Welcome to CCCC

Welcome to Central Carolina Community College, a top-rated community college within the North Carolina Community College System.

Central Carolina Community College was established to help you achieve your educational goals, whether finishing high school, learning a valuable vocational skill, or completing the first two years of college–at minimal cost–before transferring to a university or four-year college.

At Central Carolina Community College, you can explore different kinds of job opportunities, identify your personal strengths, and start on the path toward new levels of success.

The foundation of Central Carolina Community College's strength is a competent and caring faculty, staff, and administration. We genuinely want to see students succeed and are willing to go the extra mile to ensure that success. Our commitment to student success includes a comprehensive program of student financial and academic assistance.

We are committed to helping our students become well-rounded individuals, and we offer a diversified program of student activities designed to develop social and leadership skills and to make the learning experience enjoyable.

Welcome to CCCC

College Mission, Vision, & Values

Mission

Central Carolina Community College provides first-class opportunities for students, serves as a leading workforce partner, and cultivates a workplace where professionals thrive—uplifting the region through education and opportunity.

Vision Statement

Through a culture rooted in excellence, CCCC strives to be the college of choice:

- **For students:** by ensuring every step—from connection to completion—is designed to lead to family-sustaining jobs and meaningful careers, supported by clear academic and career pathways, student-centered instruction, personalized advising, and opportunities for further education.
- **For workforce partners:** by efficiently delivering talent and training responsive to workforce needs.
- **For community leaders:** by working collaboratively to expand opportunity across the region.

- **For employees:** by being an employer of choice, where well-being, meaningful contribution, and professional growth are prioritized.

Core Values

CCCC is guided by a shared commitment to:

- **Excellence** - Upholding the highest standards in teaching, learning, and service.
- **Integrity** - Acting with honesty, accountability, and transparency.
- **Respect** - Valuing individual perspectives and treating everyone with dignity.
- **Collaboration** - Working together to achieve shared goals and community impact.
- **Innovation** - Embracing creativity and adaptability in all endeavors.
- **Leadership** - Empowering individuals to lead with purpose, courage, and vision.

Welcome to CCCC

CCCC is an Equal Opportunity College

Central Carolina Community college serves the public without regard to race, color, national origin, religion, age, sex and sexual orientation, gender, family status, disability status, veteran status, or any health or genetic information.

Services to Students with Disabilities

Central Carolina Community College has approved the following policy to guide its delivery of services to students with disabilities: No individual shall, by reason of disability, be excluded from the participation in, be denied the benefits of, or be subjected to discrimination under any program or activity for which otherwise qualified. The college may make program adjustments in instructional delivery and may provide supplemental services to enable students with disabilities to participate in activities compatible with their condition and interest. For more information, see Student Accessibility Services (URL: https://www.cccc.edu/support-success/student-accessibility-services).

Accreditations

Central Carolina Community College is currently engaged in the process of seeking institutional accreditation from the Higher Learning Commission (HLC) and transitioning its accreditation from the Southern Association of Colleges and Schools Commission on Colleges (SACSCOC). The College has formally begun HLC's Accelerated Process for Initial Accreditation and is preparing required documentation for review. This process includes multiple stages designed to ensure that institutions meet established Criteria for Accreditation and federal compliance requirements.

Until such time as accreditation is granted by HLC, the College remains accredited by SACSCOC and is in good standing.

Additional information about the Higher Learning Commission is available at **www.hlcommission.org**

Central Carolina Community College is accredited by the Southern Association of Colleges and Schools Commission on Colleges (SACSCOC) to award associate degrees. Degree-granting institutions also may offer credentials such as certificates and diplomas at approved degree levels. Questions about the accreditation of Central Carolina Community College may be directed in writing to the Southern Association of Colleges and Schools Commission on Colleges at 1866 Southern Lane, Decatur, GA 30033-4097, by calling (404) 679-4500, or by using information available on SACSCOC's website (www.sacscoc.org).

NOTE: The Commission on Colleges should be contacted only if there is evidence that appears to support an institution's significant non-compliance with a requirement or standard.

The college was accredited by the North Carolina State Board of Education in 1970, by the Southern Association of Colleges and Schools in 1972 and accreditation was reaffirmed in 1976, 1987, 1997, 2008, and 2018.

CCCC is a member of the American Association of Community Colleges. Its trustees are members of the Association of Community College Trustees.

In addition to being accredited by the Southern Association of Colleges and Schools Commission on Colleges, a number of curriculum programs are approved by various accrediting or licensing agencies:

- The Barbering program is licensed by the North Carolina Board of Barber and Electrolysis Examiners
- The Basic Law Enforcement Training program is certified by the North Carolina Criminal Justice Education and Training Standards Commission.
- The Computer-Integrated Machining with an emphasis in Tool, Die, and Mold Making program is accredited by the National Institute for Metalworking Skills (NIMS).
- The Cosmetology program is licensed by the North Carolina Board of Cosmetic Art Examiners.
- The Dental Assisting program is accredited by the Commission on Dental Accreditation.
- The Dental Hygiene program is accredited by the Commission on Dental Accreditation.
- The Emergency Medical Science AAS Bridge Program is accredited by the Commission on Accreditation of Allied Health Education Programs (CAAHEP) upon the recommendation of the Committee on Accreditation of Educational Programs for the Emergency Medical Services Professions (CoAEMSP).
- The Health Information Technology Program is accredited by the Commission on Accreditation for Health Informatics and Information Management Education (CAHIIM).
- The Medical Assisting Diploma program is accredited by the Commission on Accreditation of Allied Health Education Programs upon the recommendation of the Medical Assisting Education Review Board (MAERB).
- The Nursing programs are approved by the North Carolina Board of Nursing and going through initial Accreditations with the Accreditation Commission for Education in Nursing.
- The Radio Broadcasting program is approved by the Federal Communications Commission.
- The Veterinary Medical Technology program is accredited by the Committee on Veterinary Technician Educational Activities (CVTEA) of the American Veterinary Medical Association (AVMA).
- The Medical Sonography program is accredited by the Joint Review Committee on Education in Diagnostic Medical Sonography (JRC-DMS).

College Policies

College policies related to visitors and children on campus, drones on campus, student conduct, intellectual property, computer and internet use, housing, communicable diseases, tobacco on campus, solicitation and fundraising, and copyright can be found on the CCCC web site, in the Student Handbook, and in the CCCC Policies & Procedures Manual.

Academic Calendar

Grades due to the registrar's office (10-week classes, late session classes)	August 2, 9:00am
Summer Graduation	August 9, planned--time TBD

Learning Options at CCCC

Central Carolina Community College offers a wide range of programs to help you reach your goals—whether you're earning a degree, building job skills, or exploring new interests. This includes both **curriculum (credit)** programs that lead to associate degrees, diplomas, or certificates, and **continuing education (non-credit)** programs for workforce training, personal enrichment, or high school completion.

CCCC is proud of its long history of creating innovative programs that respond to the needs of our students, local businesses, and the communities we serve.

Explore your options and discover the path that’s right for you.

Learning Options at CCCC

Curriculum

Programs for college credit are classified as curriculum programs. Central Carolina Community College offers Associate in Arts, Associate in Engineering, Associate in Science, Associate in Arts in Teacher Preparation, and Associate in Science in Teacher Preparation degree programs that transfer to four-year colleges and universities; two-year programs that lead to an Associate in Applied Science degree; and programs that can be completed in one year or less and lead to a diploma and/or a certificate. Articulation agreements with four-year colleges and universities enable graduates to move seamlessly into additional education, if that is their goal.

A strong asset of the North Carolina Community College System is the flexibility in programs. When the job market no longer provides employment for graduates in certain areas, programs can be phased out so more critical labor needs may be met. It is not the purpose of the college to adopt a fixed curriculum; rather, its aim is to modify all programs to meet the ever-changing needs in the fields of employment.

The college reserves the right to cancel any course or program in cases of low enrollment or decreased budget. The college reserves the right to change any curriculum, and such changes may be made without prior notice.

Learning Options at CCCC

Non-curriculum

The college also offers non-credit courses in basic education and in technical, vocational, enrichment, and general interest areas. These non-curriculum courses do not count toward a college degree or diploma, but a certificate of completion is given and continuing education units are awarded. The Adult High School/High School Equivalency program awards a diploma or certificate. Continuing education classes award a diploma or certificate with continuing education units.

Continuing Education

Continuing Education provides opportunities for adults, regardless of educational backgrounds, to train and update their skills for employment, develop leadership and civic responsibility, improve in-home and community life, expand knowledge in general education, and develop creativity in the fine arts.

The Continuing Education division awards Continuing Education Units (CEU) for appropriate programs. The CEU is a nationally recognized records device for substantive noncredit learning experiences. A CEU is defined as “10 hours of participation in an organized continuing education experience under responsible sponsorship and qualified instruction or direction.” The following are continuing education programs for which CEU’s may be earned:

Occupational programs provide pre-employment, on-the-job, and in-service training of personnel for area businesses and industries. Occupational courses are available to the community and may also be developed for specific employer training needs. Courses may be delivered in a classroom, online, or lab environment. These courses may be offered “on site” or at a college location.

Emergency Services programs provide courses to meet the training needs of law enforcement, fire, emergency medical, and rescue services personnel. Its programs develop skilled responders, empowering them to act more effectively in emergencies.

Community Service programs are offered as a part of the commitment of the college to serve the total community. Offered on a day or evening basis, these courses are designed to meet the personal enrichment educational needs of adults in a variety of areas.

College & Career Readiness

The mission of the College & Career Readiness program is to prepare adults with the knowledge and skills necessary to be successful in postsecondary education and in the workplace. Anyone 16 years of age or older who has been out of school for a minimum of six months, may enroll in College & Career Readiness. The following programs are offered at various sites in the college’s three-county service area at no cost.

1. Adult Basic Education

Adult Basic Education is offered to individuals who performed below a high school level on a placement test and seek to improve basic skills in reading, writing, mathematics, and related subjects. These courses are designed to prepare students to transition into the High School Equivalency program or the Adult High School Diploma program.

2. High School Completion

- The High School Equivalency and Adult High School Diploma programs provide adults the opportunity to earn a high school credential.
- High School Equivalency (HSE): The HSE program allows an adult to take a series of tests to demonstrate attainment of the academic skills equivalent to those of a high school graduate. The HSE program supports preparation for both the GED® and HiSET®. The GED® includes four tests and is computer based. The HiSET® includes five tests and offers both computer-based testing and paper-based testing. HSE tests are fee-based.
- Adult High School Diploma (AHS): The AHS diploma program offers students an opportunity to complete the high school credits needed to obtain an adult high school diploma. Course and graduation requirements are in alignment with the standards established by the North Carolina State Board of Education, the local education agencies, and Central Carolina Community College. The AHS diploma is issued jointly by the local education board of the student's residence and the Central Carolina Community College's Trustees.

3. English as a Second Language (ESL)/English Literacy

The ESL program assists students whose first language is not English improve their English speaking, reading, and writing skills. Students may also choose to prepare for the US citizenship test and/or enroll in a computer literacy course.

4. Bridges to Living and Learning Academy (B.E.L.L.)

B.E.L.L. is a program for adults with intellectual or developmental disabilities. Eligible students must be referred by high school teachers, vocational rehabilitation counselors, academic advisors or guidance counselors. B.E.L.L. Academy's emphasis is on improving reading, writing, math, and computer skills; helping adults become more independent; and offering hands-on, real-life career experiences.

5. Basic Skills Plus

Basic Skills Plus is a program that allows students who are enrolled in College & Career Readiness and performing at the adult secondary education level to co-enroll in certain curriculum or continuing education career pathways. Tuition is waived for the first 12 credit hours of a curriculum program or 96 hours of a continuing education program.

YouthBuild

Central Carolina YouthBuild is a grant-funded program administered by the U.S. Department of Labor that assists youth between the ages of 16 and 24 who have barriers to education and/or employment. Participants are able to complete a high school credential, enroll in a career pathway in Construction Technology, Nurse Aide I or Culinary, and participate in leadership and community development activities. Support services, such as help finding employment, housing, child care, and transportation are offered. Email YouthBuild@cccc.edu for additional information.

Small Business Centers

The college's small business centers support the development of new businesses and the growth of existing small businesses through training, counseling, and resources. The college operates three small business centers, one in each of the counties within the college's service area. Through the centers, seminars are offered related to small business operations for entrepreneurs and prospective small business owners. Direct counseling and resources are provided to small business center clients. Additionally, the small business centers work in conjunction with other service organizations in the three-county service area to provide resources and support to small businesses. Centers have a special focus of assistance and loan referral for small businesses as needed.

Customized Training & Industry Services

The customized training program provides education and training opportunities for eligible businesses and industries. Those businesses and industries eligible for support through customized training include manufacturing, technology intensive, regional or national warehousing and distribution centers, customer support centers, air courier services, national headquarters with operations outside North Carolina, and Civil Service employees providing technical support to US military installations located in North Carolina. Resources may support training assessment, instructional design, instructional costs, job profiling, and training delivery for personnel involved in the direct production of goods and services. In order to receive assistance, eligible businesses and industries must demonstrate two or more of the following criteria:

- The business is making an appreciable capital investment.
- The business is deploying new technology.

- The business is creating jobs, expanding an existing workforce, or enhancing the productivity and profitability of the operations with the state
- The skills of workers will be enhanced by the assistance.

Learning Options at CCCC

Cooperative Innovative High Schools

Cooperative Innovative High Schools

Lee Early College
The college's Lee Main Campus is home to Lee Early College, an innovative partnership with Lee County Schools. Students earn both a high school diploma and an associate degree in five years. The student body is diverse, but its members are united by their personal motivation and ability to thrive in a college setting.

Harnett County Early College (HCEC)
The college's Dunn Center is home to HCEC, which encourages access to and completion of a college degree by year 13 with opportunities for transfer to senior institutions and options for accelerated coursework in the areas of business, culinary, early education, and information technology.

Chatham Early College
Chatham Early College is an innovative opportunity that includes a focus on science, math, engineering, and advanced course options and includes applied science programming offered in Chatham County, like electrical systems technology. Ninth graders have the opportunity to earn a high school diploma and an associate degree and transfer credits. Chatham Early College is housed primarily at the Chatham Center for Innovation in Siler City with students visiting the Chatham Main Campus for most college coursework.

Learning Options at CCCC

Career and College Promise

Career and College Promise provides seamless dual enrollment educational opportunities tuition-free for eligible North Carolina high school students in order to accelerate completion of college certificates, diplomas, and associate degrees that lead to college transfer or provide entry-level job skills. Central Carolina offers Career and College Promise pathways aligned with the K-12 curriculum and career and college ready standards adopted by the State Board of Education.

Learning Options at CCCC

Central Carolina Promise Program

The Central Carolina Promise/K14 Program provides recent high school students with free in-state tuition and required student fees for the two academic years immediately following graduation (up to five consecutive semesters). Full details of each county's eligibility requirements can be found on the Central Carolina Promise/K14 website.

Board of Trustees

John Bonardi
Appointed by Chatham, Harnett, and Lee County School Boards (Jointly)

Jim Burgin
Appointed by Harnett County Commissioners

James Crawford
Appointed by Chatham County Commissioners

Karen Howard
Appointed by Chatham County Commissioners

Derrick Jordan
Appointment: Chatham, Harnett & Lee County School Boards (Jointly)

James C. Kelly, Jr.
Appointed by the Governor

Patricia Kirkman
Appointed by the Governor

Chett Mann
Appointed by the NC House of Representatives

Gladys McAuley
Appointed by the Governor

Jerry Pedley
Appointed by the NC Senate

Julian Philpott – Chairman
Appointed by the Lee County Commissioners

Norman Chip Post, Jr.
Appointed by Chatham, Harnett & Lee County School Boards (Jointly)

Gordon Springle – Vice Chairman
Appointed by Harnett County Commissioners

Bill Tatum
Appointed by the Governor

Taylor Vorbeck
Appointed by Lee County Commissioners

Jim Womack
Appointment: Lee County Commissioners

**Current as of April 2025*

Personnel

(Highest Applicable Credentials Listed)

Abels, Lara
History Instructor
M.Ed., Campbell University

Absher, Ronald
Electrical Systems Technology Instructor
B.S., Computer Science, Duke University

Acevedo, Michelle
Esthetics Instructor
Cosmetology Certification, the Paul Mitchell School, Fayetteville, NC

Ainsworth, John
Information Technology Lead Instructor
M.S., Network Technology, East Carolina University

Allen, Maria
English Instructor
M.A., English Literature, Memorial University of Newfoundland

Allen, Roy
Dean, Public Safety
M.S., Criminal Justice, University of North Carolina at Chapel Hill

Alvarez, Marc
Nursing Instructor
Ed.D., Nursing Education, St. Paul University

Anderson, Patricia
Executive Director, Industry Services
B.S., Industrial Engineering, North Carolina State University

Ashe, Phillip
Humanities Instructor
M.A., Fine Art, University of North Carolina at Greensboro

Aucompaugh, Maryann
Department Chair, Business Technologies
M.A., Healthcare Administration, Franklin University

Autry, Tracy
Director of Secondary Partnerships
B.S., Business Administration, Franklin University

Avalos, Elizabeth
Custodian

Babb, Jennifer
Career and College Promise Advisor
B.A., Communication, North Carolina State University

Badillo-Reyes, Alondra
Education Navigator
M.Ed., North Carolina State University

Baker, David
Lead Instructor, Sciences
Ph.D., Physics, North Carolina State University

Baker, Randy
HVAC Technician
A.A.S., HVAC, Fayetteville Technical Community College

Balmori, Stephanie
English Instructor
M.A., English, University of South Alabama

Barefoot, Brenda
Administrative Assistant
A.A.S., Business Administration, NC Wesleyan College

Barnes, Robert
History Instructor
M.A., Liberal Studies, University of North Carolina at Wilmington

Barnes, Timothy
Psychology Instructor
M.S., Industrial Organizational Psychology, Capella University

Barrick, Emily
Health Information Technology Clinical Coordinator
B.S., Health Information Management, Charter Oak State College

Bartholomew, Ginger
Department Chair, Education Programs
M.A., Education, University of North Carolina at Chapel Hill

Battifelli, David
Biotechnology Instructor
Ph.D., University of North Carolina at Chapel Hill

Beam, Leigh
Department Chair, Social Sciences
M.A., Sociology, North Carolina State University

Beasley, Gary
Laser & Photonics, Lead Instructor
M.S., Industrial Technology, East Carolina University

Belcher, Emma
Biology Instructor
M.S., Biological Sciences, Clemson University

Bell, Charles
Department Chair, Welding
A.A.S., GOT, Concentration in Welding, Central Carolina Community College

Bennett, Thomas
Math Instructor
M.S., Mathematics, North Carolina State University

Bera, Barbara
Library Assistant
B.S., Library and Information Science, University of Southern Mississippi

Berrier, Amy
Associate Director, Financial Aid
M.Ed., Curriculum & Instruction/Higher Education, University of North Carolina at Greensboro

Bestwick, Walter
Department Chair, Building Construction Instructor
B.S., Business Management, Grove City College

Blakeley, Erin
Executive Director, Workforce Special Programs
M.B.A., Campbell University

Blakley, Kelly
Associate Director of Human Resources
B.S., Business Administration and Law, Western Carolina University

Blanchard, Jessica
AR/CR Accountant Supervisor
A.A.S., Accounting, Randolph Community College

Blankenship, Gary
Criminal Justice Technology Instructor
B.S., Criminal Justice & Criminology, Mount Olive College

Bogan, Annie
HR Coordinator
A.A.S., Paralegal Technology, Central Carolina Community College

Boggs, Jimmie
Supply Operations Coordinator

Bowen, Sandra
Communication Instructor
M.A., Communication, Wake Forest University

Boyce, Melissa
Education Residency Coordinator
M.A., Educational Leadership, East Carolina University

Boyer, Thea
Department Chair, Social and Human Services
M.A.M.F.C. and M.A.C.E., Southwestern University

Boyles, Laura
Institutional Research Analyst
Ph.D., Educational Research Methodology, University of North Carolina at Greensboro

---

Boykin, Donna
Program Coordinator, TRiO Student Support Services
M.S., Rehabilitation Counseling, Winston-Salem State University

---

Boykin, Rodney
Custodian

Bradbury, Amy
Veterinary Medical Technology Instructor
A.A.S., Veterinary Medical Technology, Central Carolina Community College

---

Breindel, Tiffany
Project Manager (EARTh)
A.S., Sustainability Technologies, CCCC

Brock, Beverly
Director, Health Programs - Continuing Education
M.S., Nursing Education, ECPI University

Brower, Latoya
Director, Operations & Staff Development
M.A., Business Administration, University of Mount Olive

Brown, Meghan
Vice President, Advancement and Operations
J.D., Campbell University

Brown, Jessica
Biology Instructor & Faculty Professional Development Coordinator
M.A., Animal Physiology, Clemson University

Brown, Terri
Executive Director, Small Business Center
M.S., Business, University of North Carolina at Pembroke

Browning, Kim
Veterinary Medical Technology Instructor
D.V.M., North Carolina State University

Bruner, Danielle
Coordinator of Accreditation, Enrollment, and Retention
B.S., Dental Hygiene, West Liberty University

Bryan, Kaylen
PC Technician I
A.A.S., Information Technology, Central Carolina Community College

Bryant, Lee
Controller
B.A., Business Administration/Computer Information Systems, Campbell University

Bryant, Vincent
Buyer/Equipment Coordinator
B.S., Finance, North Carolina Central University

Byrd, Jonathan
Maintenance Technician

Brzozowski, Kimberly
Education Navigator
B.A., English, University of North Carolina at Wilmington

Burch, Ashley
Education Navigator
B.A., English, University of North Carolina at Charlotte

Burgess, Megan
Dean of Onboarding and Advising
B.A., Special Education, University of North Carolina at Charlotte

Burke, Mary
Information Technology Instructor
M.A., Information Technology, American InterContinental University

Burton, Kelly
Culinary Arts Instructor
A.A.S., Culinary Arts, Kendall College

Butcher, Scott
Industrial Systems Technology Instructor
A.A.S., Industrial Systems Technology/Bioprocess, Central Carolina Community College

Butler, Eric
Assistant Director of Facilities
Certificate, Telephone Communication, Central Carolina Community College

Buxens, Begoña
Spanish Instructor
M.A., Romance Languages Spanish American Literature, University of North Carolina at Chapel Hill

Byington, Scott
Associate Vice President, Onboarding and Advising
M.S., Biology, West Virginia University
M.S., Academic Advising, Kansas State University

Byrd, Jonathan
Maintenance Technician

Byrd, Pamela
Administrative Specialist
A.A.S., Medical Office Administration, Central Carolina Community College

Cain, Carissa
Career and College Promise Advisor
M.A., Education, Tiffin University

Campbell, Barbara
Department Chair, Nursing
D.S.N., Grand Canyon University

Carpenter, Chelsie
Biology Instructor
Ph.D., Biochemistry and Molecular Biology, University of South Alabama

Carr, James
Associate Director of Student Onboarding and Success
M.S., General Administration, Central Michigan University

Carter, Amanda
Director of Distance Education
M.S., Vocational Education, East Carolina University

Carter, Jackson
Financial Aid Technician
B.A., Communication, North Carolina State University

Carter, Jordan
Director, TRiO Upward Bound Programs
M.A., Teaching, University of North Carolina at Chapel Hill

Carter, Juanita
Nurse Aide Instructor
M.S., Nursing Education, Western Governors University

Cassady, Brandon
Grounds Technician
A.A.S., Criminal Justice, Sandhills Community College

Castel, Marco
XR Developer (EARTh)
A.A.S., Information Technology, Diploma in Virtual and Augmented Reality Development, Eastern Iowa Community College

Castonguay, Sandra
Information and Engineering Technologies Department Chair
M.S., Technology Management, East Carolina University

Chance, Shavonda
Criminal Justice Instructor
M.S., Public Administration/Criminal Justice, University of North Carolina at Chapel Hill

Chapman, Lisa
President
Ed.D., Curriculum and Instruction, University of North Carolina at Chapel Hill

Chenoweth, Justin
3D Technical Artist (EARTh)
Diploma, Augmented and Virtual Reality, Eastern Iowa Community College

Childress, Jamie
Dean of Enrollment/Registrar
B.A., International Studies, University of North Carolina at Chapel Hill

Christian, Keisha
Chemistry Instructor
M.Phil., Chemistry, University of the West Indies

Christman, MontE
Executive Director of Information Technology
A.A.S., Computer Programming, Central Carolina Community College

Ciliberto, Craig
Department Chair, Transportation Technology
A.A.S., Automotive Technology, Central Carolina Community College

Clark, Brianna
YouthBuild Job Developer
B.S., Speech Language Pathology and Audiology, University of North Carolina at Greensboro

Clark, Vicky
Continuing Education Registrar
B.A., Business Administration, University of North Carolina at Greensboro

Clayton, Claudia
Dean, Career & Academic Engagement
M.S., Instructional Technology, Fort Hays State University

Cochrane, Alyson
Department Chair, English and Humanities
M.A., Education and Secondary English, Campbell University

Coffer, Emma
Financial Aid Advisor
B.S., Sport Management, Liberty University

Cole, Wayne
Automotive, Lead Instructor
A.A.S., Automotive Systems Technology, Central Carolina Community College

---

Cole, Ben
Lead Mechanical Engineering Technology Instructor
B.S., Industrial Technology, East Carolina University

Coleman, Kevin
Welding Instructor
Diploma, Machining Technology, Tool, Die & Mold Making Concentration, Central Carolina Community College
Diploma, Machinist, Central Carolina Community College

Collins, Sabine
Medical Assisting Practicum Coordinator
A.A.S., Medical Assisting, Central Carolina Community College

---

Coore, Michelle
Help Desk Support (IT)
A.A.S., Office Systems Technology, Central Carolina Community College

---

Core, Marisa
Mathematics Instructor
M.S., Mathematical Sciences, University of West Florida

Cortez Perez, Marbella
Cosmetology Instructor
Cosmetology Instructor Certificate, Central Carolina Community College

---

Cotten, Peggy
Library Assistant - Circulation
M.L.S., North Carolina Central University

Craig, Wendy
Nursing Programs Administrative Assistant
A.F.A., Music, Sandhills Community College

Crittenden, Felicia
Associate Vice President, Workforce Development & Continuing Education
M.S., Professional Writing, Towson University

Crissman, Nicole
Administrative Assistant
A.A.S., Accounting/Business Administration, Central Carolina Community College

Davin, Misty
Education Programs Instructor
M.A., Education, Indiana University of Pennsylvania

Davis, Brandon
PC Technician I
A.A.S., Computer Information Technology, Central Carolina Community College

Dalrymple, James
Lead Maintenance & Facilities Set Up Technician
A.A.S., Criminal Justice Technology, Central Carolina Community College

Del Valle-Blair, Sara
Director, Grants Performance
B.A., Business Administration, Campbell University

Dennison, Daniel
3D Technical Artist (EARTh)
A.S., Virtual and Augmented Reality Development, Eastern Iowa Community College

Dent, Ryan
PC Technician I

Dillon, Jennifer
Communication Instructor
M.A., Adult and Community College Education, North Carolina State University

Dilworth, Matthew
Graduation Coordinator/Records Assessment Specialist
B.A., Economics, Wake Forest University

Diniz, Beverly
Administrative Assistant
B.S., Biology, Manhattan College

Dishman, Marcie
Associate Vice President of Marketing and External Relations
Ed.D., Higher Education, Texas Tech University

Dorman, Kelly
Lead ACA Instructor
Ph.D., Forensic Psychology, Walden University

Dowdy, Alexandra
Director of Executive Operations
M.B.A., University of North Carolina at Wilmington

Dunham, Ian
PC Technician I
A.A.S., Computer Information Technology, Central Carolina Community College

Ellis, Theresa
Custodian

Erskine, Billy
Truck Driver Training Coordinator

Estes, Angela
Veterans Affair Coordinator
M.A., Education-Curriculum & Instruction, Middle Tennessee State University

Etchison, Carla
Payroll Supervisor/Benefits Administrator
B.S., Accounting, Chaplain College

Ewers, Garrick
Food Service Technology Instructor
B.S., Business Administration, Central Texas College

Fincher, Darren
Maintenance Supervisor
Diploma, Industrial Plant Management, Central Carolina Community College

Fink, Jessica
Records Assessment Specialist

Flannery, James
Information Technology Instructor
M. S., Engineering, Northeastern University

Flatley, David
English Instructor
M.A., English, East Carolina University

Fogarty, Melissa
CHSC Site Director/Department Chair, Medical Assisting
B.S., Organizational Administration, North Carolina Wesleyan College
A.A.S., Medical Assisting, Central Carolina Community College

Fonke, Anna
Administrative Assistant
B.A., Communication, Campbell University

Foster, David
Director of Civic Center
B.S., Hospitality Management, East Carolina University

Foxx, Randy
Custodian
B.S., Accounting, Livingston College

Franco, Timarie
Lead Career and College Promise Advisor/Instructor
Ph.D., University of South Florida

Francis, Julie
Medical Sonography Clinical Coordinator
A.A.S., Medical Sonography, A.A.S. Cardiovascular Sonography, Johnston Community College

Franklin, Jennifer
Nursing Instructor
Ed. D., Nursing, Duke University

Franks Jr., Gary
Grounds Technician, Chatham County

Frederick, Joseph
Lead Business Instructor
M.S., Business Administration, Columbia College

Freeman, William (Billy)
Audio and Video Production Technology Department Chair
B.A., Fine Arts, University of North Carolina at Greensboro

Friday, Talia
Academic Assistance and Writing Center Coordinator
M.A., Adult Education, East Carolina University

Frye, Lincoln
Workforce Continuing Education Program Coordinator
M.A., History, University of North Carolina at Charlotte

Gallien, Tara
Building Construction Technologies Instructor
Ed.D., Health Studies, Texas Women's University

Gardner, Billie
Custodian

Garner, Anthony
Lead Electrical Systems Technology Instructor
A.A.S., Electronic Engineering, Sandhills Community College

Garnett, J. Dwayne
Associate Director, Student Onboarding and Success/Limited Enrollment Coordinator
M.S., Healthcare Services Management, Webster University

Gault, Kaylon
Cosmetology Instructor
A.A.S., Cosmetology, Fayetteville Technical Community College

Gause, Tammy
Custodian

Gehrke, Tamara
Biology Instructor
M.S., Oral Biology, University of North Carolina at Chapel Hill

Genthe, Wade
Assistant Director of Security
A.A.S., Criminal Justice, Central Carolina Community College

Gibson, Kaleigh
Education Navigator

Gillis, Tara
Animal Facilities Manager
A.A.S., Veterinary Medical Technology, Central Carolina Community College

Gillespie, Richard
XR Developer (EARTh)
B.A., Cinema and Communications, University of Iowa

Gillespie, Robert
Senior XR Developer (EARTh)
Ph.D., English, University of Iowa

Gilmore, Felicia
Career Center Coordinator
A.A.S., Occupational Technology, Central Carolina Community College

Glover, Alonzo
Custodian

Godfrey, Brian
Maintenance Technician

Goins, Deanna
Career and College Promise Advisor
B.S., Health & Physical Education, Campbell University

Goldston, Rhonda
Custodian

Goodman, Fae
Chatham Early College Liaison/Instructor
M.S., Cultural Anthropology, Tulane University

Gonzalez, Jessica
Director of Human Resources
M.B.A., University of Phoenix

Gonzalez-Venegas, Juan
Maintenance Technician

Goodson, Drew
Associate Vice President, Financial Services/CFO
Ph.D., Educational Research and Policy Analysis, North Carolina State University

---

Green, Anita
Career Pathways Coordinator
M.A., Higher Education/Adult Education, Appalachian State University

---

Gregory, Dawn
Nursing Instructor
B.S., Nursing, University of North Carolina at Wilmington

Grubb, Brenda
Department Chair, Biotechnology
Ph.D., Molecular Genetics, George Washington University

Gustavson, Amy
Director, Title III and BOOST
M.S., Library Science, North Carolina Central University

Guzman-Ramirez, Liza
Biology Instructor and C-STEP Advisor
M.S., Environmental Manufacturing, Universidad Metropolitana

Hall, Jenna
Biology Instructor
M.S., Biology, Appalachian State University

Hall, Katie
Harnett County Provost Executive Assistant
A.A.S., Laser & Photonics Technology, Central Carolina Community College

---

Hall, Mark
Provost, Chatham
Ph.D., Educational Research and Policy Analysis, North Carolina State University

---

Hammond, Robert
Chemistry Instructor
Ph.D., Chemistry, University of Virginia

Hampson, Josh
Automotive Systems Instructor
B.S., Electronic Engineering Technologies, Western Carolina University

---

Hare, Emily
Executive Director, CCCC Foundation
Ph.D., Higher Educational Leadership, University of the Cumberlands

---

Harloff, Jason
Physical Therapist Assistant, Clinical Education Coordinator
M.S., Physical Therapy, D'Youville College

Harrington, Wendy
Custodian

Harris, Crystel (Kay)
Psychology Instructor
M.S., Psychology, Walden University

Harvey, Tiffany
Cosmetology Instructor
Vocational Cosmetic Science, Aveda Institute, Chapel Hill

Haslup, Jennifer
Chemistry Instructor
Ph.D., Fiber and Polymer Science, North Carolina State University

Hecker, Cody
Veterinary Medical Technology Instructor
A.A.S., Veterinary Medical Technology, Central Carolina Community College

Heesacker, David (Steve)
Business Administration Instructor
M.S., Management, Troy University

Heller, Janice
Student Learning Data Analyst
A.A.S., Specialized Business, Lehigh Valley College

Heptig, Richard
Automotive Instructor
B.A., Occupational Education, Western Carolina University
A.A.S., Automotive Technology, Piedmont Community College

Hernandez, Brandi
Director of Purchasing and Contracts
B.S., Business Administration, Operations and Supply Chain Management, East Carolina University

Hernandez Luciana, Karmisha
TRiO Veterans Upward Bound Assistant Programs Director
B.S., Business Administration and Law, Western Carolina University

Hernandez, Martha
Custodian Coordinator - Lee County

Himes, Marsha
Administrative Assistant, Chatham Health Sciences
B.S., History, University of Maryland

Hoel, Anna
Financial Aid Advisor

Hodges, Elizabeth
CCP Nurse Aide Coordinator/HHSC Site Coordinator
B.S.N., Mount Olive University

Holder, Chester (Tommy)
Chief Information Officer
A.A.S., Electronics Engineering Technology, Central Carolina Community College

---

Holder, Donna
Custodian

Holmes, Cristy
Associate Vice President for Student Learning
Ed.D., Community College Executive Leadership, Wingate University

---

Holt, Jessica
Veterinary Medical Technology Instructor
D.V.M., Tennessee Technological University

Holt, Jessica, M.
Nursing Program Simulation Coordinator
B.S., Nursing, Chamberlain College of Nursing

Hoyle, Jr., Kenneth
Vice President, Student Services
M.A., Public Administration, North Carolina State University

Humphrey, Anna
Mathematics Instructor
M.S., Mathematics Education, East Carolina University

Hunt, Kelvin
Executive Director, Athletics and Student Outreach
B.S., Health, PE and Recreation, University of North Carolina at Pembroke

---

Hunt, Scott
Director, Security
A.A.S., Criminal Justice Technology, Central Carolina Community College

Hunter, Gerald
Director, Apprenticeship & Applied Technologies/CWI Site Coordinator
B.S., Psychology/Liberal Arts, Excelsior College

Hurd, Brian
Maintenance Technician

Hurley, Joshua
Landscaping & Custodial Supervisor

Iceman, Ashley
Payroll/Travel Specialist

Jackson, John (Chris)
Machining Tool and Die Instructor
D.B.A., Walden University
A.A.S., Machining Technology/Tool Die and Mold, Certificate in Machining Technology, Central Carolina Community College

Jasso, Jesse
Director of Information Systems
A.A.S., Information Technology/Network Administration and Support Concentration, Central Carolina Community College

Jeffries, Christian
Grants Accountant
M.S., Accounting, Liberty University

Jobe, Kelsey
Mathematics Instructor
M.S., Mathematics, Montana State University

Johnson, Dianne
Medical Assisting Practicum Coordinator
A.A.S., Medical Assisting, Central Carolina Community College

Johnson, Jim
Enrollment Technologies and Survey Administrator
B.A., General Studies, Kent State University

Johnson, Joshua
Director, Corrections Education Programs
B.S., Industrial Technology, East Carolina University

Johnson, Susan
Department Chair, Cosmetic Arts
B.I.S., General Studies, University of North Carolina at Pembroke
A.A.S., General Occupational Technology— Cosmetology, Cosmetology Certificate, Esthetics Certificate, Central Carolina Community College

---

Johnson, Tyra
ABE Instructor
B.S., Business Administration, Winston-Salem State University

---

Jones, Christy
Administrative Specialist, Health Sciences and Human Services

---

Jones, Gina
EMS Administrative Assistant
B.S., Criminal Justice, Guilford College

Jones, Ryan
EMS Clinical Coordinator/Instructor
A.A.S., Emergency Medical Science, Guilford Technical Community College

---

Jones, Shawna
English Instructor
M.A., English, North Carolina State University

Jones-Elliott, Armani
Associate Director, TRiO Student Support Services
M.B.A., University of North Carolina at Pembroke

Kallimanis, Audra
Sociology Instructor
M.A., Sociology, Fayetteville State University

Kedzierski, Brian
Lead STEM Tutor
A.S., Central Carolina Community College

Kelly, Lanita
Purchasing Support Technician
B.A., English, Rutgers University

Kelly, Megan
Department Chair, Veterinary Medical Technology
A.A.S., Veterinary Medical Technology, Central Carolina Community College

Kelly, Tracy
Basic Law Enforcement Training Program Director
M.S., Justice Administration, Methodist University

Kennedy, Amy
Biology Instructor
Ph.D., Biomedical Science, Auburn University

King, Elizabeth
College and Career Readiness Instructor
B.S., Education, Kings College

Kirkman, Tammy
Basic Law Enforcement Training Coordinator

Klug, Kelly
Director of Grants Development
B.A., Communication Studies, Northwestern University

Knight, Lisa
Instructional Designer
M.A., Teaching/Science Education, University of North Carolina at Chapel Hill

Kohanowich, Robin
Sustainable Farming Coordinator
M.S., Agricultural & Extension Education, North Carolina State University

Koprowski, Bryan
Health & Fitness Science Instructor
M.A., Health Education and Promotion, East Carolina University

Lagunas, Elvira
Custodian

Lane, Samantha
Lead Career and College Promise Advisor/Instructor
M. A., Higher Education, Appalachian State University

Langston, Bayleigh Thomas
Mail and Print Production Specialist
M.A., Communication and Business Leadership, High Point University

Langston, Jodi
Nursing Instructor
B.S., Nursing, University of North Carolina at Wilmington

Lariviere, Nichelle
Assistant Director, Financial Aid

Lavere, John
Electronics Engineering Technology Instructor
M.S., Electrical Engineering, North Carolina State University

Lassen, Glenda
Accounts Payable Specialist

Lassiter, James
Lead Security, Chatham

Lofton, Nicole
Information Systems Technology Instructor
M.S., Computer Information Systems, University of Phoenix

Long, Lora A.
Department Chair, Math & Sciences
Ph.D., Biochemistry/Cell Biology, New York University

Lowe, Savannah
Financial Aid Technician

Love, Roger
Coordinator of Student Accessibility Services
J.D., University of North Carolina at Chapel Hill

Lujan, Jessica
Education Navigator and CCR Advisor
A.A., Randolph Community College

Lux, Elizabeth
Nursing Instructor
M.S.N., Nursing Education, Aspen University

Maddox, Cody
Mathematics Instructor
M.S., Mathematics, University of Louisiana at Lafayette

Malenick, David
Psychology Instructor
M.S., Psychology, Radford University

Marsh, Abigayle
Records Assessment Specialist
A.A.S., Business Administration, Central Carolina Community College

Martin, Denise
Dean of Health & Professional Services
Ed.D., Leadership, Liberty University

Mashburn, Christa
Director of Business Services
A.A.S., Business Administration, Central Carolina Community College

Matthews, Bea
Learning Support Facilitator
A.A., Business Administration, ECPI College of Technology

Matthews, Leslie
Administrative Specialist
A.A.S., Office Administration, Central Carolina Community College

Matthews, Jon
Provost, Harnett
Ed.D., Community College Executive Leadership, Wingate University

McCain, Deshawn
YouthBuild Student Success Advocate
M.A., Special Education, University of North Carolina at Pembroke

McCullen, Nicholas
Grounds Technician

McCullers, Arthur (Lee)
Lead Instructor, Barbering
Diploma, Barbering, Sherrills University of Barbering and Cosmetology

McElreath, Thadd
Health and Fitness Science, Department Chair
M.S., Heath, Physical Education and Recreation, Emporia State University

McGhee, Hope
Administrative Operations Assistant
M.A., Human Services, Liberty University

McIver, Latasha
Developmental Studies Reading Instructor
M.A., Education, Reading Education, University of North Carolina at Pembroke

McDaniel, Douglas
Lead Writing & Reading Center Coach
B.A., History, University of Minnesota – Twin Cities

McDougald, Brad
Assistant Athletic Director, Men's Basketball & Soccer Head Coach

McGowan, Neil
Graphic Artist & Multimedia Specialist
B.S., Technology, Bowling Green University

McKenzie, Heather
Lead, Career and College Promise Advisor
M.A., Sociology, Fayetteville State University

McKoy, Pamela
Continuing Education Medical Programs Administrative Assistant
B.A., Business Administration, University of North Carolina at Greensboro

McLamb-Collier, Amanda
Lead Instructor, Cosmetic Arts
AAS Cosmetology, James Sprunt Community College

McLeod, Jaime
Instructional Designer and Central Teaching & Learning Hub Co-Director
Ed.D., Community College Executive Leadership, Wingate University

McMahan, Andy
Director, Environmental and Natural Resource Technology (EARTh) Center; Co-Principal Investigator, Center for Renewable Energy Advanced Technological Education (CREATE)
B.A., Interdisciplinary Studies - Environmental Policy & Planning, Minor is Sustainable Development, Appalachian State University

McNeill, Christopher
Maintenance Supervisor
A.A.S., Industrial Systems/Bio-Maintenance, Central Carolina Community College

McNeill, Daniel
Director of Facilities Maintenance
B.S., Economics, East Carolina University

Mendez, Jaclyn
Veterinary Medical Technology Instructor
D.V.M., Oklahoma State University

Merle, Maribel
Adult English as a Second Language Instructor
B.A., Education, Normal Superior de la Laguna Cursos Regulares

Miller, Crissy
Administrative Coordinator
A.A., Central Carolina Community College

Miller, Dustin
Criminal Justice Department Chair
M.A., History, Liberty University

Miller, Faye
Custodian - HMC

Minter, Karen
Student Onboarding and Success Administrative Specialist
M.A., Special Education, Fayetteville State University

Minter, Regina
Department Chair, Culinary
B.S., Culinary Arts and Food Service Management, Johnson & Wales University

Minton, Rachel
Career Pathways Coordinator
B.A., Classics, University of North Carolina at Asheville

Montegna, Kassandra
Audio and Video Production Technology Instructor/4CNC PEG Manager
B.S., Communication/Radio/Video, Bradley University

Moore, Audrey
Administrative Specialist, Workforce & Continuing Education
A.A.S, Business Administration/Human Resource Management, Central Carolina Community College

Morales, Christina
Customized Training Program Project Coordinator
B.S., Business Administration, West Virginia University

Mummert, Gabrielle
Associate Director of Student Outreach and Recruitment
B.S., Early Childhood Education/Psychology, Susquehanna University

Murchison, Tanasha
Administrative Assistant
M.A., Human Resources Management, Webster University

Musselwhite, Laura
Administrative Assistant to Vice President of Student Services
A.A.S., Business Administration, Central Carolina Community College

Myrick, Timothy
Maintenance Technician

Nebolisa, Anozie
Information Technology Instructor
Ed.D., Higher Education, Capella University

Needham, Tiffany
Department Chair, Physical Therapist Assistant
M.S., Leadership, South University

Nelson, Gavin
Records Assessment Specialist
M.L.I.S., University of North Carolina at Greensboro

Newby, William
Education Navigator
B.A. Business Administration, Livingstone College

Newcomb, Chris
Enrollment Services Coordinator
M.B.A., Gardner-Webb University

Newcomb, Sara
Dean, Business and Applied Technologies
Ed.D., Higher Education, Western Carolina University

Nicely, Jena
Education Navigator
M.A., Counselor Education – Mental Health, University of Central Florida

Nickens, Samuel
Carpentry Instructor
A.A.S., Building Construction Technology, Central Carolina Community College

O'Quinn, Lisa
Library Information Technology Lead Instructor
M.S., Library Science, East Carolina University

Ocegueda, Heather
Associate Director of Student Onboarding and Success
M.A., Applied Psychology, Liberty University

Oldham, Leslie
Cosmetology Instructor
AAS Cosmetology, Central Carolina Community College

Oliver, Cris
Web Technician
M.S., Information Technology, University of Liverpool

Overcash, Kimberly
English Instructor
M.A., English, North Carolina State University

Pappas, Phillip
Small Business Center Coordinator
M.B.A., Frostburg State University

Parker, Erika
Health Information Technology Department Chair
M.H.A., Pfeiffer University

Parr, Gregg
Biotechnology Pathway Navigator
B.A., Political Science, Wittenberg University

Parrish, Chad
Programmer
A.A.S., Computer Programming; Internet Technology, Central Carolina Community College

Patterson, Kasey
Coordinator of Distance Education and Student Learning Support
B.A., Business Administration, St. Andrews University

Pearson, Kevin
Dean, College Access Services
D.S.L., Liberty University

Pearson, James
Lead Security Guard, Harnett County

Peluso, Michael
Information Technology Instructor
M.S., Information Technology, North Carolina Agricultural and Technical State University

Peng, Alice
Mathematics Instructor
M.S., Mathematics, University of North Carolina at Chapel Hill

Perry, Travis
Director of Instructional Support
A.A.S., Information Systems Technology, Central Carolina Community College

Peterson, C. Dane
Department Chair, Academic Transitions
M.Ed., Mathematics and Statistics Education, North Carolina State University

Perry, Fernanda
Dental Assisting/Hygiene Instructor
D.D.S., Howard University

Petty, Ramona
Education Navigator
B.A., Biology, Wake Forest University

Phillips, Jennifer
Enrollment Services Coordinator
B.S., English, State University of New York at Brockport

Pickens, Lauren
Assistant Director, YouthBuild Job Developer
B.S., Social Work, North Carolina State University

Pollard, Meggan
Events & Engagement Coordinator
B.S., Interior Design, Meredith College

Porter, Tanya
Director, TRiO Veterans Upward Bound
E.M.P.S., University of Arkansas for Medical Sciences

Pounds, Jessie
Communications Coordinator
B.A., Journalism, Emory University

Post, Brian
Senior Education Navigator
M.A., Christian Education, Southeastern Baptist Theological Seminary

Preston, Katherine
English Instructor
Ph.D., English, Brown University

Price, Jr., Thomas
Maintenance Technician
Electrical Wiring Vocational Certificate, Johnston Community College

Proud, Anna
Nursing Instructor
M.S.N., Poznan University of the Medical Sciences

Provost, Margaret
Lead Accounting Instructor
M.S., Accounting, University of North Carolina at Chapel Hill

Pruitt, Morgan
Outreach and Assessment Librarian
M.S., Library and Information Studies, University of North Carolina at Greensboro

Pugh, Tarrell
Custodian

General Admissions Information

Central Carolina Community College welcomes all students and does not discriminate based on race, color, national origin, religion, age, sex, sexual orientation, gender identity, family or veteran status, disability, or any health or genetic information.

To enroll in a curriculum (credit) program, students must have a high school diploma or high school equivalency.

If you do not meet these requirements, you may still be eligible to enroll after meeting with the Vice President of Student Services or their designee to discuss your options.

Our admission policies follow state guidelines (1D SBCCC 400.2).

Admissions

Onboarding and Advising & Student Services Divisions

The purpose of the Onboarding and Advising and Student Services Divisions is to assist students with various aspects of their education, from admissions through graduation. More specifically, Onboarding and Advising handles admissions, testing, registration and records, graduation ceremonies, and transfer assistance. Student Services handles athletics, financial aid, veterans' benefits assistance, assistance to the disabled, coordination of student activities, and strategic initiatives such as TRIO.

Admissions

Open Door Policy

All 58 campuses of the North Carolina Community College System operate under an "open door" admissions policy to all applicants who are legal residents of the United States. This means that any person, whether a high school graduate or non-graduate, who is eighteen years old or older and who is able to profit from further formal education, will be served by the institution. An "open door" policy, however, does not mean that an applicant will not have to meet additional admissions requirements set for specific, individual curriculum programs. Such requirements can be found in this College Catalog (also available online), a curriculum guide sheet, or from an Education Navigator. Students who withdraw from such programs must meet these specific program admissions requirements, plus any new or modified ones, should they wish to attempt to re-enter the program. The college reserves the right to limit enrollment in a curriculum program to a number that can be accommodated by the resources of the college and to satisfy accreditation standards.

The college may refuse admissions to applicants who meet at least one of the following exceptions:

1. Admissions may be denied to any applicant during any period of time that they were suspended or expelled from any other educational entity.
2. Admission may be denied to any applicant to protect the safety of the applicant, student body, faculty/staff, and library patrons when there is an articulable, imminent, and significant threat by documenting (a) the detailed facts supporting the rationale for denying admission, (b) the time period within which the refusal to admit the applicant shall be applicable, and (c) the conditions upon which the applicant would be eligible to be admitted.

The Dean of Student Onboarding and Success, working through the Admissions staff, will recommend to the Vice President of Student Services if an applicant should be denied admission based on safety concerns. The Vice President of Student Services, who is designated as the Chief Admissions Officer of the college, will then notify the applicant in writing of the college's admissions decision. Any appeals of admission denials should be made in writing directly to the Office of the College President.

Admissions

How to Apply

All applicants to CCCC will be provisionally admitted to the college. To be officially accepted into a curriculum program, a student must complete all curriculum program admission requirements. Only students who have been officially accepted into a curriculum program will be eligible to receive federal aid, Veteran's benefits, or third-party sponsorship.

- Complete and submit the admission application.
- Submit an official high school transcript or high school equivalency. Official transcripts are required. A transcript is an "official transcript" when it is received by the college through the mail or secure electronic document provider directly from the high school, college, or other institution. It is the applicant's responsibility to request that transcripts be sent.
- Students who desire to have the Student Records and Registrar's Office evaluate any previous coursework for transfer credit evaluation must request transcripts from previously attended institutions of higher education. If transcripts are not requested by the student and received by the college, the student is therefore forfeiting any potential credit and must take all of the prescribed courses in their chosen program of study here at the college.

- Students must satisfy the placement testing requirement by meeting the state-required waiver or qualifying GPA by submitting an official high school transcript and/or official placement test scores, or taking the placement test.
  NOTE: *Applicants who take the placement test, but do not meet the minimum required test scores may be required to take developmental courses. These courses may lengthen the time required to complete a credential. See specific course descriptions and prerequisites/corequisites. Only students who graduated high school more than 10 years ago or who have completed high school in another country are eligible to take the placement assessment. The following students may be exempt from taking the placement test at CCCC*:
  ● *Beginning Fall 2025 semester, students who have graduated high school with a qualifying unweighted GPA OR have acceptable SAT/ACT scores within the last ten years.*
  ● *Students who have acceptable SAT, ACT, Asset, Compass, or Accuplacer test scores within the last five to ten years.*
  ● *Students who have transfer credits for English and mathematics courses required for the curriculum major. If students switch to a major requiring additional English and/or mathematics courses for which they do not have transfer credits, they may need to take the placement test or be evaluated by the placement model to determine appropriate proficiency level.*
  ● *Students who enter CCCC under the terms of an articulation agreement with another college, provided they have completed the English and mathematics courses required for the articulated program.*
  ● *Students who have acceptable Advanced Placement (AP) credits earned in the last ten years for required English and mathematics courses.*

- Students using VA benefits must obtain all college transcripts from all previously attended institutions of higher education.
- Students applying for competitive academic programs (Dental Programs, Medical Sonography, Medical Assisting, Nursing, Veterinary Medical Technology, and Esthetics) must submit college transcripts from all previously attended institutions of higher education.

- Students must supply additional information if requested. The admissions decision for the Associate Degree Nursing, Dental Assisting, Dental Hygiene, Medical Sonography, Medical Assisting, Physical Therapist Assistant, Practical Nursing, Veterinary Medical Technology, and Certificate in Esthetics is made based on students meeting minimum requirements. Limited Enrollment programs enter students in a number of ways, including: maintaining a list and entering students based on date of application, entering students based on a ranked GPA, or by using a ranked point system. These requirements and processes are college approved policies and processes. Students must meet the Minimum Admissions Criteria in order to apply by the published application deadline. Please see the individual program curriculum descriptions for additional information. Additional admission procedures and requirements for certain programs are listed in the catalog and on the individual program website. The programs are:
  ● Associate Degree Nursing
  ● Basic Law Enforcement Training (BLET)
  ● Certificate in Esthetics
  ● Cosmetology Instructor Training
  ● Dental Assisting
  ● Dental Hygiene
  ● Esthetics Instructor Training
  ● Medical Assisting
  ● Medical Sonography
  ● Practical Nursing
  ● Veterinary Medical Technology

Admissions

Readmission of Military Students

The college will promptly readmit a student with the same academic status as they had when last attending or accepted for admission if they cannot attend school due to military service. The student must notify the college of the military service and intention to return through oral or written notice of such service as far in advance as is reasonable under the circumstances, or by an attestation of military service that necessitated the student's absence from school upon readmission. Notification can be provided to Student Onboarding and Success, the Registrar's Office, or the Office of the Vice President of Student Services. No notice is required if precluded by military necessity, such as service in operations that are classified or would be compromised by such notice. Notice of intent to return to school must be within three years after the completion of the period of service. If a student is hospitalized or convalescing due to an illness or injury incurred or aggravated during the performance of service, the student must notify the college within two years after the end of the period needed for recovery from the illness or injury. A student who fails to apply for readmission within these periods will be subject to the college's established general practices concerning leave of absence.

Admissions

Placement Testing

Student Onboarding and Success administers the placement test to students who have been out of high school more than 10 years or graduated high school outside of the United States. The purpose of the test is to assess a student's readiness for the requirements of the curriculum. Test scores are used for academic advisement and course placement, to include a transitions course or a math or English course with a co-requisite course if needed.

Students enrolled in select Health Science programs are required to complete additional testing. Please see the program's Education Navigator for further information.

The following placement testing policies will apply:

1. Students must present photo identification in order to take the placement test.
2. Placement test scores will be valid to use for placement for ten (10) years.
3. Students are permitted to take the placement test two times total as a student at CCCC, twice within five (5) years. If a student retests, the highest score on each section will be used for advisement and course placement.
4. Students are not permitted to take the placement test if they are currently enrolled in a developmental course.
5. Placement test scores are transferable to other colleges with permission of the student.
6. It is the discretion of the Dean of Student Onboarding and Success and/or the Associate Vice President of Onboarding and Advising to grant or deny further retesting attempts or testing exemptions.

Admissions

Self-Service

Students can use Self-Service to collaborate with their faculty advisors and Education Navigators to develop a comprehensive academic course plan for current and future semesters. Self-Service also provides students with access to transcripts, plans of study, and other important advising information.

Logging into Self-Service
Self-Service is an online academic planning tool where CCCC students can:

- Communicate with Education Navigators and faculty advisors.
- Create course success plans.
- Plan for upcoming class registration periods to have faculty advisors approve course selections
- Once your advisor has approved the course selections, students can register themselves via Self-Service
- Self-Service can be accessed at https://www.cccc.edu/self-service/

For technical assistance contact (919) 718-7201 or (800) 682-8353 ext. 7201

Admission Categories

Central Carolina Community College welcomes students from a variety of educational backgrounds. This section outlines important admissions information for applicants with unique circumstances, including home-schooled students, graduates of correspondence schools, undocumented and DACA applicants, international students, and individuals enrolling as special credit or non-degree seeking students. Review the requirements carefully to ensure a smooth admissions process.

Admissions Categories

Home-schooled Applicants

Home-schooled applicants must provide the following documentation for admission:

- Proof of listing with the N.C. Division of Non-Public Education (DNPE).
- A full, final high school transcript including a list of all courses taken, the term and year courses were taken, final course grades, and a final grade point average. The transcript should include the official school name and the administrator's signature (usually parents or guardian).

NOTE: *All academic instruction in core subjects MUST come from parents, legal guardians, or a member of the household and not from anyone outside the household. (Two household schools are permitted to work together.) Colleges generally assume that a member of the household was the supervising instructor for each of the core subjects unless contrary evidence is presented. The home school may be asked to present a statement that a member of the household was the instructor of the core subjects. The NCDNPE can provide information identifying which subjects are core subjects.*

- Nationally standardized test scores for the last two years of home school instruction, measuring competencies in verbal and quantitative areas. The home school is permitted to establish its own minimum scores on this test. The home school established minimum score must be indicated on the transcript and scores must meet or exceed such scores.
- Failure to meet all transcript verification requirements may result in the college's inability to certify the secondary school's validity for the purpose of Title IV funding.
- Persons home schooled may also elect to take the high school equivalency exam from their local community college in lieu of a high school diploma. If the student passes this test, the high school equivalency is equivalent and can take the place of a high school diploma. The cost of the high school equivalency exam is minimal.

Admissions Categories

Correspondence Schools for High School Diplomas

Central Carolina Community College will accept any correspondence school registered with the state of North Carolina's Department of Non-Public Education for admission to the college. However, the college may be unable to certify the validity of some schools for the purpose of Title IV funding.

While Central Carolina Community College does not endorse any of the following schools, successful completion of one of these programs will fulfill the high school graduation admissions requirement for the college. This is not an exhaustive list.

- American School
- A Becka Academy
- Continental Academy - degree must have been received after July 2006
- Keystone National High School
- Penn Foster, formerly Thompson Educational Direct - degree must have been completed after November 1, 2002
- Ashworth High School (part of Ashworth University) formerly James Madison High School

If you have questions about another correspondence school, please contact the Registrar's Office. Correspondence schools must have regional accreditation at the time of graduation for the college to accept the diploma. For more information about regional accreditation, please go to Regional Accreditation for Online Schools (URL: https://www.thoughtco.com/regional-accreditation-for-online-schools-1097947) or Council for Higher Education Accreditation Directory (https://www.chea.org/directories).

Admissions Categories

Undocumented Immigrant Applicants

Under the State Board of Community Colleges' rule "Admission to Colleges," undocumented immigrants will be admitted if the following requirements are met:

- Must be a graduate of a United States public high school, private high school, adult high school, or home school that operates in compliance with state or local law or must have completed a High School Equivalency Diploma
- Must pay the out-of-state tuition rate
- Undocumented immigrants will be permitted to register for classes once the late registration period begins.

Additionally, when considering a program of study, undocumented immigrants should be aware that federal law prohibits states from granting professional licenses to undocumented immigrants (see NCCCS CC-13-019, 8 U.S.C. 1621(a) and (c)(1)(A) and SBCC Code 1D SBCCC 400.2(b)(5)). Further, students lawfully present in the United States shall have priority over any undocumented immigrant in any class or program of study when capacity limitations exist, such as programs with competitive-entry waitlists.

Admissions Categories

Deferred Action for Childhood Arrivals (DACA) Applicants

Applicants who have been granted deferral under the DACA program are responsible for presenting documentation to establish that they have DACA classification. This documentation includes the I-797, Employment Authorization Document (EAD), and social security card. DACA students are held to the general

admission standards and procedures and pay the out-of-state tuition rate. Per State Board of Community College Code 1D-SBCC 400.2, Deferred Action Childhood Arrival (DACA) students may not be eligible to sit for licensure but are not prohibited from enrolling in a health science or professional service program that leads to licensure. However, acceptance into the college does not guarantee acceptance to a specific program. DACA students MUST meet all of the program requirements for consideration and acceptance as does any other student. Verified DACA students do not have to wait until the late registration period to enroll in classes.

Admissions Categories

Students Needing State Authorization

Central Carolina Community College has been approved by North Carolina to participate in the National Council for State Authorization Reciprocity Agreements (NC-SARA). SARA is an agreement among member states, districts, and territories that establishes comparable national standards for interstate offering of postsecondary distance education. CCCC is approved to serve students in 49 states (all but California), the District of Columbia, Puerto Rico and the U.S. Virgin Islands (St. Thomas, St. Croix, and St. John).

Students who live in a state or pursue programs of study other than those for which the college is approved will be admitted to CCCC, but will not be allowed to register until authorization has been obtained. Students should consult with their state prior to enrolling in programs that require licensure or certification.

Central Carolina Community College determines a student's location for the purposes of state authorization at the time of a student's initial enrollment. If a student's location changes, a Change of Student Data Form is completed by the student and is processed by the Student Records and Registrar's Office.

Admissions Categories

International Students

CCCC does not currently accept international applicants who do not reside in the United States. Central Carolina Community College does not issue any student an I-20 required for an F-1 immigration student visa.

Admissions Categories

Special Credit Students

An applicant 18 years or older may enroll as a special credit student without specifying an educational objective or program of study. To be admitted, the special credit student needs only to complete an application. It is to the student's advantage to declare an educational objective and to complete all of the admission procedures as soon as possible after enrollment. Special credit students are not eligible to receive financial aid or veteran's benefits and must meet all prerequisite requirements for each course enrollment.

Residency Status for Tuition

The tuition charge for persons who have been legal residents of North Carolina for at least 12 months is less than for nonresidents. Session Law 2013–360 directs the University of North Carolina (UNCGA), the North Carolina Community College System (NCCCS), the North Carolina State Education Assistance Authority (NCSEAA), and the North Carolina Independent Colleges and Universities (NCICU) to create a centralized, uniform process for determining residency for tuition purposes and for administration of state financial aid.

Purpose and Background

Purpose and Background

The state of North Carolina partially subsidizes the cost of tuition for all students whose domicile, or permanent legal residence, is in North Carolina. Since it first became a state, North Carolina has abided by the philosophy that an educated public is necessary to a democratic government and that the State, therefore, has an obligation to provide for the education of its people. Article IX, Section 9, of the State Constitution states: “The General Assembly shall provide that the benefits of the University of North Carolina and other public institutions of higher education, as far as practicable, be extended to the people of the State free of expense.” Therefore, while North Carolina welcomes out-of-state students it considers the privilege of providing a reduced in-state tuition rate to be a taxpayer benefit.

This centralized process is known as the Residency Determination Service (RDS). In order for a student to receive the benefits of in-state tuition, a residency determination from RDS is required as part of admission. To learn more about residency and complete a determination, please visit the North Carolina Residency Determination Service website.

Residency Determination Service (RDS)

The purpose and mission of RDS is to provide leadership and administration of residency determinations in accordance with North Carolina residency laws and applicable federal statutes. The RDS goal is to provide students access to transparent information and the opportunity to claim NC residency in a simple, accurate, and straightforward manner. For more information on residency for tuition purposes contact RDS at:
Email: rdsinfo@ncresidency.org
Phone: (844) 896-2411
Fax: (919) 835-2427
North Carolina Residency Determination Service website

Determining Residency Status

Determining Residency Status

The specific requirements for establishing residency for tuition classification purposes are prescribed by state law. A North Carolina resident for tuition purposes is a person or a dependent person (dependent according to IRS tax code) whose parent or legal guardian has established and maintained legal residence in North Carolina for at least 12 months. Residence in North Carolina must be legitimate and be a permanent situation rather than just for the purpose of maintaining a residence prior to enrollment at an institution of higher education.

Under North Carolina law, to qualify for in-state tuition, you must show that:

- You have established your legal residence (domicile) in North Carolina.
- You have maintained that domicile for at least twelve (12) consecutive months before the beginning of the term.
- You have a residentiary presence in the state.
- You intend to make North Carolina your permanent home indefinitely (rather than being in North Carolina solely to attend college).

Other persons not meeting the 12-month legal residence requirement may be classified as North Carolina residents for tuition purposes only if they fall within one of the limited categories authorized by the North Carolina Legislature. All other persons are ineligible for classification as a North Carolina "resident for tuition purposes" and will be charged out-of-state tuition. Learn more about residency and complete a determination.

Information relating to claimed North Carolina Residence for tuition purposes will be required from all applicants. The NC Residency Determination Service, RDS, provides the sole determination for NC residency status. Applicants seeking reclassification who claim to be North Carolina residents must work through RDS for reclassification or to appeal. When a student is reclassified, the student must notify the college to have the new status applied to the student's account. Individuals on active military duty in North Carolina and their dependents may be granted waivers that reduce tuition to in-state rates. The federally mandated Choice Act allows recently discharged military personnel or their dependents certified to use VA benefits to be awarded in-state rates. The burden of establishing facts that justify classification of a student as a non-resident entitled to in-state tuition rates is the responsibility of the applicant. Decisions by school officials will be based on the requirements of the North Carolina General Statutes and regulations specified in the Residence Manual to assist the public higher education institutions for North Carolina in the matter of student residence classification for tuition purposes.

Applicants with questions not covered by this section should read detailed guidelines provided in the North Carolina State Residence Classification Manual or information provided on the Residency page on the CCCC website. The Residency Status determination is a part of the application; however, applicants will be required to complete a more in-depth form if reclassification or waiver is requested.

Tuition

The tuition rate is set by the North Carolina General Assembly and is subject to change. Visit Tuition and Fees for the most up-to-date information.

A senior citizen may audit a course section without payment of any required tuition or registration fee.

Refund Policy–Tuition

A tuition refund shall not be made except for the following circumstances:

- A 100% refund shall be made if the student officially drops prior to the first day of the academic semester as noted in the college calendar. Also, a student is eligible for a 100% refund if the class in which the student is officially registered is canceled.
- A 75% refund shall be made if the student officially withdraws from classes prior to or on the official 10% point of the course session or semester. State Board of Community College Code IE SBCCC 900.

Should a student, having paid the required tuition for a term, die during that term (prior to or on the last day of examinations), all tuition and fees for that semester may be refunded to the estate of the deceased. This is state policy as stated in the North Carolina Administrative Code, Chapter 23 2D.0202.

Tuition

Business Office

Receipt of tuition and fees, collection of parking fines, and payment of refunds are major responsibilities of the Business Office. The Business Office is open between 8:00 a.m. and 5:00 p.m. daily, Monday through Thursday, and between 8:00 a.m. and 3:30 p.m. on Friday, excluding holidays. The Business Office is also open during evening hours during the registration period at the beginning of each term.

Tuition

Bookstores

Central Carolina Community College participates in the BibliU Access (First Day Access) program, which provides students with access to required course materials through the learning management system beginning on the first day of class. Students are automatically enrolled in the program when they register for classes and may opt out by the census date each semester. Students who opt out are responsible for obtaining required course materials independently.

Tuition

Special Apparel and Equipment

Students enrolled in the Automotive Technician, Barbering, Basic Law Enforcement Training, Cosmetology, Dental Assisting, Dental Hygiene, Esthetics, Machining, Medical Assisting, Medical Sonography, Motorcycle Mechanics,

Associate Degree Nursing, Tool and Die Making, Welding, and Veterinary Medical Technology curriculums will be required to purchase special items of apparel and/or equipment, such as uniforms, lab jackets, tools, gloves, etc. Most of these items may be purchased in the college bookstore.

Fees

In addition to tuition, there are a few required fees that help support student services, technology, campus safety, and course materials. This section explains what each fee covers—like your student activity fee, graduation fee, and any course-specific costs—so you know exactly where your money is going.

Fees

Student Insurance

A $1.60 student accident insurance fee will be charged each semester to curriculum students. While stringent precautions are taken to ensure all students safety, it is in the best interest of all students to provide some measure of insurance protection. The college will maintain a group policy providing insurance protection, and all students will be covered. International students are encouraged to secure more complete coverage.

Fees

Malpractice Insurance

A $10 malpractice fee will be charged each semester for students enrolled in applicable courses. All students in healthcare and personal service programs must have malpractice insurance. For questions regarding the malpractice insurance policy, please contact the Business Office.

Fees

CAPS Fee

A campus access, parking, and security fee of $50 per semester is charged to all curriculum students.

Fees

Student Activity Fee

A $35 activity fee is charged to curriculum students for the fall and spring semesters. A $5 activity fee is charged to all curriculum students for summer semesters. The student activity fee provides the revenue necessary to provide services and activities for the student body. Typically, student activity fees provide the following benefits: student handbook, student ID's, parking stickers, various student activities, guest speakers, as well as other events. The student fee also funds the CCCC intercollegiate athletic program.

Fees

Computer Use and Technology Fee

A $48 technology fee is charged each semester to all curriculum students. The computer use and technology fee is used to support the procurement, operations, and repair of computer and other instructional technology including supplies and materials that support technology.

Fees

Ceremony Fee

A $5 ceremony fee will be charged each semester to all curriculum students. The ceremony fee will help fund the cost of graduation ceremonies, cap and gowns, diplomas, etc.

Fees

Distance Education Fee

A $15 distance education fee will be charged for each course taken online. hybrid, blended, video-conference, web-conference, and lab co-requisite courses are exempt from this fee. This fee is used to support the licensing, hosting, and maintenance of online technologies used in distance education, including the learning management system, plagiarism detection service, and streaming video content. No separate fees or costs associated with verification of student identity are required.

Fees

Course Specific Fees

Course specific fees may be associated with certain courses. These fees will be noted on student's registration statements and will vary by course.

Fees

Breakage Fee

Breakage, damage, or loss due to student negligence, carelessness, or other mishandling of school supplies, materials, or equipment is the responsibility of the student. The student will be required to pay for such items and may be subject to disciplinary action.

Fees

BibliU Course Materials Fee

The BibliU course materials fee is added to courses that participate in the College's digital course materials program. This fee provides students with immediate access to required digital textbooks and course materials through the College's learning management system on or before the first day of class.

The fee is **$22 per credit hour** and is included with tuition and fees at the time of registration. Financial aid may be used to cover this cost.

Students are automatically enrolled in the BibliU program but may choose to opt out. Students who opt out are responsible for obtaining all required course materials independently. The opt-out deadline is the course census date, which you will find on the course syllabus. If a student opts out by the deadline, access to materials will be removed and the fee will be reversed.

Instructions for opting out are provided via email and within the learning management system.

Financial Aid

Financial aid options are available at Central Carolina Community College for degree-seeking students in qualified programs. CCCC awards federal and state grants, scholarships, and/or work-study employment. Eligible students may receive one or more of these types of financial aid to assist with tuition, fees, books, and other educational related expenses.

The Financial Aid Office utilizes the Free Application for Federal Student Aid (FAFSA) to determine student eligibility for financial aid. All students are encouraged to complete the FAFSA as early as possible each year

To learn more about the types of aid available, visit Financial Aid.

Financial Aid

Financial Aid Eligibility Requirements

In order to receive financial aid from federal and state programs and to continue one's eligibility once aid has been awarded, the following criteria must be met:

- Be a U.S. citizen or eligible non-citizen
- Not be in default of any prior student loan or owe monies to any Federal Student Aid program
- Have a high school diploma or a General Education Development (GED) certificate, or have completed homeschooling. If you don't, you may still be eligible for federal student aid if you were enrolled in college or career school prior to July 1, 2012. Visit Eligibility Requirements for additional information
- Have a valid Social Security number
- Demonstrate financial need
- Apply for admissions to CCCC and have all admissions requirements met:
  ○ Submit an official high school transcript from an accredited high school/home school or an official GED transcript.

○ Be enrolled in an eligible program as a regular student seeking a degree or certificate.
○ Be currently maintaining Satisfactory Academic Progress (SAP). The SAP Policy can be found at: SAP Policy.

Financial Aid

Dependency Status for Financial Aid

A student will need to determine whose information to report on the FAFSA. An independent student will report income and asset information for themselves and spouse, if married. A dependent student will report income and asset information for themselves and parents. Not living with parents or not being claimed by them on tax forms does not determine dependency status for federal student aid. For more information, you may visit The Federal Student Aid website.

Financial Aid

Financial Aid Application Process

Students interested in applying for federal and/or state financial aid must:

- Create a Federal Student Aid (FSA) username (ID) and password
- Complete the Free Application for Federal Student Aid (FAFSA) on the Federal Student Aid website.

Review the FAFSA:
The FSA ID has replaced the FAFSA PIN. The FSA ID confirms your identity when you access your financial aid information and electronically sign Federal Student Aid documents. If you do not already have an FSA ID (different from the old PIN number) you can create one when logging into studentaid.gov. You can still create an FSA ID if you have forgotten or do not have a PIN.
OR
Request a paper FAFSA by calling (800) 433-3242; for hearing impaired contact (800) 730-8913.

Follow up:
You will receive a FAFSA Submission Summary at the address and/or the email address you listed on the FAFSA. This form is for your records. The FAFSA Submission Summary is NOT an award letter. You will receive notification from the Financial Aid Office when or if:

- additional information is required to complete your application
- your eligibility status has been determined
- an award has been placed on your student record

Financial Aid

Federal Aid Enrollment Status for Credit Hour Programs

Federal student aid is awarded based on the expected family contribution (EFC) and SAI (Student Aid Index) as determined by the FAFSA and prorated depending on the student's enrollment status. Full-time awards are subject to change based on the Federal Pell Grant LEU (Lifetime Eligibility Used). Federal student aid is awarded based on the Student Aid Index (SAI) as determined by the FAFSA and prorated depending on the student's enrollment status. Full-time awards are subject to change based on the Federal Pell Grant LEU (Lifetime Eligibility Used). The Federal Pell Grant is awarded at 100% of eligibility for 12+ credit hours and is prorated for any enrollment of less than 12+ credit hours. Students do NOT have to be full-time to receive the Federal Pell Grant. Awards will be prorated based on enrollment status.

State Aid:
Students enrolled for less than six (6) credit hours are NOT eligible to receive the North Carolina Guarantee Scholarship (Next NC). State aid is awarded by the state for the summer terms if funding is available.

Enrollment Status for Clock Hour Programs
BLET–Basic Law Enforcement Training (C55120) and Esthetics Certificate (C55230) are clock hour programs, not credit hour programs. Enrollment status is determined by the number of clock hours completed as the semester progresses. For additional information regarding clock hour programs, contact the Financial Aid Office.

Financial Aid

Financial Aid Award Process

Students are notified of financial aid award decisions for the academic year once the financial aid file is complete. All notifications will be emailed and available on Self-Service unless the student has opted in to receiving paper notifications. To ensure prompt processing of the financial aid application, students must complete the FAFSA early and turn in all required paperwork to the CCCC Financial Aid Office via eforms by notated priority dates available on the Financial Aid page each semester.

Financial Aid

Financial Aid Satisfactory Academic Progress

In accordance with federal and state regulations, CCCC's Financial Aid Office is required to evaluate a student's satisfactory academic progress at the end of each term (fall, spring, summer), to determine financial aid eligibility for the following term. Satisfactory academic progress evaluations will include all periods of enrollment whether students received or did not receive financial aid for periods of enrollment and include credit hours earned at other institutions and transferred into the student's program of study at CCCC.

In order to be eligible for federal, state, and institutional aid, students must meet both quantitative (time-based) and qualitative (grade-based) standards.

Grade-based Standard (GPA)

Grade Point: Maintain a minimum cumulative grade point average (GPA) of 2.0.

Time-based Standard (PACE)

Completion Rate: Complete 67% percent of the total cumulative credit hours attempted. For example, if a student has attempted 100 credits, the student must complete 67 credits to meet the completion rate requirement.

Maximum Timeframe:

Complete the requirements for an eligible program of study within a timeframe not to exceed 150% of the published program length. For example, if an academic program length is 60 credit hours, the maximum credit hours eligible for financial aid is 90 (60 * 150% = 90). Students may only receive financial aid for two Associate programs at CCCC. Students who have completed one degree (certificate, diploma, or associate) will be placed on Maximum Time Frame and be required to appeal for another program. CCCC Financial Aid will only pay for two Associate Degrees. Once you have completed/graduated with two Associate Degrees your financial aid eligibility will be terminated.

Note: Developmental coursework will be included in the time-based standard and is limited to 30 credit hours.

Financial Aid Treatment of Selected Grades

Withdrawals/Drops: Credit hours in which a student receives a grade of “W” or “WF” are included in the number of attempted hours, but do not count toward successfully completed hours. Excessive withdrawals may affect your ability to meet satisfactory academic progress standards.

Incompletes: Credit hours in which a student receives a grade of “I” are included in the number of attempted hours, but do not count toward successfully completed hours. Grades of “I” are treated as an “F”, which negatively affects GPA.

Fails: Credit hours in which a student receives a grade of “F”, “WF”, “R” are included in the number of attempted hours, but do not count toward successfully completed hours. In addition, these grades negatively affect GPA. Students with failed grades may have difficulty meeting the satisfactory academic progress standards.

Audit and Never Attend: An audit “AU” or never attended “NA” grade is not considered attempted coursework. It is not included in the students’ GPA or completion rate evaluation. A student cannot receive financial aid for courses that they audit or never attend.

Repeat Courses: Per federal regulations, a student may repeat a previously passed course (grade of “D” or better) one additional time. Repeat courses are included in total attempted earned hours.

Credit by Exam: Credit hours in which a student receives a “CE” is included in attempted and completed hours for the time-based standards of completion rate and maximum time frame. A student cannot receive financial aid for a “CE” credit.

Transfer Credit: All hours transferred and accepted from other institutions are included in the number of hours attempted and completed. In addition, a student’s maximum time to receive financial aid will be reduced by the equivalent transfer of credit hours towards the degree.

Eligibility Status

Satisfactory: Students who meet the minimum requirements (cumulative 2.0 GPA, 67% completion rate, and have not reached 150% maximum time frame for enrolled program of study) of satisfactory academic progress standards are placed on this status.

Warning: Students who do not meet the minimum requirements (cumulative 2.0 GPA and 67% completion rate) after an official evaluation at the end of a semester will be placed on warning for the following semester. Students may continue to receive financial aid during the warning period.

Suspension: Students on warning status who fail to meet the minimum requirements (cumulative 2.0 GPA and 67% completion rate) or have not met the minimum requirements for two consecutive terms will no longer be eligible for financial aid.

Maximum Time Frame: Students who have reached the maximum credit hours allowed for the program of study will be placed on this status. Attempted credits from all enrollment periods at the college plus all applicable transfer credits are counted; whether the student received financial aid for those terms is of no consequence.

Probation: Students who have successfully appealed financial aid suspension are placed in probation status. Students in probation status are eligible to receive financial aid for one (1) semester, after which they must be in satisfactory status or meeting the requirements of satisfactory academic progress terms and conditions.

Termination: Students on probation status who do not adhere to the success plan that they were given will be placed on Financial Aid Termination. Students who have been terminated are no longer eligible for financial aid until the minimum satisfactory academic progress standards are met.

Appeals/Regaining Eligibility for Financial Aid

Students who fail to meet the standards of the satisfactory academic progress policy will become ineligible for financial aid immediately. Students with documented extenuating circumstances beyond their control may submit an appeal to the Financial Aid Office for review. If the appeal is approved, financial aid eligibility will be reinstated on a probationary status.

Students may also regain financial aid eligibility if they meet the minimum requirements of CCCC's Satisfactory Academic Progress Policy. Students may achieve good standing by enrolling for classes at their own expense.

SAP Evaluations and Notifications of Eligibility Status

Returning students are evaluated on a continuous basis from the first enrollment at CCCC unless a mitigating circumstance is considered. Returning students who were previously enrolled under an academic progress policy other than the current satisfactory academic progress policy will be required to meet the standards of the current policy at the end of the returning semester.

The Financial Aid Office will send correspondence of eligibility status to students receiving federal and/or state aid when SAP is evaluated at the end of the semester.

Return of Title IV/State Funds Policy

Students who are receiving financial aid and withdraw/drop from all classes prior to completing more than 60 percent of the semester will have their eligibility for financial aid recalculated and may be required to repay all or a portion of any federal and/or state financial aid funds received for that semester. Students are responsible for paying any debts to Central Carolina Community College. A “hold” will be placed on the student’s record until all charges are paid in full.

Academic Policies & Procedures

This section outlines the key academic standards and expectations that guide your progress at Central Carolina Community College. From grading and course registration to credit transfer, withdrawals, and graduation requirements, you’ll find the policies and procedures that support your academic journey.

Academic Policies & Procedures

Orientation

All new students are expected to participate in an orientation process that is intentionally planned and guided by Onboarding and Advising. CCCC’s orientation model consists of (1) in-person and virtual orientation sessions that will help students make an initial connection to the campus, faculty and staff, students, services, and policies; and (2) ACA “first-year experience” courses designed with a common core curriculum that help to introduce students to more intensive academic and college-related concepts to encourage persistence and college/career success. Students are expected to enroll in the required ACA course during one of their first two terms of enrollment. Students who do not enroll or successfully complete the required ACA course in their first term will be expected to take it in the next term.

ACA Course Waiver Guidelines

The following students may be waived from the ACA requirement by an academic dean but may still need to fulfill the one credit hour on their program of study:

- Individuals who have earned a college degree from a regionally accredited institution or individuals who have completed and received credit for at least 18 hours credit for prior academic work and/or who demonstrate competency and skills that will facilitate the successful transfer into and persistence in the chosen degree program at Central Carolina Community College will qualify for a waiver for the ACA requirement. At the dean's discretion, transfer students with 12 hours of earned credit will also be considered if earned as a fulltime student; or
- Those who have completed an ACA course at the 100-level or above from Central Carolina Community College or another North Carolina community college, or who have received prior credit for an equivalent course.

Students who receive the proper signatures on the Credit by Experience form will then be referred to Student Advising and Success to complete an online ACA tutorial that covers CCCC success.

Academic Advisors

The role of the academic advisor is to serve as the primary contact with the student for their academic activities while enrolled at CCCC, to provide referrals to college resources, and to assist in overall academic and career planning.

The student is expected to confer periodically with their advisor (at least twice each semester) regarding academic standing, early registration, or any other areas of concern. Students are required to meet with their advisor to approve their courses for registration for the subsequent semester.

More information about advising at CCCC, including the roles of advisors and how they work with students, can be found on the college's advising page.

Registration

All curriculum students must register prior to or at the beginning of each term during the time specified for that purpose on the college calendar. Each semester, returning students are encouraged to register early for the subsequent semester. Students are expected to pay tuition charges in full by the designated pay date. Failure to do so results in the student losing their schedule.

Course Load

Students enrolled for 12 or more semester credit hours during the fall and spring semesters are designated as full-time students.

No additional tuition is charged for credit hours over and above 16. Normally, the course load range is from 16-19 semester credit hours. Students may take no more than 19 semester credit hours during fall or spring semester without special permission of their advisor and the chief academic officer or vice president of student services.

Students enrolled for six or more semester credit hours during the summer semester are designated as full-time students. Pell recipients must enroll in at least 12 semester credit hours to receive a full Pell award for a summer semester. Students may take no more than 12 semester credit hours during the summer semester without special permission of their advisor and the vice president student services or chief academic officer. Students are not permitted to register for more than 14 semester credit hours during the summer semester.

Students experiencing academic difficulty will be advised to take a reduced course load.

Definition of a Credit Hour

According to CCCC policy, the college follows the requirements of the North Carolina State Board of Community Colleges in awarding curriculum credit hours for instruction. The amount of credit hours awarded for each course is determined by the North Carolina Community College System and listed in the Combined Course Library available on the North Carolina Community College System webpage.

Following is the NCCCS convention for awarding credit hours from course hours:

- For every 16 classroom hours, one semester (credit) hour is awarded.
- For every 32 hours of "experiential laboratory work," one semester (credit) hour is awarded.
- For every 48 hours of "faculty directed laboratory work" one semester (credit) hour is awarded.
- For every 48 clinical hours, one semester (credit) hour is awarded.
- For every 160 work experience hours, one semester (credit) hour is awarded.

All programs of study meet the NCCCS requirement set forth in statewide curriculum standards. Following are the number of credit hours required for associate degree, diploma, and certificate programs:

	AAS	DIPLOMA	CERTIFICATE
Minimum General Education Hours	15	6	0
Minimum Major Hours	49	30	12
Other Required Hours	0-7	0-4	0-1
Total Semester Hours Credit (SHC)	64-76	36-48	12-18

**Any CCCC credential that contains a total number of credit hours that falls outside of the defined range are exceptions approved by the NCCCS and show accurately in the required state curriculum standards.*

Section Numbers: How Courses Are Identified

Each course at CCCC is assigned a **section number** (for example, *H01*, *LN1*, *or PWA*). This number identifies important details about the course, including the **location**, **instructional format**, and **time of day**. Section numbers help students and advisors select the correct course during registration.

---

1. First Character: Course Location

The first character indicates the **campus or instructional site** associated with the course.

LETTER	LOCATION
L	Lee Main Campus (Sanford)
H	Harnett Main Campus (Lillington)
P	Pittsboro Campus
S	Siler City Campus
D	Dunn Center
F, M	Health Sciences locations
I, J, T, V, W, U, C, N, etc.	Local high school sites (Career and College Promise/early college)
G	Special off-campus location
L (for fully online courses)	Online courses administered by the Lee Campus

Hybrid courses use the first character to note the campus where on-site meetings occur.

2. Second Character: Instructional Format

The second character designates the **delivery method** or **special instructional category**.

CHARACTER	FORMAT DESCRIPTION
0 (zero)	Standard in-person course
N	Fully online (no required campus meetings)
H	Hybrid: instruction primarily online with required campus meetings
B	Blended: instruction primarily in person with some online components
C	Live interactive delivery between campuses (video conference/SmartRoom)
W	Weekend instruction
K	High school CCP section taught at a school site
L	CCP online
E	Early College designation

3. Third Character: Time of Instruction

The third character identifies whether the class begins during the daytime or evening.

FINAL CHARACTER	INDICATES
1–9	Day or weekend course beginning **before 5:00 p.m.**
A–Z	Evening or weekend course beginning **at or after 5:00 p.m.**

Some short-session courses may include additional digits (e.g., **181, 182, 281**) to indicate specific 8-week terms and section sequences.

Illustrative Examples

SECTION	EXPLANATION
H01	Day course located at the Harnett Campus
P0A	Evening course located at the Pittsboro Campus
LN1	Online course administered by the Lee Campus
PH1	Hybrid day course hosted at the Pittsboro Campus
LW1	Weekend course at the Lee Campus beginning before 5:00 p.m.
NK1	High school CCP course at Northwood High School
LN181	First-session, 8-week online course (Lee Campus administered)

Summary

Section numbers provide essential information about course **location**, **format**, and **time**, supporting students, families, and advisors in academic planning and registration.

Academic Policies & Procedures

Transfer to and from CCCC

Central Carolina Community College offers Associate in Arts, Associate in Science, Associate in Engineering, Associate in Arts in Teacher Preparation, Associate in Science in Teacher Preparation, and Associate in Applied Science degrees, as well as diplomas and certificates.

Transfer to Four-Year Institutions

In accordance with the Comprehensive Articulation Agreement and Transfer Assured Admissions Policy between the North Carolina Community College System and the University of North Carolina (UNC) System, CCCC graduates who complete an Associate in Arts or Associate in Science degree and meet all other requirements are assured admission into one of the UNC system's 16 public universities. Students who complete the Associate in Engineering and its corresponding requirements are not guaranteed admission into a public or private university but will meet the core requirements for transfer to the state's public and private universities with undergraduate

engineering programs. The Associate in Arts in Teacher Preparation degree and the Associate in Science in Teacher Preparation degree prepare students for articulated transfer to designated senior institutions. CCCC also has transfer agreements with several colleges and universities outside the UNC System. Check with your academic advisor for more information on transfer credits.

Enhanced Transfer Partnerships

Central Carolina students have a number of transfer options and can transfer credits to in-state public and private colleges and universities as well as out of state institutions. Students are advised to work with their advisor to explore the transferability of credits and credentials. CCCC has worked with a number of institutions, known as Enhanced Transfer Partners, which provide extra incentives or guarantees related to transfer.

For more information, contact the Associate Dean of Academic Advising and Transfer or visit Transfer Partnerships.

Associate in Applied Science Degree (AAS) Transfer

Although the Associate in Applied Science degree is designed for workforce training, many colleges and universities will accept transfer credit from CCCC Associate in Applied Science degree students who wish to pursue a four-year degree. Credit granted may range from partial to full credit toward a bachelor's degree program. AAS students wanting to transfer are encouraged to meet with a CCCC college transfer advisor and with the appropriate admissions officer at the four-year college to discuss transfer credit.

Resident Transfer Credit

When a student transfers from one curriculum to another within the college, all courses applicable to the new program for which the student has earned credit will transfer as resident credit depending upon the curriculum guidelines and academic policies in effect at the time of transfer. Some courses may be ineligible for transfer based on time limitations set by specific curriculum programs.

Transfer Credit from Another Institution

CCCC accepts transfer credit from regionally accredited institutions under the following rules:

- Higher education institutions (colleges) transfer credits may be accepted only from regionally accredited institutions.
- A course grade of "C-" or better is required for all transfer credit.
- Students must request official transcripts to be sent to the Student Records and Registrar's Office for evaluation.
- When deemed necessary, students must provide course descriptions and/or course syllabi if they are needed to determine credit eligibility.
- Some courses may be ineligible for transfer credit based on time limitations as set by specific curriculum programs.

Credit will be granted on a course-by-course basis for courses closely paralleling those offered at the college and must meet the credit hours of the CCCC course for which transfer credit is granted. Transferred credit will not be calculated in the grade point average.

Alternative Credit / Credit for Prior Learning

The Student Learning and Student Services divisions collaboratively ensure appropriate procedures and guidelines exist for granting and recording the amount and level of credit for each course.

Amount of Alternative Credit Allowed

- At least 1/4 of credit for a certificate, diploma, or associate degree required for graduation must be earned at Central Carolina Community College.
- No more than 20% of credit for a certificate, diploma, or associate degree required for graduation may be earned through credit by experience.
- A student may earn alternative credit in the following ways:

Advanced Placement (AP), CLEP, DANTES

Students may request credit for subjects tested under advanced placement exams such as AP, CLEP, and DANTES. Subjects must be applicable to the student's current curriculum program requirements and test scores must meet American Council on Education (ACE) recommendations. Such credit must be supported by official test score reports. The following rules apply:

- Students must request that official score reports be sent to the CCCC Student Records and Registrar's Office for evaluation.
- Credit will be granted only for scores earned within the last ten (10) years unless approved by the chief academic officer.
- Credit will be granted on a course-by-course basis for courses closely paralleling those offered at the college and must meet the credit hours of the CCCC course for which transfer credit is granted.
- Such credit will not be calculated in the grade point average.
- An exam score of 3 or better is required to receive credit for an AP course.
- Recommended ACE cut-off scores will be used for CLEP and DANTES.
- Advanced Placement Credit will not be calculated into the GPA.

Credit by Examination

Students with prior proficiency in a course due to previous educational or work experience may wish to apply for credit for prior learning. The college helps to facilitate this goal by allowing challenge exam requests to award credit by exam. This option is available for selected courses as determined by the department chair/program director. A proficiency demonstration may be a written exam, oral exam, shop exercise, lab exercise, or combination.

To receive credit by examination, the student must complete the following:

- Complete the Challenge Exam Request form prior to the start of the semester/session or within the first few days (fourth day of the 16-week session; third day the 12-week session; second day of an 8-week session).
- Show evidence of preparedness for a proficiency demonstration (e.g., high achievement in secondary school, military service, and/or work experience) that must be submitted to and approved by the department chair/program director or their delegate.

- Take the proficiency exam administered by the instructor no later than the fourth day of the 16-week session; no later than the third day of the 12-week session; no later than the second day of an 8-week session for the term in which the Registrar will transcribe the course. This allows the student to register for the subsequent class following in sequence.
- Earn a grade of 85% or better on the proficiency exam.

College faculty and staff must complete the following:

- Department chairs will approve or deny requests in a timeframe consistent with procedure and assign an instructor to administer the exam.
- The assigned instructor records the challenge exam score on the Challenge Exam Request form and submits the form to the Records Office to award credit.
- The Records Office enters the student's proficiency exam score under 'Other Tests' in the Student Information System and assigns a grade of "CE" (Credit by Examination).

Proficiency demonstrations may:

- only be attempted once.
- only be attempted for the initial enrollment in the course.
- not be attempted for courses being audited.
- not be attempted for courses where the student has previously received a grade of A, B, C, D, F, W, or WF.

Credit granted through a proficiency exam:

- Will not be calculated in the grade point average.
- May not be transferred to other institutions.

Articulated CTE High School to Community College Credit

Students may request articulated credit based on CTE courses completed from a NC public high school if they meet the following criteria:

- To receive articulated credit, students must enroll at the community college within two years of their high school graduation date.
- Students must have earned a final grade of B or higher in high school CTE courses.
- Students must have earned a score of 93 or higher on the standardized CTE post-assessment.
- Students will complete a HS to CC Articulated Credit form available on the website.
- The registrar will verify high school graduation date, CTE course taken, course grade and post-assessment grade.
- Awarded credit will be issued tech prep non-course credit with a grade of CE which will not be included in GPA calculations.

Credit by Experience

Students may request credit for work experience, skills, or professional licensure or certification that directly correlate with competencies required in a specific course. The following procedures apply:

- Requests for credit by experience must be properly made and acted upon prior to the 10% point of the class and must be made in writing on the Request for Credit by Experience form.
- Credit by experience may not be granted for work based learning courses.
- The department chairperson/program director or lead instructor will guide the student in determining the appropriate documentation necessary to evaluate the request. Documentation required will vary depending upon the field of study.
- For guidance, the following are examples of the appropriate documentation: official work history with job responsibilities and proficiency ratings verified by supervisors and human resource officers within the company; a completed thesis verified by an official transcript could serve as verification that a student should receive credit for a technical writing course; electronically recorded presentations (taped presentations could be evaluated to determine credit by experience for an oral communications class); and brochures announcing a pottery exhibit and displaying the creations of the student could be used for an art class.
- Experiences, which may require a demonstration of one's ability, must be approved by the student's curriculum department chairperson/program director or lead instructor, the subject area department chairperson/program director, and the chief academic officer.
- Experiences must be officially documented per the college's request.
- Veterans may apply credit for training received under the armed forces college training programs and some specialized and technical training completed under the auspices of the armed forces. Appropriate documentation must be provided.
- The approved credit recommendation should be submitted to the Records and Registrar's Office.
- The registrar will record a grade of "EL" on the transcript with credit hours; however, no quality points will be assigned.
- Documentation shall be kept on file for five (5) years in the Registrar's Office.
- Credit granted for experience will not be calculated in the grade point average.
- Financial aid is not available for credit by experience.
- Credit by experience will not be entered on a student's record until after the census date of the student's first enrolled curriculum course with the college.

Internal Articulated Credit

Students may be granted articulated curriculum credit for non-credit courses that have an approved internal articulation agreement on file in the Registrar's Office.

Independent Study

Under extenuating circumstances, a student may enroll in a course through independent study, adhering to the following steps for an independent study course:

1. The student must complete the Independent Study form.
2. Approval of the instructor of record, the department chairperson/program director, and the appropriate curriculum dean, demonstrated by their signature on the Independent Study Form, is required.
3. The student enrolling in the independent study course must also complete regular registration procedures.
4. The student and instructor of record must meet for a minimum of ten (10) contact hours for any independent study course.
5. Course requirements must be completed in the same term as registered.

Faculty serving as instructor of record for one or more Independent Study courses are subject to the following:

- Must meet with student for a minimum of ten (10) contact hours during the semester
    - Contact for independent study purposes is defined as synchronous interaction between the student(s) and the instructor of record.
    - Examples of approved methods of contact may include, but are not limited to, face-to-face meetings, phone calls, shop/lab time, and the use of interactive communication technology, such as FaceTime, Zoom, and/or Video Conferencing.
- Must meet with the student at least once before the ten percent point.
- Must record and document all contact hours met for attendance purposes.
- Must follow all college policies related to student attendance, communication, and grading.
- Must submit grades to the Registrar's office by the due date.
- Instructor compensation for Independent Study Courses is supplemented in the form of a stipend.

Independent Study courses are not considered as part of the course load for the instructor of record.

Academic Policies & Procedures

Course Substitution

Central Carolina Community College may allow courses to be substituted in a curriculum for a student only under extenuating circumstances and only if the substitution is within the North Carolina Community College System's curriculum standards.

The course(s) used as a substitute must have credit hours that are at least equal to the number of credit hours of the original course.

- The substitute course(s) must have relevance to the curriculum and to the course for which the substitution is made, unless the course is being used as a free elective.
- Required core courses as outlined in North Carolina Community College System curriculum standards may not be substituted without review and approval of the chief academic officer.

- Requests to substitute courses that were completed at institutions other than a North Carolina community college must be accompanied by a full course description and accreditation status at the time the course was completed from the institution from which the course is being transferred. If necessary, the department chair/program director may request a course syllabus if the course description is not detailed enough. It is the responsibility of the student to provide all requested documentation.
- Course substitutions must be submitted and processed prior to the census date of the substituted course.
- The Registrar's Office requires documentation in order to process the substitution in the student information system.
- The Course Substitution form must be used.

Course Policies

Time Provisions for Completing a Curriculum Program

The catalog of record is the catalog that is current at the time a student enrolls at CCCC in a program of study. If a student changes the program of study, then the catalog of record becomes the catalog that is current at the time of that change of program. To graduate under a program of study, a student must meet the requirements of the catalog of record or any catalog in effect within the next five years as long as the student has been continuously enrolled.

If a student breaks enrollment for one academic year (fall and spring consecutively, or spring and fall consecutively), the catalog of record will become the catalog that is current at the time of re-entry. From that point of reentry, the rule of continuous enrollment will apply. The assigned faculty advisor and/or registrar have/has the authority to choose a catalog within a five-year period of continuous enrollment that best suits the student's needs for the particular program of study at the time of graduation.

Exceptions to this policy must be approved by the chief academic officer or designee. External agencies, accrediting agencies, and the North Carolina Community College System may make changes which impact program requirements.

Auditing Courses

A student who desires to take a course without credit may choose to audit the course by completing the Audit Declaration form available through their faculty advisor on the college intranet; having it signed by the instructor, department chair, and dean; turning it in at registration; and paying full tuition. An audit student cannot change the course from audit to credit or from credit to audit after the last day to register or drop/add a course. A grade of "AU" will be assigned to the student upon completion of the course.

Auditing a course is subject to permission of the instructor and is contingent upon space available in the class.

The registrar will ensure that all faculty receive a copy of the completed Audit Declaration Form in order to know who is auditing their classes.

Financial aid is not available for course audit.

A special exclusion exists for senior citizens who wish to audit a class. Individuals 65 years and older may elect to audit a course if space allows. No tuition will be charged to the individual although the student will be responsible for any applicable fees. A grade of SR will be assigned to the student at the time of enrollment. No credits attempted or completed will be reflected on the student's transcript and no quality points will be awarded. The student must provide a photo ID documenting the age requirement or a birth certificate and complete the auditing form. This exclusion cannot be utilized until the add registration period has ended to insure space availability for credit-seeking students.

Curriculum Course Repetition

A student may repeat a course to eliminate a failing grade, to attempt to earn a higher grade, or to earn credit for which transfer credit has not been granted. All course grades will be recorded on the transcript; however, the highest grade will be used for computing total credit hours attempted and passed, total grade points, and grade point averages. No course may be counted more than once for graduation. No course, except developmental courses, may be repeated more than twice. An exception may be granted for courses that receive a "W" grade, which may be repeated more than twice with approval of the dean.

Certain regulations may prohibit veterans and other financial aid recipients from receiving financial aid for repeating courses previously passed. It is the student's responsibility to determine status in regard to financial aid.

Financial aid is available to repeat a "passed" class (grade of "D" or better) one additional time for a higher grade. Students can receive financial aid to repeat a failed class. However, students must meet the minimum requirements of Satisfactory Academic Progress standards at the end of each semester. Financial aid does not do grade replacements.

Academic Forgiveness

Students may request academic forgiveness for grades of D or lower guided by the following conditions:

1. Students who (a) were not enrolled in college curriculum courses for 36 consecutive months (three years) or longer, and (b) have been re-admitted to the college, seeking acceptance in a limited enrollment program and complete at least 12 credit hours of coursework at the 100-level or above with a minimum quality point average of 2.0.
2. Students meeting the criteria for 1a and 1b should visit with their Education Navigator to review the Academic Forgiveness guidelines/steps and will be connected to the Dean of Student Onboarding and Success and the Dean of Health Sciences and Human Services for final approval towards academic forgiveness.

If the student is granted academic forgiveness, the following conditions apply:

1. Previous grades of D, F, and WF will not be used when calculating the cumulative GPA. Recalculated grades must not have been counted under a previously-granted certificate, diploma, or degree from Central Carolina Community College.
2. The student's full academic record from Central Carolina Community College will still be recorded on all subsequent transcripts.
3. Academic forgiveness is only available once for each student.

4. Academic forgiveness is used for calculation of the cumulative academic GPA and will not be changed on the student's transcript.
5. Due to federal regulations, the Financial Aid Office takes all attempted courses into account from a student's transcript when determining financial aid eligibility.
6. The Vice President of Student Services and Chief Academic Officer must approve any exceptions to this policy on a case-by-case basis.

Removal of Incomplete

Instructors may assign in accordance with NCCCS guidelines a grade of "I" (Incomplete) to any student who needs additional time to complete course requirements.

For each grade of "I," the instructor must fill out a Requirements to Remove Incomplete form indicating what the student must do to earn a final grade, attach a copy to the grade report submitted to the registrar, and send a copy to the student and the appropriate dean. The student must take the initiative to remove the Incomplete by the midterm date of the next semester (fall, spring, or summer) as specified on the college calendar.

Unusual and extenuating circumstances may be cause for allowing extended time to remove an Incomplete. These circumstances must be determined by the instructor and student with notification of the extended time to the registrar. A student cannot graduate with an "I" on their record if the course is required for graduation.

If the student fails to complete requirements necessary to remove the Incomplete when prescribed and/or the instructor fails to turn in a final grade on an Instructor's Grade Change report by the midterm date of the next (fall, spring, or summer) semester as specified in the college calendar, a grade of F will be assigned by the registrar and computed in the student's cumulative grade point average.

Academic Policies & Procedures

Curriculum Course Repetition Policy

A student may repeat a course to eliminate a failing grade, to attempt to earn a higher grade, or to earn credit if transfer credit has not been granted. All course grades will be recorded on the transcript; however, the highest grade will be used for computing total credit hours attempted and passed, total grade points, and grade point averages. All grades will be counted for calculations of satisfactory academic progress (SAP) for financial aid. No course may be counted more than once for graduation. No course–may be attempted a third time without department chair approval. In exceptional circumstances, a course may be repeated a fourth time with academic dean approval. The fourth attempt at CCCC is the student's final attempt. Courses transferred into CCCC do not count toward the number of attempts allowed, but may be considered in financial aid eligibility. Courses the student drops prior to or during the add/drop period do not count toward the number of attempts allowed. CCCC will follow all state and federal requirements and policies related to course repetition.

Procedure

Students who wish to attempt a course for the third time shall complete the form to request the third attempt and schedule an appointment with the department chair to discuss challenges and plan for successful completion of the course. The department chair must approve the request for registration to proceed. In exceptional circumstances, if students request to take a course a fourth time, they must complete the form to request the fourth attempt and

schedule an appointment with the academic dean. The academic dean must approve the request for registration to proceed. No student may attempt a course more than four times at CCCC. Certain regulations may prohibit veterans and other financial aid recipients from receiving financial aid for repeating courses previously passed. It is the student's responsibility to determine status in regard to financial aid.

Academic Policies & Procedures

Prerequisites/Corequisites

Central Carolina Community College and each student are responsible for ensuring that prerequisite (course taken prior to another course) and corequisite (course taken at the same time or prior to another course) requirements have been satisfied.

Prerequisites and corequisites serve as safeguards to successful course and program completion in that they ensure proper knowledge and background for higher-level courses. In the case of corequisites, the goal is to ensure a proper educational experience when two courses depend upon one another for coherence and knowledge application.

In rare cases, prerequisites or corequisites may be waived using the appropriate form upon review and recommendation by the department chair to the dean or provost and in consultation with the chief academic officer. Permissible reasons for waiver of local prerequisites are limited to the following:

- Grade of at least "C" in a course judged of similar or higher-level content to that of either the prerequisite/corequisite or the requested course.
- Demonstrated competency in the content of the prerequisite/corequisite obtained through professional application. In this case, the student must request credit by experience.
- Life experiences that are deemed equivalent to or that supersede the prerequisite or corequisite; a formal review of course level outcomes would occur and be maintained in the student's records.
- Transfer in of a course that has a prerequisite or corequisite (for example: a student transferring in MAT-271 with the prerequisite of MAT-172 would not have to take MAT-172).
- Satisfactory completion of proficiency exams administered by CCCC (when such exams are available).
- Enrollment in another course deemed suitable to satisfy the corequisite.
- Students engaged in a job experience during the duration of the course that would provide a similar purpose of the corequisite.
- An associate or higher level degree when enrolling in beginning college level courses (e.g. ENG 111; PSY 150) or other reasons as approved by the academic dean and chief academic officer.
- For visiting students, written documentation from their college/university to enroll in a specified course that has a prerequisite.

Academic Policies & Procedures

Uniform Grading System

The college operates on a uniform grade point system in curriculum areas. All subjects must be completed satisfactorily for academic credit. This grade system is followed for all subjects in curriculum areas except in cases an alternate grading scale is prescribed by an external regulatory agency.

CCCC computes curriculum GPA using the quality point system explained below. All subjects must be completed with satisfactory grades if the student is to be awarded a certificate of completion, diploma, or degree. This grade system is followed for all subjects in curriculum areas. Students enrolled in a course that includes integrated and/or corequisite lecture and lab components will earn a single course grade. A cumulative grade point average is maintained which includes all courses taken. If a course is retaken, only the highest grade will be averaged in the cumulative and program grade point average; however, both grades will be recorded on the transcript.

LETTER GRADE	MEANING	QUALITY POINTS (PER CREDIT HR.)
A (90-100)	Excellent	4
B (80-89)	Above Average	3
C (70-79)	Average	2
D (60-69)	Below Average	1
F (59 & under)	Failure	0
I	Incomplete	0
W	Withdrew	0
WF	Withdrawal/Failing	0
AU	Audit	0
P/F	Pass/Fail	0
CE	Credit by Exam	0
* (Grade)	Indicates grade not applicable	0
EL	Learning by Experience	0
TR	Transfer Credit	0
SR	Senior Audit	0

How to Compute the Grade Point Average (GPA)

Academic quality must be achieved in order to graduate from any program at CCCC. The standard for students' work is determined by the quality point system. Under this system, a letter grade is assigned a certain number of quality points (QPs) per credit hour; i.e., an "A" is given four QPs; a "B", three QPs; a "C", two QPs; a "D", one QP; and "F", no QPs. Quality points are computed by multiplying the number of credit hours per course by the value of the grade earned. The grade point average (GPA) is then computed by dividing the total number of quality points by the total number of credit hours attempted

Example of Computing Grade Point Average

Thirty-eight (38) QPs divided by seventeen (17) credit hours equals 2.235 GPA. ***NOTE:*** *Grade point averages are not rounded up or down for graduation or honor awards.*

COURSE EARNED	CREDIT HRS.	GRADE	CALCULATION	QPS
ENG 111	3	C (2)	3x2=	6
BIO 163	5	A (4)	5x4=	20
PSY 150	3	B (3)	3x3=	9
SOC 210	3	D (1)	3x1=	3
BUS 110	3	F (0)	3x0=	0

Note: Developmental course grades of courses below 100 level are not calculated into the academic GPA. However, all grades are calculated into the Financial Aid GPA to determine eligibility for financial aid.

Academic Policies & Procedures

General Academic Standards

If a student does not meet minimum placement criteria to take the mathematics and English composition course of their choice, they must enroll in the appropriate non-credit developmental course(s) to learn the skills necessary to meet the placement scores for the general education course desired.

Students who do not earn a 2.0 GPA for any given term will be held to the Academic Sanctions policy.

Students will not be allowed to repeat any curriculum course more than twice.

Note: for the Associate in Arts, Associate in Science, Associate in Engineering, and all health science programs except for nursing, coursework must be completed with a grade of C or higher. All NUR prefix courses must be completed with a grade of B or higher

Academic Policies & Procedures

Academic Awards

President's/Dean's List Eligibility

A student will be announced as a President's List student if they are enrolled full-time in a curriculum program (minimum of 12 credit hours), receive all grades of "A" (4.0 GPA), and have no grades of "I" during the term. The required GPA will be determined by computing grades earned only in credit courses.

A student will be announced as a Dean's List student if they are enrolled full-time in a curriculum program, receive a grade point average of 3.50 with no grades lower than a "C," and have no grades of "I" during the term.

A student graduating with an average of 3.5 or higher in major program courses will be announced as an Honor Graduate.

Highest Academic Award

The Highest Academic Award in four categories: AA, AS/AE, AAS and Diploma will be presented to participating graduates at the annual graduation ceremony who have the highest academic average. These graduates must have completed 75% of their course work and their last term of study at the college. Only graduates with a minimum grade point average of 3.5 will be eligible to receive this award.

Academic Policies & Procedures

Academic Sanctions

Academic Warning:
Students who do not earn a 2.0 GPA for any given semester will be placed on academic warning and will be notified of their academic status at the end of each term. Students with an academic warning status who are seeking a degree, diploma, or certificate will be required to enroll in and successfully complete a zero-level ACA course. Additionally, students will be required to meet with their Education Navigator.

- During the Education Navigator meeting, students will complete a self-assessment to determine their needs. If a student fails to meet with their Education Navigator, a hold will be placed on their account to trigger a meeting before they are allowed to register for the next semester.

Extended Academic Warning:
Students who do not earn a 2.0 GPA for a second consecutive semester will have their academic warning extended. Students will be notified of their academic status at the end of each term. Students with an extended academic warning status who are seeking a degree, diploma, or certificate will be required to enroll in and successfully complete a zero-level ACA course (if not already successfully completed in a previous semester). A reduced course load may be required. Students are required to meet with their Education Navigator at the beginning and end of the semester.

- Credit Hour Cap: The allowable credit hours will be tailored to each student's academic plan (in accordance with the Department Chair for their program), considering factors such as retaking courses, course sequencing, and program specifics. This determination will be made during the meeting with the Education Navigator.
- Bi-Weekly Check-In Meetings: Students must meet bi-weekly with their Education Navigator to review progress, reassess the self-assessment previously completed, and plan for any needed resources, such as tutoring, academic assistance, or other support services.
- Required Engagement: Students must engage with campus partners such as the Academic Assistance Center, Library Resources, faculty advisors, etc.

Exceptions:

- **Academic Warning Exception 1:** Students with an academic warning status who maintain a cumulative GPA of 3.0 or higher will not be required to enroll in a zero level ACA course. A reduced course load is recommended.

- **Academic Warning Exception 2:** Students with an academic warning status who have enrolled in and successfully completed a zero level ACA course during a previous term will not be required to repeat it. Students who are placed on academic warning or extended academic warning for subsequent terms will only be permitted to enroll in a maximum of 12 credit hours (12 credit hours for a 16-week term, 9 credit hours for a 12-week term, and 6 credit hours for an 8-week term) during the next term of enrollment. Students can enroll in additional credit hours upon obtaining a 2.0 term GPA during the probation term. Students in limited enrollment programs who are placed on academic warning will be subject to the academic standards and progression policies of their respective program.

Academic Suspension:
Students who continue to achieve below a 2.0 cumulative and semester GPA after two consecutive semesters, as noted on the official transcript, will be suspended for one semester unless they have had a break in attendance for one calendar year or longer. A student placed on academic suspension will be suspended from all coursework and college activities for one term, with the exception of enrollment in a zero-level ACA course (if not already successfully completed in previous semesters). Academic suspension will be posted to the student's official transcript for that term.

A student may be readmitted after one term of suspension by meeting with their Education Navigator and completing their Success Plan. The Success Plan should also be reviewed and approved by the Academic Advisor.

Upon return the student is required to meet with an Education Navigator at least 3 times to review the Success Plan, determine needs throughout the semester, and review their academic plan and progress towards completion.

Exceptions:

- **Academic Suspension Exception:** If a student applies to change curriculum programs after two terms with a GPA below 2.0, the suspension may be extended for one term. During this suspension extension term, the student will be required to enroll in and successfully complete a zero-level ACA course. This extension of suspension must be approved by the department chairperson/program director of the new curriculum and by the Vice President of Student Services or designee. Failure to obtain at least a 2.0 GPA during the subsequent term will result in academic suspension for one term.

Per NCCCS guidelines, Career and College Promise (CCP) students, including Cooperative Innovative High School students (i.e. early college) will be held to the same standard set by the college for traditional students.

General Education Competencies

The college is committed to teaching and learning excellence. Every degree program includes a minimum of fifteen semester hours credit of general education as prescribed by the North Carolina Community College System Curriculum Standards, and CCCC believes that every degree student should successfully master general education competencies regardless of the degree discipline.

The general education competencies developed by the college represent the academic proficiencies believed necessary for graduates to be successful and productive employees as well as successful community citizens.

In support of the college mission, CCCC students will be able to demonstrate:

1. Analyze complex problems to propose evidence-based solutions
2. Interpret numerical data using real life and occupational-related problems
3. Deliver effective oral communication for a professional setting
4. Create and submit professional and/or academic work using productivity software

General Academic Standards

If a student does not meet minimum placement criteria to take the mathematics and English composition course of their choice, they must enroll in the appropriate non-credit developmental course(s) to learn the skills necessary to meet the placement scores for the general education course desired.

Students who do not earn a 2.0 GPA for any given term will be held to the Academic Sanctions policy.

Students will not be allowed to repeat any curriculum course more than twice.

Note: for the Associate in Arts, Associate in Science, Associate in Engineering, and all health science programs except for nursing, coursework must be completed with a grade of C or higher. All NUR prefix courses must be completed with a grade of B or higher

Academic Policies & Procedures

Attendance

Central Carolina Community College values a philosophy that supports the attainment of education, skills, and competencies integrated with a strong awareness of a workplace ethic of responsibility and commitment to excellence. Regular attendance is required and demonstrates a commitment to educational achievement and good workplace ethics.

Procedures guiding student attendance in curriculum classes are as follows:

- All work missed during absences must be made up to the satisfaction of the instructor, and failure to make up work may adversely affect the student's final grade.
- Students may be withdrawn by the instructor for missing more than 20% of class meetings before the last day to drop a course will receive a grade of "W."
- The college establishes attendance requirements and instructors maintain accurate records of membership/attendance in accordance with state, federal, and third-party regulatory guidelines.
- Central Carolina Community College authorizes two absences from classes each academic year for religious observances required by the faith of a student. For the purposes of this policy, an academic year begins on the first day of fall classes in August and ends on the last day of summer classes in July each year. Absences due to religious observance are in addition to allowed absences set forth by 80% attendance requirement.
- Students requesting absence from class for religious observance must obtain approval at least two weeks prior to the date of the absence. Students who miss class for religious observance will be granted the opportunity to make up work missed due to the absence.

- Making up absences is at the discretion of the instructor or may be guided by internal policies determined by individual departments or programs when necessary to comply with guidelines prescribed by accrediting or licensing agencies. Allied Health, Barbering, Basic Law Enforcement Training (BLET), Cosmetology, and Esthetics are examples of such programs and courses where external agency requirements may influence attendance guidelines.
- At the discretion of the instructor, a student may be referred to their Education Navigator to address absences in courses. The visit must be documented prior to reentry to the class.
- In all cases, instructors are required to maintain accurate attendance records. Absences due to late registration shall be counted as regular absences. If a student has been in attendance prior to the 10% census date, but has also been absent during that time, the instructor should not initiate a student withdrawal except for students who have never attended class.
- When the instructor decides to withdraw a student, the instructor will notify the student through the student's official college email in a timely manner.
- If a student wishes to appeal an instructor's decision to withdraw them for absences, the student should consult the instructor's immediate supervisor. Further appeals should be made to the next ranking official up to the Chief Academic Officer. The official to whom the appeal is made may reverse the withdrawal. The decision of the Chief Academic Officer is final.
- Students who anticipate an absence should contact their instructor before the class meets. Should this prior notice to the instructor be impossible, the student should expect to explain their absence upon return to class.
- Excessive tardiness will be dealt with in a manner similar to that for absences. Three tardies constitute one (1) absence. Students who are late by 10 minutes or more will be marked absent for that hour of class.

NOTE: *A grade of "W" may adversely affect third-party payments (e.g., financial aid, VA benefits).*

**Disciplinary withdrawals may be appealed through the procedures outlined under Students Rights (Disciplinary Procedures).*

Distance Education Attendance

Attendance or participation in the online portion of distance education courses is defined as submitting academic work. At the semester start, students are required to complete course-specific academic work by the census date to remain enrolled in the course.

Clicking into a Blackboard site does not qualify as attendance in a distance education course. Students should refer to their course's syllabus for more detailed requirements regarding active participation in their distance education course. Students who do not meet the attendance policy requirement in their distance education course may be withdrawn by the instructor from the course.

Inclement Weather Policy

When the college determines that weather conditions are severe enough to warrant closing, the information will be made available as soon as possible. Students, staff, and faculty should visit the college website for the most up-to-date inclement weather postings. The chief academic officer or designee maintains a contact list for local news stations and is responsible for facilitating the process to notify the media.

All inclement weather days not made up by an administrative change in the college's calendar will be made up by the instructor utilizing one of the following options: a) using an alternate assignment relevant to course objectives, b) scheduling extra class sessions, c) holding conferences with individual students, or d) extending scheduled class time (requires dean approval). The appropriate form should be submitted to the department chair/program director.

Types of Announcements

- CCCC will be closed. Optional staff workday. (No classes will be held, but administrators, faculty, and clerical staff are expected to report for work).
- CCCC will be closed. (This applies to extreme conditions and no one is expected to report for work).
- College will open at announced time (Classes that meet at that time or after will meet).

In the absence of announcements A, B, or C listed above, classes will be held as usual.

Academic Policies & Procedures

Withdrawals

A student who initiates a withdrawal from a curriculum course should complete an official Withdrawal Request Form with appropriate personnel. An instructor may initiate a student withdrawal in accordance with the college's attendance policy. If after withdrawing, a student has a break in enrollment for one academic year (fall and spring or spring and fall consecutively), then the student will enroll under the provisions of the current catalog at the time of re-entry. Withdrawals follow all state, federal, and third-party requirements.

A student who wishes to withdraw from a curriculum course should consult with their advisor and the course instructor before completing an official Withdrawal Request Form, located on their Success Hub (linked from the CCCC Portal). The last date of attendance (including withdrawal resulting from disciplinary suspension or expulsion) from a course can affect the final grade for that course. The completed form is submitted and reviewed by the students' Faculty Advisor, Instructor(s) of the Course(s) and the Education Navigator and then processed by the Records Office. When a student withdraws from the college, they may apply for readmission at the beginning of the subsequent term for which they are eligible.

A student may withdraw within the first 75% of the course session or semester and receive a "W." After the 75% point as specified in the college calendar, withdrawal from a course results in a final grade of "WF" if a student attended past the 75% date in the class. A grade of "WF" is treated as an "F" and affects the grade point average. While a "W" does not adversely affect the student's GPA, a grade of "W" may adversely affect third-party payments (e.g. financial aid, VA benefits). Students should contact the Financial Aid Office, their Education Navigator, or their academic advisor before deciding to withdraw from one or more courses.

Withdrawal after the 75% point of the course will be designated with a "WF" except in the case of hardship/medical withdrawal from the college. A hardship/medical withdrawal may be requested from the Vice President of Student Services and documented and filed with the registrar before the end of the term. A medical withdrawal is applied to all attempted courses in the semester, not an individual attempted course.

When a student has not attended class for two consecutive weeks, has not contacted the instructor, and has not completed an official withdrawal form, the faculty may complete and submit to the registrar a "student termination" or the online Withdrawal form. The grade assigned to the student on the Withdrawal form will be determined by the last day of attendance; i.e., a "W" if the last day of attendance was on or before the 75% date or a "WF" if the last date of attendance was after the 75% point of the course session.

Readmission

When a student withdraws from the college, they may apply for readmission at the beginning of the next term in which courses are offered and for which they are eligible.

A student reentering must do so under the provision of the catalog in effect at the time of reentry.

Disciplinary Withdraws

A student may be suspended from a course for disciplinary reasons at any point during a course. Disciplinary withdrawals may be appealed through the procedures outlined under student rights (disciplinary procedures). If a student wishes to appeal an instructor's decision to withdraw them for absences, the student should follow the grade appeals procedure guided by the form posted on the Student Records and Registrar's Office web page.

Withdrawing Students from Class Roll

A student will be withdrawn when the student gives notice of withdrawal or has been absent from class for more than two consecutive weeks without making personal contact with the instructor indicating intention to continue in the course. Absence must be for a valid reason, and the student must make personal contact with the instructor to give or receive information or assignments relative to the course. All work missed during the period of absence must be made up to the satisfaction of the instructor.

A student withdrawn for more than two consecutive weeks of absences without contact or for any other reason may be readmitted through the Student Services Department. Permission to re-enroll will be given only with approval of the instructor. All work missed must be made up. A student may be withdrawn from a course for disciplinary reasons

Academic Policies & Procedures

Inclement Weather Policy

In the event of inclement weather, the college may close, delay, or truncate campus operations. Changes to the academic schedule will be announced as soon as possible via the website and Cougar Alert. Faculty are expected to maintain instructional continuity through remote learning when possible. This may include online meetings, alternate assignments, recorded lectures, or rescheduled class time. Faculty have discretion in determining the most appropriate approach, provided instructional requirements are met.

Students should check the learning management system (LMS), Cougar Alerts, and college email for updates. If students experience a loss of internet or power during a closure, they should notify their instructors as soon as they are able to make arrangements for making up missed work.

Inclement Weather Guidelines for Curriculum Students

In most circumstances, if the college campus is closed, remote learning will continue. Students with synchronous online classes should plan to log in to their class at the scheduled time. Students with asynchronous online, hybrid, or blended classes should log in to read instructor announcements and instructions and to complete assigned work. In the event of power or Internet outages, the college may exercise flexibility with instruction and attendance.

If the college opens at 10:00 a.m., students should report to the class in which they are enrolled at 10:00 a.m., even if that class began prior to the delayed opening time. Students should attend whichever class is in session at the time the campus opens.

Similarly, if the college closes early, classes that meet after the time of closure will either schedule make-up time or offer an alternative assignment.

Faculty are responsible for ensuring all instructional time is offered, and students are responsible for fulfilling attendance requirements.

Central Carolina Community College facilitates college classes for college students, who are expected to meet the requirements for their enrolled course sections. Students enrolled in the Career and College Promise (CCP) or Early College programs are also considered college students by the college. They are held to the same attendance policies and academic standards as college students who are not concurrently enrolled in high school. By registering for a college class, dually enrolled students accept the responsibility of fulfilling college requirements. They are expected to attend their college classes even if their high school has a different calendar or response to inclement weather. Students who experience extenuating circumstances and cannot attend should contact their instructor as soon as possible *before* the class session to discuss possible alternative arrangements. CCP classes will not be canceled if other college classes proceed as scheduled.

Academic Policies & Procedures

Alternate Assignments

Instructors who cancel instructional time due to unforeseen circumstances should utilize and document one of the following options to make-up time: a) providing an alternate assignment relevant to course objectives, b) scheduling extra class sessions, c) holding conferences with individual students, or d) extending scheduled class time (requires dean approval). The appropriate form should be submitted to the department chair/program director.

Academic Policies & Procedures

Graduation Requirements

Graduation exercises are held biannually for an academic year at the close of the spring and summer terms. A student who graduates or anticipates graduation during the academic year (fall or spring) may participate in the ceremonies held on graduation day in the spring. Summer graduates may participate in the summer graduation exercise. Participation in graduation exercises does not signify completion of all graduation requirements. A graduation fee may be charged to students. Graduation fees are used to cover costs for degrees, diplomas, certificates, honorariums, flowers, etc.

Graduation requires the student to have earned at least a 2.0 GPA in the student's academic program and to have maintained at least a 2.0 cumulative GPA. Students who complete graduation requirements and apply for graduation in the fall when a ceremony is not held for degrees to be conferred will have their credentials released

after the Board of Trustees meets during the subsequent quarter and confers students' credentials. Graduation is not an automatic process. The student must apply for their degree, diploma, or certificate by the midterm of the term in which coursework is scheduled for completion in order to process their graduation. In compliance with the Student-Right-To-Know and Campus Security Act of 1991, the college's graduation rate and annual crime statistics are available on request from Onboarding and Advising.

Transcripts

A student may request via electronic request that an official copy of their CCCC transcript be sent to another institution, an agency, or employer. A student may request a copy of their transcript in person, but will be responsible for submitting any such transcript to a third party. Central Carolina Community College does not accept third-party transcript requests. Curriculum transcripts are the responsibility of the Registrar's Office and non-credit transcripts are the responsibility of the Workforce Development Division.

An official curriculum transcript is a copy of a student's entire curriculum-level academic record for Central Carolina Community College. In recognition of the confidentiality of student records, an official transcript will be released only at the request of the student except under due process of the law.

To request a transcript in person, please visit the Registrar's Office at 1105 Kelly Drive, Sanford, NC between the hours of 8:00 a.m. and 5:00 p.m. Monday-Thursday or 8:00 a.m. to 3:30 p.m. on Fridays. Summer hours may vary. In-person requests will be charged a $5.00 fee for each transcript requested. Please bring a picture ID to pick up your transcript.

For electronic requests, the student's Central Carolina student ID number is required for this service, not the social security number. If you place an order without using your student ID number, the order will be canceled. Please contact the Registrar's Office at (919) 718-7201 to obtain your student ID number. Online requests will be charged a $3.75 fee for each transcript and must be paid with a debit/credit card. All online transcript fees are collected by a third-party agency that provides the transcript management and certification system. Through this service, students can order:

- A paper transcript sent via USPS first-class mail
- Electronic transcript that is delivered to any valid email address as a secure PDF

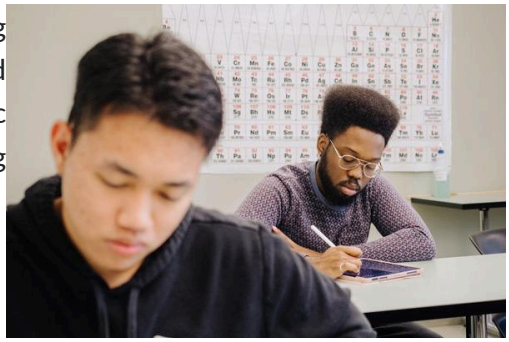
Note: *For students who attended prior to 1997, electronic transcripts may not be available. Please contact the Registrar's Office at (919) 718-7201 to inquire before placing an order.*

Students wishing to order end-of-term transcripts, should wait two days after the semester has ended to submit their request. Students waiting for degrees to be posted, should submit their request after graduation.

The Registrar's Office will process orders within two business days.

Central Carolina Community College certifies that an electronic transcript (e-transcript) issued by Parchment is an official college transcript. The acceptability of an e-transcript will be determined by the receiving institution/recipient in accordance with their policies and procedures.

Student Rights & Responsibilities



As a CCCC student, you're part of a respectful and supportive learning community. This section explains your rights—like privacy, due process, and access to resources—as well as your responsibilities, including academic honesty, respectful conduct, and following college policies. Understanding these expectations helps keep our campus safe and focused on learning.

Student Rights & Responsibilities

Conduct and Student Due Process

CCCC has a genuine concern for the integrity of all students enrolled. Students are required to conduct themselves in a mature and responsible manner. Student Rights, Responsibilities, and Judicial Procedures are detailed in the Student Handbook and CCCC Policies & Procedures Manual.

Student Rights & Responsibilities

Student Grievance Procedure

Student Grievance Procedure

The purpose of the student grievance procedure is to provide a system to channel student complaints against a college employee. Such complaints include academic grades, alleged discrimination, and alleged harassment (see Policies and Procedure Manual).

Student Rights & Responsibilities

Appealing a Grade

Grade Appeal Instructions

Students have the right to appeal a final course grade within fifteen (15) class days after the posted date of the grade. The procedure prescribed for a student to exercise the right to appeal a grade is as follows:

- First, the student must contact the instructor or staff member with whom the problem originated and attempt to resolve the problem at this level. If the grievance is determined to be an appeal of the final grade, the student must follow the steps outlined below.
- The Grade Appeal form can be found in Slate in the student's Success Hub at this link: https://apply.cccc.edu/register/GradeAppealForm The student must be logged in to view the form.
- The student initiates the appeal of a course grade by completing the descriptive information prompted on the Grade Appeal form. The student then submits the completed form, and the instructor of the class in which the grade was assigned will receive an email notification with a link to the student's submission.
- Instructions for navigating Slate are included in the email and can also be found at this link: https://apply.cccc.edu/www/documents/Grade%20Appeal%20How%20To%20(1).pdf

- The instructor reviews the description of the problem and any related supporting evidence attached to the form by the student, offers to meet with the student, and then renders a decision to either uphold or amend the grade. The instructor records the decision on the form and submits it. The student receives notification the instructor has submitted the form and can view the response. Based on the instructor's decision, the student indicates on the form whether to accept the instructor's decision or to continue the appeal process.
- If the student wishes to continue the appeal process, then the student has the right to appeal the instructor's decision to the appropriate supervising department chair who will, in turn, respond with a decision to uphold the original grade or to overturn the instructor's decision. If, after completing this step, the student feels that the issue is still unresolved, then the student has the right to appeal the department chair's decision to the appropriate supervising academic dean who will respond with a decision to uphold the original grade or to overturn the department chair's decision. If the issue is still unresolved, the student may continue the appeal process to the Chief Academic Officer based on the time frames and sequence specified on the Grade Appeal Form. The Chief Academic Officer will issue a final decision.

Examples that merit a grade appeal may include:

- Miscalculated the final grade in the course
- Grading standards differed from grading policies or procedures outlined in the syllabus/amended syllabus without reasonable cause
- Grading standards applied inequitably/bias in grading practices
- Other extenuating circumstances

Examples of conditions that do not merit a grade appeal:

- Dissatisfaction with final earned grade
- The earned grade is lower than that earned in other courses
- A desire to improve an earned grade to retain academic standing, program standing, or financial aid status without evidence of grading error or procedural issue

Student Rights & Responsibilities

Title IX

Title IX/Sexual Misconduct

Title IX of the Education Amendments of 1972 provides protection to all members of the campus community against discrimination based on Sex. Central Carolina Community College is committed to upholding Title IX protections by providing an environment that is free from sex/gender-based misconduct in any form. To accomplish these commitments, the College has developed a strict Title IX policy, a strong Student Code of Conduct, and established a Title IX Coordinator and a Deputy Title IX Coordinator who enforces Title IX laws and regulations.

