Degree Types

HFC offers many pathways to earning college credit. You may choose to obtain an Associate Degree with the intention of transferring to a four-year university or earn an Associate Degree or Certificate of Achievement in a career-related field. Whatever path you choose, we highly recommend working with a HFC Academic Advisor to develop an educational plan to meet your specific goals.

Programs of Study

Transfer Programs

Programs of study designed for transfer to a four-year college or university:

- Associate in Arts (AA) – intended for students who plan to pursue a non-Science, Technology, Engineering, and Mathematics (STEM) Bachelor Degree.
- Associate in Applied Arts (AAA) - intended for students who wish to pursue the visual or performing arts.
- Associate in Fine Arts (AFA) - intended for students who wish to study the fundamentals of art and concentrate on their specific medium of interest.
- Associate in Science (AS) – intended for students who plan to pursue a STEM Bachelor Degree.
- Associate in General Studies (AGS) – intended for student who are undecided but wish to earn college credits while exploring career options. HFC strongly recommends working with a HFC Counselor to develop an educational plan.

Career Programs

Programs of study designed to prepare you for entry into a specific career field or to upgrade skills if you are already employed. Our career programs also transfer to four-year colleges and universities if you plan to pursue a Bachelor's Degree.

- Bachelor of Science (BS) – if you plan to pursue a Culinary Arts Bachelor's Degree.
- Associate in Applied Arts (AAA), Associate in Applied Science (AAS), and Associate in Business (AB) – if you plan to pursue an occupational-focused two-year degree.
- Certificates of Achievement – if you plan to pursue an occupational-focused program that has fewer required credits. Many programs of study are designed so that the credits you earn during the achievement of certificates may be applied to an Associate Degree.

General Requirements for Degree Types

Bachelor's Degree

A bachelor's degree will be awarded after you have completed an approved program, as long as you have fulfilled the following conditions:

1. Earn a minimum of 120 semester hours of credit with a 2.00 cumulative GPA or higher.
2. Complete [General Education](#) and [Degree Specific](#) Graduation Requirements.
3. Complete all required and elective courses for the Program of Study. Go to [Self-service](#) and select Program Evaluation to find this information.
4. Developmental courses do NOT meet [General Education](#), [Degree Specific Requirements](#), or Program Requirements nor count toward the minimum requirement of 120 semester hours.
5. Complete a minimum of 30 semester hours of credit at HFC.
6. Transferability of courses may be restricted based upon program specific policies and requirements.
7. A student holding a Bachelor's Degree from a regionally accredited college or university will be given transfer credit equivalencies that meet the [General Education Requirements](#) for graduation.
8. All financial obligations to HFC have been met.

Associate Degree

An associate degree will be awarded after you have completed an approved program, as long as the following conditions have been fulfilled:

1. Earn a minimum of 60 semester hours of credit with a 2.00 cumulative grade point average (GPA) or higher.
2. Complete [General Education](#) and [Degree Specific](#) Graduation Requirements.
3. Complete all required and elective courses for the Program of Study. Go to [Self-service](#) and select Program Evaluation to find this information.
4. Developmental courses do NOT meet General Education, Degree Specific Requirements, or Program Requirements nor count toward the minimum requirement of 60 semester hours.
5. Complete a minimum of 20 semester hours of credit at HFC. The balance of credit may be transferred in from other sources (usually accredited colleges). Students must work with the HFC University Transfer, Academic Advising, and Career Counseling Office and/or the Admissions, Registration, and Records Office to establish an official record of transfer credit at the College.
6. A student holding a Bachelor's Degree from a regionally accredited college or university will be given transfer credit equivalencies that meet the [General Education Requirements](#) for graduation.
7. All financial obligations to the College have been met.

Degree Requirements

In addition to Required Core and Required Support Courses, all students working toward the completion of an associate or bachelor degree must satisfy [Degree Specific Requirements](#) AND [General Education Requirements](#). The following summary lists graduation requirements for all HFC degrees.

DEGREE TYPE	MINIMUM NUMBER OF GENERAL EDUCATION CREDITS	COMPUTER TECHNOLOGY DEGREE REQUIREMENT CREDITS	SCIENCE AND MATH DEGREE REQUIREMENT CREDITS	REQUIRED CORE AND SUPPORT COURSES	MINIMUM NUMBER OF CREDITS THAT MUST BE TAKEN AT HFC	MINIMUM NUMBER OF CREDITS REQUIRED FOR GRADUATION
Associate in Arts (AA)	30	3	N/A	Varies by Program of Study	20	60
Associate in Applied Arts (AAA)	15	3	N/A	Varies by Program of Study	20	60
Associate in Business (AB)	15	3	N/A	Varies by Program of Study	20	60
Associate in Fine Arts (AFA)	30	3	N/A	Varies by Program of Study	20	60
Associate in General Studies (AGS)	15	3	N/A	Varies by Program of Study	20	60
Associate in Science (AS)	30	3	24	Varies by Program of Study	20	60
Associate in Applied Science (AAS)	15	3	N/A	Varies by Program of Study	20	60
Bachelor of Science (BS)	30	N/A	N/A	Varies by Program of Study	30	120

HFC's Philosophy on General Education (and why you should care)

tl;dr version: When you graduate from college, you will need a specific set of skills, no matter what your field. We've honed our understanding of these skills every year during our 85-year history. So, we require 15-30 credit hours in classes that will give you these valuable and necessary skills. These classes will be worth your time and will pay off in the long run! Probably even sooner.

full version: [General Education](#) is defined as a culmination of learning experiences that enable students to attain the knowledge and skills needed by every college graduate. [General Education](#) establishes a foundation of skills and understandings to enable success in employment and further education. In line with its belief that [General Education](#) competence should be defined by the College to meet the needs of the external communities in which its graduates must function, HFC has collected and restated expectations identified by employers, alumni, and four-year universities. HFC's Institutional Outcomes reflect those expectations, and we require our students to successfully complete courses that will lead towards competence in these areas. Hence, all students are required to successfully complete a minimum of 30 [General Education](#) credits for all Bachelor of Science, Associate in Arts, Associate in General Studies, and Associate in Science degrees, or a minimum of 15 [General Education](#) credits for all Associate in Applied Science and Associate in Business degrees.

How do Students Benefit from General Education?

[General Education](#) empowers you to develop independent, critical and creative thinking skills while fostering an appreciation of the diversity, inclusion, understanding, and acceptance that you will need for success in a global society. HFC's [General Education Courses](#) are designed to produce graduates that are proficient in the following Institutional Outcomes that will equip you for your career and life:

- **Civil Society and Culture—U.S. and Global:** You will compare and contrast the United States with other nations or world regions, addressing social (economic, political and cultural) issues, patterns of diversity or aspects of inequality.
- **Communication:** You will effectively communicate ideas appropriate to your discipline using standard English, through written and verbal communication.
- **Computer Technology:** You will demonstrate skills for computer technology, including Internet, network and advanced file operations. Skills will include organizing, managing, and presenting data using general productivity software. You will also identify security and integrity threats and identify unethical actions within their social or professional environments.
- **Critical Thinking and Information Literacy:** You will demonstrate the ability to analyze and evaluate information and identify the need for research to draw conclusions, formulate inferences, solve problems, and make decisions. You will also demonstrate information literacy skills by locating, evaluating, selecting, organizing, synthesizing, and ethically documenting information from multiple sources using both informal and formal formats, as appropriate for diverse writing situations.
- **Quantitative Literacy:** You will apply quantitative skills to analyze situations and make decisions in a variety of contexts.

HFC has designed our Associate in Arts, Science, and General Studies degrees to allow you the opportunity to satisfy the Michigan Transfer Agreement (MTA) while completing your degree, with no duplication of credits. Most Programs of Study incorporate [General Education Requirements](#) in the Required Core or Required Support courses. We strongly urge you to work with [your advisor](#) to craft an educational plan.

Degree Specific Graduation Requirements

The following are Degree Specific Graduation Requirements for Henry Ford College degrees; not all categories are required for every degree. Many programs have required courses that fulfill these categories. However, some programs give students the choice to select courses from the below categories. Students should check their program of study prior to selecting any classes and are encouraged to work with a [HFC Advisor](#) or Counselor to craft an educational plan.

Science and Math Degree Requirements

HFC requires students pursuing an **Associate in Science (AS) degree** to complete at least 24 Science and Mathematics credits, including at least two laboratory science courses from the following subjects:

- Astronomy (ASTR); Atmospheric Studies (ATMS); Biology (BIO); Chemistry (CHEM); Geology (GEOL); Geospatial Technologies (GIS); Mathematics (MATH); Physical Science (PSCI); Physics (PHYS); Science (SCI)

Computer Technology Degree Requirements

HFC requires **all students pursuing an Associates degree** to complete at least one course that fulfills the Computer Technology Institutional outcome. The courses, given below, are designed to produce graduates that meet the following outcome:

Students will demonstrate skills for computer technology, including Internet, network and advanced file operations. Skills will include organizing, managing, and presenting data using office productivity software. Students will also identify security and integrity threats and identify unethical actions within their social or professional environments.

Many programs have required courses that fulfill the computer technology requirement. However, some programs give students the choice to select their preference. Students should check their program of study prior to selecting any classes and are encouraged to work with HFC's Academic Advisors or Counselors to create an educational plan.

Courses that fulfill the Computer Technology Degree Requirement:

Art: [ART111 Digital Media](#), [ART275 Advanced Projects](#)

Computer Information Systems: [CIS100 Intro Info Tech](#), [CIS221 Instruction Tech for Educators](#)

Engineering: [ENGR125 Intro Computation for Engineer](#)

Health Careers: [HCS131 Computers in Health Care](#)

Music: [MUS156 Music Technology](#)

Trade and Apprentice Education: [TAED117 Industrial Computer Applicatio](#)

Note: These classes may not apply to the Michigan Transfer Agreement (MTA)

Wellness Degree Requirements

In addition to General Education, some degree programs require students to complete at least one wellness course. The courses, given below, are designed to produce graduates that meet the following outcome:

Students will demonstrate the knowledge and skills necessary to establish a positive pattern of life-long wellness choices.

Many programs have required courses that fulfill the wellness requirement. However, some programs give students the choice to select their preference. Students should check their program of study prior to selecting any classes and are encouraged to work with HFC's Academic Advisors or Counselors to create an educational plan.

Courses that fulfill the Wellness Degree Requirement:

Business Finance: [BFN130 Beginning Investment](#), [BFN141 Personal Finance](#)

Counseling: [COUN110 Human Potential Seminar](#), [COUN114 Stress Mgmt-Personal Approach](#), [COUN119 Issues in Personal Growth](#), [COUN125 Life Work Planning](#), [COUN128 Active Parenting](#)

Note: These classes may not apply to [General Education Requirements](#) within the Michigan Transfer Agreement (MTA).

General Education Requirements

Should I choose MTA or Applied Degrees?

Your goals will determine this choice. Please talk to your [HFC Advisor](#) to make sure your program will lead you to your goals.

Generally:

- If you want to transfer to a 4-year university to earn a bachelor's degree, you should choose MTA.
- If you want to earn your Associate Degree and go into the workforce, you should choose Applied Degrees.

The following pages outline our general education requirements for transfer (MTA) degrees and Applied (Career) degrees.

[General Education Requirements](#)

General Education Requirements for Transfer Degrees

The following are Michigan Transfer Agreement categories for Henry Ford College transfer degrees:

- AA - Associate in Arts
- AB - Associate in Business
- AFA - Associate in Fine Arts
- AS - Associate in Science

Some AB programs that include 2+2 or 3+1 agreements with 4-year universities may require thirty (30) credit hours of general education coursework to fulfill requirements of the Michigan Transfer Agreement.

Many programs have required courses that fulfill these categories. However, some programs give students the choice to select courses from the below categories. Check your program of study prior to selecting any classes and work with your [HEC Advisor](#) to craft an educational plan to fit your specific needs.

Category One: 1 course in English Composition

Choose 1 course from the following:

[ENG131 Introduction College Writing](#), [ENG131A Intro College Writing \(ALP\)](#), [ENG131H Honors Intro College Writing](#), [ENG132 College Writing and Research](#), [ENG132H Honors Coll Writing & Research](#), [ENG135 Bus & Tech Writing & Research](#)

Note: Courses cannot be double counted in Category Two

Category Two: 1 course in English Composition or Communications

Choose 1 course from the following:

Communications: [SPC131 Introduction Public Speaking](#), [SPC145 Interpersonal Communication](#)

English Composition: [ENG131 Introduction College Writing](#), [ENG131A Intro College Writing \(ALP\)](#), [ENG131H Honors Intro College Writing](#), [ENG132 College Writing and Research](#), [ENG132H Honors Coll Writing & Research](#), [ENG135 Bus & Tech Writing & Research](#)

Note: Courses cannot be double counted in Category One.

Category Three: 1 course in Mathematics

Please note that one course is chosen from the following Mathematics list and groupings, including the College Algebra, Quantitative Literacy, and Statistics Tracks. One course from any of these areas will fulfill HFC's General Education Requirements.

Choose 1 course from the following:

College Algebra Track: [MATH115 College Algebra](#), [MATH165 Mathematics for Calculus](#), [MATH175 Precalculus](#), [MATH180 Calculus 1](#), [MATH183 Calculus II](#), [MATH275 Discrete Mathematics](#), [MATH280 Calculus III](#), [MATH283 Linear Algebra](#), [MATH288 Differential Equations](#)

Quantitative Literacy Track: [MATH122 Math for Elem Teachers I](#), [MATH131 Math for the Modern World](#), [MATH222 Math for Elem Teachers II](#)

Statistics Track: [MATH141 Introduction to Statistics](#)

Category Four: 2 courses in Social Sciences

Choose 2 courses on Social Sciences from 2 different disciplines (subjects):

Anthropology: [ANTH131 Intro Anthropology](#), [ANTH151 Cultures of North America](#), [ANTH152 Mid East People and Cultures](#), [ANTH153 Introduction to Archaeology](#), [ANTH154 Food, Culture, and Economy](#)

Business Economics: [BEC151 Prin Macro Economics](#), [BEC152 Prin Micro Economics](#)

Criminal Justice: [CRJ126 Intro to Homeland Security](#), [CRJ131 Intro Law Enf & Crim Just](#), [CRJ132 Police Admin/Staff](#), [CRJ134 Criminal Investigation](#), [CRJ135 Juvenile Justice](#), [CRJ136 Introduction to Corrections](#), [CRJ138 Probation and Parole](#), [CRJ140 Identity Theft-prevent & Aware](#), [CRJ251 Criminal Law](#), [CRJ252 Criminal Procedure](#), [CRJ285 Topics Criminal Justice](#)

Education: [EDU256 Educational Psychology](#), [EDU260 History in Elementary Schools](#), [EDU296 Exceptional Child](#)

Geography: [GEOG131 Environmental Geography](#), [GEOG132 World Regional Geography](#), [GEOG138 Geography of Michigan](#), [GEOG221 Geography of the Middle East](#)

History: HIST111 Ancient World History, HIST112 Medieval-Early Modern World, HIST113 Modern Wrld History, HIST151 Early American History, HIST152 Modern American History, HIST254 History of Michigan, HIST258 The Revolutionary War Era, HIST261 The Modern Middle East, HIST270 The American Civil War, HIST285 The U.S. & Second World War, HIST286 The U.S. & the Vietnam War

Political Science: POLS101 Am Gov: Democrat Participation, POLS131 Intro Amer Gov't & Pol Sci, POLS135 Amer Legal System & Process, POLS150 Leadership, Organizing & Publi, POLS152 International Relations, POLS155 State&local Govern, POLS200 Intro to Peace and Conflict, POLS201 Public Policy: Topics & Analys, POLS202 Foreign Policy: Topics & Analys

Psychology: PSY131 Introductory Psychology, PSY152 Child Psychology, PSY251 Abnormal Psychology, PSY253 Lifespan Development, PSY254 Social Psychology, PSY257 Health Psychology

Sociology: SOC131 Introduction to Sociology, SOC132 Marriage & Family, SOC151 Contemporary Social Problems, SOC152 Women, Men, & Society, SOC212 Ldrshp Diverse Comm & Organiza, SOC251 Ethnic & Racial Diversity, SOC253 Sociology of Deviance, SOC254 Social Psychology

Spanish: SPN130 Intro to Hispanic Cultures

World Religions: WR130 Intro to the Study of Religion

Category Five: 2 courses in Humanities and Fine Arts

Choose 2 courses in Humanities and Fine Arts from 2 different disciplines (subjects), excluding studio and performance courses:

Arabic: ARA131 Elementary Arabic I, ARA132 Elementary Arabic II, ARA231 Intermediate Arabic I, ARA232 Intermediate Arabic II

Art: ART107 Photoshop, ART121 Art History Survey I, ART122 Art History Survey II, ART123 History of Modern Art, ART130 History of Graphic Desgn, ART135 Art Appreciation, ART221 Medieval Art, ART224 Art of Islam, ART225 Asian Art: India & SE Asia, ART226 African and Afro American Art, ART227 History of Arab Art & Architec, ART229 Survey of Contemporary Art

ASL (American Sign Language): ASL131 Elementary ASL I, ASL132 Elementary ASL II, ASL135 Fingerspelling and Numbering, ASL140 Fingerspelling and Numbering, ASL231 Intermediate ASL I, ASL232 Intermediate ASL II

Education: EDU250 Humanities/Perform Art Educat

English: ENG139 Creative Writing, ENG231 Intro to Literature, ENG232 Intro to the Short Story, ENG233 Intro to Novel, ENG234 Topics in Literature, ENG235 Amer Literature Before 1900, ENG236 American Autobiography, ENG237 American Literature Since 1900, ENG241 Shakespeare, ENG243 Women's Literature, ENG245 The Bible as Literature, ENG246 Intro to Children's Literature, ENG248 African American Literature

French: FRE131 Elementary French I, FRE132 Elementary French II, FRE231 Second-Year French III, FRE232 Second-Year French IV

German: GER131 Elementary German I, GER132 Elementary German II, GER231 Second-Year German III, GER232 Second-Year German IV

History: HIST111 Ancient World History, HIST112 Medieval-Early Modern World, HIST113 Modern Wrld History, HIST151 Early American History, HIST152 Modern American History, HIST254 History of Michigan, HIST258 The Revolutionary War Era, HIST261 The Modern Middle East, HIST270 The American Civil War, HIST285 The U.S. & Second World War, HIST286 The U.S. & the Vietnam War

Honors: HON151 Honor Colloquium Culture/Detroit, HON161 Honors Colloquium, HON251 Great Works

Humanities: HUM101 Introduction to the Humanities, HUM105 World Civilization I, HUM204 Intro to American Cultural Stu, HUM251H Great Works

Interior Design: BLDI120 Principles of Design, BLDI130 Design & User Needs, BLDI140 Interior Design Mat & Comp, BLDI150 Light & Environ Sys for Interi, INTR181 Principles of Design

Italian: ITAL131 Elementary Italian I, ITAL132 Elementary Italian II

Journalism: JOUR131 News Writing

Media Communication Arts: MCA131 Intro to Media Communication, MCA132 Film History and Criticism, MCA241 Media Writing, TCM131 Introduction to Telecommunicat, TCM132 Film History and Criticism, TCM241 Media Writing

Music: MUS130 Music Appreciation, MUS132 Music Literature, MUS133 Exploring Popular Music, MUS134 Music Fundamentals, MUS138 Music Theory 1, MUS139 Music Theory 2, MUS141 Aural Music Skills 1, MUS142 Aural Music Skills 2, MUS154 Arab Music Appreciation, MUS232 History of Western Music 1, MUS233 History of Western Music 2, MUS238 Music Theory 3

Philosophy: PHIL130 Introduction to Philosophy, PHIL131 Introduction to Logic, PHIL133 Hist of Phil to 18th Century, PHIL135 History of Modern Philosophy, PHIL137 Topics in Philosophy, PHIL138 Moral Issues in Biotechnology, PHIL139 Ethics, PHIL201 Eastern Philosophy

Speech: SPC131 Introduction Public Speaking

Spanish: SPN131 Elementary Spanish I, SPN132 Elementary Spanish II, SPN231 Intermediate Spanish I, SPN232 Intermediate Spanish II

Theatre: THEA131 Theatre Appreciation, THEA135 Intro to Stage Makeup, THEA138 Stage Costuming, THEA238 Theatre History

World Religions: WR130 Intro to the Study of Religion, WR131 Relig Traditions in the World, WR232 Judaism, christianity and Islam, WR233 Eastern Religions, WR235 Christianity - First 1000 Year, WR236 African American Religious Ex, WR240 Myths & Symbols/Deciphering, WR241 Islam, WR280 Topics in Religious Studies

Category Six: 2 courses in Natural Sciences

Complete 2 courses in Natural Sciences, including one with laboratory experience, from 2 different disciplines (subjects). See additional notes below for exceptions.

Choose 2 courses from the following:

Lecture and Lab:

Biology: BIO131 Introduction to Biology, BIO134 Essentials Anatomy&Physiology, BIO135 Microbiology for AHS, BIO143 Zoology, BIO150 Bio: Organisms, Genes, Ecology, BIO152 Cell and Molecular Biology, BIO233 Anatomy and Physiology I, BIO234 Anatomy and Physiology II, BIO251 Microbiology

Chemistry: CHEM111 Chem Skills Pre-Professional, CHEM131 Principles of Chemistry, CHEM132 Prin Organ & Bio Chem, CHEM141 Prin Gen & Inorganic Chem I, CHEM142 Prin Gen & Inorganic Chem II

Geology: GEOL131 Physical Geology

Physics: PHYS131 General Physics I, PHYS132 General Physics II, PHYS133 Principles of Physics, PHYS231 Engineering Physics I, PHYS232 Engineering Physics II

Physical Science: PSCI131 Intro to Physical Science, PSCI135 Sound & Light in Fine-Arts

Science Education: SCI210 Intro to Science for Elem Educ, SCI212 Earth Science for Educators, SCI213 Lrnng by Inquiry: Life Sci

Lecture Only:

Astronomy: ASTR131 Descriptive Astronomy

Biology: BIO138 Environmental Science Lecture, BIO139 Environmental Science Lab

Chemistry: CHEM241 Organic Chemistry I, CHEM242 Organic Chemistry II, CHEM243 Microscale Organic Chem Lab I, CHEM244 Microscale Organic Chem Lab II

Engineering Technology: ENGR130 Intro to Engineering, ENGR201 Science of Materials, ENGR232 Statics

Meteorological Science: ATMS131 Weather and Climate

Lab Only:

Astronomy: ASTR133 Introductory Astronomy Lab

Biology: BIO139 Environmental Science Lab

Notes:

- ASTR131 Descriptive Astronomy is only eligible as an MTA natural science laboratory course if both ASTR131 Descriptive Astronomy and ASTR133 Introductory Astronomy Lab are completed.
- BIO138 Environmental Science Lecture is only eligible as an MTA natural science laboratory course if both BIO138 Environmental Science Lecture and BIO139 Environmental Science Lab are completed.

Category Seven: General Education

Some programs require additional general education credits, such as "Complete additional courses from the Michigan Transfer Agreement (MTA) list, if needed, to reach 30 total credits." These courses are representative from course options listed in category 1 through category 6.

Students should work with an Academic Advisor before selecting additional general education or MTA courses.

Computer Technology

Students will demonstrate skills for computer technology, including Internet, network and advanced file operations. Skills will include organizing, managing, and presenting data using office productivity software. Students will also identify security and integrity threats and identify unethical actions within their social or professional environments.

HFC courses that fulfill this requirement:

Computer Art: ART111 Digital Media, ART275 Advanced Projects

Computer Information Systems: CIS100 Intro Info Tech, CIS221 Instruction Tech for Educators

Engineering: ENGR125 Intro Computation for Engineer

Health Careers: HCS131 Computers in Health Care

Music: MUS156 Music Technology

Trade and Apprentice Education: TAFD117 Industrial Computer Applicatio

General Education Requirements

General Education Requirements for Applied Degrees

The following are General Education categories for Henry Ford College Applied Degrees:

- AAA - Associate in Applied Arts
- AAS - Associate in Applied Sciences
- AB - Associate in Business

Some AB programs that include 2+2 or 3+1 agreements with 4-year universities may require thirty (30) credit hours of general education coursework to fulfill requirements of the Michigan Transfer Agreement.

Many programs have required courses that fulfill these categories. However, some programs give students the choice to select courses from the below categories. Check your program of study prior to selecting any classes and work with your [HEC Advisor](#) to craft an educational plan to fit your specific needs.

Category One: 1 course in English Composition

Choose 1 course from the following:

[ENG131 Introduction College Writing](#), [ENG131A Intro College Writing \(ALP\)](#), [ENG131H Honors Intro College Writing](#), [ENG132 College Writing and Research](#), [ENG132H Honors Coll Writing & Research](#), [ENG135 Bus & Tech Writing & Research](#)

Note: Courses cannot be double counted in Category Two.

Category Two: 1 course in English Composition or Communications

Choose 1 course from the following:

Communications: [CIS294 Software Engineering](#), [SPC131 Introduction Public Speaking](#), [SPC145 Interpersonal Communication](#)

English Composition: [ENG131 Introduction College Writing](#), [ENG131A Intro College Writing \(ALP\)](#), [ENG131H Honors Intro College Writing](#), [ENG132 College Writing and Research](#), [ENG132H Honors Coll Writing & Research](#), [ENG135 Bus & Tech Writing & Research](#)

Note: Courses cannot be double counted in Category One.

Category Three: 1 course in Mathematics

Choose 1 course from the following:

Automotive Technology: [AUTO135 Mathematics for the Technician](#)

Business: [BMA110 Business Math](#)

Computer Information Systems: [CIS119 Math for Computer Professional](#)

Engineering Technology: [ENGR232 Statics](#)

Mathematics: [MATH100 Basic Tech Mathematics](#), [MATH101 Math for Health Career](#), [MATH103 Technical Mathematics](#), [MATH104 Math for Food Service Careers](#), [MATH110 Intermediate Algebra](#), [MATH112 Trigonometry](#), [MATH115 College Algebra](#), [MATH121 - Missing course](#), [MATH122 Math for Elem Teachers I](#), [MATH131 Math for the Modern World](#), [MATH141 Introduction to Statistics](#), [MATH165 Mathematics for Calculus](#), [MATH175 Precalculus](#), [MATH180 Calculus 1](#), [MATH183 Calculus II](#), [MATH221 - Missing course](#), [MATH222 Math for Elem Teachers II](#), [MATH225 - Missing course](#), [MATH275 Discrete Mathematics](#), [MATH280 Calculus III](#), [MATH283 Linear Algebra](#), [MATH288 Differential Equations](#)

Trade and Apprentice Education: [TAMA120 Indust Appl of Algebraic Princ](#)

Category Four: 2 courses in Social Sciences

Choose 2 courses from Social Sciences from 2 different disciplines (subjects):

Anthropology: [ANTH131 Intro Anthropology](#), [ANTH151 Cultures of North America](#), [ANTH152 Mid East People and Cultures](#), [ANTH153 Introduction to Archaeology](#), [ANTH154 Food, Culture, and Economy](#)

Fully Accredited Since 1949

Henry Ford College is fully accredited by the Higher Learning Commission (HLC).

The College is a member of the [Michigan Community College Association](#) (MCCA) and the [American Association of Community Colleges](#) (AACC). Approval by the recognized accrediting agencies assures that HFC students' academic credentials, transcripts, and grades will be recognized by other accredited colleges and universities.

In addition to the College and all HFC programs receiving the highest level of HLC accreditation, all programs requiring individual accreditation are accredited by the premier professional organizations in their field.

Learn More About: [Transfer Opportunities](#)

Explore: [Medical Assistant | Henry Ford College](#)

Career Opportunities - Medical Office Assistant Certificate Program:

According to recent reports from the U.S. Bureau of Labor Statistics, employment of medical assistants is expected to grow much faster than the average for all occupations through 2030 as the health care industry expands because of technological advances in medicine and a growing aging population.

Employment growth will be driven by the increase in the number of group practices and other health care facilities that need a high proportion of support personnel, particularly the flexible medical assistant who can handle both administrative and clinical duties.

Medical assistants will have the opportunity, and skill sets to work both clinically and administratively in ambulatory care, hospitals, laboratories, and surgical clinics, while serving various specialties such as pediatrics, oncology, geriatrics, gynecology, and billing and coding facilities.

Information about career placement and job success is available through either the School of Health and Human Services Office or the College Placement Office.

Occupational Exposure/Risk:

Applicants who consider a career in medical assisting should be aware that during the course of their education and subsequent employment they are likely to working in situations where exposure to infectious diseases is possible. This is an occupational risk for all health care workers. Persons should not become health care workers unless they recognize and accept this risk. Proper education and strict adherence to well established infection-control guidelines can reduce the risk to a minimum. Thorough education in infection control procedures is an important part of the medical assistant program of study.

Latex Allergies:

Early recognition of sensitization to natural rubber latex (NRL) is crucial to prevent the occurrence of life-threatening reactions in sensitized healthcare workers. The Medical Assistant Program Faculty strongly advises that students sensitized or allergic to latex consult a physician for guidance on the merits of continuing in a healthcare career. NRL sensitized students who choose to continue in their program must notify the program director upon admission.

As with any healthcare position, there are certain occupational risks that come into play with being a medical assistant, and those hazards include the following:

- Exposure to infectious diseases
- Sharps injuries
- Bloodborne pathogens and biological hazards
- Chemical and drug exposure
- Ergonomic hazards from lifting, sitting, and repetitive tasks
- Latex allergies
- Stress

Registry / Certification / Licensure Exam Information:

Upon completion of the Medical Assistant Program, students graduating from medical assistant programs accredited through Commission on Accreditation of Health Education Programs (CAAHEP) or Accreditation Bureau of Health Education Schools (ABHES) are eligible to sit for either of the following certification examinations for medical assistants. Each credential is equal in weight, importance, and acceptance for future employment.

CMAs and RMAs receive a better salary than those without credentials. Employers prefer medical assistants from accredited programs with professional certification.

- The American Association of Medical Assistants (AAMA) offers the CMA (Certified Medical Assistant) examination. The CMA is a national certification.
- The American Medical Technologist (AMT) offers the RMA (Registered Medical Assistant) examination. The RMA credential is an international certification.

Program Completion Limits:

All educational experiences are under the guidance of the Medical Assistant program. Student progress is evaluated in the classroom, laboratory and clinical setting throughout the program. Progression in the program is based upon the student meeting the following requirements:

1. Adherence to the program requirements outlined in the Medical Assistant Student Handbook.
2. Achievement of a minimum grade of B- or better in all MOA and a C or better in required support courses.
3. All MOA courses taken at HFC must be successfully completed within three consecutive calendar years. The Medical Assisting program continuously updates its program of study to meet changing health care needs and the requirements of the accreditation agency and clinical affiliates; thus the College reserves the right to change policies at any time.

Transfer Agreements:

Learn More About: [Transfer Opportunities](#)

Explore Program: [Ophthalmic Technician | Henry Ford College](#)

Career Opportunities:

The Profession:

Ophthalmic Technicians are health professionals who are an integral part of the team of medical practitioners providing vision care. They perform administrative and clinical functions under the direction of medical or osteopathic physicians who provide comprehensive, refractive, medical, and surgical eye care to the public. Technicians provide administrative support services by coordinating clinic schedules, charting, coding, and transmitting orders of the physician. Clinical functions may be generalized or specialized. Duties may include calibrating and maintaining ophthalmic equipment and supplies, recording medical histories and vision, testing eye movements and binocular functions, measuring optical power and visual fields, assisting in minor and major eye surgery, and performing ocular imaging and biometry services as applicable by local law.

Ophthalmic technicians are employed primarily by ophthalmologists, medical institutions, clinics, hospitals, ambulatory surgery centers, university ophthalmology centers, or physician groups in which they may be assigned to an ophthalmologist responsible for their supervision and performance. They may be involved with the patients of an ophthalmologist in any setting for which the ophthalmologist is responsible.

Demand for ophthalmic medical technicians should remain strong due to the rising population of older persons, the segment of the population with increased frequency of chronic health conditions.

Occupational Exposure/Risk:

Applicants considering a career as an Ophthalmic Technician should be aware that during their course of study and in subsequent employment in the field, they are likely to work in situations where exposure to infectious disease is possible. This is an occupational risk for all health care workers. Persons should not become health care workers unless they recognize and accept this risk. Proper education and strict adherence to well established infection control guidelines can reduce the risk to a minimum. Thorough education in infection control procedures is an important part of the Ophthalmic Technician program.

Latex Allergies:

Early recognition of sensitization to natural rubber latex (NRL) is crucial to prevent the occurrence of life-threatening reactions in sensitized healthcare workers. The program faculty strongly advises that students sensitized or allergic to latex consult with a physician for guidance on the merits of continuing in a health care career. NRL sensitized students who choose to continue in Ophthalmic Technician program must notify the program director.

Program Completion Limits:

The [Ophthalmic Technician AAS Degree](#) (OPT) program is 23 months in length. Students must complete all OPT courses within three years of beginning the formal program. All courses in the OPT program must be completed with a C or better. Students are responsible for their own transportation to clinical sites and any expenses incurred.

The College continuously attempts to improve each program and as a result, courses and requirements may be modified. Curriculum, course content, and admission criteria are subject to change by action of the College faculty and administration. Contact the Health Careers Office at (313) 845-9877 for any current program updates or visit www.hfcc.edu.

Withdrawal and Readmission:

A student who fails one or both first semester OPT courses ([OPT101 Intro to Ophthalmic Technology](#)/[OPT134 Ocular Anatomy and Pathology](#)) must stop out of the program. Sequencing for OPT course work is not optional; courses are scheduled annually. Therefore, all students who fail a course must appeal for continuance with a remediation plan in writing. If a student fails a course on second attempt, they are out of the ophthalmic technician program.

Transfer Agreements:

Learn More About: [Transfer Opportunities](#)

Explore Page: [Physical Therapy Assistant](#)

Career Opportunities:

The Profession:

Physical Therapist Assistants (PTAs) are skilled health care providers who assist in providing planned patient care under the direction and supervision of a Physical Therapist. As members of the rehabilitation team, PTAs perform treatments designed to relieve pain, promote healing, and improve functional ability. Once a treatment plan is designed by a physical therapist, the PTA may be responsible for carrying out this treatment plan.

Opportunities:

Opportunities for PTAs are excellent at this time and are projected to increase through at least the year 2024. PTAs may choose to practice in a variety of settings including hospitals, rehab centers, sports medicine clinics, public and private schools, outpatient physical therapy clinics, nursing homes, and home health settings. Information about career placement and job success is available through either the Health Careers Office or the Career Services Office.

Occupational Exposure/Risk:

In physical therapy, both in school and on the job, exposure to infectious diseases may be minimal to moderate depending on the work setting. This is an occupational risk. Proper education and strict adherence to well established infection control guidelines, can further reduce the risk. Thorough education in infection control procedures is a part of the physical therapist assistant program of study.

Latex Allergies:

Early recognition of sensitization to natural rubber latex (NRL) is crucial to prevent the possible occurrence of life-threatening reactions in sensitized healthcare workers. The program faculty strongly advise that students sensitized or allergic to latex consult a physician for guidance on the merits of continuing in a health care career. NRL sensitized students who choose to continue in the physical therapist assistant program are to notify the program director.

Other Information:

The information represented here is for the current catalog year, if you were admitted prior to this year, please check your requirements under the Program Evaluation section of WebAdvisor.

The College continuously attempts to improve each program and as a result, courses and/or requirements may be modified. Curriculum, course content, and admission criteria are subject to change by action of the College faculty and administration.

PTA Program Complaint and Compliment Policy:

The Henry Ford College [Physical Therapy Assistant AAS Degree](#) Program wishes to be responsive to any substantive complaints or compliments regarding the program, its students, faculty, or graduates.

- Complaints or compliments about the program students should be given in writing to the PTA Program Director, Stephen Pedley (spedley@hfcc.edu).
- Complaints or compliments about program faculty should be given in writing to the School of Health and Human Services Associate Dean, Cynthia Scheuer (cscheuer@hfcc.edu).
- Complaints about PTA program graduates should be directed to the [Michigan Board of Physical Therapy: LARA-Physical Therapy](#)

Registry / Certification / Licensure Exam Information:

Successful passage of the PTA Licensure Exam is required to practice in the State of Michigan. Students who are graduates of this program do qualify to sit for the National Physical Therapist Assistant Examination. Further details regarding this exam will be given as the student nears graduation.

Career Opportunities - Pre Elementary Education Associate in Arts Program:

Pre-Elementary Education program graduates may seek employment in child development centers. They are also able to work as an au pair, tutors, para-professionals, assistant pre-school teachers, and before/after school program group leaders in a variety of educational settings. For those wishing to teach in PK-6 schools, completion of a four-year teacher preparation program with teacher certification is necessary.

This degree requires coursework that can be transferred to most four-year teacher preparation programs without loss of credit. The elective component of this program allows students to select courses that apply toward the bachelor's degree at their intended transfer institution. Students are encouraged to consult the university guide sheets in the University Transfer, Advising, and Career Counseling Center located in Learning Resources Center.

Career Opportunities - Pre Secondary Education Associate in Arts Program:

Pre-Secondary Education program graduates who complete a bachelor degree with teacher certification may teach in middle schools or high schools.

This degree requires course work that can be transferred to most four-year teacher preparation programs without loss of credit. The elective component of this program allows students to select courses that apply toward the bachelor's degree at their intended transfer institution. Students are encouraged to consult the university guide sheets in the University Transfer, Advising, and Career Counseling Center located in Learning Resources Center.

Learn More About: [Transfer Opportunities](#)

Explore:

Learn More About: [Transfer Opportunities](#)

Explore Page: [Radiographer | Henry Ford College](#)

Career Opportunities:

The Profession:

Radiologic Technology is a segment of medicine devoted to patient diagnosis through the use of ionizing radiation. Specifically, radiation is used to create images of tissues, organs, bones, and vessels that comprise the human body. When requested by a physician, it is the radiographer who is responsible for creating these images in a safe and precise manner. The radiologist, a physician who is specifically trained in the interpretation of these images, performs diagnosis of the final image.

A major responsibility of the radiographer lies in the proper use of radiation. When not properly utilized, ionizing radiation has the potential to be damaging to both patient and user. Therefore, the radiographer is trained to understand radiation and be aware of its potential hazards. This knowledge serves to protect the patient and the radiographer, creating a safe work environment

Opportunities:

The job market for radiographers in southeastern Michigan is becoming increasingly more competitive. Information regarding employment trends for radiographers in Michigan is available through the HFC Placement Office (313) 845-9618.

A representative job profile for radiographer can be obtained through the Health Careers Office. Students requiring accommodation should directly contact the Assisted Learning Services at (313) 845-9617.

Occupational Exposure/Risk:

In Radiologic Technology, both in school and on the job, frequent exposure to radiation, sharps, patient secretions, bodily wastes, infectious patients, electricity, equipment noise, and latex is possible. These are occupational risks. Proper education in all areas and strict adherence to well established infection control guidelines can reduce the risk to a minimum. Thorough education in all areas, including infection control procedures, is an important part of the radiographer program.

Latex Allergy:

Early recognition of sensitization to natural rubber latex (NRL) is crucial to prevent the possible occurrence of life-threatening reactions in sensitized healthcare workers. The program faculty strongly advise that students sensitized or allergic to latex consult a physician for guidance on the merits of continuing in a health care career. NRL sensitized students who choose to continue in the radiographer program are to notify the program director.

Registry / Certification / Licensure Exam Information:

Students who intend to take the American Registry of Radiologic Technology Certification Examination are required to meet all general and ethical qualifications of the ARRT. A list of qualifications is included in the student handbook. Conviction of a crime may prevent a student from taking this examination. This material is also available upon request by calling the ARRT at (651) 687-0048 or online at www.artt.org.

Program Completion Limits:

HFC continuously attempts to improve each program, and as a result courses and requirements may be modified. Curriculum, course content, and admission criteria are subject to change by action of the College faculty and administration.

Graduation:

In order to graduate from the Radiographer Program, students must meet all academic and clinical requirements.

Graduates of the Radiographer program will be awarded an Associate in Applied Science Degree. Graduates who intend to take the American Registry of Radiologic Technologists (ARRT) certification examination are required to meet all general and ethical qualifications of the ARRT.

A list of qualifications is available upon request at ARRT (651) 687-0048 or at www.artt.org

Health Care Coverage:

It is the student's responsibility to have health care coverage in place during the entire program. Hospitalization insurance can be purchased through the College.

Clinical Assignments:

Clinical rotations begin during the first semester and continue throughout the entire program. Clinical hours are generally 8:00 a.m. to 4:30 p.m. with specific days of assignment changing from semester to semester. Beginning in the 3rd semester of the program, students perform afternoon shift clinical rotations.

Transfer Agreements:

Learn More About: [Transfer Opportunities](#)

Explore:

Learn More About: [Transfer Opportunities](#)

Explore this Program: [Nursing | Henry Ford College](#)

Career Opportunities:

Graduates can seek full-time employment upon passing the National Council Licensure Exam for Registered Nurses (NCLEX-RN). Opportunities for employment in nursing exist in hospitals, clinics, home care, factories, military services, schools, public health, and education settings. The Bureau of Labor Statistics predicts that employment in nursing will grow 12% between the years of 2018 and 2028. Many more opportunities in nursing are available with advanced education and experience.

Occupational Exposure/Risk:

Students in the nursing program must understand that they will be involved in the direct care of clients, including direct contact with all parts of the body. Because nurses are required to lift, move and transfer patients, stand for long periods of time, possess certain fine motor skills and sufficient visual acuity to care for patients, additional physical capabilities are required for entrance into the program. In order to be considered for admission to or retention in the Nursing Program, students must possess:

- Sufficient visual acuity necessary for accurate assessment and safe nursing care to clients, such as, physical assessment, preparation and administration of all medications and direct observation of clients.
- Sufficient auditory perception to receive verbal communication from clients and members of the health team and to assess client health status while using equipment and interpreting other noise stimuli (cardiac monitors, stethoscopes, intravenous infusion pumps, dopplers, fire alarms, call lights and cries for help).
- Sufficient gross/fine motor coordination to respond promptly and implement skills required in meeting health care needs of clients, including manipulation of equipment and supplies.
- Sufficient physical abilities to move around client's rooms, work in treatment areas and administer cardiopulmonary procedures.
- Sufficient strength to perform physical activities frequently requiring the ability to lift, push, pull objects more than fifty pounds and transfer objects and persons of more than one hundred pounds.
- Sufficient communication skills (speech, reading, writing) to interact with clients and communicate their health status and needs promptly and effectively.
- Sufficient intellectual and emotional capability to plan and implement care for clients.
- Sufficient psychological stability essential to perform at the required levels in the clinical portions of the nursing program.
- Ability to sustain long periods of concentration to make decisions regarding correct techniques, use of equipment, and proper care of clients.
- Sufficient physical stamina to remain standing for long periods of time.

Applicants considering a career in nursing may also be exposed to infectious diseases during their course of study and in subsequent employment in the field and are likely to work in situations where exposure to infectious disease is possible. This is an occupational health risk for all health care workers. Persons should not become health care workers unless they recognize and accept this risk. Proper education and strict adherence to well established infection-control guidelines can reduce this risk to a minimum. Thorough education in infection control procedures is an important part of the nursing program of study.

Registry / Certification / Licensure Exam Information:

The nursing program prepares graduates for entry-level positions in the nursing profession.

Successful completion of the program of study qualifies graduates to receive an Associate in Applied Science Degree and apply to take the National Council Licensure Examination for Registered Nurses (NCLEX-RN) leading to state license as a registered nurse.

The Michigan State Board of Nursing regulates the licensing and can deny RN licensure for a number of reasons; for example, conviction of a misdemeanor or a felony. Prior to beginning the Nursing program, students are advised to visit the [Michigan website](#) or call the Michigan Board of Nursing regarding eligibility for licensing.

Henry Ford College's nursing program prepares you to take the NCLEX exam in the state of Michigan. Graduates who want to practice in other states should review those requirements via that Board of Nursing. For additional information, please contact the [National Council of State Boards of Nursing](#).

Program Completion Limits:

The College and the Nursing Faculty reserve the right to make policy and program changes at any time to comply with requirements of accrediting agencies, clinical facilities, or the college, and to meet the changing health care needs of society. Requirement changes, updates, and all information regarding the Nursing program can be obtained through the Nursing Student Success Navigator located in the Welcome Center Advising area on main campus.

Career Opportunities - Culinary Arts Associate in Applied Science Program:

Coupled with diverse line level work experience, the student completing this degree may want to consider entry-level supervisory or management position in these areas:

- Full Service Hotels
- Resort and Travel Destinations
- Fine Dining Restaurants
- Health Care Services
- College and University Dining
- Casinos
- Conference Centers
- Food Sales and Marketing
- School Food Service
- Catering
- Casual Dining Restaurants
- Sports, Leisure, and Event Services

Career Opportunities - Culinary Arts Bachelor of Science Program:

Chef Manager, Sous Chef, Executive Chef, Restaurant Manager, Hotel Manager

Registry / Certification / Licensure Exam Information - Culinary Arts Bachelor of Science Program:

National Restaurant Association (Serv-Safe Food Safety, Serv-Safe Alcohol) American Culinary Federation (Culinary Arts AAS, Certified Culinarian)

Career Opportunities - Hotel Services Certificate Program:

- Hotel Associate
- Front Office Lead Associate
- Housekeeping Lead Associate
- Concierge
- Guest Services Lead Associate

Career Opportunities - Hotel/Restaurant Management Associate in Applied Science Program:

Coupled with diverse line level work experience, the student completing this degree may want to consider entry-level supervisory or management position in the following areas:

- Full service hotels
- Restaurants
- Event planning
- Non-commercial food service
- Facilities management
- Limited service hotels
- Food sales and marketing
- Corporate travel
- Meeting and hotel sales

Medical Office Assistant Department

Explore: [Medical Assistant | Henry Ford College](#)

Career Opportunities - Medical Office Assistant Certificate Program:

According to recent reports from the U.S. Bureau of Labor Statistics, employment of medical assistants is expected to grow much faster than the average for all occupations through 2030 as the health care industry expands because of technological advances in medicine and a growing aging population.

Employment growth will be driven by the increase in the number of group practices and other health care facilities that need a high proportion of support personnel, particularly the flexible medical assistant who can handle both administrative and clinical duties.

Medical assistants will have the opportunity, and skill sets to work both clinically and administratively in ambulatory care, hospitals, laboratories, and surgical clinics, while serving various specialties such as pediatrics, oncology, geriatrics, gynecology, and billing and coding facilities.

Information about career placement and job success is available through either the School of Health and Human Services Office or the College Placement Office.

Occupational Exposure/Risk:

Applicants who consider a career in medical assisting should be aware that during the course of their education and subsequent employment they are likely to working in situations where exposure to infectious diseases is possible. This is an occupational risk for all health care workers. Persons should not become health care workers unless they recognize and accept this risk. Proper education and strict adherence to well established infection-control guidelines can reduce the risk to a minimum. Thorough education in infection control procedures is an important part of the medical assistant program of study.

Latex Allergies:

Early recognition of sensitization to natural rubber latex (NRL) is crucial to prevent the occurrence of life-threatening reactions in sensitized healthcare workers. The Medical Assistant Program Faculty strongly advises that students sensitized or allergic to latex consult a physician for guidance on the merits of continuing in a healthcare career. NRL sensitized students who choose to continue in their program must notify the program director upon admission.

As with any healthcare position, there are certain occupational risks that come into play with being a medical assistant, and those hazards include the following:

- Exposure to infectious diseases
- Sharps injuries
- Bloodborne pathogens and biological hazards
- Chemical and drug exposure
- Ergonomic hazards from lifting, sitting, and repetitive tasks
- Latex allergies
- Stress

Registry / Certification / Licensure Exam Information:

Upon completion of the Medical Assistant Program, students graduating from medical assistant programs accredited through Commission on Accreditation of Health Education Programs (CAAHEP) or Accreditation Bureau of Health Education Schools (ABHES) are eligible to sit for either of the following certification examinations for medical assistants. Each credential is equal in weight, importance, and acceptance for future employment.

CMAs and RMAs receive a better salary than those without credentials. Employers prefer medical assistants from accredited programs with professional certification.

- The American Association of Medical Assistants (AAMA) offers the CMA (Certified Medical Assistant) examination. The CMA is a national certification.
- The American Medical Technologist (AMT) offers the RMA (Registered Medical Assistant) examination. The RMA credential is an international certification.

Program Completion Limits:

All educational experiences are under the guidance of the Medical Assistant program. Student progress is evaluated in the classroom, laboratory and clinical setting throughout the program. Progression in the program is based upon the student meeting the following requirements:

1. Adherence to the program requirements outlined in the Medical Assistant Student Handbook.
2. Achievement of a minimum grade of B- or better in all MOA and a C or better in required support courses.
3. All MOA courses taken at HFC must be successfully completed within three consecutive calendar years. The Medical Assisting program continuously updates its program of study to meet changing health care needs and the requirements of the accreditation agency and clinical affiliates; thus the College reserves the right to change policies at any time.

Nursing Department

Explore this Program: [Nursing | Henry Ford College](#)

Career Opportunities:

Graduates can seek full-time employment upon passing the National Council Licensure Exam for Registered Nurses (NCLEX-RN). Opportunities for employment in nursing exist in hospitals, clinics, home care, factories, military services, schools, public health, and education settings. The Bureau of Labor Statistics predicts that employment in nursing will grow 12% between the years of 2018 and 2028. Many more opportunities in nursing are available with advanced education and experience.

Occupational Exposure/Risk:

Students in the nursing program must understand that they will be involved in the direct care of clients, including direct contact with all parts of the body. Because nurses are required to lift, move and transfer patients, stand for long periods of time, possess certain fine motor skills and sufficient visual acuity to care for patients, additional physical capabilities are required for entrance into the program. In order to be considered for admission to or retention in the Nursing Program, students must possess:

- Sufficient visual acuity necessary for accurate assessment and safe nursing care to clients, such as, physical assessment, preparation and administration of all medications and direct observation of clients.
- Sufficient auditory perception to receive verbal communication from clients and members of the health team and to assess client health status while using equipment and interpreting other noise stimuli (cardiac monitors, stethoscopes, intravenous infusion pumps, dopplers, fire alarms, call lights and cries for help).
- Sufficient gross/fine motor coordination to respond promptly and implement skills required in meeting health care needs of clients, including manipulation of equipment and supplies.
- Sufficient physical abilities to move around client's rooms, work in treatment areas and administer cardiopulmonary procedures.
- Sufficient strength to perform physical activities frequently requiring the ability to lift, push, pull objects more than fifty pounds and transfer objects and persons of more than one hundred pounds.
- Sufficient communication skills (speech, reading, writing) to interact with clients and communicate their health status and needs promptly and effectively.
- Sufficient intellectual and emotional capability to plan and implement care for clients.
- Sufficient psychological stability essential to perform at the required levels in the clinical portions of the nursing program.
- Ability to sustain long periods of concentration to make decisions regarding correct techniques, use of equipment, and proper care of clients.
- Sufficient physical stamina to remain standing for long periods of time.

Applicants considering a career in nursing may also be exposed to infectious diseases during their course of study and in subsequent employment in the field and are likely to work in situations where exposure to infectious disease is possible. This is an occupational health risk for all health care workers. Persons should not become health care workers unless they recognize and accept this risk. Proper education and strict adherence to well established infection-control guidelines can reduce this risk to a minimum. Thorough education in infection control procedures is an important part of the nursing program of study.

Registry / Certification / Licensure Exam Information:

The nursing program prepares graduates for entry-level positions in the nursing profession.

Successful completion of the program of study qualifies graduates to receive an Associate in Applied Science Degree and apply to take the National Council Licensure Examination for Registered Nurses (NCLEX-RN) leading to state license as a registered nurse.

The Michigan State Board of Nursing regulates the licensing and can deny RN licensure for a number of reasons; for example, conviction of a misdemeanor or a felony. Prior to beginning the Nursing program, students are advised to visit the [Michigan website](#) or call the Michigan Board of Nursing regarding eligibility for licensing.

Henry Ford College's nursing program prepares you to take the NCLEX exam in the state of Michigan. Graduates who want to practice in other states should review those requirements via that Board of Nursing. For additional information, please contact the [National Council of State Boards of Nursing](#).

Program Completion Limits:

The College and the Nursing Faculty reserve the right to make policy and program changes at any time to comply with requirements of accrediting agencies, clinical facilities, or the college, and to meet the changing health care needs of society. Requirement changes, updates, and all information regarding the Nursing program can be obtained through the Nursing Student Success Navigator located in the Welcome Center Advising area on main campus.

Ophthalmic Technician Department

Explore Program: [Ophthalmic Technician | Henry Ford College](#)

Career Opportunities:

The Profession:

Ophthalmic Technicians are health professionals who are an integral part of the team of medical practitioners providing vision care. They perform administrative and clinical functions under the direction of medical or osteopathic physicians who provide comprehensive, refractive, medical, and surgical eye care to the public. Technicians provide administrative support services by coordinating clinic schedules, charting, coding, and transmitting orders of the physician. Clinical functions may be generalized or specialized. Duties may include calibrating and maintaining ophthalmic equipment and supplies, recording medical histories and vision, testing eye movements and binocular functions, measuring optical power and visual fields, assisting in minor and major eye surgery, and performing ocular imaging and biometry services as applicable by local law.

Ophthalmic technicians are employed primarily by ophthalmologists, medical institutions, clinics, hospitals, ambulatory surgery centers, university ophthalmology centers, or physician groups in which they may be assigned to an ophthalmologist responsible for their supervision and performance. They may be involved with the patients of an ophthalmologist in any setting for which the ophthalmologist is responsible.

Demand for ophthalmic medical technicians should remain strong due to the rising population of older persons, the segment of the population with increased frequency of chronic health conditions.

Occupational Exposure/Risk:

Applicants considering a career as an Ophthalmic Technician should be aware that during their course of study and in subsequent employment in the field, they are likely to work in situations where exposure to infectious disease is possible. This is an occupational risk for all health care workers. Persons should not become health care workers unless they recognize and accept this risk. Proper education and strict adherence to well established infection control guidelines can reduce the risk to a minimum. Thorough education in infection control procedures is an important part of the Ophthalmic Technician program.

Latex Allergies:

Early recognition of sensitization to natural rubber latex (NRL) is crucial to prevent the occurrence of life-threatening reactions in sensitized healthcare workers. The program faculty strongly advises that students sensitized or allergic to latex consult with a physician for guidance on the merits of continuing in a health care career. NRL sensitized students who choose to continue in Ophthalmic Technician program must notify the program director.

Program Completion Limits:

The [Ophthalmic Technician AAS Degree](#) (OPT) program is 23 months in length. Students must complete all OPT courses within three years of beginning the formal program. All courses in the OPT program must be completed with a C or better. Students are responsible for their own transportation to clinical sites and any expenses incurred.

