| Music, Values, and "Cross-Domain Mapping" | 188072, 5 |

**Learning Outcome**
Students will articulate how a culture's values can be embodied and discerned within musical practices.
Students will learn how music's organizational principles (see the previous learning outcome) can be mapped onto various non-musical aspects of that culture.
In other words, students will be able to observe and articulate how the way a music sounds relates to what that music means. Some areas of exploration related to this learning outcome could include:

musical practices in various cultures that project power and legitimacy within political contexts
musical practices in various cultures that reinforce social cohesion in a community context
musical practices in various cultures that convey reverence or worship in a religious context

In discussions, assignments, and essays, students will use this concept of "cross-domain mapping" to articulate the connection between sound and meaning in various musical contexts. They will also use this as a basis to for written self-reflection:

How does the music the students themselves use in personal, social, and religious contexts resonate with their personal, community, and religious beliefs and values?
How do LDS musical practices, for example, reflect, shape, and strengthen Mormon identity?

| Title | Tags |
|---|---|
| Ethnomusicology as a Path to Cultural Understanding | 188073, 6 |

Learning Outcome
Students will be able to articulate and demonstrate how the discipline of ethnomusicology and the scholarly methods it entails foster cross-cultural awareness, understanding, and empathy. Students will fulfill this objective by reading about the history and practices of ethnomusicology as an academic discipline, studying the methods and ethical considerations applied in ethnomusicological fieldwork, writing about their findings in assignments and exam essays, and completing a review of a scholarly monograph based on ethnomusicological fieldwork. Students will articulate in a written essay how the goals, methodologies, and ethical standards of the discipline of ethnomusicology align with the purposes and outcomes articulated in BYU's Global and Cultural Awareness Foundation Document.

| Title | Tags |
| --- | --- |
| Music and Global Change | 188074, 7 |

Learning Outcome
Students will demonstrate an understanding of the ways in which music reflects and contributes to large-scale international and intercultural changes.
Students will examine the ways in which major changes such as colonial and postcolonial political shifts, international economic developments, new media technologies, shifting social norms, religious proselytizing, etc., affect and are affected by musical practices. Students will demonstrate an understanding of musical culture as a continual interplay of tradition, hybridization, retrenchment, and change, and will be able to draw on various specific musical case studies to reflect on the complex cultural issues globalism raises. These case studies could include such things as:

How various historical encounters, from the Silk Road to the Crusades to the World Fairs

of the late 19th and 20th centuries, contributed to musical cross-pollination.
How a Colombian soap opera helped turn a little-known provincial folk music style into an international phenomenon.
How the advent of the recording industry in India dramatically changed the role of women in Indian classical music.
How a Tibetan folk musician living in the U.S. balances his sense of stewardship over his tradition with the desire to broaden his audience.
How members of the LDS Church throughout the world navigate the relationship between local traditional culture and shared LDS culture through the musical celebrations that precede temple dedications.
Etc.

**Title**
Understanding of Non-Western Musical Practices

**Tags**
188076, 4

**Learning Outcome**
Students will be able to demonstrate an understanding of the methods of musical creativity in several non-Western cultures, including various approaches to melodic, rhythmic, timbral, and formal organization.
They will also be able to identify various musical instruments as well as the methods through which various cultures conceptualize and taxonomize instruments, and be able to show an understanding of how various modes of musical transmission (oral tradition, notation, media) affect musical practices over time.

**Learning Outcome**
Students should be exposed to music outside the Western European tradition. Most of the music performed in this ensemble includes Calypso and Soca styles from the island nation of Trinidad and Tobago. We will sometimes include a pop or classical number, but most of the time we will focus on "groove" music. This means that having a conductor will be rare and the student is expected to listen and learn how to contribute to that "groove".