What types of misconduct/discrimination is included in Title IX?

Any misconduct that is sex/gender-based is prohibited under Title IX, and includes sexual/gender-based harassment, rape, sexual assault, forcible and non-forcible sex offenses, domestic or dating violence, and stalking. For more information and definitions, please see the CCCC Title IX policy in the Policies and Procedures Manual (URL: https://www.cccc.edu/consumer-information-compliance/policies-procedures) or Student Handbook (URL: https://www.cccc.edu/support-success/advising/student-handbook).

How do I report a Title IX violation?

You can report in person to the Title IX Coordinator, the Deputy Title IX Coordinator, to a faculty or staff member, or online. You can report a violation that has happened to someone else, or you can report a violation for yourself. The College prohibits Retaliation (any adverse action against a reporting party) against someone who reports a possible Title IX violation. False accusations are also prohibited.

Is my report confidential?

We understand the desire to keep information confidential, and will do everything we can to maintain confidentiality as allowed under law. However, full confidentiality is not always possible. If there is an immediate threat to the campus community, to other information that is required by law to be reported, the Title IX Coordinator/Deputy Title IX Coordinator will act appropriately.

Even if a person does not wish to file a formal complaint with the college or with law enforcement, interim measures may be enacted to ensure their safety. These measures may include adjusting their class schedule, additional time to complete class, or other adjustments that will alleviate any barriers to education.

What happens when a report is made?

When there is a report of a possible Title IX violation, the Title IX Coordinator will act promptly to end the discrimination, provide remedies for the victim and the campus community, and put steps in place to prevent reoccurrence of the misconduct. The Title IX Coordinator will also provide outside resource information and assistance as appropriate to the situation.

Tips for assisting someone who has experienced sexual assault or violence:

- If you are a CCCC employee, be sure to tell the person that you are required to report Title IX violations that occur on campus or that involve a student, faculty, or staff member
- Actively listen, provide nonjudgmental support, and do not ask questions that suggest blame or doubt
- Encourage the person to seek medical assistance as soon as possible, if needed
- Refer them to appropriate agencies and/or police
- Encourage them to speak to Security, Title IX Coordinator, or appropriate staff
- Use the online reporting form (URL: https://www.cccc.edu/support-success/central-carolina-cares/file-report) to alert the college about the incident

Where Can I Find Out More About Title IX?

To review the complete Title IX policy see the college's Policies and Procedures Manual or Student Handbook.

Questions

For questions regarding Title IX policy, please contact: Title IX Coordinator, Kevin Pearson, Dean of College Access

Student Rights & Responsibilities

Campus Sex Crimes Prevention Act Information

The Campus Sex Crimes Prevention Act is a federal law that requires institutions of higher education to inform the campus community where law enforcement agency information on registered sex offenders is available. Additionally, the law requires persons registered as sex offenders, and who are employed by the institution, who carry on a vocation at the institution, or who attend classes at the institution, to notify the institutions of higher learning of their presence on campus.

Information regarding individuals on the registered sex offenders' list can be obtained from the sheriff's office in Chatham, Harnett, and Lee counties. Additionally, the North Carolina Department of Corrections website provides access to search offender information by the offense committed, the county in which the offense was committed, the date of admission into a correctional facility, and the offender's status and release date.

Student Rights & Responsibilities

Family Educational Rights and Privacy Act

CCCC protects the privacy of students in accordance with the Family Educational Rights and Privacy Act (FERPA) of 1974 (the "Act"), as amended, enacted as Section 444 of the General Education Provisions Act. This policy is applicable for all students, regardless of the mode of instructional delivery for the courses in which the students are enrolled.

Under this Act, students have the right to:

- Inspect and review their education records;
- Seek amendment of their education records that they believe to be inaccurate, misleading, or otherwise in violation of their privacy rights;
- Consent to disclosures of personally identifiable information contained in their record, except to the extent that the Act (and in particular Section 99.31) authorizes disclosure without consent; or
- File with the U.S. Department of Education a complaint under Sections 99.63 and 99.64 concerning alleged failures by the college to comply with the requirements of the Act.

CCCC allows disclosure of education records to administrative officials, faculty, and staff who are determined to have a legitimate educational interest. Administrative officials and faculty/staff are considered to have a legitimate educational interest if they might reasonably need to access information to advise or assist a student with any college-related matter.

CCCC may disclose directory information without consent. Directory information means information contained in the education record of a student which would not generally be considered harmful or an invasion of privacy if disclosed. CCCC has designated directory information to be the following:

- Name
- County of residence
- Academic major
- Enrollment periods
- Hours earned
- Degrees awarded
- Awards received

A student has the right to refuse to let CCCC designate any or all types of information about him/her as directory information.

Student Rights & Responsibilities

Leon's Law

Leon’s Law

Under North Carolina’s Leon's Law (N.C.G.S. § 115D-10.80), community colleges must, as permitted under FERPA, share educational records of certain minor students with their parents, guardians, or acting guardians if:

- The student is under age 18,
- Is claimed as a dependent, and
- The parent or guardian has not opted out.

Minor students must sign an acknowledgment form before registering for courses. Educational records may also be shared with school administrators and counselors at the student’s high school if the student is dually enrolled.

Student Rights & Responsibilities

College AI Statement

Generative artificial intelligence (AI) is quickly developing technology and is not always reliable. Your instructor will indicate in writing what level of AI use is allowed, based on the CCCC Acceptable AI Use Chart.

CCCC Acceptable AI Use Chart

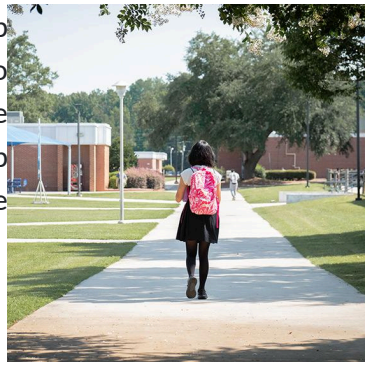
	Level of AI Use	Description	Disclosure Requirements
AI-0	No AI Use	The graded coursework must be completed without any AI assistance.	No AI disclosure required.
AI-1	AI-Assisted Generation, Structuring, and Editing	The graded coursework can use generative AI for brainstorming, organizing, or editing purposes. The final submission must be the student's own work.	AI disclosure statement that indicates how AI was used. Instructors may request copies of prompts and/or screenshots of AI interaction.
AI-2	AI for Specified Task Completion	AI can be used to complete parts of the graded coursework per instructor directions. The student must critically engage with and evaluate the AI output.	All AI created content must be cited using proper formatting (per instructor direction). Instructors may request copies of prompts and/or screenshots of AI interaction.
AI-3	Full AI Use with Human Oversight	The student may use AI how the student believes it can best support them in the graded coursework. However, the generative AI is a tool and the AI-generated product must be evaluated before submission.	All AI created content must be cited using proper formatting (per instructor direction). Instructors may request copies of prompts and/or screenshots of AI interaction.
AI-4	Full AI Freedom	These activities (graded or not) are designed for creative exploration, student self-assessing, comprehension help, etc. Students are responsible for accuracy of information obtained.	If the work is submitted, there must be an AI disclosure statement that indicates how AI was used. Instructors may request copies of prompts and/or screenshots of AI interaction.

Student Rights & Responsibilities

Communicable Diseases

Please refer to the Central Carolina Community College Policy and Procedure Manual (URL: https://www.cccc.edu/consumer-information-compliance/policies-procedures) for the college's most current communicable disease information and policy.

Student Resources



Central Carolina Community College offers a wide range of support services to help students succeed in and out of the classroom. From academic advising and tutoring to mental health counseling, career services, and technology support, these resources are designed to meet students' diverse needs and goals. Whether you're looking for help with your coursework, planning your transfer path, or navigating college life, we're here to support your journey.

Student Resources

Academic Assistance Center

The Academic Assistance Center (AAC) supports the mission of Central Carolina Community College by providing in-person and virtual tutoring services in a learner-centered environment. The STEM Lab has daily drop-in hours Monday - Friday and Upswing Virtual Tutoring access is available to students every day at any hour. The AAC also offers test proctoring services and open computer lab usage. All of these services are free to CCCC students with locations on each main campus:

Lee AAC
○ Marchant Hall, Room #9127
○ (919) 718-7361

Harnett AAC
○ Miriello Building, Room #126
○ (910) 814-8869

Chatham AAC
○ Building 42, Room #202
○ (919) 545-8029

Student Resources

Student Activities

The college shall attempt to enrich the academic and social growth of the students and promote a vibrant, positive student life experience by offering a wide range of student activities under the supervision of the Student Services Division. The Office of Student Activities oversees the Student Government Association, all student clubs and organizations, student leadership programs, the Angel Tree program, and plans fun, interactive, and educational programs both on-campus and virtually. All events and activities hosted by the Office of Student Activities are completely free for all students.

The Student Activities Coordinator will assist club advisors and students with the club application process and yearly paperwork required to continue existing clubs. Student fee funds may be available to active student clubs. Current clubs and organizations can be found on the "Get Involved" section on the CCCC Campus Life webpage.

Upcoming Student Activities can be found on the Student Activities Website, Student Activities Social Media, and the College Activities Calendar.

Website: www.cccc.edu/studentlife
Calendar: www.cccc.edu/calendar
Facebook: Central Carolina Community College Student Activities
Instagram: @ccccStudentActivities

Student Resources

Student Centers

Student Centers are located on all three campuses to provide an area for students to relax while not attending class. Students are encouraged to use the centers as places to meet, chat, eat, and relax. Visit the CCCC Student Centers & Lounges page to learn more, including information about hours of operation.

Student Resources

Alumni

CCCC values its alumni! If you'd like to give back to the college, consider making an annual gift of any amount. For more information, call (919)718-7230.

Student Resources

Athletics

Central Carolina Community College is a member of the National Junior College Athletic Association (NJCAA)-Division II (basketball and soccer), III (women's volleyball), Region 10. Students participating in

intercollegiate athletics must meet NJCAA eligibility requirements and standards. CCCC College athletic programs include the following:

- Basketball: CCCC sponsors an intercollegiate men's team when there is sufficient student interest.
- Volleyball: CCCC sponsors a women's volleyball team in intercollegiate play when there is sufficient student interest.
- Soccer: CCCC sponsors a men's and women's team in intercollegiate play where there is sufficient student interest.
- Other Athletics: Other athletic teams may be formed for men's and/or women's sports as dictated by student interest.

Student Resources

Career Center Services

Career services are available through the Career Center in Workforce Development. The Career Center assists students in selecting a curriculum major, preparing for a career, and transitioning from a student to a professional. The center offers online career assessments, a reference library, Internet research stations, and workshops and individual one-on-one sessions covering areas such as resume writing, cover letters, thank you notes, interviewing techniques, and job searches. The Career Center maintains partnerships with North Carolina Works Career Centers, Vocational Rehabilitation, Veterans Office and business and industries throughout the college's service area.

Student Resources

Phi Theta Kappa Honor Society

The Phi Theta Kappa Honor Society at Central Carolina Community College serves to promote scholarship, development of leadership and service, and cultivation of fellowship among its members. To qualify as candidates for membership, students must meet the following requirements:

1. Must have completed 12 semester hours of associate degree coursework.
2. Must have achieved a grade point average of 3.7 on a 4.0 scale and subsequently, maintain a cumulative grade point average of 3.5 on a 4.0 scale.
3. Must adhere to the Student Code of Conduct and be a student in good standing.

Members of Phi Theta Kappa are honored at college commencement exercises by a special designation on their diplomas and special regalia worn with their graduation robes.

Student Resources

Student Government Association

The Student Government Association (SGA) is the student body's self-government and the official voice of the student body. The SGA is committed to promoting student personal, social, and academic growth through student activities. The SGA provides the environment for students to create and implement activities as they desire under the direction of Student Services staff. The Student Activities office is the home of the Student Government Association where a team of students work alongside the Student Activities Coordinator to plan and implement special events for CCCC students.

The SGA's organizational structure consists of an Executive Committee made up of the following officers: President, Vice President, Secretary, Treasurer, Historian, and student club representatives. The President of the SGA represents the student body as a non-voting member on the Board of Trustees. SGA Elections are held once a year at the end of the Spring semester where new officers are voted in by their peers. Officers receive stipends to help pay for their college expenses in return for their work with the SGA.

Learn more about the Student Government Association, including ways to get involved.

Student Resources

Library Services

The CCCC Libraries consist of the Lee Main Campus Library (Sanford), the Harnett Main Campus Library (Lillington), and the Chatham Community Library (Pittsboro). The Chatham Campus Library merged with the Chatham Public Library in September 2010 to form a joint-use library located on the Chatham Main Campus in Pittsboro. All libraries provide assistance to students, faculty, and community patrons.

Library campus locations and phone numbers:

- **Lee Main Campus Library (Sanford) Phone:** (919) 718-7244 **Fax:** (919) 718-7378
- **Harnett Main Campus Library (Lillington) Phone:** (910) 814-8843 **Fax:** (910) 814-8894
- **Chatham Community Library (Pittsboro) Phone:** (919) 545-8084

Library hours are on the library web site.

NOTE: *Summer hours and semester break hours at the libraries vary and are posted at each campus library.*

Student Resources

Library Cards and Student IDs

Student ID cards are required for students to borrow materials. You must be registered for current classes to receive a student ID card. For students at the Lee and Harnett Main campuses, the student ID card is also the library card and can be made at the Lee and Harnett Libraries. At the Chatham Main Campus, IDs are made in Student Onboarding and Success in the Administration Building. Students at the Chatham Main Campus should go to the reference desk at the Chatham Community Library for a library card. Please let the Chatham library staff know that you are a CCCC student. Alternatively, all students may request a student ID card online. This card may be mailed to your home address or picked up in person.

Student Resources

TRiO Student Support Services & STEM-Health Sciences

Student Support Services (SSS) is a federally-funded TRiO program designed to assist college students with academic skills and motivation to successfully complete a postsecondary education degree. The goal of the Student Support Services program is to increase the college retention and graduation rates of its participants. The program serves 260 eligible students of all majors each year. Eligibility criteria is any combination of the following: first generation, low income, or disability. Selected students are also eligible to receive grant aid awards of at least $700.00.
Program services include:

- Academic tutoring, which may include instruction in reading, writing, study skills, mathematics, science, and other subjects;
- Advice and assistance in postsecondary course selection;

- Information on both the full range of student financial aid programs and benefits;
- Assistance in completing financial aid applications, including the FAFSA and scholarship information;
- Education or counseling services designed to improve the financial and economic literacy of students,
- Assistance in applying for transfer admission to, and obtaining financial assistance for enrollment in, four-year postsecondary education programs.
- Individualized counseling for personal, career, and academic matters;
- Career exploration;
- Exposure to cultural events and academic programs; and
- Mentoring programs.

Campus Contact:
sss@cccc.edu
Phone: 919-718-7536
Appointments available at all campus locations.

Student Resources

Ombuds/Student Advocate

CCCC wants our students to feel seen, heard and valued on our campus. However, students may occasionally face challenging situations that they are not sure how to navigate or resolve. During the time of your relationship with the college, situations may arise in which you believe the institution has acted in error or that your particular case requires further review. In these situations, if you have already attempted to remedy the problem with the particular office/department, you may submit a complaint form. Following the submission of a complaint form, the College's Ombudsman will follow up with you. Visit Ombuds: Your Student Advocate to learn more.

Student Resources

Writing and Reading Center

The Writing and Reading Center helps students develop their writing and reading skills with free services such as one-on-one coaching, group coaching sessions, and content-specific workshops. Through these services, students receive constructive feedback on writing assignments, resources to improve reading, research, and writing skills, and recognition of their growth as readers, researchers, and writers.

Writing and Reading Center coaches will help students refine and revise their work at any stage of their academic assignment.

In addition to physical services in the Writing and Reading Center, tutoring is also available via the Online Writing Center (OWL). Students taking online or evening classes can submit work for review and receive constructive feedback in no more than 48 business hours. To access the OWL, use the A–Z index on the homepage.

The Writing and Reading Center is located in the Miriello Building on the Harnett Main Campus in Room 119, Room 202 Building 42 on the Chatham Main Campus, and on the Lee Main Campus in Marchant Hall.

Campus phone numbers:
Lee Main Campus (919) 718-7210
Harnett Main Campus (910) 814-8858
Chatham Main Campus (919) 545-8049

Student Accessibility Services

Central Carolina Community College (CCCC) is committed to providing equal access to educational opportunities for all students. In compliance with Section 504 of the Rehabilitation Act of 1973 and the Americans with Disabilities Act, the college ensures that qualified students with disabilities have access to programs, services, and activities.

Student Accessibility Services (SAS) works collaboratively with students, faculty, and staff to provide reasonable accommodations that support student success while maintaining academic standards. Accommodations are designed to remove barriers and provide equitable access to learning.

CCCC does not discriminate on the basis of disability. No qualified individual shall be excluded from participation in, denied the benefits of, or subjected to discrimination under any college program or activity. The college provides reasonable accommodations and, when appropriate, modifications to instructional delivery to ensure access to educational opportunities.

Requesting Accommodations

Students seeking accommodations should complete the following steps:

1. **Apply to the College**
   Submit a standard admissions application to CCCC.
2. **Connect with Student Accessibility Services**
   Contact the Office of Student Accessibility Services to request accommodations. Students may self-identify or be referred by a high school, community agency, parent, or CCCC faculty or staff member.
3. **Submit Documentation**
   Provide current documentation of the disability (generally within the past five years). Documentation guidelines are available through Student Accessibility Services.
4. **Participate in an Intake Meeting**
   Meet with the Accessibility Services Coordinator to review documentation, discuss needs, and determine appropriate accommodations. A service agreement will be established.
5. **Request Accommodations Each Semester**
   Complete a Student Schedule Request at the beginning of each semester and whenever schedules change. This authorizes notification of instructors.
6. **Instructor Notification**
   The Accessibility Services Coordinator will provide instructors with an official accommodation notice outlining approved accommodations.

Academic Standards

All students, including those receiving accommodations, are expected to meet the same academic standards and course requirements. Accommodations are intended to provide equal access and reduce the impact of a disability; they do not alter essential course outcomes.

Recruitment of Service Members

In compliance with Department of Defense MOU paragraph 3.j.(3), Central Carolina Community College does not participate in high pressure recruitment tactics of military students including, but not limited to, providing commissions, bonuses, or other incentive payment programs to employees or contractors for the purpose of securing service member enrollments.

Loan Information for Service Members

Central Carolina Community College does not participate in the Federal Direct Loan Program. The Student Loan Cohort Default Rate (CDR) for Central Carolina is 0%. The college certifies private loans. Before certification of a private loan can take place, service members are required to meet with a trained and qualified Financial Aid Specialist for loan counseling.

Financial Aid Information for Service Members

Information regarding the financial aid process and deadlines is located on the CCCC website.

Active duty military may be eligible to receive Tuition Assistance to help with the cost of attending CCCC. Please follow this link for information on applying for these benefits. Options for Financing Higher Education.

Veterans Affairs Office

Central Carolina Community College's Veterans Affairs Office is available to assist the veterans and their eligible dependents in processing their VA applications to receive educational benefits (GI Bill®), as well as to help them solve VA problems. CCCC has a Veterans Affairs Coordinator whose office is located in Student Services.

Students eligible for VA educational benefits should follow the procedures outlined below:

- Notify the Veterans Affairs Coordinator of intent to apply for VA benefits.

- Select a program and apply for admission to the college. All admission requirements must be completed before VA benefits can be certified.
- Before registration, contact the Veterans Affairs Coordinator to ensure that all enrollment and VA document data are correct and complete. Students must inform the Veterans Affairs Coordinator of their class schedule each semester. Failure to inform the Veterans Affairs Coordinator of changes in students' schedules may result in a lapse of educational benefits.

Standards of Progress, Attendance, and Conduct for Students receiving VA Educational Benefits

Public Law 93-508 requires that each educational institution approved for veterans to receive educational benefits (GI Bill®) must establish written policies that clearly state what is expected of the veteran in the areas of academic progress, class attendance, and conduct. These standards are as follows:

1. *Academic Progress for VA Educational Benefits recipients*
   Students receiving VA Educational Benefits must maintain a grade point average (GPA) of 2.0 each semester or term in which they are enrolled. Failure to maintain a GPA of 2.0 will result in probation for the subsequent term of enrollment. If, at the end of that probationary term the GPA is still less than a 2.0, VA Educational Benefits will be terminated. Benefits cannot be reinstated until such time as the student regains satisfactory academic progress. Information on CCCC's grade system and GPA calculation is located in the college catalog. Eligible veterans or dependents can appeal their termination of benefits by completing the appeal form in the VA Office. This policy is used as the basis for determining a student's status for enrollment certification purposes to the Veterans Administration.
2. *Attendance*
   Classroom attendance requirements are the same for veterans and non-veterans. Policies regarding class attendance are listed in the college catalog and the student handbook. Veterans who receive educational benefits and are dropped from class due to inadequate attendance may be terminated from receiving educational benefits. Failure to notify the veteran's coordinator of any change in classes, including class hours, may result in an overpayment in educational benefits and a debt for the student.
3. *Conduct*
   Student conduct requirements are the same for veterans and non-veterans. Policies regarding student conduct are listed in the college catalog and in the student handbook.

Veterans Upward Bound

Veterans Upward Bound is a federal grant-funded program designed to motivate and assist veterans in the development of academic and other requisite skills necessary for success in a program of postsecondary education. The primary goal of the program is to increase the rate at which participants enroll in and complete postsecondary education programs.

The program provides: academic refresher courses; tutorial services; academic, financial, or personal counseling; mentoring programs; information on postsecondary education opportunities; assistance in preparing for college entrance exams; assistance in completing college entrance and financial aid applications; Information on the full range of Federal student financial aid programs and benefits; education or counseling services designed to improve financial and economic literacy; and assistance in securing support services from other locally available resources such as the Veterans Administration, state veterans agencies, veteran associations, and other state and local agencies that serve veterans.

All services are provided free of charge to eligible participants. Anyone interested in receiving additional information may contact the program by visiting Hockaday Hall, by calling 919-718-7463, or by emailing veteransub@cccc.edu. You can also find more information about the program online at Veterans Upward Bound.

Career Communities

Who you learn with can be as important as what you learn together.

CCCC's career communities are clusters of programs in related academic and career fields that require similar skills and generally have common curricular elements. Career communities engage networks of faculty, staff, students, alumni, and employers to help you define your interests, choose your program of study, and advance your goals in specific fields. Each career community provides you with skills, knowledge, and opportunities to pursue rewarding careers as well as connections to people on the same path.

Career communities at CCCC foster a sense of belonging to support you through each stage of your professional development as you work towards an associate degree, diploma, certificate, or certification, as well as your professional life beyond.

Arts Career Community

Find a supportive community to advance your academic goals.

Be a part of the diverse, imaginative student population that engages in our Arts Career Community programs. A background in liberal arts enables you to thrive by engaging with the social and global world around you or crafting content that matters. The Arts Career Community offers flexible pathways that align with your academic and creative aspirations through networking and events that foster connections.

Meet with instructors, alumni, mentors, and employers across the region to help determine your short and long-term goals and prepare you for next steps after graduation.

Through the Arts Career Community, graduates step into a variety of roles: lawyers, interpreters, copy editors, educators, radio personalities, and music producers. As a gateway to a bachelor's degree in liberal arts, humanities, and social sciences, we open doors to limitless opportunities.

Health Sciences Career Community

Programs that focus on the health and wellness of everyone.

Do you have a passion for helping others feel better? Or perhaps, your dream job involves working with animals. In the Health Sciences Career Community programs, you'll develop exceptional communication skills, meticulous attention to detail, and an expanded ability to think critically—necessary skills that help you excel in the health and veterinary sciences.

Our hands-on approach to Health Science education lets you hone your skills in well-equipped labs, working with medical equipment, and even advanced simulation mannequins. For our Veterinary Medical Technology students, our large animal facility gives you experience working directly with a variety of species and breeds.

All of our programs include valuable clinical rotations at healthcare facilities, working alongside a diverse group of professionals in medical and wellness environments in your chosen field of human health or veterinary sciences. Whether you see yourself in nursing, medical imaging, physical therapy, dental hygiene, working in a lab, or as a vet tech, the opportunities are vast. Our community helps prepare you for meaningful employment in improving lives, locally and nationwide.

Student Handbook

The Central Carolina Community College Division of Student Services has published this handbook to assist you in meeting your educational goals at CCCC. Please review all policies and familiarize yourself with the academic calendar.

Central Carolina Community College has made every reasonable effort to determine that everything stated in this handbook is accurate at the time of publication. However, the

N.C. General Assembly, the State Board of Community Colleges or the CCCC Board of Trustees may make changes in policy, graduation requirements, fees and other charges, curriculum course structure and content, and other such matters after the publication of this handbook (June 2023). The N.C. General Assembly may make changes in tuition without notice. The official version and any addendums of the college handbook can be found at cccc.edu/handbook.

Central Carolina Community College is accredited by the Southern Association of Colleges and Schools Commission on Colleges (SACSCOC) to award associate degrees. Degree-granting institutions also may offer credentials such as certificates and diplomas at approved degree levels. Questions about the accreditation of Central Carolina Community College may be directed in writing to the Southern Association of Colleges and Schools Commission on Colleges at 1866 Southern Lane, Decatur, GA 30033-4097, by calling (404) 679-4500, or by using information available on SACSCOC's website (www.sacscoc.org).

Student Handbook

Your First Year Experience

CCCC offers a First Year Experience (FYE) program that prepares students for college life and helps them develop the skills necessary to be successful. The CCCC FYE program is designed to provide support and encouragement to new students at CCCC and help set them on the path to personal and academic success.

This CCCC First Year Experience includes the following components:

New Student Orientation

All new students are expected to participate in an orientation process that is intentionally planned and guided by the Student Onboarding and Success Department and the faculty. CCCC offers in-person sessions prior to the beginning of each semester, and a required online orientation course that will help students make an initial connection to faculty and staff, other students, resources, and services that can assist in their success at CCCC.

ACA First Year Success Courses (ACA 122)

All associate-degree seeking students take the ACA course within the first two semesters to learn about themselves as learners and about college resources that can help students be successful at CCCC and beyond.

College Success Workshops

These workshops are aimed at helping students develop as independent, self-confident, and efficient learners through improved study skills and academic performance which can aid in success in college and life. Some workshop topics include General Study Skills, Time Management, Stress Management, and Test Taking Strategies.

Student Handbook

The College Experience

The experiences you will encounter while enrolled in college can be vastly different from those you experienced in high school. It is important for you to understand the differences so that you are college ready for your first semester on campus.

Differences in Classes	
In High School	In College
Students can spend an average of 6 hours a day, 30 hours a week in class.	Students may spend as little as 12-16 hours per week in class to be considered attending college full-time.
Each day students proceed from one class to another and have only a few minutes between classes.	Students can have an hour or more between classes. Schedules vary each day and each semester.
Studying time outside of class may be limited each week.	Studying time should be at least two to three hours outside of class for every hour spent in class.
The high school provides students with the textbooks and needed materials for each class.	Students are responsible for purchasing their own textbooks, supplies, uniforms, and other materials to accompany their classes. Textbooks can be $200-$500 per semester.
Classes are scheduled for the student based upon track and grade level.	Students will consult with their academic advisor each semester to select classes appropriate for their major.
Teachers carefully monitor class attendance.	A college attendance policy outlined in the catalog and student handbook. Remember that class attendance is needed success.

Differences in Grades and Testing	
In High School	In College
Extra credit projects are often available to help students raise the grade.	Extra credit projects are seldom available.
Grades are given for most assignments.	Assigned work may not be graded or reviewed.
Consistently good homework may help raise the student's overall grades even when test results have low grades .	Students should check the course syllabus for how assignments are weighted. Results on tests, major projects, or papers usually carry more weight in the overall course grade.
Testing is frequent and covers small amounts of material.	Testing is usually infrequent and may be cumulative, covering large amounts of material.
Make-up tests are often available.	Make-up tests are seldom an option.
Initial test grades may not have an adverse effect on the student's final grade.	The first test may count for a substantial part of the final grade. If students are not doing well, it is their responsibility to get assistance.

Differences in Responsibility	
In High School	In College
Parents can talk to their child's teachers about their grades and can have access to their records.	The Family Educational Rights and Privacy Act (FERPA) governs college policies regarding student's records and, without the student's written permission, parents are not allowed access to them.
The high school counselor can register students in classes.	An academic advisor can help students select courses and develop an educational plan, but students are responsible for enrolling and managing schedules.
Students can count on parents and teachers to remind them of responsibilities and provide guidance as they set their priorities.	Students will be faced with a large number of decisions. Students must balance their responsibilities and set priorities on their own.
Students will usually be told what to do and corrected if their behavior is out of line.	Students are expected to take responsibility for what they do and don't do, as well as for the consequences of their decisions.

Reaching Academic Success

CCCC is committed to helping you reach your educational goals and to getting you started on the path toward success. We have provided several student success tips to help you on your academic journey.

- Complete all admission requirements in a timely manner. You should complete all admission requirements in order to be officially accepted into your curriculum. Financial aid will not be awarded to eligible students until all requirements are complete.
- Apply early for financial aid. Whether you're applying for federal grants, veteran's benefits, or sponsorships, the process can take a considerable amount of time. Be sure to apply early to avoid the possibility of paying out-of-pocket for your expenses.
- Know the campus resources that are available to you. You are highly encouraged to explore the free support services we offer such as career exploration, academic tutoring, accessibility services, library services, open computer labs, and resume building.
- Follow the curriculum guide that details the courses needed to complete the program. Completing the courses listed on your curriculum guide is the quickest way to obtain your education in a timely manner.
- Complete all transition and developmental courses as early as possible, if you are told by your education navigator that you need them.
- You may need multiple courses taken in sequence before taking your program's English and/or math requirement. Developmental courses are meant to refresh your skills so that you will be successful in your English, math, and other curriculum classes.
- See your faculty advisor each semester and register early. Each student is assigned a faculty advisor. Consultations with your advisor will give you the most updated and timely information that you need. You will work with your academic advisor to develop a plan for your courses; this will also allow you to register earlier and ensure the classes you need are available.
- Be familiar with this student handbook and college catalog and know deadlines. You are urged to review the college policies and the calendar in your student handbook and college catalog. Failure to follow policy could result in financial and academic penalties. The calendar details important dates you should know such as registration, drop/add, and other important dates.
- Read and follow each course syllabus. Your course syllabi will contain important information regarding the course objectives, assignments, and other college policies, including attendance and plagiarism.
- Attend and participate in class. Regular attendance is required and demonstrates a commitment to educational achievement. Students who miss a class more than two consecutive weeks prior to the 75% mark of the term, or 20% cumulatively, with no contact may be subject to an instructor-initiated withdrawal within one week of the final absence.
- Be active at taking notes, asking questions, and visiting your instructor during office hours.
- Get involved and make connections. Seek out opportunities to participate in campus organizations and other events. These opportunities will assist you in learning valuable leadership skills and in meeting other students, faculty, and staff.
- Manage your time wisely, take care of your health, and don't overload your schedule. Consider work, family, and social obligations when registering for your courses. Be sure to get enough rest, eat well, and exercise regularly.

Academic Advising

One of Central Carolina Community College's strengths is a competent and caring faculty and staff. Education Navigators and faculty advisors can assist you in identifying educational opportunities consistent with your capabilities and interests, exploring career fields, and starting you on the path toward new levels of success.

During the first semester of enrollment, you will meet with an Education Navigator to assist with the admissions process, including helping you select the academic pathway that aligns with your career goals. Advising and registration will be based on the student's chosen major. For all future semesters, you will continue to visit the Student Onboarding and Success department for assistance with connecting to resources and ensuring you are successful along your academic pathway.

When you begin your academic program, you will start to work with a faculty advisor who will serve as your primary contact for the remainder of your academic activities while enrolled at the college. You are expected to confer periodically with your advisor (at least once per semester) regarding your academic plan, your personal and career goals, and to ensure you are able to use campus resources to support your success.

You can expect your Education Navigator/Faculty Advisor to:

- Assist in formalizing an educational plan that matches your goals and interests
- Understand and communicate the curriculum, requirements, and academic policies and procedures
- Provide information on and recommend campus support services
- Assist in selection of courses, adjust schedules as needed, and accurately monitor your progress toward program completion
- Maintain confidentiality consistent with college policy
- Be accessible for advising during documented student/office hours and by appointment

Your advisor/success team members will expect you to:

- Regularly see them each semester
- Come prepared to all advising sessions and actively participate
- Ask questions and know limitations
- Keep a personal record of your progress toward your educational goals
- Gather all relevant information before making decisions that affect your educational goals
- Discuss your personal values and goals and provide truthful information regarding interests and future plans
- Be aware of college policies, procedures, and important deadlines
- Accept responsibility for your decisions and your actions (or inactions) that affect your educational progress

Visit cccc.edu/advising for full details and updates about the advising process.

Advisement Resources

Advisor Listing: Currently enrolled students will find their advisor listed in Self-Service, which can be accessed from the Student Portal.

Central Carolina Community College Website: Our college website, www.cccc.edu, is the access point for the college catalog, curriculum guides, Self-Service, and other resources.

Competitive Admissions Website: Students pursuing a competitive admission program should review information regarding entry into their chosen program on the Competitive Admissions website: www.cccc.edu/onboarding/competitive-admissions

Self-Service: Self-Service: Our college uses Self-Service to assist students with admissions, financial aid, registration, and other information. You will need to become familiar with this system as you will use it to review semester course offerings, check grades, print out unofficial transcripts, review financial aid status, etc. This online tool allows students to pay and register for classes, monitor their progress toward completion of a program, and much more. Students can view financial account information, make payments, view grades, view and search for courses. Self-Service tutorials and other information can be downloaded from www.cccc.edu/login/self-service/ under "Resources".

Success Hub: This unique page is designed to provide you with essential academic support, personal growth methods, and various resources to ensure a successful educational journey at Central Carolina Community College. The Success Hub includes important information about scholarships, your advisor, education navigator, your class schedule and key academic dates. Additionally, on this page you can apply for graduation, apply for a limited enrollment program and drop a class. You can access your Success Hub at Central Carolina's portal.

Curriculum Guide: The curriculum guide is a comprehensive list of the course requirements for each certificate, diploma, and degree program that is offered through CCCC. It also contains the course descriptions for each course required. Within the course description is a list of the required prerequisites and/or corequisites for each course.

Student Handbook

Getting Connected

Students can access and navigate the various campus technologies that are available:

Central Carolina Community College Website: Our website, www.cccc.edu, is the access point for the campus technologies you will use. It features a webpage for most college departments and services, current events, important announcements, and curriculum information.

Distance Education: CCCC provides quality and fully-accredited distance education courses. All modalities, including distance education courses, maintain the same student learning outcomes, provide regular and substantive interactions with the instructor, and offer the same semester credits as courses taught fully

on-campus. Distance education uses six delivery methods: online, hybrid, blended, video-conference, web-conference, and HyFlex. Hybrid and blended courses reduce travel to campus for required sessions. Distance education gives students an opportunity to take courses that are more flexible around the demands of work and family. Distance education courses provide meaningful learning and engagement opportunities and require active participation in learning activities from students.

Students who are considering enrolling in a distance education course or program should work closely with their faculty advisor or an Education Navigator.

Library Resources: The CCCC Libraries contain 20,000 print volumes, a variety of electronic resources in 160 databases, and 1,800 audiovisual items. The library website, available at www.cccc.edu/library, has links to our online catalog and to the electronic resources you will need to complete class assignments. A Help & Contact section, as well as online research guides and tutorials, are also available on the library web page to assist you. Stay connected with us on Facebook at facebook.com/cccclibrary or our Instagram at www.instagram.com/cccclibrary.

Upswing: Upswing provides CCCC students with free online tutoring. The service is available 24 hours a day, seven days a week. Students can receive live tutorials across all subjects, including: writing, math, accounting, statistics, economics, chemistry, physics, and biology, as well as a full range of study resources, including: writing manuals, sample problems, and research tools. For more information regarding this service, visit cccc.upswing.io.

CCCC has sites on various social media:

Facebook: facebook.com/iamcccc

YouTube: youtube.com/centralcarolinacc

Twitter: twitter.com/iamcccc

Instagram: www.instagram.com/centralcarolinacc

LinkedIn: linkedin.com/in/centralcarolinacc

WDCC 90.5 FM and WUAW 88.3 FM: Our college radio stations broadcast to Lee, Harnett, Chatham, Moore, and portions of Wake, Cumberland, and Johnston counties. Tune in your radio, listen live and download the WDCC app at www.wdccfm.com.

4CNC: Our college television station broadcasts to Lee, Harnett, and Chatham counties. In Harnett and Lee counties, the station can be viewed on Charter Cable channel 105 (digital) or 129 (standard cable box). In Chatham County, the station can be viewed on Time Warner Cable channel 181. The channel can also be watched online at 4cnclive.com.

Wireless Internet: Students can access the wireless internet service from most buildings on all three main campus locations. Students will need to read the terms and conditions of using the service and use their email address to log in.

Self-Service log-in instructions

Self-Service log-in instructions can be accessed from the login option located in the upper right corner of www.cccc.edu. Initial login to Self-Service log-in instructions must be completed through a PC or laptop, not a tablet or smartphone.

1. Select Self-Service log-in instructions and then Log In.
2. In the User ID field, type in your user id: the first initial of your first name, the first four letters of your last name, and the last three digits of your CCCC student ID. For example, Jane Smith ID# 1234567 would be user id: jsmit567.

3. In the Password field, type in your birth date in MMDDYY format. For example, January 2, 1956 would be password 010256.
4. Select Submit .
5. Upon log in, you will be prompted to change your password to a unique password that you create. Your password must contain at least one uppercase letter, one lowercase letter, one numeric character and one special character. The following special characters cannot be used. ; ? : @ & = < > \ Your password cannot be less than 8 characters in length nor more than 26 characters. You have the option of entering a password hint to assist you the next time you log in.
6. If you are having difficulty logging into Self-Service log-in instructions, your account may need to be adjusted. This can be done through the Student Records and Registrars' office at (919) 718-7201 or (800) 682-8353, extension 7201.

Logging into CCCC Portal

Students can access the CCCC Portal with their username and password. The Portal includes the following:

- Cougarmail (CCCC Gmail Account)
- Blackboard
- Library Resources (including NC LIVE)
- Success Hub
- Additional college resources will be added over time.

On your first visit to our CCCC Portal you will be required to answer a set of self-service questions for security and to help you reset your password, if it's ever lost or stolen. Please read the following instructions for a walk-through of your CCCC Portal setup!

Full setup instructions

- Open a browser and navigate to https://portal.cccc.edu.
- Enter your username (Students will use their entire college email address.).
- Enter your current email/computer password and click the Login button.
- You will need to verify that you aren't a robot (usually this only requires checking the box).
- After you have signed in, you may select five challenge questions. Answer these questions and click the "Continue" button to finish your setup.

This process is a one-time setup. You will not be required to go through this process again. Once logged in, you may select a service to open that site (such as email or Blackboard). If you wish to change your challenge questions, add additional security to your account, or make other changes to your account, click the "Manage Your Account Settings" link.

Student Handbook

Student Resources

Academic Assistance Center

The Academic Assistance Center is available for students who request additional assistance with their academic studies. The center offers free tutoring, an open computer lab, and other services.

Lee: (919) 718-7361

CC CARES

Check out the CC CARES website for resources and services available to you as a student at CCCC or within your local community. These resources could include food pantry, child care funding assistance, mental health resources, Dream Keeper fund, and much more!

Additionally, you will find a link to be able to file a report about any concerning behavior that you witness or encounter.

www.cccc.edu/we-care

Child Care Center

The Lee Main Campus in Sanford has a child care center that is free for enrolled students. The hours of operation are Monday – Friday from 8:30 a.m. – 12:30

p.m. and Monday – Thursday from

5:30 p.m. – 9:00 p.m. Ages infant to 12 years old. Limited space is available. You must call Ms. Davin at (919) 718-7267 or email at mdavin@cccc.edu to apply for a spot for your child.

Central Carolina Promise/K14

The Central Carolina Promise/K14 program is a joint initiative between CCCC and Chatham, Harnett, and Lee Counties to provide high school graduates with a debt-free pathway to a college degree or credential. The program guarantees up to two years of free in-state tuition and required fees at the college for all eligible county residents who have recently graduated from high school. For more information about current guidelines and how to apply for the program, please visit our website at www.cccc.edu/promise.

Distance Education

The Distance Education department assists students with online, hybrid, blended, web-conference, video-conference, and Hyflex courses. Blackboard is used for all distance education courses.

- Minimum requirements for distance education courses – reliable access to a computer with an Internet connection.
- Tutoring and services through the Writing and Reading Center are available to distance education students.

All Campuses: (919) 718-7529

24/7 Blackboard technical assistance: (866) 834-6894

www.cccc.edu/distanceeducation

Financial Aid Office

The Financial Aid Office offers individual assistance for students who have questions regarding the financial aid process and the availability of federal, state and institutional aid.

All Campuses: (919) 718-7229 Email: finaid@cccc.edu www.cccc.edu/financialaid

Housing Assistance

On-campus housing is not available at Central Carolina Community College. The college maintains a listing of companies and/or persons in the area who wish to rent to students. Students are provided information such as Realtors, landlords, maps, and individuals looking for roommates.

Library

The CCCC Libraries contain a variety of electronic resources in 160 online databases, a print collection of 20,000 books, and 1,800 audiovisual items.

Online resources include complete articles from over 146,000 periodicals, over 400,000 eBooks, and over 49,000 streaming videos. Study rooms, computers, 24-hour chat assistance, and interlibrary loan services are also available. A library is located in each county of our service area.

Placement Testing Office

The Placement Testing Office administers the RISE Assessment and the Test of Essential Academic Skills (specific Health Science programs only), and the PN Predictor exam (specific to students pursuing the LPN to RN program). Students must make an appointment for testing.

- RISE Assessment – Only students that have graduated high school more than 10 years ago, graduated from an international high school, or received a GED or Adult High School diploma will be permitted to test. All other students will be placed into the appropriate English and Math course (required by their program) according to their cumulative unweighted high school GPA.

- Students are strongly advised to study prior to testing. Placement study material can be found on our website.

- Students from specific health programs must see the appropriate Education Navigator to obtain permission and receive further guidance on taking the TEAS. TEAS testing is administered in Lillington, Pittsboro, and Sanford.

Chatham: (919) 545-8029

Harnett: (910) 814-8863

Lee: (919) 718-7300

Contact the Placement Testing Office at (919) 718-7471 for a placement testing appointment.

Student Records and Registrar

The Student Records and Registrars' office maintains all enrollment and academic student records. Applications, transcript receipt, welcome correspondence and transfer credit assignment for applicants are handled through this office. The office processes all student registrations, and changes of major for students as well as verifies student grades. Graduation is coordinated and conducted by this office. This office aids alumni through processing transcript requests.

All Campuses: (919) 718-7201 www.cccc.edu/studentrecords

Security Office

The Security Office is responsible for security and emergency response.

Chatham: (919) 545-8066

TRIO Programs (TRIO)

The Federal TRIO Programs (TRIO) are Federal outreach and student services programs designed to identify and provide services for individuals from disadvantaged backgrounds. TRIO at Central Carolina Community College includes four programs targeted to serve and assist low-income individuals,

first-generation college students, and individuals with disabilities to progress through the academic pipeline from middle school to post baccalaureate programs.

www.cccc.edu/trio

Student Support Services

Student Support Services is a federally funded program that provides academic support and motivates CCCC students toward the successful completion of their postsecondary education.

All Campuses: (919) 718-7567 www.cccc.edu/sss

Veteran Affairs Office

The Veteran Affairs Office assists veterans and their eligible dependents in processing their applications to receive VA educational benefits.

All Campuses: (919) 718-7233 www.cccc.edu/military

Veterans Upward Bound

Veterans Upward Bound is designed to motivate and assist veterans in the development of academic and other requisite skills necessary for acceptance and success in a program of postsecondary education. The program provides assessment and enhancement of basic skills through counseling, mentoring, tutoring, and academic instruction in the core subject areas.

All Campuses: (919) 718-7463 www.cccc.edu/vub

Writing & Reading Center

The Writing & Reading Center helps students to develop their writing and reading skills with free services such as one-on-one tutoring, group tutoring sessions, and content-specific workshops. Appointments are preferred, but walk-in assistance is offered if space is available.

Student Handbook

Campus Lingo

Academic Advisor: A faculty or staff member who assists students in making informed and responsible decisions, selecting classes, and achieving their goals. Contacting an academic advisor is required prior to each academic term. Students will be assigned a permanent faculty advisor during their first semester in their academic program. The faculty advisor will likely change if a student selects changes programs.

Academic Probation: Students who do not earn a 2.0 grade point average for any semester will be placed on academic probation. A student on academic probation will be required to enroll in an ACA-085, Improving Study Skills, course to be removed from probation status.

Academic Suspension: Students who do not earn a 2.0 grade point average for two consecutive semesters will be placed on academic suspension. A student may be considered for re-entrance after one semester of suspension.

Accommodations: Supplemental services and/or auxiliary aids determined reasonable by Student Accessibility Services and provided to enable students with disabilities to participate in activities compatible with their condition and interests.

Add/Drop: Once the semester has started, the designated period of time in which a student can make changes to their semester schedule.

Advising: An interactive process in which a student, with the help of an advisor, sets and attains academic goals, acquires relevant information and services, and makes responsible decisions consistent with interests, goals, and abilities.

Associate in Applied Science (AAS): An associate degree primarily designed to lead to career opportunities immediately following graduation.

Associate in Arts (AA): An associate degree that prepares students for transfer into a four-year bachelor's degree program in a variety of majors including humanities/liberal arts, social sciences, business, education, and more. Students who complete the degree and follow the transfer institution's suggested course list transfer with junior status.

Associate in Arts – Teacher Preparation (AA-TP): An associate degree that prepares students to apply to transfer to a participating North Carolina university's competitive Education Preparation Program with junior status.

Associate in Engineering (AE): An associate degree that prepares students to apply to transfer to a participating North Carolina university's competitive Engineering Program with junior status.

Associate in Science (AS): An associate degree that prepares students for transfer into four-year bachelor's degree program in a variety of mathematics or science based majors. Students who complete the degree and follow the transfer institution's suggested course list transfer with junior status.

Associate in Science – Teacher Preparation (AS-TP): An associate degree that prepares students to apply to transfer to a participating North Carolina university's competitive Education Preparation Program with junior status.

Asynchronous Online: Asynchronous online classes do not have designated meeting times. While most asynchronous classes still have submission deadlines, students can connect with materials, peers, and instructors on their own schedules.

Blackboard: The learning management system used for online components of curriculum and continuing education classes.

Blended Course: A course taught on campus with less than or equal to half the class taught online.

Certificate Program: A one-to-two-semester program primarily designed to lead to career opportunities immediately following graduation.

College Catalog: A comprehensive publication that describes the college's academic programs, courses, policies, and services. It is available on the college's website.

Continuing Education: The department of the college that is dedicated to economic, workforce, and enrichment courses for the business sector and members of the community at large.

Corequisite: A course that must be taken at the same time as another course.

Cougar Alert: CCCC mass notification system for campus emergencies.

Cougar Mail: The email system used by the college.

Course Number: The three-digit number that follows the department prefix (ex. ENG 111, BIO 110).

Course Plan: A semester-by-semester plan in Self-Service for upcoming classes. Advisors can approve or deny courses in the course plan prior to registration. Students can only register for courses that have been approved.

Course Section: The designation after the course number that details where and when a class is located. (ex. LC1).

Credit Hours: The unit of academic credit assigned to each course based upon the course's contact and lab hours.

Curriculum: Curriculum Course/Program: Course and program offerings that bear college credit.

Department Prefix: The three-letter designation given to a course that details its department (ex. ENG, COS, BIO).

Developmental Course: A course that prepares students for curriculum coursework. Developmental courses are indicated with a course number below 100.

Diploma Program: A three-to-four semester program primarily designed to lead to career opportunities "immediately following graduation.

Distance Education: Various course formats with distance components such as hybrid, HyFlex, blended, online, video-conference, and web-conference.

Education Navigator: Staff members working with students regarding first semester advising and registration; change of academic programs; dropping, adding or withdrawing from courses; and other issues that may assist in the transition to college life. They are members of the Student Onboarding and Success Office.

FAFSA: Free Application for Federal Student Aid; the application completed by students to apply for federal and state aid.

FERPA: Family Educational Rights and Privacy Act; protects the privacy of student education records.

Financial Aid: Monetary assistance awarded in the form of a grant, scholarship, sponsorship, and/or federal work study to help pay for college.

Financial Aid Maximum Timeframe: In order to maintain satisfactory academic standing for financial aid, students should complete the requirements for an eligible program of study within a timeframe not to exceed 150% of the published program length. For example, if an academic program length is 60 credit hours, the maximum number of credit hours eligible for financial aid is 90 (60 x 150% = 90). Students may only receive financial aid for two programs at CCCC.

Financial Aid Suspension: Students on Warning status who fail to meet the minimum requirements (cumulative 2.0 GPA and 67% completion rate) or have not met the minimum requirements for two consecutive terms will no longer be eligible for financial aid.

Financial Aid Warning: Students who do not meet the minimum requirements (cumulative 2.0 GPA and 67% completion rate) after an official evaluation at the end of a semester will be placed on warning for the following semester. Students may continue to receive financial aid during the warning period.

Former student: A student who had previously been enrolled at the college, but the enrollment was more than two semesters ago. Former students have to resubmit an application to be readmitted.

Full-time Student: A student enrolled in 7 or more credit hours during the fall and spring semesters and 6 or more credit hours during the summer semester.

Grade Point Average (GPA): Measures a student's academic achievement; calculated by dividing the total number of quality points by the total number of credit hours attempted. Students' academic GPAs do not include developmental coursework, but financial aid GPAs include developmental coursework.

Hybrid Course: A course taught mostly online with less than half the class taught on campus.

HyFlex Course: A type of course that provides students the option to attend class sessions either face-to-face or online (synchronously or asynchronously).

Midterm: The central point of a semester in which students are notified of academic progress and/or take an exam.

NELNET: The deferred payment plan is administered through the NELNET Payment Center. Students can use the NELNET payment center during the fall and spring semesters through the 16-week Add period only. NELNET is not a loan program or financial aid. There is no interest or finance charges assessed, and there is no credit check.

Official Transcript: A secure transcript sent from the credit-earning institution. An official transcript can be delivered by the student if unopened, sent directly from the institution, or sent through an institution's official electronic document provider. An official transcript is required before CCCC can award credit from another institution and to determine if a student has met prerequisites for specific classes.

Online Course: A course that has totally online instruction. Online courses may be synchronous (everyone online at the same time, like a chat or live lecture) or asynchronous (activities completed at different times by different participants).

Part-time Student: A student enrolled in 1-11 credit hours in fall or spring or 1-5 credit hours in summer.

Placement Test: A computerized test that assesses the student's level in English and Math.

Prerequisite: A course that must be taken prior to another course.

Returning Student: A student who is currently enrolled or was enrolled in the semester prior.

Scholarship: Financial support awarded based on academic achievement or other criteria, that may include financial need, for the purpose of education.

Self-Service: An online student platform that permits students to view enrollment-related documents, plan out all courses within their academic pathway, perform various registration functions, pay for classes, check financial aid status, and more. Students can only register for courses that have been approved by their advisor or education navigator on their Course Plan in Self-Service.

Semester: The length of the academic term; the fall and spring are 16 weeks (though some classes are offered in 8 or 12 week formats) and the summer is either 8 or 10 weeks.

Student Hours/Office Hours: Specific times designated for students to meet with instructors outside of class. Student Hours/Office hours are listed on all course syllabi, and are posted outside faculty offices.

Success Team Member: A staff member that proactively identifies a student's need and empowers them to discover available programs and services that will contribute to academic success.

Syllabus: A course guide provided by the instructor that details the instructor's contact information, course objectives, assignments, and other important information.

Video-conference Course: A course taught synchronously across main campuses or approved CCCC locations that may be taught in a solely on-campus, hybrid, or blended delivery method.

Web-conference Course: A course taught synchronously through a web conference software that may be taught solely in a web-conference, hybrid, or blended delivery method.

Withdrawal: The official process of being removed from a course or all courses, which can be initiated by a student through an Education Navigator or by an instructor.

All Programs

A10100 - Associate in Arts

Overview

Program Code
A10100

Program Description
The Associate in Arts degree shall be granted for a planned program of study consisting of a minimum of 60 semester hours of credit (SHC) of college transfer courses. Within the degree program, the institution shall include opportunities for the achievement of competence in reading, writing, oral communication, fundamental mathematical skills, and basic computer use.

Courses are approved for transfer through the Comprehensive Articulation Agreement (CAA). The CAA enables North Carolina community college graduates of two-year associate in arts programs who are admitted to constituent institutions of The University of North Carolina to transfer with junior status.

Community college graduates must obtain a grade of "C" or better in each course and an overall GPA of at least 2.0 on a 4.0 scale in order to transfer with a junior status. Courses may also transfer through bilateral agreements between institutions.

The Associate in Arts is a two-year degree designed for students who plan to transfer to a four-year college or university to complete a bachelor's degree in a non-STEM field—such as business, education, the social sciences, humanities, or the arts. This degree provides a strong foundation in general education courses like English, history, math, and social sciences that fulfill many of the first- and second-year requirements at most universities.

Students pursuing the AA degree follow *Transfer Guides* to help ensure that the courses they take at the community college transfer smoothly into their intended major at a UNC System university.

To explore Transfer Guides for your intended major and transfer institution, visit the CFNC Transfer Guides page.

Program of Study

Course Requirements for Associate in Arts Degree

I. Universal General Education Transfer Component (UGETC) 31-32 SHC

A. English Composition (6 SHC) C-L-CR

ENG 111 Writing and Inquiry 3-0-3
ENG 112 Writing and Research in the Disciplines 3-0-3

B. Humanities/Fine Arts/Communication (9 SHC)

Select courses from at least two of the following discipline areas: art, communications, music, literature, and philosophy.

ART 111 Art Appreciation 3-0-3
ART 114 Art History Survey I 3-0-3
ART 115 Art History Survey II 3-0-3
COM 120 Interpersonal Communication 3-0-3
COM 231 Public Speaking 3-0-3
DRA 111 Theater Appreciation 3-0-3
ENG 231 American Literature I 3-0-3
ENG 232 American Literature II 3-0-3
ENG 241 British Literature I 3-0-3
ENG 242 British Literature II 3-0-3
MUS 110 Music Appreciation 3-0-3
MUS 112 Introduction to Jazz 3-0-3
PHI 240 Introduction to Ethics 3-0-3

C. Social and Behavioral Sciences (9 SHC)

Select courses from at least two of the following discipline areas: economics, history, political science, psychology, and sociology.

ECO 251 Principles of Microeconomics 3-0-3
ECO 252 Principles of Macroeconomics 3-0-3
HIS 111 World Civilizations I 3-0-3
HIS 112 World Civilizations II 3-0-3

HIS 131 American History I 3-0-3
HIS 132 American History II 3-0-3
POL 120 American Government 3-0-3
PSY 150 General Psychology 3-0-3
SOC 210 Introduction to Sociology 3-0-3

D. Natural Sciences (4 SHC)

Select one course, including accompanying/integrated laboratory work, from among the biological and physical science disciplines.

AST 111 Descriptive Astronomy 3-0-3
& AST 111A Descriptive Astronomy Lab 0-2-1
AST 151 General Astronomy I 3-0-3

III. Other Required Hours (15 SHC)

In addition to ACA 122 (College Transfer Success), 14 SHC can be selected from the UGETC and General Education courses listed above and any courses classified Pre-Major/Elective (listed below) in the Comprehensive Articulation Agreement. Students are advised to select courses based on intended major and senior institution requirements. Students must meet the receiving university's foreign language, health, and physical education requirements, if applicable, prior to or after transfer to the senior institution. Students need to complete two courses in foreign language if two semesters or more of a foreign language were not taken in high school.

A1010T - Associate in Arts in Teacher Preparation (AATP)

Overview

Program Code
A1010T

Program Description
The Associate in Arts in Teacher Preparation degree shall be granted for a planned program of study consisting of a minimum of 60 semester hours of credit (SHC) of college transfer courses. Within the degree program, the institution shall include opportunities for the achievement of competence in reading, writing, oral communication, fundamental mathematical skills, and basic computer use.

The Comprehensive Articulation Agreement (CAA) and the Independent Comprehensive Articulation Agreement (ICAA) enables North Carolina community college graduates of two-year associate in arts programs who are admitted to constituent institutions of The University of North Carolina and to Signatory Institutions of North Carolina Independent Colleges and Universities to transfer with junior status.

Community college graduates must obtain a grade of "C" or better in each course and an overall GPA of at least 2.7 on a 4.0 scale in order to transfer with a junior status. Courses may also transfer through bilateral agreements between institutions.

Program of Study

Course Requirements for Associate in Arts in Teacher Preparation:

I. General Education Requirements:

A. Composition (6 SHC) C-L-CR

ENG 111 Writing & Inquiry 3-0-3
ENG 112 Writing/Research in the Disciplines 3-0-3

B. Humanities/Fine Arts/Communication (9 SHC)

Select 3 courses from the following from at least 2 different disciplines (9 SHC)

Communications:

COM 120 Intro to Interpersonal Communications 3-0-3
COM 231 Public Speaking 3-0-3

Humanities/Fine Arts:

ART 111 Art Appreciation 3-0-3
ART 114 Art History Survey I 3-0-3
ART 115 Art History Survey II 3-0-3
DRA 111 Theatre Appreciation 3-0-3
ENG 231 American Literature I 3-0-3
ENG 232 American Literature II 3-0-3
ENG 241 British Literature I 3-0-3
ENG 242 British Literature II 3-0-3
MUS 110 Music Appreciation 3-0-3
MUS 112 Introduction to Jazz 3-0-3
PHI 240 Introduction to Ethics 3-0-3

C. Social/Behavioral Science

Select 2 courses from at least 2 different disciplines (6 SHC)

ECO 251 Principles of Microeconomics 3-0-3
ECO 252 Principles of Macroeconomics 3-0-3
HIS 111 World Civilizations I 3-0-3
HIS 112 World Civilizations II 3-0-3
HIS 131 American History I 3-0-3
HIS 132 American History II 3-0-3
POL 120 American Government 3-0-3
PSY 150 General Psychology 3-0-3
SOC 210 Introduction to Sociology 3-0-3

D. Mathematics, take 1 course (8 SHC)

MAT 143 Quantitative Literacy 2-2-3
MAT 152 Statistical Methods I 3-2-4
MAT 171 Precalculus Algebra 3-2-4

E. Natural Sciences (4 SHC)

AST 111 Descriptive Astronomy 3-0-3

Program of Study

Course Requirements for Associate in Science Degree

I. Universal General Education Transfer Component (UGETC) 34 SHC

A. Composition (6 SHC) C-L-CR

ENG 111 Writing and Inquiry 3-0-3
ENG 112 Writing and Research in the Disciplines 3-0-3

B. Humanities/Fine Arts/Communication (6 SHC)

Select courses from two of the following discipline areas: art, communications, music, literature, and philosophy.

ART 111 Art Appreciation 3-0-3
ART 114 Art History Survey I 3-0-3
ART 115 Art History Survey II 3-0-3
COM 120 Interpersonal Communication 3-0-3
COM 231 Public Speaking 3-0-3
DRA 111 Theater Appreciation 3-0-3
ENG 231 American Literature I 3-0-3
ENG 232 American Literature II 3-0-3
ENG 241 British Literature I 3-0-3

ENG 242 British Literature II 3-0-3
MUS 110 Music Appreciation 3-0-3
MUS 112 Introduction to Jazz 3-0-3
PHI 240 Introduction to Ethics 3-0-3

C. Social and Behavioral Sciences (6 SHC)

Select courses from two of the following discipline areas: economics, history, political science, psychology, and sociology.

ECO 251 Principles of Microeconomics 3-0-3
ECO 252 Principles of Macroeconomics 3-0-3
HIS 111 World Civilizations I 3-0-3
HIS 112 World Civilizations II 3-0-3
HIS 131 American History I 3-0-3
HIS 132 American History II 3-0-3
POL 120 American Government 3-0-3
PSY 150 General Psychology 3-0-3
SOC 210 Introduction to Sociology 3-0-3

D. Natural Sciences (8 SHC)

Select a two-semester course sequence (strongly recommended) in general biology, general chemistry or general physics (a-d) or a pair of the one-semester course combinations listed below (e-j). All courses must have a lab component.

a. BIO 111 General Biology I 3-3-4
BIO 112 General Biology II 3-3-4

b. CHM 151 General Chemistry I 3-3-4
CHM 152 General Chemistry II 3-3-4

c. PHY 151 College Physics I 3-2-4
PHY 152 College Physics II 3-2-4

d. PHY 251 General Physics I 3-3-4
PHY 252 General Physics II 3-3-4

e. BIO 110 Principles of Biology 3-3-4
GEL 111 Introductory Geology 3-2-4

f. BIO 110 Principles of Biology 3-3-4
PHY 110 Conceptual Physics 3-0-3
PHY 110A Conceptual Physics Lab 0-2-1

g. GEL 111 Introductory Geology 3-2-4
PHY 110 Conceptual Physics 3-0-3
PHY 110A Conceptual Physics Lab 0-2-1

E. Mathematics (8 SHC)

Select two courses in mathematics.

MAT 171 Precalculus Algebra 3-2-4
MAT 172 Precalculus Trigonometry 3-2-4
MAT 263 Brief Calculus 3-2-4
MAT 271 Calculus I 3-2-4
MAT 272 Calculus II 3-2-4

II. Additional General Education Hours (11 SHC)

Select additional courses from UGETC courses listed above or from the courses classified as General Education courses in the NCCCS Combined Course Library. Students are advised to select courses based on intended major and senior institution.

ANT 210 General Anthropology 3-0-3
ASL 111 Elementary ASL 1 3-0-3
ASL 112 Elementary ASL II 3-0-3

SPA 112 Elementary Spanish II 3-0-3
SPA 211 Intermediate Spanish I 3-0-3
SPA 212 Intermediate Spanish II 3-0-3

III. Other Required Hours (15 SHC)

In addition to ACA 122 (College Transfer Success) 14 SHC can be selected from the UGETC and General Education courses listed above and any courses classified Pre-Major/Elective (listed below) in the Comprehensive Articulation Agreement. Students are advised to select courses based on intended major and senior institution requirements. Students must meet the receiving university's foreign language, health and physical education requirements, if applicable, prior to or after transfer to the senior institution. Students need to complete two courses in foreign language in two semesters or more if a foreign language was not taken in high school.

Program of Study

Course Requirements for Associate in Science in Teacher Preparation:

I. General Education Requirements:

A. Composition (6 SHC) C-L-CR

ENG 111 Writing & Inquiry 3-0-3
ENG 112 Writing/Research in the Disciplines 3-0-3

B. Humanities/Fine Arts/Communication (9 SHC)

Select 3 courses from the following from at least 2 different disciplines (9 SHC)

Communications:

COM 120 Intro to Interpersonal Communications 3-0-3
COM 231 Public Speaking 3-0-3

Humanities/Fine Arts:

ART 111 Art Appreciation 3-0-3
ART 114 Art History Survey I 3-0-3
ART 115 Art History Survey II 3-0-3
DRA 111 Theatre Appreciation 3-0-3
ENG 231 American Literature I 3-0-3

ENG 232 American Literature II 3-0-3
ENG 241 British Literature I 3-0-3
ENG 242 British Literature II 3-0-3
MUS 110 Music Appreciation 3-0-3
MUS 112 Introduction to Jazz 3-0-3
PHI 240 Introduction to Ethics 3-0-3

C. Social/Behavioral Science

Select 1 course from the following (3 SHC)

ECO 251 Principles of Microeconomics 3-0-3
ECO 252 Principles of Macroeconomics 3-0-3
HIS 111 World Civilizations I 3-0-3
HIS 112 World Civilizations II 3-0-3
HIS 131 American History I 3-0-3
HIS 132 American History II 3-0-3
POL 120 American Government 3-0-3
PSY 150 General Psychology 3-0-3
SOC 210 Introduction to Sociology 3-0-3

D. Mathematics, take 2 courses (8 SHC)

MAT 171 Precalculus Algebra 3-2-4
MAT 172 Precalculus Trigonometry 3-2-4
MAT 263 Brief Calculus 3-2-4
MAT 271 Calculus I 3-2-4
MAT 272 Calculus II 3-2-4

E. Natural Sciences, take 2 sets (8 SHC)

A10500 - Associate in Engineering

Overview

Program Code
A10500

Program Description
The Associate in Engineering (AE) degree shall be granted for a planned program of study consisting of a minimum of 60 semester hours of credit (SHC) of courses. Within the degree program, the institution shall include opportunities for the achievement of competence in reading, writing, oral communication, fundamental mathematical skills, and basic computer use.

The degree plan includes required general education and prerequisite courses that are acceptable to all state funded Bachelor of Engineering programs. Students who follow the degree progression plan will meet the entrance requirements at all of the North Carolina public Bachelor of Science Engineering programs. Associate in Engineering graduates may then apply to any of these programs without taking additional and sometimes duplicative courses. Admission to Engineering programs is highly competitive and admission is not guaranteed.

To be eligible for the transfer of credits under the AE to the Bachelor of Science in Engineering Articulation Agreement, community college graduates must obtain a grade of "C" or better in each course and an overall GPA of at least 2.5 on a 4.0 scale.

GENERAL EDUCATION (42 SHC) The general education common course pathway includes study in the areas of English composition; humanities and fine arts; social and behavioral sciences; natural sciences and mathematics. UNIVERSAL GENERAL EDUCATION TRANSFER COMPONENT (Universal General Education Transfer Component (UGETC)

courses will transfer for equivalency credit to all UNC institutions.) *Exceptions (i.e. courses which are not classified as UGETC) are italicized.

Program of Study

Course Requirements for Associate in Engineering Degree

I. Universal General Education Transfer Component (UGETC) 42 SHC

A. Composition, take both (6 SHC) C-L-CR

ENG 111 Writing and Inquiry 3-0-3
ENG 112 Writing and Research in the Disciplines 3-0-3

B. Humanities, select one (3 SHC)

ENG 231 American Literature I 3-0-3
ENG 232 American Literature II 3-0-3
ENG 241 British Literature I 3-0-3

ENG 242 British Literature II 3-0-3
PHI 240 Introduction to Ethics 3-0-3
REL 110 World Religions 3-0-3

(REL 110 will transfer for equivalency credit to the engineering programs at all six UNC institutions that offer undergraduate engineering programs. It may not transfer with equivalency to other programs).

C. Humanities/Fine Arts, select one (3 SHC)

Select a course from the following discipline areas: art, communications, music.

ART 111 Art Appreciation 3-0-3
ART 114 Art History Survey I 3-0-3
ART 115 Art History Survey II 3-0-3
COM 231 Public Speaking 3-0-3
MUS 110 Music Appreciation 3-0-3
MUS 112 Introduction to Jazz 3-0-3

D. Social and Behavioral Sciences (6 SHC)

One required course, choose one additional course.

Required:

ECO 251 Principles of Microeconomics 3-0-3

One additional course:

HIS 111 World Civilizations I 3-0-3
HIS 112 World Civilizations II 3-0-3
HIS 131 American History I 3-0-3
HIS 132 American History II 3-0-3
POL 120 American Government 3-0-3
PSY 150 General Psychology 3-0-3
SOC 210 Introduction to Sociology 3-0-3

E. Natural Sciences (12 SHC)

CHM 151 General Chemistry I 3-3-4
PHY 251 General Physics I 3-3-4
PHY 252 General Physics II 3-3-4

F. Mathematics (12 SHC)

MAT 271 Calculus I 3-2-4
MAT 272 Calculus II 3-2-4
MAT 273 Calculus III 3-2-4

Calculus I is the lowest math course that will be accepted by engineering programs for transfer as a math credit. Students who are not calculus-ready will need to take additional math courses. ***Students are recommended to include both the Associate in Science and the Associate in Engineering as their declared programs of study.***

II. Additional General Education Hours/Pre-Major Electives (18 SHC)

Three required courses, choose additional courses.

ACA 122 College Transfer Success 1-0-1
EGR 150 Introduction to Engineering 1-2-2
MAT 285 Differential Equations 2-2-3

Select additional courses from UGETC courses listed above or from the courses classified as General Education courses in the NCCCS Combined Course Library. (12 SHC)

Take 3 credits from:

BIO 111 General Biology I 3-3-4
COM 110 Introduction to Communication 3-0-3
COM 231 Public Speaking 3-0-3
CHM 152 General Chemistry II 3-3-4
ECO 252 Principles of Macroeconomics 3-0-3
GEL 111 Introductory Geology 3-2-4
HUM 110 Technology and Society 3-0-3
PHI 240 Introduction to Ethics 3-0-3

Take 9 credits from:

BIO 111 General Biology I 3-3-4
CHM 152 General Chemistry II 3-3-4
CHM 251 Organic Chemistry I 3-3-4
CHM 252 Organic Chemistry II 3-3-4
COM 110 Introduction to Communication 3-0-3
COM 231 Public Speaking 3-0-3
CSC 134 C++ Programming 2-3-3
CSC 151 JAVA Programming 2-3-3
DFT 170 Engineering Graphics 2-2-3
ECO 252 Principles of Macroeconomics 3-0-3
EGR 210 Intro to Electr./Computer Eng. Lab 1-3-2
EGR 212 Logic System Design I 3-0-3
EGR 214 Num Methods for Engineers 3-0-3
EGR 215 Network Theory I 3-0-3
EGR 216 Logic and Network Lab 0-3-1
EGR 220 Engineering Statics 3-0-3
EGR 225 Engineering Dynamics 3-0-3
EGR 228 Introduction to Solid Mechanics 3-0-3

GEL 111 Introductory Geology 3-2-4
HUM 110 Technology and Society 3-0-3
MAT 280 Linear Algebra 2-2-3

A15410 - Sustainable Agriculture AAS

Overview

Program Code
A15410

Program Description
Pathway Description: These curriculums are designed to provide the entrepreneurial and technical skills necessary to manage a profitable, environmentally sound, community based small farm or agricultural business. The objective is the development of a workforce knowledgeable in sustainable agriculture practices. Students will learn the fundamentals of agriculture, focusing on crop production and business. Emphasis is placed on entrepreneurial and field training. Students will also learn the basic principles of our economic system and government policies and programs relating to agriculture. Graduates should qualify for a variety of jobs in agricultural businesses such as equipment, feed, and agricultural supply sales; store management; farm operations; wholesale and retail produce management; nursery operations; and environmental and agricultural education.

Sustainable Agriculture: A program that focuses on agricultural principles and practices that, over the long term, enhance environmental quality, make efficient use of nonrenewable resources, integrate natural biological cycles and controls, and are economically viable and socially responsible; and that may prepare individuals to apply this knowledge to the solution of agricultural and environmental problems. Potential course work includes instruction in principles of agroecology, crop and soil sciences, entomology, horticulture, animal science, weed science and management, soil fertility and nutrient cycling, applied ecology, agricultural economics, and rangeland ecology and watershed management.

A20100 - Biotechnology Bioprocess Manufacturing Technology AAS

Overview

Program Code
A20100

Program Description
This curriculum prepares individuals to apply scientific principles and technical skills in support of biologists and biotechnologists in research, industrial, and government settings.

Coursework, most of which is hands-on, includes topics such as fermentation technology, cell culturing, protein purification, biologic synthesis, assaying and testing, quality control, industrial microbiology, bioprocessing, chromatography and bioseparation, genetic technology, laboratory and hazardous materials safety, and computer applications

Graduates should be qualified for employment in various biotechnology-related laboratory and manufacturing areas of industry and government, including research and development, QA, QC, process technicians, sales, and customer service.

A25120H

Program Description
The Business Administration curriculum is designed to introduce students to the various aspects of the free enterprise system. Students will be provided with a fundamental knowledge of business functions, processes, and an understanding of business organizations in today's global economy.

Course work includes business concepts such as accounting, business law, economics, management, and marketing. Skills related to the application of these concepts are developed through the study of computer applications, communication, team building, and decision making.

Through these skills, students will have a sound business education base for lifelong learning. Graduates are prepared for employment opportunities in government agencies, financial institutions, and large to small business or industry.

A25380 - Paralegal Technology AAS

Overview

Program Code
A25380

Program Description
The Paralegal Technology curriculum prepares individuals to work under the supervision of attorneys by performing routine legal tasks and assisting with substantive legal work. A paralegal/legal assistant may not practice law, give legal advice, or represent clients in a court of law.

Course work includes substantive and procedural legal knowledge in the areas of civil litigation, legal research and writing, real estate, family law, wills, estates, trusts, and commercial law. Required courses also include subjects such as English, mathematics, and computer utilization.

Graduates are trained to assist attorneys in probate work, investigations, public records search, drafting and filing legal documents, research, and office management. Employment opportunities are available in private law firms, governmental agencies, banks, insurance agencies, and other business organizations.

A25590BS - Information Technology Business Systems and Operations Support AAS

Overview

Program Code
A25590BS

Program Description
The Information Technology (IT) curriculum prepares graduates for employment in the technology sector as designers, testers, support technicians, system administrators, developers, or programmers who use computer software and\or hardware to design, process, implement and manage information systems in specialties such as database services, security, business intelligence, healthcare informatics and others depending on the technical path selected within this curriculum.

Course work includes development of a student's ability to create, store, communicate, exchange and use information to solve technical issues related to information support and services, interactive media, network systems, programming and software development, information security and other emerging technologies based on the selected area of study.

Graduates should qualify for employment in entry-level positions with businesses, educational systems, and governmental agencies which rely on computer systems to design and manage information. The program will incorporate the competencies of industry-recognized certification exams.

A25800 - Accounting and Finance AAS

Overview

Program Code
A25800

Program Description
The Accounting and Finance curriculum is designed to provide students with the knowledge and the skills necessary for employment and growth in the accounting and finance profession. Accountants and finance professionals assemble and analyze, process, and communicate essential information about financial operations.

Course work may include accounting, finance, ethics, business law, computer applications, financial planning, insurance, marketing, real estate, selling, and taxation. Related skills are developed through the study of communications, computer applications, financial analysis, critical thinking skills, and ethics.

Graduates should qualify for entry-level accounting and finance positions in many types of organizations including accounting firms, small businesses, manufacturing firms, banks, hospitals, school systems, and governmental agencies.

A30120 - Audio and Video Production Technology AAS

Overview

Program Code
A30120

Program Description
Students enrolled in the Audio and Video Production Technology curriculum will develop professional skills in audio, video, and related applications.

Training will emphasize speech, writing, production planning, postproduction, and distribution. Students will also study the evolution of media, revenue models, entrepreneurial opportunities, and governmental regulations. Hands-on training, troubleshooting, collaboration, and time management skills are essential to the instructional process.

Upon successful completion, students are prepared to obtain audio and/or video-related employment.

A35100 - Air Conditioning, Heating and Refrigeration Technology AAS

Overview

Program Code
A35100

Program Description
The Air Conditioning, Heating, and Refrigeration Technology curriculum provides the basic knowledge to develop skills necessary to work with residential and light commercial systems.

Topics include mechanical refrigeration, heating and cooling theory, electricity, controls, and safety. The diploma program covers air conditioning, furnaces, heat pumps, tools and instruments. In addition, the AAS degree covers residential building codes, residential system sizing, and advanced comfort systems.

Diploma graduates should be able to assist in the start up, preventive maintenance, service, repair, and/or installation of residential and light commercial systems. AAS degree graduates should be able to demonstrate an understanding of system selection and balance and advanced systems.

A35130 - Electrical Systems Technology AAS

Overview

Program Code
A35130

Program Description
This curriculum is designed to provide training for persons interested in the installation and maintenance of electrical systems found in residential, commercial, and industrial facilities.

Coursework, most of which is hands-on, will include such topics as AC/DC theory, basic wiring practices, programmable logic controllers, industrial motor controls, applications of the National Electric Code, and other subjects as local needs require.

Graduates should qualify for a variety of jobs in the electrical field as an on-the-job trainee or apprentice assisting in the layout, installation, and maintenance of electrical systems.

A35140 - Building Construction Technology AAS

Overview

Program Code
A35140

Program Description
Pathway Description: These curriculums are designed to prepare individuals to apply technical knowledge and skills to the fields of architecture, construction, construction management, and other associated professions.

Course work includes instruction in sustainable building and design, print reading, building codes, estimating, construction materials and methods, and other topics related to design and construction occupations.

Graduates of this pathway should qualify for entry-level jobs in architectural, engineering, construction and trades professions as well as positions in industry and government.

Building Construction Technology: A program that prepares individuals to apply technical knowledge and skills to residential and commercial building construction and remodeling. Includes instruction in construction equipment and safety; site preparation and layout; construction estimating; print reading; building codes; framing; masonry; heating, ventilation, and air conditioning; electrical and mechanical systems; interior and exterior finishing; and plumbing.

A40160 - Computer Engineering Technology AAS

Overview

Program Code
A40160

Program Description
Pathway Description: These curriculums are designed to prepare students through the study and application of principles from mathematics, natural sciences, and technology and applied processes based on these subjects. Course work includes mathematics, natural sciences, engineering sciences and technology. Graduates should qualify to obtain occupations such as technical service providers, materials and technologies testing services, process improvement technicians, engineering technicians, construction technicians and managers, industrial and technology managers, or research technicians

Computer Engineering Technology: A course of study that prepares the students to use basic engineering principles and technical skills for installing, servicing, and maintaining computers, peripherals, networks, and microprocessor and computer controlled equipment. Includes instruction in mathematics, computer electronics and programming, prototype development and testing, systems installation and testing, solid state and microminiature circuitry, peripheral equipment, and report preparation. Graduates should qualify for employment opportunities in electronics technology, computer service, computer networks, server maintenance, programming, and other areas requiring knowledge of electronic and computer systems. Graduates may also qualify for certification in electronics, computers, or networks.

A40200 - Electronics Engineering Technology AAS

Overview

Program Code
A40200

Program Description
This curriculum is designed to prepare students through the study and application of principles from mathematics, natural sciences, and technology and applied processes based on these subjects.

Course work includes mathematics, natural sciences, engineering sciences and technology.

Graduates should qualify to obtain occupations such as technical service providers, materials and technologies testing services, process improvement technicians, engineering technicians, construction technicians and managers, industrial and technology managers, or research technicians.

This course of study prepares the students to apply basic engineering principles and technical skills to become technicians who design, build, install, test, troubleshoot, repair, and modify developmental and production electronic components, equipment, and systems such as industrial/computer controls, manufacturing systems, communication systems, and power electronic systems. Includes instruction in mathematics, basic electricity, solid-state fundamentals, digital concepts, and microprocessors or programmable logic controllers.

Graduates should qualify for employment as electronics engineering technician, field service technician, instrumentation technician, maintenance technician, electronic tester, electronic systems integrator, bench technician, and production control technician.

A40280 - Laser and Photonics Technology AAS

Overview

Program Code
A40280

Program Description
Pathway Description: These curriculums are designed to prepare students through the study and application of principles from mathematics, natural sciences, and technology and applied processes based on these subjects. Course work includes mathematics, natural sciences, engineering sciences and technology. Graduates should qualify to obtain occupations such as technical service providers, materials and technologies testing services, process improvement technicians, engineering technicians, construction technicians and managers, industrial and technology managers, or research technicians

Laser and Photonics Technology: A course of study that prepares the students to apply basic engineering principles and technical skills for specifying, operating, and maintaining laser-based systems. Includes instruction in mathematics, science, communications, electronics, and optics courses emphasizing laboratory learning experiences that develops the hands-on skills needed. Graduates of the curriculum qualify for current and emerging employment opportunities in fiber optic communications, materials processing, laser surgery, research, and a variety of related fields.

A40320 - Mechanical Engineering Technology AAS

Overview

Program Code
A40320

Program Description
Pathway Description: These curriculums are designed to prepare students through the study and application of principles from mathematics, natural sciences, and technology and applied processes based on these subjects.

Course work includes mathematics, natural sciences, engineering sciences and technology.

Graduates should qualify to obtain occupations such as technical service providers, materials and technologies testing services, process improvement technicians, engineering technicians, industrial and technology managers, or research technicians.

Mechanical Engineering Technology: A course of study that prepares the students to use basic engineering principles and technical skills to design, develop, test, and troubleshoot projects involving mechanical systems. Includes instruction in principles of mechanics, applications to specific engineering systems, design testing procedures, prototype and operational testing and inspection procedures, manufacturing system-testing procedures, test equipment operation and maintenance, computer applications, critical thinking, planning and problem solving, and oral and written communications. Graduates of the curriculum will find employment opportunities in the manufacturing or service sectors of engineering technology. Engineering technicians may obtain professional certification by application to organizations such as ASQC, SME, and NICET.

A45110 - Associate Degree Nursing

Overview

Program Code
A45110

Program Description
The Associate Degree Nursing curriculum provides knowledge, skills, and strategies to integrate safety and quality into nursing care, to practice in a dynamic environment, and to meet individual needs which impact health, quality of life, and achievement of potential.

Course work includes and builds upon the domains of healthcare, nursing practice, and the holistic individual. Content emphasizes the nurse as a member of the interdisciplinary team providing safe, individualized care while employing evidence-based practice, quality improvement, and informatics.

Graduates of this program are eligible to apply to take the National Council Licensure Examination (NCLEX-RN). Employment opportunities are vast within the global health care system and may include positions within acute, chronic, extended, industrial, and community health care facilities.

Limited Enrollment Program Information

A. PROGRAM SPECIFIC ENTRANCE STANDARDS:

Admission

A student may apply to the Associate Degree Nursing Program once minimum admissions criteria are met.

Prospective applicants are required to complete the Health Sciences information session as well as contact their Education Navigator prior to developing a plan for completing minimum requirements. The Education Navigator will review each applicant's progress, and provide further guidance once all minimum admission requirements are met.

Once an applicant has completed all general admissions criteria and all Associate Degree Nursing Program entrance requirements, they must submit a completed Limited Enrollment Application. Applicants who meet all requirements will be ranked according to the order in which they applied.

During the initial consideration, applicants will have an opportunity to indicate first and second choice programs when completing the Limited Enrollment Application. If seats do not fill after the initial consideration and after second choice candidates are considered, applicants will be admitted on a first qualified, first accepted basis up until the date of the required mandatory health science orientation.

Applicants who do not gain entry but want to gain entry in a future year do not need to resubmit their application. Applicants will remain on the active applicant list as long as they are interested in being considered for the program.

It is the applicant's responsibility to ensure that requirements are met by the established deadline.

More information can be found on the Limited Enrollment Website.

Placement Test Scores

Students must be eligible to take their gateway Math and English course in order to be eligible to apply. This can be achieved through a High School Unweighted GPA of 2.6 or higher or by presenting acceptable test scores such as SAT, ACT, Accuplacer,, or other acceptable scores

The checklist for the Associate Degree Nursing Program indicates the minimum scores required to place into ENG 111 and MAT 110. Students who have an unweighted high school GPA of 2.6 or higher, have met Multiple Measures for Placement or who have earned appropriate transfer credit in English, Math, or developmental courses with a C, P2 for English, or P1 for Math, or higher may be exempt from placement testing.

GPA

Students must be in good academic standing upon applying to health science programs. Good academic standing is defined as having a 2.8 GPA or higher based on the general education courses for the program. Students can apply if they have a 2.5-2.8 GPA but will be placed on an alternate list. Alternates will be considered if there are not enough applicants to fill all seats. These GPA requirements must be maintained at the time of entering the program from a secondary or post-secondary institution.

General Education Courses

The following courses are required to be completed with a grade of "B" or better prior to applying: BIO-168, & BIO-169. The following courses are required to be completed with a grade of "C" or better prior to applying: ENG-111, ENG-112, PSY-150, PSY-241, SOC-210, Humanities Elective, & ACA-122.

Nurse Aide I Registry Requirement

Prior Health Care Program completion with appropriate listing/licensure is required for consideration at the designated entry points in the nursing programs:

- Provide proof of current active listing on the North Carolina Department of Health and Human Services (NC DHHS) Nurse Aide I Registry with no substantiated finding of abuse, neglect, or misappropriation of resident property in a nursing home or other health care facility. This active, non-restricted listing

must be maintained as of the start of the Associate degree Nursing Program. Candidates will need to renew their certification if it is scheduled to expire before the start of the nursing program.

- Provide proof of completion of NC state approved Nurse Aide I course (see approved schools at NCDHHS). The Department Chair of Nursing will review NAI programs completed outside of NC. NC DHHS-approved NAI courses are preferred, however the CCCC Nursing Department Chair will determine, on a case-by-case basis, if a course administered by another state or agency meets the requirement.

OR

High School Medical Careers I & II courses with a grade of "C" or better within the last 5 years.

OR

Nurse Aide I work experience of at least 250 hours with the last 6 months in skilled nursing care or in an acute care hospital. (Required to have documentation of hours worked, service rendered and supervisor's name on company letterhead.)

B. REQUIREMENTS AFTER ACCEPTANCE:

Criminal Background Check/Drug Screening

A criminal background check and drug screening will be required for all accepted Health Sciences students. Clinical affiliates will review criminal background reports and drug screenings of students and reserve the right to accept or deny any students based on their consideration of these reports. Negative reports and/or failed screenings can preclude a student from attending the clinical portion of their prescribed program and thus, will result in the student's exit from the program. Students are subject to criminal background check and drug screening at any time during a course with a clinical rotation. Clinical agencies reserve the right to require additional background checks and drug screens. Associated fees are the student's responsibility.

Medical Forms/Immunizations

Applicants are required to submit a completed college approved student medical health form to the required document tracking system by the assigned date. The student medical form must include satisfactory health history, physical examination, and immunization report. Failure to submit the required information by the assigned date will result in loss of Associate Degree Nursing admission status and class space will be assigned to another applicant.

BLS Provider CPR

CPR Certification by the American Heart Association (AHA) in BLS Provider (Basic Life Support including CPR and AED) that includes both performance and testing of criteria is required prior to clinical rotations. Students are responsible for keeping their CPR certification current throughout the duration of the program.

Mandatory Orientation Session

When notified of acceptance, applicants must attend a mandatory orientation session with the Nursing department.

Liability/Malpractice Insurance

Malpractice insurance is required for health sciences students and is assessed as a student fee.

Transportation/Additional Class/Course Materials

Health Sciences students are responsible for their own transportation to off-campus clinical/learning sites. Materials other than textbooks will be required and are purchased at student's expense. Students may be required to attend classes on alternate dates depending on availability of resources to meet the objectives of the course. Students will be notified in advance at the earliest possible time.

Technical Standards

The Health Sciences programs are physically demanding. Students will be expected to perform lifting, pushing, pulling, and carrying tasks to successfully practice in a lab setting, complete clinical

affiliations, and safely treat patients. For more details, please refer to each program of study's physical requirements and technical standards.

Board of Nursing Standards

Students who enroll in the nursing program should be aware that the application for licensure at the completion of the program might be denied or restricted by the North Carolina Board of Nursing. As the regulatory agency, the Board of Nursing does not become involved in reviewing the applicant's conviction record until such time as application is made to take the national licensure examination. NC Board of Nursing

Academic Standards

Upon official acceptance, Health Sciences students are required to maintain the necessary GPA requirements for entry. Students cannot enter a Health Sciences program while on academic probation or suspension. The nursing program requires a grade scale that is different from the general college requirement. Students must achieve a final grade of "80" or higher in every NUR course in order to remain in the Associate Degree Nursing program, and they must maintain an overall and semester grade point average of 2.0 or better. Refer to individual course syllabus for specific grading policy. Students are encouraged to earn higher grades to help ensure that they are prepared to pass the National Council Licensure Examination (NCLEX), which is required to practice as a nurse.

Students may withdraw or be withdrawn from a Health Sciences course. However, the student will not be allowed to matriculate through their program of study. Reapplication to the program will be required and readmission will be awarded based on admissions criteria completion, policy on readmission, and space availability. Students completing readmission must meet with the Education Navigator to review their file.

Program Specific Academic Standards

See additional Program Specific Standards in the Nursing Student Policies Handbook and specific Associate Degree Nursing course syllabus.

Associate Degree Nursing and progressive related courses must be taken in succession as they appear in the curriculum guide. Associate Degree Nursing students must adhere to the other policies set forth in the Nursing Student Policies Handbook.

C. RE-ADMISSION, TRANSFER, OR ADVANCED STANDING INTO THE ASSOCIATE DEGREE NURSING PROGRAM

Students applying for readmission are those who have been separated from the nursing program one year or less. The student must qualify under the admission criteria in effect at time of readmission or transfer. A grade replacement waiver may be initiated if the student needs to replace a NUR course to meet the GPA requirements for acceptance into the program. A student may be required to re-enter an Associate Degree Nursing course earlier in the curriculum sequence if the student lacks sufficient content mastery. All Associate Degree Nursing courses completed more than three years prior to readmission or transfer must be challenged by exam, including passing an assessment of all skills and/or competencies covered in that course, or the course must be repeated. Withdrawal or academic failure within the Associate Degree Nursing Program will require the student to reapply. Advanced placement is not guaranteed and dependent upon space availability. The Nursing Department Chair will evaluate transferability of all Associate Degree Nursing courses. Transfer courses must be equivalent to courses required at the receiving college in theory, lab, and clinical experiences. The student must provide copies of course syllabi and outlines for those Associate Degree Nursing courses to the department chairperson/program director. Students lacking essential content may be required to audit a portion of a course, challenge the content, demonstrate skills, or repeat the course as deemed necessary. The final decision for transfer credit for Associate Degree Nursing courses is determined by the Nursing Department Chair.

All admission and clinical requirements must be completed a minimum of 8 weeks prior to course start by the first day of the previous semester.

Additional Admission Requirements for Advanced Standing LPN to-ADN Bridge Program

1. Admission is based upon all required limited enrollment requirements for the Associate Degree Nursing program being met with the below additions and exceptions.
2. Admission is dependent on space availability at the specific point of entry determined for admission.
3. Applicants must show evidence of graduation from a state-approved school of practical nursing.
4. Provide a copy of current LPN License.
5. All applicants must complete the ATI PN Predictor assessment with a probability of passing score of 90% or better -at least six months after passing the NCLEX exam. The assessments can only be used for the current consideration period. The student will incur any testing expenses and may take the test only three times in a three-year period. The applicant will be referred for remediation based on a low assessment score and/or sub-scores.
6. Applicants must have successfully completed all general education courses required in the Associate Degree Nursing Program with a grade of "C" in all other general education courses, and a minimum GPA of 2.5.
7. Students may request a course exemption of ACA 122 College Transfer Success (1 semester hour) unless identified as required pre-entry remediation.
8. If an advanced placement LPN does not meet the above admission criteria and/or validation testing, they may apply for regular admission as a first-year new entry student in the Associate Degree Nursing Program.

Accreditation

Accreditation

Effective January 26, 2025, the Associate Degree Nursing program at Central Carolina Community College at the Chatham and Lee Campuses located in Sanford, North Carolina, is a candidate for initial accreditation by the Accreditation Commission for Education in Nursing. This candidacy status expires on December 31, 2026.

Accreditation Commission for Education in Nursing (ACEN)
3390 Peachtree Road NE, Suite 1400
Atlanta, GA 30326
(404) 975-5000

View the public information disclosed by the ACEN regarding this candidate program on the *ACEN's website*.

A45260 - Dental Hygiene AAS

Overview

Program Code
A45260

Program Description
The Dental Hygiene curriculum provides individuals with the knowledge and skills to assess, plan, implement, and evaluate dental hygiene care for the individual and the community.

Students will learn to prepare the operatory, take patient histories, note abnormalities, plan care, teach oral hygiene, clean teeth, take x-rays, apply preventive agents, complete necessary chart entries, and perform other procedures related to dental hygiene care.

Graduates of this program may be eligible to take national and state/regional examinations for licensure which are required to practice dental hygiene. Employment opportunities include dental offices, clinics, schools, public health agencies, industry, and professional education.

Limited Enrollment Program Information

Limited Enrollment Curriculum:

The Dental Hygiene Program is a limited enrollment curriculum. Applicants are accepted based on a selective admissions process. Criteria for admission into the Dental Hygiene Program are reviewed annually and are subject to change.

A. PROGRAM SPECIFIC ENTRANCE STANDARDS:

Admissions Process:

A student may apply to the Dental Hygiene Program once minimum admissions criteria are met.

Prospective applicants are required to complete the Health Sciences information session as well as contact their Education Navigator prior to developing a plan for completing minimum requirements . The Education Navigator will review each applicant's progress and provide further guidance once all minimum admission requirements are met.

Once an applicant has completed all general admissions criteria and all Dental Hygiene Program entrance requirements, they must submit a completed Limited Enrollment Application. Applicants who meet all requirements will be ranked according to the order in which they applied.

During the initial consideration, applicants will have an opportunity to indicate first and second choice programs when completing the Limited Enrollment Application. If seats do not fill after the initial consideration and after second choice candidates are considered, applicants will be admitted on a first qualified, first accepted basis up until the date of the required mandatory health science orientation.

Applicants must also submit a completed "Statement of Good Standing Form" explaining the circumstances of any previous exit from any health science program. The letter must be sent from the program director at the time of the student's previous enrollment. CCCC's Dental Programs Department Chair and Vice President of Student Services must approve students who were dismissed, expelled, or suspended for any reason. Students who withhold previous exit information may be dismissed from the program.

Applicants who do not gain entry but want to gain entry in a future year do not need to resubmit their application. Applicants will remain on the active applicant list as long as they are interested in being considered for the program.

It is the applicant's responsibility to ensure that requirements are met by the established deadline.

More information can be found on the Limited Enrollment Website.

Placement Test Scores

Students must be eligible to take their gateway Math and English course in order to be eligible to apply. This can be achieved through a High School Unweighted GPA of 2.6 or higher or by presenting acceptable test scores such as SAT, ACT, Accuplacer, or other acceptable scores

The checklist for the Dental Hygiene Program indicates the minimum scores required to place into ENG 111 and MAT 110. Students who have an unweighted high school GPA of 2.6 or higher, have met Multiple Measures for Placement or who have earned appropriate transfer credit in English, Math, or developmental courses with a C, P2 for English, or P1 for Math, or higher may be exempt from placement testing.

GPA

Students must be in good academic standing upon applying to health science programs. Good academic standing is defined as having a 3.0 GPA or higher based on the general education courses for the program. Students can apply if they have a 2.8-3.0 GPA but will be placed on an alternate list. Alternates will be considered if there are not enough applicants to fill all seats. These GPA requirements must be maintained at the time of entering the program from a secondary or post-secondary institution.

General Education Courses

The following courses are required to be completed with a grade of "B" or better prior to applying: CHM-130/130A, BIO-163, BIO-175. The following courses are required to be completed with a grade of "C" or better prior to applying: ENG-111, SOC-240, ACA-122, Communications Elective, & Humanities Elective.

The Test of English as a Foreign Language (TOEFL)

TOEFL scores are required for any naturalized or non-US citizens who speak English as their second language. This test provides evidence of adequate proficiency in the English language. All test scores must be less than five years old. The minimum acceptable TOEFL scores are based on the following formats: TOEFL iBT Total Score - **80** or higher

TOEFL Essential Overall Band Score: **8** or higher. The test is offered at multiple testing sites nationally or can be taken online and is at the student's expense.

B. REQUIREMENTS AFTER ACCEPTANCE:

Criminal Background Check/Drug Screening

A criminal background check and drug screening are required for all accepted Health Sciences students. Clinical affiliates will review criminal background reports and drug screenings of students and reserve the right to accept or deny any students based on their consideration of these reports. Negative reports and/or failed screenings may prevent a student from attending the clinical portion of their prescribed program. This could result in a student's withdrawal from the program. Students are subject to criminal background checks and drug screenings at any time during a clinical rotation. Clinical agencies reserve the right to require additional background checks and drug screens.

Medical Forms/Immunizations

Applicants are required to submit a completed college approved student medical health form to the required document tracking system by the assigned date. The student medical form must include satisfactory health history, physical examination, and immunization report. Failure to submit a completed medical form will result in loss of Dental Hygiene Program admission status and class space will be assigned to another applicant. NO student will be permitted to participate in clinic without having submitted a completed medical form.

**Hepatitis B shots (3 series shot) required through the second series prior to first Fall semester and completed by Spring semester.

BLS Provider CPR

CPR Certification by the American Heart Association (AHA) in BLS Provider (Basic Life Support including CPR and AED) that includes both performance and testing of criteria is required prior to starting the program. Students are responsible for keeping their CPR certification current throughout the duration of the program.

Meeting with Department Chair

Students are required to meet with the Department Chair for the program prior to the program start date.

Mandatory Orientation Session

When notified of acceptance, applicants must attend a mandatory orientation session with the Dental Hygiene Department.

Liability/Malpractice Insurance

Malpractice insurance is required for health sciences students and is assessed as a student fee.

Transportation/Additional Class/Course Materials

Health Sciences students are responsible for their own transportation to off-campus clinical/learning sites. Materials other than textbooks will be required and are purchased at student's expense.

Technical Standards

The Health Sciences Programs are physically demanding. Students will be expected to perform lifting, pushing, pulling, and carrying tasks to successfully practice in a lab setting, complete clinical affiliations, and safely treat patients. For more details, please refer to each program of study's physical requirements and technical standards.

Communicable Disease Statement

As a healthcare provider, students enrolled in the Dental Hygiene Program are exposed to communicable diseases. Students will be trained in standard precautions and asepsis techniques to minimize the potential of transmission. Students will act as peer patients during the program and will be expected to share medical information during clinical treatment.

NC State Board of Dental Examiners Standards

The application for licensure at the completion of the program might be denied or restricted by the NC State Board of Dental Examiners. Background checks are required for ALL license applications. Written examinations are offered on-line in two subject areas: infection control/sterilization and North Carolina jurisprudence. The only acceptable clinical exams are the ADEX Dental Hygiene or the CDCA/WREB/CITA Dental Hygiene exam. Both written and clinical exams must be passed before a license will be issued. Passing either the written or clinical exam alone does not fulfill requirements for licensure. No candidate may engage in the practice of dental hygiene until the license is issued and properly displayed as required by 21 NCAC 16I .0109, NC Dental Board.

Specific dental hygiene licensure requirements vary among jurisdictions, but all jurisdictions have three basic requirements: an educational requirement, a written examination requirement, and a clinical examination requirement. All jurisdictions accept graduation from a dental hygiene program accredited by the Commission on Dental Accreditation (CODA) as fulfilling the educational requirement. Most jurisdictions also accept graduation from a Canadian dental hygiene program accredited by the Commission on Dental Accreditation of Canada (CDAC).

The NBDHE is intended to fulfill or partially fulfill the written examination requirement, but acceptance of National Board Examination results is completely at the discretion of the individual state. NC does require a passing Dental Hygiene National Board score before a license will be issued. A state can place any limit on acceptance of NBDHE results that it deems appropriate. For example, some states accept National Board Examination results only if earned within the last five to 10 years.

Academic Standards

Upon official acceptance, Health Sciences students are required to maintain the necessary GPA requirements for entry. Students cannot enter a Health Sciences program while on academic suspension. Health Sciences students must achieve a grade of "C" or higher in their Health Science courses. Students may withdraw or be withdrawn from a Health Sciences course; however, the student will not be allowed to matriculate through their program of study. Reapplication to the program will be required and readmission will be awarded based on the completion of admissions criteria, the policy for readmission, and space availability. Students requesting readmission must meet with the Education Navigator to review their file.

Program Specific Academic Standards: See the Dental Hygiene Student Policies and Procedures Manual and specific Dental Hygiene Program course syllabi.

Dental Hygiene Program and progressive related courses must be taken in succession as they appear in the curriculum guide. Dental Hygiene Program students must meet the standards related to demonstration of emotional and physical health within the framework of dental hygiene practice and must adhere to the other policies set forth in the Dental Hygiene Student Policies and Procedures Manual. Dental hygiene students must not be on suspension status.

C. RE-ADMISSION OR TRANSFER INTO THE DENTAL HYGIENE PROGRAM

A student must meet the admissions criteria in effect at the time of request for re-admission or transfer. A student may be required to re-enter a dental hygiene course earlier in the curriculum sequence if the student is lacking major content. All Dental Hygiene Program courses completed more than three years prior to re-admission or transfer must be repeated. Withdrawal or academic failure within the Dental Hygiene Program will require the student to reapply to the program for re-entry. Advanced placement is dependent upon space availability. If multiple students apply for re-admission or transfer for the same semester entry, a competitive admissions protocol will be followed to determine the strongest candidate for the available seat. Students who reenter will do so one semester earlier from the semester in which they were released. The procedure for Advanced Standing is valid for candidates for one calendar year from the date leaving the program. After one calendar year, a candidate who wishes to be enrolled in the program must reapply and follow the protocol for re-admission.

The Dental Hygiene Department Chair will evaluate transferability of all Dental Hygiene Program courses. Transfer courses must be equivalent to courses required at the receiving college in both theory and clinical experiences. The student must provide copies of course syllabi and outlines to the Dental Hygiene Department Chair for those Dental Hygiene Program courses taken. Students lacking essential content may be required to audit a portion of a course, challenge the content, demonstrate skills, or repeat the course as deemed necessary. The final decision for transfer credit for Dental Hygiene Program courses is determined by the Dental Hygiene Department Chair.

Applicants must submit a letter explaining the circumstances of any previous exit from any health science program. The letter must be sent from the Program Director at the former institution. CCCC's Dental Hygiene Department Chair and Vice-President of Student Services must approve students who were dismissed, expelled, or suspended for any reason. Students who withhold previous exit information may be dismissed from the program. A remediation plan may be required.

A45360 - Health Information Technology AAS

Overview

Program Code

A45360

Program Description

The Health Information Technology curriculum provides individuals with the knowledge and skills to process, analyze, abstract, compile, maintain, manage, and report health information.

Students will supervise departmental functions; classify, code, and index diagnoses and procedures; coordinate information for cost control, quality management, statistics, marketing, and planning; monitor governmental and non-governmental standards; facilitate research; and design system controls to monitor patient information security.

Graduates of this program may be eligible to write the national certification examination to become a Registered Health Information Technician (RHIT). Employment opportunities include hospitals, rehabilitation facilities, nursing homes, health insurance organizations, outpatient clinics, physicians' offices, hospice, and mental health facilities.

Approved AAS Electives

Approved AAS Electives (C-L-SHC)

A. Social/Behavioral Science

Take 3 credits (one course) from the following: PSY 150, ECO 150, ECO 251, ECO 252, POL 120, or SOC 210.

B. Communications

Take 3 credits (one course) from the following: ENG 112, ENG 114, COM 110, COM 120, or COM 231.

C. Humanities/Fine Arts

Take 3 credits (one course) from the following: ART 111, ART 114, ART 115, DRA 111, ENG 125, ENG 231, ENG 232, ENG 241, ENG 242, HUM 110, HUM 115, HUM 120, HUM 122, HUM 150, HUM 160, MUS 110, MUS 112, PHI 240, REL 110, REL 211, REL 212

Admissions Requirements

Admissions Requirements

Admissions Standards:

Program applicants are accepted in the Fall and Spring semesters once minimum admission criteria are met. Admission criteria for the Health Information Technology program are reviewed annually and are subject to change.

A. PROGRAM SPECIFIC ENTRANCE STANDARDS:

Admissions Process

The student may apply to the Health Information Technology program once minimum admissions criteria are met. This includes the following:

- Minimum 2.0 GPA
- All transcripts received - high school and past colleges
- Eligible to take ENG and MAT without a co-requisite.

Placement Test Scores

Students must be eligible to take their gateway Math and English course in order to be eligible to apply. This can be achieved through a High School Unweighted GPA of 2.6 or higher or by presenting acceptable test scores such as SAT, ACT, Accuplacer, or other acceptable scores

Students must be able to be placed into ENG 111 and MAT 152. Students who have an unweighted high school GPA of 2.6 or higher, have met Multiple Measures for Placement or who have earned appropriate transfer credit in English, Math, or developmental courses with a C, P2 for English, or P2 for Math, or higher may be exempt from placement testing.

GPA

Students must be in good academic standing upon applying to health science programs. Good academic standing is defined as having a 2.0 GPA in the most recent semester attempted as well as maintaining a 2.0 cumulative GPA. These GPA requirements must be maintained at the time of entering the program from a secondary or post-secondary institution.

The Test of English as a Foreign Language (TOEFL)

TOEFL scores are required for any naturalized or non-US citizens who speak English as their second language. This test provides evidence of adequate proficiency in the English language. All test scores must be less than five years old. The minimum acceptable TOEFL scores are based on the following formats:
TOEFL iBT Total Score - **80** or higher

TOEFL Essential Overall Band Score: **8** or higher. The test is offered at multiple testing sites nationally or can be taken online and is at the student's expense.

B. REQUIREMENTS AFTER ACCEPTANCE:

Criminal Background Check/Drug Screening

A criminal background check and drug screening will be required for all accepted Health Sciences students. Clinical affiliates will review criminal background reports and drug screenings of students and reserve the right to accept or deny any students based on their consideration of these reports. Negative reports and/or failed screenings can preclude a student from attending the clinical portion of their prescribed program and thus, will result in the student's exit from the program. Students are subject to criminal background check and drug screening at any time during a clinical rotation. Clinical agencies reserve the right to require additional background checks and drug screens.

Medical Forms/Immunizations

Applicants are required to submit a completed college approved student medical health form to the required document tracking system by the assigned date. The student medical form must include satisfactory health history, physical examination, and immunization report. Failure to submit the required information by the assigned date will result in loss of Health Information Technology admission status and class space will be assigned to another applicant.

Liability/Malpractice Insurance

Malpractice insurance is required for health sciences students and is assessed as a student fee.

Transportation/Additional Class/Course Materials

Health Sciences students are responsible for their own transportation to off-campus clinical/learning sites. Materials and textbooks will be required and are purchased at student's expense.

Technical Standards

Please refer to the Health Information Technology program physical requirements and technical standards.

Academic Standards

Upon official acceptance, Health Sciences students are required to maintain the necessary GPA requirements for entry. Students cannot enter a Health Sciences program while on academic suspension. Health Sciences students must achieve a grade of "C" or higher in their Health Science courses. Students may withdraw or be withdrawn from a Health Sciences course. However, the student will not be allowed to matriculate through their program of study if they do not achieve a grade of “C” or better. Students completing readmission must meet with the Education Navigator to review their file.

Program Specific Academic Standards:

See additional Program Specific Standards in the Health Information Technology Program Guide and specific Health Information Technology course syllabus.

Health Information Technology students must maintain an overall and semester GPA 2.0 or better, and must earn a grade of “C” or better in all courses required by the Health Information Technology curriculum in order to graduate. Health Information Technology and progressive related courses must be taken in succession as they appear in the curriculum guide curriculum guide. Health Information Technology students must adhere to the other policies set forth in the Health Information Technology Program Guide.

C. RE-ADMISSION OR TRANSFER INTO THE HEALTH INFORMATION TECHNOLOGY PROGRAM:

The student must qualify under the admission criteria in effect at time of readmission or transfer. A student may be required to re-enter a Health Information Technology course earlier in the curriculum sequence if the student is lacking major content as evaluated by the Program Director. All Health Information Technology courses completed more than three years prior to re-admission or transfer must either be challenged by exam, including passing an assessment of all skills and/or competencies covered in that course, or the course must be repeated. Withdrawal or academic failure within the Health Information Technology program will require the student to reapply as a new student. Advanced placement is dependent upon space availability.

The Health Information Technology Program Director will evaluate transferability of all Health Information Technology courses. Transfer courses must be equivalent to courses required at the receiving college in both theory and clinical experiences. The student must provide copies of course syllabi and outlines for those Health Information Technology courses taken to the Program Director. Students lacking essential content may be required to audit a portion of a course, challenge the content, demonstrate skills or repeat the course as deemed necessary. The final decision for transfer credit for Health Information Technology courses is determined by the Health Information Technology Program Director.

Applicants must submit a letter explaining the circumstances of any previous exit from any health sciences program. The letter must be sent from the previous Program Director. CCCC’s Health Information Technology Program Director and Vice President of Student Services must approve students who were dismissed, expelled, or suspended for any reason. Students who withhold previous exit information may be dismissed from the program. A remediation plan may be required.

A45380 - Social and Human Services AAS

Overview

Program Code
A45380

Program Description
The Social and Human Services curriculum prepares students for entry-level positions in institutions and agencies which provide social, community, and behavioral health services. Along with core courses, students take courses which prepare them for specialization in specific human service areas.

Coursework includes the development of professional knowledge, skills, and values in human services. Opportunities for experiential learning allow students to apply knowledge and skills learned in the classroom.

Graduates should qualify for positions in government, private, and nonprofit social and human services agencies. Graduates may choose to transfer and continue their education at a variety of colleges and universities.

A45400 - Medical Assisting AAS

Overview

Program Code
A45400

Program Description
The Medical Assisting curriculum prepares multi-skilled health care professionals qualified to perform administrative, clinical, and laboratory procedures.

Course work includes instruction in scheduling appointments, coding and processing insurance accounts, billing, collections, computer operations; assisting with examinations/treatments, performing routine laboratory procedures, electrocardiography, supervised medication administration; and ethical/ legal issues associated with patient care.

Graduates of CAAHEP-accredited medical assisting programs may be eligible to sit for the American Association of Medical Assistants' Certification Examination to become Certified Medical Assistants. Employment opportunities include physicians' offices, health maintenance organizations, health departments, and hospitals.

Admissions Requirements

Admissions Requirements

A. PROGRAM SPECIFIC ENTRANCE STANDARDS:

Admissions Process

The student may apply to the Medical Assisting program once minimum admissions criteria are met. This includes the following:

- Minimum 2.0 GPA
- All transcripts received - high school and past colleges
- Eligible to take ENG and MAT without a co-requisite.

Placement Test Scores

Students must be eligible to take their gateway Math and English course in order to be eligible to apply. This can be achieved through a High School Unweighted GPA of 2.6 or higher or by presenting acceptable test scores such as SAT, ACT, Accuplacer, or other acceptable scores

The Medical Assisting program indicates the minimum scores required to place into ENG 111 and MAT 110. Students who have an unweighted high school GPA of 2.6 or higher, have met Multiple Measures for Placement or who have earned appropriate transfer credit in English, Math, or developmental courses with a C, P2 for English, or P1 for Math, or higher may be exempt from placement testing.

GPA

Students must be in good academic standing upon applying to health science programs. Good academic standing is defined as having a 2.0 GPA in the most recent semester attempted as well as maintaining a 2.0 cumulative GPA.

The Test of English as a Foreign Language (TOEFL)

TOEFL scores are required for any naturalized or non-US citizens who speak English as their second language. This test provides evidence of adequate proficiency in the English language. All test scores must be less than five years old. The minimum acceptable TOEFL scores are based on the following formats: TOEFL iBT Total Score - **80** or higher

TOEFL Essential Overall Band Score: **8** or higher. The test is offered at multiple testing sites nationally or can be taken online and is at the student's expense.

B. REQUIREMENTS AFTER ACCEPTANCE:

Criminal Background Check/Drug Screening

A criminal background check and drug screening will be required 30 days before the Clinical Practicum. All accepted Health Sciences Clinical affiliates will review criminal background reports and drug screenings of students and reserve the right to accept or deny any students based on their consideration of these reports. Negative reports and/or failed screenings can preclude a student from attending the clinical portion of their prescribed program and thus, will result in the student's exit from the program. Students are subject to criminal background check and drug screening at any time during a clinical rotation. Clinical agencies reserve the right to require additional background checks and drug screens.

Medical Forms/Immunizations

Applicants are required to submit a completed college approved student medical health form to the required document tracking system by the assigned date. The student medical form must include satisfactory health history, physical examination, and immunization report. Failure to submit the required information by the assigned date will result in loss of Medical Assisting admission status and class space will be assigned to another applicant.

BLS Provider CPR

CPR Certification by the American Heart Association (AHA) in BLS Provider (Basic Life Support including CPR and AED) that includes both performance and testing of criteria is required prior to clinical rotations. Students are responsible for keeping their CPR certification current throughout the duration of the program.

Mandatory Orientation Session

Accepted students must attend a mandatory orientation session with the Medical Assisting Program.

Liability/Malpractice Insurance

Malpractice insurance is required for health sciences students and is assessed as a student fee.

Transportation/Additional Class/Course Materials

Health Sciences students are responsible for their own transportation to off-campus clinical/learning sites. Materials other than textbooks will be required and are purchased at student's expense.

Technical Standards

The Health Sciences programs are physically demanding. Students will be expected to perform lifting, pushing, pulling, and carrying tasks to successfully practice in a lab setting, complete clinical affiliations, and safely treat patients. For more details, please refer to each program of study's physical requirements and technical standards.

Academic Standards

Upon official acceptance, Health Sciences students are required to maintain the necessary GPA requirements for entry. Students cannot enter a Health Sciences program while on academic suspension. Health Sciences students must achieve a grade of "C" or higher in their Health Science courses. Students may withdraw or be withdrawn from a Health Sciences course. However, the student will not be allowed to matriculate through their program of study. Readmission to the program will be required and readmission will be awarded based on admissions criteria completion, policy on readmission, and space availability. Students completing readmission must meet with the Education Navigator counselor to review their file.

Program Specific Academic Standards:

See additional Program Specific Standards in the Medical Assisting Student Handbook and specific Medical Assisting course syllabus.

Medical Assisting and progressive related courses must be taken in succession as they appear in the curriculum guide. Medical Assisting students must adhere to the other policies set forth in the Medical Assisting Student Handbook.

C. RE-ADMISSION OR TRANSFER INTO THE MEDICAL ASSISTING PROGRAM:

The student must qualify under the admission criteria in effect at time of readmission or transfer. A student may be required to re-enter a Medical Assisting course earlier in the curriculum sequence if the student is lacking major content as evaluated by the Program Director. All Medical Assisting courses completed more than three years prior to re-admission or transfer must either be challenged by exam, including passing an assessment of all skills and/or competencies covered in that course, or the course must be repeated. Withdrawal or academic failure within the Medical Assisting program will require the student to reapply as a new student. Advanced placement is dependent upon space availability.

The Medical Assisting Program Director will evaluate transferability of all Medical Assisting courses. Transfer courses must be equivalent to courses required at the receiving college in both theory and clinical experiences. The student must provide copies of course syllabi and outlines for those Medical Assisting courses taken to the Program Director. Students lacking essential content may be required to audit a portion of a course, challenge the content, demonstrate skills or repeat the course as deemed necessary. The final decision for transfer credit for Medical Assisting courses is determined by the Medical Assisting Program Director.

Applicants must submit a letter explaining the circumstances of any previous exit from any health sciences program. The letter must be sent from the previous Program Director. CCCC's Medical Assisting Program Director and Vice President of Student Services must approve students who were dismissed, expelled, or suspended for any reason. Students who withhold previous exit information may be dismissed from the program. A remediation plan may be required.

A45440 - Medical Sonography AAS

Overview

Program Code
A45440

Program Description
The Medical Sonography curriculum provides knowledge and clinical skills in the application of high frequency sound waves to image internal body structures.

Course work includes physics, cross-sectional anatomy, abdominal, introductory vascular, and obstetrical/ gynecological sonography. Competencies are attained in identification of normal anatomy and pathological processes, use of equipment, fetal growth and development, integration of related imaging, and patient interaction skills.

Graduates of accredited programs may be eligible to take examinations in ultrasound physics and instrumentation and specialty examinations administered by the American Registry of Diagnostic Medical Sonographers and find employment in clinics, physicians? offices, mobile services, hospitals, and educational institutions.

Limited Enrollment Program Information

Limited Enrollment Curriculum:

The Medical Sonography program is a limited enrollment curriculum and program applicants are accepted based upon a selective admissions process. Admission criteria for the Medical Sonography program are reviewed annually and are subject to change.

A. PROGRAM SPECIFIC ENTRANCE STANDARDS:

Admission

A student may apply to the Medical Sonography Program once minimum admissions criteria are met.

Prospective applicants are required to complete the Health Sciences information session as well as contact their Education Navigator prior to developing a plan for completing minimum requirements . The Education Navigator will review each applicant's progress and provide further guidance once all minimum admission requirements are met.

Once an applicant has completed all general admissions criteria and all Medical Sonography Program entrance requirements, they must submit a completed Limited Enrollment Application. Applicants who meet all requirements will be ranked according to the order in which they applied.

During the initial consideration, applicants will have an opportunity to indicate first and second choice programs when completing the Limited Enrollment Application. If seats do not fill after the initial consideration and after second choice candidates are considered, applicants will be admitted on a first qualified, first accepted basis up until the date of the required mandatory health science orientation.

Applicants must also submit a completed "Statement of Good Standing Form" explaining the circumstances of any previous exit from any health science program. The letter must be sent from the program director at the time of the student's previous enrollment. CCCC's Medical Sonography Department Chair and Vice

President of Student Services must approve students who were dismissed, expelled, or suspended for any reason. Students who withhold previous exit information may be dismissed from the program.

Applicants who do not gain entry but want to gain entry in a future year do not need to resubmit their application. Applicants will remain on the active applicant list as long as they are interested in being considered for the program.

It is the applicant's responsibility to ensure that requirements are met by the established deadline.

More information can be found on the Limited Enrollment Website.

Placement Test Scores

Students must be eligible to take their gateway Math and English course in order to be eligible to apply. This can be achieved through a High School Unweighted GPA of 2.6 or higher or by presenting acceptable test scores such as SAT, ACT, Accuplacer,, or other acceptable scores.

The checklist for the Medical Sonography program indicates the minimum scores required to place into ENG 111 and at minimum MAT 143. Students who have an unweighted high school GPA of 2.6 or higher, have met Multiple Measures for Placement or who have earned appropriate transfer credit in English, Math, or developmental courses with a C, P2 for English, or P2 for MAT-143 or MAT-152 and P3 or MAT-171, or higher may be exempt from placement testing.

GPA

Students are required to have a 3.0 GPA or higher based on the general education courses for the program in order to apply through the limited enrollment process. Students can apply if they have a 2.8-3.0 GPA but will be placed on an alternate list. Alternates will be considered if there are not enough applicants to fill all seats. These GPA requirements must be maintained at the time of entering the program from a secondary or post-secondary institution.

General Education Courses

The following courses are required to be completed with a grade of "B" or better prior to applying: PHY-110/110A, BIO-163 . The following courses are required to be completed with a grade of "C" or better prior to applying: ENG-111, PSY-150 or SOC-210, PHI-240, Communications Elective, Math Elective, & ACA-122.

The Test of English as a Foreign Language (TOEFL)

TOEFL scores are required for any naturalized or non-US citizens who speak English as their second language. This test provides evidence of adequate proficiency in the English language. All test scores must be less than five years old. The minimum acceptable TOEFL scores are based on the following formats: TOEFL iBT Total Score - **80** or higher

TOEFL Essential Overall Band Score: **8** or higher. The test is offered at multiple testing sites nationally or can be taken online and is at the student's expense.

B. REQUIREMENTS AFTER ACCEPTANCE:

Criminal Background Check/Drug Screening

A criminal background check and drug screening will be required for all accepted Health Sciences students. Clinical affiliates will review criminal background reports and drug screenings of students and reserve the right to accept or deny any students based on their consideration of these reports. Negative reports and/or failed screenings can preclude a student from attending the clinical portion of their prescribed program and thus, will result in the student's exit from the program. Students are subject to criminal background check and drug screening at any time during a course with a clinical rotation. Clinical agencies reserve the right to require additional background checks and drug screens. Associated fees are the student's responsibility.

Medical Forms/Immunizations

Applicants are required to submit a completed college approved student medical health form to the required document tracking system by the assigned date. The student medical form must include satisfactory health

history, physical examination, and immunization report. Failure to submit the required information by the assigned date will result in loss of Medical Sonography admission status and class space will be assigned to another applicant.

BLS Provider CPR

CPR Certification by the American Heart Association (AHA) in BLS Provider (Basic Life Support including CPR and AED) that includes both performance and testing of criteria is required prior to clinical rotations. Students are responsible for keeping their CPR certification current throughout the duration of the program.

Mandatory Orientation Session

When notified of acceptance, applicants must attend a mandatory orientation session with the sonography department.

Liability/Malpractice Insurance

Malpractice insurance is required for health sciences students and is assessed as a student fee.

Transportation/Additional Class/Course Materials

Health Sciences students are responsible for their own transportation to off-campus clinical/learning sites. Materials other than textbooks will be required and are purchased at student's expense. Students may be required to attend classes on alternate dates depending on availability of resources to meet the objectives of the course. Students will be notified in advance at the earliest possible time.

Technical Standards

The Health Sciences programs are physically demanding. Students will be expected to perform lifting, pushing, pulling, and carrying tasks to successfully practice in a lab and clinical setting. For more details, please refer to each program of study's physical requirements and technical standards.

Academic Standards

Upon official acceptance, Health Sciences students are required to maintain the necessary GPA requirements for entry. Students cannot enter a Health Sciences program while on academic suspension. Health Sciences students must achieve a grade of "C" or higher in all Health Science courses.

Students may withdraw or be withdrawn from a Health Sciences course. However, the student will not be allowed to matriculate through their program of study. Reapplication to the program will be required and readmission will be awarded based on admissions criteria completion, policy on readmission, and space availability. Students completing readmission must meet with the Education Navigator to review their file.

Program Specific Academic Standards

See additional program specific standards in the Medical Sonography Program Manual and specific Medical Sonography course syllabus.

Medical Sonography and progressive related courses must be taken in succession as they appear in the curriculum guide. Medical Sonography students must adhere to the other policies set forth in the Medical Sonography Program Manual.

C. RE-ADMISSION, TRANSFER, OR ADVANCED STANDING INTO THE MEDICAL SONOGRAPHY PROGRAM

The student must qualify under the admission criteria in effect at time of readmission or transfer. A student may be required to re-enter a Medical Sonography course earlier in the curriculum sequence if the student is lacking major content. All Medical Sonography courses completed more than three years prior to re-admission or transfer must either be challenged by exam, including passing an assessment of all skills and/or competencies covered in that course, or the course must be repeated. Withdrawal or academic failure within the Medical Sonography Program will require the student to reapply. Advanced placement is dependent upon space availability. The Sonography Program Director will evaluate transferability of all Medical Sonography courses. Transfer courses must be equivalent to courses required at the receiving college in both class, lab, and clinical experiences. The student must provide copies of course syllabi and outlines for those Medical Sonography courses to the program director. Students lacking essential content may be

required to audit a portion of a course, challenge the content, demonstrate skills, or repeat the course as deemed necessary. The final decision for transfer credit for Medical Sonography courses is determined by the Sonography Program Director.

Applicants must submit a letter explaining the circumstances of any previous exit from any health science program. The letter must be sent from the previous Program Director. CCCC's Sonography Program Director and Vice President of Student Services must approve students who were dismissed, expelled, or suspended for any reason. Students who withhold previous exit information may be dismissed from the program. A remediation plan may be required.

A45620 - Physical Therapist Assistant AAS

Overview

Program Code
A45620

Program Description
The Physical Therapist Assistant curriculum prepares graduates to work in direct patient care settings under the supervision of physical therapists. Assistants work to improve or restore function by alleviation or prevention of physical impairment and perform other essential activities in a physical therapy department.

Course work includes normal human anatomy and physiology, the consequences of disease or injury, and physical therapy treatment of a variety of patient conditions affecting humans throughout the life span.

Graduates may be eligible to take the licensure examination administered by the NC Board of Physical Therapy Examiners. Employment is available in general hospitals, rehabilitation centers, extended care facilities, specialty hospitals, home health agencies, private clinics, and public school systems.

Limited Enrollment Program Information

Limited Enrollment Curriculum:
The Physical Therapist Assistant program is a limited enrollment curriculum and program applicants are accepted based upon admissions requirements. Admission criteria for the Physical Therapist Assistant program are reviewed annually and are subject to change. Enrollment is limited to the number of approved spaces allocated by the Commission on Accreditation in Physical Therapy Education.

A. PROGRAM SPECIFIC ENTRANCE STANDARDS:

Admission

A student may apply to the Physical Therapist Assistant Program once minimum admissions criteria are met.

Prospective applicants are required to complete the Health Sciences information session as well as contact their Education Navigator prior to developing a plan for completing minimum requirements. The Education Navigator will review each applicant's progress and provide further guidance once all minimum admission requirements are met.

Once an applicant has completed all general admissions criteria and all Physical Therapist Assistant Program entrance requirements, they must submit a completed Limited Enrollment Application. Applicants who meet all requirements will be ranked based on GPA and admitted in order of ranking.

During the initial consideration, applicants will have an opportunity to indicate first and second choice programs when completing the Limited Enrollment Application. If seats do not fill after the initial consideration and after second-choice candidates are considered, applicants will be admitted on a first-qualified, first-accepted basis up until the date of the required mandatory health science orientation.

Applicants must also submit a completed "Statement of Good Standing Form" explaining the circumstances of any previous exit from any health science program. The letter must be sent from the program director at the

time of the student's previous enrollment. CCCC's Physical Therapist Assistant Department Chair and Vice President of Student Services must approve students who were dismissed, expelled, or suspended for any reason. Students who withhold previous exit information may be dismissed from the program.

It is the applicant's responsibility to ensure that requirements are met by the established deadline.

More information can be found on the Limited Enrollment Website.

Placement Test Scores

Students must be eligible to take their gateway Math and English course in order to be eligible to apply. This can be achieved through a High School Unweighted GPA of 2.6 or higher or by presenting acceptable test scores such as SAT, ACT, Accuplacer,, or other acceptable scores

The checklist for the Physical Therapist Assistant program indicates the minimum scores required to place into ENG 111 and at minimum MAT 143. Students who have an unweighted high school GPA of 2.6 or higher, have met Multiple Measures for Placement or who have earned appropriate transfer credit in English, Math, or developmental courses with a C, P2 for English, or P2 for MAT-143 or MAT-152 and P3 or MAT-171, or higher may be exempt from placement testing.

GPA

Students must be in good academic standing upon applying to health science programs. Good academic standing is defined as having a 3.0 GPA or higher based on the general education courses for the program. Students can apply if they have a 2.8-3.0 GPA but will be placed on an alternate list. Alternates will be considered if there are not enough applicants to fill all seats. These GPA requirements must be maintained at the time of entering the program from a secondary or post-secondary institution.

General Education Courses

The following courses are required to be completed prior to applying: PHY-110/110A, BIO-168, BIO-169 with a grade of "B" or better, and ENG-111 with a grade of "C" or better. The following courses are required to be completed with a grade of "C" or better prior to graduation: PSY-150, Communications Elective, Humanities Elective, & ACA-122.

Observation Hours

The completion of twenty hours of observation/work/voluntary experience in the physical therapy field is required. The observation form is located on the Limited Enrollment Website under the Physical Therapist Assistant Program.

The Test of English as a Foreign Language (TOEFL)

TOEFL scores are required for any naturalized or non-US citizens who speak English as their second language. This test provides evidence of adequate proficiency in the English language. All test scores must be less than five years old. The minimum acceptable TOEFL scores are based on the following formats: TOEFL iBT Total Score - **80** or higher

TOEFL Essential Overall Band Score: **8** or higher. The test is offered at multiple testing sites nationally or can be taken online and is at the student's expense.

B. REQUIREMENTS AFTER ACCEPTANCE:

Criminal Background Check/Drug Screening

A criminal background check and drug screening are required for all accepted Health Sciences students. Clinical affiliates will review criminal background reports and drug screenings of students and reserve the right to accept or deny any students based on their consideration of these reports. Negative reports and/or failed screenings may prevent a student from attending the clinical portion of their prescribed program and ultimately be dismissed from the program. This could result in a student's withdrawal from the program. Students are subject to criminal background checks and drug screenings at any time during the program. Clinical agencies reserve the right to require additional background checks and drug screens.

Medical Forms/Immunizations
Applicants are required to submit a completed college approved student medical health form to the required document tracking system by the assigned date. The student's medical form must include a satisfactory health history, physical examination, and immunization report. Failure to submit a completed medical form will result in loss of Physical Therapist Assistant Program admission status and class space will be assigned to another applicant. No student will be permitted to participate in clinic without having submitted a completed medical form.

BLS Provider CPR
CPR Certification by the American Heart Association (AHA) in BLS Provider (Basic Life Support including CPR and AED) that includes both performance and testing of criteria is required prior to clinical rotations. Students are responsible for keeping their CPR certification current throughout the duration of the program.

Mandatory Orientation Session
When notified of acceptance, applicants must attend a mandatory orientation session with the Physical Therapist Assistant Department.

Liability/Malpractice Insurance
Malpractice insurance is required for health sciences students and is assessed as a student fee.

Transportation/Additional Class/Course Materials
Health Sciences students are responsible for their own transportation to off-campus clinical/learning sites. Materials other than textbooks will be required and are purchased at the student's expense.

Technical Standards
The Health Sciences Programs are physically demanding. Students will be expected to perform lifting, pushing, pulling, and carrying tasks to successfully practice in a lab setting, complete clinical affiliations, and safely treat patients. For more details, please refer to each program of study's physical requirements and technical standards.

Communicable Disease Statement
As a healthcare provider, students enrolled in the Physical Therapist Assistant Program are exposed to communicable diseases. Students will be trained in standard precautions and asepsis techniques to minimize the potential of transmission. Students will act as peer patients during the program and will be expected to share medical information during clinical treatment.

Employment Opportunities
Graduates may be eligible to take the licensure examination administered by the NC Board of Physical Therapy Examiners. A student with a felony may not be eligible for licensure or employment. Employment is available in, but not limited to, general hospitals, rehabilitation centers, skilled nursing facilities, specialty hospitals, home health agencies, private clinics, and public school systems.

Competitive admissions are anticipated for a challenging program that leads to an intensely satisfying career. The program will admit a maximum of 24 students each Fall Semester.

Academic Standards
Upon official acceptance, Health Sciences students are required to maintain the necessary GPA requirements for entry. Students cannot enter a Health Sciences program while on academic suspension. Students may withdraw or be withdrawn from a Health Sciences course; however, the student will not be allowed to matriculate through their program of study. Reapplication to the program will be required and readmission will be awarded based on the completion of admissions criteria, the policy for readmission, and space availability. Students requesting readmission must meet with the Education Navigator and Department Chair to review their file.

Program Specific Academic Standards: See the Physical Therapist Assistant Program Manual and specific Physical Therapist Assistant Program course syllabi.

Physical Therapist Assistant Program technical courses must be taken in succession as they appear in the curriculum guide. Physical Therapist Assistant Program students must meet the standards related to the demonstration of emotional and physical health within the framework of physical therapy practice and must

adhere to the other policies set forth in the Physical Therapist Assistant Program Manual. Physical Therapist Assistant students must not be on suspension status.

