About | History of ECPI

About ECPI

ECPI University is a private, multi-campus university that operates in Virginia, North Carolina, South Carolina, Florida, Texas, Georgia, and globally through the online delivery of its programs. The University has a compelling history, and our success is dependent upon the trust and confidence we have earned from students, employees, and the communities in which we operate.

ECPI University stands for East Coast Polytechnic Institute, signifying its origin and ongoing commitment to technological advancement in all fields of study.

ECPI University LLC is a Virginia limited liability company, whose principal place of business and principal office is located:

ECPI University	Phone:	(757) 671-7171
University Administration	Fax:	(757) 671-8661
5555 Greenwich Road	Email:	info@ecpi.edu
Virginia Beach, VA 23462	Website:	https://www.ecpi.edu/

Our History

Founded in Norfolk, Virginia in 1966, ECPI University demonstrated early on its commitment to forward-thinking, market-based curriculum, being among the first to offer classes in the growing field of computer programming.

From that point forward, ECPI University has pursued a path of sustained growth based on addressing the needs of students and employers while playing a key role in the mid-Atlantic's economic development.

The University eventually expanded its program offerings to include a variety of degrees in engineering technology, health sciences, nursing, business, and criminal justice. ECPI University also extended its reach by opening additional campuses and locations in Virginia, North Carolina, South Carolina, Florida, Texas, and through online programs. Degree programs at the associate, baccalaureate, and master's degree levels were added as well. Successful student outcomes, including high graduation rates and program-related employment, were considered of primary importance. These values continue to serve the institution, its students, and graduates.

TIMELINE	
1966	ECPI opened in Norfolk, Virginia.
1984	ECPI opened its second campus in Richmond, Virginia. (Subsequently, branches opened throughout Virginia, North Carolina, and South Carolina.)
1987	Main campus relocated to Virginia Beach, Virginia.
1992	Began offering degrees in Health Sciences.
1998	Became accredited by the Southern Association of Colleges and Schools Commission on Colleges to award associate degrees. (Contact the Commission on Colleges at 1866 Southern Lane, Decatur, Georgia 30033-4097 or call 404.679.4500 for questions about the accreditation of ECPI University.)
2004	Following reaffirmation of accreditation, ECPI was accredited by the Southern Association of Colleges and Schools Commission on Colleges to award baccalaureate degrees.
2005	Additional baccalaureate degree programs and the use of distance learning technology were approved by the Southern Association of Colleges and Schools Commission on Colleges.
2006	Program offerings were expanded to include Culinary Science, Dental Assisting, Medical Radiography, and Associate Degree in Nursing programs.
2011	Attained University status and accredited by the Southern Association of Colleges and Schools Commission on Colleges to offer a Master of Science Degree in Information Systems.
2013	Reviewed by Southern Association of Colleges and Schools Commission on Colleges and accreditation was reaffirmed. Next reaffirmation of accreditation review is scheduled for 2023.
2016	Lake Mary, Florida (Orlando) campus opened.
2019	San Antonio, Texas campus opened.
2023	Reviewed by Southern Association of Colleges and Schools Commission on Colleges and accreditation was reaffirmed. Next reaffirmation of accreditation review is scheduled for 2033.
2026	Atlanta, Georgia campus opened.

Throughout its history, ECPI has maintained a strong relationship with industry and employers. Program advisory boards regularly meet and provide valuable feedback regarding employer needs and industry trends. This feedback often translates into curriculum revisions that add value and help to make the University's programs more effective.

Tuition Guaranty Bond (North Carolina and South Carolina Only)

ECPI maintains tuition guaranty bonds of not less than $10,000 each for the Charlotte, Greensboro, and Raleigh, North Carolina campuses. The Charlotte bond is on file with the Clerk of Superior Court, Mecklenburg County; the Greensboro bond is on file with the Clerk of Superior Court, Guilford County; and the Raleigh bond is on file with the Clerk of Superior Court, Wake County; and may be reviewed by an appointment with the respective Campus President.

ECPI maintains a tuition surety bond of not less than $10,000 for the Charleston, Columbia, and Greenville, South Carolina campuses. The bonds are on file with the South Carolina Commission on Higher Education, License Division, and may be reviewed by an appointment with the respective Campus President.

Catalog Information

This Catalog contains information, policies, procedures, regulations and requirements that were correct at the time of publication and are subject to the terms and conditions of the Enrollment Agreement entered into between the Student and ECPI University. In keeping with the educational mission of the University, the information, policies, procedures, regulations and requirements contained herein are continually being reviewed, changed and updated. Consequently, this document cannot be considered binding. Students are responsible for keeping informed of official policies and meeting all relevant requirements. When required changes to the Catalog occur, they will be communicated through catalog addenda and other means until a revised edition of the Catalog is published.

The policies in this Catalog have been approved under the authority of the ECPI University Board of Trustees and, therefore, constitute official University policy. Students should become familiar with the policies in this Catalog. These policies outline student rights and responsibilities.

The University reserves the right and authority at any time to alter any or all of the statements contained herein, to modify the requirements for admission and graduation, to change or discontinue programs of study, to amend any regulation or policy affecting the student body, to increase tuition and fees, to deny admission, to revoke an offer of admission, and to dismiss from the University any student at any time, if it is deemed by the University to be in the best interest of the University, the University community, or the student to do so. The provisions of this publication are subject to change without notice and nothing in this publication may be considered as setting forth terms of a contract between a student or a prospective student and ECPI University.

The electronic Catalog is the official version as it is updated on a regular basis. A PDF Catalog is available for individuals who do not have access to the electronic Catalog. Information from older catalogs is available upon request by contacting accreditation@ecpi.edu. The following Catalog inserts are also available upon request:

- Catalog Insert E – Faculty and Key Personnel
- Catalog Insert F – Dental Assisting Handbook
- Catalog Insert G – Diagnostic Medical Sonography Handbook
- Catalog Insert I – Medical Radiography Handbook
- Catalog Insert J – Physical Therapist Assistant Handbook
- Catalog Insert K – Surgical Technology Handbook
- Catalog Insert L – Masters of Science in Nursing Handbook
- Catalog Insert M – Bachelor of Science in Nursing Handbook
- Catalog Insert N – Associate Degree in Nursing Handbook
- Catalog Insert O – Bachelor of Science in Nursing (Florida)
- Catalog Insert P – Practical Nursing Handbook
- Catalog Insert R – Emergency Medical Technician Handbook
- Catalog Insert S – Bachelor of Science in Nursing (Traditional Track) Handbook
- Catalog Insert T- Master of Science in Physician Assistant

Message from the President

Welcome to ECPI University!

At ECPI University, we understand the aspirations of people who want a direct route toward their career goals. Since 1966, ECPI has been offering career-oriented programs. A sound educational background, combined with hands-on experience, is required to meet the needs of an ever-changing and increasingly highly skilled society. As a student at ECPI University, you must take responsibility for your learning and personal development.

We invite you to learn from the full range of experiences that you will have, both inside and outside the classroom. We encourage you to remain open to new experiences and to new ideas and to pursue excellence while striving for your intellectual, professional, technical and personal goals. In addition, we ask you to contribute to the learning process of others. Every learner benefits when other learners share ideas, insights, and experiences in the classroom. We encourage respectful dialogue about differences in opinion and perspectives, as these are central to the learning process.

In all activities at the University, we expect students to behave responsibly and to communicate with honesty and integrity.

We encourage you to learn more about ECPI University and our programs to see how we may be able to help you achieve your educational goals.

Sincerely,

Mark B. Dreyfus
President
ECPI University

About | Campuses

ECPI University is a career-focused academic institution geared toward adult learners looking to earn their degrees, fast. We are conveniently located for a short commute from anywhere in the region.

Use the left-hand navigation to learn more about each campus or click a link below (organized by State).

Classrooms, Labs, Offices, and Equipment

Each campus and teaching location includes a variety of classrooms, labs, and equipment to meet the needs of students in the various program offerings. Instructional equipment is available according to the program curriculum so students can acquire an understanding of the kind of equipment they could expect to encounter in an entry-level position in their field. The equipment must be shared by students; accordingly, ECPI University cannot guarantee students hands-on use of the equipment beyond that called for in the curriculum. To complete the requirements of their programs, students may have to schedule use of the equipment outside normal class hours. Equipment may be used for class assignments only.

Virginia Beach, VA - Main Campus

Virginia Beach is the main campus of ECPI University and offers associate, bachelor's and master's degree programs in a student-centered environment that promotes hands-on learning, schedule flexibility, and frequent faculty/student interaction. Equipment currently found on the job is utilized to further enrich student learning and valuable student learning resources are also available. Day, evening, and weekend classes are available for resident, online and hybrid classes.

ECPI Virginia Beach is nestled in the heart of Hampton Roads off of Newtown Road with a short drive to neighboring cities of Norfolk, Chesapeake, and Portsmouth. The Virginia Beach Campus has several off-campus locations that are conveniently located near Newtown Road and Interstate 264. These locations provide free student parking. Student housing assistance is also available.

Virginia Beach is home to some of the country's largest military installations, Norfolk Naval Base and Naval Air Station Oceana. Students are minutes from the beautiful beaches of the Virginian Beach oceanfront and exciting fishing of the Chesapeake Bay. The location is close to Virginia Beach's Town Center which offers diverse dining and shopping options.

ECPI's Online programs offer the same high quality education received by students in our traditional classrooms, ensuring students are provided with the education they need to keep in step with today's technology-based workplace.

Atlanta, GA, Campus

The ECPI University Atlanta campus is located in the Chattahoochee Bluffs neighborhood on Towercreek Parkway SE. With a variety of dining and retail options nearby, the campus offers students both convenience and accessibility. Atlanta embodies a unique blend of Southern hospitality and modern innovation, providing students with a dynamic environment for learning and growth. From the eclectic culture of Little Five Points to renowned attractions such as the Georgia Aquarium, the city offers rich cultural and recreational experiences.

ATLANTA - COLLEGE OF TECHNOLOGY		
3101 Towercreek Parkway SE		
Atlanta, Georgia 30339		
(770) 874-4441		

Classrooms, Labs, Offices, and Equipment

The Atlanta campus encompasses 15,681 square feet within a professional office building and is designed to support a wide range of academic programs. The facility includes nine classrooms: five lecture spaces equipped with PCs and laptop connectivity, two nursing skills laboratories that replicate real-world clinical environments, a cybersecurity laboratory that provides computers, network devices, and simulation software arranged in collaborative pods, and an Electronics/Mechatronics laboratory that features computers, circuit stations, instrumentation equipment, and specialized simulation tools. In addition, students also have access to a library and learning resource center. Administrative space consists of offices for admissions, financial services, career services, the campus president, and other student support staff. This ensures that students receive comprehensive academic and student services in addition to hands-on technical training.

Charleston, SC, Campus

ECPI Charleston is located on Paramount Drive in North Charleston, South Carolina (I-526 at exit 15 for Dorchester Road). Charleston is one of the East Coast's hottest tourist attractions because of the rich history and beautiful beaches. Fill your weekends with a trip to Fort Sumter, the South Carolina Aquarium, or touring the historic homes.

3800 Paramount Drive		
North Charleston, SC 29405		
(843) 414-0350		

Classrooms, Labs, Offices, and Equipment

The facility of ECPI University Charleston is housed on 2 floors and has 50,000 square feet of space. The space contains a total of 23 classrooms which include 1 electrical engineering technology lab, 5 nursing simulation labs, 2 science labs, and 15 combined classrooms and labs. Additional rooms include a student lounge, a conference room, a student break room, and administrative offices.

About | Campuses

Charlotte, NC, Campus

The Charlotte campus is located in the bustling metropolis of Charlotte on Airport Center Parkway, near the Charlotte-Douglas International Airport and Billy Graham Parkway. Charlotte is known for its southern hospitality and business opportunities, with a significant number of Fortune 500 companies in the area. Charlotte also provides a wide variety of social activities through numerous cultural fairs, Charlotte Hornets NBA team and Carolina Panthers NFL team, museums, parks and the National Whitewater Center. Charlotte offers students extravagant dining, shopping, and a big city feel.

Classrooms, Labs, Offices, and Equipment

The facility of ECPI University Charlotte has fourteen classrooms, twelve computer labs, one science lab, two nursing simulation labs, two break rooms, two testing rooms, and two conference rooms. The two-story facility is approximately fifty thousand square feet.

About | Campuses

Columbia, SC, Campus

The Columbia Campus is located one-half mile down the frontage road (Berryhill Road) off Bush River Road and is located in the area of South Carolina referred to as the “Midlands.” Located in the center of the state, the location is a short drive from both the Atlantic Ocean or, in the other direction, the Appalachian Mountains.

Columbia has a number of recreational opportunities including boating and fishing on Lake Murray, a 50,000 acre man-made lake with over 500 miles of shoreline. Lake Murray is a natural wonder to explore and a true fisherman’s challenge, hosting numerous professional fishing tournaments annually.

COLUMBIA - COLLEGE OF HEALTH SCIENCE | COLLEGE OF NURSING | COLLEGE OF TECHNOLOGY		
250 Berryhill Road #300		
Columbia, SC 29210		
(803) 772-3333		

Classrooms, Labs, Offices, and Equipment

The ECPI University facility in Columbia, SC is contained on the third floor of a multi-floored building, and comprised of 24,928 square feet of space. The campus includes 15 classrooms, which incorporate 2 electrical engineering technology labs, 3 nursing simulation labs, and 10 science labs. Additional rooms consist of a library, a conference room, a student break room, and administrative and faculty offices.

Greensboro, NC, Campus

The Greensboro campus is located on Premier Drive, conveniently situated near major roadways connecting High Point, Greensboro, and the surrounding Triad area. Students can enjoy nearby attractions such as High Point City Lake Park, the High Point Museum, and a variety of shopping, dining, and entertainment options throughout the Piedmont Triad.

The Greensboro location is active throughout the Piedmont Triad area of North Carolina. ECPI is a member of the Chambers of Commerce of the nine surrounding counties. Through a semi-annual Community Resource Fair, community organizations are invited to campus to discuss opportunities for students.

GREENSBORO - COLLEGE OF HEALTH SCIENCE | COLLEGE OF NURSING | COLLEGE OF TECHNOLOGY		
3975 Premier Drive		
High Point, NC 27265		
(336) 792-7594		

Classrooms, Labs, Offices, and Equipment

The facility of ECPI University Greensboro is housed in a one-story building with approximately 31,000 square feet. There is a large fountain in front of the building, many trees, and parking on three sides. The campus contains a library, a student break room, two electrical engineering technology labs, two medical assisting labs, two nursing labs, one science lab, and fifteen classrooms equipped with student computers, an instructor computer and LCD projectors in each room. Additionally, the campus houses a front lobby, two testing rooms and administrative offices.

About | Campuses

Greenville, SC, Campus

ECPI Greenville is located off of Keys Drive. Greenville, South Carolina offers residents southern living at its finest with lots of outdoor recreation, hospitality, and great festivals and downtown events, including Fall for Greenville and Artisphere. The Greenville Zoo and many public parks provide great opportunities to enjoy the outdoors.

Lake Mary, FL, Campus (Orlando)

ECPI University Orlando and its College of Nursing are located in the charming City of Lake Mary, one of the fastest-growing communities in Central Florida. Located just north of Orlando on Interstate 4, Lake Mary offers all the conveniences of the metropolitan area minus the traffic and congestion. From its many employment opportunities and excellent schools to outdoor fun and entertainment, Lake Mary offers a small-town feel that makes it an ideal location to attend nursing school. This campus boasts modern classrooms with advanced clinical simulation laboratories, equipped with a variety of human patient simulators and medical equipment designed to help nursing students master the practical, decision-making, and problem-solving skills required in the nursing environment.

Classrooms, Labs, Offices, and Equipment

The facility of ECPI University Orlando (Lake Mary), Florida campus consists of 19,200 square feet of leased space in a multi-tenant single story building located at 660 Century Point, Lake Mary, Florida.

The physical location of the campus consists of 19,200 square feet of leased space in a multi-tenant single story building located at 660 Century Point, Lake Mary, Florida.

The campus incorporates both a wired and wireless computer network, for the use of both personal computers and laptops, administered by its own server. Six desktop computers are available in the library for student use. The campus has approximately 80 laptops that are available for student testing and student use in addition to the desktop computers provided in the library. All tables in the classrooms, labs, and library contain both power and data outlets.

The campus has two large combination classroom/labs and one larger classroom. Each of the classroom/labs contains at least 68 desk spaces for students. All student desk seating locations have both electrical power and data connections.

Classroom Lab 1 is approximately 50 x 58 feet and contains ten hospital beds with bedside tables and cabinets, low-fidelity, and medium-fidelity mannequins, as well as other necessary equipment. These mannequins and simulators can be used for various clinical tasks, including indwelling catheter insertion, naso-gastric tube insertion, wound care, assessment skills, and many other clinical tasks. There are currently 16 of these mannequins and simulators available for student instruction and training.

Classroom Lab 2, is 50 x 58 feet and contains six hospital beds with bedside tables and cabinets, low fidelity, medium-fidelity, and high-fidelity mannequins, as well as necessary equipment. These spaces simulate a hospital environment that, in addition to the hospital beds, contains individual headboards with simulated air and gas lines.

The larger dedicated classroom is approximately 58 x 56 feet in size, seats approximately 74 students and is outfitted with a multimedia cart, two mounted LCD projectors, and two large dry erase boards.

The campus also has a large Simulation Center which is approximately 32 x 52 feet in size and contains four hospital beds, four stretchers, bedside tables and cabinets, high-fidelity mannequins, a debriefing area and necessary supplies.

The facility has 14 private offices available for use by faculty and staff. There is also a large open area, approximately 1,800 square feet. Admissions, Student Finance, Student Records, and the Library have allotted office spaces. Also, there are two larger executive-type offices, one for the Program Director and the other for the Campus President, with an executive assistant's office located between them.

One conference room (seating for 10-12) is available for faculty and student use. There is a small student lounge area near the rear entrance to the facility with vending machines, a refrigerator/freezer, microwave, coffeemaker, etc.

Parking is readily available with 169 parking spaces designated for the campus. Three parking spaces are designated as handicapped parking.

About | Campuses

Raleigh, NC, Campus

The Raleigh campus is located in the capital city of North Carolina and is surrounded by three prominent cities referred to as the Triangle: Raleigh, Durham and Chapel Hill. This area is known for academia, medicine, and technology. Within a few hours' drive students can reach the beach or mountains. Raleigh offers exciting attractions such as a professional hockey team, the Carolina Hurricanes, and great college football and basketball teams. Raleigh's local shopping, dining and theatre are also outstanding.

The faculty and students of ECPI Raleigh are very active in the community supporting causes like the American Cancer Society Relay for Life, Susan G. Komen Foundation, the Food Bank, United Way, and Kramden Institute.

Mission and Core Values

Our Mission

ECPI University provides a student-centered learning environment that promotes the enhancement of each student's professional and personal life through education.

Our Core Values

ECPI University delivers high quality education and student services, and we are committed to the following four Core Values.

Excellence in academics.

- Curriculum designed to foster life-long learning and educational excellence by reinforcing critical thinking, teamwork, problem-solving, and communication skills
- Industry-relevant programs maintain rigorous academic standards and are complemented by robust student support services
- Hands-on, applied learning complements a strong theoretical foundation that prepares our graduates for the workplace

- Qualified faculty are academically credentialed, and their industry experience enriches the student's classroom experience

Commitment to students.

- Selective admissions process ensures that incoming students make informed decisions regarding their educational investment and are prepared for postsecondary education
- Dedicated professionals support the student experience and facilitate the achievement of individual student success
- Meaningful internship experiences and opportunities for graduate employment are available as a result of our long-standing employer partnerships
- Rigorous institutional effectiveness process promotes continuous improvement of the University

Professionalism in action.

- Professional appearance, punctuality, attendance, and other behaviors that are appropriate to professional environments are valued and reinforced
- Professional, civic, and ethical behaviors are promoted through the examples set by faculty and staff
- Student-centered learning environment simulates the workplace and encourages collaboration to accomplish common goals
- Opportunities for students to demonstrate professionalism by participating in on-site employer interviews, networking, and professional events including career fairs

Innovation in Education.

- Extensive use of technology is encouraged to enhance each student's university experience
- Convenient, year-round schedules allow graduates to complete their programs in a timely manner
- Input is routinely sought from the dynamic communities we serve
- Multiple approaches are encouraged to reach educational outcomes and maximize student success

Accreditation and Approvals

Navigate additional accreditation and licensure sections using the menu to the left.

Institutional Accreditation

ECPI University is accredited by the Southern Association of Colleges and Schools Commission on Colleges (SACSCOC) to award associate, baccalaureate, and master's degrees. ECPI University also offers credentials such as certificates and diplomas at approved degree levels. Questions about the accreditation of ECPI University may be directed in writing to the Southern Association of Colleges and Schools Commission on Colleges at 1866 Southern Lane, Decatur, GA 30033-4097, by calling (404) 679-4500, or by using information available on SACSCOC's website (https://www.sacscoc.org/).

ECPI University's accreditation status includes all campuses. ECPI University's accreditation is dependent on the continued accreditation of the parent campus located in Virginia Beach, Virginia. All campus sites, regardless of location or mode of delivery, are evaluated during reviews for the reaffirmation of accreditation. All other extended sites under the accreditation of the parent campus are also evaluated during such reviews.

Accreditation Liaison

The ECPI University accreditation liaison for the Southern Association of Colleges and Schools Commission on Colleges is John Olson (email: jolson@ecpi.edu).

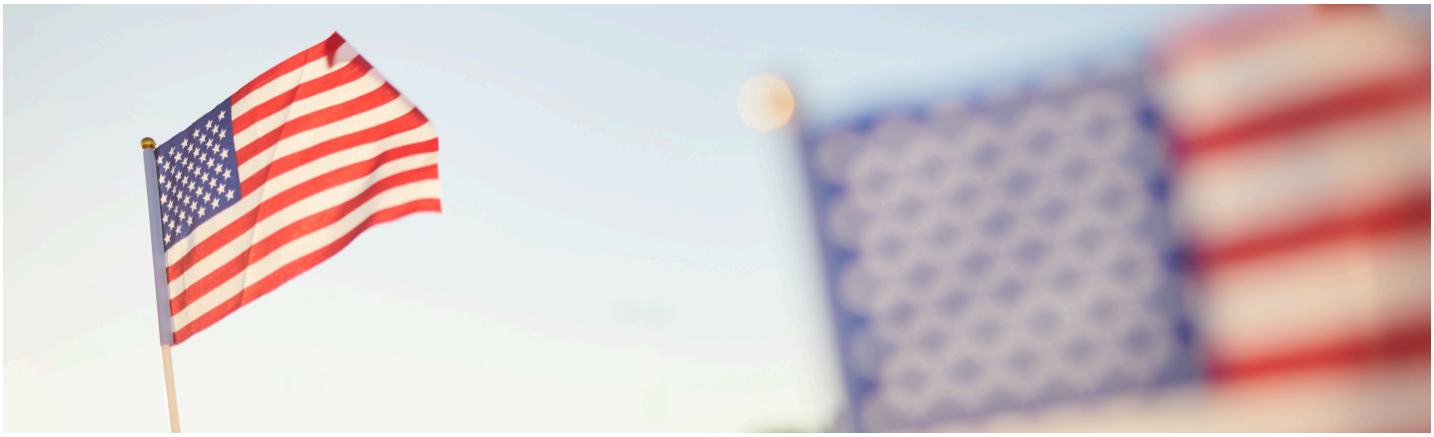

Navigate our state licensure and approvals, programmatic accreditation, and reciprocity agreements using the menu to the left.

Other University Approvals and/or Eligibilities

ECPI University is...

- eligible to participate in federal Title IV financial aid programs administered by the U.S. Department of Education.
- approved for the training of veterans and other eligible persons.
- an eligible institution to train students under the sponsorship of the Department of Vocational Rehabilitation.
- authorized under federal law to enroll nonimmigrant alien students at ECPI University campuses in Newport News, VA; Northern Virginia, VA; Raleigh, NC; and Virginia Beach, VA.
- designated as a Center of Academic Excellence in Cyber Defense (CAE-CDE) by the National Security Agency (NSA).

State Licensure

State Licensure

Florida

ECPI University is licensed by the Commission for Independent Education, Florida Department of Education. Additional information regarding this institution may be obtained by contacting the Commission at 325 West Gaines Street, Suite 1414, Tallahassee, FL 32399-0400, toll-free telephone number (888) 224-6684.

Georgia

ECPI University is authorized by the Georgia Nonpublic Postsecondary Education Commission, 2082 East Exchange Place, Tucker, GA 30084, telephone (770) 414-3300, https://gnpec.georgia.gov. The Commission serves as the official state entity to receive complaints concerning postsecondary institutions that are authorized to operate in Georgia. If students are unable to resolve a complaint through the institution's grievance procedures, they can review the Complaints Against an Institution policy and submit their complaint at https://gnpec.georgia.gov/student-resources/complaints-against-institution.

North Carolina

ECPI University is licensed by the Board of Governors of the University of North Carolina to award degrees.

The State Authorization Unit of the University of North Carolina System Office serves as the official state entity to receive complaints concerning post-secondary institutions that are authorized to operate in North Carolina. If students are unable to resolve a complaint through the institution's grievance procedures, they can review the Student Complaint Policy (PDF) and submit their complaint using the online complaint form at https://studentcomplaints.northcarolina.edu/form.

For more information contact:

Accrediting Commission of the American Culinary Federation Education Foundation (ACACFEF)

The AAS in Culinary Arts degree is accredited by the Accrediting Commission of the American Culinary Federation Education Foundation (ACF) at the following ECPI University locations in Virginia: Norfolk and Newport News. This is a programmatic accreditation by ACF, a specialized accreditation agency for postsecondary educational programs in culinary arts and baking and pastry arts. For more information, visit https://www.acfchefs.org/.

ACF requires assessment outcomes data to be available for all accredited programs, which can be found by clicking here.

American Culinary Federation
180 Center Place Way
St. Augustine, Florida 32095
Telephone: (940) 824-4468

Accreditation Review Commission on Education for the Physician Assistant (ARC-PA)

The ARC-PA has granted Accreditation-Provisional status to the ECPI University Physician Assistant Program sponsored by ECPI University.

Accreditation-Provisional is an accreditation status granted when the plans and resource allocation, if fully implemented as planned, of a proposed program that has not yet enrolled students appear to demonstrate the program's ability to meet the ARC-PA Standards or when a program holding Accreditation-Provisional status appears to demonstrate continued progress in complying with the Standards as it prepares for the graduation of the first class (cohort) of students.

Accreditation-Provisional does not ensure any subsequent accreditation status. It is limited to no more than five years from matriculation of the first class. The program's accreditation history can be viewed on the ARC-PA website at https://www.arc-pa.org/accreditation-history-ecpi-university/

Commission on Collegiate Nursing Education (CCNE)

The baccalaureate degree program in nursing at ECPI University Orlando, Florida campus is accredited by the Commission on Collegiate Nursing Education (https://www.ccneaccreditation.org/).

The master's degree program in nursing at ECPI University Virginia Beach, Virginia campus is accredited by the Commission on Collegiate Nursing Education (https://www.ccneaccreditation.org/).

The baccalaureate degree program in nursing at ECPI University Virginia Beach, Virginia campus is accredited by the Commission on Collegiate Nursing Education (https://www.ccneaccreditation.org/).

The baccalaureate degree program in nursing at ECPI University Northern Virginia, campus is accredited by the Commission on Collegiate Nursing Education (https://www.ccneaccreditation.org/).

The baccalaureate degree program in nursing at ECPI University Richmond, Virginia campus is accredited by the Commission on Collegiate Nursing Education (https://www.ccneaccreditation.org/).

Commission on Accreditation in Physical Therapy Education (CAPTE)

The Physical Therapist Assistant program at ECPI University (Newport News and Richmond/ Emerywood, Virginia campuses and Lake Mary, Florida campus) is accredited by the Commission on Accreditation in Physical Therapy Education (CAPTE), 3030 Potomac Ave., Suite 100, Alexandria, Virginia 22305-3085; telephone: (703) 706-3245; email: accreditation@apta.org; website: https://www.capteonline.org/. If needing to contact the program/institution directly, please call (757) 490-9090 or email PTADirector@ecpi.edu.

Joint Review Committee on Education in Radiologic Technology (JRCERT)

National Council for State Authorization Reciprocity Agreements

ECPI University is an institutional participant in the National Council for State Authorization Reciprocity Agreements (SARA). SARA is an agreement among member states, districts, and territories that establishes comparable national standards for interstate offering of post-secondary distance education courses and programs. It is intended to make it easier for students to take online courses offered by post-secondary institutions based in another state. A directory of SARA states and institutions can be found at the following link: https://www.nc-sara.org/directory.

Note on student complaint resolution process: ECPI University's Student Grievance Procedures can be found in the Catalog's Student Grievance Procedures section. These procedures are applicable to all students, including those taking distance education under the aegis of the State Authorization Reciprocity Agreement (SARA).

All students are first encouraged to seek and exhaust resolution of grievances/complaints with University officials or through the anonymous third-party system. If those processes do not resolve the issues, ECPI recognizes that in all matters related to SARA, any student may then communicate a grievance/complaint directly to the State Council of Higher Education for Virginia (SCHEV), as noted below.

Complete a Student Complaint Form from https://www.schev.edu/students/resources/student-complaints and submit the form to:

State Council of Higher Education for Virginia (SCHEV)
Private and Out-of-State Postsecondary Education (POPE)
101 N. 14th Street, 9th floor
James Monroe Building
Richmond, VA 23219
Telephone: (804) 371-2285 Fax: (804) 225-2604

Academic Resource Partnership

ECPI University has the following approved academic resource partnerships:

APPROVED ACADEMIC RESOURCE PARTNERSHIPS	
AWS Academy Member	Provides higher education institutions with cloud computing tools and information that prepares students to pursue in-demand cloud jobs.
CAE Center for Academic Excellence	A federally funded program that works with colleges and universities to train cybersecurity professionals.
CISCO Networking Academy	A global program that offers IT and cybersecurity education for individuals and learning institutions.
CompTIA Academic Partner	Provides valuable tools and resources to assist schools in recruiting, training, certifying and upgrading the skills of their students in IT.
EC-Council Academia	Provides educational content and technologies to institutions that focus on Cybersecurity education.
Oracle Academy	Prepares students for successful technology careers with knowledge, hands-on practice, and career-relevant skills.

Master Calendar

Our university operates on a dynamic academic calendar designed to accommodate the diverse needs of our student body across various campuses. This Master Calendar provides detailed scheduling information for our five-week terms and twelve-week quarters (which apply only to our Orlando, Florida Campus), ensuring that students, faculty, and staff are well-informed of important dates throughout the academic year.

We encourage all students to regularly consult the Master Calendar to plan their academic and personal commitments effectively, ensuring a successful and well-balanced educational experience.

Master Calendar

Welcome to the Academic Policies Section

Navigate the academic policies section using the menu to the left, or choose from the following additional policy categories below:

- Admissions Policies
- Financial Aid Policies
- Student Conduct Policies
- University Policies

Welcome to our university's Academic Policies Catalog section. The academic policies in this section apply to all students attending ECPI University. Here, you will find comprehensive guidelines that govern the academic standards and procedures within our institution. These policies ensure that all students, faculty, and staff are aligned with our commitment to academic excellence, integrity, and equity. Whether you are seeking information on course loads, academic freedom, scheduling, or the add/drop period, this section provides the necessary framework to navigate your academic journey. We encourage you to familiarize yourself with these policies to fully understand the expectations and resources available to you as a member of our academic community.

Students pursuing health science programs at the ECPI University College of Health Science/College of Nursing must also refer to their program handbook for additional policies. The following health science programs have program-specific policy handbooks:

- AASDA
- AASDMS
- AASEMS
- AASMR

- DPN
- ADN
- BSN
- BSBSN
- MSN-FNP
- MSN-NE
- RNBSN
- AASPTA
- MSPA
- AASST

ECPI University reserves the right to make changes at any time to academic programs. Updates and changes in policies and procedures may occur during your studies at ECPI University. Changes that may materially affect all students in your program of study, including any changes as to your financial obligations, graduation requirements, or substantial changes in curriculum, will be communicated by official notification to your ECPI University email account which all students are expected to monitor, and will additionally be posted in the Learning Management System accessed in your courses and distributed in class. A signature acknowledgment may be requested for significant policy changes. If your program of study includes a program-specific policy handbook, pertinent changes in instructional policies or procedures will additionally be communicated to you via addendums to the handbook.

To support student success on licensure where applicable, and employability as you near graduation, some courses include score requirements on a predictor, preparatory exam, or other comprehensive test. If there is a change to a course requirement, such as a change in the required score, the University will notify you at least one semester in advance, and this advance notice will be delivered to all affected students' ECPI University email accounts, the Learning Management System, and distributed in class.

If a policy change is necessitated by external parties such as programmatic accrediting agencies, state agencies, or to meet any regulatory requirements, students in the affected program will also be provided notice of the change through notification to your ECPI University email account, the Learning Management System, and distributions in class with new or revised requirements and the effective date.

Certain substantive program, policy or procedure changes are intended to apply only to new students, with currently enrolled students in good standing grandfathered. However, if a student changes their program or has a break in attendance, all current policies in place at the time are required, except when military orders or other hardships apply. Students that change programs, and are therefore subject to a change in tuition rates, will be asked to accept any such changes in the terms of their Enrollment Agreement and will be asked to sign a new Enrollment Agreement.

Academics Policies

Academic Calendar/Year Definition

The University operates on a semester system and instruction is typically offered in five-week terms. Three consecutive five-week terms comprise a student's semester. The ECPI academic year is 24 semester credits and 30 weeks.

The Accelerated Bachelor of Science in Nursing and the Master of Science in Nursing at the Orlando campus operate on a quarter system and instruction is typically offered in twelve-week quarters. Three quarters and 36 quarter credits constitute an academic year.

A week is defined as seven consecutive calendar days beginning on Monday at 12:00 a.m. Eastern Time and ending on Sunday at 11:59 p.m. Eastern Time. Based on the University's calendar, a term ends on Sunday at 11:59 p.m. Eastern Time of the fifth week. All coursework must be completed and submitted by the term end date, or as otherwise required by faculty.

A week for the Accelerated Bachelor of Science in Nursing and Master of Science in Nursing at the Orlando campus is defined as seven consecutive calendar days beginning on Monday at 12:00 am Eastern Time and ending on Sunday at 11:59 pm Eastern Time. Based on the University's calendar, a term ends on Saturday at 11:59 pm Eastern Time of the twelfth week. All coursework must be completed and submitted by the term end date, or as otherwise required by faculty.

Academics Policies

Academic Course Loads

To complete the program requirements in a timely manner, students must carry a minimum load of 12 semester credit hours and a maximum of 18 semester credit hours per semester. This course load is considered full time.

The following minimum course loads apply to undergraduate students:

Full time students:	at least 12 semester credit hours	
Three-quarter time students:	at least 9 semester credit hours	
Half-time students:	at least 6 semester credit hours	

The maximum course load recommended for students is six credit hours (approximately two classes) per term; however, Career Orientation (COR090 Career Orientation Seminar, COR101 Freshman Orientation, COR191 Career Orientation) may be taken as a third course without being considered an overload.

Taking an academic overload is highly discouraged; however, a student can request additional courses on a limited, case-by-case basis. To be considered for an academic overload, the student must meet the following criteria:

- Completed at least 18 semester hours
- Earned at least a 3.2 GPA
- Submitted the Academic Overload Request Form

If the student seeks to enroll in an online course as part of the overload, the student must demonstrate competency within the online environment by either satisfactorily completing the online orientation or by demonstrating successful completion of a previous online course.

Students who take an academic overload consisting of more than two courses in a term may reduce their eligibility for financial aid assistance in future semesters, which may result in greater out-of-pocket expenses. There will be an additional charge in the semester that the overload course is taken if the student takes more than 18 credits. Therefore, each student is responsible for checking with the Financial Aid office to determine the impact of schedule changes.

Graduate Course Load

Classes are scheduled on a fixed-term, semester credit hour basis. For financial aid and academic progress purposes, an academic year is 30 weeks and 18 graduate credits. Full-time graduate students may take no more than nine semester credit hours per semester. Enrollment status changes may affect the financial aid eligibility of students. Students are responsible for checking with the Financial Aid office to determine the impact of schedule changes. ECPI reserves the right to adjust class schedules to best meet student needs, faculty, classroom, equipment, parking, and facility availability.

Due to the workload required for classes there are no course overloads permitted at the graduate level.

Academics Policies

Academic Freedom

ECPI University supports the freedom of the faculty and students to exchange ideas, examine all aspects of issues, and question assumptions in order to develop the skills and understanding necessary for graduates to qualify for employment in appropriate occupations and to assume positions as responsible members of a democratic society. The ECPI University Board of Trustees requires the exercise of responsible judgment to ensure academic freedom at the University.

Academics Policies

Academic Scheduling

A student may begin most programs during any semester; restrictions typically apply in programs in which a maximum number of students is specified. The required courses, course prerequisites, and clinical requirements where applicable, may be found in each program's description in the Program section of the Catalog.

ECPI University seeks to graduate students on a timely basis. In an effort to assist students as they progress toward graduation, a combination of on-campus, online, remote synchronous, and hybrid classes are provided. All students will be scheduled for a full-time course load each semester, unless other arrangements are made in advance or other circumstances intervene. Low enrollments or other factors may require the school to cancel or reschedule on-campus courses. In addition, some courses may not be offered on-campus within an academic year. Students who need courses that are not available on-campus may choose to take courses delivered online or in a hybrid format, if available.

ECPI reserves the right to adjust class schedules to meet student needs and the availability of faculty, classroom, equipment, parking, and facilities.

Academics Policies

Add/Drop Period

The add/drop period refers to the period of time during which a student may add, drop, or re-enroll late in a given term without academic penalty. Add/drops may occur only during Week 1 of the current term. Students who wish to add/drop classes must consult with the Academic Program Director prior to making any schedule changes. Depending on the class size and/or schedule, changes to an individual student’s schedule may not be possible.

Academics Policies

Attendance

Click on the following sections related to attendance policies and program specific attendance policies (see page 63 in the PDF)

Attendance Policies

- Graduate Student Attendance
- Dental Assisting | AAS
- Diagnostic Medical Sonography | AAS
- Emergency Medical Services (EMS) Certification Program
- Medical Assisting | AAS and Diploma
- Medical Radiography | AAS
- Nursing | ADN
- Nursing | BS to BSN (Orlando)

- Nursing | MSN
- Nursing | PN Diploma
- Nursing | RN to BSN
- Physical Therapist Assistant | AAS
- Radiologic Sciences | BS

Academics Policies

Awards and Recognitions

Awards are periodically presented to undergraduate students for academic achievement. These awards become part of a student's permanent record that is available for release to prospective employers.

Dean's List. A student may be named to the Dean's List for exceptional academic performance during each standard semester. The student must be enrolled at least three-quarter time for the three terms and have achieved a minimum Cumulative Grade Point Average (CGPA) of 3.7 for those same three terms.

Attendance Award. A student may earn an attendance award for class attendance during each standard semester. To earn the award, a student must have had perfect attendance for each class taken during the standard semester.

Graduation with Honors. To be eligible for graduation with honors, a student seeking an undergraduate academic degree must earn a CGPA of 3.7 or higher and receive a recommendation by the Academic Program Director. Honor graduates will be recognized at the annual commencement exercises and the honors distinction appears on transcripts and the degree for associate and bachelor's degrees. The University bestows the following graduation honors:

Degree Honors for Undergraduates:

Summa Cum Laude	3.90-4.00	
Magna Cum Laude	3.80-3.89	
Cum Laude	3.70-3.79	

It is the student's responsibility to confirm any awards or special recognition that may be due at graduation with the campus Student Records Coordinator (or equivalent) prior to the commencement exercises.

Academics Policies

Change of Program

Students will be allowed one change of program, and the student may change his or her program at any point of his or her enrollment. The following changes are NOT considered a change of program:

- Change from a day to an evening version of the same program
- Change from an associate's to a bachelor's degree in the same program
- Change from one concentration to another concentration within the same program

Students who wish to change a program will be required to meet all the admissions requirements of the new program, including admissions assessments. A written request for a change of program must be submitted to the campus Student Records Coordinator. Evaluation of the student's transcripts, GPA, and attendance is initiated by the Student Records Coordinator through the appropriate academic department(s). If the change of program is approved, the student must sign a new Enrollment Agreement, and an administrative processing fee may be assessed for the change of program. The change of program is effective starting the term following the approval of a submitted request, subject to course availability.

Certain programs within the College of Health Science have established enrollment limits that may not permit a change of program or concentration.

Please see the Satisfactory Academic Progress policy for additional information on how a change of program may affect the student's financial aid eligibility, financial aid package, and/or academic progress.

Academics Policies

Class Availability

Not all courses are offered each term or semester. ECPI reserves the right to cancel any scheduled class if ten or fewer students are registered. A student who withdraws or fails a course, changes programs, or interrupts his/her studies may experience a delay(s) in program completion due to the availability of required courses outside the sequence of scheduled courses.

Academics Policies

Class Delivery Methods

ECPI University offers courses through four primary delivery methods: on campus, online, distance learning, and hybrid. This section outlines the general policies applicable to all delivery methods. Additional requirements and expectations specific to each delivery method are provided in the corresponding sections below.

Students may take a combination of class delivery methods as they progress toward program completion. Some may be subject to approval by the Campus Director of Academic Affairs or designee. Attendance is recorded and required for all delivery methods.

All delivery methods maintain the same course outcomes and academic standards. In addition, the tuition rate is the same regardless of delivery method. Textbook requirements are listed under the "Textbook" link in each course within the learning management system.

All delivery methods are offered in a five-week term format, with each week running Monday through Sunday, except the Nursing BS to BSN program, which runs on a 12-week term. Students are expected to complete all required work and submit assignments on or before the deadlines established by the faculty member and outlined in the course record within the learning management system (LMS).

Students are required to review the following policies that have class delivery method impacts:

- Attendance Policies
- Communications and Computing Policies
- Course Requirements
- Honor Code
- Student Conduct Policies

Delivery Method Readiness

During the admissions process, ECPI University utilizes various standardized assessment tools to determine an applicant's preparedness to undertake college-level coursework. In addition to taking an admissions assessment, the Admissions advisor will conduct a personal interview with all candidates to assess whether the applicants have the appropriate skills and competencies needed to succeed in taking courses through distance learning, hybrid, or online delivery.

Requirements regarding distance education vary from state to state. The initial enrollment documents are reviewed using the address provided upon enrollment to determine physical location and individual ability to complete the program requirements in the location provided. Upon enrolling the student signs an Enrollment Agreement certifying all information.

Orientation

To support student success, all new students are required to attend orientation prior to the start of classes. The orientation prepares students to participate effectively and provides guidance on navigating the learning management system, orients them to technologies such as Microsoft 365, Teams, OneDrive, the student portal and ECPI mobile app, and overviews all the course delivery methods and requirements.

In addition, **all students registering for an online course, regardless of whether the student is taking one course or an entire program, are required to successfully complete an online orientation prior to beginning class**. Online orientation ensures each student has an adequate Internet connection, the required computer equipment, sufficient computer proficiency and has the knowledge to navigate an online course.

Technology Requirements

Students participating in online, distance learning, or hybrid instruction are responsible for maintaining access to the required hardware, software, and internet connectivity necessary for successful participation in coursework. Students can verify that their device meets the necessary requirements by going to https://speedtest.ecpi.net/. This includes a link to an FAQ page for further information about browser requirements, etc.

ECPI University supports the Microsoft Windows 11 operating system. Android, Chrome OS (Chromebook), iOS (iPad/iPhone), macOS, and Unix/Linux operating systems are not fully supported. Certain degree programs utilize third-party software applications that require a Windows-based computer and may not function properly on unsupported operating systems.

Hardware requirements vary by degree program. Students are responsible for ensuring their computer system meets the minimum specifications required for their program of study.

ECPI University requires the following minimum hardware specifications:

ENGINEERING AND INFORMATION TECHNOLOGY DEGREE PROGRAMS		
Specification:	***Minimum Requirement:***	
Number of vCPUs	8 vCPUs	
Installed Memory (RAM)	16 GB RAM	
Free Disk Space (Storage)	256 GB (SSD Drive)	
Installed Webcam	Built-in or USB	
Available Ethernet Port	Built-in	

ALL OTHER DEGREE PROGRAMS		
Specification:	***Minimum Requirement:***	
Number of vCPUs	4 vCPUs	
Installed Memory (RAM)	8 GB RAM	
Free Disk Space (Storage)	256 GB (SSD Drive)	
Installed Webcam	Built-in or USB	
Available Ethernet Port	Built-in	

Students are also expected to maintain reliable internet access sufficient to support course participation, assignment submission, remote collaboration, and synchronous instructional activities where applicable.

Student Relocation

Students are responsible for notifying ECPI University immediately of any changes to their name, address, telephone number, email address, or physical location. Updates should be submitted through the University Student Portal or communicated to the campus Student Records Coordinator and/or designee.

A student's physical location at the time of enrollment is established through the student attestation completed in the University enrollment portal. Students who relocate while enrolled should notify the University promptly and may also consult with their Program Director regarding any potential academic or regulatory impacts.

Relocating to another state during enrollment may affect a student's ability to continue or complete a program, obtain professional credentials or licensure, or secure in-field employment, particularly if the University is not authorized to operate in that state.

Students who reside in, or plan to relocate to, a state other than the state in which their program's physical campus is located are encouraged to research applicable state certification, licensure, and employment requirements. Because state statutes, rules, and regulations frequently change, ECPI University cannot guarantee eligibility for licensure or certification in another state.

Identification Verification Process

To maintain the integrity of coursework, ECPI utilizes a variety of strategies.

All students in all class delivery methods will be required to set up and use Microsoft's Multi-Factor Authentication (MFA). This MFA requires not only a password but also a second factor - usually a temporary code sent to a user's phone (mobile device) or email - to verify the identity of the student.

In addition to the MFA, other online activities are reviewed to maintain integrity; for example, attendance logs, IP addresses, plagiarism detection tools, special security settings, and start/stop times for online learning activities.

Student Services

Comparable student support services are available for all students, regardless of the class delivery method, including access to learning resources, financial assistance, career advising, and academic advising.

Medical Assisting and Surgical Technology programs

The programs are designed to meet licensure requirements in the states in which they are offered. The University has not determined if the programs fulfill the educational requirements for specific professional licensure or certification required for employment outside the states in which the programs reside. Students who relocate to states in which the University does not have approval to operate may be adversely impacted in their ability to complete the program, obtain credentials, or gain in-field employment.

A student's physical location is determined at the time of enrollment by the student attestation of their physical location in the University enrollment portal. Students are able to notify the University of a change to their physical location in the University Student Portal and/or speak with their Program Director. It is recommended that students located in or planning to relocate to a state apart from where the program's physical campus is located research any certification or employment requirements for their intended state. All prospective and current students should be advised that due to the frequent changes to state statutes, rules, and regulations the University cannot guarantee licensure in another state.

On-Campus Delivery

In the on-campus delivery method, students attend class in person at a physical campus location on the days and times designated in the course schedule.

While campus computing resources may be available for instructional use, students may still be required to access online learning resources, course materials, and University systems outside of scheduled class time.

Online Delivery

In the online delivery method, students attend class asynchronously by completing work in the learning management system (Canvas). Some courses and/or programs are offered only online. Online courses are designed to take advantage of technology, making the learning environment accessible at any time. Students are required to be proficient in using the Internet and to have the ability to manage information on the computer.

Online students should anticipate extensive online communication with both faculty members and other students. Faculty may be contacted via email, telephone, text, or Live Chat in designed Live Chat courses. Students needing additional help may also contact their faculty member to request a tutor.

Online students are required to participate in a discussion assignment during the week unless otherwise designated. Original discussion posts will be due each week no later than 11:59pm Wednesday (Eastern Time). All other discussion responses and weekly assignments are due each week no later than 11:59pm Sunday (Eastern Time) unless otherwise designated.

Online students may also visit https://www.ecpionline.com/ to access essential information, including academic advising and student support coordinators; computer requirements; technical support; key contacts; library resources; and tutorials and demonstrations.

Distance-Learning Delivery

In the distance-learning delivery method, instruction is delivered live in synchronous class sessions through a video conferencing and collaboration tool. Most distance-learning courses have an on-campus requirement which will require a student to attend their local campus at least once during the term (see Attendance Policies). Students are notified of what the specific on-campus requirement is within their course and by their instructor.

Students must have appropriate technology as outlined in the **Technology Requirements** section to participate remotely, and maintain access to a functioning webcam, audio capability, and reliable internet connectivity. Headsets are strongly encouraged. Students without access to required technology may not continue in the course.

Students are expected to participate in their distance-learning course from a private location to reduce background distractions and the potential to be interrupted during class. Students are strongly encouraged to use the background screens provided by the video conferencing and collaboration tool. All background filters must be professional and not create additional distractions to the virtual classroom environment. Students may be required to use filters when in class. Students' microphones should remain muted unless they are participating in a class discussion, asking a question, or responding to the instructor.

Hybrid Delivery

In the hybrid delivery method, instruction combines asynchronous online delivery with face-to-face, synchronous delivery that occurs either on campus or distance learning.

- The synchronous portion follows the format and requirements for either on campus, or distance learning, depending upon how that portion is scheduled.
- The online asynchronous portion follows the format and requirements of online delivery and will not exceed 50 percent of total course instruction or activities.

Students must have appropriate technology as outlined in the Technology Requirements section to participate in the hybrid modality. If the hybrid delivery method includes distance learning requirements, students will be required to maintain access to a functioning webcam, audio capability, and reliable internet connectivity. Students without access to required technology may not continue in the course.

Academics Policies

Class Size

ECPI University is committed to providing engaging and interactive learning environments across all instructional modalities, including on-campus, distance learning (synchronous), online (asynchronous), and hybrid formats (blending of synchronous and asynchronous delivery methods). Regardless of delivery method, all courses are designed to achieve the same program and course learning outcomes.

To support student engagement and meaningful faculty-student interaction, class sizes are generally limited. For Health Science programs and the Arts and Sciences courses that support these programs, course enrollments offered as distance learning, online, or hybrid classes are typically capped at 25 students. Limited exceptions to this cap may be granted with approval of the Vice President for Academic Affairs or designee.

Academics Policies

Class Standing

Class standing is determined by credits earned, according to the following criteria:

Freshman:	0 – 23 semester credit hours earned	
Sophomore:	24 – 47 semester credit hours earned	
Junior:	48 – 71 semester credit hours earned	
Senior:	72 or more semester credit hours earned	

Foundational courses are not included when determining class standing and academic progression.

Academics Policies

Clinical Protocol

Diagnostic Medical Sonography | AAS

Clinical experiences are scheduled in various healthcare agencies and/or hospitals.

- Students may not visit any clinical facility while wearing the student uniform (including the name I.D.) without prior approval from the Diagnostic Sonography Faculty
- Students may not review any patient's chart or records except those assigned to them
- Students are not permitted to accept gifts from patients or patients' families or friends
- Students are not permitted to fraternize with any patient/agency employee while enrolled in school

Medical Radiography | AAS

Clinical experiences are scheduled in various local healthcare agencies and/or hospitals.

- Students may not visit any clinical facilities while wearing the student uniform (including the name I.D.) without prior approval from Radiography faculty.
- Students may not review any patient's chart or records except those assigned to them.
- Students are not permitted to accept gifts from patients or patient's families or friends.
- Students are not permitted to fraternize with any patient/agency employee while enrolled in school.

Nursing | All Programs

Clinical experiences are scheduled in various local healthcare agencies and hospitals and are subject to change.

- Students are not to provide personal telephone numbers or addresses to clients
- Students are not permitted to accept gifts from clients, patients, or their families
- Visiting patients, other than friends and relatives, is not permitted
- Students are not permitted to fraternize with any patient/agency employee while enrolled in school
- Students may not visit any clinical facilities while wearing the student uniform (including the name pin) unless prior permission is granted by a Nursing faculty member
- Students may not review any patient's chart except the patients assigned to them

Academics Policies

Course Audits

At ECPI University, learning doesn't stop at graduation. As industries evolve and programs advance, we encourage our graduates to stay connected and continue developing their skills.

ECPI graduates, as well as current or returning students in any (diploma or degree) program may request to audit any course they have previously completed or courses within an updated or closely related program that has evolved from their original major or degree concentration. Auditing allows alumni to refresh their knowledge, stay current with industry developments, and remain engaged with their field.

Course audits are subject to class availability and require approval from the Program Director or Campus Director of Academic Affairs. Students auditing a course are expected to attend and fully participate in class. Audited courses will be recorded on the transcript with an 'AU' designation.

There is no tuition charge for auditing a course; however, students may be responsible for any required supplies, textbooks, or uniforms. Financial aid does not apply to audited courses.

Academics Policies

Course Requirements

Requirements for each course are included in the course syllabus, which is reviewed with the class by the assigned faculty member on the first day of the course.

Academics Policies

Credit/Contact Hours

A class contact hour consists of 60 minutes with at least 50 minutes of scheduled instruction in a class, lab, lecture, test, examination, externship/internship, clinical, or preceptorship experience. Occasionally, additional class contact hours may be required for class completion without additional credit.

Credit for most ECPI courses in degree and diploma programs in Virginia, North Carolina, South Carolina, Florida, and Texas are calculated on a semester credit hours basis, using the following conversion:

- One (1) semester credit hour is awarded for 15 lecture contact hours
- One (1) semester credit hour is awarded for 30 laboratory contact hours

- One (1) semester credit hour is awarded for 45 externship/internship, clinical, or preceptorship contact hours

Credit for ECPI courses in practical nursing diploma programs in Virginia and South Carolina are calculated on a semester credit hours basis, using the following conversion:

- One (1) semester credit hour is awarded for 30 lecture or laboratory contact hours
- One (1) semester credit hour is awarded for 45 externship/internship, clinical, or preceptorship contact hours

Credit for ECPI courses in practical nursing diploma programs in North Carolina are calculated on a semester credit hours basis, using the following conversion:

- One (1) semester credit hour is awarded for 32 lecture or laboratory contact hours
- One (1) semester credit hour is awarded for 48 externship/internship, clinical, or preceptorship contact hours

BS to BSN Credit Hour Conversion

- One (1) credit hour didactic is equivalent to 1 hour per week in the classroom.
- One (1) credit hour laboratory is equivalent to 2 hours per week in the on-campus skills lab.
- One (1) credit hour clinical is equivalent to 3 hours per week at a clinical site.

BS to BSN Unit of Credit/Academic Hour Definition

An academic hour or class is 50 minutes of instruction in a 60-minute period. Academic hours are converted to credit hours to allow for comparison with other post-secondary institutions.

One quarter credit hour equals 30 units, comprised of the following academic activities:	One clock hour in a didactic learning environment equals 2 units
	One clock hour in a supervised laboratory setting of instruction equals 1.5 units
	One hour of clinical equals 1 unit
	One hour of out-of-class work and/or preparation designed to measure the student's achieved competency, relative to the required subject matter objectives, equals 0.5 units

Academics Policies

Distance Learning

See the Class Delivery Methods page.

Academics Policies

Drug Calculation Testing (BS to BSN - Orlando)

Please review the following which applies to the Orlando, Lake Mary campus only.

Drug Calculation Testing. Each quarter, the students will be tested on their ability to perform specific drug calculations. The student has three opportunities to pass the drug calculation test in the designated courses with at least a 90% score. If the student is not successful in passing within three attempts, the student will fail the course.

Academics Policies

Dual Major or Concentration

The University permits an undergraduate student to pursue a second major. Students must meet with their academic advisor and declare their intent prior to completing 100 semester credit hours of a bachelor's degree program or prior to completing 45 semester credit hours of an associate's degree program. Requirements for both majors must be completed before receiving the degree. The student will receive one degree. Both majors will appear on the transcript. The degree awarded will be determined by the majors to which University requirements are applied.

Academics Policies

Grading | Final Grades

Final grades are posted in the ECPI Student Portal following the completion of each term. Students receiving a failing grade may be required to meet with a Program Director or designee to develop an Academic Success Plan. This plan may include actions such as mandatory tutoring, periodic advising, or a reduced course load.

Once the grades are posted, they will become final on the last day of the following term's add/drop period, unless a student appeals the grade. See the Grade Policies-Grade Appeals section of this Catalog for information on appealing a final grade.

Grade Reports of Dependent Students. Parents or guardians of dependent students are an integral part of the enrollment process and subsequent educational process and success of their child/dependent. ECPI wants to maintain a relationship with parents and guardians while developing a supportive working relationship with the student, which will be important to the student's professional and personal growth and development. A dependent student may request that his/her grade reports be sent to his/her parents or guardians by submitting a written request to the Student Records Coordinator.

Grade Reports of Independent Students. Grade reports for independent students are available to the student only. However, an independent student may request that his/her grade reports be sent to his/her parents, guardians, or any other third party by submitting a written request to the Student Records Coordinator.

Back to Academics Policies > Grade Policies

Academics Policies

Grading | Grade Appeals

A student who wishes to challenge a grade on a test/assignment or the final grade in a course must follow the steps outlined below to appeal the grade:

STEPS TO CHALLENGE (APPEAL) A GRADE	
1.	The student must first try to resolve the difference with the faculty member involved (online students should email the faculty member). If the faculty member agrees to the student's request, the faculty member will make the appropriate change in the grade book or submit a grade change through the Campus Director of Academic Affairs/Director of Nursing. If the student agrees with the faculty member's decision, the matter is considered resolved and no further action is taken.
2.	If a satisfactory solution cannot be reached between the student and the faculty member, the student may submit a written grade appeal to their Program Director/Director of Nursing by the end of the add/drop period of the subsequent term.
3.	Upon the determination of the Program Director/Director of Nursing, if a satisfactory solution is not reached, the student has a final appeal available through their Campus Director of Academic Affairs or his/her designee or Program Dean. This appeal must be filed within five calendar days of the Program Director's decision. The Campus Director of Academic Affairs or his/her designee or Program Dean will investigate the facts of the case and make a decision in writing regarding the grade within seven days of receiving the appeal. The decision of the Campus Director of Academic Affairs or his/her designee or Program Dean regarding a grade appeal is final.

Academics Policies

Grading Scales

ECPI University uses the following Grade scales:

LETTER GRADE	NUMERICAL GRADE	QUALITY POINTS
A	93-100	4
A-	90-92	3.7
B+	87-89	3.3
B	83-86	3.0
B-	80-82	2.7
C+	77-79	2.3
C	73-76	2.0
C-	70-72	1.7
D	65-69	1.0
F	64 or below	0

In addition, the following letter grade designations could apply*:

LETTER GRADE	DESIGNATION	QUALITY POINTS
AS	Advanced Standing Credit	Not completed
AU	Audit Completed	Not completed
EC	Experiential Credit	Not completed
I	Incomplete	Not completed
ME	Military Experience Credit	Not completed
NP	Not Passed	Not completed
P	Passed	Not completed
T	Transfer Credit from Academic Institution	Not completed
TO	Tested Out	Not completed
W	Attempted/Withdrawal During Add/Drop	Not completed
WF	Attempted/Withdrawal Failed	0
WP	Attempted/Withdrawal Passed	Not completed

***Any previous scale(s) are identified on the Transcript Key.**

For grading scale exceptions based on specific course or program requirements, see Grading Policies-Grade Requirements for Specific Courses or Programs

Back to Academic Policies > Grade Policies

Academics Policies

Grade Policies-Graduate Programs

Grade Policy - Graduate Programs

The grading policies and scale for graduate programs are identical to those for undergraduate programs, except as noted below.

A minimum score of 80 is required to pass graduate courses, except in the Master of Science in Physician Assistant program, where a minimum score of 73 is required. Grades earned below the applicable minimum passing score will be awarded an F. Students in graduate programs must maintain a cumulative grade point average (CGPA) of a 3.0 or better; students who fall below this requirement will be in SAP Warning status (see **Satisfactory Academic Progress (SAP) - Graduate Programs**). Students who receive two grades of F at any time during the program will be dismissed. A student must re-take a course for which a grade of F was earned. Even if the course is repeated, the original earned grade counts as one of those attempts and the student may not receive another grade of F.

Back to Academic Policies > Grade Policies

Academics Policies

Grading | Incomplete Grades

Incomplete (“I”) grade may be assigned at the faculty member’s discretion to permit the student time to complete required coursework which s/he was prevented from completing in a timely manner due to mitigating circumstances. The faculty member may require the student to document the request to assist in the decision. The “I” grade should be considered only when the student has the potential to earn a passing grade if the missing work is made up.

To be eligible for an “I” grade, the student must have a passing grade in the course at the time of the request based upon the required coursework up to that point and must have completed at least 75 percent of the course work. All incomplete work must be completed within the first week of the following term; exceptions must be approved by the Campus Director of Academic Affairs or his/her designee. When the work is completed, the faculty member will submit a grade change form with the final grade earned. If the work is not completed within the prescribed time frame, the “I” will automatically change to a permanent “F” grade. The student will be informed of the final grade assigned.

For students who have been assigned a grade of incomplete for externship courses in the College of Health Sciences, all externship requirements must be completed within three weeks after the end of the term, or a grade of F will result. For all other programs, all externship requirements must be completed by the end of the following term, or a grade of F will result.

Final grades. Once the grades are posted, they will become final on the last day of the following term’s add/drop period, unless a student appeals the grade. See the Grade Report Appeals and Grade Report sections of this Catalog for information on appealing a final grade.

Back to Academic Policies > Grade Policies

Academics Policies

Grading Policies-Grade Requirements for Specific Courses or Programs

Grade Requirements for Specific Courses or Programs

1.	A score of 80 is required for courses with the following prefixes: **COR, BIO**, and **NUR** in the **Practical Nursing and Associate Degree Nursing programs**. Grades earned below the minimum of 80 in all the above courses will be awarded an F.
2.	A score of 80 is required for **BIO** courses in the **Physical Therapy Assistant and Diagnostic Medical Sonography programs**. Grades earned below the minimum of 80 in BIO courses for these programs will be awarded an F.
3.	A minimum score of 77 is required for courses with the following prefixes: **COR, BIO, and NUR** in the **BSN (Bachelor of Science in Nursing), the RN to BSN, and the Bachelor to BSN programs**. Grades earned below the minimum of 77 in all the above courses will earn an F.
4.	A minimum score of 73 is required for courses with the following prefixes: **DEN (Dental Assisting), DMS (Diagnostic Medical Sonography), EMS (Emergency Medical Systems), HCA and LTC (Healthcare Administration), MED (Medical Assisting), RAD (Medical Radiography), PTA (Physical Therapist Assistant), and SUR (Surgical Technology) programs**. Grades earned below the minimum of 73 in all of the above courses will be awarded an F.
5.	A minimum score of 70 is required for COR090 Career Orientation Seminar and COR191 Career Orientation in all programs offering these courses (including those listed in the grading scale exceptions above).

Back to Academic Policies > Grade Policies

Academics Policies

Withdrawal Grades

A student may withdraw without academic penalty from any course during the add/drop period of each term. The assigned grade of “W” is not included in the calculation of any grade point average. A student may withdraw after the add/drop period. The grade of “WP” or “WF” will be assigned and is determined by the grade earned at the time of the student’s last date of attendance.

Back to Academic Policies > Grade Policies

Academics Policies

Graduation Requirements

Undergraduate Programs

To meet graduation requirements, undergraduate students must:

- Complete their part of the electronic Graduate Exit Interview;
- Comply with the Satisfactory Academic Progress Policy standards;
- Meet program attendance and residency requirements;
- Successfully complete all courses required for degree completion;
- Comply with the financial terms of enrollment; and
- Satisfactorily resolve any outstanding obligations on the student account or library account.

The University has the right to set or change all academic standards and students are required to meet those standards to be considered as successfully completing their program.

It is important that students confirm completion of all graduation requirements with the campus records office. Students should not assume they are graduating until they have completed all graduation requirements.

Digital degrees and diplomas are issued approximately three weeks after graduation requirements have been met. Paper degrees and diplomas are mailed approximately six to eight weeks after completion of all graduation requirements. For ordering final transcripts, please see the Transcripts section of this catalog.

Please see the Commencement section of this catalog for information regarding the commencement ceremony.

Graduate Programs

To meet graduation requirements, students must:

- Complete their part of the electronic Graduate Exit Interview;
- Comply with the Satisfactory Academic Progress Policy standards with a CGPA of 3.0 or greater and have passed each course with a grade of B- or better;
- Meet program attendance and residency requirements;
- Successfully complete all courses and course hours required for degree completion;
- Achieve all applicable skill proficiencies;
- Comply with the financial terms of enrollment; and
- Satisfactorily resolve any outstanding obligations on the student account or library account.

Transcripts, degrees, and diplomas are processed approximately four to six weeks after completion of all graduation requirements.

Academics Policies

Honor Code

The honor code at ECPI is based upon individual integrity. This code assumes that each student accepts his/her role in the academic community with a feeling of self-respect and duty.

The Honor Code states: I pledge to support the Honor Code of ECPI and will refrain from any form of academic dishonesty or deception, such as cheating or plagiarism. I am aware that as a member of the academic community it is my responsibility to turn in all suspected violators of the honor code. I understand that any failure on my part to support the Honor System will be turned over to a Judicial Review Board for review. I will report to a Judicial Review Board hearing if summoned.

Each student attending ECPI is required to sign the Honor Code as part of his/her Enrollment Certification. Therefore, it follows that work submitted by a student must be his/her own work. Suspected violations of the Honor Code should be reported either to the Academic Program Director, Campus Director of Academic Affairs, or the Campus President. If the Judicial Review Board (refer to the Catalog section that defines this board) determines that a violation of the Honor Code has occurred, the offending student will be disciplined, up to and including involuntary dismissal from the University.

Academics Policies

Hybrid Delivery

See the Class Delivery Methods page.

Academics Policies

Independent Study

Independent study is defined as a non-traditional format for learning. It is an option designed to meet the needs of a student who must complete a course that would not otherwise be offered during a specific term. An independent study course meets the same learning objectives as the traditional version of the course. A student may be scheduled for an independent study for a particular course if the student has no prior failures or withdraws for that particular course. Independent study is utilized only when no other course offerings are available or extenuating circumstances exist that would prohibit regular course completion.

Enrollment in an independent study course is subject to the approval of the Campus Director of Academic Affairs. Not all of the University's courses are available for independent study. It is recommended that the student have a CGPA of 3.0 or above to be eligible for an independent study.

Meetings with the faculty member are at the faculty member's discretion. Grading is as outlined in the course syllabus. Examination dates are on a schedule agreeable to both the faculty member and student. Independent study must be completed during the term in which it is scheduled. Independent study courses will meet the same learning objectives as traditional courses. A student may not receive an "I" grade for a course scheduled as an independent study.

Prerequisites for each course, as listed in this Catalog, must be successfully completed prior to enrollment in an independent study course. Textbooks and other support materials for a course scheduled as independent study are the same as described in the course syllabus.

Graduate Program - Independent Study

Independent Study is not available to be used in graduate course delivery.

Academics Policies

Late Assignments

The ECPI University Late Assignment Policy is intended to encourage timely completion of all assignments and responsible notice when circumstances prevent timely completion of assignments. If a student has a circumstance that prevents timely submission of an assignment (by the due date) and informs the instructor in advance, or soon after the submission due date, that a circumstance prevented them from submitting on time, the instructor may waive all late work penalties.

A student who has an approved absence or approved late assignment will have the opportunity to earn full credit. A reasonable deadline for completion of the late work will be established by the instructor. If time beyond the end of the term is required refer to the Grade Policies--Incomplete Grades for assigning Incomplete grades. For missed exams or scheduled tests refer to the Make-up Tests

No late assignments from undocumented/unapproved absences will be accepted after the final day of the term.

This late assignment policy only applies to assignments, activities, essays, quizzes, and exams; it does not apply to discussion forums.

Late Assignment Penalty for Undocumented Late Submissions

Late assignments due to an undocumented/unapproved absence will incur penalties based on when the assignment is submitted. Grade penalties for both on-ground and online classes will apply based on the schedule below. Please note the following important rules:

- No assignments will be accepted more than two weeks past the original due date.
- No assignments will be accepted after the term end date.

Late Assignment Penalty Schedule: Assignments are due on the date and specified time. Students should refer to their course LMS. For online classes this is usually Sundays by Midnight (EST/EDT). The grade cap for late submissions is as follows:

WHEN YOU SUBMIT	MAXIMUM GRADE POSSIBLE
On Time - Submitted by the assignment's due date (Online: Sunday by Midnight (EST/EDT)	up to 100%
Within 3 days of the assignment's due date. (Online: Mon, Tue, or Wed after the Sunday due date)	up to 90%
Within 4-6 days of the assignment's due date. (Online: Thu, Fri, or Sat after the Sunday due date)	up to 80%
One (1) week after due date and up to two weeks (7-14 days)	up to 70%
No assignment will be accepted more than 2 weeks after	0% (Not Accepted)

Note: The maximum grade listed above reflects the highest possible score before your instructor grades the assignment. Your final grade may be lower depending on the quality of your work.

Program Specific Policies

Students in Health Science or Nursing programs should refer to their specific program handbook for their program's late assignment policy.

Nursing - RN to BSN

Written assignments must be submitted on time. All assignments will be submitted electronically to the classroom assignment page established for the assignment. If the classroom server is down, students may submit the assignment to the faculty member‘s ecpi.edu email address by the deadline and later post the assignment to the assignment page.

Make-up examinations are at the sole discretion of the course faculty member and are discouraged.

BS Radiologic Sciences

All assignments will be submitted electronically to the classroom assignment drop box established for the assignment. If the classroom server is down, students may submit the assignment to the faculty member’s ecpi.edu email address by the deadline and later post the assignment to the drop box.

Make-up examinations are at the sole discretion of the course faculty member and are discouraged.

Academics Policies

Late Registration

Students seeking late entrance into a class must do so within the add/drop period of the term. The student is responsible for all work missed but will not receive attendance for days missed.

Graduate Program - Late Registration

Late registration is not available for graduate courses.

Academics Policies

Leave of Absence Policy

ECPI offers students who are in good standing the opportunity to request an academic leave of absence. The academic leave of absence is designed for the student who must temporarily suspend his/her academic endeavors at ECPI for one or more terms/semester but intends to return at a later date. Reasons for granting a leave of absence may include, but are not limited to, serious student medical problems, pregnancy, military duty, or the death or serious illness of an immediate family member. Students must submit requests for leaves of absence in writing to the Campus Student Records Coordinator or Student Success Coordinator. All requests must be approved. Leave of absence status must be requested before the beginning of the term for which the leave is desired. A leave of absence may extend until the next scheduled term or a longer period if approved by the University, up to a maximum of 180 days. If an additional leave of absence is approved, the combination of these leaves may not exceed 180 days within an academic year. If you are receiving Federal Direct Student loans, the enrollment status will be reported as a withdrawal; see your Financial Aid Advisor to discuss details. While on an approved leave of absence, the student retains the right to use certain campus facilities, such as the ECPI Library.

International students with an F-1 visa must consult ECPI’s PDSO prior to obtaining approval for any leave of absence.

Academics Policies

Make-up Tests

Tests are typically announced in advance so that a student may prepare. Students must typically complete the required tests according to the stated schedule.

Students who miss an original (first administered) test for sufficient and documented reasons may arrange with the faculty member for that course to take a make-up test and receive full credit. Make-up tests will normally be given the day the student returns to school.

Examples of sufficient reasons include third-party written documentation of illness, medical, or dental emergencies, work schedule conflicts, military duty assignments, court appearances, funerals, or family emergencies. A make-up test is an examination of equal or greater difficulty given in a subject area. Only one make-up test will be allowed per course.

A student or faculty member may request an Academic Review Board review if special circumstances indicate that an exception to this make-up test policy warrants consideration.

Please see the College of Health Science program handbooks for specific program policies.

Academics Policies

Online Delivery of Courses/Programs

See the Class Delivery Methods page.

Academics Policies

Plagiarism Policy

Purpose and Scope. The purpose of the ECPI University Plagiarism Policy is to promote awareness and adherence to copyright and intellectual property law. Refer to https://www.copyright.gov/ for information on U.S. copyright law.

This policy applies to all students, faculty, and staff of ECPI and all intellectual property including but not limited to all written and electronic publications, ideas and inventions, verbiage, and phrasing.

Definitions. The following definitions apply to this policy.

The Writer. The Writer is defined as any student, faculty, or staff member to whom this policy applies. However, plagiarism is not limited to writers, per the definition of plagiarism and the scope of this policy. Examples of plagiarism other than through writing include but are not limited to software programs, hardware designs, schematics, multimedia, charts, graphs, tools, and other inventions.

Plagiarism. ECPI University defines plagiarism as presenting work or ideas from other sources as your own, regardless of how the work or ideas were obtained. This includes the language and thoughts of another author, materials generated by Artificial Intelligence (AI), and other sources.

Plagiarism occurs in, but is not limited to, situations when one or more of the following conditions apply:

- the writer uses exact words from a source but neglects to include quotation marks
- the writer paraphrases ideas from a source but neglects to cite the source using an acceptable documentation style such as APA (this includes AI)
- the writer copies someone else's work and presents it as his/her own
- the writer purchases documents, ideas, and/or verbiage and presents it as his/her own
- the writer fails to give credit to co-authors, team members, and/or editors of the writer's original work
- the writer uses previously published work protected under copyright and presents the work as original and not copyrighted elsewhere; or
- the writer fails to quote or paraphrase accurately but attributes the words and/or ideas to a source
- the writer attempts to document the source but does so incorrectly
- the writer attempts to give credit to an original source but does not use acceptable documentation methods
- the writer uses ideas, text, and/or verbiage without giving credit to the original source because the writer incorrectly believes the information is common knowledge
- the writer inadvertently fails to give credit to co-authors, team members, and/or editors of the writer's original work; or
- the writer inadvertently breaks copyright agreement of his/her own copyrighted work; or
- the writer submits written work for an assignment previously submitted in a different class

Consequences of Violating Policies. Violation of the University's plagiarism policy, whether the plagiarism is intentional or unintentional, may result in disciplinary action up to and including suspension from the University.

Disciplinary action may include initiation of a Judicial Review Board. For more information on ECPI's general disciplinary actions, see the sections entitled Termination Policy and Appeal Procedures and Academic and Judicial Review Boards in this Catalog.

Resources and Prevention. The University offers several resources, which vary by campus, for students, faculty, and staff who require information on plagiarism and documentation. These resources include:

- Seminars and training on citation style methods
- Writing Assistance Center handouts and workshops on avoidance of plagiarism
- Classroom instruction on documentation of sources
- Library recommended websites and sources on how to define and avoid plagiarism

Artificial Intelligence. The growth and development of Artificial Intelligence (AI), such as ChatGPT, presents opportunities and challenges for ECPI University students. AI provides ways to enhance learning but also has the potential to negatively impact the learning process. The University recognizes the potential benefits of AI in the learning process but also expects students to independently demonstrate specific skills, competencies, factual knowledge, and general cognitive development within their

academic discipline through submission of assignments, exams, and other activities. Students are accountable for the accuracy, integrity, and originality of work (See Honor Code). The University's Plagiarism Policy establishes what constitutes the proper and improper use of resources, including AI, and the expectation to properly cite resources used by the student.

Academics Policies

Prerequisites and Course Waiver/Substitution

A prerequisite course or a required course for a program may only be waived or substituted upon recommendation from the student's home campus and the approval of the appropriate Program Dean or designee. Documentation of the waiver/substitution including the Dean's approval must be filed in the student's academic record.

Academics Policies

Prior Learning

Visit these pages to review the Prior Learning policies: Prior Learning and Transfer Policies and Procedures and Types of Prior Learning and Transfer Credit

Academics Policies

Repeated Courses Undergraduate Programs

Repeated foundational courses

Students who are required to take foundational courses (i.e., ENG099 Introduction to Writing, MTH099 Introduction to College Algebra, MTH090 Introduction to Mathematics) are required to successfully complete each course on the first attempt in order to progress in the program. A failure (WF or NP) on the first attempt will result in dismissal from the student's program. A student who is dismissed for failure to successfully pass a foundational course may reapply for readmission to the University through the Academic Review Board. If accepted for readmission, students must pass the foundational course on their second attempt. No additional attempts will be allowed for foundational courses.

Repeated courses due to course withdraw or failure

A course may not be repeated more than once without approval of the Campus Director of Academic Affairs or designated academic official. Grades achieved in courses that are repeated due to course withdrawal (W, WP) or failure (F, WF) will replace previous withdrawal or failing grades in the CGPA calculation. A pattern of course repetitions could cause a student to fall below the minimum standard for satisfactory academic progress. A student who is approved to repeat a course due to a failing grade (F, WF) must successfully pass the course by the third attempt. After three failed attempts the student will be academically dismissed. When a course is repeated due to a failure, credits accrue only when the student attains a passing grade for that course. Additional tuition charges apply when a student repeats courses. Students who withdraw or earn a failing grade in a course should register for the same course in the subsequent term to improve his/her academic performance.

Repeated course to improve a grade

A student may repeat a course to improve the grade and subsequently, his/her CGPA. In the case of repeated courses to improve a grade, only the highest grade earned will be calculated in the CGPA while all the credits attempted will be calculated in the ICR and Maximum Time Frame. Students are eligible for Financial Aid for only one repetition of a previously passed course.

Please see the College of Health Science program handbook for specific program policies concerning repeated courses.

Computer and Information Science Certificate

A course may not be repeated more than once without approval of the designated academic official. Grades achieved in courses that are repeated due to course withdrawal (W, WP) or failure (F, WF) will replace previous withdrawal or failing grades. A student who is approved to repeat a course due to a failing grade (F, WF) must successfully pass the course by the third attempt. After three failed attempts the student will be academically dismissed (for appeal of academic dismissal, see Appealing an Academic Dismissal.

Back to Academics Policies > Repeated Courses

Academics Policies

Repeated Courses Graduate Programs

Students who have failed a course are eligible to repeat it once, as scheduling permits. A repeat may be approved by the Dean when it is satisfactorily determined that a student would benefit from repeating a class. When a failed course is repeated, only the grade in the repeated course counts in the student's cumulative grade point average and will appear on the student's transcript. Students in graduate programs are only permitted to repeat one failed course.

Students who repeat a course will be charged the current tuition for the course and must assume the responsibility for all associated fees. Repeating a course may interrupt the student's enrollment and may negatively impact financial aid eligibility and academic progress.

Back to Academics Policies > Repeated Courses

Academics Policies

Residency Requirement

ECPI University requires that a student complete a minimum of 25% of their program of study at the University in order to receive a degree or diploma. Courses taken on campus, via remote synchronous/distance learning, or online with ECPI all apply toward the 25% residency requirement. Any credit awarded from Prior Learning does not count toward the 25% residency requirement.

Academics Policies

Satisfactory Academic Progress (SAP)

- Undergraduate Programs
- Graduate Programs
- BS to BSN (Florida)

Academics Policies

Second Degree and Minimum Residency Requirements

The University will permit students to acquire a second undergraduate degree, provided that they:

- Pursue a different degree program;
- Meet all University admissions and departmental requirements;
- Complete a minimum of 25% of the new degree requirements beyond the requirements of the first degree; and
- Meet all degree requirements for the second degree.

Credits earned during the first degree may be applied, if deemed transferable to the second degree. A minimum of 150 credit hours is required for students earning two baccalaureate degrees.

Prior to undertaking the second degree, an academic official will conduct an evaluation of all previous university-level coursework the student has completed. Those who meet the admissions standards of the University will be admitted; however, this does not guarantee admission into specific degree programs where requirements may differ. The University, as a general rule, will not permit a student to pursue more than two associate and/or baccalaureate degrees.

Students wishing to earn a second major or concentration, rather than a second degree, should refer to the Dual Major or Concentration policy.

Academics Policies

Student Orientation - Graduate Students

The University is committed to student success; therefore, new students are required to attend a mandatory two-part orientation. This orientation is designed to orient students to the University while providing information sessions on a range of topics relevant to graduate students such as the philosophy of graduate education, study habits, and research skills.

Academics Policies

Transcripts

Students wishing to order transcripts may do so through Parchment Exchange (https://www.parchment.com/u/registration/27805632/institution). This service will allow secure and convenient ordering, processing, and tracking of transcript requests. Due to federal privacy laws, a signed request is required to release a transcript.

All requests must include the required processing fees. The following non-refundable fees apply to official transcript requests:

- Parchment electronic transcripts: $9.00 per transcript, 1 business day processing
- Parchment mailed transcripts: $9.00 per transcript plus shipping, 1 business day processing

Academics Policies

Transferability of Credit

In the U.S. higher education system, transferability of credit is always determined by the receiving institution, taking into account such factors as course content, grades, and the school's accreditation and licensing. ECPI University is accredited by the Southern Association of Colleges and Schools Commission on Colleges to award associate's, baccalaureate, and master's degrees and diplomas. The Southern Association of Colleges and Schools Commission on Colleges is an accrediting agency recognized by the United States Department of Education. However, the fact that a school is accredited is not necessarily an indication that credits earned at that school will be accepted by another school.

Students considering continuing their education at or transferring to other institutions must not assume that credits earned at ECPI will be accepted by the receiving institution. An institution's accreditation does not guarantee that credits earned at that institution will be accepted for transfer by any other institution. A student who is considering a future transfer is encouraged to make contact with the receiving institution, as early as possible, to determine what ECPI credits, if any, the institution will accept.

The University offers several applied educational programs that include discipline-specific courses not designed for transfer to traditional baccalaureate or non-applied associate degree programs. These applied educational programs include the following: Associate Degree in Nursing; Diploma, Practical Nursing; Associate of Applied Science (AAS); Diagnostic Medical Sonography, AAS; Emergency Medical Services, AAS; Medical Radiography, AAS; Physical Therapist Assistant, AAS; Surgical Technology, AAS; Dental Assisting, AAS in Health Science; Medical Assisting, Diploma; Medical Assisting, AAS; Diploma, Culinary Arts; AAS, Culinary Arts and Applied Nutrition; AAS and Diploma, Baking and Pastry Arts; and Certificates, Food Service Financial Management and Food Service Leadership.

ECPI University does not imply, promise, or guarantee transferability of its credits to any other institution.

For information regarding the evaluation of prior learning credit, refer to Prior Learning and Transfer Policies and Procedures.

Academics Policies

Withdrawal From a Course (BS to BSN - Orlando)

Withdrawal From a Course - BS to BSN (Lake Mary, Orlando)

Please review the following which applies to the Orlando, Lake Mary campus only.

Withdrawal from a course. Students desiring to withdraw from the nursing program should consult their Advisor and the Dean/Chief Nursing Administrator prior to the withdrawal.

Students who withdraw (voluntarily or involuntarily) from a course after the drop/add period will be assigned the following grade(s):

- A “W” if before 50% of grading period is completed
- A “W” if passing at any point in the grading period
- An “F” if failing after 50% of grading period
- For clinical courses only, an “F” if the clinical is not successfully completed

Academics Policies

Withdrawals from the University

The following definitions apply to the various types of withdrawals that ECPI uses in its policies:

Academic Withdrawals. See Satisfactory Academic Progress (SAP) in this catalog for information on academic withdrawals.

Administrative Withdrawals. A student who has not attended classes for more than 14 consecutive calendar days will be administratively withdrawn.

Student-Initiated Withdrawals. To officially withdraw from the University, the student must contact someone in Academic Administration to provide notification of his/her intent to withdraw. New students who withdraw from the University prior to the end of the first week of class will have no attempted courses shown on their academic records.

Students officially withdrawing from the University during week one of a term will receive a grade of W for all current courses if attendance is posted. Students officially withdrawing after the first week of the term will receive a grade of WP or WF, which is determined by the grade earned at the time of the withdrawal. A grade of F will be awarded for all courses dropped during week five.

Withdrawals and Veterans Benefits. The Veterans Administration will pay through the last day of attendance for a course from which the student withdraws. Veterans should consult with the Veterans Administration for more information.

Tuition. Students withdrawing from the University, who have completed the semester or payment period (per U.S. Department of Education regulations), are charged tuition and fees based on their enrollment status for the number of credits attempted in the semester they withdraw.

Attendance Policies

Navigate the program-specific attendance policies using the menu to the left.

ECPI believes students should follow a policy of regular attendance and punctuality to receive the maximum benefit from an ECPI education and to develop the work habits and personal qualities highly valued by employers. Therefore, students are expected to attend all regularly scheduled class meetings. The student should attempt to notify the faculty member assigned to the course by telephone or email in advance of any anticipated absence. Faculty and staff may likewise contact the student if the student is absent.

On the first day of each course, the faculty member will provide students with the course syllabus and review relevant academic policies for the course including the attendance policy and any opportunities to make up missed assignments. Please see the Late Assignments and Make-up Tests section of this Catalog or the College of Health Science program handbook for specific program policies.

A student who has not attended a course for 14 consecutive calendar days will be withdrawn from the course. A student who has not attended all courses for which s/he is enrolled for 14 consecutive calendar days will be administratively withdrawn from the University. Students enrolled in programs in the College of Health Science should consult their program handbook for program specific course attendance policies. Additionally, faculty members may request an Academic Review Board for a student whose absences from class interfere with the student’s ability to meet course objectives. Action may result in the student being removed from the course, probation, or suspension. If a pattern of excessive absences is identified, an Academic Review Board review may be conducted.

