topical concepts and applications of emerging technologies, such as AI and robotic process automation, in business process design.

JRM6300 - Introduction to American Law

Overview

Subject code
JRM

Catalog Number
6300

Course Title
Intro to American Law

Career
Law

Course Description
This is a required course for all students in the J.M. program. It provides a basic overview of the U.S. legal system. An effort is made to include broad coverage of important areas of American law, including constitutional law, criminal law and procedure, environmental and natural resources law, and family law. Students will be introduced to some of the most important cases in U.S. legal history. Prerequisites: Juris Masters students only

JRM6582 - Student Privacy and Education Records

Overview

Subject code
JRM

Catalog Number
6582

Course Title
Student Privacy

Career
Law

Course Description
The Family Education Rights and Privacy Act is a federal law that protects the privacy of student records of any educational institution that receives federal Department of Education funds. FERPA prohibits the federal funding of institutions that release education records without the consent of parents or eligible students. FERPA compliance is complex, because the law contains numerous exceptions applicable to certain individuals and to different situation, as well as several gray areas. The course explores these complexities and the difficulties of compliance in detail. Corequisite: Juris Masters Students only

JRM6820 - Discovery and e-Discovery

Overview

Subject code
JRM

Catalog Number
6820

Course Title
Disc & e-Disc

Career
Law

Course Description
This course is an in-depth study of the principles, methods and investigative techniques utilized to "discover": that is to locate, gather, document and disseminate information. In response, to discovery, ESI (Electronically Stored Information) involves the identification, collection, preservation and production of documents. The predominance of ESI has changed the context of information exchanges between adverse parties in litigation, raising complex problems of interpretation and litigation costs. Indeed, the failure to properly comply with the rules covering the exchange of ESI and spoliation of evidence has resulted in severe monetary sanctions. The course covers the statutes and court rulings governing this burgeoning and important aspect of litigation practice. Prerequisite: Juris Master students only

LAW5259 - Introduction to International and Comparative Law

Overview

Subject code
LAW

Catalog Number
5259

Course Title
Intro International & Comp Law

Career
Law

Course Description
This course introduces students to public international law, international economic law, and comparative law. Exposure to the law of nations in the international component of the course poses critical jurisprudential questions on the nature of law, the role of enforceability, and the prospects for constructing an international society. The comparative component compares and contrasts thecommon law system that prevails in the United States to civil law systems, especially as they have evolved in Latin America. Together the course provides the foundation for later advanced study in these and other topics as part of the upper level curriculum.

LAW5501 - Constitutional Law

Overview

Subject code
LAW

Catalog Number
5501

Course Title
Constitutional Law

Career
Law

Course Description
This course deals with the fundamental principles of American constitutionalism. It considers the relationships between the branches of the federal government within the separation of powers and the relationship of the national government with the states within our federalism. It focuses on the institution of the SupremeCourt and its power of judicial review and how that power is exercised to interpret the Constitution. The various powers of Congress are studied, especially the commerce clause power, including its negative effects on the state police power. The executive powers of the President, both domestic and foreign, are explored. The constitutional relationship between the individual and the government is analyzed within the context of the due process and equal protection clauses of the fourteenth amendment.

LAW5792 - Legal Skills & Values I

Overview

Subject code
LAW

Catalog Number
5792

Course Title
Legal Skills & Values I

Career
Law

Course Description
The Legal Skills and Values Program at the College of Law combines demanding traditional instruction in legal research and writing with an introduction to other lawyering skills, like interviewing and counseling, and to issues of professionalism. It is a required three-semester curriculum that will run throughout the first year, and must be completed by the end of the fourth semester by full-time students and by the end of the fifth semester by parttime students. It is premised on the beliefs that 1) strong research and writing skills are vital to lawyers in all areas of practice; 2) other lawyering skills should be introduced early in a student'sacademic career; and 3) concerns for the ethical sensitivity and civility of lawyers demand an early and recurring emphasis.

LAW6015 - International and Comparative Sales

Overview

Subject code
LAW

Catalog Number
6015

Course Title
Intl and Comp Sales

Career
Law

Course Description
This course entails the study of legal rules governing the international sale of goods, and a comparison of these rules with civil law and United States domestic law counterparts. The course will focus on the United Nations Convention on Contracts for the International Sale of Goods. Topics will include choice of law, contract formation, performance and breach, excuse of performance, and remedies for breach. Comparing and contrasting the three systems - international law, civil law, and domestic/common law - offers the student insight into the choices, interests, and policies pursued under each respective system of law.