The College continuously attempts to improve each program and as a result, courses and requirements may be modified. Curriculum, course content, and admission criteria are subject to change by action of the College faculty and administration. Contact the Health Careers Office at (313) 845-9877 for any current program updates or visit [www.hfcc.edu](#).

Withdrawal and Readmission:

A students who fails one or both first semester OPT courses ([OPT101 Intro to Ophthalmic Technology](#)/[OPT134 Ocular Anatomy and Pathology](#)) must stop out of the program. Sequencing for OPT course work is not optional; courses are scheduled annually. Therefore, all students who fail a course must appeal for continuance with a remediation plan in writing. If a student fails a course on second attempt, they are out of the ophthalmic technician program.

Physical Therapy Assistant Department

Explore Page: [Physical Therapy Assistant](#)

Career Opportunities:

The Profession:

Physical Therapist Assistants (PTAs) are skilled health care providers who assist in providing planned patient care under the direction and supervision of a Physical Therapist. As members of the rehabilitation team, PTAs perform treatments designed to relieve pain, promote healing, and improve functional ability. Once a treatment plan is designed by a physical therapist, the PTA may be responsible for carrying out this treatment plan.

Opportunities:

Opportunities for PTAs are excellent at this time and are projected to increase through at least the year 2024. PTAs may choose to practice in a variety of settings including hospitals, rehab centers, sports medicine clinics, public and private schools, outpatient physical therapy clinics, nursing homes, and home health settings. Information about career placement and job success is available through either the Health Careers Office or the Career Services Office.

Occupational Exposure/Risk:

In physical therapy, both in school and on the job, exposure to infectious diseases may be minimal to moderate depending on the work setting. This is an occupational risk. Proper education and strict adherence to well established infection control guidelines, can further reduce the risk. Thorough education in infection control procedures is a part of the physical therapist assistant program of study.

Latex Allergies:

Early recognition of sensitization to natural rubber latex (NRL) is crucial to prevent the possible occurrence of life-threatening reactions in sensitized healthcare workers. The program faculty strongly advise that students sensitized or allergic to latex consult a physician for guidance on the merits of continuing in a health care career. NRL sensitized students who choose to continue in the physical therapist assistant program are to notify the program director.

Other Information:

The information represented here is for the current catalog year, if you were admitted prior to this year, please check your requirements under the Program Evaluation section of WebAdvisor.

The College continuously attempts to improve each program and as a result, courses and/or requirements may be modified. Curriculum, course content, and admission criteria are subject to change by action of the College faculty and administration.

PTA Program Complaint and Compliment Policy:

The Henry Ford College [Physical Therapy Assistant AAS Degree](#) Program wishes to be responsive to any substantive complaints or compliments regarding the program, its students, faculty, or graduates.

- Complaints or compliments about the program students should be given in writing to the PTA Program Director, Stephen Pedley (spedley@hfcc.edu).
- Complaints or compliments about program faculty should be given in writing to the School of Health and Human Services Associate Dean, Cynthia Scheuer (cscheuer@hfcc.edu).
- Complaints about PTA program graduates should be directed to the [Michigan Board of Physical Therapy; LARA-Physical Therapy](#)

Registry / Certification / Licensure Exam Information:

Successful passage of the PTA Licensure Exam is required to practice in the State of Michigan. Students who are graduates of this program do qualify to sit for the National Physical Therapist Assistant Examination. Further details regarding this exam will be given as the student nears graduation.

Career Opportunities - Pre Elementary Education Associate in Arts Program:

Pre-Elementary Education program graduates may seek employment in child development centers. They are also able to work as an au pair, tutors, para-professionals, assistant pre-school teachers, and before/after school program group leaders in a variety of educational settings. For those wishing to teach in PK-6 schools, completion of a four-year teacher preparation program with teacher certification is necessary.

This degree requires coursework that can be transferred to most four-year teacher preparation programs without loss of credit. The elective component of this program allows students to select courses that apply toward the bachelor's degree at their intended transfer institution. Students are encouraged to consult the university guide sheets in the University Transfer, Advising, and Career Counseling Center located in Learning Resources Center.

Career Opportunities - Pre Secondary Education Associate in Arts Program:

Pre-Secondary Education program graduates who complete a bachelor degree with teacher certification may teach in middle schools or high schools.

This degree requires course work that can be transferred to most four-year teacher preparation programs without loss of credit. The elective component of this program allows students to select courses that apply toward the bachelor's degree at their intended transfer institution. Students are encouraged to consult the university guide sheets in the University Transfer, Advising, and Career Counseling Center located in Learning Resources Center.

Radiography Technician Department

Explore Page: [Radiographer | Henry Ford College](#)

Career Opportunities:

The Profession:

Radiologic Technology is a segment of medicine devoted to patient diagnosis through the use of ionizing radiation. Specifically, radiation is used to create images of tissues, organs, bones, and vessels that comprise the human body. When requested by a physician, it is the radiographer who is responsible for creating these images in a safe and precise manner. The radiologist, a physician who is specifically trained in the interpretation of these images, performs diagnosis of the final image.

A major responsibility of the radiographer lies in the proper use of radiation. When not properly utilized, ionizing radiation has the potential to be damaging to both patient and user. Therefore, the radiographer is trained to understand radiation and be aware of its potential hazards. This knowledge serves to protect the patient and the radiographer, creating a safe work environment

Opportunities:

The job market for radiographers in southeastern Michigan is becoming increasingly more competitive. Information regarding employment trends for radiographers in Michigan is available through the HFC Placement Office (313) 845-9618.

A representative job profile for radiographer can be obtained through the Health Careers Office. Students requiring accommodation should directly contact the Assisted Learning Services at (313) 845-9617.

Occupational Exposure/Risk:

In Radiologic Technology, both in school and on the job, frequent exposure to radiation, sharps, patient secretions, bodily wastes, infectious patients, electricity, equipment noise, and latex is possible. These are occupational risks. Proper education in all areas and strict adherence to well established infection control guidelines can reduce the risk to a minimum. Thorough education in all areas, including infection control procedures, is an important part of the radiographer program.

Latex Allergy:

Early recognition of sensitization to natural rubber latex (NRL) is crucial to prevent the possible occurrence of life-threatening reactions in sensitized healthcare workers. The program faculty strongly advise that students sensitized or allergic to latex consult a physician for guidance on the merits of continuing in a health care career. NRL sensitized students who choose to continue in the radiographer program are to notify the program director.

Registry / Certification / Licensure Exam Information:

Students who intend to take the American Registry of Radiologic Technology Certification Examination are required to meet all general and ethical qualifications of the ARRT. A list of qualifications is included in the student handbook. Conviction of a crime may prevent a student from taking this examination. This material is also available upon request by calling the ARRT at (651) 687-0048 or online at www.arrt.org.

Program Completion Limits:

HFC continuously attempts to improve each program, and as a result courses and requirements may be modified. Curriculum, course content, and admission criteria are subject to change by action of the College faculty and administration.

Graduation:

In order to graduate from the Radiographer Program, students must meet all academic and clinical requirements.

Graduates of the Radiographer program will be awarded an Associate in Applied Science Degree. Graduates who intend to take the American Registry of Radiologic Technologists (ARRT) certification examination are required to meet all general and ethical qualifications of the ARRT.

A list of qualifications is available upon request at ARRT (651) 687-0048 or at www.arrt.org.

Health Care Coverage:

It is the student's responsibility to have health care coverage in place during the entire program. Hospitalization insurance can be purchased through the College.

Clinical Assignments:

Clinical rotations begin during the first semester and continue throughout the entire program. Clinical hours are generally 8:00 a.m. to 4:30 p.m. with specific days of assignment changing from semester to semester. Beginning in the 3rd semester of the program, students perform afternoon shift clinical rotations.

Respiratory Therapy Department

Explore Page: [Respiratory Therapist | Henry Ford College](#)

Career Opportunities:

The Profession:

Respiratory therapists are health care professionals, dedicated to providing life-supporting, life- enhancing care to newborns, children, adults and the elderly. Respiratory therapists work under qualified medical direction to assess, treat, manage, provide diagnostic evaluation, educate, and care for patients with deficiencies and abnormalities associated with the cardiopulmonary system. Therapists work throughout hospitals, most often in intensive care units and emergency settings. Therapists are a special blend of patient-centered caregivers and technically sharp, analytical thinkers. Some therapists concentrate on pulmonary rehabilitation and continuing care in patient homes or extended care facilities while others specialize in pediatric/neonatal care. The respiratory therapist may also work in areas such as cardiopulmonary diagnostics, medical equipment sales, management, and education.

Opportunities:

The outlook for RTs has never been better. According to the Bureau of Labor Statistics, employment is expected to increase faster than average through the year 2022. The American Association for Respiratory Care (AARC) offers a wide variety of information on a career in Respiratory Therapy at www.aarc.org.

Occupational Exposure/Risk:

Applicants considering a career in Respiratory Therapy should be aware that during their course of study and in subsequent employment in the field, they are likely to work in situations where exposure to infectious disease is possible. This is an occupational risk for all health care workers. Persons should not become health care workers unless they recognize and accept this risk. Proper education and strict adherence to well established infection-control guidelines, can reduce the risk to a minimum. Thorough education in infection control procedures is an important part of the respiratory therapist program of study.

Latex Allergies:

Early recognition of sensitization to natural rubber latex (NRL) is crucial to prevent the occurrence of life-threatening reactions in sensitized healthcare workers. The program faculty strongly advises that students sensitized or allergic to latex consult a physician for guidance on the merits of continuing in a health care career. NRL sensitized students who choose to continue in the Respiratory Therapist program must notify the program director.

Registry / Certification / Licensure Exam Information:

Successful completion of the program of study qualifies graduates to receive an Associate of Applied Science degree, become eligible to sit for the national accreditation exams for the designation of the Registered Respiratory Therapist (RRT) and apply for state licensure as a respiratory therapist. The national examinations consist of the Therapist Multiple-Choice Examination (TCM) and the Clinical Simulation Examination offered by the National Board of Respiratory Care (NBRC). Information on the exam process is available through the NBRC at www.nbrc.org

Program Completion Limits:

Program is twenty-one months in length. Students must complete all RTH courses within three years of beginning the formal program. Each Respiratory Therapist course may be repeated only once.

The College continuously attempts to improve each program and as a result, courses and/or requirements may be modified. Curriculum, course content, and admission criteria are subject to change by action of the College faculty and administration. Contact the Health Careers Office for any current program updates or visit www.hfcc.edu for any current updates.

Surgical Technician Department

Explore: [Surgical Technologist | Henry Ford College](#)

Career Opportunities:

Surgical technologists are allied health professionals who are an integral part of the team of medical practitioners providing surgical care to patients in a variety of settings. The surgical technologist works under medical supervision to facilitate the safe and effective conduct of invasive surgical procedures. This individual works under the supervision of a surgeon to ensure that the operating room environment is safe, that equipment functions properly, and that the operative procedure is conducted under conditions that maximize patient safety.

A surgical technologist possesses expertise in the theory and application of sterile and aseptic technique and combines the knowledge of human anatomy, surgical procedures and implementation tools, and technologies to facilitate a physician's performance of invasive therapeutic and diagnostic procedures. Surgical technologists work in operating and delivery rooms, emergency room facilities, and the ambulatory care areas of hospitals and other medical institutions. They may also work in clinics and physicians' offices. Many surgical technologists are employed directly by surgeons and specialize in fields such as orthopedics, etc. A representative job profile for a surgical technologist can be obtained through the Health Careers Office.

Helpful qualities for surgical technologists include:

- A strong sense of responsibility
- An ability to work well with others
- Emotional stability
- An ability to respond quickly
- An ability to be orderly and work quickly
- An ability to work well under stress

Opportunities:

Demand for surgical technologists should remain strong due to the rising population of older persons, the segment of the population with the greater frequency of health care needs. Information regarding career placement and job success is available through either the Health Careers Office or the HFC Career Services Office.

Occupational Exposure/Risk:

Applicants considering a career in Surgical Technology should be aware that during their course of study and in subsequent employment in the field, they are likely to work in situations where exposure to infectious disease is possible. This is an occupational risk for all health care workers. Persons should not become health care workers unless they recognize and accept this risk. Proper education and strict adherence to well established infection-control guidelines can reduce the risk to a minimum. Thorough education in infection control procedures is an important part of the Surgical Technology program of study.

Latex Allergies:

Early recognition of sensitization to natural rubber latex (NRL) is crucial to prevent the occurrence of life-threatening reactions in sensitized healthcare workers. The program faculty strongly advises that students sensitized or allergic to latex consult a physician for guidance on the merits of continuing in a health care career. NRL sensitized students who choose to continue in the Surgical Technology program must notify the program director

Registry / Certification / Licensure Exam Information

Graduates of the program are eligible to sit for the National Certification exam offered by the National Board of Surgical Technology and Surgical Assisting for the designation of Certified Surgical Technologist (CST).

Program Completion Limits:

Program is twenty-one months in length. Students must complete all SRG courses within three years of beginning the formal program.

The College continuously attempts to improve each program and as a result, courses and/or requirements may be modified. Curriculum, course content, and admission criteria are subject to change by action of the College faculty and administration. Contact the Health Careers Office at (313) 845-9877 for any current program updates or visit [HFC's homepage](#).

ACCOUNTING.CA - Accounting

Program Information

Program Title Accounting	Program Code ACCOUNTING.CA
Degree Type Certificate of Achievement	
Minimum Credits for Program Completion 26	Program Eligible for Financial Aid? No
Subject Accounting	Semesters to Complete Program 2

Program Description

Offers preparation for those interested in working as an accounting technician in a small- to medium-sized business. Students are trained to use a double-entry accounting system to perform basic accounting functions such as journalizing and posting business transactions; preparing adjusting entries, and basic financial statements. Students are trained in computerized accounting software (QuickBooks) and in the Microsoft Office Suite. Courses in business math applications, written business communication, and business office protocol are also part of the program.

ARCON.AAS - Architecture/Construction Technology

Program Information

Program Title Architecture/Construction Technology AAS Degree	Program Code ARCON.AAS		
Degree Type Associate in Applied Science			
Minimum Credits for Program Completion 63	Program Eligible for Financial Aid? Yes		
Subject Architecture/Construction Tech	Semesters to Complete Program 5		
Program Description Teaches architectural CAD/drafting and building construction methods and materials including both residential and commercial building types. Laboratory classes provide students with experience in the areas of residential and commercial construction materials, computer-aided drafting and design, cost estimating, construction methods, presentation techniques, residential construction practices and use of surveying equipment. Covers the principles and necessary skills of the architectural profession supported by an understanding of building construction through hands-on activities designed to provide students with a practical skill-based education.			
Faculty Contact Chad Richert	Faculty Contact Email crichtert@hfcc.edu	Faculty Contact Phone 313-317-1515	Faculty Contact Office Location E-115C
Academic Advisor Rachel Vanzutphen	Academic Advisor Contact Email rvanzutphen@hfcc.edu	Academic Advisor Contact Phone 313-845-9873	Academic Advisor Office Location E-211L
School Business, Entrepreneurship, PD	Academic Department Building Sciences		

Program Learning Outcomes

Demonstrate employable skills (attendance, written communication, verbal communication, teamwork) in the fields of architecture and/or construction.
Demonstrate the professional practice of architecture and construction.
Prepare a series of commercial construction documents utilizing current industry software and accepted architectural standards and techniques.
Prepare a series of residential construction documents utilizing current industry software and accepted architectural standards and techniques.
Develop a series of design presentation drawings utilizing traditional and computerized techniques.
Select the appropriate construction materials and systems in residential and commercial projects.
Demonstrate knowledge of sustainable materials and energy efficient systems in residential and commercial projects.
Apply basic construction methods and procedures as they relate to a residential construction project.

Program Information

Program Title Automotive Service (ASSET) AAS Degree	Program Code ASSETAAS		
Degree Type Associate in Applied Science			
Minimum Credits for Program Completion 69	Program Eligible for Financial Aid? Yes		
Subject Asset Program	Semesters to Complete Program 5		
Program Description Prepares individuals for service and repair positions in automobile dealerships and independent garages. Courses provide successful students with the job competencies and skills required for entry-level employment. In addition to completing core, support, and General Education credits, students are required to participate in cooperative education at local automobile repair facilities.			
Program Accreditation Information The Automotive Service (ASSET) program is fully certified by the National Institute for Automotive Service Excellence (ASE), is fully certified in all Ford Motor Company STST credentialing areas and is fully accredited as a MAST (Master Automotive Service Technology) program by the ASE Education Foundation.			
1503 Edwards Ferry Rd., NE Suite 401 Leesburg, VA 20176 http://www.aseeducationfoundation.org/

AUTOT.AAS - Automotive Technology

Program Information

Program Title Automotive Technology AAS Degree	Program Code AUTOT.AAS
Degree Type Associate in Applied Science	

Minimum Credits for Program Completion 60	Program Eligible for Financial Aid? Yes		
Subject Automotive Technology	Semesters to Complete Program 5		
Program Description Offers an in-depth study of the multiple systems found on today's vehicles, including electrical, fuel, ignition, power, and drive train. Provides a thorough exposure to the technical aspects of the automobile, and to develop manual and critical thinking skills related to diagnostics, servicing, and testing. Courses provide a broad technical background for individuals interested in automotive technology and related industries.			
Laboratory classes offer hands-on experience designed to strengthen understanding of the theoretical concerns outlined during lecture periods. Laboratories possess many of the latest equipment currently used to service today's automobiles, including representative types of various engines, chassis, transmissions, rear axles, and testing equipment.			
Program Accreditation Information The Automotive Technology program is fully certified by the National Institute for Automotive Service Excellence (ASE) and is fully accredited as a MAST (Master Automotive Service Technology) program by the ASE Education Foundation.			
1503 Edwards Ferry Rd., NE Suite 401 Leesburg, VA 20176 http://www.aseeducationfoundation.org/

School Business, Entrepreneurship, PD	Academic Department Automotive Technology		

Program Learning Outcomes

Develop knowledge of the career opportunities in the automotive service industry
Develop the requisite entry-level skills and knowledge for employment in the automotive service industry
Demonstrate the utilization of safety hazards standards/precautions as associated with the automotive service industry and develop and demonstrate the necessary skills to work safely in auto labs and service shop environments
Demonstrate the characteristics and standards of professionalism that contribute to an effective job performance in a manner that include behavior, appearance, and punctuality
Demonstrate effective communication skills both in the written and verbal forms to communicate difficult and technical information to others, including fellow students, instructors, and/or customers
Apply the learned theories of automotive technology to specific situations to reach conclusion resulting in the proper diagnosis and repair through the use of interpreted data, previous experiences and to identify root causes
Demonstrate the utilization of technology reflective to the task to effectively retrieve information to solve complex problems through critical analysis to ensuring adequate preparations for the advancements that take place in the automotive technology industry

AUTOT.CA - Automotive Technology

Program Information

Program Title	Program Code		
Automotive Technology Certificate	AUTOT.CA		
Degree Type			
Certificate of Achievement			
Minimum Credits for Program Completion	Program Eligible for Financial Aid?		
41	Yes		
Subject	Semesters to Complete Program		
Automotive Technology	4		
Program Description Covers the various systems found on today's vehicles, including electrical, fuel, ignition, power, and drive train. Course work provides a broad background in numerous fields allied to the automobile industry and provides actual experience to strengthen understanding of the theory learned in the classroom. Laboratory classrooms are equipped with some of the latest equipment, including representative types of engines, chassis, transmissions, rear axles, and considerable testing equipment. This program can be completed individually or applied to the Associate degree in Automotive Technology. Because this certificate transfers into a two-year degree program, it is highly recommended that students complete certificate requirements prior to degree requirements.			
Program Accreditation Information The Automotive Technology Certificate program is fully certified by the National Institute for Automotive Service Excellence (ASE), and is fully accredited as a MAST (Master Automotive Service Technology) program by the ASE Education Foundation. 1503 Edwards Ferry Rd., NE Suite 401 Leesburg, VA 20176 http://www.aseeducationfoundation.org/

Program Learning Outcomes

Demonstrate proper use of special tools.
Use safety equipment properly.
Dissemble, perform critical measurements, resemble, and demonstrate satisfactory operation of components.

Perform job specific tasks as required for NATEF accreditation.
Demonstrate proper use of tools and equipment commonly found in industry.
Research proper service information using common current industry technology.
Demonstrate proper care and use of emerging technology tools and equipment.
Demonstrate proper care and use of alternative energy tools and equipment.
Demonstrate proficiency and understanding of emerging technologies.

BAKING.CA - Baking and Pastry

Program Information

Program Title Baking and Pastry Certificate	Program Code BAKING.CA		
Degree Type Certificate of Achievement			
Minimum Credits for Program Completion 30	Program Eligible for Financial Aid? Yes		
Subject Culinary Arts, Hospitality Mgm	Semesters to Complete Program 3		
Program Description Let your creativity shine while learning the various facets of the baking and pastry fields. Courses in this certificate program may be applied toward an Associate in Applied Science Degree in Culinary Arts and/or an Associate in Applied Science Degree in Hotel/Restaurant Management.			
Program Accreditation Information The Associate in Applied Science in Culinary Arts at HFC is fully accredited by the Accrediting Commission of the American Culinary Federation Educational Foundation.			
Faculty Contact Eric Gackenbach	Faculty Contact Email egackenbach@hfcc.edu	Faculty Contact Phone 313-317-1572	Faculty Contact Office Location N-155B
Academic Advisor Ashlei Chears	Academic Advisor Contact Email achears@hfcc.edu	Academic Advisor Contact Phone 313-845-6486	Academic Advisor Office Location E-211H
School Business, Entrepreneurship, PD	Academic Department Culinary Arts + Hospitality Management		

Admissions Requirements

Admissions Requirements
Official HFC chef's uniform required to be purchased prior to beginning classes for culinary lab courses - contact department on process to order uniforms. Visit the Hospitality Department in M-163 in the Culinary Arts & Student Center building, or online at <https://culinary.hfcc.edu/> for uniform ordering information.

Program Learning Outcomes

Execute a menu from start to finish in compliance with ACF category F and G standards for edible hot and cold food.
Based on NRA standards, decide how to handle various types of food in order to prevent food borne illness.

BASICENGMECH.CA - Basic Engineering: Mechanical

Program Information

Program Title Basic Engineering: Mechanical	Program Code BASICENGMECH.CA		
Degree Type Certificate of Achievement			
Minimum Credits for Program Completion 16	Program Eligible for Financial Aid? No		
Subject Pre-Engineering	Semesters to Complete Program 2		
Program Description Enables students to become knowledgeable in basic mechanical engineering pathway by practicing engineering design process, various engineering computation tools (Excel, MATLAB, and Python), and structural design concepts. Course works include engineering classes in the first two years of a mechanical engineering or a mechanical engineering technology program.			
Faculty Contact Hassan Nameghi	Faculty Contact Email hnameghi@hfcc.edu	Faculty Contact Phone 313-317-1746	Faculty Contact Office Location J-106B
Academic Advisor Brandi Walthall-Johnson	Academic Advisor Contact Email bwalthall-johnson@hfcc.edu	Academic Advisor Contact Phone 313-317-6811	Academic Advisor Office Location G-120J
School Science, Tech, Engr & Math	Academic Department Engineering Technology		

Program Learning Outcomes

Develop knowledge of career opportunities and demonstrate the requisite entry level of a mechanical engineering assistant.
Utilize engineering design process in search for solutions to real-world engineering problems.
Work in teams to formulate a complex engineering problem into a system of mathematical equations and use computational tools to find solutions.

BUSAD.AB - Business Administration

Program Information

Program Title	Business Administration AB Degree			Program Code	BUSAD.AB
Degree Type	Associate in Business				
Minimum Credits for Program Completion	60			Program Eligible for Financial Aid?	Yes
Subject	Business Administration			Semesters to Complete Program	4
Program Description Provides students with fundamental knowledge in business studies. Designed to afford students with the ability to transfer to specific four-year bachelor degree programs with the maximum number of credits possible. The core courses in the Business Administration program consist of courses that are often required by four-year institutions to enter their business programs.

Ashlei Chears	achears@hfcc.edu	313-845-6486	E-211H		
School	Business, Entrepreneurship, PD			Academic Department	Business & Economics

Program Learning Outcomes

Explain how activities involved in operating a business connect with one another.

Analyze financial conditions utilizing principles of accounting.

Develop business strategies.

Analyze how economic forces and government policies affect business alternatives as well as social outcomes.

Evaluate business decisions based on their legal consequences.

Evaluate the opportunities and threats resulting from current business trends.

Model appropriate and effective verbal and nonverbal communication with employers, employees, team members, business partners, and customers.

Apply algebraic concepts to solve business related problems and conduct business research.

Employ computer software application programs such as word processing, spreadsheets, and database to perform ordinary business activities.

Admissions Requirements

Admissions Requirements and Eligibility

It is strongly recommended that [AH100 Medical Terminology](#) and [BIO134 Essentials Anatomy&Physiology](#) are completed before AH121. Additionally, acceptance to the lactation consultant program is contingent upon fulfilling and maintaining minimum program requirements and proof of the following:

- Health Insurance
- Physical examination
- TB testing/screening
- Immunizations as required
- Titers to assure immunity for specific conditions
- American Heart Association (AHA) BLS for Healthcare Professionals certification
- Must pass drug screening on first test
- Criminal background check

Courses Required for Program Admission
AH100 Medical Terminology, BIO134 Essentials Anatomy&Physiology

Program Learning Outcomes

Identify the anatomy of the breast and hormones necessary for milk production.
Identify nutritional needs of the baby and breastfeeding mother.
Discuss ways to promote effective breastfeeding using evidenced-based principles.
Perform a comprehensive breast assessment.
Identify the impact of culture on breastfeeding.
Apply ethical and legal principles in the care of the breastfeeding mother.
Identify potential breastfeeding complications and interventions.

CHEMISTRY.AS - Chemistry

Program Information

Program Title Chemistry	Program Code CHEMISTRY.AS		
Degree Type Associate in Science			
Minimum Credits for Program Completion 60	Program Eligible for Financial Aid? Yes		
Subject Chemistry	Semesters to Complete Program 4		
Program Description Prepares students to transfer to a 4-year institution to pursue an American Chemical society approved chemistry major. It was designed in collaboration with several university chemistry departments to ensure maximum transferability into the various programs they offer.			
Faculty Contact Paul Root	Faculty Contact Email pdroot@hfcc.edu	Faculty Contact Phone 313-845-6312	Faculty Contact Office Location J-016A
Academic Advisor Elyse Hogan	Academic Advisor Contact Email ehogan@hfcc.edu	Academic Advisor Contact Phone 313-845-9730	Academic Advisor Office Location J-114A
School Science, Tech, Engr & Math	Academic Department Chemistry		

Program Learning Outcomes

Demonstrate a basic mastery of the general chemistry topics identified in the ACS Guidelines for Chemistry in Two Year College Programs.
Demonstrate a basic mastery of the organic chemistry topics identified in the ACS Guidelines for Chemistry in Two Year College Programs.
Demonstrate a proficiency to safely and correctly use chemical instrumentation and proper laboratory techniques.
Analyze and interpret information from various sources, including experimental data and chemical literature.
Present experimental results using proper written and/or verbal English.
Design and carry out a scientific investigation using appropriate experimental design and methodology.

Children and Families AA Degree

Program Code

CHILDFAM.AA

Degree Type

Associate in Arts

Program Eligible for Financial Aid?

Yes

Last Term students eligible to graduate

Summer 2027

Program Description

Prepare students to work with young children and their families. Addresses a variety of components that are conducive to high quality early childhood education settings. The curriculum is organized around core courses that meet the [NAEYC Standards for Associate Degree Programs](http://www.naeyc.org/ecada/standards), and provide skills and knowledge needed by early childhood educators. Students successfully completing the Children and Families Program will be equipped to work in a variety of program settings as a lead teacher, teacher assistant, program director, assistant director, or home provider/owner. The Children and Families Associate Degree may be used as a terminal degree or a degree transferable to universities with four-year programs in Children and Families, Child Development or Early Childhood Education.

""Mission: ""

To provide high quality teaching and learning experiences to develop knowledge, skills, attitudes and abilities in the prospective Early Childhood Educator so that students can readily matriculate to transfer institutions and serve as educators who value diversity and excellence in Early Childhood Education

""Vision: ""

To prepare qualified early childhood teachers who understand how children learn, and can plan and implement developmentally and individually appropriate learning experiences that are aligned to standards and are based on knowledge of individual children from diverse backgrounds, taking into account the family, the community, and curricular goals and objectives.

Features of HFC's Children and Families degree:

- * Alignment with the NAEYC Associate Degree Standards
- * Field Experience or Practicum hours (a total of 180) observing and / or practicing skills and learning first hand about children's development, interests, and abilities
- * A Field Experience Coordinator who provides field experience evaluations and individual coaching and mentoring
- * Experienced and Educated Master level program instructors who are currently working in the early childhood field
- * Small classes with a variety of instructional methods (lecture, small groups, hands on experiences, individual presentations, etc.)
- * Selected Program classes can be used for those seeking a CDA certification
- * Articulation agreements with five universities
- * Students graduating with a Children and Families Associate in Arts degree will be qualified to work in a variety of Early Childhood settings

Program Learning Outcomes

Explain the client-server model of web development.

Implement HTML, CSS, and JavaScript in static and dynamic, client-side pages.

Develop and publish a web site utilizing web authoring and content management software.

Use a client-side web framework to create a web site.

Use a server-side web framework / web application framework to create a web site.

Interface with the Unix/Linux operating system, including the vi editor, file management, and shell scripting.

Design and create a database-backed website.

Analyze, design, and implement an information system.

Create and deliver a professional team presentation.

CIVILENGINTECH.AAS - Civil Engineering Technology

Program Information

Program Title	Program Code		
Civil Engineering Technology	CIVILENGINTECHAAS		
Degree Type			
Associate in Applied Science			
Minimum Credits for Program Completion	Program Eligible for Financial Aid?		
60	Yes		
Subject	Semesters to Complete Program		
Architecture/Construction Tech	4		
Program Description			
The Associate of Civil Technology Program is a hands on, lab based program, designed to give students skills and knowledge necessary to work as civil engineering technicians in areas involving drafting, construction, estimating, and surveying. In this program, students will learn to assist with the design and construction of highways, buildings, and other infrastructures.			
Faculty Contact	Faculty Contact Email	Faculty Contact Phone	Faculty Contact Office Location
Chad Richert	cricht@hfcc.edu	313-317-1515	E-115C
Academic Advisor	Academic Advisor Contact Email	Academic Advisor Contact Phone	Academic Advisor Office Location
Rachel Vanzutphen	rvanzutphen@hfcc.edu	313-845-9873	E-211L
School	Academic Department		
Business, Entrepreneurship, PD	Building Sciences		

Program Learning Outcomes

Utilize principles, hardware, and software that are appropriate to produce drawings, reports, quantity estimates, and other documents related to design and construction.

Perform economic analyses and cost estimates related to design, construction, operations and maintenance of systems associated with civil technology.

Select appropriate construction related materials and practices.

Perform standard analysis and design related to civil technology.

Utilize surveying methods appropriate for land measurement and/or construction layout.

Conduct standardized field and laboratory tests related to civil engineering.

CLOUDNETWORK.AAS - Cloud and Network Technology

Program Information

Program Title	Program Code		
Cloud and Network Technology	CLOUDNETWORKAAS		
Degree Type			
Associate in Applied Science			
Minimum Credits for Program Completion	Program Eligible for Financial Aid?		
62	No		
Subject	Semesters to Complete Program		
Computer Information Systems	5		
Program Description			
Covers a wide range of topics within the cloud, networking and system administration fields. Cloud computing in the Microsoft Azure, Amazon Web Services, and Google Cloud environments are covered. Cisco CCNA courses cover the setup and configuration of switches, routers, VLAN's, VPN's, and WANs. Cloud and hybrid cloud security; server operating system administration (e.g., installation, configuration, user account creation, file system security, DNS, DHCP, network printing, performance monitoring) in Microsoft Azure, Hybrid Windows Server and Unix/Linux; and computer hardware and operating system troubleshooting are covered in depth. Students will be prepared for a variety of industry certification exams and career pathways.

Program Learning Outcomes

Demonstrate knowledge of Cloud Computing concepts used in Public Clouds.

Install, maintain, secure and administer Azure Cloud resources and Windows Server operating system in a Hybrid Cloud environment.

Install, maintain, secure and administer the Unix/Linux operating system.

Install, configure, secure and troubleshoot network devices.

Develop the programming logic required for system scripts.

Design, implement, secure and document a comprehensive Hybrid Cloud environment.

CNCAD.CA - Advanced Machine Tool Technology / CNC

Program Information

Program Title Advanced Machine Tool Technology/CNC Certificate	Program Code CNCAD.CA		
Degree Type Certificate of Achievement			
Minimum Credits for Program Completion 24	Program Eligible for Financial Aid? Yes		
Subject Machine Tool Technology	Semesters to Complete Program 4		
Program Description Provides students with the opportunity to improve and build on current skills and knowledge of CNC. Students receive training on the latest equipment used in the modern business environment, and successful students have the opportunity to develop an advanced-level of proficiency in the use and application of CNC equipment.			
Faculty Contact Guy Pizzino	Faculty Contact Email gpizzino@hfcc.edu	Faculty Contact Phone 313-845-6331	Faculty Contact Office Location E-117B

School Business, Entrepreneurship, PD	Academic Department Advanced Manufacturing		

Program Learning Outcomes

Develop knowledge of career opportunities and demonstrate the requisite entry level machining and measurement skills for the Manufacturing Industry.
Practice safe work habits in an industrial manufacturing environment.
Create a basic or complex part on non-computerized industry standard machining and turning equipment.
Create complete complex parts on computer controlled machining centers.
Create complete complex parts on computer controlled turning centers.
Utilize quality control concepts to identify root cause part discrepancies.

Synthesize information using numerical control software to complete three-dimensional parts on computer controlled milling and turning centers.

COMPNET.CA - Computer Networking Academy - CCNA

Program Information

Program Title	Computer Networking Academy - CCNA Certificate	Program Code	COMPNET.CA
Degree Type	Certificate of Achievement		
Minimum Credits for Program Completion	16	Program Eligible for Financial Aid?	Yes
Subject	CISCO Academy	Semesters to Complete Program	2
Program Description Provides students with the skills for designing, building, and maintaining computer networks. Prepares students for Cisco Certified Entry Networking Technician (CCENT) and Cisco Certified Network Associate (CCNA) industry certifications. Cisco certifications are consistently rated among the most highly valued certifications within the IT industry by both employers and IT professionals. The CCNA certificate program consists of four courses and is designed to be completed within one year. Students learn how to install and configure Cisco routers and switches in multi-protocol local and wide area networks, perform basic troubleshooting and improve network performance and security. The CCNA courses are also part of the required core courses for the Associate of Applied Science in Computer Information Systems - Network Administration and are electives for the Associate of Applied Science in Computer Information Systems - Information Assurance.			
Program Accreditation Information The College's Computer Networking Academy is Cisco-approved.

COMPSCIENCE.AS - Computer Science

Program Information

Program Title Computer Science	Program Code COMPSCIENCE.AS		
Degree Type Associate in Science			
Minimum Credits for Program Completion 70	Program Eligible for Financial Aid? Yes		
Subject Computer Information Systems	Semesters to Complete Program 7		
Program Description Computer Science is the study of computers and computational systems. Unlike electrical and computer engineers, computer scientists focus on software including their theory, design, development, and application. Our Computer Science program provides students with in-depth knowledge and skills in the field of computer science, including programming logic and algorithm design, software development using a variety of major modern languages, database systems, software engineering principles and methodologies, and security principles and methods. The program prepares students for both entry-level career opportunities and transfer opportunities to four-year universities. Students take core computer classes as well as the general education requirements and mathematics courses commonly required in Computer Science Bachelor degrees.

Academic Advisor DeJanae Hayes	Academic Advisor Contact Email dhayes8@hfcc.edu	Academic Advisor Contact Phone 313-845-9792	Academic Advisor Office Location E-211C
School Business, Entrepreneurship, PD	Academic Department Computer Technology		

Program Learning Outcomes

Operate a personal computer and productivity software installed on it, including Microsoft Office, file management, the Internet/Web, e-mail, and input/output/storage devices.
Explain the importance of personal responsibility and security in a technological world, including copyright laws, netiquette, ethics, privacy issues, and security threats.
Design and implement a computer program in any of a number of modern computer languages to meet required specifications.
Design, create and manipulate an enterprise-scale database system.
Analyze, design, implement, test, debug and document software systems of varying complexity.
Demonstrate proficiency in the mathematics utilized in computer science.
Communicate effectively both orally and in writing to a diverse audience.

CUSRV.CA - Customer Service Professional

Program Information

Program Title Customer Service Professional Certificate	Program Code CUSRVCA		
Degree Type Certificate of Achievement			
Minimum Credits for Program Completion 17	Program Eligible for Financial Aid? Yes		
Subject Business Administration	Semesters to Complete Program 2		
Program Description Course work emphasizes oral and written communication skills, workplace skills, and basic computer skills and includes training to work effectively as a Customer Service Representative (CSR). CSRs interact with a company's customers by answering questions about products, services or billings. CSRs, working in a call center or in a customer service department, receive in-bound calls from a company's customers and enter orders for products or services, sell tickets, make reservations, and solve problems that customers are experiencing.			
The Customer Service Professional certificate (developed in consultation with businesses such as Blue Cross Blue Shield, Ford Motor Company, DTE Energy, and Oakwood Hospital and Medical Center) may be used as a building block towards earning an Associate in Business degree.

CYBERSECUR.CA - Cybersecurity

Program Information

Program Title Cybersecurity Certificate	Program Code CYBERSECUR.CA
Degree Type Certificate of Achievement	
Minimum Credits for Program Completion 27	Program Eligible for Financial Aid? Yes
Subject CyberSecurity (IA)	Semesters to Complete Program 3
Program Description Provides a mid-level understanding of the technological needs, threats, and vulnerabilities of hardware, software, operating systems, networks and the Internet. Students will examine operating systems, networks, tools and protocols needed to navigate, use, and manage security technologies as well as gain insight into the legal, social, and political dynamics of the cyber universe. Designed for students interested in cyber defense or IT professionals seeking a fundamental understanding of cybersecurity.	

Faculty Contact Marrci Conner	Faculty Contact Email mrconner2@hfcc.edu	Faculty Contact Phone 313-317-4021	Faculty Contact Office Location E-162J
Academic Advisor DeJanae Hayes	Academic Advisor Contact Email dhayes8@hfcc.edu	Academic Advisor Contact Phone 313-845-9792	Academic Advisor Office Location E-211C
School Business, Entrepreneurship, PD		Academic Department Computer Technology	

Program Learning Outcomes

Write UNIX shell scripts and manipulate the UNIX operating system and services.
Recognize networks, operating systems and hardware.
Identify and explain the ten domains of cybersecurity.
Analyze and establish security requirements for systems/networks.
Defend systems against unauthorized access, modification and/or destruction.
Use cybersecurity tools (KALI, NMAP, Wireshark, SNORT, etc.)
Define access privileges, control structures, and resources.

DEAFSTUDIESCOMM.CA - Deaf Studies and the Community

Program Information

Program Title Deaf Studies and the Community	Program Code DEAFSTUDIESCOMM.CA		
Degree Type Certificate of Achievement			
Minimum Credits for Program Completion 20	Program Eligible for Financial Aid? No		
Subject Language Studies	Semesters to Complete Program 2		
Program Description Provides an understanding of Deaf culture and ensures that students reach a beginning level of competency in American Sign Language (ASL) skills. ASL courses are aligned with the American Council on the Teaching of Foreign Languages (ACTFL) proficiency standards. The proficiency goal for for students in this program is to reach "Novice High" on the ACTFL scale. According to ACTFL, a Novice High speaker is able to successfully handle uncomplicated communicative tasks involving predictable topics necessary for survival in ASL communicative situations. In addition to responding to simple direct questions and requests for information, these speakers are also able to ask formulaic questions. Novice High listeners (attenders) are able to accurately comprehend simple exchanges of sentence-length speech relating to familiar or predictable topics. Students may wish to continue studies at Henry Ford College or the university level; however, upon completion of the program, students are eligible to communicate basic personal information and express a limited number of activities, preferences, and immediate needs in social or work settings. Graduates wishing to pursue a bachelor's degree may transfer most if not all of the course work toward that degree.

Academic Advisor Sarah Krizan	Academic Advisor Contact Email smkrizan@hfcc.edu	Academic Advisor Contact Phone 313-845-9889	Academic Advisor Office Location K-248
School Liberal Arts	Academic Department Language Studies		

Program Learning Outcomes

Initiate, conduct and terminate context-specific conversations with Deaf or ASL users.
Compare and contrast American mainstream culture with Deaf culture.
Finger-spell words, numbers and loan signs clearly and accurately in regard to articulation, rate of transition from letter to letter, word configuration and distinction between words, moving from one letter to the next in a rhythmic fashion without extraneous movements.
Interpret novice-level ASL to grammatically-correct and correctly-phrased English.
Describe psychological development of hearing and non-hearing individuals and communities.

DSGNMANFCT.AAS - Design and Manufacturing

Program Information

Program Title Design and Manufacturing	Program Code DSGNMANFCT.AAS		
Degree Type Associate in Applied Science			
Minimum Credits for Program Completion 60	Program Eligible for Financial Aid? No		
Subject Machine Tool Technology	Semesters to Complete Program 4		
Program Description This degree offers the opportunity to develop skills in both Computer-Aided Drafting/Design and Computer-Aided Manufacturing/CNC. This multi-disciplinary program between HFC's CAD/Drafting and Machine Tool Technology departments is based in both CAD, CNC and Manufacturing technologies . Together these areas help students develop a foundation and the necessary hands-on experience that leads to better designed and manufactured products. Utilizing both disciplines, students who are successful gain a deeper appreciation for the resources and complexities that exist in each area independently, and as they work together in industry. Students develop and refine the skills and experience needed by entry-level and experienced CAD-CAM and CNC Operators.			
Faculty Contact Guy Pizzino	Faculty Contact Email gpizzino@hfcc.edu	Faculty Contact Phone 313-845-6331	Faculty Contact Office Location E-117B
Academic Advisor Rachel Vanzutphen	Academic Advisor Contact Email rvanzutphen@hfcc.edu	Academic Advisor Contact Phone 313-845-9873	Academic Advisor Office Location E-211L
School Business, Entrepreneurship, PD	Academic Department Advanced Manufacturing		

Program Learning Outcomes

Develop knowledge of career opportunities and demonstrate the requisite entry-level CAD and industrial drafting skills for the manufacturing industry.
Utilize drafting principles to read and comprehend a part drawing.
Apply and layout dimensions on a part drawing for manufacturing.

Create a part design using 3-D CAD software program.
Create a basic or complex part on non-computerized industry standard machining and turning equipment.
Create complete complex parts on computer controlled machining centers.
Create complete complex parts on computer controlled turning centers.
Utilize appropriate technology to solve complex problems through critical analysis in the machining environment.
Synthesize information using numerical control software to complete three-dimensional parts on computer controlled milling and turning centers.

EGR.CONSTRUCTION.AAS - Engineering Technology- Construction Management

Program Information

Program Title	Program Code		
Engineering Technology- Construction Management	EGR.CONSTRUCTION.AAS		
Degree Type			
Associate in Applied Science			
Minimum Credits for Program Completion	Program Eligible for Financial Aid?		
60	Yes		
Subject	Semesters to Complete Program		
Pre-Engineering	4		
Program Description			
Provides hands-on technical skills required in workplaces through computer- and laboratory-based practice. Teaches architectural CAD/drafting and building construction methods and materials. Laboratory classes provide students with experience in construction materials, computer-aided drafting and design, cost estimating, construction methods, presentation techniques, and construction practices. Covers the principles and necessary skills of the architectural profession supported by an understanding of building construction through laboratory activities designed to provide students with a practical skill-based education. The required math courses ease the transfer of students to a 4-year institute for completion of a Bachelor of Engineering Technology.			
Faculty Contact	Faculty Contact Email	Faculty Contact Phone	Faculty Contact Office Location

Brandi Walthall-Johnson	bwalthall-johnson@hfcc.edu	313-317-6811	G-120J
School	Academic Department		
Science, Tech, Engr & Math	Engineering Technology		

Program Learning Outcomes

Apply standard methods of mathematical analysis.
Develop knowledge of career opportunities and demonstrate the technical skills required by industry.
Demonstrate professional ethics appropriate to the field of engineering technology.
Prepare a series of construction documents utilizing current industry software and accepted architectural standards and techniques.
Develop a series of design presentation drawings utilizing traditional and computerized techniques.

Degree Type		
Associate in Applied Science		
Minimum Credits for Program Completion	Program Eligible for Financial Aid?	
60	Yes	
Subject	Semesters to Complete Program	
Pre-Engineering	4	
Program Description		
Provide hands-on technical skills required in workplaces through computer and laboratory-based practices, and a core of related courses such as physics, mathematical applications, and introduction to engineering. Students will study the design of products by learning design principles, drafting, problem solving, mechanics of materials, knowledge of manufacturing processes and machine elements design. In addition, course works include wide background content in areas such as electricity and electrical motors, science of materials, manufacturing processes, and tool design. Design is emphasized utilizing computer drafting and design technology. In a capstone course, students are required to work in a team to design and develop a		

new product or process in response to a sponsor need. Graduates are prepared for several types of design technologist positions such as product designer, CAD designer, tool designer, research and development technician, or manufacturing technician. The math sequence eases the transfer of students to a 4-year institute for completion of a Bachelor of Engineering Technology.

Admissions Requirements

Admissions Requirements
Admission Requirements and Eligibility

In order to be admitted to this program, students are required to have successfully completed at least 15.0 credits in ACT, AUTO, CIMMT, CIMTA, CINWD, CIS, DRAF, ELEC, ENGR, ENT, MFMT, MTT, PEFT, PLMB, REEN, TADV, TAEI, TAFD, TAFP, TAGD, TAIM, TAMA, TAMJ, TAMU TAMT, TAPI, TAPP, TAPT, or TASM. Approval by a counselor, an advisor, a student success navigator, or a faculty chair is required.

Program Learning Outcomes

Apply standard methods of mathematical analysis in problem solving.
Demonstrate the ability to work in a team environment in order to successfully follow an engineering design process and/or build a prototype.
Develop knowledge of career opportunities and demonstrate the technical skills required by industry.
Describe basic principles of design and problem-solving in the field of engineering technology.
Demonstrate professional ethics appropriate to the field of engineering and technology.
Demonstrate the ability to assist in troubleshooting a mechanical system.

ELECENGINTECH.AAS - Electrical Engineering Technology

Program Information

Program Title Electrical Engineering Technology	Program Code ELECENGINTECH.AAS		
Degree Type Associate in Applied Science			
Minimum Credits for Program Completion 62	Program Eligible for Financial Aid? No		
Subject Electrical Engineering Technol	Semesters to Complete Program 5		
Program Description Introduces the basic principles of electricity and proceeds to the concepts of solid state components such as diodes, transistors, integrated circuits, and microprocessor systems. Advanced courses show how these fundamental principles are applied to machine control, computers, power supplies, amplifiers, oscillators, industrial control, and instrumentation systems. Courses simulate actual working conditions in five fully-equipped laboratories where students put electrical-electronics theory into practice. Along with laboratory experiences setting up circuits, troubleshooting, and calibrating systems, computer-simulated circuit analysis is used in the majority of the courses.

School Business, Entrepreneurship, PD	Academic Department Advanced Manufacturing		

Program Learning Outcomes

Apply laws to the design, construction, analysis, and measurement of electric, hydraulic, and pneumatic circuits.
Interpret and develop technical drawings, schematics, and diagrams.
Create documents based on technical information using descriptive writing, diagrams, mathematical expression, computation, and graphs.
Perform electrical/mechanical assembly/disassembly, repair, troubleshoot, and calibration of components and devices.
Apply electrical/mechanical laws to the operation and control of machines.
Apply critical thinking skills to solving electro-mechanical problem.
Communicate and perform effectively within a team environment.
Develop PLC, HMI, and robot programs for the control of electro-mechanical systems.
Analyze a set of specifications and create a LabView virtual instrument.
Apply electro-mechanical laws to the application of specific industrial sensors/transducers.
Evaluate sensor/transducer output based on computer generated data for the purpose of creating a lab report using Microsoft Office products.

ELECENGINTECH.CA - Electrical Engineering Technology

Program Information
Program TitleElectrical Engineering Technology Program CodeELECENGINTECH.CA Degree TypeCertificate of Achievement

Minimum Credits for Program Completion		Program Eligible for Financial Aid?	
25		No	
Subject		Semesters to Complete Program	
Electrical Engineering Technol		4	
Program Description			
This certificate can be used as documentation to show a student has reached a certain level of proficiency in Electrical Engineering Technology. This certificate can be earned while pursuing an Associate in Applied Science degree in Electrical Technology. Electrical Engineering Technology articulation agreements are also available to certain 4 year universities. To earn this certificate there is approximately 50% hands on lab work and 50% theory involved. Students will receive training in basic electricity, the proper use of test equipment, motors, generators, semiconductors, digital electronics, control circuits, circuit calculations, hydraulic, pneumatics and troubleshooting.

EMMEDTECH.CA - Emergency Medical Technician Certificate - Basic

Program Information

Program Title	Program Code		
Emergency Medical Technician Certificate - Basic	EMMEDTECH.CA		
Degree Type			
Certificate of Achievement			
Program Eligible for Financial Aid?			
No			
Subject			
Allied Health			
Last Term students eligible to graduate			
Summer 2027			
Program Description			
This certificate program is designed to meet the needs of students interested in entry-level training as well as those seeking a career in the emergency medical and paramedic fields. Basic Emergency Medical Technicians are trained in basic life support procedures and the principles of care and transportation of the sick and injured. Basic EMT licensure qualifies the student for an entry-level position as an emergency care provider with municipal and private ambulance services as well as some hospital emergency departments. The basic EMT license is often a prerequisite for employment as a firefighter. (Progressive fire departments in our service area require a paramedic license. An EMT Basic license is the first step in meeting this criterion.) The EMS Programs at HFC offers the options of certificates of achievement in Basic EMT and Paramedic, or the option of an Associate in Applied Science degree.

ENGIN.AS - Pre-Engineering: General

Program Information

Program Title Pre-Engineering AS Degree	Program Code ENGIN.AS		
Degree Type Associate in Science			
Minimum Credits for Program Completion 60	Program Eligible for Financial Aid? Yes		
Subject Pre-Engineering	Semesters to Complete Program 4		
Program Description The Pre-Engineering program covers the courses in the first two years of an engineering degree (Bachelor of Science). Students take basic physics and math courses as well as general education courses required by most of engineering schools. Upon completion of program, successful students can transfer to a 4-year institution to complete their final two years of engineering. The articulation agreements with some schools in Michigan make the transfer of our graduates easier. "NOTE:" Because the elective courses required for the various fields of engineering may vary slightly, students should meet with the Engineering Faculty Advisor for assistance with registering for the correct series of courses.

School Science, Tech, Engr & Math	Academic Department Engineering Technology		

Program Learning Outcomes

An ability to identify, formulate, and solve engineering problems by applying principles of science and mathematics.
Demonstrate the ability to work in a team environment in order to successfully follow a design process and/or build a prototype.
Use a computational engineering programming tool to solve engineering problems.
Demonstrate professional ethics appropriate to the field of engineering.
Define the roles of different engineers and decide his/her engineering major/school.

No Requirement Level

Program Information

Program Title Environmental Studies AS Degree	Program Code ENVIRNAS
Degree Type Associate in Science	
Minimum Credits for Program Completion 60	Program Eligible for Financial Aid? Yes
Subject Environmental Studies	Semesters to Complete Program 4
Program Description Emphasizes the interdisciplinary nature of environmental problem-solving at the local, regional, and international levels. Students completing this program can transfer to bachelor programs in four broad areas: land resources, nature studies, resource and policy management, and urban service.	
Faculty Contact Mary Parekunnel	Faculty Contact Email mparekunnel@hfc.edu

Program Learning Outcomes

Demonstrate proficiency in designing an experiment in the lab settings and in the field and conducting experiment, collecting data, analyzing, interpreting and presenting results individually and in a team setting.
Recognize different ecosystems, the components of ecosystems and explain the relationships among them.
Demonstrate a basic understanding of Earth's weather and climate and the forces that influence them.
Explain geological processes that affect the earth.
Show proficiency in the use of basic laboratory and field equipment and basic knowledge of safe lab procedures.
Write formal reports using a standard format.
Interpret topographic maps.

EVBATTERY.CA - EV Battery Manufacturing Technology

Program Information

Program Title EV Battery Manufacturing Technology	Program Code EVBATTERYCA		
Degree Type Certificate of Achievement			
Minimum Credits for Program Completion 21	Program Eligible for Financial Aid? No		
Subject Electrical Engineering Technol	Semesters to Complete Program 2		
Program Description This certificate can be used as documentation to show a student has reached a certain level of proficiency in the fundamentals required in an electric vehicle battery manufacturing process. This certificate can be earned while pursuing an Associate in Applied Science degree in Electrical Engineering Technology or other Associate Degree programs. To earn this certificate students will receive training in some of the fundamental skills sought by electric vehicle battery manufacturers. These include basic electricity, the proper use of test equipment, digital electronics, circuit calculations, basic troubleshooting, reading schematic diagrams, data collection. Safety issues and concerns regarding the servicing of electric vehicle batteries. Also includes the study of electric vehicle battery types. The certificate also covers fundamental atomic structure; stoichiometry; molarity; the periodic table; nomenclature; reactions and equations, and properties of gases.

Admissions Requirements

Admissions Requirements
Admission Requirements and Eligibility
Eligible to take a gateway MATH course at HFC or a satisfactory score on the Math placement exam. ENG131 Introduction College Writing eligible.

Program Learning Outcomes

Interpret and develop technical drawing, schematics and diagrams.
Create documents based on technical information using descriptive writing, diagrams, mathematical expression, computation, and graphs.
Apply critical thinking skills to solving problems.
Demonstrate the ability to communicate and perform in a team environment.
Demonstrate proficiency in the use of chemical equipment.
Analyze and interpret measurement data.
Name chemicals from formulas for simple ionic and binary compounds and common acids. Common "ate" ion formulas should be committed to memory.
Prepare spreadsheets that incorporate basic formulas and a variety of formatting options.

Exercise Science	EXERCISESCIENCE.AS		
Degree Type			
Associate in Science			
Minimum Credits for Program Completion	Program Eligible for Financial Aid?		
60	Yes		
Subject	Semesters to Complete Program		
Exercise Science	5		
Program Description			
This program will prepare students to transfer to a four-year bachelor program in exercise science, kinesiology, athletic training, pre-physical therapy, nutrition, health, physical education, or other closely related program, or for direct entry into the health and fitness industry. The program follows the Michigan Pathways to ensure maximum transfer of credits.