Late Arrivals and Early Departures

Students are encouraged to contact the faculty member for the course, by telephone or email, if the student anticipates being late for class. Being tardy is defined as student arrival after class attendance has been taken. Leaving prior to class dismissal is considered early departure. Students are not allowed to disrupt academic processes and, at the faculty member's discretion, admission to a class may be denied to tardy students until the next class break. Late arrivals and early departures may affect a student's record of attendance.

Online Courses

Students taking online courses at ECPI University are expected to participate every week of the course. A variety of learning activities and assessments are required for successful completion of an online course. Activities may be graded or ungraded. Only attending faculty-led live sessions or submitting graded items are counted toward attendance. Activities which are graded may include posting to a graded discussion forum, submitting an assignment, quiz, or exam. Students should expect to academically participate in a course at least two times a week. Please note that certain course activities may be required but are not graded. For example, an ungraded Introduction discussion is required for certain courses but does not qualify for attendance because it is an ungraded activity. Earning attendance does not constitute earning a passing grade.

Online Class - Attendance in the online courses occurs from Monday 12:00 AM EST to Sunday at 11:59 PM EST. A student who does not earn attendance by Sunday of Week 1 (11:59 PM EST), will be unregistered from his/her course(s) for non-attendance.

In addition, students must meet ECPI's minimum attendance requirements. A student who has not attended a course for more than 14 consecutive calendar days will be withdrawn from the course. A student who has not attended all courses for which s/he is enrolled for more than 14 consecutive calendar days will be administratively withdrawn from the University.

Hybrid Courses

Students taking hybrid courses are expected to attend class at a campus location at least one day per week, as outlined by the course schedule. Additional course attendance is earned by completing graded assignments online. These may include posting to a graded discussion forum or submitting an assignment, quiz, or exam. Please note that certain course activities may be required but are not graded; therefore, they do not qualify for earned attendance.

In addition, students must meet ECPI's minimum attendance requirements. A student who has not attended a course for 14 consecutive calendar days will be withdrawn from the course. A student who has not attended all courses for which s/he is enrolled for 14 consecutive calendar days will be administratively withdrawn from the University.

Distance Learning Courses

Students taking distance learning courses are expected to appear on camera and respond when requested. Failure to appear on camera and respond when requested will result in missed attendance. Students taking distance learning courses are also expected to attend class at a campus location at a minimum of once per term as outlined by the course schedule. Some distance learning courses may require more frequent on campus attendance. In order for students to earn attendance for required on campus days, students must physically attend class on campus and complete the required on-campus check in process. Students who are unable to attend class on required on campus days should notify their Campus Director of Academic Affairs.

In addition, students must meet ECPI's minimum attendance requirements. A student who has not attended a course for 14 consecutive calendar days will be withdrawn from the course. A student who has not attended all courses for which s/he is enrolled for 14 consecutive calendar days will be administratively withdrawn from the University.

Back to Academics > Attendance

Attendance Policies

Graduate Student Attendance

The expectations at ECPI are similar to the workplace where employees are expected to arrive at work each day prepared to add value. As such, attendance and participation in the class is critical to success in the course and students are expected to attend each regularly scheduled session. If the student is absent, it is his/her responsibility to contact the faculty member and arrange for any make-up work assignments. Excessive absences may result in the termination of enrollment in a course and a grade will be assigned in accordance with the grading policies.

Back to Academics > Attendance

Attendance Policies

Dental Assisting | AAS Attendance

A detailed record of each student's 'attendance is maintained by the instructors and becomes a part of their permanent records. Every absence from class, no matter what the reason, is recorded and counted as such by the instructor, beginning with the first day of class. It is sometimes necessary for the school to give employment recommendations for a student. The employer often takes attendance into consideration. Students must attend class regularly. No call/no show to scheduled classes is not permitted. If, for any reason, an absence is necessary, day clinical students must call the school and the instructor no later than one hour before the scheduled start time. Students with course absences greater than 15 percent may have their records reviewed for purposes of possible probation, termination, or suspension. A student may be dropped from a course if the student is absent more than 20 percent of the scheduled course hours. Written assignments must be submitted on time. Tests and assignments must be made up on the student's first classroom day back to school after absence unless the student makes alternate arrangements with the instructor. Students will be allowed two tests/exam make-ups per course. The student receives the grade earned for the first make-up test/exam. The grade received for the second

makeup test/exam in the same course will be no higher than an 80%. No other make-up test/exam is permitted. A zero will be recorded for additional missed tests/exams in the same course. There are no make-up quizzes. Any late homework is the grade earned minus 10 points. All unit tests must be recorded prior to the final examination. Any student who does not take the make-up test/exam on the first day back will receive a zero for the test exam.

Clinical Phase Absenteeism and Tardiness

Absenteeism on clinical days will not be tolerated. Students are expected to arrive at clinical rotation sites prepared to administer patient care. If a student is unable to perform required duties due to health or other reasons, the student should not attend clinical. If for any reason the student cannot attend the clinical rotation site, the student must talk to the assigned site point of contact (POC) no later than one hour before the scheduled start time. Emergency messages will be conveyed from Medical Careers Institute to the clinical site location. At no time should family or friends call the healthcare facility where the student is assigned. If more than two clinical days are missed, the student must report to the Program Director.

Back to Academics > Attendance

Attendance Policies

Diagnostic Medical Sonography | AAS Attendance

A detailed record of student attendance is maintained by the faculty and becomes a part of their permanent record. Every absence from class, no matter what the reason, is recorded and counted as such by the faculty, beginning with the first day of class. It is sometimes necessary for the College to give employment recommendations for a student. The employer often takes attendance into consideration.

Students must attend class regularly. No call/no show to scheduled classes is not permitted. If, for any reason, an absence is necessary, day clinical students must call the College and the instructor no later than one hour before the scheduled start time. Students with course absences greater than 15 percent may have their records reviewed for purposes of possible probation, termination, or suspension. A student may be dropped from a course if the student is absent more than 20 percent of the scheduled course hours.

Written assignments must be submitted on time. Tests and assignments must be made up on the student's first classroom day back to school after absence unless the student makes alternate arrangements with the instructor. Students will be allowed two tests/exam make-ups per course. The student receives the grade earned for the first make-up test/exam. The grade received for the second makeup test/exam in the same course will be no higher than an 80%. No other make-up test/exam is permitted. A zero will be recorded for additional missed tests/exams in the same course. There are no make-up quizzes. Any late homework is the grade earned minus 10 points. Clinical Phase Absenteeism and Tardiness

Absenteeism on clinical days will not be tolerated. Students are expected to arrive at clinical rotation sites prepared to administer patient care. If a student is unable to perform required duties due to health or other reasons, the student should not attend. If for any reason the student cannot attend on a scheduled clinical day, the student must talk to the assigned site point of contact (POC) no later than one hour before the scheduled start time. Emergency messages will be conveyed from the College to the clinical site location. At no time should family or friends call the health care facility where the student is assigned. If more than two clinical days are missed, the student must report to the Program Director and/or Clinical Coordinator.

Back to Academics > Attendance

Attendance Policies

Emergency Medical Services (EMS) | AAS Attendance

A detailed record of student attendance is maintained by the program and becomes a part of the permanent student record. Every absence is recorded and counted as such, beginning with the first scheduled class. There are no excused absences. Virginia EMS Regulations require students attend 85% of all scheduled class and lab sessions. If absences exceed 15% of the scheduled class sessions, the student is dropped from the program.

Externship Phase Absenteeism and Tardiness

All clinical courses have minimum hour requirements and minimum clinical competency requirements. Both the minimum hours and the minimum clinical competencies must be met for successful course completion.

Students are expected to arrive for clinical rotations prepared to administer patient care and perform student responsibilities. If there is an emergency or illness resulting in a clinical absence, the student should notify the clinical site and the clinical coordinator prior to the start of the assigned shift. Any missed clinical time must be rescheduled with the Clinical Coordinator.

Back to Academics > Attendance

Attendance Policies

Medical Assisting | AAS Attendance

Detailed records of student attendance, including absences, are maintained by the faculty and are part of the student's official record. Attending every scheduled class period is not only crucial to mastering course objectives, but attendance records may also be reviewed by prospective employers.

Students should communicate with the instructor in the event of necessary absences. Students with course absences greater than 15 percent may have their records reviewed for possible probation. A student may be dropped from a course if the student is absent more than 20 percent of the scheduled course hours.

Late Assignments

Assignments must be submitted by the due date assigned by the faculty member. A student who is absent will have the opportunity to make up missed assignments accordingly:

- Class Assignments: Class assignments can be submitted for full credit, provided they are submitted on the first day the student returns from absence.
- Homework: Homework assignments will be deducted 10 points.
- Tests/exams: Only two tests/exams can be made up for each course. Tests/exams must be made up on the first day the student returns from absence. The first make-up test/exam will be graded without penalty. The second make-up test/exam will have a maximum score of 80%. Any subsequent tests/exams missed will be issued a zero. All unit tests must be recorded prior to the final examination.
- Quizzes: Make-up quizzes are not permitted.

Attendance Policies

Medical Radiography | AAS Attendance

A detailed record of student‘s attendance is maintained by the instructors and becomes a part of the student‘s permanent record. Every absence from class, regardless of the reason, is recorded and counted as such by the instructor, beginning with the first day of class. Sometimes, the school is asked to provide employment recommendations for students and/or graduates and the potential employer often considers the attendance record.

Students are required to attend class regularly and on time. Therefore, missing scheduled classes is unacceptable. If an absence or tardiness is unavoidable, a student must notify the school prior to the start of the scheduled class and in addition, if the course is a clinical education one, scheduled at a clinical affiliated site, the student must also notify the site prior to the scheduled time. All missed clinical time must be made up to assure completion of 1200 clinical hours.

Students with course absences greater than 15 percent of any radiography course may have their records reviewed for the purposes of possible probation, termination, or suspension. A student may be dropped from a course if the student is absent more than 20 percent of the scheduled course hours. Arrangements with the Clinical Instructor and the student, to reschedule any missed clinical time, must be made as soon as possible, to avoid any of the above-mentioned situations.

Written assignments must be submitted on time. Tests and assignments must be made up on the student‘s first classroom day back to school after an absence unless the student makes alternate arrangements with the instructor.

Clinical Phase Absenteeism and Tardiness

Absenteeism on clinical days will not be tolerated. A student is expected to arrive at clinical, prepared to administer patient care and Radiography student responsibilities. If a student is unable to perform as such, due to health or other reasons, the student should not attend clinical and is required to inform the Radiology department and the campus faculty prior to the start of the assigned schedule.

All missed clinical time must be rescheduled with the Clinical Instructor of the department for approval. If more than two clinical days are missed, the student must report to the Program Director and/or Clinical Coordinator.

Back to Academics > Attendance

Attendance Policies

Nursing | ADN Attendance

A detailed record of students' attendance is maintained by the instructors and becomes a part of their permanent records. Every absence from class, no matter what the reason, is recorded and counted as such by the instructor, beginning with the first day of class. It is sometimes necessary for the school to give employment recommendations for a student. The employer often takes attendance into consideration.

Students must attend class regularly. If, for any reason, an absence is necessary, students must call the school and the instructor no later than one hour before the scheduled start time.

Students with course absences greater than 15 percent may have their records reviewed for purposes of possible probation, termination, or suspension. A student may be dropped from a course if the student is absent more than 20 percent of the scheduled course hours. Written assignments must be submitted on time. Tests and assignments must be made up on the student‘s first classroom day back to school after absence unless the student makes alternate arrangements with the instructor.

ADN Clinical Phase Absenteeism and Tardiness

Absenteeism on clinical days will not be tolerated. A student is expected to arrive at clinical prepared to administer patient care. If a student is unable to perform required duties due to health or other reasons, the student should not attend clinical. If for any reason the student cannot attend the clinical, the student must talk to the assigned group instructor no later than one hour before the scheduled start time.

Emergency messages will be conveyed from the school to the clinical area. At no time should family or friends call the healthcare facility where the student is assigned. Students who are absent or tardy during their scheduled clinical/simulation hours must contact the Director of Nursing or designee, prior to attending their next scheduled class/clinical time.

Back to Academics > Attendance

Attendance Policies

Nursing | BS to BSN (Orlando) Attendance

Class Time

It is an expectation that students attend all classes and all clinical experiences. The second-degree program is a full-time program, with students in class or clinical five days a week. Because of the high intensity of this program, outside employment is not recommended.

If a student is aware of the need to miss a class, he or she is to notify the faculty in advance, if possible. If a student misses a class, he or she is responsible for determining what materials were presented in the missed class and for making his or her own arrangements to obtain this information from available sources such as faculty, classmates, Moodle, or other on-line or reference sources.

ECPI University – Orlando faculty feel very strongly that it is important for students to attend all classes in order to achieve a full understanding of essential core content throughout the nursing curriculum. Attendance will be taken daily by the course faculty. Students who do not meet the attendance requirements, as stated by the course faculty, will be marked absent. Students who are absent for multiple class days will have points deducted from the final course grade as follows:

• Absent 1 day = no reduction in course grade

• Absent 2 days = 1 point

• Absent 3 days = 2 points

• Absent 4 days = 3 points

• Absent 5 days = 4 points

• Absent 6 days = 5 points

• Absent 7 days = 6 points

• Absent 8 days = 7 points

• Absent 9 days = 8 points

• Absent 10 days = 9 points

• Absent 11 days = 10 points

Exams

If the student anticipates missing a scheduled exam, he or she needs to notify the instructor. A different version of the missed exam may be administered at the faculty's discretion. Penalties for missing exams and quizzes will be applied as outlined in the course syllabi.

If the student anticipates missing a scheduled exam, he /she needs to notify the faculty member prior to the exam, unless it is an emergency situation without phone access. A five percent reduction will occur on any course make-up exam, while a ten percent reduction will occur on any make-up for a comprehensive final exam. For example, if a student scores a 93% on a course make-up exam, he/she will achieve an exam score of 88%. If a student scores a 93% on a comprehensive final make-up exam, he/she will achieve an exam score of 83%. If a student has missed an exam, another version of the exam is developed at the faculty member's discretion.

Students who miss an exam are not allowed to participate in the exam review for the missed exam. All make-up exams are scheduled during Week 12 and after final exams.

Clinical/Laboratory Time

A critical component of the nursing curriculum is that students demonstrate clinical competency (meeting the clinical evaluation criteria, either on-site in a skills laboratory or off-site at a clinical site).

"Clinical Time" means the time spent on-site at a clinical site or in a skills laboratory, including all required experiences, pre -/post-conferences and observations outlined by faculty.

"Clinical Absence" means the time scheduled at a clinical site or in a skills lab that the student does not attend.

Clinical Time schedules may be adjusted from time to time. Notice of schedule changes will be given to students as soon as reasonably possible after a schedule change has been made.

Attendance during the required amount of Clinical Time is mandatory in order to receive a passing grade. Accordingly, all Clinical Absences must be made up in accordance with the requirements set forth below, or the student will not be deemed to have passed the course:

- Students must be making satisfactory progress toward all course competencies in order to be eligible to make up a Clinical Absence.
- Students may be able to make up a missed clinical day. However, if more than one clinical day, or more than 20% of Clinical Time (whichever is greater) in a course is missed, the student will receive a failing grade.
- Tardiness and early departures constitute a Clinical Absence, and the time missed due to tardiness or early departure must be made up. A student who arrives to clinical more than 10 minutes late will be dismissed for the day and will have to make up the clinical time.

- For purposes of measuring the 20% of Clinical Time missed limitation, all missed Clinical Absences will be accumulated without regard to previous makeup time. (For example, if a student has missed 5% of the Clinical Time, has made up that 5%, and then misses another 16% of Clinical Time, the student will have exceeded the 20% missed Clinical Time limitation and will not be permitted to make up additional time and will fail the course.)
- A student who has not previously exceeded the 20% of Clinical Time missed limitation will be eligible to withdraw and not receive a failing grade only (a) due to extenuating circumstances approved in advance by the Dean, or (b) in the event of a genuine medical emergency of the student or an immediate family member. [Vacations, weddings, funerals (other than those of immediate family members), child care or other family care giving obligations will not be considered to be extenuating circumstances.]
- Faculty and course coordinators have the right to determine the nature of the experience that will be required for any Clinical Time that must be made up.
- Direct patient care is typically required in clinical instruction. If faculty and clinical sites are available, the student must attend the makeup Clinical Time at the clinical site on the scheduled makeup day. If patient experiences are not available, alternative assignments will be offered for makeup time. Students are not guaranteed patient experiences for makeup Clinical Time.
- If makeup Clinical Time is scheduled at a clinical site, all students with missed Clinical Time will be required to make up the missed Clinical Time on the scheduled makeup day. A student who misses scheduled makeup day may not be able to be scheduled for a second makeup day, and therefore may fail the course. All clinical makeup time must be completed before the end of the term. Makeup Clinical Time may routinely be schedule for Week 12, after final exams. Accordingly, it may not be possible to make up Clinical Time missed near the end of the term.
- Makeup Clinical Time is coordinated by the lead instructor for each clinical course. Other faculty, including clinical adjunct faculty, are not authorized to schedule makeup Clinical Time. It is the responsibility of the student to notify the lead instructor of any clinical course regarding missed clinical Time. The student will then be notified of the scheduled makeup opportunity.
- If the makeup Clinical Time scheduled does not fall within the times that faculty is regularly scheduled at a clinical location, the student will be required to makeup Clinical Time. Makeup Clinical Time will be scheduled only to the extent that faculty and clinical space are available and there can be no assurance that makeup Clinical Time other than those scheduled by the college will be available.
- If there is an emergency or illness resulting in absence, the student should notify his or her assigned clinical instructor at least one hour prior to the start of the scheduled Clinical Time
- A student may be instructed to leave a clinical site if, if in the opinion of the clinical instructor or clinical supervisor, the student's tardiness, preparedness, or other conditions render the student incapable of providing safe patient care or having been tardy to the extent that it adversely affects the student's ability to achieve the intended educational objective of the clinical experience. In the event the student is instructed to leave the clinical site, the student will be deemed to have a Clinical Absence for portion of the scheduled Clinical Time missed.

Attendance Policies

Nursing (BSN) Attendance

Class Time

It is an expectation that students attend all classes, labs, simulation, and all clinical experiences. If a student is aware of the need to miss a class, he or she is to notify the faculty in advance, if possible. If a student misses a class, he or she is responsible for determining what materials were presented in the missed class and for making his or her own arrangements to obtain this information from available sources such as faculty, classmates, Canvas, or other on-line or reference sources.

A detailed record of student's attendance is maintained by the instructors and becomes a part of their permanent records. Every absence from class, no matter what the reason, is recorded and counted as such by the instructor. Students with course absences greater than 15 percent may have their records reviewed for purposed of possible probation, termination, or suspension. A student may be dropped from a course if the student is absent more than 20 percent of the scheduled course hours. Written assignments must be submitted on time. Tests must be made up on the student's first classroom day back to school after absence unless the student makes alternate arrangements with the instructor.

Absenteeism on clinical days will not be tolerated. A student is expected to arrive at clinical prepared to administer patient care. If a student is unable to perform required duties due to health or other reasons, the student should not attend clinical. If for any reason the student cannot attend the clinical, the student must talk to the assigned group instructor no later than one hour before the scheduled start time. No call, no show may result in failure of the course.

Students are encouraged to contact the faculty member for the course, by telephone or email, if the student anticipates being late for class. A late arrival of 10 minutes or more to any class during the first hour of the day will constitute a one hour absence. After that, absences are calculated in minutes, including leaving early. Leaving prior to class dismissal is considered early departure. Students are not allowed to disrupt academic processes and, at the faculty member's discretion, admission to a class may be denied to tardy students until the next class break.

Clinical/Laboratory Time

A critical component of the nursing curriculum is that students demonstrate clinical competency (meeting the clinical evaluation criteria, either on-site in a simulation laboratory or off-site at a clinical site).

Clinical Time schedules may be adjusted from time to time. Notice of schedule changes will be given to students as soon as reasonably possible after a schedule change has been made.

Tardiness and early departures constitute a clinical absence. A student who arrives to clinical more than 10 minutes late will be dismissed for the day. If there is an emergency or illness resulting in absence, the student should notify his or her assigned clinical instructor at least one hour prior to the start of the scheduled clinical time.

A student may be instructed to leave a clinical site if, if in the opinion of the clinical instructor or clinical supervisor, the students tardiness, degree of preparedness, or other conditions render the student incapable of providing safe patient care. A student may also be instructed to leave a clinical site if tardy to the extent that it adversely affects the students' ability to achieve the intended educational objective of the clinical experience. In the event the student is instructed to leave the clinical site, the student will be deemed to have a Clinical Absence for the portion of the scheduled Clinical Time missed. ***Students must attend a minimum of 80 percent of class, clinical, or simulation/skills laboratory time each term to successfully meet course requirements.***

Students must be making satisfactory progress toward all course competencies in order to be eligible to make up a Clinical Absence.

Students may be able to make up a missed clinical day. However, if more than one clinical day, or more than 20% of Clinical Time (whichever is greater) in a course is missed, the student will receive a failing grade.

Tardiness and early departures constitute a Clinical Absence, and the time missed due to tardiness or early departure must be made up. A student who arrives to clinical more than 10 minutes late will be dismissed for the day and will have to make up the clinical time.

For purposes of measuring the Clinical Time missed limitation, all missed Clinical Absences will be accumulated without regard to previous makeup time. (For example, if a student has missed 5% of the Clinical Time, has made up that 5%, and then misses another 16% of Clinical Time, the student will have exceeded the 20% missed Clinical Time limitation and will not be permitted to make up additional time and will fail the course.)

A student who has not previously exceeded the 20% of Clinical Time missed limitation will be eligible to withdraw and not receive a failing grade only (a) due to extenuating circumstances approved in advance by the Program Director, or (b) in the event of a genuine medical emergency of the student or an immediate family member. [Vacations, weddings, funerals (other than those of immediate family members), childcare or other family care giving obligations will not be considered to be extenuating circumstances.]

Faculty and course coordinators have the right to determine the nature of the experience that will be required for any Clinical Time that must be made up.

Direct patient care is typically required in clinical instruction. If faculty and clinical sites are available, the student must attend the Makeup Clinical Time at the clinical site on the scheduled makeup day. If patient experiences are not available, alternative assignments will be offered for makeup time. Students are not guaranteed patient experiences for makeup Clinical Time.

If Makeup Clinical Time is scheduled at a clinical site, all students with missed Clinical Time will be required to make up the missed Clinical Time on the scheduled makeup day. A student who misses a scheduled makeup day may not be able to be scheduled for a second makeup day, and therefore may fail the course. All Makeup Clinical Time must be completed before the end of the term. Makeup Clinical Time may routinely be scheduled for Week 5. Accordingly, it may not be possible to make up Clinical Time missed near the end of the term.

Makeup Clinical Time is coordinated by the lead instructor for each clinical course. Other faculty, including clinical adjunct faculty, are not authorized to schedule makeup Clinical Time. It is the responsibility of the student to notify the lead instructor of any clinical course regarding missed Clinical Time. The student will then be notified of the scheduled makeup opportunity.

Makeup Clinical Time will be scheduled only to the extent that faculty and clinical space are available and there can be no assurance that makeup Clinical Time other than those scheduled by the University will be available.

Virginia Campuses: Note: All students must meet the Virginia Board of Nursing minimum requirement of 500 direct client care hours to graduate from the program.

Attendance Policies

Nursing | MSN

Nursing | MSN Attendance

The course syllabi provide further information on attendance and participation. The MSN program follows ECPI University's Graduate Attendance Policy.

The expectations at ECPI are similar to the workplace where employees are expected to arrive at work each day prepared to add value. As such, attendance and participation in the class is critical to success in the course and students are expected to attend each regularly scheduled session. If the student is absent, it is his/her responsibility to contact the faculty member and arrange for any make-up work assignments. Excessive absences may result in the termination of enrollment in a course and a grade will be assigned in accordance with the grading policies.

Late Assignments and Testing

Guidance for late assignments and testing are located in the MSN Program Student Handbook located in the MSN Student Corner in Canvas.

Attendance Policies

Nursing | PN Diploma Attendance

A detailed record of students' attendance is maintained by the instructors and becomes a part of their permanent records. Every absence from class, no matter what the reason, is recorded and counted as such by the instructor, beginning with the first day of class. It is sometimes necessary for the school to give employment recommendations for a student. The employer often takes attendance into consideration.

Students must attend class regularly. If, for any reason, an absence is necessary, day clinical students must call the school and the instructor no later than one hour before the scheduled start time. Students with course absences greater than 15 percent may have their records reviewed for purposes of possible probation, termination, or suspension. A student may be dropped from a course if the student is absent more than 20 percent of the scheduled course hours. Written assignments must be submitted on time. Tests must be made up on the student‘s first classroom day back to school after absence unless the student makes alternate arrangements with the instructor.

PN Clinical Phase Absenteeism and Tardiness

Absenteeism on clinical days will not be tolerated. A student is expected to arrive at clinical prepared to administer patient care. If a student is unable to perform required duties due to health or other reasons, the student should not attend clinical. If for any reason the student cannot attend the clinical, the student must talk to the assigned group instructor no later than one hour before the scheduled start time.

Emergency messages will be conveyed from the school to the clinical area. At no time should family or friends call the healthcare facility where the student is assigned. Students who are absent or tardy during their scheduled clinical/simulation hours must contact the Director of Nursing or designee, prior to attending their next scheduled class/clinical time. Any additional absence or tardiness in the term may result in failure of the course and may jeopardize the student's ability to remain in the program. Absence from the clinical site on the first or last day of a rotation requires prior approval from the Director of Nursing.

Back to Academics > Attendance

Attendance Policies

Nursing | RN to BSN Attendance

Attendance and participation is required. The attendance policy requirements for online classes are documented in each individual course. For courses with a practical experience component, students will be required to attend scheduled experiences as described in their course syllabus. A student may be dropped from a course if the student is absent more than 20% of the scheduled total course hours (classroom and clinical).

Back to Academics > Attendance

Attendance Policies

Physical Therapist Assistant | AAS Attendance

A detailed record of student's attendance is maintained by the instructors and becomes a part of their permanent records. Every absence from class, no matter what the reason, is recorded and counted as such by the instructor, beginning with the first day of class. It is sometimes necessary for the school to give employment recommendations for a student. The employer often takes attendance into consideration.

Students are required to attend class regularly and on time. Therefore, missing scheduled classes is unacceptable. If an absence or tardiness is unavoidable, a student must notify the school prior to the start of the scheduled class and in addition, if the course is a clinical education one, scheduled at a clinical affiliated site, the student must also notify the site prior to the scheduled time. All missed clinical time must be made up.

Students with course absences greater than 15 percent of any course may have their records reviewed for the purposes of possible probation, termination, or suspension. A student may be dropped from a course if the student is absent more than 20 percent of the scheduled course hours. Arrangements with the Clinical Instructor and the student, to reschedule any missed clinical time, must be made as soon as possible, to avoid any of the above mentioned situations.

Clinical Phase Absenteeism and Tardiness

Absenteeism on clinical days will not be tolerated. A student is expected to arrive at clinical prepared to administer patient care. If a student is unable to perform required duties due to health or other reasons, the student should not attend clinical. If for any reason the student cannot attend the clinical, the student must contact the Clinical Instructor and Director of Clinical Education no later than one hour before the scheduled start time.

Emergency messages will be conveyed from the school to the clinical area. At no time should family or friends call the healthcare facility where the student is assigned. If more than two clinical days are missed, the student must contact the PTA Program Director or Director of Clinical Education.

Back to Academics > Attendance

Arts and Sciences Curriculum

Arts and sciences coursework provides the foundational skills necessary for success in all fields; ECPI University places significant emphasis upon the Arts and Sciences core in each program offered. The Arts and Sciences component of the curricula at ECPI University has been designed with the intention of fulfilling the University's mission to "promote the enhancement of each student's professional and personal life through education." In order to prepare students for successful careers, the Arts and Sciences courses provide students with opportunities to demonstrate collegiate-level critical thinking and problem-solving skills. Additionally, these courses give students a firm foundation for lifelong learning in the sciences and the humanities. The faculty designed the Arts and Sciences curriculum so that it provides a rich context to the students' program-related studies.

Associate degrees require a minimum of 15 semester credit hours in the Arts and Sciences, while bachelor's degrees require a minimum of 30 semester hours. The credit hours required in the Arts and Sciences core for all degree programs include at least one course from each of the following areas: mathematics/natural science, humanities, and social/behavioral sciences.

The Arts and Sciences curriculum includes the following program-level outcomes:

Upon successful completion of the arts and sciences requirements, students will be able to:

- Exhibit effective oral and written communication
- Support conclusions with quantitative logical reasoning and research
- Support conclusions with qualitative logical reasoning and research
- Utilize self-reflection to foster self-awareness
- Demonstrate awareness of diverse perspectives in the global community

Arts and Sciences Curriculum

Diploma Programs

The courses required in the Arts and Sciences core for all diploma programs cover topics in mathematics/ natural science, humanities, and social/behavioral sciences. Students pursuing a diploma are required to satisfy the requirements for each category, as designated by his/her degree program:

CULINARY ARTS		
Mathematics	MTH120 College Mathematics College Mathematics	3 semester credits

Self-Integration courses

In addition to the listed courses, students enroll in additional courses designed to help them learn valuable research skills, become more technically literate, and initiate successful career searches.

Most programs require an orientation course to assist students in becoming familiar with the learning resources available to them at ECPI. They may also take other computer science courses to help them become proficient at using the technologies available to them at school and at work. Throughout their program, students learn a variety of professional skills, including how to complete an interview process successfully and how to prepare effective resumes. Most students also take a Career Orientation course to reinforce these skills.

Degree and Certification Overviews

Associate of Science and Associate of Applied Science Degrees

The associate degree programs consist of arts and science courses, core program courses, concentration courses, and electives. Arts and sciences courses teach students the essential elements of communication, mathematics, humanities, and the social sciences. Courses in the core program area and concentration courses prepare students with theory, skills, and specific outcomes necessary for success in their chosen career fields. Electives provide the student with an opportunity to concentrate on learning advanced techniques. Most programs offer externship opportunities for academic credit.

The Associate of Science is considered an academic degree and some students who earn an Associate of Science choose to continue their education in a bachelor's degree program. In South Carolina, the Associate of Applied Science in the technology fields are consistent, in content, with Associate of Science degrees offered in Virginia and North Carolina; however, due to state regulations, the degree conferred in these technology programs is the Associate of Applied Science. The Associate of Applied Science degree programs in all health science fields are considered terminal degrees without opportunity for transfer credit; however, students may enter bachelor's degrees with advanced standing for their earned work at the associate's level. The associate degree programs prepare graduates for careers as practitioners in their respective fields.

Bachelor of Science Degrees

The Bachelor of Science degree and programs consist of arts and science courses, core program courses, concentration courses, and electives. Arts and sciences courses teach students the essential elements of communication, mathematics, humanities, and the social sciences. Courses in the core program area and concentration courses prepare students with theory, skills, and specific outcomes necessary for success in their chosen career fields. Electives provide the student with an opportunity to concentrate on learning advanced techniques. Most programs offer externship opportunities for academic credit. The Bachelor of Science programs prepare graduates for entry-level careers as practitioners and managers in their respective fields.

Masters Degrees

The Master of Science degree program provides students with problem-solving, decision-making skills, and strategic planning skills for the contemporary, global business world. Our curriculum is designed to bridge the gap between theory and practical application. Each graduate will possess a holistic technical education that facilitates entry into higher-level leadership and management positions commensurate with a technical lead, project and operations manager, or clinical/education director. Technical skills emphasized by the programs include data and information management systems related to the discipline, research analysis, and application in a results-driven environment, information assurance, systems security best practices, and use of virtualization and simulation technologies.

The Master of Business Administration (MBA) program equips students with advanced leadership, strategic thinking, and decision-making skills essential for navigating today's business environment. Our curriculum integrates theoretical knowledge with practical applications, fostering a comprehensive understanding of business functions and leadership dynamics. Graduates will be exposed to the business concepts needed by managerial roles across various sectors, including management, consulting, finance, marketing, and entrepreneurship. The program emphasizes critical competencies such as financial analysis, strategic marketing, organizational behavior, business ethics, data-driven decision-making, and operations management, while also covering emerging areas like digital transformation, innovation, and supply chain management. The MBA develops leaders ready to adapt to and thrive in an evolving business landscape, driving sustainable growth and success.

Diplomas

Diploma programs offer those who are already working in an industry the opportunity to broaden and deepen their skills or learn basic skills needed to change careers. These students may be scheduled for courses with degree-seeking students in their respective program areas. Diploma programs do not include arts and sciences.

Certifications

ECPI University offers Certificate programs (also referred to as Micro-credentials) that focus on specific skill sets. These programs are shorter than traditional degree programs and are designed to meet the needs of working professionals so that they can stay competitive in their field. Certificate programs may be offered in a variety of ways to suit the learning style and schedules of individuals. This may include remote learning, instructor led in-seat learning, hybrid courses, and online courses.

Prior Learning and Transfer Policies and Procedures

Prior Learning and Transfer Policies and Procedures

ECPI University recognizes and welcomes students that arrive at our institution with diverse backgrounds and varied prior learning experiences. Undergraduate students may transfer up to 75% of the total credits required for their degree program from all combined sources. A maximum of 25% may be earned through ECPI Prior Learning Portfolio Assessment and Challenge Exams. Students must complete at least 25% of their program at ECPI University to be awarded a degree or diploma. Students should review the policies and procedures outlined in this section including any relevant program-specific policies and the standards for each type of prior learning.

ECPI University does not guarantee acceptance of credits from or to other institutions and evaluates credit based on standards set and approved by academic program leadership. Only official transcripts are considered for transfer credit. All official transcripts must be received and all prior learning credit must be approved before the end of the student's first semester. Exceptions may be made to this deadline under extenuating circumstances. Active students may not enroll in courses outside ECPI University for the purpose of transferring credits.

Prior Learning and Transfer Policies

ECPI University awards transfer credit and advanced standing based on individual course content, specific degree program requirements and University academic standards. Credit that is awarded as transfer credit or advanced standing credit to a student's degree program is applied toward degree completion and as such, students cannot receive duplicate transfer credit for more than one external course that is equated to the same course or curriculum requirement at ECPI. In this instance, credit will only be awarded for the eligible course(s). Developmental or remedial courses are not eligible for transfer. Advanced Standing may be granted for prior coursework, qualifying professional training, or industry-standard certification exams deemed equivalent in content and scope to courses offered at the University. The University reserves the right to require successful completion of an assessment administered by ECPI faculty before awarding transfer credit or advanced standing. Students are responsible for reviewing the policy guidelines and evaluation criteria for each type of prior learning or transfer credit they intend to pursue to ensure alignment with their academic goals and program requirements. Students who have earned prior ECPI University credit should consult the Readmission and Reentry Transfer Policies or Change of Program, Dual Major and Second Degree Transfer Policies.

Students pursuing graduate degree programs or health science programs through ECPI University's College of Health Sciences should refer to the Graduate Programs Transfer Policies and Program-Specific Transfer Policies for additional requirements.

Transfer and Advanced Academic Standing credits are counted as both hours attempted and hours completed within the Satisfactory Academic Progress Policy. Transfer credit does not hold any qualitative points, therefore transfer credit is not included in the calculation of the grade-point average for the purpose of determining a student's CGPA or meeting the CGPA requirement of the Satisfactory Academic Progress Policy.

Financial Aid Implications of Transfer Credit

Students who are eligible to receive Prior Learning and Transfer Credit may experience one or more terms in which the student's status, for the purposes of financial aid, may change, and the corresponding amount of financial aid may be reduced due to the decreased number of hours scheduled. Students should discuss the potential financial aid implications of Prior Learning and Transfer Credit with a financial aid advisor.

Veterans Administration Benefits

ECPI University campuses are approved for training of veterans and eligible veterans' dependents. Each student who is eligible for and desires to receive veterans' educational benefits must provide ECPI with the student's military discharge document DD214 or Certificate of Eligibility prior to their first scheduled class. Students receiving veteran's benefits have the responsibility to provide official transcripts from all previously attended post-secondary institutions for the evaluation of transfer credit within their first semester. Classes determined to be eligible for transfer from previous institutions are ineligible for certification. Students receiving veterans' benefits will be responsible for any costs associated with completing a course determined to be ineligible for certification. Applicants should contact each campus directly for further information.

The University maintains a written record of prior education and/or training of veterans and eligible persons. Appropriate credit will be granted for prior education and/or training, with the current education/training period shortened proportionately. The University notifies the student regarding the credit granted and the amount of time the education/training period has been decreased according to the amount of credits awarded. The prior learning credit evaluation is made available to the Department of Veterans Affairs, upon request.

Prior Learning and Transfer Procedure

Applicants should discuss all prior experience and training with an advisor during the Admissions Interview. During enrollment, applicants will complete a Request for Official Transcript form for each previously attended institution and are encouraged to submit all relevant prior learning documentation for review. While the University will assist with obtaining transcripts from institutions that allow third-party requests, applicants are responsible for ensuring the University's receipt of official transcripts within a student's first semester and any related fees required by the issuing institutions. Official transcripts are required for the evaluation and application of transfer credit toward a student's degree program and all official transcripts must be received within the student's first semester; otherwise, transfer credit will not be awarded. Under extenuating circumstances, an exception to the timeline may be granted. Transcripts submitted by students, third parties, or those listed as transfer credits from another institution are not considered official.

Once official transcripts are received, the University will complete an evaluation and notify the applicant through a Transfer Credit Evaluation notification. If transfer credit is awarded, credit is posted to the student's official record accordingly, which may shorten the program length.

Program-Specific Transfer Policies

Outlined below are additional program-specific policies governing the awarding of transfer credit in the designated programs. Students considering admission to any of the programs listed are encouraged to review these policies carefully to ensure a clear understanding of the applicable requirements.

MSHA

A maximum of six graduate credit hours completed in the last six years with a B or higher may be transferred in from a prior Master's degree in a health-related field.

MHA course content is planned in a sequential manner so that each course builds upon previous course content. Students must complete all courses sequentially as outlined in the syllabi. The numerical grade of 80 (B-) is the minimum passing grade for the course. Students who fail or drop a core course while in the MHA program may continue with their cohort; however, they will not be able to enter the focus track courses until they successfully complete the failed or dropped course. Focus track courses must be taken in sequence. All core and selected focus track courses must be completed prior to taking the Capstone Course.

All graduate courses require a B- or better to be considered applicable toward degree completion and students must maintain a cumulative grade point average (CGPA) of a 3.0 or better to remain enrolled in the program. Students who receive two grades of F, at any time during the program, will be dismissed. A student must re-take a course for which a grade of F was earned.

ADN

Transfer of Credit Procedure for BIO111 , BIO111L and BIO116 , BIO116L . The University will consider coursework for transfer of BIO111 , BIO111L (4 credits) and BIO116 , BIO116L (4 credits) courses in which the student achieved a B- or better as the final grade, that were completed within the past seven calendar years, and that are established to be equivalent in content and objectives to courses offered at the University.

Coursework for Licensed Practical Nurses. The University will consider prior coursework from current licensed practical nurses in accordance with the Transfer of Credit policies outlined in the University Catalog for courses in which the student achieved a B or better as the final grade and were completed within the past five calendar years. The program will determine the comparability to course learning objectives.

BSN

Transfer of Credit Procedure for BIO111 , BIO111L and BIO116 , BIO116L . The University will consider coursework for transfer of BIO111 , BIO111L (4 credits) and BIO116 , BIO116L (4 credits) courses in which the student achieved a B- or better as the final grade, that were completed within the past seven calendar years, and that are established to be equivalent in content and objectives to courses offered at the University.

BSBSN

Transfer credits will be evaluated according to ECPI University's transfer credit policy, as modified by the stipulations described in the admissions requirements for the Bachelor of Science in Nursing program. The requirements for prerequisite courses must be satisfied, as outlined in the BS to BSN Admissions Requirements.

MSN-FNP and MSN-NE

A maximum of six graduate credit hours with a B or higher may be transferred from a prior master's degree program in nursing. For the MSN program (all concentrations), prerequisite courses and courses considered for transfer credit should have a final course grade of B or higher with these limitations:

- Specialty Core (3 P's): Coursework will be considered within six years of the program completion date.
- MSN Degree Major Courses: Coursework will be considered within six years of the program completion.
- Clinical (Practicum) Transfer Credits (All concentrations): Clinical hours may not be transferred into the MSN degree concentrations.

DPN

The University will consider coursework for transfer for the BIO112 , BIO112L (3 credits), BIO114 , BIO114L (3 credits), BIO117 , BIO117L (3 credits), and BIO118 , BIO118L (3 credits) courses in which the student achieved a B- or better as the final grade, that was completed within the past seven calendar years, and that is established to be equivalent in content and objectives to courses offered in the Practical Nursing Program.

AASPTA and AASDMS

Transfer of Credit Procedure for BIO111 , BIO111L and BIO116 , BIO116L . The University will consider coursework for transfer of BIO111 , BIO111L (4 credits) and BIO116 , BIO116L (4 credits) courses in which the student achieved a B- or better as the final grade, that were completed within the past seven calendar years, and that are established to be equivalent in content and objectives to courses offered at the University. Applicants who have completed a bachelor's degree from an accredited institution, that includes coursework in the sciences (e.g., biology, chemistry, physics, kinesiology or related disciplines) may have the coursework reviewed without timeframe limitations.

AASDA, AASMA, AASMR, AASST, and AASEMS

Transfer of Credit Procedure for BIO101 and BIO104 . The University will consider coursework for transfer of BIO101 and BIO104 (3 credits each) courses in which the student achieved a C or better as the final grade, that were completed within the past seven calendar years, and that are established to be equivalent in content and objectives to courses offered at the University. Applicants who have completed a bachelor's degree from an accredited institution, that includes coursework in the sciences (e.g., biology, chemistry, physics, kinesiology or related disciplines) may have the coursework reviewed without timeframe limitations.

Graduate Programs Transfer Policies

A maximum of six semester credit hours, or the equivalent, may be applied as transfer credit toward ECPI University's graduate degree programs. Transfer credit may be awarded for coursework completed at institutions that are either regionally or nationally accredited and recognized by the Council for Higher Education Accreditation (CHEA), or at other accredited institutions approved on a case-by-case basis. Previously earned academic credit is eligible for transfer provided it meets the following criteria: a minimum grade of B or higher (3.0 on a 4.0 scale); relevance to the required courses within the student's program of study; substantial equivalence in content and credit hours; and completion within the past ten calendar years. Students pursuing graduate degree programs in health science or nursing through ECPI University's College of Health Sciences should refer to the program-specific transfer policies for additional requirements.

Readmission and Reentry Transfer Policies

Students with an absence of more than six months are required to re-enter the program or curriculum in effect at the time of readmission. Students who withdraw prior to graduation may re-enter ECPI University within five years (two years for nursing, physical therapist assistant, and medical radiography students) and retain full academic credit, provided the coursework remains applicable to the current program.

ECPI coursework may be applied if it meets the following criteria: a passing grade of D or higher was earned; the coursework is applicable to the student's current program requirements; the content and credit hours are substantially equivalent; and the coursework was completed within the past ten calendar years. Program-specific grade or time limitations may also apply. General education or arts and sciences courses may be exempt from the time limitation. All ECPI courses, whether successfully or unsuccessfully completed, that apply to the program or curriculum in effect at the time of readmission will impact the student's Cumulative Grade Point Average (CGPA), Incremental Completion Rate (ICR), and Maximum Time Frame (MTF). In certain cases, Advanced Standing credit may be awarded based on prior coursework that demonstrates learning outcomes substantially equivalent in content and scope to current program requirements. The University reserves the right to require successful completion of an assessment administered by ECPI faculty before awarding transfer credit or advanced standing.

Credits earned at other institutions will be evaluated at the time of readmission or reentry based on the program or curriculum in effect and in accordance with the policies outlined in the Types of Prior Learning and Transfer section. Returning students who previously completed clinical courses may be required to demonstrate competency through clinical evaluations. Students pursuing graduate or health sciences programs should consult the Graduate Programs Transfer Policies and Program-Specific Transfer Policies for further details.

Change of Program, Dual Major and Second Degree Transfer Policies

Students approved to change their program, pursue an additional degree, or add a dual major are required to sign a new Program Enrollment Agreement. They will enter the program or curriculum in effect at the time of enrollment. Prior ECPI coursework and external transcripts will be evaluated as part of this curricular transition.

ECPI coursework may be applied if it meets the following criteria: a passing grade of D or higher was earned; the coursework is applicable to the student's current program requirements; the content and credit hours are substantially equivalent; and the coursework was completed within the past ten calendar years. Program-specific grade or time limitations may also apply. General education or arts and sciences courses may be exempt from the time limitation. All ECPI courses, whether successfully or unsuccessfully completed, that apply to the current program or curriculum will impact the student's Cumulative Grade Point Average (CGPA), Incremental Completion Rate (ICR), and Maximum Time Frame (MTF). In certain cases, Advanced Standing credit may be awarded based on prior coursework that demonstrates learning outcomes substantially equivalent in content and scope to current program requirements. The University reserves the right to require successful completion of an assessment administered by ECPI faculty before awarding transfer credit or advanced standing.

Credits earned at other institutions will be evaluated at the time of enrollment based on the current program or curriculum and in accordance with the Types of Prior Learning and Transfer policies. Students pursuing graduate or health sciences programs should consult the Graduate Programs Transfer Policies and Program-Specific Transfer Policies for further details.

Students pursuing a program change, additional degree, or dual major should also review the Change of Program, Dual Major or Concentration, and Second Degree and Minimum Residency Requirements policies for further guidance.

Types of Prior Learning and Transfer Credit

Types of Prior Learning and Transfer Credit

Welcome to the Types of Prior Learning and Transfer Credit page. This section discusses the types of prior learning and transfer credit that are accepted by ECPI University.

College and University Credit

Official transcripts from the issuing institution are required for the evaluation and application of college and university credit toward a student's degree program. Transfer credit or advanced standing credit may be awarded for prior coursework from regionally or nationally accredited institutions recognized by the Council for Higher Education Accreditation (CHEA) and other accredited institutions that are approved on a case-by-case basis.

Previously earned college and university credit is awarded as transfer credit provided that it meets the following criteria: a grade of C or higher (2.0 on a 4.0 scale), applicable to the required courses in the student's program, substantial equivalence in content and credit hours, and completion within the past ten calendar years. General education or arts and sciences courses may be exempt from the time limitation. Credits earned at institutions using quarter or other non-semester units will be converted to semester credits for evaluation. Courses graded on alternate scales may be accepted with documentation verifying equivalence to a 2.0 GPA. Program-specific grade or timeframe parameters in addition to those listed above may apply. Students pursuing graduate degrees or health science programs should refer to the program-specific transfer policies for more information.

Advanced standing may be granted for prior coursework that demonstrates learning outcomes substantially equivalent to ECPI University courses. The University reserves the right to require successful completion of an assessment administered by ECPI faculty before awarding transfer credit or advanced standing.

Advanced Placement Exams (AP)

Official AP exam transcripts from College Board are required for the evaluation and awarding of college credit based on AP exam scores. A minimum score of 3 is required for credit on all AP exams. General education or arts and sciences courses may be exempt from the time limitation, programmatic coursework must be completed within the past ten calendar years to be eligible for transfer.

Statistics / MTH140 Statistics (3 semester credits)

World Conflicts since 1900 / **HUMCORE2** (3 semester credits)

World Population / **SOCSCICORE** (3 semester credits)

Types of Prior Learning and Transfer Credit

ACE Learning Credit (Credly/Accredible)

ECPI University evaluates and awards transfer credit for professional, vocational, and other non-traditional coursework and examinations in accordance with college-level credit recommendations issued by the American Council on Education (ACE.) Nonmilitary credit recommendations made by ACE can be found in the ACE National Guide. The official ACE Transcript is issued by Credly and Accredible and includes credit recommendations and competencies earned through various prior learning experiences. Students can also provide the official transcript from the issuing institution for the evaluation and awarding of college credit based on college-level course equivalencies recommended by ACE.

ACE Learning credit is awarded as transfer credit provided that it meets the following criteria: applicable to the required courses in the student's program, substantial equivalence in content and credit hours, and completion within the past ten calendar years. General education or arts and sciences courses may be exempt from the time limitation. Program-specific grade or timeframe parameters in addition to those listed above may apply. Students pursuing graduate degrees or health science programs should refer to the program-specific transfer policies for more information.

Advanced standing may be granted for prior coursework that demonstrates learning outcomes substantially equivalent to ECPI University courses. The University reserves the right to require successful completion of an assessment administered by ECPI faculty before awarding transfer credit or advanced standing.

Types of Prior Learning and Transfer Credit

Military Training and Experience

ECPI University evaluates and awards transfer credit for military training and experience based on college-level credit recommendations from the American Council on Education (ACE) as listed on the Joint Services Transcript (JST), as well as credits earned through Air University (AU).

• The Joint Services Transcript (JST) provides official documentation of military training and experience, along with corresponding college-level credit recommendations by the American Council on Education (ACE), for individuals who have served in the U.S. Army, National Guard, Navy, Marine Corps, and Coast Guard. To request an official JST, please visit: https://jst.doded.mil/official.html

• The Air University (AU) Transcript documents military education and training for individuals who have served in the United States Air Force or United States Space Force. To request an official Air University transcript, please visit: https://www.airuniversity.af.edu/Registrar/Transcript-Requests/

Military training and experience is awarded as transfer credit provided that it meets the following criteria: applicable to the required courses in the student's program, substantial equivalence in content and credit hours, and completion within the past ten calendar years. General education or arts and sciences courses may be exempt from the time limitation. Program-specific grade or timeframe parameters in addition to those listed above may apply. Students pursuing graduate degrees or health science programs should refer to the program-specific transfer policies for more information.

Advanced standing may be granted for prior coursework that demonstrates learning outcomes substantially equivalent to ECPI University courses. The University reserves the right to require successful completion of an assessment administered by ECPI faculty before awarding transfer credit or advanced standing.

Types of Prior Learning and Transfer Credit

International College and University Credit

Students who have attended a postsecondary institution outside the United States must submit the following for the evaluation and awarding of college credit based on international coursework:

• An official course-by-course evaluation conducted by a credential evaluation organization that is a current member of either the National Association of Credential Evaluation Services (NACES) or the Association of International Credential Evaluators (AICE).

• Translated transcripts in English, if applicable, completed by a certified translator.

ECPI University awards transfer credit from international institutions based on NACES or AICE recommendations and provided that it meets the following criteria: the institution must be determined to be equivalent to U.S. accreditation standards, a grade of C or higher (2.0 on a 4.0 scale), applicable to the required courses in the student's program, substantial equivalence in content and credit hours, and completion within the past ten calendar years. General education or arts and sciences courses may be exempt from the time limitation. Credits earned under quarter or other non-semester systems will be converted to semester hours. Courses graded on alternate scales may be accepted with documentation verifying equivalence to a 2.0 GPA. Additional grade or time restrictions may apply to specific programs, particularly graduate and health sciences programs; students should consult program-specific policies.

Advanced standing may be granted for prior coursework that demonstrates learning outcomes substantially equivalent to ECPI University courses. The University reserves the right to require successful completion of an assessment administered by ECPI faculty before awarding transfer credit or advanced standing.

Types of Prior Learning and Transfer Credit

Professional Certifications, Credentials and Training

ECPI University evaluates and awards advanced standing credit for students who have demonstrated learning outcomes through certain professional training or passed eligible industry-standard certification exams that are determined substantially equivalent in content and scope to courses offered at the University. ECPI University awards advanced standing credit for certifications/examinations provided that they meet the following criteria: applicable to the required courses in the student's program, substantially equivalent in content and scope to courses offered at the University, valid at the time of enrollment, and completion within the past 3 calendar years. All certifications applicable to Computer and Information Science courses require relevant work experience in the areas of certification to satisfy the practical component of ECPI courses. Culinary Servsafe certification must be completed within the past 2 calendar years.

Certification and examination credits outlined below may be updated periodically due to academic revision and curricular alignment. All credits are awarded on an individual student basis. The University reserves the right to require successful completion of an assessment administered by ECPI faculty before awarding transfer credit or advanced standing.

Certifications and ECPI Equivalent Course(s)

Computer and Information Science

A+ (CompTIA) / CST120 Computer Configuration I and CST140 Introduction to Operating Systems

AWS Certified Machine Learning Specialty / CST440 AI/Machine Learning

AWS Certified Cloud Practitioner / CYB450 AWS Academy Cloud Foundations and AI Tools

AWS Certified Solutions Architect - Associate / CYB450 AWS Academy Cloud Foundations and AI Tools

CCNA - Cisco Certified Network Administrator (Cisco) / CYB220 Introduction to Routing and Switching and CYB220L Introduction to Routing and Switching LAB

CEH - Certified Ethical Hacker (EC-Council) / CYB400 Ethical Hacking with AI, CYB400L Ethical Hacking with AI Lab, CYB410 Ethical Hacking with AI II, and CYB410L Ethical Hacking II with AI Lab

Cloud+ (CompTIA) / CYB260 Introduction to Cloud Solutions and CYB260L Introduction to Cloud Solutions LAB

Linux+ (CompTIA) / CST200 Linux Administration

Network+ (CompTIA) / CST160 Introduction to Networking, CYB200 Network Protocols and Services, and CYB200L Network Protocols and Services Lab

Security+ (CompTIA) / CYB250 Principles of Cybersecurity with AI, CYB300 Advanced Cybersecurity with AI, and CYB300L Advanced Cybersecurity with AI Lab

PenTest+ (CompTIA) / CYB400 Ethical Hacking with AIand CYB400L Ethical Hacking with AI Lab

Microsoft 365 Certified Administrator / CYB280 Microsoft 365 Administration

Linux Essentials Exam (Linux Professional Institute) / CST200 Linux Administration

Red Hat Certified Systems Administrator (Red Hat) / CST200 Linux Administration

Engineering Technology

ACU Autodesk Certified User Certification in Auto CAD / MET192 Graphics Communication

ACU Autodesk Inventor Certified User / MET192L Introduction to 3-D Modeling LAB

ACU Autodesk Certified User Revit / CAD108 Architectural CAD Design

Associate CET (CETa): EM1 DC (ETA International) / EET110 Electric Circuits I

Associate CET (CETa): EM2 AC (ETA International) / ESET111 Electric Circuits II and ESET111L Electric Circuits II Lab

Associate CET (CETa): EM3 Analog (ETA International) / EET120 Semiconductor Devices and EET121 Electronic Systems Applications

Associate CET (CETa): EM4 Digital (ETA International) / EET130 Digital Systems I and EET230 Digital Systems II

Associate CET (CETa): EM5 Comprehensive (ETA International) / ESET111 Electric Circuits II, ESET111L Electric Circuits II Lab, EET120 Semiconductor Devices, EET121 Electronic Systems Applications, EET130 Digital Systems I, and EET230 Digital Systems II

Associate-Level CET (ISCET) / ESET111 Electric Circuits II, ESET111L Electric Circuits II Lab, and EET113 DC and AC Circuits

Journeyman-Level CET (ISCET) / ESET111 Electric Circuits II, ESET111L Electric Circuits II Lab, EET113 DC and AC Circuits, EET120 Semiconductor Devices, EET121 Electronic Systems Applications, and EET223 Electronic Devices and Operational Amplifiers

Business

Project Management Institute: PMP (Project Management Professional) / **Business Electives** (6 semester credits) OR **Graduate Electives** (3 semester credits)

Professional in Human Resources (PHR) or SHRM-Certified Professional or SHRM-Senior Certified Professional / **Business Electives** (6 semester credits) OR **Graduate Electives** (3 semester credits)

Six Sigma Black Belt / **Business Electives** (6 semester credits) OR **Graduate Electives** (3 semester credits)

Culinary

ServSafe Food Manager Certification / CAA115 Kitchen Essentials

ECPI Prior Learning Portfolio Assessment

Prior learning portfolio assessment is available for a select number of courses to students who are able to demonstrate proficiency in the course learning outcomes through related employment and other professional or non-traditional learning experiences. Students must request or confirm their intention to submit a portfolio no later than the end of their first semester (first three terms) and prior to accessing the selected course. Students must be approved by academic staff by meeting one or more of the following exam eligibility criteria:

• Relevant certification or licensure

• Related coursework or professional training

• Expired transfer credit

• Related employment/military experience

Students should refer to the Tuition and Fees - Other Fees section of the catalog for information regarding fees for Prior Learning Portfolio Assessment. Students that have received prior learning credit by any other means may not request or receive credit through portfolio assessment. Credit earned as a result of portfolio assessment earns a grade of EC and does not impact a student's GPA but will count towards credits attempted and earned.

*Available at select campus locations.

Types of Prior Learning and Transfer Credit

ECPI Challenge Exams

Challenge exams are available for a select number of courses to students who can demonstrate proficiency in the course learning outcomes based on their prior education or experience. Challenge exam inquiries can either be initiated through student request or identified as eligible by academic staff. Students must request or confirm their intention to challenge a course no later than the end of their first semester (first three terms) and prior to accessing the selected course. Students that have received prior learning credit by any other means may not request or receive credit through a challenge exam. Students must be approved by academic staff and meet one or more of the following exam eligibility criteria:

• Relevant certification

• Related course/insufficient credits

• Expired transfer credit

• Related employment/field experience

Students are allowed one exam attempt per course and a minimum score of 80% is required to pass and be exempt from taking the class. The exam format, time limit, and requirements may vary depending upon the challenge exam. Students should refer to the Tuition and Fees - Other Fees section of the catalog for information regarding fees for challenge exams. Credit earned as a result of a successful exam earns a grade of TO and does not impact a student's GPA but will count towards credits attempted and earned.

Satisfactory Academic Progress Policy (SAP)

ECPI calculates Satisfactory Academic Progress using cumulative grade point average and measurements that include incremental completion rate and maximum time frame at specified evaluation periods.

Undergraduate Programs

ECPI University's Satisfactory Academic Progress (SAP) Policy for Undergraduate Programs measures whether eligible undergraduate students are progressing at a responsible rate towards the completion of their educational objectives. Students must be in compliance with this policy in order to maintain their federal financial aid program eligibility. However, this policy applies to all undergraduate students, regardless of participation in federal financial aid programs.

The evaluation points contained in the policy are designed to help identify students who would benefit from an early intervention and/or remediation. Most critical is a student's ability to enroll in and complete courses successfully and consistently. Failure to complete courses successfully for any reason may negatively affect satisfactory academic progress. Failing courses or withdrawing from courses could also result in the loss of financial aid and academic dismissal. It is very important that students attend all registered courses and complete them successfully.

Navigate the additional SAP undergraduate policy related components using the menu to the left.

For additional SAP Requirements:

- Graduate Programs

Back to Academics Policies

Satisfactory Academic Progress Policy (SAP) - Undergraduate Programs

Academic Progress Table

The Satisfactory Academic Progress Policy evaluation points, required quantitative and qualitative measurements, and the corresponding actions required for failure to achieve and maintain the required academic achievements are summarized in the following Academic Progress Table:

EVALUATION PERIOD SEMESTER	REQUIRED MINIMUM CGPA*	REQUIRED INCREMENTAL COMPLETION RATE COMPLETION % OF CREDITS ATTEMPTED	REQUIRED ACTION ACADEMIC STATUS THESE STATUSES APPLY TO BOTH ACADEMICS AND FINANCIAL AID
1	1.50	40% of credits attempted	Warning
2	1.50	50% of credits attempted	Warning or Probation (if on Warning)
3	1.75	60% of credits attempted	Warning or Probation (if on Warning) or Dismissal (if on Probation)
4 and each semester thereafter	2.0	66.67% of credits attempted	Warning or Probation (if on Warning) or Dismissal (if on Probation)

Satisfactory Academic Progress Policy (SAP) - Undergraduate Programs

Appealing an Academic Dismissal

A student must appeal an academic dismissal by requesting an Academic Review Board (ARB). The written appeal must state the mitigating circumstances that contributed to the academic determination or dismissal. The written appeal may be supported with appropriate documentation of the mitigating circumstances with explanation on how the circumstances have been remedied or changed. Mitigating circumstances are events that are outside the student's control and are unavoidable.

Examples of events that may be considered a mitigating circumstance and which has negatively impacted academic progress include but are not limited to: death of an immediate family member, student illness requiring hospitalization, divorce proceedings, previously undocumented disability, work-related transfer or change in work schedule during the term, natural disaster, financial hardship such as foreclosure or eviction, and others.

The student may be asked to appear in person during the review process when deemed necessary by the Campus Director of Academic Affairs or request an ARB. The appeal process ends with the Campus President on each campus. Appeals may result in any one of the following actions:

- Reinstatement on probation with an academic plan where the student will be held to specific requirements which must be met by the end of the next semester. Reinstatement after dismissal will be granted only if mitigating circumstances exist.
- Denial of reinstatement
- A student may appeal an academic determination or dismissal one time
- A student who is granted an appeal may be reinstated and, if otherwise eligible, receive financial aid. The student must meet with the Financial Aid Advisor on campus to determine any changes to the student’s financial aid. The above minimum standards for satisfactory academic progress will continue to be applied to assess the student’s academic performance.

Satisfactory Academic Progress Policy (SAP) - Undergraduate Programs

Change of Program

For students who initiate a change of program, all courses that apply to the new program will affect the student’s CGPA, Incremental Completion Rate, and Maximum Time Frame. Students who change programs must sign a new program Enrollment Agreement.

Satisfactory Academic Progress Policy (SAP) - Undergraduate Programs

Course Withdrawals

A student may withdraw from an individual course or group of courses. A grade of W is awarded for all course withdrawals that are requested during the add/drop period if attendance is posted. Students withdrawing from a course after the first week of the term through the end of week four will receive a grade of WP or WF, which is determined by the grade earned on their last date of attendance. A grade of F will be awarded for all courses dropped during week five. A student's last date of attendance is used to determine the grade awarded.

Students who drop a course and do not replace it with another may have financial aid eligibility, veteran’s benefits, or other financial aid impacted. In addition, changes may affect the student’s satisfactory academic progress (SAP). Therefore, the student is responsible for consulting with Financial Aid and Academic Administration to determine any implications of course load changes to their financial aid package or SAP.

Satisfactory Academic Progress Policy (SAP) - Undergraduate Programs

Cumulative Grade Point Average (CGPA)

Grade Point Average (GPA) is a measure of scholastic performance. Students' transcripts will include a term GPA and a cumulative GPA, which includes all coursework within the program of study. To calculate GPA:

1. Multiply the total semester credits assigned for each course by total quality points associated with the grade earned;

2. Total the grade points earned for all the courses (see the Grading Policy for grade points assigned to each letter grade); and
3. Divide the total grade points earned by the total number of academic credits.

The CGPA is rounded up to the nearest hundredth if the last digit is five or greater. It is rounded down to the nearest hundredth if the last digit is less than five. (For example: 1.947 = 1.95, 1.944 = 1.94)

Example: Cumulative Grade Point Average calculation

COURSE	GRADE	CREDITS ASSIGNED TO THE COURSE	GRADE POINTS	TOTAL QUALITY POINT FOR THE COURSE
CIS115	B+	3	3.3	3 x 3.3 = **9.9**
ENG110	A	3	4	3 x 4 = **12.0**
BUS102	B	3	3	3 x 3 = **9.0**
CIS107L	C+	1	2.3	1 x 2.3 = **2.3**
CIS107	B-	3	2.7	3 x 2.7 = **8.1**
FOR110	A-	3	3.7	3 x 3.7 = **11.1**
Total		16		Total quality points = **52.4**

CGPA = 52.4 (total quality points) divided by 16 credits = 3.28

Satisfactory Academic Progress Policy (SAP) - Undergraduate Programs

Evaluation Period

An evaluation period is used to determine academic progress. ECPI uniquely defines the evaluation period for each student, as the University employs a student-based semester system. At ECPI, each student's semester is uniquely defined as three consecutive terms, which is 15 weeks.

All terms and semesters of a student's continuous enrollment, whether or not the student received financial aid, are also included in the SAP review. In addition, all credit hours transferred to ECPI for the current enrollment for program changes are included and counted towards a student's maximum time frame.

Satisfactory Academic Progress Policy (SAP) - Undergraduate Programs

Foundational Courses

Foundational courses are remedial courses required as a result of the admissions assessment; these courses are graded Pass/Fail. Students who are required to take foundational courses (i.e., ENG099 Introduction to Writing, MTH099 Introduction to College Algebra, and MTH090 Introduction to Mathematics) are required to complete each course successfully on the first attempt in order to progress in the program. A failure (WF or NP) on the first attempt will result in dismissal from the student's program (refer to Repeated Courses for additional information). These courses are exempt from the calculations included in this Satisfactory Academic Progress Policy, including Cumulative Grade Point Average, Incremental Completion Rate, and Maximum Time Frame. However, any student who is required to complete foundational courses will receive a Foundational Course GPA, as determined by the following:

Pass grade = 4.0 Foundational GPA

Not Pass grade = 0.0 Foundational GPA

Satisfactory Academic Progress Policy (SAP) - Undergraduate Programs

Incremental Completion Rate ICR

A student's ICR is calculated by:

- Totaling the number of credit hours attempted;
- Totaling the number of credit hours successfully completed; and
- Dividing the total number of credit hours successfully completed by the total number of credit hours attempted and expressing that as a percentage

Courses for which a student receives a letter grade of "A" through "F," an incomplete grade of "I," and withdrawal grade of "WF" are included in ICR. Withdrawal grades of "W" and "WP" are not included in ICR. In addition, all credit hours transferred to ECPI for the current enrollment are included and counted as credits attempted.

For the calculation of the ICR, there is no rounding of the percentage; therefore, if a student receives a 66.665% and the requirement is 66.67%, the student would not satisfy this evaluation point.

Example 1: After four semesters, a student has attempted 66 credits and successfully completes 40. The ICR is calculated by dividing 40 by 66, which equals 60.60%. The ICR requirement at the end of four semesters is 66.67% and the student therefore would not meet the ICR requirement at this evaluation point.

Example 2: After two semesters, a student has attempted 30 credits and successfully completes 15. The ICR is calculated by dividing 15 by 30, which equals 50.00%. The ICR requirement at the end of two semesters is 50%; therefore, the student meets the ICR requirement at this evaluation point.

Undergraduate students must successfully achieve and maintain a 66.67% incremental completion rate of courses attempted credits by the end of the fourth semester and thereafter.

Satisfactory Academic Progress Policy (SAP) - Undergraduate Programs

Maximum Time Frame

A student may not attempt more than 150 percent of the credits in his/her program. The requirements for Incremental Completion Rate are to assure that students are progressing at a rate to complete their program within the Maximum Time Frame. Withdrawal grades of "W" are not included in the Maximum Time Frame calculation.

The minimum number of credit hours required for an undergraduate degree at ECPI varies; therefore, the maximum number of credit hours that a student may attempt will vary.

Example 1: In an associate's degree program consisting of 60 semester credit hours, the student must complete the program within 90 attempted semester credit hours.

Example 2: In a bachelor's degree program of 120 semester credits, the student must complete the program within a maximum of 180 semester credit hours.

The maximum timeframe always applies to the program of study in which the student is enrolled.

Students who exceed 150% of the program credits will be dismissed from the University.

Satisfactory Academic Progress Policy (SAP) - Undergraduate Programs

Minimum Academic Requirements to Graduate

The minimum academic requirements for a student to graduate are: CGPA of 2.0, 66.67% ICR, and completion of the program in no more than 150% of total program credits. Please see Graduation Requirements in this catalog for the complete list of requirements.

Satisfactory Academic Progress Policy (SAP) - Undergraduate Programs

Procedures for Reentry/Readmission After Academic Dismissal

A student who is denied an appeal of an Academic Dismissal is not eligible for consideration for readmission to the University or reentry into any program for a period of at least one year, or twelve months, from the date of dismissal. After one year a student may submit a second written appeal requesting reentry to their original academic program or admission to another academic program. The student must demonstrate in their appeal that the factors contributing to the original academic dismissal no longer impact their ability to meet academic standards and program requirements, including the University's Satisfactory Academic Progress policy. Students whose second appeal is granted may be required to retake courses, participate in remediation, or meet other requirements as a part of an academic plan. Students whose second appeal is denied will be permanently dismissed from the University.

When applying for readmission, the student must meet with the Campus Director of Academic Affairs at least two weeks prior to the start of the term in which the student wishes to return. A student who fails to comply will forfeit the opportunity to start. The appeal procedure described in the preceding section applies to all second appeals.

A reentry/readmission student who is granted an appeal may be reinstated and, if otherwise eligible, may receive financial aid. The student will be placed on probation at the start of the next academic term or upon re-entry and may be required to meet certain additional academic conditions as specified by the Campus Director of Academic Affairs or the Academic Review Board in their decision to grant the appeal. The above minimum standards for satisfactory academic progress will continue to be applied to assess the student's academic performance.

Satisfactory Academic Progress Policy (SAP) - Undergraduate Programs

Repeated Courses

Students who are required to take foundational courses (i.e., ENG099 Introduction to Writing, MTH099 Introduction to College Algebra, MTH090 Introduction to Mathematics) are required to successfully complete each course on the first attempt in order to progress in the program. A failure (WF or NP) on the first attempt will result in dismissal from the student's program. A student who is dismissed for failure to successfully pass a foundational course may reapply for readmission to the University through the Academic Review Board. If accepted for readmission, students must pass the foundational course on their second attempt. No additional attempts will be allowed for foundational courses.

Repeated courses due to course withdraw or failure

A course may not be repeated more than once without approval of the Campus Director of Academic Affairs or designated academic official. Grades achieved in courses that are repeated due to course withdrawal (W, WP) or failure (F, WF) will replace previous withdrawal or failing grades in the CGPA calculation. A pattern of course repetitions could cause a student to fall below the minimum standard for satisfactory academic progress. A student who is approved to repeat a course due to a failing grade (F, WF) must successfully pass the course by the third attempt. After three failed attempts the student will be academically dismissed. When a course is repeated due to a failure, credits accrue only when the student attains a passing grade for that course. Additional tuition charges apply when a student repeats courses. Students who withdraw or earn a failing grade in a course should register for the same course in the subsequent term to improve his/her academic performance.

Repeated course to improve a grade

A student may repeat a course to improve the grade and subsequently, his/her CGPA. In the case of repeated courses to improve a grade, only the highest grade earned will be calculated in the CGPA while all the credits attempted will be calculated in the ICR and Maximum Time Frame. Students are eligible for Financial Aid for only one repetition of a previously passed course.

Please see the College of Health Science program handbook for specific program policies concerning repeated courses.

Computer and Information Science Certificate

A course may not be repeated more than once without approval of the designated academic official. Grades achieved in courses that are repeated due to course withdrawal (W, WP) or failure (F, WF) will replace previous withdrawal or failing grades. A student who is approved to repeat a course due to a failing grade (F, WF) must successfully pass the course by the third attempt. After three failed attempts the student will be academically dismissed (for appeal of academic dismissal, see Appealing an Academic Dismissal.

Back to Academics Policies > Repeated Courses

Veterans Administration Requirements for Satisfactory Academic Progress

Academic Dismissal/Reinstatement and Veterans' Benefits in South Carolina. Veterans who are reinstated for benefits after academic dismissal who fail to attain a GPA of at least 2.0 during that term will be placed on academic dismissal for one semester, which is equivalent to three terms.

Warning Probation or Dismissal

The Academic Progress Table demonstrates the evaluation points for CGPA and ICR; failure to achieve these milestones will result in a status change that provides the student with an additional semester to improve his/her academic standing. A student who completes his/her first semester and fails to meet the minimum requirements will be placed on warning; a student on warning remains eligible for financial aid. If a student who is on warning fails to achieve the required progress at the end any subsequent evaluation point of a warning period, s/he will be placed on probation or dismissed from the University. Probation may only be granted with a student's successful appeal with an Academic Review Board (ARB). A student who is on probation remains eligible for financial aid; however, a student may remain on probation for only one semester. If a student on probation fails to achieve satisfactory academic progress at the next evaluation point, the student will be dismissed from the University.

A student who fails to meet the required SAP benchmarks will receive a notification in writing within 14 days from the end of the evaluation period.

A student will be removed from academic warning or probation when s/he meets the requirements for satisfactory academic progress.

Please note that a student may be dismissed for academic reasons without previous academic action. In addition, at any given evaluation point, if it is determined to be mathematically impossible for the student to meet the academic requirements for graduation, the student will be dismissed.

SAP - Business Administration Certificate

Students' academic progress will be evaluated after each course grade has been awarded. In general and unless otherwise stated, the minimum grade to maintain satisfactory progress is 70% or C-. Students must achieve a minimum term grade point average of 2.0.

A course may not be repeated more than once without approval of the designated academic official. Grades achieved in courses that are repeated due to course withdrawal (W, WP) or failure (F, WF) will replace previous withdrawal or failing grades. A student who is approved to repeat a course due to a failing grade (F, WF) must successfully pass the course by the third attempt. After three failed attempts the student will be academically dismissed (for appeal of academic dismissal, see Appealing an Academic Dismissal.

After three failed attempts the student will be academically dismissed (for appeal of academic dismissal, see Appealing an Academic Dismissal.

Back to Satisfactory Academic Progress Policy (SAP) - Undergraduate Programs

Satisfactory Academic Progress (SAP) - Graduate Programs

To be in good academic standing with the college and to be eligible to receive Title IV financial aid, students must maintain satisfactory academic progress.

At the end of each semester, each student is evaluated on three components to determine if s/he is maintaining satisfactory academic progress:

THREE COMPONENTS TO MAINTAIN SATISFACTORY ACADEMIC PROGRESS	
Cumulative Grade Point Average (CGPA)	Students enrolled in graduate-level programs must maintain a minimum CGPA of 3.0.
Incremental Completion Rate	Students enrolled in graduate-level programs must complete a minimum of 66.67% of the cumulative credits attempted at the end of each semester to be making satisfactory academic progress.
Maximum Timeframe	A student may not attempt more than 150 percent of the credits in his/her program. The requirements for Incremental Completion Rate are to assure that students are progressing at a rate to complete their program within the Maximum Time Frame. Students in graduate programs are only permitted to repeat one failed course (see Repeated Courses). The minimum number of credit hours required for a graduate degree at ECPI varies; therefore, the maximum number of credit hours that a student may attempt will vary. • Example 1: In a graduate program consisting of 36 semester credit hours, the student must complete the program within a maximum of 54 attempted semester credit hours. • Example 2: In a graduate program consisting of 49 semester credit hours, the student must complete the program within a maximum of 73.5 semester credit hours. The maximum timeframe always applies to the program of study in which the student is enrolled. Graduate students who exceed 150% of the program credits will be dismissed from the University.

Navigate the additional graduate SAP policies using the menu to the left.

Satisfactory Academic Progress (SAP) - Graduate Programs

SAP Warning

A student will be placed on SAP Warning if he/she fails to meet any one of the criteria listed above. The student will have one semester to meet the requirements for satisfactory academic progress and return to good academic standing or they will be dismissed from the University. If at any evaluation point it is determined that it is mathematically impossible for the student to meet the minimum requirements, the student will be dismissed.

Satisfactory Academic Progress (SAP) - Graduate Programs

Appealing an Academic Dismissal

A student must appeal an academic dismissal by requesting an Academic Review Board (ARB). The written appeal must state the mitigating circumstances that contributed to the academic determination or dismissal. The written appeal may be supported with appropriate documentation of the mitigating circumstances with explanation on how the circumstances have been remedied or changed. Mitigating circumstances are events that are outside the student's control and are unavoidable.

Examples of events that may be considered a mitigating circumstance and which has negatively impacted academic progress include but are not limited to: death of an immediate family member, student illness requiring hospitalization, divorce proceedings, previously undocumented disability, work-related transfer or change in work schedule during the term, natural disaster, financial hardship such as foreclosure or eviction, and others.

The student may be asked to appear in person during the review process when deemed necessary by the Campus Director of Academic Affairs or request an ARB. The appeal process ends with the Campus President on each campus. Appeals may result in any one of the following actions:

- Reinstatement on SAP Probation with an academic plan where the student will be held to specific requirements which must be met by the end of the next semester. Reinstatement after dismissal will be granted only if mitigating circumstances exist.
- Denial of reinstatement
- A student may appeal an academic determination or dismissal one time
- A student who is granted an appeal may be reinstated and, if otherwise eligible, receive financial aid. The student must meet with the Financial Aid Advisor on campus to determine any changes to the student's financial aid. The above minimum standards for satisfactory academic progress will continue to be applied to assess the student's academic performance.

Satisfactory Academic Progress (SAP) - Graduate Programs

Repeated Courses

Students who have failed a course are eligible to repeat it once, as scheduling permits. A repeat may be approved by the Dean when it is satisfactorily determined that a student would benefit from repeating a class. When a failed course is repeated, only the grade in the repeated course counts in the student's cumulative grade point average and will appear on the student's transcript. Students in graduate programs are only permitted to repeat one failed course.

Students who repeat a course will be charged the current tuition for the course and must assume the responsibility for all associated fees. Repeating a course may interrupt the student's enrollment and may negatively impact financial aid eligibility and academic progress.

Back to Academics Policies > Repeated Courses

Satisfactory Academic Progress (SAP) - BS to BSN (Florida)

The Satisfactory Academic Progress Policy and Requirements described are specific to the Bachelor of Science in Nursing at the Orlando (Lake Mary), Florida campus.

All students must meet ECPI University's minimum standards of academic achievement and course completion progress requirements while enrolled at ECPI University. ECPI University's satisfactory academic progress standards ("SAP") have two primary components: one is qualitative and the other is quantitative. The qualitative component requires certain minimum cumulative grade point averages be achieved as of certain measuring points and the quantitative component requires completing courses at a certain pace in order to complete an educational program within the allowed maximum timeframe.

The qualitative and quantitative components of SAP are evaluated as of each Minimum Measurement Point based upon grades, credit or clock hours attempted and credit or clock hours completed as indicated on a student's transcript as of the end of the Grading Period ending contemporaneously with the most recent Minimum Measurement Point being reached. Minimum Measurement Points occur at the end of each Financial Aid Payment Period and in addition thereto, at the applicable Minimum Measuring Point as a percent of Program Length indicated in the qualitative component section.

ECPI University's satisfactory academic progress standards are the same for all students without regard to whether they receive financial assistance under Title IV, HEA programs ("Title IV") or other financial aid and without regard to whether they are a full-time or part-time student.

A student that fails to satisfy the SAP requirements at any Minimum Measuring Point and is not placed on either Financial Aid Warning or Financial Aid Probation status shall no longer be eligible to receive assistance under the Title IV programs.

SAP - BS to BSN (Florida)

Satisfactory Academic Progress Definitions

TERM	DEFINITION
Appeal	Means the appeal by a student of a determination by the School that a student has not meet the SAP requirements and is commenced by submitting an Appeal Request in compliance with the Appeal Procedures set forth in the Satisfactory Academic Progress Appeals and Waivers section.
Appeal Procedures	Means the procedures set forth below in the Satisfactory Academic Progress Appeals and Waivers section of this Catalog that a student must follow to Appeal a determination that a student has failed to satisfy SAP standards and to obtain Financial Aid Probation status.
Appeal Request	Means a written document that contains the information required by the Appeal Procedures set forth below in the Satisfactory Academic Progress Appeals and Waivers section of this Catalog.
CGPA	Means a student's cumulative grade point average calculated as set forth below in the Qualitative Component of Satisfactory Academic Progress section of this Catalog.
Grading Period	Is a period of instruction for which the student receives a final grade that is recorded on a student's transcript for a particular course.
Financial Aid Payment Period	Means the status assigned to a student who is on SAP Met status and subsequently fails to satisfy SAP requirements at the end of a Financial Aid Payment Period or as of any other Minimum Measuring Point.
Minimum CGPA	Shall have the meaning set forth in the Qualitative Component of Satisfactory Academic Progress section.
Minimum Percentage of Total Program Credit Hours Completed Requirement	Shall have the meaning set forth below in the Quantitative Component Of Satisfactory Academic Progress section of this Catalog and the specific Minimum Percentage of Total Program Credit Hours Completed Requirement as of each Minimum Measuring Point for various programs are delineated in the Minimum Credits Completed Requirements chart set forth below in the Quantitative Component of Satisfactory Academic Progress section of this Catalog.
Minimum Measurement Point	Shall mean the end of each Financial Aid Payment Period as defined herein for each program classification and in addition thereto the applicable Minimum Measuring Point as a percent of Program Length, Minimum Measuring Point in Credit Hour Attempted, Minimum Measuring Point in Clock Hours Attempted and Minimum Measuring Point in Modules indicated in the charts set forth in the Qualitative Component of Satisfactory Academic Progress section.
MTF	Shall have the meaning set forth below in the Quantitative Component of Satisfactory Academic Progress section of this Catalog.

SAP - BS to BSN (Florida)

Qualitative Component of SAP

The qualitative component of SAP requires the achievement of specified minimum cumulative grade point average ("Minimum CGPA") as of certain measuring points which are defined above as the Minimum Measuring Points. Except as provided below, the cumulative grade point average, CGPA, is calculated using the grades for all courses for which a grade was received, other than a "W", or "I" during the Grading Periods in which the courses were completed as of the time a Minimum Measurement Point is reached. If a student receives the temporary grade of "I", the grade received upon completion of the course or "F" if the course is not completed within time allowed for completion will be used to calculate the CGPA. However, if a student repeats a course, without regard to whether the previous grade was a failing or a passing grade, the new grade will be used and all prior grades for the repeated will not be included in the grades used to calculate the CGPA. The grades received for credit hours from another institution, other than another ECPI University campus, that are accepted for transfer towards a student's program will not be included in the calculation of the CGPA but will be included in the determination of the Minimum Measurement Point. The grades received for credit hours from another ECPI University campus that are accepted for transfer towards a student's program will be included in the calculation of the CGPA and will be included in the of the determination of the Minimum Measurement Point. The Minimum CGPA Requirement chart below lists program lengths and the Minimum CGPA required at the end of the Grading Period wherein each of the Minimum Measurement Points is initially met or exceeded.

MINIMUM CGPA REQUIREMENT			
Program Length (Minimum # of Months Required to Complete Program)	**Minimum Measurement Point** (as a percent of Program Length)	**Minimum CGPA Requirement**	**Minimum Measurement Point in Financial Aid Payment Periods**
12 Months	25%	2.00	End of Payment Period 1
	50%	2.00	End of Payment Period 2
	75%	2.00	End of Payment Period 3
	100%	2.00	End of Payment Period 4 and each payment period thereafter

If a student's CGPA falls below the minimum required CGPA at any Minimum Measuring Point, the student will be notified in writing of the consequences of not maintaining satisfactory academic progress including if such failure will impact a student's Title IV eligibility, cause the student to receive a Financial Aid Warning or require student to Appeal the determination to be placed on Financial Aid Probation to have Title IV eligibility reinstated.

SAP - BS to BSN (Florida)

Quantitative Component of SAP

The quantitative component of SAP requires the completion, as of the Minimum Measuring Points, of a minimum number of credits hours after attempting a certain number of credit hours. The number of credit hours required to be completed as of each Minimum Measuring Point is measured as a percentage of the total credit hours required to complete the program that will have been attempted by a student as each Minimum Measuring Point is reached (the "Minimum Percentage of Total Program Credit Hours Completed Requirement"). The quantitative component of SAP measures whether a student is progressing through the program at a rate that will ensure the student graduates within a maximum timeframe. The maximum timeframe ("MTF") for completion of a program is one and one-half times the program length. The MTF is measured in credit hours for credit hour courses and clock hours for clock hour courses.

The number of credit hours required to be completed depends upon the length of the program. A credit hour is completed when a grade other than "W" or "I" is assigned to the credit or clock hour. If a student receives the temporary grade of "I", the grade received upon completion of the course or "F", if the course is not completed within time allowed for completion, will be used to determine the number of completed credit hours used to measure whether the Minimum Percentage of Total Program Credits Completed Requirement has been satisfied as of a Minimum Measuring Point. The credit hours assigned to courses for which a student receives a "W" will be included in the determination of the number of credit hours attempted that is used to measure whether the Minimum Percentage of Total Program Credits Completed Requirement has been satisfied as of a Minimum Measuring Point. The credit hours from another institution, including another ECPI University campus, that are accepted for transfer towards a student's program will be included as both credit hours attempted and completed in the determination of whether the Minimum Percentage of Total Program Credits Completed Requirement has been satisfied as of a Minimum Measurement Point. Courses repeated will be included as both credit hours attempted and completed in the determination of whether the Minimum Percentage of Total Program Credit Hours Completed Requirement has been satisfied as of a Minimum Measurement Point. The number of credit hours completed and attempted as indicated on a student's transcript at the end of the Grading Period ending contemporaneously with the most recent Minimum Measurement Point being reached will be used to determine if the Minimum Percentage of Total Program Credits Completed Requirement has been satisfied as of a Minimum Measurement Point.

The Minimum Credits Completed Requirement chart below lists program lengths and the Minimum Percentage of Total Program Credits Completed Requirement that must be satisfied as of each respective Payment Period for degree students.

The Quantitative Component of SAP will be evaluated at the end of each Financial Aid Payment Period for degree Programs to determine if the Minimum Percentage of Total Program Credit Hours Completed Requirement has been satisfied.