LAW6031 - Payment Systems

Overview

Subject code
LAW

Catalog Number
6031

Course Title
Payment Systems

Career
Law

Course Description
This course will survey the uses of different payment mechanisms (negotiable and non-negotiable instruments, credit cards and electronic funds transfer and wire transfer systems) in both credit and cash transactions. The course will consider allocation of risks for fraud, countermands, defenses on the underlying contract, mistake, timeliness and unauthorized payments. In each case the allocation ofrisks in connection with different payment mechanisms will be considered, along with whether these allocations should be the same or different for each mechanism. The course will focus on Articles 3 and 4 of the Uniform Commercial Code and, as time permits, consider letters of credit under U.C.C. Article 5 and theInternational Chamber of Commerce Uniform Customs and Practice. Special emphasis will be given to techniques of statutory analysis, commercial counseling and a rethinking of present rules, especially in the light of the revision of Articles 3 and 4. The impact of federal legislation on the state payments law (U.C.C. Articles 3, 4, and 4A) may also be treated.

LAW6034 - Transnational Commercial Law

Overview

Subject code
LAW

Catalog Number
6034

Course Title
Transnational Comm Law

Career
Law

Course Description
This course offers an overview of three foundational areas in the field of commercial law: sales, payment systems and negotiable instruments. It presents the student with the core doctrines and issues relating to the Uniform Commercial Code in the United States. As such, it complements the basic series of commercial law courses in U.S. law schools. Additionally, the materials introduce the student to the Spanish law in all these same areas. Spanish doctrines and relevant issues are presented in tandem with the U.S. legal materials. Comparing and contrasting the two systems offers the student greater insight into the choices, interests and policies pursued under each respective system of law. Additionally, the course will examine the European Union's proposed regime for unified rules of commercial law across the Continent. Drawing on different sets of both unified and national rules in this area of law, this course presents a truly transnational view of the field of commercial law and its underlying concerns.

LAW6235 - Women and the Law

Overview

Subject code
LAW

Catalog Number
6235

Course Title
Women and the Law

Career
Law

Course Description
The course considers the legal treatment of sex differences in the construction and legitimization of the social status of women and men. Topics include rape, sexual harassment, incest, battery, sexuality, economic segregation, prostitution, and pornography. Central concerns to be pursued include the desirability of sex-neutral legislation and adjudication, the meaning for women of the legal distinction between the public and private spheres, competing theories of the origins of sex roles, and the differences between and similarities of traditional morality and a feminist critique of power.

LAW6236 - Women and the Law: Comparative and Global Considerations

Overview

Subject code
LAW

Catalog Number
6236

Course Title
Women&the Law:Comp&Glob Cons

Career
Law

Course Description
The course will consider the role of law in the lives of women from global and comparative perspectives. Topical coverage will include the role of international law on the lives of women by considering certain UN conventions relating to the status of women, as well as with respect to certain global issues which affect the lives of women in a particular sense (e.g., immigration policies and practices, including asylum and refugee law, and human trafficking). The comparative law component will consider and compare legal approaches to matters relating to women's private and domestic life choices and options, such as laws relating to family law, reproduction, and wage and labor gender-based disparities.

LAW6250 - Comparative Law

Overview

Subject code
LAW

Catalog Number
6250

Course Title
Comparative Law

Career
Law

Course Description
This course is designed to develop a technique by which lawyers trained in one system of law may be enabled to recognize, analyze and study legal problems arising in a different system. The first part is devoted to procedural and evidentiary problems faced by domestic courts when they have to decide cases involving foreign law and foreign facts. Following this, the fundamental, historically conditioned differences in approach and method between common law and civil law will be explored. Throughout the course, foreign legal institutions will be compared to our own, with the aim of gaining perspective in understanding and appraising the solutions provided by our own system.

LAW6251 - Comparative Constitutional Law

Overview

Subject code
LAW

Catalog Number
6251

Course Title
Comparative Const Law

Career
Law

Course Description
This course will analyze elements of constitutionalism, including: the legitimacy of constitution-making and constitutional amendment; limited government; the consent of the governed, majority rule and representative government; separation of powers; judicial and other institutions for constitutional review; civil, political, social, economic rights, and different conceptions of equality; and the relevance for constitutionalism of a society's economic system. The course will consider how and to what extent the elements of constitutionalism are realized in the United States and, selectively, in various countries in different parts of the world, and the factors that render different countries more receptive or more resistant to the development of a culture of constitutionalism or to any of its principal elements.