Skills to Develop in 344r:
1. Understand how to best balance their playing with another instrument and comprehend how that balance evolves to meet the needs of different instruments.
2. Understand how to communicate musical ideas through body language.
3. Develop musical "ESP". This is achieved when a pianist works with the same person over a long period of time, and develops better sensitivity. The pianist and soloist can sense changes in tempi, phrasing, and dynamics through concentrated listening, needing almost no visual contact.
4. Understand the subtext of the score.
5. Develop a genuine appreciation for the art of the accompanist.

### Course Information

**Teaching Area (new)**
NDFS
**Course Number**
558
**Teaching Area**
NDFS
**Course Title**
Nutritional and Food Toxicology
**Course Description**
Principles of nutritional and food toxicology with primary emphasis on food toxins will be discussed. An overview of absorption, distribution, metabolism and excretion of foreign materials, allergenic and toxic constituents in plant, animal, marine and fungal origin will be covered. Priority will be placed on the role food ingredients and nutrients may have in mutagenesis and carcinogenesis, including food processing induced toxins. Safety assessments of food additives, environmental contaminants, pesticides, antibiotic residues and dietary supplements and the laws and regulations surrounding their uses will be presented.

**Learning Outcome**
(1) The first and primary objective is the placement of each student in a professionally enhancing work setting. We intend to continuously improve the quality of internship experiences being offered through a process of continuous assessment of all internships, negotiations with agencies, and internship advisement and counseling of students at the beginning of the contractual process.
(2) Students will critically reflect on the connections between their work experience and the content of psychology and articulate these work-related insights.
(3) Students will develop professional skills and attitudes through readings on professional etiquette, in-class presentations to classmates, and poster presentation at open house.

**Title**
Fundamental knowledge of genetics and genomics

**Tags**
203057, 1

**Learning Outcome**
Students can demonstrate foundational knowledge of genetics, and understanding of emerging concepts of personal genomics in medicine, health, and family history.

**Title**
Communication of genomic knowledge to peers in a group setting

**Tags**
203058, 2

**Learning Outcome**
Students can communicate effectively with classmates through oral, visual, and digital media and present a topic on 'personal genomics' in the news as part of a group.

**Title**
Social impacts of emerging genomics technologies

**Tags**
203059, 3

**Learning Outcome**
Students can analyze and evaluate global and local ethical issues in personal genomics, and how these issues impact individuals, families, and society.

**Title**
Genomics technologies and personal spirituality

**Tags**
203060, 4

**Learning Outcome**
Students can relate personal genomics concepts with teachings of the Restored Gospel, including discussions on evolution, Lamanite ancestry, and use of genomic data in family history.

**Title**
Analytical thought and problem solving

**Tags**
203061, 5

**Learning Outcome**
Students can apply sound thinking in applying personal genomics information to real-life situations.

The Book of Mormon as Sacred Literature
**Course Description**
This course teaches students how to study the text of the Book of Mormon as scripture, but through the lens of sacred literature. Applying tools of literary analysis and drawing from the work of scholars who have studied scripture as literature, students will learn how to carefully analyze the text and write about it in ways that will deepen their understanding and appreciation of both the content and the literary elements within the book. This study of the Book of Mormon as sacred literature brings the unique advantage of being able to teach students to more fully see the book for what it truly is: a book that is not just a container of doctrine to be obeyed, nor a secular literary work to

**Learning Outcome**
The design of this course is to introduce students to some of the most important works of Russian literature. Our aim is for the student to be able to explain the trends and characteristics of the Classic Russian Novel and illustrate them with examples from the assigned readings. To help the student realize this objective, we focus our attention on three areas:
1. Reading:Those responsible for course instruction choose the assigned readings (mutually agreed upon by members of the section). Students that complete the assigned readings will demonstrate a critical understanding of and appreciation for literature.