C. REINSTATEMENT INTO THE PHYSICAL THERAPIST ASSISTANT PROGRAM

Students who wish to be considered for reinstatement should reapply using the Reinstatement Procedure listed in the Physical Therapist Assistant Program Manual. The reinstatement process will only be offered once. There is no guarantee of reinstatement for any student.

To begin the reinstatement process, the student must apply in writing to the Department Chair requesting reinstatement in the program. The letter must include the date the student wishes to return and a rationale describing how the student plans to complete the program successfully. The letter must be received by the Department Chair no later than 60 days prior to the first day of the academic semester into which the student wishes to reenroll. The Progressions Committee will meet within 3 weeks of receipt of the letter to consider the reinstatement request and complete a plan of action to address the reasons for withdrawal/dismissal.

The Department Chair will formally notify the student of their decision and plan of action within 5 business days of the meeting. If remediation or other action is warranted, it must be successfully completed no less than 7 calendar days prior to the start of the semester in which the student wishes to reenroll. If this does not occur, the student must reinitiate the reinstatement process. The final decision for acceptance into the next cohort will be based upon available slots in the cohort, successful completion of any actions required by the Department Chair, and a reasonable expectation that the student in question has the potential to succeed in the program.

A45630 - Health and Fitness Science AAS

Overview

Program Code
A45630

Program Description
The Health and Fitness Science program is designed to provide students with the knowledge and skills necessary for employment in the fitness and exercise industry.

Students will be trained in exercise science and be able to administer basic fitness tests and health risk appraisals, teach specific exercise and fitness classes and provide instruction in the proper use of exercise equipment and facilities.

Graduates should qualify for employment opportunities in commercial fitness clubs, YMCA's/ YWCA's, wellness programs in business and industry, Parks & Recreation Departments and other organizations implementing exercise & fitness programs.

Admissions Requirements

Admissions Requirements

See additional Program Specific Standards in the Health and Fitness Science Program Guide and specific Health and Fitness Science course syllabus.

Health and Fitness Science and progressive related courses must be taken in succession as they appear in the curriculum guide. Health and Fitness Science students must adhere to the other policies set forth in the Health and Fitness Science Program Guide.

A45780 - Veterinary Medical Technology AAS

Overview

Program Code

A45780

Program Description

The Veterinary Medical Technology curriculum is designed to prepare individuals to assist veterinarians in preparing animals, equipment, and medications for examination and surgery; collecting specimens; performing laboratory, radiographic, anesthetic, dental procedures; assisting in surgery; and providing proper husbandry of animals and their environment.

Course work includes instruction in veterinary anatomy, nutrition, parasitology, pathology, physiology, radiology, terminology, zoology, office practices, laboratory techniques, dentistry, and small and large animal clinical practices.

Graduates of accredited programs may be eligible to take state and national examinations administered by the North Carolina Veterinary Medical Board. Graduates may be employed in veterinary clinics; diagnostic, research, or pharmaceutical laboratories; zoos; academic institutions; or other areas associated with animal care.

Limited Enrollment Program Information

Limited Enrollment Curriculum:

The Veterinary Medical Technology program is a limited enrollment curriculum and program applicants are accepted based upon a selective admission process. Admission criteria for the Veterinary Medical Technology program are reviewed annually and are subject to change.

A. PROGRAM SPECIFIC ENTRANCE STANDARDS:

Admissions Process:

A student may apply to the Veterinary Medical Technology Program once minimum admissions criteria are met.

Prospective applicants are required to complete the Health Sciences information session as well as contact their Education Navigator prior to developing a plan for completing minimum requirements. The Education Navigator will review each applicant's progress, and provide further guidance once all minimum admission requirements are met.

Once an applicant has completed all general admissions criteria and all Veterinary Medical Technology Program entrance requirements, they must submit a completed Limited Enrollment Application. Applicants who meet all requirements will be ranked according to the order in which they applied.

During the initial consideration, applicants will have an opportunity to indicate first and second choice programs when completing the Limited Enrollment Application. If seats do not fill after the initial consideration and after second choice candidates are considered, applicants will be admitted on a first qualified, first accepted basis up until the date of the required mandatory health science orientation.

Applicants who do not gain entry but want to gain entry in a future year do not need to resubmit their application. Applicants will remain on the active applicant list as long as they are interested in being considered for the program.

Applicants must also submit a completed "Statement of Good Standing Form" explaining the circumstances of any previous exit from any health science program. The letter must be sent from the program director at the time of the student's previous enrollment. CCCC's Nursing Department Chair and Vice President of Student Services must approve students who were dismissed, expelled, or suspended for any reason. Students who withhold previous exit information may be dismissed from the program.

It is the applicant's responsibility to ensure that requirements are met by the established deadline.

More information can be found on the Limited Enrollment Website.

Placement Test Scores

Students must be eligible to take their gateway Math and English course in order to be eligible to apply. This can be achieved through a High School Unweighted GPA of 2.8 or higher or by presenting acceptable test scores such as SAT, ACT, Accuplacer, RISE Assessment scores, or other acceptable scores (within the past 10 years).

The checklist for the Medical Sonography Program indicates the minimum scores required to place into ENG 111 and MAT 110. Students who have an unweighted high school GPA of 2.8 or higher, have met Multiple Measures for Placement or who have earned appropriate transfer credit in English, Math, or developmental courses with a C, P2 for English, or P1 for Math, or higher may be exempt from placement testing.

GPA

Students must be in good academic standing upon applying to health science programs. Good academic standing is defined as having a 2.5 GPA or higher based on the general education courses for the program. Students can apply if they have a 2.0-2.5 GPA but will be placed on an alternate list. Alternates will be considered if there are not enough applicants to fill all seats. These GPA requirements must be maintained at the time of entering the program from a secondary or post-secondary institution.

General Education Courses

The following courses are required to be completed with a grade of "B" or better prior to applying: CHM-130/130A. The following courses are required to be completed with a grade of "C" or better prior to applying: ENG-111, MAT-110, Social Science Elective, Communications Elective, Humanities Elective, & ACA-122.

The Test of English as a Foreign Language (TOEFL)

TOEFL scores are required for any naturalized or non-US citizens who speak English as their second language. This test provides evidence of adequate proficiency in the English language. All test scores must be less than five years old. The minimum acceptable TOEFL scores are based on the following formats: TOEFL iBT Total Score - **80** or higher TOEFL Essential Overall Band Score: **8** or higher. The test is offered at multiple testing sites nationally or can be taken online and is at the student's expense.

Observation Hours *(Highly Recommended, Not Required)*

The completion of forty hours of observation/work/voluntary experience in the Veterinary Medical Technology field is highly recommended. The observation form is located on the Limited Enrollment Website under the Veterinary Medical Technology Program.

B. REQUIREMENTS AFTER ACCEPTANCE:

Criminal Background Check/Drug Screening

A criminal background check and drug screening will be required for all accepted Health Sciences students. Clinical affiliates will review criminal background reports and drug screenings of students and reserve the right to accept or deny any students based on their consideration of these reports. Negative reports and/or failed screenings can preclude a student from attending the clinical portion of their prescribed program and thus, will result in the student's exit from the program. Students are subject to drug screening at any time during a clinical rotation. Clinical agencies reserve the right to require additional background checks and drug screens.

Medical Forms/Immunizations

Applicants are required to submit a completed college approved student medical health form to the required document tracking system by the assigned date. The student medical form must include satisfactory health history, physical examination, and immunization report. Failure to submit the required information by the assigned date will result in loss of Veterinary Medical Technology admission status and class space will be assigned to another applicant.

**Rabies series required prior to the first Fall semester.

Mandatory Orientation Session

When notified of acceptance, applicants must attend a mandatory orientation session with the Veterinary Medical Technology department.

Liability/Malpractice Insurance

Malpractice insurance is required for health sciences students and is assessed as a student fee.

Transportation/Additional Class/Course Materials

Health Sciences students are responsible for their own transportation to off-campus clinical/learning sites. Materials other than textbooks will be required and are purchased at student's expense.

Technical Standards

The Health Sciences programs are physically demanding. Students will be expected to perform lifting, pushing, pulling, and carrying tasks to successfully practice in a lab setting, complete clinical affiliations, and safely treat patients. For more details, please refer to each program of study's physical requirements and technical standards.

Academic Standards

Upon official acceptance, Health Sciences students are required to maintain the necessary GPA requirements for entry. Students cannot enter a Health Sciences program while on academic suspension. Health Sciences students must achieve a grade of "C" or higher in their Health Science courses. Students may withdraw or be withdrawn from a Health Sciences course. However, the student will not be allowed to matriculate through their program of study. Reapplication to the program will be required and readmission will be awarded based on admissions criteria completion, policy on readmission, and space availability. Students completing readmission must meet with the Education Navigator to review their file.

Program Specific Academic Standards: See the Veterinary Medical Technology Student Handbook and specific Veterinary Medical Technology course syllabi.

Veterinary Medical Technology students must maintain an overall and semester GPA 2.0 or better, and must have a grade of "C" or better in all courses required by the Veterinary Medical Technology curriculum. Veterinary Medical Technology and progressive related courses must be taken in succession as they appear in the curriculum guide. Veterinary Medical Technology students must meet the standards related to demonstration of emotional and physical health within the framework of Veterinary Medical Technology practice and must adhere to the other policies set forth in the Veterinary Medical Technology

Student Policies and Procedures Manual. Veterinary Medical Technology students must not be on probation or suspension status.

C. RE-ADMISSION OR TRANSFER INTO THE VETERINARY MEDICAL TECHNOLOGY PROGRAM

The student must qualify under the admission criteria in effect at time of readmission or transfer. A student may be required to re-enter a Veterinary Medical Technology course earlier in the curriculum sequence if the student is lacking major content. All Veterinary Medical Technology courses completed more than three years prior to re-admission or transfer must either be challenged by exam, including passing an assessment of all skills and/or competencies covered in that course, or the course must be repeated. Withdrawal or academic failure within the Veterinary Medical Technology program will require the student to reapply. Advanced placement is dependent upon space availability.

The Veterinary Medical Technology Program Director will evaluate transferability of all Veterinary Medical Technology courses. Transfer courses must be equivalent to courses required at the receiving college in both theory and clinical experiences. The student must provide copies of course syllabi and outlines for those Veterinary Medical Technology courses taken to the Veterinary Medical Technology Program Director. Students lacking essential content may be required to audit a portion of a course, challenge the content, demonstrate skills, or repeat the course as deemed necessary. The final decision for transfer credit for Veterinary Medical Technology courses is determined by the Veterinary Medical Technology Program Director.

Applicants must submit a letter explaining the circumstances of any previous exit from any health science program. The letter must be sent from the Program Director at the former institution. CCCC's Veterinary Medical Technology Program Director and Vice-President of Student Services must approve students who were dismissed, expelled, or suspended for any reason. Students who withhold previous exit information may be dismissed from the program. A remediation plan may be required.

A50210 - Computer-Integrated Machining AAS

Overview

Program Code
A50210

Program Description
The Computer-Integrated Machining curriculum prepares students with the analytical, creative and innovative skills necessary to take a production idea from an initial concept through design, development and production, resulting in a finished product.

Coursework may include manual machining, computer applications, engineering design, computer-aided drafting (CAD), computer-aided machining (CAM), blueprint interpretation, advanced computerized numeric control (CNC) equipment, basic and advanced machining operations, precision measurement and high-speed multi-axis machining.

Graduates should qualify for employment as machining technicians in high-tech manufacturing, rapid-prototyping and rapid-manufacturing industries, specialty machine shops, fabrication industries, and high-tech or emerging industries such as aerospace, aviation, medical, and renewable energy, and to sit for machining certification examinations.

A50240 - Industrial Systems Technology AAS

Overview

Program Code
A50240

Program Description
The Industrial Systems Technology curriculum is designed to prepare or upgrade individuals to safely service, maintain, repair, or install equipment. Instruction includes theory and skill training needed for inspecting, testing, troubleshooting, and diagnosing industrial systems.

Students will learn multi-craft technical skills in print reading, mechanical systems maintenance, electricity, hydraulics/pneumatics, welding, machining or fabrication, and includes various diagnostic and repair procedures. Practical application in these industrial systems will be emphasized and additional advanced course work may be offered.

Upon completion of this curriculum, graduates should be able to individually, or with a team, safely install, inspect, diagnose, repair, and maintain industrial process and support equipment. Students will also be encouraged to develop their skills as life-long learners.

A50420 - Welding Technology AAS

Overview

Program Code
A50420

Program Description
The Welding Technology curriculum provides students with a sound understanding of the science, technology, and applications essential for successful employment in the welding and metalworking industry.

Instruction includes consumable and non-consumable electrode welding and cutting processes. Courses may include math, print reading, metallurgy, welding inspection, and destructive and non-destructive testing providing the student with industry-standard skills developed through classroom training and practical application.

Graduates of the Welding Technology curriculum may be employed as entry-level technicians in welding and metalworking industries. Career opportunities also exist in construction, manufacturing, fabrication, sales, quality control, supervision, and welding-related self-employment.

A55110 - Barbering AAS

Overview

Program Code
A55110

Program Description
The Barbering Curriculum is designed to provide competency-based knowledge, scientific/artistic principles and hands-on fundamentals associated with the barber industry. The curriculum also provides a simulated environment that enables students to develop manipulative skills.

Course work includes instruction in all phases of professional barbering, hair design, chemical processes, skin care, nail care, multi-cultural practices, business/computer principles, product knowledge and other selected topics.

Graduates should qualify to sit for the State Board of Examiners. Upon successfully passing the State Board exam, graduates will be issued a license. Employment is available in barbershops and related businesses.

A5518C - Criminal Justice Technology Forensic Science AAS

Overview

Program Code
A5518C

Program Description
Forensic Science is a concentration under the curriculum of Criminal Justice Technology, which focuses on the application of the physical, biomedical, and social sciences to the analysis and evaluation of physical evidence, human testimony and criminal suspects. Study will focus on local, state, and federal law enforcement, evidence processing and procedures.

Students will learn both theory and hands-on analysis of latent evidence. They will learn fingerprint classification, identification, and chemical development. Students will record, cast, and recognize footwear and tire-tracks; and process crime scenes. Issues and concepts of communications and the use of computers and computer assisted design programs in crime scene technology will be discussed.

Graduates should qualify for employment in a variety of criminal justice organizations especially in local, state, and federal law enforcement, and correctional agencies.

A55310 - Library and Information Technology AAS

Overview

Program Code
A55310

Program Description
The Library and Information Technology curriculum is designed to prepare graduates for employment with organizations that use technology to process, manage, and communicate information. The objective is the development of generalists and specialist in the management of electronic library resources.

Students will complete courses designed to develop proficiency in the use of electronic resources for information retrieval, inventory control, information cataloging and classification, program promotion, circulation systems, audiovisual operations, hardware/software maintenance, problem solving and telecommunications.

Graduates should qualify for employment in a variety of positions in a library, media, learning resources, information, or instructional materials center or in any organization engaged in library-related activities.

A55480 - Public Safety Administration

Overview

Program Code
A55480

Program Description
The Public Safety Administration curriculum is designed to provide students, as well as practitioners, with knowledge and skills in the technical, managerial, and administrative areas necessary for entrance or advancement within various public safety and government organizations.

Course work in diverse subject areas includes public safety administration and education, interagency operations, crisis leadership, government and agency financial management, professional standards, incident management, administrative law, and supervision, while providing a streamlined pathway that recognizes the value of previously earned skillsets and credentials within the public safety sector.

Employment opportunities exist with fire or police departments, emergency management organizations, governmental agencies, industrial firms, correctional facilities, private industries, insurance organizations, educational organizations, security and protective organizations, and through self-employment opportunities.

A60160EV - Automotive Systems Technology Electric Vehicle Track AAS

Overview

Program Code
A60160EV

Program Description
This curriculum prepare individuals for employment as entry-level transportation service technicians. The program provides an introduction to transportation industry careers and increases student awareness of the diverse technologies associated with this dynamic and challenging field.

Course work may include transportation systems theory, braking systems, climate control, design parameters, drive trains, electrical/electronic systems, engine repair, engine performance, environmental regulations, materials, product finish, safety, steering/ suspension, transmission/transaxles, and sustainable transportation, depending on the program major area chosen.

Graduates should be prepared to take professional licensure exams, which correspond to certain programs of study, and to enter careers as entry-level technicians in the transportation industry.

Automotive Systems Technology that prepares individuals to apply technical knowledge and skills to repair, service, and maintain all types of automobiles. The program includes instruction in brake systems, electrical systems, engine performance, engine repair, suspension and steering, automatic and manual transmissions and drive trains, and heating and air condition systems

C15410EL - Sustainable Agriculture Ecological Landscaping Certificate

Overview

Program Code
C15410EL

This certificate is designed to give students the tools necessary to become competent practitioners of ecological gardening and effective land stewards. Courses in plant science, plant propagation, biological pest management and design are paired with hands-on gardening labs and opportunities to tour and understand the key principles of ecological landscaping with professionals.

C20100QC - Biotechnology Quality Control Certificate

Overview

Program Code
C20100QC

Program Description
This curriculum prepares individuals to apply scientific principles and technical skills in support of biologists and biotechnologists in research, industrial, and government settings.

Coursework, most of which is hands-on, includes topics such as fermentation technology, cell culturing, protein purification, biologic synthesis, assaying and testing, quality control, industrial microbiology, bioprocessing, chromatography and bioseparation, genetic technology, laboratory and hazardous materials safety, and computer applications

Graduates should be qualified for employment in various biotechnology-related laboratory and manufacturing areas of industry and government, including research and development, QA, QC, process technicians, sales, and customer service.

This Certificate will provide the option of earning an additional credential with the Bioprocess Technology Degree (A20100). Students can choose to take ISC-129 (3 credits) to earn the AAS with the QC certificate (C20100QC), preparing students for roles as Quality Control lab technicians. This program introduces students to essential quality control (QC) testing methods used in biopharmaceutical manufacturing. Topics include analytical chemistry techniques, microbiological testing, raw material verification, in-process control, and final product release testing. Emphasis is placed on quality testing in industrial laboratories, regulatory compliance, Good Laboratory

Practice (GLP), data integrity, and hands-on skills. This certificate can also be earned as a short-term non-degree credential.

C25310HA - Healthcare Administration Certificate

Overview

Program Code
C25310HA

Program Description
The Medical Office Administration curriculum prepares individuals for employment as medical administrative personnel in the areas of medical office, medical billing and coding, dental office, patient services, and medical documents.

Course work includes medical terminology, computer applications, medical office management, medical coding, medical insurance and billing, medical legal and ethical issues, oral and written communication, and other topics depending on the subject area selected within this curriculum.

Graduates should qualify for employment opportunities in a variety of medical office positions in medical and dental offices, hospitals, insurance companies, laboratories, medical supply companies, and other healthcare related organizations. Upon graduation, students may be eligible to sit for industry recognized certification exams.

C25590K3 - Information Technology

Overview

Program Code
C25590K3

Program Description
The Information Technology (IT) curriculum prepares graduates for employment in the technology sector as designers, testers, support technicians, system administrators, developers, or programmers who use computer software and\or hardware to design, process, implement and manage information systems in specialties such as database services, security, business intelligence, healthcare informatics and others depending on the technical path selected within this curriculum.

Course work includes development of a student's ability to create, store, communicate, exchange and use information to solve technical issues related to information support and services, interactive media, network systems, programming and software development, information security and other emerging technologies based on the selected area of study.

Graduates should qualify for employment in entry-level positions with businesses, educational systems, and governmental agencies which rely on computer systems to design and manage information. The program will incorporate the competencies of industry-recognized certification exams.

C35100C - Air Conditioning, Heating & Refrig Tech Core Certificate

Overview

Program Code
C35100C

Program Description
The Air Conditioning, Heating, and Refrigeration Technology curriculum provides the basic knowledge to develop skills necessary to work with residential and light commercial systems.

Topics include mechanical refrigeration, heating and cooling theory, electricity, controls, and safety. The diploma program covers air conditioning, furnaces, heat pumps, tools and instruments. In addition, the AAS degree covers residential building codes, residential system sizing, and advanced comfort systems.

Diploma graduates should be able to assist in the start up, preventive maintenance, service, repair, and/or installation of residential and light commercial systems. AAS degree graduates should be able to demonstrate an understanding of system selection and balance and advanced systems.

Admissions Requirements

Admissions Requirements

Limited Enrollment Curriculum:

The Health Information Technology program is a limited enrollment curriculum. Program applicants are accepted in the Fall and Spring semesters once minimum admission criteria are met. Admission criteria for the Health Information Technology program C45360DA are reviewed annually and are subject to change.

A. PROGRAM SPECIFIC ENTRANCE STANDARDS:

Admissions Process

The student may apply to the Health Information Technology program once minimum admissions criteria are met. This includes the following:

- Minimum 2.0 GPA
- All transcripts received - high school and past colleges
- Eligible to take MAT without a co-requisite.

Placement Test Scores

Students must be eligible to take their gateway Math course in order to be eligible to apply. This can be achieved through a High School Unweighted GPA of 2.6 or higher or by presenting acceptable test scores such as SAT, ACT, Accuplacer, or other acceptable scores

Students must be able to be placed into MAT 152. Students who have an unweighted high school GPA of 2.6 or higher, have met Multiple Measures for Placement or who have earned appropriate transfer credit in English, Math, or developmental courses with a C, P2 for English, or P2 for Math, or higher may be exempt from placement testing.

GPA

Students must be in good academic standing upon applying to health science programs. Good academic standing is defined as having a 2.0 GPA in the most recent semester attempted as well as maintaining a 2.0 cumulative GPA. These GPA requirements must be maintained at the time of entering the program from a secondary or post-secondary institution.

The Test of English as a Foreign Language (TOEFL)

TOEFL scores are required for any naturalized or non-US citizens who speak English as their second language. This test provides evidence of adequate proficiency in the English language. All test scores must

be less than five years old. The minimum acceptable TOEFL scores are based on the following formats: TOEFL iBT Total Score - **80** or higher

TOEFL Essential Overall Band Score: **8** or higher. The test is offered at multiple testing sites nationally or can be taken online and is at the student's expense.

B. REQUIREMENTS AFTER ACCEPTANCE:

Liability/Malpractice Insurance

Malpractice insurance is required for health sciences students and is assessed as a student fee.

Transportation/Additional Class/Course Materials

Health Sciences students are responsible for their own transportation to off-campus clinical/learning sites. Materials and textbooks will be required and are purchased at student's expense.

Technical Standards

Please refer to the Health Information Technology program physical requirements and technical standards.

Academic Standards

Upon official acceptance, Health Sciences students are required to maintain the necessary GPA requirements for entry. Students cannot enter a Health Sciences program while on academic suspension. Health Sciences students must achieve a grade of "C" or higher in their Health Science courses. Students may withdraw or be withdrawn from a Health Sciences course. However, the student will not be allowed to matriculate through their program of study if they do not achieve a grade of "C" or better. Students completing readmission must meet with the Education Navigator to review their file.

Program Specific Academic Standards:

See additional Program Specific Standards in the Health Information Technology Program Guide and specific Health Information Technology course syllabus.

Health Information Technology students must maintain an overall and semester GPA 2.0 or better, and must earn a grade of "C" or better in all courses required by the Health Information Technology curriculum in order to graduate. Health Information Technology and progressive related courses must be taken in succession as they appear in the curriculum guide curriculum guide. Health Information Technology students must adhere to the other policies set forth in the Health Information Technology Program Guide.

C. RE-ADMISSION OR TRANSFER INTO THE HEALTH INFORMATION TECHNOLOGY PROGRAM:

The student must qualify under the admission criteria in effect at time of readmission or transfer. A student may be required to re-enter a Health Information Technology course earlier in the curriculum sequence if the student is lacking major content as evaluated by the Program Director. All Health Information Technology courses completed more than three years prior to re-admission or transfer must either be challenged by exam, including passing an assessment of all skills and/or competencies covered in that course, or the course must be repeated. Withdrawal or academic failure within the Health Information Technology program will require the student to reapply as a new student. Advanced placement is dependent upon space availability.

The Health Information Technology Program Director will evaluate transferability of all Health Information Technology courses. Transfer courses must be equivalent to courses required at the receiving college in both theory and clinical experiences. The student must provide copies of course syllabi and outlines for those Health Information Technology courses taken to the Program Director. Students lacking essential content may be required to audit a portion of a course, challenge the content, demonstrate skills or repeat the course as deemed necessary. The final decision for transfer credit for Health Information Technology courses is determined by the Health Information Technology Program Director.

Applicants must submit a letter explaining the circumstances of any previous exit from any health sciences program. The letter must be sent from the previous Program Director. CCCC's Health Information Technology Program Director and Vice

President of Student Services must approve students who were dismissed, expelled, or suspended for any reason. Students who withhold previous exit information may be dismissed from the program. A remediation plan may be required.

Applicants must submit a letter explaining the circumstances of any previous exit from any health sciences program. The letter must be sent from the previous Program Director. CCCC's Health Information Technology Program Director and Vice President of Student Services must approve students who were dismissed, expelled, or suspended for any reason. Students who withhold previous exit information may be dismissed from the program. A remediation plan may be required.

Admissions Requirements

Admissions Requirements

A. All high school and college transcripts must be received.

B. REQUIREMENTS AFTER ACCEPTANCE:

Liability/Malpractice Insurance

Malpractice insurance is required for health sciences students and is assessed as a student fee.

Transportation/Additional Class/Course Materials

Health Sciences students are responsible for their own transportation to off-campus clinical/learning sites. Materials and textbooks will be required and are purchased at student's expense.

Technical Standards

Please refer to the Health Information Technology program's physical requirements and technical standards.

Academic Standards

Upon official acceptance, Health Sciences students are required to maintain the necessary GPA requirements for entry. Students cannot enter a Health Sciences program while on academic suspension. Health Sciences students must achieve a grade of "C" or higher in their Health Science courses. Students may withdraw or be withdrawn from a Health Sciences course. However, the student will not be allowed to matriculate through their program of study if they do not achieve a grade of "C" or better. Students completing readmission must meet with the Education Navigator to review their file.

Program Specific Academic Standards:

See additional Program Specific Standards in the Health Information Technology Program Guide and specific Health Information Technology course syllabus.

Health Information Technology students must maintain an overall and semester GPA 2.0 or better, and must earn a grade of "C" or better in all courses required by the Health Information Technology curriculum in order to graduate. Health Information Technology and progressive related courses must be taken in succession as they appear in the curriculum guide curriculum guide. Health Information Technology students must adhere to the other policies set forth in the Health Information Technology Program Guide.

C. RE-ADMISSION OR TRANSFER INTO THE HEALTH INFORMATION TECHNOLOGY PROGRAM:

The student must qualify under the admission criteria in effect at time of readmission or transfer. A student may be required to re-enter a Health Information Technology course earlier in the curriculum sequence if the student is lacking major content as evaluated by the Program Director. All Health Information Technology courses completed more than three years prior to re-admission or transfer must either be challenged by exam, including passing an assessment of all skills and/or competencies covered in that course, or the course must be repeated. Withdrawal or academic failure within the Health Information Technology program will require the student to reapply as a new student. Advanced placement is dependent upon space availability.

The Health Information Technology Program Director will evaluate transferability of all Health Information Technology courses. Transfer courses must be equivalent to courses required at the receiving college in both theory and clinical experiences. The student must provide copies of course syllabi and outlines for those Health Information Technology courses taken to the Program Director. Students lacking essential content may be required to audit a portion of a course, challenge the content, demonstrate skills or repeat the course as deemed necessary. The final decision for transfer credit for Health Information Technology courses is determined by the Health Information Technology Program Director.

Applicants must submit a letter explaining the circumstances of any previous exit from any health sciences program. The letter must be sent from the previous Program Director. CCCC's Health Information Technology Program Director and Vice President of Student Services must approve students

who were dismissed, expelled, or suspended for any reason. Students who withhold previous exit information may be dismissed from the program. A remediation plan may be required.

C45630 - Health and Fitness Science Certificate

Overview

Program Code
C45630

Program Description
The Health and Fitness Science program is designed to provide students with the knowledge and skills necessary for employment in the fitness and exercise industry.

Students will be trained in exercise science and be able to administer basic fitness tests and health risk appraisals, teach specific exercise and fitness classes and provide instruction in the proper use of exercise equipment and facilities.

Graduates should qualify for employment opportunities in commercial fitness clubs, YMCA's/ YWCA's, wellness programs in business and industry, Parks & Recreation Departments and other organizations implementing exercise & fitness programs.

C50210K1 - Computer-Integrated Machining

Overview

Program Code
C50210K1

Program Description
The Computer-Integrated Machining curriculum prepares students with the analytical, creative and innovative skills necessary to take a production idea from an initial concept through design, development and production, resulting in a finished product.

Coursework may include manual machining, computer applications, engineering design, computer-aided drafting (CAD), computer-aided machining (CAM), blueprint interpretation, advanced computerized numeric control (CNC) equipment, basic and advanced machining operations, precision measurement and high-speed multi-axis machining.

Graduates should qualify for employment as machining technicians in high-tech manufacturing, rapid-prototyping and rapid-manufacturing industries, specialty machine shops, fabrication industries, and high-tech or emerging industries such as aerospace, aviation, medical, and renewable energy, and to sit for machining certification examinations.

C50420K1 - Welding Technology

Overview

Program Code
C50420K1

Program Description
The Welding Technology curriculum provides students with a sound understanding of the science, technology, and applications essential for successful employment in the welding and metalworking industry.

Instruction includes consumable and non-consumable electrode welding and cutting processes. Courses may include math, print reading, metallurgy, welding inspection, and destructive and non-destructive testing providing the student with industry-standard skills developed through classroom training and practical application.

Graduates of the Welding Technology curriculum may be employed as entry-level technicians in welding and metalworking industries. Career opportunities also exist in construction, manufacturing, fabrication, sales, quality control, supervision, and welding-related self-employment.

C55120 - Basic Law Enforcement Training Certificate

Overview

Program Code
C55120

Program Description
Basic Law Enforcement Training (BLET) is designed to give students essential skills required for entry-level employment as law enforcement officers with state, county, or municipal governments, or with private enterprise.

This program utilizes State commission-mandated topics and methods of instruction. General subjects include, but are not limited to, criminal, juvenile, civil, traffic, and alcohol beverage laws; investigative, patrol, custody, and court procedures; emergency responses; and ethics and community relations.

Students must successfully complete and pass all units of study mandated by the North Carolina Criminal Justice Education and Training Standards Commission and the North Carolina Sheriffs' Education and Training Standards Commission to receive a certificate.

Basic Law Enforcement Training (BLET) is designed to give students essential skills required for entry-level employment as law enforcement officers with state, county, or municipal governments, or with private enterprise. This program utilizes State-commission-mandated topics and methods of instruction. Units of instruction include legal, patrol duties, law enforcement communication , investigation, practical application, and Sheriff specific units. After successful completion of 868 training hours, graduates receive a curriculum certificate and will be able to demonstrate competence in the topics and areas required for the state comprehensive certification examination.

Admissions Requirements

Admissions Requirements
Program Specific Entrance Standards:

1. Must be 20 years of age prior to full admission (persons less than 20 years of age must receive permission from the N.C. Criminal Justice Education and Training Standards Commission).
2. Must have a physical examination (on state forms provided by CCCC) within one year of entrance date. The college does not schedule or pay for the exam.
3. Must be able to participate in a required program of physical activity and pass a state mandated skills test prior to course completion.
4. Must have no felony convictions previously or class B misdemeanors within the past 5 years.
5. Must have a 10th grade reading level as determined by the reading test.

C55140 - Cosmetology Certificate

Overview

Program Code
C55140

Program Description
The Cosmetology curriculum is designed to provide competency-based knowledge, scientific/artistic principles, and hands-on fundamentals associated with the cosmetology industry. The curriculum provides a simulated salon environment which enables students to develop manipulative skills.

Course work includes instruction in all phases of professional imaging, hair design, chemical processes, skin care, nail care, multi-cultural practices, business/ computer principles, product knowledge, and other selected topics.

Graduates should qualify to sit for the State Board of Cosmetic Arts examination. Upon successfully passing the State Board exam, graduates will be issued a license. Employment is available in beauty salons and related businesses.

C55150BP - Baking and Pastry Certificate

Overview

Program Code
C55150BP

Program Description
The Culinary Arts curriculum provides specific training required to prepare students to assume positions as trained culinary professionals in a variety of foodservice settings including full service restaurants, hotels, resorts, clubs, catering operations, contract foodservice and health care facilities.

Students will be provided theoretical knowledge/ practical applications that provide critical competencies to meet industry demands, including environmental stewardship, operational efficiencies and professionalism. Courses include sanitation/safety, baking, garde manger, culinary fundamentals/ production skills, nutrition, customer service, purchasing/cost control, and human resource management.

Graduates should qualify for entry-level opportunities including prep cook, line cook, and station chef. American Culinary Federation certification may be available to graduates. With experience, graduates may advance to positions including sous chef, pastry chef, executive chef, or foodservice manager.

C55150TR - Food Truck Operations Certificate

Overview

Program Code
C55150TR

Program Description
The Culinary Arts curriculum provides specific training required to prepare students to assume positions as trained culinary professionals in a variety of foodservice settings including full service restaurants, hotels, resorts, clubs, catering operations, contract foodservice and health care facilities.

Students will be provided theoretical knowledge/ practical applications that provide critical competencies to meet industry demands, including environmental stewardship, operational efficiencies and professionalism. Courses include sanitation/safety, baking, garde manger, culinary fundamentals/ production skills, nutrition, customer service, purchasing/cost control, and human resource management.

Graduates should qualify for entry-level opportunities including prep cook, line cook, and station chef. American Culinary Federation certification may be available to graduates. With experience, graduates may advance to positions including sous chef, pastry chef, executive chef, or foodservice manager.

C55220FH - Early Childhood Education Family Home Certificate

Overview

Program Code
C55220FH

Program Description
The Early Childhood Education curriculum prepares individuals to work with children from birth through eight in diverse learning environments. Students will combine learned theories with practice in actual settings with young children under the supervision of qualified teachers.

Course work includes child growth and development; physical/nutritional needs of children; care and guidance of children; and communication skills with families and children. Students will foster the cognitive/language, physical/motor, social/emotional, and creative development of young children.

Graduates are prepared to plan and implement developmentally appropriate programs in early childhood settings. Employment opportunities include child development and child care programs, preschools, public and private schools, recreational centers, Head Start Programs, and school-age programs.

Limited Enrollment Program Information

The CCCC Esthetics program accepts 20 full-time and 15 part-time students per year. Learn more about the admissions process with this self-paced Certificate in Esthetics information session.

Program Specific Entrance Standards:

A student can apply to the Certificate of Esthetics program once eligibility requirements have been met. Prospective applicants are required to complete the information session as well as contract the Education Navigator prior to developing a plan for completing these requirements. Students also have the ability to gain additional points through the competitive process.

The Education Navigator will review each applicant's progress, provide further guidance, and allow access to the Certificate of Esthetics Program application once all minimum admission requirements are met. Once an applicant has completed all general admissions criteria and all entrance requirements, they must submit a completed Certificate in Esthetics Application. Applicants who have completed the Application by the deadline will be ranked by tallied points and submitted in order of ranking.

During the initial consideration, applicants will have an opportunity to indicate first and second format option on the Certificate in Esthetics Application. If seats do not fill after the initial consideration for a specific format and after second choice candidates are considered, applicants will be admitted on a first qualified, first accepted basis.

Applicants who do not gain entry but want to gain entry in a future year, must reapply each year.

It is the applicants' responsibility to ensure that requirements are met by the established deadline.

More information can be found on the Limited Enrollment Website.

Overview

Program Code
C60160K2

Program Description
This curriculum prepare individuals for employment as entry-level transportation service technicians. The program provides an introduction to transportation industry careers and increases student awareness of the diverse technologies associated with this dynamic and challenging field.

Course work may include transportation systems theory, braking systems, climate control, design parameters, drive trains, electrical/electronic systems, engine repair, engine performance, environmental regulations, materials, product finish, safety, steering/suspension, transmission/transaxles, and sustainable transportation, depending on the program major area chosen.

Graduates should be prepared to take professional licensure exams, which correspond to certain programs of study, and to enter careers as entry-level technicians in the transportation industry.

Automotive Systems Technology that prepares individuals to apply technical knowledge and skills to repair, service, and maintain all types of automobiles. The program includes instruction in brake systems, electrical systems, engine performance, engine repair, suspension and steering, automatic and manual transmissions and drive trains, and heating and air condition systems

C60260K1 - Motorcycle Mechanics

Overview

Program Code
C60260K1

Program Description
Pathway Description: Curriculums in the Mobile Equipment Maintenance and Repair pathway prepare individuals for employment as entry-level transportation service technicians. The program provides an introduction to transportation industry careers and increases student awareness of the diverse technologies associated with this dynamic and challenging field. Course work may include transportation systems theory, braking systems, climate control, design parameters, drive trains, electrical/electronic systems, engine repair, engine performance, environmental regulations, materials, product finish, safety, steering/suspension, transmission/transaxles, and sustainable transportation, depending on the program major area chosen. Graduates of this pathway should be prepared to take professional licensure exams, which correspond to certain programs of study, and to enter careers as entry-level technicians in the transportation industry.

Motorcycle Mechanics: A program that prepares individuals to apply technical knowledge and skills to repair, service, and maintain motorcycles and other similar powered vehicles. Includes instruction in lubrication and cooling systems, electrical and ignition systems, carburetion, fuel systems and adjustments of moving parts.

D25120M0 - Business Administration Management Diploma

Overview

Program Code
D25120M0

Program Description
The Business Administration curriculum is designed to introduce students to the various aspects of the free enterprise system. Students will be provided with a fundamental knowledge of business functions, processes, and an understanding of business organizations in today's global economy.

Course work includes business concepts such as accounting, business law, economics, management, and marketing. Skills related to the application of these concepts are developed through the study of computer applications, communication, team building, and decision making.

Through these skills, students will have a sound business education base for lifelong learning. Graduates are prepared for employment opportunities in government agencies, financial institutions, and large to small business or industry.

D25370 - Office Management Diploma

Overview

Program Code
D25370

Program Description
The Office Management curriculum prepares individuals for employment as administrative office personnel who use skills in the areas of office management, office finance, legal office, virtual office, customer service, and office software.

Course work includes computer applications, oral and written communication, analysis and coordination of office tasks and procedures, records management, and other topics depending on the subject area selected within this curriculum.

Graduates should qualify for employment opportunities in a variety of office positions in business, government, and industry. Upon graduation, students may be eligible to sit for industry recognized certification exams.

D45240 - Dental Assisting Diploma

Overview

Program Code
D45240

Program Description
The Dental Assisting curriculum prepares individuals to assist the dentist in the delivery of dental treatment and to function as integral members of the dental team while performing chairside and related office and laboratory procedures.

Course work includes instruction in general studies, biomedical sciences, dental sciences, clinical sciences, and clinical practice. A combination of lecture, laboratory, and clinical experiences provide students with knowledge in infection/hazard control, radiography, dental materials, preventive dentistry, and clinical procedures.

Graduates may be eligible to take the Dental Assisting National Board Examination to become Certified Dental Assistants. As a Dental Assistant II, defined by the Dental Laws of North Carolina, graduates work in dental offices and other related areas.

Limited Enrollment Program Information

Limited Enrollment Curriculum:

The Dental Assisting Program is a limited enrollment curriculum. Applicants are accepted based on a selective admissions process. Criteria for admission into the Dental Assisting Program are reviewed annually and are subject to change.

A. PROGRAM SPECIFIC ENTRANCE STANDARDS:

Admission Process

A student may apply to the Dental Assisting Program once minimum admissions criteria are met.

Prospective applicants are required to complete the Health Sciences information session as well as contact their Education Navigator prior to developing a plan for completing minimum requirements . The Education Navigator will review each applicant's progress and provide further guidance once all minimum admission requirements are met.

Once an applicant has completed all general admissions criteria and all Dental Assisting Program entrance requirements, they must submit a completed Limited Enrollment Application. Applicants who meet all requirements will be ranked according to the order in which they applied.

During the initial consideration, applicants will have an opportunity to indicate first and second choice programs when completing the Limited Enrollment

Application. If seats do not fill after the initial consideration and after second choice candidates are considered, applicants will be admitted on a first qualified, first accepted basis up until the date of the required mandatory health science orientation.

Applicants must also submit a completed "Statement of Good Standing Form" explaining the circumstances of any previous exit from any health science program. The letter must be sent from the program director at the time of the student's previous enrollment. CCCC's Dental Programs Department Chair and Vice President of Student Services must approve students who were dismissed, expelled, or suspended for any reason. Students who withhold previous exit information may be dismissed from the program.

Applicants who do not gain entry but want to gain entry in a future year do not need to resubmit their application. Applicants will remain on the active applicant list as long as they are interested in being considered for the program.

It is the applicant's responsibility to ensure that requirements are met by the established deadline.

More information can be found on the Limited Enrollment Website.

Placement Test Scores

Students must be eligible to take their gateway Math and English course in order to be eligible to apply. This can be achieved through a High School Unweighted GPA of 2.6 or higher or by presenting acceptable test scores such as SAT, ACT, Accuplacer, or other acceptable scores

The checklist for the Dental Assisting Program indicates the minimum scores required to place into ENG 111 and MAT 110. Students who have an unweighted high school GPA of 2.6 or higher, have met Multiple Measures for Placement or who have earned appropriate transfer credit in English, Math, or developmental courses with a C, P2 for English, or P1 for Math, or higher may be exempt from placement testing.

GPA

Students must be in good academic standing upon applying to health science programs. Good academic standing is defined as having a 2.5 GPA or higher based on the general education courses for the program. Students can apply if they have a 2.0-2.5 GPA but will be placed on an alternate list. Alternates will be considered if there are not enough applicants to fill all seats. These GPA requirements must be maintained at the time of entering the program from a secondary or post-secondary institution.

General Education Courses

The following courses are required to be completed with a grade of "B" or better prior to applying: BIO-106. The following courses are required to be completed with a grade of "C" or better prior to applying: ENG-111, PSY-150, & ACA-122.

The Test of English as a Foreign Language (TOEFL)

TOEFL scores are required for any naturalized or non-US citizens who speak English as their second language. This test provides evidence of adequate proficiency in the English language. All test scores must be less than five years old. The minimum acceptable TOEFL scores are based on the following formats: TOEFL iBT Total Score - **80** or higher

TOEFL Essential Overall Band Score: **8** or higher. The test is offered at multiple testing sites nationally or can be taken online and is at the student's expense.

B. REQUIREMENTS AFTER ACCEPTANCE:

Criminal Background Check/Drug Screening

A criminal background check and drug screening are required for all accepted Health Sciences students. Clinical affiliates will review criminal background reports and drug screenings of students and reserve the right to accept or deny any students based on their consideration of these reports. Negative reports and/or failed screenings may prevent a student from attending the clinical portion of their prescribed program. This could result in a student's withdrawal from the program. Students are subject to criminal background checks and drug screenings at any time

during a clinical rotation. Clinical agencies reserve the right to require additional background checks and drug screens.

Medical Forms/Immunizations

Accepted applicants are provided with a student medical health form and are required to submit it to the required document tracking system by an assigned date in their acceptance materials. The student medical form includes proof of a satisfactory health history, a physical examination, and an immunization report. Failure to submit the required information by the assigned date may result in loss of admission status into the Dental Assisting Program, and class space will be assigned to another applicant.

**Hepatitis B shots (3 series shot) required through the second series prior to first Fall semester and completed by Spring semester.

BLS Provider CPR

CPR Certification by the American Heart Association (AHA) in BLS Provider (Basic Life Support including CPR and AED) that includes both performance and testing of criteria is required prior to starting the program. Students are responsible for keeping their CPR certification current throughout the duration of the program.

Meeting with Department Chair

Students are required to meet with the Department Chair for the program prior to the program start date.

Mandatory Orientation Session

When notified of acceptance, applicants must attend a mandatory orientation session with the Dental Assisting Department.

Liability/Malpractice Insurance

Malpractice insurance is required for health sciences students and is assessed as a student fee.

Transportation/Additional Class/Course Materials

Health Sciences students are responsible for their own transportation to off-campus clinical/learning sites. Materials other than textbooks will be required and are purchased at student's expense.

Technical Standards

The Health Sciences Programs are physically demanding. Students will be expected to perform lifting, pushing, pulling, and carrying tasks to successfully practice in a lab setting, complete clinical affiliations, and safely treat patients. For more details, please refer to each program's physical requirements and technical standards.

Communicable Disease Statement

As a healthcare provider, students enrolled in the Dental Assisting Program are exposed to communicable diseases. Students will be trained in standard precautions and asepsis techniques to minimize the potential of transmission. Students will act as peer patients during the program and will be expected to share medical information during clinical treatment.

Academic Standards

Upon official acceptance, Health Sciences students are required to maintain the necessary GPA requirements for entry. Students cannot enter a Health Sciences program while on academic suspension. Health Sciences students must achieve a grade of "C" or higher in their Health Science courses. Students may withdraw or be withdrawn from a Health Sciences course; however, the student will not be allowed to matriculate through their program of study. Reapplication to the program will be required and readmission will be awarded based on the completion of admissions criteria, the policy for readmission, and space availability. Students requesting readmission must meet with the Education Navigator to review their file.

Program Specific Academic Standards:

See additional Program Specific Standards in the Dental Assisting Student Policies and Procedures Manual and specific Dental Assisting Program course syllabus.

Dental assisting and progressive related courses must be taken in succession as they appear in the curriculum guide. Dental assisting students must adhere to the

other policies set forth in the Dental Assisting Student Policies and Procedures Manual. Dental assisting students must not be on suspension status.

C. RE-ADMISSION OR TRANSFER INTO THE DENTAL ASSISTING PROGRAM:

A student must meet the admissions criteria in effect at the time of request for re-admission or transfer. A student may be required to re-enter a dental assisting course earlier in the curriculum sequence if the student is lacking major content. All dental assisting courses completed more than three years prior to re-admission or transfer must be repeated. Withdrawal or academic failure within the Dental Assisting Program will require the student to reapply to the program for re-entry. Advanced placement is dependent upon space availability. If multiple students apply for re-admission or transfer for the same semester entry, a competitive admissions protocol will be followed to determine the strongest candidate for the available seat. Students who reenter will do so one semester earlier from the semester in which they were released. The procedure for Advanced Standing is valid for candidates for one calendar year from the date leaving the program. After one calendar year, a candidate who wishes to be enrolled in the program must reapply and follow the protocol for re-admission.

The Dental Assisting Department Chair will evaluate transferability of all dental assisting courses. Transfer courses must be equivalent to courses required at the receiving college in both theory and clinical experiences. The student must provide copies of course syllabi and outlines to the Dental Assisting Department Chair for those Dental Assisting courses previously taken. Students lacking essential content may be required to audit a portion of a course, challenge the content, demonstrate skills, or repeat the course as deemed necessary. The final decision for transfer credit for dental assisting courses is determined by the Dental Assisting Department Chair.

Applicants must submit a letter explaining the circumstances of any previous exit from any health science program. The letter must be sent from the previous Program Director. CCCC's Dental Assisting Department Chair and Vice President of Student Services must approve students who were dismissed, expelled, or suspended for any reason. Students who withhold previous exit information may be dismissed from the program. A remediation plan may be required.

D45260 - Dental Hygiene Diploma

Overview

Program Code
D45260

Program Description
The Dental Hygiene curriculum provides individuals with the knowledge and skills to assess, plan, implement, and evaluate dental hygiene care for the individual and the community.

Students will learn to prepare the operatory, take patient histories, note abnormalities, plan care, teach oral hygiene, clean teeth, take x-rays, apply preventive agents, complete necessary chart entries, and perform other procedures related to dental hygiene care.

Graduates of this program may be eligible to take national and state/regional examinations for licensure which are required to practice dental hygiene. Employment opportunities include dental offices, clinics, schools, public health agencies, industry, and professional education.

Admissions Requirements

Admissions Requirements

Limited Enrollment Curriculum:

The Health Information Technology program is a limited enrollment curriculum. Program applicants are accepted in the Fall and Spring semesters once minimum admission criteria are met. Admission criteria for the Health Information Technology program, D45360 are reviewed annually and are subject to change.

A. PROGRAM SPECIFIC ENTRANCE STANDARDS:

Admissions Process

The student may apply to the Health Information Technology program once minimum admissions criteria are met. This includes the following:

- Minimum 2.0 GPA
- All transcripts received - high school and past colleges
- Eligible to take ENG without a co-requisite.

Placement Test Scores

Students must be eligible to take their gateway English course in order to be eligible to apply. This can be achieved through a High School Unweighted GPA of 2.6 or higher or by presenting acceptable test scores such as SAT, ACT, Accuplacer, or other acceptable scores

Students must be able to be placed into ENG 111. Students who have an unweighted high school GPA of 2.6 or higher, have met Multiple Measures for Placement or who have earned appropriate transfer credit in English, or developmental courses with a C, P2 for English or higher, may be exempt from placement testing.

GPA

Students must be in good academic standing upon applying to health science programs. Good academic standing is defined as having a 2.0 GPA in the most recent semester attempted as well as maintaining a 2.0 cumulative GPA. These GPA requirements must be maintained at the time of entering the program from a secondary or post-secondary institution.

The Test of English as a Foreign Language (TOEFL)

TOEFL scores are required for any naturalized or non-US citizens who speak English as their second language. This test provides evidence of adequate proficiency in the English language. All test scores must be less than five years old. The minimum acceptable TOEFL scores are based on the following formats:
TOEFL iBT Total Score - **80** or higher

TOEFL Essential Overall Band Score: **8** or higher. The test is offered at multiple testing sites nationally or can be taken online and is at the student's expense.

B. REQUIREMENTS AFTER ACCEPTANCE:

Criminal Background Check/Drug Screening

A criminal background check and drug screening will be required for all accepted Health Sciences students. Clinical affiliates will review criminal background reports and drug screenings of students and reserve the right to accept or deny any students based on their consideration of these reports. Negative reports and/or failed screenings can preclude a student from attending the clinical portion of their prescribed program and thus, will result in the student's exit from the program. Students are subject to criminal background check and drug screening at any time during a clinical rotation. Clinical agencies reserve the right to require additional background checks and drug screens.

Medical Forms/Immunizations

Applicants are required to submit a completed college approved student medical health form to the required document tracking system by the assigned date. The student medical form must include satisfactory health history, physical examination, and immunization report. Failure to submit the required information by the assigned date will result in loss of Health Information Technology admission status and class space will be assigned to another applicant.

Liability/Malpractice Insurance

Malpractice insurance is required for health sciences students and is assessed as a student fee.

Transportation/Additional Class/Course Materials

Health Sciences students are responsible for their own transportation to off-campus clinical/learning sites. Materials and textbooks will be required and are purchased at student's expense.

Technical Standards

Please refer to the Health Information Technology program physical requirements and technical standards.

Academic Standards

Upon official acceptance, Health Sciences students are required to maintain the necessary GPA requirements for entry. Students cannot enter a Health Sciences program while on academic suspension. Health Sciences students must achieve a grade of "C" or higher in their Health Science courses. Students may withdraw or be withdrawn from a Health Sciences course. However, the student will not be allowed to matriculate through their program of study if they do not achieve a grade of “C” or better. Students completing readmission must meet with the Education Navigator to review their file.

Program Specific Academic Standards:

See additional Program Specific Standards in the Health Information Technology Program Guide and specific Health Information Technology course syllabus.

Health Information Technology students must maintain an overall and semester GPA 2.0 or better, and must earn a grade of “C” or better in all courses required by the Health Information Technology curriculum in order to graduate. Health Information Technology and progressive related courses must be taken in succession as they appear in the curriculum guide curriculum guide. Health Information Technology students must adhere to the other policies set forth in the Health Information Technology Program Guide.

C. RE-ADMISSION OR TRANSFER INTO THE HEALTH INFORMATION TECHNOLOGY PROGRAM:

The student must qualify under the admission criteria in effect at time of readmission or transfer. A student may be required to re-enter a Health Information Technology course earlier in the curriculum sequence if the student is lacking major content as evaluated by the Program Director. All Health Information Technology courses completed more than three years prior to re-admission or transfer must either be challenged by exam, including passing an assessment of all skills and/or competencies covered in that course, or the course must be repeated. Withdrawal or academic failure within the Health Information Technology program will require the student to reapply as a new student. Advanced placement is dependent upon space availability.

The Health Information Technology Program Director will evaluate transferability of all Health Information Technology courses. Transfer courses must be equivalent to courses required at the receiving college in both theory and clinical experiences. The student must provide copies of course syllabi and outlines for those Health Information Technology courses taken to the Program Director. Students lacking essential content may be required to audit a portion of a course, challenge the content, demonstrate skills or repeat the course as deemed necessary. The final decision for transfer credit for Health Information Technology courses is determined by the Health Information Technology Program Director.

Applicants must submit a letter explaining the circumstances of any previous exit from any health sciences program. The letter must be sent from the previous Program Director. CCCC’s Health Information Technology Program Director and Vice President of Student Services must approve students who were dismissed, expelled, or suspended for any reason. Students who withhold previous exit information may be dismissed from the program. A remediation plan may be required.

D45380 - Social and Human Services Diploma

Overview

Program Code
D45380

Program Description
The Human Services Technology curriculum prepares students for entry-level positions in institutions and agencies which provide social, community, and educational services. Along with core courses, students take courses which prepare them for specialization in specific human service areas.

Students will take courses from a variety of disciplines. Emphasis in core courses is placed on development of relevant knowledge, skills, and attitudes in human services. Fieldwork experience will provide opportunities for application of knowledge and skills learned in the classroom.

Graduates should qualify for positions in mental health, child care, family services, social services, rehabilitation, correction, and educational agencies. Graduates choosing to continue their education may select from a variety of transfer programs at senior public and private institutions.

D45400 - Medical Assisting Diploma

Overview

Program Code
D45400

The Medical Assisting curriculum prepares multi-skilled health care professionals qualified to perform administrative, clinical, and laboratory procedures.

Course work includes instruction in scheduling appointments, coding and processing insurance accounts, billing, collections, computer operations; assisting with examinations/treatments, performing routine laboratory procedures, electrocardiography, supervised medication administration; and ethical/ legal issues associated with patient care.

Graduates of CAAHEP-accredited medical assisting programs may be eligible to sit for the American Association of Medical Assistants' Certification Examination to become Certified Medical Assistants. Employment opportunities include physicians' offices, health maintenance organizations, health departments, and hospitals.

Accelerated Diploma Program Option

Diploma-level classes are offered in **eight-week semesters**, and you have the option to enroll in the accelerated program to complete your diploma in two semesters. The following courses must be completed by the final enrollment deadline: ACA 122, BIO 163, ENG 111, PSY 150, and MAT 110 ready (no co-req allowed). The following related courses are not required before applying, but completing prior to beginning the accelerated program will lessen the course load once enrolled: MED 118, MED 121, and MED 122.

Limited Enrollment Program Information

The Medical Assisting Accelerated program is limited-enrollment and accepts 13 students per year.

A. PROGRAM SPECIFIC ENTRANCE STANDARDS:

Admissions Process

The student may apply to the Medical Assisting program once minimum admissions criteria are met. This includes the following:

- Minimum 2.0 GPA
- All transcripts received - high school and past colleges
- Eligible to take ENG and MAT without a co-requisite.

Placement Test Scores

Students must be eligible to take their gateway Math and English course in order to be eligible to apply. This can be achieved through a High School Unweighted GPA of 2.6 or higher or by presenting acceptable test scores such as SAT, ACT, Accuplacer, or other acceptable scores

The Medical Assisting program indicates the minimum scores required to place into ENG 111 and MAT 110. Students who have an unweighted high school GPA of 2.6 or higher, have met Multiple Measures for Placement or who have earned appropriate transfer credit in English, Math, or developmental courses with a C, P2 for English, or P1 for Math, or higher may be exempt from placement testing.

GPA

Students must be in good academic standing upon applying to health science programs. Good academic standing is defined as having a 2.0 GPA in the most recent semester attempted as well as maintaining a 2.0 cumulative GPA.

The Test of English as a Foreign Language (TOEFL)

TOEFL scores are required for any naturalized or non-US citizens who speak English as their second language. This test provides evidence of adequate proficiency in the English language. All test scores must be less than five years old. The minimum acceptable TOEFL scores are based on the following formats: TOEFL iBT Total Score - **80** or higher

TOEFL Essential Overall Band Score: **8** or higher. The test is offered at multiple testing sites nationally or can be taken online and is at the student's expense.

B. REQUIREMENTS AFTER ACCEPTANCE:

Criminal Background Check/Drug Screening

A criminal background check and drug screening will be required 30 days before starting the Clinical Practicum. All accepted Health Sciences Clinical affiliates will review criminal background reports and drug screenings of students and reserve the right to accept or deny any students based on their consideration of these reports. Negative reports and/or failed screenings can preclude a student from attending the clinical portion of their prescribed program and thus, will result in the student's exit from the program. Students are subject to criminal background check and drug screening at any time during a clinical rotation. Clinical agencies reserve the right to require additional background checks and drug screens.

Medical Forms/Immunizations

Applicants are required to submit a completed college approved student medical health form to the required document tracking system by the assigned date. The student medical form must include satisfactory health history, physical examination, and immunization report. Failure to submit the required information by the assigned date will result in loss of Medical Assisting admission status and class space will be assigned to another applicant.

BLS Provider CPR

CPR Certification by the American Heart Association (AHA) in BLS Provider (Basic Life Support including CPR and AED) that includes both performance and testing of criteria is required prior to clinical rotations. Students are responsible for keeping their CPR certification current throughout the duration of the program.

Mandatory Orientation Session

Accepted students must attend a mandatory orientation session with the Medical Assisting Program.

Liability/Malpractice Insurance

Malpractice insurance is required for health sciences students and is assessed as a student fee.

Transportation/Additional Class/Course Materials

Health Sciences students are responsible for their own transportation to off-campus clinical/learning sites. Materials other than textbooks will be required and are purchased at student's expense.

Technical Standards

The Health Sciences programs are physically demanding. Students will be expected to perform lifting, pushing, pulling, and carrying tasks to successfully practice in a lab setting, complete clinical affiliations, and safely treat patients. For more details, please refer to each program of study's physical requirements and technical standards.

Academic Standards

Upon official acceptance, Health Sciences students are required to maintain the necessary GPA requirements for entry. Students cannot enter a Health Sciences program while on academic suspension. Health Sciences students must achieve a grade of "C" or higher in their Health Science courses. Students may withdraw or be withdrawn from a Health Sciences course. However, the student will not be allowed to matriculate through their program of study. Readmission to the program will be required and readmission will be awarded based on admissions criteria completion, policy on readmission, and space availability. Students completing readmission must meet with the Education Navigator counselor to review their file.

Program Specific Academic Standards:

See additional Program Specific Standards in the Medical Assisting Student Handbook and specific Medical Assisting course syllabus.

Medical Assisting and progressive related courses must be taken in succession as they appear in the curriculum guide. Medical Assisting students must adhere to the other policies set forth in the Medical Assisting Student Handbook.

C. RE-ADMISSION OR TRANSFER INTO THE MEDICAL ASSISTING PROGRAM:

The student must qualify under the admission criteria in effect at time of readmission or transfer. A student may be required to re-enter a Medical Assisting course earlier in the curriculum sequence if the student is lacking major content as evaluated by the Program Director. All Medical Assisting courses completed more than three years prior to re-admission or transfer must either be challenged by exam, including passing an assessment of all skills and/or competencies covered in that course, or the course must be repeated. Withdrawal or academic failure within the Medical Assisting program will require the student to reapply as a new student. Advanced placement is dependent upon space availability.

The Medical Assisting Program Director will evaluate transferability of all Medical Assisting courses. Transfer courses must be equivalent to courses required at the receiving college in both theory and clinical experiences. The student must provide copies of course syllabi and outlines for those Medical Assisting courses taken to the Program Director. Students lacking essential content may be required to audit a portion of a course, challenge the content, demonstrate skills or repeat the course as deemed necessary. The final decision for transfer credit for Medical Assisting courses is determined by the Medical Assisting Program Director.

Applicants must submit a letter explaining the circumstances of any previous exit from any health sciences program. The letter must be sent from the previous Program Director. CCCC’s Medical Assisting Program Director and Vice President of Student Services must approve students who were dismissed, expelled, or suspended for any reason. Students who withhold previous exit information may be dismissed from the program. A remediation plan may be required.

D45530 - Advanced Medical Coding Diploma

Overview

Program Code
D45530

Program Description
The Advanced Medical Coding curriculum provides the didactic and clinical experience necessary to become competent credentialed coders. Coursework includes reimbursement, advanced International Classification of Diseases-10th Revision-Clinical Modification/ Procedure Coding System (ICD-10-CM/PCS), Current Procedural Terminology (CPT), and Healthcare Common Procedure Coding System (HCPCS). Graduates may be eligible to take either of the Certified Coding Specialist exams: the Certified Coding Specialist and/or the Certified Coding Specialist-Physician Based (CCS/CCS-P). Individuals entering this curriculum must hold a minimum of an associate's degree in a healthcare field or health informatics from a regionally accredited college or university.

D45630 - Health and Fitness Science Diploma

Overview

Program Code
D45630

Program Description
The Health and Fitness Science program is designed to provide students with the knowledge and skills necessary for employment in the fitness and exercise industry.

Students will be trained in exercise science and be able to administer basic fitness tests and health risk appraisals, teach specific exercise and fitness classes and provide instruction in the proper use of exercise equipment and facilities.

Graduates should qualify for employment opportunities in commercial fitness clubs, YMCA's/ YWCA's, wellness programs in business and industry, Parks & Recreation Departments and other organizations implementing exercise & fitness programs.

D45660 - Practical Nursing Diploma

Overview

Program Code
D45660

Program Description
The Practical Nursing curriculum provides knowledge and skills to integrate safety and quality into nursing care to meet the needs of the holistic individual which impact health, quality of life, and achievement of potential.

Course work includes and builds upon the domains of healthcare, nursing practice, and the holistic individual. Content emphasizes safe, individualized nursing care and participation in the interdisciplinary team while employing evidence-based practice, quality improvement, and informatics.

Graduates are eligible to apply to take the National Council Licensure Examination (NCLEX-PN) which is required for practice as a Licensed Practical Nurse. Employment opportunities include hospitals, rehabilitation/long term care/home health facilities, clinics, and physicians' offices.

Limited Enrollment Program Information

Limited Enrollment Curriculum:

The Practical Nursing program is a limited enrollment curriculum and program applicants are accepted based upon a competitive admissions process. Admission criteria for the Practical Nursing program are reviewed annually and are subject to change. Enrollment is limited to the number of approved spaces allocated by the North Carolina Board of Nursing.

A. PROGRAM SPECIFIC ENTRANCE STANDARDS:

Admission

A student may apply to the Practical Nursing Program once minimum admissions criteria are met.

Prospective applicants are required to complete the Health Sciences information session as well as contact their Education Navigator prior to developing a plan for completing minimum requirements. The Education

Navigator will review each applicant's progress, and provide further guidance once all minimum admission requirements are met.

Once an applicant has completed all general admissions criteria and all Practical Nursing Program entrance requirements, they must submit a completed Limited Enrollment Application. Applicants who meet all requirements will be ranked according to the order in which they applied.

During the initial consideration, applicants will have an opportunity to indicate first and second choice programs when completing the Limited Enrollment Application. If seats do not fill after the initial consideration and after second choice candidates are considered, applicants will be admitted on a first qualified, first accepted basis up until the date of the required mandatory health science orientation.

Applicants who do not gain entry but want to gain entry in a future year do not need to resubmit their application. Applicants will remain on the active applicant list as long as they are interested in being considered for the program.

It is the applicant's responsibility to ensure that requirements are met by the established deadline.

More information can be found on the Limited Enrollment Website.

Placement Test Scores

Students must be eligible to take their gateway Math and English course in order to be eligible to apply. This can be achieved through a High School Unweighted GPA of 2.6 or higher or by presenting acceptable test scores such as SAT, ACT, Accuplacer, or other acceptable scores

The checklist for the Medical Sonography Program indicates the minimum scores required to place into ENG 111 and MAT 110. Students who have an unweighted high school GPA of 2.6 or higher, have met Multiple Measures for Placement or who have earned appropriate transfer credit in English, Math, or developmental courses with a C, P2 for English, or P1 for Math, or higher may be exempt from placement testing.

GPA

Students must be in good academic standing upon applying to health science programs. Good academic standing is defined as having a 2.5 GPA or higher based on the general education courses for the program. Students can apply if they have a 2.0-2.5 GPA but will be placed on an alternate list. Alternates will be considered if there are not enough applicants to fill all seats. These GPA requirements must be maintained at the time of entering the program from a secondary or post-secondary institution.

General Education Courses

The following courses are required to be completed with a grade of "B" or better prior to applying: BIO-168, & BIO-169. The following courses are required to be completed with a grade of "C" or better prior to applying: ENG-111, PSY-150, & ACA-122.

Nurse Aide I Registry Requirement

Prior Health Care Program completion with appropriate listing/licensure is required for consideration at the designated entry points in the nursing programs:

- Provide proof of current active listing on the North Carolina Department of Health and Human Services (NC DHHS) Nurse Aide I Registry with no substantiated finding of abuse, neglect, or misappropriation of resident property in a nursing home or other health care facility. This active, non-restricted listing must be maintained as of the start of the Practical Nursing Program. Candidates will need to renew their certification if it is scheduled to expire before the start of the nursing program.
- Provide proof of completion of NC state approved Nurse Aide I course (see approved schools at NCDHHS). The Department Chair of Nursing will review NAI programs completed outside of NC. NC DHHS-approved NAI courses are preferred, however the CCCC Nursing Department Chair will determine, on

a case-by-case basis, if a course administered by another state or agency meets the requirement.

OR

High School Medical Careers I & II courses with a grade of "C" or better within the last 5 years.

OR

Nurse Aide I work experience of at least 250 hours with the last 6 months in skilled nursing care or in an acute care hospital. (Required to have documentation of hours worked, service rendered and supervisor's name on company letterhead.)

B. REQUIREMENTS AFTER ACCEPTANCE:

Criminal Background Check/Drug Screening

A criminal background check and drug screening will be required for all accepted Health Sciences students. Clinical affiliates will review criminal background reports and drug screenings of students and reserve the right to accept or deny any students based on their consideration of these reports. Negative reports and/or failed screenings can preclude a student from attending the clinical portion of their prescribed program and thus, will result in the student's exit from the program. Students are subject to criminal background check and drug screening at any time during a course with a clinical rotation. Clinical agencies reserve the right to require additional background checks and drug screens. Associated fees are the student's responsibility.

Medical Forms/Immunizations

Applicants are required to submit a completed college approved student medical health form to the required document tracking system by the assigned date. The student medical form must include satisfactory health history, physical examination, and immunization report. Failure to submit the required information by the assigned date will result in loss of Practical Nursing admission status and class space will be assigned to another applicant.

BLS Provider CPR

CPR Certification by the American Heart Association (AHA) in BLS Provider (Basic Life Support including CPR and AED) that includes both performance and testing of criteria is required prior to clinical rotations. Students are responsible for keeping their CPR certification current throughout the duration of the program.

Mandatory Orientation Session

When notified of acceptance, applicants must attend a mandatory orientation session with the Practical Nursing department.

Liability/Malpractice Insurance

Malpractice insurance is required for health sciences students and is assessed as a student fee.

Transportation/Additional Class/Course Materials

Health Sciences students are responsible for their own transportation to off-campus clinical/learning sites. Materials other than textbooks will be required and are purchased at student's expense. Students may be required to attend classes on alternate dates depending on availability of resources to meet the objectives of the course. Students will be notified in advance at the earliest possible time.

Technical Standards

The Health Sciences programs are physically demanding. Students will be expected to perform lifting, pushing, pulling, and carrying tasks to successfully practice in a lab setting, complete clinical affiliations, and safely treat patients. For more details, please refer to each program of study's physical requirements and technical standards.

Board of Nursing Standards

Students who enroll in the nursing program should be aware that the application for licensure at the completion of the program might be denied or restricted by the North Carolina Board of Nursing. As the regulatory agency, the Board of Nursing does not become involved in reviewing the applicant's conviction record until such time as application is made to take the national licensure examination. NC Board of Nursing

Academic Standards

Upon official acceptance, Health Sciences students are required to maintain the necessary GPA requirements for entry. Students cannot enter a Health Sciences program while on academic probation or suspension. The nursing program requires a grading scale that is different from the general college requirement. Students must achieve a final grade of "80" or higher in their NUR Nursing courses.

Students may withdraw or be withdrawn from a Health Sciences course. However, the student will not be allowed to matriculate through their program of study. Reapplication to the program will be required and readmission will be awarded based on admissions criteria completion, policy on readmission, and space availability. Students completing readmission must meet with the Education Navigator to review their file.

Program Specific Academic Standards

See additional Program Specific Standards in the Nursing Student Policies Handbook and specific Practical Nursing course syllabus.

Practical Nursing and progressive related courses must be taken in succession as they appear in the curriculum guide. guide. Practical Nursing students must adhere to the other policies set forth in the Nursing Student Policies Handbook.

Nursing curriculum students once enrolled must maintain an overall and semester grade point average of 2.0 or better, and must have a grade of “C” or better in all nursing courses and co-requisites required in order to graduate. Students are encouraged to earn higher grades to help ensure that they are prepared to pass the National Council Licensure Examination (NCLEX), which is required to practice as a nurse. See individual course syllabus for additional grading information.

C. RE-ADMISSION OR TRANSFER INTO THE PRACTICAL NURSING PROGRAM

The student must qualify under the admission criteria in effect at time of readmission or transfer. A student may be required to re-enter a Practical Nursing course earlier in the curriculum sequence if the student is lacking major content. All Practical Nursing courses completed more than three years prior to re-admission or transfer must either be challenged by exam, including passing an assessment of all skills and/or competencies covered in that course, or the course must be repeated. Withdrawal or academic failure within the Practical Nursing Program will require the student to reapply. Advanced placement is dependent upon space availability. The Nursing Department Chair will evaluate transferability of all Practical Nursing courses. Transfer courses must be equivalent to courses required at the receiving college in theory and clinical experiences. The student must provide copies of course syllabi and outlines for those Practical Nursing courses to the department chairperson. Students lacking essential content may be required to audit a portion of a course, challenge the content, demonstrate skills, or repeat the course as deemed necessary. The final decision for transfer credit for Practical Nursing courses is determined by the Nursing Department Chair

Applicants must submit a letter explaining the circumstances of any previous exit from any health sciences program. The letter must be sent from the previous Program Director. CCCC’s Nursing Department Chair and Vice President of Student Services must approve students who were dismissed, expelled, or suspended for any reason. Students who withhold previous exit information may be dismissed from the program. Students who have been unsuccessful in two attempts in the nursing program are able to reapply for entry in the first NUR program course.

Accreditation

Accreditation

Effective January 26, 2025, the Practical Nursing program at Central Carolina Community College at the Harnett Campus located in Lillington, North Carolina, is a candidate for initial accreditation by the Accreditation Commission for Education in Nursing. This candidacy status expires on December 31, 2026.

Accreditation Commission for Education in Nursing (ACEN)

3390 Peachtree Road NE, Suite 1400

Atlanta, GA 30326

(404) 975-5000

View the public information disclosed by the ACEN regarding this candidate program on the ACEN website.

D45780 - Veterinary Assisting Diploma

Overview

Program Code
D45780

Program Description
The Veterinary Medical Technology curriculum is designed to prepare individuals to assist veterinarians in preparing animals, equipment, and medications for examination and surgery; collecting specimens; performing laboratory, radiographic, anesthetic, dental procedures; assisting in surgery; and providing proper husbandry of animals and their environment.

Course work includes instruction in veterinary anatomy, nutrition, parasitology, pathology, physiology, radiology, terminology, zoology, office practices, laboratory techniques, dentistry, and small and large animal clinical practices.

Graduates of accredited programs may be eligible to take state and national examinations administered by the North Carolina Veterinary Medical Board. Graduates may be employed in veterinary clinics; diagnostic, research, or pharmaceutical laboratories; zoos; academic institutions; or other areas associated with animal care.

D55140 - Cosmetology Diploma

Overview

Program Code
D55140

Program Description
The Cosmetology curriculum is designed to provide competency-based knowledge, scientific/artistic principles, and hands-on fundamentals associated with the cosmetology industry. The curriculum provides a simulated salon environment which enables students to develop manipulative skills.

Course work includes instruction in all phases of professional imaging, hair design, chemical processes, skin care, nail care, multi-cultural practices, business/computer principles, product knowledge, and other selected topics.

Graduates should qualify to sit for the State Board of Cosmetic Arts examination. Upon successfully passing the State Board exam, graduates will be issued a license. Employment is available in beauty salons and related businesses.

D55220 - Early Childhood Education Diploma

Overview

Program Code
D55220

Program Description
The Early Childhood Education curriculum prepares individuals to work with children from birth through eight in diverse learning environments. Students will combine learned theories with practice in actual settings with young children under the supervision of qualified teachers.

Course work includes child growth and development; physical/nutritional needs of children; care and guidance of children; and communication skills with families and children. Students will foster the cognitive/language, physical/motor, social/emotional, and creative development of young children.

Graduates are prepared to plan and implement developmentally appropriate programs in early childhood settings. Employment opportunities include child development and child care programs, preschools, public and private schools, recreational centers, Head Start Programs, and school-age programs.

D55310 - Library and Information Technology Diploma

Overview

Program Code
D55310

The Diploma in Library and Information Technology curriculum is designed to prepare graduates for employment with organizations that use technology to process, manage, and communicate information. Students will complete courses designed to develop proficiency in the use of electronic resources for records management, information resources and services, acquisition and collection management, cataloging and classifying, and public service.

All credits earned in this diploma program will transfer into the Associate in Applied Science Degree in Library and Information Technology provided the student meets the higher entrance standards.

D60130 - Collision Repair and Refinishing Technology Diploma

Overview

Program Code
D60130

Program Description
Pathway Description: Curriculums in the Mobile Equipment Maintenance and Repair pathway prepare individuals for employment as entry-level transportation service technicians. The program provides an introduction to transportation industry careers and increases student awareness of the diverse technologies associated with this dynamic and challenging field. Course work may include transportation systems theory, braking systems, climate control, design parameters, drive trains, electrical/electronic systems, engine repair, engine performance, environmental regulations, materials, product finish, safety, steering/suspension, transmission/transaxles, and sustainable transportation, depending on the program major area chosen. Graduates of this pathway should be prepared to take professional licensure exams, which correspond to certain programs of study, and to enter careers as entry-level technicians in the transportation industry.

Collision Repair and Refinishing Technology: A program that prepares individuals to apply technical knowledge and skills to repair, reconstruct and finish automobile bodies, fenders, and external features. Includes instruction in structure analysis, damage repair, non-structural analysis, mechanical and electrical components, plastics and adhesives, painting and refinishing techniques, and damage analysis and estimating.

D60260 - Motorcycle Mechanics (Diploma)

Overview

Program Code
D60260

Program Description
Pathway Description: Curriculums in the Mobile Equipment Maintenance and Repair pathway prepare individuals for employment as entry-level transportation service technicians. The program provides an introduction to transportation industry careers and increases student awareness of the diverse technologies associated with this dynamic and challenging field. Course work may include transportation systems theory, braking systems, climate control, design parameters, drive trains, electrical/electronic systems, engine repair, engine performance, environmental regulations, materials, product finish, safety, steering/suspension, transmission/transaxles, and sustainable transportation, depending on the program major area chosen. Graduates of this pathway should be prepared to take professional licensure exams, which correspond to certain programs of study, and to enter careers as entry-level technicians in the transportation industry.

Motorcycle Mechanics: A program that prepares individuals to apply technical knowledge and skills to repair, service, and maintain motorcycles and other similar powered vehicles. Includes instruction in lubrication and cooling systems, electrical and ignition systems, carburetion, fuel systems and adjustments of moving parts.

P1012A - Humanities and Social Science Pathway

Overview

Program Code
P1012A

Program Description
The Core 44 College Transfer Pathway is designed for high school juniors and seniors who wish to begin the pathway towards a baccalaureate degree. The Core 44 Pathway is a structured set of general education courses leading to completion of the Associate in Arts or Associate in Science diploma (44 hours) or degree (64 hours). Upon completion of the diploma or degree and admission to a North Carolina public university or a participating independent college or university, students will receive credit for the undergraduate, lower-division general education core as established in the Comprehensive Articulation Agreement between the University of North Carolina and the North Carolina Community College System.

ACA085 - Improving Study Skills

Overview

Course Description
This course is designed to improve academic study skills and introduce resources that will complement developmental courses and engender success in college-level courses. Topics include basic study skills, memory techniques, note-taking strategies, test-taking techniques, library skills, personal improvement strategies, goal-setting, and learning resources. Upon completion, students should be able to apply techniques learned to improve performance in college-level classes.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
1

Student Learning Outcomes

Learning Objectives

Objectives
Explain important campus policies, procedures, and regulations necessary to be a successful college student.

Objectives
Evaluate campus resources (e.g., tutoring, counseling, and other services) that will support success in college coursework.

Objectives
Compare and contrast the similarities and differences between secondary and post-secondary coursework.

Objectives
Develop SMART Goals, implement them, and reflect upon their effectiveness.

Objectives
Discuss the academic habits of mind and learning strategies necessary to be successful in college coursework.

ACA090 - Student Success Strategies

Overview

Course Description
This course is intended to provide students with skills and strategies to promote success in college, career, and life. Topics include the College's physical, academic, and social environment, promotes personal development, and cultivates learning strategies essential for student success. Upon completion, students should be able to manage their learning experiences to meet educational and life goals.

Credit Hours
3

ACA111 - College Student Success

Overview

Course Description
This course introduces the college's physical, academic, and social environment and promotes the personal development essential for success. Topics include campus facilities and resources; policies, procedures, and programs; study skills; and life management issues such as health, self-esteem, motivation, goal-setting, diversity, and communication. Upon completion, students should be able to function effectively within the college environment to meet their educational objectives.

Course Typically Offered
Spring

Credit Hours
1

Student Learning Outcomes

Learning Objectives

Objectives
Evaluate campus resources (e.g., tutoring, counseling, and other services) that will support success in college coursework.

Objectives
Develop SMART Goals, implement them, and reflect upon their effectiveness.

Objectives
Apply time management and organizational strategies necessary to be successful in college coursework.

Objectives
Calculate Grade Point Averages based on the college's grading scale.

Objectives
Discuss the college advising process and create an academic plan in Self Service.

ACA115 - Success & Study Skills

Overview

Course Description
This course provides an orientation to the campus resources and academic skills necessary to achieve educational objectives. Emphasis is placed on an exploration of facilities and services, study skills, library skills, self-assessment, wellness, goal-setting, and critical thinking. Upon completion, students should be able to manage their learning experiences to successfully meet educational goals.

Credit Hours
1

ACA122 - Transfer & Career Success

Overview

Course Description

This course introduces students to career and transfer opportunities while building skills for academic success, career exploration, and transfer preparation, ensuring readiness for success in community college and beyond. Topics include transfer agreements with public and independent institutions, programs and processes that facilitate transfer, and transfer tools and resources; career topics include career exploration and information and skills such as resume writing, portfolio development, and professional communication. Upon completion, students will be able to identify the community college program that matches their transfer and career goals, navigate transfer policies and processes, use Transfer Guides, develop an academic plan for future success, and identify professional application materials. This course has been approved for transfer under the CAA as a premajor and/or elective course requirement. This course has been approved for transfer under the ICAA as a premajor and/or elective course requirement.

Credit Hours

1

Student Learning Outcomes

Learning Objectives

Objectives
1. Develop a strategic plan for completing community college academic goals, including certificates, diplomas, and/or associate degrees.

Objectives
2. Develop a strategic plan for transferring to a university and preparing for a new career.

Objectives
3. Identify the rights and responsibilities of transfer students under the Comprehensive Articulation Agreement (CAA), including Universal General Education Transfer Component (UGETC) designated courses, the Transfer Assured Admissions Policy (TAAP), and the CAA appeals process.

Objectives
4. Evaluate learning strategies, including note-taking, test-taking, information processing, time management, and memorization techniques, and identify strategies for improvement.

Objectives
5. Identify essential college resources, including financial aid, advising, registration, tutoring, library services, computer labs, and counseling services and recognize the importance of these resources on student success.

Objectives
6. Identify essential college policies and procedures, including academic integrity such as avoiding plagiarism; calculating a GPA, and maintaining satisfactory academic progress for financial aid eligibility and/or good academic standing. Develop a strategic plan for completing community college academic goals, including certificates, diplomas, and/or associate degrees.

ACC115 - College Accounting

Overview

Course Description
This course introduces basic accounting principles for a business. Topics include the complete accounting cycle with end-of-period statements, bank reconciliation, payrolls, and petty cash. Upon completion, students should be able to demonstrate an understanding of accounting principles and apply those skills to a business organization.

Course Typically Offered
Summer

Credit Hours
4

Student Learning Outcomes

Learning Objectives

Objectives
Discuss the basic concepts of accounting.

Objectives
Analyze business transactions using the accounting equation and “T-accounts”.

Objectives
Journalize and post transactions to accounts in the ledgers.

Objectives
List the steps of the accounting cycle and discuss the actions taken by the accountant during each step.

Objectives
Identify, describe, and prepare and interpret a trial balance, work sheet, income statement, statement of owner’s equity, and balance sheet.

Objectives
Prepare and record adjusting and closing entries.

Objectives
Discuss the importance of internal controls.

Objectives
Discuss daily cash transactions, including receipts and disbursements.

Objectives
Manage banking transactions, including reconciling bank statements.

Objectives
Use an accounting software package to record accounting transactions.

Objectives
Prepare financial statements using an accounting software package.

ACC120 - Principles of Financial Accounting

Overview

Course Description
This course introduces business decision-making using accounting information systems. Emphasis is placed on analyzing, summarizing, reporting, and interpreting financial information. Upon completion, students should be able to prepare financial statements, understand the role of financial information in decision-making and address ethical considerations. This course has been approved for transfer under the CAA/ICAA as a premajor and/or elective course requirement.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
4

Student Learning Outcomes

Learning Objectives

Objectives
Discuss the basic concepts of accounting.

Objectives
Describe the differences among the sole proprietorship, partnership, and corporate forms of organization.

Objectives
List the steps of the accounting cycle and discuss the actions taken by the accountant during each step.

Objectives
Identify, describe, prepare and interpret the three basic financial statements.

Objectives
Prepare and record adjusting and closing entries.

Objectives
Describe the impact of accruals and deferrals on the financial statements.

Objectives
Demonstrate an understanding of the basics of financial reporting and analysis.

Objectives
Prepare specific accounting transactions and reports that relate to inventory, investments, bad debts, long-term debt, banking, fixed asset and merchandising functions.

Objectives
Identify the difference between the perpetual and periodic inventory systems.

Objectives
Apply inventory-costing methods: specific unit cost, weighted-average cost, FIFO, and LIFO, and identify the income effects and the tax effects of the inventory costing methods.

Objectives
Apply the lower-of-cost or market rule to inventory.

Objectives
Explain and demonstrate an understanding of internal control.

Objectives
Discuss and apply the methods and basis used to value accounts receivable.

Objectives
Demonstrate an understanding of notes receivables including the computations of the maturity date and interest and the entries to record the same.

Objectives
Discuss ethical issues relevant to course material.

ACC121 - Principles of Managerial Accounting

Overview

Course Description
This course includes a greater emphasis on managerial and cost accounting skills. Emphasis is placed on managerial accounting concepts for external and internal analysis, reporting and decision-making. Upon completion, students should be able to analyze and interpret transactions relating to managerial concepts including product-costing systems. This course has been approved for transfer under the CAA/ICAA as a premajor and/or elective course requirement.

Course Typically Offered
Fall, Spring

Credit Hours
4

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take ACC-120

Take ACC-120(S10290);

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate understanding of various accounting concepts including material costs, labor costs, overhead costs, and how these costs flow through an accounting system.

Objectives
Identify the various types of costs including variable, fixed, and mixed costs.

Objectives
Distinguish between job-order, process, and activity-based costing systems.

Objectives
Prepare all necessary journal entries and reports relating to the costing system.

Objectives
Apply acquired knowledge in cost-volume-profit analysis, including computation of contribution margin, break-even points, margins of safety, and operating leverage.

Objectives
Prepare various types of budgets for manufacturing firms and understand how technology aids in development of such budgets.

Objectives
Prepare and use production reports, responsibility accounting reports, and differential analysis reports for decision-making.

Objectives
Determine the selling price of products using various approaches.

Objectives
Conduct performance evaluation using variances from standard costs and various nonfinancial measures.

Objectives
Analyze the effects of decentralized operations and the various methods of transfer pricing on accounting information.

Objectives
Use various methods to analyze capital investment opportunities.

ACC122 - Principles of Financial Accounting II

Overview

Course Description
This course provides additional instruction in the financial accounting concepts and procedures introduced in ACC 120. Emphasis is placed on the analysis of specific balance sheet accounts, with in-depth instruction of the accounting principles applied to these accounts. Upon completion, students should be able to analyze data, prepare journal entries, and prepare reports in compliance with generally accepted accounting principles.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take ACC-120

Take ACC-120(S20278);

Student Learning Outcomes

Learning Objectives

Objectives
Discuss and properly classify fixed asset expenditures.

Objectives
Compute and record depreciation of fixed assets for accounting purposes using multiple methods.

Objectives
Properly account for the disposal of fixed assets.

Objectives
Calculate and record depletion for natural resources.

Objectives
Compute and record amortization for intangibles.

Objectives
Discuss the corporate form of organization.

Objectives
Prepare accounting entries for various corporate transactions, including issuance of stock, declaration/payment/distribution of dividends, purchase/resale of treasury stock, and income taxes.

Objectives
Describe the effect of stock splits.

Objectives
Prepare corporate financial statements, including retained earnings statement, statement of stockholders' equity, balance sheet, and income statement including earnings per share data.

Objectives
Prepare accounting entries for issuance, amortization, and redemption of, or for investments in bonds.

Objectives
Prepare a statement of cash flows.

Objectives
Discuss and apply financial statement analysis.

ACC129 - Individual Income Taxes

Overview

Course Description
This course introduces the relevant laws governing individual income taxation. Topics include tax law, electronic research and methodologies, and the use of technology for preparation of individual income tax returns. Upon completion, students should be able to analyze basic tax scenarios, research applicable tax law, and complete various individual tax forms.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate knowledge of the history and objectives of U.S. Tax Law.

Objectives
List the different entities subject to tax and reporting requirements.

Objectives
Apply the tax formula for individuals.

Objectives
Determine the proper forms and schedules needed to prepare an income tax return.

Objectives
Identify the optimum filing status for a taxpayer.

Objectives
Determine the number of personal and dependency exemptions for a taxpayer.

Objectives
Identify inclusions and exclusions from gross income.

Objectives
Compute common deductions for Adjusted Gross Income.

Objectives
Determine standard deduction amounts and compute itemized deductions.

Objectives
Compute tax on various levels of taxable income and determine tax owed or tax refund.

Objectives
Compute the most common individual tax credits.

Objectives
Describe the tax law development process and current tax law.

Objectives
Demonstrate application of research techniques to resolve tax problems.

Objectives
Complete an individual tax return.

ACC130 - Business Income Taxes

Overview

Course Description
This course introduces the relevant laws governing business and fiduciary income taxes. Topics include tax law relating to business organizations, electronic research and methodologies, and the use of technology for the preparation of business tax returns. Upon completion, students should be able to analyze basic tax scenarios, research applicable tax law, and complete various business tax forms.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Explain how accounting methods and tax reporting periods are selected and which periods and/or methods are allowed under I.R.S. regulations.

Objectives
Compute various business tax deductions including depreciation on business assets for tax purposes under the various applicable guidelines.

Objectives
Determine appropriate tax treatment for disposition of business assets.

Objectives
Discuss business responsibilities for estimated tax payments, payroll tax withholding, depositing, and related reporting.

Objectives
Determine tax consequences at both entity and owner/shareholder levels.

Objectives
Complete the proper forms and schedules needed to prepare employment tax returns and income tax returns for a partnership, 7. C-Corporation, and an S-Corporation.

Objectives
Compare and contrast the tax aspects of different forms of business organizations including proprietorships, partnerships, limited liability companies, and C and S corporations.

Objectives
Explain applicable penalties, statute of limitations, and interest computations.

Objectives
Apply research techniques to resolve tax problems.

Objectives
Explain the current structure of the I.R.S.

Objectives
Explain the common tax audit process, the appeals process, and litigation

Objectives
Demonstrate understanding of tax planning opportunities.

ACC140 - Payroll Accounting

Overview

Course Description
This course covers federal and state laws pertaining to wages, payroll taxes, payroll tax forms, and journal and general ledger transactions. Emphasis is placed on computing wages; calculating social security, income, and unemployment taxes; preparing appropriate payroll tax forms; and journalizing/posting transactions. Upon completion, students should be able to analyze data, make appropriate computations, complete forms, and prepare accounting entries using appropriate technology.

Course Typically Offered
Fall, Spring

Credit Hours
2

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take One: ACC-115 or ACC-120

Take ACC-115(S12924) or ACC-120(S10290);

Student Learning Outcomes

Learning Objectives

Objectives
Identify the various laws that affect employers in their payroll operations.

Objectives
Calculate pay rates.

Objectives
Calculate Federal and State taxes.

Objectives
Complete payroll related tax forms.

Objectives
Properly record all payroll related transactions and complete payroll journal entries.

ACC149 - Introduction to Accounting Spreadsheets

Overview

Course Description
This course provides a working knowledge of computer spreadsheets and their use in accounting. Topics include pre-programmed problems, model-building problems, beginning-level macros, graphics, and what-if analysis enhancements of template problems. Upon completion, students should be able to use a computer spreadsheet to complete many of the tasks required in accounting.

Course Typically Offered
Fall, Spring

Credit Hours
2

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take One: ACC-115 or ACC-120

Take ACC-115(S12924) or ACC-120(S10290);

Student Learning Outcomes

Learning Objectives

Objectives
Discuss the basic applications of Excel for accounting

Objectives
Apply industry standard formatting rules to spreadsheets

Objectives
Apply a pivot table to a set of large data

Objectives
Enter data into spreadsheets

Objectives
Apply absolute cell referencing

Objectives
Create charts and graphs that are directly linked to data

Objectives
Calculate various methods of depreciation using Excel functions

Objectives
Create depreciation schedules

Objectives
Calculate loan and bond payments

Objectives
Create loan and bond amortization tables

Objectives
Create an operating, investing, and finance budget

Objectives
Calculate present and future values using Excel functions

Objectives
Discuss applications of present and future value calculations

ACC150 - Accounting Software Applications

Overview

Course Description
This course introduces microcomputer applications related to accounting systems. Topics include general ledger, accounts receivable, accounts payable, inventory, payroll, and correcting, adjusting, and closing entries. Upon completion, students should be able to use a computer accounting package to accurately solve accounting problems.

Course Typically Offered
Fall, Spring

Credit Hours
2

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take One: ACC-115 or ACC-120

Take ACC-115(S12924) or ACC-120(S10290);

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate backing up and restoring company data using QuickBooks

Objectives
Apply accounting principles to record vendor, customer, and employee transactions in an accounting software system.

Objectives
Organize and input inventory item data into an accounting system to ensure accurate inventory tracking and valuation.

Objectives
Calculate payroll using employee data and tax rates, and process transactions in compliance with payroll regulations.

Objectives
Enter and classify sales transactions to accurately reflect revenue and customer balances in the accounting system.

Objectives
Generate and analyze financial statements (e.g., balance sheet, income statement) to interpret business performance.

Objectives
Reconcile accounts and evaluate financial records to complete year-end closing procedures in preparation for the next fiscal cycle.

ACC220 - Intermediate Accounting I

Overview

Course Description
This course is a continuation of the study of accounting principles with in-depth coverage of theoretical concepts and financial statements. Topics include generally accepted accounting principles and extensive analysis of balance sheet components. Upon completion, students should be able to demonstrate competence in the conceptual framework underlying financial accounting, including the application of financial standards.

Course Typically Offered
Fall, Summer

Credit Hours
4

Requisites

Simple Requisites

Prerequisite

Type
Prerequisite

Take ACC 122

Take ACC-122;

State prerequisite

Type
Prerequisite

Take ACC-120

Take ACC-120(S20278);

Student Learning Outcomes

Learning Objectives

Objectives
Define generally accepted accounting principles, and describe their development.

Objectives
Explain the “conceptual framework”, its purpose, and applications.

Objectives
Describe the basic assumptions and principles underlying financial accounting.

Objectives
Prepare a classified balance sheet, and disclosures.

Objectives
Demonstrate a general understanding of the audit report.

Objectives
Classify items properly in the balance sheet.

Objectives
Compute and interpret the common ratios used by financial analysts.

Objectives
Prepare a multiple-step income statement and earnings per share disclosures.

Objectives
Explain the importance of earnings quality for users of financial statements.

Objectives
Prepare a proper statement of cash flows.

Objectives
Demonstrate understanding of revenue recognition concepts.

Objectives
Compute inventory values and cost of goods sold under various cost flow assumptions.

Objectives
Apply the lower of cost or market rule in valuation of inventory.

Objectives
Value transactions appropriately involving long-lived tangible and intangible assets.

Objectives
Record research and development costs appropriately.

ACC221 - Intermediate Accounting II

Overview

Course Description
This course is a continuation of ACC 220. Emphasis is placed on special problems which may include leases, bonds, investments, ratio analyses, present value applications, accounting changes, and corrections. Upon completion, students should be able to demonstrate an understanding of the principles involved and display an analytical problem-solving ability for the topics covered.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
4

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take ACC-220

Take ACC-220(S10646);

Student Learning Outcomes

Learning Objectives

Objectives
Describe characteristics and costs included in property, plant, and equipment

Objectives
Apply depreciation methods accurately to financial reports.

Objectives
Explain the accounting issues related to asset impairment.

Objectives
Compute depletion expense for natural resources.

Objectives
Identify and explain the accounting for intangible assets.

Objectives
Describe accounting issues related to research and development costs.

Objectives
Explain the accounting treatment for intangible assets with finite and/or indefinite lives.

Objectives
Identify the three categories of debt and/or equity securities.

Objectives
Describe the accounting and reporting treatment for debt and equity securities.

Objectives
Explain and compare the equity and fair value methods of accounting for investments.

Objectives
Describe the procedures associated with issuing long-term debt.

Objectives
Identify various types of bond issues, including discount or premium amortization.

Objectives
Describe the accounting for the extinguishment of debt.

Objectives
Explain the accounting of long-term notes payable

Objectives
Discuss the characteristics of the corporate form of organization.

Objectives
Explain the accounting procedures for issuing shares of stock.

Objectives
Describe the accounting for treasury stock

Objectives
Explain the accounting for and reporting of preferred stock

Objectives
Identify and account for the various forms of dividends

Objectives
Describe the accounting issues for revenue recognition.

Objectives
Apply the percentage-of-completion method for long-term contracts.

Objectives
Apply the completed-contract method for long-term contracts

Objectives
Identify the proper accounting for losses on long-term contracts.

Objectives
Identify permanent and temporary differences between financial and taxable income.

Objectives
Explain the purpose of the deferred tax asset valuation allowance.

Objectives
Account for loss carryback and loss carry forward applications.

Objectives
Describe the need for deferred tax assets or deferred tax liabilities.

Objectives
Prepare a cash flow statement using the direct and indirect methods of calculating cash flows from operating activities.

Objectives
Identify sources of information for a statement of cash flows

Objectives
Discuss special problems in preparing a statement of cash flows

ACC227 - Practices in Accounting

Overview

Course Description
This course provides an advanced in-depth study of selected topics in accounting using case studies and individual and group problem solving. Topics include cash flow, financial statement analysis, individual and group problem solving, practical approaches to dealing with clients, ethics, and critical thinking. Upon completion, students should be able to demonstrate competent analytical skills and effective communication of their analysis in written and/or oral presentations.

Course Typically Offered
Fall, Spring

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take ACC-220

Take ACC-220(S10646);

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate competent analytical skills in reviewing Financial Statements of Public Companies.

Objectives
Prepare Financial Statements.

Objectives
Complete an individual tax return from Financial Statements.

Objectives
Identify and research relevant tax court cases.

Objectives
Identify how ethics and accounting are connected and the impact on the profession.

Objectives
Describe the Audit process, best practices, and current issues.

Objectives
Identify internal controls and fraud.

Objectives
Manage client expectations in the professional environment.

Objectives
Use resources provided by NC CPA Board and AICPA.

ACM112 - Facility Management

Overview

Course Description
This course covers the design and management of an animal care facility. Topics include facility design, observation and reporting, facility maintenance, general operation, sanitation, and management techniques. Upon completion, students should be able to effectively plan for and operate an animal care facility considering sustainable practices.

Credit Hours
3

AGR110 - Agricultural Economics

Overview

Course Description
This course provides an introduction to basic economic principles in agriculture. Topics include supply and demand, the role of agriculture in the economy, economic systems, and micro- and macroeconomics. Upon completion, students should be able to explain economic systems, interpret supply and demand curves, and complete cost and revenue production schedules.

Course Typically Offered
Fall

Credit Hours
3

AGR111 - Basic Farm Maintenance

Overview

Course Description
This course covers fundamentals of maintenance and repair of farm facilities and equipment. Topics include safe use of hand tools and farm machinery, carpentry, concrete, painting, wiring, welding, plumbing, and calculating costs and materials needed. Upon completion, students should be able to answer theoretical questions on topics covered and assist with maintenance and repair of farm facilities and equipment.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate proper use and maintenance of tools and equipment used on the farm.

Objectives
Select proper tools and equipment needed for various farm maintenance needs.

Objectives
Create cost projections and material lists for farm projects.

Objectives
Research options for appropriate farm facility needs.

Objectives
Demonstrate safe use of tools and equipment found in agricultural settings.

AGR121 - Biological Pest Management

Overview

Course Description
This course will emphasize the building and maintaining of healthy soil, plant and insect biological cycles as the key to pest and disease management. Course content includes study of major pests and diseases, including structure, life cycle, and favored hosts; and biological and least toxic methods of chemical control. Upon completion, students will be able to identify and recommend methods of prevention and control of selected insects and diseases.

Course Typically Offered
Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Identify insects, weeds and diseases that are commonly associated with vegetable production of the South East.

Objectives
Demonstrate appropriate management strategies based on specific cropping situations

Objectives
Create a crop management plan that integrates best management practices with market needs.

AGR139 - Introduction to Sustainable Agriculture

Overview

Course Description
This course will provide students with a clear perspective on the principles, history and practices of sustainable agriculture in our local and global communities. Students will be introduced to the economic, environmental and social impacts of agriculture. Upon completion, students will be able to identify the principles of sustainable agriculture as they relate to basic production practices.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Compare the characteristics of sustainable agriculture systems to those of conventional agriculture systems.

Objectives
Describe the role and responsibility of the consumer in creating a sustainable food system.

Objectives
Classify organic, biodynamic, and other specific bio-intensive production methods as sub-sets of sustainable agriculture.

Objectives
Discuss the essentials of a sustainable agriculture system, including its role in the environment, the economy and in preserving viable rural communities.

AGR160 - Plant Science

Overview

Course Description
This course introduces the basic principles of botany that pertain to agricultural production. Emphasis is placed on the anatomy and physiology of flowering plants. Upon completion, students should be able to identify and explain plant systems.

Course Typically Offered
Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Design an on-farm research project including a final written report

Objectives
Classify plants according to botanical classification schemes

Objectives
Differentiate between photosynthesis and respiration and apply that information to plant production schedules

Objectives
Integrate climate information and weather forecasts to production schedules

Objectives
Evaluate a planting scheme for maximum plant production

Objectives
Design an on-farm research project and create a final written report

AGR170 - Soil Science

Overview

Course Description
This course covers the basic principles of soil management and fertilization. Topics include liming, fertilization, soil management, biological properties of soil (including beneficial microorganisms), sustainable land care practices and the impact on soils, and plant nutrients. Upon completion, students should be able to analyze, evaluate, and properly amend soils/media according to sustainable practices.

Course Typically Offered
Fall

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Identify the primary factors which influence soil formation.

Objectives
Evaluate soil for agricultural use, including the ability to locate and interpret a soil report and soil survey.

Objectives
Explain the influence of soil physical and chemical properties on soil fertility and water management practices.

Objectives
Explain the role of soil microbes on soil nutrient cycles and fertility.

Objectives
Perform accurate sampling for soil fertility tests and interpret test results.

Objectives
Explain the importance of organic matter in crop production.

Objectives
Explain the importance of soil pH and the value of lime in crop production.

Objectives
Determine ways to supply soil nitrogen and other soil nutrients at appropriate levels.

Objectives
Create a land use plan when presented with a soil test report and other information (soil surveys, visual inspection).

AGR212 - Farm Business Management

Overview

Course Description
This course introduces budgeting, farm analysis, production costs, business organizations, and general management principles. Topics include enterprise budgets, partial budgets, whole farm budgets, income analysis, and business organizations. Upon completion, students should be able to prepare and analyze a farm budget.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Create crop journals and basic crop budgets

Objectives
Identify profit centers

Objectives
Create enterprise budgets by crop

Objectives
Create a whole farm budget

Objectives
Utilize basic bookkeeping methods

AGR214 - Agricultural Marketing

Overview

Course Description
This course covers basic marketing principles for agricultural products. Topics include buying, selling, processing, standardizing, grading, storing, and marketing of agricultural commodities. Upon completion, students should be able to construct a marketing plan for an agricultural product.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Construct a marketing plan for an agricultural product or business

Objectives
Conduct a marketing skills and preferences assessment

Objectives
Identify appropriate markets based on farmer skill level and personality

Objectives
Identify appropriate markets based on demographic research

Objectives
Demonstrate the ability to identify and correct food safety concerns in harvest and post-harvest handling

Objectives
Apply the principles of retail display to create a market stand that is visually appealing and functional

Objectives
Create a farm website/facebook page (and associated social media) that is appropriate for marketing agricultural products

AGR220 - Agricultural Mechanization

Overview

Course Description
This course is a study of farm machinery and agricultural equipment. Topics include selection and operation of tractors, materials handling equipment, tillage and harvesting equipment, and irrigation systems. Upon completion, students should be able to identify equipment parts and explain the basic principles of machinery operation and management.

Course Typically Offered
Fall

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Develop maintenance schedule for equipment used on the farm.

Objectives
Evaluate the need for specific pieces of agricultural equipment.

Objectives
Perform basic diagnostic assessments for small and large farm equipment.

Objectives
Evaluate opportunities for on farm energy production.

Objectives
Demonstrate safe use of tools and equipment found in agricultural settings.

AGR221 - Farm Structures

Overview

Course Description
This course covers basic agricultural buildings and structures. Topics include building materials, cost estimating, basic blueprint reading, and job planning. Upon completion, students should be able to complete a cost estimate for constructing an agricultural structure.

Credit Hours
3

AGR265 - Organic Crop Production: Spring

Overview

Course Description
This course includes a study of spring organic crop production practices, including vegetables, cut flowers, and culinary and medicinal herbs. Topics include variety selection, production methods, and record keeping procedures for certification. Upon completion, students will be able to demonstrate a knowledge of organic crop production appropriate for the spring season.

Course Typically Offered
Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Locate resources for certified organic producers.

Objectives
Recognize crops that are suitable for organic production in the Southeast

Objectives
Plan, order and schedule seed and input needs for seasonal crop productionAnalyze different production strategies for efficiency and profitability.

Objectives
Evaluate a site for the suitability for cultivation of annual crops

Objectives
Apply critical and creative thinking skills in farm production issues.

Objectives
Select the appropriate post- harvest handling techniques for crops discussed

Objectives
Locate resources for certified organic producers.

AGR266 - Organic Crop Production: Fall

Overview

Course Description
This course includes a study of fall organic crop production practices, including vegetables, cut flowers, and culinary and medicinal herbs. Topics include variety selection, production methods, and record keeping procedures for certification. Upon completion, students should be able to demonstrate a knowledge of organic crop production appropriate for the fall season.

Course Typically Offered
Fall

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Locating resources for certified organic producers.

Objectives
Recognizing which crops are suitable for organic production in the Southeast.

Objectives
Planning, ordering and scheduling for year-round crop production

Objectives
Analyzing different production strategies for appropriateness.

Objectives
Evaluating a site for suitability of cultivation

Objectives
Applying critical and creative thinking skills in farm management issues.

Objectives
Selecting and using the appropriate hand tools and equipment for a variety of production and management tasks.

Objectives
Post- harvest handling of all crops discussed.

AGR267 - Permaculture

Overview

Course Description
This course introduces the design of sustainable human habitats as part of a sustainable system, with emphasis placed on living systems of the temperate region. Topics include fundamentals of permaculture system design for farms, including gardens, fields, water, animals, buildings, economics, and society. Upon completion, students should be able to design a functional holistic farm system.

Course Typically Offered
Fall

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Differentiate permaculture design from traditional design for working landscapes.

Objectives
Analyze a site map to identify critical features prior to creating a farm design.

Objectives
Create a farm design using Permaculture guidelines.

Objectives
Design plant guilds for temperate climates by applying integrated forest gardening techniques.

Objectives
Evaluate appropriate permaculture solutions to real world problems.

Objectives
Construct useful structures using natural building techniques.

Objectives
Identify useful and appropriate plants for permaculture use.

AGR268 - Advanced Organic Crop Production

Overview

Course Description
This course provides students with structured practical experience in managing the complexities of organic crop production. Emphasis is placed on crop management skills and decision making associated with production-related operations such as cover crop management, irrigation, and post-harvest physiology. Upon completion, students should be able to create and implement a crop management plan and demonstrate competency in the selection and efficient use of equipment.

Course Typically Offered
Spring

Credit Hours
4

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take One: AGR-265 or AGR-266

Take AGR-265 or AGR-266;

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate long-term decision making for farm sustainability to include; appropriate cover crop selection and timing, crop rotations, implement/ equipment use and selection, crop and enterprise selection.

Objectives
Explain a working knowledge of farm tasks by writing task-specific standard operating procedures (SOPs)

Objectives
Selecting and applying optimal strategies for organic farm management: including soil management (nutrient budgets, soil OM, available nutrients) and record-keeping strategies that correlate with pest management and crop production strategies.

Objectives
Recognize crop problems and implement appropriate action steps for correction.

Objectives
Demonstrate appropriate choices for timing (plant and transplant, manage and harvesting of crops and cover crops), tool selection, pest management

Objectives
Implement appropriate post-harvest quality control of product based on market specifications.

AGR3001B1 - Biological Pest Management

Overview

Course Description
This course emphasizes the building and maintenance of healthy soil, plant, and insect biological cycles as the key to pest and disease management. Content includes the study of major crop pests and diseases such as structure, life cycle, and favored hosts; and biological and least toxic methods of chemical control. Upon completion students will be able to identify and recommend methods of prevention and control of selected insects, weeds, and diseases. Completed in a curriculum environment, this is a parallel course offered with AGR121.

Credit Hours

	Credit Hours Max:
0	0

AHR110 - Introduction to Refrigeration

Overview

Course Description
This course introduces the basic refrigeration process used in mechanical refrigeration and air conditioning systems. Topics include terminology, safety, and identification and function of components; refrigeration cycle; and tools and instrumentation used in mechanical refrigeration systems. Upon completion, students should be able to identify refrigeration systems and components, explain the refrigeration process, and use the tools and instrumentation of the trade.

Credit Hours
5

AHR111 - HVACR Electricity

Overview

Course Description
This course introduces electricity as it applies to HVACR equipment. Emphasis is placed on power sources, interaction of electrical components, wiring of simple circuits, and the use of electrical test equipment. Upon completion, students should be able to demonstrate good wiring practices and the ability to read simple wiring diagrams.

Credit Hours
3

AHR112 - Heating Technology

Overview

Course Description
This course covers the fundamentals of heating systems. Topics include safety, instrumentation, system operating, efficiency testing, electrical power, and control systems. Upon completion, students should be able to perform maintenance, service, and testing for major components of a heating system.

Credit Hours
4

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate safe practices and procedures with tools, materials, and industry accepted test equipment covered in the course.

Objectives
Use industry terminology to describe principles for oil, gas, and electric warm air heating systems.

Objectives
Identify the major components of oil, gas, and electric heating systems.

Objectives
Install and start-up warm air heating systems.

Objectives
Identify various types of energy sources used in heating and describe the individual characteristics of each.

Objectives
Describe service procedures for heating systems.

Objectives
Use tools and instruments necessary to troubleshoot and test system efficiency.

AHR113 - Comfort Cooling

Overview

Course Description
This course covers the installation procedures, system operations, and maintenance of residential and light commercial comfort cooling systems. Topics include terminology, component operation, and testing and repair of equipment used to control and produce assured comfort levels. Upon completion, students should be able to use psychrometrics, manufacturer specifications, and test instruments to determine proper system operation.

Credit Hours
4

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate safe practices and procedures with tools, materials, and industry accepted test equipment covered in the course.

Objectives
Evaluate system operation using psychometrics, manufacturer specifications, and test instruments.

Objectives
Demonstrate methods of installing, testing, maintaining, and repairing comfort cooling systems.

Objectives
Demonstrate use of test equipment and interpretation of test equipment results.

Objectives
Identify refrigerants used in residential and light commercial comfort cooling systems and demonstrate the proper procedures for handling these refrigerants

AHR114 - Heat Pump Technology

Overview

Course Description
This course covers the principles of air source and water source heat pumps. Emphasis is placed on safety, modes of operation, defrost systems, refrigerant charging, and system performance. Upon completion, students should be able to understand and analyze system performance and perform routine service procedures.

Credit Hours
4

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take One: AHR-110 or AHR-113

Take AHR-110(S26631) or AHR-113(S26634);

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate safe practices and procedures with tools, materials, and industry accepted test equipment covered in the course.

Objectives
Diagram refrigerant flow through a heat pump in both the heating and cooling mode identifying refrigerant conditions and pressures.

Objectives
Explain the defrost cycle for air-to-air heat pumps.

Objectives
Identify and troubleshoot electrical control system components for heat pumps.

Objectives
Identify and troubleshoot refrigeration system components for heat pumps.

Objectives
Identify and describe the different types of heat pumps in relation to their source of heat.

AHR115 - Refrigeration Systems

Overview

Course Description
This course introduces refrigeration systems and applications. Topics include defrost methods, safety and operational control, refrigerant piping, refrigerant recovery and charging, and leak testing. Upon completion, students should be able to assist in installing and testing refrigeration systems and perform simple repairs.

Credit Hours
4

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take AHR-110

Take AHR-110(S26631);

Student Learning Outcomes

Learning Objectives

Objectives
Recognize and compare the components and configurations of multiple refrigeration system types

Objectives
Describe how the defrost system works.

Objectives
Distinguish between different metering refrigerator equipment

Objectives
Explain the difference in metering refrigerator equipment.

AHR120 - HVACR Maintenance

Overview

Course Description
This course introduces the basic principles of industrial air conditioning and heating systems. Emphasis is placed on preventive maintenance procedures for heating and cooling equipment and related components. Upon completion, students should be able to perform routine preventive maintenance tasks, maintain records, and assist in routine equipment repairs.

Course Typically Offered
Summer

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Perform basic maintenance procedures on air conditioning and refrigeration equipment.

Objectives
Troubleshoot simple problems on air conditioning, heating and refrigeration equipment.

Objectives
Define the theories relating to heating and air conditioning systems and identify various system components and their function.

Objectives
Apply safe work practices relating to heating and air conditioning service techniques.

Objectives
Diagram a basic HVAC system including all components.

Objectives
Identify common refrigerants.

Objectives
Demonstrate the process to evacuate and recharge an air conditioning or refrigeration system.

Objectives
Interpret electrical properties and perform tests related to HVAC equipment and associated power schematics.

Objectives
Demonstrate proper use of a voltmeter (VOM)

AHR125 - HVACR Electronics

Overview

Course Description
This course introduces the common electronic control components in HVACR systems. Emphasis is placed on identifying electronic components and their functions in HVACR systems and motor-driven control circuits. Upon completion, students should be able to identify components, describe control circuitry and functions, and use test instruments to measure electronic circuit values and identify malfunctions.

Course Typically Offered
Fall

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take One: AHR-111, ELC-111, or ELC-112

Take AHR-111(S23420) ELC-111 or ELC-112(S21587);

Student Learning Outcomes

Learning Objectives

Objectives
Identify and know the basic operations of various electrical components used in HVACR systems

Objectives
Read and understand the use of Electrical schematics used in HVACR systems for system troubleshooting.

Objectives
Understand the Defrost systems for Residential HVAC systems.

Objectives
Use the VOM and ammeter to verify proper operations and use for troubleshooting systems problems.

AHR133 - HVAC Servicing

Overview

Course Description
The course covers the maintenance and servicing of HVAC equipment. Topics include testing, adjusting, maintaining, and troubleshooting HVAC equipment and record keeping. Upon completion, students should be able to adjust, maintain, and service HVAC equipment.

Credit Hours
4

Requisites

Simple Requisites

State concurrent or previous courses

Type
Corequisite

Take AHR-110, AHR-112, or AHR-113

Take AHR-110(S26631) AHR-112(S26633) or AHR-113(S26634);

AHR151 - HVAC Duct Systems I

Overview

Course Description
This course introduces the techniques used to lay out and fabricate duct work commonly found in HVAC systems. Emphasis is placed on the skills required to fabricate duct work. Upon completion, students should be able to lay out and fabricate simple duct work.

Course Typically Offered
Fall

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Understand Static pressure and its use in duct systems.

AHR160 - Refrigerant Certification

Overview

Course Description
This course covers the requirements for the EPA certification examinations. Topics include small appliances, high pressure systems, and low pressure systems. Upon completion, students should be able to demonstrate knowledge of refrigerants and be prepared for the EPA certification examinations.

Credit Hours
1

Requisites

Simple Requisites

State concurrent or previous courses

Type
Corequisite

Take AHR-110 AHR-113 or AHR-120;

Take AHR-110(S26631) AHR-113(S26634) or AHR-120;

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate readiness to take the EPA Certification Examination

Objectives
Successfully complete the EPA Certification Examination

AHR180 - HVACR Customer Relations

Overview

Course Description
This course introduces common business and customer relation practices that may be encountered in HVACR. Topics include business practices, appearance of self and vehicle, ways of handling customer complaints, invoices, telephone communications, and warranties. Upon completion, students should be able to present themselves to customers in a professional manner, understand how the business operates, complete invoices, and handle complaints.

Course Typically Offered
Spring

Credit Hours
1

Student Learning Outcomes

Learning Objectives

Objectives
Define the principles of effective customer service in the HVAC industry.

Objectives
Explain key elements of a positive service culture.

Objectives
Recognize customer-friendly systems.

Objectives
Identify and evaluate customer-friendly systems and practices.

Objectives
Demonstrate strategies for ensuring positive customer interactions

Objectives
Assess the impact of verbal and nonverbal communication on customer experience

Objectives
Develop and maintain professional customer relationships.

Objectives
Formulate strategies to prevent and address customer dissatisfaction.

AHR211 - Residential System Design

Overview

Course Description
This course introduces the principles and concepts of conventional residential heating and cooling system design. Emphasis is placed on using tables, worksheets, and/or appropriate software to calculate a residential load based on Air Conditioning Contractors of America (ACCA) standards. Upon completion of the course students should be able to calculate a heating and cooling residential load.

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Design and draw a duct system in accordance with the ACCA Manual D.

Objectives
Apply appropriate HVACR codes to the design of residential HVACR systems.

Objectives
Calculate heating and cooling loads for residential structures in accordance with ACCA Manual J.

AHR212 - Advanced Comfort Systems

Overview

Course Description
This course covers advanced comfort systems for residential and commercial applications. Emphasis is placed on the application, maintenance, and servicing of residential and commercial advanced comfort systems. Upon completion, students should be able to test, analyze, troubleshoot, and service multiple types of residential and commercial advanced comfort systems.

Credit Hours
4

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take AHR-114

Take AHR-114(S26635);

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate safe practices and procedures with tools, materials, and industry accepted test equipment covered in the course.

Objectives
Identify components of water-cooled comfort systems, water-source/geothermal heat pumps, and high efficiency heat pumps.

Objectives
Compare and contrast standard and high efficiency heat pumps

Objectives
Design and size earth coupled piping loops for geothermal heat pump systems.

Objectives
Describe geothermal heat pump operation.Test duct systems for proper airflow and make adjustments.

AHR213 - HVACR Building Code

Overview

Course Description
This course covers the North Carolina codes that are applicable to the design of HVACR systems. Topics include current North Carolina codes as applied to HVACR design and service industries. Upon completion, students should be able to demonstrate the correct usage of North Carolina codes that apply to specific areas of the HVACR trade.

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Apply the mechanical, gas, and energy code of North Carolina for designing, installing, maintaining and servicing HVACR systems.

Objectives
Define terms and abbreviations using codes applicable to the HVACR trade.

Objectives
Analyze information to conform to North Carolina mechanical, gas, and energy code.

Objectives
Describe sources of authority and methods of enforcement.

AHR215 - Commercial HVAC Controls

Overview

Course Description
This course introduces HVAC control systems used in commercial applications. Topics include electric/ electronic control systems, direct digital control (DDC) controlled devices, temperature sensors, humidity sensors, pressure sensors, wiring, controllers, actuators, and controlled devices. Upon completion, students should be able to verify or correct the performance of common control systems regarding sequence of operation and safety.

Credit Hours
2

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take AHR-111, ELC-111, or ELC-112

Take AHR-111(S26632) ELC-111 or ELC-112(S26663);

Student Learning Outcomes

Learning Objectives

Objectives
Explain how Building Automation Systems control HVAC equipment.

Objectives
Differentiate between pneumatic and low-voltage control systems.

Objectives
Describe how zone controls manage temperature in multiple areas using a single HVAC system

AHR225 - Commercial System Design

Overview

Course Description
This course covers the principles of designing heating and cooling systems for commercial buildings. Emphasis is placed on commercial heat loss/gain calculations, applied psychometrics, air-flow calculations, air distribution system design, and equipment selection. Upon completion, students should be able to calculate heat loss/gain, design and size air and water distribution systems, and select equipment.

Course Typically Offered
Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Analyze refrigeration cycle conditions using enthalpy data.

Objectives
Plot and interpret the refrigeration cycle on a pressure-enthalpy diagram.

Objectives
Demonstrate proper procedures for pumping down chillers and residential HVAC units.

Objectives
Identify various types of compressors used in HVAC systems.

Objectives
Evaluate compressor operating temperatures to ensure safe and efficient performance.

ALT110 - Biofuels I

Overview

Course Description
This course is designed to provide an introduction to the fundamentals of biobased fuels. Emphasis is placed on proper handling and use guidelines, basic chemistry of biofuels, production methods, and the social, environmental, and economic impacts of biofuels. Upon completion, students should be able to demonstrate a general understanding of biofuels.

Course Typically Offered
Summer

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate knowledge of the history, current state, and future potential of bioenergy in the United States and around the world.

Objectives
Identify the various sources of bioenergy and their applications.

Objectives
Identify materials needed for the production of bioenergy in a laboratory setting.

Objectives
Determine the proper amount of materials to produce a successful chemical reaction for the production of bioenergy.

Objectives
Recognize the different characteristics of feedstocks used for the production of bioenergy.

Objectives
Demonstrate good lab protocols including personal safety, proper materials handling, and documentation in a clear and logical manner.

Objectives
Identify basic quality testing procedures for biofuels and the importance of quality fuel production.

Objectives
Demonstrate understanding of the economics of bioenergy production.

ALT120 - Renewable Energy Technologies

Overview

Course Description
This course provides an introduction to multiple technologies that allow for the production and conservation of energy from renewable sources. Topics include hydo-electric, wind power, passive and active solar energy, tidal energy, appropriate building techniques, and energy conservation methods. Upon completion, students should be able to demonstrate an understanding of renewable energy production and its impact on humans and their environment.

Course Typically Offered
Fall

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Understand the differences between renewable and nonrenewable energy sources

Objectives
Compare and contrast various sources of renewable energy

Objectives
Evaluate possibilities for various renewable energy sources in different geographic locations

Objectives
Locate resources used to make informed decisions about various renewable energies

Objectives
Identify mechanical components of renewable energy systems

Objectives
Describe the flow of electrons from power source to end user

Objectives
Implement changes to their own lives to promote energy efficiency and renewable energies

ALT250 - Thermal Systems

Overview

Course Description
This course introduces concepts, tools, techniques, and materials used to convert thermal energy into a viable, renewable energy resource. Topics include forced convection, heat flow and exchange, radiation, the various elements of thermal system design, regulations, and system installation and maintenance. Upon completion, students should be able to demonstrate an understanding of geothermal and solar thermal systems and corresponding regulations.

Course Typically Offered
Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Describe and explain the properties and equipment used in thermal solar energy and geothermal systems.

Objectives
Assemble components to install a solar heating system.

Objectives
Apply critical thinking methodology to solar and geothermal sizing, speciifying, and troubleshooting.

Objectives
Be fluent in a vocabulary of technical terms related to the systems.

Objectives
Recognize the differences and applications of different types of systems.

Objectives
Perform site assessment for solar installation.

Objectives
Describe the economic factors relevant to implementing sustainable systems.

Objectives
Relate information from this classs to the NABCEP Objectives and Task Analysis for Solar Water and Pool Heating Systems.

AMC200 - Health Information for Coders

Overview

Course Description
This course provides a detailed look at the role of a coder within the healthcare system. Topics include health record content and documentation for all record types, roles and responsibilities of various providers and disciplines, data source reliability and accuracy, policies and procedures to ensure compliance with regulations and standards, and legal and regulatory requirements. Upon completion, students should be able to demonstrate an understanding of the role of coding in the healthcare organization and apply various policies and procedures as they relate to documentation and compliance and comply with regulatory standards.

Credit Hours
2

AMC201 - Legal and Compliance

Overview

Course Description
This course covers legal and regulatory processes, privacy and security rules as applied to the coding environment. Topics include legal terminology, health record laws and regulations, internal and external standards and regulations, data security, storage and retrieval, and access and disclosure. Upon completion, students should be able to apply healthcare legal terminology, maintain a legally defensible health record, comply with state and federal privacy and security laws, and adhere to security policies and procedures.

Credit Hours
2

AMC202 - Coding for Reimbursement

Overview

Course Description
This course covers the revenue cycle and reimbursement for acute and ambulatory care. Topics include payment methodologies and systems, utilization review, case management, billing processes and procedures, and fraud and abuse. Upon completion, students should be able to apply policies and procedures for the use of data required in healthcare reimbursement, evaluate the revenue cycle, and identify potential fraud and abuse.

Credit Hours
2

AMC203 - Intermediate International Classes of Diseases Diagnoses

Overview

Course Description

This course covers the proper application of ICD diagnosis coding conventions and guidelines and application of codes. Emphasis is placed on reviewing clinical documentation to determine appropriate code selection. Upon completion, students should be able to accurately assign and sequence diagnosis codes according to the current coding and reporting requirements for acute care and outpatient services.

Credit Hours

3

AMC204 - Intermediate International Classification of Diseases Procedures

Overview

Course Description

This course covers ICD procedure coding conventions and guidelines, Procedure Coding System (PCS) Table navigation, and application of codes. Emphasis is placed on the interrelationship between anatomy and physiology and the application of procedure codes by reviewing clinical documentation to determine procedure intent and extent. Upon completion, students should be able to navigate the PCS tables to accurately assign and sequence diagnosis codes according to the current coding and reporting requirements for acute care and outpatient services.

Credit Hours

3

AMC205 - Intermediate Current Procedural Terminology Coding

Overview

Course Description
This course covers the application of Current Procedural Terminology (CPT) and Healthcare Common Procedure Coding System (HCPCS) codes as applied to current coding and reporting requirements. Emphasis is placed on the interrelationship between anatomy and physiology and the application of procedure codes by reviewing clinical documentation. Upon completion, students should be able to apply the official CPT and HCPCS Level II coding guidelines, and apply the appropriate reporting measures such as modifiers.

Credit Hours
3

AMC206 - Clinical Documentation

Overview

Course Description
This course covers the importance of clinical documentation and its role in accurate coding. Topics include communication with providers, documentation in the health record, how to formulate ethical queries to clarify conflicting diagnoses, and implications of accurate coding. Upon completion, students should be able to identify discrepancies between supporting documentation and coded data and develop appropriate physician queries.

Credit Hours
3

AMC207 - Advanced Medical Coding Lab I

Overview

Course Description
This course covers the practical application of current ICD diagnosis and CPT guidelines by using encoders to code patient charts. Emphasis is on analyzing and applying current regulations and established guidelines in clinical classification systems by using standard data set definitions and resources. Upon completion, students should be able to accurately code a variety of chart types and recommend coding resources.

Credit Hours
2

AMC209 - Professional Practice Experience

Overview

Course Description
This course provides supervised clinical coding experience in healthcare settings. Emphasis is placed on the practical application of coding concepts through demonstration of critical thinking and integration of didactic and clinical components. Upon completion, students should be able to demonstrate the comprehensive knowledge required of an advanced level coder.

Credit Hours
2

ANS110 - Animal Science

Overview

Course Description
This course introduces the livestock industry. Topics include nutrition, reproduction, production practices, diseases, meat processing, sustainable livestock production, and marketing. Upon completion, students should be able to demonstrate a basic understanding of livestock production practices and the economic impact of livestock locally, regionally, state-wide, and internationally.

Course Typically Offered
Fall

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Describe the importance of animal production and explain the major issues related to the production of livestock on an international, national, and state level.

Objectives
Explain the relationship of science and animal production through the studies of biotechnology, technology, genetics, physiology, nutrition, and health.

Objectives
Describe the basic physiology and terminology of the animal industries.

Objectives
Describe the production (including sustainable production) methodologies of the swine, beef, dairy, sheep and horse industries.

Objectives
Recognize the requirements of production animals, and the benefits of proper care, nutrition, genetics, and environment to the animal's productivity levels.

ANS111 - Sustainable Livestock Management

Overview

Course Description
This course covers the integration of livestock as part of a sustainable farming system, with emphasis on small-scale production for niche markets and pasture. The course will cover appropriate breed selection, nutrition and living requirements for livestock such as goats, hogs, sheep, poultry, and bees. Upon completion, students will recognize appropriate breeds for their farm needs and demonstrate knowledge of small scale livestock production.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Select appropriate species and breeds for their farm and market needs

Objectives
Evaluate farmland for various uses by livestock

Objectives
Develop a pasture management plan appropriate for rotational grazing systems in the southeast.

Objectives
Evaluate markets and processing facilities appropriate for specific enterprises

ANT210 - General Anthropology

Overview

Course Description
This course introduces the physical, archaeological, linguistic, and ethnological fields of anthropology. Topics include human origins, genetic variations, archaeology, linguistics, primatology, and contemporary cultures. Upon completion, students should be able to demonstrate an understanding of the four major fields of anthropology. This course has been approved for transfer under the CAA/ICAA as a premajor and/or elective course requirement.

Course Typically Offered
Fall

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate an understanding of the four major fields of anthropology

ANT220 - Cultural Anthropology

Overview

Course Description
This course introduces the nature of human culture. Emphasis is placed on cultural theory, methods of fieldwork, and cross-cultural comparisons in the areas of ethnology, language, and the cultural past. Upon completion, students should be able to demonstrate an understanding of basic cultural processes and how cultural data are collected and analyzed. This course has been approved for transfer under the CAA/ICAA as a premajor and/or elective course requirement.

Course Typically Offered
Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Define the concept of culture and provide specific examples of how it is learned, shared, and transmitted through symbols, including language.

Objectives
Demonstrate knowledge of cultural variation and explain the diversity of perspectives, practices, and beliefs found within and across cultures.

Objectives
Explain how cultural relativism, ethnocentrism, and the holistic approach distinguish anthropology from other scientific disciplines.

Objectives
Describe the benefits and limitations of methodologies used by cultural anthropologists, including ethnographic fieldwork, participant observation, and ethnological analysis.

Objectives
Demonstrate knowledge of the history of cultural anthropology and its ethical concerns, including the pioneering contributions of Franz Boas, Bronislaw Malinowski, and Margaret Mead.

Objectives
Describe the processes through which cultures change over time.

Objectives
Explain the significance of religion, art, and ritual in human societies.

Objectives
Apply the anthropological perspective to analyze issues related to globalization, migration, and conflict.

Objectives
Describe how human cultural and biological differences are connected to issues of power and inequality within their own culture and in cultures around the world.

ARC111 - Introduction to Architectural Technology

Overview

Course Description
This course introduces basic architectural drafting techniques, lettering, use of architectural and engineer scales, and sketching. Topics include orthographic, axonometric, and oblique drawing techniques using architectural plans, elevations, sections, and details; reprographic techniques; and other related topics. Upon completion, students should be able to prepare and print scaled drawings within minimum architectural standards.

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate proficiency with an Architect and Engineer's scale.

Objectives
Illustrate the components that constitute plan views.Interpret various plan views for thoroughness and accuracy.

Objectives
Create plans through hand drawing and CAD technologies.

ARS112 - Automotive Restoration Research

Overview

Course Description
This course covers identification and collection of information needed to restore classic automobiles. Emphasis is placed on using books, numbers, emblems, titles, bills of sale, and other documents as resources. Upon completion, students should be able to use reference materials in the area of auto restoration to restore classic vehicles.

Course Typically Offered
Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Research Vintage automobile literature

Objectives
Locate and interpret information pertinent to a vintage or collector automobile, such as VIN numbers, part numbers codes of different manufacturers Shop & Service manuals and use the information in restoring them.

Objectives
Find State and Local DMV procedures for Titling

Objectives
Locate aftermarket suppliers, catalogues, remanufactures of reproduction parts

ARS113 - Automobile Upholstery

Overview

Course Description
This course covers automobile upholstery work used in restoration of classic automobiles. Emphasis is placed on removing, repairing, or reconstructing worn/ damaged upholstery material in classic automobiles. Upon completion, students should be able to disassemble, repair/reconstruct, or replace the seats, headliners, door panels, and other components in the interior of vehicles.

Course Typically Offered
Summer

Credit Hours
4

Student Learning Outcomes

Learning Objectives

Objectives
Disassemble, repair/reconstruct, or replace the seats, headliners, door panels, and other components in the interior of vehicles.

Objectives
Operate sewing equipment and tools through lab assignments.

Objectives
Identify material types used in vintage vehicles.

ARS114 - Restoration Skills I

Overview

Course Description
This course covers mechanical, electrical, and upholstery restoration. Emphasis is placed on engines, transmissions, brakes, starters, generators, distributors, and replacement or fabrication of upholstery. Upon completion, students should be able to demonstrate an understanding of the major components contained in a wide range of classic vehicles.