LAW6256 - Environmental Health Law and Policy: Comparative Perspectives

Overview

Subject code
LAW

Catalog Number
6256

Course Title
Env Hea Law and Pol

Career
Law

Course Description
Environmental Health Law and Policy: Comparative Perspectives is an inter-disciplinary course examining a range of legal responses to questions of environmental health law and policy in the context of modern Rio de Janeiro, Brazil. In conjunction with graduate students in public health, students are asked to consider appropriate legal, regulatory and policy responses to a range of environmental health challenges, from the effects of pesticides on consumers to efforts to control communicable and insect-born disease. Because this course is offered abroad, students are also asked to consider the appropriate role of foreign lawyers and policymakers in formulating appropriate responses to the environmental health challenges studied. The course features extensive lecturing by Brazilian faculty drawn from the worlds of law, public health and other social sectors, and students are asked to tackle role-playing exercises in order to apply the material studied.

LAW6257 - Comparative Environmental Law: Urban Issues

Overview

Subject code
LAW

Catalog Number
6257

Course Title
Comp Env Law Urban Issues

Career
Law

Course Description
Comparative Environmental Law: Urban Issues, offers students the opportunity to study a wide range of environmental problems in a comparative context. The course examines Brazilian legal and regulatory responses to issues such as urbanization and its threat to biodiversity of the Atlantic Rainforest, water and wastewater management in a less developed country, the use of international and national legal instruments to improve urban air quality, ecosystem conservation, and environmental education. Brazilian experience and efforts will be compared to U.S. and other legal responses where relevant. Students will have the opportunity to study these and other questions through in-class lectures from U.S. and Brazilian faculty, role-playing exercises, and field visits.

LAW6270 - African American and Minority Jurisprudence

Overview

Subject code
LAW

Catalog Number
6270

Course Title
Afr. Am. & Minority Jur.

Career
Law

Course Description
This course will teach the students about the substantial body of legal thought produced by African American, Indigenous, Latinx, and Asian legal scholars in the United State. The course will focus on the historical development of minority legal thought from the founding of the United States to the present. Rather than focusing on race specifically, the course seeks to provide students with a richer understanding of minority scholars' thoughts on the law and politics of the United States more broadly. Consequently, while the course will concern itself with racial equality, it may also explore writings on legal issues that may not have a specific component touching on race. The course will also provide a comparative and international exploration of thinkers outside the United States focusing particularly on the Caribbean, Latin America, Asia, and Africa.

LAW

Catalog Number
6280

Course Title
EULP

Career
Law

Course Description
This course examines the doctrines, institutions and policies that define the European Union, the political, social, economic, and legal context that made it possible, and the challenges it faces. The course will explore how European Union law impacts member and foreign states, international institutions, and other regional arrangements. This course will examine different areas of influence of European Union law and its policies, including, but not limited to, antitrust, privacy, human rights, commercial, and environmental regulations. In addition, we will discuss European efforts to protect human rights, regulate the economy, labor, and immigration, fight terrorism, address climate change, and the impact of new technologies, and contrast these with the US. This course meets the international graduation requirement.

LAW6281 - Latin American Private Law

Overview

Subject code
LAW

Catalog Number
6281

Course Title
Latin Am Pvt law

Career
Law

Course Description
Commercial transactions, business entities, interests in property, family law, inheritance, and torts are all considered part of the broad category of private law in Latin America. This course aims to provide historical and institutional background for these areas of law followed by an investigation and evaluation of present practices and developments, particularly in the Spanish-speaking countries. The ways private law in practice and in theory respond or do not respond to internal and external economic, social, and political forces will be considered. Topics to be addressed may include methods of structuring transactions, land reform, notions of civil responsibility, courts and alternative dispute resolution, and the privatization of state-owned enterprises

LAW6282 - Law and Politics in Latin American

Overview

Subject code
LAW

Catalog Number
6282

Course Title
Law & Pol In Lat Am

Career
Law

Course Description
This course examines a series of issues related to law and legal systems in Latin America. It draws out the interrelationship of theory and politics that constitute lawyerly thinking by Latin Americans. It has both a practical orientation, addressing how to understand and work with Latin American law and lawyers, and a theoretical orientation, examining how legal practices are the result of both overlapping and competing projects of social organization. This course in comparative law and politics examines a cross-section of the institutions, doctrines, and interpretive theories of Latin American codes, courts and legal commentators. As against the widely-held view that Latin American law is merely imitative of foreign models or is mainly irrelevant to their societies, the course examines the strategic and programmatic function of law in the service of national governance, cultural identity, and existing economic arrangements.