MINIMUM CREDITS COMPLETED REQUIREMENT		
Program Length (Minimum # of Quarters Required to Complete the Program)	**Measurement Point** in Financial Aid Payment Periods	**Minimum Percentage of Total Program** (Credit Hours Complete Requirement)
4 Quarters	End of Payment Period 1	10%
	End of Payment Period 2	20%
	End of Payment Period 3	40%
	End of Payment Period 4	60%
	End of Payment Period 5	80%
	End of Payment Period 6	100%

If a student cannot complete the program within the MTF, the student will be notified in writing that the student will not be able to meet the SAP requirements and that as a consequence that the student will be dropped, and such failure will impact a student's eligibility to receive assistance under the Title IV programs.

SAP Appeals

Please see the following links for descriptions of the Satisfactory Academic Progress warning, probation, dismissal, and appeals processes.

Warning Probation or Dismissal

Appealing an Academic Dismissal

Welcome to the Admissions Policies Section

Navigate the admissions policies using the menu to the left, or choose from the following additional policy categories below:

- Academics Policies
- Financial Aid Policies
- Student Conduct Policies
- University Policies

Our university is committed to providing a clear and supportive admissions process that welcomes students from diverse backgrounds and educational experiences. Our Admissions Policies are designed to ensure transparency, fairness, and inclusivity for all applicants. Whether you are a domestic, international, or home-schooled student, these policies guide you through every step of the process, from initial application to enrollment.

ECPI University receives admissions applications throughout the year and classes begin every five weeks. Careful consideration is given to each applicant's qualifications in the following areas: academic potential, readiness, personal motivation, and goals. It is the University's goal to facilitate an effective and applicant-friendly admissions process, Admissions Advisors are available to assist prospective students in this process.

As you embark on your educational journey with us, we encourage you to review these policies to fully understand the admissions process and the opportunities available to you.

Admissions Policies

Admissions Requirements

Our Admissions requirements are outlined in the following sections:

- Undergraduate Requirements
- Graduate Requirements

Admissions Policies

Application/Registration Fees

The application fee for undergraduate programs is $25.00 (non-refundable, one-time charge) and the registration fee is $100.00.

The application fee for graduate programs is $25.00 (non-refundable, one-time charge) and the registration fee is $35.00.

Admissions Policies

Applications to Multiple Campuses

Applicants who are undecided with respect to the location they wish to attend should submit an application to their location of first choice. Applicants who are accepted into their location of first choice and who, prior to beginning the program, determine they want to complete the same program at a different location, should notify the initial location of record of that intent. Provided that the same program is available, all previous admissions approvals, transfer credits, and advanced standing status accepted

by one campus will remain in force and a transfer will be granted. If an individual requests to change programs in addition to changing campuses, he or she will need to meet all of the admission requirements of the new program prior to a decision on the transfer. Please note that a requested transfer to another campus may be denied for any program due to availability or other factors, as determined by the Campus President.

This transfer policy between ECPI campuses does not apply to health science programs with established enrollment limits.

Admissions Policies

Background Checks

All nursing programs along with other various selected programs require a background check for admission, acceptance, matriculation, and/or clinical or externship courses. See Admissions Requirements (Undergraduate Programs | Graduate Programs) for additional information.

Any student or graduate who has a prior criminal conviction may experience denial of admission or limitations for externships/clinicals, professional licensure, or employment opportunities.

Professional licensure in certain programs and in selected states may require that an applicant possess good moral character and report any prior criminal convictions. If a conviction appears on the student's record, it may hinder ECPI University's ability to find the student appropriate clinical/externship site that may be required to complete the student's degree program. A conviction may also hamper the student's employment options after graduation. Please see the program descriptions in this catalog or speak to the Admissions Advisor for specific requirements.

Students who experience a citation, sanction or arrest while enrolled in a College of Nursing or College of Health Sciences program must notify the Director of Nursing or Program Director within 24-hours of the citation, sanction or arrest.

Additionally, students who are prescribed any controlled substance that may impair their alertness or cognition while enrolled in a course with clinical/externship component must notify the Director of Nursing or Program Director as soon as possible.

Admissions Policies

Denial of Admission

ECPI University reserves the right to deny admission to any applicant for reasons including but not limited to:

- Failing to meet the stated admissions requirements
- Lacking the ability to benefit from the education
- Exhibiting a lack of motivation
- Lacking the professional attitude or maturity required
- Being unable to meet financial obligations to ECPI

If an applicant is denied admission, this decision is final and may not be appealed.

Admissions Policies

Dual Enrollment

The Dual Enrollment (DE) program at ECPI University provides eligible high school students with the opportunity to complete college-level courses while still attending high school. High school students who have demonstrated collegiate reading, writing, and math skills are screened and selected for the program. Written permission from the student's legal guardian and principal is required prior to start. DE students may also be required to complete a readiness assessment prior to taking classes. In this program, students who successfully complete courses gain high school credits that meet their graduation requirements, as well as college credits that may apply to ECPI University's programs of study. ECPI University does not guarantee the transferability of credit to another college or university.

All faculty who teach DE courses meet the same academic credentialing requirements as faculty who teach courses for ECPI University. The DE courses are equivalent to other instruction offered by the university, including course objectives, components of the syllabi, level and rigor of content, assessment of student learning outcomes, textbooks, and other resources. DE courses utilize a Learning Management System (LMS) that includes resources embedded within the course modules.

DE students are selected by their high school and are enrolled at ECPI University as "Non-Degree Seeking" (NDS) students, meaning students are enrolled in a course but have not been accepted into a degree program. ECPI awards credit upon successful completion. Courses with a "C" or higher may be applied to a related ECPI program. Permanent records and transcripts are maintained by ECPI University.

DE students have access to the same academic and student support resources as any ECPI University student. In addition, library and other learning resources are provided through the LMS and the ECPI University campus.

Admissions Policies

English Language Proficiency Policy

Applicants to ECPI University whose first language is not English must demonstrate competence in the English language (see Admissions Assessment - Undergraduate for more information). Language proficiency may be demonstrated by one of the following methods:

METHODS			
1.	**Document the minimum requirement on one of the following instruments.**		
	INSTRUMENT	**UNDERGRADUATE MINIMUM REQUIREMENT**	**GRADUATE MINIMUM REQUIREMENT**
	Internet-Based TOEFL (iBT)	61	79
	TOEFL (written)	500	550
	IELTS Band	6.0	6.5
	Pearson PTE Academic	48	54
	iTEP (International Test of English Proficiency)	3.6	3.9
	SAT, Critical Reading (old)	440	NA
	SAT (new)	25 Writing/Language or 440 Evidence-Based Reading/Writing	NA
	ACT (English/Writing or English Language Arts)	20	NA
2.	**Document previous academic course work with English as the official language of instruction, using one of the following:**		
	• For undergraduate or graduate admission, a Medium of Instruction (MOI) Letter – A copy of a high school diploma or transcript which states the medium of instruction was English, or an official letter from the high school or university certifying that English was the official language of instruction.		
	• For undergraduate or graduate admission, a transcript for a degree-seeking program which records a minimum of two semesters of study at an institution of higher education in the United States, Canada, United Kingdom, Australia, New Zealand, or Ireland. In addition, a copy of the corresponding visa must be included in order to verify the student attended the institution in person and not online.		
	• For undergraduate or graduate admission, completion of two college-level English courses with a C or higher at an institution of higher education in the United States.		
	• For undergraduate or graduate admission, citizenship of a country where English is the official language.		
	• For undergraduate or graduate admission, successful completion of commonly recognized programs for English Speakers of Other Languages, including the following:		
		Level 5 of the American Language Academy (ALA)	
		An ESL program in the United States (transcript required)	
	• For graduate admission, proof of graduation from a degree program at an institution of higher education in countries with English as the primary language; for example, the United States, Canada, United Kingdom, Australia, New Zealand, or Ireland. In addition, a copy of the corresponding visa must be included in order to verify the student attended the higher education institution in person and not online.		

Applicants may submit alternative examination scores or other documentation for consideration. Alternative means of demonstrating competency will be evaluated for comparability to those listed here.

Foundational Courses

Applicants who score within defined ranges in either the math or writing section of the admissions assessment and who are accepted into the University in a provisional status, will be required to take foundational mathematics and/or English/writing. These foundational courses are in addition to the credit hours required in each program. Foundational course grades are not used in calculating a grade point average. Student must complete any required foundational courses within the first three terms of enrollment. For more information, see Foundational Courses and Repeated Courses under Satisfactory Academic Progress in Academic Policies.

Admissions Policies

High School Transcripts

Official secondary school transcripts must show the date of graduation and must be delivered directly to ECPI University from the secondary school. Transcripts marked as *issued to student* are not considered “official." Certificates of attendance, copies of diplomas, special high school diplomas or modified high school diplomas are not acceptable to establish proof of high school graduation. Applicants are responsible for providing ECPI with the official transcript or for providing ECPI with the authorization to secure transcripts. Students are responsible for the fees related to securing high school transcripts.

Students have one term (5 weeks) to provide the official high school transcripts. For students in the Medical Assisting and Surgical Technology programs, the deadline to provide official high school transcripts is 30 days from the start of their first term. If official transcripts are not received by the deadline, the student will be dismissed.

Students who have attended a postsecondary education institution that is accredited by an agency recognized by the U.S. Department of Education and who have completed an associate degree or higher may use their official postsecondary school transcript to establish proof of high school graduation/GED.

In cases where documentation of an applicant’s completion of a secondary school education is unavailable, e.g., the secondary school is closed and information is not available from another source such as the local school district or a State Department of Education, or in the case of homeschooling, the parent(s)/guardian(s) who provided the homeschooling is deceased, an institution may accept alternative documentation to verify the applicant’s high school completion status.

All applicants who have attended secondary school outside of the United States must provide a credential evaluation for all secondary (and if applicable, postsecondary) transcripts submitted to ECPI by the start of their first term. Exceptions may be considered based on extenuating circumstances. ECPI will only accept credential evaluations completed by a credential evaluation organization which is a member of the National Association of Credential Evaluation Services (NACES) or the Association of International Credential Evaluators, Inc. (AICE). Postsecondary education may be used to establish proof of high school graduation if it has been deemed by NACES or AICE to be the U.S. equivalency of an earned associate degree or higher and the official transcripts and evaluation are delivered directly to ECPI. For more information concerning NACES and AICE member organizations, refer to the NACES website at https://www.naces.org/ and AICE website at https://aice-eval.org.

If any applicable official academic records have not been prepared in English, a complete and official translation of the transcript is also required. Students who have obtained their secondary school (or postsecondary) education in any language other than English must provide evidence of English proficiency (refer to the English Language Proficiency Policy).

Non-immigrant alien students.

Non-immigrant alien students attending ECPI University under the auspices of a non-immigrant student visa must submit all official academic records, including evaluations and translations, if applicable, as part of a complete application for admission. In compliance with federal regulations governing the attendance of nonimmigrant alien students in authorized U.S. schools, non-immigrant students may not be granted provisional admission status while awaiting the receipt of official academic documents. Unofficial evaluations submitted by the evaluation organization may be used for admission purposes. Admission is official upon receipt of the official transcript.

Admissions Policies

Home-schooled Students

ECPI welcomes students from all types of educational backgrounds and encourages homeschooled students to apply. Due to the diverse nature of home school requirements from state to state; ECPI requires the following materials in order to evaluate a student’s academic history for acceptance:

- Transcripts from a nationally recognized and accredited home school program - **OR -**
- Detailed home-school transcripts (course titles, brief description of each course content, a grade or performance assessment for each course, details on duration of study, and expected graduation date) and a second academic indicator such as the SAT, ACT, or college GPA (where 12 or more credits were completed at a single institution).

In order to attend ECPI, each applicant must demonstrate completion of high school or the equivalent of high school. Homeschooled students need to submit documents indicating that they have followed the regulations determined by their state. Other forms of proof of high-school equivalency will be considered on a case-by-case basis, but should be approved in advance by contacting the University Registrar (Registrar@ecpi.edu).

Admissions Policies

International Student Admissions

The following page describes how ECPI University defines an international student and provides the admissions requirements information. Admissions Requirements - International Students.

Admissions Policies

Provisional Acceptance

The Campus President or his/her designee may grant provisional acceptance to students who score within a defined range on the admissions tests that require foundational or prerequisite coursework or for extenuating circumstances which may include previous training, related work experience, or other acceptable test measurements such as SAT or ACT scores. Provisional acceptance based on admissions testing requires foundational or prerequisite courses. The period of provisional acceptance is determined by the campus President or his/her designee and does not normally exceed 12 semester credits with a GPA of at least 2.20. Nonimmigrant alien students seeking to enroll at ECPI University in valid nonimmigrant alien student status are not eligible for provisional acceptance.

Admissions Policies

Readmission Procedure

When a student withdraws prior to graduation, the student may re-enter ECPI within five years (two years for nursing, physical therapist assistant, and medical radiography students) and retain full academic credit, provided the courses are still applicable to the program. Returning students who have completed clinical courses may be required to pass clinical competency evaluations. Students will maintain the original cost per semester with an absence of less than six months during their program. Students with an absence of more than six months are subject to tuition rates in effect at the time of readmission. They may be required to undergo skill proficiency examination, particularly if significant curriculum changes are involved. In addition, these students will also be required to return into the program/ curriculum taught at the time of readmission.

While returning students are not required to reapply for admission, they must schedule an appointment to discuss their return to the University and go through the formal readmission process. The student's records are reviewed by the following departments:

- Student Records will review satisfactory academic progress;
- Student Accounts will review for outstanding balances;
- Financial Aid will review unresolved financial issues; and
- Academic Affairs will review attendance and academic preparedness to resume studies at ECPI.

Students must have approval by all departments in order to complete the readmission process.

Admissions Policies

Readmission of Service Members

ECPI University complies with readmission requirements for service members set forth in the Higher Education Opportunity Act (HEOA) section 487 and its implementing regulations (34 CFR § 668.18).

ECPI University will promptly readmit service members to the same program with the same academic status after an interruption in their program due to a call to active duty. The cumulative length of all absences for military service may not exceed five years.

Students who are service members who are called to active duty must provide ECPI University with either oral or written notification of: (1) the military service and (2) the intent to return to school following the active duty service.

Students who are called to active duty must return to school under one of the following:

- within three years after the completion of the period of service
- within two years of the needed recovery period if hospitalized or convalescing due to an illness or injury incurred or aggravated during the performance of service

Students must provide documentation such as, but not limited to the following: DD214, duty orders indicating completion of service, a letter from commanding officer or other authority, certificate of completion from military training school, discharge certificate with character of service, payroll documents showing periods of service, or letter from National Disaster Medical System Team Leader/Administrative Officer verifying dates and time of NDMS training or Federal activation. Other documents may be considered on a case by case basis.

Service members readmitted to ECPI University under this procedure will be assessed tuition and fees at the rate of their last attendance or prior offer of admission for one calendar year if they are pursuing the same degree. After the one calendar year, they are assessed the tuition and fee rates in effect at that time.

Admissions Policies

South Carolina Admissions and Professional Licensure

In South Carolina, certain programs require graduates to obtain professional licensure to practice. For professional licensure, please note the following:

- Citizenship/authorized alien/immigrant status is now a prerequisite for a professional license by an agency of a State or local government under Title 8 US Code Section 1621.
- Conviction, guilty plea, or nolo contendere plea involving a crime involving drugs, moral turpitude, or other criminal charges may prohibit licensure or employment.
- Specifically, acceptance into the Practical Nursing program requires a routine criminal background check as part of the admissions process in South Carolina.

Please see the program descriptions for information regarding professional licensure.

Admissions Policies

Statement of Non-Discrimination

ECPI University is committed to providing an environment for its students, faculty and staff that is free from discrimination and to ensuring that all enrollment, education and employment decisions are based solely on an individual's abilities and qualifications. Consistent with this principle and applicable laws, it is therefore the University's policy not to discriminate in recruitment, admission or access to its educational programs and activities, or employment in its educational programs and activities, on the basis of race or color, religion or creed, sex or sexual orientation, gender identity or expression, national origin or ethnicity, age, disability, military service or veteran status, political affiliation or belief, marital status or pregnancy status.

Inquiries concerning the University's Non-Discrimination policies, compliance with applicable laws, statutes, and regulations (including Titles VI and VII of the Civil Rights Act of 1964, Title IX of the Educational Amendments of 1972 and Section 504 of the Rehabilitation Act of 1973) should be directed to:

Shanna Campise

Admissions Policies

Transfer of Credit and Advanced Academic Standing

Applicants should discuss all previous experience and training with an advisor during the Admissions Interview. During the enrollment process, applicants will complete a Request for Official Transcript form for each prior institution attended and submit all relevant documentation relating to prior learning for review and consideration of credit towards the student's program completion.

The University will assist applicants with requesting transcripts from all prior institutions that allow third-party requests. Applicants are responsible for ensuring the University's receipt of official transcripts within a student's first semester and any related fees required by the issuing institutions.

Once official transcripts are received, an evaluation will be completed to determine the application of transfer credit towards the student's program. Applicants are notified once an evaluation is complete and will receive a Transfer Credit Evaluation notification.

Students pursuing health science programs at the ECPI University College of Health Science/ College of Nursing should refer to their program-specific handbook for additional policies.

See also our Transferability of Credit policy for additional information.

Admissions Requirements - Undergraduate Programs

To attend ECPI University, all new applicants must do the following:

1.	Complete a Personal Admissions Interview
2.	Complete and submit an Application for Admission and an Enrollment Agreement
3.	Provide an official high school transcript or official General Educational Development (GED) test scores
4.	Achieve acceptable scores on the Admissions Assessment(s)

Certain programs listed in the left-hand navigation of this page have additional requirements for admission, acceptance, matriculation, or clinical or externship courses. Please see the program descriptions in this catalog for other program specific requirements.

Before beginning classes, each student must complete the required Financial Aid applications and/or complete all timely obligations of a Tuition Payment Plan.

Students who have attended a postsecondary education institution that is accredited by an agency recognized by the U.S. Department of Education and who have completed an associate's degree or higher may use their official postsecondary school transcript to establish proof of high school graduation/GED.

Non-immigrant applicants must provide evidence of high school completion, or its international equivalent as certified by a credential evaluation organization which is a member of either the National Association of Credential Evaluation Services (NACES) http://naces.org or the Association of International Credential Evaluators (AICE) https://aice-eval.org/. Examples of country-specific requirements can be found at https://www.ece.org/ECE/Individuals/Documentation-Requirements.

Applicants will receive notification of their application status.

All policies in the Official Catalog including student conduct, refund policies, and general University policies apply to graduate students unless specifically addressed for graduate students.

Follow this link for information on Admissions Assessment Retesting - Undergraduate.

For additional Admissions Requirements:

- Graduate Programs

Admissions Requirements - Undergraduate Programs

Admissions Assessment Retesting - Undergraduate

Admissions assessments are valid for up to one year from the date of testing. Applicants who do not attend courses at ECPI University within one year of assessment will be required to retake all applicable assessments when applying for admission. A student who does not achieve scores acceptable for admission or provisional admission (see section on **Provisional Acceptance** in this catalog for more information) to ECPI University on the first attempt may retest at any time. If the student fails to achieve the acceptable scores for program entrance after the second attempt on any approved assessment, s/he must wait six months before reapplying to ECPI. If any retaken assessment is not passed after the third attempt, the applicant must wait for a period of one year from the most recent assessment date before reapplying to ECPI University.

Admissions Requirements - Undergraduate Programs

Admissions Requirements - Business Administration Certificate

Admission is on a selective and competitive basis. ECPI University reserves the right to select those applicants who are deemed best qualified for the Business Administration Certificate program. Entrance requirements include the following prerequisites:

- **Lean Methodology and Project Management** – BUS121 Introduction to Business
- **Financial Literacy for Business Professionals** – CIS108 Office Applications

Admissions Requirements - Undergraduate Programs

Admissions Requirements - Cyber and Information Security Technology | B to BS (Degree Completion)

Admission is on a selective and competitive basis. ECPI University reserves the right to select those applicants who are deemed best qualified for the Cyber and Information Security Technology, Bachelor of Science (Degree Completion) program. The Admission process includes the following:

ADMISSION REQUIREMENTS	
1.	Applicants must have completed a Bachelor of Science or a Bachelor of Arts degree, graduating with a minimum GPA of 2.50. *Students who do not meet the 2.50 GPA requirement may apply for admission to the B to BS (Degree Completion) program on a provisional status. Upon successful completion of the first semester of the B to BS (Degree Completion) program, a student may apply for a change of status from provisional admission to the full admission.*
2.	Applicants are required to provide official high school or General Education Diploma (GED) transcripts, as well as official college transcripts for completed college level course work. An educational history evaluation will be completed upon receipt of official transcripts. Transfer credits will be evaluated according to ECPI University's transfer credit policy.
3.	Relevant work or military history and industry certifications related to computer science are also evaluated.
4.	Applicants are expected to have basic proficiency in common computer applications.
5.	Submission of an Entrance Essay (1 page maximum length) on *Why This Program is Important for My Professional Goals*.
6.	Qualified applicants who rank highest on the admissions criteria will be evaluated by an academic review committee. The academic review committee will determine final selection for admission to the B to BS (Degree Completion) program.
7.	All applicants must submit to a criminal background check.
8.	Entrance requirements include 60 total credits applied from previous degree/coursework, including:
	• 30 Arts and Sciences credits (including prerequisite coursework outlined below)
	• 30 elective credits

	60 SEMESTER CREDIT HOURS	
	COURSE TITLE	**CREDITS**
ARTS AND SCIENCES	Written/Oral Communication	6
	Social/Behavioral Sciences	6
	Natural Sciences	3
	Fine Arts/Humanities	3
	Math	3
	Arts and Sciences Electives	9
ELECTIVES	General Electives	30

Admissions Requirements - Undergraduate Programs

Admissions Requirements - Culinary Arts Certificate

Admission is on a selective and competitive basis. ECPI University reserves the right to select those applicants who are deemed best qualified for the Culinary Arts Certificate program. Entrance requirements include the following prerequisites:

- Food Service Financial Management – CIS108 Office Applications
- Food Service Leadership – No pre-requisites

Admissions Requirements - Undergraduate Programs

Admissions Requirements - Dental Assisting | AAS

Dental assisting program applicants must have a high school diploma or a GED. Dental Assisting program applicants must successfully complete the admissions assessment.

Admissions Requirements - Diagnostic Medical Sonography | AAS

The Diagnostic Medical Sonography program has a selective review process that consists of the following:

- Diagnostic Medical Sonography program applicants must have a standard high school diploma or a GED.
- Diagnostic Medical Sonography program applicants must successfully complete the entrance assessment.
- A personal information session with the Program Director or designee is required.

Prerequisite Courses

Must be greater than or equal to 100 level college courses only.

- College Algebra (3 credit hours)

HEALTHCARE EXPERIENCE (15% WEIGHTED VALUE)		
APPLICANT POINTS CRITERIA	**VOLUNTEER OR WORK IN A MEDICAL PROFESSION**	**VOLUNTEER OR WORK IN ULTRASOUND**
1 pt	1-2 years	40 to 99 hours
2 pt	3-5 years	100-199 hours
3 pt	6+ years	200+ hours
ENTRANCE ASSESSMENTS (70% WEIGHTED VALUE)		
Reading	20% of exam values	
English	20% of exam values	
Math	30% of exam values	
Science	30% of exam values	
ACADEMIC COURSES - COLLEGE OR HIGH SCHOOL (15% WEIGHTED VALUE)

	Anatomy and Physiology	
	Physics	
	Chemistry	
	Biology	
	Medical Terminology	

Admissions Requirements - Emergency Medical Services | AAS

Admission to Emergency Medical Services Certification Programs in Virginia is regulated by the Board of Health, Emergency Medical Services Regulation 12VAC5-31-900. The below listed requirements have been established.

- Be a minimum of 18 years of age on the start date of the training program.
- Be proficient in reading, writing and speaking the English language.
- Hold a high school diploma, general equivalency diploma, or higher degree of education.
- Hold current certification as an Emergency Medical Technician.
- Hold current certification in an approved course in Cardiopulmonary Resuscitation.

- Be capable of performing all assigned duties. Have no defect, which would render the student unable to perform all practical skills required for this level of training. Physical performance skills must include the ability of the student to function and communicate independently, to perform appropriate patient care, physical assessments and treatments without the need for an assistant. Specific physical requirements are defined in the functional position description.
- Comply with OSHA 29 CFR part 1910.1030. A health examination and copies of immunization records is required.
- Evidence of competency in high school level mathematics and post high school English.
- Not have been convicted or found guilty of any crime, offense or regulatory violation, or participated in any other prohibited conduct identified in the Virginia EMS regulations as defined in 12VAC5-31-910

Admissions Requirements - Undergraduate Programs

Admissions Requirements - Engineering Technology Certificate

Admission is on a selective and competitive basis. ECPI University reserves the right to select those applicants who are deemed best qualified for the Engineering Technology Certificate program. Entrance requirements include the following prerequisites:

- **Manufacturing Processes and CNC Programming** – MTH200 Pre-calculus Precalculus, PHY120 Physics Physics, MET192 Graphics Communication, & MET192L Introduction to 3-D Modeling LAB Introduction to 3D Modeling and Lab, and MTH131 College AlgebraCollege Algebra
- **CAD, Prototyping, and 3D Printing** – MTH131 College Algebra College Algebra
- **Pre-Engineering Math and Software Applications** – No pre-requisites
- **Digital Logic Systems** – MTH131 College Algebra College Algebra

Admissions Requirements - Undergraduate Programs

Admissions Requirements - Medical Radiography | AAS

The Medical Radiography program has a selective review process that consists of the following:

- Medical Radiography program applicants must have a standard high school diploma or a GED.
- Medical Radiography program applicants must successfully complete the entrance assessment.
- A personal information session with the Program Director or designee is required.

Qualified applicants who rank highest on the admissions criteria and complete an information session with the Medical Radiography Program Director or designee are considered for admission to the program. Students will be selected based on a point system. The following criteria will be evaluated:

HEALTHCARE EXPERIENCE (15% WEIGHTED VALUE)		
APPLICANT POINTS CRITERIA	**VOLUNTEER OR WORK IN A MEDICAL PROFESSION**	**VOLUNTEER OR WORK IN RADIOGRPHY**
1 pt	1-2 years	40 to 99 hours
2 pt	3-5 years	100-199 hours
3 pt	6+ years	200+ hours
ENTRANCE ASSESSMENTS (70% WEIGHTED VALUE)		
Reading	20% of exam values	
English	20% of exam values	
Math	30% of exam values	
Science	30% of exam values	
ACADEMIC COURSES - COLLEGE OR HIGH SCHOOL (15% WEIGHTED VALUE)		
1 pt each, per subject, one time:		
	Anatomy and Physiology	
	Physics	
	Chemistry	
	Biology	
	Medical Terminology	

The Medical Radiography program requires applicants who were interviewed and provisionally accepted into the program, to submit proof of acceptable health and wellness, via a complete physical examination, including proof of specific immunizations, prior to the commencement of studies. In addition, they must undergo both a criminal background check and a drug screening test. They are required to provide medical documentation regarding any disability or physical limitation that they have, prior to final acceptance into the program. That documentation will be reviewed by the program faculty to determine if the extent of the limitation(s) is/are too limiting to complete required tasks.

Physical Demand Requirements

Students seeking admission into the Medical Radiography Program are advised that their course of study will include classroom education, hands-on practical skills and clinical experiences. Students making the decision to enter into this program should be aware of the physical nature of both the profession and their course of study. While the profession of Radiography may be performed in a variety of settings, each with specific physical demand requirements, students must be able to demonstrate a wide range of skills that may be performed in a variety of settings to successfully complete the program.

Applicants to the program must be aware that they must possess the following abilities required of Radiography students and radiographers.

Physical	Vision	Ability to read and analyze data, formulate technical factors, evaluate the technical results, and observe patient conditions. Ability to perform all the radiographic procedures expected of a Radiography student.
	Hearing	Ability to hear instructions in a variety of situations, such as a darkened x-ray room, trauma room in the emergency department, and surgery; where the persons may not be facing you or they may be wearing surgical masks. Patients, who are sick, injured, elderly, and in other weakened conditions sometimes have difficulty in communicating; therefore, it is important to be able to hear them with accuracy.
	Motor Skills	Above average hand/eye coordination and other basic motor skills are essential. Ability to lift, move and support patients. Ability to operate various x-ray equipment including portable machines which may involve lifting, pulling, pushing, etc. Ability to stand/ walk for extended periods of time, as well as bending twisting and reaching.
Mental	Memory	Possess both short and long term memory capabilities.
	Critical Thinking	Ability to think critically and perform mathematical calculations, solve problems and demonstrate safe practices, including radiation protection.
	Interpersonal Skills	Ability to communicate effectively, both orally and in writing with patients, peers, general public and others, especially members of the health care team.
Hazards Awareness	Occupational Exposure	Students may be exposed to infectious body fluids, toxic drugs and solutions, and radiation.

Admissions Requirements - Nursing | ADN

Admission is on a selective and competitive basis. ECPI University reserves the right to select those applicants who are deemed best qualified for the Associate Degree in Nursing program. The Admission process includes the following.

APPLICANT REQUIREMENTS		
1.	Successful completion of the entrance assessment exam: Test of Essential Academic Skills (TEAS IV).	
	***Minimum score requirements*:**	
	Reading: 85+	
	Math: 51+	
	English: 60+	
	Science: 55+	
	Criteria will be evaluated for entrance assessments:	
	Reading: 20% of exam values	
	Math: 30% of exam values	
	English: 20% of exam values	
	Science: 30% of exam values	
2.	A minimum cumulative GPA of 2.5 is required (minimum of 9 credits) or high school GPA if no college has been attended. If the GPA is below 2.5, applicants can qualify by completing a minimum of 6 additional credits of biological science courses with a cumulative 2.5 GPA or greater in those courses. GED with a passing score meets the 2.5 GPA requirements.	
3.	Applicants are required to provide official high school or General Education Diploma (GED) transcripts, as well as official college transcripts for completed college level course work. An educational history evaluation will be completed upon receipt of official transcripts. High School Honors and Advanced Placement Science courses will be considered.	
4.	Relevant work history in the medical field, i.e. Practical Nursing, Military Corpsman, etc. is evaluated.	
5.	Submission of an Entrance Essay (1-2 pages maximum length) on one of the following topics: (1) Academic Integrity; (2) The Art of Caring; (3) Managing College / Life Balance. Completion may increase your admission ranking.	
6.	Qualified applicants who rank highest on the admissions criteria will be evaluated by an academic review committee of no less than three individuals, with representation from Nursing Administration or faculty. The academic review committee will determine final selection for admission to the ADN program.	
7.	Graduates of ECPI University's Practical Nursing program who hold a current and unencumbered Practical Nursing (LPN) license may apply to the Associate Degree in Nursing (RN) program without completion of the steps outlined above. Acceptance to the program is contingent on space availability; therefore, acceptance is not guaranteed. Applicants are required to successfully complete the LPN to RN Transition Orientation course.	
8.	All applicants (including Licensed Practical Nurses) must submit to a criminal background check and drug screen.	
9.	All applicants (including Licensed Practical Nurses) must possess the ability to meet the minimal level of essential functional abilities required to practice as a nurse, as described by the National Council of State Boards of Nursing.	

Financial terms as specified on Enrollment Agreements must be agreed upon in addition to meeting the academic acceptance criteria.

Applicants must complete a physical examination and provide proof of required immunizations prior to participation in skills laboratories or clinical experiences. These requirements are intended to promote the safety of patients, students, and the public, and to ensure that students are able to meet the essential functions of the nursing program.

Students with documented disabilities or medical conditions may request reasonable accommodations in accordance with the Americans with Disabilities Act (ADA) and applicable laws. Additional information is available in the Students with Disabilities Policy and Procedures section of the Catalog.

If a potential physical or mental health condition is identified at any time during the program that may interfere with safe or satisfactory classroom or clinical performance, the student may be referred for evaluation by an appropriate licensed professional. Recommendations from a professional will be considered in determining the student's ability to meet program requirements, with or without reasonable accommodation.

Admission or continued enrollment may be denied or interrupted if a student is unable to perform the essential functions of the program and nursing profession, with or without reasonable accommodation, or if the condition poses a direct threat to the safety of patients, students, themselves, or others. Determinations will be made on an individualized basis using objective evidence and in compliance with applicable laws and regulations.

All health-related information will be maintained in accordance with applicable confidentiality and privacy standards.

Essential Functional Abilities

Nursing is a profession that requires specific abilities. Students must be able to complete the minimal level of abilities to practice as a nurse as published by the National Council of State Boards of Nursing. RNs should be able to fully function in the following areas:

- Physical (gross and the fine motor, physical endurance, physical strength, mobility)
- Sensory (visual, tactile, olfactory, hearing)
- Cognitive (reading, arithmetic, analytical and critical thinking)
- Interactive (interpersonal, communicative)
- Contact the Program Director for questions or more information if you have questions about any one or all of the essential functional abilities. Also see the catalog section on Americans with Disabilities Act.

Admissions Requirements - Undergraduate Programs

Admissions Requirements - Nursing | BSN

Admission is on a selective and competitive basis. ECPI University reserves the right to select those applicants who are deemed best qualified for the Bachelor of Science in Nursing program. The admission process includes the following:

APPLICANT REQUIREMENTS		
1.	Successful completion of the entrance assessment exam: Test of Essential Academic Skills (TEAS IV).	
	***Minimum score requirements*:**	
	Reading: 85+	
	Math: 60+	
	English: 65+	
	Science: 60+	
	Criteria will be evaluated for entrance assessments:	
	Reading: 20% of exam values	
	Math: 30% of exam values	
	English: 20% of exam values	
	Science: 30% of exam values	
	**Students who have achieved a prior baccalaureate degree may not be held to minimum score requirements.*	
2.	A minimum cumulative GPA of 2.5 is required (minimum of 9 credits) or high school GPA if no college has been attended. If the GPA is below 2.5, applicants can qualify by completing a minimum of 6 additional credits of biological science courses with a cumulative 2.5 GPA or greater in those courses. GED with a passing score meets the 2.5 GPA requirements.	
3.	Applicants are required to provide official high school or General Education Diploma (GED) transcripts, as well as official college transcripts for completed college level course work. An educational history evaluation will be completed upon receipt of official transcripts. High School Honors and Advanced Placement Science courses will be considered.	
4.	Relevant work history in the medical field, i.e. Practical Nursing, Military Corpsman, etc. is evaluated.	
5.	Submission of an Entrance Essay (1-2 pages maximum length) on one of the following topics: (1) Academic Integrity; (2) The Art of Caring; (3) Managing College / Life Balance. Completion may increase your admission ranking.	
6.	Qualified applicants who rank highest on the admissions criteria will be evaluated by an academic review committee of no less than three individuals, with representation from Nursing Administration or faculty. The academic review committee will determine final selection for admission to the BSN program.	
7.	All applicants (including Licensed Practical Nurses) must submit to a criminal background check and drug screen.	
8.	All applicants (including Licensed Practical Nurses) must possess the ability to meet the minimal level of essential functional abilities required to practice as a nurse, as described by the National Council of State Boards of Nursing.	
9.	All applicants must submit a physical examination and immunizations including, but not limited to, documentation of negative TB status; Td/Tdap; complete series of MMR and Varicella vaccination or titers documenting immunity; Hepatitis B titer documenting immunity.	

Financial terms as specified on Enrollment Agreements must be agreed upon in addition to meeting the academic acceptance criteria.

Applicants are required to pass a physical examination and provide proof of immunizations prior to the commencement of skills labs/clinical experience. Conviction of a crime (other than a minor traffic violation) could make the student ineligible to take the licensing exam upon graduation, which is required by the profession. The student may be required to provide medical documentation of any disability or physical imitation prior to beginning classes. The rationale for these additional admission requirements is to provide reasonable assurance to the public that students are capable of performing duties required of a registered nurse upon graduation and successful preparation of the licensing exam.

Essential Functional Abilities

Nursing is a profession that requires specific abilities. Students must be able to complete the minimal level of abilities to practice as a nurse as published by the National Council of State Boards of Nursing. RNs should be able to fully function in the following areas:

- Physical (gross and the fine motor, physical endurance, physical strength, mobility)
- Sensory (visual, tactile, olfactory, hearing)
- Cognitive (reading, arithmetic, analytical and critical thinking)
- Interactive (interpersonal, communicative)
- Contact the Program Director for questions or more information if you have questions about any one or all of the essential functional abilities. Also see the catalog section on Americans with Disabilities Act.

Admissions Requirements - BS to BSN (Orlando)

ECPI University's Admission, Progression, and Graduation Committee ("APG Committee") is the decision-making body that determines a prospective student's eligibility for admission, reviews students' progression issues and considers readmission requests.

In determining an applicant's eligibility for admission, the APG Committee will consider, among other factors, the applicant's overall grade point average, overall science grade point average, and application materials. The APG Committee will accept students for admission on a space available basis. Applicants are not required to be a licensed Registered Nurse in order to be eligible for admission to the program. Nursing is a limited access major, which may result in qualified applicants not having the opportunity to enroll in the Bachelor of Science in Nursing program.

To be considered for acceptance, an applicant must do the following:

APPLICANT REQUIREMENTS		
1.	Execute an Application for Admission and satisfy all prerequisites prior to the start date of the Program.	
2.	Have earned a Bachelor of Science or a Bachelor of Arts degree, graduating with at least a 2.50 Grade Point Average (GPA). An official transcript is required as part of the application package.	
3.	Applicants must have successfully completed all prerequisite courses, with no more than two being allowed to be in progress at the time of application. A grade of B- or higher is required for the Anatomy and Physiology prerequisites. All other Bachelor to BSN General Education Prerequisites will be reviewed in accordance with the Transferability of Credit policies. See prerequisite courses listed below.	
	a. Anatomy and Physiology:	(8 semester credit hours/ 12 quarter credit hours, Parts I and II, with labs)
	b. Statistics:	(3 semester credit hours/ 4.5 quarter credit hours)
	c. Social Science: Sociology or Psychology	(3 semester credit hours/ 4.5 quarter credit hours)
	d. Human Growth and Development or Developmental Psychology:	(3 semester credit hours/ 4.5 quarter credit hours)
	e. English:	(3 semester credit hours/ 4.5 quarter credit hours)
	f. Additional General Education Elective:	(11 semester credit hours / 16.5 quarter credit hours)
4.	Present two letters of reference, including one from an academic source.	
5.	Submit a résumé or curriculum vitae.	
6.	Submit an essay as part of the application package, addressing the applicant's desire to pursue a baccalaureate degree in nursing, including the rationale for choosing this professional pathway.	
7.	Completed FDLE/FBI criminal background checks. The components of the background check include two parts:	
	a. A background check done online through VerifiedCredentials.com.	
	b. A Level II Criminal Background Check from the Florida Department of Law Enforcement and the Federal Bureau of Investigation. Contact the University to have a FDLE / FBI fingerprint card to be sent to you. All applicants are advised to begin the process well in advance of submitting the application package to the University. Your application cannot be processed without these background check results.	
8.	Must make satisfactory financial arrangements to provide for complete payment of all amounts expected to be due to the institution for tuition and fees. This requirement may include, but is not limited to, the completion of credit applications, financial aid applications and forms (if the applicant wishes to apply for financial aid), and the execution of promissory notes or other documents necessary to obtain the requisite financial aid or other financial assistance.	
9.	Take the Test of Essential Academic Skills (TEAS).	
10.	Additionally, applicants for the Bachelor of Science in Nursing program may be required to have a personal interview by the Campus President/ Campus Director of Academic Affairs (or his or her designee), either in person or by phone.	

Essential Functional Abilities

Nursing is a profession that requires specific abilities. Students must be able to complete the minimal level of abilities to practice as a nurse as published by the National Council of State Boards of Nursing. RNs should be able to fully function in the following areas:

- Physical (gross and the fine motor, physical endurance, physical strength, mobility)
- Sensory (visual, tactile, olfactory, hearing)
- Cognitive (reading, arithmetic, analytical and critical thinking)
- Interactive (interpersonal, communicative)
- Contact the Program Director for questions or more information if you have questions about any one or all of the essential functional abilities. Also see the catalog section on Americans with Disabilities Act.

Accepted Student Requirements

To be admitted, an applicant who has been accepted must satisfy the admissions requirements as follows:

REQUIREMENTS AFTER ACCEPTANCE		
1.	Take a tour of the campus and execute an Enrollment Agreement.	
2.	Attend an orientation or obtain a waiver of the requirement to attend an orientation from the Campus President/Dean.	
3.	Meet the health requirements imposed by the clinical agencies, as set forth in (a) through (f).	
	a. **Health Form**:	Have a health form completed by a licensed provider (MD, NP or PA).
	b. **MMR (Measles, Mumps, Rubella)**:	Provide documentation of two immunizations or positive titer.
	c. **DT (Diphtheria/ Tetanus)**:	Provide documentation of immunization within the last ten (10) years.
	d. **Varicella (Chicken Pox)**:	Provide documentation of satisfactory titer or immunization. History of disease does NOT meet this requirement.
	e. Hepatitis B:	Provide documentation of a completed Hepatitis B vaccine series.
	f. Mantoux Tuberculin Skin Test:	Be free of active (contagious) tuberculosis and provide documentation of a recent Mantoux tuberculin skin test using the two-step method conducted within the last 12 months. (Students will also be required to maintain at their own expense a current Mantoux Tuberculin Skin Test during their enrollment at ECPI University.) Students who test positive must meet current Center for Disease Control ("CDC") guidelines regarding annual chest x-rays.
4.	Provide documentation of personal health insurance.	
5.	Provide documentation of a current certification in basic life support for healthcare providers (BLS-HCP) offered by the American Heart Association.	

Acceptance of Academic Credit

Applicants must have completed a Bachelor of Science or a Bachelor of Arts degree, graduating with at least at 2.50 GPA. An official transcript is required as part of the application package.

For information on the transfer of credit - See the Transferability of Credit policy**, being sure to review the Nursing | BS to BSN section.**

Admissions Requirements - Practical Nursing Diploma

(These policies apply to Virginia, North Carolina, and South Carolina campuses)

Students must meet minimum application thresholds to be considered a qualified applicant.

APPLICANT REQUIREMENTS		
1.	Successful completion of the entrance assessment exam*:	
	TEST OF ESSENTIAL ACADEMIC SKILLS (TEAS IV)	
	***Minimum score requirements*:**	
	Reading: 80+	
	Math: 51+	
	***Provisional score requirements*:**	
	Reading: 75-79+	
	Math: 42-50 (MTH099 Introduction to College Algebra required)	
	TEST OF ESSENTIAL ACADEMIC SKILLS (TEAS V)	
	***Minimum score requirements*:**	
	Reading: 58.3+	
	Math: 55+	
	***Provisional score requirements*:**	
	Reading: 55.3+	
	Math: 55+ (MTH099 Introduction to College Algebra required)	
	**PN Students may take either transitional math or be admitted under provisional status for Reading scores, but not both. TEAS versions (IV, V) vary by campus location.*	
2.	Record of high school graduation or high school equivalent.	
3.	Ability to meet minimal level of essential functional abilities required to practice as a nurse as described by the National Council of State Boards of Nursing.	
4.	Physical and emotional health that would provide evidence that is indicative of the applicant's ability to provide safe nursing care to the public.	

Applicants must complete a physical examination and provide proof of required immunizations prior to participation in skills laboratories or clinical experiences. These requirements are intended to promote the safety of patients, students, and the public, and to ensure that students are able to meet the essential functions of the nursing program.

Students with documented disabilities or medical conditions may request reasonable accommodations in accordance with the Americans with Disabilities Act (ADA) and applicable laws. Additional information is available in the Students with Disabilities Policy and Procedures section of the Catalog.

If a potential physical or mental health condition is identified at any time during the program that may interfere with safe or satisfactory classroom or clinical performance, the student may be referred for evaluation by an appropriate licensed professional. Recommendations from a professional will be considered in determining the student's ability to meet program requirements, with or without reasonable accommodation.

Admission or continued enrollment may be denied or interrupted if a student is unable to perform the essential functions of the program and nursing profession, with or without reasonable accommodation, or if the condition poses a direct threat to the safety of patients, students, themselves, or others. Determinations will be made on an individualized basis using objective evidence and in compliance with applicable laws and regulations.

All health-related information will be maintained in accordance with applicable confidentiality and privacy standards.

Essential Functional Abilities

Nursing is a profession that requires specific abilities. Students must be able to complete the minimal level of abilities to practice as a nurse as published by the National Council of State Boards of Nursing. RNs should be able to fully function in the following areas:

- Physical (gross and the fine motor, physical endurance, physical strength, mobility)
- Sensory (visual, tactile, olfactory, hearing)

- Cognitive (reading, arithmetic, analytical and critical thinking)
- Interactive (interpersonal, communicative)
- Contact the Program Director for questions or more information if you have questions about any one or all of the essential functional abilities. Also see the catalog section on Americans with Disabilities Act.

Admissions Requirements - Undergraduate Programs

Admissions Requirements - Nursing | RN to BSN

The RN to BSN Completion Program requires applicants to have an associate degree or diploma in nursing. All applicants must hold a valid, unencumbered license to practice registered nursing in their state of residence, and have a 2.5 GPA or better in the past nursing program. Students who do not meet the 2.5 GPA requirement may apply for admission to the RN to BSN program on a provisional status. Upon successful completion of the first semester of the nursing curriculum, a student may apply for a change of status from provisional admission to the full admission. All applicants are required to submit a resume demonstrating work experience as an RN.

The full-time program is 45 weeks (9, five-week terms) in length. The part-time option is 17 terms. The classes are delivered online. All of the upper level general education courses are available online. One course requires a practical experience (NUR456 Senior Practicum), one course (NUR444L Community Health Lab) requires a virtual lab (30 hours), and one course requires lab practice (NUR340 Health Assessment).

Students are required to successfully complete an Online campus' orientation before they are enrolled for classes. In addition, students are encouraged to take an online tutorial available via the internet at https://orientation.ecpi.net/. These resources provide information on the nature of faculty/student interaction, prerequisite technology competencies, and skills, technical equipment requirements, and availability of academic support services information pertaining to technical requirements, etc.

Essential Functional Abilities

Nursing is a profession that requires specific abilities. Students must be able to complete the minimal level of abilities to practice as a nurse as published by the National Council of State Boards of Nursing. RNs should be able to fully function in the following areas:

- Physical (gross and the fine motor, physical endurance, physical strength, mobility)
- Sensory (visual, tactile, olfactory, hearing)
- Cognitive (reading, arithmetic, analytical and critical thinking)
- Interactive (interpersonal, communicative)
- Contact the Program Director for questions or more information if you have questions about any one or all of the essential functional abilities. Also see the catalog section on Americans with Disabilities Act.

Disclosure

Requirements regarding distance education and practicum experiences vary from state to state. The student’s initial program application is reviewed using the address provided upon enrollment to determine individual ability to complete the program and practicum requirements in the student’s state.

It is the responsibility of the student to inform the Program Director and ECPI University of address changes prior to relocation. Changing the state of residence during the course of the RN to BSN program may alter the ability of students to complete the RN to BSN program.

Admissions Requirements - Undergraduate Programs

Admissions Requirements - Physical Therapist Assistant | AAS

The selective admission process is based on the following: high school GPA, College GPA or GED scores, admission assessment exam scores, college Anatomy & Physiology, Physics and/or Chemistry GPA, college credits/degree, Physical Therapy hours, and professional references. Students must meet minimum application thresholds to be considered a qualified applicant.

- A high school or college GPA of 2.5, or GED
- Successful completion of the reading, math, science, and English assessment exam

Additional consideration will be given for prior college coursework, professional references, and Physical Therapy volunteer/technician hours.

Qualified applicants, who rank highest on the admissions criteria and successfully complete an interview with a PTA Program representative, are considered for admission to the program. A Review Committee makes the final decision for acceptance into the PTA program.

Admissions Requirements - Undergraduate Programs

Admissions Requirements - Radiologic Sciences | BS

The Bachelors of Science in Radiologic Sciences (B.S.R.S.) program requires applicants to have an associate’s degree or certificate in Medical Radiography. All applicants must hold a valid, ARRT certification to practice radiography in the United States, and hold a minimum 2.5 GPA. Students who do not meet the 2.5 GPA requirement may apply for admission to the B.S.R.S. program on a provisional status. Upon successful completion of the first semester of the B.S.R.S. curriculum, a student may apply for a change of status from provisional admission to the full admission. All applicants are required to submit a resume demonstrating current work experience as a radiographer.

The full-time program is 45 weeks (Nine, five-week terms) in length. The part-time option is 15 terms or approximately 5 semesters. The classes are delivered online. There are no clinical externships needed to complete the program.

Students are required to successfully complete an Online campus orientation before they are enrolled for classes. In addition, students are encouraged to take an online tutorial available via the internet at http://ecpicollege.com/?id=test#. These resources provide information on the nature of faculty/student interaction, prerequisite technology competencies and skills, technical equipment requirements, and availability of academic support services information pertaining to technical requirements, etc.

Admissions Requirements - Graduate Programs

Qualified applicants for the Graduate level degree program must meet the following requirements:

REQUIREMENTS		
1.	**Complete a Personal Interview**	Students are required to meet with an admissions advisor and discuss career goals, interests, financial planning, and needs. This interview is typically conducted during a visit and tour of the school or, in extenuating circumstances, and for online students, the interview may be completed by telephone.
2.	**Complete a Graduate Application for Admission and Enrollment Agreement**	A non-refundable $50 fee is submitted with the Graduate Application for Admission and does not reduce the total tuition due.
3.	**Submit official transcripts confirming graduation of a bachelor's degree in a related discipline**	Official transcripts must be received within the student's first term or the student will be dismissed (official transcripts must be received directly from the post-secondary institution to ECPI University). The degree, if earned in the US, must be from an accredited academic institution recognized by the Council of Higher Education Accreditation (CHEA). In those cases where a student has met the undergraduate achievement but has course deficiencies, the academic leader for the program will identify the criteria that must be met to remove deficiencies. (See program specific requirements below.)
4.	**Undergraduate Cumulative Grade Point Average (CGPA) of 2.5**	Undergraduate Cumulative Grade Point Average (CGPA) of 2.5 (on a 4.0 scale) for institutions that calculate CGPA. For applicants who have an undergraduate CGPA of less than 2.5, the applicant may be asked to submit GMAT or GRE test scores for review.
5.	**English Language Proficiency**	English Language Proficiency. See the English Language Proficiency Policy in this Catalog.
6.	**Non-immigrant applicants**	Non-immigrant applicants will provide evidence, in the form of an official post-secondary school transcript, of having earned a bachelor's degree in a related discipline. The degree must be from an accredited academic institution recognized by the Council of Higher Education Accreditation (CHEA) or its international equivalent, as certified by a credential evaluation organization which is a member of the National Association of Credential Evaluation Services (NACES). Examples of country-specific requirements can be found at https://www.ece.org/ECE/Credential-Evaluations/Documentation-Requirements.

In addition to the Admissions Criteria for Graduate Programs, qualified applicants for the following programs must also meet the requirements as outlined on each page.

- Master of Business Administration
- Master of Science in Nursing
- Master of Science in Cybersecurity
- Master of Science in Systems Engineering

For additional Admissions Requirements:

- Undergraduate Programs
- International Students

Admissions Requirements - Graduate Programs

Master of Business Administration

In addition to the Admissions Criteria for Graduate Programs, qualified applicants for the Master of Business Administration program must meet the following requirement:

Bachelor of Science degree in a business related discipline with a basic understanding of business principles. The degree must be from an accredited academic institution recognized by the Council of Higher Education Accreditation (CHEA). Applicants who do not have previous undergraduate coursework in a business related discipline may be required to validate their basic understanding of business through work experience or by completing a bridge course or one or more undergraduate courses, to include accounting, finance, and statistics.

Admissions Requirements - Graduate Programs

Master of Science in Cybersecurity

In addition to the Admissions Criteria for Graduate Programs, qualified applicants for the Master of Science in Cybersecurity or Master of Science in Information Systems program must meet the following requirements:

Bachelor of Science degree in Computer Science or Information Systems/Assurance or related field. The degree must be from an accredited academic institution recognized by the Council of Higher Education Accreditation (CHEA), if earned in the US. Applicants who do not have previous undergraduate coursework in computer science or information systems/assurance may be required to complete one or more undergraduate courses.

Admissions Requirements - Graduate Programs

Master of Science in Engineering Technology

In addition to the Admissions Criteria for Graduate Programs, qualified applicants for the Master of Science in Engineering Technology program must meet the following requirements:

Bachelor of Science degree in an Engineering related field. The degree must be from an accredited academic institution recognized by the Council of Higher Education Accreditation (CHEA), if earned in the US. Applicants who do not have previous undergraduate coursework in an engineering related field may be required to complete one or more undergraduate courses.

Students from outside the discipline and/or those who do not have the required prerequisites may be required to complete leveling courses based on the concentration and the applicant's degree.

Admissions Requirements - Graduate Programs

Master of Science in Healthcare Administration

In addition to the admissions criteria for graduate programs, qualified applicants for the Master of Healthcare Administration must meet the following requirements:

- Bachelor's degree in Health Administration or health-related field from an academic institution recognized by the Council of Higher Education Accreditation (CHEA). ECPI University graduates with a Bachelor's degree in Business Administration or Organizational Leadership are required to take a two-semester credit hour course in Fundamentals of Healthcare and pass with a grade of 80 or higher, before being admitted to the MHA program.
- Submit a current resume and personal goal statement.

Admissions Requirements - Graduate Programs

Master of Science in Nursing

In addition to the Admissions Criteria for Graduate Programs, qualified applicants for the Master of Science in Nursing program must meet the following requirements:

MSN APPLICANT REQUIREMENTS	
Bachelor's degree in Nursing from an academic institution recognized by the Council of Higher Education Accreditation (CHEA)	Applicants with "current and unencumbered" RN licensure in the United States who hold a foreign BSN degree must have their transcripts evaluated to determine the academic equivalency to U.S. educational standards. In any circumstance where the Office of Admissions is unable to determine the academic level or course credit awarded in relation to U.S. educational standards, applicants will be asked to submit their transcripts to a member of the National Association of Credential Evaluation Services (NACES) or the Association of International Credential Evaluators, Inc. (AICE). Applicants must pay the evaluation fee directly to the NACES or AICE member. Applicants who do not have previous undergraduate coursework in statistics, health assessment, or research, will be required to complete these prerequisite courses prior to acceptance in the graduate program. The MSN Director or Associate Director will review undergraduate transcripts, resumes, and licenses.
Current Resume, Unencumbered RN License, and Written Essay	Each applicant must submit a current resume that indicates three months or more RN experience within the past three years, an active/unencumbered RN license in state of residence, and a written essay.
Completion of MSN Orientation	Before the start of the first term of study, the applicant must complete the 1-week online orientation.

Essential Functional Abilities

Nursing is a profession that requires specific abilities. Students must be able to complete the minimal level of abilities to practice as a nurse as published by the National Council of State Boards of Nursing. RNs should be able to fully function in the following areas:

- Physical (gross and the fine motor, physical endurance, physical strength, mobility)

- Sensory (visual, tactile, olfactory, hearing)
- Cognitive (reading, arithmetic, analytical and critical thinking)
- Interactive (interpersonal, communicative)
- Contact the Program Director for questions or more information if you have questions about any one or all of the essential functional abilities. Also see the catalog section on Americans with Disabilities Act.

Admissions Requirements - Graduate Programs

Master of Science in Physician Assistant

Please refer to the Admissions Guidebook located at: https://www.ecpi.edu/programs/master-science-physician-assistant

Admissions Requirements - Graduate Programs

Master of Science in Systems Engineering

In addition to the Admissions Criteria for Graduate Programs, qualified applicants for the Master of Science in Systems Engineering program must meet the following requirements:

Bachelor of Science degree in Engineering or Computer Science related field. The degree must be from an accredited academic institution recognized by the Council of Higher Education Accreditation (CHEA), if earned in the US. Applicants who do not have previous undergraduate coursework in engineering or a computer science related field may be required to complete one or more undergraduate courses.

Admissions Requirements - International Students

ECPI University defines an international student applicant for admission as any **non-US Citizen** who currently lives:

- outside of the United States and plans to enter the United States through the use of appropriate student visa documentation issued by ECPI University.
- inside the United States in valid academic or vocational student non-immigrant status and wishes to transfer to ECPI University from another educational institution; or,
- inside the United States in any other non-immigrant classification, and wishes to obtain valid academic or vocational student non-immigrant status in conjunction with attending ECPI University.

Legal permanent residents of the US, residents of US territories, naturalized citizens, refugees, as well as non-immigrant aliens granted asylum to the US are **not** considered international students.

In addition to meeting the standard requirements of admission to ECPI University, international applicants must fulfill the following additional requirements. To document financial support, copies of original financial statements are required.

APPLICANT REQUIREMENTS	
1.	A completed and signed ECPI University International Student Application Attestation Form.
2.	A completed and signed International Student Affidavit of Financial Support.
3.	Scanned copies of original and official financial statements. Financial statements (typically provided by a bank) must verify sufficient funds to cover the cost of the educational program for the first academic year as well as all living expenses and must demonstrate access to liquid assets available within the last six-months of the date of submission. If the financial statements are not in the applicant's name, a completed affidavit form or letter is required.
4.	A scanned copy of the applicant's passport (picture and information pages). (Any applicants currently residing outside of the United States who have not yet acquired a passport will need to submit a copy of their birth certificate to validate date of birth and country of citizenship.)
5.	For all non-immigrant applicants residing in the US at the time of application, a photocopy of the visa page contained within the applicant's passport.
6.	For all non-immigrant applicants residing in the US at the time of application, a photocopy of the applicant's Form I-94 Arrival/Departure Record (both sides).
7.	For all non-immigrant applicants residing in the US at the time of application who currently hold valid F-1, M-1, or J-1 non-immigrant classification: written confirmation of current non-immigrant alien status from the school through which that non-immigrant alien status was secured.
8.	Proof of Health Insurance or signed insurance waiver form. Typically, this is a photocopy of a health insurance identification card, which includes:
	• Policy number
	• Group and/or individual identification number
	• Full name of the policy holder
	• Beneficiary's name, if the beneficiary is not the policy holder.
	• Start date of health insurance coverage as well as the expiration date of health insurance coverage.

Applicants who do not possess health insurance must be prepared to purchase health insurance through an approved ECPI University provider upon matriculation into the University.

Other Requirements

ECPI University reserves the right to make exceptions on any Admissions decision and exceptions are at the sole discretion of the University and are on a case-by-case basis. The Director of Admissions reserves the right to request additional information to determine admissions eligibility for any applicants. Failure to provide additional documentation may affect your admission to the University.

See also International Scholarship Policies.

For additional Admissions Requirements:

- Undergraduate Programs
- Graduate Programs

Welcome to the Financial Services Section

Navigate the financial aid policies using the menu to the left, or choose from the following additional policy categories below:

- Academics Policies
- Admissions Policies
- Student Conduct Policies
- University Policies

Financial aid is available to help qualified students pay for their education. ECPI offers many financial aid options to help students and their families determine the best way to pay for an education. ECPI is committed to helping each student find the best solution to meet his/her needs and pursues this educational investment.

Student aid is awarded based on the applicant's need and factors such as income, assets, and benefits. Financial aid applications and a guide to financial aid are available from the Financial Aid Department. The guide provides general information regarding eligibility, application processes, and Federal financial aid programs.

Financial aid application forms are to be completed and submitted to a Financial Assistance Advisor. Students receive a financial aid award letter when their application for financial aid has been processed that states the type, amount, and conditions of financial aid offered. The number of credits a student attempts each term also affects financial aid eligibility.

Students are required to apply for financial aid each academic year (two semesters). Forms are available in the financial aid office.

Students receiving financial aid must maintain Satisfactory Academic Progress Policy (SAP) as indicated in this *Catalog* in order to retain eligibility for both Federal and ECPI financial assistance.

ECPI students may make monthly in-school payments to the University. The in-school payments may reduce the amount of money students borrow and must repay after they graduate or withdraw. The student should contact their financial aid advisor if they would like more information about payment options and plans.

Financial Aid Policies

Availability of Employee for Dissemination Purposes

The University has designated a group of employees who are available to assist enrolled or prospective students in obtaining institutional and financial assistance information for students as specified in Sections 668.42, 668.43, 668.45, and 668.46 of the Code of Federal Regulations.

Their combined work schedules have been arranged so that at least one of them is available, upon reasonable notice, throughout the normal administrative working hours of the University.

Please see our contact information within each **Campus** page for assistance across all departments and campuses. They will coordinate/organize the resources necessary to satisfy all relevant data requests.

Financial Aid Policies

Definition of Financial Need

Financial need is defined as the difference between the cost of attending school and the student's (and/or the family's) Student Aid Index (SAI). A Central Processor to whom the student's Free Application for Federal Student Aid (FAFSA) is submitted conducts determination of the SAI, based on federal guidelines. The School's Financial Aid Director or staff then determines the student's Cost of Attendance, which generally consists of tuition and fees and average living expenses based on nationally published data. The federal need formula can be stated as follows: Cost of Attendance – SAI - estimated financial assistance not received under Title IV = Financial Need. Financial need determines eligibility for different sources of student aid.

Financial Aid Policies

Title IV Eligibility Requirements

In general, an applicant to ECPI is eligible to apply for Federal Title IV financial assistance if the following criteria are met:

TITLE IV ELIGIBILITY REQUIREMENTS		
1.	Be a United States citizen or national; U.S permanent resident or other eligible noncitizen; or a citizen of the Freely Associated States.	
2.	Have a valid Social Security Number or, for citizens of the Freely Associated States, a pseudo SSN assigned during the FAFSA application process.	
3.	Have financial need, for some sources of student aid.	
4.	Have a high school diploma; a recognized equivalent of a high school diploma, such as a General Education Development (GED) or certificate; or have completed secondary education in a homeschool settings.	
5.	Be enrolled or accepted for enrollment as a regular student at ECPI for the purpose of obtaining a degree or certificate offered by ECPI University.	
6.	Make satisfactory academic progress as outlined in the school policies herein.	
7.	Sign a statement on the Free Application for Federal Student Aid (FAFSA) certifying that you 1) will use federal and/or state student financial aid only to pay the cost of attending an institution of higher education, 2) are not in default on any Federal Student Aid loan and do not owe an overpayment on any Federal Student Aid grant, or have made satisfactory arrangements to repay them, 3) will notify your college if you default on a federal student loan and 4) will not receive a Federal Pell Grant from more than one college for the same period of time.	
8.	Have not exceeded annual or aggregate loan limits.	
9.	For the Pell Grant program eligibility, the student may not have previously earned a bachelor’s, master's or first professional degree.	
10.	For Direct Subsidized/Unsubsidized and Direct PLUS LOAN programs, the student must be enrolled at least half-time.	

HEOA Sec. 489 amended HEA Sec. 485B(d)(4) (20 U.S.C. 1092b) Institutions that enter into an agreement with a potential student, student, or parent of a student regarding a Title IV, HEA loan are required to inform the student or parent that the loan will be submitted to the National Student Loan Data System(NSLDS), and will be accessible by guaranty agencies, lenders, and institutions determined to be authorized users of the data system.

Applicants under the age of 24 are considered to be dependent by federal definition and are required to have parental participation in completing the financial aid forms and the financial aid process.

An applicant has the right to appeal all financial aid decisions. Such appeals must be in writing, made to the Director of Financial Aid within 10 calendar days of the date of the decision. The Financial Aid Director and the Campus President will review all appeals and inform the applicant of the University’s decision within 30 calendar days of the receipt of the appeal.

Financial Aid Policies

Financial Aid Received Prior to Attending ECPI

Federal regulations require an institution to determine all previous Federal Title IV aid received by the student prior to disbursement of funds. When a FAFSA is processed, the FASFA Processing System (FPS) matches students against the National Student Loan Data System (NSLDS). ECPI will review all NSLDS data reported by each school at which a student was previously enrolled. Financial aid awarded at other schools could limit the amount of financial aid available at ECPI.

Financial Aid Policies

Loan Default Prevention

Students are responsible to repay, in full, all loans used to pay for their education. Repayment of student loans helps ensure the availability of loan funds for the future. Borrowers are encouraged to take the responsibility of loan repayment seriously.

Some helpful hints on avoiding delinquency are as follows:

WAYS TO AVOID DELINQUENCY
• Send in the required payment each month even if a bill was not received.
• Send in larger or additional payments to reduce the amount of interest paid on the loan. Be sure to indicate that the extra amount should be applied to the principal or used as a future payment.
• Remember that overpaying one month does not mean that the next month's payment can be skipped or that it will be reduced.
• Call your lender/servicer immediately if the payment will not be made on time or in cases of financial hardship. The lender/servicer may be able to work out an alternative plan.
• Know the deferment rights. After sending in the necessary forms, follow up with the lender/servicer to confirm that the appropriate loan(s) has been deferred.
• Understand the borrower's rights and responsibilities under each loan program. Keep all paper work such as promissory notes, lender correspondence, cancelled checks, etc.
• Always call to resolve a discrepancy.
• Never ignore correspondence or requests for payment from the lender/servicer.

If a default does occur on the loan(s), in spite of all the arrangements available to prevent this from happening, one or more of the following repercussions may occur:

DEFAULT REPERCUSSIONS
• The default status may be reported to a national credit bureau and have a negative effect on credit ratings for seven years.
• Deferment possibilities may be lost.
• Wages may be garnished.
• Federal and state income tax refunds may be withheld.
• Ineligibility status for any further federal or state financial aid funds.
• The entire unpaid amount of the loan, including interest and cost of collection, may become due and payable immediately.
• Students may obtain additional information about loan repayment and default prevention guidance from the Financial Aid Office.

Refund Policies

Refund policies are an essential aspect of financial planning for your education, ensuring you understand the conditions under which you may receive a refund of tuition or fees. These policies outline the circumstances under which refunds are granted, including withdrawal from courses, program changes, or institutional cancellations, as well as the timelines and procedures for requesting a refund. It is important to familiarize yourself with these policies to avoid any unexpected financial liabilities and to ensure compliance with institutional and regulatory requirements. This section provides a comprehensive guide to the refund process, including key deadlines, eligibility criteria, and how refunds are calculated.

Students considering withdrawing from a course/program should read all of the following sections of the Catalog:

- Refund Policies
- Satisfactory Academic Progress Policy-Undergraduate Programs | Satisfactory Academic Progress-Graduate Programs
- Grade Policies- Final Grades
- Course Withdrawals
- Leave of Absence Policy
- Readmission Procedure
- Add/Drop Period

Financial Aid Policies

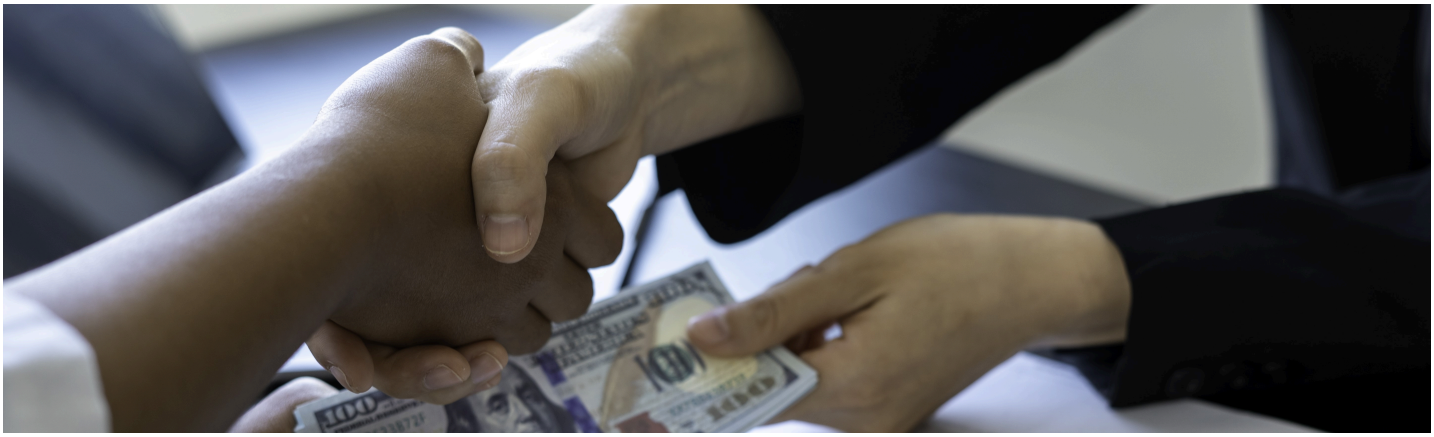

Renewal Applications

Students must reapply for financial aid in each new academic year. In some cases this may require the completion of a Renewal FAFSA. Renewal-eligible students automatically receive a renewal reminder by email if they provide an email address in the previous application year. Students must complete all required applications and submit additional paperwork as necessary five weeks before they start a new academic year. Failure to do so could result in the student being required to make cash payments to the University or being dismissed from ECPI.

Note: The entire financial aid application process and verification process, if applicable, must be completed for each academic year.

Financial Aid Policies

Sources of Financial Aid

When planning for your education, understanding the various sources of financial aid available is crucial. Financial aid can come from multiple sources, including federal and state governments, educational institutions, private organizations, and employers. These resources are designed to help reduce the financial burden of higher education and make it more accessible to students from all backgrounds. This section provides an overview of the different types of financial aid you may qualify for, including grants, scholarships, loans, and work-study opportunities, along with guidance on how to apply and manage your aid effectively.

Financial Aid Policies

Student Cost of Attendance

An average cost of attendance for a student attending ECPI University consists of tuition and fees, food and housing allowance, transportation allowance, personal and miscellaneous allowance, and books/supplies allowance. Tuition and direct academic costs are assessed for one academic year. Living expenses are estimated using nationally approved living expense guidelines. These components of the cost of attendance are estimates and will vary from student to student depending on the program, course load, and the student's living arrangements (students living with parents, living on their own, or military housing).

For specific details on calculating cost of attendance, contact the Financial Aid Department.

Financial Aid Policies

Requirements for Verification

Federal regulations require that application data be matched against several databases: those of National Student Loan Data Services (NSLDS), FAFSA Processing System (FPS), The Department of Defense, the Department of Justice, the Social Security Administration, Department of Veterans Affairs, and the Department of Homeland Security (DHS). An unsuccessful match to any of these databases will require students and/or parents provide documentation to validate their current status. For any failed database match, your Financial Aid Administrator will advise you of the documentation required and which must be provided to be eligible for financial aid.

Some student aid applications are also subject to a process called verification. This process involves documenting the information submitted on the student's Free Application for Federal Student Aid (FAFSA) and verifying that the information is correct.

The procedures governing verification are as follows:

School Policy for Timeline in Completing Verification

The School will complete the "Notification of Verification Document Required Form" and email or meet with students in person to explain what is required.

Verification is required to be completed before the start of a program or within 30 days of notification.

Under extenuating circumstances the Institution may, at their option, accept completed verification documentation after the above deadline. Other federal deadlines may also apply.

Students who do not complete verification in the above time frame may have a delay or loss of subsidized financial aid and may be prevented from registering for subsequent classes.

Acceptable Documentation

The Department of Education publishes an annual notice announcing the FAFSA information that an institution and an applicant may be required to verify for an applicant selected for verification by the Department, and the acceptable documentation for that information. If an application is selected for verification by the FAFSA Processing System (FPS), the resulting Student Aid Report (SAR) will indicate that verification is required. In addition to this, ECPI University may choose to select an application for verification. In either case, students will be notified of the documentation required to complete the verification process by their Financial Aid Administrator.

Applicant's Rights and Responsibilities in Regard to Verification

Each applicant has the right to be informed that s/he has been selected for verification and the responsibilities associated with verification selection. Consequences for not meeting those responsibilities, are explained in detail orally, and when deemed necessary by the University or if requested by the applicant, presented in writing.

Correction to Information

All conflicting data must be resolved and if, as the result of verification or another documentation process, it becomes necessary to correct any of the information on an ISIR, the student may be required to make a correction or the Financial Aid Department with acceptable documentation will submit the corrections electronically to the U.S. Department of Education. A new ISIR, showing the corrected information is then generated. Applicants may be required to verify correctness and sign the revised ISIR.

If corrections result in a change in eligibility, students will be advised and a revised award letter will be reviewed for approval.

If ECPI has reason to believe that any application has been intentionally submitted under false or fraudulent pretenses, such application will be referred to the Federal Office of the Inspector General.

Note: Failure to provide required information could result in a new student being denied admission to ECPI University, and a student already attending classes could be dismissed for failure to meet financial obligations to the school.

Refund Policies

Review the following scenarios that impact any refunds.

If ECPI Postpones the Program Start Date

If ECPI postpones the Program start date, the student is entitled to a full refund of all monies paid to ECPI if the request is made within fifteen days of receiving notice of the Program's postponement.

If ECPI Discontinues the Program

If ECPI discontinues the Program and the student has not yet begun classes, he/she may transfer to another program and all monies paid will be applied to the new program. If the student has completed coursework in the discontinued Program, they will be provided an opportunity to complete all outstanding coursework at ECPI and earn the appropriate credential for the Program.

If The Student Cancels Within 3 Business Days

The student may cancel this Agreement, without any penalty or obligation, within three business days from the date he/she signs this Agreement, in which event the student will be returned any payment within 30 days following receipt by ECPI of the cancellation notice, excluding the non-refundable application fee, and any security interest arising out of this Agreement will be voided. The student will have the right to apply for reinstatement within twelve months from the date they signed this Agreement, at which time a credit will be given for the non-refundable application fee. To cancel this Agreement, the student must mail or deliver a signed and dated copy of their written cancellation notice to ECPI at the campus location noted on page one of their Agreement no later than midnight on the third business day.

Students who have not visited ECPI prior to enrollment may withdraw without penalty within three days following either their scheduled class orientation or following a tour of ECPI and its facilities, whichever is earlier.

If The Student Withdraws During the Trial Period

New undergraduate students attending their first course at ECPI are in a "trial period," which is typically five weeks. For certificate (Micro-credential) programs, the trial period is one week. For courses that are longer than five weeks, the trial period ends with the 5th week. If the student withdraws during the trial period, ECPI will refund all money paid except for the non-refundable application fee and registration fee. Title IV federal student assistance is not disbursed during the trial period. After the trial period has expired, Title IV federal student assistance is disbursed for the period including the trial period. Students who utilize the trial period, but re-apply and attend in a later semester, will be assessed $250 in tuition per previously earned credit (not applicable for students in quarter-based programs). The Trial Period is not applicable to international students or students enrolled in graduate degree programs.

If The Student Withdraws After the Trial Period

A "semester" is the period for which students are charged. Each semester consists of three 5-week modules. Two semesters constitute an academic year.

For students enrolled in programs measured in quarter credit hours: A "quarter" is the period for which students are charged. Each quarter consists of 12 weeks of instruction. Three quarters constitute an academic year.

If the student withdraws after the trial period, the non-refundable application and registration fees will be retained, and the refund for each semester will be the larger of (a) the refund required by state law, if any, or (b) the refund required by federal law, if any, or (c) the refund provided in the charts below:

REFUND SCHEDULE FOR PROGRAMS MEASURED IN SEMESTER CREDIT HOURS	
WITHDRAWAL OCCURS AFTER PERCENTAGE COMPLETION OF THE SEMESTER	**PERCENTAGE OF TUITION AND FEES REFUNDED**
Within First 10%	90%
After 10% and Up to 20%	80%
After 20% and Up to 30%	70%
After 30% and Up to 40%	60%
After 40% and Up to 50%	50%
After 50% and Up to 60%	40%
After 60% and Up to 70%	30%
After 70% and Up to 80%	20%
After 80%	0%

For students attending the Florida (Lake Mary) campus, the semester credit refund will be pro-rated for the first 20% of the semester based on the number of days attending in the semester divided by the total days scheduled in the semester.

Diploma students attending a North Carolina campus (Raleigh, Greensboro, or Charlotte) who attend 20-25% of the semester will receive a 75% refund.

REFUND SCHEDULE FOR PROGRAMS MEASURED IN QUARTER CREDIT HOURS	
IF STUDENT WITHDRAWS OR IS DISMISSED WHEN SCHEDULED CLASSES HAVE BEEN HELD FOR:	**STUDENT'S TUITION CHARGES WILL BE:**
1-20% of the quarter	Equal corresponding pro rata percentage, e.g. 7% = 7% tuition charges.
More than 20% but not more than 30% of the quarter	30% of the Quarter Tuition Charges
More than 30% but not more than 40% of the quarter	40% of the Quarter Tuition Charges
More than 40% but not more than 50% of the quarter	50% of the Quarter Tuition Charges
More than 50% but not more than 60% of the quarter	60% of the Quarter Tuition Charges
More than 60% of the quarter	100% of the Quarter Tuition Charges

For students that received military educational benefits, eligible amounts paid by the Veteran's Administration and other military assistance programs may not align with ECPI University's tuition refund policy, which could result in amounts due to the military assistance program and/or ECPI University.

Students enrolled in a Certificate program that was prepaid, are eligible for a full refund for those courses not attended beyond the withdrawal period.

Orlando Lake Mary Campus

The BSN and MSN programs are 48 weeks long and instruction is scheduled five days per week. The Master’s program is 60 weeks long and instruction is scheduled five days per week. All other Programs are varying lengths and instruction is scheduled four days per week. Days or parts thereof spent at clinical sites are considered days on which classes are scheduled.

Back to Financial Aid Policies

Refund Policies

Exit Calculation and Refund Policies

Information regarding any applicable third-party funding agency refund or return of funds policies (e.g., Title IV, WIA, etc.) may be obtained from the University Student Finance Department.

The following is a brief and general explanation of rules, regulations and policies applicable to the making of the Exit Calculation. In the event that any conflict exists between this explanation and the rules, regulations and policies applicable to the various financial aid programs, such rules, regulations and policies as modified and amended from time to time shall be applied. This explanation is not intended to be a complete and thorough explanation of all of the applicable components of the Exit Calculation, and should not be relied upon as such.

In the simplest terms, the Exit Calculation and refund process consists of four steps:

1. Computing the amount of Tuition that a student is charged for a payment period in which the student withdraws or is dismissed in accordance with the institutional refund policy. (The method of determining the official date of termination is the date the student notified the College they were withdrawing or the last date the student attended class).
2. Determining what, if any, amounts from financial aid and/or other financial assistance programs are required to be returned to the fund sources. For a discussion of amounts required to be returned under Return of Title IV Funds regulations see “Federal Return of Funds Requirement” section below.
3. Adjusting the student’s account based on the calculations of (1) and (2), making the appropriate refunds, if any, based on the calculations of (1) and (2) and determining whether the student owes ECPI University any additional monies as a result of the adjustments, or whether the student has a credit balance (amount owed to the student’s account) after applying any additional institutional and non-institutional charges, including any prior year balances, against the credit balance.
4. Refunding any credit balance to the student’s lenders.

Refund Policies

Federal Return of Title IV Funds Policy

“Unearned” Title IV Funds

Any “unearned” Title IV funds must be returned to the applicable Federal aid program. In general, “Unearned” Title IV funds is the amount of disbursed funds that exceeds the amount that is earned based on the student’s attendance in the semester (or quarter). If the student withdraws after completing 60% of a semester (or quarter), then all Title IV funds for that semester (or quarter) are considered earned; however, if the student withdraws before completing 60% of a semester (or quarter), “unearned” Title IV funds must be returned to the applicable Federal aid program.

Calculating the Amount of “Unearned” Title IV Funds

The percentage of “unearned” Title IV funds is found by dividing the number of days remaining to be completed after the student withdraws by the total number of days in the semester (or quarter). The calculation of “unearned” Title IV funds is delayed if the student notifies ECPI of an expected re-entry date before the end of the current semester (or quarter).

Pell Grant awards will be recalculated to the eligible amount based on any changes to the enrollment status before being pro-rated as required by the U.S. Department of Education, which often results in a significant reduction in Pell Grant eligibility.

Post-Withdrawal Disbursements

The institution notifies the student of a post-withdrawal disbursement within 30 days of the Date of Determination. The institution will disburse a post-withdrawal disbursement of a grant directly to the student within 45 days from the Date of Determination. The institution will disburse a post-withdrawal disbursement of a grant or a direct loan direct to the student's account within 180 days from the Date of Determination.

How Much “Unearned” Title IV Funds ECPI Must Return

ECPI multiplies the cost of tuition, fees, room and board (if the student contracts with the institution for the room and board) and other educationally-related expenses for the entire semester (or quarter) by the percentage of “unearned” Title IV funds to determine the amount that ECPI must return to the applicable Federal aid program. The amount ECPI is responsible to return is compared to the total amount of unearned aid; the lesser amount is then returned to the applicable Federal aid program, in the order of programs listed below.

- Unsubsidized Direct Loans (other than Direct PLUS Loans)
- Subsidized Direct Loans
- Direct PLUS Loans
- Federal Pell Grants for which a return is require
- Iraq and Afghanistan Service Grant, for which a return is required.
- Federal Supplemental Educational Opportunity Grants (FSEOG) for which a return of funds is required

Unearned Title IV aid funds are returned no later than 45 days from the Date of Determination.

Withdrawal Exemption

A student may be considered Withdrawal Exempt for Title IV aid purposes only if they successfully complete over 49% of the Payment Period/Semester or successfully completes coursework equal to or greater than the coursework required for Half-time enrollment for the Payment period/semester that the student withdrew from school due to new Federal student aid regulations starting 7/1/2021. A student who meets the criteria above is now considered to have completed the payment period and is not a withdrawn student. Therefore, students who meet the withdrawal exemption will be charged as a student who completed the current payment period and will be able to keep all earned Title IV aid with the exception of recalculation of Pell grant based on enrollment status.

Students who qualify for the Withdrawal Exemption will be charged the same as students who complete the payment period in which they withdrew. Institutional charges for students who qualify for a withdrawal exemption are based on the enrollment status for credits attempted in the completed Payment Period/semester, with the exception of Withdrawn courses during the add/drop period.

ECPI will bill the student account the full amount of Title IV funds that ECPI has returned. **After application of ECPI's Refund Policy, it is possible that the student will owe ECPI for tuition, books, fees, or other costs**.

Title IV Credit Balances

Title IV credit balances will be refunded to the student by the 14th day of when the credit balance was created on the student's account.
The institution may hold a Title IV credit balance with a valid Authorization to Hold Title IV Credit Balance form. Direct Loan Title IV credit balances cannot be held beyond the end of the Academic year and/or loan period. Any other FSA funds cannot be held beyond the end of the last payment period in the award year for which they were awarded.

How Much "Unearned" Title IV Funds I Must Return

The student is responsible for returning any portion of the "unearned" aid that is not part of the required return from ECPI. The student will be responsible for repaying any "unearned" Title IV aid according to the terms of the promissory note or other agreement, whether or not the student graduates or gets a job.

If an overpayment occurs, the school will repay the overpayment for the student to the department and consider the overpayment as a student debt to the institution.

Sources of Financial Aid | Federal Aid Programs

ECPI is approved by the U.S. Department of Education to participate in each of the below sources of Federal Student Aid. For information about these programs, eligibility requirements, and the application processes, the Department of Education provides Funding Education Beyond High School, The Guide to Federal Student Aid.

Federal Pell Grant

A Federal Pell Grant, unlike a loan, does not have to be repaid. Federal Pell Grants usually are awarded only to undergraduate students who have not earned a bachelor's or professional degree. The maximum award is based on award years that run July 1 through June 30 each year. For the current year maximum award, visit Federal Pell Grants | Federal Student Aid . Effective July 1, 2012 students receive the Federal Pell Grant for no more than 12 semesters. Students can apply at www.ecpi.edu/fa. The resulting Institutional Student Information Report, with an official SAI must be received by ECPI while the student is enrolled and eligible but not later than applicable deadlines established and published by the Department of Education.

Federal Supplemental Educational Opportunity Grant (FSEOG)

Award amounts depend upon the applicant's financial need and funding availability. Priority is given to Federal Pell Grant recipients.

Federal Work-Study

The Federal Work-Study Program provides on- and off-campus part-time employment, while enrolled in school to undergraduate, graduate, and professional students. Students earn at least current federal minimum wages and this employment is awarded based on financial need and funding availability.

Federal Direct Subsidized Loan

The Federal Direct Subsidized Loan is a financial need-based, low-interest, fixed rate loan available to undergraduate students directly from the Department of Education.

To apply for Federal Direct Loans you must first complete the FAFSA application, be enrolled at least half time, and your school determines the actual loan amount you may be eligible to receive each academic year. The maximum that can be borrowed in the first year is $3,500. Annual loan limits depend on what year the student is in school and whether they are a dependent or independent student. There are also limits to the total amounts that the student may borrow for undergraduate studies and the program length.

The U.S Department of Education pays the interest while the student is in school at least half-time, for the first six months after you leave school (grace period), and during a period deferment. Loan repayment begins six months after graduation, withdrawal, or dropping below half-time enrollment status.

Federal Direct Unsubsidized Loan

Federal Direct Unsubsidized Loans are available to undergraduate and graduate students. The annual loan limit is $2.000 for dependent undergrad students, $6,000 for independent undergrad students, and $20,500 for graduate/professional students. If you are a dependent student whose parents are ineligible for a Direct PLUS Loan, you may be able to receive additional Direct Unsubsidized Loan funds. Other limits also apply to the annual and total amounts you may receive. Your school determines the actual loan amount you may be eligible to receive each academic year.