Admissions Requirements

Admissions Requirements
Admission Requirements and Eligibility
There are no specific admission requirements for acceptance into the exercise science program. When applying to the college, students should choose exercise science as the course of study.

Program Learning Outcomes

Demonstrate a comprehensive understanding of the scientific principles related to Anatomy, Physiology, and Biomechanics applied to Exercise Science.
Create evidence-based exercise plans for healthy individuals following the guidelines of the American College of Sports Medicine, American Council on Exercise, the National Strength and Conditioning Association and other nationally recognized certifying bodies.
Perform accurate assessments of physical fitness based on standardized protocols from the American College of Sports Medicine, American Council on Exercise, the National Strength and Conditioning Association and other nationally recognized certifying bodies.
Demonstrate preparation for entry-level positions in the health and fitness industry or successful transfer to a four-year university program.

GENRL.AA - Liberal Arts

Program Information

Program Title	Program Code		
Liberal Arts AA Degree	GENRLAA		
Degree Type			
Associate in Arts			
Minimum Credits for Program Completion	Program Eligible for Financial Aid?		
60	Yes		
Subject	Semesters to Complete Program		
Liberal Arts	4		
Program Description			
The Associate of Arts degree is designed to assist students preparing to transfer to a four-year bachelor's degree. Completing HFC's Associate of Arts in Liberal Arts degree helps students transfer to a four-year degree program while providing a broad sampling of academic disciplines typical in the first two years of undergraduate study. By studying these disciplines -- humanities, natural sciences, mathematics, and social sciences -- to meet the requirements of the Michigan Transfer Agreement, students gain a solid foundation for continued study at the bachelor's degree level. Students may choose one of several pathways to focus on a particular discipline, or they may select classes that fulfill specific requirements at an intended transfer institution. Please consult with an advisor or counselor to learn more about transfer opportunities.

Liberal Arts	Fine & Performing Arts		

Program Learning Outcomes

Society & Culture: Demonstrate an understanding within and across Liberal Arts examine disciplines of how various historical, political, and socioeconomic factors influence and are influenced by a diverse society and shifting of norms and values, and how those factors impact culture and community development; how the fine and performing arts (literature, drama, dance, visual arts, music, etc.) both communicate unique cultural perspectives and reflect shared human experiences.

Communication: Develop an effective process to clearly communicate information via writing and/or speaking to varied audiences within and across Liberal Arts disciplines. Compose and revise essays, speeches, and other projects in a variety of genres incorporating reflection, analysis, synthesis, and ethical source use.

Reading: Identify and employ effective reading strategies for a variety of reading situations within and across Liberal Arts disciplines. Work independently and collaboratively with complex written and visual materials, drawing connections between texts and relevant themes. Demonstrate comprehension through oral or written summary, response, analysis, and/or synthesis.

Critical Thinking: Analyze and evaluate available information (and identify the need for further research, when necessary) to arrive at reasonable judgments and conclusions within and across Liberal Arts disciplines; reduce bias in ones thinking about a topic or issue by considering a wide variety of differing perspectives and viewpoints.

Information Literacy: Locate, evaluate, and select information appropriate for diverse writing and research situations within and across Liberal Arts disciplines; organize, synthesize, and ethically document (formally and informally) information appropriate for diverse writing and research situations.

GENRL.AGS - General Studies

Program Information

Program Title	Program Code
General Studies AGS Degree	GENRL.AGS
Degree Type	
Associate in General Studies	
Minimum Credits for Program Completion	Program Eligible for Financial Aid?
60	Yes
Subject	Semesters to Complete Program
Liberal Arts	4
Program Description	
Completion of course work in the General Studies Associate degree signifies that the student is broadly educated in the major divisions of higher learning: humanities, natural sciences, mathematics, social sciences, and fine arts. The student has acquired methods of study and habits of thought which are demonstrated by an ability to analyze problems, make appropriate value judgments, and express conclusions in cogent style. The student devotes a portion of study within at least one career education course to explore career, employment, or other educational advancement opportunities.	

Students in the General Studies Associate Degree should select electives to reflect both the student's interests and the requirements of the intended transfer institution. Students are encouraged to consult the transfer guide sheets located in the University, Transfer, Advising, and Career Counseling Center.

Program Learning Outcomes

Civil Society and Culture: Compare and contrast the United States with other nations or world regions, addressing social (economic, political and cultural) issues, patterns of diversity, or aspects of inequality.
Communication: Effectively communicate ideas appropriate to their discipline using Standard English, through written and verbal communication.
Computer Technology: Demonstrate skills for computer technology, including internet, network and advanced file operations. Skills will include organizing, managing, and presenting data using office productivity software. Students will also identify security and integrity threats and identify unethical actions within their social or professional environments.
Critical Thinking/Information Literacy: Demonstrate the ability to analyze and evaluate information and identify the need for research to draw conclusions, formulate inferences, solve problems and make decisions. Students will also demonstrate information literacy skills by locating, evaluating, selecting, organizing, synthesizing, and ethically documenting information from multiple sources using both informal and formal formats, as appropriate for diverse writing situations.
Quantitative Literacy: Apply quantitative skills to analyze situations and make decisions in a variety of contexts.

Type

Completion Requirement

Category 1: English Composition

Complete any one, from the Michigan Transfer Agreement (MTA) list.

Complete ALL of the following Course Sets:

CAT1 - Gen Ed Transfer - 2020

Category 2: English Composition or Communications

Complete any one course from the Michigan Transfer Agreement (MTA) list.

Complete at least 1 courses in the following course sets:

CAT2 - Gen Ed Transfer - 2020

Category 3: Mathematics

Complete any one course from the Michigan Transfer Agreement (MTA) list.

Complete ALL of the following Course Sets:

CAT3 - Coll Algebra - Gen Ed Transfer - 2020

CAT3 - Quant Lit - Gen Ed Transfer - 2025

CAT3 Stats - Gen Ed Transfer - 2020

Category 4: Social Sciences

Complete any two, from different disciplines, from the Michigan Transfer Agreement (MTA) list.

Complete at least 2 courses in the following course sets:

CAT4 - Gen Ed Transfer - 2020

Category 5: Humanities and Fine Arts

Complete any two, from different disciplines, from the Michigan Transfer Agreement (MTA) list.

Complete at least 2 courses in the following course sets:

CAT5 - Gen Ed Transfer - 2020

Category 6: Natural Sciences

Complete any two, including one with laboratory experience, from different disciplines, from the Michigan Transfer Agreement (MTA) list.

Complete at least 2 courses in the following course sets:

CAT6 - Transfer - Lec and Lab - 2020

CAT6 - Transfer - Lec Only - 2020

CAT6 - Gen Ed Transfer - Lab Only - 2020

Category 7: General Education

Complete any additional General Education course from the Michigan Transfer Agreement (MTA) list to meet the 30 hour General Education requirement.

Associate in Arts

Subject

Theater

Last Term students eligible to graduate

Summer 2027

Program Description

Completion of course work in the Liberal Arts Associate of Arts degree signifies that the student is broadly educated in the major divisions of higher learning: humanities, natural sciences, mathematics, social sciences, and fine arts. The student has acquired methods of study and habits of thought which are demonstrated by an ability to analyze problems, make appropriate value judgments, and express conclusions in cogent style. The student devotes a portion of study to in-depth concentration of one subject [Theatre].

Students in the Liberal Arts Associate of Arts degree should select electives to reflect both the student's interests and the requirements of the intended transfer institution. Students are encouraged to consult the transfer guide sheets located in the University, Transfer, Advising, and Career Counseling Center

Program Description

This program is designed to provide students with skills both soft and digital that will prepare the student for an entry level position or an entrepreneurial role in the industry. This is a career program for students who do not plan to transfer and wish to seek either an entry level position or begin working with clients. The program provides a comprehensive foundation of study, emphasizing the development of theoretical, practical, and technical skills within the Graphic Design field. The program uses sequential courses that build and develop skills in a range of studio classes. Offers courses in print, front-end web design, motion graphics, and the business of design. Employs computer applications and tools as well as design techniques to assist the student in developing the range of skills necessary to compete in the multi-media field of graphic design.

Program Learning Outcomes

Create visual communications for an intended message, from conceptual development to final artifact using a range of media, both traditional and digital, for final output both printed and digital.

Utilize current graphic design terminology and methodology as a basis for discussing and evaluating works of design, both student and professional.

Incorporate historic and contemporary design influences, both period and designer, in the creation of design solutions as well as understand the role of design in culture.

Implement appropriate typographic treatments for print and digital communications. This includes typesetting, legibility, hierarchy, and style to create engaging communication solutions.

Apply design processes to complete appropriate design solutions. This includes the ability to sketch and refine preliminary concepts, employ the elements and principles of design as well as color theory into effective solutions.

Utilize current industry software and equipment to construct vector and raster files for use in print, motion and digital outcomes. This includes appropriated file formats for saving work as well as for distribution of final output, and preparation for print or file transfer.

Learn how to build a design business practice. Topics include communicating, contracts and building a personal design identity.

Develop and present a portfolio of projects for use in seeking an entry-level position or transfer to a four-year degree program. Curate and exhibit projects in a graduating student exhibition

Admissions Requirements

Additional Program Requirements

Official chef's uniform required to be purchased prior to beginning class for culinary lab courses. Visit the Hospitality Department in M-163 in the Culinary Arts & Student Center building, or our [Culinary Arts website](#) for uniform ordering information.

Program Learning Outcomes

Relate restaurant operations and scenarios to FDRP standards and procedures.

Based on MLCC and MRA standards, assess when and how beer, wine, and spirits are served in a licensed establishment.

Based on NRA standards, decide how to handle various types of food in order to prevent food borne illness.

Incorporate professional work behaviors to complete 300 hours of supervised internship.

Organize examples of various segments (non-commercial, lodging, sports and leisure, restaurant, casino) and job opportunities in the hospitality industry.

Combine principles of management, marketing, accounting, finance, and economics as they relate to decision-making in the hospitality industry.

HTLSRVCS.CA - Hotel Services

Program Information

Program Title Hotel Services	Program Code HTLSRVCS.CA
Degree Type Certificate of Achievement	
Minimum Credits for Program Completion 17	Program Eligible for Financial Aid? Yes
Subject Culinary Arts, Hospitality Mgm	Semesters to Complete Program 2

Program Description
Provides opportunities for students to build character, leadership, and technical skills critical for success in the global industry of hospitality and tourism. For degrees in Hospitality Management, continue with the Associate Degree in Hotel/Restaurant Management and Bachelor of Science Degree at Henry Ford College.

Program Accreditation Information
Courses in the Hotel/Restaurant Management curriculum are supported by materials and certification exams from the American Hotel & Lodging Educational Institute, National Restaurant Association Educational Foundation, and Federation of Dining Room Professionals.

Instructors receive training and certifications from the American Hotel & Lodging Educational Institute, The National Restaurant Association Educational Foundation, the Federation of Dining Room Professionals and the American Culinary Federation.

HVACTECH.CA - HVAC Technician

Program Information

Program Title HVAC Technician	Program Code HVACTECH.CA
Degree Type Certificate of Achievement	
Minimum Credits for Program Completion 36	Program Eligible for Financial Aid? No
Subject Energy Technology	Semesters to Complete Program 3

Program Description
Designed to provide students the necessary skills required to enter the HVACR industry. Provides both theory and laboratory experiences as well as advanced course work in both residential and commercial heating, cooling, refrigeration, light commercial controls, heating and cooling mechanical codes, installation, energy management, and energy system design. The program offers opportunities to receive several industry recognized certificates, including: EPA 608 Refrigerant Recovery, ready to work, and BPI Building Analyst certification (Building Performance Institute).

Faculty Contact Gregory Ward	Faculty Contact Email gmward16192@hfcc.edu	Faculty Contact Phone 313-845-7146	Faculty Contact Office Location E-164F
Academic Advisor Rachel Vanzutphen	Academic Advisor Contact Email rvanzutphen@hfcc.edu	Academic Advisor Contact Phone 313-845-9873	Academic Advisor Office Location E-211L
School Business, Entrepreneurship, PD		Academic Department Building Sciences	

Program Learning Outcomes

Use proper tools, materials, and equipment necessary for completing mechanical operations on residential and light commercial HVAC-R systems and equipment.
Demonstrate both soft skills and communication skills including reading comprehension, computer skills, communication, and customer service.
Troubleshoot electrical systems and controls in HVAC-R equipment.
Interpret mechanical, electrical, and control diagrams relevant to the HVAC-R industry.
Design and select equipment for HVAC-R systems including duct work.
Apply manufacturer specifications for HVAC-R equipment and systems.

INDSG.AAS - Interior Design

Program Information

Program Title

Interior Design AAS Degree

Program Code

INDSG.AAS

Degree Type

Associate in Applied Science

Minimum Credits for Program Completion

61

Program Eligible for Financial Aid?

Yes

Subject

Interior Design

Semesters to Complete Program

5

Program Description

Provides a comprehensive foundation of study, emphasizing the development of theoretical, practical, and technical skills within the interior environment. This specialization is developed and formed utilizing sequential courses with specific course work in environmental psychology, architectural and interior construction materials and components, lighting and environmental systems, and a range of studio classes. The environmental systems course group will focus on building codes, sustainability, and energy conservation. Graphic, oral and written communication, and presentation skills will be evaluated and enhanced. Computer applications are employed and utilized across the core courses to assist students in developing a broad range of computer skills including Computer Aided Design (CAD).

Building Sciences

Program Learning Outcomes

Produce 2-D and 3-D schematic construction drawings employing technical manual and computer generated architectural drafting skills.

Exhibit artistic 2-D and 3-D visual communication and presentation skills conveying interior environments through perspective drawing, sketching, rendering and model making.

Exhibit proficient written communication skills essential to conveying aesthetic concepts, specifications, installation instructions and programming documents.

Professionally present aesthetic and functional design solutions for small-scale commercial and residential projects that meet user physiological, sociological and psychological needs and its impact on environmental, energy and economic issues.

Create a professional-quality student design portfolio to successfully enter a career in the interior design industry or pursue a bachelors degree at a four-year institution.

INFOCYBRSCR.AAS - Computer Information Systems - Cybersecurity

Program Information

Program Title Computer Information Systems Cybersecurity	Program Code INFOCYBRSCR.AAS		
Degree Type Associate in Applied Science			
Minimum Credits for Program Completion 63	Program Eligible for Financial Aid? Yes		
Subject CyberSecurity (IA)	Semesters to Complete Program 5		
Program Description Prepares students for a career in the Cybersecurity field. As the world becomes more dependent on information technology, the security of information becomes critical. Henry Ford College is a member of the International Cyber Security Education Consortium, and offers an interdisciplinary program leading to an Associate in Applied Science degree that emphasizes technical security, ethical conduct, legal and regulatory compliance, law enforcement and development of strategic security plans. Students complete an interdisciplinary core of study and can tailor electives to their career or transfer interest.			
In April, 2006, the Information Assurance Courseware Evaluation (IACE) Review Committee of the National Security Agency's National Information Assurance Education and Training Program (NIETP) certified that Henry Ford College's Information Assurance courseware meets all of the elements of the Committee on National Security Systems (CNSS) National Training Standard for Information Systems Security (INFOSEC) Professionals NSTISSI-4011.

Academic Advisor DeJanae Hayes	Academic Advisor Contact Email dhayes8@hfcc.edu	Academic Advisor Contact Phone 313-845-9792	Academic Advisor Office Location E-211C
School Business, Entrepreneurship, PD	Academic Department Computer Technology		

Program Learning Outcomes

Operate a personal computer and server operating system with productivity software installed on it, including Microsoft Office, file management, the Internet/Web, e-mail, and input/output/storage devices.
Explain the importance of personal responsibility and security in a technological world, including copyright laws, netiquette, ethics, privacy issues, and security threats, vulnerabilities and countermeasures.
Explain and utilize networking standards, protocols, transmission media, hardware, protocol analyzer and cybersecurity tools.
Describe the fundamentals of cybersecurity, threats to business continuity, disaster recovery, legal, ethical predicaments and professional issues relative to security whether it be related to data, information, application, or networks.
Develop a comprehensive security plan, including risk analysis, legal, regulatory, physical security, data and personnel threats.
Explain and utilize digital forensic techniques, procedures and software tools.
Describe the role of various disciplines within cybersecurity in the development of comprehensive security measures, guidelines, procedures, or plans.
Design, create and manipulate with an enterprise database.

Interface with the Unix/Linux operating system, including the vi editor, file management, and shell scripting.
Demonstrate proficiency in national, Michigan and Wayne County policies, threats and vulnerabilities of systems, legal elements of protection and prosecution, countermeasures, risk management, trust, organizational personnel.

Program Information

Program Title Kitchen and Bath Design Certificate		Program Code KITBTHDSN.CA	
Degree Type Certificate of Achievement			
Minimum Credits for Program Completion 31		Program Eligible for Financial Aid? Yes	
Subject Interior Design		Semesters to Complete Program 3	
Program Description Offers students an opportunity to express themselves creatively while developing the skills necessary to obtain employment in the kitchen and bath industry. To ensure the quality and success of this program, Interior Design faculty collaborated with the National Kitchen and Bath Association (NKBA), the governing agency accrediting kitchen and bath design programs at colleges and universities across the U.S. and Canada. This certificate program requires a 160-hour internship in the kitchen and bath industry.			
Program Accreditation Information The NKBA assists in the development of the kitchen and bath program curriculum to assure the course objectives and competencies meet industry standards. The HFC Kitchen and Bath Design certificate meets the rigorous curriculum standards of the NKBA and has been designated as an NKBA supported program. Becoming a supported program provides HFC and our students more than theoretical and pedagogical advice. Additional benefits from NKBA include: • State-of-the-art industry-standard kitchen and bath design software • Industry research and student scholarship opportunities. Many awards are substantial. • Extensive professional development opportunities for faculty • Annual grants toward funding NKBA student chapter activities • Discounted student NKBA membership dues • Assistance for students in obtaining internships in kitchen and bath design firms

School Business, Entrepreneurship, PD		Academic Department Building Sciences	

Program Learning Outcomes

Develop professional kitchen and bath design presentation skills and produce high quality sample boards.
Select appropriate interior materials and finishes for kitchens and baths through critical analysis of their properties and characteristics meeting user need and budget.
Demonstrate proficiency in manual and CAD drafting skills in the production of basic 2-D and 3-D schematic construction drawings using National Kitchen and Bath Graphic Presentation standards.
Demonstrate and apply knowledge of building codes and mechanical systems, including acoustical, electrical, lighting, plumbing and HVAC to residential and commercial kitchen and bath environments.
Illustrate the ability to design large-scale residential and commercial kitchen and bath projects including programming documents, schematic and construction drawings, perspective drawings and presentation boards conveying well-developed aesthetic and functional interior design concepts.

Synthesize the kitchen and bath design educational experience through the development of design solutions and apply critical thinking and highly developed design skills to a national kitchen and bath design competition.

LAWEFPA.AA - Criminal Justice - Law Enforcement with Police Academy

Program Information

Program Title Criminal Justice - Law Enforcement/Police Academy AA Degree	Program Code LAWEFPA.AA		
Degree Type Associate in Arts			
Minimum Credits for Program Completion 66	Program Eligible for Financial Aid? Yes		
Subject Criminal Justice	Semesters to Complete Program 4		
Program Description Emphasizes the preservation of peace, the prevention of crime, and the protection of life and property. Prepares successful students for employment in law enforcement positions requiring both an Associate Degree and Michigan Commission on Law Enforcement Standards (MCOLES) certification. Students start this associate degree by first completing required course work at HFC, then transferring to Schoolcraft College to complete the Police Academy component of the program. Students then transfer back to HFC to receive their degree. Students completing the program benefit from articulation agreements with Eastern Michigan University, Madonna University, University of Michigan-Dearborn, and Lake Superior State University. This allows successful students to continue their studies toward a bachelor degree with no loss of credit hours.

MASST.CA - Medical Assistant

Program Information

Program Title	Medical Assistant Certificate	Program Code	MASST.CA
Degree Type	Certificate of Achievement		
Minimum Credits for Program Completion	27	Program Eligible for Financial Aid?	Yes
Subject	Medical Office Assistant	Semesters to Complete Program	2
Program Description	A Level II (complex skills) certificate designed to prepare professional multi-skilled individuals for employment in physician's offices, medical clinics, laboratories and other ambulatory health care facilities. Emphasizes administrative and clinical skills in the classroom and laboratory under directed practical experience in physician offices, clinics, and ambulatory care settings, teen health centers, and in the public school system.		
Externships are arranged by program faculty utilizing many of the clinical agencies throughout the region.			
Program Accreditation Information	The Medical Assistant program is accredited by the Commission on Accreditation of Allied Health Education Programs upon the recommendation of the Medical Assistant Education Review Board (MAERB).		
Commission on Accreditation of Allied Health Education Programs	9355-113th St N. #7709 Seminole, FL 33775 727-210-2350 www.caahep.org

Admissions Requirements

Admissions Requirements
Admission Requirements and Eligibility

- A minimum high school grade-point-average of C+ (2.5) or a minimum average score of 55 on the GED test, or a minimum college grade-point-average of C (2.25) for both transfer students and Henry Ford College students

The program is restricted and admits students based on space availability. Admission is on a first-come, first-served basis. Students must see the Health Careers advisor for admission to the program and are highly encouraged to complete their admission requirements as early as possible.

Additional Program Requirements

Accreditation standards require that students do not receive compensation/payment, monetary or otherwise, from any clinical site for any portion of their clinical externship ([MOA190 Medical Office Externship](#)).

The following courses must be taken within the same academic year in the following sequence:

- Fall - [MOA122 Intro Med Asst Clinical Proced](#)
- Winter - [MOA152 Med Assist. Clinical Proc II](#)
- Winter/Summer - [MOA190 Medical Office Externship](#)

In order to begin the clinical procedures course of the [Medical Assistant Certificate](#) program, [MOA152 Med Assist. Clinical Proc II](#), students must meet the following pre-requisites all with a B- or better:

- [MOA101 Admin Medical Procedures I](#)
- [MOA122 Intro Med Asst Clinical Proced](#)

And the following with a C or better:

- [MATH100 Basic Tech Mathematics](#) or higher
- [BIO134 Essentials Anatomy&Physiology](#) or [BIO233 Anatomy and Physiology I](#) and [BIO234 Anatomy and Physiology II](#)

During the program the students will be required to submit proof of all of the following by **designated program deadlines**:

- Active health insurance coverage
- Completion of physical examination
- Two-step tuberculosis PPD test (2-step TB test)
- Evidence of required immunizations and titers.
- American Heart Association, Basic Life Support for Healthcare Providers certification (AHA-BLS for Healthcare Providers card) valid throughout the [Medical Assistant Certificate](#) program (may be satisfied by [AH105 Basic Life Support Healthcare](#)).
- Valid driver's license or state issued identification card with a photo.
- Must pass the drug screen on the first test.
- Criminal background check.

Program Learning Outcomes

Perform entry level patient assessment and care in an ambulatory setting showing proficiency in patient safety, wellness and education based on scope of practice and national standards.

Demonstrate mathematical processes related to administering medication, mensuration of a patient using various methodologies, and reading clinical/laboratory equipment and graphs.
Demonstrate the ability to successfully perform clinical lab procedures, safety and emergency procedures along with patient preparation in the ambulatory and inpatient care setting.
Communicate effectively using verbal, non-verbal, and written communication as it relates to various health care providers and businesses.
Perform administrative duties based on scope of practice as it relates to finances, billing and insurance, and effective practice management.

Subject	Semesters to Complete Program		
Medical Office Assistant	2		
Program Description			
A certificate designed to provide entry-level skills for medical billing and medical coding specialists. The Program provides instruction necessary for reimbursement of health care services, including review of medical records, assigning diagnostic and procedural codes, verification of insurance, claim preparation, and posting and balancing of accounts. Students will be able to recognize, evaluate, and interpret inconsistencies, discrepancies, and inaccuracies in the billing and coding processes. Physician billing as well as facility billing procedures are developed.			
Program Accreditation Information			
Upon completion of the Medical Insurance Specialist program students are eligible to take the certification examination for Certified Medical Administrative Specialists (CMAS). Students may also consider taking the Certified Medical Billing Insurance Examination (CMBI) offered by the American Association of Professional Coders. These credentials may be necessary for employment in administrative medical office duties.

Admissions Requirements

Admissions Requirements
Additional Program Requirements
Adherence to the program requirements outlined in the Student Handbook.
Achievement of a minimum grade of C or better in all required core and required support courses.

Program Learning Outcomes

Demonstrate the process of producing procedural and diagnostic claims for the major insurance carriers.
Demonstrate the correct process of insurance procedures in the areas of physician and facility billing.
Communicate effectively with clients, providers, and insurance agencies.

Program Information

Program Title Media Communication Arts	Program Code MEDIACOMMAA		
Degree Type Associate in Arts			
Minimum Credits for Program Completion 60	Program Eligible for Financial Aid? Yes		
Subject Media Communication Arts	Semesters to Complete Program 4		
Program Description Provides a comprehensive foundation of study and practice in the areas of media production, editing, writing, performance, and management for radio, television, film, broadcast journalism, public relations, media performance, and social media. This specialization is developed through a range of courses incorporating both theoretical classroom academic knowledge and creative hands-on use of hardware, software, studios, and labs combined with real-world assignments and experience to provide successful students with a solid foundation for pursuing a four-year related degree at a transfer institution or as a stepping stone into the field.

Admissions Requirements

Admissions Requirements
Additional Program Requirements
The purchase of minimal support materials including headphones, binders, a flash drive, and additional items will be required for program project needs. Individual instructors will provide specific materials lists.

Program Learning Outcomes

Assess issues relating to media literacy and ethics using practices of media criticism.

Demonstrate media-related skills including media writing, script analysis, audio and video performance, and criticism.
Implement the use of industry-standard software and hardware to produce and edit audio and video works.
Examine historical and contemporary issues as they apply to the legal aspects of the media industry.
Solve problems by collaborating with team members on a media project in an ensemble writing, production, performance, editing or directing environment.

Admissions Requirements

Admissions Requirements

Students must select one the following degree types for their program of study to be automatically admitted to this certificate program:

Associate in Arts

Associate in Science

Associate in General Studies

Once requirements are complete a graduation application should be submitted for receipt of the certificate.

Program Learning Outcomes

Compare and contrast the United States with other nations or world regions, addressing social (economic, political and cultural) issues, patterns of diversity, or aspects of inequality.

Effectively communicate ideas appropriate to their discipline using standard English, through written and verbal communication.

Demonstrate skills for computer technology, including Internet, network and advanced file operations. Skills will include organizing, managing, and presenting data using office productivity software. Students will also identify security and integrity threats and identify unethical actions within their social or professional environments.

Analyze and evaluate information and identify the need for research to draw conclusions, formulate inferences, solve problems and make decisions. Students will also demonstrate information literacy skills by locating, evaluating, selecting, organizing, synthesizing, and ethically documenting information from multiple sources using both informal and formal formats, as appropriate for diverse writing situations.

Apply quantitative skills to analyze situations and make decisions in a variety of contexts.

Admissions Requirements

Admissions Requirements Admission Requirements and Eligibility
1. A minimum high school grade-point-average of C+ (2.5) or a minimum average score of 55 on the GED test, or a minimum college grade-point-average of C (2.25) for both transfer students and Henry Ford College students.

2. ACCUPLACER next Gen Reading score of 231 or higher.
3. Successful completion of MATH100 or higher with a C or better.
4. Successful completion of AH132 or higher with a C or better.

The program is restricted, has a limited enrollment, and admits students based on space availability. Admission is on a first-come, first-served basis. Students must see the Health Careers Program Advisor for admission to the program and are highly encouraged to complete their admission requirements as early as possible.

Additional Program Requirements

Accreditation standards require that students do not receive compensation/payment, monetary or otherwise, from any clinical site for any portion of their clinical practicum ([MOA190 Medical Office Externship](#) – Medical Office Externship). In order to begin the clinical procedures course of the [Medical Practice - Clinical Management AAS Degree](#) program, [MOA152 Med Assist. Clinical Proc II](#), students must meet the following pre-requisites:

The following courses must be taken within the same academic year in the following sequence:

Fall - [MOA122 Intro Med Asst Clinical Proced](#)

Winter- [MOA152 Med Assist. Clinical Proc II](#)

Spring- [MOA190 Medical Office Externship](#)

In order to begin the clinical procedures course of the Medical Assistant component [MOA152 Med Assist. Clinical Proc II](#) students must complete the following pre-requisites all with a B- or better:

[MOA101 Admin Medical Procedures I](#)

[MOA110 Process Hlth Insurance Claims](#)

[MOA122 Intro Med Asst Clinical Proced](#)

And the following with a C or better:

[MATH100 Basic Tech Mathematics](#) or higher

[BIO134 Essentials Anatomy&Physiology](#) or both [BIO233 Anatomy and Physiology I](#) and [BIO234 Anatomy and Physiology II](#)

During the program the students will be required to submit proof of all of the following by **designated program deadlines**:

- Active health insurance coverage.

• Completion of physical examination.

• Two-step tuberculosis PPD test (2-step TB test).

• Evidence of required immunizations and titers.

• American Heart Association, Basic Life Support for Healthcare Providers (AHA-BLS for Healthcare Providers card) valid throughout the Medical Assisting coursework (may be satisfied by [AH105 Basic Life Support Healthcare](#)).

• Valid driver's license or state issued identification card with a photo.

• Must pass the drug screen on the first test.

• Criminal background check.

Courses Required for Program Admission

AH132 Intro to Healthcare Profession

Program Learning Outcomes

Perform entry level patient assessment and care in an ambulatory setting showing proficiency in patient safety, wellness and education based on scope of practice and national standards.
Demonstrate mathematical processes related to administering medication, mensuration of a patient using various methodologies, and reading clinical/laboratory equipment and graphs.
Demonstrate clinical lab procedures, safety and emergency procedures along with patient preparation in the ambulatory and inpatient care setting.
Communicate effectively using verbal, non-verbal, and written communication as it relates to various health care providers and businesses.
Perform administrative duties based on scope of practice as it relates to finances, billing and insurance, and effective practice management.
Apply management theory to effectively supervise the human resources of an organization.
Solve common problems in managing the business office of a medical or medical related organization.

No Requirement Level

Program Title	Program Code
Nursing AAS Degree	NURSE.AAS

1. Be admitted to Henry Ford College.
2. **GPA:** Have a cumulative grade point average of 2.70 or better in pre-requisite courses to the nursing program
3. **Appointment:** It is recommended that all prospective Nursing students schedule an appointment with one of the Student Success Navigators through the HFC Advising Office. Students who intend to apply to the Nursing program must first attend/view a virtual [Intake | Nursing Information Session](#) available through the Nursing website. Admissions tab to be completed within one year of application submission. After attending this virtual session, students must record their date of attendance as they will enter this date on their Nursing application.
4. **Application:** Submit a nursing program application with all required documentation by application deadline. Application deadline dates can be found on the [nursing program website](#).
5. **Grades:** Complete all prerequisite, co-requisite, and support courses with a "C" grade or better. No pre-requisite, co-requisite or support courses can be repeated more than one time to receive a higher grade. GPA will be calculated by averaging the first two course attempted grades per course. "W" and "DR" grades will be counted as an attempt, therefore only leaving one attempt remaining to use for GPA.
6. **Age:** Due to clinical agencies minimal age requirements, applicants must be at least 18 years of age at the start of the nursing program.
7. **Courses Required for Program Admission:** Complete the following, with a "C" grade or better:
 - Biology: Complete:
 - [BIO131 Introduction to Biology](#) or its transfer equivalent or better or a High school grade of "A" or "B" throughout a one year laboratory Advance Placement course
 - [BIO233 Anatomy and Physiology I](#)
 - [BIO234 Anatomy and Physiology II](#)
 - Mathematics: Complete one: [MATH115 College Algebra](#), [MATH131 Math for the Modern World](#), [MATH141 Introduction to Statistics](#), [MATH165 Mathematics for Calculus](#), [MATH175 Precalculus](#), [MATH180 Calculus 1](#)
 - Other Courses: Complete: [ENG131 Introduction College Writing](#), [PSY131 Introductory Psychology](#), [HCS131 Computers in Health Care](#) or [CIS100 Intro Info Tech](#)
8. **Nursing Admission Test (NAT):** Successfully complete the NAT.
 - The required Nurse Admission Test (NAT) is offered by the College and must be taken at HFC.
 - All Nat scores at time of application deadline date cannot be over 1 year old.
 - Students will be allowed 2 attempts in a 12-month period. Students who do not pass after the 2nd attempt must wait 1 year from the 2nd attempt date before being eligible to test again.
 - The [Learning Lab](#) offers free assistance to prepare for this exam.
 - The NAT requirements are:
 - Math proficiency at 80%.
 - Reading composite proficiency at 80%.
 - Grammar proficiency at 80%.
 - Vocabulary proficiency at 80%.
 - Students unsuccessful on their first test may choose in their second testing attempt to only take those subject areas where a score of 80% was not achieved in their first attempt.

Use evidence based practices in the delivery of nursing care.
Communicate effectively with individuals, families, communities and the health care team using a variety of methods, including informatics.
Utilize the nursing process and standards of care in promotion of health and wellness and in the prevention and management of illness for individuals across the life span.

Respect the client's cultural diversity by incorporating professional nursing values of legal, ethical, and caring behaviors through lifelong learning.
Collaborate as a member of the interdisciplinary health care team to provide quality care and integrate safety that reduces harm to clients.
Integrate critical thinking and clinical decision making to make sound clinical judgments.
Advocate on behalf of the client, the family and the community, who are a source of control and full partners when producing compassionate care.

Program Information

Program Title Nursing Care Skills Certificate	Program Code NURSE.CA
Degree Type Certificate of Achievement	
Program Eligible for Financial Aid? No	
Subject Nursing	
Last Term students eligible to graduate Summer 2027	
Program Description This five-week certificate program prepares individuals to become a Nurse Aide. Aide's render care to clients in hospitals, long-term care facilities, and in home-care. The program consists of 40 hours of course work in theory, 50 hours of laboratory activities, and 30 hours in a clinical agency. The course requires consistent attendance from 9:00 a.m. - 3:30 p.m., four days a week. Successful mastery allows testing at the state level to receive the Certified Nurse Aide (CNA) designation. After certification, many students return to school to become nurses or other health care professionals. The CNA program is a great foundation for an Associate Degree in Applied Science.

OPTECH.AAS - Ophthalmic Technician

Program Information

Program Title Ophthalmic Technician AAS Degree	Program Code OPTECH.AAS		
Degree Type Associate in Applied Science			
Minimum Credits for Program Completion 60	Program Eligible for Financial Aid? Yes		
Subject Ophthalmic Technician	Semesters to Complete Program 7		
Program Description Prepares individuals as entry-level Ophthalmic Technicians. The first year of the program is devoted to building a strong foundation in core technical courses and their corresponding academic support courses. Students receive a comprehensive introduction to ophthalmic technology with simulated and actual clinical equipment. During the second year, the program continues with advanced didactic conferences and studies while students begin the clinical component of the program, consisting of approximately 960 hours in a variety of diverse vision care clinical settings.			
Program Accreditation Information The Ophthalmic Technician program is accredited by the International Council of Accreditation for Allied Ophthalmic Education Programs , 2025 Woodlane Drive, St. Paul, MN 55125-2998; (651) 731-7244.

School Health & Human Services	Academic Department Health Careers, Education, and Human Services		

Admissions Requirements

Admissions Requirements
Students who meet all admission requirements are considered qualified and are admitted to the program once per year in the fall semester on a "first-qualified, first-admitted" basis. Acceptance into the college does not constitute nor guarantee admission to the program. Final approval to enroll in the program comes from the [Ophthalmic Technician AAS Degree](#) Program Director.

Program Admission Requirements

- College GPA of at least 2.60 or higher for a minimum of 12 academic credits, excluding lower than 100-level courses.
- Complete one of the following:
 - Accuplacer Next Gen 255+ Reading score OR
 - [ENG131 Introduction College Writing](#), [ENG131A Intro College Writing \(ALP\)](#), or [ENG131H Honors Intro College Writing](#) with B- or better
- Complete one of the following:
 - [BIO134 Essentials Anatomy&Physiology](#) with a C or better OR
 - [BIO233 Anatomy and Physiology I](#) and [BIO234 Anatomy and Physiology II](#) or college equivalent with a C or better.
- Complete [MATH100 Basic Tech Mathematics](#) or higher with a C or better.

The Program Admission Process

Our Health Career programs are limited enrollment programs with specific admission requirements. In order to get on the qualified list, you must complete the Health Careers Ophthalmic Technician (OPT) application found at the [Health Careers Admissions Process](#) site and all the OPT admission requirements. It is recommended that students interested in a health career meet with the Health Careers Student Success Navigator located in the Welcome Center Advising area. Make an appointment with the Health Careers Student Success Navigator early in your planning process. This will allow you to discuss program options and create an academic plan to qualify for the selected program.

Due to the number of credit hours required for program completion and the intensity of the program, students are encouraged to complete as many of the Required Support Courses as possible prior to entering the program. The first courses that a student should complete are those required for program admission followed by the other Required Support Courses.

Additional Program Requirements

Prior to starting the program:

- Applicants must attend informational and orientation meetings scheduled by program director for Ophthalmic Technician Program.
- Within two months of beginning second year clinical rotations, students must provide a current American Heart Association, Basic Life Support for Healthcare Provider certification (AHA, BLS Healthcare Provider) valid through remainder of program. This may be completed by taking [AH105 Basic Life Support Healthcare](#)

Program Supplies

- Students will be required to purchase clinical uniforms and supplies including electronic devices (i.e. iPod Touch) for electronic clinical documentation. Do not purchase in advance. Specific directions will be given during orientation meeting.

Program Deposit

- At the time of formal admission to the program, each applicant is required to pay a \$100 fee to secure a place in the program. This fee is refunded only if the student is still active in the program October 15 of Fall Term 1.

Health Appraisal

Students in the OPT program are expected to meet the same physical and mental health requirements as an ophthalmic technician.

A representative OPT Job Profile listing these requirements as well as environmental conditions of this occupation is available through the Health Careers Office.

Final acceptance and continuation in the OPT program is contingent upon fulfilling and maintaining minimum program requirements and proof of the following by specified deadline dates:

- Physical examination (must meet job profile requirements as determined by a physician and validated on health form)
- Required titers from previous immunizations and needed immunizations from titer results, if necessary. Evidence of titers must be provided by submission of current lab copies
- Tuberculosis screening
- Vaccinations as required by health care community, including flu vaccine
- Health insurance coverage throughout clinical externship portion of the program

Criminal Background Check and Drug Screen

Consistent with Section 20173 of the Michigan Public Health Code and the requirements of our clinical affiliates, a Criminal Background Check and Drug screen clearance (on first test) are required for all students in the OPT program prior to beginning clinical assignments. The cost for this test is in addition to the basic tuition and fee schedule. Students who are not cleared for clinical through the health appraisal, criminal background check, and have not passed the drug screen on the first test will not be able to complete the OPT program.

Courses Required for Program Admission

BIO134 Essentials Anatomy&Physiology, BIO233 Anatomy and Physiology I, BIO234 Anatomy and Physiology II

Program Learning Outcomes

Perform technician-level tasks safely and accurately defined by national certification and accreditation standards.
Communicate and collaborate effectively as part of an interdisciplinary health care team.
Model professional and ethical behaviors in the healthcare environment.
Performs administrative duties of an ophthalmic technician.
Calibrate and maintain ophthalmic equipment and instrumentation.
Evaluate eye movements and binocular functions.
Measure visual acuity and visual fields.
Perform surgical scrub, change gloves and gown, and monitor sterile field during minor and major eye surgery to meet professional standards.
Perform ocular imaging procedures.

PARALEGAL.AB - Paralegal Studies

Program Information

Program Title Paralegal Studies AB Degree	Program Code PARALEGALAB		
Degree Type Associate in Business			
Minimum Credits for Program Completion 60	Program Eligible for Financial Aid? Yes		
Subject Paralegal	Semesters to Complete Program 4		
Program Description Offers students a solid foundation of core legal knowledge and essential skills necessary for a career in the legal profession. A paralegal is employed by a law office, business, or government agency, and performs specifically delegated substantive legal work for which a lawyer is responsible. Graduates may enter the workforce as a paralegal or continue their education by transferring to a four-year baccalaureate-degree institution. Paralegals must work under the supervision of an attorney. Paralegals are not lawyers and are not permitted to provide legal services directly to the public except as permitted by law.			
The Paralegal Program at Henry Ford College is approved by the American Bar Association.

School Business, Entrepreneurship, PD	Academic Department Business & Economics		

Admissions Requirements

Admissions Requirements The Paralegal Studies AB Degree Program at Henry Ford College welcomes transfer students from institutions of higher education. There are no minimal transfer credit requirements. Students may transfer in a maximum of 40 semester credit hours in accordance with Henry Ford College's policy. Of those, students may transfer in a maximum of 12 legal specialty semester credit hours, of which at least 4 must have been earned through traditional classroom instruction. The transfer credits from legal specialty courses must be approved by the Director of the Paralegal Studies AB Degree Program to ensure that the credit is classified as legal specialty and meets the course objectives of the course for which credit is being awarded. Legal specialty courses are defined as: (1) cover substantive law or legal procedures or processes, (2) have been developed for paralegals, and (3) emphasize practical paralegal skills. Additional requirements for approval of transfer legal specialty credits are: - The course must be considered college-level. - Only courses in which the student has received a grade of 2.0 ("C") or higher may transfer. - Official transcripts must be sent directly from the student's previous college to HFC.
--

Program Learning Outcomes

Demonstrate knowledge and understanding of substantive law in one or more areas of practice.
Prepare legal documents using proper legal reasoning and analysis of issues, facts and law.
Use critical thinking skills and legal research skills to solve legal problems and make well-reasoned legal and ethical decisions.
Articulate the structure of the legal system and the paralegals duties and responsibilities for the delivery of legal services within that system.
Critically analyze and resolve legal problems and communicate these results in a clear and effective manner, both orally and in writing

Demonstrate the computer, time management, organizational, and communication skills necessary to work professionally and efficiently in a legal environment.

Admissions Requirements

Admissions Requirements

Students must have already successfully completed an A.A., A.B., A.S., or Bachelor's degree, from a regionally accredited institution. A four-year degree is highly recommended. Students following this curriculum must have proof of their A.A., A.B., A.S., or Bachelor's degree on file and entered on their official Henry Ford College transcript before beginning this curriculum.

Program Learning Outcomes

Prepare legal documents using proper legal reasoning and analysis of issues, facts, and law.
Use critical thinking skills and legal research skills to solve legal problems and make well-reasoned legal and ethical decisions.
Articulate the structure of the legal system and the paralegals duties and responsibilities for the delivery of legal services within that system.
Critically analyze and resolve legal problems; and communicate these results in a clear and effective manner, both orally and in writing.
Demonstrate the computer, time-management, organizational, and communication skills necessary to work professionally and efficiently in a legal environment.

PARAMED.CA - Paramedic

Program Information

Program Title Paramedic Certificate	Program Code PARAMED.CA		
Degree Type Certificate of Achievement			
Program Eligible for Financial Aid? Yes			
Subject Allied Health			
Last Term students eligible to graduate Summer 2027			
Program Description Paramedics are highly trained members of the health-care community often responsible for bringing life-saving diagnostic and treatment skills to the patient at the scene of an emergency. Paramedics receive intense training in EKG interpretation, emergency pharmacology, and advanced life-support procedures. The scope of practice of the paramedic is rapidly expanding, creating a number of new employment opportunities. The EMS Program at HFC offers the options of certificates of achievement in Basic EMT and Paramedic, or the option of an Associate in Applied Science degree. The HFC Paramedic Program has been awarded the highest level of approval through the Michigan Department of Health and Human Services, EMS & Trauma Division.

PARAMEDIC.AAS - Paramedic

Program Information

Program Title Paramedic AAS Degree	Program Code PARAMEDIC.AAS
Degree Type Associate in Applied Science	
Program Eligible for Financial Aid? Yes	
Subject Allied Health	
Last Term students eligible to graduate Summer 2027	
Program Description Designed to meet the needs of students interested in entry-level training as well as those seeking career advancement in the emergency medical and paramedic fields. Emergency Medical Technology offers an exciting and challenging health-care career for individuals interested in providing emergency care in the pre-hospital or hospital emergency department setting.	
Due to health care reform issues and the growing recognition of the Emergency Medical Technician, also known as an EMT, a professional member of the health-care team, career opportunities for EMTs of all levels of licensure are developing and expanding. Basic Emergency Medical Technicians are trained in basic life support procedures and the principles of care and transportation of the sick and injured. Basic EMT licensure qualifies the student for an entry-level position as an emergency care provider with municipal and private ambulance services as well as some hospital emergency departments. The basic EMT license is often a prerequisite for employment as a firefighter. (Progressive fire departments in our service area require a paramedic license. An EMT Basic license is the first step in meeting this criterion.)

PELED.AA - Pre-Elementary Education

Program Information

Program Title Pre-Elementary Education AA Degree	Program Code PELED.AA
Degree Type Associate in Arts	
Minimum Credits for Program Completion 60	Program Eligible for Financial Aid? Yes
Subject Pre-Education	Semesters to Complete Program 4

Program Description Designed for students seeking teacher certification in Elementary Education. This degree focuses on teaching children in grades K-8. Upon completion of this program students are eligible for work in various education and child care professions, however, transfer to and completion of a four-year university teacher preparation program is necessary for full teacher certification. When following university articulation guides, graduates pursuing a bachelor s degree should be able to transfer all of the required and elective coursework toward that degree.

Admissions Requirements

Admissions Requirements
The law requires new teachers, school administrators, school psychologists, and other personnel to provide documentation of a completed criminal record check. Students who complete field experiences as part of their HFC coursework must provide a statewide criminal record check prior to working with children in public or non-public schools.

Program Learning Outcomes

Apply current educational theories and practices to a classroom setting.
Apply humanities concepts within the pre-kindergarten through middle school classroom.
Apply knowledge of the physical, emotional, intellectual, and social development theories of the learner in a school setting.
Apply knowledge of the exceptionalities, learning environments, and laws as they relate to special education programs.
Develop lesson plans implementing educational software for grades PK-6.
Analyze elementary and middle school mathematics at the level necessary for teaching.
Construct scientific knowledge using inquiry-based techniques.

Simple Requisites

Core Course Requirements
Pre-Elementary Education AA - Core Course Requirements Type Completion Requirement
Complete ALL of the following Courses: - EDU256-Educational Psychology 3 credits - EDU250-Humanities/Perform Art Educat 3 credits - EDU260-History in Elementary Schools 3 credits - EDU296-Exceptional Child 3 credits - EDU298-Found of Educ With Pract Exp 4 credits - ENG246-Intro to Children's Literature 3 credits - GEOG132-World Regional Geography 3 credits - MATH122-Math for Elem Teachers I 4 credits - CIS221-Instruction Tech for Educators 3 credits
Complete the required Natural Sciences courses within one of the following three pathways. Consultation with an academic advisor is recommended to determine the correct pathway.
Transferring to Wayne State University- Natural Science Students completing the Wayne State University Transfer pathway complete the required Science course listed below. Complete ALL of the following Courses: SCI212-Earth Science for Educators 4 credits
Transferring to the University of Michigan Ann Arbor- Natural Science Students completing the University of Michigan Ann Arbor Transfer pathway, complete one the two Science courses listed below. Complete at least 1 of the following courses: SCI212-Earth Science for Educators 4 credits OR SCI213-Lrning by Inquiry: Life Sci 4 credits
Transferring to Eastern Michigan University- Natural Science Students completing the Eastern Michigan University Transfer pathway complete the required Science course listed below. Complete ALL of the following Courses:

SCI213-Lrning by Inquiry: Life Sci 4 credits
Transferring to the University of Michigan Dearborn- Natural Science Students completing the University of Michigan- Dearborn Transfer pathway complete the required Science course listed below. Complete at least 1 of the following courses: SCI212-Earth Science for Educators 4 credits OR SCI213-Lrning by Inquiry: Life Sci 4 credits
Additional Comments: Education Paraprofessional Certificate: Students also earn the Education Paraprofessional Certificate after completion of the following courses: <u>PSY131 Introductory Psychology</u> , <u>ENG131 Introduction College Writing</u> , <u>ENG132 College Writing and Research</u> , <u>ENG246 Intro to Children's Literature</u> , <u>CIS221 Instruction Tech for Educators</u> , <u>EDU250 Humanities/Perform Art Educat</u> , <u>EDU296 Exceptional Child</u> , and <u>SCI212 Earth Science for Educators</u> or <u>SCI213 Lrning by Inquiry: Life Sci</u>).

Support Course Requirements

Pre-Elementary Education AA - Support Course Requirements Type Completion Requirement
Complete ALL of the following Courses: - ENG131-Introduction College Writing 3 credits - ENG132-College Writing and Research 3 credits - PSY131-Introductory Psychology 3 credits
Complete the recommended elective courses (14 credits). If you already have credits, such as <u>MATH110 Intermediate Algebra</u> or other course/s, that counts toward the 14 elective credits. If you have not already satisfied your electives, then see the recommended list with the corresponding transfer institution. Consultation with an academic advisor is recommended to determine the correct pathway.
Transferring to Wayne State University- Recommended Electives Complete ANY of the following Courses: - MATH110-Intermediate Algebra 4 credits - MATH122-Math for Elem Teachers I 4 credits
Transferring to the University of Michigan Ann Arbor- Recommended Electives Complete ALL of the following Courses: - ANTH152-Mid East People and Cultures 3 credits - SOC131-Introduction to Sociology 3 credits - SOC251-Ethnic & Racial Diversity 3 credits
Transferring to Eastern Michigan University- Recommended Elective Earn at least 14 credits from the following: - SPC131-Introduction Public Speaking 3 credits - MATH110-Intermediate Algebra 4 credits - MATH222-Math for Elem Teachers II 4 credits - PSC131-Intro to Physical Science 4 credits
Transferring to the University of Michigan Dearborn- Recommended Electives Earn at least 14 credits from the following: - CHEM131-Principles of Chemistry 4 credits - HPE262-Health PE for Elem Teachers 3 credits - MATH110-Intermediate Algebra 4 credits - MATH222-Math for Elem Teachers II 4 credits - PHYS133-Principles of Physics 4 credits - POLS131-Intro Amer Gov't & Pol Sci 3 credits - PSY152-Child Psychology 3 credits - SCI212-Earth Science for Educators 4 credits - SCI213-Lrning by Inquiry: Life Sci 4 credits
Electives: Any 100-level or higher transfer or HFC courses can be used as electives. Recommended electives for University of Michigan Dearborn: <u>CHEM131 Principles of Chemistry</u> , <u>HPE262 Health PE for Elem Teachers</u> , <u>PHYS133 Principles of Physics</u> , <u>POLS131 Intro Amer Gov't & Pol Sci</u> , <u>PSY152 Child Psychology</u> , <u>SCI212 Earth Science for Educators</u> , <u>SCI213 Lrning by Inquiry: Life Sci</u> Recommended elective for Eastern Michigan University: <u>SPC131 Introduction Public Speaking</u> Recommended electives for Wayne State University: See an academic advisor and university transfer advisor. Earn at least 14 credits

PHARM.AS - Pre-Pharmacy

Program Information

Program Title Pre-Pharmacy AS Degree	Program Code PHARM.AS
Degree Type Associate in Science	
Minimum Credits for Program Completion 67	Program Eligible for Financial Aid? Yes

Subject Health Careers	Semesters to Complete Program 5		
Program Description Prepares students interested in becoming pharmacists for transfer to a 4-year institution. Provides students with a solid foundation using a set of carefully selected courses, which will maximize the transfer of course work. Courses were selected to include the general admission criteria used by pharmacy schools and formal transfer agreements HFC maintains with other institutions. Pre-Pharmacy students are strongly encouraged to work closely with the Pre-Pharmacy advisor before selecting their courses.

Admissions Requirements

Admissions Requirements
Students should meet with the Pre-Pharmacy advisor on a regular basis to select the correct courses, their sequence and review the desired transfer institution requirements.

Program Learning Outcomes

Incorporate principles of general and organic chemistry to apply concepts.
Differentiate between algebraic and trigonometric concepts.
Communicate personal abilities to write effectively.
Apply biological concepts and principals in the analysis of biological processes.
Interpret written forms of communication.
Demonstrate interpersonal communication skills.

PLMTT.AAS - Plant Maintenance Trades

Program Information

Program Title Plant Maintenance Trades AAS Degree	Program Code PLMTT.AAS		
Degree Type Associate in Applied Science			
Minimum Credits for Program Completion 60	Program Eligible for Financial Aid? Yes		
Subject Skilled Trade & Apprenticeship	Semesters to Complete Program 4		
Program Description Provides the related trades instructional classes for registered Department of Labor and other industrial apprentices involved in the maintenance of manufacturing systems. Apprentices in these skilled trade classifications take courses defined by their employer or joint apprentice committee. They also must complete on-the-job hours of work and skills certification to qualify for a journeyman's certification or the equivalent. Apprentice certificate educational programs are typically 38 credit hours or longer in duration. Apprentice or journeyman students may also be eligible to apply credits earned in their trade's educational program toward the 60 credit hours required for the degree. Additional licensing test preparation is also available for specific trades such as the State of Michigan licensing for electricians.			
Faculty Contact James Anderson	Faculty Contact Email jwanderson3@hfcc.edu	Faculty Contact Phone 313-845-6351	Faculty Contact Office Location E-164K
Academic Advisor Rachel Vanzutphen	Academic Advisor Contact Email rvanzutphen@hfcc.edu	Academic Advisor Contact Phone 313-845-9873	Academic Advisor Office Location E-211L
School Business, Entrepreneurship, PD	Academic Department Skilled Trade & Apprenticeship		
Admissions Requirements Designed for employer-sponsored industrial apprentices. Admission is restricted to those approved by TAE apprentice coordinator.			
Program Learning Outcomes Demonstrate an understanding of the mathematical functions specific to their trade.			

Demonstrate an understanding of the occupational health and safety requirements relative to the workplace in general and specific to their trade.
Demonstrate an understanding of basic industrial computer applications in the general workplace and specific to their trade.
Demonstrate an understanding of the application of graphic design relative to the general workplace and specific to their trade.
Demonstrate an understanding of the following essential knowledge and skills: troubleshooting, measurement, communication, use of hand tools, use of personal protective equipment, graphic interpretation, and problem solving.