Create effective and appropriate visual and numerical summaries of datasets.

| Title | Tags |
| --- | --- |
| Modeling and Analysis | 214626, 0, 4 |

Learning Outcome

Carry out the following analyses and interpret the results in the context of the research study:
1) Hypothesis testing and confidence intervals for a single mean, a single proportion, the difference between two means, and the difference between two proportions;
2) ANOVA for comparing multiple means;
3) Chi-square test of independence;
4) Simple and multiple linear regression.

| Title | Tags |

Title
Statistically Significant Interaction

Tags
205525, 11

Learning Outcome
Explain a statistically significant interaction

Title
Simple Problems

Tags
205528, 2

Learning Outcome
Solve simple problems using axioms of probability, conditional probability, independence, and Bayes' theorem

Title
Experimental Design

Tags
205638, 6

Learning Outcome
Understand the basics of experimental design, including the definition of the experimental unit, response, variable, factor(s), and level(s) of a basic experiment, and the role of randomization and replication to permit causal inference

Title
Interval for μ

Tags
205738, 7

Learning Outcome

This is a course with no set curriculum. The learning objectives will be determined by the directing instructor. The outcomes will be specific to the special topic as directed by the professor. In general, after completion of a special topics course in statistics, the student will:

| Title | Tags |
|---|---|
| Understanding of and Competence in Subject Matter | 205821, 2 |

**Learning Outcome**
Demonstrate understanding of and competence in subject matter, varying by course topic

| Title | Tags |
|---|---|
| Historical Context or Modern Relevance | 205822, 3 |

**Learning Outcome**
Explain the historical context or modern relevance of the selected special topics curriculum

| Title | Tags |

**Learning Outcome**
Practice appropriate dress and etiquette in varied business settings

| Title | Tags |
|---|---|
| Written and Oral Communication | 205705, 3 |

**Learning Outcome**
Demonstrate effective written and oral communication skills as they report on their internship experience

Quantitative Methods 205823, 4

**Learning Outcome**
Develop proficiency in specialized quantitative methods and their use in a modern statistical software package

**Title**
Report or Presentation of Authentic Data

**Tags**
205824, 5

**Learning Outcome**
Prepare a report or presentation documenting an authentic data analysis using the tools of the special topics curriculum

Historical Development: Introduce students to past communication technologies, with a focus on their development, usability, sustainability, evolution, and relative impact on: society, politics, economy, environment, and leisure.
Ethics: Help students develop an understanding of the ethical development and use of communication technologies.
User and Actor Skills: Help students develop the skills to not only be users, but actors in the positive development and evolution of society's Technology (Postman, 1999).
Tools and Services: Expose and train students in a broad range of communication technology tools and services (i.e., media authoring, desktop publishing, web authoring, HTML and CSS languages, Java and JavaScript, social media, Video and TV production, RSS and ATOM feeds and subscriptions, Vod and

**Learning Outcome**

Students will be able to visualize how components are joined and how to communicate this through drawings and specifications.
Students will understand the properties of wood as a material and how these properties impact design of projects using wood and wood products.
Students will select and use subtractive processes in prototype construction: sawing, shaping, milling, turning, routing, etc.
Students will select and use additive processes in prototype construction: joining, laminating, fastening, etc.
Students will be able to identify, and use hand tools including tools for measuring, layout, sawing, planing, scraping, shaping, clamping, drilling, driving, and sharpening.

podcasting, digital photography (techniques, tools, storage), computer hardware and networking issues, GPS technologies, and 3D modeling.
Technology Assessment: Throughout this semester students will be asked to collect, implement, and assess the relative value of various contemporary technologies, and will be asked to discuss if and how the technologies should be used in classrooms and in the world.

Students will be able to accurately set-up and safely use woodworking machinery including the jointer, surface planer, table saw, panel saw, radial arm saw, power miter saw, bandsaw, thickness sander, mortiser, boring machine, lathe, and drill press.
Students will have experience with the use of electric, pneumatic, and cordless power hand tools including routers, drills, and sanders.
Students will be able to apply methods of clamping, gluing, and assembly, sanding, and finishing.
Students will experience practical problem solving in working with industrial materials, tools, and machines.
Students will experience the importance of caring, hard work, planning, initiative, and patience, in making a project that is well designed, includes quality workmanship, and is nicely finished.
Students will learn concepts and methods of teaching safe use of woodworking equipment.
Students will be able to apply basic machine and hand tool maintenance.