You are responsible for paying the interest on a Direct Unsubsidized Loan during all periods. If you choose not to pay interest while you are in school and during grace, deferment, or forbearance periods, interest accrues and is capitalized (added to the principal amount of your loan). Loan repayment begins six months after graduation, withdrawal, or dropping below half-time enrollment status.

Federal Direct PLUS Loan for Parents of Dependent Undergraduate Students (PLUS)

PLUS loans provide funds to help meet educational expenses. They are low-interest, fixed rate loans made directly from the U.S. Department of Education. Borrowers must not have an adverse credit history. The maximum loan amount is the student's cost of attendance determined by the school minus any other financial aid received. Repayment begins once your loan is fully disbursed.

Federal Direct Grad PLUS Loan for Graduate or Professional Degree Students

This is a low interest/fixed rate loan provided directly from the U.S. Department of Education to borrowers who do not have an adverse credit history. The maximum loan amount is the student's cost of attendance determined by the school minus any other financial aid received.

Repayment begins once your loan is full disbursed, however, these loans are placed into deferment while you are enrolled at least half-time and for an additional six months after you cease to be enrolled at least half-time. During deferment periods interest will accrue. You may opt to pay the interest when the deferment period ends.

Gaining Early Awareness and Readiness for Undergrad Programs (GEAR UP)

The GEAR UP program is a federal grant program funded by the U.S. Department of Education and administered by the state. Applicants must be eligible for Pell Grants and demonstrate financial need in addition to other eligibility requirements. Maximum award amounts are determined each year by the state and are contingent upon available funding.

Maximum Pell Grant Eligibility for Dependents of Certain Deceased Servicemembers and Public Safety Officers

The FAFSA Simplification Act changed eligibility for what were formerly called “Iraq and Afghanistan Service Grants (IASG)” and “Children of Fallen Heroes (CFH) Scholarships.” Beginning with the 2024-25 award year, students who meet the eligibility requirements for Pell Grants under the Special Rule in HEA Section 401(c) will receive a maximum Pell Grant award, regardless of their calculated SAI. To receive a Pell Grant based on eligibility under the Special Rule, a student must be:

- The child of a parent or guardian who died in the line of duty while either (a) serving on active duty as a member of the U.S. Armed Forces on or after September 11, 2001; or (b) actively serving as and performing the duties of a public safety officer; and
- Less than 33 years old as of the January 1 prior to the award year for which the applicant is applying (e.g., for the 2024–25 award year, a student must be less than 33 years old as of January 1, 2024, to be eligible).

Supplemental Loan Programs

ECPI has arranged for other student loan programs to be made available. The lenders and terms on these loan programs vary, and your financial aid officer can help you find the one that best fits your needs.

Sources of Financial Aid | ECPI Scholarships

ECPI University awards in excess of $14 million in scholarships each year. These are funds to help you pay for your education that you do not have to pay back and reward you for your commitment to earn your degree. The initial criteria for consideration includes the following. Note that each scholarship has its own unique qualifying criteria.

- Applicants must have applied and been accepted for admissions to ECPI University for the current academic year.
- Applicants must meet the ECPI University entrance requirements.

Navigate the various ECPI Scholarships using the menu to the left.

General Scholarship Policies

- Scholarships will be applied to lower tuition debt in most cases.
- Only degree-seeking students enrolled in a minimum of 9 credits per semester will receive a scholarship award unless otherwise noted in the criteria.
- To qualify for scholarships, students must maintain continuous enrollment on a semester basis. Students may take only one semester off during their program.
- Students eligible for multiple special tuition rates, pricing programs or scholarships receive the one most beneficial, with

Our financial aid advisors can assist you in identifying and applying for these scholarship opportunities.

ECPI Scholarships

Active Duty Military and Spouses

Active Duty Scholarship

Helping Military Active Duty overcome financial hurdles.

ECPI University has provided educational opportunities to service members and their families since 1966. We believe that every active duty service member should have the opportunity to pursue the college of their choice. In honor of the men and women who serve in every branch of the United States Armed Forces, ECPI University offers the following scholarship for eligible programs of study* with our thanks and gratitude.

To help relieve the financial challenges associated with pursuing your education, ECPI University offers an Active Duty Military Scholarship Program. This scholarship for service members is open to active duty, reservists, National Guardsmen, other service members, and includes their spouses when enrolled in our online college.

If you are eligible for Tuition Assistance, you may be eligible for ECPI University's Active Duty Military Scholarship. Reservists eligible for TA may also be eligible for the scholarship. The Active Duty Military Scholarships will cover the costs of tuition remaining after eligible TA has been applied.

Through the program, qualifying service members and spouses are provided a scholarship which will effectively reduce tuition to $250.00 per semester credit for undergraduate course work, and $595.00 per semester credit for graduate course work.

*Eligible programs include all degree programs in the Colleges of Technology, Business, and Criminal Justice. In the College of Culinary Arts, Food Service Management is eligible. In the College of Health Sciences, eligible programs include Medical Assisting, Dental Assisting, and Healthcare Administration.

ECPI Scholarships

Armed Forces Scholarship

The Armed Services Scholarship was designed to help lessen the financial challenges associated with pursuing your undergraduate education. ECPI University's scholarship for armed service members is open to Active Duty, Reservists, National Guardsmen, and other service members, as well as their spouses, who may not be eligible for our Active Duty Scholarship. Qualifying service members or spouses pursuing their undergraduate degree receive a scholarship for $500.00 per semester/$1000.00 per academic year. Available through all of our Campus locations and Online (Active Duty Members and their Spouses, undergraduate programs only), ask your admissions advisor for more information.

ECPI Scholarships

Career Advancement Bookstore Award

Employers value third party endorsement of skills that enhance the value of your degree. Your success means success for all of the graduates, faculty and staff at ECPI University!

- For specific programs, ECPI University may award up to $100 in Bookstore Credit for each certification or license approved for this award that you earn while enrolled
- Many academic programs have certifications you will be encouraged to earn by the time you graduate
- ECPI University subsidizes the majority of the fees to take certification exams
- Account must be in good standing, or may be applied to outstanding charges
- Additional information regarding eligible programs is available here: https://ecpi.libguides.com/CertificationsECPI

ECPI Scholarships

Community Service Scholarship

Actively participating and contributing to our communities in important to ECPI University. If you are helping others in our community, you may be eligible to receive our **$500** Community Service Scholarship.

ELIGIBILITY & AWARD CRITERIA
• Submit a letter of recommendation from the organization verifying community service (letter must be on the organization's letterhead).
• Prospective or enrolled international students in all programs are eligible to apply.

ECPI Scholarships

Early Action Scholarship

This scholarship is available to those applicants who submit their admissions documents and complete their application at least three months before they plan to start school.

ELIGIBILITY & AWARD CRITERIA
• Complete your admissions file at least three months before your start date.
• Prospective or enrolled international students in all programs are eligible to apply.

Amount: Up to $500

ECPI Scholarships

ECPI Scholarship for EducationUSA Advisees

EducationUSA is a U.S. Department of State network of over 400 international student advising centers in more than 170 countries. The network promotes U.S. high education to students around the world by offering accurate, comprehensive and current information about opportunities to study at accredited postsecondary institutions in the United States. Find an EducationUSA advising center near year: https://educationusa.state.gov/find-advising-center.

ELIGIBILITY & AWARD CRITERIA
• Available to all students who find out about ECPI University through an EducationUSA Advising Center.
• Does not apply if the student is also referred by another third-party agent or education consultant.

Amount: Up to $2,000

ECPI Scholarships

Enterprise Partnership Program

ECPI University has agreements with area businesses to provide their employees tuition assistance benefits. Contact the admissions office to see if your employer participates.

ECPI Scholarships

Founders Scholarship

Mr. Alfred Dreyfus immigrated to the USA and founded ECPI University. The Founder's Scholarship was created to honor Mr. Dreyfus and is available to those deserving students who require additional financial support.

ELIGIBILITY & AWARD CRITERIA
• Prospective or enrolled international students in all programs are eligible to apply
• The applicant must submit evidence of their financial status, disability, or social status, and submit a one page essay on why you would be a good candidate to receive the Founder's Scholarship.
• Due to the high value of the Founder's Scholarship, students who apply and qualify, are excluded from receiving most of the scholarships available from ECPI University. The only scholarships that may stack with the Founder's Scholarship are the Refer a Friend Scholarship, and the International Student Diversity Scholarship.
• The Founder's Scholarships is highly selective and therefore, limited scholarships will be available each academic year.

Amount: Up to $5,000 per academic year

ECPI Scholarships

Head Start - Experience in the Field

This scholarship is available for those students that are already working and have returned to school to further their career.

ELIGIBILITY & AWARD CRITERIA
• Submit a letter of recommendation from a previous or current employer verifying work and achievements in the field in which you wish to study (letter must be on the employer's letterhead). The work experience must be related to the intended field of study.
• Prospective or enrolled international students in all programs are eligible to apply.

Amount: Up to $2,000

ECPI Scholarships

High School Seniors

Scholarships awarded up to $3000. High School seniors are eligible to apply.

Applications are due by May of each year:

- Complete application
- Submit high school transcript
- Two letters of recommendation (at least one from a teacher or counselor)
- Typed personal essay (250 words minimum) explaining your reason for pursuing your chosen program of study

GPA, attendance record, acceptance to ECPI University will be considered along with the information submitted with the application. Contact the University for an application.

ECPI Scholarships

International Students' Scholarships

ECPI University has established several scholarships to assist international students in financing their education. To apply for these scholarships, they must meet the admissions requirements for the program of choice and the criteria outlined below.

Applicants can discuss these, and other options, with an ECPI University admissions or financial advisor. For more information on any scholarship, please fill out the International Scholarship Form.

See also International Scholarship Policies

ECPI Scholarships

Leveling Course Scholarship

For international students taking leveling courses there will be a $200.00 per credit hour scholarship. Contact your advisor for additional information.

ECPI Scholarships

Merit Scholarships

ECPI University awards a select number of Merit Scholarships to graduates enrolling in selected programs each year. The scholarships range in value from $3,000 to $4,000 per academic year.

Eligibility and award criteria per Academic Year.

GPA	BACHELOR'S	MASTER'S
2.75	$3,000	$2,000
3.25	$4,000	$3,000

ECPI Scholarships

Refer a Friend Scholarship

This scholarship is awarded for every student you refer to ECPI University.

ELIGIBILITY & AWARD CRITERIA
• Make sure your friend includes your name on their application form so you can receive credit.
• Scholarship is applied after the referred student pays for their first three terms.

Amount: $1,000 (for referring a bachelor's or master's student)

ECPI Scholarships

VA Educational Benefits - Department of Veterans Affairs

ECPI is approved to offer VA Educational Benefits by the respective State Approving Agency located within the State of operation. For more information please contact the local ECPI campus Veterans Benefits Coordinator

This institution is approved to offer GI Bill® educational benefits by the Virginia State Approving Agency. GI Bill® is a registered trademark of the U.S. Department of Veterans Affairs (VA). More information about education benefits offered by VA is available at the official U.S. government website at http://www.benefis.va.gov/gibill.

Sources of Financial Aid | Veteran's Benefits

Some ECPI students have Veterans Education benefits available to them while they are attending school. The Department of Veteran Affairs is now taking online applications. To apply for veterans' educational benefits online, log onto www.gibill.va.gov, click on "Electronic Application Form" and start “VONAPP” to complete VA Form 22-1990 or 22-1995. Each student must forward a copy to the application to the Campus Veterans Certifying Official.

Students who are discharged veterans should forward a copy of the DD214, copy 4, along with the Application for Admission. It is the student's responsibility to submit the application for benefits to the Veterans Administration and to keep their educational information up to date with the Veterans Administration. ECPI will provide assistance to those students who need help and will answer questions that students may have with regard to the VA benefits.

Students seeking advanced academic standing via credit transfer or challenge examinations must do so by the end of their first semester of enrollment. VA students are expected to report all enrollment changes to the VA coordinator (for example: changing concentrations, falling below a full-time status, and leaving school).

ECPI must have an academic transcript from each post-secondary school previously attended by a veteran. Consent to Release School Records forms must be completed in full (complete address) for each school attended.

Chapter 33 Post 9/11 GI Bill® Benefits

This benefit program is available to individuals who served in active duty on or after September 10, 2001 and is payable for education pursued after August 1, 2009. If a veteran qualifies for assistance under the Montgomery GI Bill® on or after August 1, 2009 and the veteran also qualifies for assistance under the Post 9/11 GI Bill®, the veteran may make an irrevocable decision to receive benefits solely under the Post 9/11 GI Bill®. Please see your Campus Veterans Certifying Official or visit www.gibill.va.gov for more information.

Tuition and fee rates for private schools are capped by the Veterans Administration annually. Please check with your campus V.A. representative for the current year's cap. Eligibility tiers based on length of service still apply. Only the VA can determine a veteran’s eligibility. ECPI University is a Yellow Ribbon school for those students who are 100% eligible for this program.

Active duty students are limited to the net cost for tuition and fees that are prorated based on eligibility tiers (40% - 100%) previously established for veterans.

The housing allowance under CH33 Post 9/11 benefits is now payable to the student (other than an active duty student) solely enrolled in distance learning. The housing allowance payable is equal to ½ the national average Basic Allowance for Housing for an E-5 with dependents. Housing is also prorated based on the student's rate of pursuit (rounded to the nearest tenth).

Any person entitled to educational assistance under chapter 33, Post-9/11 GI Bill® or chapter 31, Vocational Rehabilitation and Employment benefits and experiences delayed payment of benefits, will not be subject to any penalties, late fees, denial of access to classes, libraries, or other university facilities as a result of such delay. Nor will such person be required to borrow additional funds to satisfy financial obligations to the university due to the delayed disbursement of funding from the Veteran's Administration, under chapter 31 or 33. To be a person covered under this policy, documentation of eligibility must be determined by providing a certificate of eligibility which can include a "Statement of Benefits" from the VA website – eBenefits, or a VAF 28-1905 for chapter 31 authorization.

Further clarification can be found at or by contacting the Campus Veterans Certifying Official.

Back to Financial Aid Policies

Sources of Financial Aid | Other

Students who have been approved for assistance under any of the following programs must provide the documentation of eligibility to the Financial Aid Administrator.

Employer Assistance

Many employers provide tuition assistance programs to their employees to assist with education goals. Check with the human resources department or benefits manager to see if an educational assistance program is available at your place of employment.

Job Location and Development Program

This program is administered through the Career Services Center to assist students, with and without financial need, in securing part-time employment. Information and program requirements are available from the Career Services Center.

Local Aid

ECPI Culinary students in need of assistance, who are residents of Norfolk, Virginia, may qualify for $750 in a locally provided City of Norfolk Scholarship. Inquire with your Financial Aid Administrator to verify eligibility.

Military Tuition Assistance

Active duty students who use Tuition Assistance will have their first term TA cost sheet automatically sent directly to the student. Students must request a TA cost sheet for each subsequent term until the TA is capped for the fiscal year. Students are responsible for submitting all TA cost sheets to their TA Education office before the term begins for TA approval.

MyCAA

The MYCAA scholarship provides a maximum education benefit of $4,000 with an annual fiscal year cap of $2,000 to assist eligible military spouses who have completed high school and who need professional credentials to pursue their career goals (MyCAA, 2020). For program eligibility or site navigation assistance, please contact a MYCAA Spouse Education and Career Opportunities Coach at 1-800-342-9647.

Virginia Career Works Hampton Roads Region

A student who may qualify for benefits funded through the U.S. Department of Labor should contact the local Virginia Career Works Hampton Roads Region office.

Private Aid

ECPI students may also seek private education loans from any lender of their choice. Eligibility and application processes for private education loans are provided by the private lenders.

ECPI also provides a private loan program serviced by Tuition Options to assist students in meeting their educational goals. Additional information and the application process may be obtained from the Campus Financial Aid Administrator.

State Aid

Qualified applicants may also receive educational benefits administered under the state's Employment Commission or Vocational Rehabilitation Assistance programs. Students must visit the local state agency branches to determine eligibility for these programs.

For additional information on Sources of Financial Aid:

- **ECPI Scholarships**
- **Federal Aid Programs**

MS Nursing	54	$494	$26,676

** Six (6) Semesters. Final term (1/3rd Semester) - $5,853*

***Includes: books, uniforms, student activity fees, malpractice insurance, lab fees, and computer-assisted instruction.*

To complete the Program requirements in a timely manner, student must be enrolled full-time and carry a minimum load of 12 semester credit hours and a maximum of 18 credit hours per semester. If student takes an academic overload consisting of more than 18 credit hours, this may change the eligibility for financial aid assistance in future semesters, which may result in greater out-of-pocket expenses. If student takes an overload of more than 18 credits, they will be assessed additional charges in that semester. Student is responsible for checking with the Financial Aid office to determine the impact of schedule changes.

FEE	COST	NOTES
Application Fee	$25	Non-refundable, one-time charge
Registration Fee	$100 Undergraduate students	
	$35 graduate students	
Background Check Fee, applicable programs	Fee varies	
High School, GED or College Transcript Request	Fee varies	
Textbooks*	$0 When required.	*Use of textbooks and electronic textbooks for the time needed to complete your courses is provided at no cost. If you wish to permanently own your textbooks, you may purchase them from ECPI University's bookstore, or any other retailer you choose. The student should notify the financial assistance department if they wish to acquire their own textbooks at the start of each semesters, and their account will be credited $50/semester. The student will be responsible for obtaining all required textbooks in the requested semester.*
California Student Tuition Recovery Fund**	Fee varies	Please see footnote for details (effective 04.01.2022)

**As a result of ECPI University GREEN commitment and to provide the best value in education resources, ECPI University has implemented textbook recycling and extensive use of electronic textbooks. Arrangements have been made with publishers to access their content at heavily discounted rates and make it available to you at the start of each term. You will have extended access (2-4 years) to core course textbooks. A student may opt out and acquire textbooks on their own. If student prefers to own their textbook, they are available for purchase from the ECPI University bookstore, or other retailers. Federal regulations require that students be allowed to acquire books and supplies from other sources.*

***CALIFORNIA STUDENT TUITION RECOVERY FUND (CA residents only). The State of California established the Student Tuition Recovery Fund (STRF) to relieve or mitigate economic loss suffered by a student in an educational program at a qualifying institution, who is or was a California resident while enrolled, or was enrolled in a residency program, if the student enrolled in the institution, prepaid tuition, and suffered an economic loss. Unless relieved of the obligation to do so, you must pay the state-imposed assessment for the STRF, or it must be paid on your behalf, if you are a student in an educational program, who is a California resident, or are enrolled in a residency program, and prepay all or part of your tuition. You are not eligible for protection from the STRF, and you are not required to pay the STRF assessment, if you are not a California resident, or are not enrolled in a residency program. It is important that you keep copies of your enrollment agreement, financial aid documents, receipts, or any other information that documents the amount paid to the school. Questions regarding the STRF may be directed to the Bureau for Private Postsecondary Education, 1747 North Market Blvd., Suite 225, Sacramento, California, 95834, (916) 574-8900 or (888) 370-7589. To be eligible for STRF, you must be a California*

resident or enrolled in a residency program, prepaid tuition, paid or deemed to have paid the STRF assessment, and suffered an economic loss as a result of any of the following: (1) The institution, a location of the institution, or an educational program offered by the institution was closed or discontinued, and you did not choose to participate in a teach-out plan approved by the Bureau or did not complete a chosen teach-out plan approved by the Bureau. (2) You were enrolled at an institution or a location of the institution within the 120-day period before the closure of the institution or location of the institution or were enrolled in an educational program within the 120-day period before the program was discontinued. (3) You were enrolled at an institution or a location of the institution more than 120 days before the closure of the institution or location of the institution, in an educational program offered by the institution as to which the Bureau determined there was a significant decline in the quality or value of the program more than 120 days before closure. (4) The institution has been ordered to pay a refund by the Bureau but has failed to do so. (5) The institution has failed to pay or reimburse loan proceeds under a federal student loan program as required by law or has failed to pay or reimburse proceeds received by the institution in excess of tuition and other costs. (6) You have been awarded restitution, a refund, or other monetary award by an arbitrator or court, based on a violation of this chapter by an institution or representative of an institution, but have been unable to collect the award from the institution. (7) You sought legal counsel that resulted in the cancellation of one or more of your student loans and have an invoice for services rendered and evidence of the cancellation of the student loan or loans. To qualify for STRF reimbursement, the application must be received within four (4) years from the date of the action or event that made the student eligible for recovery from STRF. A student whose loan is revived by a loan holder or debt collector after a period of non-collection may, at any time, file a written application for recovery from STRF for the debt that would have otherwise been eligible for recovery. If it has been more than four (4) years since the action or event that made the student eligible, the student must have filed a written application for recovery within the original four (4) year period, unless the period has been extended by another act of law. However, no claim can be paid to any student without a social security number or a taxpayer identification number.

Tuition and Fees - Other Fees

All Programs - Optional

These fees are not fully inclusive and may vary depending on the program. ECPI has the discretion to make changes to the fees.

Welcome to the Student Services Section

Navigate the student services using the menu to the left.

Our university is dedicated to providing a robust support system to enhance your academic and personal experience through a wide range of student services. From the moment you enroll to long after you graduate, these services are designed to help you succeed in every aspect of your educational journey.

ECPI University is committed to providing a safe and supportive learning environment for all students. Professional development and personal growth invariably overlap in the education environment; therefore, ECPI offers the following student services to all students and encourages students to take advantage of these services while enrolled at ECPI.

See also Student Conduct Policies

Student Services

Advising - Academic

The purpose of academic advising is to facilitate the intellectual and personal development of our students, to enhance their academic performance and to ensure student's progress toward graduation by assisting them in achieving the following objectives:

- Assist students toward the timely completion of their studies through the monitoring of satisfactory academic progress as well as the identification and fulfillment of academic and career goals
- Develop a meaningful educational plan that is compatible with the student's personal abilities and educational/career goals
- Explore academic options to make meaningful short-term and long-term decisions (e.g., elective course selection, opportunities for hybrid or online courses, etc.)
- Understand and follow the University's policies and procedures leading to graduation (e.g., requirements for completion of Arts & Sciences courses, concentration coursework and other University requirements)
- Increase awareness of the full range of campus programs, services, and clubs
- Identify academic skills, including required certifications that may be required or will enhance career opportunities following graduation

Faculty members and Academic Program Directors are available for academic advising and also coordinate tutorial assistance. Tutoring is available at no additional cost weekdays, or by individual arrangement, for students whose academic progress is unsatisfactory.

Student Services

Advising - Other

In addition to academic advising, individual assistance is provided to students for personal and financial needs within each of the University's departments.

Students are encouraged to request assistance as follows:

- Career development assistance is available to eligible students through Career Services
- Forms and information on Veterans, Tuition Assistance, Rehabilitation, Dislocated Workers, and Job Training Partnership Act assistance are available from the front desk or the VA/TA Coordinator
- Financial Aid questions and assistance, including information on grants, loans, and part-time employment, are directed to the Financial Services Office
- Personalized support for academic, personal, and wellness goals, including guidance on time management, study skills, and connecting with campus resources is available through Student Success.

Student Services

Alumni Association

Alumni can register at https://ecpinetwork.com/ to connect with other alumni, view job postings, and view upcoming events. Alumni are encouraged to share their success with students as guest speakers. Alumni are entitled to access to on-site campus library resources. For further details, please contact the Campus Career Services Department.

Student Services

Alumni Search Services

Alumni may be eligible to receive graduate employment assistance even after they have accepted a full-time permanent position with an employer, provided they have been employed with that employer for a minimum of one year. Exceptions to the one-year minimum would be in the case of lay-offs, family emergencies, relocation, and other extenuating circumstances as determined by the University. Current graduates receive priority for employment assistance, and alumni assistance occurs when graduate eligibility has been established and job orders require prior related work experience.

Student Services

Career Development Workshops

The Career Services Department offers career development workshops that include resume preparation, interviewing techniques, Job Fair Networking Techniques, Understanding and Qualifying Various Employment Firms, Online Resume Posting, and Professional Attire.

Student Services

Career Fairs

Every year the campus Career Services Departments coordinate career fairs. Employers are invited on campus to conduct corporate recruiting and screening activities. Career fairs provide a convenient and effective way for graduates to explore employment opportunities with a variety of employers and to compare benefits and growth potential.

Student Services

Career Services

Students choose to attend ECPI because they want to gain the required skills necessary for entry into fast-growing job fields. Among those necessary skills is the ability to prepare for and conduct a job search. ECPI works with each student every step of the way as graduation nears and students begin an employment search.

ECPI's dedicated Career Services Advisors are ready to work one-on-one with students to:

- Review resume
- Assist with interviewing techniques
- Discuss career choice
- Provide help in career/job-market research
- Assist with marketing the student's skills to potential employers
- Generate job leads and offer networking opportunities for employers and students

ECPI encourages each student to visit the Campus Career Services Department prior to enrolling and throughout their education at ECPI.

Career Services develops and maintains relationships with employers to determine hiring needs and to facilitate employment of students, placement of externs, and employment of graduates in positions related to their fields of study. Career Services assists students by developing interview skills, resume preparation and guidance on how to conduct a successful job search.

Although Career Advisors maintain contact with several employers to identify employment opportunities, students are also expected to participate actively in their employment search campaign and to assume ultimate responsibility for their employment.

Although graduates cannot be guaranteed employment or starting salary, ECPI has long been a source of qualified applicants for employers. ECPI graduates are often scheduled or referred for job interviews as employment openings occur. When out-of-state opportunities are presented, graduates are encouraged to consider relocation in order to maximize their earning potential and advancement opportunities.

Student Services

Certifications and Licensure

Please refer to the Certifications (Professional) page.

Student Services

Externships

Externships are career-related work experiences that result in academic credit upon completion. Externships are usually non-paid work experiences that occur at locations similar to where students may be employed upon graduation and require advanced approval by the Academic Program Director. Externships provide students the opportunity to dress appropriately and to perform work professionally while demonstrating achievement of program-related learning objectives. Students are encouraged to begin working with the Academic Program Director and/or Academic Advisor at or prior to the beginning of the student's last semester in order to facilitate timely scheduling of their externship.

Students who have not successfully completed externship requirements within one academic term will be assigned a grade of "Incomplete." Students have three weeks after the end of a term to complete externship requirements or the "I" grade will changed to "F". Externship courses are authorized, coordinated, and graded by faculty with input from on-site externship supervisors. Classroom allowances for absence do not apply to the externship setting. Students must satisfactorily complete all externship course requirements.

Externships are coordinated by Academic Advisors with Career Services. Career Services assists with externship site locations after faculty have scheduled students for an externship. Externships are offered in many programs and are required in some (review the specific program information in this Catalog to determine if externships are required for a particular academic program).

Student Services

Federal Work Study

Federal work-study (FWS) positions are only available to financial aid recipients with FWS awards. The positions are located both on and off campus and are filled at each campus on a competitive basis through the Career Services office.

Student Services

Graduate Employment Assistance

Students approaching graduation meet with their assigned Career Services Advisors to begin the career search process. Career Services Advisors conduct an individual Career Planning Orientation, and following this meeting and receipt of a final résumé from the student, Career Services Advisors begin assisting graduates by making them aware of job opportunities through the Career Services' employer relationships and hiring events, while coaching graduates through their individual job search process.

Resumes

Students are taught résumé preparation skills that include how to write a professional résumé and cover letter. Drafts are proofread and reviewed. Completion of an acceptable résumé is a requirement for graduate employment assistance.

Student Services

Housing - Virginia Beach

ECPI does not provide University-sponsored housing or dormitories. However, ECPI provides assistance in locating housing through several apartment complexes for students residing outside the Hampton Roads area who wish to study at the Virginia Beach main campus. Students must adhere to apartment complex regulations. If any student needs assistance, has questions, or problems arise, contact the apartment complex office. If needs are not met by the apartment complex office, then the ECPI Housing Coordinator may be contacted. Apartments are in close proximity to the campus, shopping mall, grocery stores, etc. Students must have their own transportation.

Student Services

Housing - All Other Campuses

ECPI does not provide university-sponsored housing or dormitories and students are encouraged to make their own housing arrangements. The University provides information about local apartments and rental opportunities for students interested in living near campus. Students should first contact their campus Admissions Department. All University campuses are located along major traffic arteries to allow easy commuting for students.

Student Services

Library

The ECPI University libraries provide resources and services at each campus location to support the academic program needs of students, faculty, and staff. The main campus library in Virginia Beach with twelve branch campus libraries in Virginia, North Carolina, South Carolina, and Florida is maintained by a team of professional librarians and support staff. Wireless access is available in all libraries. Libraries are arranged with study spaces, computer workstations, or labs for individual and collaborative work. Academic resources include a print collection of 14,000 books and reference sources. Over 260,000 electronic books, online resource guides, and video tutorials, and 83 research databases covering all disciplines are available **online**. The University's special collection of certification test prep study guides is available from the campus libraries and from the digital library.

Instruction and Services

Helping students develop lifelong learning skills is an integral part of the library's mission. Ask a Librarian service is ECPI's virtual reference service providing responses to questions through email. Library orientation is held in the freshmen orientation course. New faculty library orientation is included with the onboarding training. Library staff provide individual information assistance and offer classes in library research skills. Librarians partner with the faculty to develop the library collection and provide curriculum support. Campus libraries offer circulation and interlibrary loan services, and provide technology such as computer lab/classroom, headphones, printer, photocopier, and scanner.

Library Hours

The campus libraries are open to the University's registered students, alumni, faculty, and staff. The campus libraries set their own hours of operation, Monday through Saturday.

Loan Policies

Items from the circulating collections are loaned. Current registered students, faculty, and staff can check out materials. The loan period is five weeks. There are no library fines, however, each unreturned item incurs a replacement fee and non-refundable processing fee. Holds are placed on circulating items from the Ask a Librarian service. A free Interlibrary Loan (ILL) service is limited to borrowing from any ECPI University campus library. ILL books must be picked up and returned to the campus library. Alumni may borrow books but must pick up and return materials at the campus library.

Student Services

MyECPI

ECPI University is committed to maintaining the highest standards of ethics and integrity in conducting our business; to treating all students and employees openly, honestly and fairly; and to complying with all federal/state laws and accreditation requirements.

Taking action to prevent problems is important and the University encourages the good faith reporting of possible questionable conduct, suggestions for improvement, or questions on University policies. MyECPI is an enhancement, not a replacement, of the current ECPI University Student Complaint/Grievance policies and procedures. ECPI University encourages students to continue to utilize the student grievance/complaint policy, if you feel comfortable doing so.

Every student has free, unlimited access to MyECPI, an anonymous and confidential incident reporting system. This beneficial service is available 24 hours a day, 7 days a week via a toll-free number 1-800-716-9007 or on the internet at MyECPI.

Upon submission of a report, MyECPI will provide a unique access code and the student will be asked to generate a personal password. The student must document the access code and passwords, as they will be required to follow up on the report.

The student can call MyECPI (1-800-716-9007) or log in to MyECPI to check on the status of the report. Once the unique access code and password are entered, the student may continue anonymous dialogue with ECPI through the message board, "Talk to Your Organization" section of the report.

The University takes good faith allegations of improper conduct very seriously. All reports will be treated as confidential to the fullest extent practicable and no student shall be subjected to reprisal or retaliation for making a report or inquiry in good faith or for seeking guidance on dealing with potential or suspected improper behavior. However, if a report is deemed frivolous or is made in "bad faith," for instance, if a false or misleading report is made in a deliberate effort to get someone in trouble (as opposed to an honest mistake), the person making the report may be subject to disciplinary action, up to and including dismissal from the University.

Student Services

New Student Orientation

Each new student is required to attend the New Student Orientation, which is typically held on the Thursday before each term start date for evening students and the Friday before each term start for day students. The orientation program is designed to facilitate the students' transition to the University and to help familiarize new students with the organization and operation of the University. At Orientation, students have the opportunity to meet faculty, staff, and/or classmates. Policies and procedures are reviewed and students will be required to complete any outstanding paperwork, including financial aid documents and an Enrollment Certification form regarding key academic and school policy information. Additionally, student services and community resources available to the students are discussed.

All new students are required to attend, and returning students are encouraged to attend orientation. Attendance at orientation does not count towards total attendance requirements for the program.

All new online students and on-campus students who elect to enroll in an online course are required to complete an online orientation course prior to starting classes. This orientation covers the policies and procedures associated with online learning at ECPI University; students have an opportunity to practice working within the online classroom environment during this orientation.

Student Services

Student Clubs and Organizations

ECPI students are encouraged to participate in extracurricular activities. Student and professional organizations are an excellent way for students to grow personally and professionally. Membership in field-related groups gives students the opportunity to network with industry professionals, take part in educational programs, and get involved in community outreach projects. Students are encouraged to get involved with student and professional organizations.

In addition to the professional organizations, each campus offers student groups for many of the degree programs. For more information about the groups, please see the Student Success Coordinator or Student Records Coordinator at the local campus.

Availability of student organizations varies with each campus. Students who wish to start a student group/club must provide a written proposal and seek official approval through the Academic Program Director, the Campus Director of Academic Affairs, and the Campus President. Clubs must be supported by a faculty or staff member, be program-relevant, and support local employer partnerships. Officially approved and recognized student clubs and organizations may receive financial support from the University based upon membership.

All student clubs and organizations are expected to uphold and comply with the institution's Code of Conduct and all related policies, found at: Student Conduct Policies | ECPI University Catalog

Student Services

Student Employment During Enrollment

Part-time job search assistance is available to active students. This service is available to students after they begin their first term and may not be directly related to the student's field of study.

Student Services

WellConnect - Student Resource Services

From time to time, ECPI University students face challenges that could interfere with their abilities to focus fully on their academic work. At no cost to the student, ECPI provides 24/7 counseling services for currently enrolled students and their family (defined as a "modern family"). Students access the services either through the Student Resource Services portal (https://wellconnect.lucethealth.com) or by calling 1-866-640-4777. Trained, master's prepared, licensed counselors with five or more years of counseling experience are available to provide support in emotional areas, addiction issues, domestic violence, legal matters, financial guidance, or research potential resources that might be available related to childcare, transportation, housing, or medical needs. The service also provides consultations for all faculty and staff on student issues.

Welcome to the University Policies Section

Navigate the broad university-wide policies using the menu to the left or choose from the following additional policy categories below:

- Academics Policies
- Admissions Policies
- Financial Aid Policies
- Student Conduct Policies

At ECPI University, the well-being, safety, and rights of our students, faculty, and staff are of utmost importance. Our comprehensive set of policies ensures a respectful, secure, and inclusive environment conducive to academic and personal growth. Whether you're navigating college life or seeking information on appeal procedures, clinical requirements, or study abroad opportunities, these policies are designed to support your educational journey. We encourage all community members to familiarize themselves with these policies to contribute to a safe, respectful, and thriving academic environment.

University Policies

Anti-Hazing Policy

Per Code of Virginia § 18.2-56, “hazing means to recklessly or intentionally endanger the health or safety of a student or students or to inflict bodily injury on a student or students in connection with or for the purpose of initiation, admission into or affiliation with or as a condition for continued membership in a club, organization, association, fraternity, sorority, or student body regardless of whether the student or students so endangered or injured participated voluntarily in the relevant activity.”

The practice of hazing at ECPI, to any degree or in any form, is strictly prohibited. Students or employees are not permitted to organize, participate in, or in any way involve themselves with any hazing activity or conduct.

Non-observance of this policy is grounds for dismissal from school or termination of employment. In addition, violations will be reported to appropriate law enforcement agencies. Hazing conduct which willfully or recklessly endangers the physical or mental health of any student or other person is punishable by fine, imprisonment, or both. The verbiage/definition of each offense comes directly from the VAWA amended version of the Higher Education Act (revision made in 2014).

Directions to Report a Crime or Emergency appear here: Crime Awareness

See also Student Conduct Policies

University Policies

Appeal Procedures and Review Boards

Review boards are comprised of faculty and administrative personnel who meet as needed to review the academic, financial, and enrollment status of students. Students, faculty, or administrative personnel may initiate review boards. The boards have the authority to review appropriate issues and serve as the official student appeals process. Actions recommended to the Campus President by these boards include probation, repeat of a course, suspension, leaves of absence, and termination. Students may attend and participate in review board hearings. A student’s spouse or parent(s) may also attend.

Academic Review Boards address concerns that affect student academic progress. Judicial Review Boards address non-academic concerns.

Students who complete the review board process are required to meet with the Financial Services office to review what impact, if any, the outcome will have on their financial status.

Academic Review Board

Grade Appeal

See the Grade Policies-Grade Appeals section of the catalog for grade appeal information.

Academic Termination Appeal Procedures

If a student is terminated (i.e., dismissed) or suspended from ECPI for lack of Satisfactory Academic Progress (SAP) or other academic reasons, the student may appeal by following the steps below:

- The student may submit a written petition to the Academic Review Board through the Campus Director of Academic Affairs' office
- The written petition of appeal must contain verifiable documentation of mitigating circumstances that contributed to poor academic performance and a realistic plan for improvement
- The written petition must be submitted prior to the beginning of the following term if the student wishes to continue without interruption
- The student must appeal within three months of dismissal, or all rights of appeal expire. The Committee will meet within two weeks of receiving an appeal and will attempt to accommodate more urgent schedules

The Academic Review Boards will consist of three or more members of campus administration and/or academic staff. Academic Review Boards will consider all the facts of the appeal and will provide a recommendation to the Campus President typically within two business days.

The Campus President will consider the recommendation of the Satisfactory Academic Progress Committee and will typically render the final decision on the petition in writing within two business days. If the petition of appeal is approved, the student will be reinstated on academic probation and provisions of the University's academic probation policy will apply.

Judicial Review Board

Adverse Action Appeal Procedures

Adverse actions are disciplinary actions due to a student violating student conduct policies or academic honesty standards. These can include termination or suspension. All adverse actions take effect immediately when imposed by campus administration but are subject to appeal.

If the student disputes the basis for an adverse action, the student may appeal the action with the following procedure:

- A student appealing an adverse action must submit a written statement with supporting evidence (if any) disputing the basis of the adverse action to the Campus President. The Campus President will investigate the facts of the case and render a final decision in writing typically within seven business days.
- If dissatisfied with the decision of the Campus President, or if the adverse action was taken by the Campus President, the student may appeal to the Judicial Review Board. Any such appeal must be made in writing within 30 days for suspensions, and within three months for terminations. A request to be heard before the Judicial Review Board must be in writing to the Campus President and it must set forth, in significant detail, the basis for the appeal. A Judicial Review Board hearing will be held within a reasonable period of time, usually two weeks. The board will be comprised of three faculty or staff members, none of whom are directly involved in the issue. The appealing student may call witnesses and provide other evidence to support his/her case. The decision of the Judicial Review Board will be by majority vote, will be made within two business days of the Board's meeting, and will be final and binding upon the University and the student.
- If a suspension has already taken place and the course(s) is/are still ongoing and, upon appeal, is reversed by the Campus President or Judicial Review Board, the University will provide reasonable assistance and time for the student to make up missed material, tests, or projects, all of this being on the basis that such extra time or instruction is practical in the sole judgment of the University.
- In the event a student has already been terminated or suspended and the course(s) has/have ended, the student will be allowed to retake any courses that were interrupted by a termination or suspension that was reversed upon appeal.

University Policies

Arbitration Agreement and Waiver of Jury Trial

Not applicable to students residing outside the state of Virginia who are enrolled in a fully online program.

The student and ECPI University ("ECPI") agree as follows:

- Any dispute the student may bring against ECPI, or any of its parents, subsidiaries, officers, directors, or employees, or which ECPI may bring against the student, no matter how characterized, pleaded or styled, shall be resolved by binding arbitration conducted by the American Arbitration Association (the "AAA"), under its Consumer Arbitration Rules ("Consumer Rules"), with the exception that the arbitrator appointment process shall be governed by AAA Commercial Rule 12(a)-(b). The arbitration shall be conducted and decided by a single Arbitrator. Any remedy available from a Court under the law shall be available in the arbitration. The arbitration hearing will be conducted in the city in which the campus is located.
- Notice Regarding Borrower Defense Claims: The student understands this Agreement is a condition of enrollment in ECPI. This Agreement does not, in any way, limit, relinquish, or waive the student's ability to pursue filing a borrower defense claim at any time. This Agreement does not require that the student participate in arbitration or any internal dispute resolution process offered by ECPI prior to filing a borrower defense to repayment application with the US Department of Education.
- The Federal Arbitration Act ("FAA") shall govern the interpretation, scope, and enforcement of this Agreement. Any and all disputes concerning the interpretation, scope, and enforcement of this Agreement shall be decided exclusively by a Court of competent jurisdiction, and not by the Arbitrator.
- Both ECPI and the student explicitly waive any right to a jury trial. The student understands that the decision of the Arbitrator will be binding, and not merely advisory. The award of the Arbitrator may be entered as a judgment in any Court having jurisdiction.
- The student agrees that any dispute or claim they may bring shall be brought solely in their individual capacity, and not as a plaintiff or class member in any purported class action, representative proceeding, mass action, consolidated or joint action.
- This Agreement does not affect either party's right to seek relief in small claims court for disputes or claims within the scope of the small claims court's jurisdiction.
- The student may, but need not, be represented by an attorney at arbitration.

- Except as specifically required by any applicable state laws, usually the State of Virginia, the fact of and all aspects of this arbitration and the underlying dispute shall remain strictly confidential by the parties, their representatives, and the AAA. The student agrees that any actual or threatened violation of this provision would result in irreparable harm and will be subject to being immediately enjoined.
- The student understands the information about the AAA arbitration process and the AAA Consumer Rules can be obtained at www.adr.org. The student shall disclose this Agreement to the AAA if they file an arbitration.
- If any part of this Agreement is declared unenforceable or invalid, it shall be severable, and the remainder of this Agreement shall continue to be valid and enforceable.
- The student will acknowledge and give their consent to use an electronic signature to bind them to the Agreement. The student will further acknowledge that the electronic signature attached to the document during enrollment was created by them as a voluntary and knowing act that represents their intent to be legally bound.
- The following provision only applies when the U.S. Department of Education's Final Regulations, 87 Federal Register 65,904 (November 1, 2022), are effective, and the Final Regulations are set to become effective on July 1, 2023. The following provision regarding arbitration agreements and class action waivers shall not apply if this provision is no longer required under 34 C.F.R. § 685.300. Additionally, this provision only applies to Federal Direct Loan borrowers or students for whom a Federal Direct PLUS Loan was obtained.

ECPI agrees that neither we nor anyone else will use this agreement to stop the student from bringing a lawsuit concerning our acts or omissions regarding the making of the Federal Direct Loan or the provision by ECPI of educational services for which the Federal Direct Loan was obtained. The student may file a lawsuit for such a claim, or the student may be a member of a class action lawsuit for such a claim even if they do not file it. This provision does not apply to lawsuits concerning other claims. ECPI agrees that only the court is to decide whether a claim asserted in the lawsuit is a claim regarding the making of the Federal Direct Loan or the provision of educational services for which the loan was obtained.

ECPI agrees that this agreement cannot be used to stop the student from being part of a class action lawsuit in court. The student may file a class action lawsuit in court, or they may be a member of a class action lawsuit even if they do not file it. This provision applies only to class action claims concerning ECPI acts or omissions regarding the making of the Direct Loan or our provision of educational services for which the Direct Loan was obtained. We agree that the court has exclusive jurisdiction to decide whether a claim asserted in the lawsuit is a claim regarding the making of the Federal Direct Loan or the provision of educational services for which the loan was obtained.

Campus Contacts

Students who need assistance with any of these issues should contact the appropriate department. For concerns not listed, please see the Student Records Coordinator or Student Success Coordinator.

Campus Security

ECPI is committed to providing a safe, secure environment. Crime awareness and campus security are matters for which everyone must take personal responsibility. Student conduct policies strictly prohibit the possession of weapons and the use of alcohol, controlled substances, and drugs on school property or at school-sponsored activities. Violation of these rules or criminal acts of any kind may result in prompt disciplinary action, including dismissal.

Directions to Report a Crime or Emergency appear here: Crime Awareness

See also Student Conduct Policies

University Policies

Cancellation and/or Postponement of a Start Date

ECPI reserves the right to postpone or cancel the start date of any term due to insufficient enrollment. If this occurs, the student may request either a guaranteed enrollment in the next scheduled class for that program or cancellation of enrollment with a full refund of all monies paid.

The student may also choose to postpone his/her start date. In the event of a postponement of a start date, whether at the request of the University or the student, a written agreement is required to be signed by the student and the University. The Agreement must set forth (a) whether the postponement is for the convenience of the University or the student, and (b) a deadline for the new start date, beyond which the start date will not be postponed.

If the course is not commenced, or if the student fails to attend by the start date set forth in the Student Enrollment Agreement, the student will be entitled to a full refund of prepaid tuition and fees within 30 days of the deadline of the new start date, in accordance with the University's refund policy and all applicable laws and rules that govern the University.

Certifications

At ECPI University, all students are strongly encouraged to pursue industry-recognized certifications to strengthen employment opportunities and career advancement. To support this effort, eligible students and alumni are provided with low-cost vouchers to offset certification exam costs, making it possible to earn valuable credentials at a fraction of the retail price. If a certification is required as part of a course, the cost is covered as part of the student's tuition.

To provide structured access and ongoing support, ECPI University offers the **Certification Hub** within the Student Portal. Within this hub, students and alumni can view ECPI-approved certifications for their program and follow the steps required to pursue them. They can also access the **ECPI Certification Voucher Program**, which provides the opportunity to attempt multiple certifications at minimal cost.

Some courses are designed to provide knowledge and skills that support preparation for specific certification exams; however, successful completion of a course does not guarantee certification.

ECPI Certification Voucher Program

Eligibility

- All active students and alumni are eligible to receive vouchers for certifications approved for their current or completed program(s). Alumni 18 months post graduation are eligible for vouchers if University Discount applies. (See Student and Alumni Voucher Costs below)
- Faculty and staff may request certification vouchers for role-related certification exams with prior approval.

How It Works

- Students and alumni start the process to obtain a certification in the Certification Hub of the Student Portal by clicking **Begin** on the certification card.
- Vouchers become available to purchase once the student has met the readiness requirements outlined.
- Students and alumni receive credit for **three vouchers**. Note that CompTIA Security+, or other certifications that are required by the program are already covered in tuition and do not count toward the voucher limit.
- Each exam requires one voucher and only one voucher may be used at any given time.
- **Exam results must be uploaded to the Certification Hub** in the Student Portal before another voucher is issued.
- Each time a student or alumni passes a certification exam, a voucher credit **is automatically replenished** after results are uploaded and verified, with no cap on how many approved certifications they can earn.
- Voucher credits are not replenished after an unsuccessful exam attempt. Students will exhaust their voucher limit after three attempt failures.

Attempts and Retakes

- **Retakes:** If students or alumni do not pass, the voucher is redeemed, but remaining credits may be used for retakes or other certifications if the exam results are uploaded in the Certification Hub of the Student Portal.
- **Attempts:** Active students and alumni up to 6 months after graduation have a **maximum of three** attempts, and alumni within 6-18 months of graduation will be limited to **two attempts**; after that, their vouchers will **be exhausted**, regardless of which certification they use them for.

Student and Alumni Voucher Costs

- **Technology, Business & Criminal Justice Certifications:**
  - Active students: $20 per certification voucher
  - Alumni (within 6 months of graduation): $20 per certification voucher
  - Alumni (6–18 months):
    - Over $200 exam cost → alumni receive $100 subsidy
    - $100–$200 exam cost → alumni pay $100 flat
    - Under $100 exam cost → alumni pay University cost
  - Alumni (18+ months): pay University Cost
    - *Some certification exams do not offer a University discount. When the University and retail prices are the same, students may register and pay for the exam directly rather than using a voucher.*
- **Nursing, Health Science & Culinary Certifications:**
  - Active students & Alumni: pay 25% of certification voucher cost

Where to Test (But Not Limited To)

- Pearson Testing Centers

- Pearson OnVUE (online)
- ECPI Campus Testing Centers (where available)

Special Notes

- Only one voucher may be active at a time; exam results must be submitted before the next voucher is issued.
- Additional voucher credits may be awarded at the University's discretion.
- As long as students keep passing, they'll never run out of opportunities. Fail three times on a certification, and voucher eligibility ends.
- If you graduated before January 2026, please reach out to:
    - certvoucher@ecpi.edu for voucher related questions
    - studentportal@ecpi.edu for other certification support

University Resources

Academic Program Directors and Career Services can provide guidance and resources to help students:

- Identify recommended certifications
- Navigate the certification voucher process
- Investigate state licensure requirements

The ECPI approved certification list is published on the ECPI Library website.

Career Advancement Bookstore Award

ECPI University has designated select certifications and licenses as eligible for the Career Advancement Bookstore Award. Award information can be found in the ECPI Scholarships section of the catalog. Students should consult with their campus Financial Aid office for more information.

University Policies

Clinical Requirements and Immunization Policy

ECPI University has established the following Clinical Requirements and Immunization Policy for programs within the College of Health Science. Students must also refer to their program handbook for additional policies.

- AHA CPR Card
- Drug Screen, per state requirements
- Physical exam, proof of immunizations, current TB
- Permission to conduct a criminal background check

University Policies

Commencement

Commencement ceremonies are held annually, usually in June or July. Students who have met the requirements for graduation or reach graduate candidate status are encouraged to participate and to invite their families and friends to attend. Graduate candidate status is achieved by students who are actively enrolled and are scheduled for program completion by a date authorized by the Campus President.

University Policies

Communicable Disease

Students are required to practice Standard Precautions and Infection Control measures at all times in order to minimize the potential for transmission of infection among patients and personnel. Individual clinical education centers may have their own communicable/infectious disease policies, which cover regulations and/or procedures not contained in the program policies. The Infection Control Manual for the Health Sciences Division is available for reference. Published policy and procedures are available at campus.

- Personal Portable Electronic Devices
- Retention and Security of Messages
- Transmitting Confidential Information

University Policies

Crime Awareness

ECPI University faculty and staff are concerned that all students and employees experience a safe and secure environment. It is the responsibility of every student and employee to be aware of safety and security matters and to promptly report any crime to school officials and to the local police.

In compliance with the Crime Awareness and Campus Security Act of 1990, the Campus Security Policy and Report is available to prospective students upon request to the Campus President. The report discusses safety and security issues such as the importance of prompt reporting of crimes, campus security procedures, and statistics for the prior three calendar years, as well as other pertinent information.

No later than October 1 of each year, current students and employees receive the annual Crime Awareness and Campus Security Report. A Safety Report is available on the University web site at http://www.ecpi.edu/campus-security-information/.

Conduct. All members of the ECPI community and visitors are required to obey ECPI regulations. They reflect the policies set by the President and Board of Trustees as well as local, state, and federal laws. Observed, they help to provide a safe environment for all of our staff and students engaged in a wide range of activities.

ECPI University respects and protects the individual dignity, integrity, and reputation of its students. Students must comply with the conventions and regulations that are necessary to maintain order, protect individuals and property, and fulfill the purposes and responsibilities of our schools. ECPI University is responsible under state law for maintaining order and is empowered to exclude those who are disruptive.

Reporting a Crime or Emergency. Criminal activities and emergencies occurring on ECPI University facilities should be reported immediately to the Campus President or Campus Director of Academic Affairs either in person or via telephone.

An ECPI University representative and local authorities will investigate the incident, document the information, and take appropriate action.

Crimes that occur at student housing should be reported to the police department having legal jurisdiction for that area, and to Campus President's office.

The Campus President will ensure that all reports of criminal activities or other emergencies occurring on campus will be reported and recorded at each ECPI University location. Monthly/ quarterly reports will be forwarded to the University Administration at the Virginia Beach main campus. University Administration will maintain a record of the following criminal offenses reported to campus security authorities or local police agencies: Criminal Homicide, Sex Offenses, Domestic Violence, Dating Violence, Stalking, Robbery, Aggravated Assault, Burglary, Motor Vehicle Theft, Arson, Liquor Law Violations, Drug Law Violations, and/or Illegal Weapons Possession.

Any questions regarding the Campus Security or Crime Awareness Policies should be directed to the Campus President.

University Policies

Drug-Free Workplace and Campus

In accordance with Public Law 101-226 (Drug-Free Schools and Communities Act Amendments of 1989), ECPI pursues and promotes a comprehensive program to prevent and correct the illegal use of drugs and the abuse of alcohol by students.

The use of illicit drugs and alcohol can lead to physical and psychological dependence and damage, behavioral changes, and possible death. Even low doses may significantly impair judgment and coordination.

ECPI does not tolerate illegal drugs or alcohol on campus, and the use or possession of such substances on ECPI grounds is sufficient cause for termination of a student's enrollment as well as referral of the case to appropriate legal authorities.

Students are informed at orientation that the standards of conduct clearly prohibit the unlawful possession, use, or distribution of drugs and alcohol; a clear statement of the specific sanctions to be imposed on student (consistent with local, state and Federal law); and a description of these sanctions, up to and including dismissal and referral for prosecution for violations of the standards is provided during orientation.

Directions to Report a Crime or Emergency appear here: Crime Awareness

University Policies

Equal Employment/Educational Opportunity

ECPI University is committed to maintaining an educational environment which welcomes and supports a diverse student body and staff. ECPI is an equal employment opportunity employer and educational provider and does not discriminate against any person because of race or color, religion or creed, sex or sexual orientation, gender identity or expression, national origin or ethnicity, age, disability, military service or veteran status, political affiliation or belief, marital status, or pregnancy status.

This non-discrimination policy extends to all terms, conditions, and privileges of admission to the University, enrollment in classes, student services, financial aid, and employment as well as the use of all University facilities and participation in all University programs and activities. The University conducts its educational activities in accordance with provisions of Title VI and VII of the Civil Rights Act of 1964, Title IX of the Educational Amendments of 1972, and Section 504 of the Rehabilitation Act of 1973. Harassment/discrimination will not be tolerated at ECPI and is considered a violation of institutional policy.

Inquiries regarding, or reports of alleged violations of this policy should be directed to:

University Policies

Family Educational Rights and Privacy Act (FERPA)

The Family Educational Rights and Privacy Act (FERPA) (20 U.S.C. § 1232g; 34 CFR Part 99) is a Federal law that protects the privacy of student education records. The law applies to all schools that receive funds under an applicable program of the U.S. Department of Education.

FERPA gives parents certain rights with respect to their children's education records. These rights transfer to the student when he or she reaches the age of 18 or attends a school beyond the high school level. Students to whom the rights have transferred are eligible students.

As noted above, the rights under FERPA transfer from the parents to the student once the student turns 18 years old or enters a postsecondary institution at any age. However, although the rights under FERPA have now transferred to the student, a school may disclose information from an "eligible student's" education records to the parents of the student, without the student's consent, if the student is a dependent for tax purposes. Neither the age of the student nor the parent's status as a custodial parent is relevant. If a student is claimed as a dependent by either parent for tax purposes, then either parent may have access under this provision.

Parents and Eligible Students Rights include the right to inspect and review the student's education records within 45 days of the day ECPI receives a request for access.

A parent or eligible student should submit to the Campus President a written request that identifies the record(s) the parent or eligible student wishes to inspect. The ECPI official will make arrangements for access and notify the parent or eligible student of the time and place where the records may be inspected.

The right to request the amendment of the student's education records that the parent or eligible student believes is inaccurate, misleading, or otherwise in violation of the parent or eligible student's privacy rights under FERPA.

A parent or eligible student who wishes to ask ECPI to amend a record should write the ECPI official responsible for the record, clearly identify the part of the record the parent or eligible student wants changed, and specify why it should be changed.

If ECPI decides not to amend the record as requested, ECPI will notify the parent or eligible student in writing of the decision and the parent or eligible student's right to a hearing, conducted within the procedures established for Academic Review Boards in ECPI's catalog, regarding the request for amendment. Additional information regarding the hearing procedures will be provided to the parent or eligible student when notified of the right to a hearing.

After the hearing, if the school still decides not to amend the record, the parent or eligible student has the right to place a statement with the record setting forth his or her view about the contested information.

Generally, schools must have written permission from the parent or eligible student in order to release any information from a student's education record. However, FERPA allows schools to disclose those records, without consent, to the following parties or under the following conditions (34 CFR § 99.31):

- School officials with legitimate educational interest
- Other schools to which a student is transferring
- Specified officials for audit or evaluation purposes
- Appropriate parties in connection with financial aid to a student
- Organizations conducting certain studies for or on behalf of the school
- Accrediting organizations
- To comply with a judicial order or lawfully issued subpoena
- Appropriate officials in cases of health and safety emergencies and
- State and local authorities, within a juvenile justice system, pursuant to specific State law

A school official is a person employed by ECPI in an administrative, supervisory, academic or research, or support staff position (including law enforcement unit personnel and health staff); a person or company with whom ECPI has contracted as its agent to provide a service instead of using ECPI employees or officials (such as an attorney, auditor, or collection agent); a person serving on the Board of Trustees; or a student serving on an official committee, such as a disciplinary or grievance committee, or assisting another school official in performing his or her tasks; and in order to comply with a lawfully issued subpoena or court order.

A school official has a legitimate educational interest if the official needs to review an education record in order to fulfill his or her professional responsibilities for ECPI.

Upon request of another school, ECPI also discloses education records without consent to officials of another school in which a student seeks or intends to enroll.

ECPI has designated the following types of information as directory information: the student's name, address, telephone number; date and place of birth; honors, awards, and certifications; and dates of attendance. Parents and eligible students may request that the school not disclose directory information about them by contacting the Campus President of the ECPI location that the student is currently attending or has previously attended.

Written consent must state the purpose of disclosure, specify records to be disclosed, identify those to whom the disclosure may be made, and must be signed and dated. ECPI Presidents will provide direction for these requests.

The student has the right to file a complaint with the U.S. Department of Education concerning alleged failures by ECPI to comply with the requirements of FERPA. The name and address of the Office that administers FERPA is:

Family Policy Compliance Office

U.S. Department of Education

400 Maryland Avenue, SW

Washington, DC 20202-8520

Phone: 1.800.USA.LEARN (8.800.872.5327)

Individuals who use TDD may use the Federal Relay Service

http://www.ed.gov/about/contacts/gen/index.html#frs

University Policies

Fire Emergency

The fire alarm will sound if there is a fire or other emergency necessitating building evacuation. Upon hearing the alarm, everyone is to leave the building by the nearest exit. In multi-story locations, use stairwells (not elevators). Students should not re-enter the building until authorized by an ECPI official. Exit routes are posted in all student areas. Fire extinguishers are strategically placed for emergency use.

University Policies

Holidays

ECPI observes the following holidays: New Year’s Day, Martin Luther King, Jr.'s Birthday, Memorial Day, Independence Day, Labor Day, Thanksgiving Day, and Christmas Day. On these days, ECPI will be closed for academic purposes. If the holiday falls on Saturday, the holiday will be observed on Friday. If the holiday falls on Sunday, the holiday will be observed on Monday.

University Policies

Identification Cards

New students, faculty, and staff are issued a complimentary ECPI University ID card.

ID card, Terms and Conditions of Use:

- All ID cards are the property of ECPI and are provided for appropriate use for identification and access to services
- ID cards are to be carried at all times while on campus
- The ID card is valid as long as the holder continues his/her specific affiliation with ECPI
- The ID card is not transferable
- Any misuse, alteration, or fabrication of the ID card will subject the holder to disciplinary action by the University
- Students shall show their ID card when requested to do so by University officials performing their duties that identify themselves and state the reason for their request

A replacement fee of $10.00 will be incurred if the ID card becomes lost or its condition renders the card unreadable. ID cards replaced due to malfunction or due to a change of name or identification number are reissued at no charge.

University Policies

Instructional Resources

Each program requires that students use certain textbooks and supplies as part of the enrollment in the program and are issued to students as they begin each course. Students are responsible for their books and must purchase an additional book in the event of damage, loss, or theft. If students change a course for any reason, the student is responsible for any additional charge necessary if a different textbook is required.

Required textbooks, including e-texts, may be included in the student’s financial aid.

Each student is responsible for providing his/her own supply of notebooks, copy paper, calculator, pens, pencils, etc. as needed. Certain programs require program-specific supplies.

See the Tuition and Fees section of this Catalog for additional information.

University Policies

Intellectual Property

Subject to the following conditions, a student will retain ownership rights to works created by the student as a class assignment or as part of a pro-bono commission approved as a student project by an instructor. A pro-bono commission is work that an instructor may approve for students to undertake as a skill-building opportunity. Students may receive nominal consideration provided by the person or group that commissions such a work.

For purposes of clarification, the University agrees that all rights of intellectual property and other ownership rights in a work created by a student will belong, as between the University and the student, to the student only if all of the following conditions respecting such work are met:

- The work is not derivative of or otherwise infringe upon any other University-owned intellectual property right
- The work is created by the student entirely on his/her personal time

Each student shall remain at all times responsible and liable for his/her own actions in the creation, use and distribution of intellectual property created by the student.

University Policies

Licensure Exams

Certain programs, particularly in health science and nursing, require professional, national, or state certification or licensure as a prerequisite to employment. Requirements vary by state. Each student is responsible for researching licensure and certification laws in the state(s) and/or municipalities where they plan to work.

Licensure requirements often include:

- Verification of good moral character
- Disclosure of prior criminal convictions

Students and graduates with prior convictions may experience limitations or denial of licensure, externship placement, or employment opportunities.

College of Health Science and College of Nursing

The appropriate Program Director or Director of Nursing manages exam approvals. The University may subsidize one retake per failed exam for College of Health Science students on the condition that the tester follows a designated remediation plan to improve. Nursing students (ADN and PN) are subsidized once for the licensure exam. Nursing students must pay full price for a retake exam.

University Resources

Academic Program Directors and Career Services can provide guidance and resources to help students investigate state licensure requirements.

University Policies

Non-Discrimination Policy

In accordance with the provisions of Titles VI and VII of the Civil Rights Act of 1964, Title IX of the Educational Amendments of 1972, and Section 504 of the Rehabilitation Act of 1973, ECPI University is committed to providing an environment for its students, faculty, and staff that is free from discrimination and to ensuring that all enrollment, education, and employment decisions are based solely on an individual's abilities and qualifications and not on unrelated personal factors, including (without limitation) race or color, religion or creed, sex or sexual orientation, gender identity or expression, national origin or ethnicity, age, disability, military service or veteran status, political affiliation or belief, marital status, or pregnancy status.

It is important that students, faculty, staff, and all others associated with the University understand the importance of reporting possible violations of this policy. The University's commitment demands a full investigation of any possible violation of this Non-Discrimination policy. Retaliation for good faith reporting of an alleged violation of this policy will not be tolerated.

To report alleged violations of this policy, or retaliation, contact:

Shanna Campise

Title IX Coordinator/Section 504 Coordinator

ECPI University

5555 Greenwich Rd.

Virginia Beach, VA 23462

757.994.1054

TitleIX_Coordinator@ecpi.edu

University Policies

Parking

Students are to park only in designated parking areas. Under extenuating circumstances, the Campus President may grant special permission for students to park in other areas, and such permission will be noted on students' ID cards. Some campuses issue window stickers for parking; the sticker should be placed on the left side of the rear window. Violators of parking policies are subject to probation, suspension, or dismissal. Handicapped parking spaces are reserved for students, visitors, or employees who display an appropriate state-issued handicap placard or license plate.

The University assumes no responsibility for the care or protection of any vehicle or its contents at any time it is operated or parked on the campus.

University Policies

Program Closure and Teach-Out Policy

Policy Statement

ECPI University is committed to managing program closures in accordance with the requirements of the Southern Association of Colleges and Schools Commission on Colleges (SACSCOC) and with institutional integrity. The University ensures that program closures are:

- Approved internally before any student communication
- Reported to SACSCOC with an appropriate teach-out plan
- Executed with minimal disruption and cost to currently enrolled students

Scope

This policy applies to:

- Complete termination of academic programs across all locations and delivery methods
- Program closures at specific locations or via specific delivery methods
- All credit-bearing degree and certificate programs offered by ECPI University

This policy does not apply to internal changes such as the removal of a concentration, minor, or other embedded specializations within a program.

Definitions

Program Closure: The termination of admissions to a program at any or all locations or delivery methods. Closure is effective when new students are no longer enrolled into the program, not when instruction ends.

Teach-Out Plan: A detailed plan that outlines how affected students will complete their program of study in a timely and equitable manner.

Roles and Responsibilities

- Vice President of Academic Affairs: Oversees academic impact assessment and internal approvals.
- SACSCOC Accreditation Liaison (VP of Accreditation & Institutional Effectiveness): Coordinates the development and timely submission of required documents to SACSCOC.
- University Management Team: Provides institutional review and final internal approval for program closure actions.
- President and Board of Trustees: Approve closures when board-level endorsement is necessary.

Procedures

1. Initiation of Closure

- Conduct market analysis and rationale for closure
- Secure preliminary approval from the VP of Academic Affairs and President

2. Internal Review and Approval

- Submit proposal through the Academic Affairs Council
- Submit proposal to the University Management Team for final approval

3. Teach-Out Plan Development

- Initiate development of a teach-out plan immediately upon closure decision. The plan must address:
    - Affected student count
    - Completion timelines
    - Transfer or teach-out institution agreements
    - Communication strategy for students and staff
    - Resource and budget analysis

4. SACSCOC Notification

The University will submit a teach-out plan and program closure notification to SACSCOC. However, program closure is not official until approved by the SACSCOC Board of Trustees. The University may begin implementing the teach-out after submission but before approval, at its own risk.

5. Student Communication and Support

- Notify affected students in writing
- Provide academic advising and transfer support
- Ensure minimal financial and academic disruption

6. Monitoring and Follow-Up

- Regularly assess student progression in teach-out phase
- Submit any additional required reports to SACSCOC or other regulatory bodies

Documentation and Records

All program closure documents including internal approvals, SACSCOC correspondence, and student communication logs must be maintained for a minimum of five years by the Office of Accreditation and Institutional Effectiveness.

Compliance and Noncompliance

Any failure to comply with this policy may jeopardize the University's accreditation standing. If a program closes without an approved teach-out plan, the institution must submit a request for a period of noncompliance in accordance with SACSCOC policy.

University Policies

Safety in Private Spaces Act - Lake Mary (Orlando) campus only

ECPI University Orlando Campus faculty, staff, students, and visitors are expected to adhere to Florida Statue 553.865, "Safety in Private Spaces Act." This includes not entering a restroom or changing facility for the opposite sex except for authorized purposes, for example:

- To assist or chaperone a child under the age of 12, an elderly person, or a person with a disability
- For law enforcement or government regulatory purposes
- To render emergency medical assistance or intervening in an emergency
- To conduct custodial, maintenance, or inspection functions when the restroom or changing facility is not in use
- To enter when the appropriate designated restroom or changing facility is out of order or under repair and the restroom or changing facility is not occupied by a person of the opposite sex

For the purposes of this policy, gender is based upon biological sex at birth. Visitors and guests who violate this policy may be charged with trespassing. University faculty, staff, and students may face disciplinary action up to and including termination or suspension. Faculty and staff are encouraged to report alleged violations to the Campus President. All faculty and staff, however, have a right to file a complaint with the Attorney General alleging the University has failed to meet the minimum requirements for safety in private spaces as defined in 553.865.

University Policies

School Closing or Class Cancellation

ECPI may close the school or cancel classes for the following reasons:

- Extreme weather situation in which it is determined unsafe for students to travel
- Emergency situation in a particular classroom (e.g. lack of electricity or air conditioning/heat)
- Faculty unavailable due to illness or personal emergency when a qualified substitute is unavailable
- Other unforeseen events

Class cancellations. In the event that a class meeting must be cancelled, ECPI will make every effort to inform students of the cancellation as soon as possible.

School closing. ECPI's policy is to remain open whenever possible. If snow or other weather conditions or an emergency situation results in a school closing, announcements will be posted on the student portal of the University web site, local television, and/or radio stations. The front office at each campus can provide a list of stations notified of ECPI weather closings.

Rescheduling of Cancelled Classes. In the event of a cancelled class or school closing, it may be necessary to schedule make-up classes on another day or at the end of the term.

Unless further announcements are made, classes will resume on schedule the following day. Students are to assume responsibility for their own safety when making decisions to attend class during inclement weather.

University Policies

Sexual Harassment and Sexual Misconduct Policy

ECPI University is committed to providing a teaching, learning, and working environment that is free from sexual harassment and sexual misconduct.

This policy prohibits sexual harassment and sexual misconduct (“Prohibited Conduct”) on University property and in all University programs and activities. Individuals who engage in Prohibited Conduct are in violation of this policy and are subject to disciplinary action. This policy also prohibits retaliation against individuals who report Prohibited Conduct, who assist others in reporting, or who participate in University proceedings related to such a report.

The University will provide appropriate training about Prohibited Conduct and this policy. All participants in University programs and activities are responsible for helping to ensure our University community is kept free of Prohibited Contact by refraining from engaging in such conduct, completing required training, and complying with reporting requirements when they become aware of Prohibited Conduct.

Individuals who are subjected to Prohibited Conduct in violation of this policy are encouraged to report these incidents. All reports will be treated seriously. Individuals who experience Prohibited Conduct will have access to appropriate resources regardless of their decision to report.

This policy applies to all members of the University community including, but not limited to, students, employees, interns, contractors and vendors (including their employees), guests, and visitors while they are on University property or participating in University programs and activities.

Prohibited Conduct

Sex Discrimination

Conduct that adversely affects any aspect of an individual’s employment, education, or participation in an institution’s activities or programs or has the effect of denying equal access or treatment to an individual on the basis of that individual’s sex or gender. Sexual harassment and sexual misconduct are forms of sex discrimination.

Sexual Harassment

Unwelcome sexual advances, requests for sexual favors, and other verbal or physical conduct of a sexual nature constitutes sexual harassment when (1) submission to such conduct is made either explicitly or implicitly a term or condition of an individual’s employment or educational experience or their participation in a University program or activity, (2) submission to or rejection of such conduct by an individual is used as the basis for employment, academic, or program-related decisions affecting such an individual, or (3) creates a hostile environment.

Sexual Assault

Sexual contact or sexual intercourse with another person without the consent of that person.

Dating Violence

Violence committed in a “dating relationship,” which is defined as a romantic or intimate social relationship between two adult individuals; “dating relationship” does not include a casual relationship or ordinary fraternization between two individuals in a business or social context. The University shall determine if a dating relationship existed by considering the length of the relationship, the type of the relationship, and the frequency of the interaction between the adult individuals involved in the relationship.

Domestic Violence

Any of the following engaged in by an adult family member or adult household member against another adult family member or adult household member, by an adult caregiver against an adult who is under the caregiver’s care, by an adult against his or her adult former spouse, by an adult against an adult with whom the individual has or had a dating relationship, or by an adult against an adult with whom the person has a child in common:

1. Intentional infliction of physical pain, physical injury, or illness.
2. Intentional impairment of physical condition.
3. A violation of state statutes regarding sexual assault
4. A violation of state statutes regarding stalking.
5. A violation of state statutes regarding damage to property, involving property that belongs to the individual.
6. A threat to engage in any of the conduct under 1 through 5 listed above.

Stalking

Intentionally engaging in a course of conduct that would cause a reasonable person under the same circumstances to suffer serious emotional distress or to fear bodily injury to or the death of himself or herself or a member of his or her family or household.

Retaliation

An adverse action taken against an individual in response to, motivated by, or in connection with the individual’s complaint of Prohibited Conduct, participation in an investigation of such complaint, and/or opposition of Prohibited Conduct in the University’s workplace or educational programs and activities. An adverse action is an action that a reasonable person would find materially adverse such that it would dissuade the person from making or supporting a charge of discrimination.

Providing false information

Any person who makes intentionally false statements or provides intentionally false information when reporting a violation of this policy or during the course of any disciplinary proceeding pursuant to this policy is subject to disciplinary action. The fact that a complaint of Prohibited Conduct did not result in a finding of wrongdoing in a law enforcement or University disciplinary proceeding will not, by itself, be a basis for determining that this provision has been violated.

Reporting

Violations of this Policy should be reported to the Title IX Coordinator.

Title IX Coordinator's responsibilities include:

- Promoting the creation of policies, procedures, and notifications designed to ensure university compliance with Title IX;
- Being trained annually regarding sexual harassment, including sexual violence, and is familiar with the university's grievance procedures;
- Overseeing implementation of grievance procedures, including investigation and disposition of complaints, and identifying and addressing any problems throughout an investigation;
- Answering questions and providing guidance about Title IX compliance and the university's related policies and procedures;
- Serving as a liaison to the U.S. Department of Education's Office of Civil Rights and other state and federal agencies that enforce Title IX;
- Ensuring the campus community and university employees are adequately trained and educated on their Title IX compliance responsibilities; and
- Monitoring all other aspects of the university's Title IX compliance.

Shanna Campise, Title IX/Section 504 Coordinator

5555 Greenwich Rd.

Virginia Beach, VA 23462

(757) 994-1054

TitleIX_coordinator@ecpi.edu

Violations of Title IX may also be reported directly to the US Department of Education, Office for Civil Rights.

(OCR) US Department of Education, Office for Civil Rights

In addition to constituting a violation of this policy, Prohibited Conduct might also constitute criminal conduct that violates state and local statutes. Regardless of whether these acts are reported to the University, anyone who has been subjected to sexual harassment or sexual violence has the option of reporting to law enforcement.

Confidential Resources

Well Connect 1-866-640-4777

Investigatory and Disciplinary Procedures

For purposes of this policy, a Complainant is any individual who is reported to have been subjected to Prohibited Conduct and a Respondent is a person who is accused of violating this policy. Complainants and respondents will be treated equitably.

Upon receipt of a formal complaint, the Title IX Coordinator will assess for a possible Title IX violation. If a possible violation is found, written notification will be provided to both the complainant and respondent which contains the allegations and facts, details on the formal grievance process (investigation and live hearing), details on the informal resolution process (if an option), a statement that the parties can request to inspect and review certain evidence, and information regarding the code of conduct, presumption of innocence and false statements.

Efforts will be made to ensure confidentiality to the extent practical consistent with the goals of preventing further instances of the alleged Prohibited Conduct and conducting a fair and thorough investigation.

If a possible violation of Title IX is not found, if the Complainant notifies the Title IX Coordinator in writing that he/she wishes to withdraw the complaint or if the respondent is no longer employed by the University, both parties will be sent written notice which includes the reason for the dismissal and the right to appeal.

Please note that this policy sets forth our goals of promoting a teaching, learning and work environment that is free of Prohibited Conduct. The policy is not designed or intended to limit the University's authority to discipline or take remedial action for conduct the University deems unacceptable, regardless of whether that conduct meets the definition of Prohibited Conduct.

Applicable Statutes

Title IX. Title IX of the Education Amendments of 1972 (20 U.S.C. sec. 1681 et seq. (as amended) and its implementing regulation, 34 C.F.R. Part 106. A federal law that states, "[n]o person in the United States shall, on the basis of sex, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any education program or activity receiving Federal financial assistance." 20 U.S.C. § 1681(a).

Violence Against Women Act (VAWA). Federal law enacted in 1994, which promotes the investigation and prosecution of violent crimes against women, among other objectives. Recently, it amended the Clery Act [42 U.S.C. §§ 13701-14040], through the Campus Sexual Violence Elimination Act (SaVE) provision, Section 304.

Social Security Number

ECPI is dedicated to ensuring the privacy and proper handling of confidential information pertaining to students and employees. The Social Security number shall be required of all entering students for their permanent student records. An alternative student identification number will be assigned to each student. This identification number will be used for all purposes that do not require a social security number. In no event shall grades be posted using the social security number. See the section on Identification Cards for more information about the issuance and use of the ECPI ID card.

Student Consumer Information

The Student Consumer Information regulations of the United States Department of Education require colleges to provide students with access to information they are entitled to as a consumer. Our goal is to provide each student with complete and easy access to this information and to inform you annually of the availability of this information. This information may also be found on the ECPI University website, https://www.ecpi.edu/student-consumer-services, and other links on the website, requested from our campus staff, and provided in paper form on request.

Any requests for information under this service should be sent to info@ecpi.edu.

California Residents - CA Consumer Protection Act (CCPA)

The “CCPA” gives students who are California residents certain rights to know personal information retained by ECPI University. ECPI University retains personally identifiable information for the purposes of facilitating the processing of federal student aid benefits, veteran’s benefits, state and local financial assistance, and required reporting to federal, state, and local governments as required. ECPI University does not sell student information. Certain information is shared with various vendors to allow access to learning and student support platforms and servicing of student records and accounts. ECPI University must retain most information to comply with regulatory and legal requirements, and this information cannot be deleted. Much of the information retained was submitted by the student to government agencies, who then necessarily transmitted this information to ECPI University.

California residents may request that ECPI University disclose to what personal information is collected, used, shared, or sold, and why it is collected, used, shared, or sold. Specifically, students who are California residents may request:

- The categories of personal information collected
- Specific pieces of personal information collected
- The categories of sources for collected personal information
- The purposes for which the personal information is used
- The categories of third parties with whom the information is shared
- The categories of information that is disclosed to third parties

This information must be provided, upon request at no charge, for the 12-month period preceding the request.

California residents may call their campus registrar or send an email to registrar@ecpi.edu. Responses will be made within 45 days or with notice, up to 90 days.

University Policies

Student Contact Information

Each student is provided with an ECPI email address to facilitate communication between the University and the student.

It is essential that students notify the campus Student Records Coordinator immediately of any changes to their name, address, telephone number, or email address. Upon graduation, it is mandatory that students who have loans through Title IV funding to notify ECPI of any changes to their address and phone number.

Student consents to receiving notifications regarding all required consumer information (safety reports, curriculum updates, receipts for federal assistance, academic progress, financial aid counseling, etc.) via his/her ECPI assigned email account which can be accessed from any PC at ECPI and elsewhere.

University Policies

Student Grievance Procedures

ECPI University is committed at all times to providing an educational experience which is conducive to the personal and professional growth of each student in a comfortable, student-oriented environment. As part of that commitment, the University has developed procedures designed to ensure that its students have a meaningful and fair opportunity to pursue any grievance they may have, whether the grievance relates to an academic matter, a non-academic matter or any other facet of their University experience. These procedures are as follows:

Students are encouraged to make every possible effort to resolve a grievance on an informal basis through discussion(s) with the faculty or staff member whom the student believes will be most knowledgeable about the matter at hand. If for any reason the student is not comfortable pursuing those discussions with such faculty or staff member, the student may choose to discuss the issue with another faculty or staff member chosen by the student or recommended to the student by his or her Program Director, the Campus Director of Academic Affairs, or the Campus President. All University faculty and staff members are required to treat each student grievance in a professional manner and to endeavor to resolve all grievances fairly and swiftly.

Students at all times have available to them on a 24/7 and unlimited basis access to the MyECPI resource. MyECPI is a third-party anonymous and confidential incident reporting service available to all University students. A student may contact MyECPI by telephone at 800-716-9007 or online at MyECPI. More information on MyECPI may be found in the Student Services section of the Catalog.

If following the pursuit and conclusion of the procedures described in the immediately preceding paragraphs the grievance remains unresolved to the reasonable satisfaction of the student, the student is invited to submit a written request (formal grievance) for further review. Any such written request must be submitted by the student no later than fifteen days following the conclusion of the informal procedure described above and must be directed, at the student's option, either (a) to the student's Campus Director of Academic Affairs or to the Campus President or (b) to the University President. ECPI University will strive to keep all grievances confidential but cannot guarantee confidentiality. Under some circumstances, a release in respect of confidentiality may be needed in order for a grievance to be properly investigated and resolved in a timely manner. Unless submitted through the MyECPI system, anonymous grievances will not be acted upon.

Contact information for the University President is as follows:

By mail:	President, ECPI University 5555 Greenwich Road; Virginia Beach, VA 23462
By email:	president@ecpi.edu

The following minimum details should be included in any such written request:

- A description of the issue, including all relevant details such as dates and identities of other individuals involved
- A description of the student's efforts to resolve the subject dispute prior to the written submission, such as details including dates of, locations of, and other individuals attending meetings conducted in the course of the informal procedure described above
- Reason(s) why the result of the informal procedure described above is unsatisfactory to the student
- The student's name and contact information

The individual to whom such submission is directed will be required to ensure that any such submission be reviewed and that a decision with respect to such submission be rendered as promptly as practical and made available to the student in question. The student will be required to cooperate with all reasonable requests of such an individual should additional information or meetings with the student or other appropriate individuals become necessary in the course of this review.

If after the taking of all of the above steps the student remains dissatisfied with the resolution of the student's grievance, the student has available to him/her the resources of the applicable external organizations and agencies to which further pursuit may be addressed. Contact information for all such entities is available in the Accreditation and Approvals section of the Catalog and varies depending on the specific physical or online campus location of the University attended by the student.

Students are referred to their Enrollment Agreement for information regarding Arbitration through the American Arbitration Association. The complete Arbitration Agreement also may be found in the University Policies section of the Catalog.

The Virginia State Approving Agency (SAA) is the approving authority of education and training programs for Virginia. Our office investigates complaints of GI Bill® beneficiaries. While most complaints should initially follow the school grievance policy, if the situation cannot be resolved at the school, the beneficiary should contact our office via email saa@dvs.virginia.gov.

University Policies

Student Records

Records of student progress are maintained that include grades, previous education and training, awards, courses attempted, and attendance. Grade reports are provided upon request.

University Policies

Student Responsibilities

ECPI students are considered to be responsible adults and are expected to maintain the standards of conduct appropriate to an academic and business environment. It is the student's responsibility to:

- Conform with ECPI policy, procedures, and regulations;
- Maintain security and academic integrity;
- Maintain academic progress and satisfactory attendance;

- Submit course work on time; and
- Pay tuition as scheduled.

University Policies

Student Rights

- Students in good academic standing have access to all instructional facilities and services, including classes, laboratories, library, tutoring, advising, etc.
- Students have the right to inquire about, and to propose, improvements in policies, regulations and procedures affecting the welfare of students through student surveys, MyECPI, campus clubs and organizations, and University offices.
- The Family Educational Rights and Privacy Act of 1974 provides safeguards regarding the confidentiality of, and access to, student records, and this Act will be adhered to by the University. See the heading Family Educational Rights and Privacy Act (FERPA) for more detailed information.
- Students may appeal results of tests, examinations, or other grades by the end of the add/drop period of the subsequent term.
- ECPI decisions affecting a student may be appealed by requesting a review board hearing.
- Students may record class lectures only with the approval of the faculty member assigned to the course. Students agree that recordings are made strictly for academic (course-related) purposes and are for personal use only. Recordings are not to be distributed. Students do not have permission to retain recordings beyond the end of the term unless they have obtained written permission.

University Policies

Students with Disabilities Policy and Procedures

ECPI University does not discriminate against qualified individuals with disabilities in admission or in access to our programs, services, and activities, in accordance with our obligations under Section 504 of the Rehabilitation Act of 1973, the Americans with Disabilities Act of 1990, and the ADA Amendments Act of 2008.

Admission of Students with Disabilities

The University will make admission decisions using criteria which do not consider an individual's disability, but rather, the student's individual qualifications, to meet the essential elements of the program, service, or activity being offered, assuming the incorporation or use of the appropriate academic adjustments/ auxiliary aids and services, if necessary. Students with disabilities desiring to enroll in any program, service, or activity of ECPI University must be able to meet the minimal standards of the University and of the particular program, service, or activity to which admission is sought.

Definitions

A person with a disability is someone who has a physical or mental impairment that substantially limits one or more major life activities, including, but not limited to, caring for one's self, performing manual tasks, learning, walking, seeing, hearing, breathing, and working; has a record of such an impairment; or is regarded as having such an impairment. Although disclosure of a disability may not be necessary or appropriate for some persons, those who seek academic adjustments/auxiliary aids and services from ECPI University must follow the procedure outlined below.

Procedure for Requesting Academic Adjustments/Auxiliary Aids and Services

Students requesting academic adjustments/auxiliary aids and services must take the initiative to seek assistance, comply with deadlines and agreements, and participate in the following procedure:

1. ***Contact the Campus President or Approved Academic Designee***. ECPI University students requesting academic adjustments/auxiliary aids and services should contact their Campus President or Approved Academic Designee. The Campus President or Approved Academic Designee will meet with the student to discuss the student’s disability, the impact and functional limitations of the disability in the academic setting, and the proposed academic adjustments/ auxiliary aids and services.
2. ***Provide Medical or Other Diagnostic Documentation***. The student will provide acceptable medical or other diagnostic documentation that supports the request for academic adjustments/auxiliary aids and services. Acceptable documentation includes a report from a qualified professional explaining the disability and diagnosis, the impact, or functional limitations in an academic setting, suggested academic adjustments/auxiliary aids and services, and the expected duration of the disability and requested academic adjustments/auxiliary aids and services. The documentation provided should be current (e.g., within 3 years of the students’ enrollment in the University), on medical practice letterhead, and signed by your medical provider. Individual Education Plans (IEPs) and 504 Plans generally do not contain sufficient information.

In all cases, the University may request additional diagnostic information and assessment when, in its opinion, such additional information is needed to document the existence of a disability or the need for academic adjustments/auxiliary aids and services in the educational or clinical settings of ECPI University.