PREENGINELECCOMP.AAS - Pre-Engineering: Electrical/Computer

Program Information

Program Title Pre-Engineering: Electrical/Computer	Program Code PREENGINELECCOMPAAS		
Degree Type Associate in Applied Science			
Minimum Credits for Program Completion 74	Program Eligible for Financial Aid? Yes		
Subject Pre-Engineering	Semesters to Complete Program 4		
Program Description The Pre-Engineering: Electrical/Computer program enables students to complete the courses in the first two and half years of the Bachelor of Science program in Electrical/Computer Engineering at University of Michigan - Dearborn. Students take physics, math, chemistry, general education, and program specific courses required by the engineering program. Upon completion of this program, successful students can transfer to the University of Michigan - Dearborn to complete their final years of engineering. The HFC articulation agreement with the University of Michigan - Dearborn makes the transfer process easier. NOTE: Students should meet with the Engineering Faculty Advisor for assistance with registering for the correct series of courses.			
Faculty Contact Hassan Nameghi	Faculty Contact Email hnameghi@hfcc.edu	Faculty Contact Phone 313-317-1746	Faculty Contact Office Location J-106B
Academic Advisor Brandi Walthall-Johnson	Academic Advisor Contact Email bswalthall-johnson@hfcc.edu	Academic Advisor Contact Phone 313-317-6811	Academic Advisor Office Location G-120J
School Science, Tech, Engr & Math	Academic Department Engineering Technology		

Admissions Requirements

Admissions Requirements
Successful completion of [ENGR130 Intro to Engineering](#) or permission from the Chair of the Pre-Engineering Department.

Program Learning Outcomes

An ability to identify, formulate, and solve engineering problems by applying principles of science and mathematics.
Demonstrate the ability to work in teams to solve introductory engineering and math problems.
Define the roles of electrical/computer engineers and decide his/her pathway.

Program Learning Outcomes

Civil Society and Culture: Compare and contrast the United States globally with other nations or regions, addressing one or both of the following: (1) social, economic, political and cultural issues or (2) patterns of diversity or inequality, including racial, ethnic, religious or gender differences.
Communication: Effectively communicate ideas appropriate to their discipline using Standard English, through written and verbal communication.
Computer Technology: Demonstrate skills for computer technology, including internet, network and advanced file operations. Skills will include organizing, managing, and presenting data using office productivity software. Students will also identify security and integrity threats and identify unethical actions within their social or professional environments.
Critical Thinking/Information Literacy: Demonstrate the ability to analyze and evaluate information and identify the need for research to draw conclusions, formulate inferences, solve problems and make decisions. Students will also demonstrate information literacy skills by locating, evaluating, selecting, organizing, synthesizing, and ethically documenting information from multiple sources using both informal and formal formats, as appropriate for diverse writing situations.
Quantitative Literacy: Apply quantitative skills to analyze situations and make decisions in a variety of contexts.

PREOPHTHALMICTECH - Pre-Ophthalmic Technician

Program Information

Program Title Pre-Ophthalmic Technician AS Degree	Program Code PREOPHTHALMICTECH
Degree Type Associate in Science	
Minimum Credits for Program Completion 60	Program Eligible for Financial Aid? Yes
Subject Ophthalmic Technician	Semesters to Complete Program 4

Program Description
Provides students with the general academic background to be successful in their chosen health care field. For students pursuing admission to the [Ophthalmic Technician]/[programs/ophthalmic-technician-associate-applied-science] program, please follow these steps:

1. Apply to the Ophthalmic Technician (OPT) program at the Health Careers Admissions Process site.
Students are strongly urged to meet with a health careers student success navigator (advisor) within the first semester of course work.
2. Complete the [Ophthalmic Technician]/[programs/ophthalmic-technician-associate-applied-science] program admission requirements.
a. College GPA of at least 2.60 or higher for a minimum of 12 academic credits, excluding lower than 100-level courses, HPE activity, studio and performance classes (if applicable),
b. ACCUPLACER Reading score of 80 or better.
c. Eligible for placement into ENG 131
d. Complete [BIO-134: Essentials of Anatomy and Physiology]/[courses/bio-134] or college equivalent with a C or better.
e. Complete one of the following:
[MATH 100: Basic Technical Mathematics]/[courses/math-100] with a C or better.
[MATH 101:Mathematics for Health Careers]/[courses/math-101] with a C or better.
Eligible for placement into MATH 080.

Contact the Health Careers Student Success Navigator to confirm completion of steps 1 & 2 and placement on the qualified list.

While on the qualified list complete as many of the required program support courses as possible in the [Ophthalmic Technician]/[programs/ophthalmic-technician-associate-applied-science] program. This degree does **NOT** have to be completed to be eligible for admission / entry to the [Ophthalmic Technician]/[programs/ophthalmic-technician-associate-applied-science] program. Only program admission requirements must be completed to be placed on the qualified list and begin the program when the next open seat occurs and final approval has been given by the OPT Program Director.

Program Learning Outcomes

Civil Society and Culture: Compare and contrast the United States globally with other nations or regions, addressing one or both of the following: (1) social, economic, political and cultural issues or (2) patterns of diversity or inequality, including racial, ethnic, religious or gender differences.

Communication: Effectively communicate ideas appropriate to their discipline using Standard English, through written and verbal communication.

Computer Technology: Demonstrate skills for computer technology, including internet, network and advanced file operations. Skills will include organizing, managing, and presenting data using office productivity software. Students will also identify security and integrity threats and identify unethical actions within their social or professional environments.

Critical Thinking/Information Literacy: Demonstrate the ability to analyze and evaluate information and identify the need for research to draw conclusions, formulate inferences, solve problems and make decisions. Students will also demonstrate information literacy skills by locating, evaluating, selecting, organizing, synthesizing, and ethically documenting information from multiple sources using both informal and formal formats, as appropriate for diverse writing situations.

Quantitative Literacy: Apply quantitative skills to analyze situations and make decisions in a variety of contexts.

PRERESPHERAPY - Pre-Respiratory Therapist

Program Information

Program Title Pre-Respiratory Therapist AS Degree	Program Code PRERESPHERAPY
Degree Type Associate in Science	
Minimum Credits for Program Completion 60	Program Eligible for Financial Aid? Yes
Subject Respiratory Therapy	Semesters to Complete Program 4

Program Description
Provides students with the general academic background to be successful in their chosen health care field. For students pursuing admission to the [Respiratory Therapist]/[programs/respiratory-therapist-associate-applied-science] program, please follow these steps:

1. Apply to the Respiratory Therapist program at the Health Careers Admissions Process site.
Students are strongly urged to meet with a health careers student success navigator (advisor) within the first semester of course work.
2. Complete the [Respiratory Therapist]/[programs/respiratory-therapist-associate-applied-science] program admission requirements.
- a. College GPA of at least 2.70 or higher for a minimum of 12 academic credits, excluding lower than 100 level courses.
 - b. ACCUPLACER Reading Score of 80 or better.
 - c. Eligible for placement into ENG 131.
 - d. Eligible for placement into MATH 110.
 - e. [AH-100]/[courses/ah-100], with a C grade or better.
 - f. [BIO-233]/[courses/bio-233], with a C grade or better.
 - g. [CHEM-131]/[courses/chem-131], with a C grade or better.

Contact the Health Careers Student Success Navigator to confirm completion of steps 1 & 2 and placement on the qualified list.

While on the qualified list complete as many of the required program support courses as possible in the [Respiratory Therapist]/[programs/respiratory-therapist-associate-applied-science] program. This degree does **NOT** have to be completed to be eligible for admission / entry to the [Respiratory Therapist]/[programs/respiratory-therapist-associate-applied-science] program. Only program admission requirements must be completed to be placed on the qualified list and begin the program when the next open seat occurs and final approval has been given by the Respiratory Therapist Program Director.

Program Learning Outcomes

Civil Society and Culture: Compare and contrast the United States globally with other nations or regions, addressing one or both of the following: (1) social, economic, political and cultural issues or (2) patterns of diversity or inequality, including racial, ethnic, religious or gender differences.
Communication: Effectively communicate ideas appropriate to their discipline using Standard English, through written and verbal communication.
Computer Technology: Demonstrate skills for computer technology, including internet, network and advanced file operations. Skills will include organizing, managing, and presenting data using office productivity software. Students will also identify security and integrity threats and identify unethical actions within their social or professional environments.
Critical Thinking/Information Literacy: Demonstrate the ability to analyze and evaluate information and identify the need for research to draw conclusions, formulate inferences, solve problems and make decisions. Students will also demonstrate information literacy skills by locating, evaluating, selecting, organizing, synthesizing, and ethically documenting information from multiple sources using both informal and formal formats, as appropriate for diverse writing situations.
Quantitative Literacy: Apply quantitative skills to analyze situations and make decisions in a variety of contexts.

Program Title	Program Code		
Pre-Secondary Education AA Degree	PSCED.AA		
Degree Type			
Associate in Arts			
Minimum Credits for Program Completion	Program Eligible for Financial Aid?		
60	Yes		
Subject	Semesters to Complete Program		
Pre-Education	4		
Program Description			
Designed for individuals seeking teacher certification in Secondary Education. This degree focuses on teaching in grades 7-12. Students in this program complete General Education requirements, early professional preparation courses, and begin course work in their teaching majors and minors. Transfer to and completion of a four-year university teacher preparation program is necessary for full teacher certification. Students are advised to consult transfer guides for the school to which they intend to transfer when selecting courses.

Admissions Requirements

Admissions Requirements
The law requires new teachers, school administrators, school psychologists, and other personnel to provide documentation of a completed criminal record check. Students who complete field experiences as part of their HFC course work must provide a statewide criminal record check prior to working with children in public or non-public schools.

Program Learning Outcomes

Apply current educational theories and practices to a classroom setting.
Apply content knowledge to development of lessons to be taught in grades 5-9 and 7-12.
Apply knowledge of the physical, emotional, intellectual, and social development theories of the learner in a school setting.
Apply knowledge of the exceptionalities, learning environments, and laws as they relate to secondary education programs.

Develop lesson plans implementing educational software for grades 5-9 and 7-12.

PTAST.AAS - Physical Therapist Assistant

Program Information

Program Title Physical Therapy Assistant AAS Degree	Program Code PTASTAAS		
Degree Type Associate in Applied Science			
Minimum Credits for Program Completion 68	Program Eligible for Financial Aid? Yes		
Subject Physical Therapy Assistant	Semesters to Complete Program 6		
Program Description Prepares individuals for employment as entry-level Physical Therapist Assistants. Students in this program will have learning experiences in the classroom, laboratory and in local physical therapy facilities. The final semester is spent in full-time (40 hrs/week) clinical externships.			
Program Accreditation Information The Physical Therapist Assistant Program at Henry Ford College is accredited by the Commission on Accreditation in Physical Therapy Education (CAPTE), 3030 Potomac Ave., Suite 100, Alexandria Virginia 22305-3085; telephone: 703-706-3245; email: accreditation@apta.org ; website: http://www.captelonline.org . If needing to contact the program/institution directly, please call 313-317-6576 or email sepedley@hfcc.edu .			
Faculty Contact Stephen Pedley	Faculty Contact Email sepedley@hfcc.edu	Faculty Contact Phone 313-317-6576	Faculty Contact Office Location G-133H

School

Health & Human Services

Academic Department

Health Careers, Education, and Human Services

Admissions Requirements

Admissions Requirements

Students who meet all admission requirements are considered qualified and are admitted to the program once per year in the fall semester on a "first-qualified, first-admitted" basis. Acceptance into the college does not constitute nor guarantee admission to the program. Final approval to enroll in the program comes from the [Physical Therapy Assistant AAS Degree](#) Director.

Program Admission Requirements

1. College GPA of at least 2.80 or higher for a minimum of 12 academic credits excluding lower than 100 level courses.

2. Accuplacer Next Gen (250+) Reading Score.

3. Successful completion of [BIO233 Anatomy and Physiology I](#) or equivalent, with a B- or better, within five years of admission."

4. Successful completion of [PSY131 Introductory Psychology](#), or equivalent, with a C or better.

5. Successful completion of [MATH110 Intermediate Algebra](#) or higher with a C or better, or Accuplacer Next Gen QAS (255+), or ARITHANG (225+).

6. Successful completion of [AH132 Intro to Healthcare Profession](#), with a C or better.

7. Twenty hours or more of observation in a physical therapy setting observing a PTA at work with a letter of confirmation from the supervisory PT or PTA or complete an essay on the roles and responsibilities of a PTA. The assignment for the essay can be obtained from the PTA Program Advisor, Samer Atris (submit either document to the PTA Program Advisor, Samer Atris via email at satris1@hfcc.edu or in person to G-203).

*There may be other pre-admission coursework the student needs to complete based on results of placement tests and/or high school coursework.

The Program Admission Process

Our Health Career programs are limited enrollment programs with specific admission requirements. In order to get on the qualified list, you must complete the Health Careers Physical Therapist Assistant (PTA) application found at the [Health Careers Admissions Process site](#) and all the PTA admission requirements. It is recommended that students interested in a health career meet with the Health Careers Student Program Advisor located in the Health Careers building G in room G-203 on the second floor. Make an appointment with the Health Careers Student Program Advisor early in your planning process. This will allow you to discuss program options and create an academic plan to qualify for the selected program.

Due to the number of credit hours required for program completion and the intensity of the program, students are encouraged to complete as many of the Required Support Courses as possible prior to entering the program. The first courses that a student should complete are those required for program admission followed by the other Required Support Courses.

Courses Required for Program Admission

BIO233 Anatomy and Physiology I, PSY131 Introductory Psychology, AH132 Intro to Healthcare Profession

Program Learning Outcomes

Demonstrate the knowledge base and technical skills to provide care as an entry level Physical Therapist Assistant.

Recognize and demonstrate professional behaviors appropriate for practice as an entry level Physical Therapist Assistant.

Demonstrate behaviors that comply with legal standards and adhere to the ethical standards established by the American Physical Therapy Association for Physical Therapist Assistants.

Demonstrate safe, efficient, and compassionate care for patients in a variety of settings as Physical Therapist Assistants.

Program Information

Program Description

Prepares individuals for employment as entry-level Respiratory Therapists. Graduates of the program are awarded an Associate in Applied Science Degree and are eligible to apply for the National Board of Respiratory Care (NBRC) examination(s) leading to the national credential designation of Registered Respiratory Therapist (RRT) and state licensure as a Respiratory Therapist. The program provides a blend of classroom, laboratory, and clinical experiences. The first year of the program involves completion of technical and support courses. Beginning with the spring semester and throughout the second year of the program, students are required to complete advanced technical courses and a wide variety of clinical rotations. Core courses are offered during the day and only in the semester as indicated in the course sequence. Support courses are usually offered in a variety of semesters and times.

The Henry Ford College Respiratory Therapist program, #200283, Associate in Applied Science degree, in Dearborn, MI is accredited by the Commission on Accreditation for Respiratory Care <http://www.coarc.com/> Student/Graduate outcomes for respiratory therapist programs can be found on the CoARC website at: <https://coarc.com/students/programmatic-outcomes-data/>

Commission on Accreditation for Respiratory Care (CoARC) 817-283-2835, www.coarc.com

Admissions Requirements

Students who meet all admission requirements are considered qualified and are admitted once a year in the fall semester on a "first-qualified, first admitted" basis. Acceptance into the college does not constitute nor guarantee admission to the program. Final approval to enroll in the program comes from the Respiratory Therapist AAS Degree Program Director.

1. College GPA of at least 2.70 or higher for a minimum of 12 academic credits, excluding lower than 100 level courses.
2. Accuplacer Next Gen (250+) Reading Score.
3. Completion of MATH110 Intermediate Algebra or higher with a C or better, or Accuplacer Next Gen QAS (255+), or ARITHANG(225+).
4. Completion of AH132 Intro to Healthcare Profession, with a C grade or better.
5. Completion of BIO233 Anatomy and Physiology I, with a C grade or better.
6. Completion of CHEM111 Chem Skills Pre-Professional or CHEM131 Principles of Chemistry or CHEM141 Prin Gen & Inorg Chem I with a C grade or better.

Our Health Career programs are limited enrollment programs with specific admission requirements. In order to get on the qualified list, you must complete the Health Careers Respiratory Therapist (RTH) application found at the [Health Careers Admissions Process site](#) and all the RTH admission requirements. It is recommended that students interested in a health career meet with the Health Careers Student Success Navigator located in the Welcome Center Advising area. Make an appointment with the Health Careers Student Success Navigator early in your planning process. This will allow you to discuss program options and create an academic plan to qualify for the selected program.

Due to the number of credit hours required for program completion and the intensity of the program, students are encouraged to complete as many of the Required Support Courses as possible prior to entering the program. The first courses that a student should complete are those required for program admission followed by the other Required Support Courses.

Prerequisites: AH132 Intro to Healthcare Profession, BIO233 Anatomy and Physiology I, CHEM111 Chem Skills Pre-Professional, CHEM131 Principles of Chemistry, CHEM141 Prin Gen & Inorganic Chem I

Evaluate a patient's current condition and response to therapy using physical exam, laboratory data, and other clinical information.
Develop a treatment plan specific to the needs of the patient.

Recommend additional procedures and therapy to treat the patient, and modifications to treatment plan.
Administer oxygen therapy according to standard protocol.
Administer aerosolized medication therapy according to standard protocol.
Administer bronchial hygiene and lung volume expansion therapy according to standard protocol.
Recommend initiation, modifications, and liberation from life support.
Administer mechanical ventilation and life support according to standard protocol.
Educate patients and family members concerning disease processes and self-care, and the public on preventative medicine.

SMTECH.CA - Supply Chain Management Technician

Program Information

Program Title Supply Chain Management Technician Certificate		Program Code SMTECH.CA	
Degree Type Certificate of Achievement			
Minimum Credits for Program Completion 32		Program Eligible for Financial Aid? Yes	
Subject Supply Chain Management		Semesters to Complete Program 2	
Program Description Presents practical skills and knowledge for front line workers who are interested in entering the field of logistics and supply chain management. Introduces the basic business functions and their relations to the field of supply chain management, logistics, transportation and warehouse management. Provides fundamental reading, writing, mathematics, computer, and spreadsheets skills.			
Faculty Contact Diana Baran	Faculty Contact Email dbaran@hfcc.edu	Faculty Contact Phone 313-317-1583	Faculty Contact Office Location K-327
Academic Advisor Ashlei Chears	Academic Advisor Contact Email achears@hfcc.edu	Academic Advisor Contact Phone 313-845-6486	Academic Advisor Office Location E-211H
School Business, Entrepreneurship, PD		Academic Department Business & Economics	

Program Learning Outcomes

Develop a working knowledge necessary to become a 21st century front line worker in supply chain management and logistics.
Develop mastery of the core competencies of material handling at the front-line (entry-level to front-line supervisor) required to pass MSCC CLA/CLT certification test.
Demonstrate a working knowledge and basic skills specifically in the areas of logistics, transportation, and warehouse management.
Exhibit proper communication, computer, and mathematics skills necessary for an entry-level position in supply chain management.

SOCWRKCOUNS.AA - Social Work and Counseling

Program Information

Program Title Social Work and Counseling	Program Code SOCWRKCOUNS.AA
Degree Type Associate in Arts	
Minimum Credits for Program Completion 60	Program Eligible for Financial Aid? No
Subject Social Work	Semesters to Complete Program 4

Program Description
Provides knowledge, skills, and abilities necessary to work in a wide variety of health and human service agencies as assistants to licensed professionals or transfer to a university to pursue a Bachelor's degree. Areas of pursuit, either as a technician or through transfer for additional studies and potential licensure, include social work, counseling, special education, substance abuse, gerontology, and human resource development. Students may participate at a supervised field experience in cooperation with mental health agencies including mental health clinics, drug and alcohol abuse centers, special education facilities and programs, community action programs, public assistance offices, hospitals, rehabilitation programs, and residential care programs. Students in the technician pathway have the opportunity to work with a variety of clients including the terminally ill, those with AIDS, the developmentally disabled, and geriatric clients.

Academic Advisor Hannah Doederlein	Academic Advisor Contact Email hdoederlein@hfcc.edu	Academic Advisor Contact Phone 313-317-6868	Academic Advisor Office Location G-203A
School Health & Human Services		Academic Department Health Careers, Education, and Human Services	

Admissions Requirements

Admissions Requirements
Health Appraisal

Potential students must have an interest in working with the ill and disabled. Good physical strength, observation skills, and communication skills are just some of the abilities required for this job. A more detailed sample job profile is available through the Health Careers Office 313-845-9877. Each student must pass a basic physical examination prior to prior to the start of clinical (may include checking blood titers for immunity, vaccinations required by health care community, tuberculosis screening). Any students requesting special accommodations for program admission and progression should contact the Assisted Learning Office at 313-845-9617.

Criminal Background Check and Drug Screen

Consistent with Section 20173 of the Michigan Public Health Code and the requirements of our clinical affiliates, a Criminal Background Check and Drug Screen clearance (on first test) is required for all students in SWK program prior to beginning clinical assignments. The cost for this test is in addition to the basic tuition and fee schedule. For questions regarding this policy, contact the Health Careers Office.

The following are a list of some of the reasons students will be denied registration into courses with field experience, based on the criminal background check:

1. A conviction of a felony or conviction of an attempt to commit a felony within fifteen years preceding the start of the program.
2. A conviction of a misdemeanor involving abuse, neglect, assault, battery, or criminal sexual conduct, or involving fraud or theft, within fifteen years preceding the start of the program.
3. A conviction of a misdemeanor within five years preceding the start of the program.

In order to obtain certification students must also meet all state requirements at [State of Michigan Licensing and Regulations](#)

Students who are not cleared for clinical through the health appraisal, criminal background check and have not passed the drug screen on the first test will not be able to complete the SWK program.

CPR

Students must maintain a valid American Heart Association (AHA). Basic Life Support for Healthcare Provider card throughout the Clinical Externships. May be fulfilled by taking AH-105: Basic Life Support for Healthcare Providers.

Program Learning Outcomes

Discuss and interpret the history of the social work profession and current mental health issue trends.
Apply the different treatment modalities as appropriate to the role of a social work/counseling technician.
Apply the profession's ethical standards and principles including practice with respect and without discrimination.
Apply critical thinking skills within the context of professional mental health and social work practices.
Research the various public health services that provide counseling, mental health and social work services.

SOFTWAREENGINEER.AAS - Software Engineering

Program Information

Program Title	Software Engineering	Program Code	SOFTWAREENGINEER.AAS
Degree Type	Associate in Applied Science		
Minimum Credits for Program Completion	60	Program Eligible for Financial Aid?	Yes
Subject	Computer Information Systems	Semesters to Complete Program	4
Program Description			
Software engineering is the process of analyzing user needs to design, develop, test, deploy and maintain software applications. This program provides students with in-depth skills and knowledge in the Information Technology (IT) and software development areas necessary for an entry-level position or transfer preparation in software engineering, software development, database development, and systems analysis and design. This includes coursework, projects, and extensive hands-on lab work in all the latest technologies including Python, C, C++, C#, Java, SQL, HTML, JavaScript, PHP, mobile application development, secure coding, networking and operating systems (client and server) (software engineering methodologies.

Program Learning Outcomes

Operate a personal computer and productivity software installed on it, including Microsoft Office, file management, the Internet/Web, e-mail, and input/output/storage devices.

Explain the importance of personal responsibility and security in a technological world, including copyright laws, netiquette, ethics, privacy issues, and security threats.

Design, create and manipulate with an enterprise database.

Explain networking standards, protocols, transmission media, and hardware.

Write computer programs using several programming languages, both procedural and object-oriented.

Explain the client-server model of web development and develop client and server-side web pages.

Interface with the Unix/Linux operating system, including the vi editor, file management, and shell scripting.

Analyze, design, and implement an information system.

Create and deliver a professional team presentation.

No Requirement Level

Degree Type			
Associate in Fine Arts			
Minimum Credits for Program Completion		Program Eligible for Financial Aid?	
62		Yes	
Subject		Semesters to Complete Program	
Art (Art History)		4	
Program Description			
A comprehensive study of the foundation skills needed to successfully transfer to a four year Bachelor of Fine Arts program. Course work includes design studies, drawing, painting, photography, ceramics, digital media, and art history - all of which are used to develop an understanding of the visual elements and principals of design as they relate to observational, spatial, and expressive literacy. Craftsmanship, dedication and skill sets are stressed throughout the program. While visual literacy is of utmost importance within the program, learning how to look at, understand and communicate about art, both in a written and oral context, is also stressed. All students will be required to participate in an on-campus Exit Exhibition prior to graduation.

Sarah Krizan	smkrizan@hfcc.edu	313-845-9889	K-248
School	Academic Department		
Liberal Arts	Fine & Performing Arts		

Program Learning Outcomes

Communicate aesthetic concepts in a variety of media utilizing the Visual Elements and Principles of Design.

Create body of two-dimensional work that demonstrates an understanding of the Visual Elements and Principals of Design as they apply to observational literacy.

Create a body of three-dimensional work that demonstrates and understanding of the Visual Elements and Principles of Design as they apply to spatial literacy.

Develop a sense of historical literacy as it relates to the visual arts, and the impact on ones own art, through course assignments and discussions.

Develop a sense of expressive literacy as it relates to the creation of artistic endeavors, and assemble a body of work that validates this capability.

SURTC.AAS - Surgical Technologist

Program Information

Program Title Surgical Technologist AAS Degree	Program Code SURTC.AAS		
Degree Type Associate in Applied Science			
Minimum Credits for Program Completion 63.5	Program Eligible for Financial Aid? Yes		
Subject Surgical Technician	Semesters to Complete Program 5		
Program Description Prepares individuals for employment as entry-level surgical technologists. In the first year of the program, students complete the basic technical and academic support courses. The second year focuses on advanced technical courses and the clinical component of the program. There are two major clinical courses in the second year of the program. Students spend approximately 600 hours in a variety of diverse, quality clinical settings. Core courses in the program are offered only in the semester as indicated in the course sequence. This program meets the standard program guidelines for clinical case requirements.			
Program Accreditation Information The Surgical Technology Program is accredited through the <u>Commission on Accreditation of Allied Health Education Programs (CAAHEP)</u> upon recommendation of the Accreditation Review Council on Education in Surgical Technology and Surgical Assisting (303) 694-9262. Commission on Accreditation of Allied Health Education Programs 9355-113th St N. #7709 Seminole, FL 33775 727-210-2350 www.caahep.org

School Health & Human Services	Academic Department Health Careers, Education, and Human Services		

Admissions Requirements

Admissions Requirements
Admission Requirements and Eligibility

Students who meet all admission requirements are considered qualified and are admitted to the technical part of the program once per year in the summer semester on a "first qualified, first admitted" basis. Acceptance into the college does not constitute nor guarantee admission to the technical part of the program. Final approval to enroll in the technical part of the program comes from the Surgical Technology Program Director.

Program Admission Requirements

- College GPA of at least 2.50 or higher for a minimum of 12 academic credits, excluding lower than 100-level courses, HPE activity, studio and performance classes (if applicable).
- Accuplacer Next Gen (250+) Reading Score or completion of [ENG131 Introduction College Writing](#) with C or higher.
- Completion of [BIO233 Anatomy and Physiology I](#) with a C or higher.

- Complete one of the following:
[BIO135 Microbiology for AHS](#) with a C or higher.
[BIO251 Microbiology](#) with C or higher.
- Complete [AH100 Medical Terminology](#) with a C or higher.

The Program Admission Process

Our Health Career programs are limited enrollment programs with specific admission requirements. In order to get on the qualified list, you must complete the Health Careers Surgical Technologist (SRG) application found at the [Health Careers Admissions Process site](#) and complete all the SRG admission requirements. It is recommended that students interested in a health career meet with the Health Careers Student Success Navigator located in the Welcome Center Advising area. Make an appointment with the Health Careers Student Success Navigator early in your planning process. This will allow you to discuss program options and create an academic plan to qualify for the selected program.

Due to the number of credit hours required for program completion and the intensity of the program, students are encouraged to complete as many of the Required Support Courses as possible prior to entering the program. Students are encouraged to follow the recommended sequence to complete the program in an efficient time. The first courses that a student should complete are those required for program admission and Required Support Courses.

Courses Required for Program Admission
BIO135 Microbiology for AHS, BIO251 Microbiology, BIO233 Anatomy and Physiology I, AH100 Medical Terminology, SRG102 Surgical Technology Intro

Program Learning Outcomes

Create a sterile environment and maintain sterile technique by strictly adhering to the AST Recommended Standards of Practice throughout the entire perioperative experience.
Apply knowledge of surgical procedures to effectively utilize surgical equipment, supplies, instruments, sharps and medications used throughout the surgical procedure.
Demonstrate competence counting all surgical supplies and instruments at each phase of the perioperative experience.
Exhibit professional behavior and integrity by effectively communicating and collaborating with healthcare personnel, operating room team members, and patients.

SWDEV.CA - Software Developer

Program Information

Program Title Software Developer	Program Code SWDEV.CA
Degree Type Certificate of Achievement	
Minimum Credits for Program Completion 21	Program Eligible for Financial Aid? Yes

Subject

Computer Information Systems

Program Description

Prepares students for an entry-level position as a software developer. Students develop a marketable skill-set in designing, programming, and testing software, including windows, web, mobile, database and cross-platform applications. A strong foundation in the most marketable languages (e.g., Python, SQL, C, C++, C#, JavaScript, HTML, CSS, Java, Swift) and technologies is provided along with important accompanying knowledge and skills, such as the use of A.I. in development, team development and review, software quality analysis and version control. This certificate is a stackable credential within our Software Engineering Associate's degree and Computer Science Associate's degree. Software development is consistently ranked as the among the best careers in the country, e.g., #1 in 2023 and #3 in 2024 according to U.S. News and World Report "Best Jobs" report.

Academic Advisor DeJanae Hayes	Academic Advisor Contact Email dhayes8@hfcc.edu	Academic Advisor Contact Phone 313-845-9792	Academic Advisor Office Location E-211C
School Business, Entrepreneurship, PD	Academic Department Computer Technology		

Program Learning Outcomes

Design and develop software programs using structured and object-oriented programming.
Develop web sites using both client and server side languages.
Design and develop software applications for a variety of platforms, e.g., web, windows, mobile.
Design and develop relational database and database applications.
Demonstrate proficiency with all phases of the software development life cycle.

ACT190 - Co-op in Architecture Construction Tech

Overview

Subject	Academic Department	School
Architecture/Construction Tech	Building Sciences	Business, Entrepreneurshp, PD
Course Description		
Cooperative education is a structured method of combining classroom-based education with practical work experience. A cooperative education experience, commonly known as a "co-op," provides academic credit for structured employment experience. Work experience must be directly related to the student's declared major to be eligible.To register for this course, a student must have completed 50% of core coursework, maintain an overall GPA of 2.0 and a program specific GPA of 2.5.		
Course Pre-requisite(s)		
Career Services Officer or Co-op Job Developer Permission		
Credit Hours		
1		

Contact Hours
0.2

Course Fee	Miscellaneous Department Fee
0	0
Academic Level	
Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL)	Acceptable Prior Learning Credit
Yes	Other

Credit for Prior College Level Learning (CPCLL) Details
Student will submit a formal request in writing to the faculty and Associate Dean for work experience to be considered for Credit for Prior College-Level Learning.

The student will complete an interview, a reflective paper, or a presentation to the faculty in which the student develops and describes the learning objectives supported by the work experience, how those learning objectives were achieved and how that learning was put into practice.

Finally, the student must also provide a portfolio (or something comparable) that shows the work completed and provide some form of documentation confirming the work experience (a resume does not suffice) for which Credit for Prior College-Level Learning is requested.

Goals, Topics, and Objectives

Course Goals
Cooperative education helps students make the school-to-work transition, develop career and program-related learning objectives, and work on applicable skills for employment. Placements should provide students with the opportunity to apply and expand upon knowledge learned in the classroom, and develop the skills acquired in their coursework to align with the standards and expectations set by the worksite.

Core Course Topics

- Core Career-Focused Topics:
 - Professional Dress and Demeanor (i.e. attitude, posture, courteousness)
 - Workplace Communication
 - Interviewing Skills
 - Resume Building
 - Networking and Social Media
 - Seeking Employment
 - Career Advancement

Program Specific: 1-3 program specific learning objectives will be developed by the instructor for each individual offering.
Student-defined: Students will create 1-3 learning objectives per credit to be approved by instructor for each individual offering.
Career Services-defined: Build a resume that meets standards of Career Services Officer.
Career Services-defined: Articulate the reasons for professional attire.
Career Services-defined: Wear professional attire while on the worksite.
Career Services-defined: Attend career workshop in professional dress.
Career Services-defined: Display appropriate professional attitude and demeanor while on the worksite.
Career Services-defined: Interview effectively.
Career Services-defined: Attend mock interview, give appropriate answers to five 5 questions

Program Description
Provides students with the opportunity to test, troubleshoot, repair and maintain welding and burning equipment. Students will apply general welding principles and complete electrical theory courses to reinforce their mechanical and electrical on-the-job training.

--

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment will be determined by the instructor based on what is in the best interest of the student's academic growth, including future employability of the student. Assessment may include, but isn't limited to:

- Major final project
- Weekly journal
- Creation and attainment of all learning objectives
- Participation in a career-focused workshop
- Consistent and prompt attendance at worksite
- Employer evaluation

General Course Requirements and Recommendations To be determined by the instructor. Detailed course syllabi will be standardized for all co-op courses and individual course requirements will be available to the AEC and College Council by request "For information only" for each term that the course is offered.

Course Description		
This course is designed to explore selected topics as determined by the academic department and the instructor with emphasis on current Architecture/Construction trends. The specific special topic will be announced together with the prerequisites each term. The student can repeat the course when different topics are offered, earning credit for each different topic. This course may be used toward fulfilling the specific degree requirements for an associate degree or certificate.

Goals, Topics, and Objectives

Core Course Topics
To be determined by the instructor.
To be developed by the instructor for each individual offering.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
All students will be required to complete a comprehensive final examination that assesses the learning of course objectives. This exam must be weighted in a manner so that this exam score is worth a minimum of fifteen percent of the final course grade. All additional assessment of student achievement is left to instructor discretion.
General Course Requirements and Recommendations
To be determined by the instructor. Detailed course syllabi for each section of ACT298 Spec Topics in Arch/Constructi must be approved by the Technology Division prior to the course being offered. A copy of the specific course syllabi will be presented to the CEC and College Council by the Associate Dean, "For Information Only," at the first meeting after the beginning of the term the course is offered.
Texts
To be determined by the instructor.

AH100 - Medical Terminology

Overview

Subject	Academic Department	School
Health Careers	Health, Education, and Human Services	Health & Human Services
Course Description		
Presents health and disease medical terminology in relation to human structure and function. Introduces key elements in the formation and modification of medical terms which then is applied to specific body systems.		
Credit Hours		
4		
Contact Hours		
4		
Course Fee	Miscellaneous Department Fee	
10	0	
Academic Level		
Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL)		
No		

Goals, Topics, and Objectives

Course Goals
Upon completion of this course, the student will have a foundation in the specialized language of medicine so that they are able to define, spell, pronounce, and analyze the common medical terms as well as understand the context in which these medical terms are used.

- Core Course Topics**
- 1. Basic Word Structure
 - 2. Suffixes, roots
 - 3. Prefixes
 - 4. Body as a Whole
 - 5. Digestive System
 - 6. Musculoskeletal System
 - 7. Cardiovascular System
 - 8. Respiratory System
 - 9. Blood System
 - 10. Lymphatic and Immune Systems
 - 11. Urinary System
 - 12. Male Reproductive System
 - 13. Female Reproductive System
 - 14. Integumentary (Skin) System
 - 15. Nervous System
 - 16. Eyes and Ears
 - 17. Endocrine System

Define, spell, and pronounce basic medical word roots, prefixes, and suffixes
Divide common medical terms into their component parts.
Define common medical terms using their component parts.
Construct medical terms by putting word components together using combining forms, prefixes, and suffices for each body system.
Describe anatomical and clinical divisions of the body
Differentiate the directions and planes of the body
Define, pronounce, and spell the common medical terms related to the human body systems
Use common medical terms in both written and verbal formats as related to the human body systems.
Describe the commonly encountered clinical procedures, laboratory tests, diagnostic tests, and therapeutic procedures for each of the human body systems.
Describe an example of a common pathologic condition for each of the human body systems.
Interpret a medical report for a selected body system covered this semester.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
The academic achievement will be assessed using a combination of quizzes, exams, assignments, oral presentations, participation, and a departmental comprehensive final exam.

General Course Requirements and Recommendations
Instructors (or their designees) reserve the right to require students to provide picture identification for test taking, graded papers or projects or other appropriate purposes.

Grading Scale
Grading scale for exams and the final grade:

- 98-100% = A+
- 93-97% = A
- 90-92% = A-
- 87-89% = B+
- 83-86% = B
- 80-82% = B-
- 76-79% = C+
- 70-75% = C
- 67-69% = D+
- 63-66% = D
- 60-62% = D-
- 59% & below = E

All students will be required to complete a comprehensive final exam. The final exam must be at least 20% of the final grade.

Texts
To be determined by the School of Health and Human Services.

AH105 - Basic Life Support Healthcare Providers

Overview

Subject Health Careers	Academic Department Health, Education, and Human Services	School Health & Human Services
----------------------------------	---	--

Course Description
Designed for individuals working in healthcare or for health career and nursing students preparing for their clinical assignments. Course introduces the theory and skills of CPR for victims of all ages. Features ventilation with a barrier device, a bag-mask device, supplemental oxygen, use of automated external defibrillator (AED), and relief of foreign-body airway obstruction. Upon successful completion of the course, including both written and skills testing, the student receives an American Heart Association healthcare provider card (valid for two years).

Credit Hours

Credit for Prior College Level Learning (CPCLL) Details
Current American Heart Association, Basic Life Support for Healthcare Providers card.

Goals, Topics, and Objectives

- Core Course Topics**
- 1. Adult CPR
 - 2. Foreign body obstruction
 - 3. Infant/Child CPR
 - 4. Automated External Defibrillation
 - 5. Safety and special situations
 - 6. Risk factors for heart disease and stroke

State the importance of timely CPR
Demonstrate one rescuer adult CPR on a manikin
Demonstrate two-rescuer adult CPR on a manikin
Demonstrate the use of an AED Unit.
Recognize the signs and symptoms of foreign body obstruction
Demonstrate infant and pediatric CPR in a respiratory and/or cardiac arrest

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Student learning will be assessed with the use of written exams and practical exams

General Course Requirements and Recommendations
Instructors (or their designees) reserve the right to require students to provide picture identification for test taking, graded papers or projects or other appropriate purposes.

Grading Scale
For successful completion of this course and to be eligible for the American Heart Association (AHA) Basic Life Support (BLS) for Healthcare Provider Cards, the students must:

- Score 84% or better on the Final Written Exam. Satisfactorily pass all skill testing.
- Attend all classes.

Texts
Required: American Heart Association, BLS for Healthcare Providers, Channing L. Bete Co., most current edition is essential.

AH121 - Basic Lactation Concepts

Overview

Subject Health Careers	Academic Department Health, Education, and Human Services	School Health & Human Services
----------------------------------	---	--

Course Description
The first course in a two-semester sequence that examines basic lactation concepts including the history of breastfeeding: Breastfeeding Then and Now; Breastfeeding data; Breast Embryology and Anatomy; Relevant Infant Anatomy; Components of Human Milk; and Lactogenesis and Milk Production.

Course Pre-requisite(s)
Instructor permission

Evidence of completion of a Lactation Education Accreditation and Approval Review Committee (LEAARC) approved course offering 95 hours of didactic instruction, which meets the IBLCE® requirement for lactation education. This is in combination with the CPCLL of AH 122: Applied Principles of Breast Feeding.
See the following website for a list of approved courses.

https://www.learc.org/docs/NewApproved_Courses.pdf

Goals, Topics, and Objectives

Core Course Topics

1. History of Breastfeeding
2. Baby-Friendly Initiative
3. Breast feeding safety and quality measures
4. Research and the scientific method
5. Anatomy, physiology & embryology of the breast
6. Anatomy & physiology of the newborn
7. Breastfeeding challenges, ankyloglossia
8. Milk supply, composition, content, storage and galactagogues
9. Pediatric vaccines
10. Cow's milk hypersensitivity

Describe the history and trends in breastfeeding including "Baby-Friendly" initiatives.
Identify the components of a scientific paper and methods for analysis of scholarly papers.
Describe components of breastfeeding safety & quality measures. Identify the anatomy, physiology and embryology of the breast.
Identify the anatomy, physiology and embryology of the breast.
Describe the anatomy and physiology of an infant including components of a normal physical exam.
Define lactogenesis I and II and milk production.
Identify breastfeeding challenges including ankyloglossia and low milk supply.
Define herbal and medicinal galactagogues.
Describe the composition of human milk including nutritional and immunological components.
Describe proper storage of breast milk.
Describe the process breast milk undergoes to become donor milk.
List vaccine categories and major types of vaccines

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Students will be assessed using a combination of tests, quizzes, assignments and participation.

Grading Scale

The grading scale is:

- 98-100%: A+
- 93-97.9%: A
- 90-92.9%: A-
- 87-89.9%: B+

See the following website for a list of approved courses.
https://www.learc.org/docs/NewApproved_Courses.pdf

Goals, Topics, and Objectives

Core Course Topics

1. Lactogenesis
2. Contraception and milk production
3. Weaning, nutrition and galactopoiesis
4. Pain
5. Infection
6. Vasospasms
7. Lactopharmacology
8. Maternal conditions and breastfeeding
9. Viruses and breastfeeding
10. Infant conditions and breastfeeding
11. Gastroesophageal reflux disease (GERD)
12. Normal infant development
13. Safe sleep and feeding of infant
14. Interpretation of breastfeeding research

Define physiology of lactogenesis I and II and anatomic and medical conditions affecting lactogenesis.
Name three actions of oxytocin.
Describe two forms of contraception and the effects of hormone contraceptives on milk supply.
Describe the lactational amenorrhea method (LAM) of contraception.
Explain the difference between endocrine and autocrine control, and the prolactin receptor theory.
List foods contained in the lactating mother's diet.
Describe symptoms and treatment of breast infections and dermatitis in the breastfeeding dyad.
Describe LATCH to assess feeding.
Describe symptoms and treatment of vasospasm in the breastfeeding dyad.
Describe characteristics of a milk bleb.
List causes of breast pain in the lactating mother.
Describe the weaning process.

Describe the effects of Type I diabetes on breastfeeding.
List five maternal medical conditions that can affect breastfeeding.
Describe the root causes and effects of maternal obesity on breastfeeding outcomes.
Name three ways a maternal virus can be transmitted to an infant.
Name two viruses found in the breastmilk of seropositive women and two that are contraindications to breastfeeding in the United States.
Describe the pathophysiology of neonatal jaundice and the management of the jaundiced infant.
Describe the pathophysiology of hypoglycemia and the management of hypoglycemia in the breastfed infant.
Name three infant medical conditions that may affect breastfeeding.
Identify infant-related contraindications to breastfeeding.
Describe the physiology of gastroesophageal reflux and list three management techniques to control GERD.
Describe the categories of infant and child development.
Interpret breastfeeding behaviors through the infant development lens.
Identify safe sleep and recommendations for the breastfed infant.
Describe two theories that apply to lactation practice.
Name the two components of a research study.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Students will be assessed using a combination of tests, quizzes, assignments and participation.

Grading Scale
The grading scale is:

- 98-100%: A+
- 93-97.9%: A
- 90-92.9%: A-
- 87-89.9%: B+
- 83-86.9%: B
- 80-82.9%: B-
- 76-79.9%: C+
- 70-75.9%: C
- 67-69.9%: D+
- 63-66.9%: D
- 60-62.9%: D-

AH131 - Medicolegal Principles Hlthcr Practionion

Overview

Subject Health Careers	Academic Department Health, Education, and Human Services	School Health & Human Services
---------------------------	--	-----------------------------------

Course Description
Provides a core foundation of the basic legal issues specific to the health care practitioner. Focuses upon laws related to the delivery of care as well as health care employment issues.

Credit Hours
3

Contact Hours
3

Course Fee 0	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Course Goals
Upon completion of this course, the student will have an understanding of basic laws related to the delivery of health care and health care employment.

- Core Course Topics
- The Legal System
 - Legal Concepts as applied to Health Care Employment
 - Professional Liability
 - Privacy Laws
 - Labor Laws affecting Health Care Employment
 - Labor Laws affecting Medical Records
 - Laws related to Safety and Welfare in Health Care Employment
 - Issues related to Living
 - Issues related to Dying
 - Public Duties
 - Healthcare Trends

Discuss the American legal system as it relates to the American health care system.
Differentiate between criminal and civil law.
Define the following: licensure, certification, registration and accreditation.
Discuss how healthcare providers are licensed and regulated.
Explain professional liability and the different types of medical liability insurance.
Describe the elements of a lawsuit.
Explain the four C's of Medical Malpractice Prevention.
Discuss how privacy laws are designed to protect patients.
Describe HIPPA and the responsibilities of health care practitioners concerning privacy, confidentiality and privileged communication.
Explain the doctrine of informed consent.
Discuss the laws directly related to work place safety.
Discuss accepted criteria for determining death.
Describe the Patient Self-Determination Act including advanced directives and health care proxy.
Outline the major trends which will impact health care for the near future.
Given an assigned court case, summarize and defend your opinion of the case.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Students will be assessed using a combination of assignments, tests, and online participation.

Grading Scale
Grading scale for exams and the final grade:

- 98 -100% = A+
- 93-97% = A
- 90-92% = A-
- 87-89% = B+
- 83-86% = B
- 80-82% = B-
- 76-79% = C+
- 70-75% = C
- 67-69% = D+
- 63-66% = D
- 60-62% = D-

- 59% & below = E

AH132 - Introduction to Healthcare Professions

Overview

Subject Allied Health	Academic Department Health, Education, and Human Services	School Health & Human Services
--------------------------	--	-----------------------------------

Course Description
This course is designed to introduce students to various health care professions. It includes skills and topics common to all healthcare providers such as ethical and legal issues, professionalism, cultural considerations, vital signs, body mechanics, communication, infection control, and evidence based practice. This course will also introduce key elements in the formation and modification of medical terms. This course has a lab hands on component.

Skill checks for:

- Basic assessment and vital signs
- Hand washing
- Don/Doff PPE
- Patient transfers

Portfolio Review Details

Portfolio including Certifications/Licensure/Registrations as a healthcare provider. Evidence of implicit bias training Experience with direct patient care Evidence of healthcare education/training covering topics in this course. May include letters of recommendation, syllabus, transcript, curriculum.

Goals, Topics, and Objectives

Core Course Topics

- Healthcare Professions
 - Identify the role of members of the healthcare team .
 - Define the various responsibilities of the health care team members.
- College Success Strategies
 - Identify college success strategies.
 - Use success strategies within this course.
- Medical Terminology
 - Define, spell, and pronounce basic medical word roots, prefixes, and suffixes.
 - Divide common medical terms into their component parts.
 - Define common medical terms using their component parts.
 - Construct medical terms by putting word components together using combining forms, prefixes, and suffixes for each body system.
- Ethics and Professionalism
 - Discuss medical ethics and biomedical ethical principles in health care. Identify unethical behaviors.
 - Describe HIPAA and the responsibility of the healthcare provider in relation to HIPAA.
- Vital Signs
 - Perform accurate measurements of patient vital signs: Body temperature, blood pressure, heart rate, respiratory rate, and pulse oximetry.
 - Describe the terminology used when assessing vital signs. Differentiate normal and abnormal values for vital signs.
- Cultural Considerations, Diversity, Equity, Inclusion, and Belonging
 - Outline the various aspects involved with cultural diversity and psychosocial aspects in the provision of healthcare services.
 - Identify cultural considerations using the professional healthcare values of legal, ethical, and caring behaviors for the adult client.
- Infection Control and PPE
 - Explain the the importance of infection control practices in maintaining the safety of the healthcare provider and the patient.
 - Identify the preventive procedures in the Standard Precautions.
 - Demonstrate proper handwashing procedure.
 - Demonstrate proper donning and doffing of Personal Protective equipment.
 - Describe the various types of isolation and corresponding precautions.
- Body Mechanics: Bed Mobility and Transfers
 - Describe proper posture and and positioning in sitting, standing and in bed.
 - Describe negative consequences of poor posture and poor body mechanics.
 - Identify appropriate patient positions to minimize adverse reactions to immobility.
 - Demonstrate proper bed mobility techniques.
 - Demonstrate proper transfer techniques.
 - Use proper body mechanics throughout the activities in the course.
- Math Computation
 - Calculate appropriate medicine dosage based on patient needs.

- Perform unit conversions.
 - Solve equations pertaining to basic patient measurements.
- Evidence Based Practice
 - Define evidence based practice.
 - Locate and begin to use evidence-based research to improve client outcomes.
 - Communication
 - Demonstrate effective, professional communication with patients, clients, and other health care professionals.
 - Describe informed consent as it relates to healthcare.
 - Basic Assessment
 - Identify normal and abnormal findings on basic skin assessment.
 - Administer a pain assessment and interpret findings.
 - Administer alertness and orientation assessment and interpret findings.

Identify the role of members of the healthcare team .

Define the various responsibilities of the health care team members.

Identify college success strategies.

Use success strategies within this course.

Define, spell, and pronounce basic medical word roots, prefixes, and suffixes.

Divide common medical terms into their component parts.

Define common medical terms using their component parts.

Construct medical terms by putting word components together using combining forms, prefixes, and suffixes for each body system.

Discuss medical ethics and biomedical ethical principles in health care.

Identify unethical behaviors.

Describe HIPAA and the responsibility of the healthcare provider in relation to HIPAA.

Perform accurate measurements of patient vital signs: Body temperature, blood pressure, heart rate, respiratory rate, and pulse oximetry.

Describe the terminology used when assessing vital signs.

Differentiate normal and abnormal values for vital signs.

Outline the various aspects involved with cultural diversity and psychosocial aspects in the provision of healthcare services.

Identify cultural considerations using the professional healthcare values of legal, ethical, and caring behaviors for the adult client.

Explain the the importance of infection control practices in maintaining the safety of the healthcare provider and the patient.

Identify the preventive procedures in the Standard Precautions.

Demonstrate proper handwashing procedure.

Demonstrate proper donning and doffing of Personal Protective equipment.

Describe the various types of isolation and corresponding precautions.

Describe proper posture and and positioning in sitting, standing and in bed.

Describe negative consequences of poor posture and poor body mechanics.

Identify appropriate patient positions to minimize adverse reactions to immobility.

Demonstrate proper bed mobility techniques.
Demonstrate proper transfer techniques.
Use proper body mechanics throughout the activities in the course.
Calculate appropriate medicine dosage based on patient needs.
Perform unit conversions.
Solve equations pertaining to basic patient measurements.
Define evidence based practice.
Locate and begin to use evidence-based research to improve client outcomes.
Demonstrate effective, professional communication with patients, clients, and other health care professionals.
Describe informed consent as it relates to healthcare.
Identify normal and abnormal findings on basic skin assessment.
Administer a pain assessment and interpret findings.
Administer alertness and orientation assessment and interpret findings.

No		

Goals, Topics, and Objectives

Course Goals
Upon completion of this course, the student will have an understanding of public health and its application in the United States, challenges to delivery

of public health, and possible careers in the field.
Core Course Topics
- Definition of Public Health - History of Public Health in the United States - Environmental and Occupational Health - Social & Behavioral Factors & Health - Study Design and Epidemiology - Community Health Resources & Initiatives - Challenges to Public Health in the United States - Government & Politics of Public Health - Future Challenges and Direction of Public Health - Careers in Public Health
Describe the differences between public health and medical care.
Describe the evolution of public health in the United States.
Analyze a health problem analysis worksheet that incorporates a variety of environmental and occupational health factors.
Describe social and behavioral factors that impact health.
Analyze results and limitations of epidemiologic studies and their measures of disease frequency, incidence, and prevalence.
Compute rates that allow for the evaluation of health in a population.
Analyze rates that allow for the evaluation of health in a population.
Recognize strengths and challenges to public health in the United States.
Describe how the strengths and limitations of the health care delivery model in the United States contributes to challenges in public health.
Recognize the influence of government and politics in public health.
Describe ongoing community health initiatives.
Describe the variety of career opportunities for health professionals in the area of public health.

Assessment, Requirements, and Outcomes

Course Fee 0 Miscellaneous Department Fee 0

Academic Level Undergraduate

Eligible for Credit for Prior College Level Learning (CPCLL) No

Goals, Topics, and Objectives

Core Course Topics

- 1. Introduction and History of Community Health
 - Explain the difference in community health and personal health.
 - Identify the current major community health issues in the United States and the world.
- 2. Community Health Organizations
 - Identify governmental health agencies and describe their roles in community health.
 - Describe the roles of non-governmental health agencies as related to community health.
- 3. Health Care Systems
 - Explain community organizing.
 - Describe health education and health promotion.
 - Describe school health programming.
- 4. Epidemiology
 - Discuss the importance of disease reporting to the overall health of the community.
 - Describe the role of epidemiology in the prevention and control of diseases and health conditions.
- 5. Maternal, Infant, and Child Health
 - Describe maternal, infant and child health factors and issues.
 - Discuss the importance of community health programs on maternal,infant, and childhood morbidity and mortality.
- 6. Adolescent, Young Adult, and Adult Health
 - Identify health profiles and risks for various age groups and community health strategies for improvement.
- 7. Older Adult Health
 - Describe the health profile of older adults.
 - Describe the community health needs and services for older adults.
- 8. Racial, Ethnic, and Minority Populations
 - Define cultural competence and the importance related to minority community health.
 - Discuss the importance of diversity in the United States as is relates to community health.
- 9. Mental Health
 - Discuss the legal and practical issues affecting how society deals with mental illness and the impact on the community.
 - Identify the multicultural, practical and political challenges faced by the community mental health care system.
- 10. Substance Use
 - Describe the risk factors for substance use and the elements of abuse, prevention, and control.
 - Describe an effective community and school substance use and prevention program.
- 11. Environmental Health
 - Discuss the various pollutants both indoor and outdoor and the impact they have on the wellness of the community.
 - Identify the role of environmental agencies on the safety of food, water, and air quality.
- 12. Injuries
 - Identify the most prevalent causes of injuries at various age groups and their community health impact.
 - Discuss prevention initiatives as related to injuries.
- 13. Occupational Health
 - Explain common work place health issues and safety/wellness programs.

Explain the difference in community health and personal health.
Identify the current major community health issues in the United States and the world.
Identify governmental health agencies and describe their roles in community health.
Describe the roles of non-governmental health agencies as related to community health.
Explain community organizing.
Describe health education and health promotion.
Describe school health programming.
Discuss the importance of disease reporting to the overall health of the community.
Describe the role of epidemiology in the prevention and control of diseases and health conditions.
Describe maternal, infant and child health factors and issues.