Learning Outcome

This course is designed to give you and introduction to programming and give you some basic skills and knowledge with the Python programming language and front end web development using HTML, CSS, and Javascript. This course will help you get a jump into the world of programming and give you a basic knowledge you need to move further into computer science. For those on the teaching track, we will cover some basic principles and structures that you would use in a begin programming or web development class.

Learning Outcome

**Web Development**

We will review HTML, CSS and Javascript structure and create a portfolio website using mobile first design and development. You will want to have images and/or video available to add to your website from other TES courses you have taken. This is a chance to show off what you have done. We will also learn to use libraries such as Bootstrap and JQuery to enhance our websites.

While both Python and HTML are considered coding, they differ in the way they are implemented

Utah Effective Teaching Standards
UETS STANDARD 4- Content Knowledge: The teacher understands the central concepts, tools of inquiry, and structure of the discipline.
Standards for Engineering and Technological Literacy
STEL 5: Influence of Society on Technological Development
5F. Analyze how an invention or innovation was influenced by its historical context.
5H. Evaluate a technological innovation that arose from a specific society's unique need or want.
STEL 6: History of Technology
6C. Compare various technologies and how they have contributed to human progress.
6F. Relate how technological development has been evolutionary, often the result of a series of refinements to basic inventions or technological knowledge.
6G. Verify that the evolution of civilization has been directly affected by, and has in turn affected, the development and use of tools, materials and processes.
6H. Evaluate how technology has been a powerful force in reshaping the social, cultural, political, and economic landscapes throughout history.
Technology and Engineering Practices
TEP-1: Systems Thinking

Designs and troubleshoots technological systems in ways that consider the multiple components of the system

the way they are implemented and their uses. Therefore, we will spend the first half on python with a midterm test at the end of this module and the second half on HTML with a final at the end of that unit.

**Python**

We will learn some basic constructs of all programming languages using the Python language. These include variables, functions, libraries and classes. Class time will consist of half lecture and half lab work. You will be given programming assignments that be will written and tested in Repl. You may use each other and the internet as resources for help with construct and syntax, but your solutions should come from you.

components of the system

TEP-2: Creativity

Exhibits innovative and original ideas in the context of design-based activities
Elaborates and articulates novel ideas and aesthetics

TEP-3: Making and Doing

Exhibits safe, effective ways of producing technological products, systems, and processes
Demonstrates the ability to regulate and improve making and doing skills

TEP-4: Critical Thinking

Defends technological decisions based on evidence
Uses evidence to better understand and solve problems in technology and engineering, including applying computational thinking

Students will be able to describe the basic electronic concepts of voltage, amperage, resistance & power.
Students will be able to use Ohm's and Watt's law to perform basic calculations in an electronic circuit.
Students will be able to describe how voltage, amperage, power & resistance behave in series and parallel circuits and be able to calculate unknown quantities in a circuit.
Students will be able to use a power supply, breadboard, basic components, and a digital multi-meter to build, test and troubleshoot basic electronic circuits.
Students will be able to use a digital multi-meter, oscilloscope

digital multi-meter, oscilloscope and digital logic probe to test, troubleshoot and repair faulty circuits.
Students will be able to identify basic electronics components and describe the function of each component.
Students will be able to identify and draw the basic schematic symbols used to represent electronics components in a circuit.
Students will be able to use appropriate materials and equipment (including simulation software, CNC Mill, soldering iron) to design and build a working electronic circuit that is a solution to a technological problem and/or need.
Students will be able to successfully calculate unknown quantities and complete labs associated with magnetism, electromagnetic induction, capacitors, semiconductors, transformers and alternating current.
Based on a set of given inputs and desired outputs, students will be able to design a digital electronic circuit as a solution to a technological problem or need.
Students will be able to collect technical data and to apply appropriate math and science knowledge to see the connections between technology and other fields of study.
Students will be able to describe historical examples of discoveries, experiments, innovations and inventions related to electronics communications technology and be able to provide examples of technology transfer and how these technologies affected past and current society.