Review of the Academic Adjustments/Auxiliary Aids and Services Request

All requests for academic adjustments/auxiliary aids and services (e.g. extra time and/or separate room for exams, etc.) are evaluated on a case-by-case basis, using an interactive process. This evaluation includes the review of medical or other diagnostic documentation and a determination of the reasonableness of the academic adjustments/auxiliary aids and services. Medical or other diagnostic documentation provided by the student is kept confidential and is released to a third party only with the student's written permission or as required by law. General information about a student's disability and academic adjustments/auxiliary aids and services may, however, be shared with other ECPI University administrators or third parties with a legitimate need to know (e.g. clinical sites, externship sites, etc.) The student's disabilities file is maintained by the Campus President and is held separately from the student's official academic record.

Students with disabilities may request academic adjustments/auxiliary aids and services at any time; however, the Campus President or Approved Academic Designee must have time to review and approve the request (generally 2-3 weeks) although some requests for academic adjustments/auxiliary aids and services take more time to review than others. Therefore, students requesting academic adjustments/auxiliary aids and services requests are encouraged to contact their Campus President or Approved Academic Designee as soon as possible after they have enrolled with the University. Academic adjustments/auxiliary aids and services will not be made on a retroactive basis.

Because practical training in many of our programs may take place in a variety of settings – classroom to clinical – academic adjustments/auxiliary aids and services granted on admission may not be appropriate for all settings; the Campus President or Approved Academic Designee, in collaboration with other University administrators with a legitimate need to know, may review with the student, as needed, academic adjustments/auxiliary aids and services for each class or setting as the student progresses through the curriculum to avoid compromising or fundamentally altering the essential components of a particular course or program.

Although a student's academic adjustments/auxiliary aids and services histories are important, other factors are considered as well in determining what, if any, academic adjustments/auxiliary aids and services are appropriate now at ECPI University. The receipt of particular academic adjustments/auxiliary aids and services in a previous setting does not automatically mean that identical academic adjustments/auxiliary aids and services will be provided here.

The Campus President or Approved Academic Designee has the responsibility to review each student's documentation conscientiously and diligently in carefully considering the student's request for academic adjustments/auxiliary aids and services. When the Campus President or Approved Academic Designee has completed the evaluation and has determined that the student's disability has a current functional impact on his or her academic work or ability to participate in ECPI University's programs, the Campus President or Approved Academic Designee will work the student to determine what academic adjustments/auxiliary aids and services are reasonable and appropriate.

Academic adjustments/auxiliary aids and services initially recommended for a student may be modified as directed by a change in the student's needs or the nature of course requirements. It is the student's responsibility to request the modification and to provide support for said change.

Implementation of Academic Adjustments/Auxiliary Aids and Services Request

The student will be provided with a Faculty Notification Form from the Campus President or Approved Academic Designee at the conclusion of the review/verification process. The student, CDAA, and Campus President will sign the Faculty Notification Form, acknowledging the academic adjustments/auxiliary aids and services that have been approved. The student must provide the Faculty Notification Form to faculty members **at the beginning of each term to receive academic adjustments/auxiliary aids and services**. Students who have an approved Faculty Notification Letter that allows for recording lectures are required to notify the faculty member prior to each recording. Students agree that recordings are made strictly for academic (course-related) purposes and personal use only. Students do not have permission to retain recordings beyond the end of the term unless they have obtained written permission. A copy of the Faculty Notification Form will be retained in the student's disabilities file.

Appeal

In the event that there is a disagreement between the student and the University regarding the outcome of the Campus President or Approved Academic Designee evaluation (including whether the student is a qualified individual with a disability, the adequacy of the student's documentation regarding the student's disability, and decisions regarding academic adjustments/auxiliary aids and services), the student can file an appeal with the University's Equal Opportunity Officer and Title IX/504Coordinator:

Shanna Campise

Director Student Support Services

(757) 994-1054

scampise@ecpi.edu

University Policies

Study Abroad

The Study Abroad option is periodically available to students enrolled in degree programs. Three weeks of the term are spent in the classroom and up to two weeks are spent abroad. The Study Abroad option is administered through the Virginia Beach campus and requires additional fees.

University Policies

Termination Policy

ECPI reserves the right to terminate a student's enrollment on the following grounds:

- Nonconformity with ECPI policy and regulations;
- Unsatisfactory academic progress;
- Failing grade on foundational mathematics or English/writing courses;
- Unsatisfactory attendance;
- Failure to submit course work as scheduled;
- Nonpayment of tuition;
- Security violations;
- Academic integrity violations;

- Possession or use on campus of any firearm or other dangerous weapon or incendiary device or explosive unless such possession or use has been authorized by the University;
- Conduct damaging to the facilities; or
- Disruption of academic processes.

Disruption of academic processes includes wrongly taking credit for work or possessing unauthorized materials during tests or examinations.

University Policies

Visitors to the Classroom and Campus

All visitors must register with the campus receptionist upon arrival. ECPI does not permit unauthorized visitors to any classrooms and the campus.

University Policies

Workplace Hazards Policy

ECPI complies with the regulations of the Occupational Safety and Health Administration (OSHA). This policy is to inform students of the potential hazardous chemicals and the location of Material Safety Data Sheets (MSDS) in the medical programs in an effort to comply with the regulations of OSHA.

A written Hazardous Communication Plan is located in the medical lab. The manual includes:

- A list of known hazardous chemicals located within the medical department
- The material safety data sheets (MSDS) for the known chemicals
- Standard operating procedures for handling hazardous chemicals

Communications and Computing Policies

In today's digital learning environment, effective communication and responsible use of technology are essential to creating a productive, respectful, and inclusive academic community. This policy outlines the institution’s expectations regarding the use of computers, electronic devices, and personal devices, both on campus and during remote learning. Our goal is to ensure that all students, faculty, and staff use technology in ways that support academic integrity, protect privacy, and foster a professional atmosphere conducive to learning and growth. By adhering to these guidelines, we promote a secure, efficient, and collaborative educational environment.

Student Electronic Communications Policy

ECPI University (the “University”) is a user of many communications and information technologies. These technologies, when properly used, support educational activities and enable closer and timelier communications within the University and with employers. There is a continuing evolution of associated laws and conventions governing acceptable use of electronic communication tools and careless use can have dramatic consequences, harming the University, our students, employers, and employees. The policies outlined below are intended to minimize the likelihood of such harm by educating our students.

These policies address the appropriate use of electronic communications tools at the University. These tools include the following:

- University-supplied software
- Email accounts
- University-supplied fax machines, modems, and servers
- University-supplied computers
- University-supplied network tools (such as browsers and Internet access facilities)

Consequences of Violating Policies

Misuse of any University communications tool or violation of these policies may result in disciplinary action up to and including suspension and dismissal from the University.

Questions/Changes to Policies

Questions regarding these policies may be directed to the Vice President for Academic Affairs or the University President. The University intends generally to observe these policies but also reserves the right to change them at any time without prior notice. The University will make reasonable efforts to provide notice of such changes.

Navigate the additional Communication and Computing Policies using the menu to the left.

Back to University Policies

Communications and Computing Policies

Access and Acceptable Use

Access to University communications tools is provided in conjunction with the University's academics and the student's responsibilities. Use of these tools is subject to this policy and to other University policies and procedures. University communication tools may be made available to individuals who are not University students (e.g., visitors). Use of these tools by such persons is subject to this policy and to applicable agreement(s). Communication tools and all messages produced, stored, or carried by such tools are University properties and are subject to reasonable University inspection.

Acceptable Use

In the course of the student's academic study, each student may use communications tools to communicate internally with University faculty, staff, or students or externally with students, employers, and other business acquaintances. The University provides these electronic communications tools to facilitate educational communications and to enhance the learning experience. While these resources are primarily used in academics, there may be occasion to use these facilities for personal purposes. Personal use is permitted so long as it does not interfere with the academic process, consume significant resources, interfere with the activities of other students or faculty, or violate these policies. Under no circumstances shall such facilities be used for personal financial gain, or to solicit others for activities unrelated to the University's academics, or in connection with political campaigns or lobbying. The Campus President may make available or otherwise authorize special-purpose bulletin boards and web pages in connection with University-approved social events, sporting events, and other sanctioned activities. When making use of these University-provided facilities for personal use, always remember that there is a very limited expectation of privacy (see discussion in 3 below).

In addition to other restrictions and conditions discussed here, ECPI communications tools may not be used for any of the following:

- To carry any defamatory, discriminatory, or obscene material;
- In connection with any infringement of another person's intellectual property rights (e.g., copyrights and trademarks);
- In a manner that violates the terms of any applicable telecommunications license or any laws governing trans-border data flow (e.g., laws dealing with data collection, protection, privacy, confidentiality, and security);
- In connection with any attempt to penetrate computer or network security of any University, company, or other system, or to gain unauthorized access (or attempted access) to any other person's computer, email, or voicemail accounts or equipment; or
- In connection with the violation or attempted violation of any other law.

The University understands that web "surfing" may be academic-related and serve a legitimate academic function, but the potential for abuse exists. The Internet provides access to a huge amount of information and resources that can greatly enhance our ability to deliver services efficiently to our students. Today there is no single, comprehensive directory of resources available for the Internet and users sometimes must "navigate" through much unneeded information to reach useful material.

The University encourages exploration of the Internet for legitimate academic-related or professional activities, but students may not "browse the web" during class (unless authorized), create personal "Home Pages," or otherwise use University facilities to access Internet sites for reasons unrelated to the University's academic requirements.

Representing the University in Personal Postings

The information you publish electronically (sometimes called a "Posting") reflects on the University in general. Despite all disclaimers that a student may make (e.g., that the views are personal and do not reflect those of the University) readers elsewhere will make the association between these personal postings and the University. The student should know that true anonymity is very difficult to obtain when using these tools. While Internet relay chat ("IRC"), newsgroup visits, and net surfing sometimes appears to be done anonymously (e.g., by employing pseudonyms), accessing such services/servers through the University's network facilities normally leaves an audit trail indicating at least the identity of the University proxy server (and may leave a trail pointing directly to the student). Inappropriate use of University facilities may damage the University's reputation and could give rise to University and individual student liabilities. Accordingly, each student should make every effort to be professional in all usage of University communications tools.

Because readers may interpret personal postings to newsgroups as an official statement of the University, posting any article in a newsgroup related to the University's academics is strictly prohibited unless approved in advance by the Campus President.

Unacceptable Content

Although the University does not regularly monitor email or electronic messages, please be aware that even personal email messages may be viewed publicly or by University administration without further notice. Under no circumstances may any posting, voicemail, or email originating at the University be in violation of the letter or the spirit of the University's Equal Employment Opportunity or Student Non-Harassment policies.

Examples of unacceptable content include:

- Sexually explicit messages, images, cartoons, or jokes;
- Propositions, requests for dates, or love letters;
- Profanity, obscenity, slander, or libel;

- Ethnic, religious, or racial slurs;
- Political beliefs or commentary; or
- Any other message that could be construed as harassment or disparagement of others based on their sex, race, sexual orientation, age, national origin, disability, or religious or political beliefs.

Everyone should be aware that sexual harassment includes unwelcome sexual advances, unwelcome requests for sexual favors, or other unwelcome conduct (including comments) of a sexual nature. The standard for sexual harassment is whether the recipient could reasonably consider the message to be offensive—the sender's intentions are irrelevant.

In addition to prohibitions on sending or uploading offensive materials, University communications tools (email, browsers, newsreaders, etc.) also shall not be used to access or download obscene materials or other content that may be illegal under local law.

Communications and Computing Policies

Computing Equipment and Software

The use of personal laptop computers, tablets, and other note-taking devices are acceptable during class. The instructor may, however, require laptop computers or tablets to be turned off at certain times.

Computer users are expected to maintain standards of academic ethics. Users are not to access the private files of others. Using another student's user ID, password, program, or application constitutes invasion of privacy and may be considered grounds for enrollment termination.

University computers and equipment are to be used only for ECPI applications related to education. Access to computers and equipment must be approved by appropriate academic personnel. Only ECPI personnel are authorized to install programs on the computers. Students are prohibited from installing or using an unauthorized program on ECPI computers. No personal software is permitted on any ECPI computer. In addition, personal laptop computers and other personal communication devices may not be connected to the ECPI wired network unless authorized by the Information Technology Department.

University Access to Computers, Voicemail, and Email Systems

University administration may routinely examine students' communications or files. Such examination generally may be expected to occur in the following circumstances, which are not intended to be all-inclusive:

- Ensuring that University systems are not being used to transmit discriminatory or offensive messages, or in connection with the infringement or violation of any other person's rights;
- Determining the presence of illegal material or unlicensed software;
- Counteracting theft or espionage;
- Ensuring that communications tools are not being used for inappropriate purposes;
- Responding to legal proceedings that call for producing electronically stored evidence;
- Locating, accessing, and retrieving information in a student's absence; and
- Investigating indications of impropriety.

Software Programs

It is the policy of the University that only properly acquired and licensed software be used on the University's computer equipment. No employee or student shall install or load software on any computer at the University without the express authorization of the Campus President. When a software package has been installed on a hard drive or other memory device of the University's computer hardware, the original CD or any copy may not be used on any other hardware equipment unless specifically authorized by the Campus President.

Copying of software is not allowed unless such copying is authorized by the software license agreement and permission to make the copies is received from the Campus President.

Employees and students are to use software and documentation only as authorized by the applicable license agreement. Unauthorized use, copying, or removal of computers, software, or documentation is prohibited, and violations of these policies may result in disciplinary action, including dismissal.

Software Protection

ECPI generally obtains the right to use computer programs written or distributed by third parties pursuant to license agreements with the vendors, who retain ownership of the programs. These agreements usually prohibit copying of the licensed material, with very limited exception. Software programs are usually restricted to use on only one machine at a time. If the University wishes to use a program on more than one piece of equipment concurrently, it typically must pay additional fees to obtain additional licenses. The same requirements generally apply to manuals and other printed materials that accompany such software.

Computer programs and related printed materials also are afforded copyright protection under Federal law. The Federal Copyright Act specifically prohibits copying or distributing software without the owners' prior consent (except copying for archival purposes).

Unauthorized Use

Unauthorized duplication, distribution, or disclosure of software or its accompanying printed materials can be both a violation of the applicable license agreement and a violation of Federal law. Individual employees and students, as well as the University, can be held liable for violations and be required to pay substantial damages. It is the responsibility of each employee and student to respect the intellectual property rights of the owners of the software programs used by the University and to ensure that no breaches or violations of the University's software control procedures occur.

Back to University Policies

Communications and Computing Policies

Electronic Forgery

Electronic forgery is defined as misrepresenting the student's identity in any way while using electronic communications systems (e.g., by using another's email account without permission, by so-called IP spoofing, or by modifying another's messages without permission). For example, messages written by others should be forwarded as-is and with no changes, except to the extent that the student clearly indicate where you have edited the original message (for example, by using brackets [ ] or by using other characters * to flag edited text).

Electronic forgery is not allowed for any purpose. For email messages, the student may not take any action to misrepresent the identity of the person responsible for the message. A student may send email messages using another person's account, but only with prior express approval from the account owner, and only when the text of the message indicates that the author is different than the email account holder.

For newsgroup postings, you may not misrepresent the identity of the sender, but you may (as may sometimes be appropriate) make postings on an anonymous basis. Keep in mind that true anonymity may be quite hard to obtain, and that most such attempts at least leave an audit trail that identifies the University as the source of the posting.

Back to University Policies

Communications and Computing Policies

Encryption

Only authorized encryption tools (software and hardware) may be used in connection with any University communications tools. Except with the prior written consent of the appropriate IT manager, all such tools must implement key-recovery or key-escrow techniques to permit the University to access and recover all encrypted information.

Remember that possession and use of encryption tools may be subject to complex laws or outright prohibitions in certain localities. Also, the export and import of computers carrying such tools may be subject to local regulation.

Back to University Policies

Communications and Computing Policies

Intellectual Property

The Internet offers a universe of information, useful in conducting and furthering business operations. The student must always respect copyrights and trademarks of third parties and their ownership claims in images, text, video, and audio material, software, information, and inventions. Do not copy, use, or transfer others' materials without appropriate authorization. Be aware that downloaded software and other copyrighted material may be subject to licensing obligations or restrictions. In cases where it is possible that the software might be used by University administration or faculty in curriculum or service development or might be incorporated into final curriculum or services, it is critical that these licensing obligations be understood and strictly observed. Even when software is labeled freeware or shareware, there may be licensing restrictions that prohibit or limit the usage or commercialization of such items. Any questions may be directed to the Campus President.

Back to University Policies

Communications and Computing Policies

Limits of Privacy

The University respects the personal privacy of its students. However, because communications tools are provided for the University's academic purposes, student rights of privacy in this context are quite limited. Students and others should have no expectation that any information transmitted over University facilities or stored on University-owned computers is or will remain private. These systems are owned and/or controlled by the University and are accessible at all times by the University for maintenance, upgrades, or any other business or legal purposes. Students who use University communications tools should be aware that our firewall (and other security tools) creates an audit log detailing every request for access in either direction by each user. Also, in the course of their duties, system operators and managers may monitor student use of the Internet or review the contents of stored or transmitted data.

The University permits personal use of all these communication tools on the express understanding that it reserves the right (for its business purposes or as may be required by law) to review student use of, and to inspect all material created by or stored on, these communications tools. Use of these tools constitutes each student's permission for the University to monitor communications and to access files that are made on or with these communications tools.

Back to University Policies

Communications and Computing Policies

Personal Portable Electronic Devices

To maintain a respectful and inclusive campus environment, students are expected to use personal devices (cell phones, laptops, tablets, etc.) responsibly. While personal devices are allowed on campus, the following guidelines must be observed.

Classrooms, Libraries, and Study Areas

Personal devices should be kept on silent or vibrate mode and only used for academic purposes or with prior instructor approval. However, during test-taking situations, cell phones and other electronic devices must be turned off to minimize disruptions and protect the integrity of the exam.

Exceptions to this policy will be made for faculty-initiated technology and for emergency personnel who are on call, such as police, fire, EMS. These emergency personnel must notify their faculty member of their need for such devices at the beginning of the term and provide documentation verifying their occupation. In the event that a student is emergency personnel and is on-call during the test, leaves the classroom and returns to the classroom, the student may not complete the examination. In these cases, the faculty member will make arrangements for re-testing.

Restrooms and Private Spaces

Out of respect for others' privacy, taking photos, videos, or making calls on a personal device is strictly prohibited in restrooms, changing rooms, and other private spaces.

Public Areas

In public areas such as hallways, cafeterias, and lounges, please be mindful of those around you. Use headphones when listening to audio and avoid loud or disruptive conversations.

According to ECPI University's Student Conduct Policy, failure to comply with these policies may result in disciplinary action up to and including withdrawal/termination.

Back to University Policies

Communications and Computing Policies

Retention and Security of Messages

Email and voicemail messages and computer-stored items are all University property and business records and may have legal and operational effects identical to that of traditional, hard-copy documents. Accordingly, all email messages should be treated as though they may later be viewed by others. While confidential information may be contained in such messages, they should be created with the same care that would be used in creating hardcopy documents.

Remember that no electronic communications facility is completely secure. This means that information stored on or carried over University communications tools may be the subject of accidental or intentional interception, misdelivery, attack, or authorized University review.

When stored on computers, email messages and other files typically are subject to routine backup procedures. This means that copies of these files may be retained for long periods, in accordance with backup recycling and document retention procedures. Also, many site-wide backup systems do not guarantee privacy of backup copies (e.g., system administrators may have access).

Back to University Policies

Communications and Computing Policies

Transmitting Confidential Information

Confidential information (whether owned by the University, its students, its vendors, or other persons) is not to be disclosed to unauthorized persons without prior authorization. The question of authorization will be a function of the type and ownership of the confidential information (e.g., different authority may be required for disclosure of University-owned information than for student-owned information). Also, authorization for disclosure may be limited to certain specific individuals within the University (e.g., on a need-to-know basis).

In some cases, posting or emailing confidential information that relates to new curriculum, teaching methods, research, or University services can constitute a "publication" and prevent the University from applying for approvals or later treating the information as "proprietary." These consequences can follow even from postings or distributions that are not to the general public.

Generally, absent encryption or other security measures, confidential information should not be contained in email sent to outsiders or posted to newsgroups, and should not be placed on University communications tools that are available to third parties.

Back to University Policies

Student Conduct Policies

Navigate the Student Conduct Policies using the menu to the left, or or choose from the following additional policy categories below:

- Academics Policies
- Admissions Policies
- Financial Aid Policies
- University Policies

ECPI University encourages professionalism and responsible conduct among students to foster a positive learning environment. To address any issues, the university follows a progressive discipline approach, which typically includes a verbal warning, a written warning, and, if necessary, dismissal. However, based on the specific circumstances—such as the student's overall history, the severity of the behavior, safety concerns, and the details of the incident—ECPI University reserves the right to modify or bypass the progressive discipline process. Disciplinary action may be taken against a student for the following behaviors, as well as for other actions not specifically listed here:

- Acts of dishonesty, including but not limited to cheating on quizzes, tests, papers, hands-on homework documentation, or other assignments; or plagiarism. See the Honor Code and Plagiarism Policy.
- Fraudulent activities including but not limited to willful misrepresentation by a student concerning qualification for admission, continuing eligibility as a student, eligibility for financial aid, current enrollment information, status, or position at ECPI.
- Forgery, alteration, or misuse of school documents, records, or identification. See the Communications and Computing Policies.
- The unlawful possession, use, or distribution of illicit or prescription drugs on campus. See Drug-Free Workplace and Campus.
- Possession, use, intoxication, or being under the influence of alcohol while on campus. See Drug-Free Workplace and Campus.
- Possession of firearms or other weapons on campus. See Campus Security.
- Gambling on campus.
- Any act or threat of physical assault or intimidation directed toward any member of the school community or any other individual on campus. See Non-Discrimination Policy and Sexual Harassment and Sexual Misconduct Policy.
- Sexual harassment or hazing as described in the Non-Discrimination Policy and Anti-Hazing Policy.
- Theft or attempted theft of ECPI property, or any theft on campus.
- The defacing or destruction of ECPI property.
- Use of indecent, illegal, disruptive language and/or actions.
- Insubordination in carrying out instructions of faculty or staff.
- Any refusal to abide with or violation of federal, state, or local regulations.
- Smoking in unauthorized areas. See Smoking on Campus.
- Continued violation of the ECPI dress code. See Dress and Appearance.
- Furnishing false information to/for or against any student, faculty member, or ECPI employee.

· Students are expected to use personal devices (cell phones, laptops, tablets, etc.) responsibly. See Personal Portable Electronic Devices.

· The practice of hazing at ECPI to any degree or any form, is strictly prohibited. See Anti-Hazing Policy.

Back to University Policies or Academics Policies

Student Conduct Policies

Anti-Hazing Policy

See Anti-Hazing Policy which is found within University Policies.

Student Conduct Policies

Attendance

See ECPI's Attendance policies, which are found within Academic Policies.

Student Conduct Policies

Children on Campus

ECPI does not provide childcare for the children of students or visitors. Children under the age of 18 are not permitted in any ECPI classrooms. In addition, children are not permitted to be in the student lounge, laboratories, or the library, and children may not use any University computer equipment. Children should not be left unattended on campus, in campus parking areas, or in automobiles at any time.

Student Conduct Policies

Communications and Computing Policies

See Communications and Computing Policies which can be found within University Policies.

Student Conduct Policies

Dress and Appearance

ECPI encourages students to acquire a wardrobe suitable for their employment objectives. A student’s dress and appearance shall be appropriate at all times and respectful of other students, faculty, and staff.

The University wants students to feel comfortably dressed while attending classes, yet their attire must be appropriate for a professional environment.

Students pursuing an education in the College of Health Science and the College of Culinary Arts will adhere to a specific dress code as prescribed by the individual program.

University expectations will not conflict with applicable federal or local statutes, including those prohibiting discrimination based on national origins or religious belief.

Professional Dress Day

Although expected professional dress varies by field, students should dress professionally when engaging in job search activities such as interviewing, networking, externships, or professional events including career fairs.

Each campus of ECPI University has a designated Professional Dress Day. By focusing on personal appearance, the required professional dress days will help students learn what constitutes professional dress attire and become more comfortable in professional dress attire.

Student Conduct Policies

Drug-Free Workplace and Campus

See Drug-Free Workplace and Campus which can be found within University Policies.

Student Conduct Policies

Eating and Drinking in Classrooms

Food and drinks, other than water, are not permitted in computer rooms, labs, library, classrooms, or any other area not specifically designated for this purpose or approved by the Campus President. Water, in appropriate containers, may be consumed in classrooms and labs as posted.

Student Conduct Policies

Honor Code

See Honor Code which can be found within Academic Policies.

Student Conduct Policies

Late Assignments

See Late Assignments which can be found within Academic Policies.

Student Conduct Policies

Non-Discrimination Policy

See Non-Discrimination Policy which can be found within University Policies.

Student Conduct Policies

Plagiarism Policy

Student Conduct Policies

Sexual Harassment and Sexual Misconduct

See Sexual Harassment and Sexual Misconduct Policy which can be found within University Policies.

Student Conduct Policies

Smoking on Campus

ECPI University is committed to providing a healthy, comfortable, and productive work environment for faculty, staff and students. All ECPI facilities are smoke-free. Students will refrain from smoking (this includes e-cigs and vapor) while on the University property, which includes the buildings, grounds, walkways, and parking lots, unless a designated smoking area for students has been identified. It is the student's responsibility to know where s/he can smoke, if at all, on the local campus. Please see the front office or the Student Window for more information.

All Programs

Baking & Pastry Arts (AAS)

Overview

College
College of Culinary Arts

Program CIP Code
12.0501

Baking and pastry skills are considered an area of specialty within the field of culinary arts. A variety of food service employers, including bakeshops, grocery stores, restaurants, hotels/resorts, and contract dining facilities, employ individuals with the sole purpose of preparing baked goods on-site. Additionally, baking positions are available in manufacturing facilities which produce breads and pastries in large quantities for distribution. The graduate of the program may work in a variety of positions from entry level to lead baker or pastry chef. The industry grants exceptional opportunities for advancement with favor given to those individuals with exemplary work ethic and experience. At present, there is an industry need for skilled and work-place ready bakers. Students in the Associate of Applied Science in Baking and Pastry Arts program will be taught skills in:

- Foundational methods and techniques used throughout the baking and pastry industry
- Ensuring a safe and sanitary bake shop
- Baking and pastry recipe development and execution for various production levels
- Alternative baking techniques to accommodate specialty diets and allergies

About Baking and Pastry Arts

A career in the Baking and Pastry Arts allows you to use your creative, intellectual, and leadership skills in creating, preparing, and serving food that your customers will enjoy. Demand is high for qualified baking personnel and can be global- there are no geographic boundaries. In addition to designing and preparing fine baked goods, bakers may be responsible for managing staff, budgeting, setting menu prices, forecasting production quantities, ordering product, and maintaining a safe, clean kitchen area. Depending on the student's work ethic, experience, and dependability, the graduate may work as an entry level or lead baker or pastry chef with exceptional opportunity for advancement.

Working in a baking position is physically very demanding. Long periods of standing, lifting heavy objects and long periods between breaks are not uncommon in the industry. Hepatitis A vaccination may be required.

Background checks, drug screening and/or security clearances may be requirements for employment depending on the food service outlet.

Recommended Certifications

Students may obtain the National Restaurant Association Educational Foundation (NRAEF) ServSafe Food Protection Manager and ServSafe Alcohol certifications as a result of their studies.

Outcomes

The objective of the Baking and Pastry Arts Degree program is to educate and train prospective bakers with the knowledge, skills and abilities necessary to compete for employment in the baking and pastry field. Upon successful completion of this degree program graduates will be able to:

Culinary Arts (AAS)

Overview

College
College of Culinary Arts

Program CIP Code
12.0503

The School of Culinary Arts, Culinary Institute of Virginia, educational program prepares students for success in the competitive field of food service. The program prepares students for entry level positions in the food service industry. Emphasis is placed on the development of professional culinary skills, through standards-based, hands-on training. In the Associate of Applied Science in Culinary Arts degree, students will be taught skills in:

- Foundational methods and techniques used throughout the foodservice industry.
- Culinary and baking recipe development and execution.
- Ensuring a safe and sanitary kitchen.
- Applying purchasing, nutrition and supervision concepts in the foodservice environment.

The AAS Culinary Arts degree program at the Norfolk Campus of the Culinary Institute of Virginia of ECPI University is accredited by the American Culinary Federation Education Foundation (ACFEF). ACFEF requires assessment outcomes data to be available for all accredited programs, which can be found by clicking here.

About Culinary Arts

A career in the Culinary Arts allows you to use your creative skills in creating, preparing, and serving food that your customers will enjoy. Demand for qualified foodservice personnel can be global, there are no geographic boundaries. Culinarians plan and cook menus combining flavor profiles in ways that make memorable meals while maintaining a safe, clean kitchen area. Depending on the student's work ethic, experience, and dependability, the graduate may work as a cook, pantry cook, banquet cook, line cook, or sous chef, with exceptional opportunity for advancement.

Working in a food service position is physically very demanding. Long periods of standing, lifting heavy objects and long periods between breaks are not uncommon in the industry. Hepatitis A vaccination may be required.

Background checks, drug screening and/or security clearances may be requirements for employment depending on the food service outlet.

Recommended Certifications

Students may obtain the National Restaurant Association Educational Foundation (NRAEF) ServSafe Food Protection Manager and ServeSafe Alcohol certifications as a result of their studies. The Culinary Institute of Virginia is accredited by the American Culinary Federation. Upon successful completion of the program, students are eligible to apply for initial certification of Certified Culinarian.

Outcomes

The objective of the Associate of Applied Science in Culinary Arts program is to educate and train prospective culinarians with the knowledge, skills, and abilities necessary to compete for employment in the Culinary Arts field. Students will be able to demonstrate the attributes of a good cook including stamina, dexterity, hand-eye coordination, timing, and the ability to work well with others. Students learn restaurant management skills and proper ways to serve food to restaurant patrons. In order to manage the food preparation environment and collaborate with other food service professionals, each student will develop their oral and written communication skills. Upon successful completion of this degree program, graduates will be able to:

Locations

Norfolk, VA (Culinary Institute of Virginia), Richmond, VA (Glen Allen)

Culinary Arts and Applied Nutrition (AAS)

Overview

College
College of Culinary Arts

Program CIP Code
12.0508

The Associate of Applied Science in Culinary Arts and Applied Nutrition degree prepares students for success in the competitive field of food service. The program prepares students develop specialized skills needed by employers in the hospitality and healthcare industries. Emphasis is placed on the science behind culinary nutrition and dietary management while also developing fundamental culinary skills through hands-on training. The Associate of Applied Science Degree in Culinary Arts and Applied Nutrition students will be taught skills in:

- Culinary skills and techniques
- Nutrition and dietary management
- Culinary operations management

About Culinary Arts and Applied Nutrition

A wide range of career opportunities exist in the field of culinary nutrition. The ability to design and prepare appealing menus that may have to meet the strictest of dietary guidelines requires a combination of nutritional knowledge, culinary skills, and creativity. This specialized skill set can be applied in highly regulated clinical operations, such as hospitals to preparing meals for an individual's specialty diet as a personal chef.

Working in a food service position is physically very demanding. Long periods of standing, lifting heavy objects and long periods between breaks are not uncommon in the industry. Additionally, the student should possess the following:

- Near vision: The ability to see details at close range (within a few feet of the observer)
- Visual color discrimination: The ability to match or detect differences between colors, including shades of color and brightness
- Arm-Hand Steadiness: The ability to keep your hand and arm steady while moving your arm or while holding your arm and hand in one position
- Physical stamina: The ability to stand for extended periods of time
- Physical strength: The ability to lift and transport up to 50 pounds
- Hepatitis A vaccination may be required

Background checks, drug screening and security clearances may be requirements for employment depending on the food service outlet.

Recommended Certifications

No specific certifications are required for entry level career positions. Students will have the opportunity to earn a ServSafe Food Manager Certificate during their coursework. Upon completion of the Dietary Management Capstone, students will have the opportunity to sit for the Certified Dietary Manager (CDM) exam. This nationally recognized credential validates competency in performing the responsibilities of a dietary manager.

Outcomes

The Culinary Arts and Applied Nutrition program is designed to educate and train culinarians to compete for employment in food service operations that specialize in nutrition based menus and specialized diets. Upon successful completion of the program, graduates will be able to:

Requirements

Simple Requirements

Program Requirements

To receive the Associate of Applied Science in Culinary Arts and Applied Nutrition, students must earn 60 semester credit hours. The program requires a minimum of 4 semesters, which is equivalent to 15 months or 60 weeks of instruction. The program requirements are as follows:

Core Curriculum Requirements

Type
Completion Requirement

Core Courses

42 semester credit hours

Fulfill ALL of the following requirements:

Complete ALL of the following Courses:

- BPA245 - Alternative Baking
- CAA101 - Culinary Skills
- CAA111 - Culinary Techniques
- CAA115 - Kitchen Essentials
- CAA121 - Culinary Fundamentals
- CAA140 - Introduction to a La Carte
- CAA150 - Baking and Pastry Fundamentals
- CAA200 - Meat Selection and Utilization
- CAA240 - International Cuisine
- CAA255 - Procurement and Food Service Cost Control
- CAA260 - Culinary Nutrition
- CAA280 - Externship-CUL I-a
- CAA285 - Externship-CUL I-b
- NUT110 - Introduction to Dietary Management
- NUT210 - Menu Development for Culinary Nutrition
- NUT220 - Applied Concepts in Culinary Nutrition
- NUT230 - Customer Service Management in Culinary Nutrition
- NUT240 - Dietary Management Capstone

AND

Complete ANY of the following Courses:

- CAA130 - Pantry Kitchen

- CAA145 - Retail Production

Arts and Sciences Requirements

Type
Completion Requirement

Arts and Sciences Courses*

15 semester credit hours

Complete ALL of the following Courses:

- COM115 - Principles of Communication

3 semester credit hours

Complete ALL of the following Courses:

- CAA100 - Essentials for Success

The Associate of Applied Science in Culinary Arts and Applied Nutrition has the following program requirements.

Locations

Norfolk, VA (Culinary Institute of Virginia), Richmond, VA (Glen Allen)

Dental Assisting (AAS)

Overview

College
College of Health Science

Program CIP Code
51.0601

The Associate of Applied Science in Dental Assisting degree is designed to facilitate the development of each student into a competent dental assistant. The program regards each student as an active participant bringing a variety of individual needs and attributes to the educational process. The program is committed to preparing the dental assistant students to become lifelong learners and critical thinkers who will be prepared to contribute to the body of knowledge in dental assisting. Graduates of the program will be prepared to work under the direction and supervision of a dentist.

See also the following additional program information:

- **Admissions Requirements** > Dental Assisting | AAS
- **Attendance Policy** > Dental Assisting | AAS (includes information on Clinical Phase Absenteeism and Tardiness)
- Transferability of Credit > Dental Assisting section

About Dental Assisting

The dental assistant's responsibility can involve clinical and/or administrative duties. Graduates of the dental assistant program may be directly involved in patient care as "chairside" assistants. Other duties of a dental assistant may include performing lab work; sterilizing and disinfecting rooms and instruments; answering phones; filing charts; scheduling patients; charting, taking and processing X-rays; ordering supplies; and maintaining dental equipment.

Background checks, drug screening, and security clearances are not typically required for employment. Proof of negative chest x-ray, proof of tetanus and Hepatitis B titer, and proof of current CPR training are recommended but not required for employment.

The Dental Assistant can choose to work in private practice dental offices, public health facilities, and VA hospitals in a variety of dental specialty areas.

Recommended Certifications

The student externship agreement requires students to have the Radiation Health & Safety Certification before completing a required ten-week externship. ECPI encourages student to obtain all appropriate certifications to increase potential job opportunities. ECPI provides students in this program with vouchers which allow the student to take certification exams at a greatly reduced cost. Entry-level dental assistants should retain CPR certification and pass the Dental Assisting National Board Exams, Infection Control and Radiation Health and Safety. A National DANB Radiation Health and Safety (RHS) is required to take dental x-rays. Certified Dental Assistant and Registered Dental Assistant (CDA/RDA) are recommended certifications.

Student Evaluation

The faculty shall use the objectives of the dental assisting program as criteria for student evaluation. The student's grades are determined by a combination of professionalism, written examinations, laboratory practical exams, and clinical competency checklists.

The student progresses to the next term when all prerequisite courses have been satisfactorily completed. Students must achieve a passing grade of "C" (73 numerical grade) in all DEN courses.

Outcomes

Upon completion of the program, graduates of the Associate of Applied Science Dental Assisting program are able to:

The Associate of Applied Science in Dental Assisting has the following program requirements.

Program Philosophy

The program for dental assisting is built on a foundation of academic coursework, clinical performance, administrative techniques, and general professionalism. Program faculty and staff are strongly committed to providing all students with an exciting, stimulating, and comprehensive learning experience. The program prepares a graduate to provide safe, effective, ethical, and legal care to persons of all ages and diverse backgrounds. The program develops the ability of the student to think independently, to understand fundamental theory, and to develop the skills necessary to become clinical practitioners who are enlightened decision makers.

Program Purpose

Dental assistants are essential participants in the dental care delivery system. This program prepares students to meet the requirements for employment as a dental assistant. The dental assistant performs patient care procedures and dental office duties under the direction of a dentist. Duties for patient care include preparing dental operatories for receiving patients for examinations, sick calls or routine dental treatment, reviewing and updating patient health histories, charting existing patient treatment as well as patient needs, taking and displaying radiographs, taking and recording vital signs, assisting the general dentist or dental specialist while conducting several laboratory procedures. Dental office duties include communications and public relations, appointment scheduling and recall systems, supply and inventory control, accounts payable and accounts receivable (collections). This program includes instruction in both clinical and administrative functions. Instruction includes on-campus classroom and laboratory courses, distance learning, and off-campus clinical rotations.

The dental assistant program is comprehensive by providing the correct mix of hands on skills and general education to ensure graduates are able to function effectively as highly skilled professionals. A variety of instructional methods are utilized in program courses to support the learning style of each student, yet challenge the student to recognize and develop alternative learning styles.

Program Hours

Students are required to attend classes during the day hours Monday through Thursday 8:00 a.m. to 1:00 p.m. and Career Orientation on Friday. Students are required to complete two off-campus clinical rotations. During these two clinical rotations, students will be assigned to an off-site facility for eight hours a day Monday through Friday as determined by the site point of contact (POC).

Diagnostic Medical Sonography (AAS)

Overview

College
College of Health Science

Program CIP Code
51.0910

The Associate of Applied Science in Diagnostic Medical Sonography program offers a a degree that is designed to prepare competent entry-level general sonographers in the cognitive (knowledge), psychomotor (skills), and affective (behavior) learning domains. The program is designed to facilitate the development of each student to meet the needs of the growing healthcare industry. *This program consists of 1,920 contact hours.*

See also the following additional program information:

- **Admissions Requirements** > Diagnostic Medical Sonography | AAS
- **Attendance Policy** > Diagnostic Medical Sonography | AAS (includes information on Clinical Phase Absenteeism and Tardiness)
- **Clinical Protocol** > Diagnostic Medical Sonography section
- Transferability of Credit > Diagnostic Medical Sonography section

About Diagnostic Medical Sonography

Sonography is a dynamic profession that has grown significantly over the past 20 years. With rapidly developing new technologies and increased use of diagnostic ultrasound procedures, growth is projected to continue in the future with employment opportunities for qualified sonographers in both urban and rural areas nationwide. Professional responsibilities include: obtaining and recording an accurate patient history, performing diagnostic procedures and obtaining sonographic images, analyzing technical information, providing an oral or written summary of the technical findings to the physician, and collaborating with physicians and other members of the health care team. Salaries for sonographers are competitive with or higher than other professionals with similar levels of education.

A criminal background check, 5-panel urine drug screen, employment physical, proof of PPD test or negative chest x-ray, proof of tetanus inoculation, a Hepatitis B titer, and current CPR certification are usually required for employment as a sonographer.

Diagnostic Medical Sonographers actively work in many healthcare venues and are required to perform some physically demanding duties when working with patients. Therefore, physical requirements have been outlined for this profession and include:

• Must be able to stand and walk for 80% of clinical time.	
• Must be able to assist, lift, and position patients for at least 50% of the clinical time.	
• Has sufficient hearing to respond to patient needs and to interact with the patient, to hear instructions in a variety of situations, such as in a trauma room in the emergency room and in surgery, where the person may be facing away from you or be wearing a surgical mask. Has the ability to distinguish audible sounds of the equipment, such as Doppler.	
• Has sufficient motor skill to be able to respond to medical emergencies and to manipulate the equipment. These motor skills may include, but are not limited to the following:	
	• Has full use of hands, wrists, and shoulders. Extend the hands and arms in any direction often reaching 3-4 feet above the head. Seize, hold, grasp, turn and otherwise work with both hands. Pick, pinch, twist or otherwise work with wrists and fingers of both hands.
	• Move the hand and foot coordinately with each other in accordance with visual stimuli.
	• Bend and stoop routinely.
	• Perform frequent lifting, carrying, pulling, and pushing of objects weighing 50 lbs or more, such as wheel chairs, patient stretchers, and ultrasound equipment.
	• Lift and transfer patients to and from the examination table safely, without injury to patient, self or other health care workers.
	• Ability to maintain prolonged arm positions necessary for scanning.

The Diagnostic Medical Sonographer is also known as Sonographer, Ultrasonographer, or Ultrasound Technologist. Sonographers can choose to work in hospital radiology departments, clinics, medical imaging centers, women's health and childbirth centers, private practice physician offices, public health facilities, or breast imaging centers.

The program includes instruction in both clinical and administrative functions, on campus classroom and laboratory courses and off campus clinical education where students will work with sonographers, physicians, and other health care professionals to learn, develop, and apply the necessary skills to perform general ultrasound examinations in the work place.

Recommended Certifications

ECPI University provides vouchers allowing students to take certification exams at a greatly reduced cost. Examinations are available through the American Registry of Diagnostic Medical Sonographers (ARDMS). Examinations include: registry examination in Ultrasound Physics and Instrumentation (SPI), and the Abdomen (AB) and Obstetrics/Gynecology (OB/GYN). The American Registry of Radiologic Technologists (ARRT) Certification test in Sonography is another certification available. Certification by either ARDMS or the ARRT is required for employment.

Student Evaluation

The faculty shall use the objectives of the Diagnostic Medical Sonography program as criteria for student evaluation. The student's grades are determined by a combination of written examinations, laboratory scanning practical exams, and clinical competency checklists.

Diagnostic Medical Sonography technical skills and ability, attitude, and relationship with others are areas of clinical and laboratory evaluation. The achievement of the student in both theory and clinical performance is evaluated by the faculty at regular intervals and shared with the student.

Outcomes

Upon completion of the program, graduates of the Associate of Applied Science Diagnostic Medical Sonography program are able to:

The Associate of Applied Science Diagnostic Medical Sonography program has the following program requirements.

Program Philosophy

The Diagnostic Medical Sonography program is designed to prepare competent entry-level general sonographers in the cognitive (knowledge), psychomotor (skills) and affective (behavior) learning domains. Program faculty are strongly committed to providing all students with an exciting, stimulating, and comprehensive learning experience. The program prepares graduates to provide safe, effective, ethical, and legal care to persons of all ages and diverse backgrounds. The program develops the ability of the student to think independently, to understand fundamental theory, and to develop the skills necessary to become Diagnostic Medical Sonography practitioners who are enlightened decision makers.

Program Purpose

This program prepares students to meet the requirements for employment as a Diagnostic Medical Sonographer. The program includes instruction in both clinical and administrative functions. Instruction includes on campus classroom and laboratory courses, and off campus clinical education where students will work with sonographers, physicians, and other health care professionals to learn, develop and apply the necessary skills to perform general ultrasound examinations in the work place.

Program Hours

Students are required to attend classes during day hours only, Monday through Friday for six semesters. Each semester is divided into 3 five week terms. Each term varies in the number of required courses, depending on the number of credits and contact hours per course, with two or three courses per term.

During the first three semesters all classes are on campus Monday through Thursday. During the fourth semester students will be assigned to an Ultrasound department of a clinical affiliate hospital or imaging center Monday through Friday, eight hours per day. During the final term of the program, clinical rotations will be two to three days per week with on campus classes on the alternate days.

Electronics Engineering Technology (AAS - South Carolina Only) | Electronics Engineering Technology Concentration

Overview

College
College of Technology

Program CIP Code
15.1202

Electronics Engineering Technicians install, maintain and repair electrical and electronic equipment. They also assist in the development, testing, production, and quality assurance of equipment and components such as: circuit boards, wireless phones, PDAs, medical equipment, and control systems. Skills in the Mechatronics field can be applied in various areas including maintenance and repair, installation, quality assurance, and research and development.

Students in the Electronics Engineering Technology concentration learn about subjects such as fiber optics, analog and digital electronics, control systems, and network technologies. They are able to use test equipment to troubleshoot, maintain, and repair electronic systems, as well as computer and network technologies.

The Electronics Engineering curriculum provides the education and foundation needed for employment in a variety of related industries in both the private and public sector including: automation and manufacturing, aerospace, automotive, and computer industries.

About Electronics Engineering Technology

Electronic Engineering Technicians install, maintain, and repair electrical and electronic equipment. They assist engineers in the development, testing, production, and quality assurance of equipment and components such as circuit boards, wireless phones, medical equipment, and control systems. Electronics Engineering Technicians are needed in many industries and can find employment in work environments where electronics are used extensively.

Some positions may require background checks, drug screening, and/or security clearances, depending on the position and industry.

Some entry-level job titles for an Applied Science in Electronics Engineering Technology graduate include: Medical Equipment Repairer and Installer, Biomedical Equipment Technician, Biomedical Support Technician, Electronics Technician, Computer Engineering Technician, Computer Support Specialist, Electrical/Electronic Engineering Technician, Field Service Technician, and Technical Salesperson.

Graduates of the Applied Science in Electronics Engineering Technology degree program may choose to continue their education by pursuing a Bachelor of Science in Electronics Engineering Technology degree.

Program Objectives

Students in the Associate of Applied Science in Electronics Engineering Technology program learn to apply technical and analytical skills in electrical, electronics, and related industry to solve engineering problems and maintain equipment and facilities. They apply mathematical science and engineering principles to solve technical problems, implement complex hardware and software systems, and perform team work in engineering projects,

Graduates of the Applied Science in Electronics Engineering Technology program are expected to attain the following objectives within a few years of graduation:

- Apply acquired technical and analytical skills as it relates to their professional positions in electrical, electronic, and related industries
- Apply relative mathematical, science, and engineering methods to solve technical problems
- Analyze and implement complex systems including both hardware and software
- Pursue lifelong learning and successful professional careers
- Perform as effective team members through adequate oral and written communication skills
- Relate and exercise an educated judgment in regards to their professional and ethical responsibilities

Recommended Certifications

Certifications are not required for completion of this program; however, ECPI encourages student to obtain all appropriate certifications to increase potential job opportunities. ECPI provides students in this program with vouchers which allow the student to take certification exams at a greatly reduced cost. Available certifications for this program include Fiber Optics Installer (FOI), Fiber Optics Technician (FOT), A+ Certification, Network+ Certification, Security+ Certification, GMDSS - Global Maritime Distress and Safety System Maintainer License, GROL - General Radiotelephone Operator's License, and Associate CET.

Outcomes

Upon completion of the Associate of Applied Science in Electronics Engineering Technology program, graduates will be able to:

The Associate of Applied Science in Electronics Engineering Technology (SC Only) | Electronics Engineering Technology concentration has the following program requirements.

Locations

Charleston, SC, Greenville, SC

Electronics Engineering Technology (AAS - South Carolina Only) | Mechatronics Concentration

Overview

College
College of Technology

Program CIP Code
15.1202

Electronics Engineering Technicians install, maintain and repair electrical and electronic equipment. They also assist in the development, testing, production, and quality assurance of equipment and components such as: circuit boards, wireless phones, PDAs, medical equipment, and control systems. Skills in the Mechatronics field can be applied in various areas including maintenance and repair, installation, quality assurance, and research and development.

Students in the Mechatronics concentration will focus on core areas such as programmable controllers, hydraulics and pneumatics, testing and measuring instruments, materials science, automation and control systems, and computer programming and networks.

The Mechatronics concentration will offer you the chance to work with and troubleshoot programmable logic controllers, and integrated systems; learn by doing while grasping a firm theoretical foundation in electronics; and put into practice your acquired knowledge through several hands-on projects.

About Electronics Engineering Technology

Mechatronics Technicians play a critical role in advanced manufacturing. Through their combined skills in mechanical, electrical, and electronics circuits, they are able to troubleshoot, repair, and maintain computer-controlled mechanical systems.

Some positions may require background checks, drug screening, and/or security clearances, depending on the position and industry.

Some entry-level job titles for an Applied Science in Electronics Engineering Technology graduate with a Mechatronics concentration include: Automation Technician, Control Systems Technician, Electro-Mechanic, Electro-Mechanical Technician (E/M Technician), Electro-Mechanical Equipment Tester, Electronic Instrument Technician, Electronic Technician, and a combination of these titles.

Graduates of the Applied Science in Electronics Engineering Technology degree program may choose to continue their education by pursuing a Bachelor of Science in Electronics Engineering Technology degree.

Program Objectives

Students in the Associate of Applied Science in Electronics Engineering Technology program learn to apply technical and analytical skills in electrical, electronics, and related industry to solve engineering problems and maintain equipment and facilities. They apply mathematical science and engineering principles to solve technical problems, implement complex hardware and software systems, and perform team work in engineering projects,

Graduates of the Applied Science in Electronics Engineering Technology program are expected to attain the following objectives within a few years of graduation:

- Apply acquired technical and analytical skills as it relates to their professional positions in electrical, electronic, and related industries
- Apply relative mathematical, science, and engineering methods to solve technical problems
- Analyze and implement complex systems including both hardware and software
- Pursue lifelong learning and successful professional careers
- Perform as effective team members through adequate oral and written communication skills
- Relate and exercise an educated judgment in regards to their professional and ethical responsibilities

Recommended Certifications

Certifications are not required for completion of this program; however, ECPI encourages students to obtain all appropriate certifications to increase potential job opportunities. ECPI provides students in this program with vouchers which allow the student to take certification exams at a greatly reduced cost. Available certifications for this program include Fiber Optics Installer (FOI), Fiber Optics Technician (FOT), A+ Certification, Network+ Certification, Security+ Certification, GMDSS - Global Maritime Distress and Safety System Maintainer License, GROL - General Radiotelephone Operator's License, and Associate CET.

Outcomes

Upon completion of the Associate of Applied Science in Electronics Engineering Technology Mechatronics Concentration program, graduates will be able to:

In 1.5 years, through a year-round schedule, students can earn an Associate of Science in Electronics Engineering Technology or an Associate of Applied Science in Electronics Engineering Technology (South Carolina only).

Requirements

Simple Requirements

Program Requirements

To receive the Associate of Applied Science in Electronics Engineering Technology (SC only), students must earn 76 semester credit hours. The program requires a minimum of 5 semesters, which is equivalent to 18 months or 75 weeks of instruction. The program requirements are as follows:

Core Curriculum Requirements

Type
Completion Requirement

Core Courses

25 semester credit hours

Fulfill ALL of the following requirements:

Course Categories

Fulfill ALL of the following requirements:

ELECTRICITY

Complete ALL of the following Courses:

- EET110 - Electric Circuits I

AND

AND

Complete one lecture and corresponding lab from the following:

Earn at least 4 credits from the following:

- ESET111 - Electric Circuits II
- ESET111L - Electric Circuits II Lab

AND

ANALOG ELECTRONICS

Complete ALL of the following Courses:

- EET120 - Semiconductor Devices
- EET121 - Electronic Systems Applications

AND

DIGITAL ELECTRONICS

Complete ALL of the following Courses:

- EET130 - Digital Systems I
- EET230 - Digital Systems II

AND

NETWORKING

Complete ALL of the following Courses:

- CST160 - Introduction to Networking

AND

PROGRAMMING

Complete ALL of the following Courses:

- SDC100 - Introduction to Programming

Arts and Sciences Requirements

Type

Completion Requirement

Arts and Sciences Courses*

19 semester credit hours

Fulfill ALL of the following requirements:

Required Courses

Complete ALL of the following Courses:

- COM115 - Principles of Communication
- ENG110 - College Composition

- HUM205 - Culture, Thought, and the Human Experience
- MTH131 - College Algebra
- PHY120 - Physics
- PHY120L - Physics Lab

AND

AND

Complete at least 1 of the following courses:

- ECO201 - Macroeconomics
- ECO202 - Microeconomics
- PSY105 - Introduction to Psychology

**For allowable substitutions of arts and sciences courses, see the Arts & Sciences Department page.*

Self-Integration Requirements

Type

Completion Requirement

Self-Integration Courses

10 semester credit hours

Complete ALL of the following Courses:

- CST120 - Computer Configuration I
- COR191 - Career Orientation
- ET102 - Engineering Math and Software Applications
- FOR110 - Essentials for Success

Mechatronics Concentration Requirements

Type

Completion Requirement

Concentration Courses

13 semester credit hours

Complete ALL of the following Courses:

- MET191 - Materials Science
- MET192 - Graphics Communication
- MET192L - Introduction to 3-D Modeling LAB
- MET211 - Statics
- MET230 - Hydraulics and Pneumatics Systems

Elective Requirements

Type

Completion Requirement

Elective Courses

Earn at least 9 credits from the following:

Students must meet all pre-requisite requirements for their chosen electives.

Fulfill ANY of the following requirements:

BUSINESS

Complete ANY of the following Courses:

- BUS102 - Fundamentals of Customer Service
- BUS121 - Introduction to Business
- BUS242 - Emerging Technologies and World of AI

**Additional business and management coursework that supports engineering technology practice may be approved for elective credit, subject to departmental review for relevance to program outcomes.*

OR

CADD

Complete ANY of the following Courses:

- CAD104 - Rapid Prototyping and 3D Printing
- CAD106 - Civil CAD Design
- CAD108 - Architectural CAD Design
- CAD110 - Building Information Management (BIM)
- CAD112 - AutoCAD Electrical

OR

INFORMATION SYSTEMS

Complete ANY of the following Courses:

- CST140 - Introduction to Operating Systems
- CYB120 - Introduction to Python Programming
- CYB200 - Network Protocols and Services

OR

MATH

Complete ANY of the following Courses:

- MTH200 - Pre-calculus
- MTH220 - Applied Calculus I

OR

MECHANICAL

Complete ANY of the following Courses:

- MET114 - Introduction to Geometric Dimensioning and Tolerancing (GD and T)
- MET213 - Advanced 3D Modeling
- MET221 - Manufacturing Processes
- MET222 - Mechanical Drives and Power Transmission
- MET230L - Hydraulics and Pneumatics Systems Lab
- MET232 - Pumps

OR

PROJECT

Complete ANY of the following Courses:

- ET210 - Capstone Project
- ET210L - Capstone Project Lab

OR

EXTERNSHIP

Complete ANY of the following Courses:

- EET200 - Externship-EET III
- EET203 - Externship-EET I-a
- EET204 - Externship-EET I-b
- EET205 - Externship-EET I-c

OR

ELECTRONICS

Complete ANY of the following Courses:

- EET220 - Industrial Applications
- EET231 - Introduction to Programmable Logic Controllers
- EET272 - Fiber Optics Communication
- EET272L - Fiber Optics Communication LAB
- EET280 - Introduction to Communication Systems
- ESET280 - Introduction to Communication Systems

The Associate of Applied Science in Electronics Engineering Technology (SC Only) | Mechatronics concentration has the following program requirements.

Locations

Columbia, SC

Emergency Medical Services (AAS)

Overview

College
College of Health Science

Program CIP Code
51.0904

The Associate of Applied Science in Emergency Medical Services (EMS) degree follows the 2009 EMS Education Standards published by the US Department of Transportation and involves 555 hours of classroom and lab instruction; an extensive structured 270 hour in-hospital clinical component with experienced preceptors at various medical centers and a field internship with a high performance urban EMS agency.

Students successfully completing this program will be eligible for certification testing by the National Registry of Emergency Medical Technicians.

The Paramedic program provides general instruction in all human body systems and advanced life support management for a wide range of conditions. Components of this program include:

- Introduction to Paramedic
- Pharmacology
- Airway Management and Ventilation
- Advanced Patient Assessment
- Medicine
- Trauma
- Special Populations
- EMS Operations

See also the following additional program information:

- **Admissions Requirements** > Emergency Medical Services | AAS
- **Attendance Policies** > Emergency Medical Services (EMS) | AAS
- Transferability of Credit > Emergency Medical Services section

About Emergency Medical Services

The Paramedic is an allied health professional whose primary focus is to provide advanced emergency medical care for critical and emergent patients who access the emergency medical system. This individual possesses the complex knowledge and skills necessary to provide patient care and transportation. Paramedics function as part of a comprehensive EMS response, under medical oversight. Paramedics perform interventions with the basic and advanced equipment typically found on an ambulance. The Paramedic is a link from the scene into the health care system.

In most communities, Paramedics provide a large portion of the out-of-hospital care and represent the highest level of out-of-hospital care. Paramedics work alongside other EMS and health care professionals as an integral part of the emergency care team.

The Paramedic's scope of practice includes basic and advanced skills focused on the acute management and transportation of the broad range of patients who require emergency medical care. This may occur at an emergency scene until transportation resources arrive, from an emergency scene to a health care facility, between health care facilities, or in other health care settings.

Applicants for employment in Emergency Medical Services must be capable of completing an employment process which may include the following:

- Criminal History Check
- Drug Screening
- Psychological Screening/ Mental Health History
- Driving Record
- Polygraph Examination
- Security Clearance
- Physical Agility
- Physical Health Evaluation
- Military Disciplinary History
- Domestic Violence Investigations
- Credit History

- Social Networking Background Investigation
- Background Investigation
- Panel Interviews
- Behavioral Assessment
- Possession of a Valid Driver's License
- Compliance with policies regarding body art/ tattoos and piercings
- Tobacco Free Agreement
- Educational History

A criminal background check, 5-panel urine drug screen, employment physical, proof of PPD test or negative chest x-ray, proof of tetanus inoculation, a Hepatitis B titer, Varicella titer, proof of MMR vaccination and current AHA Healthcare Provider CPR certification are required.

Recommended Certifications

Successful completion of the National Registry of Emergency Medical Technicians Certification Examination is required to obtain Paramedic Certification. Affiliation or employment with a licensed EMS Agency and approval of the Agency Operational Medical Director is required to practice as a Paramedic.

Student Evaluation

The faculty uses the objectives of the EMS Program as criteria for student evaluation. Student grades are determined by a combination of assignment completion, written examinations, laboratory and clinical competencies and professional behavior as detailed on the course syllabus.

The achievement of the student in theory, psychomotor performance, clinical performance and professional behavior is evaluated by the faculty at regular intervals and shared with the student. The student progresses to the next term when all course requirements have been met. Students must maintain a 73 percent average in all EMS or science courses and meet all psychomotor competency requirements.

At the completion of certain courses, students will be required to complete a computerized, national examination that tests the student’s comprehensive knowledge of the course content. The student must score a minimum of 73% on the unit summative exams.

All clinical courses have minimum hour requirements and minimum clinical competency requirements. Both the minimum hours and the minimum clinical competencies must be met.

A final course grade of less than 73 percent or failure to meet clinical or laboratory requirements will result in failure of a course.

Following completion of all course requirements, the Paramedic student must score a minimum of 73% on the comprehensive capstone exam to be eligible for the National Registry of Emergency Medical Technicians Certification Examination.

Outcomes

The Associate of Applied Science Degree in Emergency Medical Services is designed to prepare Paramedics who are competent in the cognitive (knowledge), psychomotor (skills), and affective (behavior) learning domains to enter the profession.

The Associate of Applied Science Degree in Emergency Medical Services is designed to provide the entry-level Paramedic with knowledge and experience which will enable the graduate to:

The Associate of Applied Science in Emergency Medical Services (EMS) has the following program requirements.

Locations

Newport News, VA (Health Science)

Medical Assisting (AAS)

Overview

College
College of Health Science

Program CIP Code
51.0801

The Associate of Applied Science in Health Sciences-Medical Assisting degree prepares students to perform clinical and administrative functions in a physician‘s office or other medical setting. The program includes didactic classroom instruction, extensive hands-on laboratory experience, and externship in a local area medical facility. Applied Science in Health Sciences-Medical Assisting graduates are CPR certified.

Students graduating from this program may be eligible to become Certified Medical Assistants, Registered Medical Assistants, Certified Phlebotomy Technicians, and EKG Technicians.

The program has entered into a consortium agreement with the University Online campus located at the main campus in Virginia Beach. The agreement enables Arts and Science and Self Integration courses to be delivered asynchronously online. The agreement has zero impact on employment or licensure and there are no additional costs incurred.

See also the following additional program information:

- **Attendance Policy** > Medical Assisting | AAS (includes information about Late Assignments)
- Transferability of Credit > Medical Assisting section

The Health Science/Medical Assisting programs at ECPI University are accredited by the Accrediting Bureau of Health Education Schools (ABHES) at the following ECPI University campuses: Newport News, Northern Virginia, Richmond, Roanoke and Virginia Beach, Virginia; Charlotte, Greensboro and Raleigh, North Carolina; and Charleston, Columbia, and Greenville. This is a programmatic accreditation by ABHES, a recognized accrediting agency for allied health programs, including medical assisting. For more information, visit www.abhes.org.

About Medical Assisting

Medical Assistants perform a combination of clinical and administrative duties. Clinical duties might include preparing the patient for a physician’s examination, collecting and preparing specimens, performing basic laboratory tests and EKGs, removing sutures after surgery, changing dressings, sterilizing medical instruments, and administering injections. They also communicate extensively with patients and other healthcare providers. The administrative duties include scheduling appointments, recording information in electronics medical records, completing insurance forms, arranging for referrals to other healthcare institutions, performing billing functions, and purchasing and maintaining supplies and equipment. These duties occur in a wide range of healthcare settings, such as doctors’ offices, hospitals, clinics, urgent care, and other healthcare facilities.

For employment, students will generally need to pass a routine physical examination, background check, credit check, drug screening, and Mantoux test for tuberculosis and have current vaccinations, including Hepatitis B. Students must be able to comply with all federal regulations regarding HIPAA and OSHA.

Graduates could obtain employment as Medical Assistants, Phlebotomists, or EKG technicians, and they could be expected to work in any healthcare environment.

Recommended Certifications

Certifications are not required for completion of this program; however, ECPI encourages student to obtain all appropriate certifications to increase potential job opportunities. ECPI provides students in this program with vouchers which allow the student to take certification exams at a greatly reduced cost. Students graduating from this program may be eligible to become Certified Medical Assistants (CMA), Registered Medical Assistants (RMA), Certified Phlebotomy Technicians, and EKG Technicians. Students should also obtain their CPR certification.

Student Evaluation

The faculty will use the objectives of the medical assisting program as criteria for student evaluation. The student‘s grades are determined by a combination of professionalism, written examinations, laboratory practical exams, competency checklists, and other assignments.

The student progresses to the next term when all prerequisite courses have been satisfactorily completed. Students must achieve a passing grade of “C” (73 numerical grade) in all MED courses.

Outcomes

Upon completion of the program, graduates of the Associate of Applied Science Medical Assisting program are able to:

About the Medical Radiography Profession

Radiography is a “high touch” profession requiring the technologist to position patients for x-ray examinations. About half of all Radiographers work in hospitals, and the other half work in outpatient facilities. In addition to x-ray equipment, they may, with additional on the job training and/or education, use other advanced imaging modalities such as CT, MRI, Mammography, Bone Densitometry, Cardiac & Vascular Radiography, and others. Graduates of the Associate of Science in Medical Radiograph program may also pursue advanced degrees such as the B.S., M.S., and R.R.A. (Registered Radiologist Assistant). Certificate programs are available in Nuclear Medicine, Radiation Therapy, Sonography (ultrasound), and others. Radiographers may work in various employment conditions, such as doing portable exams in emergency situations, operating rooms, patient rooms, and others.

Background checks, drug screening, a physical examination, current immunizations, and security clearances may be required of graduates seeking employment as a Radiographer.

Radiography can be a physically demanding profession. Radiographers must have the physical capacity to position patients to obtain clear medical images. This activity may require standing, bending, squatting, lifting and moving patients, moving portable x-ray equipment, and overhead x-ray tubes. Radiographers must have the visual acuity to discern the quality of a medical image and analyze the technical results. They must be able to hear well enough to engage in conversation with their patients.

Radiographers are needed in many different healthcare businesses including hospitals, outpatient facilities, clinics, and orthopedic facilities.

Recommended Certifications

Certifications are not required for completion of this program; however, ECPI encourages student to obtain all appropriate certifications to increase potential job opportunities. ECPI provides students in this program with vouchers which allow the student to take certification exams at a greatly reduced cost. Available certifications for this program include R. T. (R), ARRT (Registered Technologist) in Radiography of the American Registry of Radiologic Technologist; and a state license as Radiologic Technologist. Cardio-Pulmonary Resuscitation (CPR) certification is required. ARRT Certification is required for employment.

Student Evaluation

The faculty shall use the objectives of the Medical Radiography Program as criteria for student evaluation.

The student‘s grades are determined by a combination of written examinations, laboratory competence, and/or clinical competence. Radiographer technical skills and ability, attitude, and relationship with others are areas of clinical and laboratory evaluation. The achievement of the student in both theory and clinical performance is evaluated by the faculty at regular intervals and shared with the student.

The student progresses to the next term when all prerequisite courses have been satisfactorily completed. Students must achieve a passing grade of C or better in all Radiography and/or science courses (A&P/Medical Terminology) and satisfactorily meet all clinical objectives. A final course grade of less than C or failure to meet clinical objectives, will result in failure of a course.

- FOR110 - Essentials for Success

The Associate of Applied Science in Medical Radiography has the following program requirements.

Program Philosophy

The Medical Radiography curriculum has been designed to thoroughly prepare students for an entry-level career as a Radiographer. The program teaches the physical and applied science of Radiography, with a focus on the application of theory to clinical practice. This program is designed to provide students with a fundamental imaging foundation so that they are competent clinical practitioners capable of producing diagnostic radiographs while subjecting the patient and healthcare personnel to minimum radiation exposure. Students learn critical thinking skills and independent professional judgment, thus preparing graduates for success on the national and/or any applicable state exams and in the workplace.

Program Purpose

The Medical Radiography program prepares graduates to provide professional patient care and assessment, competent performance of radiologic imaging and total quality management and safety, in the application of ionizing radiation to humans.

The program‘s main purpose is to educate students with the most current knowledge and skills to meet the needs of the client and the demands of the healthcare industry. This program includes emphasis on the culture of safety, education, and interdisciplinary collaborative learning from both community-based and hospital settings.

Upon completion of the program, students receive an Associate of Applied Science degree in Medical Radiography, which allows them to become eligible to sit for the national ARRT exam in Radiography and also qualifies graduates, who pass the ARRT exam, for state licensing. As a Radiographer, a vast range of opportunities are available to the graduate allowing continued professional growth and educational development.

Program Hours

Students are required to attend classes during day hours only on Mondays through Fridays, for five semesters. Each semester is divided into three, five week terms. Each term varies in the number of required courses, depending on the number of credits and contact hours per course, with two to three courses per term.

During the first semester, all classes are on campus, however during the second and third semesters, students will only be on campus Mondays, Wednesdays, and sometimes Fridays. On Tuesdays and Thursdays, students will be assigned to a Radiology department of a clinical affiliate hospital or imaging center. During the fourth and fifth semesters, classes are on campus Tuesdays and Thursdays, with Radiology department assignments on Mondays, Wednesdays, and Fridays. Limited experiences also include alternative evening and weekend schedules.

Clinical and/or externship assignments may include day, evening and weekend hours. The clinical and/or externship facilities used during the program are located throughout the region. Reliable transportation, a flexible schedule and the ability to commute some distance to assignments is required to complete the program.

Locations

Manassas, VA (Northern Virginia), Newport News, VA (Health Science)

Physical Therapist Assistant (AAS)

Overview

College
College of Health Science

Program CIP Code
51.0806

The Associate of Applied Science in Physical Therapist Assistant degree is designed to facilitate the development of each student into a competent, entry-level physical therapist assistant. The program regards each student as an active participant bringing a variety of individual needs and attributes to the educational process. The program is committed to preparing the physical therapist assistant students to become lifelong learners and critical thinkers who will be prepared to contribute to the body of knowledge in physical therapy. Graduates of the program will be prepared to work under the direction and supervision of a physical therapist in the delivery of rehabilitative care. *This program consists of 1,725 contact hours.*

Commission on Accreditation in Physical Therapy Education

The Physical Therapist Assistant program at ECPI University (Newport News and Richmond/Glen Allen, Virginia campuses and Orlando/Lake Mary, Florida campus) is accredited by the Commission on Accreditation in Physical Therapy Education (CAPTE), 3030 Potomac Ave., Suite 100, Alexandria, Virginia 22305-3085; telephone: 703-706-3245; email: accreditation@apta.org; website: http://www.capteonline.org. If needing to contact the program/institution directly, please call 757.490.9090 or email PTADirector@ecpi.edu.

About Physical Therapist Assistant

Physical Therapist Assistants (PTA's) provide physical therapy services under the direction and supervision of a licensed physical therapist. PTA’s help manage patients with back and neck injuries, sprains and strains, arthritis, burns, amputations, wounds, neurological conditions, surgical intervention, and injuries related to work or sports. PTA.'s help individuals of all ages who are ill, injured, or have a health condition that limits their ability to perform daily activities needed for life. Care provided by PTA's may include teaching patients exercises and activities to increase mobility, strength, and coordination. PTA's will also use physical modalities such as heat, ice, ultrasound, traction, massage, or electrical stimulation to help decrease pain, increase motion, and improve function.

Physical Therapist Assistants must be licensed in the state that they wish to practice. This requires graduation from an accredited institution and passing of the National Physical Therapy Examination for PTA's. Some positions may require criminal background checks, drug screening, and/or security clearances. A completed physical exam, evidence of immunization and current CPR certification may also be required.

Students making the decision to enter into this program should be aware of the physical nature of both the profession and their course of study. Students must be able to perform essential functions in order to successfully complete the program and work in the profession at large. Essential functions are the activities/skills that are necessary to ensure that the students are able to provide safe, competent, and timely care to patients receiving physical therapy services. The following standards reflect reasonable expectations of PTA students for the performance of common physical therapy activities. Students must be able to obtain information in the classroom laboratory and clinical setting through observation, auscultation, and palpation. Students must have sufficient motor capabilities, balance, strength, coordination, and stamina to execute the movements and skills to provide safe and effective physical therapy interventions. Students must possess the ability to comprehend, recall, and process large amounts of didactic information. Students must be able to think critically, reason, prioritize, organize, and attend to tasks and responsibilities in a timely manner when performing data collection skills and physical therapy interventions during patient care. Students must be able to utilize effective and efficient communications in the English language to interact with peers, healthcare providers, patients, and family members. Students must demonstrate the ability to practice in a professional and ethical manner. Students must exercise good judgment, develop empathetic and therapeutic relationships patients and others and tolerate close and direct physical contact and broad and diverse populations. Personal attributes must include compassion, integrity, concern for others, interpersonal skills, cultural competence, and motivation.

The most common related job title is Physical Therapist Assistant. Physical Therapist Assistants work in a variety of settings including hospitals, outpatient clinics, rehabilitation, skilled nursing, and extended care facilities, homes, schools, occupational environments, fitness centers and sports training facilities.

Recommended Certifications

Physical Therapist Assistants must be licensed in the state they wish to practice. This requires graduation from an accredited program and passing of the National Physical Therapy Examination for Physical Therapist Assistants. ECPI University provides vouchers allowing students to take certification exams at a greatly reduced cost.

Student Evaluation

The faculty shall use the objectives of the Physical Therapist Assistant Program as criteria for student evaluation. The student‘s grades are determined by a combination of written examinations, laboratory practicals, and clinical competency checklists.

Physical Therapist Assistant technical skills and ability, attitude, and relationship with others are areas of clinical and laboratory evaluation. The achievement of the student in both theory and clinical performance is evaluated by the faculty at regular intervals and shared with the student. The student progresses to the next term when all prerequisite courses have been satisfactorily completed. Students must achieve a passing grade of B or better in Anatomy and Physiology I and II courses and a grade of C or better in all PTA courses and satisfactorily meet all clinical objectives. A final course grade of less than C or failure to meet clinical objectives, will result in failure of a course.

Written assignments must be submitted on time. Tests and assignments must be made up on the student‘s first classroom day back to school after an absence, unless the student makes alternate arrangements with the instructor.

Student success involves:

1. Faculty interested in teaching and learning
2. Students interested in learning and are accountable for their education
3. Effective feedback to allow the student to correctly monitor his/her progress within the curriculum
4. Professional behaviors are essential to an effective entry-level practitioner. Professional behaviors are learned through sharing and modeling effective practice. Professional behaviors include:
    1. Commitment to learning
    2. Interpersonal skills
    3. Communication
    4. Effective use of time and resources
    5. Stress management
    6. Use of constructive feedback
    7. Problem solving
    8. Responsibility
    9. Critical thinking
    10. Ethical choices and decisions

Students will interact with all levels of healthcare practitioners. Communication is essential for effective and safe practice within the healthcare system. Communication is emphasized throughout the curriculum in various activities and role modeling in the laboratory.

Outcomes

The Associate of Applied Science Physical Therapist Assistant program has the following program outcomes:

Student/Graduate Level Goals

- The PTA program will prepare graduates for entry-level practice as physical therapist assistants who will work under the direction and supervision of a physical therapist in an ethical, legal, safe, and effective manner
- The PTA program will prepare graduates to demonstrate entry-level critical thinking skills to effectively address patient care situations and to adapt to the rapidly changing challenges in healthcare and physical therapist assistant responsibilities

Program Level Goals

- The PTA program will educate the students in cultural diversity, effective communication and professional behaviors
- The PTA education program will facilitate participation in community service and lifelong learning activities
- The PTA Program will provide a contemporary, comprehensive and evidence-based curriculum appropriate for an entry level physical therapist assistant

Program Faculty Level Goals

- The PTA faculty will engage in on-going professional development related to enhancing knowledge of contemporary physical therapy practice, pedagogy, and service

The Associate of Applied Science for the Physical Therapist Assistant has the following program requirements.

Program Philosophy

The program for physical therapist assistants is built on a foundation of academic coursework and technical education. Program faculty and staff are strongly committed to providing all students with an exciting, stimulating, and comprehensive learning experience. The program prepares a graduate to provide safe, effective, ethical, and legal care to persons of all ages and diverse backgrounds. The program develops the ability of the student to think independently, to understand fundamental theory, and to develop the skills necessary to become clinical practitioners who are enlightened decision makers.

Program Purpose

The physical therapy profession is involved in rehabilitation, prevention, health maintenance, and programs that promote health, wellness, and fitness. Physical therapist assistants are essential participants in the healthcare delivery system. The physical therapist assistant functions within the model of patient care through examination, evaluation, and treatment by providing physical therapy interventions and data collection. The physical therapist assistant will progress the rehabilitation process of a patient within the plan of care established by the supervising physical therapist. The physical therapist assistant education is a comprehensive program providing the correct mix of technical training and general education to ensure graduates are able to function effectively as highly skilled professionals within the healthcare system. A variety of instructional methods are utilized in program courses to support the learning style of each student, yet challenge the student to recognize and develop alternative learning styles.

Program Hours

Students are required to attend classes Monday through Friday 8:00 a.m. to 4:00 p.m. During the clinical education experience the student will be assigned to an off-site facility and follow the schedule as determined by the clinical instructor.

Locations

Newport News, VA (Health Science), Orlando, FL (Lake Mary), Richmond, VA (Emerywood)

Surgical Technology (AAS)

Overview

College
College of Health Science

Program CIP Code
51.0909

The Associate of Applied Science in Surgical Technology program is designed to prepare students for a career as a surgical technologist. The program of study will introduce students to the basics of surgical technology and will include a practicum providing the student with a hands-on experience in the operating room. The technology courses will give students additional skills to enhance their advancement in the surgical environment.

The curriculum is also designed to give students a general education knowledge base which will complement their skills in the major subject areas. Additionally, the curriculum is also designed to prepare the student for the surgical technology national certifying examination which will be administered as part of the core curriculum.

The program has entered into a consortium agreement with the University Online campus located at the main campus in Virginia Beach. The agreement enables Arts and Science and Self Integration courses to be delivered asynchronously online. The agreement has zero impact on employment or licensure and there are no additional costs incurred. *This program consists of 1,505 contact hours.*

See also the following additional program information:

- Transferability of Credit > Surgical Technology section

The Surgical Technology programs are accredited by the Accrediting Bureau of Health Education Schools (ABHES) at the following ECPI campuses: Northern Virginia and Richmond, Virginia campuses. This is a programmatic accreditation by ABHES, a recognized accrediting agency for allied health programs including surgical technology. For more information, For more information, visit www.abhes.org.

About Surgical Technology

An entry level surgical technologist is able to act as a “primary scrub” in a variety of surgical procedures, and he or she can participate in all aspects of the operating room experience.

Requirements include negative drug screen, clear criminal background check, Certified Surgical Technologist (CST) certification preferred; proof of immunizations/ immunity to common communicable diseases (HepB; Td; MMR; Varicella; TB; etc); physical examination and CPR certification.

Students must have good manual dexterity, the ability to lift/push/pull up to 50 pounds, the ability to stand for more than 4 hours, and good eyesight with the ability to distinguish colors.

Graduates are eligible for employment as a surgical technologist in hospital based and ambulatory surgical centers.

Recommended Certifications

Certification requirements for employment vary from state to state and are required in the state of Virginia. ECPI University provides vouchers allowing students to take certification exams at a greatly reduced cost. The Certified Surgical Technologist (CST) certification is recommended.

Outcomes

Students who graduate from the Associate of Applied Science in Surgical Technology program will be equipped with the knowledge and skill to assist with basic and advanced surgical procedures. This knowledge will prepare students to perform in major operating rooms, minor surgery, surgical centers, and surgeon‘s offices. Specific program objectives are designed to enable graduates to:

Nursing (ADN)

Overview

College
College of Nursing

Program CIP Code
51.3801

The Associate Degree in Nursing (ADN) program is dedicated to providing education opportunities for qualified students from diverse backgrounds in caring for individuals, families, and communities and for preparing graduates for the entry level practice of nursing in a variety of healthcare settings. A foundation for life-long personal and professional learning is built upon a broad base of liberal arts and sciences, humanities, and nursing theory, to assist students to develop ethically reflective professional nursing skills that will uphold the ideals of today's healthcare delivery system. Through evidence-based clinical decision-making in nursing practice and the development of leadership skills, the entry level professional registered nurse will be educated to serve and benefit a multicultural society across the life span.

For additional information about the program link to: http://www.ecpi.edu/medical/program/registered-nursing-associate-degree/. To see the Student Consumer Information link to: https://www.ecpi.edu/student-consumer-services which provides additional information on the future careers, success, cost, and financing for this program. For information on the University Completion and Graduation Rates, please see About ECPI University on the ECPI website.

In 1.5 years, through our year round instruction, you can earn an Associate Degree in Nursing.

See also the following additional program information:

- **Admissions Requirements** > Nursing | ADN
- Transferability of Credit > Nursing | ADN section
- Prior Learning Credit
- **Attendance Policy** > Nursing | ADN (includes information on Clinical Phase Absenteeism and Tardiness)
- Clinical Protocol

The associate nursing program at ECPI University at the Newport News, Richmond, Roanoke, Manassas and Virginia Beach campuses located in Virginia and the Greenville South Carolina Campus are accredited by the:

Accreditation Commission for Education in Nursing (ACEN) - 3390 Peachtree Road NE, Suite 1400 Atlanta, GA 30326 - (404) 975-5000 - https://www.acenursing.org

The most recent accreditation decision made by the ACEN Board of Commissioners for the associate nursing program is initial accreditation.

View the public information disclosed by the ACEN regarding this program on the ACEN website.

About Nursing

Registered nurses have many different career options. They can hold various positions including charge nurse, floor nurse, and even some management positions. Registered nurses are also prepared to continue their formal education and prepare for more advanced nursing degrees and certifications.

Typical employment opportunities require a background check, drug screen, drug calculation test, American Heart Association Basic Life Support (BLS) Certification. The individual needs to have the ability to perform the following: execute a full range of motion, utilize fine and gross motor skills, demonstrate physical stamina, and lift 25 pounds.

Available job titles are Registered Nurse and Staff Nurse.

Recommended Licensure

The Associate Degree in Nursing program is approved by the State Board of Nursing for the state in which the ECPI University campus which the student attends is located. ECPI University provides vouchers allowing students to take licensure exams administered by the student's state's Board of Nursing at a greatly reduced cost. All Associate Degree Nursing graduates must successfully pass the National Council Licensing Exam for Registered Nurses (NCLEX-RN) before being able to practice as a Registered Nurse (RN).

While ECPI University's Associate Degree in Nursing program does not have its own distinct accreditation by a national nursing education body, it is not required for licensure. ECPI University is accredited by the Southern Association of Colleges and Schools Commission on Colleges to award the associate, baccalaureate, and master's degrees and diplomas. See Accreditation and Approvals, State Licensure, State Nursing Approvals for additional information.

Student Evaluation

The faculty shall use the objectives of the Program of Nursing as criteria for student evaluation. The student's grades are determined by a combination of written examinations, laboratory competence, and clinical performance.

Nursing ability, attitude, and relationship with others are areas of clinical and laboratory evaluation. The achievement of the student in both theory and clinical performance is evaluated by the faculty at regular intervals and shared with the student. The student progresses to the next term when all prerequisite courses have been satisfactorily completed. Students must achieve an 80 percent average in all nursing or science courses and satisfactorily meet all clinical objectives and laboratory objectives. A final course grade of less than 80 percent or failure to meet clinical or laboratory objectives will result in failure of a course.

Outcomes

The Associate Degree in Nursing is designed to provide the entry-level nurse with knowledge and experience which will enable the graduate to:

The Associate Degree in Nursing is equivalent to and at the same degree level as an Associate of Applied Science.

Requirements

Simple Requirements

Program Requirements

To receive the Associate Degree in Nursing, students must earn a minimum of 71 credit hours. The program requires a minimum of 5 semesters, 18 months, or 75 weeks of instruction. **Program requirements vary by state, in accordance with State Boards of Nursing.** The program requirements are as follows:

Virginia and South Carolina

Type
Completion Requirement

Core Curriculum Requirements

49 semester credit hours

Complete ALL of the following Courses:

- NUR119 - Dosage Calculations for Professional Nursing
- NUR138 - Pharmacology
- NUR164 - Concepts of Nursing I
- NUR166 - Concepts of Nursing II
- NUR168 - Concepts of Nursing III
- NUR221 - Pathophysiology
- NUR234 - Mental Health Nursing
- NUR242 - Maternal Newborn Nursing
- NUR243 - Parent Child Nursing
- NUR256 - Medical Surgical Nursing I
- NUR257 - Medical Surgical Nursing II
- NUR258 - Acute Care Nursing
- NUR273 - Dimensions of Professional Nursing
- NUR280 - Nursing Capstone

Arts and Sciences Requirements*

20 semester credit hours

Complete ALL of the following Courses:

- BIO111 - Anatomy and Physiology with Terminology I
- BIO111L - Anatomy and Physiology with Terminology I Lab
- BIO116 - Anatomy and Physiology with Terminology II
- BIO116L - Anatomy and Physiology with Terminology II Lab
- ENG110 - College Composition
- HUM205 - Culture, Thought, and the Human Experience
- MTH131 - College Algebra
- PSY105 - Introduction to Psychology

**For allowable substitutions of arts and sciences courses, see the Arts & Sciences Department page.*

Self-Integration Requirements

2 semester credit hours

Complete ALL of the following Courses:

- COR101 - Freshman Orientation
- COR195 - Study Skills

North Carolina

Type
Completion Requirement

Core Curriculum Requirements

49 semester credit hours

Complete ALL of the following Courses:

- NUR119 - Dosage Calculations for Professional Nursing
- NUR138 - Pharmacology
- NUR164 - Concepts of Nursing I
- NUR166 - Concepts of Nursing II
- NUR168 - Concepts of Nursing III
- NUR221 - Pathophysiology

The Associate Degree in Nursing has the following program requirements.

Program Philosophy

The Nursing Department believes that each individual is a unique person having dignity and worth. Individuals, as members of the family and the community, are shaped by cultural, physiological, psychosocial, spiritual, and developmental forces. The family and the community influence early beliefs and values of individuals, and in turn individuals contribute to the effective functioning of the family and community.

We believe that Nursing is both an art and a science grounded in a social context and related to experiences with people in need. It is based on a specific body of nursing theory and principles from behavioral and social sciences. Nursing is an interpersonal process and involves the application of knowledge, technical and collaborative skills, critical thinking, and creative problem-solving. The focus of nursing is on individuals, families, or client groups. By using the nursing process, nurses promote, maintain and restore clients' health as well as provide compassionate care to the dying. As healthcare providers, nurses engage in a collaborative practice that focuses on outcomes and adheres to practice guidelines that ensure quality and access.