Discuss the importance of community health programs on maternal, infant, and childhood morbidity and mortality.
Identify health profiles and risks for various age groups and community health strategies for improvement.
Describe the health profile of older adults.
Describe the community health needs and services for older adults.
Define cultural competence and the importance related to minority community health.
Discuss the importance of diversity in the United States as is relates to community health.
Discuss the legal and practical issues affecting how society deals with mental illness and the impact on the community.
Identify the multicultural, practical and political challenges faced by the community mental health care system.
Describe the risk factors for substance use and the elements of abuse, prevention, and control.
Describe an effective community and school substance use and prevention program.
Discuss the various pollutants both indoor and outdoor and the impact they have on the wellness of the community.
Identify the role of environmental agencies on the safety of food, water, and air quality.
Identify the most prevalent causes of injuries at various age groups and their community health impact.
Discuss prevention initiatives as related to injuries.
Explain common work place health issues and safety/wellness programs.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement The academic achievement will be assessed using a combination or quizzes, exams, assignments, presentations, and participation.

General Course Requirements and Recommendations Instructors (or their designees) reserve the right to require students to provide picture identification for test taking, graded papers or projects or other appropriate purposes.

Grading Scale Grading scale for exams and the final grade:

- 98-100% = A+
- 93-97% = A
- 90-92% = A-
- 87-89% = B+
- 83-86% = B
- 80-82% = B-
- 76-79% = C+
- 70-75% = C
- 67-69% = D+
- 63-66% = D
- 60-62% = D-
- 59% & below = E

All students will be required to complete a comprehensive final exam. The final exam must be at least 20% of the final grade.

Texts To be determined through the School of Health and Human Services.

AH190 - Lactation Consultant Practicum

Overview

Subject Health Careers Academic Department Health, Education, and Human Services School Health & Human Services

Course Description Focuses on the clinical application of lactation concepts to breastfeeding mothers. Select experiences in health care facilities enable students to assess, develop, implement and evaluate the care of the breastfeeding dyad. The course requires 200 hours in the health care setting. This is consistent with Pathway 2 according to International Board of Lactation Consultant Examiners (IBLCE).	
Course Pre-requisite(s) Permission of Instructor	Course Co-requisite(s) <u>AH121 Basic Lactation Concepts</u>
Credit Hours 4	
Contact Hours 4	
Course Fee 15	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Core Course Topics - Professionalism in healthcare - Written and oral communication in healthcare - Birthing Center Work flow - Legal/Ethic/Culture in healthcare - World Health Organization (WHO) Code - Breastfeeding positions/equipment - Manual expression - LATCH Score - Alternative feeding methods - Early feeding expectations - Feeding plans - Breastpumps
Demonstrate professionalism in the healthcare setting.
Demonstrate effective written and oral communication including documentation in the electronic medical record (EMR).
Apply ethical and legal principles and culturally competent care in the healthcare setting.
Discuss the Birthing Center Workflow.
Discuss WHO code related to the Code of Breastmilk substitutes.
Demonstrate proper breastfeeding positions and use of breastfeeding equipment.
Demonstrate the proper method for manual expression.
Use LATCH score to assess breastfeeding dyad.
Discuss why an alternative feeding method is chosen.
Demonstrate proper use of alternative feeding methods.
Describe early feeding expectations of the newborn.
Develop and implement a feeding plan for breastfeeding dyad.
Explain reasons for breastpump use and the steps necessary for effective pumping.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Clinical evaluations, clinical attendance, student documentation, etc. will be used to assess student academic achievement and psychomotor skills.	
Grading Scale A grading scale of S/U (Satisfactory/Unsatisfactory) will be used in this course.	
Students must demonstrate competency in each required skill evaluation to complete this course satisfactorily.	
Texts Determined by program faculty.

AH192 - Lactation Consultant Adv Practicum Pathw

Overview

Subject Health Careers	Academic Department Health, Education, and Human Services	School Health & Human Services
Course Description Focuses on the clinical application of lactation concepts to breastfeeding mothers. Select experiences in health care facilities enable students to assess, develop, implement and evaluate the care of the breastfeeding dyad. The course requires 200 hours in the health care setting. This course is the second part of the practicum, following AH-190, consistent with Pathway 2 according to International Board of Lactation Consultant Examiners (IBLCE).		
Course Pre-requisite(s) <u>AH190 Lactation Consultant Practicum</u> , or Permission of Instructor	Course Co-requisite(s) <u>AH122 Applied Princ of Breastfeeding</u>	
Credit Hours 4		
Contact Hours 4		
Course Fee 15	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics - Identifying breastfeeding complications - Milk storage/donor milk - Safe formula preparation - Medications used during labor and delivery - Galactagogues - Maternal diet - Term and late pre-term breastfeeding infants - Teenage breastfeeding mother - Stressors affecting the breastfeeding mother - Breastfeeding supplementation - Effects of maternal and infant conditions on breastfeeding - Professional role of International Board Certified Lactation Consultant (IBCLC) in the Neonatal Intensive Care Unit (NICU) and Special Care Nursery (SCN).
Develop and implement a feeding plan for breastfeeding mothers with and without complications.
Describe the proper storage of breastmilk and donor milk.
Describe safe formula preparation.
Identify commonly used medications during labor and delivery and those medications that can affect milk production.
Identify galactagogues.
Identify the components of the maternal breastfeeding diet.
Develop a feeding plan for the late pre-term infant.
Establish rapport and communicate with the teen breastfeeding mom.
Identify psychological and social stressors in the breastfeeding mother.
Identify feelings, emotions, sensations or personal experience with breastfeeding that staff might experience that may affect interactions with families.
List indications for supplementation and the differences between expressed breastmilk and formula as a supplement.
Define slow infant weight gain and its relation to breastfeeding.
Describe the effects of jaundice on breastfeeding.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Clinical evaluations, clinical attendance, student documentation, etc. will be used to assess student academic achievement and psychomotor skills.
Grading Scale A grading scale of S/U (Satisfactory/Unsatisfactory) will be used in this course.
Students must demonstrate competency in each required skill evaluation to complete this course satisfactorily.

ANTH131 - Introduction to Anthropology

Overview

Subject	Academic Department	School
Anthropology	Social Sciences	Liberal Arts

Course Description
Introduces the holistic study of humanity using a multi-faceted approach that draws from the discipline's four field: archaeology, physical, cultural, and linguistic anthropology. Course topics include human evolution and variability, cultural diversity and change, material culture and language. other themes explored include religion, kinship, social and political organization, the neolithic revolution, as well as the intellectual contributions of anthropology to the social sciences.

Course Pre-requisite(s)
Eligible to take ENG courses at HFC

Credit Hours
3

Contact Hours
3

Course Fee	Miscellaneous Department Fee
10	0

Academic Level
Undergraduate

General Education Category	Michigan Transfer Agreement (MTA) Category
Social Sciences	Category 4: Social Sciences - Applied Degrees, Category 4: Social Sciences - Transfer Degrees

Eligible for Credit for Prior College Level Learning (CPCLL)
No

Goals, Topics, and Objectives

- Core Course Topics
1. What is anthropology?
 2. Culture
 3. Archaeology's view into the past
 4. Primates
 5. Human evolution
 6. Patterns in human biological variation
 7. Subsistence strategies and their implications for human social organization
 8. Language
 9. Sex & Gender
 10. Kinship, marriage, and family
 11. Cultural evolution
 12. Religion
 13. Economics
 14. Social and political organization
 15. Culture change

Identify the four subfields of anthropology and describe the methods and areas of study of each of these fields.
Describe what culture includes, in both the material and non-material realms, and how it influences behavior and thinking.
Define the concepts of cultural relativism and ethnocentrism and demonstrate the utility and danger, respectively, of each of these practices in the modern world.
Discuss human biological evolution and the evolutionary relationships between human and non-human primates.
Explain human cultural evolution, including stone tool use, the Neolithic Revolution, and the rise of cities and states.
Explain the biological limitations of racial classification of human beings and explain why looking at cultural differences is a better approach.
Describe the relationship between language and culture and explain why language is so important to our species.
Explain the different ways that humans have adapted to their environments and the impact of these adaptations on social structure, population size, and health.
Identify cross-cultural differences in marriage, gender, kinship, religious, and subsistence practices.

Discuss how these different beliefs, practices, or traditions are valid responses or solutions to basic human needs.
Develop critical thinking skills by analyzing the complex cultural, political, economic and/or religious implications that are part of the debate between either.
Religious Creationist and Scientific Evolutionary theories of human origins and development, or Racial classification systems and other non-race-based theories of human variation.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement may include (but is not limited to) exams, quizzes, homework, and projects.

Goals, Topics, and Objectives

- Core Course Topics
1. Stereotypes
 2. Theories for the origins of Native Americans
 3. Prehistory
 4. History of European/Native American relations from invasion to the present
 5. Cultures and histories of some of the following culture areas: Southwest, Southeast, Northeast, Northwest, Plains, Great Basin, California, Plateau, Subarctic, or Arctic

Discuss the origins of Native Americans and the development of pre-European cultural patterns throughout North America.
Describe the similarities as well as the wide range of variability within native societies in North America.
Identify the ecological diversity of the native peoples' adjustment to the wide range of resources available.
Identify the general patterns of life within each of the major ecological zones.
Discuss the impact of European and American peoples culture systems on the native North American peoples and their cultures.
Discuss the nature of Native American cultural heritage in today's world Identify and discuss the stereotypical portrayals associated with Native Americans?
Discuss why Native Americans object to these portrayals.

ANTH152 - Middle Eastern Peoples and Cultures

Overview

Subject	Academic Department	School
Anthropology	Social Sciences	Liberal Arts
Course Description		
Introduces the various ethnic, linguistic, and religious groups as well as cultures of the Middle East with an emphasis on both the Arabs and Islam as two of the most powerful social forces to have shaped the history and culture of the region. Explores Orientalism and western perceptions of the Middle East, colonialism, globalization and identity, nationalism, and other popular ideological currents that continue to influence the region and its peoples. Also examines the history and experiences of Arabs in the United States with a special focus on the large Arab-American community in Dearborn, Michigan.		
Course Pre-requisite(s)

Goals, Topics, and Objectives

- Core Course Topics
- Geographic, topographic, and political description of the Middle East
 - Definition of the Muslim World
 - Definition of the Arab World
 - Identification of the major ethnic, religious, and linguistic subgroups
 - Overview of Islamic history
 - Similarities and differences between Islam and Christianity (and Judaism)
 - Middle Eastern society and culture
 - Social traits and cultural values
 - Rites of passage
 - Family
 - Child rearing practices
 - Women and gender issues
 - Case studies
 - Arab Americans
 - History (national)
 - Demographic distribution (national)
 - Metro Detroit history and demographics
 - Case studies

Define/Describe the Middle East region.
Distinguish the terms "Arab" and "Muslim."
Describe the major tenets of Islam.
Compare and Contrast the relationship of Islam to Christianity and Judaism.
Identify at least two subgroups of Muslims.
Explain how Middle Easterners see the role of women in society.
Identify at least two non-Muslim communities in the Middle East.
Describe several misconceptions and/or stereotypes of Middle Eastern society.
Describe the major sub-groups comprising the Arab-American community.

Describe some of the main divisions of Arab Detroit.
Using what you have learned in the course about Middle Eastern cultures a) analyze why dating would be frowned on by Arab Americans living in the United States or b) infer the various reasons why Muslim American women might wear a headscarf or related item of clothing.

ANTH153 - Introduction to Archaeology

Overview

Subject	Academic Department	School
Anthropology	Social Sciences	Liberal Arts
Course Description		
Introduces the branch of anthropology that relates to the study of past societies, cultures, and civilizations. Explores the role of excavation, survey, material culture analysis, dating methods, and interpretation of artifacts, features, inscriptions, and monumental architecture in the ancient world. Examines developments and archaeological discoveries related to various historical periods ranging from the era of pre-human history to the emergence of state-level societies in places such as ancient Mesopotamia, Egypt, and China. Part of the course is also dedicated to familiarizing students with studies and local projects related to the archaeology of Detroit.		
Course Pre-requisite(s)		
Eligible to take ENG courses at HFC		
Credit Hours		
3		
Contact Hours		
3		
Course Fee		Miscellaneous Department Fee
10		0
Academic Level		
Undergraduate		
General Education Category		Michigan Transfer Agreement (MTA) Category
Social Sciences		Category 4: Social Sciences - Applied Degrees, Category 4: Social Sciences - Transfer Degrees
Eligible for Credit for Prior College Level Learning (CPCLL)		
No		

Goals, Topics, and Objectives

- Course Goals
- To introduce students to the field of archaeology and world prehistory. Students will appreciate the importance of and the need to protect our archaeological resources and gain a better understanding of our distant past. In addition, practical experiences will help students improve their critical reading, writing, and cognitive skills.
- Core Course Topics
- What is Archaeology and what do Archaeologists do?
 - Archaeological ethics
 - Archaeological techniques
 - Archaeological analysis
 - Archaeological interpretation
 - Human evolution
 - Human evolution including discussions of the hypotheses and controversies surrounding the Out of Africa Theory, the relationship between Homo sapiens and Neanderthals, the origins of language, and the origins and importance of tool use.
 - The spread of anatomically modern Homo sapiens
 - The spread of anatomically modern Homo sapiens to Australia and North America and the controversy surrounding the timing and routes of these migrations.
 - The rise of agriculture in both the Old and New Worlds
 - The development of social complexity and state level societies with examples from many locations around the world
 - The relevance of archaeology to the modern world

Describe what archaeologists do and how the field has developed.
Explain the importance of ethics in the field of archaeology.
Explain how archaeologists determine the age of sites and artifacts.
Demonstrate a general understanding of basic field methods of site survey, excavation, and recording.
Analyze how archaeologists interpret data to learn about cultural behaviors such as trade, social organization, ethnicity, and cultural history.
Discuss current scientific knowledge about the earliest hominid ancestors including fossil evidence, tool use, hunting, and radiation out of Africa.

Describe current scientific debates about Neanderthals including physical and cultural attributes and their controversial relationships to Homo erectus and anatomically modern Homo sapiens.
Analyze the controversies surrounding the peopling of Australia and North America.
Discuss different theories concerning the rise of agriculture and examine the archaeological evidence for this transition around the world.
Describe the social and economic context for the construction of monumental architecture in societies without state level organization such as Stonehenge, Pueblo Bonito, and Cahokia.
Discuss the archaeological evidence of urbanization, mortuary complexes, and social inequality in early states such as those of Mesopotamia and Egypt.
Explain how the study of archaeology can benefit modern human cultures.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Methods of assessing academic achievement are left to the discretion of individual instructors. These may include such assessment items as exams, quizzes, classroom analysis activities, archaeological site analysis activities, and research papers.
General Course Requirements and Recommendations
General Course requirements are left to the discretion of individual instructors.

ANTH154 - Food, Culture, and Economy

Overview

Subject	Academic Department	School
Anthropology	Social Sciences	Liberal Arts
Course Description	Explores the interconnectedness of food, culture, and economy as an overlapping set of practices and approaches that transcend geographic boundaries. Examines the relationship between food and group identity, status, culture, gender, religion, politics, economics, class, and power using ethnographic, cross-cultural comparisons. Analyzes food traditions in the context of globalization, and looks at the political, economic, social, and cultural impact of global food system structures on the United States and the rest of the world.	
Course Pre-requisite(s)	ENG131 Introduction College Writing eligible	
Credit Hours	3	
Contact Hours	3	
Course Fee	Miscellaneous Department Fee	
10	0	
Academic Level	Undergraduate	
General Education Category	Michigan Transfer Agreement (MTA) Category	
Social Sciences	Category 4: Social Sciences - Applied Degrees, Category 4: Social Sciences - Transfer Degrees	
Eligible for Credit for Prior College Level Learning (CPCLL)	No	

Goals, Topics, and Objectives

Course Goals
There are two underlying goals for this course: 1) introduce students to the importance and role of food in human cultures, and 2) illustrate to students how they are situated food consumers.Students will develop familiarity with the cross-cultural diversity of food traditions and with the common cross-cultural functions/roles of food in human cultures. In addition, students will apply the information and concepts used in the course to their own lives and develop a working knowledge of their own food traditions and of the food systems that contextualize their own food choices and alternatives.
Core Course Topics
1. Key analytical concepts
2. History of food production
3. Functions of food in culture and society
4. Cross-cultural variation in food traditions
a. Ethnicity/Identity/Solidarity
b. Social organization/Kinship
c. Religion/symbolism
d. Gender Identity/Relations
e. Power/Domination/Class
f. Diet/Health/Nutrition
g. Culture change
5. Food in/and the US
6. Food/traditions in the US
7. Global and local food systems
Describe and apply basic anthropological/sociological concepts involved in the analysis of society and culture generally, and those required to study food in a cultural context.

Illustrate the cross-cultural diversity of food traditions using specific ethnographic examples, and categorize that diversity within the range of human subsistence practices (cross-culturally and in terms of human history).
Organize the common roles/functions of food in human cultures and societies.
Apply any particular culture's/society's food traditions and practices to other aspects of that culture (a holistic understanding of food) including environment, subsistence practices, religion, social organization, etc.
Apply the information, theoretical and empirical, covered in the course; and illustrate the students' own food traditions in relation to aspects of their culture, including the commodity chains, global food systems, and markets that characterize US food production, distribution, and consumption.
Categorize the variation of food traditions in human cultures through the cross-culturally similar functions and uses of food in human culture.
Compare and contrast the social, economic, and cultural components of subsistence, market-based, and industrialized food production/ distribution systems; and evaluate the relative benefits and drawbacks of each.
Assess one's own food cultures/traditions by describing how our food choices are embedded (or not) in larger regional and national patterns of production, distribution, and consumption.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement may include (but is not limited to) exams, quizzes, homework, and projects.
General Course Requirements and Recommendations
General course requirements are left to the discretion of individual instructors.
Texts
Choice of course readings is left to the individual instructor.
Satisfies Honors Requirement
No
Satisfies Wellness Requirement
No

ARA130 - Pre-Elementary Arabic

Overview

Subject	Academic Department	School
Language Studies	Language Studies	Liberal Arts
Course Description	Introduces Modern Standard Arabic: the alphabet, vocabulary, pronunciation, grammar, and listening/speaking skills. Covers basic conversational skills. Presents Arabic culture. **Note:** No prior knowledge of Arabic required. Not open to students with basic reading and writing proficiency in Arabic or those who have earned credit for ARA-131 or its equivalent.	
Course Pre-requisite(s)	ENG094 ALP: Reading and Writing/ENG095E ALP for ELL-Reading & Writing eligible or instructor permission	
Credit Hours	3	
Contact Hours	3	
Course Fee	Miscellaneous Department Fee	
10	0	
Academic Level	Undergraduate	
General Education Category	Michigan Transfer Agreement (MTA) Category	
Humanities and Fine Arts	Category 5: Humanities and Fine Arts - Applied Degrees	
Eligible for Credit for Prior College Level Learning (CPCLL)	No	

Goals, Topics, and Objectives

Course Goals
ARA130 Pre-Elementary Arabic is intended for students with no previous knowledge of Modern Standard Arabic. This course is designed to enable students to reach the Novice Low level on the American Council on the Teaching of Foreign Languages (ACTFL) proficiency scale, focusing on language learning through communication, cultures, connections, comparisons, and communities.
Core Course Topics
1. Greetings, introductions, and farewells
2. Phonetics
3. Alphabet
4. Numbers
5. Gender and article agreement
6. Dialectal differences
7. Core vocabulary
8. Arab culture
Use appropriate greetings, introductions, and farewells.

Demonstrate knowledge of phonetics through the comprehensible pronunciation of letters and words.
Recognize and demonstrate verbal and written knowledge of the Arabic alphabet and sound system.
Recognize and produce the numbers 0-10.
Demonstrate knowledge of gender and article agreement of some nouns, pronouns, and adjectives.
Explain the differences between formal and spoken Arabic.
Define and actively use basic vocabulary in Arabic.
Describe aspects of Arab culture that differ from the U.S. norm.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement will be identified and implemented by the class instructor. Methods will include, but not be limited to:
- Participation - Weekly/regular quizzes - Homework assignments - Chapter/unit tests - Oral/receptive-expressive exam(s) - Midterm/final exam

Texts	
All sections of this level will use a textbook (and any accompanying materials) selected by the course coordinator and approved by the World Languages Committee.	
Satisfies Honors Requirement	Satisfies Wellness Requirement

ARA131 - Elementary Arabic I

Overview

Subject	Academic Department	School
Language Studies	Language Studies	Liberal Arts
Course Description		
Introduces the basic skills of reading, writing, speaking, and listening in Modern Standard Arabic within communicative contexts. Covers the elementary pronunciation and grammatical principles necessary for comprehending and expressing simple ideas in both spoken and written Modern Standard Arabic. Presents Arabic culture. NOTE:Requires basic proficiency in recognizing, reading, and writing simple sentences in Modern Standard Arabic.		
Course Pre-requisite(s)		
ARA130 Pre-Elementary Arabic with a grade of C or better, or one year of high school Arabic with a grade of C or better, AND ENG094 ALP: Reading and Writing/ENG095E ALP for ELL-Reading & Writing eligible.

Goals, Topics, and Objectives

Course Goals
ARA131 Elementary Arabic I is designed to enable students to reach the Novice Mid-level on the American Council on the Teaching of Foreign Languages (ACTFL) proficiency scale, focusing on language learning through communication, cultures, connections, comparisons, and communities.
Core Course Topics
- Autobiographical information - Pronouns - Present-tense verb - Word order/syntax - Interrogatives - Singular and plural - Negations - Numbers - Comparative and suplerative - Fronted predicate - Vocabulary - Arab culture

Provide autobiographical information.
Demonstrate correct usage of subject, object, and possessive pronouns.
Demonstrate correct usage of present-tense verb forms.
Use correct word order in statements and questions.
Develop and respond to interrogative questions relating to chapter themes.
Supply the correct form for feminine and masculine nouns in the singular and plural.
Modify nominal and verbal sentences with proper forms of negation.
Demonstrate comprehension of numbers 0-100.
Compare and contrast using comparative and superlative forms.
Recognize and produce simple nominal sentences with the fronted predicate.
Write about, speak about, and interpret situations similar to those presented in each chapter of the textbook.
Compare and contrast elements of Arabic culture that differ from the U.S. norm.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement will be identified and implemented by the class instructor. Methods will include, but not be limited to:
- Participation - Weekly/regular quizzes - Homework assignments - Chapter/unit tests - Oral/receptive-expressive exam(s) - Departmental writing assessment - Midterm/final exam

Goals, Topics, and Objectives

Course Goals
ARA132 Elementary Arabic II is designed to enable students to reach the Novice High level on the American Council on the Teaching of Foreign Languages (ACTFL) proficiency scale, focusing on language learning through communication, cultures, connections, comparisons, and communities.

Core Course Topics

- 1. Past tense and negation
- 2. Future tense and negation
- 3. Arabic dictionary
- 4. Nominative and accusative case of present tense
- 5. Verb patterns
- 6. Ordinal numbers
- 7. Accusative nouns (objects)
- 8. Vocabulary
- 9. Arab culture

Recognize and produce past tense verb forms and their negation.
Recognize and produce future verb tense forms and their negation.
Identify the concept of roots and patterns using the Arabic dictionary.
Recognize and produce present-tense verbs in the nominative and accusative case.
Distinguish between the ten major verb patterns.
Identify and list information using ordinal numbers.
Identify and produce nouns in the accusative form.
Write about, speak about, and interpret situations using level-appropriate vocabulary.
Analyze aspects of Arabic culture that differ from the U.S. norm, giving specific examples that illustrate such differences.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
Assessment of academic achievement will be identified and implemented by the class instructor. Methods will include, but not be limited to:

Goals, Topics, and Objectives

Course Goals
[ARA231 Intermediate Arabic I](#) is designed to enable students to reach the Intermediate Low level on the American Council on the Teaching of Foreign Languages (ACTFL) proficiency scale, focusing on language learning through communication, cultures, connections, comparisons, and communities.

- Core Course Topics
- 1. Nominal sentences
 - 2. Present tense in "jussive" case
 - 3. Definite and indefinite "idafa" (possessive phrase)
 - 4. Verb patterns
 - 5. Relative pronouns
 - 6. Coordinating and subordinating clauses
 - 7. Case endings for nouns and verbs
 - 8. Vocabulary
 - 9. Narrative writing
 - 10. Arabic culture and literature

Describe places using the nominal sentence structure.
Recognize and produce present tense verbs in the jussive case.
Distinguish between definite and indefinite idafa and accurately produce possessive phrases.
Explain and compare the verb patterns and provide examples of each.
Interpret and demonstrate correct usage of relative pronouns.
Interpret and demonstrate correct usage of coordinating and some subordinating clauses.
Use verbal markers to indicate tense and aspect.
Write about, speak about, and interpret situations using level-appropriate vocabulary.
Write simple descriptive and narrative essays on everyday themes.
Describe national, religious, and cultural festivities and traditions in the Arab world and how they compare to U.S. norms.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
Assessment of academic achievement will be identified and implemented by the class instructor. Methods will include, but not be limited to:	
• Participation • Homework assignments • Weekly/regular quizzes • Weekly/regular compositions • Chapter/unit tests • Oral presentation(s)/project(s) • Midterm/final exam	

Texts	
All sections of this level will use a textbook (and any accompanying materials) selected by the course coordinator and approved by the World Languages Committee.	
Satisfies Honors Requirement	Satisfies Wellness Requirement
No	No

ARA232 - Intermediate Arabic II

Overview

Subject	Academic Department	School
Language Studies	Language Studies	Liberal Arts
Course Description		
Follows ARA-231 and is the second of two intermediate-level Modern Standard Arabic courses focusing on communication in a cultural context. Further develops students' reading, writing, speaking, and listening skills in Modern Standard Arabic, expands their vocabulary, and deepens their knowledge of pronunciation and grammatical principles in order to comprehend and express a wide range of ideas in both spoken and written Arabic. Presents Arabic culture.		
Course Pre-requisite(s)		
A grade of C or better in ARA231 Intermediate Arabic I or in four years of high school Arabic, or instructor permission		
Credit Hours		
4		
Contact Hours		
4		
Course Fee	Miscellaneous Department Fee	
10	0	

Academic Level Undergraduate	
General Education Category Humanities and Fine Arts	Michigan Transfer Agreement (MTA) Category Category 5: Humanities and Fine Arts - Applied Degrees, Category 5: Humanities and Fine Arts - Transfer Degrees
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Course Goals ARA-232 is designed to enable students to reach the Intermediate Mid level on the American Council on the Teaching of Foreign Languages (ACTFL) proficiency scale, focusing on language learning through communication, cultures, connections, comparisons, and communities.
Core Course Topics
1. Verb forms in accusative and transitive
2. "Ma" and "min" as relative pronouns
3. Conditional clauses
4. Dual in verbs and object pronouns
5. "Idafa" - possessive phrases with adjectives
6. Simile expressions
7. "Masdar" - infinitive verbs as subjects in nominal sentences
8. Case endings
9. Verbs with long vowels in root
10. Critical listening and speaking
11. Essay composition
12. Arabic culture and literature

Recognize and produce verbs in the accusative and transitive.
Distinguish between ma and min and correctly produce verbal and written sentences using both.
Interpret and demonstrate correct usages of conditional clauses.
Recognize and produce nouns, pronouns and verbs in dual form.
Recognize and produce possessive phrases with adjectives.
Compare and contrast using appropriate structures.
Recognize and produce masdar in nominal sentences.
Provide case endings on nouns and mood endings on verbs including the passive.
Demonstrate correct usage of verbs with long vowels in the root in both past and present tense.
Interpret authentic audio and visual materials and respond critically.
Write simple descriptive, narrative, and informative essays related to themes presented in each chapter/unit of the textbook using register-appropriate vocabulary.
Demonstrate ability to read and analyze selections from major Arabic publications and or classical and contemporary Arabic literature using standard pronunciations, intonation, grammar, structure, and vocabulary.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

Assessment of academic achievement will be identified and implemented by the class instructor. Methods will include, but not be limited to:

- Participation
- Homework assignments
- Weekly/regular quizzes
- Weekly/regular compositions
- Chapter/unit tests
- Oral presentation(s)/project(s)
- Midterm/final exam

ART101 - Two-Dimensional Design

Overview

Subject Art (Art History)	Academic Department Fine & Performing Arts	School Liberal Arts
Course Description Introduces the basic visual elements and principles of design, along with a wide range of visual problem solving strategies, and theoretical guidelines regarding two-dimensional composition. Covers a variety of art media and processes, and formal art and design vocabulary. This class meets for six (6) hours a week.		
Course Pre-requisite(s) Eligible to take ENG courses at HFC		
Credit Hours 3		

Contact Hours

6	
Course Fee 35	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Portfolio Review, Interview

Credit for Prior College Level Learning (CPCLL) Details Portfolio Review Details Provide, in writing, a request to the department. Indicate the rationale for requesting credit and describing the type of college-level learning or course descriptions. Portfolio must contain 3-5 pieces of evidence that illustrates competency in all course learning objectives. Department faculty will evaluate submitted portfolios based on the evaluation rubric. Evaluation rubric and student checklist located in Division Office. Interview with appropriate departmental faculty to discuss the request and work samples.
Interview Details Interview, given in department-by-department faculty. Faculty will interview applicants based on submitted portfolio and will assess against evaluation rubric. Evaluation rubric and student checklist located in Division Office.

Goals, Topics, and Objectives

Course Goals 1. To expose students to two-dimensional design fundamentals, the principles and elements of design, quality craftsmanship, and graphic skills. 2. To explore design history and ideas influencing the fields of art and design and build a solid foundation in two-dimensional imagery.
Core Course Topics
1. The ruler
2. The grid
3. The Visual Elements and the Principles of Design
4. The Visual Elements
5. The Principles of Design
6. Craftsmanship and professional skill set
7. The Design Process
8. Critical analysis
9. Historical overview

Recognize the markings on a ruler and demonstrate the ability to use it.
Utilize a grid to copy and change the scale of a picture.
Recognize, identify and define the Visual Elements and Principles of Design.
Create original works of art that display an understanding of the visual elements as used in two dimensional art: line, form and volume, space, value, texture and motion
Create original works of art that display an understanding of the principles of design as used in two dimensional art: unity and variety, emphasis and subordination, scale and proportion, balance and rhythm
Employ craftsmanship along with a professional skill set in the construction of original two dimensional compositions.
Demonstrate an understanding of, and effectively utilize, the design process in the development of original two dimensional compositions.
Examine, evaluate, analyze and critique art work created by one self as well as that of peers."
Discuss and interpret how the Visual Elements and Principles of Design have been used through history.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement - Class participation - Class critiques - Assigned projects - Quizzes and exams - Instructor grading and portfolio review	Satisfies Honors Requirement No	Satisfies Wellness Requirement No

ART102 - Drawing I

Overview

Subject Art (Art History)	Academic Department Fine & Performing Arts	School Liberal Arts
Course Description An introductory-level course focusing on the fundamental concepts and skills involved in drawing a range of subject matter from direct observation. Explores line, value, and linear perspective studies in a variety of drawing media. This class meets for six (6) hours a week.		
Course Pre-requisite(s) Eligible to take ENG courses at HFC		
Credit Hours 3		
Contact Hours 6		
Course Fee 20	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals This course is designed to instill in the student a heightened level of visual awareness and to develop fundamental drawing skills as well as an understanding of basic drawing concepts.
Core Course Topics - Materials - Contour line - Gesture and the expressive qualities of line - Value - Viewfinder - Sighting - Perspective - Axes and ellipses - Hatching, cross hatching and texture - Charcoal - Vocabulary - Contemporary and historical Overview

Recognize and identify the basic materials used in a college level drawing class.
Create a body of work that emphasizes the use of contour lines.
Gesture and the expressive qualities of line.
Create a body of work that emphasizes the expressive qualities of line.
Create a multi-step value scale and a continuous value scale with seamlessly modulated transitions.
Demonstrate ability to assess composition within drawing through the use of a viewfinder.
Demonstrate an understanding of sighting and its use in the pursuit of correct perspective.
Illustrate an understanding of linear perspective by creating a drawing of three-dimensional structures with construction lines, object lines, horizon line and vanishing points all indicated.
Demonstrated competence with axes and ellipses by drawing bottles, stemware and similar cylinder forms.
Indicate axes and ellipses with construction lines as well as contour and object lines.
Demonstrate competence in constructing basic forms without either object lines or construction lines by using the hatching, cross hatching, and other textural techniques.
Demonstrate competence in constructing using charcoal as a tonal instrument to convey the illusion of mass using gradients of value.
Define and utilize the vocabulary that relates to a beginning level college drawing class.

Discuss and interpret how drawing has been used by both contemporary and historical artists and assess how one's own work fits in.
--

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement A pre-instruction drawing will be done on the first full day of class that can be compared to a post instruction drawing done the last full day of class. - Class participation - Class discussions and critiques - Portfolio review - Quizzes and/or examines as determined by the instructor that will be described in the class syllabus	Satisfies Honors Requirement No	Satisfies Wellness Requirement No

ART104 - Color Theory

Overview

Subject Art (Art History)	Academic Department Fine & Performing Arts	School Liberal Arts
Course Description An introduction to the basic principles and theories of color. The course examines color properties, color schemes and harmonies, as well as the illusionary values and emotive qualities of color, and how these are used in art. This class meets for six (6) hours a week.		
Course Pre-requisite(s) Eligible to take ENG courses at HFC	Course Co-requisite(s) ART101 Two Dimensional Design	
Credit Hours 3		
Contact Hours 6		
Course Fee 50	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Portfolio Review, Interview	
Credit for Prior College Level Learning (CPCLL) Details Portfolio Review Details		

Goals, Topics, and Objectives

Course Goals To provide students with a thorough understanding of subtractive (non-digital) color and its applications in the visual arts.
Core Course Topics - The properties of color including hue, saturation and value. - Scientific and mathematical Color Models including the color wheel, color prism, and the Munsell color tree. - Color Harmonies such as monochromatic, analogous, triadic, split complementary, complementary, and their use in a variety of applications. - Emotive principles of color in design. - Color temperature as related to the illusion of spatial depth and emotive principles. - Light and Color as one of the Visual Elements. - Color in observational literacy. - Color in expressive literacy.

Develop a series of studies employing the properties of color.
Accurately produce a 12-part color wheel using only the three primary colors.
Define and illustrate color harmonies such as monochromatic, analogous, triad, split complementary and complementary.
Develop a project using color to relate a specific mood and/or emotion.
Demonstrate the illusion of depth, as well as emotive values, through the use of color.
Create a work of art using color in conjunction with the other Visual Elements.
Create a project that demonstrates the understanding of the use of color in observational literacy.

Create a project that demonstrates the understanding of the use of color in expressive literacy.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement will be identified and implemented by the class instructor. Methods will include, but not be limited to, grades on individual projects, vocabulary of subject taught, class participation and tests on material.

General Course Requirements and Recommendations
The \$195 Lab Fee is due to the class matching other studio art classes of being a 3.00 credit hour class that meets for 92.00 contact hours a semester, or 6.00 hours a week. The \$50 Lab Fee is to support various lab items that students use throughout the semester in such a class.

Goals, Topics, and Objectives

Course Goals
This class explores design fundamentals and the principles of organization as they apply to three-dimensional forms. Assigned projects introduce the student to materials and techniques used in three-dimensional art.
Core Course Topics
1. Vocabulary
2. Visual Elements in Three Dimensional Art
3. Principles of Design in Three Dimensional Art
4. Craftsmanship
5. Contemporary and historical overview
Recognize and understand the vocabulary used in working with three-dimensional design.
Create a body of original works of art that display an understanding of the visual elements as used in three-dimensional art: line, form and volume, space, color, texture and motion.
Create a body of original works of art that display an understanding of the principles of design as used in three-dimensional art: unity and variety, emphasis and subordination, scale and proportion, balance and rhythm.
Demonstrate an understanding and competence in addressing craftsmanship in three-dimensional art.
Compare and contrast historical and contemporary three-dimensional art and discuss as assess how one's own work fits into this realm.

Assessment, Requirements, and Outcomes

- Assessment of Academic Achievement**
- Evaluation of hands-on projects
 - Homework assignments
 - Quizzes
 - Class participation
 - End of term exam

Provide, in writing, a request to the department. Indicate the rationale for requesting credit and describing the type of college-level learning or course descriptions. Portfolio must contain 3-5 pieces of evidence that illustrates competency in all course learning objectives. Department faculty will evaluate submitted portfolios based on the evaluation rubric. Evaluation rubric and student checklist located in Division Office. Interview with appropriate departmental faculty to discuss the request and work samples.

Interview Details
Interview, given in department-by-department faculty. Faculty will interview applicants based on submitted portfolio and will assess against evaluation rubric. Evaluation rubric and student checklist located in Division Office.

Goals, Topics, and Objectives

- Core Course Topics
- Photoshop workspace including panels and tool applications. Creating, printing, and saving new documents appropriate for print, web and interactive uses.
 - Selection tools. Creating masks for editing. Working with blend modes to combine images and textures.
 - Image restoration and correction using Photoshop editing tools.
 - Taking Photoshop to the next level, using layers, blend modes, adjustment layers and the fundamentals of design to develop a composited image. Destructive and non-destructive "Live" adjustments, isolating elements from an image and editing with
 - Introduce Photoshop animation process including panels and layers.
 - Photoshop for web applications. Navigation, aesthetic composition, wireframes and generating image assets.

Demonstrate an ability to work with the drawing, editing and painting tools in Photoshop.
Distinguish between and use various color modes including RGB, CMYK, and Grayscale.
Demonstrate understanding of file formats supported by Photoshop for use in web, print and interactive applications.
Apply correct layer structures including creating create new layers, duplicate, delete, name, group and rearrange layers.
Produce complex selections using a variety of selection tools in Photoshop, creating both masks and channels.
Modify image size in Photoshop without distortion using the image size window and transform tools.
Apply Photoshop editing tools to correct image flaws and color for both restoration and enhancement.
Distinguish between "Live" and destructive adjustments and apply in Photoshop.
Construct a new composition by modifying several photographic images.
Recognize appropriate images and requirements for use.
Construct a simple animated sequence.
Design as a capstone project, a website mock-up, incorporating all major course objectives.

Assessment, Requirements, and Outcomes

- Assessment of Academic Achievement**
Course work includes, but is not limited to:
- In-class exercises

- Class Participation includes discussions and critiques
- Workspace quiz, midterm and final
- Composition Project
- Website Capstone Project

Interview Details
Interview, given in department-by-department faculty. Faculty will interview applicants based on submitted portfolio and will assess against evaluation rubric. Evaluation rubric and student checklist located in Division Office.

Goals, Topics, and Objectives

- Core Course Topics
1. Time-based animation techniques and story-telling.
 2. The animated workspace, design fundamentals of animation including keyframe animation and motion tweens.
 3. Drawing and animation tools.
 4. Saving and rendering files for a variety of output.

Visualize a story arc or sequence of action for animating.
Develop storyboards for use in the animation process.
Demonstrate understanding of animated sequencing.
Construct a series of simple to complex shapes using the drawing and painting tools.
Complete simple animated sequences.
Employ appropriate file formats for output: GIF, Mp4, MOV, SWF

Assessment, Requirements, and Outcomes

- Assessment of Academic Achievement
- Tests as described in the course syllabus.
 - Class Participation includes discussions and critiques.
 - Projects as described in the course syllabus.
 - Student demo reel.

ART111 - Digital Media

Overview

Subject	Academic Department	School
Graphic Design	Fine & Performing Arts	Liberal Arts
Course Description		
An introduction to the usage of digital media as it applies within a studio art discipline. Various types of imaging software, the use of time-based media as well as cross platform construction will be covered. This class meets for six (6) hours a week.		
Course Pre-requisite(s)		
Eligible to take ENG courses at HFC, ART101 Two Dimensional Design, ART102 Drawing I		

Credit Hours
3

Contact Hours
6

Course Fee	Miscellaneous Department Fee
50	0
Academic Level	
Undergraduate	
General Education Category	
Computer Technology	
Eligible for Credit for Prior College Level Learning (CPCLL)	
No	

Goals, Topics, and Objectives

Course Goals
To develop understanding of the role digital media has in contemporary art making. The student will be introduced to image based software, time based media development, and cross platform construction in the creation of a body of art work. Vocabulary and art criticism as it relates to digital media will be introduced throughout the class.

- Core Course Topics
1. Origins of digital based media as an art form
 2. Digital Media as a contemporary art form
 3. Image based software as used in digital media based art
 4. Time based media
 5. Cross platform construction
 6. The vocabulary of digital media based art
 7. Art criticism as it relates to digital media based art
 8. Computer Literacy

Develop an understanding of the background and origins of digital based media.
Develop an understanding of digital media as used in contemporary art.
Utilize of both vector based and raster based imaging software in making art.
Develop a time based media piece as a work of digital media based art.
Build a work of art using a variety of digital media platforms.
Develop a sense of the vocabulary that is commonly used within digital media based art.
Analyze and critique one's own digital media projects, as well as those of classmates, and to speak knowledgeably about the works of well known artists within the genre. operate basic computer hardware, including common input, output, and storage devices.
Log in and out of the HFC network, utilize WebAdvisor, perform basic tasks such as finding, saving, copying and printing files, sending and receiving email with and without attachments.
Demonstrate knowledge of word processing, spreadsheet and presentation applications by creating, formatting, and configuring documents.
Demonstrate utilization of the WWW including use of a browser for internet access, use of search engines, and evaluation of credibility and quality of WWW sites.
Communicate professionally in an online environment as well as demonstrate proper ethical and legal behavior in online community as well as understand common threats to computer security and privacy such as plagiarism, viruses, phishing and identity theft.

Demonstrate Computer Literacy knowledge, by successfully being able to: operate basic computer hardware, including common input, output, and storage devices. 1. Log in and out of the HFC network, utilize WebAdvisor, perform basic tasks such as finding, saving, copying and printing files, sending and receiving email with and without attachments. 2. Demonstrate knowledge of word processing, spreadsheet and presentation applications by creating, formatting, and configuring documents. 3. Demonstrate utilization of the WWW including use of a browser for internet access, use of search engines, and evaluation of credibility and quality of WWW sites. 4. Communicate professionally in an online environment as well as demonstrate proper ethical and legal behavior in online community as well as understand common threats to computer security and privacy such as plagiarism, viruses, phishing and identity theft.
--

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of Academic Achievement will be identified and implemented by the class instructor. Methods will include, but not be limited to, grades on individual projects, vocabulary, class participation, and tests on material.

General Course Requirements and Recommendations
The \$195.00 Lab Fee is due to the class matching other studio art classes of being a 3.00 credit hour class that meets for 92.00 contact hours a semester. The \$50.00 Course Fee covers Department purchased supplies that are need to run the class.

Goals, Topics, and Objectives

Course Goals
This course is designed to further increase the observational skills, conceptual awareness, and drawing capabilities developed in Drawing I.

Core Course Topics
1. Materials
2. Sighting
3. Cross contours and values
4. Chiaroscuro
5. Linear copywork
6. Value copywork
7. Self portrait
8. Additive and Subtractive drawing
9. Perspective
10. Tonal Form
11. Tromp L'oeil
12. Contemporary and historical overview

Recognize and identify the materials used in an intermediate college level drawing class.

Demonstrate proper use of the sighting process to identify and analyze proper positions and proportions of horizontal and vertical forms in space.
--

Demonstrate competence in copywork from a masterpiece drawing in which line is the dominant method of development.
--

Employ chiaroscuro to illustrate values of forms in space.
--

Demonstrate competence in copywork from a masterpiece drawing in which tone is the dominant method of development.
--

Create a self portrait with emphasis on proper proportions and tonal values.
--

Create a drawing using the additive and subtractive method on toned paper.
--

Demonstrate an understanding of two point perspective by creating a drawing with several three dimensional objects along with all constructions lines, object lines, horizon line and vanishing points.

Create a drawing using toned (black, grey or blue) paper and contrasting drawing material (white or sienna conte.)
--

Create a Tromp L'oeil drawing using both line and tone.

Discuss and interpret how drawing has been used by both contemporary and historical artists and assess how one's own work fits in.
--

Assessment, Requirements, and Outcomes

Goals, Topics, and Objectives

Core Course Topics
1. Gesture
2. Line quality
3. Measuring
4. Composition
5. Value
6. Foreshortening
7. Anatomy
8. Portraiture
9. Vocabulary
10. Visual Overview

Illustrate the figure in full with gestural linear analysis.
--

Demonstrate forms of line variation.

Apply correct proportions in a drawing by using measurement and sighting methods.

Apply measuring skills along with the gestural quality of the model to best compose a composition within the picture plane.

Create a body of work that emphasizes the illusion of 3D form through tonal gradations in charcoal.

Competently illustrate drawing the figure foreshortened in space.

Illustrate familiarity with the skeletal structure.
Illustrate an understanding of the skull and features of the human face.
Define and utilize vocabulary that relates to college drawing classes and basic anatomy.
Discuss various artists' figurative work and interpret techniques.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
A pre instruction drawing will be done the first day of class to compare with drawings done at the end of the semester

Goals, Topics, and Objectives

Core Course Topics
- InDesign basics - Illustrator basics - Fundamentals of typesetting. - Design methodology. - Fundamentals of design including grid, layout, and hierarchy. - Color theory in relation to print and digital media design. - InDesign time saving techniques: styles, layers, master pages, and local pages. - Saving documents for output, using correct file formats. - Vector graphics.
Use tools, panels and menus to manipulate elements within a document.
Use tools, panels and menus.
Use pen and shape tools in the tool palette to create graphic elements.
Define basic print terminology.
Construct typographic solutions including appropriate typeface selection.

Use typesetting tools such as kerning, tabs, indents, letter, and line spacing.
Demonstrate conceptual development, research, and sketching.
Create multi-page and single page design documents which employ both hierarchy and grid.
Express visual harmony through the use of color theory.
Use CMYK and RGB in both print and online formats.
Construct a multi-page document using time saving techniques.
Choose correct file saving formats for a variety of outputs.
Use document pre-press techniques for packaging, digital output, and PDF formats.
Use Illustrator to create vector graphics for use in a variety of media.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
- Assigned projects including single, multi-page print and web-based documents - Test as described in the course syllabus - Class Participation includes discussions and critiques - Projects as described in the course syllabus	
Texts	
Text determined by department/instructor	Satisfies Wellness Requirement
Satisfies Honors Requirement	No

ART116 - Painting I

Overview

Subject	Academic Department	School	
Art (Art History)	Fine & Performing Arts	Liberal Arts	
Course Description			
A beginning level college painting class that explores traditional and contemporary approaches in observational painting. This class meets for six (6) hours a week.			
Course Pre-requisite(s)			
Eligible to take ENG courses at HFC, ART101 Two Dimensional Design and ART102 Drawing I or Instructor Permission.			
Credit Hours			
3			
Contact Hours			
6			
Course Fee	Miscellaneous Department Fee		
20	0		
Academic Level	Acceptable Prior Learning Credit		
Undergraduate	Portfolio Review, Interview		
Eligible for Credit for Prior College Level Learning (CPCLL)			
No			

Goals, Topics, and Objectives

Course Goals
Students in this course will develop an awareness of the basic concepts, methods, and materials involved in oil painting. Exercises are designed to build upon skills developed in previous art classes while learning about the unique capabilities of oil paint. Emphasis will be placed upon understanding the painting process as a concept of dynamic color/shape relationships.
Core Course Topics
- Vocabulary - Preparation - Color mixing - Brushwork - Traditional techniques - Contemporary techniques - Values - Individualize palettes - Canvas stretching - Copy masterwork - Self-portrait
Apply all assigned vocabulary terms in class discussions.
Maintain an organized palette with all related materials for oil painting.

Demonstrate the ability to apply colors, mediums and solvent, and learn to mix them according to their attributes and color range necessary for individual projects.
Compare the attributes of each type of brush and use them successfully for various desired effects.
Demonstrate knowledge about grisaille, glazing, scumbling, and feathering approaches in painting.
Demonstrate knowledge about alla prima, impasto, open edge effects, and color blocks interaction approaches in painting
Compose and describe forms using monochrome value as the principle means of development.
Create a still life image restricted to warm/cool colors.
Demonstrate the ability to stretch a canvas on standard stretcher bars.
Create a copy of a masterpiece painting focusing on color, composition, and proportion.
Create a self-portrait with emphasis on composition, color, and proportion.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement		
A pre-instruction painting will be done on the first full day of class to compare with work done at the end of the semester.		
- Class participation - Class critiques - Portfolio reviews - Quizzes and/or exams as determined by the instructor that will be described in course syllabi.		
Satisfies Honors Requirement	Satisfies Wellness Requirement	
No	No

Portfolio Review Details		

Provide, in writing, a request to the department. Indicate the rationale for requesting credit and describing the type of college-level learning or course descriptions. Portfolio must contain 3-5 pieces of evidence that illustrates competency in all course learning objectives. Department faculty will evaluate submitted portfolios based on the evaluation rubric. Evaluation rubric and student checklist located in Division Office. Interview with appropriate departmental faculty to discuss the request and work samples.

Interview Details

Interview, given in department-by-department faculty. Faculty will interview applicants based on submitted portfolio and will assess against evaluation rubric. Evaluation rubric and student checklist located in Division Office.

Goals, Topics, and Objectives

Course Goals
To provide students with an understanding of techniques focused on the preliminary development of a sequence of events or series of actions.
Core Course Topics
- Story Construction - Storyboard Development - Style Frames - Sequential construction of a specific communication.
Illustrate a sequence of events that communicate a message.

Set up a sequence of events that tell a story.
Set up a sequence of events that allows for a series of actions in an interactive experience.
Construct digital style frames which demonstrate visual aesthetic of the communication message.
Construct an original concept for a interactive experience as a capstone project.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement		
- Class Participation includes discussions and critiques - Projects as described in the course syllabus - Unit Quizzes and - Final Capstone project

ART121 - Art History I - Pre-Historic to Medieval

Overview

Subject	Academic Department	School
Art (Art History)	Fine & Performing Arts	Liberal Arts
Course Description		
A survey of the development of visual arts from the pre-historic to the end of medieval period, covering major civilizations and cultures worldwide. Offers students strong background for understanding the visual art as a vehicle of communication in its functional context. Provides cross-cultural understanding through continuous critical thinking perspective. Enables students to comprehend and interpret works of art by examining the contextual characteristics of the work, its subject, functionality and the culture(s) that produced it. A field trip to a major museum and other appropriate sites is required to strengthen student knowledge.		
Course Pre-requisite(s)		
Eligible to take ENG courses at HFC

Goals, Topics, and Objectives

Course Goals
This course is a fundamental survey concerned with the growth of civilization and development of art in relation to history and technology. A variety of media are presented: sculpture, architecture, painting, and the applied arts. These are studied in terms of their historical context.

Core Course Topics
- Prehistoric Art - Ancient near East - Ancient Egypt - Prehistoric Aegean - Ancient Greece - Ancient Southeast Asia - Early China, Early Japan - Etruscan and Ancient Rome - Jewish, Early Christian, Byzantium, Islamic Art - Ancient Americas - Pre Colonial Africa - Early Medieval, Romanesque and Gothic

Demonstrate an aesthetic awareness of Prehistoric Art and explain the importance of Prehistoric Art within its cultural context.
Demonstrate an aesthetic awareness of the art of Ancient near East and explain the importance of this style within its cultural context.
Demonstrate an aesthetic awareness of the art of Ancient Egypt and explain the importance of Egyptian art within its cultural context.
Demonstrate an aesthetic awareness of Prehistoric Aegean art and explain the importance of this style within its cultural context.

Demonstrate an aesthetic awareness of the art of Ancient Greece and explain the importance of these styles within its cultural context.
Demonstrate an aesthetic awareness of the art of Ancient Southeast Asia and explain the importance of this art within its cultural context.
Demonstrate an aesthetic awareness of the art of both early China and early Japan and explain the importance of these styles within their cultural context.
Demonstrate an aesthetic awareness of Etruscan and ancient Roman art and explain the importance of these styles within their cultural context.
Demonstrate an aesthetic awareness of the artistic styles that developed in central Europe and the Middle East during the first half of the Millennium CE and explain the importance of these styles within their cultural context.
Demonstrate an aesthetic awareness of art of the ancient Western Hemisphere and explain the importance of these styles within its cultural context.
Demonstrate an aesthetic awareness of African art prior to European colonialism and explain the importance of these styles within their cultural context.
Demonstrate an aesthetic awareness of the artistic styles that developed in central and western Europe during the first half of the second Millennium CE and explain the importance of this art within its cultural context.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
Quizzes given throughout the course. Exams are given within the class at measurable intervals. A written final examination is based on visual imagery studied throughout the course. Assessing a written Research Paper with major points evaluated. Assessing key concepts of Research Paper within an oral presentation in a group setting.