LAW6294 - Cross Cultural Dispute Resolution

Overview

Subject code
LAW

Catalog Number
6294

Course Title
CCDR

Career
Law

Course Description
This course surveys the impact that culture has on dispute resolution processes. In any increasingly inter-dependent world, counselors will need a strong foundation in cross-cultural communication skills to effectively represent their clients in local and national disputes and in conflicts with a local, national and transnational character. This course will explore cultural difference in social customs, business practices, religious and ethical values, and language in the context of various dispute resolution processes through classroom discussions, simulations, and roleplays, many of which will involve domestic, foreign and international settings and will address environmental, land use, commercial, labor, family, human rights, technology and other issues. Students will develop and enhance their skills in critical thinking, listening, and cross-cultural communications and will have the opportunity to learn about and observe the use of these skills with lawyers and other professionals. This course meets the international graduation and experiential requirement.

Course Title
International Organizations

Career
Law

Course Description
The problems and prospects of the UN and the World Bank in the New Millennium are rooted in four major phenomena: (1) the Second World War from which they were born; (2) the Cold War Era during which they evolved certain norms, procedures, and programs; (3) the early Post-Cold War era which has raided popular notions of multilateralism and globalization; and (4) the New Millennium Global Realignment Era. The course will examine the principal legal and political issues concerning organizations constituting states. These include interpretation of their organic instruments, legal status and powers, membership and participation, successions problems, non-state actors, and experiences in norm-creation, dispute settlement, and enforcement of decisions. Special attention is given to the impact that the United Nations and World Bank have had on the evolution of International Law.

LAW6317 - Conflict Management Practice-Comparative Perspectives of Negotiation

Overview

Subject code
LAW

Catalog Number
6317

Course Title
Conflict Mgt Pra Comp Pers Neg

Career
Law

Course Description
Will provide an overview of the theory and practice of negotiation, with an emphasis on its practice in the international context. All attorneys spend much of their professional lives negotiating with clients, co-counsel, opposing counsel, and others. Further, in an increasingly interdependent world counselors will need a strong foundation in cross-cultural negotiation techniques to effectively represent their clients in local and national disputes and in conflicts with a transnational character. This course is designed to develop understanding of negotiation and to enhance student's negotiating skills. In addition to negotiation skills and theory, students will also be introduced to the ethical issues in negotiations.

LAW6318 - Conflict Management Practice-Comparative Perspectives of Mediation

Overview

Subject code
LAW

Catalog Number
6318

Course Title
Conflict Mgt Pra Com Mediation

Career
Law

Course Description
Designed to provide students with both a theoretical background and practical experience in mediation and mediation advocacy, with an emphasis on its practice in an international context in recent years, individuals and their lawyers are increasingly turning to mediation to resolve disputes, and effective lawyers will need to understand the nature of the conflict and to be equipped with the skills essential to effective mediation. This course will introduce students to the various mediation models and mediator styles and to the policy, practical, and ethical implications of the growing use of mediation. It also will offer the opportunity to develop and enhance the skills necessary to both mediate disputes and to represent clients in a mediation setting.

LAW6340 - Conflicts of Law

Overview

Subject code
LAW

Catalog Number
6340

Course Title
Conflicts of Law

Career
Law

Course Description
This course deals with the special problems that arise when the facts or the parties in a case have contacts with more than one state or country. These problems relate to: jurisdiction in personam, in rem and quasi-in rem; choice of the applicable law; and after rendition of a judgment, that judgment's recognition and enforcement in other states and enforcement in other states andcountries. Jurisdictional and choice of law rules are studied with special emphasis on situations involving torts, contracts and property transactions cutting across state and national boundary lines. Also considered are interstate and international problems concerning marriage, divorce, and decedents' estates.

6492

Course Title
Water Resources Law

Career
Law

Course Description
Water Resources Law will explore water's distinctive character as property that is both public and private, and individual and common. The course will begin with an overview survey of the general legal issues regarding historic water allocation and information regarding current water uses in the United States. First we will study the Riparian system of allocation. We will conclude that study with an examination of water resource issues facing Florida. We will then examine western prior appropriation systems. We will also conclude that study by examining the dispute among users of the Colorado River. We will conclude the course by studying issues related to groundwater and the impact of the Clean Water Act on water resources. Prerequisites: None, although Environmental and Administrative Law is helpful.