We believe that professional values and value-based interventions are fundamental to nursing education. As the basis for professional nursing practice, values and value-based actions may be viewed as ethically reflective practice that the nursing student uses to interact with patients, healthcare professionals, and society.

We believe that teaching/learning is a life-long interactive process through which active inquiry and participation result in a change in behavior. The teaching/learning process is facilitated when the learner and teacher share responsibility for outcomes. Learning is facilitated when content is presented in an orderly sequential manner, i.e. simple to complex, known to unknown, normal to abnormal, general to specific.

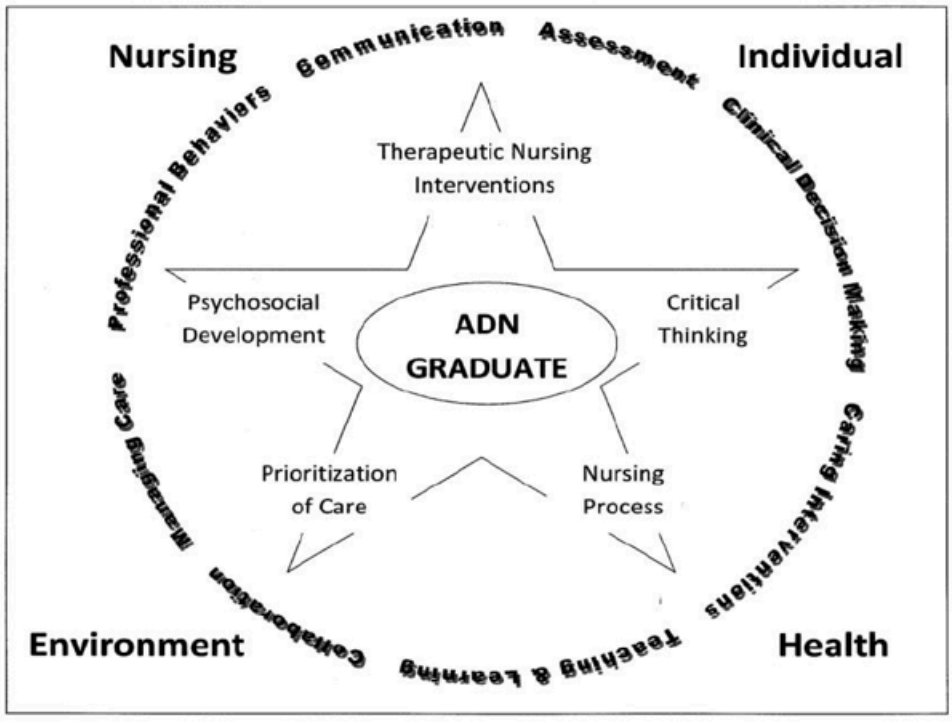

We believe that critical thinking, clinical competence, accountability, and a commitment to the value of caring is necessary to maintain or restore clients their optimum state of health and to provide the support which allows death with dignity. As the provider of care, the nurse's commitment to client/family-centered care will facilitate successful preparation for practice in various healthcare settings where policies and procedures are specified and guidance is available.

We believe it is essential that the nurse have current knowledge in nursing concepts, principles, processes, and skills. Supportive of that knowledge is an understanding of health, acute and chronic health deviations, nutrition, pharmacology, communication, human development, teaching/learning principles, current technology, humanities, and biological, social, and behavioral sciences.

We believe the nurse is the manager of care in various healthcare settings where policies and procedures are specified and guidance is available. To be competent in the role as a manager of care, the nurse must possess the knowledge and skills necessary to make decisions regarding priorities of care, to delegate some aspects of nursing care, direct others to use time and resources efficiently, and to know when to seek assistance. Supporting this knowledge is an understanding of the principles of client-care management, communication, and delegation, legal parameters of nursing practice, and roles and responsibilities of members of the healthcare team.

We believe that the entry level practice of a graduate from the Associate Degree in Nursing program is characterized by collaboration, organization, delegation, accountability, advocacy, and respect for other healthcare workers. As a coordinator of care, the entry level registered nurse demonstrates caring and compassion and provides and coordinates holistic nursing care for groups of clients who have healthcare needs.

Conceptual Framework

Program Purpose

The nursing program offers potential candidates the opportunity to complete an Associate Degree in Nursing. The program is designed for the purpose of providing additional opportunities for those interested in obtaining a license and practicing as a registered nurse. The Nursing program prepares graduates to provide direct client care in a safe, effective manner across multiple settings.

The ADN education in Nursing equips nursing students with the knowledge and skills prerequisite to begin professional practice in the care, counseling, and education of multicultural healthcare consumers in a variety of settings. The Nursing Program will graduate a competent entry-level professional nurse workforce for providers of healthcare in local, statewide, and national communities. ECPI sees this opportunity as one that will positively impact the local shortage of registered nurses and support the healthcare community in hiring qualified candidates to work in their facilities.

Program Hours

Day	Class hours may vary from 4 – 5 days per week from 8:00 AM to 5:00 PM depending on course requirements. Clinical hours may include day, evening or weekend hours depending on the clinical site and course requirements.
Evenings	Class hours may vary from 4 – 5 evenings per week from 5:30 PM to 10:30 PM and 8:00 AM to 4:30 PM on weekends. Clinical hours may include evening or weekend hours depending on the clinical site and course requirements. Occasional day clinical rotations may be required.
Preceptorship Hours:	Clinical hours are scheduled to meet the staffing schedule of the Professional Nurse assigned and may include day, night or weekend hours. Schedules may vary by course and instructor. 12 hour clinical shifts may be required as needed.

Computer-Aided Drafting and Design (AS)

Overview

College
College of Technology

Program CIP Code
15.1302

The Associate of Science in Computer-Aided Drafting and Design program focuses on real-world application of engineering principles. Students in the Associate of Science in Computer-Aided Drafting and Design program will take a hands-on approach, utilizing a variety of drafting software and tools to create drawings in support of engineering projects. The program focuses on needed skills and competencies to develop the ability for the creation of two- and three-dimensional drawings, models, and designs for various engineering fields such as mechanical, electrical, architectural, and civil. Through a capstone experience, students will develop an effective solution to a problem statement related to engineering systems utilizing acquired skills in computer-aided drafting and design.

About Computer-Aided Drafting and Design

The Computer-Aided Drafting and Design program prepares students for design and drafting careers supporting the various engineering fields such as mechanical, electrical, architectural, and civil. Graduates will apply acquired skills in computer drafting software to create engineering designs and models in support of engineering projects. Designers work with engineers to develop a comprehensive design documentation for engineering projects to include, graphical presentations, animations, prototypes and analysis of relevant parts. As an integral part of the design team, graduates play a vital role in the various stages of the design process from the conception to the final design production.

Certain positions may require background checks, drug screening, and/or security clearances, depending on the position and industry.

The curriculum provides graduates with the education and foundation needed for employment in a variety of industries in the private and public sector, including the automotive industry, aerospace industry, automation and manufacturing, architectural and civil firms. Computer-Aided Drafting and Design graduates are employed in a wide spectrum of areas, in positions such as CAD Designer, CAD Technician, Mechanical Drafter, Mechanical Designer, and Technical Illustrator.

Program Objectives

Graduates of the Associate of Science in Computer-Aided Drafting and Design program are expected to attain the following objectives within a few years of graduation:

- Apply acquired technical and analytical skills as it relates to their professional positions in electrical, mechanical, architectural, civil, and related industries.
- Develop engineering drawings, models and designs as applied to various engineering fields.
- Pursue lifelong learning and successful professional careers.
- Perform as effective team members through adequate oral and written communication skills.
- Relate and exercise an educated judgment in regard to their professional and ethical responsibilities.

Recommended Certifications

Certifications are not required for completion of this program; however, ECPI encourages student to obtain all appropriate certifications to increase potential job opportunities. ECPI provides students in this program with vouchers which allow the student to take certification exams at a greatly reduced cost. Available certifications for this program include AutoCAD Certified User and Inventor Certified User.

Outcomes

Students in the Associate of Science in Computer-Aided Drafting and Design program learn to use drafting software to create and visualize design concepts for product manufacturing, architectural designs, and civil infrastructure planning. They are able to apply acquired skills in design and drafting to analyze and prototype designs.

The Associate's in Science in Computer-Aided Drafting in Design has the following program requirements:

Locations

Virginia Beach, VA (Main), Newport News, VA

Electronics Engineering Technology (AS) | Electronics Engineering Technology Concentration

Overview

College
College of Technology

Program CIP Code
15.1202

Electronics Engineering Technicians install, maintain and repair electrical and electronic equipment. They also assist in the development, testing, production, and quality assurance of equipment and components such as: circuit boards, wireless phones, PDAs, medical equipment, and control systems. Skills in the Mechatronics field can be applied in various areas including maintenance and repair, installation, quality assurance, and research and development.

Students in the Electronics Engineering Technology concentration learn about subjects such as fiber optics, analog and digital electronics, control systems, and network technologies. They are able to use test equipment to troubleshoot, maintain, and repair electronic systems, as well as computer and network technologies.

The Electronics Engineering curriculum provides the education and foundation needed for employment in a variety of related industries in both the private and public sector including: automation and manufacturing, aerospace, automotive, and computer industries.

About Electronics Engineering Technology

Electronic Engineering Technicians install, maintain, and repair electrical and electronic equipment. They assist engineers in the development, testing, production, and quality assurance of equipment and components such as circuit boards, wireless phones, medical equipment, and control systems. Electronics Engineering Technicians are needed in many industries and can find employment in work environments where electronics are used extensively.

Some positions may require background checks, drug screening, and/or security clearances, depending on the position and industry.

Some entry-level job titles for an Applied Science in Electronics Engineering Technology graduate include: Medical Equipment Repairer and Installer, Biomedical Equipment Technician, Biomedical Support Technician, Electronics Technician, Computer Engineering Technician, Computer Support Specialist, Electrical/Electronic Engineering Technician, Field Service Technician, and Technical Salesperson.

Graduates of the Applied Science in Electronics Engineering Technology degree program may choose to continue their education by pursuing a Bachelor of Science in Electronics Engineering Technology degree.

Program Objectives

Students in the Associate of Applied Science in Electronics Engineering Technology program learn to apply technical and analytical skills in electrical, electronics, and related industry to solve engineering problems and maintain equipment and facilities. They apply mathematical science and engineering principles to solve technical problems, implement complex hardware and software systems, and perform teamwork in engineering projects.

Graduates of the Applied Science in Electronics Engineering Technology program are expected to attain the following objectives within a few years of graduation:

- Apply acquired technical and analytical skills as it relates to their professional positions in electrical, electronic, and related industries
- Apply relative mathematical, science, and engineering methods to solve technical problems
- Analyze and implement complex systems including both hardware and software
- Pursue lifelong learning and successful professional careers
- Perform as effective team members through adequate oral and written communication skills
- Relate and exercise an educated judgment in regards to their professional and ethical responsibilities

Recommended Certifications

Certifications are not required for completion of this program; however, ECPI encourages student to obtain all appropriate certifications to increase potential job opportunities. ECPI provides students in this program with vouchers which allow the student to take certification exams at a greatly reduced cost. Available certifications for this program include Fiber Optics Installer (FOI), Fiber Optics Technician (FOT), A+ Certification, Network+ Certification, Security+ Certification, GMDSS - Global Maritime Distress and Safety System Maintainer License, GROL - General Radiotelephone Operator's License, and Associate CET.

Outcomes

Graduates of the A.S. EET Electronics Engineering concentration will use interactive hands-on education in technology to achieve the following outcomes:

Electronics Engineering Technology (AS) | Mechatronics Concentration

Overview

College
College of Technology

Program CIP Code
15.0406

Electronics Engineering Technicians install, maintain and repair electrical and electronic equipment. They also assist in the development, testing, production, and quality assurance of equipment and components such as: circuit boards, wireless phones, PDAs, medical equipment, and control systems. Skills in the Mechatronics field can be applied in various areas including maintenance and repair, installation, quality assurance, and research and development.

Students in the Mechatronics concentration will focus on core areas such as programmable controllers, hydraulics and pneumatics, testing and measuring instruments, materials science, automation and control systems, and computer programming and networks.

The Mechatronics concentration will offer you the chance to work with and troubleshoot programmable logic controllers, and integrated systems; learn by doing while grasping a firm theoretical foundation in electronics; and put into practice your acquired knowledge through several hands-on projects.

About Electronics Engineering Technology

Mechatronics Technicians play a critical role in advanced manufacturing. Through their combined skills in mechanical, electrical, and electronics circuits, they are able to troubleshoot, repair, and maintain computer-controlled mechanical systems.

Some positions may require background checks, drug screening, and/or security clearances, depending on the position and industry.

Some entry-level job titles for an Applied Science in Electronics Engineering Technology graduate with a Mechatronics concentration include: Automation Technician, Control Systems Technician, Electro-Mechanic, Electro-Mechanical Technician (E/M Technician), Electro-Mechanical Equipment Tester, Electronic Instrument Technician, Electronic Technician, and a combination of these titles.

Graduates of the Applied Science in Electronics Engineering Technology degree program may choose to continue their education by pursuing a Bachelor of Science in Electronics Engineering Technology degree.

Recommended Certifications

Certifications are not required for completion of this program; however, ECPI encourages student to obtain all appropriate certifications to increase potential job opportunities. ECPI provides students in this program with vouchers which allow the student to take certification exams at a greatly reduced cost. Available certifications for this program include Fiber Optics Installer (FOI), Fiber Optics Technician (FOT), A+ Certification, Network+ Certification, Security+ Certification, GMDSS - Global Maritime Distress and Safety System Maintainer License, GROL - General Radiotelephone Operator's License, and Associate CET.

Outcomes

Upon completion of the Associate of Science in Electronics Engineering Technology | Mechatronics Concentration program, graduates will be able to:

In 1.5 years, through a year-round schedule, students can earn an Associate of Science in Electronics Engineering Technology.

Requirements

Simple Requirements

Program Requirements

To receive the Associate of Science in Electronics Engineering Technology Mechatronics Concentration, students must earn 76 semester credit hours. The program requires a minimum of 5 semesters, which is equivalent to 18 months or 75 weeks of instruction. The program requirements are as follows:

Core Curriculum Requirements

Type
Completion Requirement

Core Courses

25 semester credit hours

Fulfill ALL of the following requirements:

Course Categories

Fulfill ALL of the following requirements:

ELECRICITY

Complete ALL of the following Courses:

- EET110 - Electric Circuits I

AND

Complete one lecture and corresponding lab from the following:

Earn at least 4 credits from the following:

- ESET111 - Electric Circuits II
- ESET111L - Electric Circuits II Lab

AND

ANALOG ELECTRONICS

Complete ALL of the following Courses:

- EET120 - Semiconductor Devices
- EET121 - Electronic Systems Applications

AND

DIGITAL ELECTRONICS

Complete ALL of the following Courses:

- EET130 - Digital Systems I
- EET230 - Digital Systems II

AND

NETWORKING

Complete ALL of the following Courses:

- CST160 - Introduction to Networking

AND

PROGRAMMING

Complete ALL of the following Courses:

- SDC100 - Introduction to Programming

- MET230 - Hydraulics and Pneumatics Systems

Elective Requirements

Type
Completion Requirement

Elective Courses

9 semester credit hours

Students must meet all pre-requisite requirements for their chosen electives.

Fulfill ANY of the following requirements:

BUSINESS

Complete ANY of the following Courses:
- BUS102 - Fundamentals of Customer Service
- BUS121 - Introduction to Business
- BUS242 - Emerging Technologies and World of AI

**Additional business and management coursework that supports engineering technology practice may be approved for elective credit, subject to departmental review for relevance to program outcomes.*

OR

CADD

Complete ANY of the following Courses:
- CAD104 - Rapid Prototyping and 3D Printing
- CAD106 - Civil CAD Design
- CAD108 - Architectural CAD Design
- CAD110 - Building Information Management (BIM)
- CAD112 - AutoCAD Electrical

OR

INFORMATION SYSTEMS

Complete ANY of the following Courses:
- CST140 - Introduction to Operating Systems
- CYB120 - Introduction to Python Programming
- CYB200 - Network Protocols and Services

OR

MATH

Complete ANY of the following Courses:

- MTH200 - Pre-calculus
- MTH220 - Applied Calculus I

OR

MECHANICAL

Complete ANY of the following Courses:

- MET114 - Introduction to Geometric Dimensioning and Tolerancing (GD and T)
- MET213 - Advanced 3D Modeling
- MET221 - Manufacturing Processes
- MET222 - Mechanical Drives and Power Transmission
- MET230L - Hydraulics and Pneumatics Systems Lab
- MET232 - Pumps

OR

PROJECT

Complete ANY of the following Courses:

- ET210 - Capstone Project
- ET210L - Capstone Project Lab

OR

Mechanical Engineering Technology (AS)

Overview

College
College of Technology

Program CIP Code
15.0805

The Associate of Science in Mechanical Engineering Technology program is a hands-on career in testing, manufacturing, operations, maintenance and technical support. Students will be taught skills that support industries such as Product Design and Fabrication, and Manufacturing and Systems Control.

About Mechanical Engineering Technology

Some positions may require background checks, drug screening, and/or security clearances, depending on the position and industry.

Some entry-level job titles for an Associate of Science in Mechanical Engineering Technology graduate include manufacturing technician, mechanical engineering technician, drafting and computer graphics technician, industrial technician, or plant maintenance technician.

Graduates of the Associate of Science in Mechanical Engineering Technology degree program may choose to continue their education by pursuing a Bachelor of Science in Mechanical Engineering Technology degree.

Program Objectives

Students in the Associate of Science in Mechanical Engineering Technology program learn to apply technical and analytical skills in mechanical engineering technology to solve engineering problems, maintain equipment and facilities. They apply mathematical, science and engineering principles to solve technical problems, troubleshoot and maintain mechanical systems, and perform team work in engineering projects.

Recommended Certifications

Certifications are not required for completion of this program but are encouraged. ECPI University provides vouchers allowing students to take certification exams at a greatly reduced cost.

Outcomes

Students in the Associate of Science in Mechanical Engineering Technology degree focus on problem solving and real-world application of applied engineering sciences and technology. Mechanical engineering technicians are real problem solvers with responsibilities ranging from those of a support technician to plant manager.

Upon successful completion of the program, graduates will be able to:

Applied Data and AI Operations (BS) (Accepting Enrollments for a January 2027 Term Start)

Overview

College
College of Technology

Program CIP Code
11.0501

The Bachelor of Science in Applied Data and AI Operations prepares students to design, deploy, operate, test, and secure data and AI-enabled systems within real organizational environments. The program integrates applied artificial intelligence, data operations, systems engineering, testing, and DevSecOps practices into a unified curriculum focused on reliability, security, and operational effectiveness.

Students develop professional competencies in SQL, data pipelines, analytics, AI integration, systems development processes, testing, continuous integration and deployment, and AI operations. Emphasis is placed on applied workflows, lifecycle thinking, and responsible use of AI technologies rather than theoretical model development or advanced mathematics.

Graduates are prepared for entry-level roles such as Data Analyst, Business Intelligence Analyst, Junior Data Engineer, Analytics Engineer, Systems Engineer (entry-level), DevSecOps Analyst, AI Operations Analyst, and Technical Operations Analyst across healthcare, government, logistics, education, finance, and other sectors.

About Applied Data and AI Operations

Graduates of an Applied Data and AI Operations degree program have many career options. They often have career paths that lead them into data and AI operations leadership positions, including AI Operations Manager, Machine Learning Operations (MLOps) Lead, or Director of Data Engineering. They design, build, and maintain the data pipelines, cloud infrastructure, and automation that allow organizations to deploy and operate AI systems reliably at scale. They develop and test monitoring, security, and quality-assurance practices to ensure AI-enabled systems remain accurate, secure, and dependable. Graduates also may work as data engineers, business intelligence developers, or systems integrators who design, implement, and maintain the data and AI systems that are the backbone to any modern organization's operations.

Certain positions may require background checks, drug screening, and/or security clearances, depending on the position and industry.

Some entry-level job titles for a Bachelor of Science in Applied Data and AI Operations graduate include Data Operations Analyst, Junior Data Engineer, AI/ML Operations Technician, Cloud Support Associate, Business Intelligence Analyst, and Systems Administrator. Applied data and AI skills are in demand across many industries, so employment can be expected in most any business, government, or military setting.

Certifications are not required for completion of this program; however, ECPI encourages students to obtain all appropriate certifications to increase potential job opportunities. ECPI provides students in this program with vouchers which allow them to take certification exams at a greatly reduced cost. Available certifications for this program include CompTIA IT Fundamentals, CompTIA A+, CompTIA Network+, CompTIA Linux+, CompTIA Cloud+, CompTIA Data+, CompTIA Security+, AWS Certified Cloud Practitioner, AWS Certified Machine Learning - Specialty, Microsoft Azure AI Fundamentals (AI-900), and Microsoft Azure Data Fundamentals (DP-900).

Outcomes

Students in the Bachelor of Science in Applied Data and AI Operations program develop planning, design, implementation, operations skills in artificial intelligence (AI), data systems, cloud infrastructure, software development, and secure AI operations. Students learn to build and manage data pipelines, apply machine learning and analytics to business problems, integrate AI into operational systems, and monitor the reliability, security, and performance of AI-enabled solutions. Students also develop the professional and problem-solving skills needed to help organizations adopt and operate data and AI technologies effectively.

Upon completion of the Bachelor of Science in Applied Data and AI Operations, graduates will be able to:

Business Administration (BS) | Accounting Concentration

Overview

College
College of Business and Criminal Justice

Program CIP Code
52.0301

In ECPI's Bachelor of Science in Business Administration (B.S.B.A.) program, students develop decision-making, problem-solving, and leadership skills based on a foundation of practical knowledge and application of business fundamentals. Students investigate business theory as it relates to accounting, management, analytics, and operations.

The program creates a unique opportunity for the student to explore the diverse aspects of business as they relate to today's global environment. The focus on real-world application, case studies, hands-on activities, and relevant scenarios are woven into the framework of the program to develop and enhance analytical, professional, and organizational skills. The curriculum integrates the functional areas of the business environment, such as finance, accounting, marketing, and management.

In today's marketplace, business, industry, government, and not-for-profit organizations need high-quality and near to real time financial information to compete in local, national, and global markets. The accountant is a key person who can provide management with this critical information. No organization can function effectively without accounting.

Our Bachelor of Science in Business Administration with a concentration in Accounting provides students with an in-depth understanding of accounting principles. Accounting graduates are prepared to pursue careers in public accounting, business, or government. This concentration offers two tracks:

TRACK	DESCRIPTION
Accounting Data Analytics Track	The accounting data analytics track provides students with an opportunity to engage with auditing and analytics knowledge that adds to their accounting concentration. Organizations want data-driven perspectives and decisions. The additional analytics focus allows students to look at data output while combining financial and accounting insights. **students interested in sitting for the CPA exam, depending on state of residence, will need thirty upper division accounting credits.*
General Accounting Track	The general accounting track covers the additional topics of auditing and personal taxation, providing students with a broad overview of accounting. By taking the additional core areas, students will become well rounded accounting graduates. The focus on auditing prepares students to track and verify accounting transactions and their source when reviewing financial reports to meet organizational goals.

4 + 1 Undergraduate to Graduate Option

The 4+1 programs offer students with the opportunity to seamlessly transition from their bachelor's degree to a master's degree in an accelerated timeframe. This program allows students to complete both degrees by integrating selected graduate-level coursework into their undergraduate curriculum. By taking advantage of this program, students can maximize their time and resources, efficiently advancing their education and enhancing their career prospects. Through rigorous coursework and advanced research projects, students develop specialized knowledge and skills in their chosen field, positioning themselves for leadership roles and further academic pursuits upon graduation.

4 + 1 BSBA to MBA/MSM Program

The 4+1 programs allow for BSBA/BSOL students to take up to 6 credit hours (2 classes) that count towards fulfilling their undergraduate degree requirements and count towards the completion of their master's program. The bachelor's degree is awarded after successful completion of all BSBA or BSOL requirements. Once the bachelor's degree is completed, a student is required to apply for the graduate program.

Below is the program curriculum for the 4+1 course pairings offered. Some undergraduate courses listed are required for the program, while others may be taken as electives. While the student is enrolled in the undergraduate course, additional course work is required at that time for the 4+1 program. The admission criteria for participation in the 4+1 Undergraduate to MBA or MSM programs are as follows:

- Students must have completed 60 undergraduate credit hours towards their baccalaureate degree
- Students must maintain a cumulative undergraduate GPA of 3.0 on a 4.0

About Business Administration

Graduates of the Bachelor of Science in Business Administration may find employment in a variety of industries, including manufacturing, retail, banking, service, restaurant, accounting, and in government. Possible job titles include accountant, project manager, entrepreneur, sales manager, and actuary, among many others. Graduates of this program, in any concentration area, may be qualified to work in government positions as well as in industry.

Recommended Certifications

Certifications are not required for completion of this program; however, ECPI encourages student to obtain all appropriate certifications to increase potential job opportunities. ECPI provides students in this program with vouchers which allow the student to take certification exams at a greatly reduced cost. Students pursing concentrations and tracks could earn certificates while earning their bachelor's degree. Certificates in Leadership, Accounting Analytics, Business Analytics, Operations Analytics, Project Management, and Human Resources are available and complement the Bachelor of Science in Business Administration degree program.

Other recommended certifications for this program include Management Skills, Six Sigma, Project Management, and Systems Analyst. For students taking the IT Management concentration, all of these certifications are recommended along with the Security+ certification. For students taking the Operations, Logistics, and Supply Chain Management concentration, all of these certifications are available along with Certified Associate in Project Management (CAPM) and Six Sigma Green Belt Expert Rating. All ECPI certifications are available to Bachelor of Science in Business Administration students if they meet the criteria and requirements.

Certifications recommended for an entry-level career position in the Operations, Logistics and Supply Chain Management concentration are Certified Associate in Project Management (CAPM), Project Management Professional (PMP) for students with applicable experience, SCPro Level One: Cornerstones of Supply Chain Management, Entry Certificate in Business Analysis (ECBA), Six Sigma Green Belt, Strategic Planning Associate (SPA), and Certified in Production and Inventory Management (CPIM).

Student Evaluation

Students pursuing the BS Business Administration, Business Analytics concentration are required to earn a grade of C or better in MTH140 Statistics (Statistics) prior to beginning the Business Analytics concentration courses. Students will have no more than three attempts to achieve a C or better in this course.

Electives - any course from BSBA and/or BS Organizational Leadership depending on prerequisite. General electives from other programs and schools.

Outcomes

Upon completion of the program, graduates of the Bachelors of Science in Business Administration Accounting Concentration are able to:

Virginia Beach, VA (Main), Online, Newport News, VA, Richmond, VA (Glen Allen)

Business Administration (BS) | Business Analytics Concentration

Overview

College
College of Business and Criminal Justice

Program CIP Code
52.0201

In ECPI's Bachelor of Science in Business Administration (B.S.B.A.) program, students develop decision-making, problem-solving, and leadership skills based on a foundation of practical knowledge and application of business fundamentals. Students investigate business theory as it relates to accounting, management, analytics, and operations.

The program creates a unique opportunity for the student to explore the diverse aspects of business as they relate to today's global environment. The focus on real-world application, case studies, hands-on activities, and relevant scenarios are woven into the framework of the program to develop and enhance analytical, professional, and organizational skills. The curriculum integrates the functional areas of the business environment, such as finance, accounting, marketing, and management.

The Business Analytics concentration focuses on how organizations, more now than ever, are depending on data and analytics to inform decision making. Business analytics is the process of transforming data into action to improve decision making. However, the modeling cannot be done in isolation from organizational context. As demand continues to evolve, organizations must model and analyze data to improve processes for producing and delivering goods. This concentration offers two tracks:

TRACK	DESCRIPTION
Operations Analytics Track	The operations analytics track focuses on using data to solve organizational problems by leveraging techniques such as optimization, data mining, and statistical analysis. Operations Analyst positions are found in the government, military, freight, and shipping to health care. Students learn how organizations leverage big data into pragmatic operationalization to operate more efficiently and cost-effectively.
Leadership Track	The leadership track allows students to develop ethical leadership skills and abilities and the emotional intelligence necessary to lead contemporary organizations. The program emphasizes the creation of a learning environment that encourages change and innovation. Students are afforded an opportunity to develop strategic decision-making and problem-solving skills.

4 + 1 Undergraduate to Graduate Option

The 4+1 programs offer students with the opportunity to seamlessly transition from their bachelor's degree to a master's degree in an accelerated timeframe. This program allows students to complete both degrees by integrating selected graduate-level coursework into their undergraduate curriculum. Business Administration (BS) | Business Management Concentration

Overview

College
College of Business and Criminal Justice

Program CIP Code
52.0201

In ECPI's Bachelor of Science in Business Administration (B.S.B.A.) program, students develop decision-making, problem-solving, and leadership skills based on a foundation of practical knowledge and application of business fundamentals. Students investigate business theory as it relates to accounting, management, analytics, and operations.

The program creates a unique opportunity for the student to explore the diverse aspects of business as they relate to today's global environment. The focus on real-world application, case studies, hands-on activities, and relevant scenarios are woven into the framework of the program to develop and enhance analytical, professional, and organizational skills. The curriculum integrates the functional areas of the business environment, such as finance, accounting, marketing, and management.

The Business Management concentration emphasizes application of business theory and principle in managing in a technically and economically dynamic world. As technology advances, businesses must continue adaptive change in order to sustain competitive advantage. Our program is designed to create managers and business-oriented personnel who are able to strategically manage and utilize technology while implementing changes essential to today's global business environment. This concentration offers four tracks:

TRACK	DESCRIPTION
Project Management Track	The project management track focuses on leading projects from start to completion. Students will develop the skill set to lead project teams and will use project management tools to successfully manage the different stages of projects, including how to maximize performance and minimize risk. Core competencies, quality control, and enhancing the customer experience through a collaborative organizational framework are emphasized.
Human Resources Track	The human resource management track provides students with the opportunity to engage in contemporary practices that support and motivate a diverse and multicultural workforce in individual and group settings. Employee recruitment and retention is emphasized, including compensation and benefits, rewards, and recognition.
Leadership Track	The leadership track allows students to develop ethical leadership skills and abilities and the emotional intelligence necessary to lead contemporary organizations. The program emphasizes the creation of a learning environment that encourages change and innovation. Students are afforded an opportunity to develop strategic decision-making and problem-solving skills.
General Management Track	The general management track allows students the flexibility to tailor coursework to their individual career goals. Students are able to take a variety of courses in order to customize an educational plan suited to their needs.

4 + 1 Undergraduate to Graduate Option

The 4+1 programs offer students with the opportunity to seamlessly transition from their bachelor's degree to a master's degree in an accelerated timeframe. This program allows students to complete both degrees by integrating selected graduate-level coursework into their undergraduate curriculum. Business Administration (BS) | General Business Concentration

Overview

College
College of Business and Criminal Justice

Program CIP Code
52.0201

In ECPI's Bachelor of Science in Business Administration (B.S.B.A.) program, students develop decision-making, problem-solving, and leadership skills based on a foundation of practical knowledge and application of business fundamentals. Students investigate business theory as it relates to accounting, management, analytics, and operations.

The program creates a unique opportunity for the student to explore the diverse aspects of business as they relate to today's global environment. The focus on real-world application, case studies, hands-on activities, and relevant scenarios are woven into the framework of the program to develop and enhance analytical, professional, and organizational skills. The curriculum integrates the functional areas of the business environment, such as finance, accounting, marketing, and management.

At ECPI, the Bachelor of Science in Business Administration program addresses industry needs while incorporating current events, topics, business theories, and technological concepts. Students work collaboratively while applying concepts to complete projects based on real-world scenarios. This program provides an exceptional opportunity to obtain and practice the professional skills and industry knowledge necessary to be successful in any contemporary business environment.

The general business concentration is designed to provide students with the flexibility to tailor their studies according to their specific interests and career goals. This concentration consists entirely of elective courses, allowing students to select from a wide range of business-related subjects such as marketing, finance, management, international business, and more. By choosing courses based on their individual preferences and areas of expertise, students can gain a comprehensive understanding of various aspects of business while honing their skills in specific areas of interest.

For the General Business concentration, students can customize an educational plan suited to their needs from transfer credits or electives. This concentration offers four tracks:

TRACK	DESCRIPTION
Project Management Track	The project management track focuses on leading projects from start to completion. Students will develop the skill set to lead project teams and will use project management tools to successfully manage the different stages of projects, including how to maximize performance and minimize risk. Core competencies, quality control, and enhancing the customer experience through a collaborative organizational framework are emphasized.
Human Resources Management Track	The human resource management track provides students with the opportunity to engage in contemporary practices that support and motivate a diverse and multicultural workforce in individual and group settings. Employee recruitment and retention is emphasized, including compensation and benefits, rewards, and recognition.
Leadership Track	The leadership track allows students to develop ethical leadership skills and abilities and the emotional intelligence necessary to lead contemporary organizations. The program emphasizes the creation of a learning environment that encourages change and innovation. Students are afforded an opportunity to develop strategic decision-making and problem-solving skills.
General Management Track	The general management track allows students the flexibility to tailor coursework to their individual career goals. Students are able to take a variety of courses in order to customize an educational plan suited to their needs.

4 + 1 Undergraduate to Graduate Option

The 4+1 programs offer students with the opportunity to seamlessly transition from their bachelor's degree to a master's degree in an accelerated timeframe. This program allows students to complete both degrees by integrating selected graduate-level coursework into their undergraduate curriculum. By taking advantage of this program, students can maximize their time and resources, efficiently advancing their education and enhancing their career prospects. Through rigorous coursework and advanced research projects, students develop specialized knowledge and skills in their chosen field, positioning themselves for leadership roles and further academic pursuits upon graduation.

4 + 1 BSBA to MBA/MSM Program

The 4+1 programs allow for BSBA and BSOL students to take up to 6 credit hours (2 classes) that count towards fulfilling their undergraduate degree requirements and count towards the completion of their master's program. The bachelor's degree is awarded after successful completion of all BSBA or BSOL requirements. Once the bachelor's degree is completed, a student is required to apply for the graduate program.

Below is the program curriculum for the 4+1 course pairings offered. Some undergraduate courses listed are required for the program, while others may be taken as electives. While the student is enrolled in the undergraduate course, additional course work is required at that time for the 4+1 program. The admission criteria for participation in the 4+1 Undergraduate to MBA or MSM programs are as follows:

- Students must have completed 60 undergraduate credit hours towards their baccalaureate degree
- Students must maintain a cumulative undergraduate GPA of 3.0 on a 4.0

MBA/MSM Courses	BSBA/BSOL Courses
MGT520 Organizational Behavior and Leadership Organizational Behavior and Leadership	BUS303 Organizational Leadership and Management Organizational Leadership and Management
MGT528 Business Research and Analysis Business Research and Analysis	BUS480 Strategic Planning and Implementation Strategic Planning and Implementation

About Business Administration

Graduates of the Bachelor of Science in Business Administration may find employment in a variety of industries, including manufacturing, retail, banking, service, restaurant, accounting, and in government. Possible job titles include accountant, project manager, entrepreneur, sales manager, and actuary, among many others. Graduates of this program, in any concentration area, may be qualified to work in government positions as well as in industry.

Recommended Certifications

Certifications are not required for completion of this program; however, ECPI encourages students to obtain all appropriate certifications to increase potential job opportunities. ECPI provides students in this program with vouchers which allow the student to take certification exams at a greatly reduced cost. Students pursuing concentrations and tracks could earn certificates while earning their bachelor's degree. Certificates in Leadership, Accounting Analytics, Business Analytics, Operations Analytics, Project Management, and Human Resources are available and complement the Bachelor of Science in Business Administration degree program.

Other recommended certifications for this program include Management Skills, Six Sigma, Project Management, and Systems Analyst. For students taking the IT Management concentration, all of these certifications are recommended along with the Security+ certification. For students taking the Operations, Logistics, and Supply Chain Management concentration, all of these certifications are available along with Certified Associate in Project Management (CAPM) and Six Sigma Green Belt Expert Rating. All ECPI certifications are available to Bachelor of Science in Business Administration students if they meet the criteria and requirements.

Certifications recommended for an entry-level career position in the Operations, Logistics and Supply Chain Management concentration are Certified Associate in Project Management (CAPM), Project Management Professional (PMP) for students with applicable experience, SCPro Level One: Cornerstones of Supply Chain Management, Entry Certificate in Business Analysis (ECBA), Six Sigma Green Belt, Strategic Planning Associate (SPA), and Certified in Production and Inventory Management (CPIM).

Student Evaluation

Students pursuing the BS Business Administration, Business Analytics concentration are required to earn a grade of C or better in MTH140 (Statistics) prior to beginning the Business Analytics concentration courses. Students will have no more than three attempts to achieve a C or better in this course.

Electives - any course from BSBA and/or BS Organizational Leadership depending on prerequisite. General electives from other programs and schools.

Students work collaboratively while applying concepts to complete projects based on real-world scenarios. This program provides an exceptional opportunity to obtain and practice the professional skills and industry knowledge necessary to be successful in any contemporary business environment.

Students in the Operations, Logistics, and Supply Chain Management concentration develop skills necessary to function in a global operations, logistics and supply chain environment by relating models and theory to real-world practical applications. The program integrates the management functions of creating supply chains, beginning with the initial workflow design of critical processes like material sourcing and logistics, through the delivery of outputs to the customer base. The program's key goals are creating and maintaining customer satisfaction, operating within budget, and providing on time delivery.

TRACK	DESCRIPTION
Project Management Track	The project management track focuses on leading projects from start to completion. Students will develop the skill set to lead project teams and will use project management tools to successfully manage the different stages of projects, including how to maximize performance and minimize risk. For information on the University Completion and Graduation Rates, please see About ECPI University on the ECPI website.

In 2.5 years, through our year-round schedule, students can earn the Bachelor of Science in Business Administration degree.

Requirements

Simple Requirements

Program Requirements

To receive the Bachelor of Science in Business Administration, students must earn 121 semester credit hours. The program requires a minimum of 8 semesters, which is equivalent to 30 months or 120 weeks of instruction. The program requirements are as follows:

Core Curriculum Requirements

Type
Completion Requirement

Core Courses

40 semester credit hours

Complete ALL of the following Courses:

- ACC160 - Principles of Accounting I
- ACC161 - Principles of Accounting II
- BUS121 - Introduction to Business
- BUS222 - Ethics in Business
- BUS298 - Externship-BUS III
- BUS331 - Management Information Systems
- BUS480 - Strategic Planning and Implementation
- BUS480L - Strategic Planning and Implementation LAB
- ECO201 - Macroeconomics
- ECO202 - Microeconomics
- FIN350 - Financial Management
- HRM211 - Introduction to Human Resources Management
- LAW225 - Legal Environment of Business
- MKT214 - Marketing Management

Arts and Sciences Requirements

Type
Completion Requirement

Arts and Sciences Courses*

31 semester credit hours

Complete ALL of the following Courses:

- CAP480 - Arts and Sciences Capstone
- COM115 - Principles of Communication
- ENG110 - College Composition
- ENG120 - Advanced Composition
- HUM205 - Culture, Thought, and the Human Experience
- MTH131 - College Algebra
- MTH140 - Statistics
- PHY120 - Physics
- PHY120L - Physics Lab
- PSY225 - Industrial/Organizational Psychology
- PSY105 - Introduction to Psychology

**For allowable substitutions of arts and sciences courses, see the Arts & Sciences Department page.*

Self-Integration Requirements

Type

Completion Requirement

Self-Integration Courses

6 semester credit hours

Complete ALL of the following Courses:

- CIS108 - Office Applications
- COR191 - Career Orientation
- FOR110 - Essentials for Success

Operations, Logistics, and Supply Chain Management Concentration Requirements

Type

Completion Requirement

Operations, Logistics, and Supply Chain Management Concentration Courses

21 semester credit hours

Complete ALL of the following Courses:

- BAN317 - Data Analytics, Machine Learning, and Business Forecasting
- BUS102 - Fundamentals of Customer Service
- BUS226 - Managerial Processes and Communications
- BUS316 - Foundations of Decision Making
- OPM227 - Operations Management
- OPM307 - Logistics and Supply Chain Management
- OPM403 - Operations, Logistics, and Supply Chain Management Capstone

Project Management Track Requirements

Type

Completion Requirement

Project Management Track Courses

11 semester credit hours

Complete ALL of the following Courses:

- ACC312 - Accounting for Business Decisions
- BUS328 - Business Process Improvement
- BUS328L - Business Process Improvement LAB
- PMT472 - Applied Project Management
- PMT472L - Applied Project Management Lab

Project Management Track Elective Courses

12 semester credit hours

Any course from other BSBA concentrations and/or BS Organizational Leadership programs depending on prerequisite. General electives from other programs and schools.

Leadership Track Requirements

Type
Completion Requirement

Leadership Track Courses

9 semester credit hours

Complete ALL of the following Courses:

- BUS224 - Change Management
- BUS409 - Organizational Dynamics: Motivation and Leadership
- BUS460 - Leadership Capstone

Leadership Track Elective Courses

14 semester credit hours

Any course from other BSBA concentrations and/or BS Organizational Leadership programs depending on prerequisite. General electives from other programs and schools.

The Bachelor of Science in Business Administration | Operations, Logistics, and Supply Chain Management concentration has the following program requirements.

Locations

Virginia Beach, VA (Main), Online, Newport News, VA, Richmond, VA (Glen Allen)

Nursing (BS to BSN)

Overview

College
College of Nursing

Program CIP Code
51.3801

The mission of the University and the Bachelor of Science in Nursing program **at the Orlando (Lake Mary), Florida location** is to offer a quality educational program that provides its graduates with the educational foundation and skills necessary to achieve professional success in the field of nursing.

The University is committed to providing quality nursing education with the goal of developing clinical leaders with the ability to advance and promote the health of the diverse populations within the communities they serve, advocate on behalf of their clients, achieve and maintain their clinical competency, and provide service to the community and the profession.

The members of the faculty and administration of the University are dedicated to achieving the University's and the BSN program's mission.

See also the following additional program information:

- **Admissions Requirements** > Nursing | BS to BSN (Orlando) (includes Essential Functional Abilities and Accepted Student Requirements)
- **Attendance Policy** > Nursing | BS to BSN (Orlando)
- Transferability of Credit > Nursing | BS to BSN section

The Baccalaureate Degree Program in Nursing at ECPI University Orlando, Florida campus, ECPI University Virginia Beach, Virginia campus, and ECPI University Richmond, Virginia campus is accredited by the Commission on Collegiate Nursing Education (http://www.ccneaccreditation.org.)

About Nursing

The Bachelor to BSN graduate can work in a variety of roles in community health, specialty bedside practice, informatics, and management, pursuing employment in a range of settings. The Bachelor of Science in Nursing program allows students to acquire the essential skills and knowledge needed to meet the preventative and restorative needs of patients. Students learn both the art and science of nursing.

Recommended Licensure

ECPI University provides vouchers allowing students to take licensure exams administered by the student's state's Board of Nursing at a greatly reduced cost. All Bachelor Degree Nursing graduates must successfully pass the National Council Licensing Exam for Registered Nurses (NCLEX-RN) before being able to practice as a Registered Nurse (RN).

Program Progression

A numeric grade of 77 or better is required in all nursing courses to graduate from the nursing program. In order to receive a passing grade in the course, students are required to pass the clinical, lab, and theory portions of the course. Failure in the theory, lab, or clinical component requires repeating all aspects of the course. Academic progression in the nursing program is determined by a student's weighted exam average in each course without consideration for any additional assignments. The benchmark for passing each course is a weighted exam grade average of 77 or greater. Students who achieve a final course grade of less than 77 in any nursing course cannot enroll in subsequent clinical nursing courses. If the student does not pass the exam portion of the course with this average, other course requirements (such as papers and presentations) will not suffice to raise the grade to passing.

Only one nursing course may be repeated to raise an unsatisfactory grade. Students may not enroll in any course for which they do not have the necessary prerequisites as a result of course failure or course withdrawal. A Student who is unsuccessful in a course may be allowed to reattempt that course the next time it is offered, based on availability. In order to be considered to repeat the failed course, the student must write a letter to the Dean/Chief Nursing Administrator requesting permission to repeat the course ECPI University's Nursing Admission, Progression, and Graduation Committee will determine reinstatements and reviews each case individually. Re-admission to the nursing program is not guaranteed.

A student who fails more than one course, or who fails one course twice, will be dismissed from the program and will not be eligible for re-enrollment.

Student Evaluation

At the completion of certain courses, students are required to complete a computerized, national examination that tests the student's comprehensive knowledge of the course content. Any fees for these examinations are included in the program costs.

Students are evaluated according to course-specific performance criteria designated on the syllabus. Students will receive a written evaluation in each clinical course at mid-term and at the completion of the clinical course. The instructor will review the evaluation with the student, and upon completion of the review, the student and the instructor will sign the evaluation. The student's signature does not constitute an acknowledgement that the student agrees with the instructor's evaluation, but serves as confirmation that the evaluation has been reviewed with and provided to the student. The student may make written comments in response to the evaluation, attaching it to the evaluation.

In the final quarter of the program, students are required to take a course entitled Senior Seminar and as a part of the course requirements, must pass a comprehensive computerized examination provided by ATI, containing questions similar to those found on the National Council Licensure Examination for Registered Nurses ("NCLEX-RN"). Students who fail to achieve a passing score of 70 or greater on the exam, as graded by the testing service, will not pass the Senior Seminar course, and will not

be eligible for graduation until they pass the Senior Seminar course. During the Senior Seminar course, students are given three (3) opportunities to achieve a passing score on the comprehensive computerized examination. Students who do not achieve a passing score on the ATI comprehensive computerized examination during the Senior Seminar course, will receive a failing grade for the course.

Outcomes

The curriculum leading to the Bachelor of Science in Nursing degree is designed to prepare a professional nurse who should be able to demonstrate the ability to:

Requirements

Simple Requirements

Program Requirements

A student transferring into the institution with a bachelor's degree will transfer the equivalent of 105 quarter credit hours from the previous baccalaureate degree, including: 46.5 quarter credit hours in general education courses, 30 quarter credits of which are in specific required general education courses; and 75 quarter credits in nursing, to meet the minimum total of 180 quarter credit hours. The program requires a minimum of 4 quarters, which is equivalent to 12 months or 48 weeks of instruction. Nursing courses will not be available online.

The program requirements are as follows:

Program Prerequisite Requirements

Type
Prerequisite

Bachelor's Degree + Designated General Education Courses

Applicants must have successfully completed all prerequisite courses, with no more than two being allowed to be in progress at the time of application. A grade of B- or higher is required for the Anatomy and Physiology prerequisites. All other Bachelor to BSN General Education Prerequisites will be reviewed in accordance with the Transfer of Credit policies outlined in the University Catalog.

Designated General Education Prerequisite Courses

COURSES	QUARTER CREDIT HOURS
Anatomy and Physiology I and II with labs	8 semester | 12 quarter credits
Statistics	3 semester | 4.5 quarter credits
Social Science: Sociology OR Psychology	3 semester | 4.5 quarter credits
Human Growth and Development OR Developmental Psychology	3 semester | 4.5 quarter credits
English	3 semester | 4.5 quarter credits
Additional General Education Electives	11 semester | 16.50 quarter credits
TOTAL	**31 SEMESTER | 46.50 QUARTER CREDITS**

- NUR447 - Nursing Care of the Older Adult Clinical
- NUR448 - Transition to Practice
- NUR449 - Senior Seminar
- NUR460 - Clinical Applications Lab

The Bachelor of Science in Nursing program has the following program requirements.

Program Philosophy

The BSN program believes that:

- Baccalaureate nursing education is the basic preparation for professional nursing practice, and establishes the foundation for life-long learning. The faculty members believe that the baccalaureate graduate is a generalist, prepared to provide clinical leadership in the assessment, planning, delivery and evaluation of health care for individuals, families and communities.
- The curriculum is structured to enable the student to demonstrate that they have developed an understanding and mastery of baccalaureate-level nursing and related concepts as they progress through their educational experience. Related concepts emphasized in the nursing curriculum include ethical decision-making, critical thinking, effective communication, leadership and management.
- As envisioned by the faculty members of the University, the nursing paradigm includes:
- Person. Each person is a unique being with basic rights and choices who experiences multiple stressors from their continually changing internal and external environments with varying degrees of adaptation. The ultimate goal that a person has is to find, establish and maintain balance with health. Clients of nursing care are composed of individuals, families, groups, and communities with diverse backgrounds, sharing common goals and values. Perceptions, attitudes, values, and goals are influenced by culture, race, spirituality, age, gender, and abilities.
- Environment. The environment is a complex, open system existing in a dynamic state of change. Economic, political, environmental, and technological factors exert their effects on society. The nurse promotes an environment in which the person's needs may be met, while respecting individual differences related to values, customs, and responses to life experiences.
- Health. Health is regarded as dynamic and multidimensional, with physical, mental, spiritual and social components that are all interrelated on the wellness-illness continuum, varying from a high level of wellness to varying degrees of illness. Health is influenced by both internal and external factors to the individuals' optimal level of functioning. When adaptive abilities are inadequate or stressed, the individual moves on the wellness-illness continuum toward a lower level of functioning. All people have the inherent right to make informed decisions regarding their health care, including self-determination.
- Nursing. Nursing is both an art and a science. Professional nursing provides comprehensive health care services to clients in an effort to support them in attaining their optimal level of independence and wellness through the promotion, maintenance, and restoration of health. The role of the nurse is multifaceted, conceptualized in three primary categories: provider of care, coordinator of care and member of the profession. Nursing education is an interactive process, allowing the adult learner to incorporate previously learned knowledge, building a foundation for providing holistic, outcomes-oriented care. The profession works collaboratively with other members of the health care interdisciplinary team to facilitate optimal client outcomes. The faculty believes that the baccalaureate degree is the professional degree for nursing, providing the groundwork for the graduate degree.
- Learning. Faculty members of the University believe baccalaureate education in nursing is the basis for professional practice as a nurse generalist, and offers preparation for professional development and life-long learning. Baccalaureate nursing education, based upon a liberal arts education, is the synthesis of knowledge from a variety of disciplines, including humanities, social, behavioral, and natural sciences.
- Learning is a collaborative partnership between the student and the faculty member, promoted by critical thinking, problem-solving and effective decision-making. Learning occurs in a variety of settings, with each student responsible for maximizing his or her own experiences. Each student has unique life, educational and work experiences and therefore, has individual learning needs. Outcome assessments quantitatively and qualitatively measure achievement of programmatic goals.

Program Purpose

The purposes of the Bachelor of Science in Nursing program are to provide undergraduate students with (1) Ability to practice professional nursing as a generalist, (2) the Academic foundation necessary to pursue graduate education.

Program Hours

Classes will be held Monday-Friday and will be scheduled between 8:00 am and 6:00 pm. Clinical experiences can be scheduled at any time during the week, including weekends. Prospective students should also be aware that clinical experiences are scheduled for the convenience of the clinical site and may be held during evenings or nights. For example, a student may have a shift of 3:00 pm – 11:00 pm or 11:00 pm – 7:00 am. Due to the high-intensity nature of this program, it is advised that a student not have outside employment.

Administrative office hours may differ from scheduled class hours. Administrative office hours are generally Monday-Friday 9:00 am to 5:00 pm.

Classes are offered and scheduled by ECPI University in sequences or combinations to allow the student to complete the program in a timely manner. ECPI University reserves the right to alter schedules so that proper facilities, equipment, and faculty are available. As per the Florida Board of Nursing regulations, the maximum number of students in a clinical placement is 12 students to 1 faculty ratio and the maximum ratio for preceptored experiences is 18 students to 1 faculty ratio.

The sequence in which courses are taught during the program may change at the discretion of ECPI University. Prerequisites for all courses are listed in the Course Description section of this catalog.

Cyber and Information Security Technology (B to BS)

Overview

College
College of Technology

Program CIP Code
11.1003

The Bachelor of Science in Cyber and Information Security Technology (BS CIST Degree Completion) program covers all aspects of the use of computers and information systems in today's organizations. Students are introduced to a variety of operating system environments, networking technologies, and associated security practices. With the growth of the internet, organizations are networking and securing their internal computer resources and also connecting to external internet-based resources. The pervasiveness of the internet and the rise of cloud computing present challenges in defending critical network infrastructure against cyber threats. These employer-driven, hands-on, interactive educational programs equip students with cyber and networking skills required for career-entry positions in a wide range of companies. The Bachelor of Science in Cyber and Information Security Technology program is designed to provide accelerated degree completion and new career options for candidates who have previously earned a bachelor's degree.

See also the following additional program information:

- **Admissions Requirements >** Cyber and Information Security Technology | B to BS.

About Cyber and Information Security Technology

The Bachelor of Science in Cyber and Information Security Technology program will prepare graduates for IT career paths, including network and cybersecurity positions. Graduates will be prepared to plan, design, and implement computer hardware, software, networking, and cybersecurity systems. They may also work as security analysts, network architects, or administrators who design, implement, and maintain computer networks, including wireless networks. Graduates also may work in cyber defensive or offensive roles. Certain positions may require background checks, drug screening, and/or security clearances, depending on the position and industry.

Some entry-level job titles for a Bachelor of Science in Cyber and Information Security Technology graduate include: Cybersecurity Operations and Maintenance Specialist, Network and Datacenter Administrator, Virtual Server Administrator, Storage Technology Manager, Systems Analyst, and Systems Administrator. IST graduates are required in many industries, so employment could be expected in most any military or business setting.

Program Objectives

Graduates of the Bachelor of Science in Cyber and Information Security Technology program are expected to attain the following objectives within a few years of graduation:

- Show innovation in applying the skills and techniques of computing in their professions
- Pursue lifelong learning to ensure currency and continuous improvement of technical and soft skills and abilities
- Participate actively as a member of the computing community, through professional organizations or other activities that serve the profession
- Contribute to the advancement of computing while upholding the professional and ethical responsibilities of the field
- Exhibit expertise in leadership and management in the profession
- Develop adaptive solutions to evolving needs using industry-current tools and processes
- Apply cybersecurity and risk management principles universally
- Apply AI techniques in cybersecurity to enhance threat detection, risk mitigation, and defense against cyber attacks.

Recommended Certifications

ECPI encourages students to obtain all appropriate certifications to increase potential job opportunities. ECPI provides students in this program with vouchers which allow the student to take certification exams at a greatly reduced cost. Available certifications for this program include Microsoft, Cisco, and Oracle certifications; A+, Network+, Linux+, and Security+; and Certified Ethical Hacker (CEH).

Outcomes

Students in the Bachelor of Science in Cyber and Information Security Technology program develop planning, design, implementation, and support skills in operating systems, networking, software programs, and security. Students develop additional focused skills based on which major the student pursues. Students also learn principles of excellent customer service in order to assist clients with technical issues.

Upon completion of the Bachelor of Science in Cyber and Information Security Technology program, graduates are able to:

Criminal Justice (BS) | Crime and Intelligence Analysis Concentration

Overview

College
College of Business and Criminal Justice

Program CIP Code
43.0408

Program Overview

The Bachelor of Science in Criminal Justice degree provides a practice-based approach to learning through an overview of law enforcement, corrections, the court system and private security in the United States. Crime and other threats affect the stability of both local communities and the nation's security. Members of the criminal justice system and certain related emergency management sectors work to identify and eliminate these threats.

About Criminal Justice

Graduates of the Bachelor of Science in Criminal Justice program have many career opportunities. These career paths may lead students to positions within or related law enforcement, the courts, corrections (including community corrections such as probation and parole), emergency management and private security, one of the fastest growing sectors in criminal justice. Criminal justice positions generally are located within federal, state and local government agencies but can also be found in the military and private corporations inside the United States and beyond.

Graduates of the B.S. degree program in Criminal Justice (with the **Crime & Intelligence Analysis concentration**) are positioned to compete for employment in federal, state, local and military law enforcement agencies, and private companies. Graduates are also positioned to compete for employment in transportation security organizations, emergency management agencies, banks, or financial institutions and public health departments. This is only a partial list of common employment opportunities.

Applicants for employment in criminal justice must be capable of completing an employment process which may include the following:

- Criminal History Check
- Drug Screening
- Psychological Screening/ Mental Health History
- Driving Record
- Polygraph Examination
- Security Clearance
- Physical Agility
- Physical Health Evaluation
- Military Disciplinary History
- Domestic Violence Investigations
- Credit History
- Social Networking Background Investigation
- Background Investigation
- Panel Interviews
- Behavioral Assessment
- Possession of a Valid Driver's License
- Compliance with policies regarding body art/ tattoos and piercings
- Tobacco Free Agreement
- Educational History

Recommended Certifications

Certifications are not required for completion of this program but are encouraged. ECPI University provides vouchers allowing students to take certification exams at a greatly reduced cost. See the Campus Program Director for a discussion on certifications offered at that Campus.

Externships are opportunities for students to gain mentored, practical experience in a "real world" job setting. Students in the College of Criminal Justice are not required to complete an externship as part of their programs of study. Each student who wishes to complete an externship will be assisted by Career Services in finding a suitable externship opportunity.

Outcomes

Upon successful completion of the program, graduates are able to:

The Bachelor of Science in Criminal Justice | Crime and Intelligence Analysis concentration has the following program requirements.

Locations

Online, Newport News, VA

Criminal Justice (BS) | Criminal Justice Concentration

Overview

College
College of Business and Criminal Justice

Program CIP Code
43.0104

Program Overview

The Bachelor of Science in Criminal Justice degree provides a practice-based approach to learning through an overview of law enforcement, corrections, the court system and private security in the United States. Crime and other threats affect the stability of both local communities and the nation's security. Members of the criminal justice system and certain related emergency management sectors work to identify and eliminate these threats.

About Criminal Justice

Graduates of the Bachelor of Science in Criminal Justice program have many career opportunities. These career paths may lead students to positions within or related law enforcement, the courts, corrections (including community corrections such as probation and parole), emergency management and private security, one of the fastest growing sectors in criminal justice. Criminal justice positions generally are located within federal, state and local government agencies but can also be found in the military and private corporations inside the United States and beyond.

Graduates of the B.S. degree program in Criminal Justice (with the **Criminal Justice concentration**) are positioned to compete for employment in federal, state, local and military law enforcement agencies, courts, law firms, prisons, jails, federal and state (adult and juvenile) probation and parole offices, rehabilitative facilities and private security firms. Graduates are also positioned to compete for employment in transportation security organizations, emergency management agencies and public health departments. This is only a partial list of common employment opportunities.

Applicants for employment in criminal justice must be capable of completing an employment process which may include the following:

- Criminal History Check
- Drug Screening
- Psychological Screening/ Mental Health History
- Driving Record
- Polygraph Examination
- Security Clearance
- Physical Agility
- Physical Health Evaluation
- Military Disciplinary History
- Domestic Violence Investigations
- Credit History
- Social Networking Background Investigation
- Background Investigation
- Panel Interviews
- Behavioral Assessment
- Possession of a Valid Driver's License
- Compliance with policies regarding body art/ tattoos and piercings
- Tobacco Free Agreement
- Educational History

Recommended Certifications

Certifications are not required for completion of this program but are encouraged. ECPI University provides vouchers allowing students to take certification exams at a greatly reduced cost. See the Campus Program Director for a discussion on certifications offered at that Campus.

Externships are opportunities for students to gain mentored, practical experience in a "real world" job setting. Students in the College of Criminal Justice are not required to complete an externship as part of their programs of study. Each student who wishes to complete an externship will be assisted by Career Services in finding a suitable externship opportunity.

Program Overview

The Bachelor of Science in Criminal Justice degree provides a practice-based approach to learning through an overview of law enforcement, corrections, the court system and private security in the United States. Crime and other threats affect the stability of both local communities and the nation's security. Members of the criminal justice system and certain related emergency management sectors work to identify and eliminate these threats.

About Criminal Justice

Graduates of the Bachelor of Science in Criminal Justice program have many career opportunities. These career paths may lead students to positions within or related law enforcement, the courts, corrections (including community corrections such as probation and parole), emergency management and private security, one of the fastest growing sectors in criminal justice. Criminal justice positions generally are located within federal, state and local government agencies but can also be found in the military and private corporations inside the United States and beyond.

Graduates of the B.S. degree program in Criminal Justice (with the **Digital Forensics concentration**) are positioned to compete for employment primarily in law enforcement fields that focus on the security of United States citizens, security and control of U.S. borders and protection of domestic critical infrastructure sectors including transportation. These agencies are looking for skilled employees who can assist in the fight to bring cyber criminals to justice and stop the current rise in cyber-attacks and computer crimes. Graduates are also positioned to compete for employment in private digital forensic companies and private security firms. This is only a partial list of common employment opportunities.

Applicants for employment in criminal justice must be capable of completing an employment process which may include the following:

- Criminal History Check
- Drug Screening
- Psychological Screening/ Mental Health History
- Driving Record
- Polygraph Examination
- Security Clearance
- Physical Agility
- Physical Health Evaluation
- Military Disciplinary History
- Domestic Violence Investigations
- Credit History
- Social Networking Background Investigation

Overview

College
College of Technology

Program CIP Code
15.1202

The Bachelor of Science in Electronics Engineering Technology program focuses on real-world application of engineering principles. Students in the Bachelor of Science in Electronics Engineering Technology programs will take a hands-on approach, utilizing a variety of electronic systems and tools to analyze and solve real world problems. The program focuses on needed skills and competencies to develop solutions for automation and robotics systems. Through a capstone experience, students will implement, test, and demonstrate a solution to a problem statement related to engineering technology systems utilizing acquired skills in Programmable Logic Controllers and microcontrollers programming.

Students in the Bachelor of Science in Electronics Engineering Technology program learn to design and build electronic systems through a strong foundation in analog and digital electronics. They are able to apply the acquired engineering and mathematical principles to implement and maintain computers and control systems.

Students enrolled in the Electronics Engineering Technology concentration will apply acquired knowledge to design and repair computer, control and embedded systems as well as implementing industrial automation solutions.

With the new emerging technologies, a skilled workforce in the electronics field has been and will continue to be in demand for the maintenance, repair, installation, quality assurance, and research and development fields.

About Electronics Engineering Technology

Graduates of this degree program are able to design, install, maintain, and repair electrical and electronic equipment. They serve as a link between engineers and technicians in the workplace, and often work with engineers from the conception of an electronic product until its final production. They assist engineers in the development, testing, production, and quality assurance of components such as circuit boards, wireless phones, medical equipment, and control systems. Electronics Engineering Technologists are needed in many industries and can find employment in work environments where electronics are used extensively.

Some positions may require background checks, drug screening, and/or security clearances, depending on the position and industry.

The curriculum provides graduates with the education and foundation needed for employment in a variety of industries in the private and public sector, including the computer industry, homeland security, automation and manufacturing, and education. Electronics Engineering Technology graduates are employed in a wide spectrum of areas, in positions such as: Engineering Consultant, Electrical Engineering or Computer Engineering Technologist, Product Engineer, or Project Manager.

Program Objectives

Graduates of the Bachelor of Science in Electronics Engineering Technology program are expected to attain the following objectives within a few years of graduation:

- Apply acquired technical and analytical skills as it relates to their professional positions in electrical, electronic, and related industries.
- Apply relative mathematical, science, and engineering methods to solve technical problems.
- Analyze and implement complex systems including both hardware and software.
- Pursue lifelong learning and successful professional careers.
- Perform as effective team members through adequate oral and written communication skills.
- Relate and exercise an educated judgment in regards to their professional and ethical responsibilities.

Recommended Certifications

Certifications are not required for completion of this program; however, ECPI encourages student to obtain all appropriate certifications to increase potential job opportunities. ECPI provides students in this program with vouchers which allow the student to take certification exams at a greatly reduced cost. Available certifications for this program include Fiber Optics Installer (FOI), Fiber Optics Technician (FOT), A+ Certification, Network+ Certification, Security+ Certification, GMDSS - Global Maritime Distress and Safety System Maintainer License, GROL - General Radiotelephone Operator's License, and Associate CET.

Outcomes

Upon completion of the Bachelor of Science in Electronics Engineering Technology | Electronics Engineering Technology Concentration, graduates will be able to:

Requirements

Simple Requirements

Program Requirements

To receive the Bachelor of Science in Electronics Engineering Technology, students must earn 124 semester credit hours. The program requires a minimum of 8 semesters, which is equivalent to 30 months or 120 weeks of instruction. The program requirements are as follows:

Core Curriculum Requirements

Type
Completion Requirement

Core Courses

52 semester credit hours

Fulfill ALL of the following requirements:

ELECTRICITY

Complete ALL of the following Courses:

- EET110 - Electric Circuits I
- ESET111 - Electric Circuits II
- ESET111L - Electric Circuits II Lab
- EET310 - Circuit Analysis

AND

ANALOG ELECTRONICS

Complete ALL of the following Courses:

- EET120 - Semiconductor Devices
- EET121 - Electronic Systems Applications
- EET220 - Industrial Applications
- EET221L - Instrumentation and Measurement Lab

AND

DIGITAL ELECTRONICS

Complete ALL of the following Courses:

- EET130 - Digital Systems I
- EET230 - Digital Systems II
- EET230L - Digital Systems Lab

AND

NETWORKING

Complete ALL of the following Courses:

- CST160 - Introduction to Networking

AND

PROGRAMMING

Complete ALL of the following Courses:

- EET207 - Applied Engineering Programming
- SDC100 - Introduction to Programming

AND

CONTROL SYSTEMS

Complete ALL of the following Courses:

- EET231 - Introduction to Programmable Logic Controllers
- EET231L - Introduction to Programmable Logic Controllers Lab
- EET331 - Programmable Controllers and Robotics
- EET331L - Programmable Controllers and Robotics Lab

AND

EMBEDDED AND DRIVE SYSTEMS

Choose one course and corresponding lab.

Earn at least 4 credits from the following:

- EET390 - Motor Drives
- EET390L - Motor Drives Lab
- EET430 - Microcontrollers
- EET430L - Microcontrollers Lab

AND

Electronics Engineering Technology (BS) | Mechatronics Concentration

Overview

College
College of Technology

Program CIP Code
15.0406

The Bachelor of Science in Electronics Engineering Technology program focuses on real-world application of engineering principles. Students in the Bachelor of Science in Electronics Engineering Technology programs will take a hands-on approach, utilizing a variety of electronic systems and tools to analyze and solve real world problems. The program focuses on needed skills and competencies to develop solutions for automation and robotics systems. Through a capstone experience, students will implement, test, and demonstrate a solution to a problem statement related to engineering technology systems utilizing acquired skills in Programmable Logic Controllers and microcontrollers programming.

Students enrolled in the Mechatronics concentration will apply acquired knowledge to design and repair mechanical, electronics, and control systems.

With the new emerging technologies, a skilled workforce in the electronics field has been and will continue to be in demand for the maintenance, repair, installation, quality assurance, and research and development fields.

About Electronics Engineering Technology

Graduates of this degree program are able to design, install, maintain, and repair electrical and electronic equipment. They serve as a link between engineers and technicians in the workplace, and often work with engineers from the conception of an electronic product until its final production. They assist engineers in the development, testing, production, and quality assurance of components such as circuit boards, wireless phones, medical equipment, and control systems. Electronics Engineering Technologists are needed in many industries and can find employment in work environments where electronics are used extensively.

Some positions may require background checks, drug screening, and/or security clearances, depending on the position and industry.

The curriculum provides graduates with the education and foundation needed for employment in a variety of industries in the private and public sector, including the computer industry, homeland security, automation and manufacturing, and education. Graduates of the Mechatronics concentration area may also be employed as Automation Engineers and might enjoy a career working with robotics.

Program Objectives

Graduates of the Bachelor of Science in Electronics Engineering Technology program are expected to attain the following objectives within a few years of graduation:

- Apply acquired technical and analytical skills as it relates to their professional positions in electrical, electronic, and related industries
- Apply relative mathematical, science, and engineering methods to solve technical problems
- Analyze and implement complex systems including both hardware and software
- Pursue lifelong learning and successful professional careers
- Perform as effective team members through adequate oral and written communication skills
- Relate and exercise an educated judgment in regards to their professional and ethical responsibilities

Recommended Certifications

Certifications are not required for completion of this program; however, ECPI encourages students to obtain all appropriate certifications to increase potential job opportunities. ECPI provides students in this program with vouchers which allow the student to take certification exams at a greatly reduced cost. Available certifications for this program include Fiber Optics Installer (FOI), Fiber Optics Technician (FOT), A+ Certification, Network+ Certification, Security+ Certification, GMDSS - Global Maritime Distress and Safety System Maintainer License, GROL - General Radiotelephone Operator's License, and Associate CET.

Electronic Systems Engineering Technology (BS) | Electronic Systems Concentration

Overview

College
College of Technology

Program CIP Code
15.1202

The Bachelor of Science in Electronic Systems Engineering Technology (ESET) program focuses on real-world applications of engineering principles. Students in the program will acquire needed skills and competencies to develop solutions for automation and robotics systems.

The Electronic Systems concentration offers a broad exposure to analog and digital electronics, engineering programming, instrumentation and measurement systems, as well as embedded and drive systems. A culminating capstone experience allows students to implement, test, and demonstrate a solution to a problem statement related to engineering technology systems.

With the new emerging technologies, a skilled workforce in the electronics field has been and will continue to be in demand for the design and implementation of new innovative solutions and products.

ABET | Engineering Technology Accreditation Commission

The Bachelor of Science in Electronic Systems Engineering Technology at the Virginia Beach and Newport News, VA campuses and Online is accredited by the Engineering Technology Accreditation Commission (ETAC) of ABET, under the General Criteria and Program Criteria for Electrical/Electronic(s) Engineering Technology.

About Electronic Systems Engineering Technology

ESET graduates function in multidisciplinary teams to design, install, maintain, and repair systems, components, or processes meeting specific needs to engineering applications. They serve as a link between engineers and technicians in the workplace, where they play a key role from the conception of electronic systems until the implementation. They are involved in the development, testing, production, and quality assurance of components and systems, such as circuit boards, wireless phones, medical equipment, and control systems.

Some positions may require background checks, drug screening, and/or security clearances, depending on the position and industry.

The curriculum provides ESET graduates with the education and foundation needed for employment in a variety of industries in the private and public sector, including the computer industry, homeland security, automation and manufacturing, and education. Electronic Systems concentration graduates are employed in a wide spectrum of areas, in positions such as Engineering Consultant, Electrical Engineering or Computer Engineering Technologist, Product Engineer, or Project Manager.

Program Objectives

Graduates of the Bachelor of Science in Electronic Systems Engineering Technology program are expected to attain the following objectives within a few years of graduation:

- Apply acquired technical and analytical skills as it relates to their professional positions in electrical, electronic, and related industries
- Apply relative mathematical, science, and engineering methods to solve technical problems
- Analyze and implement complex systems including both hardware and software
- Pursue lifelong learning and successful professional careers
- Perform as effective team members through adequate oral and written communication skills
- Relate and exercise an educated judgment in regards to their professional and ethical responsibilities

Recommended Certifications

Certifications are not required for completion of this program; however, ECPI encourages student to obtain all appropriate certifications to increase potential job opportunities. ECPI provides students in this program with vouchers which allow the student to take certification exams at a greatly reduced cost. Available certifications for this program include Fiber Optics Installer (FOI), Fiber Optics Technician (FOT), A+ Certification, Network+ Certification, and Security+ Certification.

Outcomes

Students in the Bachelor of Science in Electronic Systems Engineering Technology program learn to design and integrate electronic systems through a strong foundation in analog and digital electronics. They are able to apply the acquired engineering and mathematical principles to implement and improve systems and/or processes for engineering applications.

Upon completion of the Bachelor of Science in Electronic Systems Engineering Technology | Electronic Systems Concentration, graduates will be able to:

The Bachelor of Science in Electronics Systems Engineering Technology | Electronic Systems Engineering Technology has the following program requirements.

Locations

Virginia Beach, VA (Main), Online, Newport News, VA

Electronic Systems Engineering Technology (BS) | Mechatronics Concentration

Overview

College
College of Technology

Program CIP Code
15.0406

The Bachelor of Science in Electronic Systems Engineering Technology (ESET) program focuses on real-world applications of engineering principles. Students in the program will acquire needed skills and competencies to develop solutions for automation and robotics systems.

The Mechatronics concentration offers a broad exposure to analog and digital electronics, engineering programming, instrumentation and measurement systems, as well as embedded and drive systems. A culminating capstone experience allows students to implement, test, and demonstrate a solution to a problem statement related to engineering technology systems.

With the new emerging technologies, a skilled workforce in the electronics field has been and will continue to be in demand for the design and implementation of new innovative solutions and products.

ABET | Engineering Technology Accreditation Commission

The Bachelor of Science in Electronic Systems Engineering Technology at the Virginia Beach and Newport News, VA campuses and Online is accredited by the Engineering Technology Accreditation Commission (ETAC) of ABET, under the General Criteria and Program Criteria for Electrical/Electronic(s) Engineering Technology.

About Electronic Systems Engineering Technology

ESET graduates function in multidisciplinary teams to design, install, maintain, and repair systems, components, or processes meeting specific needs to engineering applications. They serve as a link between engineers and technicians in the workplace, where they play a key role from the conception of electronic systems until the implementation. They are involved in the development, testing, production, and quality assurance of components and systems, such as circuit boards, wireless phones, medical equipment, and control systems.

Some positions may require background checks, drug screening, and/or security clearances, depending on the position and industry.

The curriculum provides ESET graduates with the education and foundation needed for employment in a variety of industries in the private and public sector, including the computer industry, homeland security, automation and manufacturing, and education. Graduates of the Mechatronics concentration area may also be employed as Automation Engineers and might enjoy a career working with robotics.

Program Objectives

Graduates of the Bachelor of Science in Electronic Systems Engineering Technology program are expected to attain the following objectives within a few years of graduation:

- Apply acquired technical and analytical skills as it relates to their professional positions in electrical, electronic, and related industries
- Apply relative mathematical, science, and engineering methods to solve technical problems
- Analyze and implement complex systems including both hardware and software
- Pursue lifelong learning and successful professional careers
- Perform as effective team members through adequate oral and written communication skills
- Relate and exercise an educated judgment in regards to their professional and ethical responsibilities

Recommended Certifications

Certifications are not required for completion of this program; however, ECPI encourages students to obtain all appropriate certifications to increase potential job opportunities. ECPI provides students in this program with vouchers which allow the student to take certification exams at a greatly reduced cost. Available certifications for this program include Fiber Optics Installer (FOI), Fiber Optics Technician (FOT), A+ Certification, Network+ Certification, and Security+ Certification.

Outcomes

Students in the Bachelor of Science in Electronic Systems Engineering Technology program learn to design and integrate electronic systems through a strong foundation in analog and digital electronics. They are able to apply the acquired engineering and mathematical principles to implement and improve systems and/or processes for engineering applications. **Note that the last three outcomes listed are specific to the Mechatronics concentration.**

Upon completion of the Bachelor of Science in Electronic Systems Engineering Technology, graduates will be able to:

The Bachelor of Science in Electronic Systems Engineering Technology program has the following program requirements.

Locations

Virginia Beach, VA (Main), Online, Newport News, VA

Food Service Management (BS)

Overview

College
College of Culinary Arts

Program CIP Code
52.0905

The Bachelor of Science in Food Service Management degree completion program is dedicated to studying the operational issues that lead to profitability in a food service operation. Students examine the food service industry from the perspective of management, expanding leadership knowledge and skills to further their careers in the hospitality industry.

Core curriculum courses fall into three categories:

- ***Financial Management:*** The ability to create, interpret, and analyze financial reports
- ***Leadership:*** Exposure to the leadership skills associated with creating, communicating, and implementing an operational vision
- ***Operations Management:*** Studying the development and management of service systems

Students are required to have an associate's degree in a culinary related field, with a minimum of 60 semester credits, for admission to the program. The Bachelor of Science in Food Service Management is a degree completion program that can be earned in less than 15 months. Classes are offered days and evenings.

About Food Service Management

Food Service Managers are responsible for the daily operation of restaurants and other food service establishments that prepare and serve food and beverages to customers. Managers ensure that customers are satisfied with their guest service experience.

The role of a Food Service Manager can often be physically demanding. Prospective students able to meet the following physical requirements will have the greatest number of employment opportunities available to them:

- Physical Stamina: The ability to stand for extended periods of time
- Physical Strength: The ability to lift and transport up to 50 pounds

Outcomes

The objective of the Food Service Management degree program is to educate and train prospective food service professionals with the knowledge, skills and abilities to compete for employment in the hospitality field. Graduates of the program will be able to:

3 semester credit hours

Earn at least 3 credits from the following:

- FSM498 - Food Service Externship I-a
- FSM499 - Food Service Externship I-b

The Bachelor of Science in Food Service Management has the following program requirements.

Locations

Norfolk, VA (Culinary Institute of Virginia), Richmond, VA (Glen Allen)

Healthcare Administration (BS)

Overview

College
College of Health Science

Program CIP Code
51.0701

The Bachelor of Science in Health Science-Healthcare Administration program teaches students how to become entry-level managers in many different kinds of healthcare settings. Students learn the fundamental areas of healthcare administration including finance, accounting, management, technology, community health, healthcare research, long-term care administration, global health, managed care, and healthcare delivery systems. Graduates will serve as business advocates in the global healthcare workplace.

The business of healthcare needs well-educated caring professionals to manage:

- Medical Units
- Long-term Care Centers
- Hospital Departments
- Community Health and Physician Office Practices

Medical and health services managers plan, direct, coordinate, and supervise the delivery of healthcare. These workers are either specialists in charge of a specific clinical department or generalists who manage an entire facility or system. This program offers the following two tracks:

TRACK	DESCRIPTION
Acute Care Track	The Acute Care Track is designed to provide students with real-world experience and an in-depth understanding of public health and healthcare administration within acute care settings. This track prepares students to effectively manage operations in fast-paced, high-pressure acute care environments.
Long-Term Care Track	The Long Term Care Track focuses on preparing students to manage and lead long-term care facilities, with a curriculum that includes a balance of practical experience and theoretical learning. This track equips students with the knowledge and skills to excel in the growing field of long-term care administration.

About Healthcare Administration

The Bachelor of Science in Health Science-Healthcare Administration produces graduates who may plan, direct, coordinate, and supervise the delivery of healthcare. Program emphasis is on the preparation of future medical and health services managers to deal with the integration of healthcare delivery systems, technological innovations, an increasingly complex regulatory environment, and an increased focus on preventive care. Program graduates will be prepared to improve efficiency in a variety of healthcare settings and to positively impact the quality of the care provided.

Some jobs may require background checks and drug screening. The ability to obtain security clearance is a plus for certain government jobs.

Students could seek entry level management positions in many different kinds of acute care healthcare venues and in long-term care facilities and assisted living facilities.

Recommended Certifications

Certifications are not required for completion of this program; however, ECPI encourages students to obtain all appropriate certifications to increase potential job opportunities. ECPI provides students in this program with vouchers which allow the student to take certification exams at a greatly reduced cost. While no certifications are necessary for the acute care track, state licensing as a long-term care administrator, nursing home administrator or assisted living administrator is required by most states.

Outcomes

Bachelor of Science in Health Science-Healthcare Administration students first learn basic business and accounting skills as they apply to the healthcare industry. They then learn about health information systems, managed care systems, marketing a healthcare business, public health issues, and legal and ethical issues in healthcare. The acute care track prepares entry level managers for work in hospitals, clinics, and emergency centers. The long-term care track prepares students for careers as long-term care administrators in skilled nursing facilities, nursing homes, and assisted living.

Upon completion of this program, graduates are able to:

Information and Cybersecurity Operations (BS)

Overview

College
College of Technology

Program CIP Code
11.1003

The Bachelor of Science in Information and Cybersecurity Operations degree provides a comprehensive education in IT and cybersecurity, preparing students to protect and manage modern information systems. Through hands-on learning, students gain practical skills in safeguarding data, managing networks, using and training artificial intelligence, and responding to cyber threats, equipping them for careers in industries ranging from corporate IT to government and defense. Graduates are prepared for roles like Information Security Analyst, Network Security Engineer, and Systems Administrator.

Additionally, students will choose from select groups of courses focused on specialized areas or tracks. Specifically, students will select one of three tracks as part of their degree. A listing and description of these tracks can be found in the table below. These employer-driven, hands-on, interactive educational tracks equip students with cyber and networking skills required for positions in a wide range of companies.

TRACK	DESCRIPTION
Security Operations (SOC) Track	The Security Operations (SOC) Track focuses on equipping students with the skills needed to protect and defend computer systems and networks against cyber threats. This track covers topics such as ethical hacking, advanced defense mechanisms, network security, and cloud security. Students learn to identify vulnerabilities, implement countermeasures, and respond to security incidents. Graduates of the Security Operations (SOC) Track are prepared for specialized roles such as Information Security Analyst, Penetration Tester, and Network Security Engineer, with expertise in safeguarding critical infrastructure across various industries.
Cloud Computing Track	Cloud computing or software services provided across the internet are ushering in a wave of new opportunities to help businesses become more flexible, efficient and agile. By providing infrastructures, platforms and software as a service, cloud computing allows users to access and implement important business and technology tools whenever and wherever they need.
General Track	The General Track in the Bachelor of Science in Information and Cybersecurity Operations program provides students with a broad and flexible education in IT and cybersecurity. This track allows students to choose from various courses in networking, cybersecurity, cloud computing, and digital forensics, enabling them to build a well-rounded skill set. Graduates of the General Track are prepared for a wide range of roles in the IT and cybersecurity sectors, offering the flexibility to pursue careers in network security, systems administration, cybersecurity analysis, and more, depending on their chosen course mix.

Apprenticeship Option - South Carolina Only

To be successful in the IT field today, the industry requires that graduates have a degree, certifications, and work experience. The Apprenticeship Option for the Cybersecurity Track in the BS in Computer and Information Science program is intended for students with limited or no in-field work experience.

The Program Director determines whether a student's education is best served through the Apprenticeship Option. If that is determined to be the case, then the Apprenticeship Option is considered required for graduation from the Information and Cybersecurity Operations program.

About Information and Cybersecurity Operations

Graduates of an Information and Cybersecurity Operations degree program have many career options. They often have career paths that lead them into IT security management positions, including Information Security Director or Chief Information Security Officer. They design and implement computer security systems that are vital to any modern computer network. They develop and test security plans to ensure a secure work environment for all employees in a company. Graduates also may work as security analysts, network architects, or administrators who design, implement, and maintain computer networks and systems which are the backbone to any company IT infrastructure.

Certain positions may require background checks, drug screening, and/or security clearances, depending on the position and industry.

Some entry-level job titles for a Bachelor of Science in Information and Cybersecurity Operations graduate include Data Center Engineer, Information Security Analyst, Penetration Tester, Network Security Engineer, Digital Forensics Analyst, and Systems Administrator. Cybersecurity graduates are required in many industries, so employment can be expected in most any business, government, or military setting.

Recommended Certifications

Certifications are not required for completion of this program; however, ECPI encourages students to obtain all appropriate certifications to increase potential job opportunities. ECPI provides students in this program with vouchers which allow them to take certification exams at a greatly reduced cost. Available certifications for this program include CompTIA IT fundamentals, CompTIA A+, CompTIA Cloud+, CompTIA Network+, CompTIA Linux+, CompTIA Security+, AWS cloud practitioner, CISCO CCNA and EC-Council CEH.

Outcomes

Students in the Bachelor of Science in Information and Cybersecurity Operations program develop planning, design, implementation, and support skills in artificial intelligence (AI), operating systems, networking, software programs, and security. Students also develop additional focused skills based on which track the student pursues. Students learn principles of excellent technical and customer service skills in order to assist clients with technical issues.

Upon completion of the Bachelor of Science in Information and Cybersecurity Operations, graduates will be able to:

Apprenticeship Option Courses

This option is for South Carolina students only. No additional credit is earned. Apprenticeship courses are pass/fail.

Complete ALL of the following Courses:

- APP491 - Cybersecurity Apprenticeship I
- APP492 - Cybersecurity Apprenticeship II
- APP493 - Cybersecurity Apprenticeship III
- APP494 - Cybersecurity Apprenticeship IV
- APP495 - Cybersecurity Apprenticeship V
- APP496 - Cybersecurity Apprenticeship VI

- Current domestic students in the Associate or Bachelor in Computer and Information Science program are eligible to apply for the Apprenticeship Option. To be considered, students must have a GPA of 3.0 or higher and a 90% or higher attendance rate, and be a full-time student. Students must apply before the end of their first semester.

- Students must maintain full-time student status while participating in apprenticeship courses. If selected, students must remain an active student at ECPI University during the apprenticeship and will be assigned a mentor that they will work with throughout the apprenticeship. The program consists of up to six semesters of apprenticeship courses.

- Apprenticeships are work experiences that may include consultancy-type projects and/or applied research that solves problems and are designed to apply the material learned in class.

- Students enter the Apprenticeship Option on a probationary status and will be evaluated after the completion of 500 hours to determine if the apprentice will continue in the program. After the probationary period, students will be evaluated every 500 hours.

Information Technology, Software Development and Coding (BS)

Overview

College
College of Technology

Program CIP Code
11.0202

The Bachelor of Science in Information Technology, Software Development and Coding degree provides a comprehensive education in software development, equipping students with the skills to design, develop, and implement modern software solutions. Through hands-on learning, students gain practical experience in coding, programming languages, database management, and software engineering, preparing them for careers in industries ranging from business and technology to healthcare and entertainment. Graduates are prepared for roles such as Software Developer, Data Analytics Professional, Data Scientist, Application Programmer, Web Developer, and Systems Analyst.