ART122 - Art History Survey II

Overview

Subject Art (Art History)	Academic Department Fine & Performing Arts	School Liberal Arts
Course Description	A survey of the development of visual arts from the early Renaissance to the present time. Offers broad background for understanding the visual art as a vehicle of communication in its functional context. Provides a concise appreciation to the development of socioeconomic, religious and political characteristics of the covered periods. Enables students to acquire a broad scope of cross-cultural understanding through continuous critical thinking perspective. Discusses how to comprehend and interpret works of art by examining the contextual characteristics of the work, its subject, functionality and the culture(s) that produced it. A field trip to a major museum and other appropriate sites is required to strengthen student knowledge.NOTE: It is recommended that a student who plans to take both ART-121 and ART-122 start with ART-121 first.	
Course Pre-requisite(s)	Eligible to take ENG courses at HFC	
Credit Hours	3	
Contact Hours	3	
Course Fee 15	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category Humanities and Fine Arts	Michigan Transfer Agreement (MTA) Category Category 5: Humanities and Fine Arts - Applied Degrees, Category 5: Humanities and Fine Arts - Transfer Degrees	
Eligible for Credit for Prior College Level Learning (CPCLL)	No	

Goals, Topics, and Objectives

Course Goals
This course in art history surveys art from the Renaissance to the present. The course concentration examines the evolution of artistic styles and their relationship to technology and civilization. A variety of media will be explored including painting, sculpture, applied arts, architecture, and graphics.
Core Course Topics
1. Late Gothic, 14th Century Italy
2. 15th century Northern Europe and Spain
3. Early Renaissance
4. High Renaissance and Mannerism
5. 16th century Northern Europe and Spain
6. Baroque and Rococo
7. Southeast Asia, Later China, Later Japan
8. Neo-Classicism, Romanticism and mid-19th Century European Art

9. Modernism of the Twentieth/Twenty-First Century

Demonstrate an aesthetic awareness of Late Gothic and 14th Century Italian art and explain the importance of these styles within their culture context.
Demonstrate an aesthetic awareness of 15th century art from Northern Europe and Spain and explain the importance of these styles within their culture context.
Demonstrate an aesthetic awareness of Early Renaissance art and explain the importance of these styles within their culture context.
Demonstrate an aesthetic awareness of High Renaissance and Mannerism artistic styles and explain the importance of these developments within their culture context.
Demonstrate an aesthetic awareness of 16th century art from Northern Europe and Spain and explain the importance of these styles within their culture context.
Demonstrate an aesthetic awareness of the Baroque and Rococo artistic styles and explain the importance of these developments within their culture context.
Demonstrate an aesthetic awareness of art of Southeast Asia, later China and later Japan and explain the importance of these styles within their culture context.
Demonstrate an aesthetic awareness of Neo-Classicism, Romanticism and mid to late 19 century European Art and explain the importance of these styles within their culture context.
Demonstrate an aesthetic awareness of art since the birth of Modernism of the Twentieth and Twenty-First century and explain the importance of these developments within their culture context.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
Quizzes are given throughout the course. Exams are given within the class at measurable intervals. A written final examination based on visual imagery studied throughout the course. ART123 - History of Modern Art

Overview

Subject Art (Art History)	Academic Department Fine & Performing Arts	School Liberal Arts
Course Description	A survey of major visual art forms, techniques, styles, movements, and personalities of the nineteenth, and twentieth/twenty-first centuries. Explores architecture, sculpture, painting, printmaking, graphic design, and non-traditional art forms of the modern and post-modern era. Offers broad knowledge for understanding the visual art and its societal function. Presents learning tools to comprehend and interpret works of art by examining the contextual characteristics, subject matter, functionality, and the culture(s) that produced the artwork. A field trip to a major museum and other appropriate art sites is required to strengthen student's knowledge.	
Course Pre-requisite(s)	Eligible to take ENG courses at HFC	
Credit Hours	3	
Contact Hours	3	
Course Fee 10	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category Humanities and Fine Arts	Michigan Transfer Agreement (MTA) Category Category 5: Humanities and Fine Arts - Applied Degrees, Category 5: Humanities and Fine Arts - Transfer Degrees	
Eligible for Credit for Prior College Level Learning (CPCLL)	No	

Goals, Topics, and Objectives

Course Goals
This survey course is designed to develop understanding and appreciation for modern visual art and architecture from the late nineteenth century to the present (impressionism to post modernism). The course concentration examines the evolution of artistic styles and their relationship to technology and civilization. A variety of media will be explored including painting, sculpture, printmaking, graphic design, and architecture.
Core Course Topics
1. The Origins of Modern Art
2. Impressionism and Post Impressionism
3. Art Nouveau and the Beginnings of Expressionism; Expressionism in Germany; Cubism; Early Twentieth Century Architecture

4. Western Europe during World War I; Futurism; Dadaism; De Stijl; Bauhaus; Surrealism
5. American Art Before World War I
6. American Art Between the World Wars
7. Abstract Expressionism
8. Nouveau Realisme and Pop Art
9. Modernism in Architecture
10. Conceptualism and Activist Art
11. Minimalism
12. Post-Modernism
13. Contemporary Art and Globalization

Demonstrate an aesthetic awareness of the art of Impressionism and Post Impressionism, and explain the importance of these developments within their cultural context.
Demonstrate an aesthetic awareness of the art of Art Nouveau style as well as the Beginnings of Expressionism; Expressionism in Germany; Cubism; and Early Twentieth Century Architecture and explain the importance of these developments within their cultural context.
Demonstrate an aesthetic awareness of the art of Western Europe during World War I; Futurism; Dadaism; De Stijl; Bauhaus; and Surrealism and explain the importance of these developments within their cultural context.
Demonstrate an aesthetic awareness of American art prior to World War I and explain the importance of this developments within its cultural context.
Demonstrate an aesthetic awareness of American art between World War I and World War II and explain the importance of these developments within its cultural context.
Demonstrate an aesthetic awareness of Abstract Expressionism and explain the importance of this developments within its cultural context.
Demonstrate an aesthetic awareness Nouveau Realisme and Pop Art and explain the importance of these developments within its cultural context.
Demonstrate an aesthetic awareness Modernism in architecture and explain the importance of this developments within its cultural context.
Demonstrate an aesthetic awareness Conceptualism and Activist Art and explain the importance of these developments within its cultural context.
Demonstrate an aesthetic awareness of the artistic style of Minimalism and explain the importance of this developments within its cultural context.
Demonstrate an aesthetic awareness of the artistic style of Post-Modernism and explain the importance of this developments within its cultural context.
Demonstrate an aesthetic awareness of Contemporary Art and Globalization and explain the importance of these developments within their cultural context.

Assessment, Requirements, and Outcomes

Humanities and Fine Arts		Category 5: Humanities and Fine Arts - Applied Degrees, Category 5: Humanities and Fine Arts - Transfer Degrees
Eligible for Credit for Prior College Level Learning (CPCLL)		
No		

Goals, Topics, and Objectives

Course Goals
To help students become better designers by giving them a historical context for their field of study as well as a look at how the field is changing through technology and the growing global design environment.
Core Course Topics
1. Early writing, mark making, the invention of alphabets, and the use of words to communicate through illuminated manuscripts of the Middle Ages to present day.
2. Typographic design from the Renaissance period through contemporary typographic design. Including the invention of printing and typeface design.
3. The use of illustration and photography, and the relationship of both to graphic design.
4. Major periods in the history of graphic design from Renaissance through contemporary design including the influence of the Art movements on graphic design.
5. The digital revolution, screen based media, and its effects on graphic design.
6. International design trends through history and the effect of the global village on design.
Identify and discuss early writing systems and their influences on design today.
Classify major type design styles and their designers.
Recognize illustrative techniques and understand the role of innovation in graphic design.
Classify work and artists from important artistic movements and discuss their relevance to graphic design, including Arts and Crafts, Art Nouveau, Cubism, Futurism, Dada, and the New York School.
Analyze the relevance of important typographic movements and the work of significant graphic designers through history.
Understand the importance of technology and historic influences on design today.
Identify and discuss international trends in design in context of a contemporary design practice.

ART135 - Art Appreciation

Overview

Subject	Academic Department	School
Art (Art History)	Fine & Performing Arts	Liberal Arts
Course Description		
A global survey of the development of visual arts through studying major historic civilizations and cultures from the stone age to the present. Explains technical information on the materials, tools, and techniques used to create visual arts in different branches. Discusses how to interpret works of art by examining the contextual characteristics, the content, functionality and the culture(s) that produced it. Field work at a major museum/art gallery is required to strengthen student's knowledge.

Goals, Topics, and Objectives

Course Goals This course in art appreciation introduces art techniques and presents a multitude of art imagery in association with explanations.
Core Course Topics 1. Introduction to art 2. Vocabulary of terms 3. Two-dimensional media (drawing, painting, prints, camera art, and graphic design). 4. Three-dimensional media (sculpture, applied arts, architecture). 5. Techniques of art making 6. Artistic styles 7. Arts in time (content of history to art explained timeframe and techniques developed chronologically).
Develop an understanding of what art is along with role art has played throughout the cultural context of human development.
Define and utilize the some of the major terms used in the making, viewing, and understanding art.
Define the similarities and differences between different two-dimensional medial.
Define the similarities and differences between different three dimensional media.
Demonstrate an aesthetic awareness of the development individualistic artistic styles.
Demonstrate an aesthetic awareness of the chronological development of some of the major art trends throughout history and explain the importance each within its cultural context.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement • Class participation • Class discussions • Written essays and/or research paper as determined by the instructor and described in the course syllabus • Quizzes and/or tests as determined by the instructor and described in the course syllabus • Possible museum and/or gallery visit as determined by the instructor and described in the course syllabus

ART141 - Ceramics I

Overview

Subject Art (Art History)	Academic Department Fine & Performing Arts	School Liberal Arts
Course Description A beginning level college course in ceramic materials and processes. Covers various hand-building techniques, basic surface and glazing techniques, and the differences between gas and electric firing. This class meets for six (6) hours a week.		
Course Pre-requisite(s) Eligible to take ENG courses at HFC		
Credit Hours 3		
Contact Hours 6		
Course Fee 125	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals To provide the beginning construction and glazing skills necessary for a student to design, construct and glaze both challenging and aesthetically pleasing ceramics, and to encourage the development of creative problem solving skills.
Core Course Topics 1. Pinch construction 2. Coil construction 3. Slab construction 4. Mold construction

5. Slip decoration 6. Iron oxide stain decoration 7. High fire glazing 8. Low fire glazing. 9. Ceramic aesthetics 10. Vocabulary
Create a group of pinch constructed pieces utilizing a variety of themes.
Create a thematically based piece utilizing the coil construction technique.
Slab construction Create pieces utilizing both soft slab and stiff slab construction techniques.
Create a ceramic piece utilizing one or more press molds.
Employ colored slips as a decorating vehicle in high fire ceramics.
Employ iron oxide stain as a decorating vehicle in high fire ceramics.
Utilize a variety of high fire glaze techniques on ceramic pieces.
Apply low fire glazing glazes on one or more of ceramic pieces.
Analyze and contrast different themes and construction techniques in one's work and how discuss how these fit into a historical and/or contemporary overview of the media.
Define a basic vocabulary list pertaining to the operation of making and firing ceramics.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement • Evaluation of hands-on projects. • Class discussions • Class participation • Critiques. • Written quizzes and/or exams as determined by the instructor and described in the course syllabus	
Texts No "text" required, but students do outside of class research on pottery.	
Satisfies Honors Requirement No	Satisfies Wellness Requirement No

ART142 - Ceramics II

Overview

Subject Art (Art History)	Academic Department Fine & Performing Arts	School Liberal Arts
Course Description Emphasizes functional pots and the wheel as the primary technique of construction. Introduces the history of functional ceramics as an idea source for functional designs and includes instruction in kiln stacking. This class meets for six (6) hours a week.		
Course Pre-requisite(s) ART141 Ceramics I with a "C" grade or higher, or Instructor Permission		
Credit Hours 3		
Contact Hours 6		
Course Fee 125	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Skilled Demonstration, Portfolio Review	
Credit for Prior College Level Learning (CPCLL) Details Skilled Demonstration Details Demonstration of live ability to make all the items covered in class to a high skilled level.		
Portfolio Review Details Extensive portfolio of ceramic work done by the individual that covers the work cited in the Course Master		
Other Details Determined by department.		

Goals, Topics, and Objectives

Course Goals
To provide the basic skills in developing forms on the potter’s wheel necessary for students interested in a possible ceramics emphasis at a four year art program, a career in ceramics or for setting up a home studio, and to encourage creative problem solving skills within the arts.

- Core Course Topics**
- 1. Course overview and vocabulary
 - 2. The potter’s wheel
 - 3. Tumblers
 - 4. Bowls
 - 5. Trimming
 - 6. Mugs
 - 7. Surface design
 - 8. Glaze mixing
 - 9. Kiln loading
 - 10. Ceramic aesthetics

Develop and understanding and utilization of the vocabulary used to describe the various ways and means of working on a potter’s wheel.
Demonstrated the ability to center, open and pull up clay on the potter’s wheel.
Create a group of cylindrical tumblers on the potter’s wheel
Transform the shape of thrown pieces by trimming a foot on the bottom edge
Create a group of mugs that have functional and aesthetically pleasing handles
Demonstrate proficiency in using slips and glazes to put aesthetically pleasing as well as functional surfaces on pottery.
Demonstrate the ability to use the balance scale and mix a large batch of glaze.
Assist in the stacking of both electric and gas kilns.
Analyze and contrast different themes and construction techniques in one’s work and how discuss how these fit into a historical and/or contemporary overview of the media.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement • Evaluation of hands-on projects. • Critiques and class discussion. • Written quizzes. • Final exam.

ART150 - Digital Photography I

Overview

Subject Art (Art History)	Academic Department Fine & Performing Arts	School Liberal Arts
Course Description An introductory-level course on the basics of digital imaging where creativity is emphasized. Offers key concepts such as (manual) camera capture, basic file management, 'non-destructive' image processing, and printing which help foster the foundations for visual communications, new media disciplines, or a fine art practice. A student may wait until the first class meeting to make arrangements to buy/use a camera. This class meets for six (6) hours a week.		
Course Pre-requisite(s) Eligible to take ENG courses at HFC		
Credit Hours 3		
Contact Hours 6		
Course Fee 10	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Portfolio Review, Interview	
Credit for Prior College Level Learning (CPCLL) Details Portfolio Review Details		

Portfolio must contain 3-5 pieces of evidence that illustrates competency in all course learning objectives. Department faculty will evaluate submitted portfolios based on the evaluation rubric. Evaluation rubric and student checklist located in Division Office.2. Scheduled interview with the appropriate department faculty.

Interview Details

Interview, given in department-by-department faculty. Faculty will interview applicants based on submitted portfolio and will assess against evaluation rubric. Evaluation rubric and student checklist located in Division Office.

Goals, Topics, and Objectives

Course Goals
Designed to introduce students to the tools and processes for creating and managing digital lens based imagery for print, web, and fine art production.

- Core Course Topics**
- 1. Adjustable digital single lens reflex camera
 - 2. Manipulating the exposure with in camera techniques
 - 3. Post-production methods for light-based output ("non-destructive" alterations to the file in order to address aesthetic concerns)
 - 4. Beginning lighting for products
 - 5. Historic and contemporary practices in photography.
 - 6. Design and aesthetic considerations to making/understanding photographic works
 - 7. Communicating the photographic process and aesthetic choices including the students description of their own work, vocabulary.

Demonstrate the functions of and effectively use a SLR (Single Lens Reflex) manual operated film camera.
Demonstrate an understanding and utilization of black and white film as an image recording medium.
Demonstrate a basic knowledge of how speeding up or slowing down the shutter effects the photographic image.
Demonstrate a basic knowledge of how open or closing the camera’s lens with the aperture control effects the photographic image.
Demonstrate proper film loading and developing including the proper use and sequence of the chemical developing process.
Understand basic darkroom protocol.
Demonstrate the ability to load film into the enlarger and expose photographic paper for printing.
Demonstrate proper hands on processing techniques of black and white prints through the chemical baths.
Utilize contrast filters on variable contrast photographic paper to change the aesthetic quality of images.
Practice proper darkroom safety techniques when using photographic chemistry.
Employ a mat cutter to properly mat and present photographs.
Analyze, discuss and contrast different themes in one’s work and how these fit into historical and/or contemporary ideas of photography.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement • Production of photographic projects. • Produce bracketed images for an HDR rendering as an amalgamated composition. • Give an oral presentation on a photographer’s work. • Produce and present a final project along with a written project statement. • Group critiques of assigned photo work.	
Texts Determined by instructor.	
Satisfies Honors Requirement No	Satisfies Wellness Requirement No

Goals, Topics, and Objectives

Course Goals
Designed to introduce the beginning photography student to basic film and darkroom photographic skills.

- Core Course Topics
1. The camera
 2. Black and white film
 3. The camera's shutter speed control
 4. The camera's aperture control
 5. Film processing
 6. Darkroom
 7. The enlarger
 8. Darkroom chemistry
 9. Contrast filters
 10. Darkroom safety
 11. Photographic presentation
 12. Photographic aesthetics

Demonstrate the functions of and effectively use a SLR (Single Lens Reflex) manual operated film camera .
Demonstrate an understanding and utilization of black and white film as an image recording medium .
Demonstrate a basic knowledge of how speeding up or slowing down the shutter effects the photographic image.
Demonstrate a basic knowledge of how open or closing the camera's lens with the aperture control effects the photographic image.
Demonstrate proper film loading and developing including the proper use and sequence of the chemical developing process.
Understand basic darkroom protocol.
Demonstrate the ability to load film into the enlarger and expose photographic paper for printing.
Demonstrate proper hands on processing techniques of black and white prints through the chemical baths.
Utilize contrast filters on variable contrast photographic paper to change the aesthetic quality of images.
Practice proper darkroom safety techniques when using photographic chemistry.
Employ a mat cutter to properly mat and present photographs.
Analyze, discuss and contrast different themes in one's work and how these fit into historical and/or contemporary ideas of photography.

Assessment, Requirements, and Outcomes

- Assessment of Academic Achievement
- Class participation
 - Class discussions
 - Class critiques of student photographs
 - Portfolio review
 - Quizzes and exams as determined by the instructor that are to be described in the class syllabus

ART165 - Typography

Overview

Subject	Academic Department	School
Graphic Design	Fine & Performing Arts	Liberal Arts

Course Description
Typography is the art of arranging type to create visually communicated messages. Covers typesetting, and layout design including history, anatomy, and design fundamentals. Introduces Adobe Illustrator and InDesign. ART-107 is highly suggested prior to taking this course. This class meets for six (6) hours a week.Students are expected to have access to the Adobe Creative Cloud applications including Photoshop, Indesign, and Illustrator.

Course Pre-requisite(s)
Eligible to take ENG courses at HFC [ART101 Two Dimensional Design](#), or Instructor Permission

Credit for Prior College Level Learning (CPCLL) Details
Portfolio Review Details

Provide, in writing, a request to the department. Indicate the rationale for requesting credit and describing the type of college-level learning or course descriptions. Portfolio must contain 3-5 pieces of evidence that illustrates competency in all course learning objectives. Department faculty will evaluate submitted portfolios based on the evaluation rubric. Evaluation rubric and student checklist located in Division Office. Interview with appropriate departmental faculty to discuss the request and work samples.

Interview Details

Interview, given in department by department faculty. Faculty will interview applicants based on submitted portfolio and will assess against evaluation rubric. Evaluation rubric and student checklist located in Division Office.

Other Details

Determined by department.

Goals, Topics, and Objectives

Course Goals
To provide students with knowledge of typography and the principles of layout design and its importance of typography as a tool for communicating visual messages.

- Core Course Topics
1. Anatomy of typeface design.
 2. Classification of typeface design: Serif (old, transitional, modern), san-serif (humanist, geometric, grotesque), slab serif, script, and display
 3. Type setting techniques and best practices.
 4. Grid and layout. Construct page layouts based on a grid. Show a variety of grid systems and explain appropriate use for each.
 5. Designing for legibility and the communication of intended message
 6. Historical and typographic trends. Introduction to periods of designs as well as notable designers and typographers
 7. Discuss ways to research historical and typographic trends. Introduce periods of designs as well as notable designers and typographers.

Identify the anatomical parts and measurements of letters.
Classification of typeface design: Serif (old, transitional, modern), san-serif (humanist, geometric, grotesque), slab serif, script, and display.
Classify and sketch type with pencil on paper from each of the major classifications.
Exhibit proper use of typesetting techniques including manual leading, kerning, and various forms of justification.
Construct page layouts based on a grid.
Show a variety of grid systems and explain appropriate use for each.
Experiment with concepts for a design on paper (or digital) and then produce the design using Adobe drawing tools.
Show evidence in their design solutions of an understanding of design concepts and principles such as typographic hierarchy, optical adjustment, visual alignment, and grid systems.
Examine well-known typefaces such as Bodoni, Caslon, Garamond, Helvetica, Garamond, and Universe.
Illustrate and articulate an understanding of typographic trends such as Bauhaus, International Style and experimental typography.
Discuss ways to research historical and typographic trends. Introduce periods of designs as well as notable designers and typographers.

Assessment, Requirements, and Outcomes

- Assessment of Academic Achievement
- Written and designed projects as described in the course syllabus.
 - Class Participation includes discussions and critiques

- Unit tests and final exam as described in the course syllabus.

ART190 - Co-Op in Graphic Design

Overview

Subject Art (Art History)	Academic Department Fine and Performing Arts	School Liberal Arts
Course Description Cooperative education is a structured method of combining classroom-based education with practical work experience. A cooperative education experience, commonly known as a "co-op," provides academic credit for structured employment experience. Work experience must be directly related to the student's declared major to be eligible. To register for this course, a student must have completed 50% of core coursework, maintain an overall GPA of 2.0 and a program specific GPA of 2.5. Contact the HFC Career Services Office for more information at careers@hfcc.edu .		
Course Pre-requisite(s) All co-op students must have completed a minimum of 50% of their core classes generating a core grade point average (GPA) of a 2.5 and a minimum overall GPA of 2.0. For more information, please visit careers.hfcc.edu . HFC Career Services Office approval is required.		
Credit Hours 1		

Contact Hours

Course Fee 0	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Course Goals
Cooperative education helps students make the school-to-work transition, develop career and program-related learning objectives, and work on applicable skills for employment. Placements should provide students with the opportunity to apply and expand upon knowledge learned in the classroom, and develop the skills acquired in their coursework to align with the standards and expectations set by the worksite.

- Core Course Topics
- Publication design and layout
 - Construct illustrations and page layouts that align with current industry trends.
 - Workplace etiquette
 - Demonstrate collaborative and polite oral and written communication to meet deadlines.
 - Publication trends
 - Evaluate content and determine appropriate visual communication media.
 - Resume building
 - Generate and edit content for publication.
 - Design software
 - Demonstrate mastery of industry-standard design software.

Publication design and layout: Construct illustrations and page layouts that align with current industry trends.
Workplace etiquette: Demonstrate collaborative and polite oral and written communication to meet deadlines.
Publication trends: Evaluate content and determine appropriate visual communication media.
Resume building: Generate and edit content for publication.
Design software: Demonstrate mastery of industry-standard design software.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Assessment to be determined by the instructor based on the student's academic growth including future employability. It may include, but is not limited to, the following: Consistent and prompt attendance at worksite Employer evaluation Monthly submissions to the newspaper Participation in career-focused workshop(s)	Satisfies Wellness Requirement No
General Course Requirements and Recommendations ART190 Co-Op in Graphic Design will provide students interested in careers in graphic design to obtain hands-on experience. The student will be required to attend weekly production meetings.

ART213 - Life Drawing II

Overview

Subject Art (Art History)	Academic Department Fine & Performing Arts	School Liberal Arts
Course Description An intermediate college level exploration Life Drawing through direct observation of a model. This class meets for six (6) hours a week.		
Course Pre-requisite(s) ART113 Life Drawing I or Instructor Permission		
Credit Hours 3		

Contact Hours

6	
Course Fee 40	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

- Core Course Topics
- Gesture
 - Line quality
 - Measuring
 - Composition
 - Value
 - Foreshortening
 - Anatomy
 - Portraiture
 - Vocabulary
 - Visual Overview

Illustrate the figure in full with quick linear analysis based on energy, movement and rhythm.
Demonstrate techniques of line variation as it pertains to contour, movement, and indications of form and weight.
Apply correct proportions in a drawing by using measurement and sighting methods, including positive/negative space analysis.
Apply measuring and design elements to utilize the ratio of paper size to figure to create harmony between the figure, ground and the predetermined size of the drawing.
Create a body of work that emphasizes understanding of aspects of lighting and shadow on the figure and visually communicates the illusion of 3D form through tonal gradations in charcoal.
Demonstrate competence in measuring and accurately drawing the figure foreshortened, reclining, and turned.
Illustrate the skeleton in full and demonstrate a working knowledge of skeletal proportions, bones and joints.
Illustrate an understanding of the skull, neck, facial planes and features. Define and utilize vocabulary that relates to college drawing classes and basic anatomy.
Interpret technique and narrative in figure based compositions.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement A pre-instruction drawing will be done on the first full day of class to compare with work done at the end of the semester. - Class Participation - Class discussions and critiques of student work - Portfolio review - Quizzes and/or exams as determined by the instructor and described in the course syllabus	Satisfies Wellness Requirement No
General Course Requirements and Recommendations This class meets 6 hours a week.	
Satisfies Honors Requirement No

Provide, in writing, a request to the department. Indicate the rationale for requesting credit and describing the type of college-level learning or course descriptions. Portfolio must contain 3-5 pieces of evidence that illustrates competency in all course learning objectives. Department faculty will evaluate submitted portfolios based on the evaluation rubric. Evaluation rubric and student checklist located in Division Office. Interview with appropriate departmental faculty to discuss the request and work samples.

Interview Details

Interview, given in department by department faculty. Faculty will interview applicants based on submitted portfolio and will assess against evaluation rubric. Evaluation rubric and student checklist located in Division Office.

Other Details

Determined by the department.

Goals, Topics, and Objectives

Core Course Topics

1. Semiotics.
2. Conceptual development.
3. Discuss the importance of recording design process for clients, portfolios and college transfer.
4. Branding and terminology.
5. Work across the Adobe platform to create design solutions.
6. Designing for digital products (UX) and social media.
7. Color Theory and Color Practices
8. Printing, digital output, and PDF formats.
9. Preliminary critiques and revision as part of design methodology.

Interpret and apply symbolism in design strategy.
Employ research, planning, preliminary sketching, and applied color theory in the creation of a design strategy.
Discuss the importance of recording design process for clients, portfolios and college transfer.
Develop a process binder that includes all process work up to and including the final solutions.
The process binder would demonstrate the design process from brainstorming techniques, sketching, to the final solution, in a well organized and designed digital package.
Articulate an understanding of design terminology. Create brand strategy for a defined project.
Work across the Adobe platform to create design solutions.
Manage importing and exporting files for use between software programs.
Evaluate and use appropriate software within the suite for a given application.
Design materials appropriate for digital and mobile interfaces and social media platforms.
Interpret color theory and meaning to apply appropriate color for intended communications.
Select appropriate Pantone colors for print and identity.

Evaluate design strategies which lead to the correct saving and desired output of documents.
Perform self analysis and peer critique.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

- Projects as described in the course syllabus
- Tests as described in the course syllabus
- Class Participation includes discussions and critiques
- Capstone project which incorporates cross-platform, cross-output considerations

ART216 - Painting II

Overview

Subject Art (Art History)	Academic Department Fine & Performing Arts	School Liberal Arts
Course Description An intermediate level college painting class that further explores traditional and contemporary approaches to observational painting. This class meets for six (6) hours a week.		
Course Pre-requisite(s) ART101 Two Dimensional Design, ART102 Drawing I, and ART116 Painting I or Instructor Permission		

Credit Hours
3

Contact Hours
6

Course Fee 25	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Course Goals
Students in this course will develop an awareness of the advanced concepts, methods, and materials involved in oil painting. Exercises are designed to build upon skills developed in Painting 1 while sharpening these skills through advanced challenges. Emphasis will be placed upon understanding the painting process as a concept of dynamic color/shape relationships.

Core Course Topics

1. Vocabulary
2. Preparation
3. Values
4. Individualize Palettes
5. Traditional Techniques
6. Contemporary Techniques
7. Canvas stretching
8. Copy Masterwork
9. Self-portrait

Demonstrate the ability to successfully apply all assigned vocabulary terms in class discussions.
Demonstrate the ability to maintain an organized palette with all related materials for oil painting.
Demonstrate expertise in describing forms using monochrome value as the principle means of development.
Exhibit an advanced knowledge of how to create a still life image restricted to warm/cool colors.
Demonstrate familiarity with grisaille, glazing, scumbling, and feathering approaches beyond material learned in Painting I.
Demonstrate familiarity with alla prima, impasto, open edge effects, and color blocks interaction beyond material learned in Painting I.
Demonstrated the ability to stretch and prepare canvas on standard stretcher bars.

Demonstrate expertise in copying a masterpiece painting focusing on color, composition, proportion, and the use of abstract color shapes and patterns.
Create a self-portrait with advanced knowledge of composition, color, and proportion.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

- Class participation
- Class Critiques
- Portfolio review
- Quizzes and/or exams as determined by the instructor that are to be described in course syllabus.

ART221 - Medieval Art

Overview

Subject Art (Art History)	Academic Department Fine & Performing Arts	School Liberal Arts
Course Description A comprehensive overview of medieval art and architecture from the late antiquity to the late Gothic period in Europe and the Mediterranean region. Discusses the visual art and cultures of about 1000 years (around 400-1400 CE) including Late Roman, Early Christian, Byzantine, Romanesque, Islamic, and Gothic art. Offers diverse perspectives on the development, exchange, interaction, and influence between all these cultures through their visual arts. A field trip to a major museum is required.		
Course Pre-requisite(s) Eligible to take ENG courses at HFC		
Credit Hours 3		

Contact Hours
3

Course Fee 0	Miscellaneous Department Fee 0
Academic Level Undergraduate	
General Education Category Humanities and Fine Arts	Michigan Transfer Agreement (MTA) Category Category 5: Humanities and Fine Arts - Applied Degrees, Category 5: Humanities and Fine Arts - Transfer Degrees
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Course Goals To develop understanding and appreciation for the different phases of medieval art and architecture as an important cultural period interacted with other major cultures; to explore and comprehend the relationship between the artistic forms of different religious groups; to understand the different architectural structures in relation to the different religious movement in the Mediterranean region. To understand the political interaction between the different phases of Medieval culture and their impact on the art of the Renaissance.
Core Course Topics 1. The Late Antiquity: Introduction to the Early Medieval Period: 100 - 400 CE 2. The Byzantine Empire: 400 - 1543 CE 3. The Early Middle Ages in the West: 200 - 800 CE 4. Medieval Art and Islam 622 - 1400 CE 5. The Romanesque (950-1200) 6. The Late Middle Ages 7. Phases of Medieval culture 8. Medieval architecture 9. Religion in Medieval culture 10. Politics in Medieval culture

Identify and explain the art and architectural trends during the Early Medieval Period, 100 - 400 CE.
Identify and explain the artistic trends, styles, and mediums of the various forms of visual arts among the Byzantine Empire, 400 - 1543 CE.
Identify and explain the artistic trends, styles, and mediums of the various forms of visual arts among the Early Middle Ages in the West, 200 - 800 CE.
Identify and explain the artistic trends, styles, and mediums of the various forms of visual expression the Medieval and Islamic worlds, 622 - 1400 CE.
Identify and explain the artistic trends, styles, and mediums of the various forms of visual arts among the Romanesque world, 950 - 1200 CE.
Identify and explain the artistic trends, styles, and mediums of the various forms of visual arts among the Late Middle Ages.

Demonstrate comprehension of the chronological and geographic boundaries of the different phases of medieval culture.
Identify, analyze, and explain the artistic trends, styles, and techniques of the various forms of architectural structures among the different medieval sub-periods.
Examine the iconography and symbolism of the different visual art forms in relation to the religious and ritualistic factors of each specific sub-period and its ramification on the succeeding period.
Distinguish between the exchange, interaction, impact, and influence of the different cultures on medieval European esthetics through the political and cultural contacts.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

- Class participation
- Class discussions
- Weekly readings and overviews thereof
- Short essays and/or a research paper
- A Detroit Institute of Art visit and tour certain sections related to the Medieval art and materials
- DIA report
- Quizzes and/or Exams as determined by the instructor to be described in the course syllabus

ART224 - Art of Islam

Overview

Subject Art (Art History)	Academic Department Fine & Performing Arts	School Liberal Arts
Course Description Offers a comprehensive study of the history and development of Islamic art and architecture from its birth in the 7th century CE to the present time. Explains basic characteristics of Islamic art as experienced through major architectural monuments, painting, sculpture, ceramic, calligraphy, and other forms of visual art. Discusses the relationship between the theology of Islam as a faith and its arts. A field trip to a major museum is required.		
Course Pre-requisite(s) Eligible to take ENG courses at HFC		
Credit Hours 3		

Contact Hours
3

Course Fee 15	Miscellaneous Department Fee 0
Academic Level Undergraduate	
General Education Category Humanities and Fine Arts	Michigan Transfer Agreement (MTA) Category Category 5: Humanities and Fine Arts - Applied Degrees, Category 5: Humanities and Fine Arts - Transfer Degrees
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Course Goals The goal of this course to acquaint students with the foundation to fundamental understanding of Islamic art and culture. Students will also learn chronological periods of Islamic art.
Core Course Topics 1. Art and culture of pre-Islamic times in the Arabian Peninsula. 2. Rise and expansion of Islam: early Islamic art. 3. Medieval Islam: stability and conflict, development in style. 4. Islamic Renaissance and decline. 5. Modern Islamic art and society. 6. Identification of Islam art 7. Islamic art in relationship to Islamic culture 8. Muslim rituals in relationship to art and architecture 9. Vocabulary

Demonstrate and aesthetic awareness of the art and culture of pre-Islamic times in the Arabian Peninsula.
Examine and define the rise and expansion of Islam along with the accompanying visual aesthetics.
Examine and define Medieval Islam, and discuss both the stability and conflicts that developed, along with the accompanying visual aesthetics.

Examine and define the Islamic Renaissance, along with it's decline, and explain the accompanying visual aesthetics.
Demonstrate an aesthetic awareness of modern Islamic art, and explain how it fits into contemporary Islamic society.
Identify major architectural monuments and works of Islamic art in painting and calligraphy.
Discuss the foundation of Islamic art and culture and the formation of the distinct characteristics of Islamic art and architecture.
Discuss the relationship between Muslim rituals and certain forms of art and architectural design in the traditional Islamic culture.
Define major vocabulary terms in the field of Islamic art.

Assessment, Requirements, and Outcomes

ART225 - Asian Art: Art of India & SE Asia

Overview

Subject Art (Art History)	Academic Department Fine & Performing Arts	School Liberal Arts
Course Description Offers a global view on Asian art, culture, and history by exploring the major monuments, traditions, and civilizations of India, China, Japan, Korea, and Southeast Asia. Covers important Asian artists and historical figures, artistic terms, monuments, sites, and time periods. Discusses art and architecture in terms of historical, social, and religious context. Analyzes and distinguishes various styles of art, and examines how and why certain styles are characteristic of specific times and places.		
Course Pre-requisite(s) Eligible to take ENG courses at HFC		
Credit Hours 3		
Contact Hours 3		
Course Fee 15	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category Humanities and Fine Arts		Michigan Transfer Agreement (MTA) Category Category 5: Humanities and Fine Arts - Applied Degrees, Category 5: Humanities and Fine Arts - Transfer Degrees
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals
Designed to expose students to the art of India and Southeast Asia, and to learn about outstanding examples of monuments and art works in painting, calligraphy, sculpture, and other forms. The materials in this course present challenges that will inspire students to explore beyond the works and learn about the elements, specialized vocabulary, and historical context of those works. An in-depth understanding of these essential tools will facilitate the interpretation and appreciation of art for all periods and areas.

Core Course Topics

- South and South East Asia before 1200 CE
- China & Korea before 1279 CE
- Japan before 1333 CE
- South and South East Asia 1200-1980
- China & Korea 1279 to 1980
- Japan 1336-1980
- Religious iconography
- Cultural, historical and geographical context
- Cultural iconography
- Recognition and identification of Asian Art

Demonstrate an aesthetic awareness of the art South and South East Asia prior to 1200 CE and explain it's importance within its cultural context.

Demonstrate an aesthetic awareness of the art China and Korea prior to 1279 CE and explain it's importance within its cultural context.
Demonstrate an aesthetic awareness of the art Japan prior to 1333 CE and explain it's importance within its cultural context.
Demonstrate an aesthetic awareness of the art South and South East Asia from 1200-1980 and explain it's importance within its cultural context.
Demonstrate an aesthetic awareness of the art of China & Korea 1279 to 1980 and explain it's importance within its cultural context.
Demonstrate an aesthetic awareness of the art of Japan 1336-1980 and explain it's importance within its cultural context.
Evaluate the iconography of different visual art forms in relation to the religious and ritualistic trends during the various phases of Asian art.
Recognize and explain the cultural context as well as the historical and geographical framework of major Asian masterpieces.
Categorize and differentiate the iconography and context of the various architectural monuments, their decoration, and the objects used in relation to the rituals performed in different parts of the region.
Recognize and identify the key examples forms, titles, artists, dates, media and locations of the major masterpieces of these areas and time frames.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
The instructor will identify and implement appropriate methods to assess the achievement of the learning objectives for the course. These methods may include objective and essay examinations, as well as out-of-class papers, Internet assignments, and library projects, all of which will be described in the course syllabus.

ART226 - African and Afro American Art

Overview

Subject Art (Art History)	Academic Department Fine & Performing Arts	School Liberal Arts
Course Description Provides a broad overview of the history of visual culture in different regions of continental Africa. Discusses different civilizations, which flourished in different parts of Africa from pre-historic time to the present. Offers study to native spiritual and ritualistic beliefs along with objects associated with and used in these various rituals and involved visual materials such as masks, helmets, costumes, weapons, body art, and other symbolic objects. Discusses African art in the Diaspora with focus on African artists in the Americas and the emerging African American art in North America. A field trip to a major museum is required.		
Course Pre-requisite(s) Eligible to take ENG courses at HFC		
Credit Hours 3		
Contact Hours 3		
Course Fee 15	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category Humanities and Fine Arts		Michigan Transfer Agreement (MTA) Category Category 5: Humanities and Fine Arts - Applied Degrees, Category 5: Humanities and Fine Arts - Transfer Degrees
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals
To develop an understanding of and appreciation for the different visual forms of African art and architecture as an important historic cultural region and its ramification on the development of African American art. To explore and comprehend the relationship between the artistic forms and objects produced for different spiritual rituals and different religious groups. To understand the interaction between visual materials, ritualistic performance, and architectural space in different traditional African societies. To understand the political interaction between the different phases of African cultures and their impact on the art of African artists in the Diaspora. To understand the formation and development of Modern African American art.

Core Course Topics

1. From the Nile to the Niger: The Sahara and the Maghrib; Lands of the Nile, Egypt, Nubia, and Ethiopia; The Central Sudan; Mande World and the Upper Niger; The Western Sudan
2. Western Africa: West Atlantic Forests; Akan Worlds; The Yoruba and the Fon; The Lower Niger.
3. Central Africa: Crose River, Cameron Grassland and Gaboon; The Western Congo Basin, The Eastern Congo Basin
4. Eastern & Southern Africa: Eastern Africa; Southern Africa
5. The Diaspora: African Artists Abroad. Art of the African Diaspora in the Americas
6. Chronological awareness and Geography

7. Trends, stylistic approaches and mediums used in African art
8. Rituals, cultural issues, iconography and political factors within African art
9. Influences of Arican art on the Western world
10. Aesthetics of African art

Demonstrate an aesthetic awareness of the art of Africa from the Nile to the Niger, and explain its importance within it's cultural context.
Demonstrate an aesthetic awareness of the art of Western Africa, and explain its importance within it's cultural context.
Demonstrate an aesthetic awareness of the art of Central Africa, and explain its importance within it's cultural context.
Demonstrate an aesthetic awareness of the art of Eastern and Southern Africa, and explain its importance within it's cultural context.
Demonstrate an understanding by comparing and contrasting the relationship between art, rituals, and visual cultures in the different regions of Africa.
Demonstrate an aesthetic awareness of the art of the African Diaspora, and explain its importance within it's cultural context.
Identify and examine the history and development of African art and architecture through the chronological and geographical regions in Africa.
Analyze the artistic trends, styles, and mediums of the various forms of visual arts and architecture among the different traditional African sub-regions and periods.
Demonstrate an understanding of the relationship between art, rituals, and visual cultures in the different regions of Africa and examine the iconography of the different art forms and objects in relation to the religious-ritualistic and political factors of each specific sub-period and its ramification on African art in the Diaspora.
Examine the exchange, interaction, impact, and influence of the different cultures in Africa on European and American modern art.
Recognize, identify, and analyze the iconography, style, and forms of African art and architecture through visual examination, analysis, and reading of related literature.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement The instructor will identify and implement appropriate methods to assess the achievement of the learning objectives for the course. These methods may include objective and essay examinations, as well as out-of-class papers, Internet assignments, and library projects, all of which will be described in the course syllabus.		
General Course Requirements and Recommendations Students will write one long critical research paper for the course along with 2-3 short essay papers on specific topics from the materials of the course. Each student will develop a presentation based on the research paper and present it to the class during the last week of the course. There will be a weekly reading assignment assessed by in class discussion and participation. The whole class will visit the Detroit Institute of Art and tour certain sections related to the African art and materials. The DIA visit is mandatory, and students will meet at the museum on a prearranged day and time. Students may conduct special research project at the African American Museum in Detroit or at a similar institution in the country or abroad.

ART227 - History of Arab Art & Architecture

Overview

Subject Art (Art History)	Academic Department Fine & Performing Arts	School Liberal Arts
Course Description Presents an overview of the art, architecture, culture, and history of the Arab world. Discusses the history and development of Arab visual art and architecture from around 1000 BCE to the present time. Explains the relationship between the artistic forms of Arab art with different religious and political factors as well as the impact of different cultures on the identity of Arab art. A field trip to a major museum is required.		
Course Pre-requisite(s) Eligible to take ENG courses at HFC		
Credit Hours 3		
Contact Hours 3		
Course Fee 15	Miscellaneous Department Fee 0	
Academic Level Undergraduate		

General Education Category Humanities and Fine Arts	Michigan Transfer Agreement (MTA) Category Category 5: Humanities and Fine Arts - Applied Degrees, Category 5: Humanities and Fine Arts - Transfer Degrees
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Course Goals To develop understanding and appreciation for Arab art and architecture as an important cultural trend interacted with other major cultural forces throughout the different periods in the Middle East; to explore and comprehend the relationship between the artistic forms of Arab art and architectural structures in relation to the different religious and political factors as well as the impact of different culture on the identity of Arab art.
Core Course Topics - The Early Period in Arab Art, 400 BCE - 400 CE - The Middle Period in Arab Art, 400 - 700 CE - The Islamic Period in Arab Art, 622 - 1258 CE - Arabs in Europe, 700 - 1500 - Islamic Period, 1258-1914 - The Modern Era - Contemporary Arab Art - Arab American Contemporary Art - Identification - Concepts of Arab art - Iconography of Arab art - Arab art across chronological, geographical, political and cultural boundaries

Demonstrate an aesthetic awareness of The Early Period (400 BCE-400 CE) in Arab art including the emergence of the Nabataeans in Palmyra and Petra, the Art of the Early Arabian Mini States such as Petra, Palmyra, Hatra, Kinda, and Hira against the backdrop of the two dominant contemporary empires: The Roman and the Sassanian, as well as early Jewish Arab art from al-Salhiyyah (Dura Europos) in Syria.
Demonstrate an aesthetic awareness of The Middle Period 400-700 CE in Arab art including formation of indigenous Arab art forms in South Arabia, the north west Arabian Peninsula, and the early Christian and Arab art in Syria, Jordan, Iraq and Egypt including an examination of samples of Coptic, Nestorian, Syriac, and other Eastern Christian traditions.
Demonstrate an aesthetic awareness of traditional Islamic art history, beginning in 622 CE, to the fall of Baghdad to the Mongol in 1258 including main Islamic artistic periods of the Ummayyads, Abassides, and Fatimites.
Demonstrate and understanding and awareness of the exchange and impact of Arab art on Europe and vice versa through the presence of Arabs in Sicily, southern Italy and Spain, and through the contact caused by the Crusades.
Demonstrate an aesthetic awareness of the Islamic Period, 1258-1914 CE including Mongol domination followed by the Safavids and the Ottomans during times which Arab culture was subject to various cultural impacts from Anatolia, Iran, and central Asia represented by the art of the Saljuqs, Mamluks, Ilkhanites, Timurites, Safavids, and Ottomans.
Demonstrate and aesthetic awareness that colonialism and post colonialism of the Modern Era of Arab art including the European colonization of the Arab world, the establishment of "Modern Arab Art" on the European prototype, the struggle of Arab traditional art against European Modern art and the crisis of Arab Art Identity.
Demonstrate an aesthetic awareness of the Renaissance of Classical Arabic Heritage in Contemporary Arab Art and Architecture including the modern trend in investigating and utilizing classical Arab heritage as a cultural stimulus and visual source of modern aesthetics.
Demonstrate an aesthetic awareness of contemporary art done by Arab Americans as well as Arab American Contemporary Art that is steeped in Arab tradition, and define the similarities and/or differences between the two.
Define the architectural monuments and their functional forms among the Arabs in various periods.
Describe and explain the symbolism and function of different architectural structures in relation to the religious, ritualistic, and social trends during the various phases of Arab history.
Evaluate the iconography of different Arab art forms and stylistic approaches in relationship to the religious and ritualistic trends during the various phases of Arab history as well as categorize and differentiate the iconography and context of the various architectural monuments and their decorative qualities.
Interpret and assess how Arab art and architecture developed through and across chronological and geographical boundaries and evaluate the exchange, interaction, impact, and influence of the different cultures on Arab art and aesthetics through the political and cultural contacts.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

- Class Participation
- Class Discussions
- Essay papers
- A research paper with classroom presentation
- A class visit to the Detroit Institute of Art with an accompanying research paper
- Quizzes and tests to be determined by the instructor and described in the syllabus

General Course Requirements and Recommendations

1. Students will write one long critical research paper for the course along with 2-3 short essay papers on specific topics from the materials of the course.
2. Each student will develop a presentation based on the research paper and present it to the class during the last week of the course.
3. There will be a weekly reading assignment assessed by in class discussion and participation.
4. The whole class will visit the Detroit Institute of Art and tour certain sections related to the Arab art materials. The DIA visit is mandatory, and students will meet at the museum on a prearranged day and time. Students may conduct special research project at different museums that has Arab art materials in Detroit or at a similar institution in the country or abroad.

Texts

The text will be formed as a course pack from different appropriate academic materials.

ART228 - Arabic Calligraphy

Overview

Subject Art (Art History)	Academic Department Fine & Performing Arts	School Liberal Arts
------------------------------	---	------------------------

Course Description

Introduces students to the history and development of different styles of Arabic Calligraphy- both traditional and modern. Students will learn the use of the traditional letters writing in the Kufic, Thuluth, Ruq' ah, Diwani, Naskh and modern styles. By the end of the course, students should be able to produce calligraphic compositions of their own by utilizing the rules of measurement and creativity. They will also be able to distinguish between various styles in historical calligraphic monuments. Basic knowledge of the Arabic language is helpful, but not necessary. As a part of this course, students will visit the Detroit Institute of Art.

Course Pre-requisite(s)

Eligible to take ENG courses at HFC

Academic Level
Undergraduate

Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Skilled Demonstration, Portfolio Review, Interview
---	--

Credit for Prior College Level Learning (CPCLL) Details

Skilled Demonstration Details

Life demonstration, given in department by department faculty. Faculty will assess demonstration based on evaluation rubric (quality and creativity). Evaluation rubric and student checklist located in Division Office.

Portfolio Review Details

Portfolio must contain evidence (samples, images, or copies of students work in calligraphy, and sample of research or articles in the field) that illustrates competency in all course learning objectives. Department faculty will evaluate submitted portfolios based on the evaluation rubric. Evaluation rubric and student checklist located in Division Office.

Interview Details

Interview, given in department-by-department faculty. Faculty will interview applicants based on submitted portfolio and will assess portfolio and demonstration against evaluation rubric. Evaluation rubric and student checklist located in Division Office.

Goals, Topics, and Objectives

Course Goals

- To develop succinct understanding and appreciation to the history and development of Arabic calligraphy since its early phase in the 7th century CE.
- To gain academic knowledge of the development of the various styles of calligraphy through understanding the chronology, political, religious and social development since the 7th century CE.
- To train student with studio practice in the main styles of Arabic calligraphy as a major visual expression in Arabic-Islamic art.
- To understand the historic artistic interaction of Arabic calligraphy with major cultural trends throughout the different periods in the Arab and Islamic world.
- To explore, comprehend and learn the fundamentals of professional classical Calligraphy and their functional use on architectural structures both religious and secular.
- To understand and be able to utilize the use of modern Arabic calligraphy in a creative relationship between the artistic forms of calligraphy and other forms of visual art such as ornamentation on pottery, ceramic tiles, application in Graphic Design, Interior Design and modern architecture.

Core Course Topics

1. Arabic calligraphy and alphabets development and structure
2. Arabic calligraphy styles
3. Monumental works in manuscripts and architectural structures
4. Geometric design, ornamentation, floral composition, and vegetal decoration
5. Zoomorphic calligraphic creation
6. Arabic calligraphy art impact on the art of European Early and High renaissance artists

Describe the history and development of Arabic calligraphy art. Recognize different calligraphic styles as visual art forms.

Describe the different styles of calligraphy and their chronological development in different architectural structures, manuscripts, and other objects.

Describe the development of the main styles and their variations chronologically.

Produce calligraphy in the following styles: Kufic, Thulth, Naskh, Muhaqqaq, Rayhani, Diwani, Tawqi, Riqah.

Explain the artistic/cultural identity of each specific style and its variations on the aesthetics of the space it occupies in the given region-period.

Apply through practice basic rules of classical Arabic calligraphy in different styles.

Analyze important works of calligraphy chronologically in early manuscripts and important copies of Quran.
--

Examine calligraphic compositions in both religious and secular buildings such as the Dome of the Rock in Jerusalem, the great mosque of Cordoba and the Al-Hamra complex in Spain, the Taj Mahal in India, Sultan Hasan complex in Cairo, Egypt, Al-Ahmadiyyah mosque in Istanbul, Turkey and others.
--

Identify masterpieces of historic monumental Arabic calligraphy in various buildings, manuscripts, metal, glass, pottery, jewelry, and woodwork.
--

Analyze and apply the rules of traditional Arabic calligraphy and its use on various architectural monuments and their decoration in this field.
--

Explain the symbolism and function of different forms of calligraphy in relation to the religious, ritualistic, and social usage.

Describe and apply ornamentations to calligraphic compositions through the use of traditional decorative vocabularies such as floral, geometric and vegetal units.
--

Produce creative calligraphic works of art while utilizing modern decorative elements.
--

Compare and contrast the different artistic trends, styles, techniques and mediums of the various forms of Arabic calligraphy as a visual art.
--

Analyze zoomorphic calligraphic creations such as human figure, animals, birds, and other objects in calligraphic composition.
--

Identify the choice of the proper text in creating zoomorphic calligraphic design.
--

Describe the spread of Arabic calligraphy and its impact on the work of European artists during the early and high Renaissance, especially in Italy during the 14th - 16th centuries.

Analyze important sample of such impact in works of painting and sculpture that depicts Biblical narratives, religious figures, and Christian icons from that period.

Explain the exchange, interaction, impact, and influence of Arabic calligraphy on the other contemporary cultures.
--

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

- Class participation
- Class discussions
- student portfolio of calligraphic compositions
- Student essays and/or research project
- DIA visit and corresponding report
- Quizzes and/or exams as determined by the instructor and described in the course syllabus

Texts

Determined by the instructor.

ART229 - Survey of Contemporary Art

Overview

Subject Art (Art History)	Academic Department Fine & Performing Arts	School Liberal Arts
Course Description A global survey of major trends in visual art since the end of the Modern era. Examines the evolution of visual exploration and expression since the middle of the twentieth century and the impact it has manifested on contemporary society worldwide. Students will be encouraged to comprehend the context of contemporary trends and consider the artists' roles as image-makers in today's globally connected world. A field trip to a major museum, or other appropriate art site, is required.		
Course Pre-requisite(s) Eligible to take ENG courses at HFC		
Credit Hours 3		
Contact Hours 3		
Course Fee 10	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category Humanities and Fine Arts		Michigan Transfer Agreement (MTA) Category Category 5: Humanities and Fine Arts - Applied Degrees, Category 5: Humanities and Fine Arts - Transfer Degrees
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals - An exploration and analysis towards learning and comprehending the fundamentals of various styles, methods and presentations of contemporary art in Post-Modern culture. - To encourage students to develop personal visual approaches in creating contemporary artwork within the 21st century society.
Core Course Topics - What is Contemporary Art - Pluralities in Contemporary Art - Cross cultural influences on Contemporary Art - Discovering the Contemporary - Appropriation and its Consequences: Power on Display, Space and Action - Back to the Easel: Neo-Expressionism and the Return of Painting - Memory and History - Culture, Body and the Self - Global Contemporary Art
Demonstrate an understanding, awareness and appreciation to the history and development of contemporary art since the middle of the twentieth century.
Demonstrate an academic knowledge of the development of the various trends within Contemporary art through understanding the chronology, political, religious and social development globally.
Understand the historic artistic interaction of contemporary art trends with major cultural developments throughout the world during the contemporary era.
Describe the history and development of Contemporary art. Recognize different trends and styles.
Describe the different styles: Minimalism, Process Art, Environmental art, Institutional Critique, African American Critique, Feminist Statement.
Explain appropriation theory. Include the dates when it became a major strategy for contemporary artists, and explain why it did from a historical perspective.
Identify artworks in this area and explain how they deploy appropriation.
Analyze the new approach in painting in the United States, Italy, Germany, and other countries.
Examine and understand the essence of "Art in the Community" and the "Mass Media".
Understand the concept of "Commodities and Consumerism" worldwide.
Describe the trend of memorializing wars, African American History, and visual documentation of civil wars. Analyze major monuments worldwide.
Understand the artist utilization of the self and body as form and content, the body as social medium, and personal life and artistic practice.

Describe the spread of contemporary art abroad to places such as Russia, China, Cuba, Iran, Japan, and the Middle East. Understand the New Metaphors and New Narratives in painting, sculpture.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement - Class discussions - Class participation - At least one museum visit - Assessment of Academic Achievement will be identified and implemented by the class instructor. Methods may include written tests and essay examinations, out-of-class papers, Internet assignments, library/museum projects, etc. These criteria will be thoroughly outlined and described in the course syllabus.	Texts Determined by the instructor. Present suggested text is: Kalb, Peter R., ART SINCE 1980 Charting the Contemporary, Brandeis University

ART242 - Ceramics III

Overview

Subject Art (Art History)	Academic Department Fine & Performing Arts	School Liberal Arts
Course Description An intermediate level course stressing refinement of ceramic construction techniques and design, primarily through utilitarian objects. This class also offers the opportunity for individual exploration of ceramic glaze and surface possibilities. This class meets for six (6) hours a week.		
Course Pre-requisite(s) ART142 Ceramics II with a "C" grade or higher, or Instructor Permission		
Credit Hours 3		
Contact Hours 6		
Course Fee 125	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) Yes		Acceptable Prior Learning Credit Skilled Demonstration, Portfolio Review, Other
Credit for Prior College Level Learning (CPCLL) Details Skilled Demonstration Details Live demonstration of all topics covered in the Course Master at a highly skilled level		
Portfolio Review Details An extensive portfolio that includes examples of work in all areas covered by the Course Master at a highly skilled level		

Goals, Topics, and Objectives

Course Goals To refine the student's skills needed to design, construct and fire aesthetically pleasing ceramics that could could be marketable, and to encourage the development of creative problem solving skills.
Core Course Topics - Mugs - Lidded Containers - Plates and Platters - Cooking container - Individual research - Personal aesthetics - Kiln loading - Glaze mixing - Glaze testing
Create and refine a group of mugs with handles.
Construct three different type of lids.
Construct a set of plates and large platter.
Construct a casserole for oven use.
Develop and project organized around a personal stylistic interest.
Apply glazes in the development of a personal style or aesthetic.
Assist in loading both electric and gas kilns.
Utilize the tri-beam scale and keep at least one of the class glazes mixed throughout the semester.

Formulate ceramic chemistry in the development of a new glaze.