The course gives a presentation of economic principles that are important for understanding the relationship between economics and the law. Traditional microeconomics subjects, including demand, supply, market exchange, consumer behavior, and the theory of the firm are presented with special reference to legal problems. Tools of microeconomics are used for the analysis of economic regulation of business, environmental protection, and the economics of discrimination

Course Title
International Intell Property

Career
Law

Course Description
This course provides students with an overview of intellectual property (IP) law in the global context, commencing with a survey of patent, copyright and trademarks. We will learn about the multilateral institutions that address IP issues, and study the leading multilateral IP treaties, including the World Trade Organization Agreement on Trade-Related Intellectual Property Rights, the Paris Convention for the Protection of Industrial Property, the Berne Convention for the Protection of Literary and Artistic Works, and other international agreements that facilitate the protection of IP interests in multiple countries. In addition to studying domestic and international mechanisms for the protection of IPRs, we will review current issues in International IP law and policy. No technical background is required for this course.

6576

Course Title
Trademarks and GI

Career
Law

Course Description
This course will introduce students to the law of trademarks and unfair competition. Trademark law aims to protect against consumer confusion and the appropriation of commercial goodwill. Trademarks can have tremendous value in a variety of industries, ranging from food and agriculture to fashion and entertainment. Students will learn about acquiring, prosecuting, and enforcing trademark rights in the business context. In addition the course will cover the theoretical underpinnings of trademark protection and evaluate current issues related to trademark law domestically and internationally. This includes a consideration of the relationship between trademarks and geographical indications. No technical background is required for this course. Intellectual Property Law is recommended but not required.

LAW6743 - Veterans Law

Overview

Subject code
LAW

Catalog Number
6743

Course Title
VetL

Career
Law

Course Description
This course will cover the substance and procedure of the uniquely pro-claimant veterans benefits system. Veterans law is a form of administrative law and this course will examine traditional issues of administrative law such as regulatory interpretation and deference to agency rules. However, because of its isolation from judicial review for over 200 years, the system has procedures with no direct analogies to other legal areas and different approaches to familiar legal issues. This course will consider the history and politics of veterans benefits and explore the friction between the system's ideals and the burdens of processing over one million claims a year. In particular, it will examine several lenses for interpreting veterans law including veteran friendliness versus deference to the agency, formalism versus realism, and rules versus standards.

Advanced legal analysis presents students with the opportunity to refine the core skills necessary for success on the bar exam. After an introduction to the testing methods used on the bar exam, students will learn optimal ways to prepare for their bar study. Students will then complete numerous multiple choice and essay questions, similar to those used on the Multistate Bar Examination and on the state day of the bar, and receive extensive feedback from faculty regarding their strengths and weaknesses. The course culminates in an examination designed to stimulate the actual bar exam. Prerequisite: Open to students in the fall semester of the final year of study at the College of Law.

LAW6791 - Advanced Electronic Legal Research

Overview

Subject code
LAW

Catalog Number
6791

Course Title
Advanced Electronic Legal Res

Career
Law

Course Description
The goal of Advanced Legal and Electronic Research is to review and expand the legal research skills that have been introduced in Legal Skills and Values courses. The course focuses on practitioner-oriented materials and their use, as well as more sophisticated Internet and electronic research techniques. In addition, the student will choose a specific subject area of interest to the student, and then prepare a research guide to be presented to the class.

LAW6795 - Legal Skills and Values II-III

Overview

Subject code
LAW

Catalog Number
6795

Course Title
LSV II-III

Career
Law

Course Description
Legal Skills and Values II-III (LSV: II-III) combines elements of both LSV II and LSV III, and runs parallel to these courses in the three-course LSV sequence. The course continues the foundational LSV I focus on research analysis, and communication, but shifts to persuasive and transactional advocacy as it stimulates "real world" legal experiences. Prerequisites: LSV Director or Co-director approval.

LAW6797 - Legal Skills and Values III

Overview

Subject code
LAW

Catalog Number
6797

Course Title
Legal Skills & Values III

Career
Law

Course Description
This course will advance students legal skills in analysis, research, objective writing, persuasive writing, and oral communications, and also raise new professionalism issues. In this course students will interview and counsel a client regarding a dispute and then research the legal issues raised by the dispute. Students will write a Complaint or Answer, a Demand Letter or Response Letter, anobjective memo to a senior attorney describing the legal issues and their proposed course of action, and then prepare or respond to discovery requests. Students will mediate with opposing counsel to resolve the dispute, and will ultimately write a brief in support of their client's position.