Additionally, students will choose from select groups of courses focused on specialized areas or tracks. Specifically, students will select one of four tracks as part of their degree. A listing and description of these tracks can be found in the table below. These employer-driven, hands-on, interactive educational tracks equip students with the software development skills required for positions in a wide range of companies.

TRACK	DESCRIPTION
AI/ML and Data Analytics Track	Data analytics is the method of examining large collections of data in order to make educated recommendations and uncover opportunities to improve business functions, often with the help of various analytics tools and software. When you're dealing with a plethora of data, it can seem like an overwhelming task. The goal of data analytics is to simplify the process and explore efficient ways to organize and consolidate data to enhance an organization and give them a competitive edge.
IT Project Management Track	The Project Management Track equips students with the skills to lead and manage software development projects. Focusing on both technical and leadership aspects, students learn to oversee the entire software development lifecycle, from planning and design to implementation and maintenance, while ensuring that projects meet business requirements and timelines. This track emphasizes Agile and Scrum methodologies, project risk management, and effective communication, preparing graduates to manage development teams, coordinate resources, and deliver high-quality software solutions in a fast-paced IT environment.
User Experience and Web/ Mobile Development Track	Like most everything, web sites are becoming more advanced. Today, businesses and organizations must make a statement with their web presence if they hope to engage the target audience. Web sites now utilize the latest multimedia, e-commerce, and advanced engagement tools to draw traffic and keep visitors coming back for more.
General Track	The General Track offers students the flexibility to tailor their education by selecting courses from various IT disciplines. This track allows students to build a broad foundation in software development, coding, database management, and web/mobile development while also exploring areas such as business process improvement and project management. Graduates of the General Track are equipped with diverse skills that prepare them for a wide range of career opportunities in software development, IT management, and related fields, providing the versatility to adapt to multiple roles in the technology industry.

About Information Technology, Software Development, and Coding

Graduates of an Information Technology, Software Development, and Coding degree program have many career options. They often have career paths that eventually lead them into IT management positions, including software project management. They are able to design and implement computer software systems (including simulations, games, business applications, and other systems). They may develop test plans and then test software applications to ensure their correct implementation. Graduates also may work as security analysts, network architects, or administrators who design, implement, and maintain computer networks, including wireless networks.

Certain positions may require background checks, drug screening, and/or security clearances, depending on the position and industry.

Some entry-level job titles for a Bachelor of Science in Information Technology, Software Development, and Coding graduate include: Data Center Engineer, Network and Datacenter Administrator, Web Programmer, Computer Programmer, Software Developer, Application Programmer, Mobile App Developer, Systems Analyst, Database Programmer, and Systems Administrator. CIS graduates are required in many industries, so employment could be expected in most any military or business setting.

Recommended Certifications

Certifications are not required for completion of this program; however, ECPI encourages students to obtain all appropriate certifications to increase potential job opportunities. ECPI provides students in this program with vouchers which allow the student to take certification exams at a greatly reduced cost. Certification areas include program languages such as Java and C#, and SQL Server and Oracle certifications.

Outcomes

Students in the Bachelor of Science in Information Technology, Software Development, and Coding program develop planning, design, implementation, and support skills in operating systems, networking, software programs, and security. Students develop additional focused skills based on which major the student pursues. Students also learn principles of excellent customer service in order to assist clients with technical issues.

Upon completion of the Bachelor of Science in Information Technology, Software Development, and Coding program, graduates will be able to:

Mechanical Engineering Technology (BS)

Overview

College
College of Technology

Program CIP Code
15.0805

If you are the type of person who likes hands-on careers in design, testing, manufacturing, operations, maintenance, and technical support, then Mechanical Engineering Technology may be the right choice for you. Learn skills that support industries such as Product Design and Fabrication, Manufacturing, Power Generation, Heating, Air Conditioning, Transportation, Infrastructure, Plant Management, and Systems Controls.

In 2.5 years, through our year-round schedule, you can earn a Bachelor of Science in Mechanical Engineering Technology degree.

The Bachelor of Science in Mechanical Engineering Technology program focuses on problem solving and real-world application of applied engineering science and technology. Mechanical Engineering technologists are real problem solvers with responsibilities ranging from those of a support technician to plant manager.

- The program focuses on core areas such as:
- Mechanical design and analysis
- Materials science and manufacturing processes
- Thermal-fluid-energy sciences
- Computer aided engineering graphics and analysis
- Electro-mechanical devices
- Instrumentation and controls

ABET | Engineering Technology Accreditation Commission

The Bachelor of Science in Mechanical Engineering Technology at the Virginia Beach campus and Online is accredited by the Engineering Technology Accreditation Commission (ETAC) of ABET, under the General Criteria and Program Criteria for Mechanical Engineering Technology.

About Mechanical Engineering Technology

Mechanical engineering technologists are needed in many industries and can find employment in manufacturing environments.

Some positions may require background checks, drug screening, and/or security clearances, depending on the position and industry. The curriculum provides graduates with the education and experience needed for employment in various public and private careers: Mechanical Product Design and Fabrication; CAD and Computer Graphics; Automation and Manufacturing; Machining and Mechanical Maintenance; Power Generation and Plant Management; Climate Control: Heating, Ventilation, and Air Conditioning; Transportation: Vehicles and Infrastructure; Aerospace and Aerodynamics Industry; Systems Controls.

Entry-level employment opportunities for graduates in the mechanical engineering technology field include many specialties; it is anticipated that job titles would be diverse. A typical title would be technologist engineer or engineering technician and their respective specialty such as Mechanical Engineering Consultant; Product and Materials Testing Technologist; Drafting and Computer Graphics Engineer; Manufacturing and Quality Management Engineer; Industrial Engineer; Project Manager; Plant Maintenance and Production Manager; Transportation Engineer; Power and Energy Engineer.

Program Objectives

Building upon ECPI's tradition of providing an interactive and "real world" hands-on education in technology, you can:

- Acquire knowledge, techniques, skills and modern tools of Mechanical Engineering Technology.
- Conduct, analyze, and interpret experiments and apply experimental results to design and improve mechanical processes.
- Function effectively as a team member for preparation of reports and presentations.
- Incorporate quality, aptitude, and continuous improvement in expertise and professional behavior.

Recommended Certifications

Certifications are not required for completion of this program; however, ECPI encourages student to obtain all appropriate certifications to increase potential job opportunities. ECPI provides students in this program with vouchers which allow the student to take certification exams at a greatly reduced cost.

Some Mechanical Engineering Technology specialties require the use of complicated and expensive machinery, training is often required. There are many certifications that a Mechanical Engineering Technician would need to acquire such as Machining, Welding, HVAC, CAD, etc.

Outcomes

Upon completion of the Bachelor of Science in Mechanical Engineering Technology program, graduates will be able to:

Requirements

Simple Requirements

Program Requirements

To receive the Bachelor of Science in Mechanical Engineering Technology, students must earn 124 semester credit hours. The program requires a minimum of 8 semesters, which is equivalent to 30 months or 120 weeks of instruction. The program requirements are as follows:

Core Curriculum Requirements

Type
Completion Requirement

Core Courses

70 semester credit hours

Fulfill ALL of the following requirements:

ELECTRICITY

Complete ALL of the following Courses:

- EET113 - DC and AC Circuits

AND

ANALOG ELECTRONICS

Complete ALL of the following Courses:

- EET223 - Electronic Devices and Operational Amplifiers

AND

PROGRAMMING

Complete ALL of the following Courses:

- EET207 - Applied Engineering Programming
- SDC100 - Introduction to Programming

AND

ENGINEERING MECHANICS

Complete ALL of the following Courses:

- MET211 - Statics
- MET311 - Mechanisms
- MET410 - Dynamics

AND

DRAFTING AND MODELING

Complete ALL of the following Courses:

- MET192 - Graphics Communication
- MET192L - Introduction to 3-D Modeling LAB
- MET213 - Advanced 3D Modeling

AND

MANUFACTURING

Complete ALL of the following Courses:

- MET191 - Materials Science
- MET221 - Manufacturing Processes
- MET320 - Machine Tools
- MET320L - Machine Tools Lab
- MET322 - CNC Machining with Computer-Aided Manufacturing (CAM)

AND

MECHANICAL DESIGN

Complete ALL of the following Courses:

- MET313 - Applied Strength of Materials
- MET313L - Materials LAB
- MET412 - Machine Design
- MET414 - Applied Finite Element Analysis

AND

FLUID SCIENCE

Complete ALL of the following Courses:

- MET230 - Hydraulics and Pneumatics Systems
- MET230L - Hydraulics and Pneumatics Systems Lab
- MET330 - Applied Fluid Mechanics
- MET330L - Applied Fluid Mechanics Lab
- MET432 - Applied Thermodynamics
- MET434 - Applied Heat Transfer
- MET434L - Heat Transfer and Thermodynamics Lab

AND

SENIOR PROJECT

Complete ALL of the following Courses:

- MET400 - Senior Project
- MET400L - Senior Project Lab

Arts and Sciences Requirements

Type
Completion Requirement

Arts and Sciences Courses*

37 semester credit hours

Fulfill ALL of the following requirements:

Required Courses

Complete ALL of the following Courses:

- CAP480 - Arts and Sciences Capstone
- COM115 - Principles of Communication
- ENG110 - College Composition
- ENG120 - Advanced Composition
- HUM205 - Culture, Thought, and the Human Experience
- MTH131 - College Algebra
- MTH200 - Pre-calculus
- MTH220 - Applied Calculus I
- MTH320 - Applied Calculus II
- PHY120 - Physics
- PHY120L - Physics Lab

AND

Choose two courses from the following.

Complete at least 2 of the following courses:

- ECO201 - Macroeconomics
- ECO202 - Microeconomics
- PSY105 - Introduction to Psychology
- PSY225 - Industrial/Organizational Psychology

**For allowable substitutions of arts and sciences courses, see the Arts and Sciences Department page.*

Type
Completion Requirement

Self-Integration Courses

10 semester credit hours

Complete ALL of the following Courses:

- CST120 - Computer Configuration I
- COR191 - Career Orientation
- ET102 - Engineering Math and Software Applications
- FOR110 - Essentials for Success

Elective Requirements

Type
Completion Requirement

Elective Courses

7 semester credit hours

Students must meet all pre-requisite requirements for their chosen electives.

Fulfill ANY of the following requirements:

BUSINESS

Complete ANY of the following Courses:

- BUS102 - Fundamentals of Customer Service
- BUS121 - Introduction to Business

- BUS328 - Business Process Improvement
- BUS328L - Business Process Improvement LAB
- PMT472 - Applied Project Management
- PMT472L - Applied Project Management Lab

**Additional business and management coursework that supports engineering technology practice may be approved for elective credit, subject to departmental review for relevance to program outcomes.*

OR

ELECTRONICS

Complete ANY of the following Courses:

- EET130 - Digital Systems I
- EET220 - Industrial Applications
- EET230 - Digital Systems II
- EET233 - Robotics and Smart Manufacturing (SM)
- EET233L - Robotics and Smart Manufacturing (SM) Lab

OR

MECHANICAL

Complete ANY of the following Courses:

- MET114 - Introduction to Geometric Dimensioning and Tolerancing (GD and T)
- MET223 - Applied Machine Tools
- MET224 - CNC Machines Operation
- MET420 - Instrumentation and Industrial Controls
- MET420L - Instrumentation and Industrial Controls LAB

OR

EXTERNSHIP

Complete ANY of the following Courses:

- MET405 - Externship-MET Sr. III
- MET406 - Externship-MET Sr. II
- MET407 - Externship-MET Sr. I-a
- MET408 - Externship-MET Sr. I-b
- MET409 - Externship-MET Sr. I-c

OR

INFORMATION SYSTEMS

Complete ANY of the following Courses:

- CST160 - Introduction to Networking
- SDC100L - Introduction to Programming LAB

The Bachelor of Science in Mechanical Engineering Technology has the following program requirements.

Virginia Beach, VA (Main), Online

Nursing (BSN)

Overview

College
College of Nursing

Program CIP Code
51.3801

The focus of the Bachelor of Science in Nursing (BSN) program is to offer a quality educational program that provides its graduates with the educational foundation and skills necessary to achieve professional success in the field of nursing.

ECPI University is committed to providing quality nursing education with the goal of developing clinical leaders with the ability to advance and promote the health of the diverse populations within the communities they serve, advocate on behalf of their clients, achieve and maintain their clinical competency, and provide service to the community and the profession.

The University faculty and administration are dedicated to achieving the University and BSN program's focus.

For additional information about the program link to: https://www.ecpi.edu/programs/accelerated-bachelor-of-science-nursing-absn. To see the Student Consumer Information link to: https://www.ecpi.edu/student-consumer-services which provides additional information on the future careers, success, cost, and financing for this program. For information on the University Completion and Graduation Rates, please see About ECPI University on the ECPI website.

- Transferability of Credit > Nursing | BSN section

The Baccalaureate Degree Program in Nursing at ECPI University Orlando, Florida campus, ECPI University Virginia Beach, Virginia campus, and ECPI University Richmond, Virginia campus is accredited by the Commission on Collegiate Nursing Education (http://www.ccneaccreditation.org.)

About Nursing

The Bachelor of Science in Nursing graduate can work in a variety of roles in community health, specialty bedside practice, informatics, and management, pursuing employment in a range of settings. The Bachelor of Science in Nursing program allows students to acquire the essential skills and knowledge needed to meet the preventative and restorative needs of patients. Students learn both the art and science of nursing.

Available job titles are Registered Nurse, Clinical Nurse Manager, Nurse Educator, Clinical Educator, Charge Nurse, or Community Health Nurse.

Recommended Licensure

All nurse graduates must apply for licensure through the state Board of Nursing. The Board of Nursing must deem the graduate eligible to test and the graduate must successfully pass the National Council Licensing Exam for Registered Nurses (NCLEX-RN) before being able to practice as a registered nurse.

NCLEX Preparation and Total Testing

Total testing nursing education products are assessment tools and resources to promote mastery of core nursing concepts and to prepare students for the NCLEX exam. Assessment tools used in the nursing program are practice quizzes, practice assessments and proctored assessments. The total testing education products also assist the nursing program in the assessment of course and program competencies. All students are required to complete the secured standardized assessment tests in several content areas.

Readiness to sit for the NCLEX exam will be assessed in the final nursing course using a Comprehensive Predictor Test.

Outcomes

The curriculum leading to the Bachelor of Science in Nursing degree is designed to prepare a professional nurse who should be able to demonstrate the ability to:

The Bachelor of Science Degree in Nursing (BSN) has the following program requirements.

Program Philosophy

Faculty of the BSN program believe that:

- Baccalaureate nursing education is a basic preparation for professional nursing practice and establishes the foundation for life-long learning. The faculty members believe that the baccalaureate graduate is a generalist, prepared to provide clinical leadership in the assessment, planning, delivery and evaluation of health care for individuals, families and communities.
- The curriculum is structured to enable the student to demonstrate that they have developed an understanding and mastery of baccalaureate-level nursing and related concepts as they progress through their educational experience. Related concepts emphasized in the nursing curriculum include ethical decision-making, critical thinking, effective communication, leadership and management.

As envisioned by the faculty members, the nursing paradigm includes:

Person	Each person is a unique being with basic rights and choices who experiences multiple stressors from their continually changing internal and external environments with varying degrees of adaptation. The ultimate goal that a person has is to find, establish and maintain balance with health. Clients of nursing care are composed of individuals, families, groups, and communities with diverse backgrounds, sharing common goals and values. Perceptions, attitudes, values, and goals are influenced by culture, race, spirituality, age, gender, and abilities.
Environment	The environment is a complex, open system existing in a dynamic state of change. Economic, political, environmental, and technological factors exert their effects on society. The nurse promotes an environment in which the person's needs may be met, while respecting individual differences related to values, customs, and responses to life experiences.
Health	Health is regarded as dynamic and multidimensional, with physical, mental, spiritual and social components that are all interrelated on the wellness-illness continuum, varying from a high level of wellness to varying degrees of illness. Health is influenced by both internal and external factors to the individuals' optimal level of functioning. When adaptive abilities are inadequate or stressed, the individual moves on the wellness-illness continuum toward a lower level of functioning. All people have the inherent right to make informed decisions regarding their health care, including self-determination.
Nursing	Nursing is both an art and a science. Professional nursing provides comprehensive health care services to clients in an effort to support them in attaining their optimal level of independence and wellness through the promotion, maintenance, and restoration of health. The role of the nurse is multifaceted, conceptualized in three primary categories: provider of care, coordinator of care and member of the profession. Nursing education is an interactive process, allowing the adult learner to incorporate previously learned knowledge, building a foundation for providing holistic, outcomes-oriented care. The profession works collaboratively with other members of the health care interdisciplinary team to facilitate optimal client outcomes. The faculty believes that the baccalaureate degree is the professional degree for nursing, providing the groundwork for the graduate degree.
Learning	Faculty members of the University believe baccalaureate education in nursing is the basis for professional practice as a nurse generalist and offers preparation for professional development and life-long learning. Baccalaureate nursing education, based upon a liberal arts education, is the synthesis of knowledge from a variety of disciplines, including humanities, social, behavioral, and natural sciences. Learning is a collaborative partnership between the student and the faculty member, promoted by critical thinking, problem-solving and effective decision-making. Learning occurs in a variety of settings, with each student responsible for maximizing his or her own experiences. Each student has unique life, educational and work experiences and therefore, has individual learning needs. Outcome assessments quantitatively and qualitatively measure achievement of programmatic goals.

Program Purpose

The purpose of the program is to provide undergraduate students with the ability to practice professional nursing as a generalist, and academic foundation necessary to pursue graduate education. The Bachelor of Science in Nursing program is dedicated to providing educational opportunities for qualified students, from diverse backgrounds, in caring for individuals, families and communities and preparing graduates for the practice of registered professional nursing in a variety of health care settings. A foundation for life-long personal and professional learning is built upon a broad base of liberal arts and sciences, humanities, and nursing theory to assist students develop ethically reflective professional nursing skills that uphold the ideals of today's health care delivery system. Through evidence-based, clinical decision-making in nursing practice and the development of leadership skills, the professional registered nurse will be educated to service and benefit a multicultural society across the lifespan.

Organizational Leadership (BS) | Management Concentration

Overview

College
College of Business and Criminal Justice

Program CIP Code
52.0213

Students develop leadership skills necessary to function in a contemporary global environment by relating theory to real-world practical application in all industries and organizations, whether private or public, for-profit or not-for-profit. Students will integrate policies, procedures, and systems to build effective and efficient learning organizations. Focus is on collaboration to influence individual and team behaviors in social, economic, and ethical situations. Curriculum provides the opportunity to communicate vision and positive change and to create a culture of inclusion, while demonstrating emotional intelligence competencies. The program integrates the functions of management in leadership positions to make complex strategic decisions for continuous improvement and to motivate goal-oriented members to add value to the organization.

Graduates of the Organizational Leadership concentration may find employment in a variety of industries. Possible job titles include Human Resources Manager, Project Manager, Team Leader/Logistics Manager, and Operations Manager.

The Management Concentration allows students to gain a general background in organizational leadership with the ability to choose tracks and electives that focus on areas of interest related to their unique career paths.

This program offers three tracks:

TRACK	DESCRIPTION
Human Resources Management Track	The human resource management track provides students with the opportunity to engage in contemporary practices that support and motivate a diverse and multicultural workforce in individual and group settings. Employee recruitment and retention is emphasized, including compensation and benefits, rewards and recognition.
Leadership Track	The leadership track allows students to develop ethical leadership skills and abilities and the emotional intelligence necessary to lead contemporary organizations. The program emphasizes the creation of a learning environment that encourages change and innovation. Students are afforded an opportunity to develop strategic decision-making and problem-solving skills.
Project Management Track	The project management track focuses on leading projects from start to completion. Students will develop the skills set to lead project teams and will use project management tools to successfully manage the different stages of projects, including how to maximize performance and minimize risk. Core competencies, quality control, and enhancing the customer experience through a collaborative organizational framework are emphasized.

4 + 1 Undergraduate to Graduate Option

The 4+1 programs offer students with the opportunity to seamlessly transition from their bachelor's degree to a master's degree in an accelerated timeframe. This program allows students to complete both degrees by integrating selected graduate-level coursework into their undergraduate curriculum. By taking advantage of this program, students can maximize their time and resources, efficiently advancing their education and enhancing their career prospects. Through rigorous coursework and advanced research projects, students develop specialized knowledge and skills in their chosen field, positioning themselves for leadership roles and further academic pursuits upon graduation.

4 + 1 BSOL to MSM/MBA Program

The 4+1 programs allow for BSBA and BSOL students to take up to 6 credit hours (2 classes) that count towards fulfilling their undergraduate degree requirements and count towards the completion of their master’s program. The bachelor’s degree is awarded after successful completion of all BSBA and/or BSOL requirements. Once the bachelor’s degree is completed, a student is required to apply for the graduate program.

Below is the program curriculum for the 4+1 course pairings offered. Some undergraduate courses listed are required for the program, while others may be taken as electives. While the student is enrolled in the undergraduate course, additional course work is required at that time for the 4+1 program. The admission criteria for participation in the 4+1 Undergraduate to MBA or MSM programs are as follows:

- Students must have completed 60 undergraduate credit hours towards their baccalaureate degree
- Students must maintain a cumulative undergraduate GPA of 3.0 on a 4.0

MBA Courses	BSBA Courses
MGT520 Organizational Behavior and Leadership Organizational Behavior and Leadership	BUS303 Organizational Leadership and Management Organizational Leadership and Management
MGT528 Business Research and Analysis Business Research and Analysis	BUS480 Strategic Planning and Implementation Strategic Planning and Implementation
MGT532 Organizational Change and Development Organizational Change and Development	BUS409 Organizational Dynamics: Motivation and Leadership Organizational Dynamics: Motivation and Leadership

Recommended Certifications

Certifications are not required for completion of this program; however, ECPI encourages student to obtain all appropriate certifications to increase potential job opportunities. ECPI provides students in this program with vouchers which allow the student to take certification exams at a greatly reduced cost.

Certifications recommended for entry level career positions in the Operations, Logistics, and Supply Chain Management concentration are Certified Associate in Project Management (CAPM) and Six Sigma Green Belt.

Outcomes

Upon successful completion of the program, graduates are able to:

Organizational Leadership (BS) | Operations, Logistics, and Supply Chain Management Concentration

Overview

College
College of Business and Criminal Justice

Program CIP Code
52.0205

Students develop leadership skills necessary to function in a contemporary global environment by relating theory to real-world practical application in all industries and organizations, whether private or public, for-profit or not-for-profit. Students will integrate policies, procedures, and systems to build effective and efficient learning organizations. Focus is on collaboration to influence individual and team behaviors in social, economic, and ethical situations. Curriculum provides the opportunity to communicate vision and positive change and to create a culture of inclusion, while demonstrating emotional intelligence competencies. The program integrates the functions of management in leadership positions to make complex strategic decisions for continuous improvement and to motivate goal-oriented members to add value to the organization.

The logistics and supply chain management concentration allows students to develop skills necessary to function in a global logistics and supply chain environment by relating models and theory to real-world practical applications. Students will integrate methods, software applications, policies, procedures, and systems to build effective and efficient supply chain-focused operations. The key goals of creating and maintaining customer satisfaction, within budget and on time delivery, is the focus of this program.

4 + 1 Undergraduate to Graduate Option

The 4+1 programs offer students with the opportunity to seamlessly transition from their bachelor's degree to a master's degree in an accelerated timeframe. This program allows students to complete both degrees by integrating selected graduate-level coursework into their undergraduate curriculum. By taking advantage of this program, students can maximize their time and resources, efficiently advancing their education and enhancing their career prospects. Through rigorous coursework and advanced research projects, students develop specialized knowledge and skills in their chosen field, positioning themselves for leadership roles and further academic pursuits upon graduation.

Business Administration (Certificate) | Financial Literacy for Business Professionals

Overview

College
College of Business and Criminal Justice

Program CIP Code
52.0301

Program Overview

ECPI University offers Certificate programs (also referred to as Micro-credentials) that focus on specific skill sets. These programs are shorter than traditional degree programs and are designed to meet the needs of working professionals so that they can stay competitive in their field. Certificate programs may be offered in a variety of ways to suit the learning style and schedules of individuals. They may include remote learning, instructor led in-seat learning, hybrid courses, and online courses.

See also the following additional program information:

- **Admissions Requirements** > Business Administration Certificate
- **Academic Policy > Satisfactory Academic Progress** > SAP - Business Administration Certificate

About Financial Literacy for Business Professionals

This certificate program provides individuals working in business with a fundamental understanding of principles of accounting. It provides a strong foundation for individuals seeking positions in bookkeeping, accounts payable, accounts receivable, and payroll processing. It also provides individuals working in other aspects of business-important concepts for financial literacy.

Student Evaluation

Students' academic progress will be evaluated after each course grade has been awarded. In general and unless otherwise stated, the minimum grade to maintain satisfactory progress is 70% or C-. Students must achieve a minimum term grade point average of 2.0.

A course may not be repeated more than once without approval of the designated academic official. Grades achieved in courses that are repeated due to course withdrawal (W, WP) or failure (F, WF) will replace previous withdrawal or failing grades. A student who is approved to repeat a course due to a failing grade (F, WF) must successfully pass the course by the third attempt. After three failed attempts the student will be academically dismissed (for appeal of academic dismissal, see Appealing an Academic Dismissal).

Outcomes

Upon completion of the Certificate in Financial Literacy for Business Professionals, graduates are able to:

About Lean Methodology and Project Management

The modern workplace is more complex than ever. As a consequence, the ability to coordinate efficient and productive collaboration is a skill set highly desired by employers across all industries. This program introduces participants to principles of Six Sigma and Project Management methods. Students will work hands-on with tools such as Microsoft Project, Microsoft Visio, and Microsoft Excel that are commonly used to practice these methods to reinforce theory.

Student Evaluation

Students' academic progress will be evaluated after each course grade has been awarded. In general and unless otherwise stated, the minimum grade to maintain satisfactory progress is 70% or C-. Students must achieve a minimum term grade point average of 2.0.

About Foundations of Law Enforcement

This certificate program is designed for those seeking entry level positions in state and local law enforcement as well as correctional facilities where preference is given to those with related collegiate training but a degree is not required. The program covers aspects of the Criminal Justice system including a foundation in understanding criminal law and the rights of both law enforcement and citizens. It also provides a background to understand the Bill of Rights and US Constitution so that students gain an understanding for the role of law enforcement in our Criminal Justice system.

Outcomes

Upon completion of the Certificate in Foundations of Law Enforcement, graduates are able to:

About Digital Logic Systems

The certificate program covers foundational knowledge of basic electricity and digital systems. The fundamental understanding of AC and DC concepts is gained through the use of test equipment and troubleshooting. Students will learn about combinational and sequential circuits, state machines, and ADC/DAC converters. Upon successful program completion, students will be able to design and implement combinational and sequential logic circuits. It is intended for those seeking entry level positions installing and maintaining electrical and electronic equipment in residential and commercial environments.

Manufacturing Maintenance Technician (Certificate)

Overview

College
College of Technology

Program CIP Code
47.0303

Manufacturing Maintenance Technicians install, maintain and repair electrical, electronic, and mechanical equipment. They also assist in the development, testing, production, and quality assurance of equipment and components such as: circuit boards, hydraulic and pneumatic equipment, pumps, and control systems. Skills in the Manufacturing Maintenance field can be applied in various areas including maintenance and repair, installation, quality assurance, and research and development.

The Manufacturing Maintenance curriculum provides the education and foundation needed for employment in a variety of related industries in both the private and public sector including automation and manufacturing, aerospace, and automotive industries.

The certificate program offers students the chance to work with and troubleshoot programmable logic controllers and integrated systems, learn by doing while grasping a firm theoretical foundation in electronics and mechanical technology, and put into practice acquired knowledge through several hands-on projects.

About Manufacturing Maintenance Technician

The Manufacturing Maintenance Technician program prepares students for employment in a variety of related industries in both the private and public sector including automation and manufacturing, aerospace, and automotive industries. Manufacturing Maintenance Technician graduates may also be employed as:

- Industrial Maintenance Technician
- Maintenance Technician
- Facilities Maintenance Technician

Program Objectives

Graduates of the Manufacturing Maintenance Technician certificate program are expected to attain the following objectives within a few years of graduation:

- Apply mathematical, science, and engineering methods to solve technical problems
- Perform as effective team members through adequate oral and written communication skills
- Relate and exercise an educated judgment regarding their professional and ethical responsibilities
- Pursue lifelong learning and successful professional careers

Recommended Certifications

Certifications are not required for completion of this program; however, ECPI encourages student to obtain all appropriate certifications to increase potential job opportunities. ECPI provides students in this program with vouchers which allow the student to take certification exams at a greatly reduced cost. Available certifications for this program include: Associate Certified Electronics Technician (CETa) and AutoCAD Certified User.

Outcomes

Students in the Manufacturing Maintenance Technician certificate program learn to apply technical and analytical skills in electrical, electronics, and related industry to solve engineering problems and maintain equipment and facilities. They apply basic math and engineering principles to solve technical problems and implement complex hardware and software systems.

Upon completion of the Certificate in Manufacturing Maintenance Technician program, graduates will be able to:

Minimum 24 credits up to a maximum of 34 credits

Fulfill ANY of the following requirements:

ELECTRICITY

Fulfill ANY of the following requirements:

Complete ALL of the following Courses:

- EET110 - Electric Circuits I
- ESET111 - Electric Circuits II
- ESET111L - Electric Circuits II Lab

OR

Complete ALL of the following Courses:

- EET113 - DC and AC Circuits

OR

ANALOG ELECTRONICS

Fulfill ANY of the following requirements:

Complete ALL of the following Courses:

- EET120 - Semiconductor Devices
- EET121 - Electronic Systems Applications
- EET220 - Industrial Applications
- EET221L - Instrumentation and Measurement Lab

OR

Complete ALL of the following Courses:

- EET223 - Electronic Devices and Operational Amplifiers
- EET220 - Industrial Applications
- EET221L - Instrumentation and Measurement Lab

Students must meet all prerequisite requirements for chosen courses.

DIGITAL ELECTONICS

Complete ALL of the following Courses:

- EET130 - Digital Systems I
- EET230 - Digital Systems II
- EET230L - Digital Systems Lab

ROBOTICS

Complete ALL of the following Courses:

- EET233 - Robotics and Smart Manufacturing (SM)
- EET233L - Robotics and Smart Manufacturing (SM) Lab

CONTROL SYSTEMS

Complete ALL of the following Courses:

- EET231 - Introduction to Programmable Logic Controllers
- EET231L - Introduction to Programmable Logic Controllers Lab
- EET331 - Programmable Controllers and Robotics
- EET331L - Programmable Controllers and Robotics Lab

DRIVE SYSTEMS

Complete ALL of the following Courses:

- EET390 - Motor Drives
- EET390L - Motor Drives Lab

ENGINEERING MECHANICS

Complete ALL of the following Courses:

- MET211 - Statics
- MET311 - Mechanisms

MATERIALS

Complete ALL of the following Courses:

- MET191 - Materials Science

FLUID SCIENCE

Complete ALL of the following Courses:

- MET230 - Hydraulics and Pneumatics Systems
- MET230L - Hydraulics and Pneumatics Systems Lab

MANUFACTURING

Complete ALL of the following Courses:

- MET221 - Manufacturing Processes
- MET222 - Mechanical Drives and Power Transmission
- MET224 - CNC Machines Operation
- MET232 - Pumps

DRAFTING AND MODELING

Complete ALL of the following Courses:

- MET114 - Introduction to Geometric Dimensioning and Tolerancing (GD and T)
- MET192 - Graphics Communication
- MET192L - Introduction to 3-D Modeling LAB
- MET213 - Advanced 3D Modeling

COMPUTER SYSTEMS AND PROGRAMMING

Complete ALL of the following Courses:

- CST120 - Computer Configuration I
- ET102 - Engineering Math and Software Applications
- SDC100 - Introduction to Programming
- EET207 - Applied Engineering Programming

CAPSTONE PROJECT

Complete ALL of the following Courses:

Baking & Pastry Arts (Diploma)

Overview

College
College of Culinary Arts

Program CIP Code
12.0501

Baking and pastry skills are considered an area of specialty within the field of culinary arts. A variety of food service employers, including bakeshops, grocery stores, restaurants, hotels/resorts, and contract dining facilities, employ individuals with the sole purpose of preparing baked goods on-site. Additionally, baking positions are available in manufacturing facilities which produce breads and pastries in large quantities for distribution. The graduate of the program may work in a variety of positions from entry level to lead baker or pastry chef. The industry grants exceptional opportunities for advancement with favor given to those individuals with exemplary work ethic and experience. At present, there is an industry need for skilled and work-place ready bakers. Students in the Associate of Applied Science in Baking and Pastry Arts program will be taught skills in:

- Foundational methods and techniques used throughout the baking and pastry industry
- Ensuring a safe and sanitary bake shop
- Baking and pastry recipe development and execution for various production levels
- Alternative baking techniques to accommodate specialty diets and allergies

About Baking and Pastry Arts

A career in the Baking and Pastry Arts allows you to use your creative, intellectual, and leadership skills in creating, preparing, and serving food that your customers will enjoy. Demand is high for qualified baking personnel and can be global- there are no geographic boundaries. In addition to designing and preparing fine baked goods, bakers may be responsible for managing staff, budgeting, setting menu prices, forecasting production quantities, ordering product, and maintaining a safe, clean kitchen area. Depending on the student's work ethic, experience, and dependability, the graduate may work as an entry level or lead baker or pastry chef with exceptional opportunity for advancement.

Working in a baking position is physically very demanding. Long periods of standing, lifting heavy objects and long periods between breaks are not uncommon in the industry. Hepatitis A vaccination may be required.

Background checks, drug screening and/or security clearances may be requirements for employment depending on the food service outlet.

Recommended Certifications

Students may obtain the National Restaurant Association Educational Foundation (NRAEF) ServSafe Food Protection Manager and ServSafe Alcohol certifications as a result of their studies.

Requirements

Simple Requirements

Program Requirements

To receive the Diploma in Baking and Pastry Arts, students must earn 38 semester credit hours. The program requires a minimum of 3 semesters, which is equivalent to 10 months or 40 weeks of instruction. The program requirements are as follows:

Culinary Arts (Diploma)

Overview

College
College of Culinary Arts

Program CIP Code
12.0505

The School of Culinary Arts, Culinary Institute of Virginia, educational program prepares students for success in the competitive field of food service. The program prepares students for entry level positions in the food service industry. Emphasis is placed on the development of professional culinary skills, through standards-based, hands-on training.

About Culinary Arts

A career in the Culinary Arts allows you to use your creative skills in creating, preparing, and serving food that your customers will enjoy. Demand for qualified foodservice personnel can be global, there are no geographic boundaries. Culinarians plan and cook menus combining flavor profiles in ways that make memorable meals while maintaining a safe, clean kitchen area. Depending on the student's work ethic, experience, and dependability, the graduate may work as a cook, pantry cook, banquet cook, line cook, or sous chef, with exceptional opportunity for advancement.

Working in a food service position is physically very demanding. Long periods of standing, lifting heavy objects and long periods between breaks are not uncommon in the industry. Hepatitis A vaccination may be required.

Background checks, drug screening and/or security clearances may be requirements for employment depending on the food service outlet.

Recommended Certifications

Students may obtain the National Restaurant Association Educational Foundation (NRAEF) ServSafe Food Protection Manager and ServeSafe Alcohol certifications as a result of their studies. The Culinary Institute of Virginia is accredited by the American Culinary Federation. Upon successful completion of the program, students are eligible to apply for initial certification of Certified Culinarian.

Nursing (Practical-Diploma)

Overview

College
College of Nursing

Program CIP Code
51.3901

The Diploma in Practical Nursing program is designed to provide with the opportunity to acquire the knowledge, skills, and attitudes necessary for developing effective communication, critical thinking, clinical reasoning and teamwork/collaboration skills which will prepare the graduate to care for individuals, families and communities as an entry level practical nurse in a variety of healthcare settings.

The Diploma in Practical Nursing program prepares the student to become a valuable member of a healthcare team, working under the supervision of an advanced practice registered nurse, registered nurse, licensed physician, licensed dentist, or other practitioner.

See also the following additional program information:

- **Admissions Requirements** > Nursing | PN
- **Attendance Policy** > Nursing | PN Diploma *(includes information on Clinical Phase Absenteeism and Tardiness)*
- Clinical Protocol > Nursing | All Programs
- Transferability of Credit > Nursing | PN Diploma section

About Practical Nursing

Licensed Practical Nurses typically provide nursing care under the direction of a more senior healthcare practitioner, including registered nurses. They understand nursing fundamentals and assist with delivering care to patients and their families. They are prepared to continue their formal education and prepare for more advanced nursing degrees and certifications, including Registered Nursing.

Criminal background checks, drug screening, dosage calculation competency exams, nursing skills competency exams, and security clearances may be required, depending on the facility.

Practical Nurses must physically be able to change position frequently, stand and sit for prolonged time periods, lift 50 pounds or more with or without assistance or assistive devices, bend, and twist. They must have adequate vision and hearing, and they must be able to use computers.

A graduate from the Practical Nursing program will work as a Licensed Practical Nurse (LPN) in a healthcare setting such as a long-term care facility, skilled nursing facility, assisted living facility, or correctional facility infirmary. Licensed Practical Nurses may also work in home health care settings, physicians' offices, clinics, urgent care centers, or acute care facilities.

Vision

The Practical Nursing program at ECPI University (hereafter will be referred to as "ECPI") is a leading provider of practical nurse education. ECPI creates an environment that promotes effective teaching and successful learning.

Recommended Licensure

The Diploma in Practical Nursing program is approved by the State Board of Nursing for the state in which the ECPI University campus which the student attends is located. ECPI University provides vouchers allowing students to take licensure exams administered by the student's state's Board of Nursing at a greatly reduced cost. All Practical Nursing graduates must successfully pass the National Council Licensing Exam for Practical Nursing (NCLEX-PN) before being able to practice as a Licensed Practical Nurse (LPN).

While ECPI University's Diploma in Practical Nursing program does not have its own distinct accreditation by a national nursing education body, it is not required for licensure. ECPI University is accredited by the Southern Association of Colleges and Schools Commission on Colleges to award the associate, baccalaureate, and master's degrees and diplomas. Accreditation, state licensure, and Board of Nursing approval information can be found in this catalog under Accreditation and Approvals.

NCLEX Preparation and Total Testing

Total testing nursing education products are assessment tools and resources to promote mastery of core nursing concepts and to prepare students for the NCLEX exam. Assessment tools used in the nursing program are practice quizzes, practice assessments and proctored assessments. The total testing education products also assist the nursing program in the assessment of course and program competencies. All students are required to complete the secured standardized assessment tests in several content areas.

Readiness to sit for the NCLEX exam will be assessed in the final nursing course using a Comprehensive Predictor Test.

Student Evaluation

The faculty use the objectives of the Program of Nursing as criteria for student evaluation. The student's grades are determined by a combination of written examinations, laboratory/simulation competence, and clinical performance.

Nursing ability, attitude, and relationship with others are areas of clinical and laboratory/simulation evaluation. The achievement of the student in both theory and clinical performance is evaluated by the faculty at regular intervals and shared with the student.

The student progresses to the next term when all prerequisite courses have been satisfactorily completed. Students enrolling in the Practical Nursing program at any of the Virginia campuses must achieve an 80 percent average in all nursing and science courses including courses with the prefix COR, BIO, or NUR. Students enrolling in the program at any of the North Carolina and South Carolina campuses as well as those students enrolled in the Virginia campuses prior to January 2018 must achieve an 80 percent average in all courses and satisfactorily meet all clinical objectives. A final course grade of less than 80 percent or failure to meet laboratory/simulation competence and clinical objectives will result in failure of a course.

Outcomes

The Diploma in Practical Nursing program prepares the student for a foundation of life-long personal and professional learning built upon liberal arts, science and nursing theory courses. The program includes classroom, laboratory/simulation, and evidence based client-centered care learning experiences across the lifespan in a variety of healthcare settings. All practical nurse graduates must successfully pass the National Council Licensing Exam for Practical Nurses (NCLEX-PN) before being able to practice as a LPN.

Upon successful completion of the program, the student will:

The Diploma in Practical Nursing has the following program requirements.

Program Philosophy

The following belief of ECPI's faculty provides a foundation that guides the program of learning:

- The individual is a unique being. Nursing focuses on the bio-psychosocial-cultural aspects of an individual or family regardless of age, race, color, creed, or sexual orientation.
- Individuals, families, and communities form a society for the purpose of monitoring human needs. Individuals interact within larger interdependent systems of the family, community, and society.
- Practical nursing as a discipline assists clients/families in the achievement of optimal function. Practical nursing is conceptualized as a dynamic health care service that blends science and the humanities with a caring response.
- Practical nursing education utilizes instruction in the basic sciences, communication skills, care-giving activities, critical thinking, concepts of the nursing process and collaboration, and prepares graduates who can focus on safe, client-centered care using evidence-based practice.
- Following licensure, the LPN functions as a member of the health care team performing dependent practical nursing actions, commensurate with his/her education and demonstrated competencies within the statute defined scope. They provide care to clients in a variety of settings.
- Learning is a self-directed, life-long, personal process resulting in a change in affective, cognitive, and psycho-social behavior. A collaborative practice environment in which the teacher and student share responsibility for the educational process enhances learning. The faculty plans, implements, and evaluates the curriculum in cooperation with the student. The curriculum model, which utilizes information to emphasize and value individuality, respects and responds to individual and professional needs.
- Practical nursing education is the integration of planned theory, critical thinking, and evidence-based clinical experience through which the student progresses within the practical nursing practice.

Conceptual Framework

Program Purpose

The practical nursing program will:

- Prepare a competent, beginning practitioner of practical nursing to function effectively in a variety of healthcare settings.
- Provide a collaborative learning environment in which the students will demonstrate the ability to apply concepts of systematic reasoning through critical thinking and clinical judgment.
- Guide the student in the continuing process of personal and professional growth.
- Continue to achieve its purpose through systematic planning and evaluation by fostering mutually beneficial relationships within the community.
- Prepare students, through didactic and clinical experiences, to be eligible to take the NCLEX-PN exam.

Program Hours

Day	Class hours may vary from 4 – 5 days per week from 8:00 AM to 5:00 PM depending on course requirements. Clinical hours may include day, evening or weekend hours depending on the clinical site and course requirements.
Evenings	Class hours may vary from 4 – 5 evenings per week from 5:30 PM to 10:30 PM and 8:00 AM to 4:30 PM on weekends. Clinical hours may include evening or weekend hours depending on the clinical site and course requirements. Occasional day clinical rotations may be required.
Preceptorship Hours	Clinical hours are scheduled to meet the staffing schedule of the Professional Nurse assigned and may include day, night or weekend hours.

Business Administration (MBA) | Business Management Concentration

Overview

College
College of Business and Criminal Justice

Program CIP Code
52.0201

ECPI University's Master of Business Administration (MBA) program provides a comprehensive training experience in business for students pursuing careers in business and management.

The courses in the Master of Business Administration program integrate theories, knowledge and skills from multiple disciplines including: accounting, economics, marketing, finance, production operations, strategic management, and decision analysis, culminating in a business capstone course. The program objective is to develop students into business managers and leaders with a broad and holistic understanding of business operations with the tools and processes to be successful in any business or industry.

The business management concentration allows students to advance their management skills across a variety of career fields.

About the Masters of Business Administration

Graduates will be expected to have excellent communication, problem-solving and decision-making skills, and an ability to lead a team in a variety of environments.

Possible job titles for a Master of Business Administration graduate include Sales Director, Customer Care Manager, Production Manager, Financial Services Director, Project Manager, Operations and Logistics Manager, Healthcare Services Manager, Information Technology Manager. With proven successful work experience in the field, senior level management opportunities could be available to the graduate. The Master of Business Administration program also helps to develop an entrepreneurial spirit for those who wish to open their own businesses.

Graduates of the Master of Business Administration program have many career options, as noted above. They often have career paths that eventually lead them into senior level management. They may manage complex projects, develop strategic policy, drive competitive advantage and market share, and manage a multicultural workforce in a global network. Graduates will be able to work in a wide variety of positions in the public and private sectors, in business, industry, and government venues.

Recommended Certifications

Certifications are not required for completion of this program; however, ECPI encourages students to obtain all appropriate certifications to increase potential job opportunities.

Outcomes

Upon successful completion of this program, graduates are able to:

Cybersecurity (MS) | Cyber Operations Specialization

Overview

College
College of Technology

Program CIP Code
11.1003

The Master of Science in Cybersecurity program is designed to prepare students for leadership in information technology security. The program is focused on providing knowledge and skills to apply the principles and concepts related to the development and management of secure information systems and technology at the enterprise and individual levels, locally and globally.

The program is designed for IT professionals, executives, and baccalaureate degree graduates who realize the necessity of delivering value to customers through secure information technology systems. The degree provides students with theoretical, practical, and applied skills in computer-based information systems and the technologies that support them, as well as a broad perspective of the business and management environments in which information system technologies play a strategic role.

The Cyber Operations concentration focuses on the analysis, design, deployment, and monitoring of cyber technologies and techniques necessary to maintain the security posture of an organization. Graduates will have the skills to ensure operational continuity of large-scale organizations.

About Cybersecurity

Graduates of the Master of Science in Cybersecurity program will be hired by three distinct groups: 1) Private industry firms to assume a technical/administrative leadership role related to cybersecurity; 2) State and local government agencies to assume a technical/administrative leadership role in cybersecurity; 3) Institutions of higher education that need competent faculty members in cybersecurity, and other related knowledge areas.

Possible job titles for a Master of Science in Cybersecurity graduate include Cybersecurity Analyst, Penetration Tester, Data Center or Network Security Administrator, Information Systems Security Engineer, Risk Assessment and Vulnerability Analysis Manager. With significant, successful work experience in the field, management opportunities could be available to the graduate.

Recommended Certifications

Certifications are not required for completion of this program; however, ECPI encourages students to obtain all appropriate certifications to increase potential job opportunities. Recommended certifications are the Certified Information Systems Security Professional (CISSP) and Cisco Certified Network Associate (CCNA).

Outcomes

This degree program is based on the National Security Agency and the Department of Homeland Security program requirements for designation as a Center of Academic Excellence in Information Assurance/Cyber Defense. The curriculum builds on a foundation of communication and problem solving, theoretical and applied understanding of basic technical concepts, protocols, and software/hardware components of information systems technologies. Students enhance their understanding and practical knowledge of network security and research providing a particular emphasis on technologies and techniques related to specialized Cybersecurity (e.g., collection, exploitation, and response). These technologies and techniques are critical to intelligence, military and law enforcement organizations authorized to perform these specialized operations. A capstone project is required.

Upon successful completion of this degree program, the graduate should be able to:

Requirements

Simple Requirements

Program Requirements

To receive the Master of Science in Cybersecurity, students must earn 36 semester credit hours. Required courses to be taken by everyone admitted to the program include eight core courses (24 credit hours). Core courses build upon the knowledge support courses or appropriate experience. The program requires a minimum of 4 semesters, which is equivalent to 15 months or 60 weeks of instruction. The program requirements are as follows:

Core Curriculum Requirements

Type
Completion Requirement

Core Courses

24 semester credit hours

Complete ALL of the following Courses:

- MSCS501 - Cybersecurity with AI Synopsis
- MSCS521 - Security Architecture and Design
- MSCS525 - AI-Augmented Cybersecurity with Python
- MSCS615 - Cloud Security
- MSCS626 - Network Security and Next-Gen Firewalls with AI
- MSCS656 - Wireless, Mobile, and IoT Security
- MSCS675 - AI/Machine Learning and Cybersecurity
- MSCS695 - AI Enhanced Cyber Defense Capstone

Cybersecurity Policy Specialization Requirements

Type
Completion Requirement

Cybersecurity Policy Courses

12 semester credit hours

Complete ALL of the following Courses:

- MSCS641 - Information Risk Management
- MSCS643 - Cybersecurity Governance and Compliance using AI Gap Detection
- MSCS645 - Cybersecurity Strategies (Prevention and Protection)
- MSCS647 - Compliance and Audit

Additional Comments:
The specialization courses build upon the core courses and should be taken after the majority of core courses have been completed.

The Master Degree in Cybersecurity | Cybersecurity Policy Specialization has the following program requirements.

Engineering Technology (MS) | Mechanical Engineering Concentration

Overview

College
College of Technology

Program CIP Code
15.0805

The Master of Science in Engineering Technology program is designed to equip students with advanced knowledge and practical skills in various areas of engineering technology, preparing them for dynamic careers in industry, research, and academia. Through a combination of rigorous coursework and practical experiences, students will study topics essential for addressing contemporary challenges and driving innovation in the field.

Admissions Requirements > Admissions Requirements - Graduate Programs

About the Master of Science in Engineering Technology

The curriculum offers graduates a transformative educational experience, equipping graduates with the knowledge, skills, and confidence to drive innovation, lead change, and make meaningful contributions to the field of engineering technology.

Students can earn a Master of Science in Engineering Technology degree with a concentration in Mechanical Engineering in approximately 13 months through a year-round schedule.

Some positions may require background checks, drug screening, and/or security clearances, depending on the position and industry.

Graduates of the Engineering Technology Master's program are expected to attain the following objectives within a few years of graduation:

1. Acquire advanced knowledge, techniques, skills, and modern tools of engineering technology.
2. Apply design and analysis methodologies for complex systems, advanced manufacturing processes, and automation in industrial and research settings.
3. Cultivate professionalism, ethical conduct, effective communication, management, and leadership skills essential for successful careers in engineering technology and related fields.
4. Foster interdisciplinary collaboration and integration of knowledge from multiple domains to address complex engineering challenges and innovate solutions that contribute to societal and industrial needs.

Outcomes

Upon successful completion of the Master of Science in Engineering technology, graduates should be able to:

Healthcare Administration (MS)

Overview

College
College of Health Science

Program CIP Code
51.0701

The Master of Science in Healthcare Administration builds on the skills and knowledge of business and management professionals, preparing them to succeed in the leadership of healthcare organizations. The program prepares future healthcare leaders to increase efficiency and effectiveness of healthcare organizations by providing an overall improvement in delivery of patient care.

The program is designed using a competency-based model that allows students to apply skills using industry-specific scenarios. Immersion opportunities are structured in the curriculum so that students can collaborate with peers, key faculty members, and industry networks.

The program offers students a choice of two focused tracks.

TRACK	DESCRIPTION
Health Informatics Track	The Health Informatics track focuses on the management and analysis of health information used by the healthcare delivery system. Students will have the opportunity to apply tools which support informatics systems and interoperability.
Community Health Track	The Community Health track supports the healthcare leader seeking to work in community health areas. Community health professionals support healthcare leaders in the advancement of their professional practice through application of prevention, environmental, and social determinants related to public health issues.

Address Changes

It is the responsibility of the student to inform the Program Director and ECPI University of address changes prior to relocation.

Late Assignments and Testing

Guidance for late assignments can be found in ecpionline.com under University Catalog Academic Policies Late Assignments.

See also the following additional program information:

- **Admissions Requirements** > Master of Science in Healthcare Administration
- Transferability of Credit
- **Attendance Policy** > Graduate Student Attendance

About the Profession

Healthcare Administrators holding a master's degree in leadership will be eligible for positions in a variety of acute care and community settings The MHA program will prepare graduates for careers as Medical and Health Services Managers, with focus in Health Informatics and Community Health. Graduates working as nurses or in nursing-related fields can advance as well. Possible jobs as Medical and Health Servicers Managers include the following: Outpatient Practice Administrator, Inpatient Clinical Director, Health Information Management Corporate Director, Health Information Management Director, Health Manager, and Mental Health Program Manager. Possible jobs for the Community Health track include: Community Health Consultant, Education Coordinator, Health Education Coordinator, Health Education Specialist, Health Educator, Health Promotion Specialist, Public Health Educator, and Public Information Officer. Possible jobs for the Health Informatics track include: Clinical Informatics Analyst, Clinical Informatics Nurse, Clinical Informatics Specialist, Clinical Informatics Systems Analyst, Digital Diabetes Research Officer, Nursing Informatics Officer, and Nursing Informatics Specialist.

Management (MS) | Operations and Supply Chain Management Concentration

Overview

College
College of Business and Criminal Justice

Program CIP Code
52.0205

The Master of Science in Management degree is designed to prepare students for management and leadership roles in many industries. The program is focused on providing knowledge and skills to apply the principles and concepts related to management, leadership, and operations of complex organizations. Students can earn their Master's degree in 16 months through a year-round schedule.

The program is designed for business management majors, and other equivalent degree holders, who desire to develop the skills for complex management and leadership through critical thinking. The degree provides students with theoretical, practical, and applied skills in leadership, business systems analysis, advanced human resources management/development, and related supporting management systems technologies.

The Operations and Supply Chain Management concentration focuses on the design, execution, and improvement of business operations. This concentration covers core principles of supply chain management, process optimization, and continuous improvement frameworks. Students will explore operational planning, resource allocation, and performance measurement with a strong emphasis on practical application and operational leadership in today's complex business environments.

About the Master of Science in Management

According to the Bureau of Labor Statistics, careers in management currently offer the highest wages of all major occupation groups (https://www.bls.gov/ooh/management/home.htm). Managers and leaders play key roles in many industries: for example energy, telecommunications, construction, manufacturing, transportation and distribution, information technology, financial services, banking, automotive, retail, healthcare, airlines and aerospace, pharmaceuticals, case management, public safety, criminal justice, and homeland security.

Recommended Certifications

Certifications are not required for completion of this program; however, ECPI encourages students to obtain all appropriate certifications to increase potential job opportunities. ECPI University provides vouchers allowing students to take certification exams at a greatly reduced cost.

Outcomes

Upon successful completion of the program, graduates are able to:

Overview

College
College of Business and Criminal Justice

Program CIP Code
52.0213

The Master of Science in Management degree is designed to prepare students for management and leadership roles in many industries. The program is focused on providing knowledge and skills to apply the principles and concepts related to management, leadership, and operations of complex organizations. Students can earn their Master's degree in 16 months through a year-round schedule.

The program is designed for business management majors, and other equivalent degree holders, who desire to develop the skills for complex management and leadership through critical thinking. The degree provides students with theoretical, practical, and applied skills in leadership, business systems analysis, advanced human resources management/development, and related supporting management systems technologies.

The Organizational Leadership concentration prepares students to lead and to manage people and processes in a multicultural, global and often a virtual environment. Developing the ability to make complex, strategic decisions and to implement best practices, policies, and procedures is emphasized.

About the Master of Science in Management

According to the Bureau of Labor Statistics, careers in management currently offer the highest wages of all major occupation groups (https://www.bls.gov/ooh/management/home.htm). Managers and leaders play key roles in many industries: for example energy, telecommunications, construction, manufacturing, transportation and distribution, information technology, financial services, banking, automotive, retail, healthcare, airlines and aerospace, pharmaceuticals, case management, public safety, criminal justice, and homeland security.

Recommended Certifications

Certifications are not required for completion of this program; however, ECPI encourages students to obtain all appropriate certifications to increase potential job opportunities. ECPI University provides vouchers allowing students to take certification exams at a greatly reduced cost.

Outcomes

Upon successful completion of the program, graduates are able to:

Requirements

Simple Requirements

Program Requirements

To receive the Master of Science in Management degree, students must earn 36 semester credit hours. The program requires a minimum of 4 semesters, which is equivalent to 15 months or 60 weeks of instruction. The program requirements are as follows:

Core Curriculum Requirements

Type
Completion Requirement

Core Courses

27 semester credit hours

Complete ALL of the following Courses:

- MGT520 - Organizational Behavior and Leadership
- MGT524 - Ethics and Corporate Responsibility
- MGT528 - Business Research and Analysis
- MGT532 - Organizational Change and Development
- MGT560 - Strategic Human Resources Management
- MGT575 - Modern Management Models
- MGT585 - Cultural Issues in Management
- MGT604 - Management and Strategy
- MGT615 - Management Capstone

Organizational Leadership Concentration Requirements

Type
Completion Requirement

Concentration Courses

9 semester credit hours

Complete ALL of the following Courses:

- MGT625 - Essentials of Leadership
- MGT635 - Open Source Leadership
- MGT648 - Talent Management

The Master of Science Management Organizational Leadership concentration has the following program requirements.

Locations

Online

Nursing (MS) | Concentration in Family Nurse Practitioner

Overview

College
College of Nursing

Program CIP Code
51.3801

The Master of Science in Nursing degree program builds on the skills and knowledge of a diverse population of registered nurses with a bachelor degree in nursing and preparing them to succeed in progressive roles in inter-professional health care and education settings. The program assists future nurse leaders and educators in the advancement of their professional practice through scientific inquiry and other scholarly activities. The concentrations are guided by the National League for Nursing's Certified Nurse Educator (CNE), and the American Association of Nurse Practitioner's (AANP) core and population-specific competencies.

Graduates of the Nursing Education concentration will be prepared to educate nursing students and practicing nurses in academic and clinical settings. Graduates of the family nurse practitioner program will be able to perform as a primary care provider in the assessment, diagnosis, and treatment of acute and chronic illnesses in patients across the lifespan. The program is delivered in hybrid and online formats using current technologies that promote collaboration, accessibility and flexibility for the working nurse.

Preceptorship Attire

All students participating in clinical or preceptor experiences should dress appropriately. Clinical is limited to corporate casual attire, a white lab coat and a name tag.

Practicum Clinical Requirements

Students attending the practicum courses in the MSN program are responsible for securing their own location and qualified preceptor, and providing any clinical documentation requested by the agency such as physical exam, immunizations, current PPD or TB testing, AHA CPR Certification, and current RN license in the state of residence. Students should maintain their own clinical records throughout the program. Clinical required documents may be different depending on the concentration, please refer to the MSN Student Handbook and Practicum Handbook.

Disclosure

Requirements regarding distance education and practicum experiences vary from state to state. The student's initial program application is reviewed using the address provided upon enrollment to determine individual ability to complete the program and practicum requirements in the student's state.

It is the responsibility of the student to inform the Program Director and ECPI University of address changes prior to relocation. Changing the state of residence during the course of the MSN program may alter the ability of students to complete the MSN program.

See also the following additional program information:

- **Admissions Requirements** > Master of Science in Nursing *(includes information on Essential Functional Abilities)*
- **Attendance Policy** > Nursing | MSN (*includes information on Clinical Phase Absenteeism and Tardiness)*

CCNE Accreditation

The Master of Science in Nursing program at the Virginia Beach, Virginia campus is accredited by the Commission on Collegiate Nursing Education, 655 K Street NW, Suite 750, Washington, DC 20001, (202) 887-6791.

About the Profession

Nurses holding a master's degree in nursing leadership will be eligible for positions in a variety of acute care and community settings. Graduates with a concentration in nursing education will be eligible for positions teaching patients, healthcare employees, and nursing students at the practical, associate and bachelor degree levels. Graduates in the family nurse practitioner program will be eligible for primary care positions in clinics, doctor's offices, public health departments, and urgent care centers.

Licensure

To be licensed as a Family Nurse Practitioner (FNP), it is necessary to pass the AANP or ANCC certification exam. Licensure may be required by employers to practice as a Family Nurse Practitioner.

Program Progression

The MSN Program follows the ECPI University graduate program policies, including the grading scale. A minimum score of 80 is required for all graduate courses. Grades earned below the minimum of 80 will be awarded an F. Students in graduate programs must maintain a cumulative grade point average (CGPA) of a 3.0 or better; students who fall below this requirement will be in SAP Warning status (see Satisfactory Academic Progress – Graduate Programs). Students who receive two grades of F at any time during the program will be dismissed. A student must re-take a course for which a grade of F was earned. Even if the course is repeated, the original earned grade counts as one of those attempts and the student may not receive another grade of F.

Student Evaluation

The faculty uses the program student learning outcomes and course objectives within individual courses as criteria for student evaluation. A graduate portfolio is created across the curriculum and submitted as evidence of accomplishment of the student learning outcomes in the final nursing course. Student grades are determined by a variety of formative and summative evaluation methods.

Outcomes

Upon successful completion of this program, the graduate will:

- NUR654 - Certification Preparation Review Course
- NUR676L - Primary Care Synthesis Practicum
- NUR697L - Nursing Synthesis FNP

Prerequisite courses for the MSN degree concentrations require an earned grade of C or higher.

The Master of Science in Nursing Family Nurse Practitioner concentration has the following program requirements.

Program Philosophy

Keeping with the nursing programs of the College of Nursing, the MSN program believes that:

• Each individual is a unique person having dignity and worth. Individuals, as members of the family and the community, are shaped by cultural, physiological, psychosocial, spiritual, and developmental forces. The family and the community influence early beliefs and values of individuals, and in turn individuals contribute to the effective functioning of the family and community.
• Nursing is both an art and a science grounded in a social context and related to experiences with people in need. It is based on a specific body of nursing theory and principles from behavioral and social sciences. Nursing is an interpersonal process and involves the application of knowledge, technical and collaborative skills, critical thinking and creative problem solving. The focus of nursing is on caring for individuals, families, or client groups. By using the nursing process, nurses promote, maintain, and restore client health as well as provide compassionate care to the dying. As health care providers, nurses engage in a collaborative practice that focuses on outcomes and adheres to practice guidelines that ensure quality and access.
• Professional values and value-based interventions are fundamental to nursing education. As the basis for professional nursing practice, values and value-based actions may be viewed as ethically reflective practice that the nursing student uses to interact with patients, health care professionals, and society.
• Teaching and learning are life-long interactive processes through which active inquiry and participation result in a change in behavior. A teaching/learning process is facilitated when the learner and teacher share responsibility for outcomes. Learning is facilitated when content is presented in an orderly sequential manner (i.e. simple to complex, known to unknown, normal or abnormal, general to specific).
• Critical thinking, clinical competence, accountability, and a commitment to the value of caring is necessary to maintain or restore clients to their optimum state of health and to provide the support which allows death with dignity. As the provider of care, the nurse's commitment to client/family-centered care will facilitate successful preparation for practice in various health care settings.
• It is essential that the nurse have current knowledge in nursing concepts, principles, processes, and skills. Supportive of that knowledge is an understanding of health, acute and chronic health deviations, nutrition, pharmacology, communication, human development, teaching/learning principles, current technology, humanities, and biological, social, and behavioral sciences.
• The nurse is a manager of care in various health care settings where policies and procedures are specified and guidance is available. To be competent in the role as a manager of care, the nurse must possess the knowledge and skills necessary to make decisions regarding priorities of care, to delegate some aspects of nursing care, and direct others to use time and resources efficiently, and to know when to seek assistance. Supporting this knowledge is an understanding of the principles of client-care management, communication and delegation, legal parameters of nursing practice, and roles and responsibilities of members of the health care team.

Organizing Framework of the MSN Program

The roles and functions of the MSN nurse graduate expand from the BSN level. The framework for the MSN programs is built on the AACN Essentials of Master's Education in Nursing (2011). Graduates of the MSN programs will possess "broad knowledge and practice expertise" beyond the baccalaureate degree and the roles of health care leader, care manager, contributor to the profession, and community collaborator. Graduates will be prepared for work in current and future innovative environments where nursing and healthcare are delivered. Graduates will utilize technology to solve unique as well as global nursing issues, and learn to coordinate care by communicating across the boundaries of degrees, departments, facilities, and states. Graduates are prepared to educate patients, families, groups, students, and each other. Graduates in direct-care roles will possess graduate-level knowledge in assessment, pharmacology, and pathophysiology; and, have precepted learning experiences. Expectations for graduates will focus on patient safety, quality healthcare, and impacting the systems that provide care.

Graduates will exemplify the Institute of Medicine (IOM) core competencies of all health care professionals (2003) by providing patient-centered care that identifies and respects patients' individual needs and differences. Graduates will work in interdisciplinary teams to promote care that is continuous, reliable and will use evidence-based practices to transmit research into practice. Quality improvement techniques will be applied to identify hazards to patient care, understand safety design principles, and measures of quality. Graduates will also use information technology to communicate with each other and reduce the chances for error.

Additionally, the MSN program will use the teaching methods that support the use of technology and teach for a sense of salience, situated cognition and action in particular situations; integrate classroom and clinical experiences where appropriate; emphasize clinical reasoning and multiple ways of thinking; and emphasize role formation in graduate roles.

Program Purpose

The purpose of the master's in nursing program is to prepare nurses to act as experts in various clinical and academic settings. Graduates of this program will integrate interdisciplinary knowledge to become leaders of change and ensure quality patient outcomes and safe practices. Graduates will be prepared to engage in the research process, apply research findings to nursing practice across populations and settings, and disseminate knowledge. Graduates will provide direct and indirect nursing care at the graduate level, to coordinate care, advocate for patients, families and communities, and participate in political processes to ensure equality in care. Graduates will be able to leverage advanced technologies to solve healthcare systems problems and educate current and future nurses.

The Master of Science in Nursing Family Nurse Education concentration has the following program requirements.

Program Philosophy

Keeping with the nursing programs of the College of Nursing, the MSN program believes that:

• Each individual is a unique person having dignity and worth. Individuals, as members of the family and the community, are shaped by cultural, physiological, psychosocial, spiritual, and developmental forces. The family and the community influence early beliefs and values of individuals, and in turn individuals contribute to the effective functioning of the family and community.
• Nursing is both an art and a science grounded in a social context and related to experiences with people in need. It is based on a specific body of nursing theory and principles from behavioral and social sciences. Nursing is an interpersonal process and involves the application of knowledge, technical and collaborative skills, critical thinking and creative problem solving. The focus of nursing is on caring for individuals, families, or client groups. By using the nursing process, nurses promote, maintain, and restore client health as well as provide compassionate care to the dying. As health care providers, nurses engage in a collaborative practice that focuses on outcomes and adheres to practice guidelines that ensure quality and access.
• Professional values and value-based interventions are fundamental to nursing education. As the basis for professional nursing practice, values and value-based actions may be viewed as ethically reflective practice that the nursing student uses to interact with patients, health care professionals, and society.
• Teaching and learning are life-long interactive processes through which active inquiry and participation result in a change in behavior. A teaching/learning process is facilitated when the learner and teacher share responsibility for outcomes. Learning is facilitated when content is presented in an orderly sequential manner (i.e. simple to complex, known to unknown, normal or abnormal, general to specific).
• Critical thinking, clinical competence, accountability, and a commitment to the value of caring is necessary to maintain or restore clients to their optimum state of health and to provide the support which allows death with dignity. As the provider of care, the nurse's commitment to client/family-centered care will facilitate successful preparation for practice in various health care settings.
• It is essential that the nurse have current knowledge in nursing concepts, principles, processes, and skills. Supportive of that knowledge is an understanding of health, acute and chronic health deviations, nutrition, pharmacology, communication, human development, teaching/learning principles, current technology, humanities, and biological, social, and behavioral sciences.
• The nurse is a manager of care in various health care settings where policies and procedures are specified and guidance is available. To be competent in the role as a manager of care, the nurse must possess the knowledge and skills necessary to make decisions regarding priorities of care, to delegate some aspects of nursing care, and direct others to use time and resources efficiently, and to know when to seek assistance. Supporting this knowledge is an understanding of the principles of client-care management, communication and delegation, legal parameters of nursing practice, and roles and responsibilities of members of the health care team.

The roles and functions of the MSN nurse graduate expand from the BSN level. The framework for the MSN programs is built on the AACN Essentials of Master's Education in Nursing (2011). Graduates of the MSN programs will possess "broad knowledge and practice expertise" beyond the baccalaureate degree and the roles of health care leader, care manager, contributor to the profession, and community collaborator. Graduates will be prepared for work in current and future innovative environments where nursing and healthcare are delivered. Graduates will utilize technology to solve unique as well as global nursing issues, and learn to coordinate care by communicating across the boundaries of degrees, departments, facilities, and states. Graduates are prepared to educate patients, families, groups, students, and each other. Graduates in direct-care roles will possess graduate-level knowledge in assessment, pharmacology, and pathophysiology; and, have precepted learning experiences. Expectations for graduates will focus on patient safety, quality healthcare, and impacting the systems that provide care.

Graduates will exemplify the Institute of Medicine (IOM) core competencies of all health care professionals (2003) by providing patient-centered care that identifies and respects patients' individual needs and differences. Graduates will work in interdisciplinary teams to promote care that is continuous, reliable and will use evidence-based practices to transmit research into practice. Quality improvement techniques will be applied to identify hazards to patient care, understand safety design principles, and measures of quality. Graduates will also use information technology to communicate with each other and reduce the chances for error.

Additionally, the MSN program will use the teaching methods that support the use of technology and teach for a sense of salience, situated cognition and action in particular situations; integrate classroom and clinical experiences where appropriate; emphasize clinical reasoning and multiple ways of thinking; and emphasize role formation in graduate roles.

Program Purpose

The purpose of the master's in nursing program is to prepare nurses to act as experts in various clinical and academic settings. Graduates of this program will integrate interdisciplinary knowledge to become leaders of change and ensure quality patient outcomes and safe practices. Graduates will be prepared to engage in the research process, apply research findings to nursing practice across populations and settings, and disseminate knowledge. Graduates will provide direct and indirect nursing care at the graduate level, to coordinate care, advocate for patients, families and communities, and participate in political processes to ensure equality in care. 51.0912

Program Overview

The Master of Science in Physician Assistant (MSPA) degree program builds on the skills and knowledge of a diverse population of students with a bachelor's degree, specific science pre-requisites, and patient care hours, all preparing them to succeed in advanced practice provider roles in inter-professional health care settings.

Graduates of the physician assistant (MSPA) program will be able to assess, diagnose, and treat acute and chronic illnesses in patients across the lifespan. The program is delivered in seat using current technologies that promote collaboration, accessibility, and flexibility.

Graduates must pass the Physician Assistant National Certifying Exam (PANCE) to become certified. To maintain certification, PAs must complete 100 Continuing Medical Education (CME) credits every two years and pass the Physician Assistant National Recertifying Exam (PANRE) every 10 years. National Certification is generally required for individual state licensure, some state boards may have additional requirements.

Mission Statement

The Physician Assistant Program is dedicated to providing a challenging and innovative academic setting for students from diverse backgrounds to become physician assistants. Graduates will provide exceptional healthcare, promote health equity, commit to personal and professional growth, and lead in the communities they serve.

Requirements

When evaluating physician assistant candidates, we seek individuals who demonstrate a blend of academic excellence, clinical experience and life experience such as prior military service and first generation college students. Ideal candidates possess a strong foundation in the sciences, they have practical and genuine understandings of patient care and can demonstrate-through their application-an ability to connect, communicate, and work with others in a professional environment. If you have any questions about the ECPI University Physician Assistant program, our admissions protocol, or accreditation status, please contact PAAdmissions@ecpi.edu.

See also the following additional program information:

- Prerequisites > Master of Science in Physician Assistant | ECPI University
- Transferability of Credit > Master of Science in Physician Assistant | ECPI University

Attendance

Attendance is a mandatory requirement for the program. ECPI University believes students should follow a policy of regular attendance and punctuality to receive the maximum benefit from an ECPI University education and to develop the work habits and personal qualities highly valued by employers. Therefore, students are expected to attend all regularly scheduled class meetings. Additional policy information can be found within the MPA Student Handbook.

Program Attire

Students must adhere to the program policy on dress code and personal appearance, which can be found in the MPA Student Handbook. Didactic year students are expected to wear ECPI University issued scrubs and closed-toed shoes, unless otherwise specified for certain labs or guest speakers. Clinical year students are expected to wear business casual dress, and ECPI University PA Program issued white lab coats, unless otherwise specified by their preceptor

Supervised Clinical Practice Experiences (SCPE)

Following the didactic year, students will be assigned supervised clinical practice experiences, also known as clinical placements, based on established sites vetted by the program. Students are prohibited from arranging their own clinical placement.

Supervised Clinical Practice Experience (SCPE) Requirements

Students are responsible for providing all clinical documentation requested by the MPA program and each clinical site/health system, such as physical exams, immunizations, and current tuberculosis testing. Students will also complete program-specified drug testing and background checks, etc. The required clinical documentation may be found in the MPA Student Handbook and may vary per clinical site. Clinical site requirements supersede program requirements.

Disclosure

It is the student's responsibility to inform the Program Director and ECPI University of address changes before relocation. Changing the state of residence during the MPA program may alter the ability of students to complete the MPA program.

Essential Functional Abilities

The MSPA Program at ECPI University is dedicated to preparing students to practice safe, ethical, and effective medicine. To achieve this, all applicants and students must meet the following technical standards, which are essential requirements for admission, retention, and graduation. See the MPA Student Handbook for full explanation of these standards or the program website for a list of Technical Standards:

- Observation and Sensory Abilities
- Communication Skills
- Motor and Tactile Skills
- Cognitive and Intellectual Abilities
- Behavioral and Professional Attributes

The MSPA program complies with the University Policy for students with disabilities and with the Americans with Disabilities Act to provide reasonable accommodations to qualified individuals.

Accreditation

The ARC-PA has granted Accreditation-Provisional status to the ECPI University Master of Science in Physician Assistant Program **(MSPA)** sponsored by ECPI University.

Accreditation-Provisional is an accreditation status granted when the plans and resource allocation, if fully implemented as planned, of a proposed program that has not yet enrolled students appear to demonstrate the program's ability to meet the ARC-PA *Standards* or when a program holding Accreditation-Provisional status appears to demonstrate continued progress in complying with the *Standards* as it prepares for the graduation of the first class (cohort) of students.

Accreditation-Provisional does not ensure any subsequent accreditation status. It is limited to no more than five years from matriculation of the first class.

The program's accreditation history can be viewed on the ARC-PA website at https://www.arc-pa.org/accreditation-history-ecpi-university/.

About the Profession

PAs are licensed clinicians who practice medicine in every specialty and setting.

Trusted, rigorously educated and trained healthcare professionals, PAs are dedicated to expanding access to care and transforming health and wellness through patient-centered, team-based medical practices.

PAs are eligible for positions in a variety of acute care and community settings such as hospitals, clinics, public health departments, and urgent care centers.

Licensure

When you graduate from a PA program accredited by the Accreditation Review Commission on Education for the Physician Assistant (ARC-PA) you must take the **Physician Assistant National Certifying Examination (PANCE)** for certification. Licensure requirements vary state-by-state. Contact state licensing boards for their individual requirements.

Program Progression

A minimum score of 73 is required for all courses in the program. Refer to the Plan for Grading section of individual course syllabi to review course component requirements. Grades earned below the minimum of 73 will be awarded an F. Students in graduate programs must maintain a cumulative grade point average (CGPA) of a 3.0 or better; students who fall below this requirement will be in SAP Warning status (see **Satisfactory Academic Progress (SAP) - Graduate Programs**). The policy on evaluating student performance and grading, and program progression and completion can be found in the MPA Student Handbook.

Student Evaluation

The faculty uses course learning outcomes and instructional objectives within individual courses as criteria for student evaluation. Student grades are determined by a variety of formative and summative evaluation methods.

Outcomes

Upon successful completion of this program, the graduate will:

Program Goals

MSPA Program Goals

1. Provide a challenging and innovative learning environment where students gain the knowledge and skills necessary for entry-level PA practice.
2. Prepare graduates to practice in various settings and with various healthcare professionals to reflect the versatility and team-based nature of the PA profession.
3. Attract a cohort of students who will promote diversity in the PA profession.
4. Prepare students who are committed to personal and professional growth.

The effectiveness of the Program in meeting its Goals will be published promptly after the graduation of the inaugural class in 2028.

Requirements

Simple Requirements

Program Requirements

Program Requirements:

To receive the Master of Science in Physician Assistant students must earn 121 semester credit hours. The program requires a minimum of 7 semesters, which is equivalent to 24 months or 100 weeks of instruction. The program requirements are as follows:

Didactic Curriculum Requirements

Type
Completion Requirement

Didactic Courses

70 semester credit hours

Complete ALL of the following Courses:

- MPA500 - Clinical Gross Anatomy I
- MPA505 - Physiology and Pathophysiology I
- MPA510 - Critical Thinking I
- MPA520 - Clinical Gross Anatomy II
- MPA525 - Physiology and Pathophysiology II
- MPA530 - Laboratory Medicine
- MPA540 - Clinical Medicine I
- MPA545 - Pharmacology I
- MPA550 - History and Physical I
- MPA560 - Clinical Medicine II
- MPA565 - Pharmacology II
- MPA570 - History and Physical Exam II
- MPA575 - Diagnostic Medicine I
- MPA580 - Clinical Medicine II
- MPA585 - Pharmacology III
- MPA590 - History and Physical Exam III
- MPA595 - Diagnostic Medicine II
- MPA600 - Clinical Medicine IV
- MPA605 - Pharmacology IV
- MPA610 - History and Physical Examination IV
- MPA615 - Diagnostic Medicine III
- MPA617 - Clinical Skills I
- MPA620 - Clinical Medicine V
- MPA625 - Pharmacology V
- MPA627 - Clinical Skills II
- MPA630 - Critical Thinking II
- MPA635 - Population Health and Epidemiology
- MPA640 - Clinical Medicine VI
- MPA645 - Pharmacology VI
- MPA650 - Critical Thinking III
- MPA655 - Fundamentals of Surgery and Emergency Medicine
- MPA660 - Research/Evidence-Based Medicine
- MPA665 - Clinical Preparation
- MPA670 - Ethics and Professional Practice Issues
- MPA675 - Interprofessional Case Seminar

Clinical Curriculum Requirements

Type
Completion Requirement

Clinical Requriements

51 semester credit hours

Complete ALL of the following Courses:

- MPA700 - Clinical Seminar I
- MPA705 - Family Medicine
- MPA710 - Clinical Seminar II
- MPA715 - Internal Medicine
- MPA720 - Clinical Seminar III
- MPA725 - Adult Specialty Medicine
- MPA730 - Clinical Seminar IV
- MPA735 - Emergency Medicine
- MPA740 - Clinical Seminar V
- MPA745 - Surgery
- MPA750 - Clinical Seminar VI
- MPA755 - Women's Health
- MPA760 - Clinical Seminar VII
- MPA765 - Behavioral and Mental Health Medicine
- MPA770 - Clinical Seminar III
- MPA775 - Pediatrics
- MPA780 - Clinical Seminar IX
- MPA785 - Elective
- MPA790 - Graduate Seminar
- MPA795 - Preceptorship

The Master of Science in Physician Assistant program has the following program requirements:

Locations

Virginia Beach, VA (Health Science)

Systems Engineering (MS) | Mechatronics Concentration

Overview

College
College of Technology

Program CIP Code
14.2701

The Master of Science in Systems Engineering program prepares students for leadership positions in the technical management, development, and acquisition of complex technology systems. The program focuses on providing the knowledge and skills related to the planning, coordination, and overseeing of diverse group efforts in order to translate operational needs into a technology solution. The program provides a holistic view of systems engineering applicable to many industries and leading to the implementation of efficient, on budget, and reliable systems.

The curriculum provides graduates with needed knowledge and skills for an integrated approach to system analysis, design and implementation. The program examines topics, such as modern concepts & practices to modeling, requirements definition, specification and system architecture development, as well as test and evaluation processes applicable to complex systems.

Students apply acquired knowledge and concepts to the entire product life cycle, including operations, costs, scheduling, performance testing, manufacturing, and maintenance through an integrated approach that considers technical, business, and end-user needs.

About Systems Engineering

Some positions may require background checks, drug screening, and/or security clearances, depending on the position and industry

The curriculum provides graduates with the education and foundation needed for employment in a variety of industries in the private and public sector. Systems Engineering graduates are employed in a wide spectrum of areas in positions such as: Systems Engineer, Test Engineer, Software Engineer, Engineering Manager, System Architect, and Electromechanical Engineer.

Students can earn a Master of Science in Systems Engineering degree with a concentration in Mechatronics in approximately 13 months through a year-round schedule.

Outcomes

Upon successful completion of the Master of Science in Systems Engineering, graduates will be able to:

Virginia Beach, VA (Main), Online

Nursing (RN to BSN)

Overview

College
College of Nursing

Program CIP Code
51.3801

The Bachelor of Science in Nursing is a degree completion program for registered nurses. The program provides a smooth transition for Registered Nurses furthering their education and careers, and serves the community and our society by meeting the need for increased numbers of highly skilled and knowledgeable nursing professionals. Program emphasis is on professional development in communication, critical thinking, community health, research, and leadership. Advanced standing credits are awarded for past nursing coursework. The program is delivered in an online format with a part-time or full-time option.

See also the following additional program information:

- **Admissions Requirements**, see Nursing | RN to BSN
- **Attendance Requirements:** Nursing | RN to BSN
- **Late Assignments** > *Program Specific Policies*: Late Assignments

The RN - BSN Nursing education program, Newport News, VA is accredited by the: Accreditation Commission for Education in Nursing (ACEN) - 3390 Peachtree Road NE, Suite 1400 Atlanta, GA 30326 - (404) 975-5000

The most recent accreditation decision made by the ACEN Board of Commissioners for the RN - BSN nursing program is Continuing Accreditation.

View the public information disclosed by the ACEN regarding these programs at http://www.acenursing.com/accreditedprograms/programsearch.htm

About Nursing

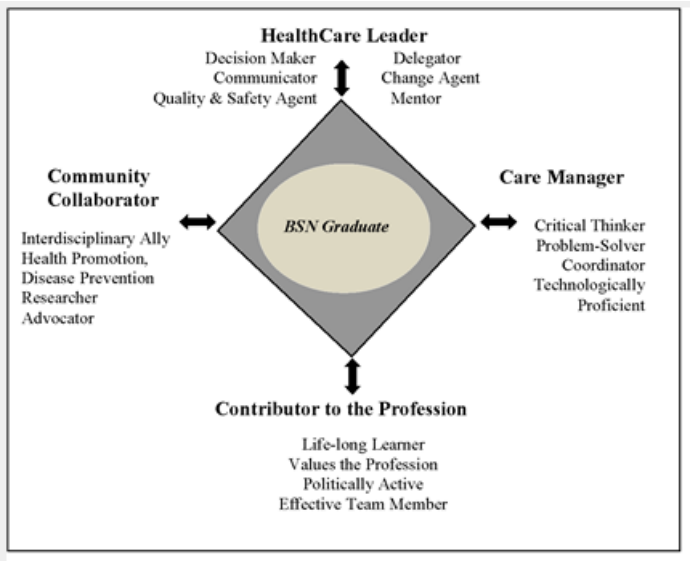

The Bachelor of Science in Nursing graduate is eligible for roles in leadership and management, community health, informatics, and specialty bedside practice. Nurses holding a Bachelor of Science in Nursing degree may pursue advanced education that may lead to specialized practice. Graduates of this program can work in many different healthcare settings, such as hospitals, skilled nursing facilities, and community health facilities.

A state-issued license to practice as an RN, a background check, drug screening, up-to-date immunizations, TB testing, and CPR certification are all often required of BSN graduates in their careers.

Nurses who have a Bachelor of Science in Nursing degree are often placed in leadership positions after they have gained significant work experience. Some positions include: Case Manager, Charge Nurse, or Unit Manager.

Organizing Framework of the RN to BSN Program

This diagram represents the organizing framework of the RN to BSN program at ECPI University. The program is designed to build upon knowledge acquired in diploma and associate degree RN programs and offers courses that develop registered nurses to be healthcare leaders, community collaborators, care managers, and contributors to the profession. These four roles provide the basis for the program outcomes.

Progression

Students must achieve a grade of C+ or higher in all NUR courses to progress. If a student fails a nursing course, they meet with the nursing program director. If a second failure occurs in any course in the program, the student is placed on probation. If a third failure occurs, the student is dismissed from the program. All catalog policies apply to RN to BSN students.

Students declare the part-time (PT) or full-time (FT) curriculum at the time of application. Students may request a one-time change from the FT to PT program by speaking to the nursing program director.

Student Evaluation

The faculty uses the objectives of the overall program and individual courses as criteria for student evaluation. A developmental student portfolio is created across the curriculum and submitted as evidence of accomplishment of the program outcomes in the final nursing course. Student grades are determined by a variety of formative and summative evaluation methods.

Outcomes

The objective of the curriculum is to produce baccalaureate-prepared, registered professional nurse graduates who can:

The Bachelor of Science in Nursing (RN to BSN) has the following program requirements.