**Learning Outcome**

Provide students an opportunity to gain an understanding of the technical, creative, and cultural, political, economic, and environmental impact of photography, television and film/video media.

Expose and train students in contemporary video, film, TV, and photography pre-production, production, and post-production techniques.

Expose and train students to effectively use contemporary video, film, TV, and photography tools (i.e., Final Cut Pro, DVD Studio, Studio Code, Adobe Creative Suite, Camera Switcher, HD Video, digital SLR cameras, Celtix [script writing], lighting and audio recording equipment, and so forth).
Teach students the primary

simple ABS prototype of an object.
8. Describe qualities of polymers as they pertain to design and polymer fabrication.
9. Understand the fundamental safety procedures and protocol associated to the various manufacturing and fabrication processes associated to the different polymer domains.
10. Evaluate the economic and environmental issues associated with the different polymers and their related manufacturing processes.

2. Identify and understand the different types of information indicated on a drawing.
3. Apply safe work habits when operating tools and equipment.
4. Accurately measure with and read a ruler, venier calipers, and various gauges.
5. Use tools to make a layout for a project.
6. Identify, select, and safely use basic hand tools in metalworking.
7. Identify and correctly use several types of metal fasteners.
8. Cut, bend and make a sheet metal project using several different tools.
9. Demonstrate the soldering and brazing process.
10. Demonstrate how to use an oxy-acetylene torch to cut metal.
11. Correctly use various tools to make a bench metal project.
12. Correctly select the rod and adjust arc welding equipment.
13. Correctly setup and adjust the current and feed rate for a MIG welder.
14. Use a MIG welder to strike an arc, run a bead, and make a butt and lap joint to given specifications.
15. Correctly use a metal lathe to make a specified project.

2. Develop design drawings and engineering drawings.
3. Design and use jigs and fixtures in producing a finished product.
4. Develop a manufacturing system and produce multiples of a product.
5. Set up and conduct a manufacturing pilot run and production run.
6. Establish methods for quality control in manufacturing.
7. Organize a manufacturing enterprise.
8. Keep records relative to finances, labor, and material purchase and use.
9. Develop practices and attitudes for safe use of equipment and tools.

Students will understand:
1. Historical aspects and impacts of manufacturing.
2. Principles of manufacturing including material flow, converting raw materials and standard stock into finished products, economy of motion and material use, interchangeability of parts, product design for manufacture, and tasks involved in manufacturing a finished product.
3. Principles of free enterprise including types of ownership, product selection and design, marketing techniques, corporate structure in manufacturing, and record keeping.

Educator Preparation Program Outcomes
This course is part of your preparation for licensure in a major or minor that is part of the BYU Educator Preparation Program (EPP). This course will help you fulfill the EPP Outcomes required for accreditation. Advisors in Education Student Services (350 MCKB / 801-422-3426) can answer questions you have about the licensure requirements (http://education.byu.edu/ess/licensing.html) for your teaching major or minor. As students progress through the Technology and Engineering teacher education program, they should gain knowledge, dispositions and skills that will enable them to become effective teachers. The standards that encompass the knowledge, dispositions and skills that teachers should have are known as the UETS standards and can be found on the TEE Outcomes webpage. The following UETS standards will be addressed in this class (TEE 276).