LAW6800 - International Arbitration Competition

Overview

Subject code
LAW

Catalog Number
6800

Course Title
IAC

Career
Law

Course Description
Students selected as members of the international arbitration competition will participate in activities geared to learn about the use of international commercial law, international investment law, and arbitration for resolution of international disputes. The competition is structured in two phases: the writing of memoranda for the claimant and the respondent and the hearing of oral argument based upon the memoranda - both settled by arbitral experts in the issues considered. The forensic and written exercises require determining questions of contract - flowing from a transaction relating to the sale or purchase of goods under the United Nations Convention on Contracts for the International Sale of Goods and other uniform international commercial or investment law - in the context of an arbitration of a dispute under specified Arbitration Rules. Since the teams and the arbitrators are usually from both common and civil law countries, students will be permitted to learn from approaches taken by lawyers from other systems. May be repeated.

LAW6809 - Transnational Representation and Advocacy

Overview

Subject code
LAW

Catalog Number
6809

Course Title
Transnational Represent.

Career
Law

Course Description
This course will provide students the opportunity to hone their research, writingand advocacy skills in the realm of transnational dispute resolution from the perspective of the advocate. The course will examine the different substantive and procedural legal frameworks available in a variety of transnational fora, including international courts, arbitral tribunals, inter-governmental entities, special commissions and national courts. The course will also consider the most effective techniques for researching and drafting memoranda, briefs and pleadings before foreign and international tribunals; and will help the students to become effective oral advocates both in the context of international student competitions and their future professional careers. Finally, the course will stress the importance of professional ethics and discuss the challenges faced by legal professionals in that respect. This course has no co-requisites or pre-requisites.

LAW6817 - Climate Change Law & Policy

Overview

Subject code
LAW

Catalog Number
6817

Course Title
CCLP

Career
Law

Course Description
Climate change is an urgent, multidimensional problem. The law itself is in a constant state of flux, negotiation, and renegotiation. This course is an introduction to this dynamic subject. It will cover governmental and nongovernmental action within both the domestic and international domains. It will study some of the science, but the focus of the course is on the multilateral legal responses, legislation, and other strategies - adaptation and mitigation - in relation to climate change. The course will survey the doctrine through the lens of contemporary discussions.

LAW6830 - Comparative Public Law: Government and Judicial Oversight

Overview

Subject code
LAW

Catalog Number
6830

Course Title
CPL:GJO

Career
Law

Course Description
This course focuses upon both constitutional and ordinary judicial control over government administration from civil law and common law perspectives, in unitary and federal nation-states. Emphasis will be placed upon the emergence of divergent legal control mechanisms over government different national jurisdictions. The course will offer a comparative perspective in order that the U.S. students might better appreciate how the learning of a linguistic and conceptual grid of legal reference points up front, rather than an experiential learning of law through the case law method, can affect the way in which the differently trained legal professionals approach their work. Readings and discussion in class will be supplemented with guest lectures and other activities, providing the students an enriched exposure to different legal cultures. This course meets the international graduation requirement.

LAW6880 - Artificial Intelligence and the Law

Overview

Subject code
LAW

Catalog Number
6880

Course Title
AI and Law

Career
Law

Course Description
This foundation course toward the MS in Legal Tech degree explores the revolution in AI and law that began with text analytic programs such as IBM's Watson and Debater and the open-source information management architectures on which they are based. AI, sometimes referred to as cognitive computing, refers to computers learning how to complete tasks traditionally done by humans. The focus of this foundation course on AI is on computers looking for patterns in data, carrying out tests to evaluate the data and finding results (for AI/smart machines, see LAW 6881 Smart City Applications and Governance, and CAP 5602 Introduction to Artificial Intelligence). This course is open only to students enrolled in the MS in the Law of Technology program.

LAW6884 - Blockchain Regulation

Overview

Subject code
LAW

Catalog Number
6884

Course Title
Blockchain Reg

Career
Law

Course Description
This survey course will focus on the new technology of blockchain and relevant legal implications, influenced by political, business, and economic considerations. It will provide students with a good understanding of what the technology is, its history, uses and how governments worldwide, though focused on the United States, have responded to it and likely will in the future. The professor will rely on personal experiences in the blockchain space representing, commenting upon and/or advising clients and blockchain networks and media. We will review materials on cryptocurrencies to understand what they are and the multiple opportunities for their application. We will read legal cases by the government and class actions involving ICOs and blockchain companies, exchanges, or founders, and relevant rules and regulations by the SEC, CFTC, OCC, FinCEN, NYS and DOJ, among others. For two separate classes during the semester, we will have guests, one class from the regulators and one from the blockchain community, invited to speak with the class.