Program Philosophy

The RN to BSN program believes that:

• Each individual is a unique person having dignity and worth. Individuals, as members of the family and the community, are shaped by cultural, physiological, psychosocial, spiritual, and developmental forces. The family and the community influence early beliefs and values of individuals, and in turn individuals contribute to the effective functioning of the family and community.
• Nursing is both an art and a science grounded in a social context and related to experiences with people in need. It is based on a specific body of nursing theory and principles from behavioral and social sciences. Nursing is an interpersonal process and involves the application of knowledge, technical and collaborative skills, critical thinking, and creative problem-solving. The focus of nursing is on caring for individuals, families, or client groups. By using the nursing process, nurses promote, maintain, and restore clients‘ health as well as provide compassionate care to the dying. As healthcare providers, nurses engage in a collaborative practice that focuses on outcomes and adheres to practice guidelines that ensure quality and access.
• Professional values and value-based interventions are fundamental to nursing education. As the basis for professional nursing practice, values and value-based actions may be viewed as ethically reflective practice that the nursing student uses to interact with patients, healthcare professionals, and society.
• Teaching and learning are life-long interactive processes through which active inquiry and participation result in a change in behavior. A teaching/learning process is facilitated when the learner and teacher share responsibility for outcomes. Learning is facilitated when content is presented in an orderly sequential manner (i.e. simple to complex, known to unknown, normal or abnormal, general to specific).
• Critical thinking, clinical competence, accountability, and a commitment to the value of caring is necessary to maintain or restore clients to their optimum state of health and to provide the support which allows death with dignity. As the provider of care, the nurse‘s commitment to client/family-centered care will facilitate successful preparation for practice in various healthcare settings.
• It is essential that the nurse have current knowledge in nursing concepts, principles, processes, and skills. Supportive of that knowledge is an understanding of health, acute and chronic health deviations, nutrition, pharmacology, communication, human development, teaching/learning principles, current technology, humanities, and biological, social, and behavioral sciences.
• The RN to BSN program builds on the fundamental knowledge and skills acquired in associate degree and diploma nursing programs. The BSN graduate is prepared to care for individuals as well as families, groups and communities utilizing evidence-based practice. The BSN graduate will be prepared to serve in the roles of healthcare leader, care manager, community collaborator, and contributor to the profession of nursing.

Program Purpose

The program is dedicated to providing education opportunities for qualified registered nurse students from diverse backgrounds in caring for individuals, families, and communities and preparing graduates for the practice in a variety of healthcare settings. A foundation for lifelong personal and professional learning is built upon a broad base of liberal arts and sciences, humanities, and nursing theory to assist students to develop ethically reflective professional nursing skills that will uphold the ideals of today‘s healthcare delivery system. Through evidence-based clinical decision-making in nursing practice the development of leadership skills, the professional registered nurse will be educated to service and benefit a multicultural society across the lifespan.

Description

Course Description
This course introduces students to additional Generally Accepted Accounting Procedures (GAAP) for sole proprietorships, partnerships and corporations. Students will learn how to calculate depreciation, account for interest income and expense, partnerships and corporations, bond and equity transactions, calculate cash flows, and analyze financial information.

ACC312 Accounting for Business Decisions (3)

Description

Course Description
This course examines how accounting information impacts business operations, strategic decision making, and the achievement of organizational goals. Key roles of the managerial accounting discipline that analyze metrics, financial control, and enterprise-wide strategic planning are examined. The focus is on learning and exercising skills that help managers define, develop, and implement data-driven plans that can improve an organization’s financial performance. Students will learn how accounting-based financial information is generated, collected, organized and interpreted.

ACC321 Intermediate Accounting II (3)

Description

Course Description
This course is the second course of three in the Intermediate Accounting series, and includes an in-depth study of the following Balance Sheet items: Current Assets, such as Cash & Receivables, and Inventory; current liabilities, such as Accounts Payable and short-term notes; Fixed Assets and Intangibles; and Long-term Liabilities, such as Notes payable and Bonds. GAAP, and will be able to compare this process with the International Financial Reporting Standards with respect to these Balance Sheet categories.

ACC550 Accounting for Managers (3)

Description

Course Description
This course applies accounting tools and concepts to allow managers to make sound business decisions. Students learn to evaluate organizational performance based on accounting information and control. Reading and interpreting financial statements and reports is emphasized. Additional topics include cost allocation and budgeting, cash flow analysis, profit analysis and taxation. The importance of business ethics figures prominently throughout the course.

ACS140 CyberPython: AI and Automation for Security (6)

Description

Course Description
This course introduces students to Python programming and its applications in cybersecurity and artificial intelligence. Students will learn the fundamentals of Python scripting for automating system and network tasks, enhancing security configurations, and interacting with command-line functions. Additionally, the course explores AI concepts, including machine learning, neural networks, and data analysis, with a focus on cybersecurity applications. Students will gain hands-on experience using Python to implement AI-driven threat detection, automate cybersecurity defense strategies, and optimize software security processes. By the end of the course, students will be equipped with the skills to develop intelligent automation solutions for cybersecurity challenges.

ACS460 SOC Analyst (5)

Description

Course Description
This course introduces students to the core functions of a Security Operations Center (SOC), including threat detection, incident response, and security monitoring. Students will explore security operations workflows, emerging cybersecurity threats, and the role of AI and automation in modern security practices. The course emphasizes analytical thinking, problem-solving, and teamwork within SOC environments. Through hands-on exercises and simulations, students will develop the foundational skills needed to support cybersecurity operations in a variety of settings.

ACS200 Security Fundamentals with AI (6)

Description

Course Description
This course introduces the principles of cybersecurity with an emphasis on maintaining secure and resilient computing environments. Students explore foundational concepts of cyber defense, including threat identification, vulnerability management, and incident response. Special focus is given to the role of artificial intelligence (AI) in modern security practices, where students learn how AI-driven tools can detect, analyze, and mitigate evolving threats. Through applied exercises, students develop skills in safeguarding systems, evaluating security controls, and integrating AI-augmented methods into defense strategies. This course provides both theoretical knowledge and practical experience to prepare students for the CompTIA Security+ certification and entry-level roles in cybersecurity.

ACS200L Advanced Cybersecurity with AI Lab (1)

Description

Course Description
This lab course reinforces advanced cybersecurity skills through immersive, hands-on practice aligned with the CompTIA Security+ certification domains. Students apply knowledge of network security, access control, risk management, and incident response in simulated environments that mirror real-world challenges. Emphasis is placed on using AI-enabled tools to identify vulnerabilities, analyze system behavior, and strengthen defensive strategies against evolving threats. By working directly with industry-standard technologies, students gain practical experience in configuring security controls, mitigating risks, and applying AI-augmented methods to enhance efficiency and accuracy. This lab prepares students to confidently demonstrate Security+ competencies while building the applied skills employers seek in cybersecurity professionals.

ACS325 Cloud Administration with AI Tools (6)

Description

Course Description
This course introduces the fundamentals of cloud computing architecture, virtualization, and security within modern datacenter environments. Students examine cloud service models, deployment strategies, storage solutions, and virtualization management while applying best practices for scalability and security. Special emphasis is placed on how artificial intelligence (AI) tools enhance cloud operations by supporting system monitoring, workload optimization, and proactive threat detection. Through guided projects and practical scenarios, students gain experience in configuring cloud environments, evaluating performance, and applying AI-augmented methods to strengthen reliability and security. By bridging foundational knowledge with applied skills, this course prepares students for roles in cloud administration, security, and AI-enabled infrastructure management.

ACS400 Ethical Hacking with AI (6)

Description

Course Description
This course develops ethical hacking and penetration testing skills with a focus on AI-augmented tools that support efficiency and accuracy in security assessments. Students learn how to generate and refine command-line options for scanning, exploit detection, and other penetration testing activities using AI-enhanced methods. Emphasis is placed on identifying vulnerabilities, documenting findings, and applying appropriate countermeasures in alignment with legal and ethical standards. Through hands-on labs and simulated attack scenarios, students gain practical experience with industry-standard techniques and AI-driven workflows that mirror real-world practices. As part of the penetration testing learning path, this course builds competencies that prepare students for the EC-Council Certified Ethical Hacker (CEH) certification and entry-level roles in offensive security.

ACS453 Capstone II (Project) (3)

Description

Course Description
This course is designed to enable students to assimilate the broad educational themes embedded in the major and general education program to support the outcomes of the B.S. Degree in Computer & Information Science, major in Cyber and Network Security. As such, the course is constructed to require students to interact as teams, and develop and present group reports and presentations that synthesize and support the expected student outcomes in the general education and major core curriculum. Students are required to design, plan, and defend an appropriate project approved by the professor that will enable them to demonstrate individual and group mastery of skills and competencies learned across the entire curriculum. The course helps the students to develop knowledge and skill that may facilitate their career growth as they progress through the ranks toward IT leadership positions.

AIS101 Foundations of AI-Enabled Systems (3)

Description

Course Description
This course introduces artificial intelligence as an integrated component of organizational systems rather than as a standalone technology. Students explore AI system architectures, data flows, system lifecycles, human-in-the-loop design, and principles of responsible AI, including ethical considerations and governance. With an emphasis on operational literacy rather than advanced mathematics or programming, students learn to evaluate AI use cases for appropriate fit and communicate AI capabilities, limitations, decisions, and recommendations to both technical and non-technical stakeholders. The course provides a practical foundation for understanding how AI systems are designed, deployed, managed, and maintained in organizational environments while preparing students for continued study in AIS coursework.

AIS101L Foundations of AI-Enabled Systems Lab (1)

Description

Course Description
This lab provides hands-on application of the concepts introduced in the AIS101 course. Students evaluate AI-enabled system scenarios to determine use-case fit, identify required system components, and assess ethical and organizational risks. Students document data flows, human checkpoints, and governance controls through system architecture diagrams and communicate their findings through professional stakeholder briefs that include evidence-based go/no-go recommendations. Through these applied activities, students develop practical skills for evaluating AI-enabled systems and communicating responsible implementation recommendations in organizational environments.

AIS301 Data Pipelines and ETL/ELT Operations (3)

Description

Course Description
This course explores the design, implementation, and operation of the data pipelines that power modern analytics and AI systems. Students will build and manage workflows using ETL and ELT patterns, and apply core practices in scheduling, dependency management, error handling, logging, and documentation. Emphasis is placed on constructing pipelines that are reliable, repeatable, and auditable — the standards expected in professional data engineering environments. By the end of the course, students will be able to design a functioning data pipeline, diagnose and resolve failures, and document workflows for maintainability and compliance, preparing them to support data-driven decision-making across analytics and machine learning applications.

AIS310 Secure Data and AI Systems (3)

Description

Course Description
This course examines the security, privacy, and governance considerations essential to data-driven and AI-enabled systems. Students will apply practices in secure data handling, access control, and risk awareness while exploring the compliance considerations that shape how organizations manage sensitive information. Particular attention is given to safeguarding the inputs and outputs of AI systems against emerging threats. Emphasis is placed on integrating security into everyday system operations rather than treating it as an afterthought. By the end of the course, students will be able to evaluate security and privacy risks, apply appropriate safeguards to data and AI workflows, and recognize governance and compliance obligations — preparing them to operate responsibly in increasingly regulated, AI-driven environments.

AIS402 Monitoring, Reliability and AI Operations (3)

Description

Course Description
This course addresses the post-deployment operation of AI-enabled systems — the work of keeping them reliable, accurate, and trustworthy once they are live. Students will monitor system performance, run data quality checks, and evaluate AI outputs while learning to recognize model drift and respond to operational incidents. Emphasis is placed on logging, alerting, and structured incident response as the backbone of dependable AI operations. By the end of the course, students will be able to build operational playbooks, diagnose and remediate performance and quality issues, and establish monitoring practices that sustain reliability and continuous improvement — preparing them to keep AI systems accountable and effective in real-world production environments.

AIS495 Capstone: Applied AI Systems and Operations (3)

Description

Course Description
This capstone is a culminating experience in which students design, integrate, deploy, and operate a complete AI-enabled system. Drawing together data operations, AI integration, testing, security, and monitoring, students apply the full lifecycle of skills developed throughout the program to a single comprehensive project. Emphasis is placed on operational readiness, thorough documentation, and clear professional communication of technical work. By the end of the course, students will be able to deliver a functioning, well-documented AI-enabled system and articulate their design and operational decisions to both technical and non-technical audiences — demonstrating the integrated competence expected of professionals entering the field.

BAN317 Data Analytics, Machine Learning, and Business Forecasting (3)

Description

Course Description
This course introduces practical approaches to business forecasting and decision support using artificial intelligence and modern data tools. Students will work in cloud-based environments to analyze data using guided tools that support SQL-style operations and Python workflows. Key activities include structuring multi-tab datasets, creating KPI dashboards for cost, risk, and performance, and applying AI-assisted predictive models to inform business decisions. Learners will calculate and interpret forecasting and error metrics to evaluate scenarios and validate spreadsheet-based analyses. Emphasis is placed on using enhanced analytics platforms to run and interpret models, compare outcomes, and generate clear, stakeholder-ready reports. Throughout the course, students will practice responsible AI use by ensuring transparency, traceability, and reliability in their data-driven recommendations.

Description

Course Description
This course advances analytic practice with an emphasis on applied AI and sound evidence. Students design data pipelines and governance practices, test statistical assumptions, and build predictive models for managerial decisions. Coverage includes probability and distributions, hypothesis testing, correlation and evidence appraisal, and business intelligence. Students create and tune a simple neural network, compare it with baseline models, and document model iteration and versioning for a 1.0 release. The course also examines data management systems, data governance, and emerging topics such as blockchain for data integrity, with attention to ethics and responsible use.

BAN327 Data Visualization and BI Tools with Applied AI (3)

Description

Course Description
This course builds practical skill with business analytics tools and introduces responsible AI assistance. Students design surveys, manage datasets, and build visualizations and dashboards for decision support. Topics include BI concepts, data collection methods, data quality and governance, visualization best practices, and action-plan development. Students also learn when and how to use AI assistants to draft survey items, document methods, suggest formulas or DAX, explain charts, and generate first-pass narratives. Emphasis is on verification, reproducible workflows, and human-in-the-loop review.

BAN385 AI and Data Mining with Python (3)

Description

Course Description
This course introduces data mining and introductory AI methods using Python for business decision-making. Students acquire, clean, and transform data; perform exploratory analysis; and build, tune, and compare predictive and descriptive models. Topics include feature engineering; supervised learning (linear and logistic regression, k-NN, decision trees); unsupervised learning (k-means clustering, association rules); model evaluation with train/validate/test splits and cross-validation; and communication of results to non-technical audiences. Work is implemented in Python (e.g., pandas, scikit-learn, matplotlib), with attention to documentation and reproducibility. Ethical considerations include privacy, bias, transparency, and appropriate model use.

BAN390 Business Optimization: Linear, Integer, and Network Models (3)

Description

Course Description
This course develops a practical approach to optimization modeling for business decisions. Students learn to translate problems into decision variables, objectives, and constraints, then solve and interpret models using spreadsheet solvers. Coverage includes linear programming, blending and inventory models, network flow, scheduling with fixed and setup costs, integer and binary formulations, and goal programming for competing objectives. Emphasis is on model formulation, sensitivity and what-if analysis, and clear communication of results to decision makers. Ethical considerations focus on assumptions, fairness, and limits of optimization in real organizations.

BAN400 Operations Analytics, AI, and Emerging Technologies (3)

Description

Course Description
This course develops operations analytics for real business decisions. Students frame problems, gather and validate data, and apply forecasting, network planning, inventory, scheduling, and risk analysis to propose improvements. Projects include a mixed-methods literature review, technology and ethics evaluation, and workflow visualization using diagramming tools. Emerging technologies such as AI, blockchain, RFID, cloud computing, robotics, and IoT are examined for sustainability, standards, and governance. Students convert analysis into an action plan for a workplace context and document methods with clear, reproducible reasoning.

BAN485 Data Mining II: R, Python, and Applied AI (3)

Description

Course Description
This course develops practical data fluency for future business leaders through a low-code/no-code approach to Python and SQL. Students begin with no-code and visual tools to explore data, build queries, and generate reports, then progress to guided low-code applications using AI assistants, templates, and automation tools. Emphasis is placed on framing effective business questions, validating data sources, cleaning and organizing information, and transforming results into clear, actionable insights. Students examine how emerging technologies, including AI coding assistants, cloud data platforms, and automated reporting tools, support business decision-making while also considering accuracy, governance, ethics, and data privacy. Applied work throughout the course helps students connect data analysis practices to workplace contexts and document their processes in a clear, reproducible way.

BAN495 Business Analytics Modeling: Optimization and Simulation (3)

Description

Course Description
This course builds decision-making skill through management-science modeling. Students frame business problems, express them mathematically, and implement solutions using spreadsheet-based optimization, decision analysis, and Monte Carlo simulation. Coverage includes linear and integer formulations, sensitivity and scenario analysis, risk models, and effective technical reporting. The course also introduces machine-learning model tuning at a conceptual level to compare when optimization, simulation, or ML/AI methods are appropriate. An integrated “E-City” case synthesizes methods into actionable recommendations.

BIO101 Human Anatomy and Physiology I (3)

Description

Course Description
This course provides students with an introduction to the anatomy and physiology of the human body. Students will learn human anatomy, physiology, and pathology focusing on the chemistry of life; the cell and tissue structure; and the skeletal, muscular, integumentary, nervous and endocrine systems.

BIO111 Anatomy and Physiology with Terminology I (3)

Description

Course Description
This course is Part 1 of a two-part comprehensive course presenting the interrelationship of each body system. The course presents an integrated approach to human anatomy and physiology, microbiology, and pathology. It includes basic chemistry, physics, cell structure, cell physiology, metabolism, tissues, and integumentary, skeletal, muscular, endocrine and nervous systems as it relates to health sciences. This course is also designed to provide students entering the healthcare profession with skills to learn medical terminology. It focuses on basic techniques of medical word building and application of these techniques to acquire an extensive medical vocabulary.

BPA228 Retail Baking (2)

Description

Course Description

Retail Baking immerses students in the craft of professional baking within a retail setting. Emphasizing hands-on skill development, the course covers a variety of techniques for producing high-quality baked goods using both scratch and convenience methods. Students will practice fundamental baking methods, recipe scaling, and production planning to meet customer demand in a retail environment.

In addition to technical preparation, the course introduces key concepts in product display, merchandising, and point-of-sale presentation to enhance the appeal and profitability of baked goods. Students will also explore basic cost control and startup budgeting to support future entrepreneurial goals.

BPA235 Advanced Pastry Design (2)

Description

Course Description
This advanced course emphasizes the creation of modern cakes and entremets using contemporary pastry techniques. Students will craft multi-format cakes and layered entremets with precision, employing both molded and hand-shaped methods. Key focus areas include structural integrity, uniformity, and refined execution. The course also introduces the principles of ice cream production—covering formulation, flavor balancing, texture refinement, and storage—culminating in applications as both standalone desserts and integrated components of plated entremets. Additional topics include the use of chocolate and sugar garnishes, meringue techniques, and the deliberate use of decorative elements. Students will also explore seasonal flavor development, global ingredient integration, and plating strategies that emphasize composition, contrast, and temperature dynamics.

BUS480L Strategic Planning and Implementation LAB (1)

Description

Course Description
This lab provides students the opportunity to implement the theories and concepts learned from the entire core Business program. It will focus on an interactive strategic management simulation. The simulation provides students with an opportunity to gain hands-on, "low-risk" experience in performing the functions of a CEO. They will have the opportunity to make strategic decisions, and observe the impact their decisions on business performance in a competitive market. They will end the experience with a greater appreciation for the interaction of a firm's key functional areas, including operations, marketing, R&D, and finance.

CAA270 Supervision for Food Service (3)

Description

Course Description
This course discusses the role of the chef supervisor in the food service industry. The student will develop an understanding of the leadership and management skills required in order to become a successful food service manager. The historical development of modern management theories and the application of current best practices will be discussed. Topics include supervision as a manager and leader; goal setting; effective communication; equal opportunity, diversity, recruitment and performance standards; motivating employees, conflict management and problem solving; discipline, decision making and delegation. Students will apply principle elements learned through the development of a restaurant project.

CAA280 Externship-CUL I-a (1)

Description

Course Description
This course provides students with the opportunity to apply their educational experiences in a real world work environment. Through this externship the student will gain an understanding of the inner workings of a food service establishment under direct report to an employer. This supervised experience will allow the student to apply learned skills such as professionalism and organization as well as develop the speed, accuracy and timing that is of importance to success in the field.

CIS108 Office Applications (2)

Description

Course Description
This course offers comprehensive training in essential office applications within a contemporary computing environment, focusing on practical skills in file management, collaboration, and professional document creation. Students will gain proficiency in navigating operating systems, organizing files, and leveraging cloud-based storage solutions to enhance productivity and teamwork. Through hands-on assignments, students will create polished documents, spreadsheets, and presentations, using formatting and visualization tools to communicate effectively across diverse settings. Additionally, students will explore the integration of generative AI technology to develop dynamic content, equipping them with the digital literacy skills needed in today's technology-driven workplaces.

Description

Course Description
This course will provide students with an opportunity to apply the criminal justice concepts and theories that contribute to the overall discipline. The capstone course is designed to examine the objectives of the Criminal Justice program and will involve a project designed to address the student's concentration.

CJ416 Domestic Terrorism (3)

Description

Course Description
This course will provide an overview of domestic terrorism within the United States. Students will learn the history and motives of domestic terrorism/terrorist groups as well as techniques to combat domestic terrorism. Students will also be able to contrast the roles in which women play in these terrorist groups as well as analyze law enforcement's data gathering capabilities used in combating domestic terrorism.

CJ430 Critical Incident Management (3)

Description

Course Description
This course will examine the role of crisis response from the perspective of both the private sector and that of public safety. Students will learn about the phenomenon of crisis, various intervention methodologies, as well as differing legal and ethical issues relating to the varying stages of crisis. Additionally, using artificial Intelligence, students will work their way through the phases of a critical incident from the perspective of public safety.

CJ461 Media Relations For Law Enforcement (3)

Description

Course Description
This course provides an overview of departmental protocols for release of information to media outlets, the public, and other government agencies. The course also outlines issues involving dissemination of information and addresses state and federal freedom of information and privacy protection laws. The course will also explore how media influence, including social media, the internet, and “fake news,” shapes how the public perceives the criminal justice system.

CJ490 Externship-CJ Sr. III (3)

Description

Course Description
In this course, students will gain valuable field experience by working in the field with a public or private law enforcement, legal, or correctional agency. In this course, students are expected to apply intermediate and advanced knowledge and technical skills to the performance of their assigned duties. Students will be supervised by an agency representative and the course managed by a Criminal Justice faculty member.

Description

Course Description
This course introduces students to the critical thinking frameworks required to provide competent patient care. The course will provide foundational skills in critical thinking, clinical reasoning, and clinical judgement while expanding on knowledge from previous courses. Students will focus on reasoning skills for application to the clinical setting. Students will be able to develop the interpersonal, teamwork, and self-management skills needed to be successful as a registered nurse.

COR191 Career Orientation (1)

Description

Course Description
This course equips students with the practical tools and confidence needed to launch a successful job search in their chosen field. Students will research career opportunities and salary benchmarks specific to their program of study, then draft an industry-specific resume, cover letter, and reference list. Through hands-on activities, students will build effective interview techniques, including preparation, responding to knock-out questions, and professional follow-up. The course also addresses personal branding, guiding students to create or update a LinkedIn profile that showcases their skills and supports professional networking. By the end of the course, students will have a complete, employer-ready job search toolkit and a strengthened online professional presence.

CST210 Introduction to AI (3)

Description

Course Description
This course provides an overview of artificial intelligence and its applications in both cybersecurity and software development. Students will learn the fundamentals of AI, including machine learning, neural networks, and data analysis. The course will explore practical applications of AI in threat detection, cybersecurity defense strategies, automated response systems, and software development processes such as code optimization, bug detection, and intelligent automation. Through hands-on activities, students will gain experience using AI tools and frameworks to enhance both security and software development practices. Ethical considerations of AI in both fields will also be explored.

CST100 Introduction to Computing (3)

Description

Course Description
This course was designed for students who are interested in Information Technology. Students learn foundational concepts related to computer hardware and software, networking, databases, programming, and cybersecurity. Basic skills in Microsoft Word, Excel, and PowerPoint are introduced to support professional and technical tasks commonly used in IT environments. The course also introduces students to a wide range of IT careers. It covers all objectives necessary to pass the CompTIA Learn Tech+ exam.

CYB410L Ethical Hacking II with AI Lab (1)

Description

Course Description
This course provides practical experience in identifying, exploiting, and documenting security vulnerabilities using preconfigured virtual environments and industry-standard penetration testing tools. Students apply ethical hacking techniques to analyze attack surfaces, test secure communications, and strengthen system defenses. Emphasis is placed on accurate documentation, legal compliance, and adherence to ethical standards in real-world security assessments. Artificial intelligence (AI)–enhanced tools are integrated throughout the course to support scanning, vulnerability detection, and command-line option generation, helping students work more efficiently and effectively. Through hands-on labs and simulated attack scenarios, students gain applied skills in offensive security while building the competencies required for the EC-Council Certified Ethical Hacker (CEH) exam.

CYB120 Introduction to Python Programming (3)

Description

Course Description
This course introduces the fundamentals of Python programming within a cybersecurity context, emphasizing its role in automating common system and network tasks. Students will explore essential programming concepts such as syntax, data types, and core structures, applying them to create functional scripts that improve efficiency and accuracy in security operations. The course also develops skills in analyzing program output to understand behavior, troubleshoot issues, and refine code. Through hands-on practice, students will learn how Python can be used to process and analyze data relevant to cybersecurity, preparing them to integrate automation into real-world security workflows.

CYB120L Introduction to Python Programming LAB (1)

Description

Course Description
This lab course provides practical, hands-on application of Python programming within a cybersecurity context, reinforcing its role in automating common system and network tasks. Students will practice core programming concepts such as syntax, data types, and control structures through weekly assessments and guided lab exercises. The course emphasizes interpreting program output, identifying and fixing errors, and refining scripts for improved performance. By applying Python to process and analyze cybersecurity data in a lab environment, students will gain the practical skills and experience needed to implement automation in real-world security operations.

CYB250 Principles of Cybersecurity with AI (3)

Description

Course Description
This course introduces the fundamentals of cybersecurity with an emphasis on building and maintaining secure computing environments. Students explore core methodologies, technologies, and best practices for protecting systems, networks, and data. Artificial intelligence (AI)–driven tools are integrated throughout the course to demonstrate how modern security operations monitor activity, detect anomalies, and support rapid defense against evolving threats. Learners gain foundational skills in threat identification, access control, and security policy implementation while applying ethical and legal considerations. By combining theoretical knowledge with applied practice, this course prepares students for further study in cybersecurity and covers key objectives required for the CompTIA Security+ certification.

CYB300 Advanced Cybersecurity with AI (3)

Description

Course Description
This course builds on foundational cybersecurity knowledge by covering intermediate concepts and practices for securing complex systems and networks. Students analyze advanced threat landscapes, explore layered defense strategies, and apply risk management techniques to strengthen organizational security. Emphasis is placed on the integration of AI-enabled defenses, where learners use intelligent tools to detect anomalies, automate responses, and optimize system resilience. Through case studies and applied exercises, students gain experience in securing enterprise environments, evaluating vulnerabilities, and implementing proactive countermeasures. The course aligns with key domains of the CompTIA Security+ certification and equips students with skills valued by employers in security operations and defense roles.

Description

Course Description
This course provides a comprehensive, hands-on review of the CompTIA Security+ domains with an emphasis on applied skills and exam readiness. Students engage in interactive labs that reinforce core security concepts, from risk management and access control to cryptography and incident response. Artificial intelligence (AI)–enhanced tools are integrated into lab activities to support vulnerability identification, automate scanning, and strengthen defense strategies, giving students exposure to technologies increasingly used in the field. The course also introduces effective exam preparation strategies, helping students build confidence and proficiency. By practicing all Security+ objectives in a guided environment, learners are well-prepared to successfully pursue the CompTIA Security+ certification.

CYB310 Introduction to Data Handling with AI (3)

Description

Course Description
This course teaches students to manage, analyze, and secure data using industry-standard artificial intelligence (AI) tools. Learners explore data management strategies, apply security practices, and leverage AI-driven methods to support decision-making and problem-solving. Emphasis is placed on real-world applications, where students organize, clean, and structure data for accuracy and reliability; perform analysis using AI-enhanced techniques; and communicate insights through effective visualization. Practical exercises allow students to evaluate risks, implement protective measures, and apply ethical considerations in handling sensitive information. By combining technical skills with AI-augmented approaches, this course equips students with the competencies needed for data-driven roles in business, cybersecurity, and analytics.

CYB330L Network Routing and Switching LAB (1)

Description

Course Description
This course will provide students with the knowledge of routers and switches by simulating the configuration of a small business network in a LAN, WAN environment. Students will learn how to analyze, plan, configure, and administer the router and switch devices and services to support network availability. Students will also use routing protocols that support both IPv4 and IPv6.

CYB400 Ethical Hacking with AI (3)

Description

Course Description
This course introduces students to ethical hacking and penetration testing through current tools, frameworks, and professional methodologies. Learners explore each phase of an attack cycle, from reconnaissance and scanning to exploitation and reporting, while applying AI-enhanced techniques to identify vulnerabilities and simulate real-world threats. Hands-on labs provide experience in assessing security risks, executing ethical hacks, and recommending effective countermeasures in alignment with legal and ethical standards. By combining traditional penetration testing skills with AI-driven efficiencies, students develop competencies valued in offensive security roles. This course also supports the knowledge and practical objectives required for the EC-Council Certified Ethical Hacker (CEH) exam, preparing learners for further advancement in cybersecurity careers.

CYB400L Ethical Hacking with AI Lab (1)

Description

Course Description
This course guides students through the analysis, documentation, and reporting of vulnerabilities identified in ethical hacking labs. Learners research real-world threats, examine Common Vulnerabilities and Exposures (CVEs), and apply artificial intelligence (AI)–enhanced tools to support scanning, vulnerability detection, and penetration testing activities. Emphasis is placed on producing professional-quality deliverables, including technical reports and presentations that clearly communicate findings to both technical and non-technical audiences. Students develop the ability to assess security risks, recommend effective mitigation strategies, and present results with clarity, accuracy, and adherence to ethical standards. This course also aligns with key objectives of the EC-Council Certified Ethical Hacker (CEH) exam, reinforcing both technical and communication competencies essential for cybersecurity professionals.

CYB410 Ethical Hacking with AI II (3)

Description

Course Description
As the second course in the penetration testing sequence, this course builds on foundational knowledge to provide students with essential skills in identifying, exploiting, and documenting security vulnerabilities. Learners apply ethical principles while conducting penetration tests and use artificial intelligence (AI)–enhanced tools to strengthen computer and network defenses. A variety of security technologies and concepts are explored to develop an in-depth understanding of secure communication channels, devices, and media. Through applied labs and analysis, students gain practical experience in assessing risks, testing defenses, and implementing protective measures. The course aligns with key domains of the EC-Council Certified Ethical Hacker (CEH) exam, preparing students for advanced study and roles in offensive security.

CYB420 Applied Cloud Computing and AI (3)

Description

Course Description
This course equips students with the knowledge and skills of cloud computing concepts and artificial intelligence (AI) through the Microsoft Azure platform. The first part of the course focuses on cloud fundamentals, including core Azure services, solutions, governance, and security. The last part of the course focuses on core Azure AI services including implementing chatbots. Students will develop an understanding of how Azure cloud and AI technologies support modern business and technical needs.

CYB430 Advanced Defense and Countermeasures with AI (3)

Description

Course Description
This course covers the principles and practices of intrusion detection, firewalls, and access control as core components of network defense. Students learn how to configure and evaluate defensive mechanisms that safeguard systems against unauthorized access and malicious activity. Artificial intelligence (AI)–enhanced analysis tools will be used to assist in research and analysis for assignments. Emphasis is placed on applying layered security techniques, analyzing system logs, and designing policies that reinforce organizational resilience. By combining foundational security practices with AI-augmented methods, students gain practical experience in defending networks and developing skills that align with industry needs in security operations.

CYB430L Advanced Defense and Countermeasures with AI Lab (1)

Description

Course Description
This lab-based course provides hands-on experience with intrusion detection systems (IDS), firewall configuration, and security monitoring. Students practice implementing and testing countermeasures designed to prevent, detect, and respond to network-based threats. Artificial intelligence (AI)–enhanced monitoring tools are used to strengthen detection accuracy, automate analysis, and support real-time defense strategies. Through guided exercises, learners gain practical skills in configuring firewalls, analyzing alerts, tuning intrusion detection systems, and applying layered defenses to protect organizational assets. By combining technical practice with AI-augmented approaches, this course prepares students to operate effectively in security operations environments where rapid threat identification and response are critical.

CYB450 AWS Academy Cloud Foundations and AI Tools (3)

Description

Course Description
This course introduces students to core concepts of Amazon Web Services (AWS), including cloud services, architecture, and industry best practices. Learners explore advanced topics such as infrastructure, applications, and the AWS Well-Architected Framework to gain insights into how artificial intelligence (AI) services enhance cloud operations. Emphasis is placed on applying AI-driven tools to optimize workloads, monitor performance, and enhance cloud security. Through applied learning and guided exercises, students build working knowledge of AWS cloud environments and develop practical skills aligned with organizational needs. The course covers all objectives found in a multitude of AWS certification exams, preparing students to validate their expertise in cloud fundamentals.

CYB460 Kubernetes in Cloud Security with AI (3)

Description

Course Description
This course explores the security of Kubernetes clusters in cloud environments with a focus on container orchestration, pod hardening, role-based access control (RBAC), encryption, and ingress/egress controls. Students analyze common vulnerabilities in containerized systems and apply best practices to strengthen cluster defenses. Artificial intelligence (AI) tools are integrated into labs and exercises to enhance monitoring, anomaly detection, and automated response. Hands-on labs guide learners through securing Kubernetes deployments, implementing resilience strategies, and meeting compliance requirements in real-world scenarios. By combining technical depth with AI-augmented approaches, students gain practical experience in protecting containerized environments and develop skills highly valued in cloud security operations.

CYB490 Information and Cybersecurity Externship I (3)

Description

Course Description

The purpose of this course is to provide the graduating Bachelors Degree student with real-world experience in a work area appropriate for their particular CIS concentration. The externship is approved and managed by the faculty advisor for the concentration area, and is graded by the faculty member assigned course management. Students are expected to complete 45 hours of on-the-job work assignments for each 1 Semester Hour of course credit, provide all paperwork related to the externship, including weekly observations and work attendance reports to their course faculty manager.

CYB495 Information and Cybersecurity Capstone (3)

Description

Course Description
This course is designed to enable students to assimilate the broad educational themes embedded in the major and general education program to support the outcomes of the B.S. Degree in Information and Cybersecurity Operations. As such, the course is constructed to require students to interact as teams and develop and present group reports and presentations that synthesize and support the expected student outcomes in the general education and major core curriculum. Students are required to design, plan, and defend an appropriate project approved by the professor that will enable them to demonstrate individual and group mastery of skills and competencies learned across the entire curriculum. The course helps the students to develop knowledge and skill that may facilitate their career growth as they progress through the ranks toward IT leadership positions.

DEN100 Dental Anatomy (3)

Description

Course Description
This course will introduce the student to dental head and neck anatomy and physiology. The focus of this course will include dental terminology related to oral anatomy. Tooth morphology and overview of the dentition is taught at the in-depth level. Students will learn the human skull, including landmarks of the skull, face and oral cavity, bones of the head, and the temporomandibular joint. The musculature, nerves and vascular circulation of the head and neck will be studied. The students will study tooth embryology, histology, structure, components of the periodontium, and systems of tooth identification.

DEN120 Clinical Science (2)

Description

Course Description
This course emphasizes patient preparation, medical/dental histories, vital signs, oral diagnosis, dental charting and accurate patient treatment records. Management of dental, medical emergencies that may occur in the dental office is achieved in this course. Cardiopulmonary resuscitation (CPR) training for certification and registration is included. Students will learn patient management and the medically compromised patient. The study of therapeutics includes a history of drugs, methods of administration, drug effects, and commonly used drugs in the treatment of oral lesions, anxiety, and pain management. Principles of pharmacology to include; overview and dispensing of drugs, commonly used drugs in dentistry and adverse drug effects will be discussed. Students will learn to pronounce, define, and spell key terms.

DEN125 Community Health (1)

Description

Course Description
This course provides topics related to community health concerns including identification of specific diseases, symptoms, causes and effects. An emphasis is placed on the promotion of oral health in the community through patient education in oral home care techniques, dietary counseling, plaque control procedures, risks of tobacco, and application of medicinal agents. Students will learn dental illiteracy, psychology, communication and multicultural interaction. The importance of understanding patients with special needs is stressed. The study of oral pathology and recognizing the difference between normal and abnormal conditions will be explored. Students will learn to pronounce, define, and spell key terms.

DEN200 Dental Chairside Assisting (2)

Description

Course Description
This course provides instruction in the principles of clinical chairside dental assisting; dental equipment use and maintenance; safety and instrument identification. Students will learn the many varied dental office designs. Students will also learn chairside operatory procedures, infection control practices, provider and ergonomic assistant positioning. Various dental hand pieces and their attachments, dental operative hand instruments and their tray set-ups are included. Anesthesia and pain control will be discussed. Chairside assisting procedures including dental amalgam and composite restorative materials are taught to a competent level. Additional chairside assisting functions include oral illumination, tissue retraction, evacuation, and dental dam, and the tofflemire matrix band. Advanced chairside functions include placing liners, bases, and varnishes for restorative procedures. Students will be able to pronounce, define, and spell key terms.

Description

Course Description
This course will challenge the student to link theory with clinical practice. The focus of this course is through laboratory practice, the dental assisting student will perfect the skills necessary to assume their professional role. The Dental Radiography Lab course prepares dental assisting students to operate x-ray units and expose bitewing, periapical, extra oral, and occlusal radiographs. Emphasis is placed on protection against x-ray hazards. Students also process, mount, and evaluate radiographs for diagnostic value. In this course students will first demonstrate competency on a manikin. Students will learn the principles and skills advance, the dental assisting students must demonstrate competence in exposing diagnostically acceptable full-mouth dental image surveys on a minimum of two patients. In addition, they will use radiographs to educate the patients.

DEN225 Clinical Rotation I (4)

Description

Course Description
This course provides the student with 180 hours of clinical extern assignments in various dental specialty practices, as well as general dentistry practices. This is an opportunity for students to obtain practical experience and to reinforce subject matter and skills learned in the classroom. The student will begin interaction with dentist, staff and patient. Students will learn to demonstrate the principles of professionalism, effective communication, infection control, instrumentation, four and six handed dentistry, moisture control, asepsis, vital signs assessment, topical placement, documentation, and computer software integration. Students will assess patient oral hygiene, charting existing restorations and abnormalities. Students will expose, process, and mount radiographs. Students will learn to pronounce, define, and spell key terms.

Description

Course Description
This course provides the student with 135 hours of clinical extern assignments in various dental specialty practices, as well as general dentistry practices. Students will learn to integrate practical experience and to reinforce subject matter and skills taught in the classroom. Students will continue to be assessed with the same skills as DEN 225 and should be showing progression in this course. Students will continue to demonstrate the ability to pronounce, define, and spell key terms.

DEN230S Seminar II (1)

Description

Course Description
This course will be held during clinical rotation. Students will be instructed on techniques to prepare for Dental Assisting Certification Examinations. Students will learn to integrate practical experience and to reinforce subject matter and skills taught in the classroom. Students will demonstrate competence in pronouncing, defining, and spelling key terms.

DMS100 Essentials of Sonography and Patient Care (3)

Description

Course Description
This course is designed to provide an overview of Diagnostic Medical Sonography and the role of the sonographer in the health care delivery system. The student will learn the functional responsibilities of the sonographer, and ergonomic principles to minimize and/or prevent work-related musculoskeletal disorders (WRMSD) will be discussed. Medical law, ethics, practices, and policies of the health care organizations will be examined to include Patient's Bill of Rights, Standard Precautions and Health Insurance Portability and Accountability Act (HIPAA). Discussion of basic patient care and comfort principles will include patient transfer, oxygen, the taking of blood pressure, respiration, and pulse.

DMS105 Ultrasound Physics and Instrumentation (3)

Description

Course Description
The student will learn the basic concepts of ultrasound physics, frequency, velocity, sound attenuation in tissue, power and intensity, image formation, focal zones, transducer selection, image optimization, harmonics, spectral and color Doppler principles. Students will learn how they are applied to basic ultrasound instrumentation controls, digital signal and image processing, image quality and Doppler flow analysis. Concepts of acoustic artifacts will be introduced. The ALARA principle, biological effects, and safety will be stressed. The student will learn to perform measurements, pre and post processing enhancement, documentation and recording capabilities, picture archiving, digital imaging and communication in medicine. The student will be introduced to 3D/4D imaging and emerging technologies. The student will apply and manipulate these principles on ultrasound instruments in the scanning lab.

DMS109 Sectional Anatomy (3)

Description

Course Description
This course focuses on the detailed appearance of normal sectional anatomy in the transverse, longitudinal, and coronal planes used during sonographic examinations. Anatomy will be identified using cross-sectional cadaver images and correlated with sonographic images. Emphasis will be placed on the anatomy of the adult abdomen and pelvis which is seen sonographically. Structures are described according to their position and location in the body and their relationship to each other using medical terminology. Topics will also include basic organ function.

DMS202 Obstetrics and Gynecologic Sonography (3)

Description

Course Description
This course introduces student to gynecologic sonography with an introduction to obstetric ultrasound. Emphasis will be placed on a comprehensive knowledge of normal and abnormal anatomy, physiology and sonographic appearances of the female reproductive system in the pregnant and non-pregnant state and correlate with clinical symptoms, patient history, and exam indications. Students will learn non-pregnant pelvic and first trimester obstetrical scanning techniques and protocols that are correlated with hands on scanning exercises. Topics will also include clinical ethics for obstetric sonography, ectopic pregnancy, the role of ultrasound in evaluation of female infertility, and developmental stages of the embryo and fetus up to 14 weeks.

Description

Course Description
This course will review normal and abnormal anatomy and physiology of the abdominal vascular system. Emphasis will be placed on normal and abnormal anatomy and physiology of the peripheral vascular system. Students will learn the different types of vascular disease and will be able to demonstrate their ability to perform the necessary vascular procedures and will know and understand the other invasive and noninvasive exams that can be utilized. Students should be proficient in the use of quantitative principles applied to peripheral vascular testing.

DMS206 Introduction to Clinical Education (1)

Description

Course Description
This course will be the first opportunity for students to develop their newly learned skills in a clinical patient care setting. Students will demonstrate how to effectively deal with patient care issues, patient preparation, history taking and communication while keeping patients information confidential. Students may report to their site for orientation, department policy and procedure review, and to get oriented to their clinical team as well as the facility. Emphasis will be placed on students professional qualities as it pertains to their behavior and interaction with patients, sonographers and physicians. Students may begin to conduct sonographic exams under direct supervision of staff sonographers.

DMS207 Clinical Education I (4)

Description

Course Description
This course will develop the student's ultrasound scanning skills in a clinical patient care environment such as a private diagnostic imaging setting or local hospital. The student will be exposed to abdominal, obstetrics, gynecology, small parts, and vascular ultrasonography where they will learn to perform ultrasound exams, effectively deal with patient care issues including patient preparation, patient history taking, and patient confidentiality,pertinent clinical laboratory values,and communication. Emphasis will be placed on the student's professional qualities as it relates to conduct, behavior and patient/sonographer interaction.

DMS208 Clinical Education II (4)

Description

Course Description
This course provides students with continued work experience in a hospital, private office or clinic setting. Students will improve their skills in performing procedures of abdominal, small parts, vascular, obstetrics and gynecology ultrasound exams, with a goal toward completing competencies in specific organ systems. While clinical experience will further expose the student to the professional medical environment, emphasis will be placed on the student learning to effectively communicate with the radiology and medical staff. Students will conduct sonographic examinations under direct and indirect supervision of staff sonographers and a clinical instructor.

EET121 Electronic Systems Applications (3)

Description

Course Description
This course is a continuation of the theory and operation of analog electronic devices and circuits. Students will learn about large-signal amplifiers, operational amplifiers, oscillators, multi-vibrators and regulated power supplies.

Credit Hours

3

Simple Requirements

Prerequisite

Type
Prerequisite

Course Description
This course presents the epidemiology, pathophysiology, psychosocial impact, presentations, and management of Trauma. Topics include trauma systems; mechanism of injury; hemorrhage, shock, soft tissue, burn, head, face, spine, thoracic, abdominal and orthopedic trauma; environmental emergencies and trauma skills. This course includes NAEMT Pre-Hospital Trauma Life Support (PHTLS) Certification.

FOR110 Essentials for Success (3)

Description

Course Description
This course introduces students to essential self-management strategies that support academic achievement, professional growth, and lifelong learning. Students will develop skills in time management, communication, and critical thinking while exploring key resources that contribute to success in their coursework and future careers. The course also introduces foundational concepts in information literacy, financial literacy, and the effective use of technology to support learning and productivity. Through practical application and reflection, students will strengthen their ability to manage responsibilities, evaluate information, communicate effectively, and apply strategies for personal and professional success.

FSM498 Food Service Externship I-a (1.5)

Description

Course Description
This course is designed to provide students with an opportunity to experience a real-world, professional business situation and to apply the concepts, theories, and knowledge learned in the FSM curriculum. Through this externship, students will have the opportunity to gain first-hand knowledge and participation in a professional food service environment. This experience will allow the students to interact with management and contribute to a food service business' operation with guidance and mentorship. Students will be required to submit a written report and all necessary externship documentation demonstrating their achievement of the course learning outcomes.

FSM499 Food Service Externship I-b (1.5)

Description

Course Description
This course builds upon the foundational experience gained during FSM498 (Externship I-a) by providing students with increased responsibility and opportunities to apply managerial knowledge and professional skills in a real-world food service environment. Under the guidance of an industry mentor, students will actively contribute to operational, financial, and supervisory activities while demonstrating professional conduct, ethical decision-making, and effective communication. Students will participate in evaluating and improving operational performance, applying cost-control practices, supporting staff supervision and guest service initiatives, and analyzing how current industry trends influence organizational operations. Through ongoing reflection, feedback, and participation in leadership activities, students will further develop the knowledge, skills, and professional competencies expected of emerging food service managers. Students will complete a comprehensive written report and all required externship documentation demonstrating achievement of the course learning outcomes.

FSM101 Introduction to Food Service (3)

Description

Course Description
The course will explore topics in food service including the historical development of the food service industry, the classification of food service operations by type and by system, and the role of the food service industry in the economic life of the country. This is a survey style course designed to introduce the student to concepts that will be studied in depth in later courses. Topics will include foundation discussions of sanitation and food safety, menu development, purchasing and storing products, inventory control, production and service systems, equipment and facility needs, human resource, performance management, and marketing.

HCA305 Legal Aspects of Healthcare Administration (3)

Description

Course Description
This course is designed to present students with an overview of health law issues, and provides the student with a basic knowledge of health law. Students will learn about government regulation, including but not limited to, legal constraints; liability; negligence; patient rights; confidentiality; and corporate/administrative responsibility. Emphasis is placed on applications of health law to current issues in healthcare administration. This course will assist students in understanding their own legal rights and duties as both healthcare professionals and consumers of healthcare, in recognizing legal issues as they arise. Healthcare System operations and health professionals, the changes in regulations relating to the U.S. Healthcare System, patient's rights, the elements needed to develop a culture of patient safety, and the scope of corporate and government healthcare administration.

This course is designed to develop an awareness of the responsibilities of the office professional. Emphasis is on current operating functions, ethics and professional liability, basic bookkeeping and accounting aspects of a medical practice management, supervisory duties, and professionalism. Other topics include but not limited to: process payments and collect overdue payments, process payroll, develop and control revenues and expenses, conflict resolution, leadership and legal concepts and ethical responsibilities. “Hands-on” simulations and role-playing to promote development of competencies required in a medical setting are emphasized with the use of virtual medical office software.

MED286 National Certification Exam Prep (1)

Description

Course Description
This course will provide Medical Assisting degree students with a systematic and structured study environment in preparation for the national certification examination. This course is designed as an academic review. Students will learn the steps necessary to become nationally certified.

MED295 Medical Assisting Externship (4)

Description

Course Description
This externship is a culmination of all the learning and practice acquired with in-house courses. The student goes into a “real-life" medical environment and applies their skills and knowledge while interacting with patients and co-workers. The extern performs clinical and administrative duties required of an entry level Medical Assistant during the supervised, graded, MA practice. Employer agreements, detailed job descriptions, employer evaluations and duties directly related to the student’s program of study are required. This course is approved, coordinated and graded by faculty. This course is taken after all other courses have been completed.

MET191 Materials Science (3)

Description

Course Description
This course introduces students to both theoretical and practical industry-standard practices. Students will learn about structures, properties, and applications of metals, ceramics, polymers, and composites commonly used in industry while also developing problem-solving skills in materials selection, evaluation, measurement, and testing.

MET192 Graphics Communication (3)

Description

Course Description
This course introduces students to the fundamentals of sketching, engineering drawings, and 3-D modeling using a traditional or parametric modeling software package such as AutoCAD, Pro/E, or SolidWorks. Student will learn how to draw layouts and lettering; orthographic and pictorial projections; orthographic, auxiliary, and section views; dimensioning techniques; tolerancing; manufacturing processes; fasteners; and freehand sketches.

MET504 Artificial Intelligence in Manufacturing (3)

Description

Course Description
This course introduces students to the fundamentals of implementing machine learning algorithms and AI-assisted design for manufacturing technologies. Topics covered include machine learning classification and regression methods with basic neural networks, techniques applied to failure prediction, and process monitoring, among other case studies. The course will review AI-assisted generative design for manufacturing and automated modeling. Students will apply machine learning algorithms and AI-assisted technology to solve industrial problems or optimize design for manufacturing.

MET600 Manufacturing Systems (3)

Description

Course Description
This course introduces students to the skills and tools required to plan, design, manage, and improve manufacturing systems. Topics covered include factory layout, simulation, value stream mapping, theory of constraints, lean manufacturing, standard work, visual management, single-piece flow vs. batch processing, time studies, real-world manufacturing case studies, inventory management, and manufacturing leadership. Students will be able to lay out and optimize a production line, identify bottleneck processes, and determine lead times using analytical methods and simulation software.

MGT520 Organizational Behavior and Leadership (3)

Description

Course Description
This course focuses on developing effective skills to manage and lead people in today’s complex organizations. Students will analyze the essential elements of teams, group culture, individuals, and their interrelationships in multicultural and global organizations in order to develop methods that elicit high performance. In addition to exploring the human aspect of an enterprise, the intrinsic role of an organization’s mission, vision, purpose, core competencies, and structure will be examined.

MGT528 Business Research and Analysis (3)

Description

Course Description
This course improves a student's abilities to research, analyze, interpret and report information. Case based reasoning uses a logical approach to design business plans and to solve business problems. Students will identify key areas of information for business management, evaluate both quantitative and qualitative data and information and communicate results to a diverse audience. Ethics in research and reporting is emphasized. This course provides the structure needed for the capstone project that will be completed in BUS628.

Description

Course Description
This course provides students with an overview of the digital landscape and a synopsis of technology available to measure and manage human capital. Students will explore specific systems and frameworks for investigating and selecting technology solutions. Through class discussion, case exploration, and research, this course will provide opportunities to review a variety of technology and the advantages of using that technology to enhance the contributions of the human resource function across an organization.

MGT608 Global Management Processes (3)

Description

Course Description
This course focuses on the theories and applications of Management Science, quantitative analysis, decision theory, and scientific methods collectively known in the global business arena as Decision Science. Students will learn through application of a breakeven analysis, transportation models, linear forecasting, inventory forecasting and PERT/Critical Path Methods.Special emphasis will be placed on forecasting models and decision theory. Best practices for promoting workplace innovation and positive team dynamics in decision science are addressed.

MGT615 Management Capstone (3)

Description

Course Description
This capstone course integrates the theories, skills and knowledge gained from previous courses and provides students with the opportunity to make strategic management decisions. A simulation learning environment helps students develop analytical, organizational and managerial skills to analyze complex situations and recommend comprehensive solutions.

MGT625 Essentials of Leadership (3)

Description

Course Description
This course prepares managers and leaders with the leadership skills essential to lead in today's world of business and assist in achieving instructional and organizational goals. This course will provide an opportunity to gain essential knowledge and skills in supporting an organizational vision, delivering results-oriented leadership, and leadership through the lens of personal leadership style.

MHA490 Fundamentals of Healthcare (2)

Description

Course Description
This introductory course serves to connect the business environment with the healthcare field. Students will learn about healthcare facility types and the services provided, key healthcare administration operational topics, and complete interactive activities to gain familiarity with medical and healthcare administration terminology. In addition, students will explore the components of the MHA program focus tracks, understand the variety of career opportunities, and analyze the healthcare facilities/ services in their local communities.

MKT214 Marketing Management (3)

Description

Course Description
This course introduces students to the field of marketing, its principles, strategies and procedures that are followed in moving from marketing research, to a marketing idea, to development of the marketing plan and strategies for getting a product to the public. The impact of environmental, societal, and technological influences on the marketing process will also be reviewed and analyzed. Students will conduct marketing research, analyze case studies, and research companies and their marketing strategies.

MPA500 Clinical Gross Anatomy I (4)

Description

Course Description
This is the first of a two-part course series that will provide a regional approach to normal and variations in human anatomy, including structure and function. Students will learn to recognize anatomical landmarks, musculoskeletal components, and organs and how to associate and apply normal structure and function to frequently treated disease processes, pathologies, and dysfunctions seen in PA practice. Upon successful completion of the course, students will be able to identify anatomy and describe common pathologies seen in PA practice and apply this knowledge to clinical practice.

MPA510 Critical Thinking I (1)

Description

Course Description
This course will introduce students to the foundational policies and professional expectations of the PA Program, preparing them to meet academic requirements and uphold professional standards. Students will learn the historical development of the PA profession, including its origins, milestones, and evolving role in U.S. healthcare. Core concepts of critical thinking and clinical reasoning will be introduced, with emphasis on early-stage case analysis. Through case-based, small-group learning, students will build essential skills in analytical thinking, contextual understanding, problem-solving, and professional judgment. Upon successful course completion, students will demonstrate the ability to apply clinical reasoning and critical thinking to deliver patient-centered care.

Credit Hours

1

Contact Hours

Lecture
15

MPA525 Physiology and Pathophysiology II (3)

Description

Course Description
This is the second of a two part course series that explores the physiological and pathophysiological foundations of disease. Students will examine how genetics, epidemiology, and physiology interact to influence health and disease processes. Upon successful completion of the course, students will be able to explain how pathophysiologic mechanisms relate to anatomy and common diseases and apply this understanding in clinical contexts.

Credit Hours

3

Contact Hours

Lecture
30

Lab
30

MPA530 Laboratory Medicine (2)

Description

Course Description
This course offers a comprehensive exploration of laboratory medicine, emphasizing the integration of physiological and pathophysiological principles in diagnostic testing. Students will develop critical thinking skills, including concepts such as sensitivity and specificity, to optimize patient care. Topics include medical microbiology, hematology, chemistry, immunology, serology, urine studies, and laboratory interpretation in relation to diagnostic reasoning. Through clinical case discussions and interactive eHospital modules, students will learn to interpret laboratory results within the context of patient assessment and diagnosis, recognizing abnormal findings and their clinical significance. Upon successful completion, students will be equipped to select and utilize appropriate diagnostic tests to support accurate and effective clinical decision-making.

Credit Hours

2

Contact Hours

Lecture
30

MPA540 Clinical Medicine I (3)

Description

Course Description
Clinical Medicine I is the inaugural course in the Clinical Medicine Series (I - VI). The Clinical Medicine Series is the cornerstone of the didactic curriculum covering the pathophysiology, diagnosis, and management of diseases across the lifespan and including all major body systems. It integrates basic sciences with clinical application, focusing on developing a student's ability to formulate differential diagnoses, create treatment plans, and apply evidence-based medicine in a variety of patient scenarios.

Credit Hours

3

Contact Hours

Lecture
45

MPA545 Pharmacology I (1)

Description

Course Description
This course serves as the foundation for a six-part series on pharmacotherapy. Students will explore the mechanisms and applications of drug-based interventions for various pathologies. Upon successful course completion, students will be able to apply core pharmacological principles to the development of judicious, evidence-based treatment plans.

Credit Hours

1

Contact Hours

Lecture
15

MPA575 Diagnostic Medicine I (1)

Description

Course Description

This introductory course in the Diagnostic Medicine series covers major imaging modalities, including X-ray, ultrasound, CT, PET, MRI, nuclear medicine, and fluoroscopy. Students will develop essential skills in imaging selection and interpretation while examining how radiology integrates into holistic patient management.

MSCS501 Cybersecurity with AI Synopsis (3)

Description

Course Description
This course provides a comprehensive exploration of cybersecurity strategy in the era of artificial intelligence (AI). Students will examine how AI enhances threat intelligence, risk evaluation, and organizational defense through advanced analytical frameworks. Guided by NIST standards, students will apply critical thinking to assess adversarial tactics, interpret complex security data, and explore adaptive strategies that strengthen organizational resilience. Throughout the course, students will also collaborate with AI assistants to support analysis, decision-making, and strategy development in real-world cybersecurity contexts.

MSCS521 Security Architecture and Design (3)

Description

Course Description
This course will provide students with advanced knowledge of designing and evaluating secure digital systems. Students will analyze security architectures to identify vulnerabilities, integrate key principles such as least privilege and segmentation, and assess the effectiveness of frameworks like NIST, ISO, and CIS. The course explores architectural models, including zero trust and layered defense, to address organizational security needs and ensure regulatory compliance. Students will be able to develop secure architectural designs, mitigate potential threats, and implement effective incident response strategies to safeguard critical assets.

MSCS525 AI-Augmented Cybersecurity with Python (3)

Description

Course Description
This course offers a comprehensive exploration of cybersecurity concepts, tools, and techniques, integrated with the practical application of Python programming. Students will use artificial intelligence to troubleshoot Python code, enhancing their ability to build, analyze, and refine cybersecurity scripts and tools. Through hands-on projects, students will apply Python to tasks such as threat detection, log analysis, and automation, while leveraging AI to accelerate debugging and learning. By the end of the course, students will be able to combine cybersecurity knowledge, Python programming, and AI-assisted problem solving to design more effective and resilient security solutions.

MSCS637 Hardening Enterprise Security Architecture with AI (3)

Description

Course Description
This course introduces students to methods for strengthening enterprise cybersecurity architecture from a managerial perspective, with an emphasis on leveraging artificial intelligence and machine learning. Students will learn how to analyze and identify threats, vulnerabilities, and mitigations in complex enterprise networks, while incorporating AI-enabled tools to support risk assessment and decision-making. Through penetration testing projects and managerial analysis, students will evaluate vulnerabilities, design mitigation strategies, and allocate resources to improve organizational defenses. By the end of the course, students will be able to integrate business, technical, and AI-driven insights to enhance enterprise security architecture and strengthen cybersecurity management practices.

Description

Course Description
This course provides an in-depth exploration of information risk management, equipping students with the knowledge and skills to analyze risk management principles, frameworks, and methodologies. Students will investigate internal and external factors that impact an organization's risk profile, including regulatory compliance, emerging technologies, and third-party risks. The course emphasizes developing effective risk mitigation strategies, designing comprehensive risk management programs, and applying risk-based decision-making to align security initiatives with business objectives. Students will be able to assess risks, implement mitigation strategies, and support organizational security through data-driven risk management practices.

MSCS643 Cybersecurity Governance and Compliance using AI Gap Detection (3)

Description

Course Description
This course explores how artificial intelligence (AI) can support compliance and governance in cybersecurity by identifying and analyzing detection gaps. Students will use AI tools, such as ChatGPT, to investigate security gaps, translate findings into everyday language, and map them to key regulatory requirements. The course emphasizes U.S. utility sector compliance, focusing on standards like NIST 800-53 and GLBA 501. Through labs and case studies, students will learn to identify detection gaps, connect them to specific regulatory obligations, interpret control IDs and clauses, and explore best practices for governance, compliance, and operational improvement in federally regulated industries. By the end of the course, students will be able to apply AI-assisted analysis to strengthen compliance strategies and improve cybersecurity governance practices.

MSCS675 AI/Machine Learning and Cybersecurity (3)

Description

Course Description
This course gives hands-on practice using artificial intelligence in cybersecurity. Students will analyze real network captures and apply machine-learning models to spot unusual activity and determine risk. Large language models (LLMs) support research—helping brainstorm questions, summarize sources, and explain results—while students verify all facts with trusted references. Content maps to NIST principles and CISSP domains and aligns with NSA/CAE academic outcomes. By the end, learners can connect AI methods to practical threat detection tasks.

MTH099 Introduction to College Algebra (3)

Description

Course Description
This course will provide students with mathematically sound and comprehensive coverage of the topics essential in an introductory algebra course and the fundamental skills needed by students for collegiate level mathematics courses. Students will learn and review integers, whole numbers and fractions, ratio and proportion, and problem solving. Pass/No Pass course

MTH131 College Algebra (3)

Description

Course Description
This course examines algebraic applications and problem-solving skills to include the ability to formulate, use, and interpret mathematical models. Students will learn graphing of systems of linear equations, operations with and factoring polynomials, the algebra of rational expressions, manipulation and simplification of radicals, and properties of exponential and logarithmic functions and terms.

MTH140 Statistics (3)

Description

Course Description
This course introduces students to gathering and using data to make inferences about a population using mathematical principles. Topics covered in this course include classifying different types of data, interpreting and generating graphical representations of data. Students will learn how to summarize statistics and use probability distributions to calculate the likelihood of events in experiments.

Course Description
This course further develops decision making skills acquired in previous courses. Emphasis is placed upon continued professional development. The student will participate in a mock interview and be required to develop a resume. Legal aspects of practical nursing, employment opportunities and responsibilities, as well as preparation for the NCLEX-PN are included. In clinical, instructors and students explore the role of the practical nurse in the context of a nursing care delivery care system. Coordinating care for groups of clients continues and builds upon experience and knowledge gained in previous courses.

NUR240 LPN to RN Transition Orientation (0)

Description

Course Description
The focus of this course is to provide client-centered care to clients with acute, chronic and complex healthcare needs across the lifespan. The elements of evidence-based practice will be utilized to enhance the plan of care. Students are given the opportunity to gain cognitive, affective and psychomotor skills in the delivery of client care to patients with hypertensive, reproductive, endocrine, and immune disorders and musculoskeletal alterations . Many of the clients may be more critically ill than those previously encountered. Students will continue to be introduced to the skills of intravenous phlebotomy and electrocardiogram tracing. Nutritional needs for these clients will be identified and addressed. Available sources of informatics will be utilized in the care setting to organize and manage client care.

NUR242 Maternal Newborn Nursing (4)

Description

Course Description
This course introduces students to the principles, theories and concepts of caring for the childbearing individual and family in a multicultural society. Students use clinical decision making to explore best practices that can enhance the patient's plan of care. Available sources of informatics will be utilized in the care setting to organize and manage patient care. Students learn to apply teaching and learning concepts to the identified needs of the childbearing family with inclusion of cultural considerations. Learning opportunities for this course include classroom and supervised clinical experiences.

NUR243 Parent Child Nursing (4)

Description

Course Description
This course introduces the student to principles, theories and concepts of caring for children and their families in a multicultural society. Students will study the effects of acute and chronic illness on growth and development and family dynamics. A key focus of this course is on health promotion, maintenance, and restoration. Integrated throughout this course is an overview of the common standards of parent/child health goals. Elements of evidence based practice and available sources of informatics will be utilized in planning and implementing the interdisciplinary plan of care. Teaching and learning principles are discussed as they relate to patient- centered/ family-centered care. Learning opportunities for this course include classroom and supervised clinical experiences.

NUR256 Medical Surgical Nursing I (5)

Description

Course Description
This course introduces the student to setting priorities, communicating, planning and providing care for medical-surgical patients with multiple physiological and psychosocial needs in diverse health care settings. Students will learn health promotion, maintenance, and restoration. Opportunities to identify best practices from selected sources of current nursing evidence are provided. Students communicate with the interdisciplinary team to initiate plan of care and participate in quality improvement processes. Learning opportunities for this course include classroom and supervised clinical experiences.

NUR257 Medical Surgical Nursing II (5)

Description

Course Description

This course further expands upon the use of the nursing process in caring for adults, from early adulthood through geriatrics, with multiple physiological and psychosocial needs. Students will utilize clinical decision making and nursing evidence to prioritize, communicate, plan and manage care for medical-surgical patients in diverse health care settings. Core principles of health promotion, maintenance, and restoration will be incorporated to reflect an individualized plan of care. Students will coordinate with members of the interdisciplinary team and identify quality improvement processes that enhance patient outcomes. Learning opportunities for this course include classroom and supervised clinical experiences.

NUR258 Acute Care Nursing (5)

Description

Course Description
This course expands upon prior knowledge, nursing principles and health concepts to provide culturally sensitive patient-centered care for adults with multiple acute biopsychosocial needs. Clinical experiences increase in the level of complexity and acuity from previous nursing courses. Students explore human responses to emergencies, crisis and life changing events. Clinical decision making and the nursing process are implemented to manage and modify care for high-acuity patients and their families. Learning opportunities for this course include classroom and supervised clinical experiences.

NUR426 Parent Child Nursing (4)

Description

Course Description
This course introduces the student to principles, theories and concepts of caring for children and their families in a multicultural society. Students study the effects of acute and chronic illness on growth and development and family dynamics. A key focus of this course is on health promotion, maintenance, and restoration. Integrated throughout this course is an overview of the common standards of parent/child health goals. Elements of evidence-based practice and available sources of informatics will be utilized in planning and implementing the interdisciplinary plan of care. Students participate in discussions related to laws governing pediatric nursing practice as well as the legal aspects of practice. Students engage in health teaching and counseling in various pediatric settings. Learning opportunities are presented in the classroom, simulation, and in supervised clinical experiences.

NUR439 Mental Health Nursing (4)

Description

Course Description
This course provides the theoretical foundation for the study of mental health nursing. The client is viewed as the individual, the family and the community within a social framework, with the goal of optimizing his or her functioning. Historical, socioeconomic, environmental, political, and cultural indicators of the health of a community are explored. The application of the nursing process is applied to diverse client scenarios with the emphasis on the provision of holistic care to the clients and their family.

NUR458 Acute Care Nursing (5)

Description

Course Description

This course expands upon prior knowledge, nursing principles and health concepts to provide culturally sensitive patient-centered care for adults with multiple acute biopsychosocial needs. Clinical experiences increase in the level of complexity and acuity from previous nursing courses. Students explore human responses to emergencies, bioterrorism, crisis and life changing events. Clinical decision making and the nursing process are implemented to manage and modify care for high-acuity patients and their families. The course reinforces legal aspects of practice along with health teaching and counseling skills that are needed when caring for patients in the acute care setting. Learning opportunities are presented in the classroom, simulation, and in supervised clinical experiences.

NUR504 Role of the Advanced Practice Nurse (3)

Description

Course Description
This course delves into the advanced practice roles of nurses. It explores the historical evolution of advanced practice nursing using nursing theories and leadership models across diverse healthcare settings and systems. These components serve as the foundation for promoting self-care, resilience, self-mastery, professional integrity, professional growth, and ethical decision-making. Through this course, nurse practitioner students will gain a comprehensive understanding of their advanced practice roles, facilitating their transition from being registered nurses to advanced practice nurses.

NUR652L Nursing Education Practicum I (1)

Description

Course Description
This clinical practice experience provides nurse educator students an opportunity to integrate and apply new knowledge from advanced courses to the direct care of a selected population in acute care, long-term care, home health, community-based settings, and educational settings.Students will assess the impact of social, cultural, economic, and ethical factors on the client's outcomes while refining professional competencies. Clinical experiences will be documented in a reflective journal including analysis and evaluation of the advanced nursing direct-care role. At the end of this course, students will be able to perform in the role of an advanced practice nurse and demonstrate attainment of the program outcomes.

NUR654 Certification Preparation Review Course (2)

Description

Course Description
This course serves as a review of the Family Nurse Practitioner curriculum across the life-span, seeking to solidify the student's knowledge base in preparation for success on either the AANP or ANCC Family Nurse Practitioner (FNP) Certification Exam, which is required for entry into practice. Students will cover topics and skills that will provide an assessment of entry-level professional competence. This course has been placed into the curriculum after the didactic completion of all practice areas and prior to the Nursing Synthesis courses that are practicums geared towards independent practice. These final courses in the curriculum allow the creation of both didactic and practicum experiences that give the student the opportunity to demonstrate mastery of the FNP curriculum and assess readiness for independent practice.

PSY220 Positive Psychology (3)

Description

Course Description
This course provides students the opportunity to explore and experience positive applications with regard to human behavior and mental processes. In the past, traditional research in psychology has focused on disorders and dysfunctional behavior. In today's society, individuals must understand how to focus on positive endeavors in order to have the opportunity to live a balanced, meaningful, fulfilling, and successful life. This course focuses on such positive experiences as how to increase emotional intelligence, resiliency, optimism, pro-social behavior, positive emotions, meaning in life/work, self-efficacy and overall well-being while optimizing performance and decreasing stressors, burnout and susceptibility to physical or mental illness.

PTA145 Medical and Surgical Conditions I (2)

Description

Course Description
This course addresses the common medical and surgical conditions encountered in physical therapy practice. It explores the basic concepts of disease processes including pathophysiology, inflammation, healing and infection. This course focuses on the physical therapy intervention and specifically the role of a PTA in the rehabilitation process of musculoskeletal conditions. It explores the basic concepts of pharmacology and effects of immobility, stress and pain. This course also includes the classic or common physical therapy plan of care/protocols and establishes the justification for progression, modification or discontinuation of physical therapy intervention.

Description

Course Description
This course addresses the common medical and surgical conditions encountered in physical therapy practice. It explores the basic concepts of diseases processes including pathophysiology, inflammation, healing and infection. This course focuses on the physical therapy intervention and specifically the role of a PTA in the rehabilitation process of cardiopulmonary conditions. This course also includes the classic or common physical therapy plan of care/protocols and establishes the justification for progression, modification or discontinuation of physical therapy intervention.

PTA206 Neurological Rehabilitation (3)

Description

Course Description
This course provides an integrated approach to basic neuroscience and applied neurorehabilitation. It presents practical applications for the functional implications of neurological damage. The course addresses the value and distinctness of physical therapy for the developing, mature, and aging neurological patient.

PTA208 Rehabilitation IV: Devices (2)

Description

Course Description
This course will present the basic adaptive, protective, supportive, orthotic and prosthetic devices used in the physical therapy profession. The course involves the application of the composite theoretical knowledge in modifying, progressing, or discontinuing the use of such treatment or devices in the physical therapy plan of care.

PTA255 Clinical Education Experience I (4)

Description

Course Description
This full-time clinical education experience introduces the student to a physical therapy clinical setting for the first time. Prior to the first day of clinical attendance, the student will complete a series of lab activities and foundational skill checkoffs to ensure competency and safety. During the clinical experience, the student works under the direct supervision of a licensed physical therapist or physical therapist assistant in an approved facility. The facility provides learning experiences consistent with the student's level of knowledge. The clinical education experience allows opportunities to implement the knowledge and skills acquired in the classroom/laboratory setting.

PTA256 Clinical Education Experience II (4)

Description

Course Description
This full-time clinical education experience provides the student with a clinical working environment under the direct supervision of a licensed physical therapist or physical therapist assistant in an approved facility. The facility provides learning experiences consistent with the student's level of knowledge. This clinical education experience allows opportunities to continue refining the knowledge and skills acquired in the classroom and laboratory settings and utilize them in a clinical setting. The students will continue to develop their critical thinking skills in providing care to their patients. Students will require less supervision for previously learned skills. Upon completion of the experience, students will participate in intermediate critical thinking skills competencies within the lab environment.

PTA257 Clinical Education Experience III (4)

Description

Course Description
The focus of this full-time clinical experience is validation of the level of independence gained in patient care, documentation, and professionalism as a physical therapist assistant student. The student will work towards independence in all aspects of the scope of physical therapy practice. Laboratory skills prior to attendance in the clinical environment includes advanced patient-centered performance, which incorporate legal, ethical, fiscal, and organizational aspects of care. This clinical experience allows the student to establish a comfort level and confidence with the facility, supervising therapist and patients. At the completion of this course, the student will be able to follow the progression from initial evaluation through discharge with a multitude of different rehabilitation opportunities.

PTA258 Clinical Education Experience IV (4)

Description

Course Description

Course DescriptionThe focus of this full-time terminal clinical experience is validation of the level of independence gained in patient care, documentation, communication and professionalism as a physical therapist assistant student. The student will work towards independence in all aspects of the scope of physical therapy practice and will achieve entry-level clinical competency upon completion in preparation for the National Physical Therapist Assistant board examination. This clinical education experience allows the student to refine professional interactions and have a basic understanding of departmental administrative mechanisms and expectations. At the completion of the clinical education experience within the clinical setting, the student will return to laboratory activities to demonstrate competent safe care of patients throughout the continuum of care.

RAD100 Fundamentals of Radiologic Sciences and Healthcare (1)

Description

Course Description
This course will provide an overview of the foundations in radiography and the practitioner’s role in the health care delivery system. Students will have a more comprehensive understanding of medical terminology, abbreviations, and symbols and will learn principles, practices and policies of the health care organization as well as the professional responsibilities of the radiographer.

RAD105 Patient Care and Ethics in Radiologic Sciences (2)

Description

Course Description
This course will present basic patient care and medical terminology related to the Radiography profession. Students will learn: ethics and moral behavior; legal and professional responsibilities; patient consent; patient education, safety, and comfort; prevention and control of infection; patient monitoring; communication and assessment; proper body mechanics for patient transfer; universal precautions and isolation procedures; medical emergency and monitoring equipment; contrast media administration; contraindications, complications, imaging orders, requests, and reports; and Radiographer's response.

RAD110 Introduction to Radiographic Positioning and Technique (1)

Description

Course Description
This course will introduce basic terminology related to radiographic positioning and technique.Students will learn placement of a patient’s body parts to obtain a radiographic image. Basic concepts of x-ray technique formation, x-ray equipment handling and an introduction to DR/CR systems will be practiced. Basic positioning for a routine chest procedure will be introduced.

RAD115 Radiographic Procedures 1 (2)

Description

Course Description
General procedural considerations involved with positioning patients for x-ray examinations and certain specific imaging procedures are presented in this course. Considerations include patient preparation, equipment capabilities, patient terminology, patient instruction and immobilization, technique and positioning variations, such as for trauma or pediatric patients and adaptations for patient's body habitus. The specific imaging procedures presented, (including the positioning, technical factors, anatomy, physiology, and basic pathology) are as follows: chest and abdomen, hand and wrist, forearm and elbow, humerus, shoulder and scapula, clavicle and A.C. joints, toes and foot, os calcis and ankle, tibia and fibula, knee and patella, femur and pelvis.

RAD147 Radiographic Imaging I (2)

Description

Course Description
This course will cover the primary and secondary technical exposure factors that govern the acquisition and production of a radiographic image. An emphasis is placed on image quality factors, and the components of digital imaging systems. Students will learn the principles of technique selection and usage of imaging accessories that are used to produce quality diagnostic images. The basis of image evaluation and steps needed for improvement of suboptimal images are included in the course.Topics will also include receptor exposure, contrast, resolution, and distortion.

RAD360 Specialized Imaging Modalities (3)

Description

Course Description
This course offers in-depth presentations of Computed Tomography (CT) or Magnetic Resonance Imaging (MRI) from the American Society of Radiologic Technology's (ASRT) learning modules. Students will learn concepts, anatomy, equipment, clinical applications, and the role of the technologist with other team members.

RAD370 Advanced Patient Assessments (3)

Description

Course Description
This course provides advanced patient care skills for the experienced radiologic technologist. Students will learn concepts of patient education, assessment, communication, preprocedural and postprocedural care, and proper charting and documentation. Technologists' responsibilities and intervention in cases of critical patient care will also be covered. A unit on pharmacology will focus on drugs and their applications in medical imaging.

RAD420 Healthcare Delivery Systems (3)

Description

Course Description
This course will focus on the structure, operations, and outcomes associated with the United States' healthcare system and radiology's role within that system.Students will learn how to assess a healthcare entity's payer mix and expenditures in relation to the cost of services; identify key benchmarks in the development of the healthcare system; locate and read sources of research and monitoring of the healthcare system; and, evaluate the impact of existing legislation on the healthcare system.health care system, understand policy formation and implementation, and access sources of research and monitoring in healthcare delivery.

SDC120 Object-oriented Programming (3)

Description

Course Description
This course introduces students to the principles of object-oriented programming (OOP). Students will design and develop modular, class-based applications that demonstrate core OOP concepts, including encapsulation, inheritance, and polymorphism. Through hands-on labs and guided practice, students will apply generative AI tools for “prompt-debugging,” using AI-generated feedback to resolve runtime errors and to refine failed unit tests.

SDC120L Object-oriented Programming Lab (1)

Description

Course Description
This lab emphasizes project-driven application of object-oriented principles. Students design and implement modular Java applications such as inventory management systems or game prototypes that demonstrate encapsulation, inheritance, and polymorphism. Each project requires unit testing and iterative debugging, with AI tools available as support for troubleshooting. By the end of the lab, students will have completed projects that showcase maintainable, object-oriented design.

SDC130 Database Systems and SQL (3)

Description

Course Description
This course introduces students to the design, implementation, and management of relational database systems as essential tools in modern software development. Students will learn to model structured data, design efficient and scalable schemas, and write SQL queries for data manipulation and retrieval. Topics include entity-relationship modeling, schema design, and the use of normalization techniques to ensure data integrity.

SDC130L Database Systems and SQL Lab (1)

Description

Course Description
This lab centers on projects where students design and implement relational databases to support realistic applications. Students create schemas, populate data, and build SQL queries that support reporting and decision-making. Performance optimization and query validation will be integral to the creation of database-driven projects that demonstrate schema design, query proficiency, and data integrity.

SDC235 Foundations of Versioning and Workflows (3)

Description

Course Description
This course introduces students to the core practices of version control and collaborative software development. Through hands-on activities, students learn how to track changes, manage code history, create and merge branches, and resolve conflicts in multi-developer environments. Emphasis is placed on best practices for team workflows, including contribution management and peer review processes. Students will also explore the use of generative AI tools to support version control tasks, such as interpreting errors, composing commit messages, and improving workflow efficiency.

SDC300 Cloud Development and Monitoring Using AI Tools (3)

Description

Course Description
This course introduces students to the deployment and monitoring of applications in scalable, cloud-based environments. Students learn to provision and configure deployment targets such as virtual machines and containerized services, incorporating key strategies for load balancing, auto-scaling, and high availability. Emphasis is placed on monitoring application health and performance through logs, metrics, and alerting tools, as well as interpreting system behavior to support ongoing optimization. The course also covers cost-awareness and resource efficiency in deployment planning. Generative AI tools are used to assist in infrastructure configuration, deployment diagnostics, and performance analysis, with a focus on informed decision-making and operational reliability.

SDC305 Software Architecture with AI Tools (3)

Description

Course Description
This course introduces software architecture as the discipline of structuring software systems to meet business goals and quality requirements. Students learn to read and diagram existing systems, prioritize architectural characteristics, analyze trade-offs, compare the major architectural styles, and design and document an architecture using architecture decision records. AI tools draft candidate diagrams and architectures throughout, and students evaluate and revise that output against documented evidence. The course culminates in an architecture package presented and defended to a stakeholder audience.

SDC315 Secure Coding Practices Using AI Tools (3)

Description

Course Description
This course introduces students to the principles of writing secure software. The course emphasizes practical techniques for identifying and mitigating common vulnerabilities. Students learn to write code that defends against threats such as injection attacks, cross-site scripting, and insecure data storage, while applying secure coding standards and checklists. Students gain experience recognizing risky patterns and implementing safer alternatives. Generative AI tools are introduced to assist in identifying potential security flaws and refactoring insecure code. The course prepares students to apply secure development practices in both individual and team-based project environments.

SDC325 Software Testing and Quality Assurance (3)

Description

Course Description
This course introduces students to the practices of software testing and quality assurance in the software development lifecycle. Students learn how to plan, write, and execute various types of tests, including unit tests, integration, and system-level testing, using structured testing frameworks. Emphasis is placed on test-driven thinking, reproducible bug reporting, and understanding how testing supports maintainable, scalable code. Students also explore foundational QA strategies such as test planning, defect tracking, and peer review. Generative AI tools are introduced as aids for generating test cases, analyzing code quality, and improving test coverage.

SDC332 DevOps and CI/CD Using AI Tools (3)

Description

Course Description
This course introduces students to the principles and practices of DevOps with a focus on continuous integration and continuous delivery (CI/CD). Students learn to streamline the software development lifecycle through version control integration, automated builds, test execution, and staged deployment workflows. Emphasis is placed on configuring pipelines using declarative tools such as YAML, ensuring quality through test automation, and enabling fast, reliable feedback loops. Generative AI tools are used to assist in pipeline configuration, troubleshoot errors, and optimize workflow steps, while students critically evaluate the output for correctness and maintainability.

SDC100 Introduction to Programming (3)

Description

Course Description
This course introduces students to the foundational concepts of programming using the C++ language. Students explore essential topics such as syntax, primitive data types, variables, constants, expressions, and console input/output. Emphasis is placed on writing simple programs and developing an understanding of control structures, loops, and basic debugging techniques. Designed for students beginning their software development journey, this course also promotes critical thinking, algorithmic reasoning, and secure coding practices that prepare learners for AI-augmented development.

SDC100L Introduction to Programming LAB (1)

Description

Course Description
This lab course supports and reinforces the concepts introduced in SDC100 through guided, hands-on programming projects using C++. Students will apply core skills such as control flow, data handling, loops, and conditionals to build interactive, text-based applications. Emphasis is placed on designing, writing, and debugging complete programs from start to finish. Through structured project work, students gain practical experience in applying foundational programming techniques and begin developing the critical thinking and problem-solving skills essential for future software development and AI-augmented coding courses.

SDC420 System Analysis and Design (3)

Description

Course Description
This course provides advanced coverage of modern strategies and techniques of systems development. The course will cover the concepts, skills, methodologies, techniques, tools and perspectives essential for the systems analysts to successfully analyze, design and develop Information Systems.

Credit Hours

3

Simple Requirements

Prerequisite

Type
Prerequisite

Fulfill ALL of the following requirements:

Prerequisite

Complete ALL of the following Courses:
- SDC200 - Introduction to Databases

AND

Prerequisite

Complete ANY of the following Courses:
- SDC220 - Object-Oriented Programming Using C#
- SDC230 - Object-oriented Programming Using Java

Corequisite

SDC435 Advanced Databases (3)

Description

Course Description
This course will provide students with hands-on experience in both relational and non-relational databases. Students will learn to store, retrieve, manipulate, and secure data in both structured and non-structured environments.

Credit Hours

3

Simple Requirements

Prerequisite

Type
Prerequisite

Complete ALL of the following Courses:
- CST200 - Linux Administration
- SDC200 - Introduction to Databases
- SDC205 - Python for Data Analytics
- SDC250 - Structured Query Language

Corequisite

SDC445 Interface Design II (3)

Description

Course Description
This course is designed to provide students with a comprehensive understanding of developing modern web applications using React.js and deploying them to the Web. Throughout the course, students will learn the fundamental concepts of React.js, including component-based architecture, state management, props, and JSX syntax. Students will learn best practices for organizing and structuring React applications to ensure maintainability, scalability, and code reusability. In the latter part of the course, students will delve into the process of deploying React applications to various hosting platforms, including cloud services like Vercel, Heroku, and Netlify.

SDC470 Cloud Native Application Development (3)

Description

Course Description
This course will provide students with the knowledge to design, develop, and monitor modern distributed cloud native applications. Students will facilitate the containerization, orchestration, and deployment of web applications and services. Students will utilize various software deployment tools and will also identify the steps needed to design resilient and easily scalable applications that are “cloud-native.”

SE510 Systems Engineering Concepts (3)

Description

Course Description
This course will provide students with the knowledge and skills to apply a top down approach to the engineering of complex systems. Topics covered in this course include all activities involved in engineering complex systems starting from the inception of the system to its implementation. Specifically, the management, maintenance and quality assurance of the engineering process are covered. Students will learn how to engineer complex systems using the principles of systems engineering.

SE530 Testing and Evaluation (3)

Description

Course Description
This course will provide students with knowledge and skills on the application of systems engineering principles to the testing and evaluation of complex systems. Topics include adoption of proper testing requirements and parameters, validation and verification, operational testing and evaluation. Student will be able to apply systems engineering concepts to develop corrective actions based on data interpretation and analysis.

SUR101 Surgical Theory I (3)

Description

Course Description
This course provides general introductory information for the surgical technology student. The student will learn the history and development of surgery, healthcare facilities organization and accreditation, physical environment and safety, biomedical science, surgical technologist and other team members job descriptions, medical/ legal aspects of surgery including informed consent, risk management, patient's Bill of Rights, the surgical patient and treatment of "special populations" of patients, professional management, communication skills and teamwork, microbiology related to the perioperative environment.

SUR102 Surgical Theory II (3)

Description

Course Description
This course introduces the student to the basic principles of aseptic and sterile technique. The students will learn methods of disinfection and sterilization, hand hygiene and surgical scrub, gowning and gloving, technological sciences, pre and post-operative patient care, urinary catheterization, hemostasis, pharmacology and anesthesia, disaster preparedness and response. The student will learn the basic principles and reasons for aseptic technique.

SUR120 Surgical Procedures I (4)

Description

Course Description
This course introduces the student to skills including creation and maintenance of the sterile field, sterile and non-sterile equipment and supplies, and surgical counts. The students should be able to name and identify instruments, equipment and supplies used in the operative setting. The student will learn concepts related to wound healing and the devices and methods of wound closure, pre/intra/post-operative routines, patient skin prep, positioning and draping and urethral catheterization.