**Learning Outcome**

Students will prepare to teach communication technology - specifically graphic design in print and web formats. To accomplish this students will first learn the primary and fundamental theories of design, and develop associated skills and understanding by completing a variety of projects, including but not limited to: user experience designs for a variety of web applications, print designs in the form of advertisements and identity design. Second, students will design instructional ideas for use in both industry and educational settings (i.e., lesson and unit plans), which they will have evaluated by peers, instructor, and through application (i.e., they will teach their lesson plan(s) in an educational setting).
Students will be introduced to the visual communication profession and associated professional literature. Field trips, readings, and client work will be the primary methods of meeting these criteria.
Students will gain competency in applying the design principles in both print and web mediums. As note above the course assignments will provide the means for accomplishing this outcome. In addition, peer evaluations, and student presentations will help accomplish this outcome.

Upon completion of this course students will:
Identify and demonstrate characteristics of an effective teacher, including:

Positive expectations
Classroom management
Lesson preparation
A knowledge of one's own strengths and weaknesses
Participate in clinical field experience to observe and to engage in meaningful education practices.
Research and present supplementary educational research materials.
Demonstrate an understanding of current issues facing public schools.
Reflect in writing, discussion, and assignment the effective teacher model and how it is reinforced through public school observation and experience.
Evaluate and assess one's own commitments and practices relative to teaching and learning with frequent reflections on teaching practices.

A description of how these will be met are outlined in the table below:

Course Outcomes - Level 1 (Listed as STEL and UETS); Course Outcomes - Level 2 (Listed in the table and below as objectives and how assignments meet level 1 criteria).
Upon completion of this course students will:
Identify and demonstrate characteristics of an effective teacher, including:

Positive expectations
Classroom management
Lesson preparation
A knowledge of one's own strengths and weaknesses
Participate in clinical field

**Course Title**
Creative Engineering and Problem Solving I

**Course Description**
This course is a hands-on experience centered on preparing students to teach middle school Technology & Engineering Education courses. During this course, students will be exposed to a wide breadth of topics, assignments, teaching styles, and activities within Technology & Engineering Education. Students will explore different pedagogical approaches in the context of career and technology education employment clusters and engage in iterative design, build, automate, test, and refine cycles (e.g., engineering design process)

## Utah Effective Teaching Standards

**UETS STANDARD 4- Content Knowledge:** The teacher understands the central concepts, tools of inquiry, and structure of the discipline.

## Standards for Engineering and Technological Literacy

**STEL 1 Nature andCharacteristics ofTechnology andEngineering**

1J. Develop innovative products and systems that solve problems and extend capabilities based on individual or collective needs and wants.

1K. Compare and contrast the contributions of science, engineering, mathematics and technology in the development of technological systems.

1L. Explain how technology and engineering are closely linked to creativity, which can result in both intended and unintended innovations.

1M. Apply creative problem-solving strategies to the improvement of existing devices or processes or the development of new approaches.

**Additional Comments:**

Note
Two sets of standards guide the outcomes of TES 330: 1)\tUtah Effective Teaching Standards: UETS STANDARD 4- Content Knowledge. 2)\tStandards for Technological and Engineering Literacy (STEL - 2020):

1N. Explain how the world around them guides technological development and engineering design.

1O. Assess how similarities and differences among scientific, mathematics, engineering, and technological knowledge and skills contributed to the design of a product or system.

1P. Analyze the rate of technological development and predict future diffusion and adoption of new technologies.

1R. Develop a plan that incorporates knowledge from science, methematics, and other disciplines to design and improve a technological product or system.

**STEL 2 Core Concepts of Technology and Engineering**

2M. Differentiate between inputs, processes, outputs, and feedback in technological systems.

2O. Create an open-loop system that has no feedback path and requires human intervention.

2P. Create a closed-loop system that has a feedback path and requires no human intervention.

2Q. Predict outcomes of a future product or system at the beginning of the design process.

2S. Defend decisions related to a design problem.

2V. Analyze the stability of a technological system and how it is influenced by all of the components in the system, especially those in the feedback loop.

2W. Select resources that involve tradeoffs between competitng values, such as availability, cost,

desiribility and waste while solving problems.