Course Typically Offered
Summer

Credit Hours
4

Student Learning Outcomes

Learning Objectives

Objectives
Recall the major components contained in a wide range of classic vehicles.

Objectives
Identify powertrain components using labeling diagrams.

Objectives
Demonstrate upholstery installation through lab activity.

ARS117 - Automotive Engines

Overview

Course Description
This course covers the repair, rebuilding, and troubleshooting of internal combustion engines. Emphasis is placed on use of tools and equipment to measure reconditioning tolerances of the internal combustion engine. Upon completion, students should be able to disassemble, repair and/or replace, and reassemble an internal combustion engine.

Course Typically Offered
Spring

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Disassemble, repair and/or replace, and reassemble an internal combustion engine.

Objectives
Identify all the components of an internal combustion engine.

Objectives
Correctly operate measuring tools through lab performance.

ARS118 - Wood & Metal Restoration

Overview

Course Description
This course introduces various wood materials used in early automobile construction including a general overview of woodworking techniques. Emphasis is placed on wood material, metal behavior, and trim construction. Upon completion, students should be able to perform simple woodworking techniques, attach and remove trim, and be familiar with basic hardware techniques.

Course Typically Offered
Fall

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Perform simple woodworking techniques, attach and remove trim, and be familiar with basic hardware techniques.

Objectives
Identify material types.

Objectives
Demonstrate proper use of equipment through lab performance.

Objectives
Recognize the principals of metal shaping by finding or identifying examples.

ART111 - Art Appreciation

Overview

Course Description
This course introduces the origins and historical development of art. Emphasis is placed on the relationship of design principles to various art forms including but not limited to sculpture, painting, and architecture. Upon completion, students should be able to identify and analyze a variety of artistic styles, periods, and media. This course has been approved for transfer under the CAA as a general education course in Humanities/Fine Arts. This course has been approved for transfer under the ICAA as a general education course in Humanities/Fine Arts

Course Typically Offered
Fall, Spring, Summer

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Define the origins and historical development of art through the ages.

Objectives
Summarize basic concepts, theories, and research as related to the topics listed in the syllabus.

Objectives
Identify how architecture, painting, and sculpture were influenced through history.

Objectives
Differentiate between artwork styles, periods, and media

ART114 - Art History Survey I

Overview

Course Description
This course covers the development of art forms from ancient times to the Renaissance. Emphasis is placed on content, terminology, design, and style. Upon completion, students should be able to demonstrate an historical understanding of art as a product reflective of human social development. This course has been approved for transfer under the CAA as a general education course in Humanities/Fine Arts. This course has been approved for transfer under the ICAA as a general education course in Humanities/Fine Arts.

Course Typically Offered
Fall

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Define and use standard terms of art history.

Objectives
Identify specific art styles studied, their time period, and cultural significance.

Objectives
Relate art of each period studied to its historical and cultural context.

Objectives
Discuss the works of recognized artists in terms of the principal influences upon their art, their artistic concerns and stylistic characteristics, and the media they used.

Objectives
Attribute unfamiliar works of art to an artist, to a time period, and to a country, culture, and/or style.

ART115 - Art History Survey II

Overview

Course Description
This course covers the development of art forms from the Renaissance to the present. Emphasis is placed on content, terminology, design, and style. Upon completion, students should be able to demonstrate an historical understanding of art as a product reflective of human social development. This course has been approved for transfer under the CAA as a general education course in Humanities/Fine Arts. This course has been approved for transfer under the ICAA as a general education course in Humanities/Fine Arts.

Course Typically Offered
Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Define and use standard terms of art history.

Objectives
Identify specific art styles studied, their time period, and cultural significance.

Objectives
Relate art of each period studied to its historical and cultural context.

Objectives
Discuss the works of recognized artists in terms of the principal influences upon their art, their artistic concerns and stylistic characteristics, and the media they used.

Objectives
Attribute unfamiliar works of art to an artist, to a time period, and to a country, culture, and/or style.

ART131 - Drawing I

Overview

Course Description
This course introduces the language of drawing and the use of various drawing materials. Emphasis is placed on drawing techniques, media, and graphic principles. Upon completion, students should be able to demonstrate competence in the use of graphic form and various drawing processes. This course has been approved for transfer under the CAA as a general education course in Humanities/Fine Arts. This course has been approved for transfer under the ICAA as a general education course in Humanities/Fine Arts.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Develop an expanded visual awareness and more accurate, open and clear perception.

Objectives
Draw with a variety of tools and materials with increasing competence.

Objectives
Describe the concept of abstraction in drawing.

Objectives
Appraise drawing as both a fundamental and important artistic activity.

ART132 - Drawing II

Overview

Course Description
This course continues instruction in the language of drawing and the use of various materials. Emphasis is placed on experimentation in the use of drawing techniques, media, and graphic materials. Upon completion, students should be able to demonstrate increased competence in the expressive use of graphic form and techniques. This course has been approved for transfer under the CAA as a general education course in Humanities/Fine Arts. This course has been approved for transfer under the ICAA as a general education course in Humanities/Fine Arts.

Take ART-131

Take ART-131;

ASL111 - Elementary ASL I

Overview

Course Description
This course introduces the fundamental elements of American Sign Language within a cultural context. Emphasis is placed on the development of basic expressive and receptive skills. Upon completion, students will be able to comprehend and respond with grammatical accuracy to expressive American Sign Language and demonstrate cultural awareness. This course has been approved for transfer under the CAA as a general education course in Humanities/Fine Arts. This course has been approved for transfer under the ICAA as a general education course in Humanities/Fine Arts.

Course Typically Offered
Fall

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Discuss deaf culture as it relates to ASL

Objectives
Define the parameters of ASL

Objectives
Interpret and formulate basic signs

Objectives
Exchange personal information via ASL

Objectives
Complete a basic conversation using only ASL

ASL112 - Elementary ASL II

Overview

Course Description
This course is a continuation of ASL 111 focusing on the fundamental elements of American Sign Language in a cultural context. Emphasis is placed on the progressive development of expressive and receptive skills. Upon completion, the students should be able to comprehend and respond with increasing accuracy to expressive American Sign Language and demonstrate cultural awareness. This course has been approved for transfer under the CAA as a general education course in Humanities/Fine Arts. This course has been approved for transfer under the ICAA as a general education course in Humanities/Fine Arts.

Course Typically Offered
Spring

Credit Hours
3

Learning Objectives

Objectives
Communicate effectively using ASL for a variety of purposes

Objectives
Interpret and respond with accuracy to expressive ASL, with increasing grammatical complexity.

Objectives
Demonstrate cultural awareness of the deaf community

Objectives
Complete a 10-minute conversation, retell events, and give specific directions using only ASL.

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take ASL-111

Take ASL-111(S11976);

Student Learning Outcomes

ASL211 - Intermediate ASL I

Overview

Course Description
This course provides a review and expansion of the essential skills of American Sign Language. Emphasis is placed on the progressive development of expressive and receptive skills, study of authentic and representative literacy and cultural texts. Upon completion, students should be able to communicate effectively, accurately, and creatively using American Sign Language about the past, present, and future. This course has been approved for transfer under the CAA as a general education course in Humanities/Fine Arts. This course has been approved for transfer under the ICAA as a general education course in Humanities/Fine Arts.

Course Typically Offered
Fall

Credit Hours
3

Learning Objectives

Objectives
Express meaning through multiple signs rather than focusing on individual signs

Objectives
Confirm information by asking questions or using a sign in context

Objectives
Interpret the whole meaning/context of a conversation

Take ASL-211(S13118);

Student Learning Outcomes

Learning Objectives

Objectives
Express spontaneous and accurate meaning through multiple signs

Objectives
Receive and understand spontaneous the whole context of signed message

Objectives
Understand not only the message but cultural context in signed conversation

AST111 - Descriptive Astronomy

Overview

Course Description
This course introduces an overall view of modern astronomy. Topics include an overview of the solar system, the sun, stars, galaxies, and the larger universe. Upon completion, students should be able to demonstrate an understanding of the universe around them. This course has been approved for transfer under the CAA as a general education course in Natural Science. This course has been approved for transfer under the ICAA as a general education course in Natural Science.

ATR112 - Introduction to Automation

Overview

Course Description
This course introduces the basic principles of automated systems and describes the tasks that technicians perform on the job. Topics include the history, development, and current applications of robots and automated systems including their configuration, operation, components, and controls. Upon completion, students should be able to understand the basic concepts of automation and robotic systems.

Course Typically Offered
Spring

Credit Hours
3

ATT115 - Green Transportation Safety and Service

Overview

Course Description
This course covers workplace safety, hazardous material and environmental regulation relevant to electric, hybrid and alternative fueled vehicles. Topics include safety of high voltage vehicle systems, gaseous fuel systems and alternative liquid fuels. Upon completion, students should be able to demonstrate safe work practices, utilize appropriate shop tools and explain government regulations associated with alternative transportation.

Credit Hours
2

ATT125 - Hybrid-Electric Transportation

Overview

Course Description
This course covers the theory and operation of hybrid-electric drive vehicles. Topics include maintenance, diagnostics, repair and safety procedures for electrically propelled and hybrid vehicles. Upon completion, students should be able to perform diagnostics, maintenance and repair hybrid-electric drive vehicles.

Credit Hours
4

Requisites

Take TRN-120

Take TRN-120(S23456);

ATT140 - Emerging Transportation Technology

Overview

Course Description
This course covers emerging technologies in the automotive industry and diagnostic procedures associated with those technologies. Topics include exploring new technologies, diagnostic tools, methods and repairs. Upon completion, students should be able to demonstrate practical skills applicable to emerging transportation technologies.

Credit Hours
3

AUB111 - Painting & Refinishing I

Overview

Course Description
This course introduces the proper procedures for using automotive refinishing equipment and materials in surface preparation and application. Topics include federal, state, and local regulations, personal safety, refinishing equipment and materials, surface preparation, masking, application techniques, and other related topics. Upon completion, students should be able to identify and use proper equipment and materials in refinishing following accepted industry standards.

Course Typically Offered
Fall, Spring

Credit Hours
4

Student Learning Outcomes

Learning Objectives

Objectives
Identify and use proper equipment and materials in refinishing, following accepted industry standards.

Objectives
Review federal, state, and local regulations.

Objectives
Demonstrate proper safety procedures through simulations.

Objectives
Demonstrate proper paint preparations through lab projects.

Objectives
Demonstrate proper painting techniques through lab projects.

AUB112 - Painting & Refinishing II

Overview

Course Description
This course covers advanced painting techniques and technologies with an emphasis on identifying problems encountered by the refinishing technician. Topics include materials application, color matching, correction of refinishing problems, and other related topics. Upon completion, students should be able to perform spot, panel, and overall refinishing repairs and identify and correct refinish problems.

Course Typically Offered
Spring

Credit Hours
4

Learning Objectives

Objectives
Perform spot, panel, and overall refinishing repairs and identify and correct refinish problems.

Objectives
Identify and correct color matching issues.

Objectives
Perform paint correcting task in lab setting.

AUB114 - Special Finishes

Overview

Course Description
This course introduces multistage finishes, custom painting, and protective coatings. Topics include base coats, advanced intermediate coats, clear coats, and other related topics. Upon completion, students should be able to identify and apply specialized finishes based on accepted industry standards.

Course Typically Offered
Summer

Credit Hours
2

Requisites

Simple Requisites

Prerequisite

Take AUB-111

Take AUB-111;

Student Learning Outcomes

Learning Objectives

Objectives
Identify and apply specialized finishes based on industry standards.

Objectives
Identify and apply proper techniques when painting different types of plastic materials.

Objectives
Demonstrate the use of specialized products and additives during the painting process.

AUB121 - Non-Structural Damage I

Overview

Course Description
This course introduces safety, tools, and the basic fundamentals of body repair. Topics include shop safety, damage analysis, tools and equipment, repair techniques, materials selection, materials usage, and other related topics. Upon completion, students should be able to identify and repair minor direct and indirect damage including removal/repairing/replacing of body panels to accepted standards.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Identify and repair minor direct and indirect damage.

Objectives
Demonstrate removal and replacing of body panels to accepted standards.

Objectives
Perform damage analysis through lab project.

AUB131 - Structural Damage I

Overview

Course Description
This course introduces safety, equipment, structural damage analysis, and damage repairs. Topics include shop safety, design and construction, structural analysis and measurement, equipment, structural glass, repair techniques, and other related topics. Upon completion, students should be able to analyze and perform repairs to a vehicle which has received light/ moderate structural damage.

Course Typically Offered
Fall

Credit Hours
4

Student Learning Outcomes

Learning Objectives

Objectives
Analyze and perform repairs to a vehicle which has received light/ moderate structural damage.

Objectives
Demonstrate proper use of vehicle measuring equipment through lab simulations.

Objectives
Perform welded panel replacement in a lab setting.

AUB162 - Autobody Estimating

Overview

Course Description
This course provides a comprehensive study of autobody estimating. Topics include collision damage analysis, industry regulations, flat-rate and estimated time, and collision estimating manuals. Upon completion, students should be able to prepare and interpret a damage report.

Course Typically Offered
Spring

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Prepare and interpret a damage report.

Objectives
Demonstrate proper use of a collision estimating program.

Objectives
Define estimating terminology.

AUT114 - Safety and Emissions

Overview

Course Description
This course covers the laws, procedures, and specifications needed to perform a North Carolina State Safety and Emissions inspection. Topics include brake, steering and suspension, lighting, horn, windshield wiper, tire, mirrors, exhaust emission controls, tire definitions, vehicle tint, and emission control devices inspection. Upon completion, students should be able to perform complete and thorough North Carolina State Safety and Emissions inspections.

Credit Hours
2

AUT114A - Safety and Emissions Lab

Overview

Course Description
This course is an optional lab that allows students to enhance their understanding of North Carolina State Emissions Inspection failures. Topics include evaporative, positive crankcase ventilation, exhaust gas recirculation and exhaust emissions systems operation, including catalytic converter failure diagnosis. Upon completion, students should be able to employ diagnostic strategies to repair vehicle emissions failures resulting from North Carolina State Emissions inspection.

Course Typically Offered
Summer

Credit Hours
1

Requisites

Simple Requisites

Objectives
Perform a North Carolina State Safety Inspection.

Objectives
Perform a North Carolina State Emission Inspection.

AUT116 - Engine Repair

Overview

Course Description
This course covers the theory, construction, inspection, diagnosis, and repair of internal combustion engines and related systems. Topics include fundamental operating principles of engines and diagnosis, inspection, adjustment, and repair of automotive engines using appropriate service information. Upon completion, students should be able to perform basic diagnosis, measurement and repair of automotive engines using appropriate tools, equipment, procedures, and service information.

Course Typically Offered
Fall

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Identify and illustrate the construction of the automotive engine.

Objectives
Perform and interpret basic diagnosis of an engine using appropriate tools.

Objectives
Locate and review the removal, repair, specification, reassembly, and reinstallation of the engine.

Objectives
Measure and description of automotive engines using appropriate tools, equipment, procedures, and service information.

Objectives
Evaluate the engines condition and assess the repairs of an automotive engines

AUT116A - Engine Repair Lab

Overview

Course Description
This course is an optional lab to be used in conjunction with or as an alternative to work-based learning placements in order to meet the ASE Education Foundation standards for hours. Topics include diagnosis, inspection, adjustment, and repair of automotive engines using appropriate service information. Upon completion, students should be able to perform basic diagnosis, measurement and repair of automotive engines using appropriate tools, equipment, procedures, and service information.

Credit Hours
2

Requisites

Simple Requisites

Take AUT-116(S21687);

AUT141 - Suspension & Steering Systems

Overview

Course Description
This course covers principles of operation, types, and diagnosis/repair of suspension and steering systems to include steering geometry. Topics include manual and power steering systems and standard and electronically controlled suspension and steering systems. Upon completion, students should be able to service and repair steering and suspension components, check and adjust alignment angles, repair tires, balance wheels, and calibrate/reset related driver assist systems using appropriate tools, equipment, procedures, and service information.

Credit Hours
3

AUT141A - Suspension & Steering Lab

Overview

Course Description
This course is an optional lab to be used in conjunction with or as an alternative to work-based learning placements in order to meet the ASE Education Foundation standards for hours. Topics include manual and power steering systems and standard and electronically controlled suspension and steering systems. Upon completion, students should be able to service and repair steering and suspension components, check and adjust alignment angles, repair tires, balance wheels, and calibrate/reset related driver assist systems using appropriate tools, equipment, procedures, and service information.

Learning Objectives

Objectives
Observe and perform safety procedures related to electronic systems.

Objectives
Identify vehicle identification numbers, electronic service information, and service repair orders.

Objectives
Methodically approach and diagnosis problems in electrical/electronic systems, in order to make a direct, thorough and economical diagnosis.

Objectives
Preform basic testing and service on body electrical/electronic systems and basic electrical systems.

Objectives
Perform basic “in-car” diagnostics and repairs.

AUT163A - Advanced Automotive Electricity Lab

Overview

Course Description
This course is an optional lab to be used as an alternative to co-op placement in meeting the NATEF standards for total hours. Topics include networking and module communication, circuit construction, wiring diagrams, circuit testing, troubleshooting and emerging electrical/electronic systems technologies. Upon completion, students should be able to properly use wiring diagrams, diagnose, test, and repair wiring, lighting, gauges, accessories, modules, and electronic concerns.

Course Typically Offered

Objectives
Identify vehicle identification numbers, electronic service information, and service repair orders.

Objectives
Methodically approach and diagnosis problems in electrical/electronic systems, in order to make a direct, thorough and economical diagnosis.

Objectives
Perform basic testing and service on body electrical/electronic systems and basic electrical systems.

Objectives
Perform basic “in-car” diagnostics and repairs.

Objectives
Demonstrate the basic concepts and procedures to successfully repair late model electrical/ electronic systems.

Student Learning Outcomes

AUT181 - Engine Performance 1

Overview

Course Description
This course covers the introduction, theory of operation, and basic diagnostic procedures required to restore engine performance to vehicles equipped with complex engine control systems. Topics include an overview of engine operation, ignition components and systems, fuel delivery, injection components and systems and emission control devices. Upon completion, students should be able to describe operation, diagnose and repair basic ignition, fuel and emission related drivability problems using appropriate equipment, procedures, and service information.

Credit Hours
3

AUT181A - Engine Performance 1 Lab

Overview

Course Description
This course is an optional lab to be used in conjunction with or as an alternative to work-based learning placements in order to meet the ASE Education Foundation standards for hours. Topics include overviews of engine operation, ignition components and systems, fuel delivery, injection components and systems and emission control devices and emerging engine performance technologies. Upon completion, students should be able to describe operation, diagnose, and repair basic ignition, fuel and emission related drivability problems using appropriate tools, equipment, procedures, and service information.

AUT221 - Automatic Transmissions/Transaxles

Overview

Course Description
This course covers operation, diagnosis, service, and repair of automatic transmissions/transaxles. Topics include hydraulic, pneumatic, mechanical, and electrical/electronic operation of automatic drive trains and the use of appropriate service tools, equipment, and service information. Upon completion, students should be able to explain operational theory, diagnose and repair automatic drive trains using appropriate tools, equipment, procedures, and service information.

Credit Hours
3

AUT221A - Automatic Transmissions/Transaxles Lab

Overview

Course Description

This course is an optional lab to be used in conjunction with or as an alternative to work-based learning placements in order to meet the ASE Education Foundation standards for hours. Topics include hydraulic, pneumatic, mechanical, and electrical/ electronic operation of automatic drive trains and the use of appropriate service tools, equipment, and service information. Upon completion, students should be able to explain operational theory, diagnose and repair automatic drive trains using appropriate tools, equipment, procedures, and service information.

Credit Hours

2

Requisites

Simple Requisites

State concurrent or previous courses

Type
Corequisite

Take AUT-221

Take AUT-221(S26990);

AUT231 - Manual Transmissions/Transaxles/ Drive Trains

Overview

Course Description

This course covers the operation, diagnosis, and repair of manual transmissions/transaxles, clutches, driveshafts, axles, and final drives. Topics include theory of torque, power flow, and manual drive train servicing and repair using appropriate service information, tools, and equipment. Upon completion, students should be able to explain operational theory, diagnose and repair manual drive trains using appropriate tools, equipment, procedures, and service information.

Credit Hours

3

AUT231A - Manual Transmissions/Transaxles/ Drive Trains Lab

Overview

Course Description
This course is an optional lab to be used in conjunction with or as an alternative to work-based learning placements in order to meet the ASE Education Foundation standards for hours. Topics include manual drive train diagnosis, service and repair using appropriate service information, tools, and equipment. Upon completion, students should be able to diagnose and repair manual drive trains using appropriate tools, equipment, procedures, and service information.

Credit Hours
1

Requisites

Simple Requisites

State concurrent or previous courses

Type
Corequisite

Take AUT-231

Take AUT-231(S26992);

AUT281 - Advanced Engine Performance

Overview

Course Description
This course utilizes service information and specialized test equipment to diagnose and repair power train control systems. Topics include computerized ignition, fuel and emission systems, related diagnostic tools and equipment, data communication networks, and service information. Upon completion, students should be able to perform diagnosis and repair using appropriate tools, equipment, procedures, and service information.

Credit Hours
3

BAR111 - Barbering Concepts I

Overview

Course Description
This course introduces basic barbering concepts and includes careers in barber styling and various hair treatments. Emphasis is placed on sanitizing equipment, professional ethics, skin, scalp and hair disorders and treatment and safe work practices. Upon completion, students should be able to safely and competently apply barbering concepts in the shop setting.

Course Typically Offered
Fall, Spring

Credit Hours
4

Requisites

Simple Requisites

State concurrent or previous courses

Type
Corequisite

Take BAR-112

Take BAR-112;

Student Learning Outcomes

Learning Objectives

Objectives
Discuss the history and evolution of barbering, including its cultural significance and impact on modern practices.

Objectives
Explain the statutes and regulations relating to the practice of barbering in North Carolina.

Objectives
Describe and evaluate the principles of sanitation, hygiene, and infection control, including sterilization and antiseptics.

Objectives
Analyze and discuss the shedding and regrowth of hair, including hair loss disorders and treatments.

Objectives
Identify and describe the structure and function of the skin and hair, including common disorders and diseases.

Objectives
Examine the pharmacology of barbering products and their effects on hair and scalp.

BAR112 - Barbering Clinic I

Overview

Course Description
This course introduces basic clinic services. Topics include a study of sanitizing procedures for implements and equipment, determination of hair texture, hair cutting, and hair processing. Upon completion, students should be able to safely and competently demonstrate shop services.

Course Typically Offered
Fall, Spring

Credit Hours
8

Requisites

Simple Requisites

State concurrent or previous courses

Type
Corequisite

Take BAR-111

Take BAR-111;

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate proper infection control and safe work practices in a barbering environment.

Objectives
Perform proper cleaning and disinfection of nonelectrical tools, implements, clippers, and outliners.

Objectives
Demonstrate correct handwashing techniques and handling of exposure incidents.

Objectives
Perform shampooing and the application of creams and lotions according to industry standards.

Objectives
Demonstrate draping procedures for wet, chemical, and haircutting services.

Objectives
Perform scalp massage manipulations and treatment variations.

BAR113 - Barbering Concepts II

Overview

Course Description
This course covers more comprehensive barbering concepts. Topics include safety and sanitation, product knowledge as well as both wet and thermal hairstyling. Upon completion, students should be able tosafely and competently apply these barbering concepts in the shop setting.

Course Typically Offered
Spring

Credit Hours
4

Requisites

Simple Requisites

State concurrent or previous courses

Type
Corequisite

Take BAR-114

Take BAR-114;

Student Learning Outcomes

Learning Objectives

Objectives
Identify and explain the structure and function of the skin, including common disorders and diseases.

Objectives
Analyze the properties and disorders of hair and scalp to determine appropriate treatment recommendations.

Objectives
Explain the elementary chemistry related to sterilization, antiseptics, and product formulation.

Objectives
Describe the effects of electrical appliances on the skin and hair.

Objectives
Identify and analyze the nerve points of the face and their role in facial massage.

Objectives
Examine and describe the benefits of facial massage techniques and treatments.

BAR114 - Barbering Clinic II

Overview

Course Description
This course provides experience in a simulated shop setting. Topics include draping, shampooing, hair cutting, and hair drying as well as chemical processing. Upon completion, students should be able tosafely and competently apply these barbering concepts in the shop setting.

Course Typically Offered
Spring

Credit Hours
8

Requisites

Simple Requisites

State concurrent or previous courses

Type
Corequisite

Take BAR-113

Take BAR-113;

Student Learning Outcomes

Learning Objectives

Objectives
Perform men's facial massage techniques and treatments following proper procedures.

Objectives
Utilize facial steamers and brush machines safely and effectively in facial treatments.

Objectives
Demonstrate proper handling, positioning, and stroking techniques with a straight razor.

Objectives
Execute professional shaving and facial hair design services according to barbering standards.

Objectives
Perform men's haircutting techniques including taper, fade, and precision cuts.

Objectives
Demonstrate styling techniques such as blow-drying, pompadour styling, and braiding.

BAR115 - Barbering Concepts III

Overview

Course Description
This course covers more comprehensive barbering concepts. Topics include hair processing as well as finger waving, wet and thermal hairstyling, skin care, including electricity/light therapy, and manicuring. Upon completion, students should be able to safely andcompetently apply these barbering concepts in the shop setting.

Course Typically Offered
Summer

Credit Hours
4

Requisites

Simple Requisites

State concurrent or previous courses

Type
Corequisite

Take BAR-116

Take BAR-116;

Student Learning Outcomes

Learning Objectives

Objectives
Examine the fundamentals of men's hair replacement and its role in barbering services.

Objectives
Analyze and apply the principles of women's haircutting and styling in theory-based scenarios.

Objectives
Explain the chemical processes involved in texture services such as perming and relaxing.

Objectives
Assess the impact of hair coloring and lightening on hair structure and how to select the appropriate products.

Objectives
Compare and contrast different chemical texture services and their effect on hair composition.

Objectives
Evaluate the safety and regulatory considerations related to chemical services in barbering.

BAR116 - Barbering Clinic III

Overview

Course Description
This course covers more comprehensive barbering concepts. Emphasis is placed on intermediate-level of skin care manicuring, scalp treatments, hair design, chemical restructuring and other related topics. Upon completion, students should be able to safely andcompetently apply these barbering concepts in the shop setting.

Course Typically Offered
Summer

Credit Hours
4

Requisites

Simple Requisites

State concurrent or previous courses

Type
Corequisite

Take BAR-115

Take BAR-115;

Student Learning Outcomes

Learning Objectives

Objectives
Apply men's hair replacement techniques, including template making and full-head bonding.

Objectives
Demonstrate proper application and removal of hair replacement systems.

Objectives
Perform cleaning and maintenance of wigs and human hair replacement systems.

Objectives
Analyze and apply chemical services such as coloring and perming on hair replacement systems.

Objectives
Execute women's haircutting and styling techniques, including blunt and layered cuts.

Objectives
Demonstrate hair straightening and pressing techniques using appropriate tools and methods.

BAR117 - Barbering Concepts IV

Overview

Course Description
This course covers advanced barbering concepts. Topics include hair color, advanced hair cutting techniques, hair styling, shaving, skin care, retailing, and preparing for a job interview. Upon completion, students should be able to demonstrate an understanding of these barbering concepts and meet program completion requirements.

Course Typically Offered
Fall

Credit Hours
2

Requisites

Simple Requisites

State concurrent or previous courses

Type
Corequisite

Take BAR-118

Take BAR-118;

Student Learning Outcomes

Learning Objectives

Objectives
Develop a career plan including preparation for licensure and employment in the barbering industry.

Objectives
Analyze the skills and qualities required to work effectively behind the barber chair.

Objectives
Examine the business aspects of running a successful barbering practice, including marketing and customer relations.

Objectives
Identify and evaluate state board requirements and regulations for barbering licensure.

Objectives
Assess the importance of continuing education and professional development in the barbering field.

Objectives
Examine strategies for financial management and pricing services in a barbering business.

BAR118 - Barbering Clinic IV

Overview

Course Description
This course provides advanced experience in a simulated shop setting. Emphasis is placed on efficient and competent delivery of all shop services in preparation for the licensing examination and employment. Upon completion, students should be able to demonstrate competence in the areas covered on the Barbering Licensing Examination and meet entry-level employment requirements.

Course Typically Offered
Fall

Credit Hours
7

Requisites

Simple Requisites

State concurrent or previous courses

Type
Corequisite

Take BAR-117

Take BAR-117;

Student Learning Outcomes

Learning Objectives

Objectives
Perform chemical texture services such as permanent waving and hair relaxing.

Objectives
Demonstrate proper patch and strand testing before hair coloring procedures.

Objectives
Apply various hair coloring techniques, including single-process and double-process applications.

Objectives
Execute special effects coloring techniques such as highlights and lowlights.

Objectives
Demonstrate proper beard and mustache coloring techniques.

Objectives
Demonstrate proficiency in practical skills required to pass the state board mock exam.

BAR119 - Trichology and Chemistry

Overview

Course Description
This course introduces basic principles associated with the study of the hair and scalp and the interaction of applied chemicals. Emphasis is placed on pH actions, the reactions and effects of chemical ingredients, and the impact of healthcare and wellness as it relates to hair loss. Upon completion, students should be able to demonstrate an understanding of chemical terminology, pH testing, and chemical reactions on hair.

Course Typically Offered
Fall

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Describe the fundamental principles of trichology, including the structure and function of the hair and scalp.

Objectives
Analyze environmental and genetic factors that influence hair health and scalp conditions.

Objectives
Evaluate the relationship between healthcare, wellness, and hair loss, identifying contributing factors and prevention methods.

Objectives
Define key trichology, healthcare, and wellness terminology as it relates to barbering consultations and services.

Objectives
Explain key scientific principles related to trichology and their application in hair care services.

BAR121 - Contemporary Hair Coloring

Overview

Course Description
This course covers basic color concepts, hair coloring problems, and application techniques. Topics include color theory, terminology, contemporary techniques, product knowledge, and other related topics. Upon completion, students should be able to identify a client's color needs and safely and competently perform color applications and correct problems.

Course Typically Offered
Spring

Credit Hours
2

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take All: BAR-111 and BAR-112

Take BAR-111 BAR-112;

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate the use of a triscope to study the hair and scalp.

Objectives
Discuss healthcare and wellness topics that deal with hair loss issues.

Objectives
Safely and competently apply trichology healthcare and wellness concepts in the shop setting.

Objectives
Demonstrate safe work practices.

BAS120 - Introduction to Analytics

Overview

Course Description
This course introduces basic concepts and applications of analytics. Topics include an overview of the analytical process and the role of the analyst, applied descriptive statistics, and exploratory data analysis. Upon completion, students should be able to demonstrate a basic understanding of analytics for decision-making in business.

Course Typically Offered
Fall

Credit Hours
3

BAS121 - Data Visualization

Overview

Course Description
This course introduces key concepts in data visualization and reporting. Topics include concepts and methods used in graphical representation of data, exploration and reporting of data, and basic linear regression methods. Upon completion, students should be able to effectively use graphical tools to communicate insights about data.

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take BAS-120

Take BAS-120(S24318);

BAS150 - Introduction to Analytical Programming

Overview

Course Description
This course introduces statistical software for analytics. Topics include utilization of analytical and statistical software packages for data management, data visualization, and exploratory data analysis. Upon completion, students should be able to use statistical programming tools to conduct descriptive analytics.

Credit Hours
3

BAS220 - Applied Analytical Programming

Overview

Course Description
This course covers applications of statistical software for data management and reporting. Topics include data management, data preprocessing, and modeling including linear and logistic regression analysis using programming tools. Upon completion, students should be able to process data and generate reports that support business decision-making.

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take BAS-150

Take BAS-150(S24320);

BIO106 - Introduction to Anatomy/Physiology/ Microbiology

Overview

Course Description
This course covers the fundamental and principle concepts of human anatomy and physiology and microbiology. Topics include an introduction to the structure and function of cells, tissues, and human organ systems, and an overview of microbiology, epidemiology, and control of microorganisms. Upon completion, students should be able to identify structures and functions of the human body and describe microorganisms and their significance in health and disease.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Explain how anatomical structures supports physiological functions within the human body.

Objectives
Describe how negative and positive feedback systems maintain homeostasis

Objectives
Identify structures and functions of the human body;

Objectives
Describe microorganisms and their significance in health and disease.

BIO110 - Principles of Biology

Overview

Course Description
This course provides a survey of fundamental biological principles for non-science majors. Emphasis is placed on basic chemistry, cell biology, metabolism, genetics, evolution, ecology, diversity, and other related topics. Upon completion, students should be able to demonstrate increased knowledge and better understanding of biology as it applies to everyday life.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
4

Student Learning Outcomes

Learning Objectives

Objectives
Define the principles of life and apply the scientific method.

Objectives
Recognize basic chemistry concepts to biological systems including atomic structure, chemical bonds, properties of water, pH, and biological macromolecules.

Objectives
Differentiate between prokaryotic and eukaryotic cells.

Objectives
Outline the processes of cell transport and cellular division.

Objectives
Summarize how cells utilize and transform energy.

Objectives
Describe the basics of Mendelian genetics and be able to perform a Punnett square.

Objectives
Identify the structure of DNA and outline the processes of protein synthesis.

Objectives
Examine the diversity of life and apply the principles of taxonomy.

Objectives
Summarize the basic principles of ecology and how humans impact the environment.

BIO111 - General Biology I

Overview

Course Description
This course introduces the principles and concepts of biology. Emphasis is placed on basic biological chemistry, molecular and cellular biology, metabolism and energy transformation, genetics, evolution, and other related topics. Upon completion, students should be able to demonstrate understanding of life at the molecular and cellular levels.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
4

Requisites

Simple Requisites

Local

Type
Corequisite

Take ENG-045;

Take 1 group; # Take RED-090 ENG-090; # Take DRE-098(S23643); # Take ENG-011; # Take ENG-111(S25433); # Take ENG-025; # Take ENG-045;

Student Learning Outcomes

Learning Objectives

Objectives
Apply the scientific method to questions in biology and develop scientific literacy.

Objectives
Employ basic chemistry concepts to biological systems including atomic structure, chemical bonds, properties of water, pH, and biological macromolecules.

Objectives
Distinguish between a prokaryotic and a eukaryotic cell, in terms of structures and organelles, as well as describe the chemical makeup of cell membrane and the various methods of cellular transport.

Objectives
Explain energy transformations as it corresponds to the processes of respiration and photosynthesis.

BIO112 - General Biology II

Overview

Course Description
This course is a continuation of BIO 111. Emphasis is placed on organisms, evolution, biodiversity, plant and animal systems, ecology, and other related topics. Upon completion, students should be able to demonstrate comprehension of life at the organismal and ecological levels.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
4

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take BIO-111

Take BIO-111(S24020);

Student Learning Outcomes

Learning Objectives

Objectives
Explain the theory of evolution.

Objectives
Discuss evidence and possible mechanisms of evolution.

Objectives
Describe characteristics and differentiate between the major groups of life: bacteria, viruses, protists, fungi, plants, and animals.

Objectives
Identify and contrast the major animal systems.

Objectives
Compare and contrast the major plant systems.

Objectives
Summarize the basic principles of ecology and how humans impact the environment.

BIO120 - Introductory Botany

Overview

Course Description
This course provides an introduction to the classification, relationships, structure, and function of plants. Topics include reproduction and development of seed and non-seed plants, levels of organization, form and function of systems, and a survey of major taxa. Upon completion, students should be able to demonstrate comprehension of plant form and function, including selected taxa of both seed and non-seed plants.

Credit Hours
4

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take One: BIO-110 or BIO-111

Take BIO-110(S13284) or BIO-111(S13307);

BIO130 - Introductory Zoology

Overview

Course Description
This course provides an introduction to the classification, relationships, structure, and function of major animal phyla. Emphasis is placed on levels of organization, reproduction and development, comparative systems, and a survey of selected phyla. Upon completion, students should be able to demonstrate comprehension of animal form and function including comparative systems of selected groups.

Credit Hours
4

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take One: BIO-110 or BIO-111

Take BIO-110(S13284) or BIO-111(S13307);

BIO140 - Environmental Biology

Overview

Course Description
This course introduces environmental processes and the influence of human activities upon them. Topics include ecological concepts, population growth, natural resources, and a focus on current environmental problems from scientific, social, political, and economic perspectives. Upon completion, students should be able to demonstrate an understanding of environmental interrelationships and of contemporary environmental issues.

Course Typically Offered
Fall

Credit Hours
3

Requisites

Simple Requisites

Required concurrent or previous courses

Type
Corequisite

Take BIO-140A

Take BIO-140A;

Student Learning Outcomes

Learning Objectives

Objectives
Identify the components and interactions of environmental systems.

Objectives
Describe human population growth and how this affects food and agriculture

Objectives
Describe ecological concepts

Objectives
Describe climate change and how humans effect it

Objectives
Define the various energy resources

Objectives
Summarize both air and water pollution

Objectives
Give examples and classify organisms in the major taxonomic categories

Objectives
Identify water resources and their impact on water quality.

BIO140A - Environmental Biology Lab

Overview

Course Description
This course provides a laboratory component to complement BIO 140. Emphasis is placed on laboratory and field experience. Upon completion, students should be able to demonstrate a practical understanding of environmental interrelationships and of contemporary environmental issues.

Course Typically Offered
Fall

Credit Hours
1

Requisites

Simple Requisites

State concurrent or previous courses

Type
Corequisite

Take BIO-140

Take BIO-140;

Student Learning Outcomes

Learning Objectives

Objectives
Identify and understand environmental systems

Objectives
Describe human population growth and how this affects food and agriculture

Objectives
Describe ecological concepts

Objectives
Describe climate change and how humans effect it

Objectives
Define the various energy resources

Objectives
Summarize both air and water pollution

Objectives
Give examples and classify organisms in the major taxonomic categories

Objectives
Have an understanding of water resources and water quality

BIO155 - Nutrition

Overview

Course Description
This course covers the biochemistry of foods and nutrients with consideration of the physiological effects of specialized diets for specific biological needs. Topics include cultural, religious, and economic factors that influence a person's acceptance of food, as well as nutrient requirements of the various life stages. Upon completion, students should be able to identify the functions and sources of nutrients, the mechanisms of digestion, and the nutritional requirements of all age groups.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Describe key rules for adhering to a healthy diet

Objectives
Demonstrate ability to adhere to rules for evaluating nutrition information

Objectives
Explain the process of digestion in the human body

Objectives
Explain the relationship between the types of nutrients and their functions in the body

Objectives
Discuss key parts of a basic weight management strategy

Objectives
Recall important nutrition needs at each life stage

Objectives
Identify the major nutrient-related diseases affecting society

BIO161 - Introduction to Human Biology

Overview

Course Description
This course provides a basic survey of human biology. Emphasis is placed on the basic structure and function of body systems and the medical terminology used to describe normal and pathological states. Upon completion, students should be able to demonstrate an understanding of normal anatomy and physiology and the appropriate use of medical terminology.

Credit Hours
3

BIO163 - Basic Anatomy & Physiology

Overview

Course Description
This course provides a basic study of the structure and function of the human body. Topics include a basic study of the body systems as well as an introduction to homeostasis, cells, tissues, nutrition, acid-base balance, and electrolytes. Upon completion, students should be able to demonstrate a basic understanding of the fundamental principles of anatomy and physiology and their interrelationships.

Course Typically Offered
Fall, Spring

Credit Hours
5

Requisites

Simple Requisites

Local

Type
Corequisite

Local corequisite: Take ENG-045; or have credit for one of the following: ENG-102, ENG-110, ENG-111, ENG-002 (grade of P2,) ENG-025, ENG-090 AND RED-090, ENG-095, DRE-098

Take 1 group; # Take ENG-002; From rule RMINP2; # Take ENG-025; # Take ENG-090 RED-090; # Take ENG-095; # Take DRE-098(S23643); # Take ENG-102(S12952); # Take ENG-110(S26923); # Take ENG-111(S26393); # Take ENG-045;

Student Learning Outcomes

Learning Objectives

Objectives
Identify the principles of life, order the levels of organization, and generalize feedback mechanisms.

Objectives
Recognize basic chemistry concepts to biological systems including atomic structure, chemical bonds, properties of water, pH, and biological macromolecules.

Objectives
Describe the components of a eukaryotic cell and cell transport.

Objectives
Label the major tissues of the human body.

Objectives
Identify the anatomical structures associated with the major organ systems.

Objectives
Demonstrate a basic understanding of the physiology of the major organ systems.

Objectives
Explain the interaction of organ systems to the maintenance of homeostasis.

BIO168 - Anatomy and Physiology I

Overview

Course Description
This course provides a comprehensive study of the anatomy and physiology of the human body. Topics include body organization, homeostasis, cytology, histology, and the integumentary, skeletal, muscular, and nervous systems and special senses. Upon completion, students should be able to demonstrate an in-depth understanding of principles of anatomy and physiology and their interrelationships.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
4

Requisites

Simple Requisites

Local Co-Req

Type
Corequisite

Take ENG-045

Take 1 group; # Take DRE-098(S23643); # Take RED-090 ENG-090; # Take ENG-095; # Take ENG-011; # Take ENG-045; # Take ENG-111(S25433);

Student Learning Outcomes

Learning Objectives

Objectives
Define the principles of life, describe the levels of organization, and the maintenance of homeostasis across human organ systems.

Objectives
Apply basic chemistry concepts to biological systems including atomic structure, chemical bonds, properties of water, pH, and biological macromolecules.

Objectives
Diagram the components of a eukaryotic cell, as well as describe the chemical makeup of cell membrane and the various methods of cellular transport and division

Objectives
Differentiate the major tissues of the human body.

Objectives
Demonstrate an in-depth understanding of the physiology of the integumentary system, the skeletal system, the muscular system, the nervous system, and special senses.

Objectives
Apply and analyze homeostatic imbalances of the associated organ systems.

BIO169 - Anatomy and Physiology II

Overview

Course Description
This course provides a continuation of the comprehensive study of the anatomy and physiology of the human body. Topics include the endocrine, cardiovascular, lymphatic, respiratory, digestive, urinary, and reproductive systems as well as metabolism, nutrition, acid-base balance, and fluid and electrolyte balance. Upon completion, students should be able to demonstrate an in-depth understanding of principles of anatomy and physiology and their interrelationships.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
4

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take BIO-168

Take BIO-168(S11555);

Student Learning Outcomes

Learning Objectives

Objectives
Identify the anatomical structures associated with the endocrine system, the cardiovascular system, the lymphatic system, the respiratory system, the digestive system, the urinary system, and the reproductive system.

Objectives
Apply in-depth knowledge of the physiology of the endocrine system, the cardiovascular system, the lymphatic system, the respiratory system, the digestive system, the urinary system, and the reproductive system.

Objectives
Analyze homeostatic imbalances of the associated organ systems.

Objectives
Outline the stages of human development and the continuity of life.

Objectives
Apply the interaction of organ systems to the maintenance of homeostasis.

BIO175 - General Microbiology

Overview

Course Description
This course covers principles of microbiology with emphasis on microorganisms and human disease. Topics include an overview of microbiology and aspects of medical microbiology, identification and control of pathogens, disease transmission, host resistance, and immunity. Upon completion, students should be able to demonstrate knowledge of microorganisms and the disease process as well as aseptic and sterile techniques.

Course Typically Offered
Fall, Spring

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take One: BIO-110, BIO-111, BIO-163, BIO-165, or BIO-168

Take BIO-110(S13284) BIO-111(S13307) BIO-163 BIO-165 or BIO-168(S11555);

Student Learning Outcomes

Learning Objectives

Objectives
Discuss various scientists who have made important contributions to microbiology

Objectives
Compare and contrast the various microscopes and staining procedures used to visualize microbes including performing gram staining and isolating microbes for additional examination.

Objectives
Categorize the different types of microbes.

Objectives
Describe the dynamics of bacterial growth and metabolism and the application to controlling microbial growth.

Objectives
Demonstrate correct aseptic lab techniques.

Objectives
Assess the effects that microorganisms have on human health and mechanisms for controlling the disease process.

BIO180 - Biological Chemistry

Overview

Course Description

This course provides an introduction to basic biochemical processes in living systems. Topics include properties of carbohydrates, lipids, proteins, nucleic acids, vitamins, and buffers, with emphasis on biosynthesis, degradation, function, and equilibrium. Upon completion, students should be able to demonstrate an understanding of fundamental biochemical concepts.

Credit Hours

3

Student Learning Outcomes

Learning Objectives

Objectives
Draw and name organic molecules

Objectives
Describe the importance of biological chemistry to health professionals

Objectives
Describe the function and metabolism of macromolecules including carbohydrates, proteins/amino acids, lipids, and nucleic acids

Objectives
Describe the function and life-cycle of chemical messengers, neurotransmitters, and certain drugs

BIO275 - Microbiology

Overview

Course Description
This course covers principles of microbiology and the impact these organisms have on man and the environment. Topics include the various groups of microorganisms, their structure, physiology, genetics, microbial pathogenicity, infectious diseases, immunology, and selected practical applications. Upon completion, students should be able to demonstrate knowledge and skills including microscopy, aseptic technique, staining, culture methods, and identification of microorganisms.

Credit Hours
4

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take One: BIO 111, BIO 163, BIO 165, or BIO 168

Take 1 group; # Take BIO-111(S13307); # Take BIO-163; # Take BIO-165; # Take BIO-168(S11555);

Student Learning Outcomes

Learning Objectives

Objectives
Apply proper biosafety and aseptic technique.

Objectives
Use microscopy to observe, characterize, and identify microbes.

Objectives
Perform staining procedures and interpret results.

Objectives
Culture microorganisms using appropriate isolation and media techniques.

Objectives
Perform tests used in microbial identification and analysis.

Objectives
Document and analyze experimental data with scientific accuracy.

BPA120 - Petit Fours and Pastries

Overview

Course Description
This course introduces the basic principles of the preparation and plating of a variety of petit fours and individual dessert pastries. Emphasis is placed on traditional and contemporary petit fours and pastries utilizing updated production methods. Upon completion, students should be able to produce individual pastries and petit fours for buffet and special event settings.

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take All: CUL-110 and CUL-160

Take CUL-110(S11030) CUL-160(S13015);

BPA150 - Artisan & Specialty Bread

Overview

Course Description
This course provides an advanced study in the art and craft of bread making. Topics include pertinent formulas and techniques associated with naturally leavened loaves, hearth breads, focaccia, flat breads, and other breads utilizing a variety of grains. Upon completion, students should be able to prepare artisan and specialty breads that meet or exceed the expectations of restaurant and retail publics.

Credit Hours
4

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take All: CUL-110 and CUL-160

Take CUL-110(S11030) CUL-160(S13015);

BPM110 - Bioprocess Practices

Overview

Course Description
This course provides a study of plant operations including various plant utility systems and detailed study of the varied plant environments in a bioprocessing facility. Emphasis is placed on quality mindset and principles of validation through applications of monitoring procedures. Upon completion, students should be able to demonstrate the rigors of industry regulation and its necessity.

Course Typically Offered
Fall, Spring

Credit Hours
5

Requisites

Simple Requisites

Ptc-110

Type
Corequisite

PTC-110

Take PTC-110;

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate an understanding of quality systems such as International Standards Organization (ISO) and Current Good Manufacturing Practices (cGMP

Objectives
Measure length, volume, mass, and pressure using the metric system.

Objectives
Identify workplace safety hazards.

Objectives
Apply a quality mindset and validation principles to varied bioprocess operational environments

Objectives
Operate process equipment including an autoclave, incubator, microscope, balance, refractometer, pH meter, conductivity meter, and bioreactor.

Objectives
Work aseptically to minimize product contamination.

Objectives
Provide the optimal conditions for growing cells.

BPM111 - Bioprocess Measurements

Overview

Course Description
This course covers a variety of physical measurements. Emphasis is placed on pH, temperature, pressure and flow rates, as well as spectrophotometry, and biochemical and chemical analysis methods. Upon completion, students should be able to demonstrate and perform many aspects of process monitoring.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
4

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take BPM-110

Take BPM-110(S20448);

Student Learning Outcomes

Learning Objectives

Objectives
Identify physical, chemical, and biological process measurement components relevant to the biopharmaceutical industry.

Objectives
Apply the theories and principles of bioprocess measurements and instrumentation to control and adjust processes.

Objectives
Follow procedures to keep accurate and precise records.

Objectives
Record data from performing a variety of analytical methods

Objectives
Perform data analysis utilizing graphing software to organize data

Objectives
Prepare an organized lab report summarizing a laboratory experiment using the course laboratory report format.

BPM112 - Upstream Processing

Overview

Course Description
This course introduces techniques involved in cell growth and fractionation. Topics include fermentation theory and application, as well as cell harvesting, cell disruption and fractionation methods. Upon completion, students should be able to grow cells, as well as isolate and collect various fractions.

Course Typically Offered
Fall

Credit Hours
5

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take BPM-111

Take BPM-111(S20449);

Student Learning Outcomes

Learning Objectives

Objectives
Identify upstream process components relevant to the biopharmaceutical industry.

Objectives
Apply theories and principles of upstream biomanufacturing to industry technologies.

Objectives
Demonstrate aseptic technique and sterilization procedures.

Objectives
Perform upstream processes like cell culture and media prep using standard operating procedures (SOPs)

Objectives
Generate presentation of scientific information from experimental data.

BPM113 - Downstream Bioprocessing

Overview

Course Description
This course introduces a variety of techniques involved in separation procedures. Topics include extraction and precipitation, concentration and molecular filtration methods, as well as different types of chromatography. Upon completion, students should be able to perform separation procedures with an understanding of industrial scale procedures.

Course Typically Offered
Spring

Credit Hours
4

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take BPM-111

Take BPM-111(S26129);

Student Learning Outcomes

Learning Objectives

Objectives
Identify components of separations procedures used in downstream processing

Objectives
Explain different types of chromatography

Objectives
Perform separation procedures like chromatography, extraction, precipitation, concentration, and filtration

Objectives
Describe industrial scale downstream processing procedures

Objectives
Communicate applications and issues of downstream processing

BPR111 - Print Reading

Overview

Course Description
This course introduces the basic principles of print reading. Topics include line types, orthographic projections, dimensioning methods, and notes. Upon completion, students should be able to interpret basic prints and visualize the features of a part or system.

Course Typically Offered
Fall

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Identify types of lines

Objectives
Identify types of views

Objectives
Calculate measurements of features on prints

Objectives
Convert degrees to decimal degrees

Objectives
Identify sectional views

Objectives
Sketch simple prints

Objectives
Identify parts on an IPB (Illustrated Parts Breakdown)

Objectives
Relate Drawings Views to actual parts.

BPR121 - Blueprint Reading-Mechanical

Overview

Course Description
This course covers the interpretation of intermediate blueprints. Topics include tolerancing, auxiliary views, sectional views, and assembly drawings. Upon completion, students should be able to read and interpret a mechanical working drawing.

Course Typically Offered
Spring

Credit Hours
2

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take One: BPR-111 or MAC-131

Take BPR-111(S13137) or MAC-131;

Student Learning Outcomes

Learning Objectives

Objectives
Practice Safety

Objectives
Understand fractions, decimals and metric systems

Objectives
Use practical measuring tools

Objectives
Use layout and hand tools

Objectives
Understand various grinders

Objectives
Understand metal finishes

Objectives
Operate machines as Drill Presses, Saws, Lathes, and Milling Machines

BPR130 - Print Reading-Construction

Overview

Course Description
This course covers the interpretation of prints and specifications that are associated with design and construction projects. Topics include interpretation of documents for foundations, floor plans, elevations, and related topics. Upon completion, students should be able to read and interpret construction prints and documents.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate proficiency with an Architect and Engineer's scale.

Objectives
Interpret plan, elevation, and section views in Blueprints and Construction Drawings.

Objectives
Identify the vocabulary and parts of the built environment including site, foundation, framing, trades, interior and exterior finishes, and construction materials.

BPT110 - Media Evolution

Overview

Course Description
This course introduces media in the United States. Emphasis is placed on industry development, media ethics, governmental oversight, technological advancements, revenue models, and audience shifts and trends. Upon completion, students should be able to demonstrate knowledge of regulations, organizational structures, revenue sources, historical development, and on-going operation in media related industries.

Course Typically Offered
Fall

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Students will analyze concepts, historical events, and advancements in technology in the media industry based on a series of graded assignments and chapter tests.

BPT111 - Broadcast Law & Ethics

Overview

Course Description
This course covers judicial, legislative, and administrative policies pertinent to the ethical and legal operation of broadcast and other electronic media organizations. Emphasis is placed on legal and ethical issues including First Amendment protection, FCC regulations, copyright, and libel laws. Upon completion, students should be able to demonstrate an understanding of the historical significance and modern-day application of important broadcast laws and policies.

Course Typically Offered
Fall

Credit Hours
3

BPT112 - Media Writing

Overview

Course Description
This course introduces the principles for writing for media. Emphasis is placed on understanding target audiences and demographics, while shaping the message to meet the specificity of the content platform. Upon completion, students should be able to understand and write copy and scripts according to standard industry formats.

Course Typically Offered
Fall

Credit Hours
4

Student Learning Outcomes

Learning Objectives

Objectives
Write copy and scripts according to standard industry formats

BPT113 - Broadcast Sales

Overview

Course Description
This course covers sales principles applicable to radio, television, cable, and other electronic media. Emphasis is placed on prospecting and servicing accounts, developing clients, and preparing sales presentations. Upon completion, students should be able to create a sales presentation based upon standard ratings reports, prospect for new customers, and understand account management.

Course Typically Offered
Fall

Credit Hours
3

BPT115 - Public Relations

Overview

Course Description
This course introduces the art and science of analyzing trends, predicting their consequences, counseling organizations, and implementing actions to serve organizational and public interests. Emphasis is placed on identifying public needs, conducting and analyzing research, writing and communicating information, maintaining media relations, and creating an organizational crisis plan. Upon completion, students should be able to summarize public relations history, conduct research, develop press releases, create printed material, and formulate a crisis plan.

Credit Hours
3

BPT121 - Media Speech Techniques

Overview

Course Description
This course covers basic preparation and speaking performance. Emphasis is placed on proper articulation, pronunciation, rate of delivery, pitch, breathing techniques, inflection, projection, and phrasing for media talent. Upon completion, students should be able demonstrate effective communication to a target audience.

Course Typically Offered
Fall

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate effective communication to a target audience.

BPT122 - Broadcast Speech II

Overview

Course Description
This course covers basic and advanced preparation and performance of on-air speech. Emphasis is placed on enhancing a pleasant, effective voice with techniques applied to impromptu speaking, radio plays, and taped presentations. Upon completion, students should be able to employ proper articulation, pronunciation, rate of delivery, phrasing, and other voice techniques in a professional manner.

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take BPT-121

Take BPT-121(S13717);

BPT131 - Audio Production I

Overview

Course Description
This course covers the creation, development, production, and presentation of audio programming elements for various formats and platforms. Emphasis is placed on the operation of professional audio equipment, microphones, and recording devices. Upon completion, students should be able to correctly operate audio recording and playback equipment and demonstrate an understanding of the basic components of sound.

Course Typically Offered
Fall

Credit Hours
4

Student Learning Outcomes

Learning Objectives

Objectives
Operate audio recording and playback equipment

Objectives
Demonstrate an understanding of the basic components of sound

BPT132 - Audio Production II

Overview

Course Description
This course is designed to advance the skills learned in BPT 131 Audio Production I and covers creation, development, production, and presentation of audio programming elements for various formats and platforms. Emphasis is placed on the operation of professional audio equipment, microphones, and recording devices. Upon completion, students should be able to correctly operate audio recording and playback equipment and demonstrate an understanding of the basic components of sound.

Course Typically Offered
Spring

Credit Hours
4

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take BPT-131

Take BPT-131(S26034);

Student Learning Outcomes

Learning Objectives

Objectives
Edit audio files using digital software to enhance clarity and timing.

Objectives
Apply advanced audio mixing and mastering techniques.

Objectives
Create professional-level audio productions for multiple platforms.

Objectives
Troubleshoot and resolve audio issues during the post-production process.

Objectives
Demonstrate proficiency in software tools for audio editing and enhancement.

BPT135 - Audio Performance I

Overview

Course Description
This course the basics for audio performance and audio content creation. Emphasis is placed on diction, scripting, recording, ad-libbing, microphone techniques, articulation, pronunciation, and presentation of audio broadcasting elements for broadcast and/or other electronic media applications. Upon completion, students should be able to demonstrate competency in audio communications.

Course Typically Offered
Fall

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate competency in audio communications

BPT135A - Radio Performance I

Overview

Course Description
This course provides an opportunity to operate the college radio station as an announcer/board operator. Emphasis is placed on operating control-room equipment, logging transmitter readings, EBS tests, reading news, and broadcasting free of interruptions. Upon completion, students should be able to prepare music, public service announcements, and promos for timely broadcast; introduce songs/programs smoothly; and follow FCC rules.

Course Typically Offered
Fall

Credit Hours
1

BPT135B - Radio Performance I

Overview

Course Description
This course provides an opportunity to operate the college radio station as an announcer/board operator. Emphasis is placed on operating control-room equipment, logging transmitter readings, EBS tests, reading news, and broadcasting free of interruptions. Upon completion, students should be able to prepare music, public service announcements, and promos for timely broadcast; introduce songs/programs smoothly; and follow FCC rules.

Course Typically Offered
Spring

Credit Hours
1

Requisites

Simple Requisites

Prerequisite

Type
Prerequisite

None Take BPT-135A;

Take BPT-135A;

BPT136 - Audio Performance II

Overview

Course Description
This course is designed to advance skills learned in BPT 135 Audio Performance I and focuses on audio performance and audio content creation. Emphasis is placed on diction, scripting, recording, ad-libbing, microphone techniques, articulation, pronunciation, and presentation of audio broadcasting elements for broadcast and/or other electronic media applications. Upon completion, students should be able to demonstrate competency in audio communications.

Course Typically Offered
Spring

Credit Hours
2

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take BPT-135

Take BPT-135(S26036);

Student Learning Outcomes

Learning Objectives

Objectives
Create and perform music-oriented radio shows aligned with format clock standards.

Objectives
Demonstrate advanced vocal delivery techniques suitable for broadcast and streaming.

Objectives
Operate radio broadcast equipment in live studio settings.

Objectives
Manage live and pre-recorded program flow using scripting and ad-libbing techniques.

Objectives
Assess performance quality through instructor, self and peer review.

BPT215 - Industry Career Preparation

Overview

Course Description
This course covers employment trends and job descriptions in media, research, resume development, industry best practices for showcasing competencies in technical skills, and interviewing skills. Emphasis is placed on preparing students for employment in various jobs in media.Upon completion, students should be able to research, analyze, and identify employment opportunties in industry that match skills mastered in the Audio and Video Production Technology Program.

Course Typically Offered
Fall

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Research, analyze, and identify employment opportunities in industry that match skills mastered in Audio and Video Production Technology.

BPT220 - Emerging Technologies

Overview

Course Description
This course introduces advancements in technology, equipment, and/or software in the industry. Emphasis is placed on new and emerging content production trends in the audio and video industry. Upon completion, students should be able to adapt and utilize the most current audio and video technology.

Course Typically Offered
Spring

Credit Hours
4

Student Learning Outcomes

Learning Objectives

Objectives
Identify current trends in audio and video production technology.

Objectives
Operate new or emerging software and hardware tools used in the media industry.

Objectives
Apply new technologies to the planning and creation of professional media content.

Objectives
Produce at least two podcasts using current production techniques.

Objectives
Evaluate the potential impact of emerging technologies on industry practices.

BPT231 - Video Production I

Overview

Course Description
This course is designed to develop technical abilities and a creative eye for producing effective videos. Emphasis is placed on fundamental techniques and aesthetics of planning, shooting, lighting, sound design, and editing. Upon completion, students should be able to create professional video productions in a team environment.

Course Typically Offered
Fall

Credit Hours
4

Student Learning Outcomes

Learning Objectives

Objectives
Create professional video productions in a team environment

BPT232 - Video Production II

Overview

Course Description
This course is designed to advance the study of video production learned in BPT 231 Video Production I and is designed to develop technical abilities and a creative eye for producing effective videos. Emphasis is placed on fundamental techniques and aesthetics of planning, shooting, lighting, sound design, and editing. Upon completion, students should be able to create professional video productions in a team environment.

Course Typically Offered
Spring

Credit Hours
4

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take BPT-231

Take BPT-231(S26045);

Student Learning Outcomes

Learning Objectives

Objectives
Apply advanced techniques in video planning, production, and editing.

Objectives
Incorporate lighting and sound design principles to enhance visual storytelling.

Objectives
Create a minimum of four professional video projects that demonstrate creative and technical proficiency.

Objectives
Troubleshoot production challenges using critical thinking and media tools.

Objectives
Evaluate production outcomes against project goals and audience expectations.

BPT235 - Video Performance I

Overview

Course Description
This course provides hands-on experience in the operation of video equipment. Emphasis is placed on the application of skills through direct participation in the production or distribution of video. Upon completion, students should be able to demonstrate competence in creating video content.

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Operate studio video equipment, including cameras, switchers, and audio boards.

Objectives
Participate in the production of studio-based video content in a team setting.

Objectives
Participate in the production of studio-based video content in a team setting.

Objectives
Demonstrate effective communication and performance techniques for studio roles.

Objectives
Apply studio production procedures and safety protocols.

Objectives
Collaborate with peers to produce content in the 4CNC-TV studio.

BPT235AB - Video Performance I

Overview

Course Description
This course provides hands-on experience in the operation of video equipment. Emphasis is placed on the application of skills through direct participation in the production or distribution of video. Upon completion, students should be able to demonstrate competence in creating video content.

Course Typically Offered
Fall

Credit Hours
1

BPT235BB - Video Performance I

Overview

Course Description
This course provides hands-on experience in the operation of video equipment. Emphasis is placed on the application of skills through direct participation in the production or distribution of video. Upon completion, students should be able to demonstrate competence in creating video content.

Course Typically Offered
Spring

Credit Hours
1

Learning Objectives

Objectives
Operate studio video equipment, including cameras, switchers, and audio boards.

Objectives
Participate in the production of studio-based video content in a team setting.

Objectives
Demonstrate effective communication and performance techniques for studio roles.

Objectives
Apply studio production procedures and safety protocols.

Objectives
Collaborate with peers to produce content in the 4CNC-TV studio.

BPT236 - Video Performance II

Overview

Course Description
This course is designed to advance the skills learned in BPT 235 Video Performance I and provides hands-on experience in the operation of video equipment. Emphasis is placed on the application of skills through direct participation in the production or distribution of video. Upon completion, students should be able to demonstrate competence in creating video content.

Course Typically Offered
Summer

Credit Hours
2

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take BPT-235

Take BPT-235(S26047);

Student Learning Outcomes

Learning Objectives

Objectives
Create and manage five studio video productions in a live or simulated broadcast setting.

Objectives
Operate advanced studio video equipment with minimal supervision.

Objectives
Perform in or direct live studio shows in compliance with format and time constraints.

Objectives
Coordinate production crew roles and responsibilities effectively.

Objectives
Evaluate studio performance for quality, timing, and content.

Objectives
Plan video projects that meet specific goals for business, education, or corporate clients.

BPT250 - Corporate Video

Overview

Course Description
This course covers planning and video production for businesses, education, or corporate clients. Emphasis is placed on meeting the defined goal of the client, including interviewing, research, location scouting, script review, field production and post-production. Upon completion, students should be able to plan, write, shoot, and edit an a corporate video.

Course Typically Offered
Spring

Credit Hours
3

Requisites

Simple Requisites

Learning Objectives

Objectives
Plan video projects that meet specific goals for business, education, or corporate clients.

Objectives
Conduct research, interviews, and location scouting to support video production.

Objectives
Write and revise scripts to align with client objectives and brand messaging.

Objectives
Produce and edit at least three institutional videos using professional tools.

Objectives
Communicate effectively with clients and team members throughout production.

BPT285 - Broadcast Production Capstone

Overview

Course Description
This course provides an opportunity to complete a media project from the design phase through implementation with minimal instructor guidance. Emphasis is placed on analyzing, planning, production, post-production, delivery, and evaluation. Upon completion, students should be able to plan, produce and deliver a media project.

Course Typically Offered
Spring

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take One: BPT-132 or BPT-232

Take BPT-132(S26035) or BPT-232(S26046);

Learning Objectives

Objectives
Design and execute a comprehensive media project from concept to final delivery with minimal instructor guidance.

Objectives
Apply planning, production, and post-production skills in a real-world scenario.

Objectives
Evaluate media project outcomes against defined goals and audience needs.

Objectives
Complete a professional portfolio media project showcasing technical and creative abilities.

Objectives
Reflect on personal growth and readiness for employment or further education in media.

Student Learning Outcomes

BTC3300 - Aseptic Manufacturing

Overview

Course Description
This course will focus on the basics of Clean Room operations. Students will learn the fundamentals and principles associated with parenteral products as it relates to aseptic processing. Topics may include basic microbiology, clean room design and control, environmental monitoring, glassware and equipment preparation, solution processing (compounding), and filtration. Upon completion, students will understand and have hands-on experience with various pre-manufacturing activities.

Credit Hours
0

BUS110 - Introduction to Business

Overview

Course Description
This course provides a survey of the business world. Topics include the basic principles and practices of contemporary business. Upon completion, students should be able to demonstrate an understanding of business concepts as a foundation for studying other business subjects.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Identify various forms of business organizations.

Objectives
Define business vocabulary.

Objectives
Describe the basics of business ethics.

Objectives
Explain basic management principles.

BUS115 - Business Law I

Overview

Course Description
This course introduces the student to the legal and ethical framework of business. Contracts, negotiable instruments, the law of sales, torts, crimes, constitutional law, the Uniform Commercial Code, and the court systems are examined. Upon completion the student should be able to identify legal and ethical issues that arise in business decisions and the laws that apply to them.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Discuss the origins and history of law

Objectives
Explain constitutional law

Objectives
To become familiar with the federal and state court systems

Objectives
Demonstrate a basic knowledge of criminal law and tort law

Objectives
Explain the requirements of an enforceable contract

Objectives
Draft a simple contract

Objectives
Demonstrate a working knowledge as to what constitutes a breach of contract and defenses to breach of contract

Objectives
Identify all conduct, including performance, that constitutes duties under a contract

Objectives
Explain the differences that arise when a contract comes under the sales provisions of the UCC

Objectives
Identify the elements of a contract.

Objectives
Describe the structure of the U.S. court system.

Objectives
Identify laws, conditions and regulations in national and international work environments.

BUS116 - Business Law II

Overview

Course Description
This course includes the study of the legal and ethical framework of business. Business Organizations, property law, intellectual property law, agency and employment law, consumer law, secured transactions, and bankruptcy are examined. Upon completion, the student should be able to identify legal and ethical issues that arise in business decisions and the laws that apply to them.

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take BUS-115

Take BUS-115(S24153);

BUS125 - Personal Finance

Overview

Course Description
This course provides a study of individual and family financial decisions. Emphasis is placed on building useful skills in buying, managing finances, increasing resources, and coping with current economic conditions. Upon completion, students should be able to develop a personal financial plan.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate an understanding of the components of an individual's personal finances

Objectives
Identify the appropriate sources of information needed to complete a personal budget

Objectives
Calculate car loan and mortgage payments

Objectives
Research techniques to prepare for retirement

Objectives
Develop a plan to prepare for unplanned expenses

Objectives
Evaluate current interest rates as they relate to financial investments and savings for personal wealth

Objectives
Discuss the components of credit and how to utilize it responsibly

Objectives
Develop and design a personal budget plan that will include evaluating income, savings, and future financial needs

BUS137 - Principles of Management

Overview

Course Description
This course is designed to be an overview of the major functions of management. Emphasis is placed on planning, organizing, controlling, directing, and communicating. Upon completion, students should be able to work as contributing members of a team utilizing these functions of management.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Explain strategic management in business operations.

Objectives
Define management, quality management, and project management.

Objectives
Identify relevant issues in human resource management.

Objectives
Discuss the basics of the management in business

Objectives
Explain the four management functions within an organization

Objectives
Demonstrate a variety of management techniques in real-world situations

BUS151 - People Skills

Overview

Course Description
This course introduces the basic concepts of identity and communication in the business setting. Topics include self-concept, values, communication styles, feelings and emotions, roles versus relationships, and basic assertiveness, listening, and conflict resolution. Upon completion, students should be able to distinguish between unhealthy, self-destructive, communication patterns and healthy, non-destructive, positive communication patterns.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Distinguish between unhealthy, self-destructive, communication patterns and healthy, non-destructive, positive communication patterns.

Objectives
Develop and implement strategies for strong interpersonal skills with colleagues and others for implementation in the workplace and business arena.

Objectives
Demonstrate communication skills and habits to implement in real world scenarios to foster success between individuals in a business environment.

BUS153 - Human Resource Management

Overview

Course Description
This course introduces the functions of personnel/ human resource management within an organization. Topics include equal opportunity and the legal environment, recruitment and selection, performance appraisal, employee development, compensation planning, and employee relations. Upon completion, students should be able to anticipate and resolve human resource concerns.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Discuss and apply various employment laws.

Objectives
Discuss the reasons leading to the development of organizational policies and procedures

Objectives
To be able to analyze and evaluate current workplace situations

Objectives
Demonstrate the critical thinking process through application based activities

BUS217 - Employment Law and Regulations

Overview

Course Description
This course introduces the principle laws and regulations affecting public and private organizations and their employees or prospective employees. Topics include fair employment practices, EEO, affirmative action, and employee rights and protections. Upon completion, students should be able to evaluate organization policy for compliance and assure that decisions are not contrary to law.

Course Typically Offered
Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Define fair employment practices, EEO, affirmative action.

Objectives
Identify employee rights and protections.

Objectives
Evaluate organization policy for compliance.

Objectives
Evaluate decisions to assure they are not contrary to law.

Objectives
Demonstrate knowledge and cite various employment laws

Objectives
Explain the background and reasons leading to the enactment of various employment laws

Objectives
Evaluate and apply case law to current workplace situations

Objectives
Perform legal research to faciltate application of employment law

Objectives
Demonstrate skill and clarity in writing

Objectives
Practice hard skills to include critical thinking, problem solving, decision making, and sound judgement

BUS225 - Business Finance

Overview

Course Description
This course provides an overview of business financial management. Emphasis is placed on financial statement analysis, time value of money, management of cash flow, risk and return, and sources of financing. Upon completion, students should be able to interpret and apply the principles of financial management.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Analyze financial statements (income statement, balance sheet, and cash flow statement).

Objectives
Apply time value of money concepts to evaluate financial decisions.

Objectives
Assess risk using basic financial metrics to support sound financial decision-making.

Objectives
Compare and evaluate sources of business financing (short-term and long-term debt, equity, and internal financing).

BUS228 - Business Statistics

Overview

Course Description
This course introduces the use of statistical methods and tools in evaluating research data for business applications. Emphasis is placed on basic probability, measures of spread and dispersion, central tendency, sampling, regression analysis, and inductive inference. Upon completion, students should be able to apply statistical problem solving to business.

Credit Hours
3

BUS230 - Small Business Management

Overview

Course Description
This course introduces the challenges of entrepreneurship including the startup and operation of a small business. Topics include market research techniques, feasibility studies, site analysis, financing alternatives, and managerial decision making. Upon completion, students should be able to develop a small business plan.

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Create a finacial plan for a small business.

Objectives
Categorize business expenses into fixed and variable costs

Objectives
Evaluate their business idea for feasibility

Objectives
Write a comprehensive business plan

BUS234 - Training and Development

Overview

Course Description
This course covers developing, conducting, and evaluating employee training with attention to adult learning principles. Emphasis is placed on conducting a needs assessment, using various instructional approaches, designing the learning environment, and locating learning resources. Upon completion, students should be able to design, conduct, and evaluate a training program.

Course Typically Offered
Fall

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Design, conduct, and evaluate a training program.

Objectives
Define the steps for conducting a needs assessment.

Objectives
Identify instructional approaches.

Objectives
Design a learning environment.

Objectives
Compare and contrast training with education, development, and consulting.

Objectives
Identify at least five characteristics of adult learning.

Objectives
Describe the steps involved in producing communication training programs.

Objectives
Conduct a needs analysis.

Objectives
Write a clear learning objective for adult learners.

Objectives
Identify two advantages and two disadvantages of various training methods.

Objectives
Use appropriate visual aids to enhance training.

Objectives
Produce a trainer guide for two contact hours of communication training.

Objectives
Explain three methods for managing or reducing conflict in the training classroom.

Objectives
Identify at least three advantages and disadvantages of various types of assessment instruments.

Objectives
Model appropriate training techniques in a training presentation. 12. Design, conduct, and evaluate a training program.

Objectives
Define the steps for conducting a needs assessment.

Objectives
Identify instructional approaches.

Objectives
Design a learning environment.

BUS240 - Business Ethics

Overview

Course Description
This course introduces contemporary and controversial ethical issues that face the business community. Topics include moral reasoning, moral dilemmas, law and morality, equity, justice and fairness, ethical standards, and moral development. Upon completion, students should be able to demonstrate an understanding of their moral responsibilities and obligations as members of the workforce and society.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Identify an organization's stakeholders

Objectives
Define the basic ethical theories that inform ethical decision making in business

Objectives
Recognize an ethical dilemma in the workplace

Objectives
Propose a resolution for an ethic dilemma in a workplace

BUS252 - Labor Relations

Overview

Course Description
This course covers the history of the organized labor movement and the contractual relationship between corporate management and employees represented by a union. Topics include labor laws and unfair labor practices, the role of the NLRB, organizational campaigns, certification/decertification elections, and grievance procedures. Upon completion, students should be able to act in a proactive and collaborative manner in an environment where union representation exists.

Course Typically Offered
Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Discuss collective bargaining

Objectives
Discuss labor relations issues in the public and private sectors

Objectives
Explain the provisions of the National Labor Relations Act and other labor laws

Objectives
Discuss the methods/labor relations practices used in other countries as compared and contrasted with those in the United States

Objectives
Explain the causes and solutions to the challenges unions face in representing workers

Objectives
Discuss what is considered to be unfair labor practices

Objectives
Discuss how international labor relations are developing

BUS255 - Organizational Behavior in Business

Overview

Course Description
This course covers the impact of different management practices and leadership styles on worker satisfaction and morale, organizational effectiveness, productivity, and profitability. Topics include a discussion of formal and informal organizations, group dynamics, motivation, and managing conflict and change. Upon completion, students should be able to analyze different types of interpersonal situations and determine an appropriate course of action.

Credit Hours
3

BUS256 - Recruiting, Selection, & Personnel Planning

Overview

Course Description
This course introduces the basic principles involved in managing the employment process. Topics include personnel planning, recruiting, interviewing and screening techniques, maintaining employee records; and voluntary and involuntary separations. Upon completion, students should be able to acquire and retain employees who match position requirements and fulfill organizational objectives.

Course Typically Offered
Fall

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Identify recruiting, interviewing and screening techniques.

Objectives
Describe processes to acquire and retain employees who match position requirement and fulfill organizational objectives.

Objectives
Describe personnel planning.

Objectives
Identify procedures for maintaining employee records.

Objectives
Develop a staffing strategy that reinforce business strategy

Objectives
Forecast talent needs and labor supply and plan accordingly

Objectives
Conduct a job or competency analysis and a job rewards analysis

Objectives
Strategically source potential recruits

Objectives
Recruit and select the right people

Objectives
Negotiate and hire top candidates

Objectives
Socialize, deploy, and retain talent

Objectives
Leverage technology throughout the staffing system

Objectives
Ensure legal compliance of the staffing system

BUS258 - Compensation and Benefits

Overview

Course Description
This course is designed to study the basic concepts of pay and its role in rewarding performance. Topics include wage and salary surveys, job analysis, job evaluation techniques, benefits, and pay-for-performance programs. Upon completion, students should be able to develop and manage a basic compensation system to attract, motivate, and retain employees.

Course Typically Offered
Fall

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Describe job analysis and job evaluation techniques.

Objectives
Describe benefits and pay-for-performance programs.

Objectives
Develop and manage a basic compensation system to attract, motivate, and retain employees.

Objectives
Define wage and salary surveys.

Objectives
Analyze different types of pay plans and benefit options.

Objectives
Make cost benefit calculations.

Objectives
Explain job evaluation, pay range and pay grade decision.

Objectives
Demonstrate effective writing techniques: clarity, correct grammar usage, word choice, and tone.

BUS259 - Human Resource Management Applications

Overview

Course Description
This course provides students in the Human Resource Management concentration the opportunity to reinforce their learning experiences from preceding HRM courses. Emphasis is placed on application of day-to-day HRM functions by completing in-basket exercises and through simulations. Upon completion, students should be able to determine the appropriate actions called for by typical events that affect the status of people at work.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take: BUS-217 or BUS-234

Take BUS-217(S24154) or BUS-234(S24155);

Student Learning Outcomes

Learning Objectives

Objectives
Apply day-to-day HRM functions to exercises and simulations.

Objectives
Determine the appropriate actions called for by typical events that affect the status of people at work.

Objectives
Apply day-to-day HRM functions to exercises and simulations.

Objectives
Determine the appropriate actions called for by typical events that affect the status of people at work. 3. Determine the appropriate actions called for by typical events that affect the status of people at work

Objectives
Identify personal and family issues that affect employees at work and develop some background in how to deal with them

Objectives
Discuss the legal and moral aspects of discrimination and sexual harassment and strategies to use in situations of discrimination or sexual harassment.

Objectives
Define job performance, performance standards, and performance measurement and be able to effectively handle these activities

Objectives
Explain general guidelines for effective recruitment, selection, and training and career development

Objectives
Discuss the function of compensation, benefits, safety and health policies and procedures

Objectives
Describe how to handle motivation, discipline, layoffs, demotions and firings

Objectives
Demonstrate technique in the areas of labor relations and collective bargaining

Objectives
Compare cross-culture management differences, individual characteristics, and values and describe how individuals and organizations can improve their effectiveness in global settings

BUS260 - Business Communication

Overview

Course Description
This course is designed to develop skills in writing business communications. Emphasis is placed on business reports, correspondence, and professional presentations. Upon completion, students should be able to communicate effectively in the work place.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
3

Objectives
Compose workplace emails and memorandums using either a deductive or inductive approach depending on the situation.

Objectives
Compose a persuasive email and memorandum using an inductive approach as outlined in the AIDA template.

Objectives
Describe the types of communication flows within an organization.

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take One: ENG-110 or ENG-111

Take ENG-110(S24002) or ENG-111(S24022);

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate effective communcaition in the workplace using a variety of written communcaiton tools.

BUS261 - Diversity in Management

Overview

Course Description
This course is designed to help managers recognize the need to incorporate diversity into all phases of organizational management. Topics include self-evaluation, management, sexual harassment, workforce diversity, dual careers, role conflict, and communication issues. Upon completion, students should be able to implement solutions that minimize policies, attitudes, and stereotypical behaviors that block effective team building.

Course Typically Offered
Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Discuss the reasons leading to the development of organizational policies and procedures relative to improving diversity

Objectives
Practice the use of diversity perspectives in the workplace

Objectives
Demonstrate knowledge of laws governing diversity and discrimination

Objectives
Evaluate workplace situations involving diversity

Objectives
Develop management skills to successfully resolve employee conflicts

Objectives
Explain the strategic importance of diversity programs in the global marketplace

Objectives
Write and speak with reasonable skill and clarity

BUS270 - Professional Development

Overview

Course Description
This course provides basic knowledge of self-improvement techniques as related to success in the professional world. Topics include positive human relations, job-seeking skills, and projecting positive self-image. Upon completion, students should be able to demonstrate competent personal and professional skills necessary to get and keep a job.

Course Typically Offered
Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
To demonstrate resume writing and job interview skills

Objectives
To categorize etiquette skills by telephone, business and social skills

Objectives
To evaluate their current wardrobe for interview appropriateness

Objectives
To write short and long term goals for employment

BUS280 - REAL Small Business

Overview

Course Description
This course introduces hands-on techniques and procedures for planning and opening a small business, including the personal qualities needed for entrepreneurship. Emphasis is placed on market research, finance, time management, and day-to-day activities of owning/operating a small business. Upon completion, students should be able to write and implement a viable business plan and seek funding.

Course Typically Offered
Fall, Spring

Credit Hours
4

Student Learning Outcomes

Learning Objectives

Objectives
Create a finacial plan for a small business.

Objectives
To categorize business expenses into fixed and variable costs

Objectives
To evaluate their business idea for feasibility

Objectives
To write a comprehensive business plan

CAR111 - Carpentry I

Overview

Course Description
This course introduces the theory and construction methods associated with the building industry, including framing, materials, tools, and equipment. Topics include safety, hand/power tool use, site preparation, measurement and layout, footings and foundations, construction framing, and other related topics. Upon completion, students should be able to safely lay out and perform basic framing skills with supervision.

Course Typically Offered
Fall, Spring

Credit Hours
8

Student Learning Outcomes

Learning Objectives

Objectives
Students will understand and be able to demonstrate the safe and proper use of both hand tools and power tools.

Objectives
Students will understand all aspects of construction blueprints pertaining to the framing process for the floor systems interpretation through construction of floor system.

CAR112 - Carpentry II

Overview

Course Description
This course covers the advanced theory and construction methods associated with the building industry including framing and exterior finishes. Topics include safety, hand/power tool use, measurement and layout, construction framing, exterior trim and finish, and other related topics. Upon completion, students should be able to safely frame and apply exterior finishes to a residential building with supervision.

Course Typically Offered
Spring

Credit Hours
8

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take CAR-111

Take CAR-111(S16248);

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate the ability to design, layout, and construct various wall systems.

Objectives
Demonstrate the ability to design, layout and construct various roofing systems according to code in regard to span.

Objectives
Recognize and apply different types of roof sheathing.

CAR113 - Carpentry III

Overview

Course Description
This course covers interior trim and finishes. Topics include safety, hand/power tool use, measurement and layout, specialty framing, interior trim and finishes, cabinetry, and other related topics. Upon completion, students should be able to safely install various interior trim and finishes in a residential building with supervision.

Course Typically Offered
Spring

Credit Hours
6

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take CAR-111

Take CAR-111(S10358);

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate proper safety procedures when working with hand tools and power tools used in interior trim and finish applications.

Objectives
Accurately measure, mark, and lay out materials for interior trim projects using standard construction practices.

Objectives
Identify and install various types of interior trim and finish materials, including baseboards, casings, crown molding, and wall paneling, under supervision.

Objectives
Construct and install specialty framing and cabinetry components in compliance with residential building standards.

Objectives
Interpret basic construction drawings and specifications to complete interior trim and finish tasks in a residential setting

CAR114 - Residential Building Codes

Overview

Course Description
This course covers building codes and the requirements of state and local construction regulations. Emphasis is placed on the minimum requirements of the North Carolina building codes related to residential structures. Upon completion, students should be able to determine if a structure is in compliance with North Carolina building codes.

Course Typically Offered
Fall, Spring

Credit Hours
3

CAR115 - Residential Planning/ Estimating

Overview

Course Description
This course covers project planning, management, and estimating for residential or light commercial buildings. Topics include planning and scheduling, interpretation of working drawings and specifications, estimating practices, and other related topics. Upon completion, students should be able to perform quantity take-offs and cost estimates.

Course Typically Offered
Fall, Spring

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take BPR-130

Take BPR-130(S11505);

CET225 - Digital Signal Processing

Overview

Course Description
This course introduces concepts and applications of digital signal processing. Topics include Fourier analysis, signal sampling, digital filtering, IIR filters, FIR filters, and DSP programming. Upon completion, students should be able to implement and troubleshoot DSP systems in hardware and software.

Course Typically Offered
Fall

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Identify the components of a DSP system

Objectives
Explain the processes of recording, playback, and synthesis of digital music.

Objectives
Apply knowledge of the role of sampling and digitization in DSP systems through problem analysis and lab assignments

Objectives
Apply knowledge of the effects of sampling rate in a DSP system through problem analysis and lab assignments

Objectives
Apply knowledge of the function of compression in DSP systems through problem analysis and lab assignments

Objectives
Write source code in a graphics-based language to create DSP filtering systems

Objectives
Apply knowledge of DSP principles in written lab reports and exam questions

CHI111 - Elementary Chinese I

Overview

Course Description
This course introduces the fundamental elements of the Chinese language within a cultural context. Emphasis is placed on the development of basic listening, speaking, reading, and writing skills. Upon completion, students should be able to comprehend and respond with grammatical accuracy to spoken and written Chinese and demonstrate cultural awareness.

Credit Hours
3

CHI112 - Elementary Chinese II

Overview

Course Description
This course includes the basic fundamentals of the Chinese language within a cultural context of the Chinese people and its history. Emphasis is placed on the progressive development of listening, speaking, reading, and writing skills. Upon completion, students should be able to comprehend and respond with increasing proficiency to spoken and written Chinese and demonstrate further cultural awareness.

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take CHI-111

Take CHI-111;

CHI211 - Intermediate Chinese I

Overview

Course Description
This course includes communicative competencies in speaking, listening comprehension, reading, and writing at an intermediate level with attention to cultural awareness. Emphasis is placed on intermediate skills in speaking, reading, writing, and comprehension of spoken language. Upon completion, students should demonstrate simple conversations and distinguish an appropriate range of Chinese characters, as well as read simple expressions in modern standard Chinese.

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take CHI-112

Take CHI-112;

CHI212 - Intermediate Chinese II

Overview

Course Description
This course provides continuation of communicative competence in speaking, listening comprehension, reading and writing at an intermediate level with attention to cultural awareness. Emphasis is placed on intermediate skills in speaking, reading, writing, and comprehension of spoken language. Upon completion, students should demonstrate simple conversations and distinguish a broad range of Chinese characters, as well as read expressions in modern standard Chinese.

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take CHI-211

Take CHI-211;

CHM092 - Fundamentals of Chemistry

Overview

Course Description
This course covers fundamentals of chemistry with laboratory applications. Topics include measurements, matter, energy, atomic theory, bonding, molecular structure, nomenclature, balancing equations, stoichiometry, solutions, acids and bases, gases, and basic organic chemistry. Upon completion, students should be able to understand and apply basic chemical concepts and demonstrate basic laboratory skills necessary for success in college-level science courses.

Credit Hours
4

CHM130 - General, Organic, & Biochemistry

Overview

Course Description
This course provides a survey of basic facts and principles of general, organic, and biochemistry. Topics include measurement, molecular structure, nuclear chemistry, solutions, acid-base chemistry, gas laws, and the structure, properties, and reactions of major organic and biological groups. Upon completion, students should be able to demonstrate an understanding of fundamental chemical concepts.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
3

Requisites

Simple Requisites

Required concurrent or previous courses

Type
Corequisite

Take CHM-130A

Take CHM-130A;

Student Learning Outcomes

Learning Objectives

Objectives
Utilize scientific measurements through choosing appropriate tools in the laboratory, employing the appropriate significant figures in measurements and calculations, using appropriate metric units, and solving problems using formulas and/or dimensional analysis.

Objectives
Describe subatomic particles and atomic structure, relating atomic structure to periodic properties.

Objectives
Differentiate between compounds with ionic and/or covalent bonding, explain the rules governing bonding, and relate bond polarity to macroscopic properties.

Objectives
Utilize the mole concept to interpret and classify chemical reactions and perform stoichiometric calculations.

Objectives
Apply the laws of conservation of matter and energy to everyday situations.

Objectives
Identify functional groups in organic compounds, name basic organic molecules, and predict the products of selected reactions.

Objectives
Describe the structure and function of select biologically significant compounds.

CHM130A - General, Organic, & Biochemistry Lab

Overview

Course Description
This course is a laboratory for CHM 130. Emphasis is placed on laboratory experiences that enhance materials presented in CHM 130. Upon completion, students should be able to utilize basic laboratory procedures and apply them to chemical principles presented in CHM 130.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
1

Requisites

Simple Requisites

State concurrent or previous courses

Type
Corequisite

Take CHM-130

Take CHM-130;

Student Learning Outcomes

Learning Objectives

Objectives
Utilize basic laboratory procedures and apply them to the principles presented in CHM 130.

Objectives
Demonstrate an understanding of laboratory safety and be able to work safely in the chemistry laboratory.

Objectives
Demonstrate the proper use of measuring tools and perform measurement conversions.

Objectives
Recognize commonly used laboratory equipment and supplies and be able to use them appropriately.

Objectives
Perform lab experiments, collect data, make observations and perform calculations associated with laboratory concepts.

Objectives
Write clearly and concisely in reporting and analyzing laboratory work and answering questions related to laboratory work.

CHM131 - Introduction to Chemistry

Overview

Course Description
This course introduces the fundamental concepts of inorganic chemistry. Topics include measurement, matter and energy, atomic and molecular structure, nuclear chemistry, stoichiometry, chemical formulas and reactions, chemical bonding, gas laws, solutions, and acids and bases. Upon completion, students should be able to demonstrate a basic understanding of chemistry as it applies to other fields.

Course Typically Offered
Fall

Credit Hours
3

Requisites

Simple Requisites

Required concurrent or previous courses

Type
Corequisite

Take CHM-131A

Take CHM-131A;

Student Learning Outcomes

Learning Objectives

Objectives
Utilize scientific measurements through choosing appropriate tools in the laboratory, employing the appropriate significant figures in measurements and calculations, using appropriate metric units, and solving problems using formulas and/or dimensional analysis.

Objectives
Describe subatomic particles and atomic structure, relating atomic structure to periodic properties.

Objectives
Differentiate between compounds with ionic and/or covalent bonding, explain the rules governing bonding, and relate bond and molecule polarity to macroscopic properties.

Objectives
Balance chemical equations, predict the products of selected reactions, utilize the mole concept to interpret and classify chemical reactions, and perform stoichiometric calculations.

Objectives
Apply the laws of conservation of matter and energy to everyday situations.

CHM131A - Introduction to Chemistry Lab

Overview

Course Description
This course is a laboratory to accompany CHM 131. Emphasis is placed on laboratory experiences that enhance materials presented in CHM 131. Upon completion, students should be able to utilize basic laboratory procedures and apply them to chemical principles presented in CHM 131.

Course Typically Offered
Fall

Credit Hours
1

Requisites

Simple Requisites

State concurrent or previous courses

Type
Corequisite

Take CHM-131

Take CHM-131;

Student Learning Outcomes

Learning Objectives

Objectives
Utilize basic laboratory procedures and apply them to the principles presented in CHM 131.

Objectives
Demonstrate an understanding of laboratory safety and be able to work safely in the chemistry laboratory.

Objectives
Demonstrate the proper use of measuring tools and perform measurement conversions.

Objectives
Recognize commonly used laboratory equipment and supplies and be able to use them appropriately.

Objectives
Perform lab experiments, collect data, make observations and perform calculations associated with laboratory concepts.

Objectives
Write clearly and concisely in reporting and analyzing laboratory work and answering questions related to laboratory work.

CHM132 - Organic and Biochemistry

Overview

Course Description
This course provides a survey of major functional classes of compounds in organic and biochemistry. Topics include structure, properties, and reactions of the major organic and biological molecules and basic principles of metabolism. Upon completion, students should be able to demonstrate an understanding of fundamental chemical concepts needed to pursue studies in related professional fields.

Credit Hours
4

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take one set: Set 1: CHM-131 and CHM-131A Set 2: CHM-151

Take 1 group; # Take CHM-131 CHM-131A; # Take CHM-151;

CHM151 - General Chemistry I

Overview

Course Description
This course covers fundamental principles and laws of chemistry. Topics include measurement, atomic and molecular structure, periodicity, chemical reactions, chemical bonding, stoichiometry, thermochemistry, gas laws, and solutions. Upon completion, students should be able to demonstrate an understanding of fundamental chemical laws and concepts as needed in CHM 152.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
4

Requisites

Simple Requisites

Local Prerequisite

Type
Corequisite

Take MAT-045P

Take 1 group; # Take DMA-060(S24128) DMA-070(S24129) DMA-080(S24130); # Take DMA-060(S23172) DMA-070(S23173) DMA-080(S23174); # Take MAT-080; # Take MAT-071(S25141); # Take MAT-003; From rule RMINP3; # Take MAT-121(S24993); # Take MAT-161(S20916); # Take DMA-010 DMA-020 DMA-030 DMA-040(S23170) DMA-050(S23171) DMA-065(S24074); # Take MAT-060 MAT-070 MAT-080; # Take MAT-060 MAT-070 MAT-090; # Take MAT-095; # Take MAT-045P;

Student Learning Outcomes

Learning Objectives

Objectives
Utilize scientific measurements through choosing appropriate tools in the laboratory, employing the appropriate significant figures in measurements and calculations, using appropriate metric units, and solving problems using formulas and/or dimensional analysis.

Objectives
Describe subatomic particles and atomic structure using the nuclear and quantum mechanical models and relate atomic structure to periodic properties.

Objectives
Differentiate between compounds with ionic and/or covalent bonding, construct Lewis structures for molecules, identify molecular shapes using VSEPR theory, and determine molecular polarity.

Objectives
Utilize the mole concept to interpret and classify chemical reactions and perform stoichiometric calculations.

Objectives
Identify systems and their surroundings, make use of the laws of conservation of matter and energy, and apply these concepts to enthalpy calculations.

Objectives
Apply the kinetic-molecular theory and simple gas laws to calculate properties of ideal gas samples.

CHM152 - General Chemistry II

Overview

Course Description
This course provides a continuation of the study of the fundamental principles and laws of chemistry. Topics include kinetics, equilibrium, ionic and redox equations, acid-base theory, electrochemistry, thermodynamics, introduction to nuclear and organic chemistry, and complex ions. Upon completion, students should be able to demonstrate an understanding of chemical concepts as needed to pursue further study in chemistry and related professional fields.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
4

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take CHM-151

Take CHM-151;

Student Learning Outcomes

Learning Objectives

Objectives
Apply mathematical skills to perform chemical calculations.

Objectives
Identify and explain intermolecular forces found in chemical substances.

Objectives
Identify factors affecting rates of reaction and perform calculations related to chemical kinetics.

Objectives
Describe chemical equilibrium and use equilibrium expressions to predict chemical concentrations.

Objectives
Identify and describe acids, bases, and buffer systems; perform calculations involving pH, pOH, and pK.

Objectives
Describe thermodynamic concepts relating entropy, free energy, and spontaneity and perform calculations related to these concepts.

Objectives
Discuss the operations of electrochemical cells and perform related calculations.

CHM251 - Organic Chemistry I

Overview

Course Description
This course provides a systematic study of the theories, principles, and techniques of organic chemistry. Topics include nomenclature, structure, properties, reactions, and mechanisms of hydrocarbons, alkyl halides, alcohols, and ethers; further topics include isomerization, stereochemistry, and spectroscopy. Upon completion, students should be able to demonstrate an understanding of the fundamental concepts of covered organic topics as needed in CHM 252.

Credit Hours
4

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take CHM-152

Take CHM-152;

Student Learning Outcomes

Learning Objectives

Objectives
Discuss the fundamental concepts of covered organic topics as needed in CHM 252.

Objectives
Recognize, identify, and draw common organic functional groups and describe their properties.

Objectives
Name simple organic molecules in accordance with IUPAC and common naming conventions.

Objectives
Identify, draw and explain common reactions of alkenes and alkynes.

Objectives
Draw and predict the reactions and reaction mechanisms for substitution and elimination reactions of organic compounds.

Objectives
Explain the concepts of isomerization and stereochemistry.

Objectives
Explain, in writing organic concepts presented in the lecture and/or lab.

CHM252 - Organic Chemistry II

Overview

Course Description
This course provides continuation of the systematic study of the theories, principles, and techniques of organic chemistry. Topics include nomenclature, structure, properties, reactions, and mechanisms of aromatics, aldehydes, ketones, carboxylic acids and derivatives, amines and heterocyclics; multi-step synthesis will be emphasized. Upon completion, students should be able to demonstrate an understanding of organic concepts as needed to pursue further study in chemistry and related professional fields.

Credit Hours
4

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take CHM-251

Take CHM-251;

Student Learning Outcomes

Learning Objectives

Objectives
For aromatic molecules, alcohols, ethers, aldehydes, ketones, carboxylic acids and derivatives, amines and heterocyclics, be able to a) name them, in accordance with IUPAC and common naming conventions b) draw their structures c) identify their properties d) write their common reactions and reaction mechanisms

Objectives
Write multiple-step reaction pathways for synthesizing organic compounds.

Objectives
Identify isomeric relationships between molecules (constitutional isomers, diastereomers, entantiomers, etc.).

Objectives
Predict stereochemistry and configurations of products obtained during organic reactions.

Objectives
Identify, draw and name organic molecules based upon principles of spectroscopy.

Objectives
Explain, in writing organic concepts presented in the lecture and/or lab.

CIS110 - Introduction to Computers

Overview

Course Description
This course introduces computer concepts, including fundamental functions and operations of the computer. Topics include identification of hardware components, basic computer operations, security issues, and use of software applications. Upon completion, students should be able to demonstrate an understanding of the role and function of computers and use the computer to solve problems. This course has been approved for transfer under the CAA as a general education course in Mathematics (Quantitative). This course has been approved for transfer under the ICAA as a general education course in Mathematics (Quantitative).

Course Typically Offered
Fall, Spring, Summer

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Identify the basic elements required in a computer system.

Objectives
Produce electronic documents using various software applications.

Objectives
Illustrate the role of the computer for personal and professional uses.

Objectives
Demonstrate familiarization with basic computer hardware components including processor, input, output, and storage devices.

Objectives
Operate computer hardware and software, including operating system software.

Objectives
Demonstrate digital citizenship.

Objectives
Define and apply basic computer concepts and terminology.

Objectives
Construct documents, spreadsheets, and presentations using Microsoft Office.

Objectives
Operate the Internet and its resources, Windows, and Microsoft Office.

Objectives
Differentiate when to use Microsoft Word, Microsoft Excel, and Microsoft PowerPoint to complete certain tasks.

Objectives
Demonstrate proficiency in Microsoft Word, Excel, and PowerPoint through practical application.

CIS111 - Basic PC Literacy

Overview

Course Description
This course provides an overview of computer concepts. Emphasis is placed on the use of personal computers and software applications for personal and fundamental workplace use. Upon completion, students should be able to demonstrate basic personal computer skills.

Course Typically Offered
Fall

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate familiarization with basic computer hardware components including processor, input, output, and storage devices.

Objectives
Operate computer hardware and software, including operating system software.

Objectives
Define and apply basic computer concepts and terminology.

Objectives
Demonstrate digital citizenship.

Objectives
Construct documents, spreadsheets, databases, and presentations using Microsoft Office.

Objectives
Operate the Internet and its resources, Windows, and Microsoft Office.

Objectives
Differentiate when to use Microsoft Word, Microsoft Excel, and Microsoft PowerPoint to complete certain tasks.

Objectives
Demonstrate proficiency in Microsoft Word, Excel, and PowerPoint through practical application.

Objectives
Design spreadsheets, documents, and presentations using Microsoft Office.

CIS115 - Introduction to Programming and Logic

Overview

Course Description

This course introduces computer programming and problem solving in a structured program logic environment. Topics include language syntax, data types, program organization, problem solving methods, algorithm design, and logic control structures. Upon completion, students should be able to use top-down algorithm design and implement algorithmic solutions in a programming language.

Credit Hours

3

Student Learning Outcomes

Learning Objectives

Objectives
Apply control structures

Objectives
Apply top-down algorithmic design.

Objectives
Implement algorithmic solutions in a programming language.

Objectives
Describe basic hardware and software components of a computer system.

Objectives
Describe the basic components of a Python program. programming methodologies.

Objectives
Construct flowcharts and/or pseudo code based on a given business problem.

Objectives
Solve a problem by using a programming language.

Objectives
Complete applicable certification when available(e.g. Python Institute PCEP)

CJC111 - Introduction to Criminal Justice

Overview

Course Description
This course introduces the components and processes of the criminal justice system. Topics include history, structure, functions, and philosophy of the criminal justice system and their relationship to life in our society. Upon completion, students should be able to define and describe the major system components and their interrelationships and evaluate career options.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Define and describe the major criminal system components;

Objectives
Describe the interrelationships between the system components; and

Objectives
Evaluate career options.

CJC112 - Criminology

Overview

Course Description
This course introduces deviant behavior as it relates to criminal activity. Topics include theories of crime causation; statistical analysis of criminal behavior; past, present, and future social control initiatives; and other related topics. Upon completion, students should be able to explain and discuss various theories of crime causation and societal response.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Explain and discuss various theories of crime causation;

Objectives
Classify various social response;

Objectives
Compare statistical analysis of criminal behavior, and

Objectives
Identify past, present, and future social control initiatives.

CJC113 - Juvenile Justice

Overview

Course Description
This course covers the juvenile justice system and related juvenile issues. Topics include an overview of the juvenile justice system, treatment and prevention programs, special areas and laws unique to juveniles, and other related topics. Upon completion, students should be able to identify/discuss juvenile court structure/procedures, function and jurisdiction of juvenile agencies, processing/detention of juveniles, and case disposition.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Identify and discuss various psychological theories used to explain delinquency

Objectives
Identify and discuss the effects that juvenile delinquency has on our society

Objectives
Demonstrate proper knowledge of the juvenile justice system history

Objectives
Identify and compare various programs and services available to youth offenders

CJC114 - Investigative Photography

Overview

Course Description
This course covers the operation of digital photographic equipment and its application to criminal justice. Topics include the use of digital cameras, storage of digital images, the retrieval of digital images and preparation of digital images as evidence. Upon completion, students should be able to demonstrate and explain the role and use of digital photography, image storage and retrieval in criminal investigations.

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Provide an overview of crime scene photography, to include:

Objectives
Demonstrate understanding of composition and camera usage, to include; -Camera nomenclature and general settings -General camera fundtions -Shutter speed -ISO -F/Stop, aperture, and Depth of Field -Filling the frame -Fill flash-photography in shaded and unshaded areas -Image quality and bracketing -Night photography

Objectives
Legal Issues of Crime Scene Photography

CJC115 - Crime Scene Photography

Overview

Course Description
This course covers methodologies for photographing crime scenes including their application to forensic sciences, the legal system, and the proper use of digital cameras and accessories. Topics include digital cameras, operational functions required to properly photograph physical evidence and crime scenes, factors affecting admissibility of crime scene photographs, and methods and techniques specific to photographing crime scenes. Upon completion, students should be able to operate digital cameras using appropriate settings to control exposure and depth of field, properly compose various types of crime scene photographs, and use specialized techniques to properly photograph key items of evidence.

Course Typically Offered
Fall

Credit Hours
3

CJC120 - Interviews/ Interrogations

Overview

Course Description
This course covers basic and special techniques employed in criminal justice interviews and interrogations. Emphasis is placed on the interview/ interrogation process, including interpretation of verbal and physical behavior and legal perspectives. Upon completion, students should be able to conduct interviews/interrogations in a legal, efficient, and professional manner and obtain the truth from suspects, witnesses, and victims.

Course Typically Offered
Fall, Spring

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Conduct interviews/interrogations in a legal, efficient, and professional manner;

Objectives
Demonstrate the ability to extract the truth from suspects, witnesses, and victims;

Objectives
Describe the interview/interrogation process.

CJC121 - Law Enforcement Operations

Overview

Course Description
This course introduces fundamental law enforcement operations. Topics include the contemporary evolution of law enforcement operations and related issues. Upon completion, students should be able to explain theories, practices, and issues related to law enforcement operations.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Describe the sources or law enforcement;

Objectives
Identify various trends in law enforcement operation; and

Objectives
Discuss the proper role of law enforcement in the community.

CJC122 - Community Policing

Overview

Course Description
This course covers the historical, philosophical, and practical dimensions of community policing. Emphasis is placed on the empowerment of police and the community to find solutions to problems by forming partnerships. Upon completion, students should be able to define community policing, describe how community policing strategies solve problems, and compare community policing to traditional policing.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Define community policing;

Objectives
Describe how community policing strategies solves problems; and

Objectives
Compare community policing to traditional policing.

CJC131 - Criminal Law

Overview

Course Description
This course covers the history/evolution/principles and contemporary applications of criminal law. Topics include sources of substantive law, classification of crimes, parties to crime, elements of crimes, matters of criminal responsibility, and other related topics. Upon completion, students should be able to discuss the sources of law and identify, interpret, and apply the appropriate statutes/elements.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Discuss the sources of law.

Objectives
Identify and interpret the appropriate statutes in criminal law; and

Objectives
Construct the proper elements to the major crimes.

CJC132 - Court Procedure & Evidence

Overview

Course Description
This course covers judicial structure/process/procedure from incident to disposition, kinds and degrees of evidence, and the rules governing admissibility of evidence in court. Topics include consideration of state and federal courts, arrest, search and seizure laws, exclusionary and statutory rules of evidence, and other related issues. Upon completion, students should be able to identify and discuss procedures necessary to establish a lawful arrest/search, proper judicial procedures, and the admissibility of evidence.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Identify the development of American court structure and procedures; +

Objectives
Summarize the functions and jurisdiction of law enforcement, prosecutors, defense attorneys, judges, juries, witnesses, and other court officials;

Objectives
Define terminology used in the criminal justice system; especially as it pertains to court procedures;

Objectives
Discuss the role of evidence in the judicial system

CJC141 - Corrections

Overview

Course Description
This course covers the history, major philosophies, components, and current practices and problems of the field of corrections. Topics include historical evolution, functions of the various components, alternatives to incarceration, treatment programs, inmate control, and other related topics. Upon completion, students should be able to explain the various components, processes, and functions of the correctional system.

Course Typically Offered
Fall

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Identify the various components of the correctional system.

Objectives
Explain the functions of corrections;

Objectives
Explain the processes of the correctional system.

CJC144 - Crime Scene Processing

Overview

Course Description
This course introduces the theories and practices of crime scene processing and investigating. Topics include legal considerations at the crime scene, processing indoor and outdoor scenes, recording, note taking, collection and preservation of evidence and submission to the crime laboratory. Upon completion, the student should be able to evaluate and search various crime scenes and demonstrate theapprpriate techniques.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Describe the fundamental concepts of physical evidence processing and collection;

Objectives
Demonstrate the ability to reconstruct a crime scene;

Objectives
Photograph, sketch, and document various crimes scenes and submit evidence to a crime laboratory

CJC146 - Trace Evidence

Overview

Course Description
This course provides a study of trace evidence as it relates to forensic science. Topics include collection, packaging, and preservation of trace evidence from crime scenes such as bombings, fires and other scenes. Upon completion, students should be able to demonstrate the fundamental concepts of trace evidence collection, preservation and submission to the crime laboratory.

Course Typically Offered
Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate the fundamental concepts of trace evidence collection;

Objectives
Preserve evidence;

Objectives
Submit evidence to a crime laboratory.

CJC151 - Introduction to Loss Prevention

Overview

Course Description
This course introduces the concepts and methods related to commercial and private security systems. Topics include the historical, philosophical, and legal basis of security, with emphasis on security surveys, risk analysis, and associated functions. Upon completion, students should be able to demonstrate and understand security systems, risk management, and the laws relative to loss prevention.

Course Typically Offered
Fall, Summer

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Identify the basic components of private security history, business and concepts.

Objectives
Discuss the basic functions of various private security categories; i.e., premises security, business security, personal and employment-related security, retail security and loss prevention, and information and computer security.

Objectives
Explain private security operations

CJC152 - Introduction to Security and Protective

Overview

Course Description
This course introduces the various components, processes, and operational characteristics associated with private security and loss prevention services. Topics include armed/unarmed security guard/officer hiring criteria including licensing, job responsibilities, career pathways, professional conduct and communication, public relations, emergency procedures, law, first aide, legal issues and liability, workplace violence, patrol techniques, and the security industry. Upon completion, students should be able to evaluate career options and define and describe the major system components, processes, and operational characteristics associated with the private security industry.

Credit Hours
3

CJC153 - Private Security Operations

Overview

Course Description
This course introduces the various operations associated with private security and loss prevention services. Topics include strategies for protecting individuals and company assets, report writing, interview techniques, crime and accident prevention, courtroom procedures, observation techniques, traffic direction, surveillance, substance abuse, law enforcement relationships, and emergency procedures. Upon completion, students should be able to demonstrate an understanding of the various operational characteristics common to the private security industry.

Credit Hours
3

CJC154 - Private Security Business

Overview

Course Description
This course introduces the business and managerial aspects specific to private security and loss prevention services. Topics include profitability, personnel management, finances, rules, policies, and law, organizational structure, sales management, and issues specific to private security and loss prevention services. Upon completion, students should be able to explain the basic characteristics required of an effective private security and loss prevention services business.

Credit Hours
3

CJC160 - Terrorism: Underlying Issues

Overview

Course Description
This course identifies the fundamental reasons why America is a target for terrorists, covering various domestic/international terrorist groups and ideologies from a historical aspect. Emphasis is placed upon recognition of terrorist crime scene; weapons of mass destruction; chemical, biological, and nuclear terrorism; and planning considerations involving threat assessments. Upon completion, students should be able to identify and discuss the methods used in terrorists' activities and complete a threat assessment for terrorists' incidents.

Course Typically Offered
Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Explain the role and impact of symbolism in terrorist activities

Objectives
Analyze the common traits of extremist ideologies and the perspectives of their followers

Objectives
Evaluate different perspectives on classifying acts of violence as terrorism, considering the context and motivations of those involved.

Objectives
Synthesize various definitions of terrorism to create a comprehensive understanding of the term

Objectives
Identify and apply sociological theories of intergroup conflict and collective violence to posit explanations for political violence

Objectives
Critically evaluate the ethical implications of extremist justifications for political violence

Objectives
Evaluate the effectiveness of state responses to violence.

CJC170 - Critical Incident Management for Public Safety

Overview

Course Description
This course prepares the student to specialize in the direct response, operations, and management of critical incidents. Emphasis is placed upon the theoretical and applied models to understand and manage disasters, terrorism, and school/work place violence. Upon completion, the student should be able to identify and discuss managerial techniques legal issues, and response procedures to critical incidents.

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Identify and discuss managerial techniques and legal issues;

Objectives
Describe response procedures to critical incidents;

Objectives
Discuss the theoretical and applied models to understand and manage disasters, terrorism, and school/work place violence

CJC211 - Counseling

Overview

Course Description
This course introduces the basic elements of counseling and specific techniques applicable to the criminal justice setting. Topics include observation, listening, recording, interviewing, and problem exploration necessary to form effective helping relationships. Upon completion, students should be able to discuss and demonstrate the basic techniques of counseling.

Credit Hours
3

CJC212 - Ethics & Community Relations

Overview

Course Description
This course covers ethical considerations and accepted standards applicable to criminal justice organizations and professionals. Topics include ethical systems; social change, values, and norms; cultural diversity; citizen involvement in criminal justice issues; and other related topics. Upon completion, students should be able to apply ethical considerations to the decision-making process in identifiable criminal justice situations.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate how to apply ethical considerations to the decision-making process in identifiable criminal justice situations

Objectives
Discuss ethical systems; social change, values, and norms; cultural diversity; citizen involvement in criminal justice issues.

CJC213 - Substance Abuse

Overview

Course Description
This course is a study of substance abuse in our society. Topics include the history and classifications of drug abuse and the social, physical, and psychological impact of drug abuse. Upon completion, students should be able to identify various types of drugs, their effects on human behavior and society, and treatment modalities.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Explain and discuss challenges of drugs in our society.

Objectives
Classify various drugs in relation to crime and the Criminal Justice system.

Objectives
Identify drug taking behavior and causation in our society.

Objectives
Discuss prevention, protection and deterrence of substance abuse.

CJC214 - Victimology

Overview

Course Description
This course introduces the study of victims. Emphasis is placed on roles/characteristics of victims, victim interaction with the criminal justice system and society, current victim assistance programs, and other related topics. Upon completion, students should be able to discuss and identify victims, the uniqueness of victims' roles, and current victim assistance programs.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Discuss and identify victims.

Objectives
Demonstrate understanding of the uniqueness of victim's roles.

Objectives
Identify victim assistance programs.

CJC215 - Organization & Administration

Overview

Course Description
This course introduces the components and functions of organization and administration as it applies to the agencies of the criminal justice system. Topics include operations/functions of organizations; recruiting, training, and retention of personnel; funding and budgeting; communications; span of control and discretion; and other related topics. Upon completion, students should be able to identify and discuss the basic components and functions of a criminal justice organization and its administrative operations.

Course Typically Offered
Fall

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Identify and discuss the basic components of a criminal justice organization and its administration operations;

Objectives
Identify and discuss the basic functions of a criminal justice organization and its administration operations;

Objectives
Discuss the recruiting, training and retention of personal

CJC221 - Investigative Principles

Overview

Course Description
This course introduces the theories and fundamentals of the investigative process. Topics include crime scene/incident processing, information gathering techniques, collection/preservation of evidence, preparation of appropriate reports, court presentations, and other related topics. Upon completion, students should be able to identify, explain, and demonstrate the techniques of the investigative process, report preparation, and courtroom presentation.

Course Typically Offered
Spring

Credit Hours
4

Student Learning Outcomes

Learning Objectives

Objectives
Describe the fundamentals of criminal investigations.

Objectives
Discuss various follow-up investigative processes

Objectives
Identify the techniques used to obtain information from subjects involved in the criminal investigative process

Objectives
Discuss the elements of and the techniques to investigate important criminal violations that include: -Death investigations -Robbery -Assault and related offenses -Missing and abducted persons -Crimes against children -Crime against property -Terrorism

CJC222 - Criminalistics

Overview

Course Description
This course covers the functions of the forensic laboratory and its relationship to successful criminal investigations and prosecutions. Topics include advanced crime scene processing, investigative techniques, current forensic technologies, and other related topics. Upon completion, students should be able to identify and collect relevant evidence at simulated crime scenes and request appropriate laboratory analysis of submitted evidence.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Compare and contrast the different methods of crime scene investigation and evidence collection in classroom discussions;

Objectives
Compare and contrast different specialized scientific methods commonly utilized by the criminal investigator;

Objectives
Differentiate the applied forensic methods used to evaluate various types of evidence;

Objectives
Identify and process the common steps taken during a scene search; and

Objectives
Evaluate the limitations of forensic techniques and interpretations.

CJC225 - Crisis Intervention

Overview

Course Description
This course introduces critical incident intervention and management techniques as they apply to operational criminal justice practitioners. Emphasis is placed on the victim/offender situation as well as job-related high stress, dangerous, or problem-solving citizen contacts. Upon completion, students should be able to provide insightful analysis of emotional, violent, drug-induced, and other critical and/or stressful incidents that require field analysis and/or resolution.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Provide insightful analysis of emotional/stressful incidents;

Objectives
Identify and interpret behavior preceding violent situations; and

Objectives
Construct the proper resolution to crisis situations.

CJC231 - Constitutional Law

Overview

Course Description
The course covers the impact of the Constitution of the United States and its amendments on the criminal justice system. Topics include the structure of the Constitution and its amendments, court decisions pertinent to contemporary criminal justice issues, and other related topics. Upon completion, students should be able to identify/discuss the basic structure of the United States Constitution and the rights/procedures as interpreted by the courts.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Identify/discuss the basic structure of the Constitution;

Objectives
Identify/discuss constitutional rights.

Objectives
Discuss federal procedure as it relates to the Supreme Court.

CJC232 - Civil Liability

Overview

Course Description
This course covers liability issues for the criminal justice professional. Topics include civil rights violations, tort liability, employment issues, and other related topics. Upon completion, students should be able to explain civil trial procedures and discuss contemporary liability issues.

Course Typically Offered
Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Explain civil trials;

Objectives
Describe procedures;

Objectives
Discuss contemporary liability issues.

CJC240 - Law Enforcement Management & Supervision

Overview

Course Description
This course provides a study of the best known methods and practices of police leadership and management. Topics include the role of the manager in law enforcement, communications, time-management in law enforcement, managing problems, training and law enforcement productivity. Upon completion, students should be able to identify and discuss methods and practices capable of moving law enforcement agencies forward into the twenty-first century.

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Discuss methods and practices capable of moving law enforcement agencies forward into the twenty-first century;

Objectives
Describe the role of the manager in law enforcement;

Objectives
Discuss the importance of communications and time-management in law enforcement;

Objectives
Demonstrate knowledge of training and law enforcement productivity.

CJC245 - Friction Ridge Analysis

Overview

Course Description
This course introduces the basic elements of fingerprint technology and techniques applicable to the criminal justice field. Topics include the history and meaning of fingerprints, pattern types and classification filing sequence, searching and referencing. Upon completion, the students should be able to discuss and demonstrate the fundamental techniques of basic fingerprint technology.

Course Typically Offered
Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Explain the history of fingerprint analysis

Objectives
Explain the theory of fingerprint analysis

Objectives
Categorize a given fingerprint into various categories

Objectives
Identify common fingerprint patterns from samples

Objectives
Explain the process of fingerprint collection and classification

CJC246 - Advanced Friction Ridge Analysis

Overview

Course Description
This course introduces the theories and processes of advanced friction ridge analysis. Topics include evaluation of friction ridges, chart preparation, comparative analysis for values determination rendering proper identification, chemical enhancement and AFIS preparation and usage. Upon completion, students must show an understanding of proper procedures for friction ridge analysis through written testing and practical exercises.

Course Typically Offered
Fall, Spring

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take CJC-245

Take CJC-245;

Student Learning Outcomes

Learning Objectives

Objectives
Define various terms involved in the area of fingerprint analysis and comparison

Objectives
Discuss the scientific basis of fingerprints

Objectives
Describe the scientific procedure of ACE/V

Objectives
Discuss the Methods and Mechanics of advanced latent Print processing

Objectives
Identify latent prints and compare to known impressions

CJC250 - Forensic Biology I

Overview

Course Description
This course covers important biological principles that are applied in the crime laboratory. Topics include forensic toxicology, forensic serology, microscopy, and DNA typing analysis, with an overview of organic and inorganic analysis. Upon completion, students should be able to articulate how a crime laboratory processes physical evidence submitted by law enforcement agencies.

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Articulate how a crime laboratory processes physical evidence submitted by law enforcement agencies;

Objectives
Demonstrate understanding of forensic toxicology, forensic serology, microscopy, and DNA typing analysis;

Objectives
Discuss organic and inorganic analysis techniques.

CJC251 - Forensic Chemistry I

Overview

Course Description
This course provides a study of the fundamental concepts of chemistry as it relates to forensic science. Topics include physical and chemical properties of substances, metric measurements, chemical changes, elements, compounds, gases, and atomic structure. Upon completion, students should be able to demonstrate an understanding of the fundamental concepts of forensic chemistry.

Credit Hours
4

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate an understanding of the fundamental concepts of forensic chemistry;

Objectives
Discuss physical and chemical properties of substances, metric measurements;

Objectives
Identify and discuss chemical changes, elements, compounds, gases, and atomic structure.

CMT120 - Codes and Inspections

Overview

Course Description
This course covers building codes and the code inspections process used in the design and construction of residential and commercial buildings. Emphasis is placed on commercial, residential, and accessibility (ADA) building codes. Upon completion, students should understand the building code inspections process and apply building code principals and requirements to construction projects.

Course Typically Offered
Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Describe from start to finish, the permitting and inspection process

Objectives
Explain the relevance of Building Inspections

Objectives
Demonstrate fluency accessing NC State Building Code information and requirements

Objectives
Develop a proficiency identifying common NC State Building Code items and Violations

COM110 - Introduction to Communication

Overview

Course Description
This course provides an overview of the basic concepts of communication and the skills necessary to communicate in various contexts. Emphasis is placed on communication theories and techniques used in interpersonal group, public, intercultural, and mass communication situations. Upon completion, students should be able to explain and illustrate the forms and purposes of human communication in a variety of contexts.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Examine the role of perception of self and others in communication

Objectives
Analyze how verbal and nonverbal messages contribute to meaning

Objectives
Articulate how culture influences communication

Objectives
Apply concepts of small group communication to a group project

Objectives
Explore how interpersonal communication impacts relationships with others

Objectives
Deliver an effective presentation using visual aids and a speech outline

Objectives
Explain the purpose of mass communication and its influence on an individual's worldview

COM120 - Introduction to Interpersonal Communication

Overview

Course Description
This course introduces the practices and principles of interpersonal communication in both dyadic and group settings. Emphasis is placed on the communication process, perception, listening, self-disclosure, speech apprehension, ethics, nonverbal communication, conflict, power, and dysfunctional communication relationships. Upon completion, students should be able to demonstrate interpersonal communication skills, apply basic principles of group discussion, and manage conflict in interpersonal communication situations.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate interpersonal skills

Objectives
Apply basic principles of group discussion.

Objectives
Manage conflict in interpersonal communication situations.

COM231 - Public Speaking

Overview

Course Description
This course provides instruction and experience in preparation and delivery of speeches within a public setting and group discussion. Emphasis is placed on research, preparation, delivery, and evaluation of informative, persuasive, and special occasion public speaking. Upon completion, students should be able to prepare and deliver well-organized speeches and participate in group discussion with appropriate audiovisual support.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Identify and utilize strategies to manage speech apprehension.

Objectives
Model the concept of “listener-oriented” speaking.

Objectives
Practice active and critical listening and provide effective constructive feedback to speakers.

Objectives
Analyze audiences and devise speaking strategies based on the analyses.

Objectives
Define, compare, and apply concepts of speech organization, support, introductions, conclusions, and transitions.

Objectives
Create and deliver effective impromptu, informative, and persuasive speeches.

Objectives
Assess areas for improvement in nonverbal and vocal speech delivery.

Objectives
Demonstrate improvement in speech development and delivery.

COS111 - Cosmetology Concepts I

Overview

Course Description
This course introduces basic cosmetology concepts. Topics include safety, first aid, sanitation, bacteriology, anatomy, diseases and disorders, hygiene, product knowledge, chemistry, ethics, manicures, and other related topics. Upon completion, students should be able to safely and competently apply cosmetology concepts in the salon setting.

Course Typically Offered
Fall, Spring

Credit Hours
4

Take COS-112;

Student Learning Outcomes

Learning Objectives

Objectives
Explain infection control principles and safety as they relate to cosmetology practices.

Objectives
Describe the general structure and function of human anatomy and physiology as it applies to cosmetology.

Objectives
Analyze the history and career opportunities available in the field of cosmetology.

Objectives
Evaluate the role of life skills, professional image, and communication in building a successful cosmetology career.

Objectives
Identify and explain the structure and conditions of the hair and scalp, including disorders and diseases.

Objectives
Evaluate the principles of haircutting and hair design to determine appropriate services and recommend personalized hair care solutions.

COS111A - Cosmetology Concepts I

Overview

Course Description
This course introduces basic cosmetology concepts. Topics include safety, first aid, sanitation, bacteriology, anatomy, diseases and disorders, hygiene, product knowledge, chemistry, ethics, manicures, and other related topics. Upon completion, students should be able to safely and competently apply cosmetology concepts in the salon setting.

Objectives
Demonstrate proper infection control, handwashing, and disinfection procedures for tools and workstations.

Objectives
Perform proper draping techniques for hair services, including shampooing and scalp massage.

Objectives
Demonstrate shampooing, conditioning, and scalp massage techniques for different hair and scalp conditions.

Objectives
Perform basic haircutting techniques, including blunt, graduated, and layered cuts.

Objectives
Demonstrate proper blow-drying, thermal styling, and curling iron manipulation techniques.

Objectives
Execute chemical texture services, including permanent waving and relaxer applications.

COS112A - Salon I

Overview

Course Description
This course introduces basic salon services. Topics include scalp treatments, shampooing, rinsing, hair color, design, haircutting, permanent waving, pressing, relaxing, wigs, and other related topics. Upon completion, students should be able to safely and competently demonstrate salon services.

Learning Objectives

Objectives
Describe the structure, growth, and nutritional needs of the skin.

Objectives
Analyze common skin conditions, disorders, and diseases relevant to cosmetology.

Objectives
Identify the structure and growth process of nails and analyze nail disorders and diseases.

Objectives
Explain the fundamental principles of chemical texture services and their effect on hair structure.

Objectives
Assess the composition and function of hair color and its chemical interactions.

Objectives
Evaluate methods of hair removal and compare the effectiveness of different techniques.

COS113AB - Cosmetology Concepts II

Overview

Course Description
This course covers more comprehensive cosmetology concepts. Topics include safety, product knowledge, chemistry, manicuring, chemical restructuring, and hair coloring. Upon completion, students should be able to safely and competently apply these cosmetology concepts in the salon setting.

Learning Objectives

Objectives
Perform hair coloring applications including single-process, lightening, and highlighting techniques.

Objectives
Execute advanced hair color techniques, including balayage, root smudging, and color melting.

Objectives
Demonstrate professional eyebrow shaping and waxing techniques using soft and hard wax.

Objectives
Perform facials, including basic, dry skin, oily skin, and acne-prone treatments.

Objectives
Apply basic and advanced nail services, including manicures, pedicures, and enhancements.

Objectives
Demonstrate eyelash and brow tinting, lash lifts, and brow lamination techniques.

COS114AB - Salon II

Overview

Course Description
This course provides experience in a simulated salon setting. Topics include basic skin care, manicuring, nail application, scalp treatments, shampooing, rinsing, hair color, design, haircutting, chemical restructuring, pressing, wigs, and other related topics. Upon completion, students should be able to safely and competently demonstrate these salon services.

Corequisite

COS-116

Take COS-116(S24641);

State prerequisite

Type
Prerequisite

Take All: COS-111 and COS-112

Take COS-111 COS-112;

Student Learning Outcomes

Learning Objectives

Objectives
Describe the basic principles of electricity and electrical safety as they relate to cosmetology.

Objectives
Analyze braiding techniques and their cultural significance in the beauty industry.

Objectives
Evaluate different types of wigs and hair additions and their role in hairstyling and hair replacement.

Objectives
Explain the principles and techniques of professional facial treatments.

Objectives
Assess makeup application techniques for different face shapes and skin types.

Objectives
Analyze career planning strategies and the business aspects of the cosmetology industry.

COS116 - Salon III

Overview

Course Description
This course provides comprehensive experience in a simulated salon setting. Emphasis is placed on intermediate-level of skin care, manicuring, scalp treatments, shampooing, hair color, design, haircutting, chemical restructuring, pressing, and other related topics. Upon completion, students should be able to safely and competently demonstrate these salon services.

Course Typically Offered
Spring, Summer

Credit Hours
4

Requisites

Simple Requisites

Corequisite

Type
Corequisite

COS-115

Take COS-115(S24640);

State prerequisite

Type
Prerequisite

Take All: COS-111 and COS-112

Take COS-111 COS-112;

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate professional upstyling techniques, including chignons and French pleats.

Objectives
Perform braiding and twisting techniques for different hair textures.

Objectives
Demonstrate natural hairstyling methods, including locs and Nubian coils.

Objectives
Perform customized facials for dry, oily, and acne-prone skin types.

Objectives
Apply professional makeup techniques, including contouring and false eyelash application.

Objectives
Demonstrate proper infection control and setup for makeup and skincare applications.

COS117 - Cosmetology Concepts IV

Overview

Course Description
This course covers advanced cosmetology concepts. Topics include chemistry and hair structure, advanced cutting and design, and an overview of all cosmetology concepts in preparation for the licensing examination. Upon completion, students should be able to demonstrate an understanding of these cosmetology concepts and meet program completion requirements.

Course Typically Offered
Fall, Spring

Credit Hours
2

Prerequisite

Take All: COS-111 and COS-112

Take COS-111 COS-112;

Student Learning Outcomes

Learning Objectives

Objectives
Develop a professional career plan for employment in the cosmetology industry.

Objectives
Analyze the professional skills required for success in the beauty industry.

Objectives
Evaluate business strategies for salon management and entrepreneurship.

Objectives
Identify the financial responsibilities and pricing structures used in salon business operations.

Objectives
Assess continuing education and licensing renewal requirements for cosmetology professionals.

Objectives
Examine strategies for professional networking and marketing in the beauty industry.

COS118 - Salon IV

Overview

Course Description
This course provides advanced experience in a simulated salon setting. Emphasis is placed on efficient and competent delivery of all salon services in preparation for the licensing examination and employment. Upon completion, students should be able to demonstrate competence in program requirements and the areas covered on the Cosmetology Licensing Examination and meet entry-level employment requirements.

Course Typically Offered
Fall, Spring

Credit Hours
7

Requisites

Simple Requisites

Corequisite

Corequisite

COS-117

Take COS-117(S24642);

State prerequisite

Type
Prerequisite

Take All: COS-111 and COS-112

Take COS-111 COS-112;

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate advanced technical skills in preparation for the state board practical exam.

Objectives
Perform advanced styling and cutting techniques, including precision cuts and fades.

Objectives
Execute chemical services, including permanent waving, relaxers, and advanced coloring techniques.

Objectives
Apply professional makeup and skincare techniques suitable for real-world clients.

Objectives
Practice time management and efficiency in performing cosmetology services.

Objectives
Demonstrate proficiency in all required practical skills to pass the state board exam.

COS119 - Esthetics Concepts I

Overview

Course Description
This course covers the concepts of esthetics. Topics include orientation, anatomy, physiology, hygiene, sterilization, first aid, chemistry, basic dermatology, and professional ethics. Upon completion, students should be able to demonstrate an understanding of the concepts of esthetics and meet course requirements.

Course Typically Offered
Fall, Spring

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Analyze life skills, professional image, and communication strategies essential for success in esthetics.

Objectives
Explain infection control principles and best practices for maintaining a safe and hygienic esthetics environment.

Objectives
Describe the principles of chemistry and chemical safety related to esthetic services and skincare products.

Objectives
Evaluate the effects of electricity and electrical safety in esthetics services and equipment use.

Objectives
Identify and describe the physiology and histology of the skin, including common disorders and diseases.

Objectives
Examine the principles of skin analysis, skincare ingredients, and facial services to determine appropriate services.

COS120 - Esthetics Salon I

Overview

Course Description
This course covers the techniques of esthetics in a comprehensive experience in a simulated salon setting. Topics include client consultation, facials, body treatments, hair removal, make-up applications, and color analysis. Upon completion, students should be able to safely and competently demonstrate esthetic services on clients in a salon setting.

Course Typically Offered
Fall, Spring

Credit Hours
6

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate proper infection control, handwashing, and disinfection procedures for esthetics tools and workstations.

Objectives
Perform skin analysis and consultation to determine appropriate skincare product and services.

Objectives
Demonstrate proper hair removal techniques, including waxing, depilatory application, and tweezing.

Objectives
Perform basic facials, including steam, cleansing, exfoliation, extraction, and hydration.

Objectives
Demonstrate proficiency in facial massage techniques for relaxation and skin stimulation.

Objectives
Safely perform facial services using electrical devices such as magnifiers, LED light, and high-frequency machines.