Law

Course Description
Seminars provide an opportunity for intensive analysis of legal and policy issues in a specialized area of study, culminating in a multi-draft research paper of twenty-five or more pages (in order to satisfy the graduation writing requirement). Seminars require a considerable investment in time by students and faculty, and a corresponding responsibility for thorough preparation and participation by all members of the seminar. Seminars may also include a final examination.

LAW6942 - Consumer Bankruptcy Externship

Overview

Subject code
LAW

Catalog Number
6942

Course Title
Bankruptcy Externship

Career
Law

Course Description
The Bankruptcy Clinic a two semester course combines classroom and practical work experience. Students may enroll for one semester with permission. They will represent clients in federal bankruptcy proceedings, as permitted by the Florida Limited Practice Act and the Rules of the United States District Court for the Southern District of Florida. The classroom component examines legal, social and ethical dimensions of bankruptcy law practice, including legal skills and knowledge in federal bankruptcy law practice, such as client interviewing, legal analysis, drafting legal documents, arguing motions, professional responsibility, and practice issues such as choice of relief under state law or the Bankruptcy Code, relief from the automatic stay, objections to discharge and dischargeability, and confirmation of a chapter 13 plan. Case developments and issues will be shared in case rounds exposing students to many ethical and practice concerns and issues. Prerequisites: 45 credit hours, Professional Responsibility, Evidence, and Bankruptcy Law. Corequisites: Professional Responsibility, Evidence, and Bankruptcy Law.

Course Title
Law Review: Board of Editors

Career
Law

Course Description
Students selected as members of the Board of Editors of the Law Review may earn credit for satisfactory completion of their Board duties. As members of the Board of Editors, students will solicit, select, edit and publish articles submitted by lawyers, judges, and professors from across the country. The Board of Editors also may organize and solicit participants for symposia on legal topics of current interest and publish the papers presented at the symposia. Student editors will supervise the preparation of student comments by new members of the Law Review and will select and edit those comments for possible publication. Student editors will train new Law Review members on proper citation format and cite-checking requirements for articles published in the Law Review. Student editors will be responsible for all other aspects of the Law Review, including obtaining subscriptions, managing its finances, working with the publisher and others in the printing and distribution of the Law Review. The professor may designate this course as either pass/fail or as a letter graded course.

LAW7258 - Comparative Business Law

Overview

Subject code
LAW

Catalog Number
7258

Course Title
Comp Bus Law

Career
Law

Course Description
This course offers a comparative survey of various topics of business law of the United States and Argentina. CO-taught by both U.S. and Argentine business law faculty, the materials present U.S. and Argentine law as well as comparative analyses of both. The principal topics addressed will be the legal structure of business entities, issues related to the limited liability of corporate entities, fiduciary duties and liabilities of corporate officials, and government regulation. Because it is a comparative law course, the topics will be addressed from the perspective of both U.S. and Argentine law. Additionally, the course will address related areas of commercial law, principally the rules concerning negotiable instruments and secured transactions. To that end, Articles 3 and 9 of the U.S.'s Uniform Commercial Code will be compared to the counterpart Argentine statutes and commercial code.

LAW7285 - Profesion Juridica Comparada (Comparative Legal Profession)

Overview

Subject code
LAW

Catalog Number
7285

Course Title
Profesion Jur Comp

Career
Law

Course Description
This course offers students an opportunity to strengthen their oral and written communication skills in Spanish, to acquire and use legal concepts, and develop analytical skills for potential use in their future legal practice. The course is meant to benefit students with varying levels of Spanish language proficiency, up to and including native Spanish speakers. The course may focus on legal terminology, concepts, and processes in one or more legal fields, jurisdictions, or topics. Assignments may include client simulations, written and oral advocacy, negotiations with colleagues and the comparative analysis of legal concepts. Ideally, the students enrolled in the course already have an intermediate level of Spanish, including familiarity with essentials of Spanish grammar and the ability to write and engage in intermediate verbal communication, but the professor will determine prerequisite Spanish-language proficiency for admission to the class. This course meets the international graduation requirement and depending on its specific methodology and content may meet the experiential graduation requirement.