Assessment, Requirements, and Outcomes

- Assessment of Academic Achievement
- Evaluation hands-on projects
 - Critiques and class discussion
 - Written test

ART245 - Interactive Experience Design

Overview

Subject Graphic Design	Academic Department Fine & Performing Arts	School Liberal Arts
Course Description To provide students with the knowledge and skills needed for work in the field of experience design. Introduces User Interface (UI) and User Experience (UX) Design developing an understanding of basic design principles used in the creation of web and application-based communications. Through assigned projects, students will understand the nature of user interface design while the role of the user is introduced. To provide students with the ability to evaluate and apply design thinking process and systems to user experience design. This class meets for six (6) hours a week.		
Course Pre-requisite(s) Eligible to take ENG courses at HFC: ART107 Photoshop , ART114 Graphic Design Studio 1 or instructor permission: ART165 Typography and ART214 Graphic Design Studio 2 highly suggested.		
Credit Hours 3		
Contact Hours 6

Credit for Prior College Level Learning (CPCLL) Details Portfolio Review Details Provide, in writing, a request to the department. Indicate the rationale for requesting credit and describing the type of college-level learning or course descriptions. Portfolio must contain 3-5 pieces of evidence that illustrates competency in all course learning objectives. Department faculty will evaluate submitted portfolios based on the evaluation rubric. Evaluation rubric and student checklist located in School of Liberal Arts Office. Interview with appropriate departmental faculty to discuss the request and work samples.		
Interview Details Interview, given in department by department faculty. Faculty will interview applicants based on submitted portfolio and will assess against evaluation rubric. Evaluation rubric and student checklist located in Division Office.		

Miscellaneous Department Fee 0	
Acceptable Prior Learning Credit Portfolio Review, Interview	

Goals, Topics, and Objectives

Course Goals
To provide students with the ability to evaluate and apply design thinking process and systems to user experience design.

Core Course Topics

- Introduction to User Experience Design (UX) and the role of Human Centered Design (HCD) as well as the role of empathy in creating successful user experiences.
- Design Thinking - Empathize and Define the Problem. This includes research, agile process and tools used for defining the problem
- UX Deliverables
- Introduction to User Interface (UI) Design - Ideate and Prototype. Includes the heuristics of design, accessibility, low-fidelity prototyping as a way to rapidly solve design problems
- Design Thinking - Ideate and Prototype. Discuss high-fidelity prototypes, tools and visual design considerations
- Creating a UX case study including writing and storytelling as a method to build an engaging case study. Tools for creating a case study.

Explain User Experience Design in using appropriate terminology and theories.
Apply the theories of user experience design to the process of designing interactive experiences.
Understand and choose design solutions that empathize with the users response type and emotion.
Empathize and Define the Problem.
This includes research, agile process and tools used for defining the problem.
Complete a variety of research tools including but not limited to personas, interviews, journey maps to investigate solutions.
Understand each deliverable - including but not limited to Research: personas, story boards, journey map; Ideation: brainstorming, user flow; Prototyping: sitemaps, low-fidelity prototype, high-fidelity prototype, interactive prototypes and evaluation.

Employ the use of deliverables in the design process.

Evaluate low-fidelity prototype feedback to revise and define the problem.

Discuss high-fidelity prototypes, tools and visual design considerations.

Use prototyping tools to create a high-fidelity prototype. Illustrate the user experience process and prototype to create a case study.

Assessment, Requirements, and Outcomes

- Assessment of Academic Achievement
- Midterm and Final
 - Projects as described in the course syllabus
 - Class Participation includes discussions and critiques
 - Completion of capstone project

Texts
To be determined by instructor.

Portfolio must contain 3-5 pieces of evidence that illustrates competency in all course learning objectives. Department faculty will evaluate submitted portfolios based on the evaluation rubric. Evaluation rubric and student checklist located in Division Office. Interview with appropriate departmental faculty to discuss the request and work samples.		
Interview Details Interview, given in department-by-department faculty. Faculty will interview applicants based on submitted portfolio and will assess against evaluation rubric. Evaluation rubric and student checklist located in Division Office.		

Miscellaneous Department Fee 0	
Acceptable Prior Learning Credit Portfolio Review, Interview	

Goals, Topics, and Objectives

Course Goals
Designed to expand a student's knowledge and photographic training in preparation for creating lens-based imagery in professional applications.

Core Course Topics

- Advanced use of digital single lens reflex camera.
- Advanced 'non-destructive' image processing.
- Producing and selecting images from a large body of work.
- Intermediate lighting techniques with 1-point and 2-point lighting scenarios.
- Survey of photography both contemporary and historic with emphasis on discussing formal qualities and methods, for use and critique.
- Presenting of large bodies of work.

Demonstrate the proper use of the manual camera settings accounting for light temperature, light sources, and types of lighting.
Perform image processing techniques at a level acceptable for industry employment.
Demonstrate refined skills in selecting and editing imagery.
Apply knowledge of contemporary and historic photography by presenting of a series of photo works.
Critique photo works using learned criteria.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

Photographic projects:

- A series of 20 sequenced lens based works.
- Presentation with successful image sequencing for the images final form (ex. book format, work portfolio for website, etc.).
- A series of photographs using controlled lighting sources such as: continuous artificial light (tungsten) is employed, discontinuous artificial light (strobe/flash), and mixed lighting is used.
- Completion of an application for a professional exhibition.
- Images prepared for the student gallery show.

Goals, Topics, and Objectives

Course Goals

The goal of this course is to teach students the basic skills and knowledge they will need to create and produce time-based media (motion graphics).

Core Course Topics

1. Introduction to motion graphics for use in the design industry.
2. History of animation and notable designers and animators in the field.
3. Drawing techniques for animated communications.
4. Design for motion-typography and color.
5. Creating artwork for time based communications.
6. Introduction to Adobe After Effects and its use in motion graphics. Saving conventions and rendering of videos.

Evaluate various purposes and styles of motion graphics.

Evaluate important animators and events in the history of animation as a basis for understanding time based communications.

Design for motion-typography and color.

Construct typography for static and kinetic motion.

Decide appropriate color schemes for topic relevance and computer display.

Assess the proper artwork creation method for defined motion projects.

Saving conventions and rendering of videos.

Use basic AfterEffects tools effectively.

Construct animated sequences using Adobe After Effects.

Demonstrate the appropriate method for saving animations and the rendering of videos.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

- Assigned animation projects as described in the course syllabus
- Class Participation includes discussions and critiques
- Tests as described in the course syllabus

Goals, Topics, and Objectives

Course Goals

Designed to further extend the student's photoskills.

Core Course Topics

1. Use of adjustable film-based camera.
2. Assignments based on controlled lighting.
3. Assignments designed for the student to organize and produce large bodies of work.
4. Hands-on processing of black and white film.
5. Hands-on processing of black and white prints in the darkroom.
6. Design and aesthetic considerations appropriate to making/understanding photographic works.
7. Group critiquing of the produced photoworks.
8. Presentation of large bodies of work.
9. Research skills - how to use the library, Internet and gallery/museum field trips.

Use an adjustable still-film-based camera effectively. Perform film processing techniques successfully.

Produce high-quality black & white prints.

Expand/refine skills in pictorial composition.

Present a series of photoworks effectively.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

Photographic projects

Produce a series of 20 sequenced photoworks.

- Emphasis of this series should be on the photographic aspect.
- Method of presentation should control the sequencing aspect (ex: book format).

Produce a series of 20 photographs using controlled lighting.

- Continuous artificial light (tungsten) is employed.
- Discontinuous artificial light (strobe) is also used.
- Subject variation encouraged.

Produce a series of 20 photographs of choice.

- Student required to present written statement of theme before starting work.
- Emphasis on photographic aspect of work.
- Appropriate presentation of work (ex. matted prints)

Interview Details

Interview, given in department-by-department faculty. Faculty will interview applicants based on submitted portfolio and will assess against evaluation rubric. Evaluation rubric and student checklist located in School of Liberal Arts Office.

Goals, Topics, and Objectives

Core Course Topics

1. Concept development including brainstorming, thumbnail sketching, and conceptual sketching for illustration.
2. Discuss well known illustrators, techniques, and the distinction between fine art and illustration.
3. Finding and using photographs as inspiration and reference. Discuss usage and copyright in the art process.
4. Using Photoshop painting tools in to create painterly digital illustrations.
5. Vector illustration techniques using Abode Illustrator including Bezier pen tool, shape building and pathfinder tools, gradient/blend modes mesh and texture.
6. Presentation of illustrations including saving files for print, matting and digital submission.

Develop illustration concept on paper, scan or photograph, use it sketch to create a finished illustration.
Discuss well known illustrators, techniques, and the distinction between fine art and illustration.
Evaluate the work of some important illustrators. Interpret professional techniques and styles of illustrations.
Finding and using photographs as inspiration and reference.
Discuss usage and copyright in the art process.
Appraise inspirational images and save for future reference.
Assemble images as a basis for illustration without breaking usage laws.
Manage the Bezier pen tool in Adobe Illustrator to construct complex shapes.
Use gradients and fills to modify complex objects in Illustrator.
Present finished illustrations in a professional manner.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

- Evaluation of illustration assignments
- Test as described in the course syllabus
- Class Participation includes discussions and critiques

Portfolio must contain 3-5 pieces of evidence that illustrates competency in all course learning objectives. Department faculty will evaluate submitted portfolios based on the evaluation rubric. Evaluation rubric and student checklist located in The School of Liberal Arts office. Interview with appropriate departmental faculty to discuss the request and work samples.

Interview Details Interview, given in department by department faculty. Faculty will interview applicants based on submitted portfolio and will assess against evaluation rubric. Evaluation rubric and student checklist located in The School of Liberal Arts office.

Other Exam Details

Determined by department.

Goals, Topics, and Objectives

Core Course Topics

1. Business Model- Not just freelancing, building a business.
2. Networking-projecting a professional image.
3. Assessing the business needs of a client.
4. Creating a preliminary design pitch.
5. Team work and communicating effectively for building business relationships.
6. Contracts and Project Pricing Strategies

Create a personal brand identity and professional direction.
Evaluate social media platforms for best practice scenarios.
Explore networking avenues and create content for both in real life and online networking.
Analyze and evaluate the communication needs of clients and creating or responding to design brief.
Implement brainstorming techniques.
Develop and deliver a winning presentation for design projects using appropriate digital tools.
Understand non-verbal communications.
Estimate time, expenses and project scope to develop profit strategy.
Differentiate between various pricing strategies and develop appropriate tactics to receive fair compensation.
Evaluate business documents including estimates, invoices and contracts. Learn how to protect the business from common pitfalls that plague individual business owners.

ART273 - Studio Art Capstone

Overview

Subject Art (Art History)	Academic Department Fine & Performing Arts	School Liberal Arts
Course Description A capstone class for graduating Studio Art majors to be taken during their final semester that includes portfolio and Exit Exhibition preparation and implementation.		
Course Pre-requisite(s) Instructor permission		

Credit Hours

1

Contact Hours

1

Course Fee 0 Miscellaneous Department Fee 0

Academic Level Undergraduate

Eligible for Credit for Prior College Level Learning (CPCLL) No

Goals, Topics, and Objectives

Course Goals This is a capstone class for all Studio Art majors. The class will emphasize putting together a portfolio of one's work, writing an artist statement, as well as preparation and hanging of their portion of the Art and Design Students' Graduating Exit Exhibition.

Core Course Topics

- 1. Preparing one's portfolio
- 2. Photographing artwork
- 3. Exit Exhibition preparation
- 4. Mat cutting
- 5. Public relations
- 6. Artist statement
- 7. Exit Exhibition

Select work that should be included in a professional portfolio.

Photograph art work for inclusion in a professional portfolio.

Evaluate one's art work for inclusion in Exit Exhibition.

Measure and cut mats for any two dimensional pieces that require mats.

Design a PR card and/or flier for Exit Exhibition.

Write an artist statement about one's own work. Organize and hang Exit Exhibition.

- 3. How to develop and present digital and graphic arts portfolios.
- 4. Reinforced typography and its use in print and screen based media.
- 5. Exhibition of art work.
- 6. How to develop and present graphic design portfolios
- 7. Professional business practices using standard computer tools.
- 8. The Graphic Designer as a business professional.

Create online presence using professional networking sites such as Behance and LinkedIn.

Create a complete job application packet including artist statement, employment letter, resume, and portfolio.

Select and prepare student work for gallery capstone exhibition and digital presentation including the use of presentation software.

Evaluate, curate and prepare accumulated students projects for presentation.

Demonstrate facility in reinforced typography by designing and producing a professional resume using developed business stationary and word processing software, appropriate to the concentration.

Select and prepare personal works for both live and digital presentation including the use of presentation software.

Evaluate and prepare accumulated students projects for capstone exhibition.

Demonstrate Computer Literacy knowledge by successfully being able to: Log in and out of the HFC network, utilize Academic Computing Services (ACS), and WebAdvisor.

Operate basic PC hardware, including common input, output, and storage devices.

Utilize an operating system to perform basic tasks, such as finding, saving, copying, and printing files.

Send and receive e-mail, including attachments.

Utilize a browser for Internet access, use search engines, identify appropriate search terms and use a search engine effectively, and evaluate the credibility and quality of information on WWW sites.

Demonstrate proper ethical and legal behavior in online environment including common threats to computer security and privacy, such as plagiarism, viruses, phishing, and identity theft.

Evaluate social media platforms for best practice scenarios.

Create a personal brand identity and professional direction.

Analyze and evaluate the communication needs of clients and creating or responding to design brief. Develop production plan for a hypothetical project that ranges from conception to production.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

- Class Participation
- Portfolio Organization
- Exit Exhibition
- Any additional Assessment of Academic Achievement will be identified and implemented by the class instructor and included in the course syllabus.

General Course Requirements and Recommendations Must be taken during final semester prior to graduation.

Satisfies Honors Requirement No

Satisfies Wellness Requirement No

ASL130 - Deaf Culture and the Deaf Community

Overview

Subject American Sign Language	Academic Department Language Studies	School Liberal Arts
Course Description Introduces the Deaf culture and the Deaf community, focusing on its history, traditions, values, and characteristics. Provides a survey of Sign language structure, history, and usage, as well as information about the contributions of Deaf persons to American society.		
Course Pre-requisite(s) ENG094 ALP: Reading and Writing / ENG095E ALP for ELL-Reading & Writing eligible or instructor permission		
Credit Hours 3		

Contact Hours
3

Course Fee 10	Miscellaneous Department Fee 0
Academic Level Undergraduate	
General Education Category Social Sciences	
Eligible for Credit for Prior College Level Learning (CPLL) No	

Goals, Topics, and Objectives

Course Goals ASL130 Deaf Culture & the Deaf Comm is designed to increase students' knowledge of, and experience with, the Deaf culture and the Deaf community, introducing students to the Deaf community as a linguistic and cultural minority and its role in the larger society.
--

Core Course Topics 1. Membership in Deaf culture/community 2. Deaf vs. mainstream American culture 3. History of American Sign Language 4. History of Deaf culture 5. Historical and contemporary issues of Deaf culture/community 6. Local Deaf community 7. Interacting with the Deaf community 8. Deaf culture 9. Contributions of Deaf Americans 10. Terminology and technology used by the Deaf
Identify criteria for membership in Deaf culture/community.
Compare and contrast American mainstream culture with Deaf culture.
Demonstrate knowledge of the history of American Sign Languages and its roots in Old French Sign Language.
Describe social, educational, and cultural changes in local, national, and international Deaf culture.
Demonstrate knowledge of the historical and contemporary issues that impact the Deaf culture and the Deaf community.
Apply cultural knowledge of Deaf culture to the local Deaf community.
Describe the impact of Deaf culture as it relates to the roles of various professionals interacting with deaf groups and members of the Deaf community.
Analyze aspects of Deaf culture (behavior, values, beliefs, and etiquette) that differ from the student's own culture, giving specific examples that illustrate these differences
Identify significant contributions made by Deaf Americans to American society.
Identify current terminology and technology used by the Deaf.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Assessment of academic achievement will be identified and implemented by the class instructor. Methods will include, but not be limited to: - Participation - Weekly/regular quizzes - Homework assignments - Chapter/unit tests - Midterm/final exam

Texts All sections of this level will use a textbook (and any accompanying materials) selected by the course coordinator and approved by the World Languages Committee.	Satisfies Honors Requirement No	Satisfies Wellness Requirement No

ASL131 - Elementary American Sign Language I

Overview

Subject American Sign Language	Academic Department Language Studies	School Liberal Arts
Course Description Introduces the basic American Sign Language (ASL) skills, focusing on communication in a cultural context. Covers fingerspelling, basic vocabulary and grammatical structures, and the development of visual receptive and gestural expressive skills. Designed for students with little or no previous knowledge of ASL.		
Course Pre-requisite(s) ENG094 ALP: Reading and Writing / ENG095E ALP for ELL-Reading & Writing eligible or instructor permission		
Credit Hours 4		

Contact Hours
4

Course Fee 44	Miscellaneous Department Fee 0
Academic Level Undergraduate	
General Education Category Humanities and Fine Arts	Michigan Transfer Agreement (MTA) Category Category 5: Humanities and Fine Arts - Applied Degrees, Category 5: Humanities and Fine Arts - Transfer Degrees

Eligible for Credit for Prior College Level Learning (CPCLL)
No

Goals, Topics, and Objectives

Course Goals
ASL131 Elementary ASL I is designed to enable students to reach the Novice Mid-level on the American Council on the Teaching of Foreign Languages (ACTFL) proficiency scale, focusing on language learning through communication, cultures, connections, comparisons, and communities.

- Core Course Topics**
- 1. ASL structure
 - 2. Vocabulary (a core vocabulary of approximately 300 signs)
 - 3. Fingerspelling
 - 4. Numbers
 - 5. Facial expressions/body language
 - 6. Grammar/conversation: simple statements, commands, wh-questions, yes/no questions; affirmative and negative statements
 - 7. Communication strategies: attention-getting; beginning and ending conversations; maintaining eye contact; signer’s perspective
 - 8. Deaf history
 - 9. Deaf culture

Recognize differences and similarities between spoken languages and the visual/conceptual structure of American Sign Language, including inflections, questions, negatives, statements, etc.

Identify and use approximately 300 signs Fingerspell the names of classmates and commonly fingerspelled words of three to four letters at a moderate to normal rate of speed within a conversational context.

Understand and express the numbers 1 - 100 Use appropriate facial expressions/body language Initiate and respond to simple statements and questions, and be able to engage in basic face-to-face conversation.

Demonstrate comprehension and production of regulating behaviors (i.e. attention-getting techniques, greeting, turn-taking signals, leaving, and others).

Demonstrate a basic knowledge of the historical and contemporary issues that impact Deaf culture and the Deaf community.

Analyze aspects of Deaf culture that differ from the student’s own culture, giving specific examples that illustrate these differences

Assessment, Requirements, and Outcomes

- Assessment of Academic Achievement**
Assessment of academic achievement will be identified and implemented by the class instructor. Methods will include, but not be limited to:
- Participation
 - Weekly/regular quizzes
 - Homework assignments
 - Chapter/unit tests
 - Oral/receptive-expressive exam(s)
 - Departmental expressive assessment
 - Midterm/final exam

Texts All sections of this level will use a textbook (and any accompanying materials) selected by the course coordinator and approved by the World Languages Committee.	
Satisfies Honors Requirement No	Satisfies Wellness Requirement No

ASL132 - Elementary American Sign Language II

Overview

Subject American Sign Language	Academic Department Language Studies	School Liberal Arts
Course Description Further builds American Sign Language (ASL) skills, focusing on communication in a cultural context. Expands students' knowledge of fingerspelling, vocabulary and grammatical structures, and the development of visual receptive and gestural expressive skills in order to comprehend and express everyday ideas in ASL.		
Course Pre-requisite(s) A grade of C or better in ASL131 Elementary ASL I or in one year of high school American Sign Language, or instructor permission		
Credit Hours 4		
Contact Hours 4		
Course Fee 44	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category Humanities and Fine Arts		Michigan Transfer Agreement (MTA) Category Category 5: Humanities and Fine Arts - Applied Degrees, Category 5: Humanities and Fine Arts - Transfer Degrees

Eligible for Credit for Prior College Level Learning (CPCLL)
No

Goals, Topics, and Objectives

Course Goals
ASL132 Elementary ASL II is designed to enable students to reach the Novice-High level on the American Council on the Teaching of Foreign Languages (ACTFL) proficiency scale, focusing on language learning through communication, cultures, connections, comparisons, and communities.

- Core Course Topics**
- 1. Vocabulary (a core vocabulary of approximately 800 signs)
 - 2. Fingerspelling
 - 3. Numbers
 - 4. Facial expressions/body language
 - 5. Grammar/conversation: size/shape/location; pronouns; descriptive classifiers; contrastive structures; inflected verbs, negation; questions; commands; responses
 - 6. Communication strategies: making introductions; getting attention; negotiating a signing environment
 - 7. Narration
 - 8. Deaf history/culture
 - 9. Technology
 - 10. Interpreting

Identify and use approximately 800 signs.

Demonstrate a knowledge of the manual alphabet, with appropriate fingerspelling conventions, when fingerspelling at a normal rate of speed within a conversational context.

Use ordinal numbers and numbers for age and time.

Use appropriate facial expressions/body language.

Perform complex visual-spatial tasks related to size, shape, and locations; use personal and possessive pronouns, descriptive classifiers, contrastive structures, inflected verbs and negation correctly; respond to simple commands and questions using correct ASL syntax, usage, and conventions.

Demonstrate comprehension and production of regulating behaviors (making introductions, getting attention, negotiating a signing environment).

Narrate in ASL the events of a brief story.

Analyze and discuss the history, lifestyles, and traditions of the diverse cultures that make up the Deaf World.

Use appropriate technology for/within the Deaf community (camera, recorders, videophones, etc.).

Explain the interpreter’s role and responsibilities and the interpreting process

Assessment, Requirements, and Outcomes

- Assessment of Academic Achievement**
Assessment of academic achievement will be identified and implemented by the class instructor. Methods will include, but not be limited to:
- Participation
 - Weekly/regular quizzes
 - Homework assignments
 - Chapter/unit tests
 - Oral/receptive-expressive exam(s)
 - Midterm/final exam

2

Course Fee 10	Miscellaneous Department Fee 0
Academic Level Undergraduate	
General Education Category Humanities and Fine Arts	Michigan Transfer Agreement (MTA) Category Category 5: Humanities and Fine Arts - Applied Degrees, Category 5: Humanities and Fine Arts - Transfer Degrees
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Course Goals
ASL135 Fingerspelling and Numbering is designed to enable students to improve their fluency and clarity in receptive and expressive fingerspelling and numbering skills.

Core Course Topics

1. Uses of fingerspelling and numbering
2. Terminology
3. Warm-up exercises
4. Hand, arm, and wrist positions
5. American manual alphabet
6. Multiple-letter words and syllable groups
7. Letter position
8. Commonly-used fingerspelled words, acronyms, abbreviations, and loan signs
9. Clarity, accuracy, and fluidity
10. Numbering systems
11. Facial focus
12. Receptive techniques
13. Contextual clues
14. Mouthing fingerspelled words
15. Differences between Deaf and hearing communities

Identify the various uses of fingerspelling and numbering conventions in American Sign Language (ASL)
Demonstrate an understanding of appropriate terminology associated with fingerspelling and numbering
Perform warm-up exercises to relax muscles and prevent stress to the hands, wrists, and arms
Demonstrate the appropriate hand, arm, and wrist position for clear fingerspelling
Recognize and articulate all the letters of the American manual alphabet clearly and accurately with regard to letter formation, palm orientation and hand position
Recognize and read words of three to four letters (rather than individual letters)
Recognize words or word groups by their configuration, context, or visible letters in initial, middle and/or final position
Recognize and articulate commonly-used fingerspelled words, acronyms, abbreviations, and loan signs
Fingerspell words, numbers and loan signs clearly and accurately in regard to articulation, rate of transition from letter to letter, word configuration and distinction between words, moving from one letter to the next in a rhythmic fashion without extraneous movements
Recognize common ASL number systems, and identify what types of numbers are represented by different locations, palm orientations, and movements
Recognize fingerspelled words, word groups or numbers while eyes are focused on the signer's face, utilizing peripheral vision to allow for input from non-manual markers, speech-reading techniques, and speaker affect as well as from fingerspelling
Employ various receptive fingerspelling techniques, such as prediction skills, word patterns, rhythm and phrasing
Demonstrate the ability to incorporate contextual clues to aid in closure when letters or words are missed or not clearly fingerspelled
Demonstrate the ability to simultaneously, without voice, mouth fingerspelled words

Analyze differences between the Deaf culture/community and the hearing culture/community
--

Assessment, Requirements, and Outcomes

Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals ASL231 Intermediate ASL I is designed to enable students to reach the Intermediate-Low level on the American Council on the Teaching of Foreign Languages (ACTFL) proficiency scale, focusing on language learning through communication, cultures, connections, comparisons, and communities.
Core Course Topics - Core vocabulary (approximately 1000 signs) - Vocabulary expansion strategies - Fingerspelling and numbering - Facial expressions, body language and non-manual signals - Grammar - Conversation - Communication strategies - Narration - Deaf events

10. Deaf history and culture Identify and use approximately 1000 signs.
Demonstrate the ability to utilize ASL expansion strategies when specific vocabulary is unknown.
Demonstrate increased fluency and accuracy in fingerspelling and numbering.
Employ non-manual grammar and facial expressions to match the appropriate register.
Identify, recognize, comprehend and produce: advanced sentence structures, syntax, spatialization, advanced verbs and tense, and instrument classifiers.
Demonstrate the ability to initiate, conduct and terminate context-specific conversations with Deaf or ASL users other than the professor.
Analyze and use different patterns of communication and social interaction appropriate to the setting.
Demonstrate expressive mastery of dialogues and short-sentence narratives utilizing ASL grammatical features.
Demonstrate understanding of social interaction patterns within ASL and Deaf culture(s) through participation in cultural activities within and beyond the school setting. Analyze and discuss the history, lifestyles, and traditions of the diverse cultures that make up the Deaf world.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	Assessment of academic achievement will be identified and implemented by the class instructor. Methods will include, but not be limited to: - Participation - Weekly/regular quizzes - Homework assignments - Chapter/unit tests - Oral/receptive-expressive exam(s) - Midterm/final exam
Texts	All sections of this level will use a textbook (and any accompanying materials) selected by the course coordinator and approved by the World Languages Committee.
Satisfies Honors Requirement	Satisfies Wellness Requirement
No	No

Register for this Course

ASL232 - Intermediate American Sign Language II

Overview

Subject American Sign Language	Academic Department Language Studies	School Liberal Arts
Course Description Follows ASL 231 and is the second of two intermediate-level American Sign Language (ASL) courses focusing on communication in a cultural context. Further develops knowledge of fingerspelling, vocabulary and grammatical structures, and expands visual receptive and gestural expressive skills in order to comprehend and express a wide range of ideas in ASL.		
Course Pre-requisite(s) A grade of C or better in ASL 232 Intermediate ASL II or in three years of high school American Sign Language, or instructor permission		
Credit Hours 4		
Contact Hours 4		
Course Fee 44	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category Humanities and Fine Arts		Michigan Transfer Agreement (MTA) Category Category 5: Humanities and Fine Arts - Applied Degrees, Category 5: Humanities and Fine Arts - Transfer Degrees
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals ASL232 Intermediate ASL II is designed to enable students to reach the Intermediate-Mid level on the [American Council on the Teaching of Foreign Languages (ACTFL)](http://www.actfl.org/publications/guidelines-and-manuals/actfl-proficiency-guidelines-2012) proficiency scale, focusing on language learning through communication, cultures, connections, comparisons, and communities.
Core Course Topics - Core vocabulary (approximately 1200 signs) - Fingerspelling and numbering - Facial expressions, body language, and non-manual signals

4. Grammar
5. Conversation
6. Narration
7. Translation
8. Interpretation and reception skills
9. Idioms, colloquialisms, and local variations of American Sign Language
10. Deaf events
11. Deaf history and culture
Identify and use approximately 1200 signs.
Demonstrate increased fluency and accuracy in fingerspelling and numbering.
Use appropriate facial expressions, body language, and non-manual signals (hand-shape, orientation, movement, and location) in American Sign Language (ASL).
Demonstrate significant grammatical structures in English and ASL, including: time indicators, questions, classifiers, locatives, negation, and pluralization.
Demonstrate the ability to converse in ASL at an everyday conversational level Integrate skills in discourse styles and structures, and apply the concept of contextualization to narratives.
Demonstrate the ability to translate ASL into English text Interpret receptive skills from signed videos and ASL exams into linguistically and grammatically correct English.
Recognize and express idiomatic expressions, colloquial signs and local variations in ASL.
Demonstrate understanding of social interaction patterns within the ASL and Deaf culture(s) through participation in cultural activities within and beyond the school setting. Analyze and discuss the history, lifestyles, and traditions of the diverse cultures that make up the Deaf world.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	Assessment of academic achievement will be identified and implemented by the class instructor. Methods will include, but not be limited to:
	• Participation • Weekly/regular quizzes • Homework assignments • Chapter/unit tests • Oral/receptive-expressive exam(s) • Midterm/final exam
Texts	All sections of this level will use a textbook (and any accompanying materials) selected by the course coordinator and approved by the World Languages Committee.
Satisfies Honors Requirement	Satisfies Wellness Requirement
No	No

ASTR131 - Descriptive Astronomy

Overview

Subject	Academic Department	School
Astronomy	Physics, Astronomy, and Earth Sciences	Science, Tech, Engr & Math
Course Description	Consists of a conceptual introduction to the fundamentals of astronomy. Describes the motion, structure, and evolution of celestial bodies as well as the Universe itself.	
Credit Hours	3	
Contact Hours	3	
Course Fee	Miscellaneous Department Fee	
20	0	
Academic Level		
Undergraduate		
General Education Category	Michigan Transfer Agreement (MTA) Category	
Natural Sciences	Category 6: Natural Sciences - Applied Degrees, Category 6: Natural Sciences - Transfer Degrees - Lecture Only	
Eligible for Credit for Prior College Level Learning (CPCLL)		
No		

Goals, Topics, and Objectives

Course Goals
The goal of this course is to strengthen critical thinking skills and scientific literacy through the study of astronomy.

Core Course Topics
1. History of Astronomy
2. Astronomical Coordinate Systems
3. The Motions of the Moon and the Reason for the Phases and Eclipses
4. The Motions of the Earth and the Reason for the Seasons
5. The Motion, Structure, and Evolution of Solar and Extra-Solar Planetary Systems
6. The Nature of Light and Telescope Technology
7. The Motion, Structure, and Evolution of Stars
8. The Motion, Structure, and Evolution of Galaxies
9. The Large-Scale Structure and Evolution of the Universe
10. Circumstellar Habitable Zones and the Search for Life in the Universe
11. The Structure of Science and the Scientific Method
Describe the major models of the universe and discoveries that lead to heliocentrism.
Describe the two primary Astronomical Coordinate Systems.
Explain the phases of the Moon and the different types of eclipses.
Describe the real and apparent motions of the Earth.
Explain the cause of the seasons.
Describe the motion, structure, and evolution of the Solar System, including the bodies therein.
Describe the basic characteristics of light - including wavelength, frequency, velocity, and energy - and how they relate to absorption, emission, and thermal spectra.
Describe the various phenomena of light waves - including reflection, refraction, dispersion, diffraction, interference, polarization, and the Doppler Effect.
Explain how refractor and reflector telescopes work.
Describe the structure and evolution of low, medium, and high-mass stars.
Explain the thermonuclear processes involved in powering the Sun and stars.
Explain how stellar classification led to the development of the H-R Diagram, and how it refined our understanding of stellar evolution.
Identify the major types of galaxies and describe their structure and evolution.
Explain the history of and the evidence supporting the Big Bang Theory.
Describe how our understanding of circumstellar habitable zones refines our search for extra-terrestrial life.
Estimate the number of communicative civilizations in our galaxy. Describe the Scientific Method and explain the difference between science and pseudo-science.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	Student learning will be assessed through homework, quizzes, collaborative activities/projects, and exams.
General Course Requirements and Recommendations	Recommendations include HFC Planetarium visit(s) and/or utilization of astronomy simulation software or websites.
Texts	Standard Introductory Astronomy Textbook
Satisfies Honors Requirement	Satisfies Wellness Requirement
No	No

Register for this Course

ASTR133 - Introductory Astronomy Laboratory

Overview

Subject	Academic Department	School
Astronomy	Physics, Astronomy, and Earth Sciences	Science, Tech, Engr & Math

Course Description Emphasizes experimental work with the scientific concepts important in astronomy. Includes planetarium-based observation and/or computer simulations, as well as hands-on experimentation of astronomical phenomena. This course combined with ASTR-131 provides the student with a four-hour laboratory science credit. Two hours of laboratory per week.	
Course Pre-requisite(s) ASTR131 Descriptive Astronomy	Course Co-requisite(s) ASTR131 Descriptive Astronomy . Previous or concurrent enrollment in ASTR131 Descriptive Astronomy is required.
Credit Hours 1	
Contact Hours 2	
Course Fee 20	Miscellaneous Department Fee 0
Academic Level Undergraduate	
General Education Category Natural Sciences	Michigan Transfer Agreement (MTA) Category Category 6: Natural Sciences - Applied Degrees, Category 6: Natural Sciences - Transfer Degrees - Lab Only
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Course Goals The goal of this course is to strengthen and demonstrate critical thinking skills and scientific literacy through experimentation involving real and simulated astronomical data collection and analysis.		
Core Course Topics - Star Charts - Using Astronomy Simulation Software - Celestial Motions - Lunar and Planetary Characteristics - Telescope Construction and Operation - Stellar Evolution - Hubble's Law		
Demonstrate proper use of laboratory equipment, including celestial globes, telescopes, and/or computers and astronomy simulation software.		
Collect, plot, and analyze real and simulated astronomical data accurately.		
Relate experimental results to accepted astronomical theory.		
Demonstrate the proper use of star charts in real and/or simulated sky environments.		
Demonstrate an understanding of the structure and motions of our Solar System		
Demonstrate an understanding of the structure and evolution of stars.		
Demonstrate an understanding of the structure and evolution of the Universe.		

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement - Graded activities using laboratory equipment and/or astronomy simulation software to gather data with questions leading the student in the analysis of the data. - Practical Examinations on the use of laboratory equipment and/or computer software and website applets simulating astronomical phenomena to gather and analyze data.		
Texts Astronomy Lab Activity Manual		
Satisfies Honors Requirement No	Satisfies Wellness Requirement No

ATMS131 - Weather and Climate

Overview

Subject Meteorological Science	Academic Department Physics, Astronomy, and Earth Sciences	School Science, Tech, Engr & Math
Course Description A non-mathematical introduction to the behavior of the atmosphere and its causes. Topics include atmospheric structure, earth-sun relationships, heat, humidity, clouds, wind, storms, forecasting, pollution, and climate. Offers students without scientific background an interesting look into the atmosphere and weather that surround them.		
Credit Hours 3		
Contact Hours 3		

Course Fee 40	Miscellaneous Department Fee 0
Academic Level Undergraduate	
General Education Category Natural Sciences	Michigan Transfer Agreement (MTA) Category Category 6: Natural Sciences - Applied Degrees, Category 6: Natural Sciences - Transfer Degrees - Lecture Only
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Course Goals The goal of this course is to, through the process of scientific investigation, instill in the general education student an appreciation of the processes occurring in our atmosphere and the physical principles that govern them.	
Core Course Topics - Atmospheric structure - Earth-Sun relationships - Heat and temperature - Humidity - Clouds - Precipitation - Wind - Storms - Weather forecasting - Pollution - Climate	
Identify and define the elements of weather and climate and describe their effects on weather and climate.	
Interpret and analyze atmospheric conditions. Analyze atmospheric data, and interpret it to make simple weather predictions.	
Analyze climatic data and interpret it to describe the climate of an area.	

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement - In class activities centered on the course concepts and their application; especially observation of elements of weather and climate leading to weather prediction and description of climates. - Homework to review and reinforce lectures and reading on course topics. - Examinations on course topics and their application.	
General Course Requirements and Recommendations Students will receive instruction on using the Internet to monitor weather and gather weather and climate data.	
Texts Lutgens & Tarbuck, <i>The Atmosphere</i>	
Satisfies Honors Requirement No	Satisfies Wellness Requirement No

AUTO101 - Automotive Fundamentals

Overview

Subject Automotive Technology	Academic Department Automotive Technology	School Business, Entrepreneurship, PD
Course Description Provides an introduction to the major automotive systems covered in greater detail in other automotive technology specific system classes. Explores how to perform preventive maintenance routines, such as oil changes, tire rotations on standard systems as well as on vehicles equipped with TPMS (Tire Pressure Monitoring System); brake and suspension system inspections; and how to service the cooling system. This is the only course allowed for Secondary Partnership transfer credit (4 credit hours) from approved high school programs.		
Credit Hours 4		
Contact Hours 4		
Course Fee 35	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics - Working in the Automotive Service Industry - Using Hand Tools - Using Power Tools and Equipment - Fundamentals of Engine Operation - Fuel, Cooling and Lubrication Systems - Electrical Systems and Fundamentals - Manually Operated Transmission - Automatic Transmission	
--	--

9. Suspension System
10. Steering and Wheel Alignment
11. Brake System
12. Operation of Air Conditioning and Heating System
13. Emission Control System
14. Computerized Engine Controls

Describe the major vehicle operating systems.
Demonstrate how to measure critical dimensions of selected engine components.
Identify the major functioning components in the major automobile systems.
Demonstrate competency in using common automotive laboratory service tools.
Perform cooling system tests.
Perform oil changes.
Perform tire rotations.
Use a hoist. Inspect a brake system.
Repair a tire.
Inspect a suspension system.
Introduce OBD-2 in basic DLC function Identify the major components of a Engine Control and Emissions related system.
Research 6 job opportunities in the Automotive Service Industry.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
Measurable objectives will be evaluated by the instructor based on accuracy and proficiency and completion of assigned tasks. Homework, class participation, lab activities, quizzes and tests will be used as criteria to assign the student's final earned grade for this class.	
General Course Requirements and Recommendations	
Students must take notes on demonstrations, carefully read and analyze assigned course materials and perform exercises to determine their competence in performance of basic automotive service tasks.	
Satisfies Honors Requirement	Satisfies Wellness Requirement
No	No

AUTO102 - Auto Fundamentals&Dealership Operations

Overview

Subject Automotive Technology	Academic Department Automotive Technology	School Business, Entrepreneurship, PD
Course Description	A course for all ASSET students focusing on the inter-workings of Ford or Lincoln Dealerships. Covers dealer practices of writing warranty reports, work orders, and parts ordering. Introduces general preventative maintenance routines such as oil changes, cooling system service, tire service, and tire pressure monitoring system (TPMS) operation. Use of Ford Motor Company's training system, service publications, prior-approval/technical assistance request, and Service Labor Time Standards (SLTS) will also be discussed.	
Credit Hours	3	
Contact Hours	4	
Course Fee 35	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL)	No	

Goals, Topics, and Objectives

- Core Course Topics
1. Laboratory safety
2. Working in the Automotive Dealership Service Facility
3. Using Hand Tools
4. Using Power Tools and Equipment
5. Basic Maintenance Service
6. Warranty Repair Orders - writing and submission

7. Tire Service
8. TPMS
9. Ford STARS
10. Service Publications
11. SLTS
12. Prior Approvals/Technical Assistance Request

Demonstrate the vehicle major operating systems.
Measure critical dimensions of selected engine components.
Identify the major functioning components in the major automobile systems.
Demonstrate competency in using common automotive laboratory service tools.
Perform cooling system tests.
Perform oil changes.
Perform both a Tire Rotation and Tire Balance.
Demonstrate the proper use a hoist.
Demonstrate lab safety.
Repair a tire.
Perform a NVH Diagnosis.
Introduce OBD-2 in basic DLC function.
Write warranty reports/work orders.
Describe the daily operations of Ford or Lincoln dealerships.
Perform basic navigation of service publications.
Perform basic navigation of SLTS. Understand the use of the Ford STARS system.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
Lab activities, quizzes, and a written final examination. Measurable objectives will be evaluated by the instructor based on accuracy and proficiency of completion.	
General Course Requirements and Recommendations	
Students must take notes on demonstrations, carefully read and analyze assigned course materials and perform exercises to determine their competence in performance of basic automotive service tasks.	
Texts	
Reference materials will be provided by Ford Motor Company.	
Satisfies Honors Requirement	Satisfies Wellness Requirement
No	No

AUTO103 - Intro Auto Industry & Auto Maintenance

Overview

Subject Automotive Technology	Academic Department Automotive Technology	School Business, Entrepreneurship, PD
Course Description	Provides an introduction to the major automotive systems covered in greater detail in other automotive technology specific system classes. Explores how to perform preventive maintenance routines, such as oil changes, tire rotations on standard systems as well as on vehicles equipped with TPMS (Tire Pressure Monitoring System); brake and suspension system inspections; and how to service the cooling system.	
Credit Hours	2	
Contact Hours	2	
Course Fee 35	Miscellaneous Department Fee 0	
Academic Level Undergraduate		

Eligible for Credit for Prior College Level Learning (CPCLL)
No

Goals, Topics, and Objectives

- Core Course Topics
- 1. Working in the Automotive Service Industry
 - 2. Using Hand Tools
 - 3. Using Power Tools and Equipment
 - 4. Oil Changes
 - 5. Rotation
 - 6. Battery Testing
 - 7. Belts and Hoses Inspection
 - 8. Coolant System Flush
 - 9. Brake Inspection

Describe the major vehicle operating systems.
Identify the major functioning components in the major automobile systems.
Perform cooling system tests. Perform tire rotations.
Demonstrate proper use of a hoist. Inspect a brake system.
Repair a tire. Interpret vehicle information. (VIN number)
Write repair estimates.
Analyze vehicle repair cost.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Measurable objectives will be evaluated by the instructor based on accuracy and proficiency and completion of assigned tasks. Homework, class participation, lab activities, quizzes and tests will be used as criteria to assign the student's final earned grade for this class.

AUTO105 - Internal Combustion Engines

Overview

Subject	Academic Department	School
Automotive Technology	Automotive Technology	Business, Entrepreneurship, PD
Course Description		
Introduces four-stroke engines by exploring principles of operation, compression ratio, piston displacement, operating tolerances, valve timing, horsepower and torque development along with adjustments, inspection, and troubleshooting procedures. Course topics help students prepare for ASE certification exams and State of Michigan licensure, but these exams/licensure are not included in this course. Laboratory activities.		
Credit Hours		
3		

Goals, Topics, and Objectives

- Core Course Topics
- 1. Engine Operation
 - 2. Cleaning the Engine
 - 3. Engine Shop Safety, Tools, and Equipment
 - 4. Measuring
 - 5. Preliminary Diagnosis Before Repair
 - 6. Engine Removal, Disassembly, Inspection, and In-Car Repairs
 - 7. Cylinder Head
 - 8. Engine Breathing and Power: Cam, Manifolds, and Turbochargers
 - 9. Cylinder Block – Inspection and Service
 - 10. Crankshaft and Bearings, Piston and Rod
 - 11. Lubrication of Cooling Systems
 - 12. Engine Hardware: Fasteners, Thread Repair, and Gaskets

13. Reassembly and Starting Explain the basics of engine operation
Identify major components of an engine
Compare engine tolerances in the English and Metric measuring system.
Identify common internal engine wear points.
Use common precision measuring instruments.
Measuring critical external engine operating parameters.
Measuring critical internal engine operating dimensions.
Diagnose common engine compression, cooling and lubrication problems.
Disassemble a laboratory engine unit. Clean and inspect disassembled engine parts. Assemble a laboratory engine unit.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Quizzes, engine assembly / disassembly and a written final examination. Measurable objectives will be evaluated by the instructor based on the accuracy and proficiency of objection completion.

General Course Requirements and Recommendations
Students must take notes on demonstrations, carefully read and analyze assigned course materials and perform exercises to determine their competence in servicing modern engine operating systems.

Satisfies Honors Requirement	Satisfies Wellness Requirement
No	No

AUTO108 - Basic Automotive Electricity

Overview

Subject Automotive Technology	Academic Department Automotive Technology	School Business, Entrepreneurship, PD
Course Description A study of basic automotive electricity theory and principles. Covers voltage, amperage, Ohm's law, accessories, and lighting as well as series, parallel, and series-parallel circuits. Reading of electrical schematics/wiring diagrams is covered. Also discusses the various meters that are used in the service of automobiles. Emphasizes circuit diagnosis and troubleshooting using proper diagnostic techniques and tools, including flex-probes.		
Credit Hours 3		
Contact Hours 4		
Course Fee 30	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

- Core Course Topics
- 1. Introduction to Electricity
 - 2. Methods of Producing Electron Flow
 - 3. Circuit Types
 - 4. Ohm's Law
 - 5. Magnetism
 - 6. Circuit Faults
 - 7. Electrical Meters
 - 8. Test Devices
 - 9. Circuit Protection
 - 10. Electrical Components
 - 11. Circuit Diagnosis

Use a DMM to diagnose a circuit fault.
Interpret results of voltage drop measurements.
Identify five rules that apply when measuring voltage, current and resistance in a parallel circuit.

Identify four rules that apply when measuring voltage, current and resistance in a series circuit.
Use wiring diagrams during diagnosis of electrical circuit problems.
Check voltage and voltage drop in an electrical circuit.
Analyze and diagnose lighting circuits.
Repair wiring harness and connector faults.
Analyze and test switches, relays and solenoids and perform necessary actions.
Diagnosis incorrect horn and wiper/washer operation.
Diagnose incorrect accessory operation, door locks, heated seats, heated glass, cruise control and power seats and determine necessary action.
Identify and use cause and effect relationships presented in service manual and CD solving trees.
Calculate mathematically ohm's law for circuit solutions.
Use conventional sentence structure, spelling and punctuation when composing sentences for service reports.
Identify the specific cause of the described problem by generating conclusions based on known symptoms related to the problem (SSCC rationale).

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Lab workstations, quizzes, and a written final examination. Measurable objectives will be evaluated by the instructor based on the accuracy and proficiency of completion.		
General Course Requirements and Recommendations Students must take notes on demonstrations, carefully read and analyze assigned course materials and perform exercises to determine their competence in servicing modern electrical systems.		
Texts Ford Motor Company reference text.		
Satisfies Honors Requirement No	Satisfies Wellness Requirement No

AUTO110 - Automotive Electrical Systems

Overview

Subject Automotive Technology	Academic Department Automotive Technology	School Business, Entrepreneurshp, PD
Course Description A basic automotive electricity and electronics course, including the study of the fundamentals of and operation and service required for batteries, cranking motors, alternators, regulators, and certain accessories used on current-production automobiles. NOTE: Course topics and laboratory experiences help the student prepare for ASE certification and State of Michigan licensure in automotive electrical systems, but certification/license are not included in this course.		
Credit Hours 3		
Contact Hours 6		
Course Fee 35	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics
1. Basic Electricity and Circuits
2. Magnetism, Electromagnetism and EMI Suppression
3. Semiconductors and Solid State Electronics
4. Automotive Wiring and Basic Circuit Components
5. Batteries
6. AC Charging Systems and Alternators
7. Starting System Overview
8. Starter Motors

9. Inputs and outputs of various electronic control modules, their functions, and how they relate to vehicle and engine operation
10. Fuel and ignition system overview
11. Body Electrical and Electronic Systems
12. Vehicle Communication Networks
Use electronic diagnostic tools and equipment commonly found in a modern repair facility and interpret results.
Perform measurement of voltage, current and resistance in automotive electrical circuits.
Interpret automotive electrical wiring diagrams and diagnosis circuit for intermittent faults.
Identifying and diagnosing shorts and opens in automotive electrical circuits.
Diagnose Starting/Charging system fault
Perform electrical system repairs to industry standards/OEM integrity of aftermarket service and diagnostic information.
Explain the differences in Network protocols Perform a PMI Diagnosis communications network fault using DSO Diagnose a BCM controlled accessory operation failure

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Homework, quizzes, lab reports and final examination. Measurable objectives will be evaluated by the instructor based accuracy and proficiency of completion.		
General Course Requirements and Recommendations Students must take notes on demonstrations, carefully read and analyze assigned course materials, and perform exercises to determine their competence in servicing modern electrical systems.		
Satisfies Honors Requirement No	Satisfies Wellness Requirement No

AUTO120 - Automotive Fuel Management Systems

Overview

Subject Automotive Technology	Academic Department Automotive Technology	School Business, Entrepreneurshp, PD
Course Description Introduces the types of fuels and air/fuel ratio requirements of the various fuels used in current automotive engines, along with the construction and operation of fuel delivery systems. Discusses fuel pumps, fuel lines, fuel filters, and storage tanks. Fuel system types include returnable electronic fuel injection, returnless electronic fuel injection, and gasoline direct fuel injection. Also discusses elements of mechanical and electronic automotive emissions. This course also covers the use of diagnostic scan tools and covers vehicle programming principals.		
Credit Hours 2		
Contact Hours 4		
Course Fee 35	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics
1. Introduction to Fuel Systems an Emission Controls
2. Engine Operating Principles
3. Gasoline and Alternative Fuels
4. Engine Fuel-Air Requirements
5. Fuel Tanks, Lines, and Evaporative Emission Controls
6. Fuel Pumps and Filter
7. Air Cleaners and Filters
8. Intake and Exhaust Manifolds
9. Electronic Fuel Metering Control
10. Electronic Engine Control Systems
11. Gasoline Fuel-Injection Systems
12. Supercharging and Turbocharging
13. Variable and Flexible Fuel Systems
14. Positive Crankcase Ventilation, Air Injection Systems, and Catalytic Converters
Recognize and identify selected modern fuel systems components.

Explain Stoichiometric air/fuel ratios for gasoline and alternative fuels.
Identify components of the fuel storage sub-system.
Identify components of a Fuel Injection system.
Explain the function of the Induction and Exhaust system.
Measure fuel rail pressure - load and no-load.
Perform injector electrical tests.
Perform injector leakdown tests.
Measure electrical parameters of sensors and actuators.
Diagnose engine malfunctions relating to the vehicle fuel management system.
Perform basic fuel system feedback tests.
Use diagnostic trouble codes to analyze vehicle drive ability symptoms.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
Tests, Lab Reports and a comprehensive final examination. Measurable objectives will be evaluated by the instructor based on the accuracy and proficiency of objective completion.	
General Course Requirements and Recommendations	
Students must take notes on demonstrations, carefully read and analyze assigned course materials, and perform exercises to determine their competence in servicing modern fuel management systems.

AUTO121 - Electronic Fuel & Emissions Control Syst

Overview

Subject	Academic Department	School
Automotive Technology	Automotive Technology	Business, Entrepreneurship, PD
Course Description		
Introduces electronic computer-controlled fuel delivery and metering systems. Discusses electronic emission controls and environmental impact of tailpipe emissions. Comparison of mechanical historical fuel and emissions control systems to modern electronic systems. Discussion of onboard diagnostic system monitors. Provides exposure to electronic diagnostic equipment. Also, discusses connected vehicle monitoring and autonomous over-the-air controller updates.		
Credit Hours		
3		
Contact Hours		
6		
Course Fee	Miscellaneous Department Fee

Goals, Topics, and Objectives

Core Course Topics
1. Introduction to Fuel Systems an Emission Controls
2. Engine Operating Principles
3. Gasoline and Alternative Fuels
4. Engine Fuel-Air Requirements
5. Fuel Tanks, Lines, and Evaporative Emission Controls
6. Fuel Pumps and Filter Air Cleaners, Filters, and Air Induction Systems
7. Electronic Drive-by-Wire Throttle Control Systems
8. Intake and Exhaust Manifolds
9. Electronic Fuel Injection Systems
10. Electronic Powertrain Control Systems
11. Onboard Diagnostics and System Monitors
12. Ethanol Based Fuel Systems
13. Supercharging and Turbocharging
14. Flexible Fuel Systems
15. Positive Crankcase Ventilation
16. Secondary Air Injection Systems

17. Catalyst Systems and Monitors
18. Evaporative Emissions Systems and Monitors
19. Electro-Mechanical Exhaust Gas Recirculation Systems and Monitors
20. Electrical Exhaust Gas Recirculation Systems and Monitors

Recognize and identify selected modern fuel systems components.
Explain Stoichiometric air/fuel ratios for gasoline and alternative fuels.
Identify components of the fuel storage and delivery systems.
Identify components of a fuel injection system.
Explain the function of the air induction system.
Identify and explain the components of catalyst system.
Measure fuel pressure in primary and secondary fuel delivery systems.
Perform electronic fuel injector flow tests.
Perform fuel injector leak down tests.
Measure electrical parameters of sensors and actuators.
Diagnose engine malfunctions relating to the vehicle fuel management system with diagnostic scan tool.
Access and report data from emissions control systems OBD Monitors.
Identify and report fuel trim data in relationship to oxygen sensor/air fuel sensor operation.
Use diagnostic trouble codes to analyze vehicle drive ability symptoms.
Identify type of positive crankcase ventilation system and perform flow testing.
Apply tailpipe emissions control data to engine diagnostic procedures and engine evaluation.
Perform bi-directional controls of fuel systems to affect testing and diagnosis of powertrain management systems.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
Tests, lab reports and a comprehensive final examination. Measurable objectives will be evaluated by the instructor based on the accuracy and proficiency of objective completion.	
General Course Requirements and Recommendations	
Students must take notes on demonstrations, carefully read and analyze assigned course materials, and perform exercises to determine their competence in servicing modern fuel management systems.

AUTO131 - Automotive Ignition Systems

Overview

Subject	Academic Department	School
Automotive Technology	Automotive Technology	Business, Entrepreneurship, PD
Course Description		
An intermediate-level course covering the operating principles, construction, troubleshooting and maintenance of units of the automotive ignition system, including distributors, coils, electronic controls and advance mechanisms. Studies ignition timing, wiring, and ignition malfunctions as well as electronic ignition systems and ignition-related emission controls.		
Course Pre-requisite(s)		
AUTO105 Internal Combustion Engines, AUTO121 Elec Fuel & Emissions Control, and AUTO131 Auto Ignition Systems or Instructor Permission		
Credit Hours		
2		
Contact Hours		
2		
Course Fee	Miscellaneous Department Fee	
35	0	

Academic Level
Undergraduate

Eligible for Credit for Prior College Level Learning (CPCLL)
No

Goals, Topics, and Objectives

- Core Course Topics
- 1. Introduction to ignition systems
 - 2. Engine 4 stroke operating principles
 - 3. Ignition coil design and operation
 - 4. Ignition timing mechanisms and procedures
 - 5. Computer controlled timing systems
 - 6. Base ignition component testing
 - 7. Spark plug replacement interval and procedure
 - 8. Distributor removal and installation procedure
 - 9. Electronic system components and testing base operation

Recognize and identify selected modern ignition systems components.
Interpret results of analog oscilloscope analyzer patterns.
Interpret results of digital oscilloscope analyzer patterns.
Perform secondary ignition tests.
Perform primary ignition tests.
Diagnose engine malfunctions relating to the vehicle ignition systems.
Diagnose a crank no start condition.
Check and adjust ignition timing. Static time a distributor.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Measurable objectives will be evaluated by the instructor based on accuracy and proficiency and completion of assigned tasks. Attendance, homework, class participation, lab activities, quizzes and tests will be used as criteria to assign the student's final earned grade for this class.