COS121 - Manicure/Nail Technology I

Overview

Course Description
This course covers techniques of nail technology, hand and arm surface manipulation, and recognition of nail diseases and disorders. Topics include OSHA/safety, sanitation, bacteriology, product knowledge, salesmanship, manicures, artificial applications, pedicures, surface manipulation, and other related topics. Upon completion, students should be able to safely and competently perform nail care, including manicures, pedicures, surface manipulations, decorating and artificial applications in a salon setting.

Course Typically Offered
Fall

Credit Hours
6

Student Learning Outcomes

Learning Objectives

Objectives
Describe and demonstrate fundamental techniques in nail technology, including shaping, buffing, and enhancement applications.

Objectives
Identify common nail diseases and disorders to determine appropriate care and contraindications.

Objectives
Explain infection control principles and their relevance to maintaining a safe nail care environment.

Objectives
Demonstrate knowledge of nail care products, including chemical composition and proper usage.

Objectives
Discuss professional salesmanship techniques to promote nail care services and retail products.

Objectives
Perform professional nail care services, including manicures, pedicures, nail artistry, and artificial enhancements, in a salon setting.

COS125 - Esthetics Concepts II

Overview

Course Description
This course covers more comprehensive esthetics concepts. Topics include nutrition, business management, makeup, and color analysis. Upon completion students should be able to demonstrate an understanding of the advanced esthetics concepts and meet course requirements.

Course Typically Offered
Fall, Spring

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Explain the anatomy and physiology of the skin and its relation to esthetics services.

Objectives
Analyze hair growth cycles and explain various methods of hair removal.

Objectives
Describe fundamental and corrective makeup techniques, including color theory and application methods.

Objectives
Evaluate the use of facial devices and advanced esthetics services in skincare applications.

Objectives
Analyze service area setup and the role of the esthetician in creating a safe, comfortable experience.

Objectives
Examine career planning, professional ethics, and business principles in the esthetics industry.

COS126 - Esthetics Salon II

Overview

Course Description
This course provides experience in a simulated esthetics setting. Topics include machine facials, aromatherapy, surface manipulation in relation to skin care, electricity, and apparatus. Upon completion, students should be able to demonstrate competence in program requirements and the areas covered on the Cosmetology licensing examination for Estheticians.

Course Typically Offered
Fall, Spring

Credit Hours
6

Student Learning Outcomes

Learning Objectives

Objectives
Perform advanced facials, including manual exfoliation, microdermabrasion, chemical peels, microneedling, and dermaplaning.

Objectives
Demonstrate professional makeup application techniques, including contouring and corrective makeup.

Objectives
Perform advanced machine facials using Woods lamp, galvanic current, LED therapy, and suction devices.

Objectives
Demonstrate proficiency in artificial lash application, lash lifts, brow lamination, and lash/brow tinting.

Objectives
Demonstrate proper infection control, handwashing, and disinfection procedures for esthetics tools and workstations.

Objectives
Demonstrate readiness for the esthetics state board practical exam through comprehensive service execution.

COS222 - Manicure/Nail Tech. II

Overview

Course Description
This course covers advanced techniques of nail technology and hand and arm surface manipulation. Topics include OSHA/safety, product knowledge, customer service, salesmanship, artificial applications, nail art, and other related topics. Upon completion, students should be able to demonstrate competence necessary for the licensing examination, including advanced nail care, artificial enhancements, and decorations.

Course Typically Offered
Spring

Credit Hours
6

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take COS-121

Take COS-121(S24327);

Student Learning Outcomes

Learning Objectives

Objectives
Describe and demonstrate advanced techniques in nail technology, including precision shaping, sculpting, and finishing.

Objectives
Identify advanced nail diseases and disorders to determine appropriate care and contraindications.

Objectives
Demonstrate product knowledge, including the selection and proper use of advanced nail care products and chemicals.

Objectives
Apply professional customer service and salesmanship strategies to promote nail care services and retail products.

Objectives
Perform advanced artificial enhancements, nail art, and decorative applications while adhering to industry standards.

Objectives
Explain and demonstrate OSHA safety standards and infection control procedures for advanced nail services.

Objectives
Demonstrate proficiency in all practical skills required for the state licensing examination, including advanced nail care, artificial enhancements, and nail artistry.

COS223 - Contemporary Hair Coloring

Overview

Course Description
This course covers basic color concepts, hair coloring problems, and application techniques. Topics include color theory, terminology, contemporary techniques, product knowledge, and other related topics. Upon completion, students should be able to identify a clients color needs and safely and competently perform color applications and correct problems.

Course Typically Offered
Spring

Credit Hours
2

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take All: COS-111 and COS-112

Take COS-111 COS-112;

Student Learning Outcomes

Learning Objectives

Objectives
Analyze color theory principles and accurately explain hair coloring terminology.

Objectives
Demonstrate contemporary hair coloring techniques, including balayage, color melting, and fashion tones in a lab setting.

Objectives
Explain and apply product knowledge, including color formulation, mixing, and application techniques.

Objectives
Assess a client's hair color needs and safely perform hair coloring services, including corrective color applications.

COS224 - Trichology & Chemistry

Overview

Course Description
This course is a study of hair and the interaction of applied chemicals. Emphasis is placed on pH actions and the reactions and effects of chemical ingredients. Upon completion, students should be able to demonstrate an understanding of chemical terminology, pH testing, and chemical reactions on hair.

Course Typically Offered
Fall

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Explain pH levels and analyze the chemical reactions and effects of ingredients used in hair treatments.

Objectives
Define and apply key chemical terminology related to hair treatments, color processing, and chemical services.

Objectives
Demonstrate pH testing techniques to assess the compatibility of products with different hair types.

Objectives
Analyze the effects of chemical reactions on the hair structure and integrity after processing treatments.

COS253 - Esthetics Instructional Concepts I

Overview

Course Description
This course introduces esthetic instructional concepts and skills. Topics include orientation, theories of education, unit planning, daily lesson plans, laboratory management, student assessment in a laboratory setting. Upon completion, students should be able to demonstrate esthetic services and instruct and objectively assess student performance in a classroom setting.

Credit Hours
11

Student Learning Outcomes

Learning Objectives

Objectives
Identify and discuss theories of education.

Objectives
Discuss unit planning, daily lesson plans, laboratory management, and student assessment in a laboratory setting.

Objectives
Demonstrate esthetic services and instruct and objectively assess student performance in a classroom setting.

COS254 - Esthetic Instructional Concepts II

Overview

Course Description
This course covers advanced esthetic instructional concepts and skills. Topics include practical demonstrations, lesson planning, lecture techniques, development and administration of assessment tools, record keeping and other related topics. Upon completion,students should be able to demonostrate competencies in the areas covered by the Esthetics Instructor Licensing Examination and meet program requirements.

Credit Hours
11

Student Learning Outcomes

Learning Objectives

Objectives
Complete a practical demonstration.

Objectives
Develop and administer lesson plans, assessment tools and record keeping.

Objectives
Demonstrate competencies in the areas covered by the Esthetics Instructor Licensing Examination and meet program requirements.

COS271 - Instructor Concepts I

Overview

Course Description
This course introduces the basic cosmetology instructional concepts. Topics include orientation, theories of education, unit planning, daily lesson planning, laboratory management, student assessment, record keeping, and other related topics. Upon completion, students should be able to identify theories of education, develop lesson plans, demonstrate supervisory techniques, and assess student performance in a classroom setting.

Credit Hours
5

Student Learning Outcomes

Learning Objectives

Objectives
Identify and discuss theories of education.

Objectives
Discuss unit planning, laboratory management, student assessment and record keeping.

Objectives
Develop lesson plans and demonstrate supervisory techniques.

Objectives
Assess student performance in a classroom setting.

COS272 - Instructor Practicum I

Overview

Course Description
This course covers supervisory and instructional skills for teaching entry-level cosmetology students in a laboratory setting. Topics include demonstrations of services, supervision, and entry-level student assessment. Upon completion, students should be able to demonstrate salon services and instruct and objectively assess the entry-level student.

Credit Hours

Learning Objectives

Objectives
Complete practical demonstrations.

Objectives
Demonstrate lesson planning and lecture techniques.

Objectives
Develop and administer assessment tools, record keeping and other related topics.

Objectives
Demonstrate supervision techniques, assess student performance in a classroom setting and keep accurate records.

COS274 - Instructor Practicum II

Overview

Course Description
This course is designed to develop supervisory and instructional skills for teaching advanced cosmetology students in a laboratory setting. Topics include practical demonstrations, supervision, and advanced student assessment. Upon completion, students should be able to demonstrate competence in the areas covered by the Instructor Licensing Examination and meet program completion requirements.

Course Typically Offered
Spring

Credit Hours
7

Student Learning Outcomes

Learning Objectives

Objectives
Complete practical demonstrations.

Objectives
Demonstrate supervision and advanced student assessment.

Objectives
Demonstrate competence in the areas covered by the Instructor Licensing Examination and meet program completion requirements.

CSC113 - Artificial Intelligence Fundamentals

Overview

Course Description
This course provides a survey of artificial intelligence and machine learning. Topics include the history, development, and current applications of artificial intelligence and machine learning. Upon completion, students should be able to demonstrate general artificial intelligence and machine learning concepts.

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Define and describe the six main domains of Artificial Intelligence and explain real-world applications of each with specific examples.

Objectives
Define generative AI and describe its three main architectures along with their corresponding training methods, using labeled diagrams and examples.

Objectives
Define, compare, and contrast key techniques in data wrangling and data exploration (e.g., managing missing values, normalization, outlier detection, and visualization methods) by applying them to a sample dataset.

Objectives
Define input/output features, interpret scatter diagrams, and explain the role of loss functions in linear regression models, then analyze a simple linear regression example using labeled components.

Objectives
Describe how the K-Nearest Neighbors (KNN) algorithm uses supervised learning and how the K-Means algorithm uses unsupervised learning, then compare their objectives, input requirements, and output interpretations.

Objectives
Use Python and scikit-learn to implement and evaluate machine learning models for linear regression, binary classification, and polynomial regression, achieving reasonable accuracy on a holdout test set for classification tasks and interpreting model coefficients and performance metrics.

CSC118 - Swift Programming I

Overview

Course Description
This course introduces the development of iOS applications and Apple applications using Swift programming language. Emphasis is placed on syntax, object-oriented principles, memory management, and functional concepts of Swift programming. Upon completion, students should be able to develop fully functional iOS and Apple applications using Swift programming language.

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Code in Swift using the code concepts used by IOS developers

Objectives
Use XCode and UIKit to build IOS screens using stock UI elements

Objectives
Create multipage IOS apps

Objectives
Debug and test IOS apps

Objectives
Deploy IOS apps to local IOS devices

CSC121 - Python Programming

Overview

Course Description
This course introduces computer programming using the Python programming language. Emphasis is placed on common algorithms and programming principles utilizing the standard library distributed with Python. Upon completion, students should be able to design, code, test, and debug Python language programs.

Credit Hours
3

CSC134 - C++ Programming

Overview

Course Description
This course introduces computer programming using the C++ programming language with object-oriented programming principles. Emphasis is placed on event-driven programming methods, including creating and manipulating objects, classes, and using object-oriented tools such as the class debugger. Upon completion, students should be able to design, code, test and debug at a beginning level.

Course Typically Offered
Fall

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Describe basic hardware and software components of a computer system.

Objectives
Describe the terms compiler and Integrated Development Environment (IDE).

Objectives
Describe structured design and object-oriented design programming methodologies.

Objectives
Describe the basic components of a C++ program (i.e., functions, special symbols, identifiers).

Objectives
Design, code and test programs using the C++ programming language.6 Trace and debug programs written in the C++ programming language.

CSC139 - Visual BASIC Programming

Overview

Course Description
This course introduces computer programming using the Visual BASIC programming language with object-oriented programming principles. Emphasis is placed on event-driven programming methods, including creating and manipulating objects, classes, and using object-oriented tools such as the class debugger. Upon completion, students should be able to design, code, test and debug at a beginning level.

Credit Hours
3

CSC151 - JAVA Programming

Overview

Course Description
This course introduces computer programming using the JAVA programming language with object-oriented programming principles. Emphasis is placed on event-driven programming methods, including creating and manipulating objects, classes, and using object-oriented tools such as the class debugger. Upon completion students should be able to design, code, test, debug JAVA language programs.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Describe basic hardware and software components of a computer system.

Objectives
Define structured design and object-oriented design

Objectives
Describe the basic components of a Java program programming methodologies.

Objectives
Design, code and test programs using the Java.

CSC218 - Swift Programming II

Overview

Course Description
This course introduces advanced iOS application development using the Swift programming language. Emphasis is placed on navigation, data manipulation, web services, prototyping, debugging, and project planning. Upon completion, students should be able to develop advanced multifunctional iOS and Apple applications using the Swift programming language.

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take CSC-118

Take CSC-118;

Student Learning Outcomes

Learning Objectives

Objectives
Use tables to display lists of information, to allow users to interact with the information.

Objectives
Organize the files, structures, and classes in IOS apps, making it easier to maintain

Objectives
Save data to the IOS device, so that any information the user enters will persist on the device

Objectives
To request information from a web service and to use that information within an app

CST111 - Construction I

Overview

Course Description
This course covers standard and alternative building methods to include wall framing. Topics include safety and footings, foundations, floor framing systems, and wall framing systems commonly used in the construction industry. Upon completion, students should be able to safely erect all framing necessary to begin roof framing.

Course Typically Offered
Fall, Spring

Credit Hours
4

Student Learning Outcomes

Learning Objectives

Objectives
Set up a construction worksite including the safe and effective use of all typical construction tools.

Objectives
Demonstrate competency in the use of measuring and mathematical computing tools such as tape measure, speed square and framing square.

Objectives
Demonstrate proficiency in the safe use of hand and power tools

Objectives
Execute, in actual scale, conventional and high performance construction framing techniques required to build a house.

Objectives
Apply critical thinking skills: in choosing proper and best construction materials per application; the installation of conventional and high performance construction techniques; solving work flow problems; and navigating the challenges of the construction industry.

Objectives
Communicate effectively with peers towards harmonious and productive work flow.

CST112 - Construction II

Overview

Course Description
This course covers building methods and materials used to dry-in a building. Topics include safety, ceiling/ roof framing applications, roof finishes, windows, and exterior doors. Upon completion, students should be able to safely erect different roof types and properly install windows and exterior doors, roofing, and exterior finish materials.

Course Typically Offered
Spring

Credit Hours
4

Take CST-111;

Student Learning Outcomes

Learning Objectives

Objectives
Set up a construction worksite including the safe and effective use of all typical construction tools.

Objectives
Demonstrate competency in the use of measuring and mathematical computing tools such as tape measure, speed square and framing square.

Objectives
Demonstrate proficiency in the safe use of hand and power tools

Objectives
Execute, in actual scale, conventional and high performance exterior finishes and envelope details including windows and doors required to build a house.

Objectives
Apply critical thinking skills: in choosing proper and best construction materials per application; the installation of conventional and high performance techniques; solving work flow problems; and navigating the challenges of the construction industry.

Objectives
Communicate effectively with peers towards harmonious and productive work flow.

CST113 - Construction III

Overview

Course Description
This course covers building methods and materials used to complete the interior of a structure. Topics include safety, installation of thermal and acoustical barriers, and interior finishes including millwork, cabinets, interior doors, flooring, and wall treatments. Upon completion, students should be able to safely and accurately install interior treatments including insulation, paneling, drywall, molding, doors, flooring, and cabinetry.

Course Typically Offered
Spring, Summer

Credit Hours
4

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take CST-112

Take CST-112;

Apply critical thinking skills: in choosing proper and best construction materials per application; the installation of conventional and high performance construction techniques; solving work flow problems; and navigating the challenges of the construction industry.

Objectives
Communicate effectively with peers towards harmonious and productive work flow.

CST131 - OSHA/Safety/ Certification

Overview

Course Description
This course covers the concepts of work site safety. Topics include OSHA regulations, tool safety, and certifications which relate to the construction industry. Upon completion, students should be able to identify and maintain a safe working environment based on OSHA regulations and maintain proper records and certifications.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Identify construction workplace hazards and implement appropriate mitigation and protection methods.

Objectives
Implement a construction worksite prioritizing the safe and effective use of all typical construction tools, material handling, and equipment operation.

Objectives
Apply critical thinking skills to evaluate, avoid, and mitigate potential unsafe hazards in the workplace.

Objectives
Communicate effectively to demonstrate professionalism in prioritizing a workplace culture of safety.

Objectives
Model a knowledge base and proactive behavior that recognizes the inherent danger in the construction occupation and values a culture of safety.

CST150 - Building Science

Overview

Course Description
This course introduces concepts and techniques for the design and interaction of the mechanical systems of high performance buildings. Topics include building envelope, heating, ventilation and air conditioning (HVAC), indoor air quality, lighting, plumbing and electrical. Upon completion, students should be able to understand building systems interaction and performance.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Describe the concepts and techniques behind high performance building systems.

Objectives
Demonstrate an ability to utilize the tools to perform field measurements of building performance.

Objectives
Explain how building systems interact and perform.

Objectives
Identify and understand career pathways between Building Science and Construction

CST221 - Statics/Structures

Overview

Course Description
This course covers the basic concepts of statics and strength of materials related to building structures. Topics include span charts, dimensional framing requirements, building forces on columns, beams, girders, and footings and connection points when timber, steel, and concrete members are used. Upon completion, students should be familiar with various load conditions present in structural members.

Prerequisite

Take One Set: Set 1: ARC-112 and MAT-110 Set 2: ARC-112 and MAT-121 Set 3: ARC-112 and MAT-171 Set 4: CAR-112 and MAT-110 Set 5: CAR-112 and MAT-121 Set 6: CAR-112 and MAT-171 Set 7: CST-112 and MAT-110 Set 8: CST-112 and MAT-121 Set 9: CST-112 and MAT-171 Set 10: MAT-110 and CST-112 Set 11: MAT-121 and CST-112 Set 12: MAT-171 and CST-112

Take 1 group; # Take MAT-110(S26398) ARC-112(S23271); # Take MAT-121(S26399) ARC-112(S23271); # Take MAT-171(S26403) ARC-112(S23271); # Take MAT-110(S26398) CAR-112(S16249); # Take MAT-121(S26399) CAR-112(S16249); # Take MAT-171(S26403) CAR-112(S16249); # Take MAT-110(S26398)

CST-112; # Take MAT-121(S26399) CST-112; # Take MAT-171(S26403) CST-112;

Student Learning Outcomes

Learning Objectives

Objectives
Describe Newton's 3 Laws of Motion and how they apply to structures.

Objectives
Solve for resultant vectors from force vectors

Objectives
Illustrate Free-Body diagrams and apply equilibrium equations

Objectives
Calculate scalar moments on beams, moment of a force, and couple moments

Objectives
Evaluate the structural capabilities of trusses, shear walls, etc.Apply friction, moment of inertia, and center of gravity to design concepts

CST241 - Planning/Estimating I

Overview

Course Description
This course covers the procedures involved in planning and estimating a construction/building project. Topics include Construction Specifications Institute (CSI) MasterFormat and performing quantity takeoffs of materials required for a building project. Upon completion, students should be able to accurately complete a take-off of materials and equipment needs involved in a construction project.

Take One : BPR-130, MAT-110, MAT-121, MAT-143, or MAT-171

Take 1 group; # Take BPR-130(S23275); # Take MAT-110(S26398); # Take MAT-121(S26399); # Take MAT-143(S26401); # Take MAT-171(S26403);

Student Learning Outcomes

Learning Objectives

Objectives
Apply Planning and Scheduling process and flow to project scenarios

Objectives
Calculate relevant construction mathematical equations and geometry including area, volume, layout, and pythagorean theorem in order to calculate construction materials

Objectives
Evaluate the applicable work scope per task at hand and the accompanying materials and work flow

Objectives
Create accurate project estimates.

CTI110 - Information Technology Foundations

Overview

Course Description
This course provides an introduction to technology concepts and current trends in IT. Topics include foundational concepts across various IT domains such as, but not limited to, artificial intelligence, database fundamentals, programming principles, and web development. Upon completion, students should be able to demonstrate knowledge in core IT areas and apply skills critical for their academic and professional success.

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Apply basic principles of programming logic.

Objectives
Create a simple website with mark-up tool.

Objectives
Create a simple database table.

Objectives
Use programming language elements to create server scripts.

Objectives
Recognize and use Web page structure and style elements.

Objectives
Update and extract information from a database.

Objectives
Analyze and troubleshoot code samples by applying corrective fixes

CTI120 - Network and Security Foundations

Overview

Course Description
This course introduces students to the Network concepts, including networking terminology and protocols, local and wide area networks, and network standards. Emphasis is placed on securing information systems and the various implementation policies. Upon completion, students should be able to perform basic tasks related to networking mathematics, terminology, media and protocols.

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Perform basic calculations necessary for network operations.

Objectives
Identify the components of local and wide area networks.

Objectives
Identify security risks to a networked information system.

Objectives
Describe recent advances in network technologies and their impact.

Objectives
Implement initial settings including passwords, IP addressing, and default gateway parameters on a network switch and end devices.

Objectives
Explain how network protocols enable devices to access local and remote network resources.

Objectives
Explain how physical layer protocols, services, and network media support communications across data networks.

Objectives
Calculate numbers between decimal, binary, and hexadecimal systems.

Objectives
Explain how media access control in the data link layer supports communications across networks.

Objectives
Explain how Ethernet operates in a switched network.

Objectives
Explain how routers use network layer protocols and services to enable end-to-end connectivity.

Objectives
Explain how ARP and ND enable communication on a local area network.

Objectives
Implement initial settings on a router and end devices.

Objectives
Calculate an IPv4 subnetting scheme to efficiently segment your network.

Objectives
Implement an IPv6 addressing scheme.

Objectives
Use various tools to test network connectivity.

Objectives
Compare the operation of transport layer protocols in supporting end-to-end communication.

Objectives
Explain the operation of the application layer in providing support to end-user applications.

Objectives
Configure switches and routers with device hardening features to enhance security.

Objectives
Troubleshoot connectivity in a small network.

Objectives
Explain why basic security measures are necessary on network devices.

Objectives
Identify security vulnerabilities and general mitigation techniques.

Objectives
Configure network devices with devices hardening features to mitigate security threats

CTI140 - Virtualization Concepts

Overview

Course Description
This course introduces operating system virtualization. Emphasis is placed on virtualization terminology, virtual machine storage, virtual networking and access control. Upon completion, students should be able to perform tasks related to installation, configuration and management of virtual machines.

Course Typically Offered
Fall

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Apply basic principles of programming logic.

Objectives
Create a simple website with mark-up tools.

Objectives
Create a simple database table.

Objectives
List the benefits of implementing virtualization technologies.

Objectives
Describe the various virtualization tools that are available

Objectives
Create a virtual machine.

Objectives
Install operating systems on a virtual machine.

Objectives
Manage resources, networking, and other devices for a virtual machine.

Objectives
Copy a virtual machine.

Objectives
Explain the importance of "availability" as it relates to virtualization

Objectives
Demonstrate best practices for deploying applications in a virtual environment.

CTI289 - Computer Technology Integration Capstone Project

Overview

Course Description
This course provides students an opportunity to complete a significant integrated technology project from the design phase through implementation with minimal instructor support. Emphasis is placed on technology policy, process planning, procedure definition, systems architecture, and security issues to create projects for the many areas in which computer technology is integrated. Upon completion, students should be able to create, implement, and support a comprehensive technology integration project from the planning and design phase through implementation.

Course Typically Offered
Spring, Summer

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take All: CTI-110, CTI-120, and CTS-115

Take CTI-110(S22510) CTI-120(S22511) CTS-115(S20996);

Student Learning Outcomes

Learning Objectives

Objectives
Utilize a systems development methodology to create a new information system.

Objectives
Document business user system requirements.

Objectives
Develop formal information systems project documentation.

Objectives
Design, develop, and implement a formal testing plan.

Objectives
Design, develop, and implement a formal training plan.

Objectives
Transition the new information system to business users.

CTS115 - Information Systems Business Concepts

Overview

Course Description
The course introduces the role of IT in managing business processes and the need for business process and IT alignment. Emphasis is placed on industry need for understanding business challenges and developing/managing information systems to contribute to the decision making process based on these challenges. Upon completion, students should be able to demonstrate knowledge of the 'hybrid business manager' and the potential offered by new technology and systems.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Identify the relationship between the business objectives and the IT requirements of an enterprise.

Objectives
Identify attributes that make up a "hybrid business manager."

Objectives
Assess the role of technology options for managing business processes.

Objectives
Demonstrate the development of a plan for the creation of create an MIS system

Objectives
Describe foundational Management Information Systems (MIS) benefits

Objectives
Describe the steps utilized in MIS systems development

Objectives
Describe various types of Cross-Functional MIS used in business and professional environments

Objectives
Describe how the information systems facilitate decision making

Objectives
Describe how various MIS systems are used with supply chains

Objectives
Describe best practices in MIS information security management

CTS120 - Hardware/Software Support

Overview

Course Description
This course covers the basic hardware of a personal computer, including installation, operations and interactions with software. Topics include component identification, memory-system, peripheral installation and configuration, preventive maintenance, hardware diagnostics/repair, installation and optimization of system software, commercial programs, system configuration, and device-drivers. Upon completion, students should be able to select appropriate computer equipment and software, upgrade/maintain existing equipment and software, and troubleshoot/repair non-functioning personal computers.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Identify appropriate computer equipment and software based on organizational needs.

Objectives
Demonstrate ability to upgrade/maintain existing equipment and software.

Objectives
Repair non-functioning personal computers.

Objectives
Identify, install, and configure various mobile devices.

Objectives
Describe basic networking devices and protocols.

Objectives
Install and configure a basic SOHO network.

Objectives
Perform basic IP configuration on a PC.

Objectives
Demonstrate competencies in upgrading/repairing a PC including installing and configuring I/O, multimedia, communication devices, and network interface cards.

Objectives
Identify different types of hardware and components, including basic peripheral devices.

Objectives
Demonstrate selection of various components to assemble a working PC.

Objectives
Describe basic virtualization and cloud computing concepts.

Objectives
Describe basic troubleshooting procedures.10. Demonstrate methods of preventive maintenance.

Objectives
Identify the objectives of CompTIA's A+ certification exams and demonstrate an understanding of their testing procedures.

CTS130 - Spreadsheet

Overview

Course Description
This course introduces basic spreadsheet design and development. Topics include writing formulas, using functions, enhancing spreadsheets, creating charts, and printing. Upon completion, students should be able to design and print basic spreadsheets and charts.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Create a worksheet with embedded charts and/or graphs.

Objectives
Enter formulas and use the Sum, Average, Max, Min, If and advanced financial functions.

Objectives
Format fonts, numbers, cells, and other features.

Objectives
Create and use formulas.

Objectives
Run What-If Analyses, and work with large worksheets.

Objectives
Create, sort and query a table.

Objectives
Create and process a database using Excel.

CTS135 - Integrated Software Intro

Overview

Course Description
This course instructs students in the Windows or Linux based program suites for word processing, spreadsheet, database, personal information manager, and presentation software. This course prepares students for introductory level skills in database, spreadsheet, personal information manager, word processing, and presentation applications to utilize data sharing. Upon completion, students should be able to design and integrate data at an introductory level to produce documents using multiple technologies.

Course Typically Offered
Spring

Credit Hours
4

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate proficiency in navigating and utilizing core features of Microsoft Office 2020 applications, both individually and collaboratively, with a primary focus on Excel.

Objectives
Demonstrate proficiency in navigating and utilizing core features of Microsoft Office 2020 applications, both individually and collaboratively, with a primary focus on Excel.

Objectives
Prepare, design, format, save, view documents, spreadsheets, databases, and presentations using Microsoft Office, and being able to print documents, spreadsheets, database objects, and presentations.

Objectives
Integrate data between Word, PowerPoint, and Excel

Objectives
Copy data from Excel to Word and paste Excel objects into Word

Objectives
Copy a chart from Excel to Word and copy objects to the clipboard

Objectives
Embed and edit a Word file in Excel

Objectives
Switch between Word and Excel

Objectives
Create linked objects and update a linked chart and object

Objectives
Use Paste Special to create a link

Objectives
Insert a Word file as an object

CTS220 - Advanced Hardware/ Software Support

Overview

Course Description
This course provides advanced knowledge and competencies in hardware and operating system technologies for computer technicians to support personal computers. Emphasis is placed on: configuring and upgrading; diagnosis and troubleshooting; as well as preventive maintenance of hardware and system software. Upon completion, students should be able to install, configure, diagnose, perform preventive maintenance, and maintain basic networking on personal computers.

Course Typically Offered
Spring

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take CTS-120

Take CTS-120(S23679);

Student Learning Outcomes

Learning Objectives

Objectives
Compare and contrast different operating systems, including mobile device operating systems.

Objectives
Demonstrate use of Windows Utilities and Tools to Support the OS, including command-line tools.

Objectives
Configure Microsoft Windows networking concepts on a client/desktop.

Objectives
Use features and tools of the Mac OS and Linux client/desktop operating systems.

Objectives
Summarize security strategies for a basic network to secure Windows workstations and mobile devices.

Objectives
Troubleshoot microsoft windows OS problems.

Objectives
Troubleshoot and resolve PC security issues.

Objectives
Troubleshoot mobile OS and application issues.

Objectives
Describe best practices for documentation and change management.

Objectives
Use proper communication techniques and display professionalism.

Objectives
Describe the basic concept of scripting.

CTS285 - Systems Analysis & Design

Overview

Course Description
This course introduces established and evolving methodologies for the analysis, design, and development of an information system. Emphasis is placed on system characteristics, managing projects, prototyping, CASE/OOM tools, and systems development life cycle phases. Upon completion, students should be able to analyze a problem and design an appropriate solution using a combination of tools and techniques.

Credit Hours
3

Requisites

Simple Requisites

Local Prerequisite

Type
Prerequisite

CIS-115

Take CIS-115(S25440);

CUL110 - Sanitation and Safety

Overview

Course Description
This course introduces the basic principles of sanitation and safety relative to the hospitality industry. Topics include personal hygiene, sanitation and safety regulations, use and care of equipment, the principles of food-borne illness, and other related topics. Upon completion, students should be able to demonstrate an understanding of the content necessary for successful completion of a nationally recognized food/safety/sanitation exam.

Course Typically Offered
Fall, Spring

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Identify foodborne illnesses.

Objectives
Identify and prevent contaminants in food establishment

Objectives
Explain and implement a HACCP procedure in a food service establishment using the seven principles

Objectives
Demonstrates proper kitchen hygiene and personal hygiene

Objectives
Apply proper internal cooking temperatures

Objectives
Distinguish the characteristics of FAT TOM by identifying each acronym and the importance of it in the kitchen

Objectives
Apply purchasing, receiving, and storage strategies using key steps such as FIFO

Objectives
Design a daily, weekly, monthly, and yearly cleaning schedule

Objectives
Develop a pest control plan for the facility on quarterly time frame

Objectives
Complete a daily temperature log of prepared foods

CUL112 - Nutrition for Foodservice

Overview

Course Description
This course covers the principles of nutrition and its relationship to the foodservice industry. Topics include personal nutrition fundamentals, weight management, exercise, nutritional adaptation/analysis of recipes/ menus, healthy cooking techniques and marketing nutrition in a foodservice operation. Upon completion, students should be able to apply basic nutritional concepts to food preparation and selection.

Course Typically Offered
Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Identification of common dietary preferences and intolerances

Objectives
Plan and Implement allergy free meals

Objectives
Demonstrate Healthy cooking techniques

Objectives
Apply contemporary presentation to healthy food preparation

Objectives
Judge the value of nutrient dense food

Objectives
Develop a personal food philosophy

Objectives
Identify connections between food choices and health status

Objectives
Compare and Contrast labels of unhealthy food choices and nutritious food choices, including industry terms for ingredients

CUL112A - Nutrition for Foodservice Lab

Overview

Course Description
This course provides a laboratory experience for enhancing student skills in the principles of nutrition and its relationship to the foodservice industry. Emphasis is placed on personal nutrition fundamentals, weight management/exercise, nutritional adaptation/ analysis of recipes/menus, healthy cooking techniques and marketing nutrition in a foodservice operation. Upon completion, students should be able to apply basic nutritional concepts to food preparation and selection.

Course Typically Offered
Spring

Credit Hours
1

Requisites

Simple Requisites

State concurrent or previous courses

Type
Corequisite

Take CUL-112

Take CUL-112(S10923);

Learning Objectives

Objectives
Identification of common dietary preferences and intolerances

Objectives
Plan and Implement allergy free meals

Objectives
Demonstrate Healthy cooking techniques

Objectives
Apply contemporary presentation to healthy food preparation

Objectives
Judge the value of nutrient dense food

Objectives
Develop a personal food philosophy

Objectives
Identify connections between food choices and health status

Student Learning Outcomes

CUL120 - Purchasing

Overview

Course Description
This course covers purchasing for foodservice operations. Emphasis is placed on yield tests, procurement, negotiating, inventory control, product specification, purchasing ethics, vendor relationships, food product specifications and software applications. Upon completion, students should be able to apply effective purchasing techniques based on the end-use of the product.

Course Typically Offered
Fall, Spring

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
List the basic steps in the purchasing process, along with the impacts of effective purchasing.

Objectives
Classify the internal and external factors that impact the purchasing process.

Objectives
Compare and contrast the use of ready to eat products over in house made.

Objectives
State the procedures helpful in forecasting product needs.

Objectives
Identify how to make vendor selection decisions.

Objectives
Describe alternative purchasing sources.

Objectives
Explain the flow of products that are purchased for use in multiunit organizations.

Objectives
Explain how technology can impact the ordering process.

Objectives
Summarize the importance of professional vendor relations.

Objectives
Summarize the basic requirements for effective product receiving.

CUL135 - Food and Beverage Service

Overview

Course Description
This course is designed to cover the practical skills and knowledge necessary for effective food and beverage service in a variety of settings. Topics include greeting/ service of guests, dining room set-up, profitability, menu sales and merchandising, service styles and reservations. Upon completion, students should be able to demonstrate competence in human relations and the skills required in the service of foods and beverages.

Course Typically Offered
Spring

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Use proper Proper Food Service ticket writing skills and implement those skills in the cafe

Objectives
Identify proper table manners and table etiquette and demonstrate those foundational techniques

Objectives
Explain and Demonstrate Basic Fine Dining procedures such as Utensils, Glassware, Plating, and Napkins

Objectives
Explain and Demonstrate how to properly present each course during a fine dining experience

Objectives
Examine food and beverage pairings

Objectives
Review and Summarize Hospitality and how they are implemented in hotels, caterings,and kitchen F.O.H

Objectives
Implement Food and Beverage Cost Control

Objectives
8Identify types of menus that are specific to F.O.H training.

Objectives
Examine BEO's from other F.O.H establishments and Design one specific to your class project

Objectives
Demonstrate Table Services

CUL140 - Culinary Skills I

Overview

Course Description
This course introduces the fundamental concepts, skills and techniques in basic cookery, and moist, dry and combination heat. Emphasis is placed on recipe conversion, measurements, terminology, classical knife cuts, safe food/equipment handling, flavorings/ seasonings, stocks/sauces/soups, and related topics. Upon completion, students should be able to exhibit the basic cooking skills used in the foodservice industry.

Course Typically Offered
Fall

Credit Hours
5

Requisites

Simple Requisites

State concurrent or previous courses

Type
Corequisite

Take CUL-110

Take CUL-110(S22835);

Student Learning Outcomes

Learning Objectives

Objectives
Exhibit safe practices such as personal hygiene, cross-contamination and food temperature

Objectives
Demonstrate proper and safe knife skills including basic cuts and knife care

Objectives
Classify food products and identify different recipe ingredients and in storage

Objectives
Demonstrate proper use, cleaning and care of smallwares and equipment

Objectives
Exhibit proper cooking methods and techniques by properly executing lab recipe

Objectives
Complete daily mise en place with ingredients, equipment and tools

Objectives
Interpret standardized recipes and design/ construct personal recipes

Objectives
Identify proper measuring tools and techniques for liquid vs. dry

Objectives
Complete kitchen math with recipe conversion projects

Objectives
Exhibit kitchen professionalism through language, dress and conduct

CUL140A - Culinary Skills I Lab

Overview

Course Description
This course provides laboratory experience for enhancing student skills in the fundamental concepts, skills and techniques in basic cookery, and moist, dry and combination heat. Emphasis is placed on practical experiences including recipe conversion, measurements, terminology, classical knife cuts, safe food/equipment handling, flavorings/seasonings, stocks/sauces/soups, and related topics. Upon completion, students should be able to demonstrate competency in the basic cooking skills used in the foodservice industry.

Course Typically Offered
Fall

Credit Hours
1

Requisites

Type
Corequisite

Take CUL-110 and CUL-140

Take CUL-110(S11030) CUL-140(S12163);

Student Learning Outcomes

Learning Objectives

Objectives
Exhibit safe practices such as personal hygiene, cross-contamination and food temperature

Objectives
Demonstrate proper and safe knife skills including basic cuts and knife care

Objectives
Classify food products and identify different recipe ingredients and in storage

Objectives
Demonstrate proper use, cleaning and care of smallwares and equipment

Objectives
Exhibit proper cooking methods and techniques by properly executing lab recipe

Objectives
Complete daily mise en place with ingredients, equipment and tools

Objectives
Interpret standardized recipes and design/ construct personal recipes

Objectives
Identify proper measuring tools and techniques for liquid vs. dry

Objectives
Complete kitchen math with recipe conversion projects

Objectives
Exhibit kitchen professionalism through language, dress and conduct

CUL150 - Food Science

Overview

Course Description
This course covers the chemical and physical changes in foods that occur with cooking, handling, and processing. Emphasis is placed on practical application of heat transfer and its effect on color/flavor/texture, emulsification, protein coagulation, leavening agents, viscosity, and gel formation. Upon completion, students should be able to demonstrate an understanding of these principles as they apply to food preparation in an experimental setting.

Credit Hours
2

CUL160 - Baking I

Overview

Course Description
This course covers basic ingredients, techniques, weights and measures, baking terminology and formula calculations. Topics include yeast/chemically leavened products, laminated doughs, pastry dough batter, pies/tarts, meringue, custard, cakes and cookies, icings, glazes and basic sauces. Upon completion, students should be able to demonstrate proper scaling and measurement techniques, and prepare and evaluate a variety of bakery products.

Course Typically Offered
Spring

Credit Hours
3

Requisites

Simple Requisites

State concurrent or previous courses

Type
Corequisite

Take CUL-110

Take CUL-110(S22835);

Student Learning Outcomes

Learning Objectives

Objectives
Identify Flours and how to properly use them in recipes

Objectives
Distinguish the use proper use of measurements such as weight vs. volume

Objectives
Demonstrate how to properly use Baking Equipment

Objectives
Demonstrate how to properly construct cake and the properties such as Icing, garnishes, and fillings

Objectives
Understand Bakeshop math and food safety

Objectives
Understand and Demonstrate how to make foundational quickbreads, soft doughs, and desserts

Objectives
Differentiate and Identify how to properly use leavening agents and yeasts

Objectives
Identify composition of foundational baking ingredients such as butter, eggs, diary, wheat

CUL160A - Baking I Lab

Overview

Course Description
This course provides a laboratory experience for enhancing student skills in basic baking. Emphasis is placed on the practical experiences of yeast/chemically leavened products, laminated/pastry dough, batter, pies/tarts, meringue, custard, cakes and cookies, icings, glazes and basic sauces. Upon completion, students should be able to demonstrate a basic proficiency in bakeshop applications.

Credit Hours
1

Requisites

Simple Requisites

State concurrent or previous courses

Type
Corequisite

Take CUL-160 and CUL-110

Take CUL-160(S13015) CUL-110(S22835);

CUL165 - Therapeutic Cuisine

Overview

Course Description
This course covers the principles of therapeutic cooking with an emphasis on gluten free, allergy free, and vegan cooking. Topics include vegan, lacto-ovo, vegetarian, nut-free, dairy-free, wheat-free, soy-free, and corn-free meal preparation. Upon completion, students should be able to demonstrate an understanding of common dietary preferences and intolerances, and be able to safely and accurately execute allergy-free meal plan preparation.

Course Typically Offered
Fall

Credit Hours
3

Requisites

Simple Requisites

State concurrent or previous courses

Type
Prerequisite

Take All: CUL-110 and CUL-140

Take CUL-110(S22835) CUL-140(S22844);

Student Learning Outcomes

Learning Objectives

Objectives
Define the basic components of whole foods nutrition and a holistic lifestyle model.

Objectives
Classify key words/theories such as: holism/ holistic, balance, therapeutic cooking, diet vs. dietary approach, quality ingredients, food politics.

Objectives
Examine, implement and individualize a whole foods diet program.

Objectives
Design menus for special diets and/or health conditions

Objectives
Recall knowledge of cooking techniques and methods related to health based cuisine

Objectives
Develop personal food and lifestyle related goals in the form of journaling

Objectives
Apply basic nutritional concepts as they relate to health and well-being; foundations of healthy cooking

Objectives
Demonstrate alternate baking skills by using alternative flours, fats and dairy

Objectives
Revise recipes to incorporate healthier ingredients . Identify healthy proteins, fats and carbohydrates

Objectives
Identify essential vitamins and minerals for a healthy diet

CUL170 - Garde Manger I

Overview

Course Description
This course introduces basic cold food preparation techniques and pantry production. Topics include salads, sandwiches, appetizers, dressings, basic garnishes, cheeses, cold sauces, and related food items. Upon completion, students should be able to present a cold food display and exhibit an understanding of the cold kitchen and its related terminology.

Course Typically Offered
SPring

Credit Hours
3

Requisites

Simple Requisites

State concurrent or previous courses

Type
Corequisite

Take CUL-110

Take CUL-110(S22835);

Student Learning Outcomes

Learning Objectives

Objectives
Identify food products that comprise the cold kitchen

Objectives
Demonstrate the ability to compose plates of charcuterie in an informed manner

Objectives
Design and execute buffet tables, utilizing knowledge of flow and product placement

Objectives
Produce presentation of cold foods utilizing carve fruits and vegetables safely and attractively

Objectives
Construct forcemeats and utilize in a variety of products such as sausages and pates

Objectives
Produce different types of dressings for salads composed of a variety of foods

Objectives
Implement appropriate cooking techniques to produce soups, pates, cheeses, jams, and jellies

Objectives
Demonstrate ability to produce commonly purchased condiments: mayonnaises, jams, jellies, dressings, spreads

Objectives
Distinguish between the different types of salads and sandwiches

Objectives
Identify and display cheeses

CUL240 - Culinary Skills II

Overview

Course Description
This course is designed to further students' knowledge of the fundamental concepts, skills, and techniques involved in basic cookery. Emphasis is placed on meat identification/fabrication, butchery and cooking techniques/methods; appropriate vegetable/starch accompaniments; compound sauces; plate presentation; breakfast cookery; and quantity food preparation. Upon completion, students should be able to plan, execute, and successfully serve entrees with complementary side items.

Course Typically Offered
Fall

Credit Hours
5

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take one set: Set 1: CUL-110 and CUL-140 Set 2: CUL-110, CUL-142, and CUL-170

Take 1 group; # Take CUL-110(S22835) CUL-140(S22844); # Take CUL-110(S22835) CUL-142(S22845) CUL-170(S22849);

Student Learning Outcomes

Learning Objectives

Objectives
Identify proteins and how to store, fabricate and cook

Objectives
Identify fruits and how to store and cook

Objectives
Identify vegetables and how to store and cook

Objectives
Identify legumes and how to store and cook

Objectives
Distinguish the difference between dairy products, how to store and use in cooking

Objectives
Recall and reproduce mother sauces and compound sauces

Objectives
Demonstrate ability to produce foundational desserts such as doughs, breads, and cookies

Objectives
Identify and respond to basic dietary issues such as portion size, allergies and dietary restrictions

Objectives
Compose a well designed plate including color, height and texture

Objectives
Execute kitchen skills in a real time service such as urgency, communication, and cooking skills

CUL240A - Culinary Skills II Lab

Overview

Course Description
This course provides a laboratory experience for furthering students' knowledge of the fundamental concepts, skills, and techniques involved in basic cookery. Emphasis is placed on practical applications of meat identification/fabrication; butchery and cooking techniques/methods; appropriate vegetable/starch accompaniments; compound sauces; plate presentation; breakfast cookery; and food preparation. Upon completion, students should be able to demonstrate a basic proficiency in the preparation of entrees and accompaniments.

Student Learning Outcomes

Learning Objectives

Objectives
Develop Business Plan for Your Catering Business

Objectives
Develop Business Plan for Your Food Truck Business

Objectives
Propose and Build Catering Menu

Objectives
Implement Recipes Costing in your menu that you are building

Objectives
Organize and Examine the specific needs for Event Planning

Objectives
Invent a marketing plan that uses social media platforms to market your business

Objectives
Build your brand and concept for your Food Truck

Objectives
Design your Business Logo

Objectives
Develop Employee Schedule and list/name certified hub kitchens

Objectives
Review Capstone Project which will include Business plans, and Presentation of both your Catering Business and Food truck business

CUL283 - Farm-To-Table

Overview

Course Description
This course introduces students to the cooperation between sustainable farmers and foodservice operations. Emphasis is placed on environmental relationships, including how foods are grown, processed, cooked and distributed, as well as related implications on quality and sustainability. Upon completion, students should be able to demonstrate an understanding of environmental stewardship and its impact on cuisine.

Credit Hours
5

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take All: CUL-110 and CUL-140

Take CUL-110(S22835) CUL-140(S22844);

DBA110 - Database Concepts

Overview

Course Description
This course introduces database design and creation using a DBMS product. Emphasis is placed on data dictionaries, normalization, data integrity, data modeling, and creation of simple tables, queries, reports, and forms. Upon completion, students should be able to design and implement normalized database structures by creating simple database tables, queries, reports, and forms.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Utilize normalization and data integrity.

Objectives
Create simple tables, queries, reports and forms.

Objectives
Explain data modeling and the entity-relationship model.

Objectives
Describe a quality database design.

Objectives
Using advanced report and form techniques: Create tables, queries, reports, and forms

DBA120 - Database Programming I

Overview

Course Description
This course is designed to develop SQL programming proficiency. Emphasis is placed on data definition, data manipulation, and data control statements as well as on report generation. Upon completion, students should be able to write programs which create, update, and produce reports.

Course Typically Offered
Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Issue SQL commands to retrieve data based on criteria specified by the user.

Objectives
Issue SQL commands to join multiple tables and retrieve data from the joined tables.

Objectives
Perform calculations based on data contained within the database.

Objectives
Use sub-queries to retrieve data based on unknown conditions that exist within the database.

Objectives
Insert, update and delete data stored in database tables.

Objectives
Create, modify, and drop database tables.

Objectives
Enforce business rules through the use of table constraints.

Objectives
Create printable reports through various SQL commands.

DDF211 - Design Process I

Overview

Course Description
This course emphasizes design processes for finished products. Topics include data collection from manuals and handbooks, efficient use of materials, design sketching, specifications, and vendor selection. Upon completion, students should be able to research and plan the design process for a finished product.

Course Typically Offered
Spring, Summer

Credit Hours
4

Requisites

Simple Requisites

Local Corequisite

Type
Corequisite

DFT-153 or DFT-154

Take DFT-153(S20643) or DFT-154(S20664);

Student Learning Outcomes

Learning Objectives

Objectives
Analyze design criteria and develop a solution

Objectives
Create technical documentation for a design project

Objectives
Estimate cost of the final design

DDF212 - Design Process II

Overview

Course Description
This course stresses the integration of various design practices. Emphasis is placed on the creation of an original design. Upon completion, students should be able to apply engineering graphics and design procedures to a design project.

Course Typically Offered
Fall

Credit Hours
4

Objectives
Analyze design criteria, develop a solution, and iterate the solution

Objectives
Create technical documentation for a design project

Objectives
Estimate a cost analysis of the final design

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take DDF-211

Take DDF-211(S10112);

Student Learning Outcomes

Learning Objectives

Objectives
Understand and apply the basic procedures for design

DDT110 - Intellectual & Developmental Disabilities

Overview

Course Description
This course covers intellectual and developmental disabilities. Emphasis is placed on causes of intellectual/developmental disabilities, service provision and advocacy. Upon completion, students should be able to demonstrate a general knowledge of serving individuals with intellectual/developmental disabilities.

Course Typically Offered
Fall

Credit Hours
3

Requisites

Simple Requisites

Local Co-Requisite

Type
Corequisite

Take HSE-135

Take HSE-135;

Student Learning Outcomes

Learning Objectives

Objectives
Describe the causes and etiology of intellectual and developmental disabilities.

Objectives
Analyze historical and contemporary perspectives on intellectual and developmental disabilities.

Objectives
Apply best practices to support the needs and challenges of individuals with intellectual and developmental disabilities.

Objectives
Evaluate different service provision models and interventions for individuals with intellectual and developmental disabilities.

Objectives
Describe approaches to advocate for the rights and inclusion of individuals with intellectual and developmental disabilities.

DDT120 - Direct Service Skills

Overview

Course Description
This course covers teaching modalities which enhance learning among people with intellectual/ developmental disabilities. Topics include assessment, support strategies, writing behavioral strategies, teaching methods, and documentation. Upon completion, students should be able to demonstrate competence in individual program plan development and implementation.

Credit Hours
3

DDT220 - Individualized Service Planning

Overview

Course Description
This course covers individual program planning used in services for people with intellectual and developmental disabilities. Topics include basic components of service planning, outcomes, and integration of services. Upon completion, students should be able to develop and evaluate service plans.

Credit Hours
3

DDT230 - Supported Employment

Overview

Course Description
This course introduces the concept of supported employment and the action steps needed to assist individuals with disabilities to participate in the world of work. Topics include a history of vocational services, supported employment values, organizational marketing, consumer assessment, job development, employment selection, job site training and long term supports. Upon completion, students should be able to develop a customer profile, a marketing plan, and assist individuals with disabilities to obtain and maintain employment.

Credit Hours
3

DEN100 - Basic Orofacial Anatomy

Overview

Course Description
This course provides a basic introduction to the structures of the head, neck, and oral cavity. Topics include tooth morphology, head and neck anatomy, histology, and embryology. Upon completion, students should be able to demonstrate knowledge of normal structures and development and how they relate to the practice of dental assisting.

Course Typically Offered
Fall

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Describe extraoral and intraoral structures.

Objectives
Compare the most common numbering systems for deciduous and permanent teeth.

Objectives
Differentiate internal and external morphology on the deciduous and permanent dentition using standard oral anatomy terminology.

Objectives
Describe variations in occlusion.

Objectives
Name surrounding structures and describe their locations.

Objectives
Discuss histology and embryology as it pertains to basic tooth and facial development.

Objectives
Describe the specific muscles in the head and neck.

Objectives
Discuss major nervous and vascular supply of the face and oral cavity.

DEN101 - Preclinical Procedures

Overview

Course Description
This course provides instruction in procedures for the clinical dental assistant as specified by the North Carolina Dental Practice Act. Emphasis is placed on orientation to the profession, infection control techniques, instruments, related expanded functions, and diagnostic, operative, and specialty procedures. Upon completion, students should be able to demonstrate proficiency in clinical dental assisting procedures.

Course Typically Offered
Fall

Credit Hours
7

Student Learning Outcomes

Learning Objectives

Objectives
Describe dental health team members with regard to educational requirements, dental organizations and professional roles in the dental office.

Objectives
Discuss, identify, operate and maintain dental operatory equipment.

Objectives
State and apply the principles to team dentistry.

Objectives
Explain and apply the principles of dental patient assessment and management.

Objectives
Describe and demonstrate the principles of instrument transfer.

Objectives
Describe and implement infection control techniques.

Objectives
Recall and demonstrate the techniques and procedures necessary to maintain a clean, dry working field.

Objectives
Describe and demonstrate skills in assisting with the armamentarium, materials and procedures associated with operative dentistry and dental specialties.

Objectives
Describe the rationale for treatment planning.

Objectives
Accurately record conditions found in the oral cavity using the appropriate charting symbols.

DEN102 - Dental Materials

Overview

Course Description
This course provides instruction in identification, properties, evaluation of quality, principles, and procedures related to manipulation and storage of operative and specialty dental materials. Emphasis is placed on the understanding and safe application of materials used in the dental office and laboratory. Upon completion, students should be able to demonstrate proficiency in the laboratory and clinical application of routinely used dental materials.

Course Typically Offered
Fall

Credit Hours
4

Student Learning Outcomes

Learning Objectives

Objectives
Identify and distinguish the dental materials presented in a lecture and lab.

Objectives
Describe and identify the common types and normal uses for each kind of dental material.

Objectives
Explain and list the properties and composition of each dental material.

Objectives
Demonstrate the recommended technique for preparation and use of each dental material.

Objectives
Indicate the effects of variations in techniques on the properties of each dental material.

Objectives
Demonstrate and identify the current expanded functions within the scope of Dental Assisting practice for the State of North Carolina.

DEN103 - Dental Sciences

Overview

Course Description
This course is a study of oral pathology, pharmacology, and dental office emergencies. Topics include oral pathological conditions, dental therapeutics, and management of emergency situations. Upon completion, students should be able to recognize abnormal oral conditions, identify classifications, describe actions and effects of commonly prescribed drugs, and respond to medical emergencies.

Course Typically Offered
Spring

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Explain the significance of vital signs and the health history as an aide in preventing office emergencies.

Objectives
Discuss the role of the dental assistant and other dental team members during an office emergency.

Objectives
Explain vasodepressor syncope in terms of its causes, physiology, prevention, signs/symptoms and treatment.

Objectives
Recognize airway obstruction and identify its causes physiology, prevention, signs/symptoms and treatment.

Objectives
Discuss asthma in term of its causes, physiology, prevention, signs/symptoms, and treatment.

Objectives
Explain hyperventilation in terms of its causes, physiology, prevention, signs/symptoms and treatment.

Objectives
Discuss epilepsy in terms of its terms of its causes, physiology, prevention, signs/symptoms and treatment.

Objectives
Discuss diabetes mellitus in terms of its causes, physiology, prevention, signs/symptoms and treatment.

Objectives
Recognize allergic reactions and identify certain causes, physiological aspects, prevention, signs/symptoms and treatment.

Objectives
Discuss angina pectoris and myocardial infarction in terms of its causes, physiology, prevention, signs/symptoms and treatment.

Objectives
Explain dental pharmacology in relation to common terminology, classification of drugs, controlled substances, sources of drug information, and methods of drug administration.

Objectives
Explain the purpose of a prescription including: parts of a prescription, Latin words and abbreviations, and units of measurement.

Objectives
Define Oral Pathology.

Objectives
Recognize obvious conditions of the head and neck which deviate from normal.

Objectives
Define basic pathology principles.

Objectives
Explain the inflammatory response, repair of infections, and immunity.

Objectives
Discuss some common oral developmental abnormalities.

Objectives
Explain dental caries and pulpal disorders.

Objectives
Discuss common diseases of soft tissues, neoplasms, and periodontium.

DEN104 - Dental Health Education

Overview

Course Description
This course covers the study of preventive dentistry to prepare dental assisting students for the role of dental health educator. Topics include etiology of dental diseases, preventive procedures, and patient education theory and practice. Upon completion, students should be able to demonstrate proficiency in patient counseling and oral health instruction in private practice or public health settings.

Course Typically Offered
Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Lecture:

Objectives
Community Dental Health Education: (Gagliardi Ch.1)

Objectives
Identify who is involved in creating a dental health program

Objectives
Explain the factors that influence intrinsic behaviors

Objectives
Describe multicultural issues in dental health

Objectives
Define dental health programs

Objectives
Describe the importance of a dental health program.

Objectives
Oral Hygiene Instructions/Patient Education: (Bird Ch. 15, Gagliardi Section 4, Wilkins Ch. 28 & 29)

Objectives
Define oral physiotherapy aids.

Objectives
State the objectives of plaque control and the most effective ways to control plaque.

Objectives
Discuss the types of disclosing agents available and explain the advantages of using them.

Objectives
Discuss various other aids and devices and their function in oral physiotherapy.

Objectives
Describe various types of toothpastes and explain the indications and contraindications of each.

Objectives
Describe the various types of mouth rinses available and explain the indications and contraindications of each.

Objectives
List the goal and objectives for an initial, periodic, and emergency exam.

Objectives
Fluoride: (Bird Ch. 15, Gagliardi Ch. 7)

Objectives
Discuss the history of fluoride.

Objectives
Identify the benefits of fluoride to oral health.

Objectives
Describe the differences and effects of systemic and topical fluoride.

Objectives
Discuss fluoride toxicity.

Objectives
Identify the optimal level of water fluoridation.

Objectives
List the various sources of fluoride.

Objectives
Discuss the supplemental dosage schedule

Objectives
Describe treatment guidelines for topical fluoride.

Objectives
Plaque Index and Control: (Bird Ch. 15)

Objectives
Demonstrate the recognition of plaque on teeth.

Objectives
Explain and demonstrate how to calculate a plaque index.

Objectives
Describe how to incorporate the plaque index into oral hygiene instructions.

Objectives
Nutrition and Preventive Dentistry: (Bird Ch. 16, Gagliardi Ch. 8)

Objectives
State the difference between nutrition and diet.

Objectives
Explain the difference between good nutrition and malnutrition.

Objectives
Describe how nutrients work together.

Objectives
Discuss the role of digestion, absorption and metabolism in how the body utilizes nutrients.

Objectives
Describe the food pyramid and recommended servings per group.

Objectives
List the key nutrients, their functions, sources and some significant deficiencies related to each.

Objectives
Discuss nutritional disorders that may be of concern when providing nutritional education to the dental patient.

Objectives
Explain the relationship between sucrose, plaque formation and caries susceptibility and periodontal disease.

Objectives
Explain the cariogenic nature of foods based on their retentive nature.

Objectives
Explain the cariogenic nature of foods based on their frequency at which they are eaten.

Objectives
Discuss how food choices influence the prevention of dental disease.

Objectives
Conduct a dietary analysis on a patient.

Objectives
Define liquid and soft diets and list foods from each group included in the diet.

Objectives
Describe dietary modifications required by dental patients for the following: cosmetic dentistry, injured anterior teeth, orthodontic requirements, ANUG, Pre/Post oral surgery, new denture wearer, etc.

Objectives
Community In-service/Lesson Plans: (Gagliardi Chapter 2, Section 4)

Objectives
Discuss why we create lesson plans.

Objectives
Create an effective lesson plan for a classroom.

Objectives
Plan and implement a community project

Objectives
Describe how to create an effective community outreach program.

Objectives
Tobacco Cessation: (Gagliardi Ch. 11, Wilkins Ch 32)

Objectives
List the different forms of tobacco.

Objectives
Explain the importance of tobacco cessation as it relates to oral health.

Objectives
Describe the effects of tobacco on oral and overall health.

Objectives
Discuss the environmental effects of tobacco.

Objectives
Describe oral manifestations of tobacco use.

Objectives
List pharmacotherapies available for tobacco cessation.

Objectives
List the 5 “A’s” of a tobacco cessation program.

Objectives
Oral Health Education for Special Needs/ Medically Compromised Patients: (Gagliardi Ch. 14, 15, 16, Bird Ch. 29, Wilkins Section IX)

Objectives
Describe educational alterations for children and adults with special needs

Objectives
Identify adaptive methods for brushing and flossing for patients with special needs

Objectives
Identify various medical conditions and the treatment considerations

Objectives
Oral Cancer: (Bird Ch. 17)

Objectives
Explain why oral pathology is important for the dental assistant.

Objectives
Describe types of oral lesions.

Objectives
Describe warning symptoms of oral cancer.

Objectives
Describe the appearance of lesions associated with the use of smokeless tobacco

Objectives
Discuss the procedure for follow up of a suspicious lesion

Objectives
Identify different technologies that are available for oral cancer screening

Objectives
Periodontal Disease & Acute Periodontal Conditions (Bird Ch. 14, Wilkins Ch. 18-20)

Objectives
Describe the periodontium

Objectives
Discuss the periodontal examination

Objectives
Identify causes and risk factors of periodontal disease

Objectives
Identify a case patient's severity of periodontal disease

Objectives
Recognize types of necrotizing periodontal diseases

Objectives
Describe the treatment of periodontal disease & conditions

Objectives
Intraoral Photography & Intraoral Camera (Supplemental materials/handouts)

Objectives
Discuss application for use of intra oral photography

Objectives
Photograph and mount an intraoral photography series

Objectives
Describe uses for the intraoral camera

Objectives
Caries Process & Risk Assessment (Bird Ch. 13, Wilkins Ch. 25)

Objectives
Explain the dental caries process

Objectives
Describe the causes and risk factors for dental caries

Objectives
Explain the importance of saliva related to dental caries

Objectives
Explain the goal of CAMBRA

Objectives
List the protocol for remineralization

Objectives
Lab:

Objectives
Demonstrate the difference between tooth brushing techniques.

Objectives
Demonstrate giving oral hygiene instructions to include: a. Choosing and demonstrating an appropriate brushing technique b. Choosing an appropriate oral physiotherapy aid c. Choosing and demonstrating appropriate flossing technique

Objectives
Demonstrate how to calculate a plaque index

Objectives
Plan and implement a community project

Objectives
Demonstrate proper infection control with intraoral photography

Objectives
Conduct dietary analysis on a patient

Objectives
Photograph specific areas in the oral cavity with the (intraoral) camera

Objectives
Role play providing tobacco cessation using motivational interviewing skills

Objectives
Debate the pros and cons of fluoride use

Objectives
Zoom Presentations

Objectives
Caries risk assessment

DEN105 - Practice Management

Overview

Course Description
This course provides a study of principles and procedures related to management of the dental practice. Emphasis is placed on maintaining clinical and financial records, patient scheduling, and supply and inventory control. Upon completion, students should be able to demonstrate fundamental skills in dental practice management.

Course Typically Offered
Spring, Summer

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate the ability to relate efficient management of the dental practice and recognize examples of good and bad business management techniques and their probable effects on the practice.

Objectives
Prepare and maintain patient records, both electronically and manually, in the Dental Healthcare Setting.

Objectives
Prepare and maintain financial records, both electronically and manually, in the Dental Healthcare Setting.

Objectives
Maintain appointment and recall systems, both electronically and manually, in the Dental Healthcare Setting.

Objectives
Maintain supply and inventory systems, both electronically and manually, in the Dental Healthcare Setting.

Objectives
Demonstrate the ability in usage of the ADA Code on Dental Procedures and Nomenclature and the Code of Dental Terminology manual.

Objectives
Demonstrate how to effectively communicate among dental team members and patients daily in the dental practice with oral, written, and electronic telecommunications.

DEN106 - Clinical Practice I

Overview

Course Description
This course is designed to provide experience assisting in a clinical setting. Emphasis is placed on the application of principles and procedures of four-handed dentistry and laboratory and clinical support functions. Upon completion, students should be able to utilize classroom theory and laboratory and clinical skills in a dental setting.

Course Typically Offered
Spring

Credit Hours
6

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take DEN-101

Take DEN-101(S20496);

Student Learning Outcomes

Learning Objectives

Objectives
Experience working under the direct supervision of the dentist and/or staff.

Objectives
Apply basic theory and competencies learned to actual office practices.

Objectives
Demonstrate professional behavior and dress.

Objectives
Experience performing business office management procedures.

Objectives
Interpret the NC Dental Practice Act as it applies to Dental Assistants.

Objectives
Prepare the operatory and patient for treatment utilizing correct infection control procedures.

Objectives
Assist with diagnostic procedures, restorative and specialty procedures, and preventive procedures.

Objectives
Assume radiographic responsibilities.

Objectives
Recognize signs and symptoms of medical/dental emergencies and assist in administering appropriate care.

Objectives
Operate and maintain all dental equipment.

DEN107 - Clinical Practice II

Overview

Course Description
This course is designed to increase the level of proficiency in assisting in a clinical setting. Emphasis is placed on the application of principles and procedures of four-handed dentistry and laboratory and clinical support functions. Upon completion, students should be able to combine theoretical and ethical principles necessary to perform entry-level skills including functions delegable to a DA II.

Course Typically Offered
Summer

Credit Hours
5

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take DEN-106

Take DEN-106(S14145);

Student Learning Outcomes

Learning Objectives

Objectives
Experience working under the direct supervision of the dentist and/or staff.

Objectives
Apply basic theory and competencies learned to actual office practices.

Objectives
Demonstrate professional behavior and dress.

Objectives
Experience performing business office management procedures.

Objectives
Interpret the NC Dental Practice Act as it applies to Dental Assistants.

Objectives
Prepare the operatory and patient for treatment utilizing correct infection control procedures.

Objectives
Assist with diagnostic procedures, restorative and specialty procedures, and preventive procedures.

Objectives
Assume radiographic responsibilities.

Objectives
Recognize signs and symptoms of medical/dental emergencies and assist in administering appropriate care.

Objectives
Operate and maintain all dental equipment.

DEN110 - Orofacial Anatomy

Overview

Course Description
This course introduces the structures of the head, neck, and oral cavity. Topics include tooth morphology, head and neck anatomy, histology, and embryology. Upon completion, students should be able to relate the identification of normal structures and development to the practice of dental assisting and dental hygiene.

Course Typically Offered
Fall

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Lecture:

Objectives
Describe extraoral and intraoral structures.

Objectives
Compare the most common numbering systems for deciduous and permanent teeth.

Objectives
Differentiate internal and external morphology on the deciduous and permanent dentition using standard oral anatomy terminology.

Objectives
Describe variations in occlusion.

Objectives
Name surrounding structures and describe their locations.

Objectives
Discuss histology as it pertains to basic tooth and facial development.

Objectives
Describe the locations of the bones and related landmarks of the head and neck.

Objectives
Discuss the specific muscles in the head and neck.

Objectives
Discuss major nervous, vascular and lymphatic supply of the face and oral cavity.

Objectives
Discuss local anesthetic as it pertains to the landmarks and their corresponding affects.

Objectives
Laboratory:

Objectives
Locate and identify extraoral and intraoral structures.

Objectives
Use the most common numbering systems for deciduous and permanent teeth.

Objectives
Locate and identify internal and external morphology on the deciduous and permanent dentition using standard oral anatomy terminology.

Objectives
Compare variations in occlusion.

Objectives
Locate and identify surrounding structures.

Objectives
Identify and locate the bones and related landmarks of the head and neck.

Objectives
Identify and locate specific muscles in the head and neck.

Objectives
Differentiate major nervous, vascular and lymphatic supply of the face and oral cavity.

Objectives
Identity and locate nerves and associated foramen in preparation for local anesthetic injections.

DEN111 - Infection/Hazard Control

Overview

Course Description
This course introduces the infection and hazard control procedures necessary for the safe practice of dentistry. Topics include microbiology, practical infection control, sterilization and monitoring, chemical disinfectants, aseptic technique, infectious diseases, OSHA standards, and applicable North Carolina laws. Upon completion, students should be able to understand infectious diseases, disease transmission, infection control procedures, biohazard management, OSHA standards, and applicable North Carolina laws.

Course Typically Offered
Fall, Spring

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Discuss the basic principles of microbiology.

Objectives
Recognize and classify microorganisms as they relate to the human body.

Objectives
Define and/or match terms with definitions used in microbiology.

Objectives
Identify microbial life forms from given descriptions.

Objectives
Explain various modes of disease transmission.

Objectives
Identify the various methods of sterilization.

Objectives
Identify the various methods of disinfection

Objectives
Describe proper methods used in the care of, storage, and handling of instruments.

Objectives
Identify/Describe Bacterial Diseases.

Objectives
Identify/Describe Viral Diseases.

Objectives
Identify various preventive measures/universal precautions to follow in order to reduce the risk of disease transmission.

Objectives
Define Epidemiology and explain its relation to the transmission of disease.

Objectives
Discuss the effects that infectious diseases have on/in the human body.

Objectives
Identify the CDC's classification of instruments as it relates to sterilization/disinfection.

Objectives
Identify OSHA's Bloodborne Pathogens Standards/TB Draft Standard as they relate to the Exposure Control Plans/Universal Precautions in the health care environment.

Objectives
Recognize/explain/identify NC Dept. Of DEHNR's regulations/CDC guidelines for infection control procedures/Healthcare Personnel and Patient Monitoring and surveillance.

Objectives
Explain the role of the FDA and EPA in infection control procedures.

Objectives
Explain the importance of various types of personal protective equipment.

Objectives
Identify various types of personal protective equipment.

Objectives
Describe the proper placement and removal of personal protective equipment.

Objectives
Define exposure control/universal precautions/ infection control procedures.

Objectives
Identify the preventive measures that must be utilized as determined by OSHA, CDC, EPA, FDA, other health care organizations, and the NC State Dept. Of Environment, Health, & Natural Resources.

Objectives
Identify/Recognize warning labels and symbols used according to OSHA's Bloodborne Pathogens Standard.

Objectives
Discuss the importance/reasons for using warning labels and signs as they relate to the Bloodborne Pathogens Standard.

Objectives
Describe the importance of the OSHA's Hazardous Communications Standard and watch for continual changes with the standard.

Objectives
Recognize hazardous chemicals/symbols.

Objectives
Describe the types of protective equipment to wear; safety measure to follow; handling of chemicals; and proper storage of hazardous chemicals.

Objectives
Explain the function of the material safety data sheets.

Objectives
Identify, the MSDS sheet.

Objectives
Identify the information found on/in the MSDS sheet.

DEN112 - Dental Radiography

Overview

Course Description
This course provides a comprehensive view of the principles and procedures of radiology as they apply to dentistry. Topics include techniques in exposing, processing, and evaluating radiographs, as well as radiation safety, quality assurance, and legal issues. Upon completion, students should be able to demonstrate proficiency in the production of diagnostically acceptable radiographs using appropriate safety precautions.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Lecture:

Objectives
List and describe basic principles of radiation production and quality.

Objectives
Discuss factors of x-ray production and dental sensors as related to diagnostically acceptable radiographs.

Objectives
Discuss the composition, size, speed, and uses of dental radiographic sensors.

Objectives
State guidelines for exposing dental radiographs.

Objectives
Describe the set-up, armamentarium, and proper utilization of sensor processing.

Objectives
Describe the biological effects of radiation exposure.

Objectives
Discuss the exposure and utilization of extraoral radiography.

Objectives
Discuss the rationale, methods, and law for protecting the patient and operator from ionizing radiation.

Objectives
Laboratory:

Objectives
Using a variety of techniques, make diagnostically acceptable radiographic surveys while meeting current legal requirements for radiation safety.

Objectives
Maintain the treatment area, SCANX room, and each component of the armamentarium.

Objectives
Process, mount, and evaluate radiographic surveys to determine diagnostic acceptability.

Objectives
Demonstrate proper patient management and aseptic technique during the radiographic procedure.

Objectives
Evaluate radiographs for errors in exposure and/or processing and corrective procedures.

Objectives
Demonstrate knowledge of anatomical landmarks and radiographic interpretation.

Objectives
Comply with clinic rules pertaining to safety, asepsis, and radiation protection.

DEN120 - Dental Hygiene Preclinic Lecture

Overview

Course Description
This course introduces preoperative and clinical dental hygiene concepts. Emphasis is placed on the assessment phase of patient care as well as the theory of basic dental hygiene instrumentation. Upon completion, students should be able to collect and evaluate patient data at a basic level and demonstrate knowledge of dental hygiene instrumentation.

Course Typically Offered
Fall

Credit Hours
2

Requisites

Simple Requisites

State concurrent or previous courses

Type
Corequisite

Take DEN-121

Take DEN-121;

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate professionalism in class through ethical behavior, punctuality, interest and participation.

Objectives
Exercise punctuality with class attendance and completion of assignments.

Objectives
Demonstrate respect to peers and faculty in all interactions.

Objectives
Demonstrate skills for patient reception and ergonomic practices for the dental hygienist.

Objectives
Discuss the roles, functions and responsibilities encompassing the profession of dental hygiene.

Objectives
Analyze and discuss the American Dental Hygienists' Association's Principles of Ethics.

Objectives
Explain proper infection and exposure control protocol in the clinical setting.

Objectives
Explain disease transmission processes and intervention methods for patient care.

Objectives
Describe appropriate patient/operator positioning for patient care.

Objectives
Assess at patient thoroughly and accurately to include: a. Medical/dental history b. Vital signs c. Drug referencing d. Extraoral/intraoral examination e. Gingival description f. Dental/ periodontal charting g. Bleeding and plaque control record

Objectives
Describe the techniques used for grasps and finger rests.

Objectives
Explain effective use of the mirror and compressed air for patient examination and treatment.

Objectives
Explain detection and removal techniques for soft deposits on the teeth.

Objectives
Identify appropriate oral physiotherapy aids based on patient needs and effectively educate patients in their use.

Objectives
Explain use of dental explorers for detection of hard deposits and tooth anatomy.

Objectives
Discuss the etiology of caries and techniques used in caries detection.

Objectives
Explain techniques for removal of hard deposits from the teeth and dental implants using area specific curettes, universal curettes and sickle scalers.

Objectives
Explain appropriate technique for sharpening sickle scalers, universal curettes, and area specific curettes.

Objectives
Define scaling, root planning and periodontal debridement.

Objectives
Describe the assessment of tooth mobility and furcation involvement.

Objectives
Describe the process of treatment planning and implementation.

Objectives
Explain the protocol and technique for polishing teeth and using dental floss.

Objectives
Discuss the protocol, rationale and contraindications for applying topical fluoride.

Objectives
Present a patient case to include appropriate assessment strategies, clinical findings and treatment interventions.

Objectives
Complete a peer patient utilizing all course goals and objectives including a dental hygiene care plan.

DEN121 - Dental Hygiene Preclinical Lab

Overview

Course Description
This course provides the opportunity to perform clinical dental hygiene procedures discussed in DEN 120. Emphasis is placed on clinical skills in patient assessment and instrumentation techniques. Upon completion, students should be able to demonstrate the ability to perform specific preclinical procedures.

Course Typically Offered
Fall

Credit Hours
2

Requisites

Simple Requisites

State concurrent or previous courses

Type
Corequisite

Take DEN-120

Take DEN-120;

Student Learning Outcomes

Learning Objectives

Objectives
Locate and operate dental equipment

Objectives
Demonstrate correct infection control protocol.

Objectives
Position the patient, operator, and light for treatment

Objectives
Perform a thorough and accurate assessment phase of care including: a. medical/dental history b. vital signs/drug referencing c. extraoral/ intraoral examination d. gingival description e. dental/periodontal charting f. bleeding and plaque indices

Objectives
Demonstrate effective use of the mirror and compressed air during patient examination and treatment.

Objectives
Detect, identify and remove soft deposits from the teeth using the indicated technique.

Objectives
Identify appropriate oral physiotherapy aids for each patient and effectively educate patient in their use.

Objectives
Demonstrate the correct technique to complete an intra-extra-oral examination

Objectives
Demonstrate the correct technique for use of explorers for detection of hard deposits, caries, and tooth anatomy.

Objectives
Demonstrate the correct technique for use of the periodontal probe, PSR probe, and Nabor's probe.

Objectives
Detect and remove hard deposits from the teeth using area specific curets, universal curets, and sickle scalers.

Objectives
Assess and remove extrinsic stain with accepted stain removal technique.

DEN123 - Nutrition/Dental Health

Overview

Course Description
This course introduces basic principles of nutrition with emphasis on nutritional requirements and their application to individual patient needs. Topics include the study of Federal Nutritional Guidelines, nutrient functions, Recommended Daily Allowances, Adequate Intake, Tolerable Upper Intake Level, Estimated Average Requirement, and related psychological principles. Upon completion, students should be able to recommend and counsel individuals on their food intake as related to their dental health.

Course Typically Offered
Spring

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Indicate six classes of nutrients and their importance to oral health.

Objectives
Determine the nutritional content of specific food using the Food Label.

Objectives
Discuss the role of protein, lipids, and carbohydrates have on oral health.

Objectives
Explain basal metabolism and the various energy needs of an individual.

Objectives
Discuss the effects of foods on oral health.

Objectives
Determine how vitamins and minerals affect oral health.

Objectives
Explain how proper nutrition is important for children, periodontal clients, female considerations, medically compromised and the elderly.

Objectives
Identify different cultures in the local population for the purpose of promoting oral health and an understanding of disease activity.

Objectives
Recognize the need to treatment plan according to state of health of the individual.

DEN124 - Periodontology

Overview

Course Description
This course provides an in-depth study of the periodontium, periodontal pathology, periodontal monitoring, and the principles of periodontal therapy. Topics include periodontal anatomy and a study of the etiology, classification, and treatment modalities of periodontal diseases. Upon completion, students should be able to describe, compare, and contrast techniques involved in periodontal/maintenance therapy, as well as patient care management.

Course Typically Offered
Spring

Credit Hours
2

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take DEN-110

Take DEN-110;

Student Learning Outcomes

Learning Objectives

Objectives
Describe the anatomical structures of the periodontium and describe their histological features and relationships.

Objectives
Describe changes in histological and anatomical features in response to functional demands placed on the periodontium.

Objectives
Describe the AAP classification of periodontal disease.

Objectives
Describe the potential pathogenic mechanisms of plaque bacteria in inflammatory periodontal disease.

Objectives
Discuss the systemic and local factors that influence the occurrence and progression of periodontal disease.

Objectives
Describe the different stages of periodontal disease.

Objectives
Describe the steps involved in a complete assessment of periodontal disease.

Objectives
Discuss the use and treatment of dental implants including types of implants and dental hygiene care of implant patients.

Objectives
Evaluate the components necessary for the diagnosis of periodontal disease.

Objectives
Recognize the significance and clinical indications for surgical, non-surgical and maintenance therapies.

Objectives
Apply evidence-based approach to periodontal care.

Objectives
Demonstrate the ability to analyze a radiograph for periodontal disease.

DEN125 - Dental Office Emergencies

Overview

Course Description
This course provides a study of the management of dental office emergencies. Topics include methods of prevention, necessary equipment/drugs, medicolegal considerations, recognition and effective initial management of a variety of emergencies. Upon completion, the student should be able to recognize, assess and manage various dental office emergencies and activate advanced medical support when indicated.

Course Typically Offered
Summer

Credit Hours
1

Student Learning Outcomes

Learning Objectives

Objectives
Discuss the general considerations

Objectives
List/evaluate predisposing factors

Objectives
Discuss/demonstrate possible prevention strategies

Objectives
Generate related dental therapy considerations and modify accordingly

Objectives
Describe / effectively evaluate clinical manifestations

DEN130 - Dental Hygiene Theory I

Overview

Course Description
This course is a continuation of the didactic dental hygiene concepts necessary for providing an oral prophylaxis. Topics include deposits/removal, instrument sharpening, patient education, fluorides, planning for dental hygiene treatment, charting, and clinical records and procedures. Upon completion, students should be able to demonstrate knowledge needed to complete a thorough oral prophylaxis.

Course Typically Offered
Spring

Credit Hours
2

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take DEN-120

Take DEN-120;

State concurrent or previous courses

Type
Corequisite

Take DEN-131

Take DEN-131;

Student Learning Outcomes

Learning Objectives

Objectives
Discuss Preventive Counseling and Behavior Change for Patient Care

Objectives
Determine Oral Hygiene needs regarding toothbrushes and toothbrushing

Objectives
Learn and demonstrate interdental care

Objectives
Recognize and determine the need for dentifrices and mouthrinses

Objectives
Understand and learn fluoride patient and community needs

Objectives
Determine the prevention and protocol for control of Dental Caries

Objectives
Understand the care and needs for patients with Orthodontics Appliances

Objectives
Understand and determine the needs for the Patient with Dental Prosthesis and Implants

Objectives
Identify the needs for the patient with nicotine disorders and assess the patient to determine the dental hygiene care plan necessary for treatment

Objectives
Demonstrate Instrument sharpening and appropriate care for dental instruments

Objectives
Discuss the different options for whitening and tooth bleaching options

DEN131 - Dental Hygiene Clinic I

Overview

Course Description
This course continues skill development in providing an oral prophylaxis. Emphasis is placed on treatment of the recall patients with gingivitis or light deposits. Upon completion, students should be able to assess these patients' needs and complete the necessary dental hygiene treatment.

Course Typically Offered
Spring

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take DEN-121

Take DEN-121;

State concurrent or previous courses

Type
Corequisite

Take DEN-130

Take DEN-130;

Student Learning Outcomes

Learning Objectives

Objectives
Utilize appropriate aseptic techniques in the preparation and performance of all clinical procedures.

Objectives
Obtain/review, record, update and interpret a personal, medical, and dental history for each patient appointment.

Objectives
Apply information obtained in didactic classes in observing and examining the oral conditions of each patient observations demonstrated in the oral examination for each patient.

Objectives
Examine the dentition and chart findings accurately.

Objectives
Apply information obtained in periodontics and DEN 124 when assessing the periodontal structures and document findings accurately.

Objectives
Recognize the potential for emergency situations and respond appropriately.

Objectives
Recognize conditions in which a radiographic examination is necessary.

Objectives
Recognize medical and dental findings that may require further consultation and review and seek appropriate consultation.

Objectives
Incorporate preventive care planning in rendering care to patients as it relates to overall dental needs, as discussed in all previous and current coursework.

Objectives
Educate patients regarding their present oral health status.

Objectives
Educate and communicate clearly with each patient in methods of home care specific to his/her oral needs.

Objectives
Position the patient, self and equipment to attain maximum visibility and accessibility for examination and treatment.

Objectives
Select appropriate instruments for each procedure according to principles and design and function and nature of deposits.

Objectives
Analyze and evaluate individual strengths and weaknesses in skill development.

Objectives
Demonstrate and assess the effectiveness of instrumentation in producing a tooth surface that can maintain health.

Objectives
Demonstrate and assess the ability to perform selective polishing procedures for stain and plaque removal.

Objectives
Select and apply appropriate topical fluoride and/or recommend appropriate home-use fluoride products.

Objectives
Provide fundamental dental hygiene services involving the selection, manipulation, and care of specific dental materials.

Objectives
Maintain effectively sharpened instruments.

Objectives
Recognize the need for, and implement the CCCC tobacco cessation program with selected patients.

Objectives
Exhibit the use of appropriate professional communication with others including patients, faculty, staff, and peers.

Objectives
Exhibit appropriate professional behavior in all clinical experiences and assigned rotations.

Objectives
Involve and inform the patient in all aspects of decision-making, treatment planning and implementing care.

Objectives
Utilize evidence-based patient management skills in the assessment, planning, treatment of all patients in order to provide comprehensive effective patient care

DEN140 - Dental Hygiene Theory II

Overview

Course Description
This course introduces principles in treatment modification. Topics include modification of treatment for pain management and advanced radiographic interpretation. Upon completion, students should be able to differentiate necessary treatment modifications, radiographic abnormalities, and be certified in the administration of local anesthesia.

Course Typically Offered
Summer

Credit Hours
2

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take DEN-130

Take DEN-130;

State concurrent or previous courses

Corequisite

Take DEN-141

Take DEN-141;

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate and apply the principles of Ultrasonic use during clinical practice.

Objectives
Determine, apply, and administer local anesthetics as needed for dental hygiene care

Objectives
Understand and apply the necessary treatment for Pain Control in patient care.

Objectives
Learn and apply the principles of Intraoral Photography

Objectives
Identify and apply the principles of radiographic interpretation of periodontal disease, trauma, pulpal lesions, periapical lesions, restorations, dental materials, foreign objects, and dental caries.

Objectives
Understand how to care for the patient with dentin hypersensitivity.

DEN141 - Dental Hygiene Clinic II

Overview

Course Description
This course continues skill development in providing an oral prophylaxis. Emphasis is placed on treatment of patients with early periodontal disease and subgingival deposits. Upon completion, students should be able to assess these patients' needs and complete the necessary dental hygiene treatment.

Course Typically Offered
Summer

Credit Hours

Obtain/review, record, update and interpret a personal, medical, and dental history for each patient appointment.

Objectives
Apply information obtained in oral pathology and periodontics in observing and examining the oral conditions of each patient observations demonstrated in the oral examination for each patient.

Objectives
Examine the dentition and chart findings accurately.

Objectives
Apply information obtained in periodontics and DEN 124 when assessing the periodontal structures and document findings accurately.

Objectives
Recognize the potential for emergency situations and respond appropriately.

Objectives
Recognize conditions in which a radiographic examination is necessary.

Objectives
Recognize medical and dental findings that may require further consultation and review and seek appropriate consultation.

Objectives
Incorporate preventive care planning in rendering care to patients as it relates to overall dental needs, as discussed in all previous and current coursework.

Objectives
Educate patients regarding their present oral health status.

Objectives
Educate and communicate clearly with each patient in methods of home care specific to his/her oral needs.

Objectives
Position the patient, self and equipment to attain maximum visibility and accessibility for examination and treatment.

Objectives
Select appropriate instruments for each procedure according to principles and design and function and nature of deposits.

Objectives
Analyze and evaluate individual strengths and weaknesses in skill development.

Objectives
Demonstrate and assess the effectiveness of instrumentation in producing a tooth surface that can maintain health.

Objectives
Demonstrate and assess the ability to perform selective polishing procedures for stain and plaque removal.

Objectives
Select and apply appropriate topical fluoride and/or recommend appropriate home use fluoride products.

Objectives
Provide fundamental dental hygiene services involving the selection, manipulation, and care of specific dental materials.

Objectives
Maintain effectively sharpened instruments.

Objectives
Recognize the need for, and implement the CCCC tobacco cessation program with selected patients.

Objectives
Exhibit the use of appropriate professional communication with others including patients, faculty, staff, and peers.

Objectives
Exhibit appropriate professional behavior in all clinical experiences and assigned rotations.

DEN220 - Dental Hygiene Theory III

Overview

Course Description
This course introduces advanced principles of patient care. Topics include advanced periodontal debridement, subgingival irrigation, air polishing, special needs and case presentations. Upon completion, students should be able to demonstrate knowledge of methods of treatment and management of periodontally compromised and special needs patients.

Course Typically Offered
Fall

Credit Hours
2

Corequisite

Take DEN-221

Take DEN-221;

Student Learning Outcomes

Learning Objectives

Objectives
Explain and describe advanced and specialized clinical techniques: a. probing b. advanced instruments c. air polishing d. root instrumentation

Objectives
Determine and recognize when advanced techniques should be utilized.

Objectives
Explain hypersensitivity factors.

Objectives
Distinguish treatment modalities for hypersensitivity characteristics.

Objectives
Recognize and discuss various modifications types for patients with special needs.

Objectives
Explain the various medications used for infectious disease and how they might influence dental treatment.

Objectives
Identify barriers to communication and how to effectively express strategies for change.

Objectives
Describe oral conditions related to various medication therapies.

Objectives
Understand and explain the need for advanced treatment planning and case presentations.

DEN221 - Dental Hygiene Clinic III

Overview

Course Description
This course continues skill development in providing an oral prophylaxis. Emphasis is placed on treatment of patients with moderate to advanced periodontal involvement and moderate deposits. Upon completion, students should be able to assess these patients' needs and complete the necessary dental hygiene treatment.

Course Typically Offered
Fall

Credit Hours
4

Learning Objectives

Objectives
Utilize appropriate aseptic techniques in the preparation and performance of all clinical procedures.

Objectives
Obtain/review, record, update and interpret a personal, medical, and dental history for each patient appointment.

Objectives
Apply information obtained in oral pathology and periodontics in observing and examining the oral conditions of each patient.

Objectives
Examine the dentition and chart findings accurately.

Objectives
Apply information obtained in periodontics and DEN 124 when assessing the periodontal structures and document findings accurately.

Objectives
Recognize the potential for emergency situations and respond appropriately.

Objectives
Recognize conditions in which a radiographic examination is necessary.

Objectives
Recognize medical and dental findings that may require further consultation and review and seek appropriate consultation.

Objectives
Incorporate preventive care planning in rendering care to patients as it relates to overall dental needs, as discussed in all previous and current coursework.

Objectives
Educate patients regarding their present oral health status.

Objectives
Using information gathered from the patient's oral and periodontal evaluation, educate and communicate clearly with each patient the methods of home care specific to his/her oral needs.

Objectives
Position the patient, self and equipment to attain maximum visibility and accessibility for examination and treatment.

Objectives
Use proper ergonomics and indirect vision while performing dental hygiene procedures.

Objectives
Select appropriate instruments for each procedure according to the principles of design, function and nature of deposits.

Objectives
Analyze and evaluate individual strengths and weaknesses in skill development.

Objectives
Demonstrate and assess the effectiveness of instrumentation in producing a tooth surface that can maintain health.

Objectives
Demonstrate and assess the ability to perform selective polishing procedures for stain and plaque removal.

Objectives
Select and apply appropriate topical fluoride and/or recommend appropriate home-use fluoride products.

Objectives
Provide fundamental dental hygiene services involving the selection, manipulation, and care of specific dental materials.

Objectives
Maintain effectively sharpened instruments.

Objectives
Recognize the need for, and implement the CCCC tobacco cessation program with selected patients.

Objectives
Exhibit the use of appropriate professional communication with others including patients, faculty, staff, and peers.

Objectives
Exhibit appropriate professional behavior in all clinical experiences and assigned rotations.

Objectives
Identify and utilize resources to determine the most effective solution in given situation.

Objectives
Self-evaluate radiographs for technique errors and anatomic landmarks, and discuss with faculty.

Objectives
Apply principles of nutrition to recognize the need for and perform diet analysis and diet counseling.

Objectives
Identify the need for a medical consult and coordinate with medical professions to develop comprehensive treatment plans.

Objectives
Select special needs patient and develop appropriate treatment plan.

DEN222 - General & Oral Pathology

Overview

Course Description
This course provides a general knowledge of oral pathological manifestations associated with selected systemic and oral diseases. Topics include developmental and degenerative diseases, selected microbial diseases, specific and nonspecific immune and inflammatory responses with emphasis on recognizing abnormalities. Upon completion, students should be able to differentiate between normal and abnormal tissues and refer unusual findings to the dentist for diagnosis.

Course Typically Offered
Fall

Credit Hours
2

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take One: BIO-163, BIO-165, or BIO-168

Take BIO-163 BIO-165 or BIO-168(S11555);

Student Learning Outcomes

Learning Objectives

Objectives
Define Pathology and Oral Pathology.

Objectives
Recognize and describe various normal oral pathologies.

Objectives
Describe the microscopic events and clinical signs of inflammation.

Objectives
Recognize injuries to the teeth and oral soft tissues.

Objectives
Describe the immune response and recognize oral diseases with immunologic pathogenesis.

Objectives
Discuss and recognize clinically the various infectious diseases that cause bacterial, fungal, and viral infections.

Objectives
Explain the various developmental disorders that cause oral abnormalities.

Objectives
Describe the correlation between genetics and various pathologies.

Objectives
List and describe various neoplastic and non-neoplastic diseases.

Objectives
Recognize the oral manifestations clinically caused by systemic diseases.

Objectives
Describe the diseases affecting the temporomandibular joint (TMD).

DEN223 - Dental Pharmacology

Overview

Course Description
This course provides basic drug terminology, general principles of drug actions, dosages, routes of administration, adverse reactions, and basic principles of anesthesiology. Emphasis is placed on knowledge of drugs in overall understanding of patient histories and health status. Upon completion, students should be able to recognize that each patient's general health or drug usage may require modification of the treatment procedures.

Course Typically Offered
Spring

Credit Hours
2

Requisites

Simple Requisites

State concurrent or previous courses

Type
Corequisite

Take One: BIO-163, BIO-165, or BIO-168

Take BIO-163 BIO-165 or BIO-168(S11555);

Student Learning Outcomes

Learning Objectives

Objectives
Explain and describe the general principles of pharmacology.

Objectives
Determine and recognize various drug actions.

Objectives
Understand regulatory agencies and drug legislation

Objectives
Recognize which medications affect the autonomic system.

Objectives
Distinguish between non-opioid analgesics and opioid analgesics.

Objectives
Define and recognize the uses of various antimicrobial, antifungal and antiviral agents.

Objectives
Explain the various medications used for infectious disease and how they might influence dental treatment.

Objectives
Distinguish among the various sedative hypnotic medications and their potential uses in dentistry.

Objectives
Describe oral conditions related to various medication therapies.

Objectives
List and explain the dental concerns associated with cardiovascular disease.

Objectives
Recognize the overall management of seizure disorder and the related dental concerns.

Objectives
Describe the effects of psychiatric drugs on a patient.

Objectives
Describe the pharmacologic effects and clinical uses of antihistamines.

Objectives
Describe the relationship between the various adrenocortical steroids and other hormones.

Objectives
Explain the dental concerns of local anesthetics and cardiovascular disease.

Objectives
Discuss antineoplastic pharmacology, gastrointestinal disorders, respiratory disorders, diabetes mellitus, pregnancy, and pediatric concerns.

Objectives
Understand use of emergency drugs for special situations.

Objectives
Discuss drug abuse and its potential effects on patients and the dental community.

Objectives
Recognize natural/herbal products and dietary supplements and their potential effects and interaction with various prescription drugs.

Objectives
Discuss the various drug interactions and their effects on dental treatment.

Objectives
Explain the ethical responsibility of pharmacology in the dental practice and the confidentiality of patients.

DEN224 - Materials and Procedures

Overview

Course Description
This course introduces the physical properties of materials and related procedures used in dentistry. Topics include restorative and preventive materials, fabrication of casts and appliances, and chairside functions of the dental hygienist. Upon completion, students should be able to demonstrate proficiency in the laboratory and/or clinical application of routinely used dental materials and chairside functions.

Course Typically Offered
Spring

Credit Hours
2

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take DEN-111

Take DEN-111;

Student Learning Outcomes

Learning Objectives

Objectives
Identify and distinguish the dental materials presented in a lecture and lab.

Objectives
Describe and identify the common types and normal uses for each kind of dental material.

Objectives
Explain and list the properties and composition of each dental material.

Objectives
Demonstrate the recommended technique for preparation and use of each dental material.

Objectives
Indicate the effects of variations in techniques on the properties of each dental material.

Objectives
Demonstrate and identify the current expanded functions within the scope of Dental Hygiene practice for the State of North Carolina.

DEN230 - Dental Hygiene Theory IV

Overview

Course Description
This course provides an opportunity to increase knowledge of the profession. Emphasis is placed on dental specialties, technological advances, and completion of a case study presentation. Upon completion, students should be able to demonstrate knowledge of various disciplines of dentistry, technological advances and principles of case presentations.

Course Typically Offered
Spring

Credit Hours
1

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take DEN-220

Take DEN-220(S11191);

State concurrent or previous courses

Type
Corequisite

Take DEN-231

Take DEN-231;

Student Learning Outcomes

Learning Objectives

Objectives
Have a working knowledge of the dental specialties.

Objectives
Differentiate between new diagnostic technologies and new therapeutic technologies in the dental hygiene profession.

Objectives
Recognize when to refer and the importance of timely referrals to different specialties.

Objectives
Identify case specifics based on patient presentation and findings to determine dental hygiene treatment and diagnosis.

DEN231 - Dental Hygiene Clinic IV

Overview

Course Description
This course continues skill development in providing an oral prophylaxis. Emphasis is placed on periodontal maintenance and on treating patients with moderate to advanced/refractory periodontal disease. Upon completion, students should be able to assess these patients' needs and complete the necessary dental hygiene treatment.

Course Typically Offered
Spring

Credit Hours
4

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take DEN-221

Take DEN-221;

State concurrent or previous courses

Type
Corequisite

Take DEN-230

Take DEN-230(S12882);

Student Learning Outcomes

Learning Objectives

Objectives
Utilize resources appropriately to assist in problem identification and decision-making.

Objectives
Critically assess strengths and weaknesses.

Objectives
Develop goals and determine a plan of action to achieve each goal.

Objectives
Identify and utilize resources to determine the most effective solution in a given situation.

Objectives
Utilize appropriate aseptic techniques and professional attire in preparation and performance of clinical procedures.

Objectives
Obtain, record, and interpret a personal, medical, and dental history for each patient seen.

Objectives
Apply information obtained in the basic and dental science courses in examining and interpreting observations in the oral inspection for each patient.

Objectives
Examine the teeth and supporting structures and chart findings

Objectives
Recognize conditions for emergency situations and prepare appropriately.

Objectives
Recognize conditions which may indicate the need for radiographic examination.

Objectives
Self-evaluate radiographs for technique errors and anatomic landmarks, and discuss with faculty.

Objectives
Verbally, logically, and concisely report significant findings from radiographs to faculty and the patient.

Objectives
Recognize those findings obtained in data collection that may require further consultation; review, and seek appropriate approval from course director.

Objectives
Utilize all information obtained in data collection for preventative treatment planning.

Objectives
Inform patients of their present oral health status.

Objectives
Facilitate each patient in methods of homecare which are specific to his/her oral needs.

Objectives
Apply principles of nutrition to recognize the need for and perform diet analysis and diet counseling.

Objectives
Incorporate pit and fissure sealants into the treatment plans for patients which would benefit from the service.

Objectives
Recognize the symptoms of dental hypersensitivity, and incorporate into the treatment plan an appropriate desensitizing technique.

Objectives
Recognize the need for and incorporate intraoral photography on patients.

Objectives
Involve and inform the patient in all aspects of decision-making, treatment planning, and implementing care.

Objectives
Assess success of treatment in meeting short and long-term goals.

Objectives
Utilize evidence based patient management skills in the assessment, planning, treatment, and re-evaluation of non-surgical periodontal therapy to all patients in order to provide comprehensive effective patient care.

DEN232 - Community Dental Health

Overview

Course Description
This course provides a study of the principles and methods used in assessing, planning, implementing, and evaluating community dental health programs. Topics include epidemiology, research methodology, biostatistics, preventive dental care, dental health education, program planning, and financing and utilization of dental services. Upon completion, students should be able to assess, plan, implement, and evaluate a community dental health program.

Course Typically Offered
Fall

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Lecture:

Objectives
Understand the evolution of dental hygiene as a dental public health science.

Objectives
Define the roles of the dental hygienist within a community setting.

Objectives
Describe the differences of the current oral health care delivery systems in the United States and International countries.

Objectives
Understand the major problems/concerns with current oral health care delivery systems.

Objectives
Identify effective preventative measures when applied to community based dental programs.

Objectives
Evaluate science research and how to use this information to improve the oral health of the community.

Objectives
Differentiate between the different methods of payment of dental care.

Objectives
Define dental health education and promotion.

Objectives
Describe the difference between inter- and intra-professional collaborations.

Objectives
Identify and describe dental public health careers.

Objectives
Laboratory:

Objectives
Practice as a dental hygienist within a community setting.

Objectives
Identify the needs of a target population.

Objectives
Demonstrate skills and knowledge in various subject areas as they relate to community-based needs.

Objectives
Gather and analyze data.

Objectives
Use appropriate measurement types to assess, plan, implement, and evaluate a community-based dental health program.

Objectives
Establish channels to promote interdisciplinary collaboration.

Objectives
Understand how fluoride plays an integral role in community water fluoridation.

DEN233 - Professional Development

Overview

Course Description
This course includes professional development, ethics, and jurisprudence with applications to practice management. Topics include conflict management, state laws, resumes, interviews, and legal liabilities as health care professionals. Upon completion, students should be able to demonstrate the ability to practice dental hygiene within established ethical standards and state laws.

Course Typically Offered
Spring

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Determine how the concepts of ethics and professionalism relate to one another

Objectives
Discover how ethical theory, philosophy, principles, and value affects professional life

Objectives
Identify the professional Codes of Ethics and what they mean to professional practice

Objectives
Understand the responsibilities of a professional health care provider to society

Objectives
Understand ethical decision making when faced with ethical dilemmas

Objectives
Learn the laws, rules, and regulations that govern the practice of dental hygiene

Objectives
Learn the specific laws for North Carolina as it pertains to the practice of dental hygiene

Objectives
Understand the legal framework for the relationships of patients in the practice of dental hygiene

Objectives
Understand the legal framework for the relationship with the dentist/employer in the practice of dental hygiene

Objectives
Understand risk management in the practice of dentistry and dental hygiene

Objectives
Be able to build a professional portfolio to include a professional resume and professional employment interview

DFT151 - CAD I

Overview

Course Description
This course introduces CAD software as a drawing tool. Topics include drawing, editing, file management, and plotting. Upon completion, students should be able to produce and plot a CAD drawing.

Course Typically Offered
Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Analyze a drafting problem and complete a drawing

Objectives
Use basic CAD commands

Objectives
Be able to produce and plot a CAD drawing

DFT152 - CAD II

Overview

Course Description
This course introduces extended CAD applications. Emphasis is placed upon intermediate applications of CAD skills. Upon completion, students should be able to use extended CAD applications to generate and manage drawings.

Course Typically Offered
Fall

Credit Hours
3

Requisites

Simple Requisites

Prerequisite

Type
Prerequisite

Take DFT-151;

Student Learning Outcomes

Learning Objectives

Objectives
Analyze a drafting problem and complete a drawing

Objectives
Use basic CAD commands

Objectives
Properly dimension a drawing with appropriate units and tolerances

Objectives
Be able to produce and plot a CAD drawing

DFT153 - CAD III

Overview

Course Description
This course introduces advanced CAD applications. Emphasis is placed upon advanced applications of CAD skills. Upon completion, students should be able to use advanced CAD applications to generate and manage data.

Course Typically Offered
Spring

Credit Hours
3

Requisites

Simple Requisites

Local Prereq

Type
Prerequisite

DFT-254

Take DFT-254;

Student Learning Outcomes

Learning Objectives

Objectives
Use advanced CAD applications to generate and manage data 2. Input file metadata.

Objectives
Produce accurate part and assembly drawings using data contained in part/assembly custom properties.

Objectives
Create SolidWorks macros.

Objectives
Use PDM software to track design changes.

DFT154 - Introduction to Solid Modeling

Overview

Course Description
This course is an introduction to basic three-dimensional solid modeling and design software. Topics include basic design, creation, editing, rendering and analysis of solid models, and creation of multiview drawings. Upon completion, students should be able to use design techniques to create, edit, render and generate a multiview drawing.

Course Typically Offered
Fall

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Use basic 3D modeling software commands.

Objectives
Analyze a drafting problem and develop 3D part and assembly models.

Objectives
Create and edit multiview drawings using a 3D model.

Objectives
Properly dimension a drawing with appropriate units.

DFT170 - Engineering Graphics

Overview

Course Description
This course introduces basic engineering graphics skills and applications. Topics include sketching, selection and use of current methods and tools, and the use of engineering graphics applications. Upon completion, students should be able to demonstrate an understanding of basic engineering graphics principles and practices.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate engineering graphics through CAD

Objectives
Sketch engineering concepts

Objectives
Use engineering graphics to communicate an idea or design

Objectives
Construct engineering graphics in orthogonal view, auxiliary view, sections and isometric views

Objectives
Become familiar with Solidworks and as an engineering graphics tool

Objectives
Develop 3-D models of parts and assemblies

Objectives
Use dimensional information, including tolerance in engineering drawings

Objectives
Recognize hardware in engineering designs

Objectives
Distinguish between first- and third- angle projection.

DFT254 - Intermediate Solid Modeling & Rendering

Overview

Course Description
This course presents a continuation of basic three-dimensional solid modeling and design software. Topics include advanced study of parametric design, creation, editing, rendering and analysis of solid model assemblies, and multiview drawing generation. Upon completion, students should be able to use parametric design techniques to create and analyze the engineering design properties of a model assembly.

Course Typically Offered
Fall, Spring

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take DFT-154

Take DFT-154(S20155);

Student Learning Outcomes

Learning Objectives

Objectives
Apply advanced 3D drawing principles and practices

Objectives
Analyze a drafting problem and develop working and assembly drawings

Objectives
Use SolidWorks to create both asssembled and exploded assembly drawings

Objectives
Be able to use the sheet metal, surfacing, functions of SolidWorks.

DRA111 - Theatre Appreciation

Overview

Course Description
This course provides a study of the art, craft, and business of the theatre. Emphasis is placed on the audience's appreciation of the work of the playwright, director, actor, designer, producer, and critic. Upon completion, students should be able to demonstrate a vocabulary of theatre terms and to recognize the contributions of various theatre artists.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Justify the relevance of theatre in historical and contemporary contexts

Objectives
Develop and use a vocabulary to examine theatre as an art

Objectives
Differentiate elements that comprise theatrical performances

Objectives
Analyze and critique live theatre productions

Objectives
Model effective audience etiquette

Objectives
Create a project illustrating one or more dimensions of theatre

ECO151 - Survey of Economics

Overview

Course Description
This course, for those who have not received credit for ECO 251 or 252, introduces basic concepts of micro- and macroeconomics. Topics include supply and demand, optimizing economic behavior, prices and wages, money, interest rates, banking system, unemployment, inflation, taxes, government spending, and international trade. Upon completion, students should be able to explain alternative solutions for economic problems faced by private and government sectors.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Explain how incentives impact the decisions of people

Objectives
Demonstrate the importance of trade for economic progress

Objectives
Model supply and demand

Objectives
Discuss the economic role of private property rights

Objectives
Examine why some nations prosper and others stagnate

Objectives
Analyze how the political process addresses economic issues

Objectives
Outline the key components to sound personal finance

Objectives
Construct a personal budget

Objectives
Evaluate and compare investment options

ECO251 - Principles of Microeconomics

Overview

Course Description
This course introduces economic analysis of individual, business, and industry in the market economy. Topics include the price mechanism, supply and demand, optimizing economic behavior, costs and revenue, market structures, factor markets, income distribution, market failure, and government intervention. Upon completion, students should be able to identify and evaluate consumer and business alternatives in order to efficiently achieve economic objectives.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Explain the concept of scarcity

Objectives
Prove the economic benefits of trade

Objectives
Classify the components of a market

Objectives
Model and interpret demand

Objectives
Model and interpret supply

Objectives
Characterize a market in equilibrium

Objectives
Identify efficient market outcomes

Objectives
Distinguish between different types of markets

Objectives
Analyze the impact of government intervention in a market

Objectives
Calculate a firm's cost of production

Objectives
Determine the point at which a firm maximizes profit

ECO252 - Principles of Macroeconomics

Overview

Course Description
This course introduces economic analysis of aggregate employment, income, and prices. Topics include major schools of economic thought; aggregate supply and demand; economic measures, fluctuations, and growth; money and banking; stabilization techniques; and international trade. Upon completion, students should be able to evaluate national economic components, conditions, and alternatives for achieving socioeconomic goals.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Model supply and demand

Objectives
Describe the circular flow diagram of the economy

Objectives
Calculate and describe Gross Domestic Product

Objectives
Estimate and explain the rate of inflation

Objectives
Relate saving to investment within a financial system

Objectives
Classify stages within a business cycle

Objectives
Define and predict the impact of fiscal policy

Objectives
Define and predict the impact of monetary policy

Objectives
Analyze the impact of government intervention in the economy

EDU119 - Introduction to Early Childhood Education

Overview

Course Description
This course introduces the foundations of culturally responsive, equitable and inclusive early childhood education, planning intentional developmentally appropriate experiences, learning activities, and teaching strategies for indoor and outdoor environments for all young children, guidance techniques, and professionalism. Topics include theoretical foundations, national early learning standards, NC Foundations for Early Learning and Development, state regulations, program types, career options, professionalism, ethical conduct, quality inclusive environments, guidance techniques, and curriculum responsive to the needs of each child/family. Upon completion, students should be able to implement developmentally appropriate environments, guidance techniques, schedules, and teaching strategies across developmental domains to support culturally, linguistically, and ability diverse children and their families in inclusive settings, and design a personal career/professional development plan.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
4

Student Learning Outcomes

Learning Objectives

Objectives
Identify effective tools that support learning for early education and development.

Objectives
Demonstrate developmental knowledge and appropriate practices to create healthy supportive and challenging learning environments, indoor and outdoor that meet the needs of diverse children and families.

Objectives
Design a career plan that reflects personal identification and involvement with the early childhood field.

EDU131 - Child, Family, and Community

Overview

Course Description
This course covers the development of partnerships among culturally, linguistically and ability diverse families, children, schools and communities through the use of evidence-based strategies. Emphasis is placed on developing skills and identifying benefits for establishing and supporting respectful relationships between diverse families, programs/schools, and community agencies/resources reflective of the NAEYC Code of Ethical Conduct and the Code of Ethics for North Carolina Educators. Upon completion, students should be able to identify appropriate relationship building strategies between diverse families, children birth through adolescence, schools, and communities and demonstrate a variety of communication skills including appropriate use of technology to support every child.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Recognize the characteristics of diverse families and communities within the cultural context.

Objectives
Demonstrate evidenced-based strategies and techniques to involve families and communities in children's development and learning.

Objectives
Apply evidenced-based strategies to build respectful, reciprocal family, teacher and community partnerships.

EDU144 - Child Development I

Overview

Course Description
This course includes the theories of child development, observation and assessment, milestones, and factors that influence development, from conception through approximately 36 months. Emphasis is placed on knowledge, observation and assessment of developmental sequences in approaches to play/learning, emotional/social, health/physical, language/communication and cognitive domains. Upon completion, students should be able to compare/contrast typical/atypical developmental characteristics, explain biological and environmental factors that impact development, and identify evidence-based strategies for enhancing development for children that are culturally, linguistically, and ability diverse.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Utilize observation and assessment to compare and contrast characteristics of typical and atypical development in each domain from conception to 36 months.

Objectives
Explain ways in which biological and environmental factors influence children's development and learning from conception to 36 months.

Objectives
Identify evidence-based, developmentally appropriate experiences, interaction techniques and environments that are sensitive to and meet the individual needs of each child from conception to 36 months.

EDU145 - Child Development II

Overview

Course Description
This course includes the theories of child development, observation and assessment, milestones, and factors that influence development, from preschool through middle childhood. Emphasis is placed on knowledge, observation and assessment of developmental sequences in approaches to play/learning, emotional/social, health/physical, language/communication and cognitive domains. Upon completion, students should be able to compare/contrast typical/atypical developmental characteristics, explain biological and environmental factors that impact development, and identify evidence-based strategies for enhancing development for children that are culturally, linguistically, and ability diverse.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Utilize observation and assessment to compare and contrast characteristics of typical and atypical development in each domain from preschool through middle childhood.

Objectives
Explain ways in which biological and environmental factors influence children's development and learning from preschool through middle childhood.

Objectives
Identify evidence-based, developmentally appropriate experiences, interaction techniques and environments that are sensitive to and meet the individual needs of each child from preschool through middle childhood.

EDU146 - Child Guidance

Overview

Course Description
This course introduces evidence-based strategies to build nurturing relationships with each child by applying principles and practical techniques to facilitate developmentally appropriate guidance. Topics include designing responsive/supportive learning environments, cultural, linguistic and socio-economic influences on behavior, appropriate expectations, the importance of communication with children/families including using technology and the use of formative assessments in establishing intentional strategies for children with unique needs. Upon completion, students should be able to demonstrate direct/indirect strategies to encourage social skills, self-regulation, emotional expression and positive behaviors while recognizing the relationship between children's social, emotional and cognitive development.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Recognize the role of observation, assessment, and technology to promote positive outcomes for each child.

Objectives
Demonstrate an understanding of appropriate guidance strategies to promote positive and supportive interactions, including working with intensive behaviors.

EDU151 - Creative Activities

Overview

Course Description
This course introduces developmentally supportive, diverse, equitable, and inclusive creative learning environments with attention to divergent thinking, creative problem-solving, evidence-based teaching practices, and open-ended learning materials and activities that align with the NC Foundations for Early Learning and Development. Emphasis is placed on best practices providing process-driven culturally diverse, learning experiences in art, music, creative movement, dance, and dramatic play integrated across all domains and academic content in indoor/outdoor environments for every young child age birth through age eight. Upon completion, students should be able to observe, examine, create, adapt, and advocate for developmentally appropriate creative learning materials, experiences, and environments for children that are culturally, linguistically, and ability diverse.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Identify the characteristics of a developmentally appropriate indoor/outdoor creative environment for children that are culturally, linguistically, and ability diverse.

Objectives
Demonstrate various developmentally appropriate creative experiences to meet the needs of each child in a variety of domains and academic content.

EDU153 - Health, Safety and Nutrition

Overview

Course Description
This course covers promoting and maintaining the health and well-being of every child. Topics include health and nutritional guidelines, common childhood illnesses, maintaining safe and healthy learning environments, health benefits of active play, recognition and reporting of abuse/neglect, and state regulations. Upon completion, students should be able to apply knowledge of NC Foundations for Early Learning and Development for health, safety, nutritional needs and safe learning environments.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Apply health and safety principles, policies, procedures and state regulations that ensure developmentally appropriate health, safety and nutritional needs of young children in indoor/ outdoor activities and environments.

Objectives
Describe the characteristics of child abuse and neglect and the procedures for reporting as defined by state regulations, while understanding the importance of upholding ethical standards.

EDU158 - Healthy Lifestyles-Youth

Overview

Course Description
This course covers maintaining the health and well-being of all school-age children. Topics include health, safety, nutrition, physical activities and environments that promote development, fitness, and healthy lifestyles. Upon completion, students should be able to plan developmentally appropriate, safe/healthy physical activities that support the healthy development of school-age children, be able to plan and identify healthy eating choices that support healthy development as well as design safety policies and procedures and environments that promote healthy lifestyles.

Credit Hours
3

EDU163 - Classroom Management and Instruction

Overview

Course Description
This course examines classroom management and evidence-based instructional strategies that create supportive learning environments to provide culturally, linguistically and developmentally appropriate guidance for school-age populations. Topics include classroom management and organization, teaching strategies, individual student differences and learning styles, ongoing systematic observation, and developmentally appropriate classroom guidance techniques. Upon completion, student should be able to utilize developmentally appropriate behavior management, utilize high-quality instructional strategies that enhance the teaching/learning process and promote students' academic success.

Course Typically Offered
Fall

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Recognize environments that promote respect, positive interactions and appreciation for student and family diversity.

Objectives
Demonstrate appropriate behavioral expectations and classroom management/guidance techniques that support student differences including those who may be culturally, linguistically and/or ability diverse recognizing possible triggers and influences for challenging behaviors.

Objectives
Analyze, through observation, teaching strategies that support individual learning styles and student differences.

EDU175 - Introduction to Trade and Industrial Education

Overview

Course Description
This course introduces the philosophy, scope, and objectives of industrial education. Topics include the development of industrial education, employment opportunities, current events, current practices, and emerging trends. Upon completion, students should be able to describe the history, identify current practices, and describe current trends in industrial education.

Credit Hours
3

EDU177 - Instructional Methods

Overview

Course Description
This course covers instructional methods in technical education with emphasis on competency-based instruction. Topics include writing objectives, industrial methods, and determining learning styles. Upon completion, students should be able to select and demonstrate the use of a variety of instructional methods.

Credit Hours
3

EDU179 - Vocational Student Organizations

Overview

Course Description
This course covers planning and organizing vocational youth clubs by understanding the structure and operating procedures to use club activities for personal and professional growth. Topics include self-assessment to set goals, club structure, election and installation of officers, club activities, function of committees, running meetings, contest preparation, and leadership skills. Upon completion students should be able to set personal goals, outline club structure, elect and install officers.

Credit Hours
3

EDU187 - Teaching and Learning for All

Overview

Course Description
This course introduces students to knowledge, concepts, and best practices needed to provide developmentally appropriate, effective, inclusive, and culturally responsive educational experiences in the classroom.

Topics include growth and development, learning theory, student motivation, teaching diverse learners, classroom management, inclusive environments, student-centered practices, instructional strategies, teaching methodologies, observation/assessment techniques, educational planning, reflective practice, collaboration, cultural competence, ethics, professionalism, and leadership.

Upon completion, students should be able to identify the knowledge, skills, roles, and responsibilities of an effective educator as defined by state and national professional teaching standards.

Course Typically Offered
Fall, Spring

Credit Hours
4

Student Learning Outcomes

Learning Objectives

Objectives
Apply developmental knowledge of learning theories and appropriate instructional strategies to create healthy, supportive, inclusive, and challenging learning environments, indoor and outdoor, that meet the needs of diverse children and families.

Objectives
Design a career plan that demonstrates leadership, ethical standards, and professional guidelines in the field of education through collaboration.

Objectives
Identify effective tools that support learning for student-centered learning and development as well as the knowledge, skills, roles, and responsibilities of an effective educator as defined by state and national professional teaching standards.

Objectives
Using observation and assessment tools, students will apply knowledge of developmentally appropriate practice in classroom management, and motivate learners to achieve academic success using a variety of teaching methodology.

Objectives
Describe stages of development and characteristic behaviors of school age students through various theories of learning in a diverse world.

EDU216 - Foundations of Education

Overview

Course Description
This course introduces the examination of the American educational systems and the teaching profession. Topics include the historical and philosophical influences on education, various perspectives on educational issues, and experiences in birth through grade 12 classrooms. Upon completion, students should be able to reflect on classroom observations, analyze the different educational approaches, including classical/traditional and progressive, and have knowledge of the various roles of educational systems at the federal, state and local level.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Identify different paths including your own journey to becoming an education professional.

Objectives
Explore your own personal philosophy of education based on the historical and philosophical foundations of education.

Objectives
Explain the role of the federal government in public and private education, and how it relates to state and local government and school boards.

Objectives
Use classroom observations and research to analyze the different educational approaches, including classical/traditional and progressive.

EDU221 - Children With Exceptionalities

Overview

Course Description
This course covers atypical patterns of child development, inclusive/diverse settings, evidenced-based educational/family plans, differentiated instruction, adaptive materials, and assistive technology. Emphasis is placed on the characteristics of exceptionalities and delays, early intervention/special education, transitions, observation, developmental screening, formative assessment of children, and collaborating with families and community partners. Upon completion, students should be able to recognize diverse abilities, describe the referral process, identify community resources, explain the importance of collaboration with families/ professionals, and develop appropriate strategies/ adaptations to support children in all environments with best practices as defined by laws, policies and the NC Foundations for Early Learning and Development.

Course Typically Offered
Spring, Summer

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take one set: Set 1: EDU-144 and EDU-145 Set 2: PSY-244 and PSY-245

Take 1 group; # Take EDU-144(S25341) EDU-145(S25342); # Take PSY-244(S12069) PSY-245(S11997);

Student Learning Outcomes

Learning Objectives

Objectives
Differentiate instructional needs of children (i.e. adapt environment, curricula, etc.) with exceptionalities and diverse abilities using formative assessment.

Objectives
Examine the process and procedures to make referrals and transitions in collaboration with families and community partners.

Objectives
Analyze evidenced-based assessment tools to adapt environments and curricula that reflect diverse abilities of each child.

EDU234 - Infants, Toddlers, and Twos

Overview

Course Description
This course covers the development of high-quality, individualized, responsive/engaging relationships and experiences for infants, toddlers, and twos. Emphasis is placed on typical and atypical child development, working with diverse families to provide positive, supportive, and engaging early learning activities and interactions through field experiences and the application of the NC Foundations for Early Learning and Development. Upon completion, students should be able to demonstrate responsive curriculum planning, respectful relationships and exposure to a variety of developmentally appropriate experiences/ materials that support a foundation for healthy development and growth of culturally, linguistically and ability diverse children birth to 36 months.

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take EDU-144

Take EDU-144(S25341);

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate responsive planning informed by formative and summative assessment for children birth to 36 months

Objectives
Identify strategies to support responsive positive relationships and interactions with children and families that promote child development and learning.

Objectives
Design quality developmentally appropriate experiences aligned with NC Foundations for Early Learning and Development.

EDU235 - School-Age Activities

Overview

Course Description
This course introduces developmentally supportive, inclusive, and creative learning environments for school-age programs, focusing on diverse, equitable, and engaging experiences in art, music, movement, and dramatic play. Emphasis is placed on fostering divergent thinking, creative problem-solving, and integrating process-driven activities across academic subjects in both indoor and outdoor settings. Upon completion, students should be able to observe, analyze, design, adapt, and advocate for creative learning opportunities that reflect the cultural, linguistic, and ability diversity of school-age children, ensuring accessibility and meaningful engagement in developmentally appropriate and inclusive educational experiences.

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Identify strategies that promote positive relationships and community building among teachers, school-age children and their families.

Objectives
Identify community resources that support school-age children and their families.

Objectives
Apply knowledge of child development to foster physical, emotional, social and cognitive growth in all school-age children.

Objectives
Apply knowledge to plan appropriate programs for all school-age children that provide rich and varied learning activities for children ages 5-12, which invite exploration and experimentation.

EDU250 - Teacher Licensure Preparation

Overview

Course Description
This course provides information and strategies necessary for transfer to a teacher licensure program at a senior institution. Topics include entry level teacher licensure exam preparation, performance based assessment systems, requirements for entry into teacher education programs, the process to become a licensed teacher in North Carolina, and professionalism including expectations within the field of education. Upon completion, students should be able to utilize educational terminology and demonstrate knowledge of teacher licensure processes including exam preparation, technology based portfolio assessment, and secondary admissions processes to the school of education at a senior institution.

Credit Hours
3

Requisites

Simple Requisites

State concurrent or previous courses

Type
Corequisite

Take One Set: Set 1: ENG-111 MAT-143 Set 2: ENG-111 MAT-152 Set 3: ENG-111 MAT-171

Take 1 group; # Take ENG-111(S26393) MAT-143(S26401); # Take ENG-111(S26393) MAT-152(S26402); # Take ENG-111(S26393) MAT-171(S26403);

Student Learning Outcomes

Learning Objectives

Objectives
Describe the teacher licensure process in North Carolina.

Objectives
Discuss strategies for success as a university student including ethics, professionalism, and student teaching expectations

Objectives
Prepare for the Praxis Core tests in Reading, Writing, and Math

Objectives
Identify the portfolio assessment process including education terminology, engaging children, reflection components, and related costs.

EDU252 - Math and Science Activities

Overview

Course Description
This course introduces discovery experiences in math and science. Topics include concepts, facts, phenomena, and skills in each area. Upon completion, students should be able to identify, plan, select materials and equipment, and implement and evaluate developmentally appropriate curriculum materials.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Define the basic scientific and mathematical concepts.

Objectives
Implement exploration activities in math and science that help children construct their own understanding of scientific concepts.

Objectives
Design a complete integrated math and science environment, including games and activities that will integrate into other curriculum areas.

EDU259 - Curriculum Planning

Overview

Course Description
This course is designed to focus on using content knowledge to build effective developmentally appropriate approaches that are culturally responsive, equitable, and ability diverse for young children. Topics include components of curriculum, a variety of curriculum models, authentic observation and assessment, and planning developmentally appropriate experiences and indoor/outdoor environments aligned with the NC Foundations for Early Learning and Development. Upon completion, students should be able to understand, evaluate, and use developmentally appropriate curriculum to plan for the individual/group needs of young children.

Course Typically Offered
Fall, Spring

Credit Hours
3

Learning Objectives

Objectives
Analyze a variety of curricula.

Objectives
Explain how to use observation and documentation to guide appropriate differentiated instruction.

Objectives
Design developmentally appropriate experiences for young children.

Learning Objectives

Objectives
Demonstrate knowledge of NC Child Care Law and Rules.

Objectives
Examine comprehensive program policies.

Objectives
Evaluate basic components of a business plan and program budget.

Objectives
Evaluate workplace situations involving diversity.

EDU262 - Early Childhood Administration II

Overview

Course Description
This course is designed to prepare students for leadership roles in licensed child care facilities in North Carolina by focusing on curriculum development, program assessment, and resource management for centers and families. Emphasis is place on best practices in early childhood curriculum, quality improvement strategies, advocacy, and leadership in early learning environments. Upon completion, students should be able to implement developmentally appropriate curriculum, assess program effectiveness, support families with relevant resources, and advocate for policies that enhance early childhood education and program quality.

Credit Hours

Student Learning Outcomes

Learning Objectives

Objectives
Identify key indicators of quality programs and methods of evaluation.

Objectives
Evaluate personal qualifications and characteristics of leadership.

Objectives
Implement community needs and resources into the program.

EDU263 - School-Age Program Administration

Overview

Course Description
This course introduces the methods and procedures for development and administration of school-age programs in the public or proprietary setting. Emphasis is placed on the construction and organization of the physical environment. Upon completion, students should be able to plan, develop and administer a quality school-age program.

Credit Hours
2

EDU270 - Effective Instructional Environments

Overview

Course Description
This course is designed to provide learners with the knowledge and skills to create, manage, and assess effective instructional environments, learning attitudes, and behaviors for today's diverse learning population.

Topics include organizing the learning environment, fostering positive learning attitudes, supporting healthy stakeholder partnerships, engaging students using effective differentiated instruction, guiding, and managing student behaviors, and assessing student progress.

Upon completion of this course, learners will demonstrate effective dispositions of the professional educator that include managing schedules, spaces, and resources, promoting supportive learning mindsets, engaging students with diverse instructional strategies, guiding student behaviors to maximize both the instructional and social climate, and analyzing and effectively responding to student progress.

Course Typically Offered
Fall

Credit Hours
2

Learning Objectives

Objectives
Design and implement instructional environments and schedules that effectively use space, resources, and transitions to support diverse learners and varied instructional strategies.

Objectives
Develop instructional lessons that apply multiple teaching modes, questioning techniques, and grouping strategies to address diverse student needs.

Objectives
Create and refine a comprehensive classroom management plan that fosters a positive learning climate and supports strong teacher-student, peer-peer, and teacher-family relationships.

Objectives
Use formative and summative assessment data to adapt instruction, provide targeted feedback, and implement interventions that promote student growth.

Student Learning Outcomes

EDU271 - Educational Technology

Overview

Course Description
This course introduces the appropriate and ethical use of technology that is inclusive of digital and analog materials/tools to enhance teaching and learning in all educational settings. Emphasis is placed on the developmentally appropriate use of technology with children, ethical issues, digital citizenship, instructional strategies, assistive technology, and the use of technology for professional development and communication with families. Upon completion, student should be able to demonstrate professional and ethical implementation of various modes of technology in culturally responsive and equitable ways to support diverse children, families and communities.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Evaluate appropriate technological resources and content.

Objectives
Use a variety of technology strategies to enhance the classroom learning environment.

Objectives
Demonstrate the ethical use of technology in the early childhood profession.

EDU272 - Technology, Data, and Assessment

Overview

Course Description
This course is designed to provide students with the knowledge and skills to utilize digital instructional technologies and technology-based assessments to plan and implement appropriate educational experiences and interventions in the classroom. Topics include educational technology to enhance instruction, instructional technologies for teaching, technology-based assessment, formative and summative assessments, data to inform practice, and ethical practices for technology and assessment. Upon completion, students will be able to demonstrate effective integration of educational technology into classroom practice, appropriate use of technology-based assessments, and practical application of data to inform educational planning and interventions.

Credit Hours
3

EDU277 - Integrated Curriculum and Instructional Strategies: Math/Science

Overview

Course Description
This course is designed to provide learners with the content knowledge, instructional methods/materials, and assessment techniques needed to provide research-based math and science K - 12 instruction.

Topics include essential math and science concepts and skills, developmentally appropriate pedagogy, culturally responsive instruction, standards-based outcomes, technology enhanced lesson planning, formative/summative assessments, research-based interventions, authentic learning experiences, and reflective practice.

Upon completion, learners will be able to plan, implement, assess, and reflect on developmentally appropriate math and science instruction aligned to the NC Standard Course of Study, other professional and national standards.

Credit Hours
3

EDU278 - Integrated Curriculum and Instructional Strategies: Social Studies/ELA

Overview

Course Description
This course is designed to provide learners with the content knowledge, instructional methods/materials, and assessment techniques needed to provide research-based social studies and ELA K -12 instruction.

Topics include essential social studies and ELA concepts and skills, developmentally appropriate pedagogy, culturally responsive instruction, standards-based outcomes, technology enhanced lesson planning, formative/summative assessments, research-based interventions, authentic learning experiences, and reflective practice.

Upon completion, learners will be able to plan, implement, assess, and reflect on developmentally appropriate social studies and ELA instruction aligned to the NC Standard Course of Study, other professional and national standards.

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate knowledge and understanding of key concepts, skills, and attitudes necessary to teach K -12 Social Studies and English Language Arts.

Objectives
Apply effective pedagogical approaches to design, plan and implement Social Studies and English Language Arts instruction that aligns with the North Carolina Standard Course of Study, as well as the standards of the National Council for Social Studies and the National Council of Teaching English.

Objectives
Choose formal and informal assessments to monitor student learning and plan for instruction in Social Studies and English Language Arts.

Objectives
Implement strategies to provide effective, evidence-based interventions for students with difficulties or disabilities in Social Studies or English Language Arts.

EDU279 - Literacy Development and Instruction

Overview

Course Description
This course is designed to provide students with concepts and skills of literacy development, instructional methods/materials and assessment techniques needed to provide scientifically-based, systematic reading and writing instruction into educational practice.

Topics include literacy concepts, reading and writing development, developmentally appropriate pedagogy, culturally-responsive instruction, standards-based outcomes, lesson planning, formative/summative assessment, recognizing reading difficulties, research-based interventions, authentic learning experiences, classroom implementation, and reflective practice.

Upon completion, students should be able to plan, implement, assess, evaluate, and demonstrate developmentally appropriate literacy instruction aligned to the NC Standard Course of Study and other state and national standards.

Course Typically Offered
Spring, Summer

Credit Hours
4

Student Learning Outcomes

Learning Objectives

Objectives
Plan and implement developmentally appropriate and authentic literacy experiences that are aligned to state and national standards using a broad repertoire of strategies to meet each student's developmental needs.

Objectives
Determine and conduct developmentally appropriate formative and informal assessments to inform teaching and learning.

Objectives
Reflect on personal teaching practices to promote positive outcomes for each child.

Objectives
Identify strategies for teaching in diverse classrooms, with special attention to social and cultural context as well as second language acquisition.

Objectives
Design literacy rich classroom environments which meet the needs of all learners and align with the NC Standard Course of Study.

EDU280 - Language and Literacy Experiences

Overview

Course Description
This course provides evidence-based strategies for enhancing language and literacy experiences that align with NC Foundations for Early Learning and Development. Topics include developmental sequences for children's emergent receptive and expressive language, print concepts, appropriate observations/ assessments, literacy enriched environments, quality selection of diverse literature, interactive media, and inclusive practices. Upon completion, students should be able to select, plan, implement and evaluate developmentally appropriate language and literacy experiences for children who are culturally, linguistically and ability diverse.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Describe developmental sequences for children's emergent receptive and expressive language, including literacy acquisition (phonological awareness, phonemic awareness, alphabetic principles, and print concepts).

Objectives
Implement appropriate language and literacy experiences using a broad repertoire of strategies to meet each child's developmental needs

EDU281 - Instructional Strategies in Reading and Writing

Overview

Course Description
This course covers concepts, resources, and methods for teaching reading and writing to elementary through middle-grade children. Topics include the importance of literacy, learning styles, skills assessment, various reading and writing approaches and instructional strategies. Upon completion, students should be able to assess, plan, implement and evaluate school-age literacy experiences as related to the North Carolina Standard Course of Study.