LAW7490 - Comparative Perspective on the Regulatory State: Doing Business and Environmental Protection

Overview

Subject code
LAW

Catalog Number
7490

Course Title
Comp Pers Reg State

Career
Law

Course Description
This course will examine the regulatory and administrative state in a comparative law context, using U.S. and Argentine administrative law as they affect business regulation and environmental regulation. CO-taught by U.S. and Argentine faculty members, the materials present U.S. and Argentine faculty members, the materials present U.S. and Argentine law as well as comparative analyses of both. The course will be divided into three principal sections. First, it will introduce students to the constitutional bases for executive regulation in both legal systems. Second, the course will examine different regulatory responses to environmental protection law and regulation in the U.S. and Argentina. Third and finally, the course will ask students to consider the consequences of those legal and regulatory strategies for the regulation of business, with a focus on trans-national business between the U.S. and Argentina. The organic U.S. administrative law statute (the Administrative Procedure Act) will be compared to comparable Argentine laws.

LAW7804 - United States Law II: Scholarship and Perspectives

Overview

Subject code
LAW

Catalog Number
7804

Course Title
US Law II

Career
Law

Course Description
This course introduces graduate law students to scholarly and theoretical techniques and approaches used in the United States to understand law. It covers basic aspects of academic and scholarly writing in law, perspectives on law from different theoretical schools, and the tools that legal academics use in thinking about and writing about law. The course will survey different kinds of academic writing, with emphasis on the law review article. It will also discuss sociological jurisprudence, legal realism, law and economics, and critical legal studies.

LAW7808 - Legal Skills & Values IV

Overview

Subject code
LAW

Catalog Number
7808

Course Title
LSV IV

Career
Law

Course Description
Students enrolled in this elective course will build upon and hone the objective and persuasive writing skills they learned and began developing in LSV I, LSV II, and LSV III. The course is designed to help students evaluate their reading, comprehension, analysis, and writing skills and diagnose any problems they may have in these areas. The course goal is to help excellent writers become exceptional writers and to help average- and below average writers become excellent writers. Further, during the course students will conduct legalresearch and deliver short presentations regarding their work, thus enhancing their legal research and oral communication skills. During the initial segment of the course (Diagnostic Assessment), students will work with the professor and class to critically evaluate their past writings (prior briefs and papers) to assess their strengths and weaknesses. During the second segment (Transactional Work), students will critically read and edit a contract and write a client letter discussing essential elements of the contract. In the third segment (Judicial Opinion Writing), students will research and write a short judicial opinion. In the final course segment (Scholarly Writing), each student will research and write a short article suitable for publication in a magazine such as The Florida Bar Journal.Pre-requisites: Legal Skills & Values I & II (or their equivalent), and Legal Skills & Values III.

LIN6323 - Phonology

Overview

Subject code
LIN

Catalog Number
6323

Course Title
Phonology

Career
Graduate

Course Description
The study of phonological processes in languages and linguistic methodology for phonological analysis. Emphasis will be placed on recent theoretical questions concerning such issues as the abstractness of underlying forms, the naturalness of processes, and the relevance of markedness to a phonological description. Prerequisite: LIN 5206, Phonetics.

LIN6510 - Syntax I

Overview

Subject code
LIN

Catalog Number
6510

Course Title
Syntax I

Career
Graduate

Course Description
This course will expose students to the theoretical models on which much contemporary work in English grammar is based. Students will read works on selected topics such as structural linguistics, transformational grammar, and case grammar. Specific content may change from semester to semester. May be re-taken for credit when content changes. Prerequisites: LIN 3010, LIN 3013, LIN 5018 or the equivalent.

LIN6805 - Semantics

Overview

Subject code
LIN

Catalog Number
6805

Course Title
Semantics

Career
Graduate

Course Description
The study of linguistic semantics. Language-universal and language-specific properties of the semantic structure of words and sentences will be considered. Students will be exposed to a variety of approaches to the study of meaning. Prerequisites: Introductory course in Linguistics or permission of the instructor.

LIT1000 - Introduction to Literature

Overview

Subject code
LIT

Catalog Number
1000

Course Title
Intro to Literature

Career
Undergraduate

Course Description
In this course, students will be assigned readings representative of a broad range of literary genres and cultures. These readings will cover a variety of literary movements and historical eras. The readings will include, but are not limited to, selections from the Western canon. Written analysis of literary works may be required. Students will be provided with opportunities to practice critical interpretation.