2X. Cite examples of the criteria and constraints of a product or system and how they affect final design.

2Y. Implemt quality control as a planned process to ensure that a product, service, or system meets established criteria.

**STEL 4 Impacts of Technology**

4K. Examine the ways that technology can have both positive and negative effects at the same time.

4L. Analyze how the creation and use of technologies consumes renewable and non-renewable resources and creates waste.

4M. Devise strategies for devising, reusing, and recycling waste caused from the creation and use of technology.

4P. Evaluate ways that technology can impact individuals, society, and the environment.

4Q. Critique whether existing or proposed technologies use resources sustainably.

***STEL 5: Influence of Society on Technological Development***

**5F.** Analyze how an invention or innovation was influenced by its historical context.

**5G.** Evaluate trade-offs based on vrious perspectives as part of a decision process that recognizes the need for careful comprimises among competing factors.

***STEL 6: History of Technology***

**6C.** Compare various technologies and how they have contributed to human progress.

6D. Engage in a research and development process to simulate how inventions and innovations have evolved through systematic tests and refinements.

**6F.** Relate how technological development has been evolutionary, often the result of a series of refinements to basic inventions or technological knowledge.

**6G.** Verify that the evolution of civilization has been directly affected by, and has in turn affected, the development and use of tools, materials and processes.

**6H.** Evaluate how technology has been a powerful force in reshaping the social, cultural, political, and economic landscapes throughout history.

**STEL 7 Design in Technology and Engineering Education**

7Q. Apply thre technological design process.

7R. Refine design solutions to address criteria and constraints.

7S. Create solutions to problems by identifying human factors in design.

7T. Assess design quality based upon established principles and elements of design.

7U. Evaluate the strengths and weaknesses of fifferent design solutions.

7V. Improve essential skills necessary to successfully design.

7X. Document trade-offs in the

technology and engineering process to produce optimal design.

7Y. Optimize a design by addressing desired qualities within criteria and constraints.

7BB. Implement the best possible solution to a design.

7CC. Apply a broad range of design skills to their design process.

7DD. Apply a broad range of making skills to their design process.

**STEL 8 Applying, Maintaining, and Assessing Technological Products and Systems**

8J. Use devices to control technological systems

*k. Design methods to gather data about technological systems

8L. Interpret the accuracy of information collected

8M. Use instruments to gather data on the performance of everyday products.

## Technology and Engineering Practices

**TEP-1: Systems Thinking**

- Designs and troubleshoots technological systems in ways that consider the multiple components of the system

**TEP-2: Creativity**

- Exhibits innovative and original ideas in the context of design-based activities
- Elaborates and articulates novel ideas and aesthetics

**TEP-3: Making and Doing**

- Exhibits safe, effective ways of producing technological products, systems, and processes
- Demonstrates the ability to regulate and improve making and doing skills

**TEP-4: Critical Thinking**

- Defends technological decisions based on evidence
- Uses evidence to better understand and solve problems in technology and engineering, including applying computational thinking

## Technology and Engineering contexts

Learning Outcome

## Course Outcomes - Level 2

1. Students will incorporate the concepts of group goals, individual accountability, group processing and practice interpersonal and small group skills in order to work cooperatively in a group engineering design project.
2. Students will incorporate various systems (e.g., electronic, mechanical, hydraulic, pneumatic, thermal) as they use the engineering design process to design an invention, innovation or solution to a design problem.
3. Students will know the steps of the engineering design process and then document and apply this process in building a solution to a design activity.
4. Students will use the steps of the engineering design process to innovate a new design solution to a common household item.
5. Students will create an operations manual (design portfolio) which includes a self-evaluation, peer evaluation, sketches made during the ideation stage, problem-solving log, copy of the computer program and final drawing of the engineering design project.
6. As a group, students will verbally and visually present their design portfolio to the rest of the class.
7. During the engineering design process, students will identify the constraints and limitations of the design problem, consider trade-offs, and then design, build a prototype, test, optimize and troubleshoot a design

solution to a problem.