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Identify and demonstrate the nature of reading and comprehension

Objectives
Reflect on learning and teaching in all four areas

Objectives
Research and plan reading and writing experiences for children

Objectives
Identify various learning styles

Objectives
Develop activities to accommodate learning styles

Objectives
Identify and demonstrate instructional strategies to teach reading and writing

EDU283 - Educator Preparation Practicum

Overview

Course Description
This course is designed to allow learners to demonstrate acquired skills and competencies in a developmentally appropriate learning environment. Topics include dispositions of effective teachers, portfolio assessment development, reflective practice, teaching methods, assessment strategies, and professional practices based on state and national Teaching Standards.

Upon completion, learners should be able to provide a portfolio assessment with evidence of ethical/professional standards, respect for a diverse population in learning environments, content knowledge, appropriate guidance intervention, and grade-level technology enhanced lesson planning/assessments through practices in the classroom environment.

Credit Hours
3

EDU284 - Early Childhood Capstone Practicum

Overview

Course Description
This course is designed to allow students to demonstrate acquired skills in a three star (minimum) or NAEYC accredited or equivalent, quality early childhood environment. Emphasis is placed on designing, implementing and evaluating developmentally appropriate activities and environments for all children; supporting/engaging families; and modeling reflective and professional practices based on national and state guidelines. Upon completion, students should be able to apply NC Foundations for Early Learning and Development to demonstrate developmentally appropriate plans/assessments, appropriate guidance techniques and ethical/professional behaviors, including the use of appropriate technology, as indicated by assignments and onsite faculty assessments.

Course Typically Offered
Fall, Spring, Summer

Implement developmentally appropriate individual and group learning experiences.

Objectives
Reflect on personal teaching practices to promote positive outcomes for each child.

Objectives
Demonstrate ethical standards and professional guidelines.

EGR131 - Introduction to Electronics Technology

Overview

Course Description
This course introduces the basic skills required for electrical/electronics technicians. Topics include soldering/desoldering, safety and sustainability practices, test equipment, scientific calculators, AWG wire table, the resistor color code, electronic devices, problem solving, and use of hand tools. Upon completion, students should be able to solder/desolder, operate test equipment, apply problem-solving techniques, and use a scientific calculator.

Course Typically Offered
Fall, Spring

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Use proper safety procedures in a lab environment

Objectives
Operate test equipment

Objectives
Use a scientific calculator

Objectives
Apply problem-solving techniques

Objectives
Demonstrate ability to solder and desolder through-hole and surface mount components on PC boards.

EGR150 - Introduction to Engineering

Overview

Course Description
This course is an overview of the engineering profession. Topics include goal setting and career assessment, ethics, public safety, the engineering method and design process, written and oral communication, interpersonal skills and team building, and computer applications. Upon completion, students should be able to understand the engineering process, the engineering profession, and utilize college resources to meet their educational goals.

Course Typically Offered
Fall, Spring

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Describe the Engineering Profession a. Definition, Disciplines b. Common Traits of Engineers c. Impact of engineering solutions

Objectives
Prepare for an Engineering Career a. Transition from high school to college b. Study strategies and habits c. Time management

Objectives
Describe the engineering design process. a. Team work and project management (tasks and scheduling) b. Use of journals/engineering paper

Objectives
Communicate Progress and Final Results a. Presentation by individuals and groups b. Formal reporting of project/lab results

Objectives
Use Entry Level Computer Applications a. Word documents for reports; PowerPoint for presentations b. Excel spreadsheets for recording/ analyzing data and graphing c. Overview of Matlab/MathCAD, FEA/CAD tools

Objectives
Explain the importance of applying ethics to engineering.

Objectives
Apply satety rules appropriately within the engineering lab. a. Engineers Creed b. Case study of engineering failure and underlying ethics c. Common safety practices

Objectives
Apply dimensional analysis to solve problems using correct units. a. Length, Time, Mass, Temperature b. Force, Energy and Power

Objectives
Develop Remote Teamwork Engineering Experience a. Impromptu design/build activities b. Teamwork organization activities c. Robotics design and programming d. Spreadsheet computations/graphing; engineering analysis software

EGR220 - Engineering Statics

Overview

Course Description

This course introduces the concepts of engineering based on forces in equilibrium. Topics include concentrated forces, distributed forces, forces due to friction, and inertia as they apply to machines, structures, and systems. Upon completion, students should be able to solve problems which require the ability to analyze systems of forces in static equilibrium.

Credit Hours

3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take PHY-251

Take PHY-251(S12543);

State concurrent or previous courses

Type
Corequisite

Take MAT-272

Take MAT-272(S13612);

Learning Objectives

Objectives
Model physical systems using free-body diagrams

Objectives
Write equations of static equilibrium for particles, rigid bodies, and systems

Objectives
Model reaction forces and moments, and solve the equations of equilibrium for them

Objectives
Account for friction and fluid pressure loads in equilibrium problems

Objectives
Calculate and plot internal forces and moments

Objectives
Calculate centroids and moments of inertia

Objectives
Determine equivalency for systems of loads

Student Learning Outcomes

EGR250 - Statics/Strength of Mater

Overview

Course Description
This course includes vector analysis, equilibrium of force systems, friction, sectional properties, stress/strain, and deformation. Topics include resultants and components of forces, moments and couples, free-body diagrams, shear and moment diagrams, trusses, frames, beams, columns, connections, and combined stresses. Upon completion, students should be able to analyze simple structures.

Course Typically Offered
Fall

Credit Hours
5

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take One: MAT-121 or MAT-171

Take MAT-121(S23927) or MAT-171(S23934);

Student Learning Outcomes

Learning Objectives

Objectives
Create free-body diagrams

Objectives
Demonstrate force vector analysis and equilibrium of force systems for a truss

Objectives
Calculate stress in beams using shear and moment diagrams

Objectives
Determine strain and deformation of beams of various cross-section geometries

EGR285 - Design Project

Overview

Course Description
This course provides the opportunity to design an instructor-approved project using previously acquired skills. Emphasis is placed on selection, proposal, design, testing, and documentation of the approved project. Upon completion, students should be able to present and demonstrate projects.

Course Typically Offered
Spring

Credit Hours
2

Requisites

Simple Requisites

Local Prereq

Type
Prerequisite

DDF-212

Take DDF-212(S20817);

Student Learning Outcomes

Learning Objectives

Objectives
Develop and submit a project proposal that clearly outlines the objectives, scope, materials, and methods for an instructor-approved project.

Objectives
Present and explain the completed project in a professional format, both orally and in writing, to an audience that may include peers, instructors, and industry professionals.

Objectives
Demonstrate safe and ethical practices in the execution of the project, including sustainable use of materials and compliance with applicable standards.

Objectives
Maintain comprehensive documentation throughout the project lifecycle, including schematics, test data, procedures, and revisions.

Objectives
Demonstrate effective project planning and management by creating a realistic timeline and adhering to project milestones.

ELC112 - DC/AC Electricity

Overview

Course Description
This course introduces the fundamental concepts of and computations related to DC/AC electricity. Emphasis is placed on DC/AC circuits, components, operation of test equipment; and other related topics. Upon completion, students should be able to construct, verify, troubleshoot, and repair DC/AC circuits.

Credit Hours
5

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate safe practices and procedures with tools, materials, and industry accepted test equipment covered in the course.

Objectives
Demonstrate appropriate use of test equipment, evaluate circuit performance and apply appropriate troubleshooting techniques to electrical circuits.

Objectives
Construct and analyze series, parallel and combinations circuits using appropriate components.

Objectives
Use appropriate laws and formulas to perform circuit calculations.

Objectives
Interpret electrical schematics.Describe the characteristics of various power sources.

Objectives
Wire Electric SchematicsDraw Electrical Schematics

Objectives
Troubleshoot with test equipment.

Objectives
Analyze problems that arise with electrical equipment.Perform circuit calculations.

ELC113 - Residential Wiring

Overview

Course Description
This course introduces the care/usage of tools and materials used in residential electrical installations and the requirements of the National Electrical Code. Topics include NEC, electrical safety, and electrical print reading; planning, layout; and installation of electrical distribution equipment; lighting; overcurrent protection; conductors; branch circuits; and conduits. Upon completion, students should be able to properly install conduits, wiring, and electrical distribution equipment associated with residential electrical installations.

Credit Hours
4

Student Learning Outcomes

Learning Objectives

Objectives
Identify and demonstrate safe practices and procedures with tools, materials and industry accepted test equipment covered in the course

Objectives
.Demonstrate appropriate use of test equipment, evaluate circuit performance and apply appropriate troubleshooting techniques to residential electrical circuits.

Objectives
Draw, plan and interpret electrical plans and symbols used in residential applications.

Objectives
Identify, size, and install wiring and electrical distribution equipment and devices associated with residential electrical installations in accordance with the National Electrical Code.Recognize and demonstrate appropriate use of tools and materials that are used in residential wiring.

ELC114 - Commercial Wiring

Overview

Course Description
This course provides instruction in the application of electrical tools, materials, and test equipment associated with commercial electrical installations. Topics include the NEC; safety; electrical blueprints; planning, layout, and installation of equipment and conduits; and wiring devices such as panels and overcurrent devices. Upon completion, students should be able to properly install equipment and conduit associated with commercial electrical installations.

Credit Hours
4

Student Learning Outcomes

Learning Objectives

Objectives
Identify and demonstrate safe practices and procedures with tools, materials and industry accepted test equipment covered in the course.

Objectives
Demonstrate appropriate use of test euqipment, evaluate circuit performance and apply appropriate troubleshooting techniques to commercial electrical circuits.

Objectives
Draw, plan, and interpret electrical plans and symbols used in commercial applications.Identify, size,and install wiring and electrical lans and symbols ued in commercial applications.

Objectives
Identify, size, and install wiring and electrical distribution equipment and devices associated with commercial electrical installations in accordance with the National Electrical Code.

Objectives
Recognize and demonstrate appropriate use of tools and materials that are used in commercial wiringIdentify and demonstrate safe practices and procedures with tools, materials and industry accepted test equipment covered in the course.

Objectives
Demonstrate appropriate use of test equipment, evaluate circuit performance and apply appropriate troubleshooting techniques to commercial electrical circuits.

Objectives
Draw, plan, and interpret electrical plans and symbols used in commercial applications.Identify, size, and install wiring and electrical distribution equipment and devices associated with commercial electrical installations in accordance with the National Electrical Code.

Objectives
Recognize and demonstrate appropriate use of tools and materials that are used in commercial wiring.

ELC117 - Motors and Controls

Overview

Course Description
This course introduces the fundamental concepts of motors and motor controls. Topics include ladder diagrams, pilot devices, contactors, motor starters, motors, and other control devices. Upon completion, students should be able to properly select, connect, and troubleshoot motors and control circuits.

Course Typically Offered
Fall, Spring

Credit Hours
4

Requisites

Simple Requisites

Local Prerequisite

Type
Prerequisite

Take ELC-112;

Take ELC-112(S26663);

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate safe practices and procedures with tools, materials and industry accepted test equipment covered in the course.

Objectives
Demonstrate appropriate use of test equipment, evaluate circuit performance and apply appropriate troubleshooting techniques to control circuits.

Objectives
Interpret and use ladder and wiring diagrams, symbols, and schematics.

Objectives
Demonstrate and describe the use of relays, contactors, motor starters and pilot devices in electrical control circuits.

Objectives
Describe principles and operations related to electrical control circuits.

Objectives
Describe the concepts of rotating electrical machinery.

Objectives
Wire electric schematics

Objectives
Draw Electrical Schematics

Objectives
Troubleshoot with test equipment.

Objectives
Analyze problems that arise with electrical equipment.

Objectives
Perform circuit calculations.

Objectives
Design and wire motor circuits.

Objectives
Troubleshoot motors.

ELC118 - National Electrical Code

Overview

Course Description
This course covers the use of the current National Electrical Code. Topics include the NEC history, wiring methods, overcurrent protection, materials, and other related topics. Upon completion, students should be able to effectively use the NEC.

Course Typically Offered
Fall

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Effectively use the NEC

Objectives
Be skilled in taking NEC Code License Exams

ELC119 - NEC Calculations

Overview

Course Description
This course covers branch circuit, feeder, and service calculations. Emphasis is placed on sections of the National Electrical Code related to calculations. Upon completion, students should be able to use appropriate code sections to size wire, conduit, and overcurrent devices for branch circuits, feeders, and service.

Course Typically Offered
Spring

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Locate and cite specific Code rules and sections using NEC Chapter and Article arrangement and the NEC Index and Table of Contents.

Objectives
Interpret various Code rules and sections.

Objectives
Select appropriate tables and figures to locate data.

Objectives
Select conductors and equipment for a specific application.

Objectives
Select boxes and fittings required for a specific application.

Objectives
Determine overcurrent protective device rules.

Objectives
Discuss the impact of international electrical standards.

ELC121 - Electrical Estimating

Overview

Course Description
This course covers the principles involved in estimating electrical projects. Topics include take-offs of materials and equipment, labor, overhead, and profit. Upon completion, students should be able to estimate simple electrical projects.

Course Typically Offered
Fall, Summer

Credit Hours
2

Requisites

Simple Requisites

Local Prerequisite

Type
Prerequisite

TAKE ELC-113

Take ELC-113(S23518);

Student Learning Outcomes

Learning Objectives

Objectives
Describe take-off codes.

Objectives
Describe labor costs.

Objectives
Describe overhead costs.

Objectives
Describe profit and loss costs.

Objectives
Use calculations to estimate electrical projects costs.

Objectives
Demonstrate understanding of electrical bidding.

Objectives
Complete electrical estimating worksheets.

Objectives
Use software to improve electrical calculation estimates.

ELC122 - Advanced Residential Wiring

Overview

Course Description
This course introduces advanced topics in residential electrical installations including the requirements of the National Electrical Code (NEC). Topics include NEC, special purpose outlets, telephone and low voltage signal systems, swimming pool electrical systems, home automation systems, standby power systems and residential utility-interactive photovoltaic systems. Upon completion, students should be able to properly install conduits, wiring, electrical distribution equipment, low voltage, standby power, automated systems, and utility-interactive photovoltaic systems associated with advanced residential electrical installations.

Course Typically Offered
Fall, Spring

Credit Hours
4

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take ELC-113

Take ELC-113(S23518);

Student Learning Outcomes

Learning Objectives

Objectives
Identify and demonstrate safe practices and procedures with tools, materials and industry accepted test equipment covered in the course.

Objectives
Demonstrate appropriate use of test equipment, evaluate circuit performance and apply appropriate troubleshooting techniques to advanced residential electrical circuits.

Objectives
Draw, plan and interpret electrical plans and symbols used in advanced residential applications.

Objectives
Identify, size, and install wiring and electrical distribution equipment and devices associated with advanced residential electrical installations in accordance with the National Electrical Code.

ELC125 - Diagrams and Schematics

Overview

Course Description
This course covers the interpretation of electrical diagrams, schematics, and drawings common to electrical applications. Emphasis is placed on reading and interpreting electrical diagrams and schematics. Upon completion, students should be able to read and interpret electrical diagrams and schematics.

Course Typically Offered
Fall

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Students will be able to analyze electrical drawings to recognize standard symbols that are used throughout the industry to determine raceways, conductors's equipment, and circuit connection.

ELC127 - Software for Technicians

Overview

Course Description
This course introduces computer software which can be used to solve electrical/electronics problems. Topics include electrical/electronics calculations and applications. Upon completion, students should be able to utilize a personal computer for electrical/ electronics- related applications.

Course Typically Offered
Spring, Summer

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Use the computation of electrical principles and concepts in applying technical calculations.

Objectives
Demonstrate the science of numbers and their operations, the relations between them, including space configurations, structure, and measurement of various electrical systems.

Objectives
Analyze problems that arise with electrical/ electronic equipment.

Objectives
Perform circuit calculations with advanced computer software.

Objectives
Design and test simulated electrical and electronic circuits.

ELC128 - Introduction to Programmable Logic Controller

Overview

Course Description
This course introduces the programmable logic controller (PLC) and its associated applications. Topics include ladder logic diagrams, input/output modules, power supplies, surge protection, selection/installation of controllers, and interfacing of controllers with equipment. Upon completion, students should be able to understand basic PLC systems and create simple programs.

Course Typically Offered
Fall, Spring

Credit Hours
3

Requisites

Simple Requisites

Local Prerequisite

Type
Prerequisite

ELC-112 or ELC-131

Take ELC-112(S23481) or ELC-131(S23482);

Student Learning Outcomes

Learning Objectives

Objectives
Identify PLC hardware components

Objectives
Create drivers and establish PC-PLC communications

Objectives
Identify basic PLC instructions

Objectives
Create simple PLC programs using Relay Ladder Logic

Objectives
Troubleshoot Relay Ladder Logic PLC programs

ELC130 - Advanced Motors and Controls

Overview

Course Description
This course covers motors concepts, construction and characteristics and provides a foundation in motor controls. Topics include motor control ladder logic, starters, timers, overload protection, braking, reduced voltage starting, SCR control, AC/DC drives, system and component level troubleshooting. Upon completion, students should be able to specify, connect, control, troubleshoot, and maintain motors and motor control systems.

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take One: ELC-111, ELC-112, ELC-131, or ELC-138

Take ELC-111 ELC-112(S23481) ELC-131(S23482) or ELC-138(S23485);

ELC131 - Circuit Analysis I

Overview

Course Description
This course introduces DC and AC electricity with an emphasis on circuit analysis, measurements, and operation of test equipment. Topics include DC and AC principles, circuit analysis laws and theorems, components, test equipment operation, circuit simulation, and other related topics. Upon completion, students should be able to interpret circuit schematics; design, construct, verify, and analyze DC/AC circuits; and properly use test equipment.

Course Typically Offered
Fall, Spring

Credit Hours
4

Student Learning Outcomes

Learning Objectives

Objectives
Identify and describe the operation of components used in DC/AC circuits.

Objectives
Apply math formulas and circuit theorems in the analyses of DC/AC Circuits.

Objectives
Locate and select DC/AC devices using component specifications based on circuit requirements.

Objectives
Construct series, parallel and combination circuits.

Objectives
Select and demonstrate the use of appropriate test equipment to analyze circuit operation.

Objectives
Using appropriate troubleshooting techniques evaluate circuit performance applying suitable repair methods.

Objectives
Identify and demonstrate safe workplace practices.

Objectives
Identify electrical components

Objectives
Identify basic electrical quantities

Objectives
Mathematically manipulate basic electrical quantities

Objectives
Measure basic electrical quantities

Objectives
Interpret circuit schematics

Objectives
Construct DC and AC circuits

Objectives
Verify DC and AC circuits

Objectives
Analyze DC and AC circuits using test equipment

Objectives
Troubleshoot DC and AC circuits using test equipment

Objectives
The student will be able to produce a variety of documents to demonstrate their understanding of electronic components, usage of test equipment and troubleshooting methods.

ELC131A - Circuit Analysis I Lab

Overview

Course Description
This course provides laboratory assignments as applied to fundamental principles of DC/AC electricity. Emphasis is placed on measurements and evaluation of electrical components, devices and circuits. Upon completion, the students will gain hands-on experience by measuring voltage, current, and opposition to current flow utilizing various meters and test equipment.

Course Typically Offered
Fall, Spring

Credit Hours
1

Requisites

Simple Requisites

State concurrent or previous courses

Type
Corequisite

Take ELC-131

Take ELC-131(S13459);

Student Learning Outcomes

Learning Objectives

Objectives
Identify electrical components

Objectives
Identify basic electrical quantities

Objectives
Mathematically manipulate basic electrical quantities

Objectives
Measure basic electrical quantities

Objectives
Interpret circuit schematics

Objectives
Construct DC and AC circuits

Objectives
Verify DC and AC circuits

Objectives
Analyze DC and AC circuits using test equipment

Objectives
Troubleshoot DC and AC circuits using test equipment

Objectives
The student will be able to produce a variety of documents to demonstrate their understanding of electronic components, usage of test equipment and troubleshooting methods.

ELC213 - Instrumentation

Overview

Course Description
This course covers the fundamentals of instrumentation used in industry. Emphasis is placed on electric, electronic, and other instruments. Upon completion, students should be able to install, maintain, and calibrate instrumentation.

Credit Hours
4

Requisites

Simple Requisites

Local Prerequisite

Type
Prerequisite

Take ELC-111 ELC-112(S21587) or ELC-131(S21593);

Take ELC-111 ELC-112(S21587) or ELC-131(S21593);

ELC220 - Photovoltaic System Technology

Overview

Course Description
This course introduces the concepts, tools, techniques, and materials needed to understand systems that convert solar energy into electricity with photovoltaic (pv) technologies. Topics include site analysis for system integration, building codes, and advances in photovoltaic technology. Upon completion, students should be able to demonstrate an understanding of the principles of photovoltaic technology and current applications.

Course Typically Offered
Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Explain Fundamental PV Concepts and System Components

Objectives
Interpret PV System Designs, Diagrams, and Documentation

Objectives
Apply Electrical Theory and Calculations Relevant to PV Systems

Objectives
Demonstrate Knowledge of PV System Safety and OSHA Practices

Objectives
Explain Applicable Codes, Standards, and Regulatory Requirements

Objectives
Perform Basic PV System Site Assessment and Shading Analysis

Objectives
Describe PV System Operation, Performance, and Maintenance

ELC228 - Programmable Logic Controllers Applications

Overview

Course Description
This course covers programming and applications of programmable logic controllers. Emphasis is placed on programming techniques, networking, specialty I/O modules, and system troubleshooting. Upon completion, students should be able to specify, implement, and maintain complex PLC controlled systems.

Course Typically Offered
Fall

Credit Hours
4

Requisites

Simple Requisites

Prerequisite

Type
Prerequisite

Take ELC-128;

Take ELC-128(S10676);

Student Learning Outcomes

Learning Objectives

Objectives
Identify PLC hardware components

Objectives
Create drivers and establish PC-PLC communications

Objectives
Identify basic PLC instructions

Objectives
Create simple PLC programs using Relay Ladder Logic

Objectives
Troubleshoot Relay Ladder Logic PLC programs

ELC229 - Applications Project

Overview

Course Description
This course provides an individual and/or integrated team approach to a practical project as approved by the instructor. Topics include project selection and planning, implementation and testing, and a final presentation. Upon completion, students should be able to plan and implement an applications-oriented project.

Course Typically Offered
Spring

Credit Hours
2

Requisites

Simple Requisites

Prerequisite

Type
Prerequisite

Take ELC-112(S21587) ELC-113 or ELC-140;

Take ELC-112(S21587) ELC-113(S11805) or ELC-140;

Student Learning Outcomes

Learning Objectives

Objectives
Troubleshoot Relay Ladder Logic PLC programs

Objectives
Create a bill of materials

Objectives
Create and update project planner template

Objectives
Develop a simulated die cast machine using Automation Studio software

Objectives
Assemble and present a final project presentation

Objectives
Plan a simulated die cast machine

ELN131 - Analog Electronics I

Overview

Course Description
This course introduces the characteristics and applications of semiconductor devices and circuits. Emphasis is placed on analysis, selection, biasing, and applications. Upon completion, students should be able to construct, analyze, verify, and troubleshoot analog circuits using appropriate techniques and test equipment.

Course Typically Offered
Spring

Credit Hours
4

Requisites

Simple Requisites

Recommended concurrent or previous courses

Type
Corequisite

Take ELC-131 or ELC-112

Take ELC-131(S23482) or ELC-112(S23481);

Student Learning Outcomes

Learning Objectives

Objectives
Identify and describe operation of semiconductor devices.

Objectives
Analyze where and how analog components are used.

Objectives
Locate and select analog devices using component specifications based on circuit requirements.

Objectives
Construct operational circuits using analog devices.

Objectives
Select and demonstrate the use of appropriate test equipment to analyze circuit operation.

Objectives
Using appropriate troubleshooting techniques evaluate circuit performance applying suitable repair methods.

Objectives
Identify and demonstrate safe workplace practices.

Objectives
Construct discrete component circuits using appropriate techniques

Objectives
Analyze discrete component circuits using appropriate techniques and test equipment

Objectives
Troubleshoot and verify discrete component circuits using appropriate techniques and test equipment

ELN132 - Analog Electronics II

Overview

Course Description
This course covers additional applications of analog electronic circuits with an emphasis on analog and mixed signal integrated circuits (IC). Topics include amplification, filtering, oscillation, voltage regulation, and other analog circuits. Upon completion, students should be able to construct, analyze, verify, and troubleshoot analog electronic circuits using appropriate techniques and test equipment.

Course Typically Offered
Fall, Summer

Credit Hours
4

Student Learning Outcomes

Learning Objectives

Objectives
Construct linear integrated circuits using appropriate techniques

Objectives
Analyze linear integrated circuits using appropriate techniques and test equipment

Objectives
Troubleshoot and verify linear integrated circuits using appropriate techniques and test equipment

ELN133 - Digital Electronics

Overview

Course Description
This course covers combinational and sequential logic circuits. Topics include number systems, Boolean algebra, logic families, medium scale integration (MSI) and large scale integration (LSI) circuits, analog to digital (AD) and digital to analog (DA) conversion, and other related topics. Upon completion, students should be able to construct, analyze, verify, and troubleshoot digital circuits using appropriate techniques and test equipment.

Course Typically Offered
Spring

Credit Hours
4

Student Learning Outcomes

Learning Objectives

Objectives
Identify and describe the operation of digital electronic devices and circuits.

Objectives
Analyze where and how digital electronics circuits are used.

Objectives
Locate and select digital electronic devices using component specifications based on circuit requirements.

Objectives
Construct operational circuits using digital devices.

Objectives
Troubleshoot and verify digital circuits using appropriate techniques and test equipment

Objectives
Select and demonstrate the use of appropriate test equipment to analyze circuit operation.

Objectives
Using appropriate troubleshooting techniques evaluate circuit performance applying suitable repair methods.

Objectives
Identify and demonstrate safe workplace practices.

Objectives
Convert between various number systems

Objectives
Construct digital circuits using appropriate techniques

Objectives
Analyze digital circuits using appropriate techniques and test equipment

ELN231 - Industrial Controls

Overview

Course Description
This course introduces the fundamental concepts of control of rotating machinery and associated peripheral devices. Topics include rotating machine theory, ladder logic, electromechanical and solid state relays, motor controls, pilot devices, three-phase power systems, and other related topics. Upon completion, students should be able to interpret schematics and demonstrate an understanding of electromechanical and electronic control of rotating machinery.

Course Typically Offered
Spring

Credit Hours
3

Learning Objectives

Objectives
Identify elements of open and closed loop systems

Objectives
Identify pressure, temperature, flow, and level systems & components

Objectives
Identify industrial detection devices & sensing methods

Objectives
Wire and troubleshoot advanced system projects

Requisites

Simple Requisites

Prerequisite

Type
Prerequisite

TAKE ELC-112 ELC-131 AND ELC-140

Take ELC-112(S23481) ELC-131(S23482) or ELC-140;

Student Learning Outcomes

ELN232 - Introduction to Microprocessors

Overview

Course Description
This course introduces microprocessor architecture and microcomputer systems including memory and input/output interfacing. Topics include low-level language programming, bus architecture, I/O systems, memory systems, interrupts, and other related topics. Upon completion, students should be able to interpret, analyze, verify, and troubleshoot fundamental microprocessor circuits and programs using appropriate techniques and test equipment.

Course Typically Offered
Fall, Spring

Credit Hours
4

Student Learning Outcomes

Learning Objectives

Objectives
Identify the components of an embedded computer system

Objectives
Use Integrated Development Environment software to write source code, assemble the source code and download the machine code to an embedded processor

Objectives
Write source code in assembly language to control devices interfaced to a microcontroller

Objectives
Troubleshoot assembly language programs

ELN234 - Communication Systems

Overview

Course Description

This course introduces the fundamentals of electronic communication systems. Topics include the frequency spectrum, electrical noise, modulation techniques, characteristics of transmitters and receivers, and digital communications. Upon completion, students should be able to interpret analog and digital communication circuit diagrams, analyze transmitter and receiver circuits, and use appropriate communication test equipment.

Credit Hours

4

Requisites

Simple Requisites

Prerequisite

Type
Prerequisite

ELN-132 OR ELN-140

Take ELN-132(S23509) or ELN-140;

Student Learning Outcomes

Learning Objectives

Objectives
Define and explain the electromagnetic spectrum and its use in radio frequency communication

Objectives
Calculate gain and attenuation in decibels (dB)

Objectives
Explain signal to noise ratio

Objectives
Explain the types of modulation used in electronic communication systems

Objectives
Determine the modulation index and percent of modulation for FM and AM communication systems

Objectives
Explain the distribution of sidebands associated with a communication signal

Objectives
Compare analog and digital communication techniques and discuss the advantages of each

Objectives
Describe the types and principles of multiplexing and demultiplexing

Objectives
Analyze the operation of transmitter and receiver circuits

Objectives
Describe the basic types of digital modulation

Objectives
Describe the types and principles of binary data transmission

Objectives
Explain and describe the principles of transmission lines

Objectives
Use an SWR Analyzer to measure the SWR of an antenna

ELN236 - Fiber Optics and Lasers

Overview

Course Description
This course introduces the fundamentals of fiber optics and lasers. Topics include the transmission of light; characteristics of fiber optic and lasers and their systems; fiber optic production; types of lasers; and laser safety. Upon completion, students should be able to understand fiber optic communications and basic laser fundamentals.

Credit Hours
4

ELN247 - Electronic App Project

Overview

Course Description
This course provides a structured approach to an application-oriented electronics project. Emphasis is placed on selecting, planning, implementing, testing, and presenting an application-oriented project. Upon completion, students should be able to present and demonstrate an electronics application-oriented project.

Course Typically Offered
Spring

Credit Hours
2

Learning Objectives

Objectives
Write a Project Planning Report, which describes the project, including possible uses for the project, anticipated costs, etc.

Objectives
Prepare a schedule of tasks to be accomplished throughout the project. The schedule is to include start/stop dates and total hours allocated to each task.

Objectives
Present and demonstrate an electronics application-oriented project.

Requisites

Simple Requisites

Prerequisite

Type
Prerequisite

Take ELN-133 ELN-132 or ELN-140;

Take ELN-133(S23488) ELN-132(S23509) or ELN-140;

Student Learning Outcomes

ELN260 - Programmable Logic Controllers

Overview

Course Description
This course provides a detailed study of PLC applications, with a focus on design of industrial controls using the PLC. Topics include PLC components, memory organization, math instructions, documentation, input/output devices, and applying PLCs in industrial control systems. Upon completion, students should be able to select and program a PLC system to perform a wide variety of industrial control functions.

Course Typically Offered
Summer

Credit Hours
4

Requisites

Simple Requisites

Local Prerequisite

Type
Prerequisite

Take ELC-128

Take ELC-128(S23522);

Student Learning Outcomes

Learning Objectives

Objectives
Identify PLC hardware components

Objectives
Create drivers and establish PC-PLC communications

Objectives
Identify basic PLC instructions

Objectives
Create simple PLC programs using Relay Ladder Logic

Objectives
Troubleshoot Relay Ladder Logic PLC programs

ELN275 - Troubleshooting

Overview

Course Description
This course covers techniques of analyzing and repairing failures in electronic equipment. Topics include safety, signal tracing, use of service manuals, and specific troubleshooting methods for analog, digital, and other electronics-based circuits and systems. Upon completion, students should be able to logically diagnose and isolate faults and perform necessary repairs to meet manufacturers' specifications.

Course Typically Offered
Fall, Spring

Credit Hours
2

Requisites

Simple Requisites

Prerequisite

Type
Prerequisite

TAKE ELN-133 ELN-132

Take ELN-133(S23488) ELN-132(S23509);

Student Learning Outcomes

Learning Objectives

Objectives
Logically diagnose and isolate fault(s), and perform necessary repairs to meet manufacturer specifications.

Objectives
Analyze schematic diagrams, line diagrams, block diagrams, flow charts and blueprints to logically diagnose and isolate fault(s).

Objectives
Troubleshoot and verify electronics related applications programs using appropriate techniques and test equipment Identify electrical components.

EMS110 - EMT

Overview

Course Description
This course introduces basic emergency medical care. Topics include preparatory, airway, patient assessment, medical emergencies, trauma, infants and children, and operations. Upon completion, students should be able to demonstrate the knowledge and skills necessary to achieve North Carolina State or National Registry EMT certification.

Credit Hours
9

EMS122 - EMS Clinical Practicum I

Overview

Course Description
This course provides the introductory hospital clinical experience for the paramedic student. Emphasis is placed on mastering fundamental paramedic skills. Upon completion, students should be able to demonstrate competency with fundamental paramedic level skills.

Credit Hours
1

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take EMS-110

Take EMS-110(S25182);

EMS130 - Pharmacology

Overview

Course Description
This course introduces the fundamental principles of pharmacology and medication administration and is required for paramedic certification. Topics include medical terminology, pharmacological concepts, weights, measures, drug calculations, vascular access for fluids and medication administration and legislation. Upon completion, students should be able to accurately calculate drug dosages, properly administer medications, and demonstrate general knowledge of pharmacology.

Credit Hours
4

Type
Prerequisite

Take EMS-110

Take EMS-110(S25182);

EMS131 - Advanced Airway Management

Overview

Course Description
This course is designed to provide advanced airway management techniques and is required for paramedic certification. Topics must meet current guidelines for advanced airway management in the pre-hospital setting. Upon completion, students should be able to properly utilize all airway adjuncts and pharmacology associated with airway control and maintenance.

Credit Hours
2

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take EMS-110

Take EMS-110(S25182);

EMS160 - Cardiology I

Overview

Course Description
This course introduces the study of cardiovascular emergencies and is required for paramedic certification. Topics include anatomy and physiology, pathophysiology, electrophysiology, and rhythm interpretation. Upon completion, students should be able to recognize and interpret rhythms.

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take EMS-110

Take EMS-110(S25182);

EMS220 - Cardiology II

Overview

Course Description
This course provides an in-depth study of cardiovascular emergencies and is required for paramedic certification. Topics include assessment and treatment of cardiac emergencies, cardiac pharmacology, and patient care. Upon completion, students should be able to manage the cardiac patient.

Credit Hours
3

Requisites

ENG045 - English Skills Support

Overview

Course Description
This course provides academic support for the successful completion of gateway English courses by supplementing and reinforcing classroom instruction. Emphasis is placed on developing a growth mindset, expanding skills in active reading and writing processes, applying editing and revision strategies, exercising standard writing conventions through contextualized instruction, and ethically using appropriate technology when reading and writing. Upon completion, students should be able to apply active reading strategies to college-level texts and produce unified, well-developed essays using standard written English.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Discuss the academic habits of mind and learning strategies necessary to be successful in a gateway Englsih course.

Objectives
Evaluate campus resources (e.g., tutoring, counseling, and other services) that will support success in gateway English coursework.

Objectives
Ethically use technology to improve writing skills, conduct research, and communicate ideas effectively.

Objectives
Master the foundational skills needed to be successful in a gateway English course:
a. Identify writing as a recursive process.
b. Use different rhetorical strategies to reflect, analyze, explain, and persuade in a variety of genres and formats.
c. Reflect on their writing process, including prewriting and revision based on feedback.
d. Make critical use of digital, visual, and alphabetic texts.
e. Locate relevant sources, evaluate their credibility, and incorporate evidence with proper documentation.
f. Write with rhetorical effectiveness, following conventions of grammar, spelling, and mechanics.
g. Collaborate actively with peers in a writing community.

ENG102 - Applied Communications II

Overview

Course Description
This course is designed to enhance writing and speaking skills for the workplace. Emphasis is placed on generating short writings such as job application documents, memoranda, and reports and developing interpersonal communication skills with employees and the public. Upon completion, students should be able to prepare effective, short, and job-related written and oral communications.

Course Typically Offered
Spring, Summer

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Communicate orally before an audience or within an interpersonal situation

Objectives
Use the steps in the writing process to communicate effectively.

Objectives
Write a well-developed paragraph that is unified, clear, and coherent.

Objectives
Use formatting and content specifications to compose various workplace documents such as business letters, memorandums, reports, and resumes.

Objectives
Apply computer skills essential to workplace writing.

Objectives
Demonstrate effective organization and style, based upon clear determination of purpose and analysis of audience.

Objectives
Evaluate workplace situations and report practical solutions and/or recommendations.

Objectives
Create workplace documents that reveal a mastery of composition and design skills.

ENG110 - Workplace Writing Essentials

Overview

Course Description
This course is designed to equip students with the essential writing skills and strategies required to excel in the workplace. Emphasis is placed on the development of written communication expertise specifically tailored to the needs of the business and industrial sectors. Upon completion, students should be able to produce a variety of professional documents appropriate for the workplace, such as forms of correspondence, business reports, proposals, resumes, cover letters, and other workplace documents, while adhering to industry standards and best practices.

Credit Hours
3

ENG111 - Writing and Inquiry

Overview

Course Description

This course is designed to develop the ability to produce clear writing in a variety of genres and formats using a recursive process. Emphasis includes inquiry, analysis, effective use of rhetorical strategies, thesis development, audience awareness, and revision. Upon completion, students should be able to produce unified, coherent, well-developed essays using standard written English. This course has been approved for transfer under the CAA as a general education course in English Composition. This course has been approved for transfer under the ICAA as a general education course in English Composition.

Overview

Course Description
This course covers the fundamentals of electrified transportation technologies, emphasizing workplace safety and environmental regulation to alternative fuels. Topics include the safety protocols for high-voltage vehicle systems, gaseous and liquid alternative fuels, and Plugin Hybrid and EV charging infrastructure. Upon completion, students should be able to demonstrate safe work practices, service modern hybrid and electric vehicles.

Credit Hours
2

EVX115 - Light Electric Vehicle Technologies

Overview

Course Description
This course introduces the core technologies common to all Electric & Hybrid Vehicles (xEVs), covering basic electric motor, battery, and controller theory, including special test and charging equipment. Topics include DC and AC motor & motor controller technologies with hands-on Light EV BLDV motor & controller technologies, as well as Battery, Battery Management, and Battery Charging technologies. Upon completion, students should be able to understand how xEV motors, motor controllers, battery packs, and battery charging systems work and diagnose common malfunctions in all these xEV core technologies.

Credit Hours
2

EVX120 - Electric Vehicle Technologies

Overview

Course Description
This course covers the essential systems and technologies of electric vehicles (EVs), focusing on safety and maintenance. Topics include a review of electrical principles, high-voltage safety protocols, and the design, testing, and maintenance of crucial EV components such as batteries, motors, inverters, and onboard chargers. Upon completion, students should be able to perform diagnostic evaluations and effectively maintain and troubleshoot battery electric vehicles.

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take TRN-120

Take TRN-120(S27004);

EVX130 - Hybrid Vehicle Technologies

Overview

Course Description
This course covers the critical systems and technologies of hybrid vehicles, focusing on safety and maintenance. Topics include a review of electrical principles and safety protocols for hybrid and battery-electric vehicles (BEVs) and the design, testing, and maintenance of critical components such as batteries, motors, inverters, and transmissions. Upon completion, students should be able to perform diagnostic evaluations and effectively maintain and troubleshoot hybrid vehicles.

Credit Hours
3

Requisites

Prerequisite

Take TRN-120

Take TRN-120(S27004);

EVX240 - Hybrid/Electric Vehicle Advanced Diagnostics

Overview

Course Description
This course provides advanced diagnostic strategies for high-voltage components found in EVXs. Topics include the evaluation of individual battery modules and contactors, motor and inverter diagnostics, EVSE and onboard charger diagnosis, thermal management systems diagnosis, and EV conversions. Upon completion, students should be able to select appropriate test equipment to diagnose high-voltage components and make repairs.

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take One Set: Set 1: EVX-120 Set 2: EVX-130

Take 1 group; # Take EVX-120; # Take EVX-130;

EVX240A - Hybrid/Electric Vehicle Advanced Diagnostics Lab

Overview

Course Description
This course is an optional lab to be used in conjunction with/or as an alternative to work-based learning. Topics include the evaluation of individual battery modules and contactors, motor and inverter diagnostics, EVSE and onboard charger diagnosis, thermal management systems diagnosis, and EV conversions. Upon completion, students should be able to select appropriate test equipment to diagnose high-voltage components and make repairs.

Credit Hours

Corequisite

Take EVX-240

Take EVX-240;

FIP3124 - NFPA1403 Live Burn Compliance

Overview

Course Description
This course covers current NFPA 1403 Standard on Live Fire Training Evolutions compliance training required before a firefighter can participate in a live fire or live burn training exercise. This is not a live burn training event; it is NFPA 1403 compliance training critical to firefighter safety.

Credit Hours
0

FRE111 - Elementary French I

Overview

Course Description
This course introduces the fundamental elements of the French language within a cultural context. Emphasis is placed on the development of basic listening, speaking, reading, and writing skills. Upon completion, students should be able to comprehend and respond with grammatical accuracy to spoken and written French and demonstrate cultural awareness.

Course Typically Offered
Fall

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Understand and use familiar everyday expressions and basic phrases needed to meet communicative needs for survival and necessity in a Francophone area of the world.

Objectives
Introduce yourself and others in French.

Objectives
Ask and answer questions about personal and family information.

Objectives
Talk about your weekly and daily routines

Objectives
Talk about hobbies and interests

Objectives
Have a basic conversation with a speaker of French who is accustomed to speaker of French as a second/foreign language

Objectives
Interact with cultural competence and understanding by using the language to investigate, explain and reflect on the relationship(s) between practices and perspectives of the cultures studied

FRE112 - Elementary French II

Overview

Course Description
This course is a continuation of FRE 111 focusing on the fundamental elements of the French language within a cultural context. Emphasis is placed on the progressive development of listening, speaking, reading, and writing skills. Upon completion, students should be able to comprehend and respond with increasing proficiency to spoken and written French and demonstrate further cultural awareness.

Course Typically Offered
Spring

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take FRE-111

Take FRE-111;

Student Learning Outcomes

Learning Objectives

Objectives
NC State Outcomes
Distinguish simple conversations (dialogues, questions, and answers) about familiar topics (e.g., telling time, talking about the weather) and respond appropriately to cultural conventions.
Formulate and answer simple questions in different cultural situations.
Explain main ideas of basic authentic texts.
Write basic descriptions of self and people in France and the Francophone world.
Describe past events in short paragraphs using simple sentences and basic vocabulary.
Demonstrate an understanding of multiple cultural perspectives.
Present narratives in the present and past tenses

Objectives
Describe and navigate the world around them

Objectives
Discuss food, diet, & dining

Objectives
Discuss professions and personality traits

Objectives
Discuss the Arts

Objectives
Have basic conversations with French speakers who are accustomed to speakers of French as a second/foreign language

Objectives
Interact with cultural competence and understanding by using the language to investigate, explain and reflect on the relationship(s) between practices and perspectives of the cultures studied

FRE211 - Intermediate French I

Overview

Course Description
This course provides a review and expansion of the essential skills of the French language. Emphasis is placed on the study of authentic and representative literary and cultural texts. Upon completion, students should be able to communicate effectively, accurately, and creatively about the past, present, and future.

Course Typically Offered
Fall

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take FRE-112

Take FRE-112;

FRE212 - Intermediate French II

Overview

Course Description
This course is a continuation of FRE 211. Emphasis is placed on the continuing study of authentic and representative literary and cultural texts. Upon completion, students should be able to communicate spontaneously and accurately with increasing complexity and sophistication.

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Prerequisite

Take FRE-211

Take FRE-211;

FST100 - Introduction to Foodservice

Overview

Course Description
This course is designed to develop an understanding of the foodservice industry, its terminology, mathematics, and measurements. Emphasis is placed on employability skills, vocabulary, and culinary math including fractions, ratio and proportion, and percents. Upon completion, students should be able to identify career paths, convert recipes, and differentiate standard measurements.

Course Typically Offered
Fall, Spring

Credit Hours
3

FST101 - Quantity Baking I

Overview

Course Description
This course introduces fundamental concepts, skills, and techniques in quantity baking. Topics include yeast and quick breads, cookies, cakes, and other baked goods. Upon completion, students should be able to prepare and evaluate baked products.

Course Typically Offered
Fall, Spring

Credit Hours
3

Requisites

Simple Requisites

State concurrent or previous courses

Type
Corequisite

Take One: FST-103 or CUL-110

Take FST-103(S22867) or CUL-110(S22835);

FST102 - Foodservice Skills I

Overview

Course Description
This course introduces the concepts, skills, and techniques for volume food production in an institutional or commercial setting. Emphasis is placed on knife skills, tool and equipment handling, and applying principles of basic hot and cold food preparation. Upon completion, students should be able to demonstrate entry-level skills for foodservice operations.

Course Typically Offered
Fall, Spring

Credit Hours
8

Requisites

Simple Requisites

State concurrent or previous courses

Type

Take One: FST-103 or CUL-110

Take FST-103(S22867) or CUL-110(S22835);

FST103 - Foodservice Sanitation

Overview

Course Description
This course provides practical experience with the basic principles of safety and sanitation in the foodservice industry. Emphasis is placed on personal hygiene habits, safety regulations, and food handling practices (H.A.C.C.P.) that protect the health of the consumer. Upon completion, students should be able to demonstrate appropriate safety and sanitation practices required in the foodservice industry.

Course Typically Offered
Fall, Spring

Credit Hours
2

FST103A - Foodservice Sanitation Lab

Overview

Course Description
This course provides a laboratory experience for enhancing student skills in the basic principles of sanitation and safety in the foodservice industry. Emphasis is placed on the practical experiences that enhance personal hygiene habits, safety regulations, and food handling practices that protect the health of the consumer. Upon completion, students should be able to demonstrate the application of sanitation and safety production procedures in foodservice operations.

Course Typically Offered
Fall, Spring

Credit Hours
1

Requisites

Simple Requisites

State concurrent or previous courses

Take FST-103(S22867) or CUL-110(S22835);

GEL111 - Geology

Overview

Course Description
This course introduces basic landforms and geological processes. Topics include rocks, minerals, volcanoes, fluvial processes, geological history, plate tectonics, glaciers, and coastal dynamics. Upon completion, students should be able to describe basic geological processes that shape the earth.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
4

Student Learning Outcomes

Learning Objectives

Objectives
Explain fundamental geologic concepts including earth structure, plate tectonics, rocks and minerals, rock cycle, crustal deformation, surficial processes, earth resources and geohazards.

Objectives
Apply the basic methods of scientific inquiry in the context of geology.

Objectives
Recognize and quantify the operation of Earth system processes over geologic and human timescales and over local, regional and global spatial scales.

Objectives
Manipulate, interpret and construct visualizations of geologic data using maps, graphs, and contemporary technology.

Objectives
Demonstrate an appreciation for the societal relevance of geology and the impact of humans on the earth system.

GEL113 - Historical Geology

Overview

Course Description
This course covers the geological history of the earth and its life forms. Emphasis is placed on the study of rock strata, fossil groups, and geological time. Upon completion, students should be able to identify major fossil groups and associated rock strata and approximate ages of geological formations.

Credit Hours
4

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take One: GEL-111 or GEL-120

Take GEL-111(S12347) or GEL-120;

GEL230 - Environmental Geology

Overview

Course Description
This course provides insights into geologic forces that cause environmental changes influencing man's activities. Emphasis is placed on natural hazards and disasters caused by geologic forces. Upon completion, students should be able to relate major hazards and disasters to the geologic forces responsible for their occurrence.

Credit Hours
4

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take One: GEL-111, GEL-120, or PHS-130

Take GEL-111(S12347) GEL-120 or PHS-130;

GEO111 - World Regional Geography

Overview

Course Description
This course introduces the regional concept which emphasizes the spatial association of people and their environment. Emphasis is placed on the physical, cultural, and economic systems that interact to produce the distinct regions of the earth. Upon completion, students should be able to describe variations in physical and cultural features of a region and demonstrate an understanding of their functional relationships.

Credit Hours
3

GRO120 - Intro to Gerontology

Overview

Course Description
This course introduces the psychological, social, and biological aspects of aging. Emphasis is placed on common mental, social, and physical changes that occur during the aging process. Upon completion, students should be able to recognize the aging process and its psychological, social, and biological aspects.

Course Typically Offered
Fall

Credit Hours
3

Requisites

Simple Requisites

Local Co-Requisite

Type
Corequisite

Take HSE-135

Take HSE-135;

HEA110 - Personal Health/ Wellness

Overview

Course Description
This course provides an introduction to basic personal health and wellness. Emphasis is placed on current health issues such as nutrition, mental health, and fitness. Upon completion, students should be able to demonstrate an understanding of the factors necessary to the maintenance of health and wellness.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Apply the basic concepts and principles of lifelong personal health and wellness.

Objectives
Assess and compare their personal lifestyle in contrast to those suggested by the health and medical field.

Objectives
Develop a personal diet strategy conducive to optimal health.

Objectives
Develop a personal exercise strategy conductive to optimal health.

Objectives
Implement personal safety habits which will improve their changes for longevity and productivity.

HEA112 - First Aid & CPR

Overview

Course Description
This course introduces the basics of emergency first aid treatment. Topics include rescue breathing, CPR, first aid for choking and bleeding, and other first aid procedures. Upon completion, students should be able to demonstrate skills in providing emergency care for the sick and injured until medical help can be obtained.

Course Typically Offered
Fall, Spring

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate skill in providing emergency care for the sick and injured until advanced medical help is obtained.

Objectives
Recognize, manage, and assist individuals suffering heart attack, cardiac arrest, burns, wounds, broken bones, bleeding, breathing difficulties, allergic reactions, life-threatening injury, survival in remote areas, and be able to react with confidence and skill to emergency situations.

HFS110 - Exercise Science

Overview

Course Description
This course is a survey of scientific principles, methodologies, and research as applied to exercise and physical adaptations to exercise. Topics include the basic elements of kinesiology, biomechanics, and motor learning. Upon completion, students should be able to identify and describe physiological responses and adaptations to exercise.

Course Typically Offered
Fall, Spring

Credit Hours
4

Student Learning Outcomes

Learning Objectives

Objectives
Identify human musculoskeletal anatomy structure and function.

Objectives
Explain concepts as it relates to Exercise Physiology

Objectives
Explain basic kinesiology principles including concepts from kinesiology, biomechanics, and motor learning.

Objectives
Identify and describe basic nutrition concepts and their relationship to exercise.

Objectives
Explain the physiology associated with exercise training.

HFS111 - Fitness & Exercise Testing I

Overview

Course Description
This course introduces the student to graded exercise testing. Topics include various exercise testing protocols with methods for prescribing exercise programs based on exercise tolerance tests and the use of various equipment and protocols. Upon completion, students should be able to conduct specific exercise tests and the use of various equipment.

Course Typically Offered
Fall

Credit Hours
4

Student Learning Outcomes

Learning Objectives

Objectives
Administer and analyze the results of various health and fitness surveys to determine a client's readiness to participate in an exercise program.

Objectives
Administer a battery of physical fitness assessments to determine a client's current state of physical fitness.

Objectives
Utilize assessment data in order to facilitate client goal setting and program development.

HFS116 - Prevention & Care of Exercise Injuries

Overview

Course Description
This course provides information about the care and prevention of exercise injuries. Topics include proper procedures, prevention techniques, and on-site care of injuries. Upon completion, students should be able to demonstrate the knowledge and skills necessary to prevent and care for exercise related injuries.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Identify major muscles, bones, joints, and anatomical landmarks.

Objectives
Explain basic biomechanical and physiological principles of movement and exercise.

Objectives
Conduct health screenings, risk assessments, and obtain informed consent.

Objectives
Assess fitness and modify exercise programs for individual needs.

Objectives
Demonstrate safe and effective use of exercise equipment and proper technique.

Objectives
Monitor exercise intensity and recognize signs of distress or injury.

Objectives
Apply injury prevention strategies and respond to exercise emergencies.

HFS118 - Fitness Facility Management

Overview

Course Description
This course provides information about the management and operation of health and fitness facilities and programs. Topics include human resources, sales and marketing, member retention, financial management, facility design and maintenance, and risk management. Upon completion, students should be able to demonstrate the knowledge and skills necessary to effectively manage a fitness facility.

Course Typically Offered
Fall, Summer

Credit Hours
4

Student Learning Outcomes

Learning Objectives

Objectives
Provide current information relating to a fitness and sport facility management

Objectives
Expose students to topics for troubleshooting working in a sports venue

Objectives
Build a special event from conception to execution and post event evaluation

HFS120 - Group Exercise Instruction

Overview

Course Description
This course introduces the concepts and guidelines of instructing exercise classes. Topics include program designs, working with special populations, and principles of teaching and monitoring physical activity. Upon completion, students should be able to demonstrate basic skills in instructing an exercise class and monitoring workout intensity.

Course Typically Offered
Fall, Spring

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take HFS-110

Take HFS-110;

Student Learning Outcomes

Learning Objectives

Objectives
Familiarize the students with the basics of group instruction including low impact aerobics, step aerobics, yoga, Pilates, and strength training. Additional classes will be introduced through the semester to include kick-boxing, water aerobics and indoor cycling. (SLO1)

Objectives
Explain how to incorporate safe, effective and efficient group exercise classes that include proper warm-up and cool-down; and appropriate aerobic intensity.

Objectives
Promote the ability to implement safety precautions and modifications to the various group exercise classes.

Objectives
Provide students the opportunity to experience various group exercise classes. Each student will also be able to observe and evaluate different group exercise instructors.

Objectives
Identify the knowledge and experience to assist in the achievement of obtaining a group exercise certification.

Objectives
Plan, develop and implement a group exercise session, with applicable lesson plan and handout.

Objectives
Evaluate a group exercise session.

HFS210 - Personal Training

Overview

Course Description
This course introduces the student to the aspects of personal (one-on-one) training. Topics include training systems, marketing, and program development. Upon completion, students should be able to demonstrate personal training techniques and competencies of same.

Course Typically Offered
Spring

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take All: HFS-110 and HFS-111

Take HFS-110 HFS-111;

Student Learning Outcomes

Learning Objectives

Objectives
Apply the knowledge, skills, and abilities of a competent, professional, personal trainer through the successful completion of at least one (1) certified personal trainer certification examination.

Objectives
Design, lead, and manage a one-on-one exercise training session with a client in a professional exercise setting.

Objectives
Evaluate, analyze, and critically critique the effectiveness of personal training sessions.

HFS212 - Exercise Programming

Overview

Course Description
This course provides information about organizing, scheduling, and implementation of physical fitness programs. Topics include programming for various age groups, competitive activities and special events, and evaluating programs. Upon completion, students should be able to organize and implement exercise activities in a competent manner.

Course Typically Offered
Spring

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take HFS-110

Take HFS-110;

Student Learning Outcomes

Learning Objectives

Objectives
Explain the implementation of corporate wellness programs, exercise programming for special populations, and safe and effective personal training practices.

Objectives
Apply knowledge of organizing and designing effective evidenced based exercise programs for clients who are diagnosed with chronic diseases and disabilities.

Objectives
Review peer-reviewed research and other credible sources to develop knowledge of a specific disease and/or disability.

Objectives
Develop a comprehensive paper that details the epidemiology, exercise modifications, and other special considerations needed when working with a client with a specific disease or disability.

Objectives
Design a presentation that will provide a synopsis of the information collected and organized in the research paper.

Objectives
Explain the design and implementation of corporate and worksite wellness programs.

Objectives
Organize and participate in a student wellness committee.

Objectives
Develop an evaluation tool to capture the needs and interests of clients.

Objectives
Work in groups to develop and implement an effective, needs specific program.

Objectives
Explain the implementation and design of exercise programs for individuals.

Objectives
Conduct and design individual exercise sessions for various clients.

Objectives
Design and present a comprehensive exercise program for clients.

HFS218 - Lifestyle Change & Wellness

Overview

Course Description
This course introduces health risk appraisals and their application to lifestyle changes. Topics include nutrition, weight control, stress management, and the principles of exercise. Upon completion, students should be able to conduct health risk appraisals and apply behavior modification techniques in a fitness setting.

Course Typically Offered
Fall, Summer

Credit Hours
4

Student Learning Outcomes

Learning Objectives

Objectives
Explain the concept of wellness, which incorporates the components of physical fitness, behavior modification, nutrition, stress, and prevention of disease.

Objectives
Introduced to basic fitness assessment and programming skills in order to build a base for advanced training in these areas.

Objectives
Use a 'coaching' model to facilitate lifestyle change for a client who is ready, willing and able to make positive changes.

HIS111 - World Civilizations I

Overview

Course Description
This course introduces world history from the dawn of civilization to the early modern era. Topics include Eurasian, African, American, and Greco-Roman civilizations and Christian, Islamic and Byzantine cultures. Upon completion, students should be able to analyze significant political, socioeconomic, and cultural developments in pre-modern world civilizations.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Analyze significant political developments in World Civilizations before 1500

Objectives
Summarize cultural developments in pre-modern World Civilizations

Objectives
Describe the socio-economic developments in World Civilizations before 1500

HIS112 - World Civilizations II

Overview

Course Description
This course introduces world history from the early modern era to the present. Topics include the cultures of Africa, Europe, India, China, Japan, and the Americas. Upon completion, students should be able to analyze significant political, socioeconomic, and cultural developments in modern world civilizations.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Analyze significant political developments in World Civilizations since 1500

Objectives
Summarize cultural developments in modern World Civilizations

Objectives
Describe the socio-economic developments in World Civilizations since 1500

HIS121 - Western Civilization I

Overview

Course Description
This course introduces western civilization from pre-history to the early modern era. Topics include ancient Greece, Rome, and Christian institutions of the Middle Ages and the emergence of national monarchies in western Europe. Upon completion, students should be able to analyze significant political, socioeconomic, and cultural developments in early western civilization.

Credit Hours
3

HIS122 - Western Civilization II

Overview

Course Description
This course introduces western civilization from the early modern era to the present. Topics include the religious wars, the Industrial Revolution, World Wars I and II, and the Cold War. Upon completion, students should be able to analyze significant political, socioeconomic, and cultural developments in modern western civilization.

Credit Hours
3

HIS131 - American History I

Overview

Course Description
This course is a survey of American history from pre-history through the Civil War era. Topics include the migrations to the Americas, the colonial and revolutionary periods, the development of the Republic, and the Civil War. Upon completion, students should be able to analyze significant political, socioeconomic, and cultural developments in early American history.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Analyze significant political developments in early American history to the Civil War

Objectives
Summarize cultural developments in the first half of American history

Objectives
Describe the socio-economic developments in American history up to 1865

Objectives
Demonstrate increased intercultural knowledge and competence through a variety of global assignments

HIS132 - American History II

Overview

Course Description
This course is a survey of American history from the Civil War era to the present. Topics include industrialization, immigration, the Great Depression, the major American wars, the Cold War, and social conflict. Upon completion, students should be able to analyze significant political, socioeconomic, and cultural developments in American history since the Civil War.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Analyze significant political developments in American history after the Civil War

Objectives
Summarize cultural developments in the second half of American history

Objectives
Describe the socio-economic developments in American history after 1865

Objectives
Demonstrate increased intercultural knowledge and competence through a variety of global assignments

HIS151 - Hispanic Civilization

Overview

Course Description
This course surveys the cultural history of Spain and its impact on the New World. Topics include Spanish and Latin American culture, literature, religion, and the arts. Upon completion, students should be able to analyze the cultural history of Spain and Latin America.

Credit Hours
3

HIS222 - African-American History I

Overview

Course Description
This course covers African American history through the Civil War period. Topics include African origins, the nature of slavery, African-American participation in the American Revolution, abolitionism, and the emergence of a distinct African-American culture. Upon completion, students should be able to analyze significant political, socioeconomic, and cultural developments in early African-American history.

Course Typically Offered
Fall

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Detect and analyze key historical figures, locations, ideas, and events in early African-American history.

Objectives
Assess the socioeconomic and cultural environment and its influence on the course of early African-American history.

Objectives
Differentiate between the chronological sequence and the causal relation between events.

Objectives
Interpret both primary and secondary sources (including documents, cartoons, photographs, film, music, charts, and maps) effectively.

Objectives
Appraise the multiple perspectives essential to study of the historical era and controversies.

HIS223 - African-American History II

Overview

Course Description
This course covers African American history from the Civil War to the present. Topics include Reconstruction, the Jim Crow era, urbanization, the Harlem Renaissance, the Civil Rights movement, and the philosophies of major African-American leaders. Upon completion, students should be able to analyze significant political, socioeconomic, and cultural developments in African-American history since the Civil War.

Course Typically Offered
Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Detect and analyze key historical figures, locations, ideas, and events in later African-American history.

Objectives
Assess the socioeconomic and cultural environment and its influence on the course of later African-American History.

Objectives
Differentiate between the chronological sequence and the causal relation between events.

Objectives
Interpret both primary and secondary sources (including documents, cartoons, photographs, film, music, charts, and maps) effectively.

Objectives
Appraise the multiple perspectives essential to study of the historical era and controversies.

HIS226 - The Civil War

Overview

Course Description
This course examines the social, political, economic, and ideological forces that led to the Civil War and Reconstruction. Topics include regional conflicts and sectionalism, dissolution of the Union, military campaigns, and the War's socioeconomic impact, aftermath, and consequences. Upon completion, students should be able to analyze significant political, socioeconomic, and cultural developments in the United States during the era of the Civil War.

Course Typically Offered
Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Aanalyze significant political developments in the United States of America during the era of the Civil War

Objectives
Summarize cultural developments in the USA during the Civil War Era

HIS236 - North Carolina History

Overview

Course Description
This course is a study of geographical, political, economic, and social conditions existing in North Carolina from America's discovery to the present. Topics include native and immigrant backgrounds; colonial, antebellum, and Reconstruction periods; party politics; race relations; and the transition from an agrarian to an industrial economy. Upon completion, students should be able to analyze significant political, socioeconomic, and cultural developments in North Carolina.

Course Typically Offered
Fall

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Understand the significant political developments in the history of North Carolina

Objectives
Comprehend the socioeconomic development of the state of North Carolina, from pre-colonial era to present

Objectives
Analyze the cultural developments throughout the history of North Carolina

HIT110 - Introduction to Healthcare and HIM Management

Overview

Course Description
This course introduces healthcare settings and the Health Information Management (HIM) professional's role in healthcare delivery systems. Topics include health information management operations in compliance with standards, regulations and accrediting body initiatives; healthcare providers and disciplines; and electronic health records (EHRs). Upon completion, students should be able to demonstrate an understanding of health information management and healthcare organizations, professions and trends.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Describe health care organizations from the perspective of key stakeholders.

Objectives
Identify policies and strategies to achieve data integrity.

Objectives
Utilize technologies for health information management.

Objectives
Identify human resource strategies for organizational best practices.

Objectives
Identify the key healthcare regulations and laws that impact HIM continuum.

Objectives
Identify and describe the classification systems used to capture coded data.

Objectives
Calculate HIM departmental data.

Objectives
Create graphical representation of healthcare data using Excel.

HIT112 - Health Law and Ethics

Overview

Course Description
This course covers the study of the judicial, legislative, and regulatory standards applicable to health care and health information processes. Topics include legal terminology, confidentiality, privacy, security, access and disclosure of health information, ethical implications, data stewardship, and the integrity of the legal health record. Upon completion, students should be able to apply policies, procedures and ethical standards in compliance with external forces.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Apply legal terminology, concepts and principles to the practice of HIM.

Objectives
Distinguish between the privacy and security rules of HIPAA.

Objectives
Explain the issues surrounding an ethical issue that reflects unbiased discussion on both sides of the issue.

Objectives
Apply policies and procedures surrounding issues of access and disclosure of protected health information.

Objectives
Identify the correct use of legal documents.

Objectives
Analyze policies and procedures to ensure organizational compliance with regulations and standards.

Objectives
Demonstrate effective listening, communication and problem-solving skills when working collaboratively with classmates.

Objectives
Demonstrate appropriate research methodologies

HIT114 - Health Data Systems and Standards

Overview

Course Description
This course covers concepts and techniques for managing and maintaining all health record formats including electronic health records (EHR). Topics include structure and use of health information including data collection and analysis, data sources/ sets, archival systems, as well as quality and integrity of healthcare data. Upon completion, students should be able to determine compliance of health record content and governance standards within the health organization.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Describe health care organizations from the perspective of key stakeholders.

Objectives
Apply policies, regulations, and standards to the management of information.

Objectives
Identify policies and strategies to achieve data integrity.

Objectives
Determine compliance of health record content within the health organization.

Objectives
Describe components of data dictionaries and data sets.

Objectives
Calculate statistics for health care operations.

Objectives
Report health care data through graphical representations.

Objectives
Describe components of revenue cycle management and clinical documentation improvement.

Objectives
Evaluate compliance with regulatory requirements and reimbursement methodologies.

Objectives
Demonstrate compliance with external forces.

Objectives
Identify the core elements of clinical documentation required in a health record.

Objectives
Identify and list the appropriate elements needed for a physician query.

HIT124 - Professional Practice Exp II

Overview

Course Description
This course provides supervised and/or simulated health information technology clinical experience in healthcare settings. Emphasis is placed on practical application of HIM functions and core curriculum concepts. Upon completion, students should be able to apply health information theory to healthcare facility practices.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
1

Student Learning Outcomes

Learning Objectives

Objectives
Explain how the various functions and units within the HIM department affect the overall operations of a healthcare facility.

Objectives
Demonstrate professional and practical skills in a HIM department

Objectives
Apply classroom learning to real-world scenarios during the practicum experience.

Objectives
Demonstrate non-clinical skills necessary to begin a career in healthcare.

Objectives
Evaluate the overall importance and impact of government and other organizations on the U.S. healthcare system.

HIT211 - Diagnosis Coding and Reporting

Overview

Course Description
This course covers diagnostic coding and sequencing utilizing the current version of the ICD code set for inpatient, outpatient and ambulatory care settings. Emphasis is placed on the rules and conventions of the ICD official coding guidelines in relation to anatomy, physiology and disease processes. Upon completion, students should be able to accurately assign and sequence diagnosis codes in compliance with the ICD official coding guidelines for reporting statistical data, patient outcomes and reimbursement methodologies.

Course Typically Offered
Fall, Spring

Credit Hours
3

Requisites

Simple Requisites

Local Prerequisite

Type
Prerequisite

Take BIO-163 or BIO-169 and MED-122

Take BIO-163 BIO-169(S11629) MED-122;

Local Corequisite

Type
Corequisite

Take HIT-226

Take HIT-226(S25691);

Student Learning Outcomes

Learning Objectives

Objectives
Apply ICD-10-CM format and conventions. 2. Assign ICD-10-CM codes.

Objectives
Explain the notations and symbols found in diagnosis code sets.

Objectives
Apply inpatient and outpatient coding guidelines for proper code assignment.

Objectives
Interpret healthcare data and physician's notes to ensure that documentation supports codes determined.

Objectives
Apply the Official Guidelines for specialty coding: hypertension; neoplasms;poisonings; etc.

HIT213 - Inpatient Procedure Coding & Reporting

Overview

Course Description
This course covers the application of coding guidelines as applied to the reporting of inpatient procedures. Emphasis is placed on the rules and conventions of the ICD-PCS code set utilizing the index and tables, in relation to anatomy and physiology to assign principal and secondary procedure codes in hospital inpatient settings. Upon completion, students should be able to accurately assign procedural codes according to the official ICD-PCS coding guidelines and evaluate compliance with regulatory requirements and reimbursement methodologies.

Course Typically Offered
Fall, Spring

Credit Hours
2

Requisites

Simple Requisites

Local Prerequisite

Type
Prerequisite

Take BIO-163 or BIO-169 and MED-122

Take BIO-163 BIO-169(S11629) MED-122;

Local Corequisite

Type
Corequisite

Take HIT-226

Take HIT-226(S25691);

Student Learning Outcomes

Learning Objectives

Objectives
Build the appropriate ICD-10-PCS code based on procedure coding guidelines.

Objectives
Describe the body system, body part characters, and how the two-character values relate to each other.

Objectives
Define the meaning of the root operation and the nine subgroupings of the root operations in the Medical and Surgical section.

Objectives
Define the seven different approach values used in ICD-10-PCS.

Objectives
Describe the device characters and the criteria for including a value for devices.

Objectives
Discuss the use of the qualifier as the last character in the ICD-10-PCS code

HIT214 - Outpatient Procedure Coding/Reporting

Overview

Course Description
This course covers application of coding and reporting standards as they apply to Current Procedural Terminology (CPT) guidelines and principles. Emphasis is placed on application of the coding guidelines, in relation to anatomy and physiology, for ambulatory healthcare settings. Upon completion, students should be able to assign CPT/HCPCS procedural codes according to official guidelines and evaluate compliance with regulatory requirements and reimbursement methodologies.

Course Typically Offered
Spring, Summer

Credit Hours
2

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take HIT-211

Take HIT-211(S25704);

Student Learning Outcomes

Learning Objectives

Objectives
Apply the general rules and guidelines for accurate coding assignments.

Objectives
Abstract pertinent clinical information.

Objectives
Describe the uses of modifiers

Objectives
Describe the documentation requirements for E/M coding.

Objectives
Apply general guidelines for HCPCS Level II coding assignment.

Objectives
Summarize regulatory requirements and reimbursement methodologies.

HIT215 - Revenue Cycle Management

Overview

Course Description
This course covers the revenue cycle management process used in all healthcare settings as they relate to national billing, compliance, and reporting requirements. Topics include clinical documentation improvement, prospective payment systems, billing processes and procedures, chargemaster maintenance, regulatory guidelines, fraud and abuse, reimbursement monitoring, compliance strategies and reporting. Upon completion, students should be able to perform data quality reviews to validate code assignment and comply with reimbursement and reporting requirements.

Course Typically Offered
Fall, Spring

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Describe components of revenue cycle management and clinical documentation improvement 2.Evaluate revenue cycle processes 3. Evaluate compliance with regulatory requirements and reimbursement methodologies 4 .Validate assignment of diagnostic and procedural codes and groupings in accordance with official guidelines

HIT217 - Quality & Data Analysis

Overview

Course Description
This course covers the principles of quality assessment and improvement, including data analysis and decision making in healthcare. Topics include healthcare statistics, continuous quality improvement, data analysis and reporting techniques, quality and outcome metric monitoring. Upon completion, students should be able to compute healthcare statistics, abstract, analyze and report clinical data for organization-wide quality and performance improvement programs for compliance purposes.

Course Typically Offered
Fall, Spring

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take MAT-152

Take MAT-152(S25431);

Student Learning Outcomes

Learning Objectives

Objectives
This course is under development course SLOs have not yet been created/finalized.

HIT218 - Management Principles in HIT

Overview

Course Description
This course covers organizational management concepts as applied to healthcare settings. Topics include leadership skills, managing organizational change, best practices, decision-making, financial management, cultural diversity, ethics, consumer engagement, and workforce training. Upon completion, students should be able to apply management, leadership, and supervisory concepts to various healthcare settings.

Course Typically Offered
Fall

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate fundamental leadership skills

Objectives
Identify the impact of organizational change

Objectives
Identify human resource strategies for organizational best practices

Objectives
Utilize financial management processes

Objectives
Examine behaviors that embrace cultural diversity

Objectives
Assess ethical standards of practice

Objectives
Identify processes of workforce training for health care organizations

HIT220 - Electronic Health Records

Overview

Course Description
This course covers EHR systems, design, implementation and application. Topics include EHR, informatics, information governance, health information exchange (HIE), speech & imaging technology, information/network security & integrity, data dictionaries, modeling and warehousing. Upon completion, students should be able to facilitate usage of electronic health record systems and other technologies.

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Apply policies, regulations, and standards to the management of health information

Objectives
Describe components of data dictionaries and data sets

Objectives
Utilize technologies for health information management

Objectives
Explain the concepts of data analytics and health informatics

Objectives
Describe the connection of data analytics and health informatics to the use of healthcare information systems

Objectives
Apply policies and procedures to the use of networks and security, including intranet and internet applications to facilitate the electronic health record (EHR), personal health record (PHR), public health, and other administrative applications

Objectives
Explain the concept of interoperability and the models, methods, benefits and barriers of health information exchange.

Objectives
Perform tasks in the planning, design, selection, implementation, integration, testing, evaluation and support for organization-wide information systems.

Objectives
Describe how Health Information Management (HIM) professionals can lead data and information governance efforts to improve patient health outcomes

HIT221 - Lifecycle of Electronic Health Record

Overview

Course Description
This course covers the concepts and features of an electronic health record (EHR) system in integrated delivery networks. Topics include administrative and clinical functions such as patient management, privacy and security aspects, clinical documentation and reporting, coding and billing, data management and analytics, CDSS and quality improvement, and implementation of electronic health record systems. Upon completion, students should be able to understand the principles of an EHR and how to utilize EHR software to improve the quality and efficiency of operations in healthcare.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Identify the core components of an electronic health record (EHR).

Objectives
Describe interoperability.

Objectives
Describe components of data dictionaries and data sets.

Objectives
Utilize technologies for health information management.

Objectives
Apply policies, regulations, and standards to the management of information

HIT222 - Professional Practice Exp III

Overview

Course Description
This course provides supervised and/or simulated health information technology clinical experience in healthcare settings. Emphasis is placed on practical application of HIM functions and core curriculum concepts. Upon completion, students should be able to apply health information theory to healthcare facility practices.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Describe how the various functions within a specific unit/department of the HIM department affects the healthcare facility as a whole.

Objectives
Demonstrate professional and practical skills in a HIM department

Objectives
Apply classroom learning to real-world scenarios during the practicum experience.

Objectives
Discuss the link between professionalism, professional growth, and personal growth.

Objectives
Demonstrate usage of multiple health information software applications; MediTech, Solcom, Tableau, Encoder and DrChrono.

Objectives
Demonstrate usage of proper ICD-10-CM/PCS, and CPT guidelines for correct code assignment.

Objectives
Demonstrate non-clinical soft skills to begin a career in healthcare.

HIT225 - Healthcare Informatics

Overview

Course Description
This course covers data analysis to support decision making, patient care, and regulatory compliance. Topics include clinical terminology and vocabulary systems, data capture methodology, data presentation and reporting, and initiatives to improve the quality of patient care. Upon completion, students should be able to identify data elements and sets, analyze capture methodology in healthcare settings, analyze compliance issues and make improvement recommendations.

Course Typically Offered
Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Explain the use of classification systems, clinical vocabularies, and nomenclatures

Objectives
Apply health informatics concepts to the management of health information

Objectives
Describe research methodologies used in healthcare

Objectives
Describe the concepts of managing data

Objectives
Summarize standards for the exchange of health information

Objectives
Manage data within a database system

Objectives
Identify standards for exchange of health information

HIT226 - Pathophysiology & Pharmacology

Overview

Course Description
This course covers principles of disease and the associated pharmacological treatments. Emphasis is placed on physical signs and symptoms, prognoses, common complications and therapeutic options. Upon completion, students should be able to relate disease processes to physical signs and symptoms, prognosis, common complications and their management.

Course Typically Offered
Spring, Summer

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take One: BIO-163 BIO-166 or BIO-169

Take BIO-163 BIO-166 or BIO-169(S11629);

Student Learning Outcomes

Learning Objectives

Objectives
Define terminology common to the various body systems and disorders of the body systems.

Objectives
Discuss basic anatomy and physiology of various body systems.

Objectives
Identify important signs and symptoms associated with various body systems.

Objectives
Describe common diagnostics used to determine the type, cause, or both of various system disorders.

Objectives
Identify disorders of the various body systems.

Objectives
Describe the typical course and management of common body system disorders.

Objectives
Describe the effects of aging on the various systems and common disorders of the systems associated with aging.

HIT280 - Health Information Management Capstone

Overview

Course Description
This course integrates application of knowledge and skills learned in prior HIT courses and is designed to prepare students for professional roles in HIM and promote ethical standards of practice. Emphasis is placed on AHIMA domains and professional competencies, career services and preparation for the National Certification exam. Upon completion, students should be able to demonstrate competency in the entry-level domains and subdomains of health information management.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
2

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take HIT-211

Take HIT-211(S25704);

Student Learning Outcomes

Learning Objectives

Objectives
Analyze mock exam performance data to identify strengths and areas for improvement.

Objectives
Demonstrate competence of the 6 RHIT exam domains including: (1) Data Content, Structure, and Information Governance, (2) Access, Disclosure, Privacy and Security, (3) Data Analytics and Use, (4) Revenue Cycle Management, (5) Compliance, and (6) Leadership.

Objectives
Demonstrate usage of proper ICD-10-CM/PCS, and CPT guidelines for correct code assignment.

Objectives
Describe health care organizations from the perspective of key stakeholders.

Objectives
Demonstrate fundamental leadership skills.

Objectives
Identify human resource strategies for organizational best practices.

HMT110 - Introduction to Healthcare Management

Overview

Course Description
This course introduces the functions, practices, organizational structures, and professional issues in healthcare management. Emphasis is placed on planning, controlling, directing, and communicating within health and human services organizations. Upon completion, students should be able to apply the concepts of management within a healthcare service environment.

Course Typically Offered
Fall

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Apply concepts and theories used in health care management (HMT);

Objectives
Demonstrate proficiency in using materials and references, tools and/or technology central to HMT

Objectives
Discuss the perspectives and values of HMT;

Objectives
Demonstrate research concepts needed to critically analyze current HMT research and literature

Objectives
Integrate health care management theory with real world problems through the use of research and discussion

HMT211 - Long-Term Care Administration

Overview

Course Description
This course introduces the administration of long-term care facilities and services. Emphasis is placed on nursing home care, home health care, hospice, skilled nursing facilities, and other long-term care services. Upon completion, students should be able to distinguish between the different long-term care offerings, criteria for use, and benefits of the patient, resident, and participant.

Course Typically Offered
Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Describe the needs and use of long term care in our society

Objectives
Contrast long term care policy in the past, the present and projecting future need

Objectives
Apply the laws, regulations and financing associated with the long term care industry to everyday practice

Objectives
Describe the long term care industries organizational structure

Objectives
Associate all long term care service points with how they work together to deliver quality care

Objectives
Discuss the essentials of effective management in the long term care industry

HMT212 - Management of Healthcare Organizations

Overview

Course Description
This course examines current issues affecting the management of healthcare delivery systems. Topics include current problems, changes, and challenges in the healthcare environment. Upon completion, students should be able to identify current health care issues and their impact on healthcare management.

Course Typically Offered
Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Explain how healthcare is delivered in the United States

Objectives
Propose a holistic approach to health care delivery

Objectives
Discuss the evolution of U.S. health care delivery and current trends.

Objectives
Provide an overview of the health services professionals employed.

Objectives
Describe the differences and imbalances between services characterized in the U.S. health care system

Objectives
Explain the meaning of medical technology and discuss the main components of technology assessment.

Objectives
Explain financing and the various methods of reimbursement.

Objectives
Differentiate between different healthcare settings.

Objectives
Explain managed care.

Objectives
Discuss cost, access, and quality in healthcare and the challenges of vulnerable populations.

Objectives
Describe the development of legislative policy.

Objectives
Discuss health care reform.

HMT220 - Healthcare Financial Management

Overview

Course Description
This course covers the methods and techniques utilized in the financial management of healthcare programs. Topics include cost determination, pricing of services, financial statement analysis, forecasting/projections, third-party billing, reimbursement, Medicare, Medicaid, and budgeting. Upon completion, students should be able to interpret and apply the principles of financial management in a healthcare environment.

Course Typically Offered
Spring

Credit Hours
4

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take All: HMT-110 and ACC-120

Take HMT-110(S20232) ACC-120(S20278);

Student Learning Outcomes

Learning Objectives

Objectives
Explain various finance concepts from a healthcare perspective.

Objectives
Discuss various revenue sources and reimbursement schemes and their impact on healthcare organizations.

Objectives
List classification, allocation, and activity based costing in healthcare organizations.

Objectives
Apply cost-volume-profit analysis, including computation of contribution margin, break-even points, margins of safety, and operating leverage.

Objectives
Demonstrate how technology is used to prepare budgets in healthcare.

Objectives
Explain revenue cycle and the importance of cash management for healthcare organizations.

Objectives
Dicsuss how debt and equity are used to finance healthcare operations.

Objectives
apply discounted cash flow analysis, including NPV, IRR, and ROI to healthcare capital projects.

Objectives
Analyze capital investment opportunities.

HOR112 - Landscape Design I

Overview

Course Description
This course covers landscape principles and practices for residential and commercial sites. Emphasis is placed on drafting, site analysis, and common elements of good design, plant material selection, and proper plant utilization (encouraged use of native plants and discouraged use of invasive species). Upon completion, students should be able to read plans and draft a landscape design according to sustainable practices.

Credit Hours
3

HOR130 - Greenhouse Design

Overview

Course Description
This course covers greenhouse facilities planning and equipment selection. Topics include types of greenhouses, location factors, materials, glazing selection, calculation of heating/cooling requirements, lighting, benches, and energy conservation. Upon completion, students should be able to demonstrate knowledge of material selection, facilities planning, equipment need selection, and appropriate calculations.

Course Typically Offered
Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Evaluate a site for greenhouse placement.

Objectives
Evaluatie different greenhouse designs for appropriateness to desired function.

Objectives
Apply critical and creative thinking skills to solving management problems in the greenhouse environment.

Objectives
Select appropriate tools and technology to accomplish tasks specific to greenhouse design and installation.

Objectives
Estimate materials costs for various design projects.

Objectives
Source materials for greenhouse construction.

Objectives
Construct and maintaining various aspects of greenhouses and their associated systems, including irrigation and ventilation.

HOR156 - Introduction to Ecological Landscaping

Overview

Course Description
This course introduces the environmental, social, economic and regulatory aspects of ecological landscaping and land stewardship practices. Topics include the shift to functioning landscapes, ecosystem services, and natural communities with strong emphasis on emerging career opportunities. Upon completion, students should be able to identify the principles of landscaping centered on positive ecological outcomes.

Credit Hours
3

HOR168 - Plant Propagation

Overview

Course Description
This course is a study of sexual and asexual reproduction of plants. Emphasis is placed on seed propagation, grafting, stem and root propagation, micro-propagation, and other propagation techniques. Upon completion, students should be able to successfully propagate ornamental plants.

Course Typically Offered
Fall

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Identify proper propagation methods for a variety of annual and perennial plants.

Objectives
Develop skills for successful application of common sexual and asexual propagation techniques.

Objectives
Competently use the tools, materials, substances, and environments for propagating plants.

Objectives
Recognize and solve rudimentary problems in the plant propagation process.

Objectives
Accurately document the plant propagation process using the vocabulary of propagation and plant nomenclature.

Objectives
Observe growth of plants and differentiate between factors affecting growth.

Objectives
Evaluate propagation success rates.

Objectives
Create a useful propagation guide appropriate for farm or nursery.

HOR3307G1 - Greenhouse Design

Overview

Course Description
Learn how to develop and design your own personal greenhouse. This course covers greenhouse facilities planning and equipment selection and will cover topics such as types of greenhouses, location factors, materials, glazing selection, calculation of heating/ cooling requirements, lighting, benches, and energy conservation. Upon completion, students should be able to demonstrate knowledge of material selection, facilities planning, equipment need selection, and appropriate calculations. This is a parallel course to HOR-130 and offered in a curriculum environment.

Credit Hours

	Credit Hours Max:
1	33

HRM170 - Food Truck Operations

Overview

Course Description
This course introduces students to mobile food truck management and provide the fundamentals of establishing and operating a food truck. Emphasis is placed on marketing, budget management, menu development, interior food truck design, and business plan implementation. Upon completion, students should be able to formulate a food truck concept, understand local, state, and federal requirements, create menu content and a marketing strategy, and develop a viable business plan.

Credit Hours
3

Requisites

Simple Requisites

State concurrent or previous courses

Type
Corequisite

Take CUL-110

Take CUL-110(S22835);

HRM220 - Cost Control-Food and Beverage

Overview

Course Description
This course introduces controls and accounting procedures as applied to costs in the hospitality industry. Topics include reports, cost control, planning and forecasting, control systems, financial statements, operational efficiencies, labor controls and scheduling. Upon completion, students should be able to demonstrate an understanding of food, beverage, and labor cost control systems for operational troubleshooting and problem solving.

Credit Hours
3

HRM245 - Human Resource Management-Hospitality

Overview

Course Description
This course introduces a systematic approach to human resource management in the hospitality industry. Topics include training/development, staffing, selection, hiring, recruitment, evaluation, benefit administration, employee relations, labor regulations/ laws, discipline, motivation, productivity, shift management, contract employees and organizational culture. Upon completion, students should be able to apply human resource management skills for the hospitality industry.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Objectively manage the interviewing, hiring, and evaluation of staff in restaurant and service operations.

Objectives
Navigate the nuances of the probationary period and the consideration of factors in staff performance, including attendance, customer service, teamwork, etc.

Objectives
Understand and maintain knowledge of the basic laws and regulations for hiring, recruiting, training, offering benefits, etc., in the hospitality industry in the time of COVID-19 (pre-, post-pandemic).

Objectives
Explore solutions for creative perks/privileges for staff, both with and without financial impact.

Objectives
Understand and articulate social media for restaurants/food service/hospitality industry businesses-managing social media profiles effectively.

Objectives
Constructively handle reviews of restaurant/food service business when faced with negative reviews and providing factual and measured responses.

HSC110 - Orientation to Health Careers

Overview

Course Description
This course is a survey of health care professions. Topics include professional duties and responsibilities, working environments, and career choices. Upon completion, students should be able to demonstrate an understanding of the health care professions and be prepared to make informed career choices.

Credit Hours
1

Student Learning Outcomes

Learning Objectives

Objectives
Identify various careers in the healthcare job profession

Objectives
Understand what professional duties and responsibilities are required to work in healthcare

Objectives
Have a better direction of where they would like to work in healthcare

HSE110 - Introduction to Human Services

Overview

Course Description
This course introduces the human services field, including the history, agencies, roles, and careers. Topics include personal/professional characteristics, diverse populations, community resources, disciplines in the field, systems, ethical standards, and major theoretical and treatment approaches. Upon completion, students should be able to identify the knowledge, skills, and roles of the human services worker.

Course Typically Offered
Fall, Spring

Credit Hours
3

Requisites

Simple Requisites

Local Co-Requisite

Type
Corequisite

Take HSE-135

Take HSE-135;

Student Learning Outcomes

Learning Objectives

Objectives
Decribe the role of the counselor; as a professional

Objectives
Explore the major approaches to counselingAnalyze basic counseling skills and techniques

HSE112 - Group Process I

Overview

Course Description
This course introduces interpersonal concepts and group dynamics. Emphasis is placed on self-awareness facilitated by experiential learning in small groups with analysis of personal experiences and the behavior of others. Upon completion, students should be able to show competence in identifying and explaining how people are influenced by their interactions in group settings.

Course Typically Offered
Spring

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Understand the role of the counselor

Objectives
Learn about the group members

Objectives
Analyze the different code of ethics in group counseling

Objectives
Discuss Group Process and the Stages of Groups

Objectives
Understand the importance of planning

Objectives
Review methods of evaluation during session and at the closing.

HSE123 - Interviewing Techniques for Human Services

Overview

Course Description
This course covers the purpose, structure, focus, and techniques utilized in effective interviewing. Emphasis is placed on observing, attending, listening, responding, summarizing, and documenting with instructor supervision. Upon completion, students should be able to perform the basic interviewing skills needed to facilitate the helping relationship.

Course Typically Offered
Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate basic attending skills (both verbal and nonverbal)

Objectives
Demonstrate skills in listening, reflection (feelings and content), paraphrasing, summarization.

Objectives
Successfully identify and respond to client reported discrepancies during information gathering.

Objectives
Apply skills and show evidence of understanding each skill by using them correctly.

Objectives
Evaluate client resistance and productive ways to respond.

HSE125 - Counseling

Overview

Course Description
This course covers the major approaches to psychotherapy and counseling, including theory, characteristics, and techniques. Emphasis is placed on facilitation of self-exploration, problem solving, decision making, and personal growth. Upon completion, students should be able to understand various theories of counseling and demonstrate counseling techniques.

Course Typically Offered
Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Understand the major approaches to psychotherapy and counseling

Objectives
Explain the differing theories that are foundational in the practice of counseling.

Objectives
Successfully demonstrate basic counseling techniques

Objectives
Explore basic counseling terminology, techniques, and skills

HSE135 - Orientation Lab I

Overview

Course Description
This course is designed to promote professional, program, and personal identification with the human services field. Emphasis is placed on interpersonal communication, verbal and non-verbal interactions, and team building. Upon completion, students should be able to identify with the human services profession and demonstrate basic team-building skills.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
1

Student Learning Outcomes

Learning Objectives

Objectives
Identify key roles and responsibilities of social and human services professionals

Objectives
Discuss basic skills in social and human services, exploring what this degree can offer students upon graduation

Objectives
Develop an individualized academic plan, discuss program outcomes, and complete academic advising

HSE210 - Diversity, Ethics, and Trends in Human Services

Overview

Course Description
This course is designed to provide students with an in-depth understanding of the role of diversity and ethical considerations within the human services profession. Emphasis is placed on the knowledge and skills in the evolving landscape of human services. Upon completion, students should be able to apply ethical decision-making, demonstrate an understanding of diverse perspectives, and identify current trends in the human services field.

Course Typically Offered
Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Articulate important issues and trends in the human services professional field.

Objectives
Discuss legal and ethical issues in human services.Analyze the politics, policies, and strategies to resolve issues

Objectives
Research, using the Internet, to find information on current issuesunderstand the politics, policies, and strategies to resolve issuesanalyze the vast number of issues and find ways to be the solution

HSE212 - Group Dynamics

Overview

Course Description
This course introduces the concepts of group processes and group dynamics. Emphasis is placed on essential tools for understanding, participating in, and contributing to group processes. Upon completion, students should be able to identify and explain how people are influenced by their interactions in group settings and facilitate various groups.

Course Typically Offered
Spring, Summer

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Recognize the fundamental principles of interpersonal communication and group dynamics.

Objectives
Demonstrate effective communication and leadership skills through learning group theory and counseling skills and techniques, then applying the skills by leading a group session during the class meeting.

Objectives
Design and facilitate group activities that promote effective communication and teamwork.

Objectives
Develop ethical communication guidelines for promoting inclusivity in group interactions.

HSE220 - Case Management

Overview

Course Description
This course covers a variety of tasks associated with professional case management. Topics include needs assessment, service planning, referral procedures, documentation, follow-up, and integration of services. Upon completion, students should be able to effectively manage the care of the whole person from initial contact through termination of services.

Course Typically Offered
Fall

Credit Hours
3

HSE223 - Counseling Theories & Skills

Overview

Course Description
This course provides an in-depth exploration of foundational theories and practical techniques essential for those working in diverse human services settings. Emphasis is placed on self-awareness, problem-solving, decision-making, and personal growth. Upon completion, students should be able to apply these theories to real-life scenarios, and develop professional skills crucial for fostering supportive relationships in various settings.

Course Typically Offered
Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Develop strategies for maintaining professional boundaries.

Objectives
Describe the foundational theories of counseling.

Objectives
Demonstrate proficiency in basic intervention skills and strategies.

Objectives
Apply different counseling theories to diverse client populations and presenting issues.

HSE225 - Crisis and Intervention Principles

Overview

Course Description
This course introduces the types of crises and the principles of intervention. Emphasis is placed on identifying culturally competent techniques for intervening in various crisis situations. Upon completion, students should be able to assess crisis situations and respond effectively.

Course Typically Offered
Fall

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Define and discuss crisis intervention characteristics, theories, and applications

Objectives
Explain basic crisis intervention skills

Objectives
Identify factors involved in handling specific crises

Objectives
Assess crisis situations and respond appropriately

Objectives
Develop an understanding of posttraumatic stress disorder

Objectives
Summarize the complexity of violent behavior in the workplace

Objectives
Explain multicultural influences on crisis and its intervention

HUM110 - Technology and Society

Overview

Course Description
This course considers technological change from historical, artistic, and philosophical perspectives and its effect on human needs and concerns. Emphasis is placed on the causes and consequences of technological change. Upon completion, students should be able to critically evaluate the implications of technology.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Identify major technological changes in Western culture from historical, artistic and philosophical perspectives.

Objectives
Discuss technological developments in their historical context.

Objectives
Evaluate the impact of technology on society and the individual.

Objectives
Analyze the relationship between the dynamics of technological change and social, economic, political, and cultural phenomena.

Objectives
Examine ethical implications of technology for society and the individual.

Objectives
Compare and explain the present state of technology and its history.

Objectives
Identify different philosophical perspectives on the value of technology.

Objectives
Evaluate new developments in technology and consider the possible courses of future technological development.

HUM115 - Critical Thinking

Overview

Course Description
This course introduces the use of critical thinking skills in the context of human conflict. Emphasis is placed on evaluating information, problem solving, approaching cross-cultural perspectives, and resolving controversies and dilemmas. Upon completion, students should be able to demonstrate orally and in writing the use of critical thinking skills in the analysis of appropriate texts.

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Define critical thinking.

Objectives
Identify the parts of an argument.

Objectives
Construct an argument.

Objectives
Identify and define common logical fallacies.

Objectives
Apply higher-order thinking processes to solve problems, to settle controversies, and to recognize and evaluate dilemmas.

Objectives
Recognize and evaluate the connection between language and thought.Use causal reasoning and the scientific method for solving problems.

HUM120 - Cultural Studies

Overview

Course Description
This course introduces the distinctive features of a particular culture. Topics include art, history, music, literature, politics, philosophy, and religion. Upon completion, students should be able to appreciate the unique character of the study culture.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Recognize and describe the current and past modes of technology that promote and shape popular culture.

Objectives
Explain how a variety of pop culture examples express economic, social, religious, and aesthetic ideals within a society.

Objectives
Select a specific example of pop culture for research and then analyze its impact on society as well as themselves.

Objectives
Identify ways in which the culture may be seen from a global perspective and predict the potential consequences of these perspectives.Identify and evaluate diverse cultural and aesthetic values that shape popular culture.Use vocabulary relevant to the discussion of artistic, historic, or social dimensions of popular culture.

HUM122 - Southern Culture

Overview

Course Description
This course explores the major qualities that make the South a distinct region. Topics include music, politics, literature, art, religion, race relations, and the role of social class in historical and contemporary contexts. Upon completion, students should be able to identify the characteristics that distinguish Southern culture.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Assess the distinctiveness of the South as a region.

Objectives
Discuss the social, historical, and religious context of the Southern culture.

Objectives
Analyze the evolution of systems of social class in the South.

Objectives
Explain the changing role of gender and the changing nature of the family in the South.

Objectives
Analyze the development of Southern racial policies and practices, including slavery and segregation.

Objectives
Detect the influences of class and race on southern politics and some styles of politics in the South.

Objectives
Classify examples of southern “creativity” which reflect the region’s cultural distinctiveness.

HUM150 - American Women's Studies

Overview

Course Description
This course provides an inter-disciplinary study of the history, literature, and social roles of American women from Colonial times to the present. Emphasis is placed on women's roles as reflected in American language usage, education, law, the workplace, and mainstream culture. Upon completion, students should be able to identify and analyze the roles of women as reflected in various cultural forms.

Course Typically Offered
Spring, Summer

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Describe the historical background of women's lives across the various spheres.

Objectives
Discuss the work of American women who have made major humanitarian, political, scientific, or cultural contributions to society.

Objectives
Give examples of how class, race, age and gender identities are societal constructions and detect the factors that influence the creation and adaptation of these constructions in women's lives.

Objectives
Explain how these concepts have impacted and continue to impact women.

Objectives
Distinguish between the similarities and the differences in women's lives from the various social spheres.

Objectives
Propose and defend ideas to challenge social institutions and practices that marginalize, subordinate and devalue particular groups of people.

HUM160 - Introduction to Film

Overview

Course Description

This course introduces the fundamental elements of film artistry and production. Topics include film styles, history, and production techniques, as well as the social values reflected in film art. Upon completion, students should be able to critically analyze the elements covered in relation to selected films.

Credit Hours

3

Student Learning Outcomes

Learning Objectives

Objectives
Recall and apply a basic technical and critical vocabulary of motion pictures.

Objectives
Summarize and explain the relevance of important moments in American film history.

Objectives
Distinguish between film genres and recognize how some of the most popular genres express cultural and social tensions.

Objectives
Describe economic aspects of the film industry and point out their historical and current influence on American society.

Objectives
Defend the role of film in shaping and reflecting American culture.

Objectives
Appraise and question their roles as passive viewers and evaluate their ability to watch films actively and critically through oral and written assignments.

Objectives
Compose critical analyses of Hollywood films by using cinematic language.

HUM211 - Humanities I

Overview

Course Description
This course introduces the humanities as a record in literature, music, art, history, religion, and philosophy of humankind's answers to the fundamental questions of existence. Emphasis is placed on the interconnectedness of various aspects of cultures from ancient through early modern times. Upon completion, students should be able to identify significant figures and cultural contributions of the periods studied.

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take ENG-111

Take ENG-111(S24022);

HUM220 - Human Values and Meaning

Overview

Course Description
This course presents some major dimensions of human experience as reflected in art, music, literature, philosophy, and history. Topics include the search for identity, the quest for knowledge, the need for love, the individual and society, and the meaning of life. Upon completion, students should be able to recognize interdisciplinary connections and distinguish between open and closed questions and between narrative and scientific models of understanding.

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take ENG-111

Take ENG-111(S13673);

HUM230 - Leadership Development

Overview

Course Description
This course explores the theories and techniques of leadership and group process. Emphasis is placed on leadership styles, theories of group dynamics, and the moral and ethical responsibilities of leadership. Upon completion, students should be able to identify and analyze a personal philosophy and style of leadership and integrate these concepts in various practical situations.

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take ENG-111

Take ENG-111(S13673);

HYD110 - Hydraulics/ Pneumatics I

Overview

Course Description
This course introduces the basic components and functions of hydraulic and pneumatic systems. Topics include standard symbols, pumps, control valves, control assemblies, actuators, FRL, maintenance procedures, and switching and control devices. Upon completion, students should be able to understand the operation of a fluid power system, including design, application, and troubleshooting.

Course Typically Offered
Summer

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Build fluid power curicuts on suitcase trainers

Objectives
Disassemble, identify, & reassemble reservoirs, valves, actuators, & pumps

Objectives
Compare differences of fluid power transfer components

Objectives
Identify fitting types and applications for use

Objectives
Solve fluid pwer system equations

Objectives
Identify and demonstrate safe practices and procedures with tools, materials and industry accepted test equipment covered in the course.

Objectives
Demonstrate appropriate use of test equipment, evaluate circuit performance and apply appropriate troubleshooting techniques to fluid power systems.

Objectives
Identify components of fluid power systems using symbols and schematics.

Objectives
Assemble a fluid power system.

Objectives
Calculate and demonstrate the basic physics of fluid mechanics.

HYD121 - Hydraulics/ Pneumatics II

Overview

Course Description
This course is a continuation of HYD 110 and provides further investigation into fluid power systems. Topics include advanced system components, troubleshooting, and other related topics. Upon completion, students should be able to demonstrate an understanding of the installation, application, operation, and maintenance of fluid power components and systems.

Course Typically Offered
Fall

Credit Hours
2

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take HYD-110

Take HYD-110(S10768);

Student Learning Outcomes

Learning Objectives

Objectives
Design and draw fluid power systems to perform simple functions.

Objectives
Interpret hydraulic and pneumatic system symbols and schematics.

Objectives
Correctly connect hydraulic devices, using schematics, on a hydraulic system trainer.

Objectives
Identify components of a hydraulic or pneumatic system.

Objectives
Calculate piston area, piston volume, and pressures in a hydraulic system necessary to perform a specific function.

INT110 - International Business

Overview

Course Description
This course provides an overview of the environment, concepts, and basic differences involved in international business. Topics include forms of foreign involvement, international trade theory, governmental influences on trade and strategies, international organizations, multinational corporations, personnel management, and international marketing. Upon completion, students should be able to describe the foundation of international business.

Credit Hours
3

ISC110 - Workplace Safety

Overview

Course Description
This course introduces the basic concepts of workplace safety. Topics include fire, ladders, lifting, lock-out/tag-out, personal protective devices, and other workplace safety issues related to OSHA compliance. Upon completion, students should be able to demonstrate an understanding of the components of a safe workplace.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
1

Student Learning Outcomes

Learning Objectives

Objectives
Identify unsafe conditions or behavior in an industrial environment

Objectives
Demonstrate safe work practices in industry

Objectives
Identify and select appropriate personal protective equipment used in industry

Objectives
Demonstrate safe practices regarding fire protection, electrical, chemicals, PPE, material handling, tools, and machine safety.

Objectives
Write an explanation of proper safety procedures in the workplace or industry.

Objectives
Write in complete sentences with few major grammatical errors

ISC112 - Industrial Safety

Overview

Course Description
This course introduces the principles of industrial safety. Emphasis is placed on industrial safety and OSHA regulations. Upon completion, students should be able to demonstrate knowledge of a safe working environment and OSHA compliance.

Course Typically Offered
Fall, Summer

Credit Hours
2

ISC121 - Environmental Health & Safety

Overview

Course Description
This course covers workplace environmental, health, and safety concepts. Emphasis is placed on managing the implementation and enforcement of environmental health and safety regulations and on preventing accidents, injuries, and illnesses. Upon completion, students should be able to demonstrate an understanding of basic concepts of environmental health and safety.

Course Typically Offered
Summer

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Recognize basic concepts of environmental health and safetyIdentify strategies to prevent accidents, injuries, and illnessesInterpret the management, implementation, and enforcement of environmental health

ISC129 - Quality Testing Lab Techniques

Overview

Course Description
This course provides practical training in destructive and non-destructive testing techniques. Emphasis is placed on quality testing in industrial laboratories. Upon completion, students should be able to perform basic laboratory testing functions and complete test forms.

Credit Hours
3

ISC132 - Manufacturing Quality Control

Overview

Course Description
This course introduces quality concepts and techniques used in industry. Topics include elementary statistics and probability, process control, process capability, and quality improvement tools. Upon completion, students should be able to demonstrate an understanding of the concepts and principles of quality and apply them to the work environment.

Course Typically Offered
Spring

Credit Hours
3

ISC175 - QA Fundamentals

Overview

Course Description
This course is designed to increase fundamental knowledge in the philosophies, principles, and practice of quality in the work environment. Topics include the history and basics of quality, philosophies of quality, daily application of principles, and roles of quality professions, with emphasis on cGMP environment. Upon completion, students should be able to discuss quality fundamentals, components of quality systems, and identify standards and programs of quality.

Course Typically Offered
Summer

Credit Hours
1

Student Learning Outcomes

Learning Objectives

Objectives
Discuss quality fundamentals in the cGMP environment

Objectives
Identify components of a quality system

Objectives
Recognize quality standards and programs

ISC221 - Statistical Quality Control

Overview

Course Description
This course covers the principles and techniques of statistical process control for the improvement of productivity. Emphasis is placed on basic statistics for quality control, organization and procedures for efficient quality control including inspections, process control, and tests of significance. Upon completion, students should be able to apply statistical principles and techniques to enhance production.

Course Typically Offered
Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Develop an understanding of management principles involving product quality

Objectives
Analyze and interpret data related to quality monitoring

Objectives
Understand the principles of statistical techniques as applied to process and product design, and quality improvement

Objectives
Identify various available statistical tools of quality monitoring

Objectives
Understand and use various available statistical tools for quality monitoring

Objectives
Understand the principles and tools used in Lean Manufacturing and Six Sigma

ISC278 - cGMP Quality Systems

Overview

Course Description
This course focuses on the development, implementation, and ongoing maintenance of a quality system in a cGMP environment. Topics include the cGMP standard, components of cGMP quality systems, quality function roles and training, development of documentation such as SOPs, and system review procedures. Upon completion, students should be able to identify the components of a quality system and develop a quality system manual utilizing the cGMP standard.

Course Typically Offered
Fall

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Discuss components of cGMP quality systems

Objectives
Identify quality function roles and training

Objectives
Create and use cGMP documents like SOPs

Objectives
Develop a quality system manual utilizing the cGMP standard

ISC280 - Validation Fundamentals

Overview

Course Description
This course covers the fundamental concepts of components of a validation program in a cGMP environment. Emphasis is placed on FDA requirements concerning validation, types of validation, documentation, procedures, and the QA role. Upon completion, students should be able to discuss the purpose of validation, identify the steps in the validation process, and effectively utilize sample documentation.

Course Typically Offered
Spring

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Explain the concept of validation and its role in ensuring product or process compliance with defined requirements.

Objectives
Explain regulatory requirements for validating pharmaceutical processing rooms and equipment

Objectives
Recall key components of the process validation guidance document.

Objectives
Describe equipment and systems qualification

Objectives
Discuss how to implement best practices in your current pharmaceutical firm.

Objectives
Describe the structure of a validation program

Objectives
Demonstrate best practices in the validation process.

Objectives
Apply and interview with confidence for an entry-level validation technician job at a North Carolina pharmaceutical or biotechnology company.

LEO111 - Lasers and Applications

Overview

Course Description
This course covers the basic principles of laser operations and applications with a particular emphasis on laser safety. Topics include the properties of laser light, laser components, laser beam characteristics, and laser safety. Upon completion, students should be able to make measurements of laser beam characteristics and conduct a safety audit and hazards analysis of a laser facility.

Course Typically Offered
Spring, Summer

Credit Hours
2

Requisites

Simple Requisites

State concurrent or previous courses

Type
Corequisite

Take MAT-122

Take MAT-122(S20805);

Student Learning Outcomes

Learning Objectives

Objectives
Describe and discuss the nature and properties of light

Objectives
Discuss different types of light sources and describe their different properties

Objectives
Describe requirements for laser safety

Objectives
Discuss basic principles of lasers

Objectives
Identify and describe different lasers

Objectives
Accurately document in written format “How a Laser Works”.

LEO211 - Photonics Technology

Overview

Course Description
This course covers optical theory, optical equipment, optical components, and laser systems. Topics include generation and control of light using optical components such as lasers, lenses, mirrors, diffraction gratings, filters, and polarizers. Upon completion, students should be able to construct, analyze, verify, and troubleshoot optical systems using appropriate techniques and equipment.

Course Typically Offered
Fall

Credit Hours
7

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take ELN-133

Take ELN-133(S16330);

Student Learning Outcomes

Learning Objectives

Objectives
Construct optical systems using proper optical alignment techniques

Objectives
Analyze optical systems for fault issues

Objectives
Operate optical systems and optical test equipment safely

Objectives
Perform Ray Tracing of an optical system; defining the location, orientation and size, of an image, given the location, orientation and size of an object.

Objectives
Verify Ray Tracing solutions of an optical system through calculations of the same optical system to determine the location, orientation and size, of an image, given the location, orientation and size of an object.

Objectives
Identify and plan needed optical components and materials per specifications required of the system

Objectives
Calibrate and properly maintain optical systems and optical equipment

Objectives
Properly clean and install optical components

Objectives
Create structured technical lab reports describing optics labs.

LEO212 - Photonics Applications

Overview

Course Description
This course provides knowledge and skills related to emerging photonics applications in North Carolina industry. Topics include applications such as materials processing, bar code scanning, surgical applications, optical data storage, and optical computers. Upon completion, students should be able to describe and analyze the critical issues attendant to a variety of photonics applications.

Course Typically Offered
Fall

Credit Hours
4

Requisites

Simple Requisites

Local

Type
Corequisite

LEO-211

Take LEO-211(S23496);

Student Learning Outcomes

Learning Objectives

Objectives
Identify laser switching and relay systems.

Objectives
Explain the concept, structure, and operation of gas lasers, semiconductor lasers, fiber lasers and solid state lasers.

Objectives
Explain the energy diagram of a four level laser, including identifying the levels and their purpose, be able to explain the advantage of the both the Metastable State and having a Lower Lasing Level above the Ground State.

Objectives
Identify, and properly use correct laser measurement equipment.

Objectives
Identify and explain low power applications for gas lasers, semiconductor lasers, fiber laser and solid state lasers

Objectives
Identify and explain high power applications for gas lasers, semiconductor lasers, fiber lasers and solid state lasers

Objectives
Properly operate gas lasers, solid state lasers, fiber lasers and semiconductor lasers

Objectives
Analyze, troubleshoot and repair defective gas lasers, solid state lasers, fiber lasers and semiconductor laser defects

Objectives
Accurately create written “Standard Operating Procedures” (SOP’s) describing the operation of high powered lasers.

LEO213 - Advanced Photonic Applications

Overview

Course Description
This course covers advanced knowledge and skills related to industrial photonics applications in industry. Topics include applications such as light emitting diode (LED) semiconductor processing, LED photonics operational testing, fiber optics, and spectroscopy. Upon completion, students should be able to describe and analyze the critical issues attendant to a variety of photonics applications.

Course Typically Offered
Spring

Credit Hours
4

Requisites

Simple Requisites

State concurrent or previous courses

Type
Prerequisite

Take LEO-212

Take LEO-212(S23497);

Student Learning Outcomes

Learning Objectives

Objectives
Identify and describe a fiber optic system block diagram

Objectives
Discuss advantages of fiber optic communication medium

Objectives
Identify, describe, and measure fiber characteristics

Objectives
Identify and discuss different fiber optic cables

Objectives
Identify and explain the operation, test and measure of fiber optic sources, detectors, transmitters, receivers, couplers, multiplexers, connectors, and splices

Objectives
Develop a fiber optic system power budget

Objectives
Identify, discuss and operate different types of fiber optic test equipment

Objectives
Identify and describe a semiconductor manufacturing and test process block diagram

Objectives
Discuss critical processing steps that significantly affect semiconductor device performance

Objectives
Measure LED critical parameters

Objectives
Measure thermal electric device critical parameters

Objectives
Describe a solid-state laser crystal manufacturing and test process block diagram

Objectives
Discuss critical processing steps that significantly affect solid-state laser crystal performance

Objectives
Measure solid-state laser crystal critical parameters

Objectives
Identify and discuss basic steps to consider as a field engineer for installation of photonic/laser systems

Objectives
Identify and explain main causes of photonic/laser system failures and possible solutions

Objectives
Identify and discuss proper customer relations procedures of a field engineer

Objectives
Discuss critical principles to consider in the design, build, manufacture, and test of a high energy pulsed solid-state laser

Objectives
Discuss the advantages of “flash-lamped” pumping versus “diode” pumping for a high energy pulsed solid-state laser

Objectives
Measure high energy pulsed solid-state laser critical parameters

Objectives
Define spectroscopy as used for detection and the benefits

Objectives
Using a block diagram, identify, describe and discuss different types of spectroscopy detection systems, including Raman Spectroscopy

Objectives
Discuss the different light energy sources used with different types of spectroscopy detection systems

Objectives
Measure spectrometer characteristics

Objectives
Create structured technical lab reports describing labs in the covered advanced photonic application areas.

LEO222 - Photonics Applications Project

Overview

Course Description
This course provides a structured approach to an applications-oriented photonics project. Emphasis is placed on selecting, planning, implementing, testing, and presenting the project. Upon completion, students should be able to present and demonstrate their photonics project.

Course Typically Offered
Spring

Credit Hours
2

Objectives
Manage and work a photonics project

Objectives
Build and test a photonics project

Objectives
Document a photonics project with a written final project report

Objectives
Demonstrate a photonics project

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take ALL: ELN-132 and LEO-211

Take ELN-132(S14036) LEO-211(S12064);

Student Learning Outcomes

Learning Objectives

Objectives
Plan a photonics project

LET110 - Basic Law Enforcement Training (BLET)

Overview

Course Description
This course covers the basic knowledge and skills needed for entry-level employment as a law enforcement officer in North Carolina as required by the Criminal Justice Education and Training Standards Commission and the Sheriffs' Education and Training Standards Commission. Topics include Commission-mandated content specific to law enforcement in North Carolina, criminal investigations, traffic enforcement/investigations, patrol techniques, crisis intervention, communication and de-escalation skills, interviews and interrogations, criminal and constitutional law, court procedures, civil process, ethical problem solving, and officer wellness. Upon completion, students should be able to demonstrate competence in the content required for the state comprehensive certification examination administered by the NC Department of Justice.

Course Typically Offered
Summer

Credit Hours
37

LEX110 - Introduction to Paralegal Study

Overview

Course Description
This course introduces the paralegal profession and the legal system, and an emphasis is placed on the role of professional and legal ethics. Topics include regulations, ethics, case analysis, legal reasoning, career opportunities, professional organizations, terminology and other related topics. Upon completion, students should be able to explain the role of a paralegal and identify the skills, knowledge, and ethics required of paralegals.

Course Typically Offered
Fall, Spring

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Define paralegal and explain what a paralegal does

Objectives
Discuss the history and growth of the profession

Objectives
Identify career opportunities for a paralegal

Objectives
Identifyskills and characteristics that will make a successful paralegal

Objectives
Discuss the advantages and disadvantages of regulation and types of regulation of the profession

Objectives
Define and identify major legal groups

Objectives
Discuss the American Legal System.

Objectives
Identify current green building standards such as LEED and Living Building Challenge and discuss the pros and cons of each.

LEX120 - Legal Research/ Writing I

Overview

Course Description
This course introduces the techniques of legal research and writing. Emphasis is placed on locating, analyzing, applying, and updating sources of law; effective legal writing, including proper citation; and the use of electronic research methods. Upon completion, students should be able to perform legal research and writing assignments using techniques covered in the course.

Course Typically Offered
Fall

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Find legal resources, including statutes and cases

Objectives
Cite legal resources

Objectives
Categorize legal resources as primary, secondary, mandatory, or persuasive

Objectives
Brief cases

Objectives
Research, draft and prepare internal law office memorandum

Objectives
Develop a systematic means of researching a legal problem/issue

Objectives
Communicate legal research results

Objectives
Demonstrate use of the National Reporter System; state regional and national digests; state and federal statutes; form books; dictionaries and hornbooks; WESTLAW; and other resources

Objectives
Demonstrate the descriptive word and known authority approach to legal research.

LEX121 - Legal Research/ Writing II

Overview

Course Description
This course covers advanced topics in legal research and writing. Topics include more complex legal issues and assignments involving preparation of legal memos, briefs, and other documents and the advanced use of electronic research methods. Upon completion, students should be able to perform legal research and writing assignments using techniques covered in the course.

Course Typically Offered
Spring

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take LEX-120

Take LEX-120;

Student Learning Outcomes

Learning Objectives

Objectives
Find legal resources, including statutes and cases using electronic methods and keycite

Objectives
Cite legal resources

Objectives
Brief cases

Objectives
Research, draft and prepare intenral law office memorandum for advanced legal issues

Objectives
Develop a systematic means of researching a legal problem/issue

Objectives
Communicate legal research results

Objectives
Demonstrate use of the National Reporter System; state regional, and national digests; state and federal statutes; form books; dictionaries and hornbooks; WESTLAW; encyclopedias; and their resources

Objectives
Utilize the descriptive word and known authority approach to legal research

Objectives
Prepare a bibliograpjhy for a legal topic

Objectives
Locate a law review article on point

Objectives
Locate an encyclopedia article on point

Objectives
Proof all work

LEX130 - Civil Injuries

Overview

Course Description
This course covers traditional tort concepts and the evolving body of individual rights created by statute. Topics include intentional and non-intentional torts with emphasis on negligence, strict liability, civil rights, workplace and environmental liability, remedies, and damages. Upon completion, students should be able to recognize, explain, and evaluate elements of civil injuries and related defenses.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Differentiate between torts, crimes, and contracts, and explain the historical development and philosophical foundations of tort law.

Objectives
Apply legal terminology and procedures related to tort litigation, including case initiation, discovery, trial preparation, trial, and post-trial phases.

Objectives
Analyze and brief tort cases using the IRAC method, demonstrating the ability to extract, interpret, and apply legal reasoning from case law.

Objectives
Identify and explain the elements of negligence, including duty, breach, causation, and damages, and apply related doctrines such as negligence per se, res ipsa loquitur, and various standards of care in specific contexts (e.g., landowners, professionals, landlord

Objectives
Differentiate between intentional torts, strict liability torts, and negligence, and evaluate when each cause of action is appropriate, including claims involving defamation, privacy, nuisance, and economic loss.

Objectives
Identify and evaluate defenses and doctrines affecting liability, including contributory and comparative negligence, assumption of risk, privilege, consent, immunity, and statute of limitations.

Objectives
Demonstrate foundational paralegal skills, including conducting interviews, gathering and analyzing client and witness information, working with law enforcement, and applying ethical standards to tort law practice.

LEX140 - Civil Litigation I

Overview

Course Description
This course introduces the structure of the legal system and the rules governing civil litigation. Topics include jurisdiction state and federal rules of civil procedure and evidence. Upon completion, students should be able to assist an attorney in pre-litigation matters and preparation of pleadings and motions.

Course Typically Offered
Summer

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate knowledge of the North Carolina Rules of Civil Procedure, Federal Rules of Civil Procedure and the Rules of Evidence

Objectives
To understand the responsibility and activities involved in trial preparation

Objectives
To understand the concepts of venue and jurisdiction, and apply that knowledge of cases and ascertain where litigation would be filed

Objectives
Calculate deadlines and statute of limitations

Objectives
Determine if a case should be filed in federal or state court

Objectives
Determine is a state case should be filed in district or superior court

Objectives
Demonstrate a knowledge of the court systems

Objectives
Demonstrate knowledge of the time limits and counting rules associated with civil litigation, including appellate proceedings

Objectives
Prepare a summons and cover sheet, and other AOC forms

Objectives
Obtain a default judgment and how to set aside a default judgment

Objectives
Demonstrate knowledge on how to serve a defendant and how to file a lawsuit

Objectives
Demonstrate knowledge of ADR, discuss advantages, types

Objectives
Discuss the ethical issues related to this area of practice and how to resolve any ethical issues or questions

LEX141 - Civil Litigation II

Overview

Course Description
This course covers advanced topics in the civil litigation process. Topics include motions, discovery, and trial and appellate procedures. Upon completion, students should be able to assist an attorney in preparing and organizing documents for trial, settlement and post-trial practice.

Course Typically Offered
Fall, Spring

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take LEX-140

Take LEX-140(S16406);

Student Learning Outcomes

Learning Objectives

Objectives
Plan an investigation for a case

Objectives
Prepare a civil case for trial

Objectives
Demonstrate knowledge of the North Carolina Rules of Civil Procedure

Objectives
Describe the responsibility and activities involved in trial preparation

Objectives
Draft pleadings, including complaints, answers, motions, and appellate documents

Objectives
Draft discovery documents, including interrogatories, deposition questions, requests for production, etc.

Objectives
Summarize and digest depositions

Objectives
Plan evidence presentations for trial, including the preparation of exhibits

Objectives
Organize litigation files and prepare a trial notebook

Objectives
Prepare clients for trials, discovery requests and depositions

Objectives
Demonstrate knowledge of the time limits and counting rules associated with civil litigation, including appellate proceedings

Objectives
Demonstrate knowledge of ADR, discuss advantages, types 14. To discuss the ethical issues related to this area of practice and how to resolve any ethical issues or questions

LEX150 - Commercial Law I

Overview

Course Description
This course covers legally enforceable agreements, forms of organization, and selected portions of the Uniform Commercial Code. Topics include drafting and enforcement of contracts, leases, and related documents and selection and implementation of business organization forms, sales, and commercial papers. Upon completion, students should be able to apply the elements of a contract, prepare various business documents, and understand the role of commercial paper.

Course Typically Offered
Fall

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Explain the requirements of an enforceable contract

Objectives
Draft a simple contract

Objectives
Demonstrate a working knowledge as to what constitutes a breach of contract and defenses to breach of contract

Objectives
Identify all conduct, including performance, that constitutes duties under a contract

Objectives
Explain the differences that arise when a contract comes under the sales provisions of the UCC

Objectives
List the duties under the Bulk Sales Act

Objectives
Explain the types of warranties and how they are used

Objectives
Recognize the requirements of a negotiable instrument

Objectives
Identify the various types of business entities and the advantages and disadvantages of each

Objectives
Prepare the necessary documents to create and start the most common forms of business organizations

LEX160 - Criminal Law & Procedure

Overview

Course Description
This course introduces substantive criminal law and procedural rights of the accused. Topics include elements of state/federal crimes, defenses, constitutional issues, pre-trial and trial process, and other related topics. Upon completion, students should be able to explain elements of specific crimes and assist an attorney in preparing a criminal case.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Apply and analyze complex elements of criminal laws

Objectives
Apply and analyze the complexities of criminal defenses

Objectives
Implement critical thinking skills; and

Objectives
Discuss various components of criminal procedure

LEX180 - Case Analysis & Reasoning

Overview

Course Description
This course covers the techniques of reading and applying legal opinions and the skills of case analysis. Emphasis is placed on the components of opinions and on types of legal writing. Upon completion, students should be able to read, analyze, and brief opinions and prepare legal memoranda, briefs, and other legal documents.

Course Typically Offered
Fall

Credit Hours
2

Requisites

Simple Requisites

State concurrent or previous courses

Type
Corequisite

Take LEX-120

Take LEX-120;

Student Learning Outcomes

Learning Objectives

Objectives
Identify the parties and procedural history of a case.

Objectives
Identify essential facts, significant facts, and insignificant facts.

Objectives
Write issue statements.

Objectives
Identify issues in judicial opinions.

Objectives
Distinguish between holdings and dicta.

Objectives
Apply inductive and deductive reasoning.

Objectives
Brief cases.

Objectives
Identify the different types of rationale on which the courts rely in judicial opinions.

Objectives
Draft internal and external memorandums of law.

Objectives
Differentiate an appellate brief from a case brief.

Objectives
Analogize cases.

LEX210 - Real Property I

Overview

Course Description
This course introduces the study of real property law. Topics include the distinction between real and personal property, various estates, mechanics of conveyance and encumbrance, recordation, special proceedings, and other related topics. Upon completion, students should be able to identify estates, forms of deeds, requirements for recording, and procedures to enforce rights to real property.

Course Typically Offered
Fall

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Define basic Real Estate concepts, terminology, ownership interests and rights in real property.

Objectives
Distinguish between real versus personal property

Objectives
Evaluate methods of Acquiring Title, Spousal interest: dower/courtesy.

Objectives
Dsitinguish between Public and private land control, Determining ownership.

Objectives
Define Title Holders: individuals, co-tenants, and business entities.

Objectives
Explore Tax consequences and straw parties.

Objectives
Draft Offer to purchase contracts, Specific/ common contract clauses, i.e. parties description, price.

Objectives
Explain when to apply Signatures and notarization.

Objectives
Summarize Additional clauses; existing building, new construction, commercial real estate.

Objectives
CAlculate ractice problems-completing offer to purchase.

Objectives
Sumamrize ther real estate contracts, Option contracts, Installment land contracts, Sale/ leaseback agreement, Right of First Refusal.

Objectives
Define urveys and Legal Description, Reference and beginning points, Curves, Monuments, Subdivision plans, Metes and bounds.

Objectives
Explre Deeds, Elements of a deed--premises, habendum, and conclusion, Warranty Deeds; Warranties, Seisin, Right to Convey, Encumbrance, Quite Possession, Special Warranty Deed, Quit Claim Deed, Special Deeds, Sheriff Deed, Correction Deed, Commissioner's Deed, Condominium Deed, Timber and Mineral Deed.

Objectives
Title Abstracting, Marketability, Chain of Title, Title search, Conveyances and encumbrances, Torrens.

Objectives
Write Title Opinions, Form, Exceptions--standard and specific.

Objectives
Write Title Insurance, Coverage, Exceptions, Owners and Lenders Coverage, Cost

LEX211 - Real Property II

Overview

Course Description
This course continues the study of real property law relating to title examination and preparation of closing documents. Topics include use of courthouse and other public records in title examination and preparation of documents required in real estate transactions and closings. Upon completion, students should be able to plot/draft a description, perform complete title examination, draft closing documents including title insurance forms, and prepare disbursement reconciliation.

Course Typically Offered
Spring

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take LEX-210

Take LEX-210(S10636);

Student Learning Outcomes

Learning Objectives

Objectives
Define the basic terms and definitions used in the legal environement

Objectives
Describe contractual relationships

Objectives
Explain property ownership and Interests

Objectives
Explain business organizations and real property ownership

Objectives
demonstrate transfer of title

Objectives
discuss legal descriptions and surveys

Objectives
demonstrate title searching procedures

Objectives
Discuss Mortgages and Deeds of Trust

Objectives
Perfom a chain of title and complete title examination

Objectives
identify and complete loan closing documents along with a HUD settlement statement

Objectives
Explain the responsibilities of an attorney and paralegal in real estate transactions

Objectives
Discuss the ethical considerations involved with real property

LEX240 - Family Law

Overview

Course Description
This course covers laws governing domestic relations. Topics include marriage, separation, divorce, child custody, support, property division, adoption, domestic violence, and other related topics. Upon completion, students should be able to interview clients, gather information, and draft documents related to family law.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Analyze and discuss breach of promise to marry, the heart balm statute, and contracts restraining marriage.

Objectives
Define and understand ante nuptial agreements and contract cohabitation

Objectives
Define and discuss ceremonial and common law marriages.

Objectives
Define and discuss annulment.

Objectives
Analyze separation agreements with regard to the legal issues and drafting options.

Objectives
Define and discuss child custody and child support.

Objectives
Define and analyze divorce, judicial separation, separate maintenance.

Objectives
Explain divorce procedure.

Objectives
Define and identify tax consequences of separation and divorce.

Objectives
Discuss legal rights and status of women.

Objectives
Explain illegitimacy and paternity proceedings.

Objectives
Define and discuss surrogacy.

Objectives
Identify and discuss torts involving family members.

Objectives
Describe ethics as they apply to family law.

Objectives
Prepare drafts of divorce pleadings, separation agreements, and child support worksheets for attorney review.

LEX250 - Wills, Estates, & Trusts

Overview

Course Description
This course covers various types of wills, trusts, probate, estate administration, and intestacy. Topics include types of wills and execution requirements, caveats and dissents, intestate succession, inventories and accountings, distribution and settlement, and other related topics. Upon completion, students should be able to draft simple wills, prepare estate forms, understand administration of estates including taxation, and explain terms regarding trusts.

Course Typically Offered
Fall

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Draft simple wills

Objectives
Prepare estate forms

Objectives
Explain administration of estates, including taxation and terms regarding trusts.

LEX270 - Law Office Management/Technology

Overview

Course Description
This course provides an overview of law office management and organization. Topics include office forms, filing systems, billing/time keeping, computer systems, calendar systems, library administration, case management, office/personnel procedures, ethics, and technology. Upon completion, students should be able to establish and maintain various law office systems, monitor case progress, and supervise non-lawyer personnel.

Course Typically Offered
Spring

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Establish and maintain various law office systems, monitor case progress, and supervise non-lawyer personnel.

LEX271 - Law Office Writing

Overview

Course Description
This course covers the basics of writing for the law office including the drafting of general correspondence, the briefing of cases, and the preparation of settlement brochures. Emphasis is placed on legal vocabulary in the context of letter writing, briefing judicial opinions, and the preparation of the settlement brochure. Upon completion, students should be able to draft letters to clients, opposing counsel, government entities, and insurance companies and prepare the settlement brochure.

Course Typically Offered
Summer

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Spell and define many legal terms

Objectives
Draft a status letter

Objectives
Draft an opinion letter

Objectives
Draft common correspondence

Objectives
Draft a demand letter

Objectives
Prepare a settlement brochure

Objectives
Demonstrate a professional writing style, using correct grammar and sentence formation

Objectives
Proof and improve documents

Objectives
Prepare a professional resume

Objectives
Prepare a simple case brief

Objectives
Prepare simple case citations

Objectives
Prepare marketing materials for a law office

Objectives
Discuss the ethical issues related to legal correspondence and how to resolve any ethical issues or questions

LEX280 - Ethics & Professionalism

Overview

Course Description
This course reinforces legal ethics and the role of the paralegal in a professional work environment. Topics include a review of ethics, employment opportunities, and search techniques; paralegal certification and other related topics. Upon completion, students should be able to understand the paralegal's role in the ethical practice of law.

Course Typically Offered
Fall, Spring

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Discuss and identify the role of a paralegal within a law firm and the ethical duty a paralegal owes to the attorney.

Objectives
Discuss and identify the fiduciary responsibility that the attorney owes the client.

Objectives
Explain common practices aimed at satisfying fiduciary duties.

LIB110 - Introduction to Libraries

Overview

Course Description
This course includes the history and future of libraries, a survey of library types, and an overview of library organization, services, and community relationships. Emphasis is placed on societal roles of the library, literary and intellectual freedom, comparisons and contrasts of library types, and the roles of professional organizations. Upon completion, students should be able to discuss literacy and intellectual freedom, describe library organization and compare types of libraries, their materials, and services.

Course Typically Offered
Fall

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Discuss library professional organizations

Objectives
Discuss and compare the characteristics of different types of libraries, their materials, and services

Objectives
Discuss library services and their relationship with a library's community

Objectives
Discuss the societal role of libraries

Objectives
Discuss issues facing libraries

Objectives
Discuss the history of libraries and their anticipated futures

LIB111 - Library Info Resources and Services

Overview

Course Description
This course provides introductory skills for selecting and using general and specialized information resources in print and electronic formats and related copyright issues. Emphasis is placed on selection tools, print and electronic censorship, core collection materials in various disciplines, compiling bibliographies and interpreting and referring reference questions. Upon completion, students should be able to use numerous resources to answer directional and factual questions and to decide when to refer difficult reference questions.

Course Typically Offered
Fall

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Discuss and use numerous print and electronic reference resource

Objectives
Answer directional and factual questions

Objectives
Discuss library copyright issues

Objectives
Discuss library censorship issues

Objectives
Discuss core collection materials

Objectives
Discuss and use bibliographies

Objectives
Interpret and refer reference questions

LIB112 - Library Collection Develop/Acquisitions

Overview

Course Description
This course covers library collection development and acquisitions policies and procedures. Emphasis is placed on evaluating mission statements, needs assessment studies, purchasing materials using selection criteria and tools, and related collection development and acquisitions activities. Upon completion, students should be able to evaluate mission statements, conduct needs assessments using selected criteria, and complete related collection development and acquisitions activities.

Course Typically Offered
Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Identify basic acquisitions procedures

Objectives
Compare material selection tools and policies

Objectives
Explain the importance of material management, including conservation, binders, and the acceptance of gifts

Objectives
Explain weeding policies and their implementation

Objectives
Demonstrate accountability in managing a library budget

Objectives
Explain the process of preparing and processing material orders accurately

Objectives
Describe how to maintain order files and outline proper file management techniques

Objectives
Identify the steps involved in tracking periodical materials and preparing claim forms

Objectives
Identify basic accounting tasks related to library materials and services

Objectives
Outline the steps for following inventory procedures and ensuring accurate inventory management

LIB113 - Library Cataloging & Classifying

Overview

Course Description
This course covers standards and procedures for copy cataloging and types of classification systems. Emphasis is placed on selecting bibliographic records, maintaining and using authority records and the importance of the catalog to the library mission. Upon completion, students should be able to select the appropriate MARC record, search OCLC, and demonstrate an understanding of authority files.