8. Students will collect technical data and then apply math and science knowledge in contextual setting.

9. Students will learn the basics of computer control systems, including, inputs, outputs, and feedback loops; and be able to design, build and program a microprocessor-driven system to drive a specific set of output devices based upon inputs to the system from various sensors and feedback mechanisms.

10. Students will build and program a robot as a solution to a given problem.

11. Students will know the basics of radio control devices and then use these principles to design a solution to a problem.

12. Students will identify a variety of engineering related curriculum resources that are currently available for them to use in their future classrooms.

Educator Preparation Program OutcomesThis course is part of your preparation for licensure in a major or minor that is part of the BYU Educator Preparation Program (EPP). This course will help you fulfill the EPP Outcomes required for accreditation. Advisors in Education Student Services (350 MCKB / 801-422-3426) can answer questions you have about the licensure requirements (http://education.byu.edu/ess/licensing.html) for your teaching major or minor.As students progress through the Technology and Engineering teacher education program, they should gain knowledge, dispositions and skills that will enable them to become effective teachers. The standards that encompass the knowledge, dispositions and skills that teachers should have are known as the UETS standards and can be found on the TEE Outcomes webpage. The following UETS standards will be addressed in this class (TEE 377).

Students will identify the basic steps of the Backwards Design

steps of the Backwards Design approach to curriculum development and use these steps to develop a curricular unit to be taught as part of the practicum experience in a middle school setting.
As part of their practicum experience, students will successfully develop and teach a curricular unit (including unit plan, lesson plans, assessments, lab experiences, instructional materials) in a middle school technology and engineering classroom. Note: the mentor teacher and the university supervisor will assess this practicum experience using the CPAS assessment.
During their practicum experience, students will demonstrate effective classroom management strategies.
Students will demonstrate a partial ability to meet the UETS Standards by a successful completion of the PPAT #1.

**Course Title**
Advanced Film Production - Non-Fiction: Pre-Production
**Course Description**
Non-Fiction Advanced Film Productions (AFPs) are peer-mentoring environments provided by the Media Arts Department and initiated by Media Arts majors. While the student initiating a Non-Fiction AFP assumes the primary responsibility for interacting with the Department, the process is collaborative. These advanced projects are generally culminating experiences at the end of a student's undergraduate work (similar to a senior project). Each Non-Fiction AFP comes with associated coursework, class credit, and departmental supervision. Non-Fiction AFPs also receive a large amount of departmental support, through equipment access and funding. This class covers Pre-Production.

TMA

**Course Title**
International Studies in Film & Culture

**Course Description**
This course offered in conjunction with the Media Arts program's study abroad program will expose students to renowned repertory programs, thorough retrospectives, and the most wide-ranging commercially distributed film offerings in the world. We will enjoy the films themselves along with a host of exemplary scholarly resources (lectures, artist interviews, scholarly notes) from nation-specific institutes of film education. In addition, our program will be distinguished by its emphasis on the ancestor arts and by its access to some of the world's great art institutions. Film is a combination and occasionally a culmination of the arts preceding it. In that spirit, film practitioners as well as students of the arts will be enriched and deepened by their exposure to our host city's rich history and its vast supply of great plays, paintings, buildings, landscapes, and design.

Advanced Film Production - Non-Fiction: Production

**Course Description**
Non-Fiction Advanced Film Productions (AFPs) are peer-mentoring environments provided by the Media Arts Department and initiated by Media Arts majors. While the student initiating a Non-Fiction AFP assumes the primary responsibility for interacting with the Department, the process is collaborative. These advanced projects are generally culminating experiences at the end of a student's undergraduate work (similar to a senior project). Each Non-Fiction AFP comes with associated coursework, class credit, and departmental supervision. Non-Fiction AFPs also receive a large amount of departmental support, through equipment access and funding. This class covers Pre-Production.