Course Typically Offered
Fall

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Understand the importance and global impact of knowing accurate cataloging skills

Objectives
Understand the importance of the library mission

Objectives
Understand and assign library classification schemes

Objectives
Select appropriate bibliographic records

Objectives
Understand standards and procedures for copy cataloging

Objectives
Understand of basic descriptive cataloging rules; i.e. RDA

Objectives
Provide correct information for MARC

Objectives
Understand the purpose of authority files

Objectives
Perform basic original cataloging

LIB114 - Library Public Service Operations

Overview

Course Description
This course covers effective library orientations, effective patron service, automated circulation systems, statistics and reports, reserves, and security. Emphasis is placed on public relations, problem solving, communication skills, circulation systems and policies, interlibrary loan procedures, shelving and display options. Upon completion, students should be able to deal with diverse patrons, conduct library orientations, compile reports from statistical data, initiate interlibrary loans, and prepare displays.

Course Typically Offered
Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Deal with diverse patrons

Objectives
Conduct library orientations

Objectives
Compile reports from statistical data

Objectives
Initiate interlibrary loans

LIB210 - Electronic Library Databases

Overview

Course Description
This course covers developing search strategies for using electronic resources in the humanities, social and behavioral sciences, physical and life sciences, and health-related fields. Emphasis is placed on the reference interview, teaching Boolean logic and other search strategies, retrieving and evaluating information, and citing it in APA/MLA style. Upon completion, students should be able to describe methods of information retrieval, use search strategies to teach basic research using databases, and cite resources appropriately.

Course Typically Offered
Spring

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take All: LIB-111 and WEB-110

Take LIB-111(S20692) WEB-110(S21129);

Student Learning Outcomes

Learning Objectives

Objectives
Use Boolean logic and other search strategies,

Objectives
Evaluate library databases

Objectives
Perform advanced database searches

Objectives
Interview a library patron so that they can conduct a database search for the patron

LIB211 - Library Program Development

Overview

Course Description
This course covers the purpose of library programs and various methods used for program design, promotion, delivery, and evaluation. Topics include serving library communities through appropriate program activities such as storytelling, puppet shows, book clubs, lectures, reading aloud, workshops, special collections, and outreach. Upon completion, students should be able to prepare, promote, deliver, and evaluate appropriate library programs.

Course Typically Offered
Fall

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Assess library program needs

Objectives
Plan, implement, and evaluate library programs

Objectives
Promote special collections

Objectives
Demonstrate an understanding of the relationship between the library audience and its programs

Objectives
Understand the needs of special populations and how library personnel address the needs

Objectives
Interpret and refer reference questions

LIB212 - Library Services/ Special Needs

Overview

Course Description
This course covers basic information for serving library users with special needs. Emphasis is placed on ADA guidelines, the location and use of appropriate resources, and accessibility options. Upon completion, students should be able to access appropriate information about ADA guidelines, locate and use appropriate resources, and be award of accessibility options.

Course Typically Offered
Fall

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Describe the special and specific needs of library patrons

Objectives
Describe and be able to explain the use of special and specific aids and devices available to and for special needs library patrons

Objectives
Effectively communicate with library patrons with special needs.

LIB213 - Cataloging Nonprint Materials

Overview

Course Description
This course continues the study and application of information cataloging practices. Emphasis is placed on cataloging information resources, updating bibliographic materials in databases, an overview of Dublin Core, and nonprint materials cataloging practices. Upon completion, students should be able to catalog nonprint and electronic resources.

Course Typically Offered
Fall, Spring

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take LIB-113

Take LIB-113(S20251);

Student Learning Outcomes

Learning Objectives

Objectives
Explore various types of non-print materials,

Objectives
Explore current MARC standards for non-print materials, and

Objectives
Prepare basic cataloging for non-print materials.

LIB214 - Library Services/ Children

Overview

Course Description
This course covers the location, evaluation, acquisition, and presentation of children's materials in libraries. Emphasis is placed on locating, evaluating, acquiring, and presenting children's literature, video and audio materials, and web sites through programs, displays, talks, and instruction. Upon completion, students should be able to locate, evaluate, acquire, and present a wide range of children's materials to library users.

Course Typically Offered
Fall

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Locate age-appropriate children's materials,

Objectives
Evaluate a wide range of age-appropriate children's materials for library users,

Objectives
Acquire a wide range of age- appropriate children's materials for library users,

Objectives
Present a wide range of age-appropriate children's materials to library users, and

Objectives
Discuss children today (how they live, challenges they face, how they spend their time, etc.).

LIB215 - Library Management

Overview

Course Description
This course covers basic management duties specific to the field of Library and Information Science. Topics include supervisory skills, delegation, time management, conflict resolution, training and coaching others, communication techniques, organizational theory, leadership and decision making in the library setting. Upon completion, students should be able to demonstrate knowledge of successful library operations, including key management concepts and strategies.

Course Typically Offered
Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Discuss history and development of management theory

Objectives
Discuss library strategic planning and decision making

Objectives
Discuss human resource and staffing issues in libraries

Objectives
Discuss the effects of effective communication, management, and leadership on an organization

Objectives
Discuss current issues facing library managers in the 21st century and propose solutions

LSG121 - Fall Gardening Lab

Overview

Course Description
This course provides basic hands-on experience in fall gardening techniques. Emphasis is placed on pruning, irrigation, planting, fertilizing, pest control, equipment operation, and turf maintenance. Upon completion, students should be able to perform various techniques essential to maintaining the fall landscape.

Credit Hours
2

MAC111 - Machining Technology I

Overview

Course Description
This course introduces machining operations as they relate to the metalworking industry. Topics include machine shop safety, measuring tools, lathes, drilling machines, saws, milling machines, bench grinders, and layout instruments. Upon completion, students should be able to safely perform the basic operations of measuring, layout, drilling, sawing, turning, and milling.

Course Typically Offered
Fall

Credit Hours
6

Student Learning Outcomes

Learning Objectives

Objectives
Safely operate all machines in shop

Objectives
Read measuring tools

Objectives
Read simple blueprints

Objectives
Layout/build simple projects in metal

Objectives
Identify/use hand tools

Objectives
Perfprm simple machining calculations

MAC112 - Machining Technology II

Overview

Course Description
This course provides additional instruction and practice in the use of precision measuring tools, lathes, milling machines, and grinders. Emphasis is placed on setup and operation of machine tools including the selection and use of work holding devices, speeds, feeds, cutting tools, and coolants. Upon completion, students should be able to perform basic procedures on precision grinders and advanced operations of measuring, layout, drilling, sawing, turning, and milling.

Course Typically Offered
Spring

Credit Hours
6

Student Learning Outcomes

Learning Objectives

Objectives
Perform complex operations on lathe

Objectives
Perform complex operations on mill

Objectives
Explain complex machining calculations

Objectives
Layout/build complex projects in metal

Objectives
Read digital readouts correctly

Objectives
Set up and use horizontal mills

Objectives
Perform basic procedures on grinders

MAC113 - Machining Technology III

Overview

Course Description
This course provides an introduction to advanced and special machining operations. Emphasis is placed on working to specified tolerances with special and advanced setups. Upon completion, students should be able to produce a part to specifications.

Course Typically Offered
Summer

Credit Hours
6

Student Learning Outcomes

Learning Objectives

Objectives
Surface grind parts to tolerance to within .0001 and square.

Objectives
Cylindrical grind shafts straight and with angles.

Objectives
Machine internal and external threads.

Objectives
Machine and grind Vs on center.

Objectives
Operate a Plunge EDM.

Objectives
Sharpen end mills - straight shank and arbor cutters.

Objectives
Heat-treat and temper parts.

MAC122 - CNC Turning

Overview

Course Description
This course introduces the programming, setup, and operation of CNC turning centers. Topics include programming formats, control functions, program editing, part production, and inspection. Upon completion, students should be able to manufacture simple parts using CNC turning centers.

Course Typically Offered
Fall

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Identify “terms” related to CNC Turning: turning, boring, facing, grooving, chasing"threads", undercut, chamfer, radius, angle, knurling

Objectives
Program, Edit, Setup and Manufacture parts using a variety of models of production size CNC Turning Centers.

MAC124 - CNC Milling

Overview

Course Description
This course introduces the manual programming, setup, and operation of CNC machining centers. Topics include programming formats, control functions, program editing, part production, and inspection. Upon completion, students should be able to manufacture simple parts using CNC machining centers.

Course Typically Offered
Spring

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Use programming codes pertaining to the Hass and the Bridgeport CNC Mills

Objectives
Setup, operate and manufacture various parts on both machines

Objectives
Inspect all parts using various measuring devices

Objectives
Edit programs

Objectives
Define Terms pertaining to CNC Milling

MAC152 - Advanced Machining Calculations

Overview

Course Description
This course combines mathematical functions with practical machine shop applications and problems. Emphasis is placed on gear ratios, lead screws, indexing problems, and their applications in the machine shop. Upon completion, students should be able to calculate solutions to machining problems.

Course Typically Offered
Spring

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Calculate solutions to machining problems

MAC153 - Compound Angles

Overview

Course Description
This course introduces the application of basic types and uses of compound angles. Emphasis is placed on problem solving by tilting and rotating adjacent angles to resolve an unknown compound angle. Upon completion, students should be able to set up and develop compound angles on parts using problem-solving techniques.

Course Typically Offered
Fall

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Set up and develop compound angles on parts using problem-solving techniques

MAC171 - Measure/Material and Safety

Overview

Course Description
This course introduces precision measuring instruments, process control and adjustment, inspection, material handling and workplace safety. Topics include properly identifying and handling various measurement instruments and materials, process control, adjustment and improvement, personal protective equipment (PPE) and OSHA safety regulations. Upon completion, students should be able to safely demonstrate effective measurement techniques, identify and handle various materials, and explain safe industry practices.

Course Typically Offered
Fall

Credit Hours
1

Student Learning Outcomes

Learning Objectives

Objectives
Safely demonstrate effective measurement techniques.

Objectives
Identify and handle various materials.

Objectives
Explain safe industry practices.

MAC224 - Advanced CNC Milling

Overview

Course Description
This course covers advanced methods in setup and operation of CNC machining centers. Emphasis is placed on programming and production of complex parts. Upon completion, students should be able to demonstrate skills in programming, operations, and setup of CNC machining centers.

Course Typically Offered
Spring

Credit Hours
2

Requisites

Simple Requisites

Local Prerequisite

Type
Prerequisite

None Take MAC-124;

Take MAC-124;

Student Learning Outcomes

Learning Objectives

Objectives
Program CNC Machining Centers

Objectives
Setup CNC Machining Centers

Objectives
Operate CNC Machining Centers

Objectives
Use 4th axis machining capabilities appropriately

Objectives
Complete a Thread Mill

Objectives
Setup and use Multi-Fixtures

MAC226 - CNC EDM Machining

Overview

Course Description
This course introduces the programming, setup, and operation of CNC electrical discharge machines. Topics include programming formats, control functions, program editing, production of parts, and inspection. Upon completion, students should be able to manufacture simple parts using CNC electrical discharge machines.

Course Typically Offered
Spring

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Apply conventional and computer aided principles of programming

Objectives
Compute wire compensation and offsets

Objectives
Edit programming and setup

Objectives
Define terms relating to Wire Machining

Objectives
Relate Wire Machining to Die Making

MAC241 - Jigs & Fixtures I

Overview

Course Description
This course introduces the application and use of jigs and fixtures. Emphasis is placed on design and manufacture of simple jigs and fixtures. Upon completion, students should be able to design and build simple jigs and fixtures.

Course Typically Offered
Fall

Credit Hours
4

Student Learning Outcomes

Learning Objectives

Objectives
Explain basic tool building

Objectives
Fabricate jigs and fixtures

Objectives
Develop self-confidence in tool building

Objectives
Explain the importance of accuracy

Objectives
Apply support, clamping, and locating principles

Objectives
Develop the design for jigs and fixtures

Objectives
Make a tool drawing

Objectives
Heat treatment of tool parts

Objectives
Select standard components from catalogs

MAC243 - Die Making I

Overview

Course Description
This course introduces the principles and applications of die making. Topics include types, construction, and application of dies. Upon completion, students should be able to design and build simple dies.

Course Typically Offered
Spring

Credit Hours
4

Student Learning Outcomes

Learning Objectives

Objectives
Identify types of dies and their parts

Objectives
Calculate cutting clearance

Objectives
Calculate stripping force

Objectives
Build and assemble a simple washer die

Objectives
Design a simple stock strip

Objectives
Explain dies are constructed and operate

MAC244 - Die Making II

Overview

Course Description
This course provides continued study in the application and use of dies. Emphasis is placed on the design and manufacturing of complex dies. Upon completion, students should be able to design and build complex dies.

Course Typically Offered
Summer

Credit Hours
4

Requisites

Simple Requisites

Local Prerequisite

Type
Prerequisite

None Take MAC-243(S22998);

Take MAC-243(S22998);

Student Learning Outcomes

Learning Objectives

Objectives
Describe blank development

Objectives
Explain die stops and progression

Objectives
Explain stripping requirements of a die

Objectives
Create accurate 2D and/or 3D CAD drawings using industry-standard CAD software, following specified design requirements and technical standards.

MAC245 - Mold Construction I

Overview

Course Description
This course introduces the principles of mold making. Topics include types, construction, and application of molds. Upon completion, students should be able to design and build simple molds.

Course Typically Offered
Fall

Credit Hours
4

Student Learning Outcomes

Learning Objectives

Objectives
Identify different groups of plastics

Objectives
Identify different plastics in each group

Objectives
Identify different ways of molding

Objectives
Identify different mold components

Objectives
Assemble and disassemble mold bases

Objectives
Define Terms pertaining to Mold Making

Objectives
Machine various Cavities, Cores and other components to print

MAC246 - Mold Construction II

Overview

Course Description
This course provides continued study in the application and use of molds. Emphasis is placed on design and manufacturing of complex molds. Upon completion, students should be able to design and build complex molds.

Course Typically Offered
Spring

Credit Hours
4

Requisites

Simple Requisites

Prerequisite

Type
Prerequisite

None Take MAC-245(S23004);

Take MAC-245(S23004);

Student Learning Outcomes

Learning Objectives

Objectives
Design Mold Construction

Objectives
Design and Build Molds from Parts and Part Prints

Objectives
Distiguish between the different types of plastics.

Objectives
Install Various Gates and Vents

Objectives
Summarize how to Accomplish a Good Finish

MAS110 - Masonry I

Overview

Course Description
This course introduces the basic principles of construction with masonry units. Topics include history of the masonry field, safety practices, blueprint reading, and principles of laying masonry units to the line using tools, equipment, and materials. Upon completion, students should be able to demonstrate knowledge of safety practices, blueprint reading, and basic tool use; identify materials; operate machinery; and lay masonry units.

Course Typically Offered
Fall

Credit Hours
10

MAS120 - Masonry II

Overview

Course Description
This course provides practical experience in cost estimating, foundations, bonding variations, expansion joints, wall ties, building codes, and other related topics. Emphasis is placed on material estimation, layout of footing, construction of walls, reinforcements, scaffolding, insulating, and building codes. Upon completion, students should be able to determine cost, plan sound building procedures, construct masonry projects, and apply building codes.

Course Typically Offered
Spring

Credit Hours
10

MAS130 - Masonry III

Overview

Course Description
This course provides fundamentals and skills used in masonry construction. Emphasis is placed on building chimneys, fireplaces, columns, concrete masonry, and arches; using materials economically; satisfying needs and expectations; and proper work ethics. Upon completion, students should be able to build structures covered in the course, demonstrate increased speed and accuracy, and make smooth transitions between construction stages.

Course Typically Offered
Spring

Credit Hours
8

MAS140 - Introduction to Masonry

Overview

Course Description
This course introduces basic principles and practices of masonry. Topics include standard tools, materials, and practices used in basic masonry and other related topics. Upon completion, students should be able to demonstrate an understanding of masonry and be able to use basic masonry techniques.

Course Typically Offered
Fall, Spring

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate safe and effective use of selected tools utilized in the masonry trade.

Objectives
Demonstrate how to correctly mix mortar using both hand tools and power mixer.

Objectives
Develop fluency with proper techniques for laying brick and block to a line

Objectives
Develop fluency building brick and block corners

MAT045 - Math Skills Support

Overview

Course Description
This course provides opportunities for students to build a stronger foundation for success in their gateway math course by obtaining skills through a variety of instructional strategies. Emphasis is placed on foundational skills as well as concepts, skills, vocabulary and definitions necessary to master student learning outcomes of the gateway math course. Upon completion, student should be able to apply mathematical concepts and critical thinking skills to solve problems relevant to the student's gateway math course.

Credit Hours
2

MAT045A - Math Skills Support for Mat-121

Overview

Course Description
This course provides opportunities for students to build a stronger foundation for success in their gateway math course by obtaining skills through a variety of instructional strategies. Emphasis is placed on foundational skills as well as concepts, skills, vocabulary and definitions necessary to master student learning outcomes of the gateway math course. Upon completion, student should be able to apply mathematical concepts and critical thinking skills to solve problems relevant to the student's gateway math course.

Course Typically Offered
Fall, Spring

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
1. Discuss the academic habits of mind and learning strategies necessary to be successful in a gateway Englsih course.

Objectives
2.Evaluate campus resources (e.g., tutoring, counseling, and other services) that will support success in gateway English coursework.

Objectives
3. Ethically use technology to improve writing skills, conduct research, and communicate ideas effectively.

Objectives
4. Master the foundational skills needed to be successful in a gateway English course:
a. Identify writing as a recursive process.
b. Use different rhetorical strategies to reflect, analyze, explain, and persuade in a variety of genres and formats.
c. Reflect on their writing process, including prewriting and revision based on feedback.
d. Make critical use of digital, visual, and alphabetic texts.
e. Locate relevant sources, evaluate their credibility, and incorporate evidence with proper documentation.
f. Write with rhetorical effectiveness, following conventions of grammar, spelling, and mechanics.
g. Collaborate actively with peers in a writing community.

MAT045P - Math Skills Support for Mat-171

Overview

Course Description
This course provides opportunities for students to build a stronger foundation for success in their gateway math course by obtaining skills through a variety of instructional strategies. Emphasis is placed on foundational skills as well as concepts, skills, vocabulary and definitions necessary to master student learning outcomes of the gateway math course. Upon completion, student should be able to apply mathematical concepts and critical thinking skills to solve problems relevant to the student's gateway math course.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
1. Discuss the academic habits of mind and learning strategies necessary to be successful in a gateway mathematics course.

Objectives
2. Evaluate campus resources (e.g., tutoring, counseling, and other services) that will support success in gateway mathematics coursework.

Objectives
3. Ethically use technology to solve mathematical problems and communicate results.

Objectives
4. Master the foundational skills needed to be successful in a gateway Precalculus Algebra course:
a. Use analytical, graphical, and numerical representations to solve absolute value, radical, polynomial, rational, exponential, and logarithmic equations with both real and complex solutions.
b. Use analytical, graphical, and numerical representations to solve absolute value, polynomial and rational inequalities with real solutions.
c. Use analytical, graphical, and numerical representations to analyze absolute value, radical, polynomial, rational, exponential and logarithmic functions with both real and complex zeros.
d. Use multiple methods to solve problems involving systems of equations and apply to decomposing partial fractions.
e. Construct the composition and inverse of functions.
f. Use polynomial, exponential and logarithmic functions to model various real world situations in order to analyze, draw conclusions, and make predictions.

MAT045Q - Math Skills Support for Mat-143

Overview

Course Description
This course provides opportunities for students to build a stronger foundation for success in their gateway math course by obtaining skills through a variety of instructional strategies. Emphasis is placed on foundational skills as well as concepts, skills, vocabulary and definitions necessary to master student learning outcomes of the gateway math course. Upon completion, student should be able to apply mathematical concepts and critical thinking skills to solve problems relevant to the student's gateway math course.

Course Typically Offered
Fall, Spring, Summer

Learning Objectives

Objectives
1. Discuss the academic habits of mind and learning strategies necessary to be successful in a gateway mathematics course.

Objectives
2. Evaluate campus resources (e.g., tutoring, counseling, and other services) that will support success in gateway mathematics coursework.

Objectives
3. Ethically use technology to solve mathematical problems and communicate results.

Objectives
4. Master the foundational skills needed to be successful in a gateway Algebra/Trigonometry I course:
a. Use geometric principles to solve industrial application problems involving perimeter, area, and volume.
b. Employ basic algebraic operations to simplify, evaluate, and solve proportions, radical and other algebraic functions, equations, and inequalities.
c. Perform basic algebraic operations involving complex numbers.
d. Solve applied problems using trigonometric principles involving right triangles.
e. Solve applied problems using systems of equations involving two and three variables.
f. Use technology to solve practical problems and communicate results.

MAT045S - Math Skills Support for Mat-152

Overview

Course Description
This course provides opportunities for students to build a stronger foundation for success in their gateway math course by obtaining skills through a variety of instructional strategies. Emphasis is placed on foundational skills as well as concepts, skills, vocabulary and definitions necessary to master student learning outcomes of the gateway math course. Upon completion, student should be able to apply mathematical concepts and critical thinking skills to solve problems relevant to the student's gateway math course.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
1.Discuss the academic habits of mind and learning strategies necessary to be successful in a gateway mathematics course.

Objectives
2. Evaluate campus resources (e.g., tutoring, counseling, and other services) that will support success in gateway mathematics coursework.

Objectives
3. Ethically use technology to solve mathematical problems and communicate results.

Objectives
4. Master the foundational skills needed to be successful in a gateway Quantitative Literacy course:
a. Judge the reasonableness of results using estimation, logical processes, and a proper understanding of quantity.
b. Utilize proportional reasoning to solve contextual problems and make conversions involving various units of measurement.
c. Identify, interpret, and compare linear and exponential rates of growth to make predictions and informed decisions based on data and graphs.
e. Differentiate between simple and compound interest and analyze the long-term effects of saving, investing, and borrowing.
f. Describe, analyze, and interpret statistical information such as graphs, tables, and summarized data to draw appropriate conclusions when presented with actual statistical studies.
g. Determine probabilities and expected values and use them to assess risk and make informed decisions.
i. Analyze civic and/or societal issues and critique decisions using relevant mathematics.

MAT110 - Mathematical Measurement and Literacy

Overview

Course Description
This course provides an activity-based approach that develops measurement skills and mathematical literacy using technology to solve problems for non-math intensive programs. Topics include unit conversions and estimation within a variety of measurement systems; ratio and proportion; basic geometric concepts; financial literacy; and statistics including measures of central tendency, dispersion, and charting of data. Upon completion, students should be able to demonstrate the use of mathematics and technology to solve practical problems, and to analyze and communicate results.

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate estimation skills and justify results.

Objectives
Use dimensional analysis to convert units of measurement

Objectives
Employ fractions, percentages and proEmploy fractions, percentages and proportions to solve contextual problemsblems

Objectives
Compute geometric measurements of perimeter, area, volume and angles

Objectives
Use technology to analyze and interpret elements of personal finance

Objectives
Compare and contrast measures of center and measures of dispersion

Objectives
Interpret tables, charts, and graphs and communicate results

MAT121 - Algebra/ Trigonometry I

Overview

Course Description
This course provides an integrated approach to technology and the skills required to manipulate, display, and interpret mathematical functions and formulas used in problem solving. Topics include the properties of plane and solid geometry, area and volume, and basic proportion applications; simplification, evaluation, and solving of algebraic equations and inequalities and radical functions; complex numbers; right triangle trigonometry; and systems of equations. Upon completion, students will be able to demonstrate the ability to use mathematics and technology for problem-solving, analyzing and communicating results.

Objectives
Solve applied problems using systems of equations involving two and three variables.Use technology to solve practical problems and communicate results.

MAT122 - Algebra/ Trigonometry II

Overview

Course Description
This course is designed to cover concepts in algebra, function analysis, and trigonometry. Topics include exponential and logarithmic functions, transformations of functions, Law of Sines, Law of Cosines, vectors, and statistics. Upon completion, students should be able to demonstrate the ability to use mathematics and technology for problem-solving, analyzing and communicating results.

Objectives
Interpret and create transformations of functions.

Objectives
Utilize the Law of Sines and Law of Cosines to solve oblique triangles and their applications.

Objectives
Define vectors and compute vector operations.

Objectives
Apply vector concepts to solve applications.

Objectives
Employ basic statistical concepts to summarize and present data and draw conclusions.

MAT143 - Quantitative Literacy

Overview

Course Description
This course is designed to engage students in complex and realistic situations involving the mathematical phenomena of quantity, change and relationship, and uncertainty through project- and activity-based assessment. Emphasis is placed on authentic contexts which will introduce the concepts of numeracy, proportional reasoning, dimensional analysis, rates of growth, personal finance, consumer statistics, practical probabilities, and mathematics for citizenship. Upon completion, students should be able to utilize quantitative information as consumers and to make personal, professional, and civic decisions by decoding, interpreting, using, and communicating quantitative information found in modern media and encountered in everyday life.

Describe, analyze, and interpret statistical information such as graphs, tables, and summarized data to draw appropriate conclusions when presented with actual statistical studies.

Objectives
Determine probabilities and expected values and use them to assess risk and make informed decisions.Analyze civic and/or societal issues and critique decisions using relevant mathematics.

MAT152 - Statistical Methods I

Overview

Course Description
This course provides a project-based approach to introductory statistics with an emphasis on using real-world data and statistical literacy. Topics include descriptive statistics, correlation and regression, basic probability, discrete and continuous probability distributions, confidence intervals and hypothesis testing. Upon completion, students should be able to use appropriate technology to describe important characteristics of a data set, draw inferences about a population from sample data, and interpret and communicate results.

Student Learning Outcomes

Learning Objectives

Objectives
Organize, display, calculate, and interpret descriptive statistics.

Objectives
Apply basic rules of probability.Identify and apply appropriate probability distributions.

Objectives
Perform regression analysis.Analyze sample data to draw inferences about a population parameter.

Objectives
Communicate results through a variety of media.

MAT171 - Precalculus Algebra

Overview

Course Description
This course is designed to develop topics which are fundamental to the study of Calculus. Emphasis is placed on solving equations and inequalities, solving systems of equations and inequalities, and analysis of functions (absolute value, radical, polynomial, rational, exponential, and logarithmic) in multiple representations. Upon completion, students should be able to select and use appropriate models and techniques for finding solutions to algebra-related problems with and without technology.

Student Learning Outcomes

Learning Objectives

Objectives
Use analytical, graphical, and numerical representations to solve absolute value, radical, polynomial, rational, exponential, and logarithmic equations with both real and complex solutions.Use analytical, graphical, and numerical representations to solve absolute value, polynomial and rational inequalities with real solutions.

Objectives
Use analytical, graphical, and numerical representations to analyze absolute value, radical, polynomial, rational, exponential and logarithmic functions with both real and complex zeros.

Objectives
Use multiple methods to solve problems involving systems of equations and apply to decomposing partial fractions.Construct the composition and inverse of functions.

Objectives
Use polynomial, exponential and logarithmic functions to model various real world situations in order to analyze, draw conclusions, and make predictions.

MAT172 - Precalculus Trigonometry

Overview

Course Description
This course is designed to develop an understanding of topics which are fundamental to the study of Calculus. Emphasis is placed on the analysis of trigonometric functions in multiple representations, right and oblique triangles, vectors, polar coordinates, conic sections, and parametric equations. Upon completion, students should be able to select and use appropriate models and techniques for finding solutions to trigonometry-related problems with and without technology.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
4

Requisites

Simple Requisites

State prerequisite

Prerequisite

Take MAT-171

Take MAT-171(S25432);

Student Learning Outcomes

Learning Objectives

Objectives
Use the unit circle and right triangle definitions to evaluate and graph trigonometric functions and their inverses, to derive trigonometric identities, and to simplify trigonometric expressions.

Objectives
Use multiple methods to solve problems involving trigonometric equations, right triangles, and oblique triangles.

Objectives
Demonstrate knowledge of vector definitions and perform vector operations.

Objectives
Convert equations and graphs between rectangular and polar coordinate systems, and apply to complex numbers.

Objectives
Use multiple representations to define, construct and analyze conic sections.

Objectives
Create, graph, and analyze parametric equations.

MAT263 - Brief Calculus

Overview

Course Description
This course is designed to introduce concepts of differentiation and integration and their applications to solving problems. Topics include graphing, differentiation, and integration with emphasis on applications drawn from business, economics, and biological and behavioral sciences. Upon completion, students should be able to demonstrate an understanding of the use of basic calculus and technology to solve problems and to analyze and communicate results. This course has been approved for transfer under the CAA as a general education course in Mathematics. This course has been approved for transfer under the ICAA as a general education course in Mathematics.

Take One: MAT-171 or MAT-175

Take MAT-171(S25432) or MAT-175(S26068);

Student Learning Outcomes

Learning Objectives

Objectives
Calculate limits and verify using graphical, numerical and analytical methods.

Objectives
Interpret the derivative as a rate of change.

Objectives
Analyze and interpret the derivative of algebraic, exponential, and logarithmic functions.

Objectives
Evaluate antiderivatives and definite integrals of algebraic, exponential, and logarithmic functions.

Objectives
Apply derivatives and integrals to business, economics, and biological and behavioral sciences contexts.

Objectives
Use appropriate technology and communicate results through a variety of media.

MAT271 - Calculus I

Overview

Course Description
This course is designed to develop the topics of differential and integral calculus. Emphasis is placed on limits, continuity, derivatives and integrals of algebraic and transcendental functions of one variable. Upon completion, students should be able to select and use appropriate models and techniques for finding solutions to derivative-related problems with and without technology.

Course Typically Offered
Fall, Spring, Summer

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take One: MAT-172 or MAT-175

Take MAT-172(S23935) or MAT-175(S26068);

Student Learning Outcomes

Learning Objectives

Objectives
Apply the definition of limit to evaluate limits by multiple methods and use it to derive the definition and rules for differentiation and integration.

Objectives
Use derivatives to analyze and graph algebraic and transcendental functions.

Objectives
Select and apply appropriate models and differentiation techniques to solve problems involving algebraic and transcendental functions; these problems will include but are not limited to applications involving optimization and related rates.

Objectives
Apply the definition of indefinite integral to solve basic differential equations.

Objectives
Apply the definition of definite integral to evaluate basic integrals.

Objectives
Use the fundamental theorem of calculus to evaluate integrals involving algebraic and transcendental functions.

MAT272 - Calculus II

Overview

Course Description
This course is designed to develop advanced topics of differential and integral calculus. Emphasis is placed on the applications of definite integrals, techniques of integration, indeterminate forms, improper integrals, infinite series, conic sections, parametric equations, polar coordinates, and differential equations. Upon completion, students should be able to select and use appropriate models and techniques for finding solutions to integral-related problems with and without technology.

Course Typically Offered
Fall, Spring

Credit Hours
4

Simple Requisites

State prerequisite

Type
Prerequisite

Take MAT-271

Take MAT-271(S23939);

Student Learning Outcomes

Learning Objectives

Objectives
Select and apply appropriate models and integration techniques to solve problems involving algebraic and transcendental functions; these problems will include but are not limited to applications involving volume, arc length, surface area, centroids, force and work.

Objectives
Evaluate proper and improper integrals using various integration techniques.

Objectives
Analyze the convergence and divergence of infinite sequences and series and find the Taylor and McLaurin representations for transcendental functions.

Objectives
Use differentiation and integration to analyze the graphs of polar form equations and parametric form equations.

Objectives
Solve separable and first-order linear differential equations.

Objectives
Analyze and graph conic sections using calculus techniques.

MAT273 - Calculus III

Overview

Course Description
This course is designed to develop the topics of multivariate calculus. Emphasis is placed on multivariate functions, partial derivatives, multiple integration, solid analytical geometry, vector valued functions, and line and surface integrals. Upon completion, students should be able to select and use appropriate models and techniques for finding the solution to multivariate-related problems with and without technology.

Course Typically Offered
Fall, Spring

Credit Hours
4

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take MAT-272

Take MAT-272(S23940);

Student Learning Outcomes

Learning Objectives

Objectives
Perform operations with vectors in two and three dimensional space and apply to analytic geometry.

Objectives
Differentiate and integrate vector-valued functions and apply calculus to motion problems in two and three dimensional space.

Objectives
Determine the limits, derivatives, gradients, and integrals of multivariate functions.

Objectives
Solve problems in multiple integration using rectangular, cylindrical, and spherical coordinate systems.

Objectives
Select and apply appropriate models and techniques to define and evaluate line and surface integrals; these techniques will include but are not limited to Green's, Divergence, and Stoke's theorems.

Objectives
Demonstrate proficiency in using CAS technology to analyze, solve and interpret the various applications.

MAT280 - Linear Algebra

Overview

Course Description
This course provides an introduction to linear algebra topics. Emphasis is placed on the development of abstract concepts and applications for vectors, systems of equations, matrices, determinants, vector spaces, multi-dimensional linear transformations, eigenvectors, eigenvalues, diagonalization and orthogonality. Upon completion, students should be able to demonstrate understanding of the theoretical concepts and select and use appropriate models and techniques for finding solutions to linear algebra-related problems with and without technology.

Course Typically Offered
Fall, Spring

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take MAT-271

Take MAT-271(S23939);

Student Learning Outcomes

Learning Objectives

Objectives
Use analytical and graphical representations to apply vector operations in multiple-dimensions.

Objectives
Solve systems of linear equations using multiple manual and technology-based methods; these methods will include but are not limited to Gaussian and Gauss-Jordan.

Objectives
Use eigenvalues, eigenvectors and diagonalization to solve problems in appropriate situations.

Objectives
Use matrix operations and linear transformations to solve problems in appropriate situations.

Objectives
Demonstrate knowledge of orthogonal projections and orthogonal complements of subspaces, and apply to appropriate situations.

Objectives
Use the fundamental concept of a basis for a subspace to give a precise definition of dimensions and rank, and to solve problems in appropriate situations.

Objectives
Demonstrate proficiency in using CAS technology to analyze, solve and interpret the various applications.

MAT285 - Differential Equations

Overview

Course Description
This course provides an introduction to topics involving ordinary differential equations. Emphasis is placed on the development of abstract concepts and applications for first-order and linear higher-order differential equations, systems of differential equations, numerical methods, series solutions, eigenvalues and eigenvectors, and LaPlace transforms. Upon completion, students should be able to demonstrate understanding of the theoretical concepts and select and use appropriate models and techniques for finding solutions to differential equations-related problems with and without technology.

Course Typically Offered
Fall, Spring

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take MAT-272

Take MAT-272(S13612);

Student Learning Outcomes

Learning Objectives

Objectives
Find general solutions to first-order, second-order, and higher-order homogeneous and non-homogeneous differential equations by manual and technology-based methods.

Objectives
Identify and apply initial and boundary values to find particular solutions to first-order, second-order, and higher order homogeneous and non-homogeneous differential equations by manual and technology-based methods, and analyze and interpret the results.

Objectives
Select and apply appropriate methods to solve differential equations; these methods will include, but are not limited to, undetermined coefficients, variation of parameters, eigenvalues and eigenvectors, LaPlace and inverse LaPlace transforms.

Objectives
Select and apply series techniques to solve differential equations; these techniques will include but are not limited to Taylor series.

Objectives
Select and apply numerical analysis techniques to solve differential equations; these techniques will include but are not limited to Euler, Improved Euler, and Runge-Kutta.

Objectives
Demonstrate proficiency in using CAS technology to analyze, solve and interpret the various applications.

MAT7025 - Concepts of Essential Math

Overview

Course Description
This course provides an opportunity to customize foundational math content and statistical concepts specific to real-world applications. Topics include decimals, percentages, ratios, proportions, solving basic equations, geometrical concepts, dimensional analysis, financial applications and elements of statistics and probability.

Credit Hours
0

MAT7035 - Concepts of Algebra

Overview

Course Description
This course covers algebraic concepts with an emphasis on application and analysis. Topics include rational/radical expressions and equations, solving equations and inequalities, concepts of functions, factoring, and exponents.

Credit Hours
0

MAT7045 - Math Skills Support

Overview

Course Description
This course provides opportunities for students to build a stronger foundation for success in their gateway math course by obtaining skills through a variety of instructional strategies. This course will reinforce the content taught in MAT 7025 and MAT 7035. Emphasis is placed on foundational skills as well as concepts, skills, vocabulary and definitions necessary to master student learning outcomes of the gateway math course.

Credit Hours
0

MCM111 - Motorcycle Mechanics

Overview

Course Description
This course covers the proper nomenclature of parts and components of motorcycles, ATVs, and personal watercraft. Topics include theory of operation, differences of operation, preventive maintenance, and operating principles involved in servicing and repairing motorcycles, ATVs, and personal watercraft. Upon completion, students should be able to perform basic inspection, diagnosis, repair, and/or adjustment of motorcycles, ATVs, and personal watercraft.

Course Typically Offered
Fall

Credit Hours
7

Student Learning Outcomes

Learning Objectives

Objectives
Diagnose and correct electrical problems

Objectives
Diagnose and correct mechanical problems

Objectives
Diagnose and correct fuel system problems

Objectives
Use specialized test equipment

Objectives
Follow a logical sequence for troubleshooting

MCM114 - Motorcycle Fuel Systems

Overview

Course Description
This course introduces various types of fuels and fuel systems used in motorcycle internal combustion engines. Emphasis is placed on the theory and principles of carburetion and fuel injection. Upon completion, students should be able to service, disassemble, inspect, reassemble, and adjust to manufacturers' specifications the components of various fuel systems.

Course Typically Offered
Summer

Credit Hours
5

Student Learning Outcomes

Learning Objectives

Objectives
Define octane ratings and state the factors that affect these ratings

Objectives
Explain the primary principles of carburetion operation

Objectives
Identify various fuel delivery systems used on motorcycles and ATV's

Objectives
Identify the components of each type of carburetor

Objectives
Describe the operation of the circuits in 3 types of carburetors

Objectives
Service and repair carbureted fuel systems

Objectives
Explain the concept of synchronization

Objectives
Explain the principles of fuel injection.

Objectives
Identify the components of an electronic fuel injection system

Objectives
Service and repair fuel injection fuel systems

Objectives
Explain the differences between turbo charging and supercharging.

Objectives
Identify exhaust system components.

MCM115 - Motorcycle Chassis

Overview

Course Description
This course covers chassis adjustments, components, and types and uses of frames and suspensions. Emphasis is placed on proper and safe use of tools and equipment in servicing and maintaining motorcycle chassis. Upon completion, students should be able to service and repair motorcycle chassis systems and suspension components.

Course Typically Offered
Fall

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Identify all components in motorcycle chassis and suspension systems

Objectives
Identify Basic Frame Types- Recognize common motorcycle frame designsand their basic functions.

Objectives
Perform Basic Chassis Inspection- Condfuct simple checks for frame Integrity, suspension condition, and tire wear.

Objectives
Service and repair chassis and suspension systems

Objectives
Diagnose and correct chassis system and suspension component problems

Objectives
Follow a logical sequence for troubleshooting

MCM117 - Motorcycle Dynamometer Tuning I

Overview

Course Description
This course introduces the theory and safe operation of motorcycle chassis dynamometers. Topics include types of dynamometers, theory of operation, differences of operations, preventative maintenance and safe operating principles involved in motorcycle dynamometer tuning and diagnostics. Upon completions, students should be able to safely use motorcycle dynamometers to measure horsepower and torque, to optimize air-fuel metering and exhaust-flow, and to diagnose performance problems.

Course Typically Offered
Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Identify types of dynamometers.

Objectives
Perform preventative maintenance

Objectives
Safely operate the dynamometer and associated software.

Objectives
Safely install a motorcycle on the dynamometer.

Objectives
Measure Horsepower, torque, and air/fuel using the dynamometer.

Objectives
Analyze air/fuel metering and exhaust flow.

Objectives
Diagnose performance problems.

MCM122 - Motorcycle Engines

Overview

Course Description
This course covers the construction and operation of components in internal combustion engines used in modern motorcycles. Topics include two- and four-cycle engines, power trains, and final drive systems. Upon completion, students should be able to disassemble, inspect, measure, reassemble, and operationally test two- and four-cycle motorcycle engines.

Course Typically Offered
Spring

Credit Hours
5

Student Learning Outcomes

Learning Objectives

Objectives
Identify types of engine design in both two-cycle and four-cycle engines

Objectives
Troubleshoot both two-cycle and four-cycle engine mechanical problems

Objectives
Utilize various techniques in measuring clearances in engine rebuilding

Objectives
Identify lubrication system components.

Objectives
Rebuild two- and four-cycle engines and powertrains

Objectives
Demonstrate and practice proper work safety procedures.

Objectives
Practice proper shop and tool safety

MCM217 - Motorcycle Dynamometer Tuning II

Overview

Course Description
This course provides advanced instruction in motorcycle dynamometers that are utilized in high performance engine tuning. Topics include safe modification and customization of components and their effect on horsepower, torque, air-fuel metering, exhaust flow, fuel economy, acceleration and speed. Upon completions, students will safely use motorcycle dynamometers to optimize performance when customizing motorcycles and/or ATV's for racing and high performance street or off-road use.

Course Typically Offered
Summer

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take MCM-117

Take MCM-117;

Student Learning Outcomes

Learning Objectives

Objectives
Perform preventative maintenance

Objectives
Safely install a motorcycle on the dynamometer.

Objectives
Safely operate the dynamometer and associated software.

Objectives
Modify engine, air-fuel and exhaust components to optimize performance

Objectives
Measure Horsepower, torque, and air/fuel using the dynamometer.

Objectives
Analyze air/fuel metering through exhaust flow sampling

Objectives
Diagnose and correct performance problems.

Objectives
Customize and tune an EFI fuel system

MEC110 - Introduction to CAD/CAM

Overview

Course Description
This course introduces CAD/CAM. Emphasis is placed on transferring part geometry from CAD to CAM for the development of a CNC-ready program. Upon completion, students should be able to use CAD/CAM software to produce a CNC program.

Course Typically Offered
Spring

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Produce a CAD drawing

Objectives
Bring the CAD drawing into CAM

Objectives
Produce the necessary CAM files to produce the required CNC program

Objectives
Manage the CAD/CAM files on a computer

MEC111 - Machine Processes I

Overview

Course Description
This course introduces shop safety, hand tools, machine processes, measuring instruments, and the operation of machine shop equipment. Topics include use and care of tools, safety, measuring tools, and the basic setup and operation of common machine tools. Upon completion, students should be able to manufacture simple parts to specified tolerance.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Practice safety in a shop environment

Objectives
Manipulate fractions, decimals and metric systems

Objectives
Use layout and hand tools such as a square, height gauge, and scribe

Objectives
Use various grinders such as surface and off-hand grinders

Objectives
Identify metal finishes

Objectives
Operate machines such as Drill Presses, Saws, Lathes and Milling Machines

MEC142 - Physical Metallurgy

Overview

Course Description
This course covers the heat treating of metals. Emphasis is placed on the effects of hardening, tempering, and annealing on the structure and physical properties of metals. Upon completion, students should be able to heat treat materials.

Course Typically Offered
Fall

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Understand various methods in heat treating

Objectives
Understand various forms of structure in metals

Objectives
Select proper temperatures for various types of heat treatment

Objectives
Identify different properties of heat treatment

Objectives
Select different methods of checking hardness

Objectives
Understand the importance of proper heat treatment

MEC161 - Manufacturing Processes I

Overview

Course Description
This course provides the fundamental principles of value-added processing of materials into usable forms for the customer. Topics include material properties and traditional and non-traditional manufacturing processes. Upon completion, students should be able to specify appropriate manufacturing processing for common engineering materials.

Course Typically Offered
Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Practice Safety in a shop environment

Objectives
Manipulate and use fractions, decimals and metric systems

Objectives
Use practical measuring tools such as micrometers and calipers

Objectives
Use layout and hand tools such as a square, height gauge, and scribe

Objectives
Identify various grinders and explain their use

Objectives
Identify how CNC machines are used

Objectives
Discuss machines as Drill Presses, Saws, Lathes, and Milling Machines

Objectives
Distinguish various primary metal working processes.

Objectives
Compare and contrast various welding processes.

Objectives
Compare and contrast various material finishing

Objectives
Compare and contrast testing techniques.

MEC180 - Engineering Materials

Overview

Course Description
This course introduces the physical and mechanical properties of materials. Topics include materials testing, pre- and post-manufacturing processes, and material selection of ferrous and non-ferrous metals, plastics, composites, and non-conventional materials. Upon completion, students should be able to utilize basic material property tests and select appropriate materials for applications.

Course Typically Offered
Fall

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Identify and explain the physical and mechanical properties of ferrous metals.

Objectives
Identify and explain the physical and mechanical properties of non-ferrous metals.

Objectives
Identify and explain the physical and mechanical properties of plastics, composites, ceramics, engineered wood materials.

Objectives
Evaluate the effects heat treatments have on various materials.

Objectives
Describe and/or conduct the physical procedures required to test these properties to compare and contrast them.

Objectives
Summarize the use of engineering materials and the impact in the industry.

Objectives
Utilize basic material property tests and select appropriate materials for applications

MEC275 - Engineering Mechanisms

Overview

Course Description
This course covers plane motion and devices used to generate plane motion. Topics include analysis of displacement, velocity, acceleration, gears, cams, and other mechanical systems. Upon completion, students should be able to graphically and mathematically analyze a plane motion system.

Course Typically Offered
Spring

Credit Hours
3

Learning Objectives

Objectives
Mathematically and graphically analyze plane motion on linkages, gears, cams, and belt drives.

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take One: PHY-131, PHY-151, or PHY-251

Take PHY-131(S20809) PHY-151(S20924) or PHY-251(S12543);

Student Learning Outcomes

MED110 - Orientation to Medical Assisting

Overview

Course Description
This course covers the history of medicine and the role of the medical assistant in the health care setting. Emphasis is placed on professionalism, communication, attitude, behaviors, and duties in the medical environment. Upon completion, students should be able to project a positive attitude and promote the profession of medical assisting.

Course Typically Offered
Fall

Credit Hours
1

Student Learning Outcomes

Learning Objectives

Objectives
Relate the history of medicine to the development of the medical assistant role

Objectives
Discuss the educational and certification process of the medical assistant

Objectives
Discuss the role and duties of the medical assistant in various health care settings including telephone triage and appointment scheduling

Objectives
Explore interpersonal relations including barriers related to multicultural patients.

Objectives
Promote team building through professionalism, communication, attitude, and behaviors.

Objectives
Project a positive attitude about the role of the medical assistant

Objectives
Promote the profession of medical assisting.

MED116 - Introduction to Anatomy & Physiology

Overview

Course Description
This course introduces basic anatomy and physiology. Emphasis is placed on the relationship between body structure and function and the procedures common to health care. Upon completion, students should be able to identify body system components and functions relating this knowledge to the delivery of health care.

Credit Hours
4

Requisites

Simple Requisites

Prerequisite

Type
Prerequisite

Take RED-080 ENG-090;

MED118 - Medical Law and Ethics

Overview

Course Description
This course covers legal relationships of physicians and patients, contractual agreements, professional liability, malpractice, medical practice acts, informed consent, and bioethical issues. Emphasis is placed on legal terms, professional attitudes, and the principles and basic concepts of ethics and laws involved in providing medical services. Upon completion, students should be able to meet the legal and ethical responsibilities of a multi-skilled health professional.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Distinguish between law, morals, ethics, and etiquette

Objectives
Relate principles of the legal relationship of the physician and medical assistant to the patient

Objectives
Apply the laws applicable to the medical office in areas of contractual agreements, professional liability, malpractice, medical practice acts informed consent, confidentiality, etc.

Objectives
Use the ethical decision-making process in common bioethical issues of today's health care arena

Objectives
Weigh the impact of economics in the making of ethical and legal decisions as they apply to the medical office environment

Objectives
Recognize legal, ethical, and moral obligation(s) to self, patient, physician, and state.

Objectives
Analyze conflict between personal and professional ethics and morals

Objectives
Demonstrate a professional attitude necessary to provide nonbiased and competent care within the legal scope of practice of the health provider

Objectives
Meet the legal and ethical responsibilities of multi-skilled health professionals.

MED121 - Medical Terminology I

Overview

Course Description
This course introduces prefixes, suffixes, and word roots used in the language of medicine. Topics include medical vocabulary and the terms that relate to the anatomy, physiology, pathological conditions, and treatment of selected systems. Upon completion, students should be able to pronounce, spell, and define medical terms as related to selected body systems and their pathological disorders.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Utilize word building rules to build appropriate medical words

Objectives
Utilize prefixes, suffixes, and whole-body terminology to build medical terms

Objectives
Diagram medical terms, labeling the word part and identifying body parts and organ in diagram pictures

Objectives
Relate common medical terms to the anatomy and physiology of each body system

Objectives
Relate common medical terms to specialty areas of practice

Objectives
Pronounce, spell, and define medical terms as related to all body systems and their pathological disorders

Objectives
Define both medical terms and abbreviations related to all body systems.

MED122 - Medical Terminology II

Overview

Course Description
This course is the second in a series of medical terminology courses. Topics include medical vocabulary and the terms that relate to the anatomy, physiology, pathological conditions, and treatment of selected systems. Upon completion, students should be able to pronounce, spell, and define medical terms as related to selected body systems and their pathological disorders.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
3

Relate common medical terms to specialty areas of practice

Objectives
Pronounce, spell, and define medical terms as related to all body systems and their pathological disorders

Objectives
Define both medical terms and abbreviations related to all body systems.

MED130 - Administrative Office Procedures I

Overview

Course Description
This course introduces medical office administrative procedures. Topics include appointment processing, written and oral communications, medical records, patient orientation, and safety. Upon completion, students should be able to perform basic administrative skills within the medical environment.

Course Typically Offered
Fall

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Explain the role of a skilled medical assistant as relates to performance of assigned duties under the guidance of an employing/supervising physician.

Objectives
Relate the knowledge and perform administrative and clinical techniques learned in the educational program, with a degree of competence appropriate for safe and effective office management and patient care.

Objectives
Develop a working knowledge of computing concepts, components and basic office applications.

Objectives
Interpret verbal and written communication relevant to safe and effective medical office and patient care practices.

Objectives
Comply at all times with legal, ethical and professional guidelines as a member of a health care service profession.

Objectives
Develop necessary computer skills to schedule appointments, process billing, and code and process insurance accounts and provide written documentation in the medical assisting setting.

Objectives
Apply clinical, administrative and laboratory skills within the clinical practicum to satisfy the competency requirement for program completion.

MED131 - Administrative Office Procedures II

Overview

Course Description
This course provides medical office procedures in both economic and management skills. Topics include physical plant maintenance, equipment and supplies, liability coverage, medical economics, and introductory insurance procedures. Upon completion, students should be able to manage the economics of the medical office and supervise personnel.

Course Typically Offered
Fall

Credit Hours
2

Requisites

Simple Requisites

Prerequisite

Type
Prerequisite

None Take MED-130;

Take MED-130;

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate knowledge of the basic types of health insurance

Objectives
Identify HIPAA's primary objectives.

Objectives
Demonstrate knowledge of ICD-10 CM and CPT-4 procedural coding from course documents as applicable in medical billing.

Objectives
State the basic purposes and components of a medical record.

Objectives
Describe the two basic types of health plans and how thy function.

Objectives
Explain the origin and evolution of the CMS-1500

Objectives
Discuss health care reform and preexisting conditions.

Objectives
Explain the concept of managed care

Objectives
Discuss the role of Military Health program, Medicare and Medicaid.

MED140 - Examining Room Procedures I

Overview

Course Description
This course provides instruction in clinical examining room procedures. Topics include asepsis, infection control, assisting with exams and treatment, patient education, preparation and administration of medications, EKG, vital signs, and medical emergencies. Upon completion, students should be able to demonstrate competence in exam room procedures.

Course Typically Offered
Fall

Credit Hours
5

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate proficiency with blood-borne pathogens, infection control, asepsis, sterilization and disinfection.

Objectives
Describe the infection cycle, including the infectious agent, reservoir, susceptible host, means of transmission, the portal of entry, and portals of exit

Objectives
Match the use of Personal Protective Equipment (PPE) to the appropriate procedure

Objectives
Demonstrate proficiency in assessing and charting patient vital signs.

Objectives
Demonstrate clinical proficiency in the area of specialty examination(s), diagnostic testing, and procedures related to the medical office. This includes familiarization with and application of equipment, supplies, room or procedure preparation, exam/treatment assistance including positioning, patient support, and patient education.

Objectives
Demonstrate proficiency with preparation and administration of medications

Objectives
Demonstrate competence in exam room procedures

Objectives
Identify measurement systems

Objectives
Define basic units of measurement in metric, apothecary, and household systems

Objectives
Identify both abbreviations and symbols used in calculating medication dosages

MED150 - Laboratory Procedures I

Overview

Course Description
This course provides instruction in basic lab techniques used by the medical assistant. Topics include lab safety, quality control, collecting and processing specimens, performing selective tests, phlebotomy, screening and follow-up of test results, and OSHA/CLIA regulations. Upon completion, students should be able to perform basic lab tests/skills based on course topics.

Course Typically Offered
Fall, Spring

Credit Hours
5

Student Learning Outcomes

Learning Objectives

Objectives
Follow OSHA guidelines for blood-borne pathogen safety by selecting and using appropriate personal protective equipment (PPE) in clinical settings.1.

Objectives
Discuss infection control procedures.

Objectives
Perform specimen collection procedures, including providing clear patient instructions for proper sample collection and safe handling collection techniques.

Objectives
Discuss the application of Standard Precautions with regard to: - All Body fluids, secretions and excretions - Blood - Non-intact skin - Mucous membranes

Objectives
Conduct microscopic analysis of urinalysis and hematology samples, accurately identifying key components and abnormalities.

Objectives
Discuss quality control issues related to handling microbiological specimens.

Objectives
Identify disease processes that are indications for CLIA waived test.

Objectives
Identify the role of the Center for Disease Control (CDC) regulations in healthcare settings.

Objectives
Deliver physician-analyzed test results to patients using clear, professional, and compassionate communication.

MED232 - Medical Insurance Coding

Overview

Course Description
This course is designed to develop coding skills. Emphasis is placed on advanced diagnostic and procedural coding in the outpatient facility. Upon completion, students should be able to demonstrate proficiency in coding for reimbursement.

Course Typically Offered
Spring

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Explain the organization of the ICD-10-CM Tabular list of Diseases, Index to Diseases, and index to procedure and tabular list to procedures.

Objectives
Apply guidelines for coding and reporting when assigning ICD-10-CM codes.

Objectives
Explain coding conventions.

Objectives
Assign ICD-10-CM diagnosis codes for outpatient and physician office care.

Objectives
Explain the organization, format and content of CPT.

Objectives
Assign CPT procedure and service codes for outpatient care.

Objectives
Understand and explain the development of ICD-10CM

MED240 - Examining Room Procedures II

Overview

Course Description
This course is designed to expand and build upon skills presented in MED 140. Emphasis is placed on advanced exam room procedures. Upon completion, students should be able to demonstrate enhanced competence in selected exam room procedures.

Course Typically Offered
Spring

Credit Hours
5

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take MED-140

Take MED-140;

Student Learning Outcomes

Learning Objectives

Objectives
Identify the classifications of medications, including desired effects, side-effects and adverse reactions

Objectives
Describe the relationship between anatomy and physiology of all body systems and medications used for treatment in each

Objectives
Maintain growth charts

Objectives
Describe the electrical conduction system of the heart.

Objectives
Describe the Medical Assistant's role in assisting with Pulmonary procedures

Objectives
Assist with examinations and procedures

MED260 - MED Clinical Practicum

Overview

Course Description
This course provides the opportunity to apply clinical, laboratory, and administrative skills in a medical facility. Emphasis is placed on enhancing competence in clinical and administrative skills necessary for comprehensive patient care and strengthening professional communications and interactions. Upon completion, students should be able to function as an entry-level health care professional.

Course Typically Offered
Summer

Credit Hours
5

Explain the role of a skilled medical assistant as relates to performance of assigned duties under the guidance of an employing/supervising physician.

Objectives
Relate the knowledge and perform administrative and clinical techniques learned in the educational program, with a degree of competence appropriate for safe and effective office management and patient care.

Objectives
Develop a working knowledge of computing concepts, components and basic office applications.

Objectives
Interpret verbal and written communication relevant to safe and effective medical office and patient care practices.

Objectives
Comply at all times with legal, ethical and professional guidelines as a member of a health care service profession.

Objectives
Develop necessary computer skills to schedule appointments, process billing, and code and process insurance accounts and provide written documentation in the medical assisting setting.

Objectives
Apply clinical, administrative and laboratory skills within the clinical practicum to satisfy the competency requirement for program completion.

Objectives
Demonstrate clinical, laboratory, and administrative skills in a medical facility.

Objectives
Participate in professional communications and interactions.

Objectives
Function as an entry-level health care professional.

MED264 - Medical Assisting Overview

Overview

Course Description
This course provides an overview of the complete medical assisting curriculum. Emphasis is placed on all facets of medical assisting pertinent to administrative, laboratory, and clinical procedures performed in the medical environment. Upon completion, students should be able to demonstrate competence in the areas covered on the national certification examination for medical assistants.

Course Typically Offered
Summer

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Knowledge of the basic word structure including prefixes, suffixes, plurals, abbreviations and symbols.

Objectives
Understand terms relating to physical descriptions, conditions, diseases, and surgical, diagnostic, and treatment procedures.

Objectives
Have the basic knowledge of the body as a whole- vocabulary, planes, directions, and divisions, structures of the body and body systems and their related conditions and

Objectives
Have the basic knowledge of the body as a whole- vocabulary, planes, directions, and divisions, structures of the body and body systems and their related conditions and diseases.

Objectives
Knowledge of the Medical code of ethics, legal guidelines for professional and patient rights. Understand the results of noncompliance with federal and state laws.

Objectives
Name the regulatory agencies for public health, patient rights and employee safety.

Objectives
Apply professional oral and written communication standards to administrative office tasks. Knowledge of basic methods of bookkeeping, accounts receivable and payable, tasks. Knowledge of basic methods of bookkeeping, accounts receivable and payable, debt collection and banking guidelines

Objectives
Understand the filing guidelines, filing systems for patient records and the different types

Objectives
Be able to recognize documentation errors and corrections.

MED270 - Symptomatology

Overview

Course Description
This course covers the study of disease symptoms and the appropriate actions taken by medical assistants in a medical facility in relation to these symptoms. Emphasis is placed on interviewing skills and appropriate triage, preparing patients for procedures, and screening test results. Upon completion, students should be able to recognize how certain symptoms relate to specific diseases, recognize emergency situations, and take appropriate actions.

Course Typically Offered
Fall

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Understand the concept of Human Diseases, Disorders, and Syndromes of the

Objectives
Understand the filing guidelines, filing systems for patient records and the different types and purposes of the medical record.

Objectives
Identify and explain the etiology, pathology, and predisposing factors related to the different diseases within the body systems.

Objectives
Understand and explain the difference between diagnosis, prognosis, and treatment of a disease.

Objectives
Describe common tests used to treat the diseases of the body.

Objectives
Identify the basic changes in the body during the aging process.

Objectives
Describe the curative, palliative, and preventive methods used to treat diseases.

Objectives
Identify the common laboratory test used to identify pathogenic organisms.

Objectives
Identify the common signs and symptoms associated with the diseases of the body.

Objectives
Define the terminology common to the different diseases and disorders of the systems.

MED272 - Drug Therapy

Overview

Course Description
This course focuses on major drug groups, including their side effects, interactions, methods of administration, and proper documentation. Emphasis is placed on the theory of drug administration. Upon completion, students should be able to identify, spell, recognize side effects of, and document the most commonly used medications in a physician's office.

Course Typically Offered
Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Recognize major drug groups, including their side effects, interactions, and methods of administration.

Objectives
Recognize special considerations for drug administration.

Objectives
Apply theoretical principles and methods for safe drug administration.

Objectives
Accurately calculate drug dosages.

Objectives
Apply principles of proper documentation regarding drug administration.

Objectives
Understand the effects/side effects of medication on the body systems.

MED274 - Diet Therapy/ Nutrition

Overview

Course Description
This course introduces the basic principles of nutrition as they relate to health and disease. Topics include basic nutrients, physiology, dietary deficiencies, weight management, and therapeutic nutrition in wellness and disease. Upon completion, students should be able to interpret clinical and dietary data and provide patient counseling and education.

Course Typically Offered
Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Define nutrition, dietetics, registered dietitian, public health nutritionist, macro-nutritionist, and micro-nutritionist.

Objectives
State the physical characteristics of good nutritional status.

Objectives
State the physical characteristics of poor nutritional status.

Objectives
State how increased scientific knowledge has changed Americans attitudes regarding health and nutrition.

Objectives
State the changes in Americans' approach to health care in the last 10 years. • Describe changes in food technology that have had an impact on the nutrition of the American public.

Objectives
List the major U.S. health problems and any possible relationship to nutrition. • Explain the meaning of Recommended Dietary Allowance (RDAs) and how the RDA came into existence.

Objectives
Describe what the basic for food groups mean.

Objectives
Explain how to use the Food Guide Pyramid.

Objectives
List the U.S. Dietary Guidelines.

Objectives
Identify the exchange lists and the foods found in each.

Objectives
List the dietary guidelines for heart prevention and for cancer prevention.

MED276 - Patient Education

Overview

Course Description
This course is designed to provide communication skills, basic education principles, and knowledge of available community resources and to apply this knowledge to the clinical setting. Emphasis is placed on identifying appropriate community resources, developing patient education materials, and perfecting written and oral communication skills. Upon completion, students should be able to instruct, communicate effectively, and act as a liaison between the patient and community agencies.

Course Typically Offered
Fall

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Maintain a professional appearance and punctuality.

Objectives
Demonstrate strong work ethic and legal principles in the delivery of patient care.

Objectives
Demonstrate strong critical thinking and problem-solving skills.

Objectives
Adequately perform medical administrative and clinical duties to include: basic practice finances, managed care/insurance, procedural and diagnostic coding, vital signs, injections and laboratory procedures including phlebotomy.

Objectives
Adequately write and verbally communicate with patients, coworkers, and employers.

Objectives
Comply and adhere to OSHA standards.

MHA140 - Introduction to Mental Health

Overview

Course Description
This course provides a comprehensive overview of mental health and wellness and the roles, duties, and ethical aspects of providing mental health services. Topics include the history of mental health services, common mental health challenges, professional qualifications, and current trends. Upon completion, students should be able to discuss the impact of mental health, examine various treatment settings, and analyze the requirements for providing mental health services in public, private, nonprofit, and community environments.

Course Typically Offered
Fall

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Discuss professional roles and responsibilities.

Objectives
Recognize regulations governing the provision of mental health services.

Objectives
Examine current trends and emerging issues in the field of mental health services.

Objectives
Articulate fundamental concepts related to mental health and historical evolution.

MHA150 - Mental Health Interventions

Overview

Course Description
This course provides exposure to different mental health treatment and intervention modalities. Topics include professional and self-help forms of intervention. Upon completion, students should be able to apply culturally competent mental health intervention principles to individuals and groups in a variety of treatment settings.

Credit Hours
3

MHA238 - Psychopathology

Overview

Course Description
This course examines the development and use of DSM/ICD in the mental health setting to establish a common language. Emphasis is placed on history, terminology, and assessment practices associated with the DSM/ICD in the treatment of psychological disorders. Upon completion, students should be able to explain the core vocabulary of treatment approaches and their applications.

Course Typically Offered
Spring

Credit Hours
3

Requisites

Simple Requisites

Local Requisite

Type
Corequisite

Take MHA-140

Take MHA-140(S26359);

Learning Objectives

Objectives
Describe the Diagnostic and Statistical Manual of Mental Disorders (DSM) and the International Classification of Diseases (ICD) in the mental health field.

Objectives
Examine the key terminology, limitations, and diagnostic criteria used in the DSM-IV/ICD.

Objectives
Apply knowledge to effectively communicate with colleagues and interdisciplinary teams.

Objectives
Evaluate the implications of DSM-IV/ICD diagnoses for treatment planning and intervention strategies.

Objectives
Describe emerging trends and debates in the field of mental health.

Student Learning Outcomes

MHA240 - Advocacy

Overview

Course Description
This course covers the roles and duties of the individual and community advocate. Topics include treatment planning, needs assessment, referral procedures, and follow-up and integration of services. Upon completion, students should be able to effectively advocate for the care of the whole person and community.

Credit Hours
3

MKT120 - Principles of Marketing

Overview

Course Description
This course introduces principles and problems of marketing goods and services. Topics include promotion, placement, and pricing strategies for products. Upon completion, students should be able to apply marketing principles in organizational decision making.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Define the role of marketing in business.

Objectives
Explain the role of selling, customer relations and product management in marketing.

Objectives
Describe marketing.

Objectives
Define pricing and channel management strategies.

Objectives
Discuss how markets are segmented and targeted

Objectives
Evaluate the quality of basic market research

Objectives
Explain how new products are developed and managed

Objectives
Indentify the value of distribution channels and how they are selected

Objectives
Explain the basic methods of determining prices

Objectives
Identify the different roles of the elements of the promotion mix

Objectives
Evaluate a basic marketing program

MKT123 - Fundamentals of Selling

Overview

Course Description
This course is designed to emphasize the necessity of selling skills in a modern business environment. Emphasis is placed on sales techniques involved in various types of selling situations. Upon completion, students should be able to demonstrate an understanding of the techniques covered.

Credit Hours
3

MKT220 - Advertising and Sales Promotion

Overview

Course Description
This course covers the elements of advertising and sales promotion in the business environment. Topics include advertising and sales promotion appeals, selection of media, use of advertising and sales promotion as a marketing tool, and means of testing effectiveness. Upon completion, students should be able to demonstrate an understanding of the concepts covered through application.

Course Typically Offered
Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Explain use of advertising and sales promotion as a marketing tool.

Objectives
Describe advertising and sales promotional appeals.

Objectives
Explain appropriate selection of media.

Objectives
Discuss means of testing effectiveness of advertising and sales promotion.

Objectives
Explain advertising and the advertising industry

Objectives
Discuss segmentation and targeting of markets as well as the marketing mix

Objectives
Describe communication process and consumer behavior

Objectives
Discuss the importance of planning in order to properly execute integrated marketing communication (IMC)

MKT223 - Customer Experience

Overview

Course Description
This course stresses the importance of customer relations in the business world. Emphasis is placed on learning how to respond to complex customer requirements and to efficiently handle stressful situations. Upon completion, students should be able to demonstrate the ability to handle customer relations.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Define customer service.

Objectives
Recognize factors responsible for shift to a service culture and explain elements of service culture

Objectives
Recognize customer-friendly systems.

Objectives
Ensure positive customer interactions.

Objectives
Recognize the impact of nonverbal communication on customers.

Objectives
Create customer relationships.

Objectives
Develop internal customer relationships.

Objectives
Recognize need for time management and apply techniques to save time.

Objectives
Identify and develop strategies to prevent customer dissatisfaction.

MKT232 - Social Media Marketing

Overview

Course Description
This course is designed to build students' social media marketing skills by utilizing projects that give students hands on experience implementing social media marketing strategies. Topics include integrating different social media technologies into a marketing plan, creating social media marketing campaigns, and applying appropriate social media tools. Upon completion, students should be able to use social media technologies to create and improve marketing efforts for businesses.

Course Typically Offered
Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Integrate different social media techniques into a marketing plan.

Objectives
Describe social media marketing strategies.

Objectives
Create a social media marketing campaign, applying appropriate social media tools.

Objectives
Create a plan to improve marketing efforts for businesses using social media.

Objectives
Identify various types of social media.

Objectives
Identify various types of social media and distinguish among their purposes.

Objectives
Determine the types of social media best suited for their business/organization based on the features of each.

Objectives
Utilize one or more types of social media for the student’s business (or that one might apply for his future business).

Objectives
Demonstrate how to integrate social media into current and existing marketing campaigns.

Objectives
Discuss the types of blogging platforms and the apprropiate use of the platforms.

Objectives
Utilize tools that analyze, measure, and/or assist in understanding social media successes and value.

Objectives
Discuss branding and social media's impact on an organization's branding.

Objectives
Explain best practices in branding and developing a brand via social media.

Objectives
Explore writing style and adapting it to social media

MNT110 - Introduction to Maintenance Procedures

Overview

Course Description
This course covers basic maintenance fundamentals for power transmission equipment. Topics include equipment inspection, lubrication, alignment, and other scheduled maintenance procedures. Upon completion, students should be able to demonstrate knowledge of accepted maintenance procedures and practices according to current industry standards.

Course Typically Offered
Fall

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Identify and demonstrate safe practices and procedures with tools, materials and industry accepted test equipment covered in the course.

Objectives
Identify and demonstrate use of hand tools.

Objectives
Identify grades of bolts and fasteners and demonstrate proper tightening techniques

Objectives
Describe the operation of and assemble mechanical power transmissions and systems.

Objectives
Identify bearings, seals, gaskets, and packing material and demonstrate appropriate assembly techniques.

Objectives
Perform preventative and predictive maintenance and mechanical troubleshooting.

Objectives
Build fluid power curicuts on suitcase trainers

Objectives
Disassemble, identify, & reassemble reservoirs, valves, actuators, & pumps

Objectives
Compare differences of fluid power transfer components

Objectives
Identify fitting types and applications for use

Objectives
Solve fluid power system equations

MNT111 - Maintenance Practices

Overview

Course Description
This course provides in-depth theory and practical applications relating to predictive and preventive maintenance programs. Emphasis is placed on equipment failure analysis, maintenance management software, and techniques such as vibration and infrared analysis. Upon completion, students should be able to demonstrate an understanding of modern analytical and documentation methods.

Course Typically Offered
Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Examine differences and applications of maintenance strategies

Objectives
Develop a preventive maintenace schedule for a machine (personal vehicle)

Objectives
Analyze and contrast service repair principles

Objectives
Identify mechanical drive types, lubricants, and ancillary components

Objectives
Build a Rube Goldberg machine using the six simple machines

MNT120 - Industrial Wiring Methods

Overview

Course Description
This course is designed to prepare the student to install industrial wiring systems in accordance with the NEC and industry practices. Emphasis is placed on the use and installation of raceways, conductors, enclosures, and other devices typically used in industry. Upon completion, students should be able to safely install simple industrial branch and feeder circuits.

Credit Hours
2

MNT240 - Indust Equip Troubleshoot

Overview

Course Description
This course covers the various service procedures, tools, instruments, and equipment necessary to analyze and repair typical industrial equipment. Emphasis is placed on electro-mechanical and fluid power equipment troubleshooting, calibration, and repair, including common techniques and procedures. Upon completion, students should be able to troubleshoot and repair industrial equipment.

Course Typically Offered
Spring

Credit Hours
2

Requisites

Simple Requisites

Prerequisite

Type
Prerequisite

Take ELC-112 or ELC-131

Take ELC-112(S23481) or ELC-131(S23482);

Student Learning Outcomes

Learning Objectives

Objectives
Interpret scematics and diagrams

Objectives
Utilize troubleshooting tools to evaluate equipment

Objectives
Test for specific problems and make repairs

Objectives
Develop a work log explaining tools, instruments, and procedures used in analysis and repair of equipment

Objectives
Analyze efficiency and sustainability techniques

MSI110 - Military Science I

Overview

Course Description
This course introduces military-style training and confidence building, including military weapons firing, rappelling, and other related material. Emphasis is placed on US Army and ROTC organization, leadership and management techniques, principles of war, evolution of weapons, and military tactics. Upon completion, students should be able to identify and explain the basics of military science and put into practice the art of organizing, motivating, and leading others.

Credit Hours
1

MSI120 - Military Science II

Overview

Course Description
This course covers the use of maps and compasses for land navigation, leadership principles and techniques, and military written and oral communication. Topics include orienteering compass techniques, assault boat training, time management, military briefings, and basic survival skills. Upon completion, students should be able to fulfill requirements for entry into the ROTC advanced program and compete for continuing ROTC scholarships.

Credit Hours
2

MSI210 - Military Science III

Overview

Course Description
This course emphasizes basic concepts in leadership, team building, and management. Topics include land navigational skills, basic first aid, oral communication, military briefings and personal management skills. Upon completion, students should be able to manage and communicate effectively in a small team environment.

Credit Hours
2

MSI220 - Military Science IV

Overview

Course Description
This course completes the preparation for accession into the ROTC advanced program. Topics include introduction to the Leadership Development Program (LDP), operation orders, advance land navigation techniques, small unit tactics, and physical training. Upon completion, students will be eligible to apply for entry into the ROTC Advanced Program.

Credit Hours
2

MUS110 - Music Appreciation

Overview

Course Description
This course is a basic survey of the music of the Western world. Emphasis is placed on the elements of music, terminology, composers, form, and style within a historical perspective. Upon completion, students should be able to demonstrate skills in basic listening and understanding of the art of music.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Define the elements of musicApply music vocabulary and active listening skills to many musical styles and traditions, including Western Art Music and popular genres

Objectives
Aurally identify and interpret specific musical characteristics of the following Western historical style periods: Medieval, Renaissance, Baroque, Classical, Romantic, Modern, and Postmodern

Objectives
Interpret and connect the social, cultural, and historical contexts of music from Western historical eras and genresIdentify orchestral instruments aurally

Objectives
Observe performance practices from different genres and traditions of music

MUS111 - Fundamentals of Music

Overview

Course Description
This course is an introductory course for students with little or no music background. Emphasis is placed on music notation, rhythmic patterns, scales, key signatures, intervals, and chords. Upon completion, students should be able to demonstrate an understanding of the rudiments of music.

Credit Hours
3

MUS112 - Introduction to Jazz

Overview

Course Description
This course introduces the origins and musical components of jazz and the contributions of its major artists. Emphasis is placed on the development of discriminating listening habits, as well as the investigation of the styles and structural forms of the jazz idiom. Upon completion, students should be able to demonstrate skills in listening and understanding this form of American music.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Identify, orally and in writing, the defining characteristics of jazz.

Objectives
Identify aurally the musical textures of jazz.

Objectives
Identify and define the styles, major artists, techniques and components of jazz.

Objectives
Write reviews of live and recorded jazz performances.

Objectives
Compare events in jazz to events in American and world history.

Objectives
Evaluate how people and technology have influenced jazz.

MUS210 - History of Rock Music

Overview

Course Description
This course is a survey of Rock music from the early 1950's to the present. Emphasis is placed on musical groups, soloists, and styles related to the evolution of this idiom and on related historical and social events. Upon completion, students should be able to identify specific styles and to explain the influence of selected performers within their respective eras.

Course Typically Offered
Fall

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Define the vocabulary of musical elements

Objectives
Aurally identify musical elements of Rock style from various genres and eras

Objectives
Relate and evaluate Rock music within societal and cultural contexts

Objectives
Demonstrate an understanding of the history of rock music

Objectives
Identify songs and musicians from different genres of Rock music

NAS101 - Nurse Aide I

Overview

Course Description
This course includes basic nursing skills required to provide safe, competent personal care for individuals. Emphasis is placed on person-centered care, the aging process, communication, safety/emergencies, infection prevention, legal and ethical issues, vital signs, height and weight measurements, elimination, nutrition, basic restorative care/rehabilitation, dementia, mental health and end-of-life care. Upon completion, students should be able to demonstrate knowledge and skills and be eligible to test for listing on the North Carolina Nurse Aide I Registry.

Course Typically Offered
Fall, Spring

Credit Hours
6

Student Learning Outcomes

Learning Objectives

Objectives
Defined the ethical, legal, and professional responsibilities of a nursing assistant.

Objectives
Demonstrated competency in nursing assistant theory and principles.

Objectives
Demonstrated competency in activity of daily living skills.

Objectives
Completed the required clinical rotation hours.

NAS102 - Nurse Aide II

Overview

Course Description
This course provides training in Nurse Aide II tasks. Emphasis is placed on the role of the Nurse Aide II, sterile technique and specific tasks such as urinary catheterization, wound care, respiratory procedures, ostomy care, peripheral IV assistive activities, and alternative feeding methods. Upon completion, students should be able to demonstrate knowledge and skills and safe performance of skills necessary to be eligible for listing on the North Carolina Nurse Aide II Registry.

Learning Objectives

Objectives
Identify, orally and in writing, the defining characteristics of jazz.

Objectives
Identify aurally the musical textures of jazz.

Objectives
Identify and define the styles, major artists, techniques and components of jazz.

Objectives
Write reviews of live and recorded jazz performances.

Objectives
Compare events in jazz to events in American and world history.Evaluate how people and technology have influenced jazz.

NET125 - Introduction to Networks

Overview

Course Description

This course offers a detailed exploration of the architecture, structure, functions, components, and operating models of the Internet and other computer networks. Topics include the essentials of IP addressing, Ethernet basics, various media types, and network operations. Upon completion, students should be able to build/troubleshoot simple Local Area Networks (LANs), develop effective IP addressing schemes, and configure routers and switches.

Credit Hours

3

Student Learning Outcomes

Learning Objectives

Objectives
Configure VLANs and Inter-VLAN routing applying security best practices.

Objectives
Troubleshoot inter-VLAN routing on Layer 3 devices.

Objectives
Configure redundancy on a switched network using STP and EtherChannel.

Objectives
Troubleshoot EtherChannel on switched networks.

Objectives
Explain how to support available and reliable networks using dynamic addressing and first-hop redundancy protocols.

Objectives
Configure dynamic address allocation in IPv6 networks.

Objectives
Configure WLANs using a WLC and L2 security best practices.

Objectives
Configure switch security to mitigate LAN attacks.

Objectives
Configure IPv4 and IPv6 static routing on routers.

NET126 - Switching and Routing

Overview

Course Description

This course covers the architecture, components, and operations of routers and switches in small networks and introduces wireless local area networks (WLAN) and security concepts. Emphasis is placed on configuring and troubleshooting routers and switches for advanced functionality using security best practices and resolving common network issues utilizing both IPv4 and IPv6 protocols. Upon completion, students should be able to configure VLANs and Inter-VLAN routing applying security best practices, troubleshoot inter-VLAN routing on Layer 3 devices, configure redundancy on a switched network using STP and EtherChannel, configure WLANs using a WLC and L2 security best practices and configure IPv4 and IPv6 static routing on routers.

Credit Hours

3

Student Learning Outcomes

Learning Objectives

Objectives
Configure single-area OSPFv2 in both point-to-point and multiaccess networks.

Objectives
Explain how to mitigate threats and enhance network security using access control lists and security best practices.

Objectives
Implement standard IPv4 ACLs to filter traffic and secure administrative access.

Objectives
Configure NAT services on the edge router to provide IPv4 address scalability.

Objectives
Explain techniques to provide address scalability and secure remote access for WANs.

Objectives
Explain how to optimize, monitor, and troubleshoot scalable network architectures.

Objectives
Explain how networking devices implement QoS.

Objectives
Implement protocols to manage the network.

Objectives
Explain how technologies such as virtualization, software defined networking, and automation affect evolving networks.

NET225 - Enterprise Networking

Overview

Course Description
This course is designed to cover the architecture, components, operations, and security to scale for large, complex networks, including wide area network (WAN) technologies. Emphasis is placed on configuring, troubleshooting, and securing enterprise network devices and understanding how application programming interfaces (API) and configuration management tools enable network automation. Upon completion, students should be able to configure link state routing protocols, implement ACLs to filter traffic and secure administrative access, configure NAT services on the router to provide address scalability, explain techniques to provide address scalability and secure remote access for WAN, and explain how automation affects evolving networks.

Credit Hours
3

NET226 - Network Programmability

Overview

Course Description
This course covers the methodologies and tools of modern software development, applied to IT and Network operations. Emphasis is placed on network programming in current network scripting languages, using GIT and common data formats, deploying applications as containers, using Continuous Integration/Continuous Deployment (CI/CD) pipelines and automating infrastructure using code. Upon completion, students should be able to use basic Python programming and Linux skills, implement a development environment, use software development and design best practices, create a secure API, use current technologies to deploy and secure applications and compare software testing and deployment methods in automation and simulation environments.

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Describe and implement spanning tree protocol

Objectives
Describe and demonstrate the use of link aggregation

Objectives
Describe and demonstrate the use of advanced single-area OSPF

Objectives
Describe and demonstrate the use of EIGRP

NOS120 - Linux Single User

Overview

Course Description

This course provides students with GUI and command line skills for using a Linux machine. Topics include Linux file system and access permissions, desktop or shell environments, command line editors, display servers, expression pattern matching, I/O redirection, and networking. Upon completion, students should be able to demonstrate competency in customizing a Linux system.

Credit Hours

3

Student Learning Outcomes

Learning Objectives

Objectives
Desrcribe Linux and the Red Hat Enterprise Linux ecosystem.

Objectives
Run commands and view shell environments.

Objectives
Manage, organize, and secure files.

Objectives
Manage users, groups and user security policies.

Objectives
Control and monitor systemd services.

Objectives
Configure remote access using the web console and SSH.

Objectives
Configure network interfaces and settings.

Objectives
Archive and copy files from one system to another.

Objectives
Manage software using DNF

NOS130 - Windows Single User

Overview

Course Description
This course introduces operating system concepts for single-user systems. Topics include hardware management, file and memory management, system configuration/optimization, and utilities. Upon completion, students should be able to perform operating systems functions at the support level in a single-user environment.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Identify and compare the features of different versions and editions of Windows.

Objectives
Demonstrate performing basic and advanced Windows installation methods.

Objectives
Use the control panel and settings app to manage and configure hardware devices.

Objectives
Demonstrate file systems, partitioning, and data storage management, including virtual disks and backing up and restoring data.

Objectives
Demonstrate implementation of Security Features of Windows.

Objectives
Use the Microsoft Management Console and Snap-Ins to perform administrative tasks, including user accounts and group administration, assigning NTFS permissions, configuring local security policies, monitoring events and resources.

Objectives
Describe the boot process.

Objectives
Configure networking, and printing for Windows.

Objectives
Explain the advantages of DNS, Active Directory Services, and Azure Resources.

NOS220 - Linux Administration I

Overview

Course Description
This course covers advanced skills needed to successfully administer a Linux system. Topics include installation, file system creation/maintenance, storage, network configuration, user interface configuration, and security. Upon completion, students should be able to perform administrative tasks on a Linux system in a network environment.

Credit Hours
3

NOS230 - Windows Administration I

Overview

Course Description
This course covers the installation and configuration of a Windows Server operating system. Emphasis is placed on the basic configuration of core network services, Active Directory and group policies. Upon completion, students should be able to install and configure a Windows Server operating system.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Install and Configure Server Roles in Windows Server Operating System

Objectives
Configure basic server settings on Microsoft Windows Server OS.

Objectives
Create and Configure an Active Directory domain on Microsoft Windows Server OS.

Objectives
Configure Group Policy on the Active Directory domain on Microsoft Windows Server OS.

Objectives
Create and manage accounts on the Active Directory domain on Microsoft Windows Server OS.

Objectives
Design a DNS namespace, given a network scenario.

Objectives
Design a DHCP addressing scheme, given a network scenario.

Objectives
Configure the Remote Desktop Services role on Microsoft Windows Server OS.

Objectives
Design a folder sharing strategy, given a network scenario.

Objectives
Design a backup strategy, given a network scenario.

NUR101 - Practical Nursing I

Overview

Course Description
This course introduces the concepts within the three domains of the individual, healthcare, and nursing. Emphasis is placed on the concepts within each domain including assessment, clinical decision making, professional behaviors, caring interventions, biophysical and psychosocial concepts, communication, collaboration, teaching/learning, safety, ethical principles, legal issues, informatics, and evidence-based practice. Upon completion, students should be able to provide safe nursing care across the lifespan incorporating the concepts identified in this course.

Course Typically Offered
Fall

Credit Hours
11

Student Learning Outcomes

Learning Objectives

Objectives
Course Objective I - Individual Domain: Upon completion of the course, the learner will be able to relate to the individual as a holistic, complex, multidimensional, unique, and significant being.

Objectives
1. OB1SLO1 Understand all concepts within the domain of the healthy individual.

Objectives
2. OB1SLO2 Identify the internal, external, and environmental factors that impact the health and well-being of individuals.

Objectives
Course Objective II - Nursing Domain: Upon completion of the course, the learner will be able to internalize foundational principles of professional nursing practice to provide safe, culturally competent, therapeutic care for individuals

Objectives
OB2SLO1 Demonstrate an awareness of the values, attitudes, behaviors, and beliefs important to professional nursing.

Objectives
OB2SLO2 Identify all concepts within the domain of nursing to safely provide therapeutic care to individuals with basic health care needs.

Objectives
OB2SLO3 Participate in the nursing process within the scope of practice of the practical nurse.

Objectives
OB2SLO4 Perform data collection and caring nursing interventions for holistic care of individuals.

Objectives
OB2SLO5 Communicate professionally and effectively while providing care to individuals with basic health care needs.

Objectives
OB2SLO6 Promote the acquisition of knowledge and learning to enhance self-care for each individual from an established plan as delegated by the RN.

Objectives
OB2SLO7 Discuss collaboration with the interdisciplinary healthcare team as assigned by the RN in providing care to individuals.

Objectives
Course Objective III - Health Care System Domain: Upon completion of the course, the learner will be able to transfer knowledge of the concepts within the domain of the healthcare system to safely and ethically administer care to the individual.

Objectives
OB3SLO1 Demonstrate knowledge of ethical and legal standards that govern the practice of nursing within the healthcare system.

Objectives
OB3SLO2 Incorporate informatics to access and communicate client information.

Objectives
OB3SLO3 Utilize principles of evidence-based practice while safely providing therapeutic nursing care to individuals in the healthcare system.

Objectives
OB3SLO4 Utilize the nursing process to identify hazards and errors within the healthcare system.

Objectives
OB3SLO5 Recognize responsibility and accountability for behaviors, actions, judgments, continued learning and self-development.

NUR102 - Practical Nursing II

Overview

Course Description
This course is designed to further develop the concepts within the three domains of the individual, nursing, and healthcare. Emphasis is placed on the concepts within each domain including clinical decision making, caring interventions, biophysical and psychosocial concepts, communication, collaboration, teaching and learning, accountability, safety, informatics, and evidence-based practice. Upon completion, students should be able to provide safe nursing care across the lifespan incorporating the concepts identified in this course.

Learning Objectives

Objectives
Course Objective I - Individual Domain: Upon completion of the course, the learner will further develop knowledge of concepts within the domain of the individual.

Objectives
OB1SLO1 Examine the pathophysiology, prevalence, and clinical course of individuals with specific alterations in health impacting quality of life, and the achievement of potential.

Objectives
OB1SLO2 Examine internal and external environmental factors that impact the health and well-being of individuals with common health alterations.

Objectives
Course Objective II - Nursing Domain: Upon completion of the course, the learner will be able to provide safe, culturally competent, therapeutic nursing care to individuals.

Objectives
OB2SLO1 Demonstrate ethical, legal, and professional behaviors specific to the scope of practice of the PN within the healthcare system.

Objectives
OB2SLO2 Incorporate all concepts within the domain of nursing to safely provide therapeutic care to individuals with common health alterations.

Objectives
OB3SLO1 Practice safely and ethically within the healthcare system according to the nursing practice act, healthcare system, and National Patient Safety Goals.

Objectives
OB2SLO3 Practice the role of the practical nurse under the direction and supervision of the registered nurse.

Objectives
OB3SLO2 Retrieve information about evidence-based healthcare practices from internet sources.

Objectives
OB2SLO4 Communicate professionally and effectively while safely providing therapeutic care to individuals with common health alterations.

Objectives
OB3SLO3 Employ information technology to support problem solving and critical thinking used in clinical decision making.

Objectives
OB2SLO5 Apply teaching and learning principles while reinforcing the teaching plan developed by the registered nurse.

Objectives
OB3SLO4 Suggest changes to the RN for improvement of client care and organizational outcomes.

Objectives
OB2SLO6 Participate in collaboration with the interdisciplinary healthcare team as assigned by the RN in using cost effective nursing strategies and quality improvement processes.

Objectives
OB3SLO5 Utilize educational opportunities for continued learning and self-development.

Objectives
Course Objective III - Health Care System Domain
Upon completion of the course, the learner will be able to safely and ethically provide therapeutic nursing care within the healthcare system for individuals.

NUR103 - Practical Nursing III

Overview

Course Description
This course is designed to assimilate the concepts within the three domains of the individual, healthcare, and nursing. Emphasis is placed on biophysical and psychosocial concepts, professional behaviors, healthcare systems, health policy, and quality improvement. Upon completion, students should be able to demonstrate the knowledge, skills, and attitudes necessary to provide safe, quality, and individualized entry level nursing care.

Objectives
Course Objective I - Individual Domain:

Objectives
Upon completion of the course, the learner will be able to assimilate all concepts within the domain of the individual related to common alterations in health.

Objectives
CO1SLO1 Participate in evaluating the concepts of the holistic individual and client response in the promotion of health, wellness, illness, quality of life, and the achievement of potential.

Objectives
CO1SLO2 Participate in evaluating the concepts of the holistic individual and client response in the promotion of health, wellness, illness, quality of life, and the achievement of potential.

Objectives
Course Objective II - Nursing Domain: Upon completion of the course, the learner will be able to provide safe, culturally competent, therapeutic nursing care to individuals with common health alterations.

Objectives
CO2SLO1 Practice professional nursing behaviors, within the legal practice boundaries of the practical nurse, incorporating personal responsibility and accountability for continued competence.

Objectives
CO2SLO2 Participate in providing evidence-based nursing care, from an established plan of care, based on biophysical, psychosocial, and cultural needs of clients in various stages of growth and development while assisting them to attain their highest level of wellness.

Objectives
CO2SLO3 Participate in the nursing process to provide individualized, safe, and effective nursing care in a structured setting under supervision.

Objectives
CO2SLO4 Demonstrate caring behaviors in implementing culturally-competent, client centered nursing care to diverse clients across the lifespan.

Objectives
CO2SLO5 Participate in collaboration with the interdisciplinary healthcare team as assigned by the RN to support positive individual and organizational outcomes in a safe and cost effective manner.

Objectives
CO2SLO6 Reinforce and/or implement the teaching plan developed and delegated by the registered nurse to promote the health of individuals, incorporating teaching and learning principles.

Objectives
CO2SLO7 Participate in collaboration with the interdisciplinary healthcare team as assigned by the RN to support positive individual and organizational outcomes in a safe and cost effective manner.

Objectives
Course Objective III - Health Care System Domain Upon completion of the course, the learner will be able to safely and provide therapeutic nursing care within the healthcare system for individuals with common alterations in health.

Objectives
CO3SLO1 Practice professional nursing behaviors, within the legal practice boundaries of the practical nurse, incorporating personal responsibility and accountability for continued competence.

Objectives
CO3SLO2 Utilize informatics to access, manage, and communicate client information and validate best practices.

Objectives
CO3SLO3 Participate in providing evidence-based nursing care, from an established plan of care, based on biophysical, psychosocial, and cultural needs of clients in various stages of growth and development while assisting them to attain their highest level of wellness.

Objectives
CO3SLO4 Participate in Quality Improvement (QI) by identifying hazards and error and by suggesting, to the RN, changes to improve the client care process.

Objectives
CO3SLO5 Practice professional nursing behaviors, within the legal practice boundaries of the practical nurse, incorporating personal responsibility and accountability for continued competence.

NUR111 - Introduction to Health Concepts

Overview

Course Description
This course introduces the concepts within the three domains of the individual, healthcare, and nursing. Emphasis is placed on the concepts within each domain including medication administration, assessment, nutrition, ethics, interdisciplinary teams, informatics, evidence-based practice, individual-centered care, and quality improvement. Upon completion, students should be able to provide safe nursing care incorporating the concepts identified in this course.

Course Typically Offered
Fall

Student Learning Outcomes

Learning Objectives

Objectives
Objective I: Upon completion of the course, the learner will be able to relate to the individual as a holistic, complex, multidimensional, unique, and significant being.

Objectives
OB1SLO1 Articulate all concepts within the domain of the healthy individual.

Objectives
OB1SLO2 Distinguish between the healthy individual within a changing internal and external environment and individuals with simple alterations in health.

Objectives
Objective II: Upon completion of the course, the learner will be able to internalize foundational principles of professional nursing practice to provide safe, culturally competent, therapeutic care for individuals.

Objectives
OB2SLO1 Receive an awareness of the values, attitudes, behaviors, and beliefs important to professional nursing.

Objectives
OB2SLO2 Incorporate all concepts within the domain of nursing to safely provide therapeutic care to individuals.

Objectives
OB2SLO3 Competently perform holistic assessments, caring nursing interventions, and clinical decision-making.

Objectives
OB2SLO4 Communicate professionally and effectively while providing care to individuals.

Objectives
OB2SLO5 Effectively collaborate with the individual/individuals and members of the interdisciplinary healthcare team to safely provide therapeutic care.

Objectives
OB2SLO6 Facilitate the acquisition of knowledge and learning to enhance self-care for each individual.

Objectives
OB2SLO7 Collaboratively manage care of individuals.

Objectives
Objective III: Upon completion of the course, the learner will be able to transfer knowledge of the concepts within the domain of the healthcare system to safely and ethically administer care to the individual

Objectives
OB3SLO1 Practice safely, legally and ethically within the healthcare system according to the nursing practice act, healthcare policy, and National Patient Safety Goals.

Objectives
OB3SLO2 Employ information technology to support clinical decision making.

Objectives
OB3SLO3 Utilize principles of evidence-based practice while safely providing therapeutic nursing care to individuals in the healthcare system.

NUR112 - Health-Illness Concepts

Overview

Course Description
This course is designed to further develop the concepts within the three domains of the individual, healthcare, and nursing. Emphasis is placed on the concepts of acid-base, metabolism, cellular regulation, oxygenation, infection, stress/coping, health-wellness-illness, communication, caring interventions, managing care, safety, quality improvement, and informatics. Upon completion, students should be able to provide safe nursing care incorporating the concepts identified in this course.

Learning Objectives

Objectives
Objective I: Upon completion of the course, the learner will further develop knowledge of concepts within the domain of the individual.

Objectives
OB1SLO1 Examine the pathophysiology, prevalence and clinical course of individuals with specific alterations in health.

Objectives
OB1SLO2 Differentiate between the healthy individual and those individuals experiencing alterations in health.

Objectives
OB1SLO3 Detect changes within the internal and external environment of the individual with these alterations.

Objectives
OB1SLO4 Correlate diagnostic tests and procedures with the identified alterations.

Objectives
Objective II: Upon completion of the course, the learner will be able to provide safe, culturally competent, therapeutic nursing care to individuals.

Objectives
OB2SLO1 Respond to situations with an awareness of the values, attitudes, behaviors, and beliefs important to professional nursing.

Objectives
OB2SLO2 Incorporate all concepts within the domain of nursing to safely provide therapeutic care to individuals with alterations in health.

Objectives
OB2SLO3 Communicate professionally and effectively while safely providing therapeutic care to individuals with alterations.

Objectives
OB2SLO4 Effectively collaborate with the individual/individuals and members of the interdisciplinary healthcare team to provide therapeutic care.

Objectives
OB2SLO5 Develop a teaching plan for individuals incorporating teaching and learning principles.

Objectives
OB2SLO6 Collaboratively manage care of the individual with alterations in health.

Objectives
Objective III: Upon completion of the course, the learner will be able to safely and ethically execute the management of therapeutic nursing care within the healthcare system for individuals.

Objectives
OB3SLO1 Practice safely, legally and ethically within the healthcare system according to the nursing practice act, healthcare policy, and National Patient Safety Goals.

Objectives
OB3SLO2 Employ information technology to support clinical decision-making.

Objectives
OB3SLO3 Utilize principles of evidence-based practice while safely providing therapeutic nursing care to individuals in the healthcare system experiencing alterations in health.

Objectives
OB3SLO4 Advocate, protect, and support the individual's rights and interests.

Objectives
OB3SLO5 Accept accountability for behavior, actions and judgments.

NUR212 - Health System Concepts

Overview

Course Description
This course is designed to further develop the concepts within the three domains of the individual, healthcare, and nursing. Emphasis is placed on the concepts of grief/loss, violence, health-wellness-illness, collaboration, managing care, safety, advocacy, legal issues, policy, healthcare systems, ethics, accountability, and evidence-based practice. Upon completion, students should be able to provide safe nursing care incorporating the concepts identified in this course

NUR213 - Complex Health Concepts

Overview

Course Description

This course is designed to assimilate the concepts within the three domains of the individual, healthcare, and nursing. Emphasis is placed on the concepts of fluid/electrolytes, metabolism, perfusion, mobility, stress/coping, violence, health-wellness-illness, professional behaviors, caring interventions, managing care, healthcare systems, and quality improvement. Upon completion, students should be able to demonstrate the knowledge, skills, and attitudes necessary to provide quality, individualized, entry level nursing care.

Learning Objectives

Objectives
Objective I: Upon completion of the course, the learner will be able to assimilate all concepts within the domain of the individual related to complex alterations in health.

Objectives
Correlate the inter-relationships of complex pathophysiology and the clinical course of individuals.

Objectives
Incorporate knowledge of the concepts of the holistic individual and the inter-play of these concepts in the promotion of health, wellness and illness.

Objectives
Distinguish between internal and external environmental factors that impact the health and well-being of individuals.

Objectives
Objective II: Upon completion of this course, the learner will be able to provide safe, culturally competent, therapeutic nursing care to individuals with complex alterations in health.

Objectives
Practice professional nursing behaviors incorporating personal responsibility and accountability for continued competence.

Objectives
Assimilate all concepts within the domain of nursing to provide safe, therapeutic nursing care to individuals.

Objectives
Manage healthcare for individuals using cost effective nursing strategies, quality improvement processes, and current technologies.

Objectives
Communicate professionally and effectively with the interdisciplinary healthcare team while advocating for the therapeutic care of all individuals.

Objectives
Develop a teaching plan for individuals, and /or the nursing team, incorporating teaching and learning principles.

Objectives
Objective III: Upon completion of the course, the learner will be able to safely and ethically execute the management of therapeutic nursing care within the healthcare system for individuals with complex alterations in health.

Objectives
Practice safely and ethically within the healthcare system according to the nursing practice act, healthcare policy, and National Patient Safety Goals.

Objectives
Apply principles of emergency preparedness to safely navigate the care of individuals in the healthcare system.

Objectives
Incorporate informatics to formulate evidence-based clinical judgments and management decisions.

NUR214 - Nursing Transition Concepts

Overview

Course Description
This course is designed to introduce concepts within the three domains of the individual, healthcare, and nursing as the LPN transitions to the ADN role. Emphasis is placed on the concepts within each domain including evidenced-based practice, quality improvement, communication, safety, interdisciplinary team, clinical decision-making, informatics, assessment, caring, and health-wellness-illness. Upon completion, students should be able to provide safe nursing care incorporating the concepts identified in this course.

Credit Hours
4

NUT110 - Nutrition

Overview

Course Description
This course covers basic principles of nutrition and their relationship to human health. Topics include meeting nutritional needs of healthy people, menu modification based on special dietary needs, food habits, and contemporary problems associated with nutrition. Upon completion, students should be able to apply basic nutritional concepts as they relate to health and well being.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Explain the basic components of whole foods nutrition and a holistic lifestyle model

Objectives
Define key words/theories such as: holism/ holistic, balance, therapeutic cooking, diet vs. dietary approach, quality ingredients, food politics

Objectives
Assess, implement and individualize a whole foods diet program

Objectives
Create menus, especially for special diets and/or health conditions·

Objectives
Increased knowledge of cooking techniques and methods related to health based cuisine

Objectives
Keep track of personal food and lifestyle related goals

Objectives
Learn about key issues surrounding our food sources

Objectives
Apply basic nutritional concepts as they relate to health and well-being; foundations of healthy cooking

OST136 - Word Processing

Overview

Course Description
This course is designed to introduce word processing concepts and applications. Topics include preparation of a variety of documents and mastery of specialized software functions. Upon completion, students should be prepared to take a nationally accredited certification exam.

Credit Hours
3

OST137 - Office Applications I

Overview

Course Description
This course introduces the concepts and functions of software that meets the changing needs of the office environment through a hands-on approach. Emphasis will be placed on creating professional documents to enhance employability in various offices. Upon completion, students should be prepared to take a nationally accredited certification exam.

Credit Hours
3

OST141 - Medical Office Terms I

Overview

Course Description
This course uses a language-structure approach to present the terminology and vocabulary that will be encountered in medical office settings. Topics include word parts that relate to systemic components, conditions, pathology, and disorder remediation in approximately one-half of the systems of the human body. Upon completion, students should be able to relate words to systems, pluralize, define, pronounce, and construct sentences with the included terms.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Describe the fundamental elements that are used to build medical words; including prefixes, root words, and suffixes.

Objectives
Define both medical terms and abbreviations related to all body systems

Objectives
Identify common diseases and disorders of all body systems

Objectives
Construct, spell, and pronounce medical words associated with all body systems

Objectives
Relate medical terms to the anatomy and physiology of all body systems

OST142 - Medical Office Terms II

Overview

Course Description
This course is a continuation of OST 141 and continues the study, using a language-structure approach, of medical office terminology and vocabulary. Topics include word parts that relate to systemic components, conditions, pathology, and disorder remediation in the remaining systems of the human body. Upon completion, students should be able to relate words to systems, pluralize, define, pronounce, and construct sentences with the included terms.

Course Typically Offered
Fall, Spring

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take One: MED-121 or OST-141

Take MED-121 or OST-141(S24691);

Objectives
Define both medical terms and abbreviations related to all body systems

Objectives
Identify common diseases and disorders of all body systems

Objectives
Construct, spell, and pronounce medical words associated with all body systems

Objectives
Relate medical terms to the anatomy and physiology of all body systems

OST148 - Medical Insurance and Billing

Overview

Course Description
This course introduces fundamentals of medical insurance and billing. Emphasis is placed on the medical billing cycle to include third party payers, coding concepts, and form preparation. Upon completion, students should be able to explain the life cycle of and accurately complete a medical insurance claim.

Course Typically Offered
Fall, Summer

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Construct, spell, and pronounce medical words associated with all body systems

Objectives
Relate medical terms to the anatomy and physiology of all body systems

Objectives
Process third-party claims forms

Objectives
Calculate basic healthcare charges and balances

OST149 - Medical Legal Issues

Overview

Course Description
This course introduces the complex legal, moral, and ethical issues involved in providing health-care services. Emphasis is placed on the legal requirements of medical practices; the relationship of physician, patient, and office personnel; professional liabilities; and medical practice liability. Upon completion, students should be able to demonstrate a working knowledge of current medical law and accepted ethical behavior.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Distinguish between law, morals, ethics, and etiquette

Objectives
Relate principles of the legal relationship of the physician and medical assistant to the patient.

Objectives
Apply the laws applicable to the medical office in areas of contractual agreements, professional liability, malpractice, medical practice acts, informed consent, confidentiality, etc.

Objectives
Use the ethical decision-making process in common bioethical issues of today's health care arena.

Objectives
Weigh the impact of economics in the making of ethical and legal decisions as they apply to the medical office environment.

Objectives
Recognize legal, ethical, and moral obligation(s) to self, patient, physician, and state.

Objectives
Analyze conflict between personal and professional ethics and morals.

Objectives
Demonstrate a professional attitude necessary to provide nonbiased and competent care within the legal scope of practice of the health provider.

Objectives
Meet the legal and ethical responsibilities of a multi-skilled health professional.

OST164 - Office Editing

Overview

Course Description
This course provides an in-depth exploration of editing skills essential for the office. Emphasis is placed on grammar, punctuation, sentence structure, proofreading, and editing. Upon completion, students should be able to proficiently compose and edit text and documents for the workplace.

Credit Hours
3

OST184 - Office Information Management

Overview

Course Description
This course includes the creation, maintenance, protection, security, and disposition of records stored in various media. Topics include alphabetic, geographic, subject, and numeric filing methods, along with database management principles. Upon completion, students should be able to set up and maintain effective information management systems.

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Discuss the different records media used in the workplace.

Objectives
Master alphabetic storage systems used in business.

Objectives
Summarize the phases of the records life cycle.

Objectives
Discuss the history of records management.

Objectives
Differentiate between alphabetic, numeric, geographic, and subject storage systems.

Objectives
Identify current technology used in records management.

OST243 - Medical Office Simulation

Overview

Course Description
This course introduces medical systems used to process information in the automated office. Topics include traditional and electronic information resources, managing health information, and the billing cycle. Upon completion, students should be able to use the computer accurately to schedule, bill, update, and make corrections.

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Discuss the logistics of EHR and data entry in the medical office

Objectives
Explain the types of healthcare and their sources.

Objectives
Explain HIPAA requirements and patient expectations

Objectives
Demonstrate the use of computer-based applications for medical office

Objectives
Perform patient related activities within the Virtual Medical Office software simulation

OST247 - Procedure Coding

Overview

Course Description
This course provides in-depth coverage of procedural coding. Emphasis is placed on CPT and HCPCS coding systems. Upon completion, students should be able to properly code procedures and services performed in a medical facility.

Course Typically Offered
Spring

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take One: MED-121 or OST-141

Take MED-121 or OST-141(S24691);

Student Learning Outcomes

Learning Objectives

Objectives
Explain the organization, format and content of CPT.

Objectives
Apply symbols, punctuation, and abbreviations unique to CPT and HCPCS Level II and incorporate clinical vocabularies and documentation

Objectives
Consult medical references and official coding manuals

Objectives
Interpret health care data to code and sequence procedures using procedure statements, case studies, and patient records

Objectives
Use coding manuals to assign CPT and HCPCS Level II codes

Objectives
Select the first-listed and principal procedures for provided documentation

OST248 - Diagnostic Coding

Overview

Course Description
This course provides an in-depth study of diagnostic coding. Emphasis is placed on ICD coding system. Upon completion, students should be able to properly code diagnoses in a medical facility.

Course Typically Offered
Spring

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take One: MED-121 or OST-141

Take MED-121 or OST-141(S24691);

Student Learning Outcomes

Learning Objectives

Objectives
Explain the organization of the ICD-10-CM Tabular list of Diseases, Index to Diseases, and index to procedure and tabular list to procedures.

Objectives
Apply guidelines, symbols, punctuation, and abbreviations unique to ICD-10-CM and incorporate clinical vocabularies and documentation

Objectives
Consult medical references and official coding manuals

Objectives
Interpret health care data and apply inpatient/ outpatient coding guidelines to code and sequence diagnoses and procedures using diagnosis/procedure statements, case studies, and patient records

Objectives
Use coding manuals to assign ICD-10-CM codes.

Objectives
Describe the changing work environment.

OST289 - Office Administration Capstone

Overview

Course Description
This course is designed to be a capstone course for the office professional and provides a working knowledge of administrative office procedures. Emphasis is placed on written and oral communication skills, office software applications, office procedures, ethics, and professional development. Upon completion, students should be able to adapt in an office environment.

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take OST-164

Take OST-164(S26558);

Student Learning Outcomes

Learning Objectives

Objectives
Identify the role and responsibilities of the administrative professional.

Objectives
Determine twenty-first-century traits necessary for the administrative professional.

Objectives
Develop and use proper telephone techniques.

Objectives
Use proper email communication techniques.

Objectives
Recognize the importance of email ethics.

Objectives
Identify traits of an ethical employee.

Objectives
Define the causes of stress.

Objectives
Develop effective techniques for receiving workplace visitors.

Objectives
Make travel arrangements.

Objectives
Prepare an itinerary.

Objectives
Identify the responsibilities of the administrative professional for meetings and conferences.

PAD151 - Introduction to Public Administration

Overview

Course Description
This course includes an overview of the role of the public administrator in government and an examination of the development and implementation of public policy. Topics include public personnel administration and management, decision making, public affairs, ethics, organizational theories, budgetary functions within governmental agencies, and other governmental issues. Upon completion, students should be able to explain the functions of government in society and in the lives of people composing that society.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Identify the responsibilities of the administrative professional for meetings and conferences.

Objectives
Explain how to process both incoming and outgoing mail.

Objectives
Describe public personnel administration and management.

Objectives
Explain decision making in public administration.

PAD152 - Ethics in Government

Overview

Course Description
This course introduces the ethical issues and problems within the public administration field. Emphasis is placed on building analytical skills, stimulating moral imagination, and recognizing the discretionary power of the administrator's role. Upon completion, students should be able to understand the moral dimensions of public administrative decision making.

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Explain major ethical theories and frameworks and apply them to ethical dilemmas in government and public safety organizations.

Objectives
Analyze ethical challenges faced by public administrators and public safety professionals, including conflicts of interest, corruption, and accountability.

Objectives
Evaluate the role of laws, policies, and professional codes of ethics in guiding ethical decision-making within government agencies.

Objectives
Apply ethical decision-making models to real-world public administration and public safety scenarios.

Objectives
Assess the impact of ethical leadership on organizational culture, public trust, and effective governance.

Objectives
Demonstrate ethical reasoning and professional responsibility through written analyses, case studies, and discussions.

PAD251 - Public Finance & Budgeting

Overview

Course Description
This course provides an overview of the public finance and budgeting processes used in the allocation of public resources to meet differing public interests. Topics include the political environment, government expenditures, revenues, taxation, budgetary process theories and techniques, and the relation of government finance to the economy. Upon completion, students should be able to recognize impacts of government revenue and expenditure policies and understand the role of budgeting in executing governmental policy.

Credit Hours
3

PAD252 - Public Policy Analysis

Overview

Course Description
This course is a study of methods and techniques used to determine the effectiveness of public programs. Emphasis is placed on the concept of ecology and environmental impact, informal groups and information networks, and the relationship between public and private sectors. Upon completion, students should be able to analyze case studies with the use of political analysis techniques.

Course Typically Offered
Fall

Credit Hours
3

PAD254 - Grant Writing

Overview

Course Description
This course covers the basic techniques of successful grant writing. Topics include concept development, funding sources research, and writing skills relevant to the grants process. Upon completion, students should be able to demonstrate a basic understanding of the grants process.

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Explain the purpose and role of grant funding in public safety and public administration organizations.

Objectives
Identify appropriate grant funding sources and interpret eligibility requirements for public sector and nonprofit agencies.

Objectives
Develop clear problem statements, goals, and objectives aligned with grantor priorities.

Objectives
Prepare key components of a grant proposal, including needs assessments, program narratives, budgets, and evaluation plans.

Objectives
Apply ethical and legal considerations in grant development, budgeting, and administration.

Objectives
Demonstrate professional writing skills through the completion of a comprehensive grant proposal.

PCI170 - DAQ and Control

Overview

Course Description
This course is a survey of data acquisition and control applications in an industrial setting. Topics include remote I/O systems, PC-based data acquisition, real-time monitoring, and other related topics. Upon completion, students should be able to demonstrate an understanding of data acquisition circuits.

Course Typically Offered
Fall, Spring

Credit Hours
4

Student Learning Outcomes

Learning Objectives

Objectives
Explain the functions of government in society and in the lives of people composing that society.

Objectives
Discuss ethics in public administration.

Objectives
Identify the components of a data acquisition and control system

Objectives
Correctly choose and test analog-to-digital converters.

Objectives
Correctly choose and test digital-to-analog converters.

Objectives
Test and troubleshoot circuits using Analog Signal Conditioning

PED110 - Fit and Well for Life

Overview

Course Description
This course is designed to investigate and apply the basic concepts and principles of lifetime physical fitness and other health-related factors. Emphasis is placed on wellness through the study of nutrition, weight control, stress management, and consumer facts on exercise and fitness. Upon completion, students should be able to plan a personal, lifelong fitness program based on individual needs, abilities, and interests.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Access, analyze and use current information related to a variety of health and wellness topics to create a personal fitness program

Objectives
Plan a personal, lifelong fitness program based on individual needs, abilities, and interests.

Objectives
Demonstrate knowledge and comprehension of basic concepts, theories and research as related to the topics listed in the syllabus.

Objectives
Using various assessment procedures, identify personal health related behaviors to either change or initiate and maintain throughout the semester and beyond.

Objectives
Complete and commit to lifestyle behavior change.

PED113 - Aerobics I

Overview

Course Description
This course introduces a program of cardiovascular fitness involving continuous, rhythmic exercise. Emphasis is placed on developing cardiovascular efficiency, strength, and flexibility and on safety precautions. Upon completion, students should be able to select and implement a rhythmic aerobic exercise program.

Course Typically Offered
Spring

Credit Hours
1

Student Learning Outcomes

Learning Objectives

Objectives
Using various assessment procedures, identify personal health related behaviors to either change or initiate and maintain throughout the semester and beyond.

Objectives
Complete and commit to lifestyle behavior change.

Objectives
Develop their aerobic capacity and subsequently vastly improve their cardiovascular system

Objectives
Develop strength and flexibility to all muscle groups of the body which will enable the student to have a complete fitness conditioning and training program

Objectives
Develop agility, rhythm, coordination, good positioning, and a desire for movement expression

Objectives
Improve the fitness mind set in terms of motivation and goal setting

PED117 - Weight Training I

Overview

Course Description
This course introduces the basics of weight training. Emphasis is placed on developing muscular strength, muscular endurance, and muscle tone. Upon completion, students should be able to establish and implement a personal weight training program.

Course Typically Offered
Fall, Spring

Credit Hours
1

Student Learning Outcomes

Learning Objectives

Objectives
Establish and implement a personal weight training program.

Objectives
Demonstrate knowledge and comprehension of basic weight training concepts.

Objectives
Explain the importance of keeping an exercise journal.

Objectives
Improve muscular strength and muscular endurance.

PED118 - Weight Training II

Overview

Course Description
This course covers advanced levels of weight training. Emphasis is placed on meeting individual training goals and addressing weight training needs and interests. Upon completion, students should be able to establish and implement an individualized advanced weight training program.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
1

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take PED-117

Take PED-117;

Student Learning Outcomes

Learning Objectives

Objectives
Understand the importance of keeping an exercise journal.

Objectives
Improve muscular strength and muscular endurance.

Objectives
Establish and implement a personal circuit training

Objectives
Demonstrate knowledge and comprehension of basic weight training concepts.

PED122 - Yoga I

Overview

Course Description
This course introduces the basic discipline of yoga. Topics include proper breathing, relaxation techniques, and correct body positions. Upon completion, students should be able to demonstrate the procedures of yoga.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
1

Student Learning Outcomes

Learning Objectives

Objectives
Improve concentration through a daily meditation/ yoga practice

Objectives
Demonstrate flexibility, strength, coordination, endurance, and breath control.

Objectives
Identify the names in Sanskrit and English of yoga asanas (poses) and explain their benefits

PED128 - Golf-Beginning

Overview

Course Description
This course emphasizes the fundamentals of golf. Topics include the proper grips, stance, alignment, swings for the short and long game, putting, and the rules and etiquette of golf. Upon completion, students should be able to perform the basic golf shots and demonstrate a knowledge of the rules and etiquette of golf.

Credit Hours
1

Student Learning Outcomes

Learning Objectives

Objectives
Apply life skill techniques to recognized challenges presented.

Objectives
Critique a martial arts class and give an oral presentation on such visit.

Objectives
Increase awareness of history, terminology, and basic strategies of golf

Objectives
Learn and develop skills such as the swings for the short and long game and putting

Objectives
Understand the rules and etiquette of golf.

Objectives
Incorporate basic skills in game situations

Objectives
Demonstrate safe warm up and flexibility

Objectives
Gain knowledge of basic drills to improve one's games

PED130 - Tennis-Beginning

Overview

Course Description
This course emphasizes the fundamentals of tennis. Topics include basic strokes, rules, etiquette, and court play. Upon completion, students should be able to play recreational tennis.

Course Typically Offered
Summer

Credit Hours
1

Student Learning Outcomes

Learning Objectives

Objectives
Play nine holes of either Par 3 golf or nine holes of regulation golf

Objectives
Perform the basic golf shots and demonstrate a knowledge of the rules and etiquette of golf.

Objectives
Understand the fundamentals of tennis.

Objectives
Demonstrate basic strokes, rules, etiquette, and court play.

Objectives
Be able to play recreational tennis.

Objectives
Discuss proper selection and use of equipment

PED145 - Basketball-Beginning

Overview

Course Description
This course covers the fundamentals of basketball. Emphasis is placed on skill development, knowledge of the rules, and basic game strategy. Upon completion, students should be able to participate in recreational basketball.

Credit Hours
1

Student Learning Outcomes

Learning Objectives

Objectives
Provide each student with information about how to get involved and play in amateur tournaments.

Objectives
Develop the student's fundamental skills and knowledge of indoor volleyball.

Objectives
Discuss the basic fundamentals of basketball.

PED157 - Pickleball

Overview

Course Description
This course covers the fundamentals of pickleball. Emphasis is placed on the basics of serving, ground strokes (drives, drops, dinks, punches, and lobs), overhead strokes (smashes and slams), and the rules and strategies of singles and doubles play. Upon completion, students should be able to apply these skills in pickleball playing situations.

Course Typically Offered
Fall

Credit Hours
1

Student Learning Outcomes

Learning Objectives

Objectives
Understand the history and ethics of flag football

Objectives
To use common sense and good judgment in regards to the safety of team members, opponents and self as well as exhibit responsible personal and social behavior that respects self and others

Objectives
Competently demonstrate various pickleball skills during practice and game play

Objectives
Obtain and understand basic pickleball rules in order to play competently at the recreation level

Objectives
Achieve and maintain a health enhancing level of physical fitness

PED171 - Nature Hiking

Overview

Course Description
This course provides instruction on how to equip and care for oneself on the trail. Topics include clothing, hygiene, trail ethics, and necessary equipment. Upon completion, students should be able to successfully participate in nature trail hikes.

Course Typically Offered
Fall, Summer

Credit Hours
1

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate basic skills related to hiking preparation.

Objectives
Identify appropriate clothing choices for various environments.

Objectives
Label the proper components of personal first aid kits.

Objectives
Discuss weather considerations and their impact on physical activity.

Objectives
Describe the concept of "leave no trace" ethics.

Objectives
Define the cardiovascular health benefits of hiking.

PED172 - Outdoor Living

Overview

Course Description
This course is designed to acquaint the beginning camper with outdoor skills. Topics include camping techniques such as cooking and preserving food, safety, and setting up camp. Upon completion, students should be able to set up camp sites in field experiences using proper procedures.

Course Typically Offered
Spring

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Have knowledge of and demonstrate knowledge of leave no trace ethics.

Objectives
Have knowledge of and demonstrate awareness of the cardiovascular health benefits of hiking.

Objectives
demonstrate basic skills related to outdoor activities

Objectives
demonstrate appropriate clothing choices for various environments

Objectives
have knowledge of personal first aid kits

Objectives
demonstrate knowledge of weather considerations and their impact on the activity

PED219 - Disc Golf

Overview

Course Description
This course introduces the fundamentals of disc golf. Emphasis is placed on basic throwing techniques, putting, distance driving, scoring, and single and doubles play. Upon completion, students should be able to perform the skills required in playing situations.

Course Typically Offered
Fall

Credit Hours
1

Student Learning Outcomes

Learning Objectives

Objectives
Identify basic anatomy and physiology principles in regards to Pilates training.

Objectives
Increase flexibility, strength, coordination, endurance, and breath control

Objectives
Apply basic rules of disc golf

Objectives
Demonstrate physical conditioning for disc golf

Objectives
Demonstrate correct throws

PED277 - Ultimate Frisbee

Overview

Course Description
This course introduces the fundamentals of ultimate frisbee. Emphasis is placed on basic throwing techniques, offense vs defense, movement of the disc, change of possession, fouls, self-refereeing, and scoring. Upon completion, students should be able to perform the skills required in playing situations.

Credit Hours
1

PHI210 - History of Philosophy

Overview

Course Description
This course introduces fundamental philosophical issues through an historical perspective. Emphasis is placed on such figures as Plato, Aristotle, Lao-Tzu, Confucius, Augustine, Aquinas, Descartes, Locke, Kant, Wollstonecraft, Nietzsche, and Sartre. Upon completion, students should be able to identify and distinguish among the key positions of the philosophers studied.

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take ENG-111

Take ENG-111(S13673);

Student Learning Outcomes

Learning Objectives

Objectives
Participate in recreational basketball.

Objectives
Create basketball plays that address a motion offense, zone offense, press, press breaking, out of bounds underneath the basketball and sideline out of bounds scenarios

Objectives
Identify the major philosophers of different historical periods.

Objectives
Compare the positions of major philosophers and discuss how they influence thinking today.

Objectives
Draw analogies between the philosophical positions of the past and the 21st century.

Objectives
Differentiate between major schools of philosophy within and across historical periods.

PHI215 - Philosophical Issues

Overview

Course Description
This course introduces fundamental issues in philosophy considering the views of classical and contemporary philosophers. Emphasis is placed on knowledge and belief, appearance and reality, determinism and free will, faith and reason, and justice and inequality. Upon completion, students should be able to identify, analyze, and critically evaluate the philosophical components of an issue.

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take ENG-111

Take ENG-111(S25433);

PHI230 - Introduction to Logic

Overview

Course Description
This course introduces basic concepts and techniques for distinguishing between good and bad reasoning. Emphasis is placed on deduction, induction, validity, soundness, syllogisms, truth functions, predicate logic, analogical inference, common fallacies, and scientific methods. Upon completion, students should be able to analyze arguments, distinguish between deductive and inductive arguments, test validity, and appraise inductive reasoning.

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take ENG-111

Take ENG-111(S13673);

PHI240 - Introduction to Ethics

Overview

Course Description
This course introduces theories about the nature and foundations of moral judgments and applications to contemporary moral issues. Emphasis is placed on moral theories such as consequentialism, deontology, and virtue ethics. Upon completion, students should be able to apply various ethical theories to moral issues such as abortion, capital punishment, poverty, war, terrorism, the treatment of animals, and issues arising from new technologies.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take ENG-111

Take ENG-111(S25433);

Student Learning Outcomes

Learning Objectives

Objectives
Discuss, orally and in writing, philosophical issues.

Objectives
Defend a philosophical position as it relates to the contemporary world.

Objectives
Engage in critical thinking about moral issues.

Objectives
Identify, reconstruct and evaluate ethical arguments.

Objectives
Analyze key ethical concepts.

Objectives
Demonstrate understanding of major views in moral philosophy and how they relate to contemporary ethical and social issues.

Objectives
Identify methods used to test and evaluate possible ethical situations.

Objectives
Identify ethical theories in ancient and modern philosophy.

Objectives
Draw conclusions on such ethical situations as retributive justice, accountability, loyalty, confidentiality, and business.

Objectives
Differentiate between opinions on similar subjects held by people in responsible positions.

PHY110 - Conceptual Physics

Overview

Course Description
This course provides a conceptually-based exposure to the fundamental principles and processes of the physical world. Topics include basic concepts of motion, forces, energy, heat, electricity, magnetism, and the structure of matter and the universe. Upon completion, students should be able to describe examples and applications of the principles studied.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
3

Requisites

Simple Requisites

Required concurrent or previous courses

Type
Corequisite

Take PHY-110A

Take PHY-110A;

Student Learning Outcomes

Learning Objectives

Objectives
Resolve misconceptions about physical concepts and laws incuding scientific theory, motion, Newton's Laws, Momentum, Energy, Thermal Energy, Fluids, Electricity, Magnetism, Sound and Light.

Objectives
Describe and apply core physical principles—including motion, forces, energy, heat, electricity, magnetism, and wave phenomena—to real-world situations using conceptually grounded reasoning and qualitative analysis.

Objectives
Explain the structure and behavior of matter and the universe through the lens of key scientific models, including atomic theory, thermodynamics, electromagnetism, and cosmology, using appropriate vocabulary and analogies for conceptual understanding.

Objectives
Use vector and graphical analysis to interpret physical quantities such as velocity, acceleration, force, and energy, and relate these to observable phenomena such as collisions, falling objects, circuits, and wave behavior.

PHY110A - Conceptual Physics Lab

Overview

Course Description
This course is a laboratory for PHY 110. Emphasis is placed on laboratory experiences that enhance materials presented in PHY 110. Upon completion, students should be able to apply the laboratory experiences to the concepts presented in PHY 110.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
1

Requisites

Simple Requisites

State concurrent or previous courses

Type
Corequisite

Take PHY-110

Take PHY-110;

Student Learning Outcomes

Learning Objectives

Objectives
Experimentally verify core physical principles—including motion, forces, energy, heat, electricity, magnetism, and wave phenomena—to real-world situations using conceptually grounded reasoning and qualitative analysis.

Objectives
Demonstrate understanding of the scientific method and experimental techniques by collecting, analyzing, and interpreting basic physical data to support or refute physical hypotheses, using clearly documented measurement methods and units.

Objectives
Resolve misconceptions about physical concepts and laws incuding scientific theory, motion, Newton's Laws, Momentum, Energy, Thermal Energy, Fluids, Electricity, Magnetism, Sound and Light.

PHY121 - Applied Physics I

Overview

Course Description
This algebra-based course introduces fundamental physical concepts as applied to industrial and service technology fields. Topics include systems of units, problem-solving methods, graphical analyses, vectors, motion, forces, Newton's laws of motion, work, energy, power, momentum, and properties of matter. Upon completion, students should be able to demonstrate an understanding of the principles studied as applied in industrial and service fields.

Course Typically Offered
Spring

Credit Hours
4

Student Learning Outcomes

Learning Objectives

Objectives
Identify and describe the physical principles related to units and measurement, vectors, linear kinematics and dynamics, energy, power, momentum, fluid mechanics, and heat.

Objectives
Transfer and relate knowledge of the physical principles covered in this course (units and measurement, vectors, linear kinematics and dynamics, energy, power, momentum, fluid mechanics, and heat) to applications in industry.

Objectives
Analyze data collected during laboratory investigations

Objectives
Relate real world data collection and analyze the physical principles covered in this course (units and measurement, vectors, linear kinematics and dynamics, energy, power, momentum, fluid mechanics, and heat).

Objectives
Explain knowledge gained with previously-held misconceptions about the above concepts.

PHY131 - Physics-Mechanics

Overview

Course Description
This algebra/trigonometry-based course introduces fundamental physical concepts as applied to engineering technology fields. Topics include systems of units, problem-solving methods, graphical analysis, vectors, motion, forces, Newton's laws of motion, work, energy, power, momentum, and properties of matter. Upon completion, students should be able to apply the principles studied to applications in engineering technology fields.

Course Typically Offered
Summer

Credit Hours
4

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take One: MAT-121 or MAT-171

Take MAT-121(S23927) or MAT-171(S23934);

Student Learning Outcomes

Learning Objectives

Objectives
Relate real world data collection and analyze the physical principles covered in this course (units and measurement, vectors, linear kinematics and dynamics, energy, power, momentum, fluid mechanics, and heat).

Objectives
Explain knowledge gained with previously-held misconceptions about the above concepts.

Objectives
Define and identify examples of the concepts underlying systems of units, problem-solving methods, graphical analysis, vectors, motion, forces, Newton's laws of motion, work, energy, power, momentum, and simple machines through the use of experimental techniques and data analysis.

Objectives
Develop mathematical models of physical phenomena related to motion, Newton’s Laws of Motion, Conservation of Energy, and Conservation of Momentum.

Objectives
Apply quantitative problem solving skills to solve problems related to systems of units, problem-solving methods, graphical analysis, vectors, motion, forces, Newton's laws of motion, work, energy, power, momentum, and simple machines.

PHY133 - Physics-Sound & Light

Overview

Course Description
This algebra/trigonometry-based course is a study of fundamental physical concepts as applied to engineering technology fields. Topics include systems of units, problem-solving methods, graphical analysis, wave motion, sound, light, and modern physics. Upon completion, students should be able to apply the principles studied to applications in engineering technology fields.

Course Typically Offered
Summer

Credit Hours
4

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take PHY-131

Take PHY-131(S13319);

Student Learning Outcomes

Learning Objectives

Objectives
Draw free body diagrams illustrating forces acting on an object and utilize the diagram to correctly solve physics problems related to motion, forces and Newton's Laws of Motion.

Objectives
Relate the concepts underlying systems of units, problem-solving methods, graphical analysis, vectors, motion, forces, Newton's laws of motion, work, energy, power, momentum, and simple machines to everyday experiences.

Objectives
Define and explain concepts and vocabulary related to simple harmonic motion, waves, sound electrostatic forces, electric fields, electric potentials, magnetostatic forces, magnetic fields, electromagnetic induction, and light.

Objectives
Apply problem-solving strategies to solve problems related to simple harmonic motion, waves, sound electrostatic forces, electric fields, electric potentials, magnetostatic forces, magnetic fields, electromagnetic induction, and light.

PHY151 - College Physics I

Overview

Course Description
This course uses algebra- and trigonometry-based mathematical models to introduce the fundamental concepts that describe the physical world. Topics include units and measurement, vectors, linear kinematics and dynamics, energy, power, momentum, fluid mechanics, and heat. Upon completion, students should be able to demonstrate an understanding of the principles involved and display analytical problem-solving ability for the topics covered.

Course Typically Offered
Fall, Spring

Credit Hours
4

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take One: MAT-171 or MAT-271

Take MAT-171(S25432) or MAT-271(S23939);

Student Learning Outcomes

Learning Objectives

Objectives
Define and calculate quantities related to measurement, kinematics, vectors and the Laws of Motion.

Objectives
Relate the concepts underlying measurement and physics, kinematics, vectors and the Laws of motion to everyday experiences.

Objectives
Draw free body diagrams and apply Newton's Second Law of Motion to solve net force problems.

Objectives
Relate the concepts of conservation of momentum and energy to everyday events and calculate quantities using the Law of Conservation of Momentum and the Law of Conservation of Energy.

Objectives
Draw free body diagrams and solveUniversal Gravitation, circular motion, rotational motion

Objectives
Collect and Analyze Data related to the concepts listed in previous student learning outcomes

PHY152 - College Physics II

Overview

Course Description
This course uses algebra- and trigonometry-based mathematical models to introduce the fundamental concepts that describe the physical world. Topics include electrostatic forces, electric fields, electric potentials, direct-current circuits, magnetostatic forces, magnetic fields, electromagnetic induction, alternating-current circuits, and light. Upon completion, students should be able to demonstrate an understanding of the principles involved and display analytical problem-solving ability for the topics covered.

Course Typically Offered
Fall, Spring

Credit Hours
4

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take PHY-151

Take PHY-151(S16517);

Learning Objectives

Objectives
Define and explain concepts and vocabulary related to electrostatic forces, electric fields, electric potentials, direct-current circuits, magnetostatic forces, magnetic fields, electromagnetic induction, alternating-current circuits, and light.

Objectives
Apply problem-solving strategies to solve problems related to electrostatic forces, electric fields, electric potentials, direct-current circuits, magnetostatic forces, magnetic fields, electromagnetic induction, alternating-current circuits, and light.

Objectives
Relate concepts learned about electrostatic forces, electric fields, electric potentials, direct-current circuits, magnetostatic forces, magnetic fields, electromagnetic induction, alternating-current circuits, and light theory to everyday examples.

Objectives
Predict, collect and analyze data through the use of basic laboratory procedures and graphical analysis techniques.

Student Learning Outcomes

PHY251 - General Physics I

Overview

Course Description
This course uses calculus-based mathematical models to introduce the fundamental concepts that describe the physical world. Topics include units and measurement, vector operations, linear kinematics and dynamics, energy, power, momentum, rotational mechanics, periodic motion, fluid mechanics, and heat. Upon completion, students should be able to demonstrate an understanding of the principles involved and display analytical problem-solving ability for the topics covered.

Credit Hours
4

Requisites

Simple Requisites

Local Corequisite

Type
Corequisite

Take MAT-272

Take MAT-272(S23940);

State prerequisite

Type
Prerequisite

Take MAT-271

Take MAT-271(S26092);

Student Learning Outcomes

Learning Objectives

Objectives
Build simplified mathematical models representing complicated physical phenomena.

Objectives
Identify and demonstrate qualitative and quantitative understanding of all the topics covered.

Objectives
Relate this understanding to everyday events, machines, and observations

Objectives
Exhibit a practical understanding of the use of laboratory equipment to design and analyze any of the concepts above.

PHY252 - General Physics II

Overview

Course Description
This course uses calculus-based mathematical models to introduce the fundamental concepts that describe the physical world. Topics include electrostatic forces, electric fields, electric potentials, direct-current circuits, magnetostatic forces, magnetic fields, electromagnetic induction, alternating-current circuits, and light. Upon completion, students should be able to demonstrate an understanding of the principles involved and display analytical problem-solving ability for the topics covered.

Course Typically Offered
Spring, Summer

Credit Hours
4

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take All: MAT-272 and PHY-251

Take MAT-272(S13612) PHY-251(S12543);

Student Learning Outcomes

Learning Objectives

Objectives
Relate this understanding to everyday events, machines, and observations

Objectives
Exhibit a practical understanding of the use of laboratory equipment to design and analyze any of the concepts above.

Objectives
Build simplified mathematical models representing complicated physical phenomena.

Objectives
Identify and demonstrate qualitative and quantitative understanding of all covered topics.

PLU111 - Introduction to Basic Plumbing

Overview

Course Description
This course introduces basic plumbing tools, materials, and fixtures. Topics include standard tools, materials, and fixtures used in basic plumbing systems and other related topics. Upon completion, students should be able to demonstrate an understanding of a basic plumbing system.

Course Typically Offered
Spring, Summer

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Recognize and properly name basic tools, fittings, and pipes used in plumbing.

Objectives
Demonstrate basic safety practices in relation to plumbing.

Objectives
Explain the process of a plumbing system.

Objectives
Describe and demonstrate porper installation procedures for installing fixtures, water supply, and drainage for new residential construction.

POL120 - American Government

Overview

Course Description
This course is a study of the origins, development, structure, and functions of American government. Topics include the constitutional framework, federalism, the three branches of government including the bureaucracy, civil rights and liberties, political participation and behavior, and policy process. Upon completion, students should be able to demonstrate an understanding of the basic concepts and participatory processes of the American political system.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate an understanding of the essential concepts and theories in the course materials.

Objectives
Illustrate an understanding of the roles, duties, and structural characteristics of the executive, legislative, and judicial branches in the US government.

Objectives
Analyze how American political institutions and individual behaviors interact to create political outcomes, with an awareness of the global context.

Objectives
Define the function of political parties, interest groups, public opinion, and the media.

Objectives
Interpret how American's political history, constitutional structure, and political culture contribute to the state of contemporary American democracy.

Objectives
Explain the origins and structure of American political institutions, as they reflect conflicting values of majoritarian rule and protection of minority rights;

Objectives
Identify the key individual and group actors in American national politics and the manner in which they attempt to influence public policy;

Objectives
Identify the basic steps in the national legislative process, as well as formal and informal strategies/ tools used by political leaders to achieve goals;

Objectives
Explain internet sources/tools for tracking naional legislation, court proceedings, and other political information.

POL130 - State & Local Government

Overview

Course Description
This course includes state and local political institutions and practices in the context of American federalism. Emphasis is placed on procedural and policy differences as well as political issues in state, regional, and local governments of North Carolina. Upon completion, students should be able to identify and discuss various problems associated with intergovernmental politics and their effect on the community and the individual.

Credit Hours
3

POL210 - Comparative Government

Overview

Course Description
This course provides a cross-national perspective on the government and politics of contemporary nations such as Great Britain, France, Germany, and Russia. Topics include each country's historical uniqueness, key institutions, attitudes and ideologies, patterns of interaction, and current political problems. Upon completion, students should be able to identify and compare various nations' governmental structures, processes, ideologies, and capacity to resolve major problems.

Credit Hours
3

POL220 - International Relations

Overview

Course Description
This course provides a study of the effects of ideologies, trade, armaments, and alliances on relations among nation-states. Emphasis is placed on regional and global cooperation and conflict, economic development, trade, non-governmental organizations, and international institutions such as the World Court and UN. Upon completion, students should be able to identify and discuss major international relationships, institutions, and problems.

Credit Hours
3

PPA3120 - Automation Fundamentals

Overview

Course Description
This course is designed for technical professionals seeking to learn the fundamental operations of company-specific Automation monitoring devices and equipment.

Through structured training and learning rotations, students will engage in hands-on sessions and in-depth tutorials to become proficient in the configuration, deployment, and optimization of HMI operator stations and telecontrol interfaces using protection schemes, numerical relays, and substation automation systems. Students will also learn the federal regulations to apply and test communication with IEC 61850 relays.

Upon completion, students will have a knowledge base of programming to select, install and monitor automation systems to ensure the safety and reliability of power distribution systems.

Credit Hours
0

PSY110 - Life Span Development

Overview

Course Description
This course provides an introduction to the study of human growth and development. Emphasis is placed on the physical, cognitive, and psychosocial aspects of development from conception to death. Upon completion, students should be able to demonstrate knowledge of development across the life span and apply this knowledge to their specific field of study.

Credit Hours
3

PSY115 - Stress Management

Overview

Course Description
This course covers stressors and techniques for stress management. Topics include anger, assertiveness, adaptation to change, conflict, coping skills, identification of stressors, time management, and the physiology of stress and burnout. Upon completion, students should be able to demonstrate an understanding of the effective management of stress.

Credit Hours
2

PSY118 - Interpersonal Psychology

Overview

Course Description
This course introduces the basic principles of psychology as they relate to personal and professional development. Emphasis is placed on personality traits, communication/leadership styles, effective problem solving, and cultural diversity as they apply to personal and work environments. Upon completion, students should be able to demonstrate an understanding of these principles of psychology as they apply to personal and professional development.

Credit Hours
3

PSY150 - General Psychology

Overview

Course Description
This course provides an overview of the scientific study of human behavior. Topics include history, methodology, biopsychology, sensation, perception, learning, motivation, cognition, abnormal behavior, personality theory, social psychology, and other relevant topics. Upon completion, students should be able to demonstrate a basic knowledge of the science of psychology.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate a basic knowledge of the science of psychology.

Objectives
Explain the steps of the scientific method and identify the major types of research methods used in psychology.

Objectives
Describe the relationship between brain biology and behavior and, the general workings of the nervous system and regions of the brain.

Objectives
Summarize the main concepts of sensation and perception.

Objectives
Apply learning principles using the concepts of social learning theory, classical conditioning and operant conditioning.

Objectives
Analyze the developmental phases of the lifespan and the major theoretical perspectives associated with each.

Objectives
Evaluate the major personality theorists and describe the details of each theory.

Objectives
Describe what a psychological disorder is; recognize the DSM-5 as a diagnostic tool and describe popular assessment instruments used in the psychological evaluation and treatment process.

PSY234 - Organizational Psychology

Overview

Course Description
This course introduces the field of industrial and organizational psychology. Topics include employee motivation, organizational structure, leadership, selection and training, conflict resolution, communication, job satisfaction, and other related influences on performance. Upon completion, students should be able to demonstrate a basic understanding of organizational dynamics and behaviors in the work place.

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take PSY-150

Take PSY-150;

PSY237 - Social Psychology

Overview

Course Description
This course introduces the study of individual behavior within social contexts. Topics include affiliation, attitude formation and change, conformity, altruism, aggression, attribution, interpersonal attraction, and group behavior. Upon completion, students should be able to demonstrate an understanding of the basic principles of social influences on behavior.

Course Typically Offered
Fall

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take One: PSY-150 or SOC-210

Take PSY-150 or SOC-210;

Student Learning Outcomes

Learning Objectives

Objectives
Evaluate the major personality theorists and describe the details of each theory.

Objectives
Describe what a psychological disorder is; recognize the DSM-5 as a diagnostic tool and describe popular assessment instruments used in the psychological evaluation and treatment process.

Objectives
Define social psychology and related terms for introductory topics.

Objectives
Review the history of social psychology as a scientific inquiry.

Objectives
Discuss why individuals alter their behavior in social situations according to the influence of the group.

Objectives
Design a social psychology study that relates to real world problems, analyze the results and discuss solutions for the problem.

Objectives
Identify past and present social problems and discuss solutions for prejudice and discrimination, bystander effect, conformity, and obedience.

PSY241 - Developmental Psychology

Overview

Course Description
This course is a study of human growth and development. Emphasis is placed on major theories and perspectives as they relate to the physical, cognitive, and psychosocial aspects of development from conception to death. Upon completion, students should be able to demonstrate knowledge of development across the life span.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take PSY-150

Take PSY-150;

Student Learning Outcomes

Learning Objectives

Objectives
Define developmental theories.

Objectives
Identify developmental stages and milestones within each developmental category.

Objectives
Compare and contrast nature-based and nurture-based development.

Objectives
Cite different parenting styles and parenting skills

Objectives
Write a paper applying current developmental concepts to theoretical concepts.

PSY246 - Adolescent Psychology

Overview

Course Description
This course provides an overview of the behavior patterns, life changes, and social issues that accompany the developmental stage of adolescence. Topics include developmental theories; physical, cognitive and psychosocial growth; transitions to young adulthood; and sociocultural factors that influence adolescent roles in home, school and community. Upon completion, students should be able to identify typical and atypical adolescent behavior patterns as well as appropriate strategies for interacting with adolescents.

Course Typically Offered
Fall

Credit Hours
3

Requisites

Prerequisite

Take PSY-150

Take PSY-150;

Student Learning Outcomes

Learning Objectives

Objectives
Cite different parenting styles and parenting skills

Objectives
Write a paper applying current developmental concepts to theoretical concepts.

Objectives
Demonstrate course navigation and tool usage skills essential to course material mastery

Objectives
Articulate the necessity of APA format in psychological research and demonstrate mastery of the use of this format.

Objectives
Define plagiarism and cite the problems associated with plagiarism.

Objectives
Identify the boundaries that define the period of adolescence.

Objectives
Define the fundamental biological, social and cognitive transitions that the adolescent encounters.

Objectives
Outline the major theories specific to identity formation in adolescence.

Objectives
Summarize the adolescent's role within the family system.

Objectives
Draw comparisons and specify differences about adolescent development across different cultural settings.

Objectives
Detect behaviors that suggest psychological difficulties in adolescence.

PSY281 - Abnormal Psychology

Overview

Course Description
This course provides an examination of the various psychological disorders, as well as theoretical, clinical, and experimental perspectives of the study of psychopathology. Emphasis is placed on terminology, classification, etiology, assessment, and treatment of the major disorders. Upon completion, students should be able to distinguish between normal and abnormal behavior patterns as well as demonstrate knowledge of etiology, symptoms, and therapeutic techniques.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take PSY-150

Take PSY-150;

Student Learning Outcomes

Learning Objectives

Objectives
Define Abnormal Psychology

Objectives
Discuss the history of Abnormal Psychology

Objectives
Apply the major psychological theories to understanding human behavior

Objectives
List and explain the primary research methods

Objectives
Summarize the various mental disorders, and have an understanding of the basic symptoms, causes, and treatments of the disorders covered

Objectives
Describe Learning theories

Objectives
Describe the basis of human consciousness.

Objectives
Identify major theories of personality development

Objectives
Compare and contrast the major categories of abnormal behavior

PTA110 - Introduction to Physical Therapy

Overview

Course Description
This course introduces the field of physical therapy including the history and standards of practice for the physical therapist assistant and basic treatment techniques. Emphasis is placed on ethical and legal considerations, universal precautions, vital signs, documentation, basic patient preparation and treatment skills, and architectural barrier screening. Upon completion, students should be able to explain the role of the physical therapist assistant and demonstrate competence in basic techniques of patient care.

Course Typically Offered
Fall

Credit Hours
3

PTA120 - Functional Anatomy

Overview

Course Description
This course provides an organized study of anatomy and kinesiology. Emphasis is placed on the integration of structure and function of the skeletal, articular, muscular, nervous, and circulatory systems to include gait analysis. Upon completion, students should be able to describe the components and demonstrate function of these systems as applied to physical therapy.

Course Typically Offered
Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives

Analyze the integration of structure and function of the skeletal, articular, muscular, nervous, and circulatory systems to include gait analysis as it relates to the physical therapy profession on written exams.

Instructional Objectives:

1. Define commonly used anatomic and kinesiology terminology.
2. Identify the structures and functions of the skeletal, articular, muscular, nervous, and circulatory systems.
3. Analyze the planes of motion and axes of rotation for common motions.
4. Compare how force, torque, and levers affect biomechanical movement.
5. Identify common clinically-relevant periarticular soft tissues.
6. Distinguish between concentric, eccentric, and isometric activation of muscles and strengthening.
7. Recognize normal ranges of motion for the major joints of the axial and appendicular skeleton.
8. Distinguish between normal and abnormal ranges of motion for the major joints of the axial and appendicular skeleton.
9. Identify the effects of mobilization and immobilization on the connective tissues of a joint.
10. Cite the normal ranges of motion for each system joints.
11. Recognize the biomechanical components of respiration and chest wall movement.
12. Identify the phases of ventilation.
13. Recognize common misalignments of the joints and body regions.
14. Identify the components of the normal gait cycle, including spatial and temporal characteristics.
15. Outline the commonly encountered gait deviations and their causes.
16. Recognize common treatment interventions utilized for postural faults.
17. Recognize common postural faults in mock

Objectives

Perform skills and competence as it relates to functional anatomy components through demonstration of the skeletal, articular, muscular, nervous, and circulatory systems functions as applied to physical therapies on lab exams.

Instructional Objectives:

1. Demonstrate the ability to accurately palpate bony landmarks and muscles of the axial and appendicular skeleton.
2. Demonstrate the ability to competently assess posture in standing and sitting and the causes for abnormalities.
3. Demonstrate the ability to accurately locate, palpate, and label all functional anatomy components within this course.
4. Demonstrate the ability to accurately perform functional movements within each structure identified in this course.
5. Demonstrate and describe the common movements of the body and normal range of motion.

Objectives

Demonstrate professional skills for all aspects of the course.

Instructional Objectives:

1. Demonstrate appropriate professional behaviors and skills in all interactions with all stakeholders as noted through a passing course Professionalism grade.
2. Articulate the relevance of readings from professional journals to the practice of physical therapy.

PTA130 - Physical Therapy Procedures I

Overview

Course Description
This course includes concepts of injury and repair and documentation methods. Emphasis is placed on physiological effects, indications, contraindications, and skilled applications of selected therapeutic modalities. Upon completion, students should be able to safely, correctly, and effectively apply the emphasized techniques and procedures with understanding of correct documentation.

Course Typically Offered
Fall

Credit Hours
3

Take PTA-120;

Student Learning Outcomes

Learning Objectives

Objectives

Analyze the role of the physical therapist assistant in non-neurological conditions on written exams.

Instructional Objectives:
1. Identify the role of non-neurologic medicine in the US healthcare system.
2. Recognize the roles of different team members (patient/client, third-party payer, case manager, physical therapist, physical therapist assistant, physical therapy aide/rehabilitation technician, occupational therapist, athletic trainer) in the team approach to health care.
3. Recognize the key concepts pertaining to the role of the physical therapist/physical therapist assistant team.
4. Identify the key concept of client/patient education.

Objectives

Analyze the general concepts of therapeutic exercise through orthopedic management of foundational concepts, prevention, health, and wellness on written exams.

Instructional Objectives:

1. Define key terms of therapeutic exercise and components of physical function related to movement.
2. Recall the classification of health status, functioning, and disability with the evolution of models and related terminology in therapeutic exercise.
3. Outline the principles of comprehensive patient management.
4. Distinguish strategies for effective exercise and task-specific instruction.
5. Define key terms and concepts related to chronic disease, prevention, and health care.
6. Identify the role of physical therapy in health promotion and wellness through therapeutic exercise.
7. Outline the implications, considerations, and physical activity guidelines for developing prevention, health, and wellness programs.
8. Define common terminology associated with kinesiology and biomechanics.
9. Recognize terminology related to injuries within the musculoskeletal system.
10. Identify the planes and axes of motion, as well as the joint motions, which take place within each.
11. Identify the physical laws and principles related to movement and stability.
12. Recognize the concepts and components related to anatomical lever and torque production.

Objectives

Analyze the responses of tissues of the body to injury, repair, and aging on written exams.

Instructional Objectives:

1. Recall and outline the components of the four types of body tissues.
2. Identify the major properties of contractile and noncontractile tissue.
3. Define and recognize the inflammatory response to injury.
4. Apply the stress-strain curve to body tissues.
5. Identify the process and stages of tissue repair.
6. Recall the effects of prolonged immobilization on musculoskeletal tissue.
7. Categorize the severity of tissue injury.
8. Recall the healing responses of selected body tissues.
9. Summarize the effects of aging on selected body tissues.
10. Identify the benefits of exercise on aging tissues.
11. Identify the neurovascular healing and thromboembolic disease of tissue healing.

Objectives

Analyze the major principles of range of motion exercise, flexibility exercises, strengthening exercises, aerobic exercises, balance/coordination exercises, gait, aquatic exercises, and peripheral joint mobilizations on written exams.

Instructional Objectives:

1. Distinguish the different types of range of motion exercises (PROM, AAROM, and AROM).
2. Recognize optimal techniques for performing range of motion exercises.
3. Identify the indications, precautions, contraindications, and goals for the use of stretching and resistance exercises.
4. Differentiate among the interventions to increase the mobility of soft tissues.
5. Identify the parameters of stretching exercises.
6. Recall the rationale behind neuromuscular inhibition techniques.
7. Identify guidelines for the application of stretching procedure.
8. Differentiate between muscle strength, muscle endurance, and muscle power.
9. Recall the significance of the overload principle, specificity of exercise principle, and reversibility principle.
10. Recall the significance of different energy systems in the body.
11. Identify factors that affect tension generation of skeletal muscle.
12. Recall the parameters of resistance exercise and the physiologic adaptations associated.
13. Differentiate among the types of muscle contractions and types of resistance with resistance exercise and various regimens associated.
14. Identify the physiological response of the body, adaptive physiologic changes, and parameters of aerobic exercise.
15. Recognize the deconditioning effects associated with bedrest and immobility.
16. Identify the role of exercise testing as a basis for an exercise program.

Objectives

Analyze the common pharmacology principles of non-neurological conditions on written exams.

Instructional Objectives:

1. Recall pharmacokinetic and pharmacodynamic concepts, basic principles, and safe medication use.
2. List the general principles of safe medication use and the role of the physical therapist assistant in optimizing patient safety.
3. Apply general principles of treatment and prevention of orthopedic infection.
4. Indicate the analgesics best suited for different types of pain.
5. Indicate how opioids work differently from anti-inflammatory analgesics in the treatment of pain.
6. Identify common side effects and precautions associated with opioids, acetaminophen, nonsteroidal anti-inflammatory drugs, cyclooxygenase-2 inhibitors, and corticosteroids.
7. Recall the risk of acetaminophen overdoses during pain management.
8. Examine commonly used medication in orthopedics.

Objectives

Analyze the management of patients/clients across the lifespan with pediatric, athletic, repetitive stress, rheumatic disorders, pain, pelvic floor, orthotics/prosthetics, and geriatric orthopedic conditions on written exams.

Instructional Objectives:

1. Determine safe and effective interventions for orthopedic injuries during the acute, subacute, and chronic phases of healing.
2. Determine safe and effective interventions for tissues that are chronically inflamed.
3. Determine safe and effective interventions for postoperative rehabilitation orthopedic surgeries.
4. Identify safe and effective interventions for specific pediatric, geriatric, athletic, repetitive stress, pelvic floor, and nonneurological conditions.
5. Recognize common exercises utilized for the treatment of vestibular disorders.
6. Identify common PNF patterns of the extremities and pelvis and common PNF interventions.

Objectives

Perform safe and effective range of motion exercises, flexibility exercises, strengthening exercises, aerobic exercises, and balance/ coordination exercises on skills tests.

Instructional Objectives:

1. Perform safe and effective passive range of motion, active-assistive range of motion, active range of motion, and resistive exercises across the lifespan.
2. Perform safe and effective manual stretching, assisted-stretching, self-stretching, and stretching with neuromuscular inhibition exercises.
3. Perform safe and effective static and dynamic open-chain and closed-chain resistance exercises.
4. Perform safe and effective aerobic exercise training.
5. Perform safe and effective balance exercise training.
6. Document all physical therapy sessions through the writing of SOAP notes.
7. Demonstrate the ability to competently educate a simulated patient with an orthopedic condition on a home exercise program.

Objectives

Perform safe and effective data collection and interventions on practical exams.

Instructional Objectives:

1. Assess pain.
2. Assess skin integrity.
3. Assess edema through volumetric measurements.
4. Assess active and passive range of motion.
5. Assess muscle strength.
6. Assess functional abilities.
7. Assess the effectiveness of patient education/ instruction.
8. Perform safe and effective passive range of motion, active-assistive range of motion, and active range of motion exercises.
9. Perform safe and effective manual stretching, assisted-stretching, self-stretching, and stretching with neuromuscular inhibition exercises.
10. Perform safe effective static and dynamic open-chain and closed-chain resistance exercises.
11. Perform safe and effective aerobic exercise training.
12. Perform safe and effective balance exercise training.
13. Demonstrate the ability to competently educate a simulated patient with an orthopedic condition on a home exercise program.
14. Document all physical therapy sessions through the writing of SOAP notes.

Objectives
Apply readings from professional literature to the practice of physical therapy during a student presentation.

Instructional Objectives:

1. Apply readings from peer-reviewed research journals to a clinical question.
2. Present conclusions to the class in a team presentation.

Objectives
Demonstrate professional skills for all aspects of the course.

Instructional Objectives:

1. Demonstrate appropriate professional behaviors and skills in all interactions with all stakeholders as noted through a passing course Professionalism grade.
2. Articulate the relevance of readings from professional journals to the practice of physical therapy.

PTA150 - Physical Therapy Procedures II

Overview

Course Description
This course is designed to include the theory and practice of additional therapeutic interventions. Topics include but are not limited to electrotherapy, burn and wound care, biofeedback, and selected data collection methods. Upon completion, students should be able to apply these modalities and treatment techniques effectively and safely and demonstrate knowledge of physiological principles involved.

Course Typically Offered
Spring

Credit Hours

Take PTA-130(S22179);

Student Learning Outcomes

Learning Objectives

Objectives

Student Learning Outcome #1: Differentiate between the various physical agents that utilize deep heat as their therapeutic effect on a written exam.
Instructional Objectives:
Utilize APTA and state licensure documents to discuss appropriate practice of physical therapy.
Determine the physical effects of deep heating specifically with ultrasound.
Describe the effects of diathermy.
Compare and contrast thermal and nonthermal diathermy.

Objectives

Student Learning Outcome #2: Discuss electrotherapy and the various physiological effects for each type on a written exam.
Instructional Objectives:
Define electrical current and identify the different types.
Recall the effects of electrotherapy.
Compare and contrast the different techniques for electrotherapy.
Define neuromuscular electrical stimulation. (NMES).
Identify the physical effects of NMES.
Define transcutaneous electrical nerve stimulation.
Recall the physical effects of TENS.
Identify the effects of electrical currents on soft tissue.
Describe the physiological effects of EMG biofeedback.

Objectives

Student Learning Outcome #3: Discuss light therapy and the various physiological effects for each type on a written exam.
Instructional Objectives:
Define lasers, light, and photobiomodulation.
Define Ultraviolet (UV) radiation.
Recognize the physical effects of UV therapy.

Objectives

Student Learning Outcome #4: Describe hydrotherapy, the phases of wound healing, the role physical therapy plays on a healing wound and various interventions utilized to address these impairments on a written exam.
Instructional Objectives:
Compare the three phases of wound healing.
Differentiate primary, secondary, and tertiary intention healing.
Recognize local and systemic factors involved in wound healing.
Identify complications of inappropriate wound care or wound healing.
Recognize physical therapy treatment interventions for wound care.
Identify the various types of wound dressings, including their indications and precautions.
Recognize wound and wound risk assessment tools.
Define hydrotherapy and negative pressure wound therapy.
Define hydrotherapy and negative pressure wound therapy.
Describe the effects of hydrotherapy and negative pressure wound therapy.
Compare and contrast the different techniques for hydrotherapy (including aquatic therapy) and negative pressure wound therapy.

Objectives

Student Learning Outcome #5: List indications, precautions, contraindications, and desired physiological effects of various physical agents on a written exam.
Instructional Objectives:
Identify the clinical indications, contraindications, and precautions, desired physiological effects as well as the accurate documentation parameters for the following physical agents/modalities:
Ultrasound (Direct, Immersion, Phonophoresis)
Diathermy
Electrotherapy Agents (TENS, NMES, IFC, Interferential, HiVolt, Russian, Combo, Iontophoresis, EMG)
Electromagnetic Agents (Lasers, UV Light)
Hydrotherapy (including wound management and aquatic therapy)

Objectives

Student Learning Outcome #6: Demonstrate competence and skilled application necessary for appropriately administering or verbalizing the administration of various physical agents or competency skills during a skills assessment.
Instructional Objectives:
Demonstrate the ability to accurately assess a wound, including wound size, depth, signs of infection, identification of viable and non-viable tissue, and exudate characteristics.
Demonstrate the ability to competently perform a sterile dressing change.
Demonstrate and safely perform or describe the safe application including set up and patient education of following physical agents/modalities:
Ultrasound (Direct, Immersion, Phonophoresis)
Diathermy
Electrotherapy Agents (TENS, NMES, IFC, Interferential, HiVolt, Russian, Combo, Iontophoresis, EMG)
Electromagnetic Agents (Lasers, UV Light)
Hydrotherapy (including wound management and aquatic therapy)

Objectives
Student Learning Outcome #7: Demonstrate competence, safety and critical thinking and problem solving skills during lab practicals involving PT/PTA scenarios for physical therapy interventions utilizing various physical agents.
Instructional Objectives:
Design a treatment progression within a PT POC utilizing aquatic therapy and describe the communication that is necessary to the supervising PT regarding progress toward STG and LTG and expected functional outcomes as well as to a referring provider regarding rationale for aquatic therapy.
Design a treatment progression within a PT POC utilizing an electrotherapy agent that would aid in pain control and discuss how you would educate your patient regarding the use of this agent.
Design a treatment progression within a PT POC utilizing an electrotherapy agent that would assist in soft tissue healing and discuss how you would educate your patient regarding the use of this agent.
Design a treatment progression within a PT POC utilizing a deep heating agent that would promote tissue healing and discuss how you would educate your patient regarding the use of this agent.

Objectives
Student Learning Outcome #PB: Demonstrate professional skills for all aspects of the course.
Instructional Objectives:
Demonstrate appropriate professional behaviors and skills in all interactions with all stakeholders as noted through a passing course Professionalism grade.
Articulate the relevance of readings from professional journals to the practice of physical therapy.

PTA160 - Physical Therapy Procedures III

Overview

Course Description
This course introduces treatment and measurement techniques and discusses treatment programs for selected neuromusculoskeletal dysfunction and injuries. Topics include soft tissue and joint dysfunction, selected assessment techniques, and various exercise programs. Upon completion, students should be able to demonstrate the application of selected data collection methods and functional interventions.

Course Typically Offered
Summer

Student Learning Outcomes

Learning Objectives

Objectives

Instructional Objectives

Utilize APTA and state licensure documents to discuss appropriate practice of physical therapy.

Demonstrate the capability to independently apply all PTA learned skills and knowledge by consistently and safely performing effective and competent physical therapy assessment skills and treatment interventions from the physical therapist's plan of care for routine and complex patients while under the direction and supervision of the physical therapist
Demonstrate the capability to independently provide timely and relevant documentation and communication to the physical therapist regarding all aspects of patient status, patient treatment and patient response to treatment.
Demonstrate the capability to independently provide effective education to patients, family members/caregivers, and other health care providers.
Demonstrate the capability to independently perform patient communication, in a culturally competent manner.
Demonstrate the ability to perform administrative procedures of the clinic, including billing, insurance requirements and performance improvement activities, with guidance for new or unusual situations.
Recognize administrative roles and duties through attendance at departmental meetings, committee meetings, and case conferences with other healthcare providers as appropriate.
Consistently and independently demonstrate appropriate legal and ethical behavior during skill performance and interactions with patients, family members, and other healthcare providers.
Consistently demonstrate entry level Professional Behaviors in all interactions with patients, family members/caregivers, physical therapy personnel, and other health care providers by displaying all Professional Behaviors at entry level (Student Self-Assessment) and Faculty Professional

Objectives
Student Learning Outcome #PB: Demonstrate professional skills for all aspects of the course.

Instructional Objectives:

Demonstrate appropriate professional behaviors and skills in all interactions with all stakeholders as noted through a passing course Professionalism grade.

Articulate the relevance of readings from professional journals to the practice of physical therapy.

PTA170 - Pathophysiology

Overview

Course Description
This course is a survey of basic pathology with emphasis on conditions most frequently observed and treated in physical therapy. Topics include etiology, pathology, manifestation, treatment, and prognosis. Upon completion, students should be able to explain repair processes, categorize diseases, define pathology, identify organ/body systems involved, and discuss treatment and prognosis.

Course Typically Offered
Fall

Credit Hours
3

PTA180 - PTA Clinical Ed Intro

Overview

Course Description
This course introduces the physical therapy clinic in planned learning experiences and practice under supervision. Emphasis is placed on reinforcement of learned skills in direct patient care and communication. Upon completion, students should be able to demonstrate satisfactory performance in learned patient care skills, communication activities, and professional behaviors.

Course Typically Offered
Fall

Credit Hours
3

PTA212 - Health Care/ Resources

Overview

Course Description
This course provides an overview of various aspects of health care delivery systems and the interrelationships of health care team members. Topics include health agencies and their functions, health care team member roles, management, and other health care issues. Upon completion, students should be able to discuss the functions of health organizations and team members and aspects of health care affecting physical therapy delivery.

Course Typically Offered
Summer

Credit Hours
2

Learning Objectives

Objectives
Utilize APTA and state licensure documents to discuss appropriate practice of physical therapy.
2. Define health and healthcare.
3. Compare the medical and wellness models of health.
4. Identify legal forms of business ownership.
5. Identify major components of the healthcare industry.
6. Identify key laws that influence the healthcare industry.
7. Describe how healthcare businesses can monitor and evaluate the external environment.
8. Describe the healthcare system of other countries.
9. Compare the US system of healthcare to those other countries' systems.
10. Assess health outcomes of healthcare systems in other countries using health indicators.

Student Learning Outcomes

Objectives
Student Learning Outcome #2: Discuss the third party reimbursement and the payment process on a written exam
Instructional Objectives:
1. Describe what arrangements are covered by the term health insurance.
2. Identify when a person is eligible for Medicare and Medicaid and what benefits are covered.
3. Describe how providers are reimbursed for Medicare and Medicaid services.
4. Define CHIP and identify who is eligible under this program.
5. Describe how fraud and abuse occur and what penalties are imposed.
6. Describe health insurance programs for government workers and military personnel.
7. Describe how workers' compensation is funded.

PTA222 - Professional Interactions

Overview

Course Description
This course is designed to assist in the development of effective interpersonal skills in the physical therapist assistant setting. Topics include reactions to disability, the grieving process, methods of communication, motivation, health promotion, disease prevention, and aging. Upon completion, students should be able to discuss and demonstrate methods for achieving effective interaction with patients, families, the public, and other health care providers.

Course Typically Offered
Summer

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives

Student Learning Outcome #1: Analyze the concept of self, behavior, family history influences, and understand their relationships to the choices an individual makes on written exams.
Instructional Objectives:
1. Utilize APTA and state licensure documents to discuss appropriate practice of physical therapy.
2. Define the concept of self.
3. Recall the relationship between self awareness, the quality of an individual's life and the choices they make.
4. Facilitate self-awareness through reading and journaling exercises.
5. Describe the role families play in the formation of identity and self-esteem.
6. Examine the development of mature personality as described by Erikson.
7. Understand the difference between awareness of the true self as opposed to the false self.
8. Define and examine personal and professional values.
9. Describe the importance of critical thinking and self-reflection to the formation of values.
10. Distinguish between nonmoral and moral values.
11. Describe the evidence that supports the importance of values for healthcare professionals.

Objectives

Student Learning Outcome #2: Identify and resolve moral and ethical dilemmas on written exams.
Instructional Objectives:
1. Describe professional ethics and distinguish among ethical situations, ethical problems, moral temptation, and true ethical dilemma.
2. Compare manners and etiquette with ethics and distinguish the continuum between moral obligations and nonmoral obligations as healthcare professionals.
3. Determine contemporary research that explores ethical and moral decision making in developing and licensed healthcare professionals.
4. Describe various factors to consider when making sound ethical decisions.
5. Identify the RIPS model and Applied Ethics Model for problem solving ethical decision making.

Objectives

Student Learning Outcome #3: Analyze the importance of communication, conflict resolution, self assessment, and stress management on written exams.
Instructional Objectives:
1. Define burnout and explore personal sources of stress.
2. Identify the negative effects of stress in healthcare organizations on quality of care and provider stress.
3. Identify the behaviors that interfere with effective helping.
4. Distinguish among sympathy, pity, identification, self-transposal, and empathy.
5. Describe the characteristics of helping communication.
6. Determine the importance of thoughts and feelings in communication.
7. Recall the risks and rewards of communicating clearly in the presence of intense feelings.
8. Identify the importance of using assertive communication in healing interactions.
9. Distinguish between nonassertive, assertive, and aggressive communication.
10. Describe how to defuse a hostile, angry reaction.
11. Define bullying and identify bullying behaviors in the workplace.
12. Determine the professional responsibilities of peer and self-assessment and how this impacts development toward expertise in practice.

Objectives

Student Learning Outcome #4: Identify leadership and advocacy for healthcare and physical therapy on written exams.
Instructional Objectives:
1. Recall Covey's 7 Habits of Highly Effective People.
2. Determine leadership resources within the profession of PT.

Objectives
Student Learning Outcome #5: Analyze the importance of culturally sensitive communication to establish successful relationships and communication through various difficult situations on
written exams.
Instructional Objectives:
1. Distinguish generational differences in communication styles.
2. Identify the principles of nonverbal communication with patient practitioner interactions.
3. Determine the impact of culture and population trends on the delivery of healthcare.
4. Identify the role PTA's play with regard to suspecting or patients disclosing cases of abuse.
5. Identify the National Standards for Culturally and Linguistically Appropriate Services.
6. Describe the characteristics of conducting a patient interview with a helping and non-helping attitude.
7. Recall the essential skills of the helping interview.
8. Describe the influence of language and culture on health related communications.
9. Describe the negative results of labeling people with disabilities.
10. Identify how a person with a disability experiences a problem.
11. Identify current values around death and dying.
12. Describe the developmental stages health care professionals go through as they learn to cope with the anxiety of caring for dying patients.

Objectives
Student Learning Outcome #PB: Demonstrate professional skills for all aspects of the course.
Instructional Objectives:
1. Demonstrate appropriate professional behaviors and skills in all interactions with all stakeholders as noted through a passing course Professionalism grade.
2. Articulate the relevance of readings from professional journals to the practice of physical therapy.

PTA240 - Physical Therapy Procedures IV

Overview

Course Description
This course covers normal development, adult and pediatric/CNS dysfunction, spinal cord injuries, amputee rehabilitation techniques, and cardiopulmonary rehabilitation. Topics include neurology review, selected rehabilitation techniques, ADL and functional training, prosthetic and orthotic training, and environmental access. Upon completion, students should be able to demonstrate safe and correct application of selected rehabilitation techniques for neurological dysfunction, cardiopulmonary conditions, and amputations.

Course Typically Offered
Fall

Credit Hours
5

PTA252 - Geriatrics for the PTA

Overview

Course Description
This course is designed to provide more in-depth knowledge of physical therapy care for the geriatric individual. Topics include health promotion, wellness programs, and medical problems specific to the elderly. Upon completion, students should be able to discuss and describe special problems and programs for the elderly.

Course Typically Offered
Fall

Credit Hours
2

PTA254 - Pediatrics for the PTA

Overview

Course Description
This course provides an in-depth study of pediatric dysfunction and rehabilitation techniques. Topics include severe and profound attention deficit disorder, sensory integration, and rehabilitation in the school setting. Upon completion, students should be able to discuss selected pediatric dysfunctions and demonstrate specialized rehabilitation techniques.

Course Typically Offered
Fall

Credit Hours
1

PTA260 - Adv. Pta Clinical Ed.

Overview

Course Description
This course provides full-time clinical affiliations for planned learning experiences and practice under supervision. Emphasis is placed on reinforcement of learned skills in direct patient care, communications, and professional behaviors. Upon completion, students should be able to demonstrate satisfactory performance as an entry-level physical therapist assistant and as a member of the physical therapy team.

Objectives

Differentiate between the various physical agents that utilize deep heat as their therapeutic effect on a written exam.

Instructional Objectives:

1. Utilize APTA and state licensure documents to discuss appropriate practice of physical therapy.
2. Determine the physical effects of deep heating specifically with ultrasound.
3. Describe the effects of diathermy.
4. Compare and contrast thermal and nonthermal diathermy.

Objectives

Discuss electrotherapy and the various physiological effects for each type on a written exam.

Instructional Objectives:

1. Define electrical current and identify the different types.
2. Recall the effects of electrotherapy.
3. Compare and contrast the different techniques for electrotherapy.
4. Define neuromuscular electrical stimulation. (NMES).
5. Identify the physical effects of NMES.
6. Define transcutaneous electrical nerve stimulation.
7. Recall the physical effects of TENS.
8. Identify the effects of electrical currents on soft tissue.
9. Describe the physiological effects of EMG biofeedback.

Objectives

Discuss light therapy and the various physiological effects for each type on a written exam.

Instructional Objectives:

1. Define lasers, light, and photobiomodulation.
2. Define Ultraviolet (UV) radiation.
3. Recognize the physical effects of UV therapy.

Objectives

Describe hydrotherapy, the phases of wound healing, the role physical therapy plays on a healing wound and various interventions utilized to address these impairments on a written exam.

Instructional Objectives:

1. Compare the three phases of wound healing.
2. Differentiate primary, secondary, and tertiary intention healing.
3. Recognize local and systemic factors involved in wound healing.
4. Identify complications of inappropriate wound care or wound healing.
5. Recognize physical therapy treatment interventions for wound care.
6. Identify the various types of wound dressings, including their indications and precautions.
7. Recognize wound and wound risk assessment tools.
8. Define hydrotherapy and negative pressure wound therapy.
9. Define hydrotherapy and negative pressure wound therapy.
10. Describe the effects of hydrotherapy and negative pressure wound therapy.
11. Compare and contrast the different techniques for hydrotherapy (including aquatic therapy) and negative pressure wound therapy.

Objectives

List indications, precautions, contraindications, and desired physiological effects of various physical agents on a written exam.

Instructional Objectives:

1. Identify the clinical indications, contraindications, and precautions, desired physiological effects as well as the accurate documentation parameters for the following physical agents/modalities:
-Ultrasound (Direct, Immersion, Phonophoresis)
-Diathermy
-Electrotherapy Agents (TENS, NMES, IFC, Interferential, HiVolt, Russian, Combo, Iontophoresis, EMG)
-Electromagnetic Agents (Lasers, UV Light)
-Hydrotherapy (including wound management and aquatic therapy)

Objectives

Demonstrate competence and skilled application necessary for appropriately administering or verbalizing the administration of various physical agents or competency skills during a skills assessment.

Instructional Objectives:

1. Demonstrate the ability to accurately assess a wound, including wound size, depth, signs of infection, identification of viable and non-viable tissue, and exudate characteristics.
2. Demonstrate the ability to competently perform a sterile dressing change.
3. Demonstrate and safely perform or describe the safe application including set up and patient education of following physical agents/modalities:
-Ultrasound (Direct, Immersion, Phonophoresis)
-Diathermy
-Electrotherapy Agents (TENS, NMES, IFC, Interferential, HiVolt, Russian, Combo, Iontophoresis, EMG)
-Electromagnetic Agents (Lasers, UV Light)
-Hydrotherapy (including wound management and aquatic therapy)

Objectives

Demonstrate competence, safety and critical thinking and problem solving skills during lab practicals involving PT/PTA scenarios for physical therapy interventions utilizing various physical agents.

Instructional Objectives:

1. Design a treatment progression within a PT POC utilizing aquatic therapy and describe the communication that is necessary to the supervising PT regarding progress toward STG and LTG and expected functional outcomes as well as to a referring provider regarding rationale for aquatic therapy.
2. Design a treatment progression within a PT POC utilizing an electrotherapy agent that would aid in pain control and discuss how you would educate your patient regarding the use of this agent.
3. Design a treatment progression within a PT POC utilizing an electrotherapy agent that would assist in soft tissue healing and discuss how you would educate your patient regarding the use of this agent.
4. Design a treatment progression within a PT POC utilizing a deep heating agent that would promote tissue healing and discuss how you would educate your patient regarding the use of this agent.

Objectives

Demonstrate professional skills for all aspects of the course.

Instructional Objectives:

1. Demonstrate appropriate professional behaviors and skills in all interactions with all stakeholders as noted through a passing course Professionalism grade.
2. Articulate the relevance of readings from professional journals to the practice of physical therapy.

PTA260AB - Adv. Pta Clinical Ed.

Overview

Course Description

This course provides full-time clinical affiliations for planned learning experiences and practice under supervision. Emphasis is placed on reinforcement of learned skills in direct patient care, communications, and professional behaviors. Upon completion, students should be able to demonstrate satisfactory performance as an entry-level physical therapist assistant and as a member of the physical therapy team.

Prerequisite

Take One Set: Set 1: PTA-180 Set 2: PTA-182 and PTA-210

Take 1 group; # Take PTA-180; # Take PTA-182 PTA-210;

Student Learning Outcomes

Learning Objectives

Objectives

Upon completion of the course, the student will be marked at “Entry Level Performance” on each element of the Clinical Performance Instrument (CPI) tool during this course or prior clinical education experiences.

Instructional Objectives:

1. Utilize APTA and state licensure documents to discuss appropriate practice of physical therapy.
2. Demonstrate the capability to independently apply all PTA learned skills and knowledge by consistently and safely performing effective and competent physical therapy assessment skills and treatment interventions from the physical therapist’s plan of care for routine and complex patients while under the direction and supervision of the physical therapist
3. Demonstrate the capability to independently provide timely and relevant documentation and communication to the physical therapist regarding all aspects of patient status, patient treatment and patient response to treatment.
4. Demonstrate the capability to independently provide effective education to patients, family members/caregivers, and other health care providers.
5. Demonstrate the capability to independently perform patient communication, in a culturally competent manner.
6. Demonstrate the ability to perform administrative procedures of the clinic, including billing, insurance requirements and performance improvement activities, with guidance for new or unusual situations.
7. Recognize administrative roles and duties through attendance at departmental meetings, committee meetings, and case conferences with other healthcare providers as appropriate.
8. Consistently and independently demonstrate appropriate legal and ethical behavior during skill performance and interactions with patients, family members, and other healthcare providers.
9. Consistently demonstrate entry level

Objectives

Demonstrate professional skills for all aspects of the course.

Instructional Objectives:

1. Demonstrate appropriate professional behaviors and skills in all interactions with all stakeholders as noted through a passing course Professionalism grade.
2. Articulate the relevance of readings from professional journals to the practice of physical therapy.

2. Articulate the relevance of readings from professional journals to the practice of physical therapy.

PTA270 - PTA Topics

Overview

Course Description
This course covers the physical therapist assistant profession in preparation for the state licensure exam. Topics include developing time management skills and practicing for the competence examinations. Upon completion, students should be able to identify individual academic strengths and weaknesses and utilize this information to continue self-study for the licensure exam.

Course Typically Offered
Fall

Credit Hours
1

PTC110 - Industrial Environment

Overview

Course Description
This course introduces the pharmaceutical industry, including a broad overview of work in this field. Emphasis is placed on good manufacturing practices (GMP), work conduct, company organization, job expectations, personal safety, hygiene, and company rules and regulations. Upon completion, students should be able to follow good manufacturing practice regulations and inspect a pharmaceutical manufacturing facility for compliance with GMP.

Course Typically Offered
Fall, Spring

Credit Hours
3

Requisites

Simple Requisites

Local

Type
Corequisite

BPM-110

Take BPM-110(S20448);

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate an understanding of quality systems such as International Standards Organization (ISO) and Current Good Manufacturing Practices (cGMP).

Objectives
Identify workplace safety hazards.

Objectives
Understand upstream and downstream bioprocess operations like separation methods including evaporation, distillation, precipitation, crystallization, filtration, liquid extraction and chromatography.

Objectives
Explain the key bioprocess operations conducted in downstrem biomanufacturing

Objectives
Perform separation and purification methods using filtration and chromotagraphy.

Objectives
Apply and interview with confidence for an entry-level process technician job at a North Carolina pharmaceutical or biotechnology company.

PTC228 - Pharmaceutical Issues

Overview

Course Description
This course provides a forum for discussion of current pharmaceutical topics. Emphasis is placed on events, news, regulations, and technology in pharmaceutical manufacturing. Upon completion, students should be able to demonstrate an understanding of the dynamic nature of the pharmaceutical industry.

Course Typically Offered
Fall, Spring

Credit Hours
1

Student Learning Outcomes

Learning Objectives

Objectives
Discuss current pharmaceutical topics.

Objectives
Interpret emerging events, news, regulations, and technology in pharmaceutical manufacturing.

Objectives
Explain the dynamic nature of the pharmaceutical industry.

PTE116 - Pathway to Employment - Biological and Chemical

Overview

Course Description

This course introduces fundamental employment core skillsets required to effectively enter the biological and chemical workforce and/or a registered apprenticeship and may also serve as a component of a pre-apprenticeship.

Topics include workplace safety, communication skills, industry overview, tools and equipment, computation and financial literacy, materials, employability skills, personal health, career exploration and pathways including apprenticeship, job preparation and required job skills, and site visits.

Upon completion, students should be able to explain how to locate and engage employers, present themselves in a professional manner, perform basic on-the-job skills, pursue necessary job-specific training and/or certification, and enter a biological and chemical career with the knowledge required to be successfully employed.

Credit Hours

3

Student Learning Outcomes

Learning Objectives

Objectives
Present themselves in a professional manner.

Objectives
Explain how to locate and engage employers.

Objectives
Pursue necessary job-specific training and/or certification.Identify basic on-the-job skills.

Objectives
Identify basic on-the-job skills.

REL110 - World Religions

Overview

Course Description
This course introduces the world's major religious traditions. Topics include Primal religions, Hinduism, Buddhism, Islam, Judaism, and Christianity. Upon completion, students should be able to identify the origins, history, beliefs, and practices of the religions studied.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Identify the world's major religions and describe their geography, origins, development, major tenets, and key words.

Objectives
Compare the references to the god or gods in the various religions and how they are revealed to people.

Objectives
Explain how ancient religious practices affect modern life and the social strain of the people involved.

Objectives
Trace the means by which followers of each religion attain a better life than without the religion and how these means are similar in various religions.

Objectives
Draw a comparative chart relative to the era in which each religion flourished.

Objectives
Determine the political and social role played by these religions and their relationship to the political scene today, especially in the Middle East.

REL211 - Introduction to Old Testament

Overview

Course Description
This course is a survey of the literature of the Hebrews with readings from the law, prophets, and other writings. Emphasis is placed on the use of literary, historical, archeological, and cultural analysis. Upon completion, students should be able to use the tools of critical analysis to read and understand Old Testament literature.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Distinguish Old Testament literature and the Hebraic literary style.

Objectives
Explain historical and cultural forces that help explain the Old Testament.

Objectives
Compare the social, political, and religious context of ancient Israel and today's Middle East.

Objectives
Explain customs and ways of thinking characteristic of the Ancient World.

REL212 - Introduction to New Testament

Overview

Course Description
This course is a survey of the literature of first-century Christianity with readings from the gospels, Acts, and the Pauline and pastoral letters. Topics include the literary structure, audience, and religious perspective of the writings, as well as the historical and cultural context of the early Christian community. Upon completion, students should be able to use the tools of critical analysis to read and understand New Testament literature.

Course Typically Offered
Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Discuss the historical and cultural settings relative to understanding the New Testament.

Objectives
Compare the social, political, and religious context of the ancient world and today's world.

Objectives
Describe the customs and thinking of the ancient world.

Objectives
Appraise an understanding of the relationship between the world of ancient Israel and the Middle East today.

SAB110 - Intro to Addiction & Recovery Studies

Overview

Course Description
This course provides an overview of the core concepts in addiction and recovery. Topics include the history of substance use, effects on society members, treatment of addiction, and preventive measures. Upon completion, students should be able to demonstrate knowledge of the origins of substance use, addiction, prevention, treatment, and recovery.

Course Typically Offered
Fall, Spring

Credit Hours
3

Requisites

Simple Requisites

Local Co-Requisite

Type
Corequisite

Take HSE-135

Take HSE-135;

Student Learning Outcomes

Learning Objectives

Objectives
Define Substance Use Disorders

Objectives
Examine the numbers of substance use and the clients who use.

Objectives
Define co-occurring disorders with Substance useUse and classify per the DSM-5

Objectives
Discuss treatment options, local and national.Identify the steps towards a certification and/or licensure

SAB120 - Intake and Assessment

Overview

Course Description
This course covers processes for rapport building and procedures used to identify and evaluate individuals' strengths and weaknesses. Topics include diagnostic evaluation and placement, effective interviewing and communication techniques, and use of assessment tools. Upon completion, students should be able to establish rapport with individuals, recognize disorders, and obtain information for referrals and placement.

Course Typically Offered
Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Identify the steps towards a certification and/or licensure

Objectives
Articulate important issues and trends in substance abuse.

Objectives
Discuss legal and ethical issues in substance abuse

Objectives
Understand client and counselor verbal and non-verbal communication

Objectives
Discuss crisis intervention, resistance, strengths, and weakness.

SAB135 - Addictive Process

Overview

Course Description
This course covers the physical, emotional, psychological, and cultural aspects of the addictive process. Emphasis is placed on disorders related to addictions to alcohol, drugs, food, sex, work, gambling, internet, and relationships. Upon completion, students should be able to identify the effects, prevention strategies, and treatment methods associated with addictive disorders.

Course Typically Offered
Fall

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Apply a systematic approach to care

Objectives
Define Addictive Process and its implications on substance use disorders

Objectives
Discover biological processes related to addictive process

Objectives
Discuss emotional processes related to addictive process

Objectives
Describe mental and environmental processes related to addictive process

SAB210 - Addiction & Recovery Counseling

Overview

Course Description
This course provides theory and skills acquisition by utilizing intervention strategies designed to obtain therapeutic information, support recovery, and prevent relapse. Topics include counseling individuals and dysfunctional families, screening instruments, counseling techniques and approaches, recovery and relapse, and special populations. Upon completion, students should be able to discuss issues critical to recovery, identify intervention models, and initiate a procedure culminating in cognitive/behavioral change.

Course Typically Offered
Fall

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Explore each division of Pharmacology and its purpose.

Objectives
Demonstrate basic substance abuse counseling skills.

Objectives
Understand the major approaches to psychotherapy and counseling

Objectives
Research and explore the DSM-5

Objectives
Demonstrate basic counseling techniques

Objectives
Understand the role of the counselor.

Objectives
Explore basic counseling terminology, techniques, and skills

SAB240 - Diversity, Ethics, & Trends in Addiction & Recovery

Overview

Course Description
This course introduces systems of diversity, ethics, and trends in addiction and recovery. Topics include confidentiality, assessment of personal values, professional responsibilities, competencies, and ethics relative to multicultural service provision. Upon completion, students should be able to apply and discuss multiple diversity and ethical scenarios applicable to addiction and recovery services.

Course Typically Offered
Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Discuss basic ethics and confidentiality

Objectives
Articulate important issues and trends in substance abuse.

Objectives
Discuss legal and ethical issues in substance abuse

Objectives
Understand current trends and news

Objectives
Understand the professionals' standards, values, and competences

SEC110 - Security Concepts

Overview

Course Description

This course introduces the concepts and issues related to securing information systems and the development of policies to implement information security controls. Topics include the historical view of networking and security, security issues, trends, security resources, and the role of policy, people, and processes in information security. Upon completion, students should be able to identify information security risks, create an information security policy, and identify processes to implement and enforce policy.

Credit Hours

3

Student Learning Outcomes

Learning Objectives

Objectives
Describe information security fundamentals.

Objectives
Compare and contrast attackers and their attacks.

Objectives
Describe methods of securing endpoint devices.

Objectives
Describe establishing security baselines.

Objectives
Describe and demonstrate securing the network infrastructure.

Objectives
Describe cloud and virtualization security controls.

Objectives
Describe the use and explain the implementation of system vulnerability scanners.

Objectives
Describe cryptography.

Objectives
Describe how to implement authentication security solutions.

Objectives
Describe strategies for reducing risk in an enterprise security environment.

Objectives
Demonstrate methods for protecting data.

SEC150 - Secure Communications

Overview

Course Description
This course provides an overview of current technologies used to provide secure transport of information across networks. Topics include data integrity through encryption, Virtual Private Networks, SSL, SSH, and IPSec. Upon completion, students should be able to implement secure data transmission technologies.

Course Typically Offered
Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Define the roles performed by major threat actors in modern cyberattacks and their primary motivations.

Objectives
Evaluate various cyberattack types and attack techniques.

Objectives
Explain how DDOS, WiFi exploits, and Advanced Threat actions are used to perform cyberattacks.

Objectives
Distinguish between compliance and security.

Objectives
Describe the basic fundamentals of perimeter-based and Zero Trust network security models.

Objectives
Explain how virtualized data center security differs from physical data center security.

Objectives
Discuss Cloud Computing Security and how it impacts organizational networks.

Objectives
Compare various network security devices including firewalls, VPNs and more.

Objectives
Describe interconnected technology in daily communication and lifestyle and systems that need protection.

Objectives
Examine cybersecurity landscape environments, attack threat vectors, exposure, vulnerabilities, and risk factors

Objectives
Identify physical, logical, and virtual addressing that accommodates various sized networks through the use of subnet mask schemes.

Objectives
Explain the TCP/IP Model and correctly identify the functions of the specific layers including packet encapsulation and lifecycle.

Objectives
Accurately explain common use of cloud, virtualization, storage, backup, and recovery procedures.

Objectives
Demonstrate the skills necessary to plan, design, implement, troubleshoot, and maintain network infrastructure environments.

Objectives
Formulate an industry-standard design to protect infrastructure against cybersecurity threats

Objectives
Apply advanced filtering methodologies such as user, application, and content ID to protect against all known and unknown attack vectors

Objectives
Describe the basics of cryptography including synchronous/asynchronous encryption, PKI, and certificates
x

Objectives
Describe the basics of cryptography including synchronous/asynchronous encryption, PKI, and certificates

Objectives
Demonstrate the ability to assess and harden endpoints based on security policies

Objectives
Describe the uses of advanced malware research and analysis as they provide enhanced protection for enterprise networks

Objectives
Examine mobile and cloud-based connection technologies

SEC160 - Security Administration I

Overview

Course Description

This course provides an overview of security administration with an emphasis on designing secure network architectures. Topics include networking technologies, TCP/IP fundamentals, network protocols, traffic analysis, monitoring strategies, and established security best practices. Upon completion, students should be able to use advanced network analysis tools to monitor network traffic and develop security measures to safeguard against various threats.

Credit Hours

3

Student Learning Outcomes

Learning Objectives

Objectives
Apply knowledge and skills to monitor for security incidents.

Objectives
Apply knowledge and skills to detect security incidents.

Objectives
Apply knowledge and skills to investigate security incidents.

Objectives
Apply knowledge and skills to analyze security incidents.

Objectives
Apply knowledge and skills to respond to security incidents.

Objectives
Demonstrate preparedness to apply for entry-level jobs as Associate Security Analyst and Incident Responder.

Objectives
Be prepared to take the Cisco Certified CyberOps Certification exam.

SEC175 - Perimeter Defense

Overview

Course Description
This course introduces the principles of securing networks using routers and firewalls. Topics include networking protocols, threat mitigation, firewall configuration, authentication, authorization, intrusion detection, encryption, IPSec, VPNs, and remote access technologies. Upon completion, students should be able to secure internal networks using router and firewall technologies.

Course Typically Offered
Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Be prepared to take the Cisco Certified CyberOps Certification exam.

Objectives
Define the roles performed by major threat actors in modern cyberattacks and their primary motivations.

Objectives
Evaluate various cyberattack types and attack techniques.

Objectives
Explain how DDOS, WiFi exploits, and Advanced Threat actions are used to perform cyberattacks.

Objectives
Distinguish between compliance and security.

Objectives
Describe the basic fundamentals of perimeter-based and Zero Trust network security models.

Objectives
Explain how virtualized data center security differs from physical data center security.

Objectives
Discuss Cloud Computing Security and how it impacts organizational networks.

Objectives
Compare various network security devices including firewalls, VPNs and more.

Objectives
Describe interconnected technology in daily communication and lifestyle and systems that need protection.

Objectives
Examine cybersecurity landscape environments, attack threat vectors, exposure, vulnerabilities, and risk factors

Objectives
Identify physical, logical, and virtual addressing that accommodates various sized networks through the use of subnet mask schemes.

Objectives
Explain the TCP/IP Model and correctly identify the functions of the specific layers including packet encapsulation and lifecycle.

Objectives
Accurately explain common use of cloud, virtualization, storage, backup, and recovery procedures.

Objectives
Demonstrate the skills necessary to plan, design, implement, troubleshoot, and maintain network infrastructure environments.

Objectives
Formulate an industry-standard design to protect infrastructure against cybersecurity threats

Objectives
Apply advanced filtering methodologies such as user, application, and content ID to protect against all known and unknown attack vectors

Objectives
Describe the basics of cryptography including synchronous/asynchronous encryption, PKI, and certificates

Objectives
Demonstrate the ability to assess and harden endpoints based on security policies

Objectives
Describe the uses of advanced malware research and analysis as they provide enhanced protection for enterprise networks

SEC210 - Intrusion Detection

Overview

Course Description
This course introduces the student to intrusion detection methods in use today. Topics include the types of intrusion detection products, traffic analysis, and planning and placement of intrusion detection solutions. Upon completion, students should be able to plan and implement intrusion detection solution for networks and host-based systems.

Course Typically Offered
Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Explain the importance of methodological ethical hacking and penetration testing.

Objectives
Create penetration testing and preliminary documents.

Objectives
Perform information gathering and vulnerability scanning activities.

Objectives
Explain how social engineering attacks succeed.

Objectives
Explain how to exploit wired and wireless network vulnerabilities.

Objectives
Explain how to exploit application-based vulnerabilities.

Objectives
Explain how to exploit cloud, mobile, and IoT security vulnerabilities.

Objectives
Explain how to perform post-exploitation activities.

Objectives
Create a penetration testing report.

Objectives

Classify pentesting tools by use case.

Objectives
Identify the major components of culture

Objectives
Compare and contrast the major theories in sociology

Objectives
Summarize the socialization process and identify the major agents of socialization.

Objectives
Differentiate between types of social groups and organizations

Objectives
Describe the concept of deviance and social control

Objectives
Discuss different aspects of social stratification including race, ethnicity, sex, and gender

Objectives
Identify major sociological institutions such as family, education, religion, and health

SOC210 - Introduction to Sociology

Overview

Course Description
This course introduces the scientific study of human society, culture, and social interactions. Topics include socialization, research methods, diversity and inequality, cooperation and conflict, social change, social institutions, and organizations. Upon completion, students should be able to demonstrate knowledge of sociological concepts as they apply to the interplay among individuals, groups, and societies.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Examine mobile and cloud-based connection technologies

Objectives
identify the major components of culture

Objectives
compare and contrast the major theories in sociology

Objectives
understand the socialization process and identify the major agents of socialization

Objectives
differentiate between types of social groups and organizations

Objectives
describe the concept of deviance and social control

Objectives
discuss different aspects of social stratification including race, ethnicity, sex, and gender

SOC213 - Sociology of the Family

Overview

Course Description
This course covers the institution of the family and other intimate relationships. Emphasis is placed on mate selection, gender roles, sexuality, communication, power and conflict, parenthood, diverse lifestyles, divorce and remarriage, and economic issues. Upon completion, students should be able to analyze the family as a social institution and the social forces which influence its development and change.

Course Typically Offered
Fall

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
identify major sociological institutions such as family, education, religion, and health

Objectives
Correct the myths about family and marriage in the United States.

Objectives
Analyze his or her own family experiences and better understand his or her place within the family.

Objectives
Explain how basic sociological concepts and principles are applied in family sociology and how they are manifested in family experiences.

Objectives
Examine relationships, including those social relationships that lead to marriage.

Objectives
Analyze different family lifestyles and variations in family structure.

Objectives
Examine many of the dynamics inherent in marriage and/or family life, i.e. communications, gender expectations, and violence.

Objectives
Examine elements of parenthood and parenting styles.

Objectives
Discuss issues related to divorce and remarriage.

SOC215 - Group Processes

Overview

Course Description
This course introduces group processes and dynamics. Emphasis is placed on small group experiences, roles and relationships within groups, communication, cooperation and conflict resolution, and managing diversity within and among groups. Upon completion, students should be able to demonstrate the knowledge and skills essential to analyze group interaction and to work effectively in a group context.

Credit Hours
3

SOC220 - Social Problems

Overview

Course Description
This course provides an in-depth study of current social problems. Emphasis is placed on causes, consequences, and possible solutions to problems associated with families, schools, workplaces, communities, and the environment. Upon completion, students should be able to recognize, define, analyze, and propose solutions to these problems.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Define the nature of sociology as a discipline;

Objectives
Define and discuss the major theoretical perspectives in sociology;

Objectives
Compare and contrast the tools that sociologists use in conducting research;

Objectives
Outline culture, including cultural norms, values, and other cultural content;

Objectives
Identify the elements of the social structure;

Objectives
Explain the relationship between the individual and society, including the study of social interaction and socialization;

Objectives
Discuss the various dimensions of social inequality;

Objectives
Identify and explain the dominant instutions in society.

SOC225 - Social Diversity

Overview

Course Description
This course provides a comparison of diverse roles, interests, opportunities, contributions, and experiences in social life. Topics include race, ethnicity, gender, sexual orientation, class, and religion. Upon completion, students should be able to analyze how cultural and ethnic differences evolve and how they affect personality development, values, and tolerance.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Define, explain, and apply sociological concepts and theories utilized in the curricula of Social Diversity

Objectives
Identify and discuss how members of marginalized groups in the United States interact with members of the dominant group and how each perceives the other.

Objectives
Define and distinguish between prejudice, race, discrimination, and stereotypes

Objectives
Compare and contrast the different experiences of various ethnic groups in the U.S.

Objectives
Identify the effect social class has on individuals

Objectives
Identify and explain the stratification of gender in major American institutions

Objectives
Discuss societal reactions and effects of cultural reactions to transgenderism, homosexuality, and gender identity

Objectives
Identify and discuss historical and contemporary issues in education and religion

SOC230 - Race and Ethnic Relations

Overview

Course Description
This course includes an examination of the various aspects of race and ethnicity and how these lead to different experiences, opportunities, problems, and contributions. Topics include prejudice, discrimination, perceptions, myths, stereotypes, and intergroup relationships. Upon completion, students should be able to identify and analyze relationships among racial and ethnic groups within the larger society.

Credit Hours
3

SOC232 - Social Context of Aging

Overview

Course Description
This course provides an overview of the social implications of the aging process. Emphasis is placed on the roles of older adults within families, work and economics, politics, religion, education, and health care. Upon completion, students should be able to identify and analyze changing perceptions, diverse lifestyles, and social and cultural realities of older adults.

Course Typically Offered
Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Identify and discuss historical and contemporary issues in education and religion

Objectives
Identify the characteristics and demographics of the elderly population

Objectives
Construct social chart of the elderly and their relationships with others

Objectives
Calculate the effects of the law, discriminatory practices, employability, victimization and abuse, on the elderly's quality of life

Objectives
Report on a case study of an aging individual and demonstrate how they are or are not disengaging from society

Objectives
Write a case history of someone over 60 and employ the theories of aging as discussed in class

SOC240 - Social Psychology

Overview

Course Description
This course examines the influence of culture and social groups on individual behavior and personality. Emphasis is placed on the process of socialization, communication, conformity, deviance, interpersonal attraction, intimacy, race and ethnicity, small group experiences, and social movements. Upon completion, students should be able to identify and analyze cultural and social forces that influence the individual in a society.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Define social psychology

Objectives
Describe the nature of attitudes

Objectives
Explain the concept of persuasion

Objectives
Summarize the complexity of prejudice and discrimination

Objectives
Identify factors involved in social influence

Objectives
Discuss the nature of group behavior

Objectives
Analyze the basis of attraction in intimate relationships.

Objectives
Explain the concepts of aggression and prosocial behavior

SON110 - Introduction to Sonography

Overview

Course Description
This course provides an introduction to medical sonography. Topics include applications, sonographic terminology, history, patient care, ethics, and basic skills. Upon completion, students should be able to define professionalism and sonographic applications and perform basic patient care skills and preliminary scanning techniques.

Course Typically Offered
Fall

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate the ability to think critically in lab and clinical situations

Objectives
Communicate professionally with classmates, instructors, preceptors, and clinic staff at all times.

Objectives
Communicate professionally with classmates, instructors, preceptors, and clinic staff at all times

Objectives
Use appropriate medical terminology in class, lab, and clinical settings

Objectives
Demonstrate patient assessment and the 10-step Sonographic examination

Objectives
Identify the clinical responsibilities of the sonographer

Objectives
Identify the role of the sonographer in emergency situations

Objectives
Display proper ergonomics and body mechanics when using sonography equipment

Objectives
Apply appropriate infection control and sterile procedure processes

Objectives
Understand diagnostic ultrasound clinical practice standards

Objectives
Explain the concept of ALARA

Objectives
Actively practice HIPAA measures and patient confidentiality at all times

Objectives
Demonstrate appropriate directional terminology and patient positioning

Objectives
Display competent use of transducers, B-mode and basic doppler, and essential universal knobology

SON111 - Sonographic Physics

Overview

Course Description
This course introduces ultrasound physical principles, bioeffects, and sonographic instrumentation. Topics include sound wave mechanics, transducers, sonographic equipment, Doppler physics, bioeffects, and safety. Upon completion, students should be able to demonstrate knowledge of sound wave mechanics, transducers, sonography equipment, the Doppler effect, bioeffects, and safety.

Course Typically Offered
Fall, Spring

Credit Hours
4

Student Learning Outcomes

Learning Objectives

Objectives
1. Describe the interaction of sound and soft tissues

Objectives
2. Explain sound production and propagation.

Objectives
3. Summarize the basic principles and techniques of ultrasound production.

Objectives
4. Explain the operation of annular, phased, and linear transducers.

Objectives
5. Discuss and draw sound beam profiles, explaining beam focusing techniques.

Objectives
6. Explain the basic functions of image creation and storage.

Objectives
7. Identify basic technical controls and their actions on the ultrasound image.

Objectives
8. Identify beneficial and detrimental image artifacts.

SON120 - Sonography Clinical Education I

Overview

Course Description
This course provides active participation in clinical sonography. Emphasis is placed on imaging, processing, and technically evaluating sonographic examinations. Upon completion, students should be able to image, process, and evaluate sonographic examinations.

Course Typically Offered
Spring

Credit Hours
5

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take SON-110

Take SON-110;

Student Learning Outcomes

Learning Objectives

Objectives
Integrate previous knowledge of anatomy and physiology to examine the cross-sectional anatomy of the abdominal viscera.

Objectives
Implement the principles of scanning techniques in examining the abdominal viscera.

Objectives
Integrate previous knowledge of anatomy and physiology to sonographically identify normal anatomy and the physiology of the abdominal viscera.

Objectives
Discuss the laboratory testing associated with the abdominal viscera.

Objectives
Explain and document the preparation that should precede a sonographic examination of the abdominal viscera.

Objectives
Perform basic abdominal imaging views using examination equipment and techniques.

SON121 - Sonography Clinical Education II

Overview

Course Description
This course provides continued active participation in clinical sonography. Emphasis is placed on imaging, processing, and technically evaluating sonographic examinations. Upon completion, students should be able to image, process, and evaluate sonographic examinations.

Course Typically Offered
Summer

Credit Hours
5

Requisites

Simple Requisites

State prerequisite

Prerequisite

Take SON-120

Take SON-120;

Student Learning Outcomes

Learning Objectives

Objectives
Integrate previous knowledge of anatomy and physiology to examine the cross-sectional anatomy of the abdominal viscera.

Objectives
Implement the principles of scanning techniques in examining the abdominal viscera.

Objectives
Integrate previous knowledge of anatomy and physiology to sonographically identify normal anatomy and the physiology of the abdominal vasculature.

Objectives
Discuss the laboratory testing associated with the abdominal viscera.

Objectives
Explain and document the preparation that should precede a sonographic examination of the abdominal viscera.

Objectives
Perform basic abdominal imaging views using examination equipment and techniques

SON130 - Abdominal Sonography I

Overview

Course Description
This course introduces abdominal and small parts sonography. Emphasis is placed on the sonographic anatomy of the abdomen and small parts with correlated laboratory exercises. Upon completion, students should be able to recognize and acquire basic abdominal and small parts images.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
1 .Integrate previous knowledge of anatomy and physiology to examine the cross-sectional anatomy of the abdominal viscera.

Objectives
2. Implement the principles of scanning techniques in examining the abdominal viscera.

Objectives
3. Integrate previous knowledge of anatomy and physiology to Sonographically identify normal anatomy and the physiology of the abdominal vasculature.

Objectives
4. Discuss the laboratory testing associated with the abdominal viscera.

Objectives
5. Explain and document the preparation that should precede a sonographic examination of the abdominal viscera.

Objectives
6. Perform basic abdominal imaging views using examination equipment and techniques.

SON131 - Abdominal Sonography II

Overview

Course Description
This course covers abdominal and small parts pathology recognizable on sonograms. Emphasis is placed on abnormal sonograms of the abdomen and small parts with correlated sonographic cases. Upon completion, students should be able to recognize abnormal pathological processes in the abdomen and on small parts sonographic examinations.

Course Typically Offered
Spring, Summer

Credit Hours
2

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take SON-130

Take SON-130;

Learning Objectives

Objectives
1. Explain and document the preparation that should precede a sonographic examination of the abdominal viscera, superficial structures, and small parts.

Objectives
2. Discuss the laboratory testing associated with the abdominal viscera, superficial structures, and small parts.

Objectives
3. List and explain the indications for performing abdominal viscera, superficial structures, and small parts.

Objectives
4. Create high diagnostic quality scans of all abdominal organs indicated in Abdominal I and II.

Objectives
5.Explain and document the completion process of a sonographic examination of the abdominal viscera, superficial structures, and small parts.

Student Learning Outcomes

SON140 - Gynecological Sonography

Overview

Course Description
This course is designed to relate gynecological anatomy and pathology to sonography. Emphasis is placed on gynecological relational anatomy, endovaginal anatomy, and gynecological pathology. Upon completion, students should be able to recognize normal and abnormal gynecological sonograms.

Course Typically Offered
Fall, Spring

Credit Hours
2

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take SON-110

Take SON-110;

Student Learning Outcomes

Learning Objectives

Objectives
Perform basic abdominal imaging views using examination equipment and techniques.

Objectives
Describe the Sonographers role in Gynecologic Sonogram

Objectives
Describe preparation of the patient for a gynecologic sonogram

Objectives
List the certification options available to a practicing sonographer.

Objectives
Describe normal Uterine and pelvic Anatomy in Adults and Pediatric patients.

Objectives
List the development stages of the female reproductive system.

Objectives
Identify Uterine anomalies.

Objectives
Explain the interconnectivity of the urinary and reproductive systems.

Objectives
Describe Diseases of the Female Pelvis

Objectives
Explain Reproductive Technologies pertinent to Medical Sonography

SON220 - Sonography Clinical Education III

Overview

Course Description
This course provides continued active participation in clinical sonography. Emphasis is placed on imaging, processing, and technically evaluating sonographic examinations. Upon completion, students should be able to image, process, and evaluate sonographic examinations.

Course Typically Offered
Fall

Credit Hours
8

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take SON-121

Take SON-121;

Student Learning Outcomes

Learning Objectives

Objectives
Upon successful completion of this course, students will be able to:

Objectives
1. Pre/Co-Integrate previous knowledge of anatomy and physiology to examine the cross-sectional anatomy of the abdominal viscera and gynecologic/obstetric female pelvis

Objectives
2. Implement the principles of scanning techniques in examining the abdominal viscera and gynecologic/obstetric female pelvis

Objectives
3 .Integrate previous knowledge of anatomy and physiology to sonographically identify normal anatomy and the physiology of the abdominal vasculature and gynecologic/obstetric female pelvis

Objectives
4. Discuss the laboratory testing associated with the abdominal viscera and gynecologic/obstetric female pelvis

Objectives
5. Explain and document the preparation that should precede a sonographic examination of the abdominal viscera and gynecologic/obstetric female pelvis

Objectives
6. Perform basic abdominal, gynecologic/obstetric female pelvis imaging views using examination equipment and techniques

Objectives
7.Demonstrate the ability to think critically in lab and clinical situations

Objectives
8. Communicate professionally with classmates, instructors, preceptors, and clinic staff

Objectives
9. Use appropriate medical terminology in class, lab, and clinical settings

Objectives
10. Identify the clinical responsibilities of the sonographer

Objectives
11. Display proper ergonomics and body mechanics when using sonography equipment

Objectives
12. Understand diagnostic ultrasound clinical practice standards

Objectives
13. Actively practice HIPAA measures and patient confidentiality at all times

Objectives
14. Demonstrate appropriate directional terminology and patient positioning

Objectives
15. Display competent use of transducers, B-mode and basic doppler, and essential universal knobology

Objectives
16. Demonstrate patient assessment and the 10-step Sonographic examination

Objectives
17. Identify the role of the sonographer in emergency situations

Objectives
18. Apply appropriate infection control and sterile procedure processes

Objectives
19. Explain the concept of ALARA

SON221 - Sonography Clinical Education IV

Overview

Course Description
This course provides continued active participation off campus in clinical sonography. Emphasis is placed on imaging, processing, and technically evaluating sonographic examinations. Upon completion, students should be able to image, process, and evaluate sonographic examinations.

Course Typically Offered
Spring

Credit Hours
8

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take SON-220

Take SON-220;

Student Learning Outcomes

Learning Objectives

Objectives
Upon successful completion of this course, students will be able to:

Objectives
Integrate previous knowledge of anatomy and physiology to examine the cross-sectional anatomy of the abdominal viscera, pelvis and fetal anatomy.

Objectives
Implement the principles of scanning techniques in examining the abdominal viscera, pelvis and fetal anatomy.

Objectives
Integrate previous knowledge of anatomy and physiology to sonographically identify normal anatomy and the physiology of the abdominal vasculature, pelvis and fetal anatomy.

Objectives
Discuss the laboratory testing associated with the abdominal viscera, pelvis and fetal anatomy.

Objectives
Explain and document the preparation that should precede a sonographic examination of the abdominal viscera, pelvis and fetal anatomy.

Objectives
Perform basic abdominal, pelvic and fetal imaging views using examination equipment and techniques

SON225 - Case Studies

Overview

Course Description
This course offers the opportunity to present interesting cases found during clinical education. Emphasis is placed on presentation methods which integrate patient history, laboratory results, and sonographic findings with reference to current literature. Upon completion, students should be able to correlate information necessary for complete presentation of case studies.

Course Typically Offered
Spring

Credit Hours
1

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take One: SON-110 or CVS-163

Take SON-110 or CVS-163;

Student Learning Outcomes

Learning Objectives

Objectives
Collect clinical information, organize it effectively, and present it in an academic and professional manner.

SON241 - Obstetrical Sonography I

Overview

Course Description
This course covers normal obstetrical sonography techniques, the normal fetal environment, and abnormal first trimester pregnancy states. Topics include gestational dating, fetal anatomy, uterine environment, and first trimester complications. Upon completion, students should be able to produce gestational sonograms which document age, evaluate the uterine environment, and recognize first trimester complications.

Course Typically Offered
Fall, Spring

Credit Hours
2

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take SON-110

Take SON-110;

Student Learning Outcomes

Learning Objectives

Objectives
1. Identify normal anatomic features of developing embryo

Objectives
2. Describe first trimester measurement techniques for determination of gestational age

Objectives
3. Discuss normal findings of adnexa in first trimester

Objectives
4. Correlate clinical presentation with sonographic findings

Objectives
5. Differentiate the normal and abnormal appearances of a first trimester pregnancy

Objectives
6. Discuss first trimester complications

Objectives
7. Describe sonographic findings associated with ectopic pregnancy.

Objectives
8. Describe the types and sonographic appearances of abortion

Objectives
9. Identify normal fetal anatomy

Objectives
10. Describe anatomical relationship to surrounding structures

Objectives
11. Describe sonographic appearance of fetal anatomical structures and surrounding area

Objectives
12. Indicate measurement techniques utilized in fetal gestational age and growth assessment

SON242 - Obstetrical Sonography II

Overview

Course Description
This course covers second and third trimester obstetrical complications and fetal anomalies. Topics include abnormal fetal anatomy and physiology and complications in the uterine environment. Upon completion, students should be able to identify fetal anomalies, fetal distress states, and uterine pathologies.

Course Typically Offered
Fall, Spring

Credit Hours
2

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take SON-241

Take SON-241;

Student Learning Outcomes

Learning Objectives

Objectives
Indicate measurement techniques utilized in fetal gestational age and growth assessment

Objectives
Explain pathological variations in placental size and appearance.

Objectives
Identify sonographic face and brain anomalies.

Objectives
Associate biochemical marker to abnormal spine development.

Objectives
List and identify the seven views of a fetal echocardiographic examination.

Objectives
Describe the difference in intrathoracic anomalies.

Objectives
Explain the difference between omphalocele and gastroschisis.

Objectives
List abnormalities of genitourinary system.

Objectives
Summarize measurement for evaluation of fetal limbs.

Objectives
List components of a fetal biophysical profile.

Objectives
List the different types of multiple gestations.

Objectives
Define intrauterine growth restriction and its effects before delivery.

SON250 - Vascular Sonography

Overview

Course Description
This course provides an in-depth study of the anatomy and pathology of the vascular system. Topics include peripheral arterial, peripheral venous, and cerebrovascular disease testing. Upon completion, students should be able to identify normal vascular anatomy and recognize pathology of the vascular system.

Course Typically Offered
Fall

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Discuss the effects of maternal health and disease on the pregnancy outcome.

Objectives
Explain the relationship between pressure, flow, and resistance

Objectives
Describe normal and abnormal flow profiles that occur in the arterial and venous systems

Objectives
Identify the vessels in the extracranial and intracranial cerebrovascular system

Objectives
Explain the effects of collateral flow on cerebral hemodynamics

Objectives
List the risk factors and mechanism for cerebrovascular disease

Objectives
Describe the capabilities, limitations, protocol/ techniques, waveforms and diagnostic criteria for cerebrovascular circulation test procedures

Objectives
Describe the effects of stenosis and occlusion on flow characteristics in the extracranial cerebrovascular system

Objectives
List the current treatment options for patients with cerebrovascular disease

Objectives
Identify the central, upper and lower extremity deep and superficial veins, and list the major perforating veins in the lower extremity

Objectives
Describe the risk factors for venous thrombosis

Objectives
Relate the mechanisms of disease associated with acute and chronic deep vein thrombosis, superficial thrombophlebitis, venous insufficiency and pulmonary embolism

Objectives
Define the clinical signs associated with acute and chronic deep vein thrombosis and superficial thrombophlebitis

SON289 - Sonographic Topics

Overview

Course Description
This course provides an overview of sonographic topics in preparation for certification examinations. Emphasis is placed on registry preparation. Upon completion, students should be able to demonstrate a comprehensive knowledge of sonography and be prepared for the registry examinations.

Course Typically Offered
Spring

Credit Hours
2

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take SON-110

Take SON-110;

Student Learning Outcomes

Learning Objectives

Objectives
1 .Demonstrate a comprehensive knowledge of sonography

Objectives
2 .Achieve a passing score on mock exams in physics, abdomen, and obstetrics & gynecology.

SPA111 - Elementary Spanish I

Overview

Course Description
This course introduces the fundamental elements of the Spanish language within a cultural context. Emphasis is placed on the development of basic listening, speaking, reading, and writing skills. Upon completion, students should be able to comprehend and respond with grammatical accuracy to spoken and written Spanish and demonstrate cultural awareness.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Interact on a basic level and write simple paragraphs using grammatically correct sentences in the present tense that incorporate the vocabulary and grammar being presented in the lessons covered.

Objectives
Listen to recorded narration and conversation and demonstrate comprehension of same orally and in writing.

Objectives
Read and understand textbook passages on the lesson theme and culture presented in the textbook.

SPA112 - Elementary Spanish II

Overview

Course Description
This course is a continuation of SPA 111 focusing on the fundamental elements of the Spanish language within a cultural context. Emphasis is placed on the progressive development of listening, speaking, reading, and writing skills. Upon completion, students should be able to comprehend and respond with increasing proficiency to spoken and written Spanish and demonstrate further cultural awareness.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take SPA-111

Take SPA-111;

Student Learning Outcomes

Learning Objectives

Objectives
Interact on a basic level and write simple paragraphs using grammatically correct sentences in the present tense that incorporate the vocabulary and grammar being presented in the lessons covered.

Objectives
Listen to recorded narration and conversation and demonstrate comprehension of same orally and in writing.

Objectives
Read and understand textbook passages on the lesson theme and culture presented in the textbook

SPA141 - Culture and Civilization

Overview

Course Description
This course provides an opportunity to explore issues related to the Hispanic world. Topics include historical and current events, geography, and customs. Upon completion, students should be able to identify and discuss selected topics and cultural differences related to the Hispanic world.

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Read and understand textbook passages on the lesson theme and culture presented in the textbook.

Objectives
Identify where Spanish is spoken in the world today

Objectives
Identify major artists and writers and discuss how their work both influenced and reflected Hispanic culture.

Objectives
Identify and discuss different aspects of Hispanic culture(s), and compare and contrast these aspects among the different Hispanic cultures and between the Hispanic cultures and the student's own culture.

Objectives
Examine the role of geography in the politics, history, economics, language, customs and culture of the countries studied.

Objectives
Identify key political and historical figures from both Spain and Latin America and summarize the major historical events that occurred

SPA211 - Intermediate Spanish I

Overview

Course Description
This course provides a review and expansion of the essential skills of the Spanish language. Emphasis is placed on the study of authentic and representative literary and cultural texts. Upon completion, students should be able to communicate effectively, accurately, and creatively about the past, present, and future.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take SPA-112

Take SPA-112;

Student Learning Outcomes

Learning Objectives

Objectives
Listen for comprehension to recorded dialogue and passages and respond orally and in writing to questions concerning the main idea and facts presented in the passage or dialogue.

Objectives
Respond orally to teacher and textbook-generated questions using the grammar and vocabulary presented to date.

Objectives
Write simple, compound, and complex sentences in the present and past tenses and in indicative and subjunctive mood that incorporate the vocabulary and grammar being presented in the lessons covered.

Objectives
Read, understand, and discuss textbook passages and selected authentic literature on the lesson theme and the culture of the countries presented.

Objectives
Identify and discuss different aspects of Hispanic culture(s) and compare and contrast these aspects among the different Hispanic cultures and between the Hispanic cultures and the student's own culture.

SPA212 - Intermediate Spanish II

Overview

Course Description
This course provides a continuation of SPA 211. Emphasis is placed on the continuing study of authentic and representative literary and cultural texts. Upon completion, students should be able to communicate spontaneously and accurately with increasing complexity and sophistication.

Course Typically Offered
Spring

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take SPA-211

Take SPA-211;

Learning Objectives

Objectives
Communicate on an advanced level and write paragraphs using grammatically correct sentences in the present, past and future tenses that incorporate the vocabulary and grammar being reviewed in the lessons covered.

Objectives
Listen to recorded narration and conversation and demonstrate comprehension of same orally and in writing.

Objectives
Read, understand, and discuss authentic literature relating to the lesson theme.

Objectives
Describe sources of authority and methods of enforcement.

Objectives
Identify well-known Hispanic writers and discuss their works.

Student Learning Outcomes

SST110 - Introduction to Sustainability

Overview

Course Description
This course introduces sustainability issues and individual contributions toward environmental sustainability. Topics include management processes needed to maximize renewable/non-renewable energy resources, economics of sustainability, and reduction of environmental impacts. Upon completion, students should be able to discuss sustainability practices and demonstrate an understanding of their effectiveness and impacts.

Course Typically Offered
Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Identify well-known Hispanic writers and discuss their works.

Objectives
Develop a comprehensive, systems understanding of the Built Environment

Objectives
Describe the concepts of high performance buildings and sustainability.

Objectives
Demonstrate fluency implementing the required processes in current green building rating systems (i.e. LEED, NAHB, System Vision, Energy Star).

SST120 - Energy Use Analysis

Overview

Course Description
This course introduces the principles of analyzing energy use, energy auditing tools and techniques, conservation techniques, and calculating energy savings. Topics include building system control theory, calibrating digital controls, energy loss calculations, and applicable conservation techniques. Upon completion, students should be able to demonstrate an understanding of energy use, audits, and controls in the analysis of energy consumption.

Course Typically Offered
Fall

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate an understanding of energy use, audits, and controls in the analysis of energy consumption.

Objectives
Compute the projected energy consumption of a building from a set of plans

SST130 - Modeling Renewable Energy

Overview

Course Description
This course introduces software and other technologies used for modeling renewable energy systems. Topics include renewable energy modeling software applications, data analysis, renewable energy sources, and cost of renewable energy systems. Upon completion, students should be able to use appropriate technology to model the effectiveness of renewable energy systems.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Calculate various building systems and their associated affect on energy efficiencies.

Objectives
A basic understanding of modeling renewable energy systems and energy efficient upgrades.

Objectives
The ability to use computer software to aid in energy performance and financial cost analysis.

Objectives
Quantify the benefits and costs of different appliance selection on the energy performance in a home.

Objectives
Understanding the output from modeling tools and present findings by creating reports showing system assumptions, performance and payback.

SST140 - Green Building and Design Concepts

Overview

Course Description
This course is designed to introduce the student to sustainable building design and construction principles and practices. Topics include sustainable building rating systems and certifications, energy efficiency, indoor environmental quality, sustainable building materials and water use. Upon completion, students should be able to identify the principles and practices of sustainable building design and construction.

Course Typically Offered
Fall, Summer

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Critical thinking to understand when certain variables and assumptions are important to analyses, evaluate whether results are reasonable and troubleshoot unexpected results.

Objectives
Demonstrate an understanding of the concepts of high performance green buildings and sustainability.

Objectives
Identify current green building rating systems (i.e. LEED, NAHB).

Objectives
Identify the energy efficiency methods that should be considered in a building design and/or construction project.

Objectives
Select appropriate "green" materials for a building project.

Objectives
Identify Indoor Environmental Quality factors to be considered in a construction project.

Objectives
Identify water management strategies in a construction project.

Objectives
Develop a comprehensive, systems understanding of the Built Environment

Objectives
Describe the concepts of high performance buildings and sustainability.

Objectives
Demonstrate fluency implementing the required processes in current green building rating systems (i.e. LEED, NAHB, System Vision, Energy Star).

SST210 - Issues in Sustainability

Overview

Course Description
This course introduces the long-term impacts and difficulties of applying sustainability concepts in an organization, business, or society. Topics include the application of sustainable technologies and the analysis of affordability, efficiencies, recycling, and small and large-scale design. Upon completion, students should be able to recognize the possible limitations of sustainable technologies and be prepared to reconcile such conflicts.

Course Typically Offered
Summer

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take SST-110

Take SST-110;

Student Learning Outcomes

Learning Objectives

Objectives
Analyze and report the long-term environmental outcomes between various building materials, methods, and systems

Objectives
Understand how global population, business growth, resource limitations, and social inequity have created a potentially destructive global economy and how it can be transformed into a more restorative system.

Objectives
Understand how global sustainability is determined in large part by urban planning, transportation, infrastructure, and building systems.

Objectives
Understand how food supply, water use and energy use are related and why the concepts of sustainability are imperative to creating a viable and equitable world food supply system.

Objectives
Analyze how marketing and advertising can be used to promote true sustainability or how it can be used to portray a false sense of environmental performance.

SWK110 - Intro to Social Work

Overview

Course Description
This course examines the historical development, values, orientation, and professional standards of social work and focuses on the terminology and broader systems of social welfare. Emphasis is placed on the various fields of practice including those agencies whose primary function is financial assistance, corrections, mental and behavioral health, and protective services. Upon completion, students should be able to demonstrate an understanding of the knowledge, values, and skills of the social work professional.

Credit Hours
3

SWK113 - Cultural Competency & Diversity

Overview

Course Description
Thius course examines and promotes understanding, sensitivity, awareness, and knowledge of various cultures and diversity. Emphasis is placed on professional responsibilities, duties, and skills critical to multicultural social services practice. Upon completion, students should be able to integrate and expand knowledge, skills, and cultural awareness relevant to diverse populations.

Course Typically Offered
Spring

Credit Hours
3

Requisites

Simple Requisites

Local Co-Requisite

Type
Corequisite

Take HSE-135

Take HSE-135;

Student Learning Outcomes

Learning Objectives

Objectives
Describe the causes and etiology of intellectual and developmental disabilities.

Objectives
Analyze historical and contemporary perspectives on intellectual and developmental disabilities.

Objectives
Apply best practices to support the needs and challenges of individuals with intellectual and developmental disabilities.

Objectives
Evaluate different service provision models and interventions for individuals with intellectual and developmental disabilities.

Objectives
Describe approaches to advocate for the rights and inclusion of individuals with intellectual and developmental disabilities.

SWK115 - Community Resources

Overview

Course Description
This course introduces community resources essential to social work practice. Emphasis is placed on awareness of and interaction with community service personnel and stakeholders. Upon completion, students should be able to demonstrate the ability to assess critical community needs, identify resources and follow through with a plan of action for resolution.

Credit Hours
3

SWK220 - Ethical Considerations in Social Work

Overview

Course Description
This course introduces the professional standards, values, and issues in social services. Topics include confidentiality, assessment of personal values, professional responsibilities, competencies, and ethics. Upon completion, students should be able to understand and discuss multiple ethical issues applicable to social work and apply various decision-making models to current issues.

Credit Hours
3

TRN110 - Introduction to Transport Technology

Overview

Course Description
This course covers workplace safety, hazardous materials, environmental regulations, hand tools, service information, basic concepts, vehicle systems, and common transportation industry terminology. Topics include familiarization with major vehicle systems, proper use of various hand and power tools, safety data sheets, and personal protective equipment. Upon completion, students should be able to demonstrate appropriate safety procedures, identify and use basic shop tools, and describe government regulations regarding transportation repair facilities.

Credit Hours
2

TRN111 - Chassis Maintenance and Light Repair

Overview

Course Description
This course covers maintenance and light repair of transportation suspension, steering, and brake systems. Topics include general servicing and inspection procedures of steering and suspension systems, wheels and tires, and drum and disc brakes including hydraulic and power-assist units. Upon completion, students should be able to perform maintenance and light repair of transportation suspension, steering, and brake systems.

Course Typically Offered
Spring

Credit Hours
4

Student Learning Outcomes

Learning Objectives

Objectives
Correctly identify or describe government regulations associated with the transportation industry.

TRN112 - Powertrain Maintenance and Light Repair

Overview

Course Description
This course covers maintenance and light repair of transportation engines, automatic and manual transmission/transaxles, engine performance systems, and HVAC systems. Topics include general servicing and inspection procedures of engines, engine lubrication and cooling systems, automatic and manual transmission/transaxles, HVAC components, and fuel, air induction, and exhaust systems. Upon completion, students should be able to perform maintenance and light repair of transportation engines, automatic and manual transmission/transaxles, engine performance systems, and HVAC systems.

Course Typically Offered
Fall

Credit Hours
4

Student Learning Outcomes

Learning Objectives

Objectives
Perform maintenance and light repair of transportation suspension, steering, and brake systems.

TRN120 - Basic Transportation Electricity

Overview

Course Description
This course covers basic electrical theory, wiring diagrams, test equipment, and diagnosis, repair and replacement of batteries, starters, and alternators. Topics include Ohm's Law, circuit construction, wiring diagrams, circuit testing, and basic troubleshooting. Upon completion, students should be able to properly use wiring diagrams, diagnose, test, and repair basic wiring, battery, starting, charging, and electrical concerns.

Credit Hours
5

TRN130 - Introduction to Sustainable Transportation

Overview

Course Description
This course provides an overview of alternative fuels and alternative fuel vehicles. Topics include composition and use of alternative fuels including compressed natural gas, biodiesel, ethanol, hydrogen, and synthetic fuels, hybrid/electric, and vehicles using alternative fuels. Upon completion, students should be able to identify alternative fuel vehicles, explain how each alternative fuel delivery system operates, and perform minor repairs.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Identify alternative fuels used in transportation industry to reduce the dependency on fossil fuels.

Objectives
Describe appropriate safety practices used when servicing and repairing Hybrid Electric Vehicles (HEVs).

Objectives
Correctly identify or describe how each alternative fuel is delivered and used in modern transportation vehicles and equipment.

Objectives
Identify diagnostic procedures and repairs associated with alternative fueled transportation vehicles and equipment.

Objectives
Describe the similarities and differences between various types of Hybrid Electric Vehicle (HEV) power systems found in modern transportation and equipment.

Objectives
Identify emerging fuel sources for the transportation industry that are currently in development and describe their characteristics.

TRN140 - Transportation Climate Control

Overview

Course Description
This course covers the theory of refrigeration and heating, electrical/electronic/pneumatic controls, and diagnosis and repair of climate control systems. Topics include diagnosis and repair of climate control components and systems, recovery/recycling of refrigerants, and safety and environmental regulations. Upon completion, students should be able to diagnose and repair vehicle climate control systems.

Credit Hours
2

TRN140A - Transportation Climate Control Lab

Overview

Course Description
This course provides experiences for enhancing student skills in the diagnosis and repair of transportation climate control systems. Emphasis is placed on reclaiming, recovery, recharging, leak detection, climate control components, diagnosis, air conditioning equipment, tools and safety. Upon completion, students should be able to describe the operation, diagnose, and safely service climate control systems using appropriate tools, equipment, and service information.

Credit Hours
2

Requisites

Simple Requisites

State recommended concurrent or previous courses

Type
Corequisite

Take TRN-140

Take TRN-140(S27007);

TRN145 - Advanced Transportation Electronics

Overview

Course Description
This course covers advanced transportation electronic systems including electronic control modules, on-board data networks, telematics, high voltage systems, navigation, collision avoidance systems and electronic accessories. Topics include interpretation of wiring schematics, diagnosing and testing data networks and other electronic concerns. Upon completion, students should be able to diagnose and test data networks and other electronic concerns, and work safely with high voltage systems.

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take TRN-120

Take TRN-120(S27004);

TRN150 - Advanced Driver Assistance Systems

Overview

Course Description
This course enhances the student's understanding of electronics theory and ability to evaluate, diagnose, and repair advanced controllers and module networks. Topics include electronic components such as transistors and diodes, inverters, CAN Bus network construction and diagnostic, and ADAS system operation. Upon completion, students should be able to identify and troubleshoot CAN Bus and ADAS networks.

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take TRN-120

Take TRN-120(S27004);

TRN150A - Advanced Driver Assistance Systems Lab

Overview

Course Description
This course is an optional lab to be used in conjunction with/or as an alternative work-based learning. Topics include electronic components such as transistors and diodes, inverters, CAN Bus network construction and diagnostic, and ADAS system operation. Upon completion, students should be able to identify and troubleshoot CAN Bus and ADAS networks.

Credit Hours
1

Requisites

Simple Requisites

State concurrent or previous courses

Type
Corequisite

Take TRN-150

Take TRN-150;

TRN170 - PC Skills for Transportation

Overview

Course Description
This course introduces students to personal computer literacy and Internet literacy with an emphasis on the transportation service industry. Topics include service information systems, management systems, computer-based systems, and PC-based diagnostic equipment. Upon completion, students should be able to access information pertaining to transportation technology and perform word processing.

Credit Hours
2

TRN180 - Basic Welding for Transportation

Overview

Course Description
This course covers the terms and procedures for welding various metals used in the transportation industry with an emphasis on personal safety and environmental health. Topics include safety and precautionary measures, setup/operation of MIG equipment, metal identification methods, types of welds/joints, techniques, inspection methods, cutting processes and other related issues. Upon completion, students should be able to demonstrate a basic knowledge of welding operations and safety procedures according to industry standard

Credit Hours
3

VET110 - Animal Breeds and Husbandry

Overview

Course Description
This course provides a study of the individual breed characteristics and management techniques of the canine, feline, equine, bovine, porcine, ovine, caprine, and laboratory animals. Topics include physiological data, animal health management, and basic care and handling of animals. Upon completion, students should be able to identify breeds of domestic and laboratory animals, list physiological data, and outline basic care, handling, and management techniques.

Course Typically Offered
Fall

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Describe and list the cutting techniques used with the various tools and methods associated with transportation systems and equipment.

Objectives
Identify breeds of common domestic and laboratory animals

Objectives
List physiological data for each species covered

VET113 - Vet Breeds, Husbandry & Nutrition

Overview

Course Description
This course covers the breed characteristics, husbandry techniques, and nutritional needs of various animal species. Topics include physiological data, animal health management, basic care and husbandry, as well as the principles of nutrition. Upon completion students will learn to identify animal breeds, understand physiological data, discuss husbandry techniques, and formulate appropriate diets based on the nutritional needs of various species.

Credit Hours
2

VET114 - Introduction to Veterinary Medicine Technology

Overview

Course Description
This course introduces the standard operating procedures and responsibilities of veterinary medical technology departments, common zoonotic diseases, safety and ethical issues, and USDA/DEA/OSHA regulations/compliance. Emphasis is placed on standard operating procedures, zoonotic diseases, safety and ethical issues, and the importance of USDA/DEA/OSHA regulations and compliance. Upon completion, students should be able to perform duties assigned in veterinary medical technology, recognize potential zoonotic diseases, and establish safety protocols/regulatory compliance.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
1

Student Learning Outcomes

Learning Objectives

Objectives
Summarize the history of the CCCC VMT program

Objectives
Recognize common zoonotic diseases

Objectives
Discuss the rules and regulations pertaining to the care and use of teaching animals and animals in research

Objectives
Discuss ethical issues as it pertains to veterinary medicine

Objectives
Recognize basic USDA, DEA, and OSHA regulations and compliance

Objectives
Calculate basic dosage problems

Objectives
Recognize and discuss basic animal behavior and restraint methods

VET120 - Veterinary Anatomy & Physiology

Overview

Course Description
This course covers the structure and function of the animal body with emphasis on the similarities and differences among domestic animals. Emphasis is placed on the structure and function of the major physiological systems. Upon completion, students should be able to identify relevant anatomical structure and describe basic physiological processes of the major body systems.

Credit Hours
4

VET121 - Veterinary Medical Terminology

Overview

Course Description
This course covers the basic medical terminology required for veterinary technicians. Topics include the pronunciation, spelling and definition of word parts and vocabulary terms unique to the anatomy, clinical pathology, and treatment of animals. Upon completion, students should be able to demonstrate knowledge and understanding of basic medical terms as they relate to veterinary medicine.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Recognize and properly define the root words, prefixes, suffixes, and terminals covered in this course

Objectives
Properly pronounce medical terms

Objectives
Spell medical terms accurately

Objectives
Apply medical terminology in relation to anatomy, physiology, diseases and medical procedures

VET123 - Veterinary Parasitology

Overview

Course Description
This course covers the common internal and external parasites of companion animals, livestock, selected zoo animals, and wild animals. Emphasis is placed on laboratory diagnosis of the most common forms of the parasite through fecal, urine, skin, and blood exams. Upon completion, students should be able to identify common parasites and discuss life-cycles, treatment and prevention strategies, and public health aspects of veterinary parasitology.

Course Typically Offered
Spring

Credit Hours
3

Requisites

Simple Requisites

Prerequisite

Type
Prerequisite

None Take VET-120;

Take VET-120(S14046);

Student Learning Outcomes

Learning Objectives

Objectives
Define parasitology and associated terminology applicable to it's study.

Objectives
Identify grossly and/or microscopically internal and external parasites of veterinary importance.

Objectives
Summarize in writing the common and scientific names, hosts, intermediate hosts, sites, and life cycles of common veterinary parasites.

Objectives
Outline pathogenesis, clinical signs and control of internal and external parasites.

Objectives
Perform diagnostic testing procedures on relevant patient samples.

Objectives
Identify zoonotic diseases and modes of transmission in the veterinary field as it applies to parasitology.

VET125 - Veterinary Diseases I

Overview

Course Description
This course introduces basic immunology, fundamentals of disease processes including inflammation, and common infectious diseases of animals and their prevention through immunization. Topics include fundamental disease processes, principles of medical therapy, immunologic processes, infections and zoonotic diseases of domestic animals, and prevention of disease. Upon completion, students should be able to describe basic disease and immunological processes, recognize infections and zoonotic diseases, and discuss prevention strategies.

Course Typically Offered
Spring

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Describe basic disease and immunological processes as they relate to body systems

Objectives
Identify clinical signs of common veterinary diseases

Objectives
Demonstrate disease prevention techniques through vaccination programs and disinfection

Objectives
Recognize common infectious diseases of domestic animals, including bacterial, fungal, and viral origins

Objectives
Identify zoonotic diseases and modes of transmision in the veterinary field

Objectives
Choose appropriate saftey protocols to avoid disease transmission

Objectives
Explain how to handle rabies suspects and samples safely

VET126 - Veterinary Diseases II

Overview

Course Description
This course is the study of basic disease processes and fundamentals of pathology, and other selected topics of veteranary medicine. Topics include histopathology, pathologic changes associated with common diseases of animals, necropsy procedures, and specimen handling. Upon completion, students should be able to describe basic pathologic changes associated with disease, recognize histopathologic changes, and properly perform collection and submission of necropsy specimens.

Course Typically Offered
Fall

Credit Hours
2

Take VET-125;

Student Learning Outcomes

Learning Objectives

Objectives
Explain how to handle rabies suspects and samples safely

Objectives
Identify clinical signs of common veterinary diseases

Objectives
Identify zoonotic diseases and modes of transmission in the veterinary field

Objectives
Distinguish key nutritional factors in diseases processes

Objectives
Describe basic pathological changes associated with common disease processes

Objectives
Recognize histopathologic changes

Objectives
Perform collection and submission of necropsy samples

VET127 - Vet Infectious & Parasitic Diseases

Overview

Course Description
This course covers the common internal and external parasites of various animal species, as well as basic immunology, fundamentals of disease processes, and common infectious diseases of animals and their prevention. Emphasis is placed on selected laboratory diagnosis of the most common forms of the parasite through fecal, blood, urine, and skin examination. Upon completion, students should be able to identify common parasites and discuss life-cycles, describe basic disease and immunological processes, recognize infections and zoonotic diseases, and discuss prevention strategies and parasite detection and disease diagnosis.

Credit Hours
3

VET131 - Veterinary Lab Techniques I

Overview

Course Description
This course includes the fundamental study of hematology, hemostasis, and urinalysis. Emphasis is placed on basic hematology and urinalysis techniques, manual skill development, instrumentation, quality control, and applications to veterinary science. Upon completion, students should be able to perform manual and automated CBCs, hemostatic assays, and complete urinalyses and maintain laboratory equipment and quality control.

Course Typically Offered
Summer

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Handle disposal of dead animals

Objectives
Perform the following diagnostic procedures: microhematocrit, CBC, manual and automated cell counts, hemostatic assays, urinalysis, and quality control tests

Objectives
Summarize the maintenance of laboratory equipment

Objectives
Identify and differentiate different blood cells microscopically

VET132 - Vet Diagnostics & Pathology I

Overview

Course Description
This course includes the fundamental study of hematology, hemostasis, and urinalysis. Emphasis is placed on basic hematology and urinalysis technique, manual skill development, instrumentation, quality control, and applications to veterinary science. Upon completion, students should be able to perform manual and automated CBCs, hemostatic assays, urinalyses, and maintain laboratory equipment and quality control.

VET134 - Veterinary Clinical Concepts I

Overview

Course Description
This course expands upon the knowledge base covered in the Clinical Practices sequence. Topics may include basic radiography, injectable and gas anesthesia, dentistry, instrument identification and care, sterile surgical technique, specimen collection and processing, and maintenance of patient records. Upon completion, students should demonstrate greater understanding of the foundational skills introduced in the Clinical Practices series.

Credit Hours
1

VET137 - Veterinary Office Practices

Overview

Course Description
This course is designed to teach basic administrative techniques, client communication skills, veterinary professional support services, and regulations pertaining to veterinary medicine. Topics include record keeping, telephone techniques, professional liability, office procedures, state and national regulatory laws, human relations, and animal welfare. Upon completion, students should be able to demonstrate effective communication techniques, office procedures, and knowledge of regulatory laws and issues relating to animal welfare.

Credit Hours
2

VET211 - Veterinary Lab Techniques II

Overview

Course Description
This course covers advanced hematology, serology, immunology, and clinical chemistry. Topics include advanced hematologic, serologic, and immunologic test procedures: manual and automated clinical chemistry procedures: laboratory safety: and quality control. Upon completion, students should be able to collect, prepare, and analyze serum and plasma samples and outline quality control and safety procedures.

Course Typically Offered
Fall

Student Learning Outcomes

Learning Objectives

Objectives
Summarize regulatory laws relating to veterinary medicne.

Objectives
Perform a complete urinalysis

Objectives
Identify blood parasites

Objectives
Perform coagulation tests

Objectives
Perform blood chemistry tests (BUN, glucose, common enzymes)

Objectives
Collect serum and plasma samples from patients

Objectives
Prepare serum and plasma samples for analysis

Objectives
Calculate erythrocyte indices

Objectives
Identify types of anemia

Objectives
Conduct appropriate quality control in the laboratory for all procedures

VET212 - Veterinary Lab Techniques III

Overview

Course Description
This course introduces the basic principles of microbiology, histology, and cytology. Emphasis is placed on collection of microbiological samples for culture and sensitivity and collection and preparation of samples for histological and cytological examination. Upon completion, students should be able to perform microbiological culture and sensitivity and evaluate cytology and histology specimens.

Course Typically Offered
Spring

Credit Hours
3

Take VET-214(S13177);

Student Learning Outcomes

Learning Objectives

Objectives
Collect microbiological samples for bacterial culture

Objectives
Culture both aerobically and anaerobically bacterial cultures

Objectives
Prepare microbiological samples for staining

Objectives
Collect microbiological samples for fungal culture

Objectives
Perform culture sensitivity testing

Objectives
Properly collect cytology and histology specimens

Objectives
Properly stain cytology and histology specimens

Objectives
Properly read cytology and histology specimens

Objectives
Prepare samples for histology shipment to diagnostic labs

Objectives
Prepare samples for cytology shipment to diagnostic labs

VET213 - Veterinary Clinical Practice II

Overview

Course Description
This course covers basic anesthetic techniques, sample collection, surgical assistance instrumentation and sterile techniques, patient record keeping, and introduces emergency care, cardiopulmonary resuscitation, radiology and dentistry skills. Topics include injectable and gas anesthesia, instrument identification and care, sterile surgical technique, specimen collection and processing, basic radiology and dentistry techniques and maintenance of patient records. Upon completion, students should be able to administer and monitor anesthesia, assist in surgical procedures, collect specimens, and maintain surgical records.

VET215 - Veterinary Pharmacology I

Overview

Course Description
This course covers drugs used in veterinary medicine, focusing on drug classification, methods of action, administration, effects, side effects, storage, and handling. Topics include medical math, pharmacokinetics, drug classes, dosage calculations, routes of medication administration, recognition of adverse reactions, and how to maintain pharmaceutical records and inventory. Upon completion, students should be able to accurately calculate medications and properly handle and document pharmaceutical materials.

Credit Hours
2

VET216 - Veterinary Pharmacology II

Overview

Course Description
This course expands upon drugs used in veterinary medicine, focusing on advanced drug classification, methods of action, administration, effects, side effects, storage, and handling. Emphasis is placed on advanced medical math, pharmacokinetics, client communication, and drug interactions. Students will learn dosage calculations, routes of medication administration, recognition of adverse reactions, and how to maintain pharmaceutical records and inventory. Upon completion, students will be able to accurately calculate medications and dilutions, and properly handle and document pharmaceutical materials.

VET237 - Animal Nutrition

Overview

Course Description
This course covers the principles of nutrition and their application to feeding practices of domestic, farm, and companion animals. Topics include basic nutrients and nutritional needs of individual species, proximate analysis, interpretation of food and feed labels, types of animal foods, and ration formulation. Upon completion, students should be able to select appropriate diets for animals in various stages of health and disease, analyze nutrition labels, and identify foods.

Course Typically Offered
Spring, Summer

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Summarize the general principles of nutrition and veterinary diets as they apply to the veterinary technician's role in practice

Objectives
Recognize different types of prescription veterinary diets and explain their usages with the management of various disease processes

Objectives
Identify different grains, hays, and forages used for livestock

Objectives
Calculate rations and caloric intake needs for common domestic species and their various life stages and energy requirements

Objectives
Interpret and analyze food and nutrition labels

Objectives
Discuss nutrition and obesity in pet populations as it relates to client education

Objectives
Identify common food toxins and poisonous plants as they relate to the care of common domestic species

VET240 - Veterinary Clinical Practicum

Overview

Course Description
This course provides students with hands-on, practical veterinary experience to expand their knowledge and develop proficiency in essential clinical skills. Emphasis is placed on completing a minimum of 240 cumulative contact hours in an approved clinical setting under the mentorship of a credentialed veterinary technician or licensed veterinarian. Upon completion, students will reinforce competency in assigned clinical tasks, adherence to professional standards, and completion of performance evaluations.

Demonstrate completion of measurable learning objectives

Objectives
Evaluate their work experience as it relates to their course of study

Objectives
Gain experience learning skills that relate to their course of study.Evaluate career selection.

WBL111R - Work-Based Learning I Audio & Visual Pro

Overview

Course Description
This course provides a work-based learning experience with a college-approved employer in an area related to the student's program of study. Emphasis is placed on integrating classroom learning with related work experience. Upon completion, students should be able to evaluate career selection, demonstrate employability skills, and satisfactorily perform work-related competencies.

1

WBL121V - Work-Based Learning II Audio & Video Pro

Overview

Course Description
This course provides a work-based learning experience with a college-approved employer in an area related to the student's program of study. Emphasis is placed on integrating classroom learning with related work experience. Upon completion, students should be able to evaluate career selection, demonstrate employability skills, and satisfactorily perform work-related competencies. Audio & Visual Production Technology Work-based Learning II

Credit Hours
1

WBL122P - Work-Based Learning II Laser & Photonics

Overview

Course Description
This course provides a work-based learning experience with a college-approved employer in an area related to the student's program of study. Emphasis is placed on integrating classroom learning with related work experience. Upon completion, students should be able to evaluate career selection, demonstrate employability skills, and satisfactorily perform work-related competencies. Laser & Photonics Technology Work-based Learning II

Credit Hours
2

WBL122 - Work-Based Learning II

Overview

Course Description
This course provides a work-based learning experience with a college-approved employer in an area related to the student's program of study. Emphasis is placed on integrating classroom learning with related work experience. Upon completion, students should be able to evaluate career selection, demonstrate employability skills, and satisfactorily perform work-related competencies.

Credit Hours
2

WBL131 - Work-Based Learning III

Overview

Course Description
This course provides a work-based learning experience with a college-approved employer in an area related to the student's program of study. Emphasis is placed on integrating classroom learning with related work experience. Upon completion, students should be able to evaluate career selection, demonstrate employability skills, and satisfactorily perform work-related competencies.

Credit Hours
1

WEB110 - Web Development Fundamentals

Overview

Course Description
This course introduces World Wide Web Consortium (W3C) standard markup language. Topics include creating web pages, responsive design, file transfer, deployment, accessibility, and other related W3C topics. Upon completion, students should be able to deploy a hand-coded website created using the HyperText Markup Language (HTML) and Cascading Style Sheet (CSS) standards.

Course Typically Offered
Spring, Summer

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate an understanding of Internet and Web Concepts.

Objectives
Use web browsers and web search tools effectively.

Objectives
Use HTML and CSS to design, develop, and hand-code Web pages and Web sites.

Objectives
Publish a Web site locally or through FTP.

WEB115 - Web Markup and Scripting

Overview

Course Description
This course introduces Worldwide Web Consortium (W3C) Internet programming using JavaScript. Topics include basic syntax, object-oriented programming, functions, variables, events, arrays, validation, accessibility, and web standards. Upon completion, students should be able to write, debug, maintain well-formed and well documented interactive web content using JavaScript code.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Develop Web pages using HTML5 and Cascading Style Sheets

Objectives
Add dynamic and interactive content to web pages using JavaScript

Objectives
Validate HTML forms using JavaScript

Objectives
Design, code and test scripts using the JavaScript programming language.

Objectives
Trace and debug scripts written in the JavaScript programming language.

WEB151 - Mobile Application Development I

Overview

Course Description
This course introduces students to programming technologies, design, and development related to mobile applications. Topics include accessing device capabilities, compliance with industry standards, and programming for mobile applications. Upon completion, students should be able to develop basic applications for mobile devices.

Course Typically Offered
Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Develop mobile applications using several platforms.

Objectives
Use Brackets or similar assistive text editing tools to develop mobile web sites.

Objectives
Convert mobile web sites to mobile applications.

Objectives
Use HTML, CSS and Javascript to develop mobile sites and apps.

Objectives
Demonstrate the jquery mobile library and its uses.

WEB214 - Social Media

Overview

Course Description
This course introduces students to social media for organizations. Topics include social media, marketing strategy, brand presence, blogging, social media analytics and technical writing. Upon completion, students should be able to utilize popular social media platforms as part of a marketing strategy, and work with social media analytics tools.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate the jquery mobile library and its uses.

Objectives
Identify various types of social media.

Objectives
To understand various types of social media and distinguish among their purposes.

Objectives
Determine the types of social media best suited for their business/organization based on the features of each.

Objectives
To utilize one or more types of social media for the student's business (or that one might apply for his future business).

Objectives
To understand and integrate social media into current and existing marketing campaigns.

Objectives
To decide whether or not to begin blogging with an understanding of the types of platforms available.

Objectives
Utilize tools that analyze, measure, and/or assist in understanding social media successes and value.

WLD110 - Cutting Processes

Overview

Course Description
This course introduces oxy-fuel and plasma-arc cutting systems. Topics include safety, proper equipment setup, and operation of oxy-fuel and plasma-arc cutting equipment with emphasis on straight line, curve and bevel cutting. Upon completion, students should be able to oxy-fuel and plasma-arc cut metals of varying thickness.

Course Typically Offered
Fall, Spring, Summer

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Identify the parts and functions of an oxy-acetylene cutting torch.

Objectives
Identify the parts and functions of various cutting equipment.

Objectives
List the safety practices of using oxy-fuel, plasma-arc, and other cutting equipment.

Objectives
Set-up and adjust cutting equipment.

Objectives
Use an oxy-acetylene outfit, plasma cutting equipment, and other equipment to: a.Cut a straight marked line on various thickness steel plate. b.Cut various shapes out of carbon steel plate. c.Cut carbon steel plate to a bevel and pipe.

WLD112 - Basic Welding Processes

Overview

Course Description
This course introduces basic welding and cutting. Emphasis is placed on beads applied with gases, mild steel fillers, and electrodes and the capillary action of solder. Upon completion, students should be able to set up welding and oxy-fuel equipment and perform welding, brazing, and soldering processes.

Course Typically Offered
Fall, Spring

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Set up oxy-acetylene torch kit using all applicable safety procedures.

Objectives
Perform oxy-acetylene gas welding, cutting, and brazing procedures.

Objectives
Select appropriate welding procedure, equipment, and rods for specific applications.

Objectives
Identify different types of metals and materials by appropriate methods.

WLD115 - SMAW (Stick) Plate

Overview

Course Description
This course introduces the shielded metal arc (stick) welding process. Emphasis is placed on padding, fillet, and groove welds in various positions with SMAW electrodes. Upon completion, students should be able to perform SMAW fillet and groove welds on carbon plate with prescribed electrodes.

Course Typically Offered
Fall

Credit Hours
5

Student Learning Outcomes

Learning Objectives

Objectives
Identify different types of metals and materials by appropriate methods.

Objectives
Demonstrate SMAW electrode classification in compliance with AWS codes.

Objectives
Perform a groove weld according to AWS D1.1.

Objectives
Demonstrate safe and proper SMAW equipment setup, operation, and shut-down practices in accordance to manufacturer's recommendations.

WLD115AB - SMAW (Stick) Plate

Overview

Course Description
This course introduces the shielded metal arc (stick) welding process. Emphasis is placed on padding, fillet, and groove welds in various positions with SMAW electrodes. Upon completion, students should be able to perform SMAW fillet and groove welds on carbon plate with prescribed electrodes.

Credit Hours
4

WLD115BB - SMAW (Stick) Plate

Overview

Course Description
This course introduces the shielded metal arc (stick) welding process. Emphasis is placed on padding, fillet, and groove welds in various positions with SMAW electrodes. Upon completion, students should be able to perform SMAW fillet and groove welds on carbon plate with prescribed electrodes.

Credit Hours
1

Requisites

Simple Requisites

Required concurrent or previous courses

Type
Prerequisite

Take WLD-115AB

Take WLD-115AB;

WLD116 - SMAW (stick) Plate/ Pipe

Overview

Course Description
This course is designed to enhance skills with the shielded metal arc (stick) welding process. Emphasis is placed on advancing manipulative skills with SMAW electrodes on varying joint geometry. Upon completion, students should be able to perform groove welds on carbon steel with prescribed electrodes in the flat, horizontal, vertical, and overhead positions.

Course Typically Offered
Fall, Summer

Credit Hours
4

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take WLD-115

Take WLD-115(S23304);

Student Learning Outcomes

Learning Objectives

Objectives
Perform welds in various positions using SMAW (stick) fillet and groove welds using various prescribed electrodes.

Objectives
Select appropriate welding procedure, equipment, and rods for specific applications.

Objectives
Set up electric arc welding machines using all applicable safety procedures.

Objectives
Perform proper material layout and preparation.

Objectives
Perform single-v groove welds in the 1G, 2G, 3G, and 4G weld positions on carbon plate with prescribed electrodes.

WLD117 - Industrial SMAW

Overview

Course Description
This course introduces the SMAW (stick) process for joining carbon steel components for industrial applications. Topics include padding, fillet, and groove welds in various positions with SMAW electrodes. Upon completion, student should be able to safely perform SMAW fillet and groove welds on carbon steel plate with prescribed electrodes.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Select appropriate welding procedure, equipment, and rods for specific applications.

Objectives
Set up electric arc welding machines using all applicable safety procedures.

Objectives
Perform SMAW fillet and groove welds on carbon plate with prescribed electrodes in all positions.

WLD121 - GMAW (MIG) FCAW/Plate

Overview

Course Description
This course introduces metal arc welding and flux core arc welding processes. Topics include equipment set up and fillet and groove welds with emphasis on the application of proper GMAW and FCAW consumables on carbon steel plate. Upon completion, students should be able to perform fillet welds on carbon steel with prescribed filler materials in the flat, horizontal, and overhead positions.

Credit Hours
4

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate the use of GMAW electrode classification in compliance with AWS code for the selection of electrodes.

Objectives
Perform a Fillet weld in accordance with AWS code.

Objectives
Perform a groove weld in accordance with AWS code.

Objectives
Demonstrate safe and proper GMAW equipment setup, operation, and shut-down practices in accordance to manufacturer's recommendations.

Objectives
Select appropriate welding procedure, equipment, and rods for specific inert gas welding applications.

Objectives
Set up inert gas welding machines using all applicable safety procedures.

Objectives
Perform inert gas welding procedures including electrode selection, amperage adjustments, joint selection and preparation for specific applications.

Objectives
Perform (MIG) GMAW & FCAW welding in flat, horizontal, vertical, and overhead positions.

Objectives
Identify different types of metals and materials by appropriate methods.

Objectives
Identify different types of metals and materials by appropriate methods.

WLD121AB - GMAW (MIG) FCAW/Plate

Overview

Course Description
This course introduces metal arc welding and flux core arc welding processes. Topics include equipment setup and fillet and groove welds with emphasis on application of GMAW and FCAW electrodes on carbon steel plate. Upon completion, students should be able to perform fillet welds on carbon steel with prescribed electrodes in the flat, horizontal, and overhead positions.

Course Typically Offered
Spring

Credit Hours
2

Student Learning Outcomes

Learning Objectives

Objectives
Perform a Fillet weld in accordance with AWS code.

Objectives
Perform a groove weld in accordance with AWS code.

Objectives
Demonstrate safe and proper GMAW equipment setup, operation, and shut-down practices in accordance to manufacturer's recommendations.

Objectives
Select appropriate welding procedure, equipment, and rods for specific inert gas welding applications.

Objectives
Set up inert gas welding machines using all applicable safety procedures.

Objectives
Perform inert gas welding procedures including electrode selection, amperage adjustments, joint selection and preparation for specific applications.

Objectives
Perform (MIG) GMAW & FCAW welding in flat, horizontal, vertical, and overhead positions.

Objectives
Identify different types of metals and materials by appropriate methods.

WLD121BB - GMAW (MIG) FCAW/Plate

Overview

Course Description
This course introduces metal arc welding and flux core arc welding processes. Topics include equipment setup and fillet and groove welds with emphasis on application of GMAW and FCAW electrodes on carbon steel plate. Upon completion, students should be able to perform fillet welds on carbon steel with prescribed electrodes in the flat, horizontal, and overhead positions.

Course Typically Offered
Fall

Credit Hours
2

Requisites

Simple Requisites

Recommended concurrent or previous courses

Type
Corequisite

Take WLD-121AB

Take WLD-121AB;

WLD131 - GTAW (TIG) Plate

Overview

Course Description
This course introduces the gas tungsten arc (TIG) welding process. Topics include correct selection of tungsten, polarity, gas, and proper filler rod with emphasis placed on safety, equipment setup, and welding techniques. Upon completion, students should be able to perform GTAW fillet and groove welds with various electrodes and filler materials.

Course Typically Offered
Fall, Spring

Credit Hours
4

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate the use of GTAW electrode classification in compliance with AWS for the selection of electrodes.

Objectives
Perform a groove weld in accordance with AWS code

Objectives
Perform a Fillet weld in accordance with AWS code

Objectives
Demonstrate safe equipment setup, operation, and shut-down practices according to manufacturer's recommendations.

Objectives
Select appropriate welding procedure, equipment, and rods for specific inert gas welding applications.

Objectives
Set up inert gas welding machines using all applicable safety procedures.

Objectives
Perform inert gas welding procedures including electrode selection, amperage adjustments, joint selection and preparation for specific applications.

Objectives
Perform (TIG) GTAW welding in flat, horizontal, vertical, and overhead positions.

Objectives
Identify different types of metals and materials by appropriate methods.

Objectives
Perform welds in various positions using GTAW (TIG) fillet and groove welds using various prescribed electrodes.

WLD132 - GTAW (TIG) Plate/ Pipe

Overview

Course Description
This course is designed to enhance skills with the gas tungsten arc (TIG) welding process. Topics include setup, joint preparation, and electrode selection with emphasis on manipulative skills in all welding positions on plate and pipe. Upon completion, students should be able to perform GTAW welds with prescribed electrodes and filler materials on various joint geometry.

Course Typically Offered
Spring

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take WLD-131

Take WLD-131(S23306);

Student Learning Outcomes

Learning Objectives

Objectives
Select appropriate welding procedure, equipment, and rods for specific inert gas welding applications.

Objectives
Set up inert gas welding machines using all applicable safety procedures.

Objectives
Perform inert gas welding procedures including electrode selection, amperage adjustments, joint selection and preparation fo specific applications.

Objectives
Perform (TIG) GTAW welding in flat, horizontal, vertical, and overhead positions.

WLD141 - Symbols and Specifications

Overview

Course Description
This course introduces the basic symbols and specifications used in welding. Emphasis is placed on interpretation of lines, notes, welding symbols, and specifications. Upon completion, students should be able to read and interpret symbols and specifications commonly used in welding.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Identify different types of metals and materials by appropriate methods

Objectives
Identify the different types of lines on a blueprint.

Objectives
Interpret destructive testing symbols and their methods.

Objectives
Interpret non-destructive testing symbols and their methods.

Objectives
Develop a working sketch.

Objectives
Create a bill of materials from a blueprint.

WLD151 - Fabrication I

Overview

Course Description
This course introduces the basic principles of fabrication. Emphasis is placed on safety, measurement, layout techniques, cutting, joining techniques, and the use of fabrication tools and equipment. Upon completion, students should be able to perform layout activities and operate various fabrication and material handling equipment.

Course Typically Offered
Fall, Spring

Credit Hours
4

Requisites

Simple Requisites

Prerequisite

Type
Prerequisite

Take 1 group; Take WLD-110 & WLD-115; Take WLD-110 & WLD-121; Take WLD-110 & WLD-131;

Take 1 group; # Take WLD-110(S23303) WLD-115(S23304); # Take WLD-110(S23303) WLD-121(S23305); # Take WLD-110(S23303) WLD-131(S23306);

Student Learning Outcomes

Learning Objectives

Objectives
Develop the ability to safely operate welding and fabrication equipment.

Objectives
Demonstrate the ability to perform measuring and layout activities.

Objectives
Learn how to safely operate band saws, ironworkers, drill presses, sheet metal shears, slip rollers, sheet metal brakes, and other fabrication equipment used in industry.

Objectives
Learn how to identify various material handling equipment and apply the skills necessary to safely use material handling equipment.

WLD215 - SMAW (stick) Pipe

Overview

Course Description
This course covers the knowledge and skills that apply to welding pipe. Topics include pipe positions, joint geometry, and preparation with emphasis placed on bead application, profile, and discontinuities. Upon completion, students should be able to perform SMAW welds to applicable codes on carbon steel pipe with prescribed electrodes in various positions.

Course Typically Offered
Spring

Credit Hours
4

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take One: WLD-115 or WLD-116

Take WLD-115(S23304) or WLD-116;

Student Learning Outcomes

Learning Objectives

Objectives
Perform fillet and single-v groove welds on carbon pipe.

Objectives
Select appropriate welding procedure, equipment, and rods for specific applications.

Objectives
Set up electric arc welding machines using all applicable safety procedures.

Objectives
Perform proper material layout and joint preparation.

Objectives
Perform single-v groove welds in the 1G, 2G, 5G, and 6G weld positions on carbon plate with prescribed electrodes.

WLD251 - Fabrication II

Overview

Course Description
This course covers advanced fabrication skills. Topics include advanced layout and assembly methods with emphasis on the safe and correct use of fabrication tools and equipment. Upon completion, students should be able to fabricate projects from working drawings.

Course Typically Offered
Spring

Credit Hours
3

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take WLD-151

Take WLD-151(S22456);

Student Learning Outcomes

Learning Objectives

Objectives
Practice safe and proper techniques to fabricate projects from working drawings.

Objectives
Develop the ability to perform advanced measuring and layout activities.

Objectives
Demonstrate safe and proper operation of welding and fabrication equipment in accordance to manufacturer's recommendations

WLD261 - Certification Practices

Overview

Course Description
This course covers certification requirements for industrial welding processes. Topics include techniques and certification requirements for prequalified joint geometry. Upon completion, students should be able to perform welds on carbon steel plate and/or pipe according to applicable codes.

Course Typically Offered
Fall, Spring

Credit Hours
2

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take All: WLD-115, WLD-121, and WLD-131

Take WLD-115(S23304) WLD-121(S23305) WLD-131(S23306);

Student Learning Outcomes

Learning Objectives

Objectives
Practice safe and proper techniques to fabricate projects from working drawings.

Objectives
Perform welds according to industry based certification tests using pre-qualified weld joint designs.

Objectives
Learn proper welding techniques and learn how to correct improper techniques when welding industry based certification tests.

WLD262 - Inspection & Testing

Overview

Course Description
This course introduces destructive and non-destructive testing methods. Emphasis is placed on safety, types and methods of testing, and the use of testing equipment and materials. Upon completion, students should be able to understand and/or perform a variety of destructive and non-destructive testing processes.

Course Typically Offered
Fall, Spring

Credit Hours
3

Student Learning Outcomes

Learning Objectives

Objectives
Use codes and proper testing symbols to perform welding test.

Objectives
Discuss shop safety with regards to testing methods.

Objectives
Demonstrate proper method to use dye penetrant.

Objectives
Demonstrate proper use of magnetic particle testing.

Objectives
Demonstrate ability to visually inspect weld quality and tolerances.

Objectives
Demonstrate destructive testing methods on pipe and plate.

Objectives
Demonstrate use and calibration of equipment.

Objectives
Demonstrate the use of weld quality gauges and tools.

WLD265 - Automated Welding/Cutting

Overview

Course Description
This course introduces automated welding equipment and processes. Topics include setup, programming, and operation of automated welding and cutting equipment. Upon completion, students should be able to set up, program, and operate automated welding and cutting equipment.

Course Typically Offered
Fall, Spring

Credit Hours
4

Requisites

Simple Requisites

State prerequisite

Type
Prerequisite

Take All: WLD-110 and WLD-121

Take WLD-110(S10913) WLD-121(S13138);

Student Learning Outcomes

Learning Objectives

Objectives
Demonstrate how to safely operate automated welding equipmen

Objectives
Identify safety requirements with regards to automated welding and cutting processes.

Objectives
Demonstrate how to safely cut metal using automated cutting equipment

Objectives
Demonstrate how to safely operate automated welding equipment