General Course Requirements and Recommendations
Students must take notes on demonstrations, carefully read and analyze assigned course materials and perform exercises to determine their competence in servicing modern ignition systems.

Satisfies Honors Requirement	Satisfies Wellness Requirement
No	No

Register for this Course

AUTO132 - Computer Controld Ignition Sys&engin Per

Overview

Subject Automotive Technology	Academic Department Automotive Technology	School Business, Entrepreneurshp, PD
Course Description An intermediate-level course on computer-controlled ignition systems and engine performance. Studies systems currently in use as well as newer systems available in the future.		
Course Pre-requisite(s) AUTO131 Auto Ignition Systems		
Credit Hours 2		
Contact Hours 2		
Course Fee 35	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

- Core Course Topics
- 1. Review of four-stroke cycle operation and the combustion process.
 - 2. Ignition coil design, operation, and testing.
 - 3. Review of ignition timing mechanisms and computer timing strategies.
 - 4. Review of point controlled systems and electronic systems.
 - 5. Electronic system component testing.
 - 6. Computer control strategies.
 - 7. Computer inputs/outputs: operation and testing.
 - 8. DIS systems operation and testing.

- 9. Coil-near-plug and coil-on-plug operation and testing.
- 10. Performance and drivability diagnosis and testing methods.

Diagnose no-starting and driveability concerns on vehicles with electronic ignition (EI/DIS) systems.
Inspect and test coil pack ignition system. Inspect and test coil on plug ignition system.
Use pinpoint tests to diagnose intermittent ignition concerns on coil on plug systems.
Determine ignition fault by analyzing results of ignition test function of VCMM and IDS. Using PC/ED determine root cause of DTC associated fault code for ignition failure.
Use pinpoint tests to determine root cause of CKP/CMP failure.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Lab workstations, quizzes and a written final examination. Measurable objectives will be evaluated by the instructor based on the accuracy and proficiency of completion.

General Course Requirements and Recommendations
Students must take notes on demonstrations, carefully read and analyze assigned course materials and perform exercises to determine their competence in servicing modern electronic computer controlled ignition systems.

AUTO135 - Mathematics for the Technician

Overview

Subject Automotive Technology	Academic Department Automotive Technology	School Business, Entrepreneurship, PD
Course Description Covers basic mathematics skills specific to the technical field as well as examining measurement aspects beginning with angle and linear measurement, ratios and proportions, basic algebraic expressions, geometry as applied to area and volume calculations - as well as suspension geometry for vehicle alignment, and vibration analyzer data analysis.		
Credit Hours 3		
Contact Hours 3		
Course Fee 35	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category Mathematics	Michigan Transfer Agreement (MTA) Category Category 3: Mathematics - Applied Degrees	
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

- Core Course Topics
- 1. Whole Numbers
 - 2. Integers and signed numbers
 - 3. Ratios, proportions and percentages
 - 4. Geometry: Angles and figures
 - 5. Metric
 - 6. Measurement Tools
 - 7. Application of Principles-Formulas

Calculate engines displacement when given stroke, bore and number of cylinders.
Calculate the alignment angles and their corrective factors.
Using the formulas provided determine speed errors when different size tires are used.
Calculate vibration frequencies when given tire size and rotational speed.
Use vibration analyzer to perform driveshaft balance procedure.
Calculate hydraulic system pressure when given piston diameters and applied force.

Analyze and solve problems requiring the use of fractions, decimals, ratios, or percentages by a direct or indirect variation of the numerical elements of the problem.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Lab workstations, quizzes, tests, hands-on test, and a written final examination.

General Course Requirements and Recommendations
Students must take notes on lectures, carefully read and analyze assigned course materials and perform exercises to determine their competence in using various formulas covered in class.

Satisfies Honors Requirement	Satisfies Wellness Requirement
No	No

AUTO140 - Automotive Transmissions Systems

Overview

Subject Automotive Technology	Academic Department Automotive Technology	School Business, Entrepreneurship, PD
---	---	---

Course Description
Covers automatic transmissions and transaxles. Emphasizes the operating principles, construction, adjustments, troubleshooting, and maintenance of automatic transmissions. Also examines clutches, bands, solenoids and torque converters.

Credit Hours
3

Contact Hours
6

Course Fee 35	Miscellaneous Department Fee 0
-------------------------	--

Academic Level
Undergraduate

Eligible for Credit for Prior College Level Learning (CPCLL)
No

Goals, Topics, and Objectives

Core Course Topics

1. Dry Friction Plate Clutches and Related Elements
2. Underdrive/Overdrive Gearing
3. Gear Ratios and Gear Designs
4. Selected 4, 5 & 6 Speed Manually Shifted Transmission
5. Selected 4 & 5 Speed Manually Shifted Transaxles,
6. Automatic Transmission Fundamentals
7. Selected 3, 4 & 5 Speed Automatically Shifted Transmissions
8. Electronic Transmission Controls
9. Drive Shafts, Half Shafts and Universal Joints

Disassemble and reassemble a selected automatic transmission.

Measure internal wear tolerances for selected transmission components.

Diagnose low pressure pump problem.

Diagnose "no up-shift" problem. Adjust automatic transmission shift linkage.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Measurable objectives will be evaluated by the instructor based on accuracy and proficiency and completion of assigned tasks. Homework, class participation, lab activities, quizzes and tests will be used as criteria to assign the student's final earned grade for this class.

General Course Requirements and Recommendations
Students must take notes on demonstrations, carefully read and analyze assigned course materials and perform exercises to determine their competence in servicing modern power transmission systems.

AUTO142 - Automatic Transmission Controls/Diagnosi

Overview

Subject Automotive Technology	Academic Department Automotive Technology	School Business, Entrepreneurship, PD
---	---	---

Course Description
Delves deeper into topics covered in AUTO-140 with additional experiences in the service and repair operations related to current electronically controlled automatic transmissions. Emphasizes electronic control systems.

Course Pre-requisite(s)
[AUTO140](#) Auto Transmission or Instructor Permission

Credit Hours
2

Contact Hours
2

Course Fee 35	Miscellaneous Department Fee 0
-------------------------	--

Academic Level
Undergraduate

Eligible for Credit for Prior College Level Learning (CPCLL)
No

Goals, Topics, and Objectives

Core Course Topics

1. Mechanical Power Trains
2. Hydraulic Control Circuits
3. Automatic Transmission Fundamentals
4. Electronic Transmission Controls
5. Inspection and Diagnosis of Selected Transmission Problems

Use digital multi-meter to check circuits for opens, shorts and grounds.

Analyze electronic transmission control circuits.

Measure transmission hydraulic line pressure.

Perform operational check of torque converter clutch.

Perform operational check of shift solenoids.

Use scan tool to obtain trouble codes and data from transmission control module.

Diagnose shifting and engagement problems (no shift/engagement, soft shift/delayed engagement, harsh shift/engagement)

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Lab workstations, quizzes and a written final examination. Measurable objectives will be evaluated on the basis of instructor evaluations.

General Course Requirements and Recommendations
Students must take notes on demonstrations, carefully read and analyze assigned course materials and perform exercises to determine their competence in servicing electronically controlled transmissions.

Texts
No Text Required. Hand-Outs provided.

Satisfies Honors Requirement	Satisfies Wellness Requirement

Academic Level
Undergraduate

Eligible for Credit for Prior College Level Learning (CPCLL)
No

Goals, Topics, and Objectives

Core Course Topics

1. Clutches
2. Clutch Diagnosis
3. Transmission
4. Transaxles
5. Transmission/Transaxle Service
6. Propeller Shaft and Universal Joint

7. Propeller Shaft and universal Joint Service
Diagnose transaxle final drive assembly noise and vibration concerns and determine necessary action.
Inspect, test and replace transmission/transaxle sensors and switches.
Trace power flow through gear ratio.
Diagnose clutch noise, slippage, pulsation and shatter, determine necessary action. Inspect housing and flywheel alignment using proper instrumentation and application.
Diagnose drive axle shaft bearings for noise, vibration and harshness, determine necessary action.
Comprehend and use cause and effect relationships presented in service manual and CD solving trees.
Use conventional sentence structure, spelling and punctuation when composing sentences for service reports.
Identify specific cause of the described problem by generating conclusions based on known symptoms related to the problem (SSCC rationale).

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Measurable objectives will be evaluated by the instructor based on accuracy and proficiency and completion of assigned tasks. Homework, class participation, lab activities, quizzes and tests will be used as criteria to assign the student's final earned grade for this class.
General Course Requirements and Recommendations
Students must take notes on demonstrations, carefully read and analyze assigned course materials and perform exercises to determine their competence in servicing modern manual transmission, driveline and clutch systems.

AUTO150 - Automotive Diagnosis & Engine Eval

Overview

Subject	Academic Department	School
Automotive Technology	Automotive Technology	Business, Entrepreneurship, PD
Course Description	An advanced-level course in the application of diagnosing, locating, and correcting trouble encountered in automotive service, using various types of testing equipment. Engine diagnosis includes variable cam timing and variable displacement engine systems. Compression analysis including cylinder compression testing and cylinder leak down testing. Fuel system diagnosis includes pressure and injector tests using active commands and relative flow analysis. Cooling system evaluation and testing, including identification of cooling system components. Coursework also explores various common problems that occur in the servicing of the modern automobile. Ignition system diagnostics that includes the use of secondary ignition scope and electronic system testing.	
Course Pre-requisite(s)	AUTO105 Internal Combustion Engines, AUTO110 Auto Elect, AUTO121 Elec Fuel & Emissions Control, or Instructor Permission	
Credit Hours	2	
Contact Hours	4	
Course Fee	Miscellaneous Department Fee	
35	0	
Academic Level	Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL)	No	

Goals, Topics, and Objectives

Core Course Topics
1. The Automobile Engine
2. Automobile Engine Systems
3. Automobile Electrical Systems
4. Automobile Emission Control
5. Automobile Electronic Control Systems
Engine systems measurable performance laboratory tests.
Perform Engine Cylinder Leakage Test
Perform Engine Compression Test
Perform Dynamic Compression Test

Perform Cooling System Pressure Test
Perform Anti-Freeze Acidity Test
Perform Head Gasket Leak Test with NDIR ANALYZER
Fuel system measurable performance laboratory Tests
Perform Fuel Rail Pressure Test
Perform Fuel Pressure Regulator Test
Perform Injector Leakage Test
Perform Injector Balance Test
Perform Cylinder Power Contribution Tests.
Perform Cooling System Performance Tests.
Diagnose Exhaust System Back Pressure Tests.
Perform Secondary Ignition System Performance Tests.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Measurable objectives will be evaluated by the instructor based on accuracy and proficiency and completion of assigned tasks. Homework, class participation, lab activities, quizzes and tests will be used as criteria to assign the student's final earned grade for this class.
General Course Requirements and Recommendations
Students must take notes on demonstrations, carefully read and analyze assigned course materials, and perform exercises to determine their competence in servicing modern engine and vehicle operating systems.
Satisfies Honors Requirement
No

AUTO160 - Automotive Chassis Units

Overview

Subject	Academic Department	School
Automotive Technology	Automotive Technology	Business, Entrepreneurship, PD
Course Description	A study of the construction, operation, and maintenance of the various chassis units. Examines steering, suspension systems, and alignment as well as disc and drum braking systems. Study of tire pressure monitoring system functionality.	
Credit Hours	2	
Contact Hours	4	
Course Fee	Miscellaneous Department Fee	
35	0	
Academic Level	Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL)	No	

Goals, Topics, and Objectives

Core Course Topics
1. Chassis Construction, Fasteners and Safety
2. Braking System Principles, Components and Operation
3. Braking System Principles, Components and Operation
4. Wheel Bearings and Service
5. Drum Brake Operation, Diagnosis and Service
6. Disc Brake Operation, Diagnosis and Service
7. Parking Brake Operation, Diagnosis and Service
8. Machining Brake Drums and Rotors
9. Power Brake Unit Operation, Diagnosis and Service
10. Antilock Braking System Operation
11. Tires and Wheels
12. Steering System Operation
13. Suspension System Operation
14. Wheel Alignment
15. Tire Pressure Monitoring Systems

Mount, inspect and balance tires and wheels Identify suspension and alignment components Identify hydraulic brake system components
Identify common drum and disc brake systems
Use common brake tools
Use common wheel alignment tools
Perform basic wheel alignment procedures
Apply steering geometry to common vehicle alignment problems
Preform drum brake machining
Preform disc brake rotor machining.
Preform TPMS relearn and reset

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Measurable objectives will be evaluated by the instructor based on accuracy and proficiency and completion of assigned tasks.Homework, class participation, lab activities, quizzes and tests will be used as criteria to assign the student's final earned grade for this class.

AUTO162 - Antilock Brake Systems

Overview

Subject Automotive Technology	Academic Department Automotive Technology	School Business, Entrepreneurship, PD
----------------------------------	--	--

Course Description
Covers the theory and operation of Anti-lock Brake Systems (ABS) and traction control systems. Includes the design and construction of ABS braking systems, as well as traction control system operating principles. Diagnostic techniques, troubleshooting, and repair of ABS/TC, along with service techniques and hands-on experiences are an integral component of the coursework.

Course Pre-requisite(s)
[AUTO160 Auto Chassis Units](#)

Credit Hours
3

Contact Hours
4

Course Fee 35	Miscellaneous Department Fee 0
------------------	-----------------------------------

Academic Level
Undergraduate

Eligible for Credit for Prior College Level Learning (CPCLL)
No

Goals, Topics, and Objectives

- Core Course Topics
1. Introduction to ABS and Traction Control
 2. ABS and Traction Control Operating Strategies
 3. ABS/TC Components
 4. ABS/TC diagnosis
 5. ABS/TC repair and bleed procedures
 6. Analyze ABS/TC scan tool data

Explain the basic operation of an ABS system.
Identify and compare the different types of ABS and traction systems used on various automobiles.
Define the basic functions of the major components of each ABS system.
Select a typical ABS symptom and choose the appropriate action.
Navigate the service publications necessary to diagnose an ABS fault. Interpret an ABS symptom chart.

Perform a PPT test and take the appropriate actions.
Bleed the ABS system utilizing the scan tool service function.
Diagnose any ABS concerns caused by vehicle modifications.
Identify traction control system components and differentiate from ABS function.
Measure and/or test with meters and measuring instruments for English or metric measurements, then convert the results to the manufacturer's specifications.
Write warranty reports and work orders to include information regarding problem resolution and the result of the work performed.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Measurable objectives will be evaluated by the instructor based on accuracy and proficiency and completion of assigned tasks. Workstations, homework, class participation, lab activities, quizzes and tests will be used as criteria to assign the student's final earned grade for this class.

General Course Requirements and Recommendations
Students must take notes on demonstrations, carefully read and analyze assigned course materials, and perform exercises to determine competence in servicing modern ABS and Traction Control systems.

Goals, Topics, and Objectives

- Core Course Topics
1. Introduction to electronic steering and suspension
 2. Electronic Steering
 3. Electronic steering diagnosis and testing
 4. Electronic suspension
 5. Electronic suspension diagnosis and testing
 6. Multiplexing of steering and suspension

Perform diagnostic routines associated with electronic steering and suspension concerns.
Use specialized tools and service equipment associated with electronic steering and suspension diagnosis and repair.
Perform repair and adjustment procedures as specified in electronic service manual.
Diagnose a system fault which has generated a fault code.
Perform a wheel alignment and determine if any geometry errors are present.
Mathematically manipulate suspension geometry values to determine if service is/will be required.
Demonstrate an understanding of the role of balanced and unbalanced forces on linear or rotating vehicle assemblies.

Explain the relationship of inertial and centrifugal-centripetal forces and vehicle dynamics.
Compose complete and accurate paragraphs that include information regarding symptoms, diagnosis results, and appropriate details when preparing warranty claims and information for inclusion on work orders.
Write warranty reports and work orders to include information regarding problems resolution, and the result of the work performed.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Lab workstations, quizzes and a written final examination. Measurable objectives will be evaluated by the instructor based on the accuracy and proficiency of completion.
General Course Requirements and Recommendations
Students must take notes on demonstrations, carefully read and analyze assigned course materials and perform exercises to determine their competence in servicing modern electronic steering and suspension systems.

1. Basic Welding Safety
2. Metal Identification Processes
3. Basic Oxy/Fuel Cutting
4. Plasma Arc Cutting
5. Shielded Metal Arc Welding
6. Gas Metal Arc Welding
7. Gas Tungsten Arc Welding
8. Basic Welding Safety
Setup and adjust gas cutting station.
Setup and adjust SMAW welding station.
Setup and adjust GMAW welding station.
Setup and adjust GTAW welding station.
Evaluate weld quality.
Perform satisfactorily weldments on steel.
Cut steel and aluminum using plasma torch.
Cut steel using oxy/fuel torch.
Evaluate weld quality by visual inspection.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Quizzes, and a written final examination. Measurable objectives will be evaluated on the basis of instructor evaluations for lab activities.

General Course Requirements and Recommendations
Students must take notes on demonstrations, carefully read and analyze assigned course materials, and perform exercises to determine their competence in performance of basic automotive service tasks.

AUTO190 - Co-op in Automotive Technology

Overview

Subject	Academic Department	School
Automotive Technology	Automotive Technology	Business, Entrepreneurshp, PD
Course Description	Cooperative education is a structured method of combining classroom-based education with practical work experience. A cooperative education experience, commonly known as a "co-op," provides academic credit for structured employment experience. Work experience must be directly related to the student's declared major to be eligible.To register for this course, a student must have completed 50% of core coursework, maintain an overall GPA of 2.0 and a program specific GPA of 2.5.	
Credit Hours	1	

Contact Hours

0.2	
Course Fee	Miscellaneous Department Fee
0	0
Academic Level	
Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL)	Acceptable Prior Learning Credit
Yes	Other

Credit for Prior College Level Learning (CPCLL) Details
Student will submit a formal request in writing to the faculty and Associate Dean for work experience to be considered for Credit for Prior College-Level Learning.
The student will complete an interview, a reflective paper, or a presentation to the faculty in which the student develops and describes the learning objectives supported by the work experience, how those learning objectives were achieved and how that learning was put into practice.
Finally, the student must also provide a portfolio (or something comparable) that shows the work completed, and provide some form of documentation confirming the work experience (a resume does not suffice) for which Credit for Prior College-Level Learning is requested.

Goals, Topics, and Objectives

Course Goals
Cooperative education helps students make the school-to-work transition, develop career and program-related learning objectives, and work on applicable skills for employment. Placements should provide students with the opportunity to apply and expand upon knowledge learned in the classroom, and develop the skills acquired in their coursework to align with the standards and expectations set by the worksite.
Core Course Topics
1. Core Career-Focused Topics
A. Professional Dress and Demeanor (attitude, posture, courteousness) B. Workplace Communication C. Interviewing Skills D. Resume Building E. Networking and Social Media F. Seeking Employment G. Career Advancement

Build a resume that meets standards of Career Services Officer.
Articulate the reasons for professional attire
Wear professional attire while on the worksite.
Attend career workshop in professional dress.
Display appropriate professional attitude and demeanor while on the worksite.
Interview effectively
Attend mock interview, give appropriate answers to five 5 questions.
Complete a written job application in a prompt, professional manner with all information legible, error-free, and thorough.
Display understanding of the appropriate use of Social Media sites (Facebook, LinkedIn, and Twitter) during Career Services workshop.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment will be determined by the instructor based on what is in the best interest of the student's academic growth, including future employability of the student. Assessment may include, but isn't limited to: - Major final project - Weekly journal - Creation and attainment of all learning objectives - Participation in a career-focused workshop - Consistent and prompt attendance at worksite - Employer evaluation
General Course Requirements and Recommendations
To be determined by the instructor: A detailed course syllabi for each section of AUTO190 Co-op in Automotive Technology offered will be presented to the School of Business, Entrepreneurship, and Professional Development and Curriculum Committee "For Information Only" by the mid-semester point of the term the course is offered.

AUTO191 - Coordinated Education Experience Auto 1

Overview

Subject Asset Program	Academic Department Automotive Technology	School Business, Entrepreneurship, PD
Course Description Designed to offer practical work experience within the Automotive Technology and Service field through participation in a supervised coordinated education program. This course integrates work experience with classroom and Lab instruction.		
Course Pre-requisite(s) Requires permission from ASSET Program Coordinator	Course Co-requisite(s) AUTO102 Auto Fund&Dealership Operatio , AUTO108 Basic Auto Elec , AUTO135 Mathematics for the Technician , AUTO160 Auto Chassis Units	
Credit Hours 2		
Contact Hours 2		
Course Fee 0	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals Coordinated education helps students make the school-to-work transition, develop career objectives, and work on applicable skills for their career. Sponsoring dealerships should provide students with the opportunity to apply and expand upon knowledge learned in the classroom, and develop the skills acquired in their coursework to align with the standards and expectations set by the students' dealership management.
Core Course Topics - Professional Dress and Demeanor (attitude, posture, courteousness). - Workplace Communication. - Work with Mentor Technicians - Documentation of tasks assigned - Tracking of flat rate hours - Dealership Operations
Properly wear the assigned dealership uniform, be courteous to colleagues, supervisors, and customers in daily interactions, and maintain a positive attitude.
Communicate with colleagues (other technicians, service advisors, parts department personnel), supervisors, and customers in a clear and respectful way.
Work with assigned mentor technicians in the areas covered in the classroom session prior to the co-op.
These areas include basic electrical, basic brakes, noise/vibration/harshness, maintenance, and basic steering and suspension.
Document all repairs performed on the Ford Co-op log sheets.
List the date, repair order number, what the vehicle came in for, and what the resolution to the concern was.
Track the flat-rate hours of each repair on the co-op log sheets so that you have a record of the number of hours turned each day and each week.
Display an understanding of dealership operations, technician's warranty responsibilities, and correct/complete repair order documentation.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Assessment will be determined by the instructor based on completion of the co-op logs, and the co-op evaluation form completed by the student's dealership service manager.	
Grading Scale A-E	
Texts No textbooks required.

AUTO215 - Automotive Engine Dynamometer

Overview

Subject Automotive Technology	Academic Department Automotive Technology	School Business, Entrepreneurship, PD
----------------------------------	--	--

Course Description

An advanced-level course in the purpose, construction, and operation of the automotive engine dynamometer. Presents how to conduct engine tests of horsepower and torque, and covers test cell setup of various sensor types and adaptation.

Course Pre-requisite(s)

AUTO105 Internal Combustion Engines, AUTO121 Elec Fuel & Emissions Control, and AUTO131 Auto Ignition Systems or Instructor Permission

Credit Hours

2

Contact Hours

2

Course Fee 35
Miscellaneous Department Fee 0

Academic Level Undergraduate

Eligible for Credit for Prior College Level Learning (CPCLL) No

Goals, Topics, and Objectives

Core Course Topics

- 1. Basic Engine Operation Overview
- 2. Terms
- 3. Formulas - HP, Torque, Friction Loss, Vapor Pressure/Atmospheric Pressure/Temp, etc.
- 4. Types of Dynamometers
- 5. Safety Procedures
- 6. Instrumentation of Engine/Measurement Systems
- 7. Computer Operation
- 8. Operation of Dynamometer
- 9. Test Procedures
- 10. Data Analysis
- 11. Data usage and determining effects of change

Analyze engine parameters which affect torque output.
Rescale and manipulate basic raw data from dynamometer tests.
Develop a test to measure basic signal conditioning.
Compare multiple sources of data used to derive calibrations.
Fit lines and curves to correct data. Correct data to standard scaling.
Calculating and deriving horsepower and Torque.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

Measurable objectives will be evaluated by the instructor based on accuracy and proficiency and completion of assigned tasks. Homework, class participation, lab activities, quizzes and tests will be used as criteria to assign the student's final earned grade for this class.

General Course Requirements and Recommendations

Students must take notes on demonstrations, carefully read and analyze assigned course materials, and perform exercises to determine their competence in servicing modern dynamometer test systems.

Satisfies Honors Requirement No
Satisfies Wellness Requirement No

AUTO216 - Chassis Dynamometer

Overview

Subject Automotive Technology
Academic Department Automotive Technology
School Business, Entrepreneurship, PD

Course Description

An advanced-level course in the purpose, construction and operation of the automotive chassis dynamometer. Demonstrates how to conduct vehicle tests of horsepower and torque, and covers setup of various sensor types and adaptation. Including how to correctly place and secure a vehicle on the dynamometer, how to instrument the vehicle, how to set up and run tests on the vehicle, how to log data, and how to interpret that data. Successful completion of this course will prepare the student for working in the field using dynamometers for OEM manufacturers and 3rd party R&D suppliers.

Course Pre-requisite(s)

AUTO105 Internal Combustion Engines, AUTO121 Elec Fuel & Emissions Control, and AUTO131 Auto Ignition Systems or Instructor Permission

Credit Hours

2

Contact Hours

2

Course Fee 35
Miscellaneous Department Fee 0

Academic Level Undergraduate

Eligible for Credit for Prior College Level Learning (CPCLL) No

Goals, Topics, and Objectives

Core Course Topics

- 1. Basic Engine Operation Overview
- 2. Terms
- 3. Formulas- HP, Torque, Friction Loss, Vapor Pressure/ Atmospheric Pressure/ Temp, ect.
- 4. Types of Dynamometers
- 5. Safety Procedures
- 6. Instrumentation of Engine/ Measurement Systems
- 7. Computer Operation
- 8. Operation of Dynamometer
- 9. Test Procedures
- 10. Data Analysis
- 11. Data usage and Determining effects on Change.
- 12. Emission testing and green state laws (FTP testing) Federal Test Procedures.

Analyze engine parameters which affect torque output.
Demonstrate proper vehicle loading/unloading on dynamometer
Rescale and manipulate basic raw data from dynamometer tests.
Develop a test to measure basic signal conditioning.
Compare multiple sources of data used to derive calibrations.
Fit lines and curves to correct data.
Correct data to standard scaling.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

Measurable objectives will be evaluated by the instructor based on accuracy and proficiency and completion of assigned tasks.Homework, class participation, lab activities, quizzes and tests will be used as criteria to assign the student's final earned grade for this class.

General Course Requirements and Recommendations

AUTO224 - Automotive Air Conditioning

Overview

Subject Automotive Technology
Academic Department Automotive Technology
School Business, Entrepreneurship, PD

Course Description

Studies automotive air conditioning systems, including components, functions, and types of service equipment. Also discusses safety protocols and environmental regulations. Course is for ASSET students.

Credit Hours

2

Contact Hours

2

Course Fee 35
Miscellaneous Department Fee 0

Academic Level Undergraduate

Eligible for Credit for Prior College Level Learning (CPCLL) No

Goals, Topics, and Objectives

Core Course Topics

- 1. Principles of the air conditioning system.
- 2. Types of systems.
- 3. Major components and their function.
- 4. A/C sensors and controls.
- 5. General system service.
- 6. Safety and environmental regulations.
- 7. Types of A/C system service equipment.

Perform cooling system cap and recovery system tests (pressure, combustion leakage and temperature); determine necessary action.
Leak test A/C system; determine necessary action.

Inspect A/C condenser for airflow restrictions; perform necessary action.
Identify (by label application or use of a refrigerant identifier) and recover A/C system refrigerant.
Recycle refrigerant.
Evacuate and charge A/C system.
Retrieve DTCs from control head and PCM.
Diagnose refrigeration, heating, air management and control subsystem concerns.
Diagnose electronic cooling fan and compressor clutch concerns.
Diagnose climate controlled seating concerns. Diagnose rear heating and air conditioning concerns. Diagnose dual zone concerns.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Lab workstations, quizzes and a written final examination. Measurable objectives will be evaluated by the instructor based on the accuracy and proficiency of objective completion.	
General Course Requirements and Recommendations Students must take notes on demonstrations, carefully read and analyze assigned course materials and perform exercises to determine their competence in servicing modern air conditioning systems.	
Satisfies Honors Requirement No	Satisfies Wellness Requirement No

AUTO225 - Automotive Air Conditioning

Overview

Subject Automotive Technology	Academic Department Automotive Technology	School Business, Entrepreneurshp, PD
Course Description A beginning course covering basic refrigeration and automotive heating, ventilation, air management, and air conditioning systems. Emphasizes identification of systems, diagnosis, repair, and responsible handling of common automotive refrigerants.		
Credit Hours 2		
Contact Hours 2		
Course Fee 35	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics 1. Air Conditioning Systems 2. System Service 3. Recover and recycle referigerant 4. Evaluate system performance with a manifold gauge set. 5. Perform electrical and mechanical tests on HVAC controls. 6. Heater (cooling) System
Perform cooling system cap and recovery system tests, determine necessary action.
Leak test A/C system; determine necessary action.
Inspect A/C condenser for airflow restrictions; perform necessary action.
Remove and install expansion valve or orifice (expansion) tube. Identify (by label application or use of a refrigerant identifier) and recover A/C system refrigerant.
Recycle refrigerant.
Identify the two common expansion type automotive A/C systems.

Identify refrigerant type and purity.
Describe basic refrigeration theory.
Describe effects of automotive refrigerant on the environment.
Demonstrate touch test to evaluate system performance.
Analyze system performance decide state of charge form gauge readings. Use stand alone and scan tool diagnostics to view faults and actuate outputs.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Measurable objectives will be evaluated by the instructor based on accuracy and proficiency and completion of assigned tasks. Homework, class participation, lab activities, quizzes and tests will be used as criteria to assign the student's final earned grade for this class.	
General Course Requirements and Recommendations Students must take notes on demonstrations, carefully read and analyze assigned course materials, and perform exercises to determine their competence in servicing modern vehicle air conditioning systems.

AUTO230 - Automotive Diesel Principles

Overview

Subject Automotive Technology	Academic Department Automotive Technology	School Business, Entrepreneurshp, PD
Course Description Explains the operating principles of the four-stroke diesel engine used in the automobile, including the construction, service, and diagnosis of the various engine systems. Laboratory activities.		
Course Pre-requisite(s) AUTO105 Internal Combustion Engines or Instructor Permission		
Credit Hours 2		
Contact Hours 2		
Course Fee 35	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics 1. Diesel Engine Principles 2. Diesel vs. Gasoline Comparison (engines / components) 3. Diesel Fuel Properties 4. Theory of ignition 5. Clean Diesel Technology, Lowering Nox and PM Levels 6. Supercharger Types and Operating Principles 7. Diagnosis and Service
Disassemble, measure, analyze components, reassemble Diesel engines.
Sketch, label and define the Diesel engine components.
Locate and identify components on Diesel engines.
Describe the operation of Diesel emission control devices.
Describe the construction and operation of Supercharging / Turbocharging devices.
Identify proper fuel for various operating conditions.
Explain compression ignition and its application to the 4 stroke cycle.
Explain the need for emission related components.
Describe service and maintenance required for emission related devices.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Measurable objectives will be evaluated by the instructor based on accuracy and proficiency and completion of assigned tasks. Homework, class participation, lab activities, quizzes and tests will be used as criteria to assign the student's final earned grade for this class.		
General Course Requirements and Recommendations Students must take notes on demonstrations, carefully read and analyze assigned course materials and perform exercises to determine their competence in servicing modern diesel power systems.		
Satisfies Honors Requirement No		Satisfies Wellness Requirement No

AUTO231 - Diesel Engine Performance & Diagnosis

Overview

Subject Automotive Technology	Academic Department Automotive Technology	School Business, Entrepreneurship, PD
Course Description Offers a comprehensive overview of the operating principles of the diesel engine, including the construction, service, and diagnosis of the various engine systems and sub-systems. Covers the latest technological advancements in electronic fuel delivery systems, their diagnosis, and service along with the most recent advances in diesel fuel and Bio-diesel technology. Extensive laboratory activities.		
Credit Hours 4		
Contact Hours 4		
Course Fee 30		Miscellaneous Department Fee 0
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics - Diesel Fundamentals - Cooling and Lubrication - Diesel Fuel Systems - Electrical / Electronics - Air Induction Systems - Diesel Engine Management - Base Engine Testing - Emission Controls - Electronic Engine Controls Diagnosis
Explain the major differences between gasoline and diesel engines. Interpret engine noise; determine course of action.
Observe engine exhaust smoke color, opacity and quantity; determine needed action.
Diagnose causes of engine fuel, oil, coolant, air and other leaks; determine course of action.
Diagnose no cranking, cranks but fails to start, hard starting and starts but does not continue to run problems; determine needed action.
Interface with vehicle's on-board computer; perform diagnostic procedures using recommended electronic diagnostic equipment and tools; determine course of action.
Locate and use relevant service information for diagnostic procedures, flow charts and wiring diagrams.
Inspect and test sensors, controls, actuator components and circuits; service as needed.
Retrieve DTCs using scan tools and identify the relationships between DTCs and failures that cause them.
Navigate between multiple electronic service publications, Wiring Diagrams and Workshop Manuals while following diagnostic subroutines.
Disassemble and reassemble select fuel system components using the correct tools and service procedure.
Visually inspect components such as cylinders, fuel injectors and turbochargers for failures.

Identify components, describe their function, identify and perform diagnostics, service and maintenance for this Diesel sub-system.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Homework, quizzes and a written final examination. Measurable objectives will be evaluated by the instructor based on the accuracy and proficiency of objective completion.		
General Course Requirements and Recommendations Students must take notes on demonstrations, carefully read and analyze assigned course materials and perform exercises to determine their competence in diagnosing servicing modern electronically controlled diesel engine systems.		
Satisfies Honors Requirement No		Satisfies Wellness Requirement No

AUTO237 - Comput Engine/Veh Netwrk, Prg, & Sec Sys

Overview

Subject Automotive Technology	Academic Department Automotive Technology	School Business, Entrepreneurship, PD
Course Description Explains the operating of vehicle communication networks. Emphasis in vehicle network faults (CAN+, CAN-, shorts, opens and other circuit faults) and their diagnosis and repair. Perform vehicle module programming using different vehicle software and interfaces. Explains vehicle network security protocols and vehicle hacking protection. Also, examines autonomous over-the-air vehicle communications and updating.		
Credit Hours 2		
Contact Hours 4		
Course Fee 35		Miscellaneous Department Fee 0
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics - Vehicle network, construction and topology - Multiplexing - Vehicle anti-theft, immobilization and external control systems - Network diagnosing - Over The Air Controller monitoring and updating - Vehicle Smart Gateway systems - Malicious Vehicle network security intrusion - Manufacture security credentials - Autonomous/ semi-autonomous vehicle control infrastructure
Properly diagnose network communication faults.
Explain CAN BUS networks.
Properly program various modules on a vehicle.
Demonstrate competency using scan tools and other vehicle communication software.
Use of network breakout box
Monitor internal and external networks using digital oscilloscope
Use OEM enhanced diagnostic equipment on a secure vehicle network

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Measurable objectives will be evaluated by the instructor based on accuracy and proficiency and completion of assigned tasks. Homework, class participation, lab activities, quizzes and tests will be used as criteria to assign the student's final earned grade for this class.		
General Course Requirements and Recommendations Students must take notes on demonstrations, carefully read and analyze assigned course materials and perform exercises to determine their competence in servicing vehicle network and security systems.		
Satisfies Honors Requirement No		Satisfies Wellness Requirement No

AUTO260 - Hybrid and Electric Vehicle Systems

Overview

Subject Automotive Technology	Academic Department Automotive Technology	School Business, Entrepreneurshp, PD
Course Description An intermediate-level course covering hybrid and electric vehicle systems. Includes environmental impact of internal combustion engines (ICE). Also, includes theory of operation and service of electric propulsion systems, with emphasis on safety issues and concerns regarding the servicing of these systems. Also, covers hybrid system safety, hybrid systems in general (both series and parallel), plug-in hybrids, electric vehicles including battery types and fuel cell vehicles. High- voltage battery types, environmental impact, construction, and diagnosis.		
Course Pre-requisite(s) <u>AUTO110 Auto Elect</u> or Instructor Permission		

Credit Hours
3

Contact Hours
4

Course Fee 35	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Core Course Topics 1. Traction motor design and operation 2. Fuel Cells 3. General characteristics and applications of primary and secondary batteries 4. High-voltage batteries 5. High voltage safety, handling and service equipment 6. Power and energy for electric, hybrid, and plug-in vehicle propulsion 7. High voltage converters and inverters 8. Levels of charging for electric and plug-in hybrid vehicles 9. Regenerative Braking Systems
Distinguish and recognize the components of batteries, the classification for types of batteries, and the applications for determining battery usage.
Recognize and identify safety concerns regarding high voltage systems.
Demonstrate the proper safety equipment and service procedures required for servicing HV vehicles.
Diagnosis a loss of isolation in the high voltage system of the vehicle.
Identify and describe the function of high voltage converters and inverters.
Describe the differences in levels of chargers for electric vehicles.
Test battery SOC and SOH and determine serviceability.
Disassemble High Voltage battery components.
Diagnose regenerative braking system concern. Describe the functionality of Hydrogen Fuel Cell Vehicles.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Quizzes, tests and written final examination. Measurable objectives will be evaluated by the instructor based on the accuracy and proficiency of objective completion.	
Satisfies Honors Requirement No	Satisfies Wellness Requirement No

AUTO262 - Electronic Automotive Chassis

Overview

Subject Automotive Technology	Academic Department Automotive Technology	School Business, Entrepreneurshp, PD
Course Description This course is a study of electronic braking and chassis systems. Examines controller networks as they apply to steering, suspension, and braking systems. Explores computerized vehicle stability systems and components.		
Course Pre-requisite(s) <u>AUTO160 Auto Chassis Units</u> or instructor permission		
Credit Hours 2		

Contact Hours
4

Course Fee 35	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Core Course Topics 1. Chassis system network structure and topology 2. Braking system network structure and topology 3. Electronic braking system principles, components and operation 4. Electronic parking brake operation, diagnosis and service 5. On-car machining brake rotors 6. Electro-hydraulic braking systems 7. Electro-mechanical braking systems 8. Variable ratio electronic steering system operation, diagnosis and service 9. Vehicle stability system operation
Perform steering system module software update and configuration.
Perform electronic brake control module update and configuration.
Access vehicle electronic chassis and braking system network with diagnostic tool.
Diagnose and service electronic parking brake system.
Perform on-car brake rotor machining.
Perform brake bleeding operation on computer controlled braking system.
Monitor and record data from computer-controlled steering and suspensions systems.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Measurable objectives will be evaluated by the instructor based on accuracy and proficiency and completion of assigned tasks. Homework, class participation, lab activities, quizzes and tests will be used as criteria to assign the student's final earned grade for this class.	
General Course Requirements and Recommendations Students must take notes on demonstrations, carefully read and analyze assigned course materials and perform exercises to determine their competence in servicing electronic automotive chassis systems.

AUTO290 - Co-op in Automotive Technology

Overview

Subject Automotive Technology	Academic Department Automotive Technology	School Business, Entrepreneurshp, PD
Course Description Cooperative education is a structured method of combining classroom-based education with practical work experience. A cooperative education experience, commonly known as a "co-op," provides academic credit for structured employment experience. Work experience must be directly related to the student's declared major to be eligible.To register for this course, a student must have completed 50% of core coursework, maintain an overall GPA of 2.0 and a program specific GPA of 2.5.		
Course Pre-requisite(s) Permission from Career Services Officer or Job Developer in the Office of Career Services		
Credit Hours 2		

Contact Hours
0.2

Course Fee 0	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Other

Credit for Prior College Level Learning (CPCLL) Details
Student will submit a formal request in writing to the faculty and Associate Dean for work experience to be considered for Credit for Prior College-Level Learning.

The student will complete an interview, a reflective paper, or a presentation to the faculty in which the student develops and describes the learning objectives supported by the work experience, how those learning objectives were achieved and how that learning was put into practice.

Finally, the student must also provide a portfolio (or something comparable) that shows the work completed and provide some form of documentation confirming the work experience (a resume does not suffice) for which Credit for Prior College-Level Learning is requested.

Goals, Topics, and Objectives

Course Goals
Cooperative education helps students make the school-to-work transition, develop career and program-related learning objectives, and work on applicable skills for employment. Placements should provide students with the opportunity to apply and expand upon knowledge learned in the classroom, and develop the skills acquired in their coursework to align with the standards and expectations set by the worksite.
Core Course Topics
1. Core Career-Focused Topics: A. Professional Dress and Demeanor (attitude, posture, courteousness) B. Workplace Communication C. Interviewing Skills D. Resume Building E. Networking and Social Media F. Seeking Employment G. Career Advancement
Build a resume that meets standards of Career Services Officer
Articulate the reasons for professional attire.
Wear professional attire while on the worksite.
Attend career workshop in professional dress.
Display appropriate professional attitude and demeanor while on the worksite.
Interview effectively. Attend mock interview, give appropriate answers to five 5 questions.
Complete a written job application in a prompt, professional manner with all information legible, error-free, and thorough.
Display understanding of the appropriate use of Social Media sites (Facebook, LinkedIn, and Twitter) during Career Services workshop.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
Assessment will be determined by the instructor based on what is in the best interest of the student's academic growth, including future employability of the student. Assessment may include, but isn't limited to: - Major final project - Weekly journal - Creation and attainment of all learning objectives - Participation in a career-focused workshop - Consistent and prompt attendance at worksite - Employer evaluation	
General Course Requirements and Recommendations	
To be determined by the instructor. A detailed course syllabi for each section of AUTO 290 offered will be presented to the School of BEPD and Curriculum Committee "For Information Only" by the mid-semester point of the term the course is offered.

Academic Level		
Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL)		
No		

Goals, Topics, and Objectives

Course Goals
Coordinated education helps students make the school-to-work transition, develop career objectives, and work on applicable skills for their career. Sponsoring dealerships should provide students with the opportunity to apply and expand upon knowledge learned in the classroom, and develop the skills acquired in their coursework to align with the standards and expectations set by the students' dealership management.
Core Course Topics
1. Professional Dress and Demeanor (attitude, posture, courteousness).
2. Workplace Communication.
3. Work with Mentor Technicians
4. Documentation of tasks assigned.
5. Tracking of flat rate hours.

6. Dealership Operations

Properly wear the assigned dealership uniform, be courteous to colleagues, supervisors, and customers in daily interactions, and maintain a positive attitude.
Communicate with colleagues (other technicians, service advisors, parts department personnel), supervisors, and customers in a clear and respectful way.
Work with Mentor Technicians Work with assigned mentor technicians in the areas covered in the classroom session prior to the co-op.
These areas include automatic transmission service, engine and engine performance diagnosis, and electronic steering and suspension.
Document all repairs performed on the Ford Co-op log sheets.
List the date, repair order number, what the vehicle came in for, and what the resolution to the concern was.
Track the flat-rate hours of each repair on the co-op log sheets so that you have a record of the number of hours turned each day and each week.
Display an understanding of dealership operations, technician's warranty responsibilities, and correct/complete repair order documentation.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
Assessment will be determined by the instructor based on completion of the co-op logs, and the co-op evaluation form completed by the student's dealership service manager.	
Grading Scale	
A-E	
Texts	
No textbooks required.

AUTO293 - Auto Technology Service Experience Lab I

Overview

Subject	Academic Department	School
Automotive Technology	Automotive Technology	Business, Entrepreneurship, PD
Course Description		
Provides real world work experiences and develops entry-level skills in diagnosis and repair of basic engine service, basic electrical, brake systems, suspension systems, and steering systems. Also covers general preventative maintenance procedures such as oil changes and tire rotation. Laboratory activities.		
Course Pre-requisite(s)		
AUTO105 Internal Combustion Engines , AUTO110 Auto Elect , and AUTO160 Auto Chassis Units or department permission		
Credit Hours		
4		
Contact Hours		
8		
Course Fee	Miscellaneous Department Fee	
35	0	
Academic Level

Eligible for Credit for Prior College Level Learning (CPCLL)		
No		

Goals, Topics, and Objectives

Core Course Topics
1. Completing and documenting a repair order.
2. Multi-point inspections
3. Electrical system service
4. Comprehensive tire service
5. Brake system service
6. Steering and suspension system service
7. Base engine service
Proper completion of work order and documentation of repair.
Completed parts needed inventory and order request.
Demonstrate a preventative maintenance procedure and complete multi-point inspection sheet.
Diagnose a base brake hydraulic concern.
Assess overall brake system condition and determine course of service.

Diagnose suspension system concern.
Assess overall steering and suspension system condition and determine proper course of action.
Diagnose tire, wheel and alignment concern and corrective action required.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
Homework, quizzes, lab reports and a final examination. Measurable objectives will be evaluated by the instructor based on the accuracy and proficiency of objective completion.	
General Course Requirements and Recommendations	
Complete at least 95% of all the Priority 1 (P-1) items listed in the NATEF Task List for areas: Brakes, Suspension & Steering, Base Engine and Electrical.	
Complete at least 80% of all the Priority 2 (P-2) items listed in the NATEF Task List for areas: Brakes, Suspension & Steering, Base Engine and Electrical.	
Complete at least 50% of all the Priority 3 (P-3) items listed in the NATEF Task List for areas: Brakes, Suspension & Steering, Base Engine and Electrical.

AUTO294 - Auto Technology Serv Experience Lab II

Overview

Subject	Academic Department	School
Automotive Technology	Automotive Technology	Business, Entrepreneurship, PD
Course Description		
Explores diagnosis and repair of major engine service, electrical/electronic systems, fuel/emission systems, ignition/engine control systems, ABS/ traction control systems, active suspension systems, manual transmission, automatic transmission, driveline, and HVAC systems.		
Course Pre-requisite(s)		
AUTO105 Internal Combustion Engines , AUTO110 Auto Elect , AUTO120 Auto Fuel Management Systems , AUTO150 Automotive Diag & Engine Eval , and AUTO160 Auto Chassis Units or department permission		
Credit Hours		
4		
Contact Hours		
8		
Course Fee	Miscellaneous Department Fee	
35	0	
Academic Level		
Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL)		
No		

Goals, Topics, and Objectives

Core Course Topics
1. Anti-lock braking system (ABS) and traction control systems.
2. Active steering and suspension system.
3. Stability assist.
4. A/C systems-CCOT and TXV.
5. OBD2 monitors.
6. Engine control and fuel injection.
7. Engine rebuilding-replacement.
8. Automobile transmission service.
Explain the basic operation of an ABS system.
Identify and compare the different types of ABS and traction systems used on various automobiles.
Navigate the workshop electronic publication necessary to diagnose an ABS/traction control fault.
Perform a PPT test and take the appropriate actions.
Bleed the ABS system utilizing the NGS, WDS, IDS or Genysis service units.
Identify traction control system components and differentiate from ABS function.
Measure and/or test with meters and measuring instruments for English or metric measurements, then convert the results to the manufacturer's specifications.

Write service and work order to include information regarding problem resolution and the result of the work performed.
Perform diagnostic routines associated with electronic steering and suspension concerns.
Use specialized tools and service equipment associated with electronic steering and suspension diagnosis and repair.
Perform a wheel alignment, assess errors in geometry angles.
Diagnose a HVAC concern and determine repair procedure.
Diagnose an NVH concern associated with an engine, suspension, and brake or tire/wheel system.
Diagnose a transmission concern and determine course of action.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
Homework, quizzes, lab reports and a final examination. Measurable objectives will be evaluated by the instructor based on the accuracy and proficiency of objective completion.	
General Course Requirements and Recommendations	
Complete at least 95% of all the Priority 1 (P-1) items listed in the NATEF Task List for areas: Brakes, Suspension & Steering, Base Engine and Electrical/Electronics, Transmission and Driveline, HVAC and NVH.	
Complete at least 80% of all the Priority 2 (P-2) items listed in the NATEF Task List for areas: Brakes, Suspension & Steering, Base Engine and Electrical/Electronics, Transmission and Driveline, HVAC and NVH.	
Complete at least 50% of all the Priority 3 (P-3) items listed in the NATEF Task List for areas: Brakes, Suspension & Steering, Base Engine and Electrical/Electronics, Transmissions and Driveline, HVAC and NVH.

Goals, Topics, and Objectives

- Core Course Topics
1. Preparing a Word Document
 2. Formatting Characters and Paragraphs
 3. Customizing Paragraphs
 4. Formatting Pages
 5. Applying Formatting and Inserting Objects
 6. Maintaining Documents and Printing Envelopes and Labels
 7. Creating Tables and SmartArt
 8. Merging Documents
 9. Customizing Paragraphs and Pages
 10. Proofing Documents and Creating Charts
 11. Automating and Customizing Formatting
 12. Customizing Themes, Creating Macros, and Navigating in a Document
 13. Inserting Special Features and References
 14. Creating Specialized Tables and Indexes
 15. Working with Shared Documents
 16. Protecting and Inspecting Documents

Protecting and Inspecting Documents
Check spelling and grammar in documents.
Apply font formatting.

Apply styles from a Style set
Apply and modify a theme.
Change paragraph alignment.
Indent text in paragraphs.
Change spacing before and after paragraphs
Format text using the Repeat Last Command and Format Painter options.
Change line spacing.
Reveal and compare formatting.
Create numbered and bulleted lists
Apply borders and shading to paragraphs.
Sort text in paragraphs.
Set and modify tabs.
Cut, copy, and paste text.
Change document views.
Change page setup (margins, orientation, and paper size).
Insert and remove a page break, blank page, and cover page.
Insert and remove page numbers.
Insert headers and footers.
Format the page background (watermark, background color, and page border).
Find and replace text and formatting.
Insert a section break.
Format text into columns.
Hyphenate words automatically and manually.
Create a drop cap.
Insert symbols, special characters, date, and time.
Use the Click and Type feature.
Align text vertically.
Insert and format images, text boxes, shapes, WordArt, and screenshots.
Use the Print Screen feature.
Create, rename, and delete folders.
Copy, move, and rename documents.
Save documents in different formats.

Open, re-size, and split windows to view documents side by side.
Create labels and envelopes.
Create a document using a template.
Create a table
Change table design.
Change table layout, and customize table cells.
Convert text to a table and a table to text.
Perform calculations in a table.
Insert an Excel spreadsheet.
Create and format SmartArt
Create a data source file and main document.
Create merged documents, envelopes, and labels.
Edit a data source.
Input text during a merge.
Customize bullets and numbers.
Customize objects and images.
Insert and customize headers and footers.
Keep text together.
Customize spelling checking.
Display word count.
Use the Thesaurus and Smart Lookup.
Translate text to and from different languages.
Create and format a chart.
Customize Autocorrect
Insert, sort, edit, save, and delete building blocks
Insert, format, and update fields.
Customize the Quick Access toolbar and the Ribbon.
Create, edit, save, and delete custom themes.
Format with styles.
Create, run, and delete a macro.
Use the Navigation Pane.
Insert and edit a hyperlink.
Create a cross-reference.

Sort text in paragraphs, in columns, and in a table.
Insert footnotes and endnotes.
Cite, edit, and manage sources.
Create, customize, update, and remove a table of contents.
Create, customize, update, and remove a table of figures.
Create, customize, update, and remove an index.
Insert, edit, show, reply to, print, and delete comments.
Track, display, and accept or reject changes in a document.
Compare documents.
Embed and link objects.
Use the Paste Special feature.
Protect documents by restricting formatting and editing.
Manage document properties.
Encrypt a document, and add a digital signature.
Inspect documents for accessibility and compatibility.

Create, open, save, and edit worksheets.
Use the auto sum feature.
Use cut/copy/paste d. Select cells. e. Apply basic formatting.
Use the help feature
Develop formulas with mathematical operators.
Insert formulas using functions.
Use relative, absolute, and mixed cell references.
Use the fill handle to copy formulas.
Change column width and row height.
Merge and split cells.
Insert and delete cells, rows, and columns.
Apply a theme.
Format numbers.
Use the format painter.
Hide and unhide columns and/or rows.
Insert headers and footers.
Customize a print job.
Use spell check.
Use find and replace.
Sort and filter data.
Create new worksheet in a workbook
Manage worksheets.
Manage windows.
Move data.
Create, rename, copy, and delete a folder.
Copy a worksheet to another workbook.
Define, apply, copy, and remove a style.
Insert and use a hyperlink.

Create, edit, and print a chart.
Change the formatting and layout.
Analyze what type of chart best fits the data
Insert symbols.
Insert, format, size, and move an image.
Draw and format a text box.
Insert SmartArt.
Create and modify WordArt.
Create, edit, and delete conditional formatting.
Use special number formatting.
Create a custom number format.
Use special date formatting. Compute math on two dates.
Name ranges.
Use statistical, math, lookup, financial, and logical functions.
Create and modify tables.
Sort and filter tables.
Use data tools.
Group and ungroup data.
Summarize data in multiple worksheets.
Use the consolidate feature.
Create formulas using references to other worksheets in the workbook
Use sparklines.
Use the paste special feature.
Apply, edit, delete, and compile a scenario.*
Perform what-if analyses.
Use auditing tools.
Manage comments.
Share a workbook.
Protect and unprotect worksheets.
Protect and unprotect the structure of a worksheet.
Track changes.
Save, run, edit, and manage macros.*
Print workbooks to the recent list.

Create, save, and use custom templates.
Import and export data.
Prepare a workbook for distribution.
Publish a workbook in PDF, XPS, or HTML format.

BCO190 - Co-op in Business

Overview

Subject Business Administration	Academic Department Business & Economics	School Business, Entrepreneurship, PD
Course Description Cooperative education is a structured method of combining classroom-based education with practical work experience. A cooperative education experience, commonly known as a "co-op," provides academic credit for structured employment experience. Work experience must be directly related to the student's declared major to be eligible.To register for this course, a student must have completed 50% of core coursework, maintain an overall GPA of 2.0 and a program specific GPA of 2.5.		
Course Pre-requisite(s) Permission from Career Services Officer or Job Developer in the Office of Career Services		
Credit Hours 1		

Contact Hours

Course Fee 0	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Other
Credit for Prior College Level Learning (CPCLL) Details Student will submit a formal request in writing to the faculty and Associate Dean for work experience to be considered for Credit for Prior College-Level Learning. The student will complete an interview, a reflective paper, or a presentation to the faculty in which the student develops and describes the learning objectives supported by the work experience, how those learning objectives were achieved and how that learning was put into practice. Finally, the student must also provide a portfolio (or something comparable) that shows the work completed and provide some form of documentation confirming the work experience (a resume does not suffice) for which Credit for Prior College-Level Learning is requested.	

Goals, Topics, and Objectives

- Course Goals
Cooperative education helps students make the school-to-work transition, develop career and program-related learning objectives, and work on applicable skills for employment. Placements should provide students with the opportunity to apply and expand upon knowledge learned in the classroom, and develop the skills acquired in their coursework to align with the standards and expectations set by the worksite.
- Core Course Topics
- Core Career-Focused Topics
 - Professional Dress and Demeanor (attitude, posture, courteousness)
 - Workplace Communication
 - Interviewing Skills
 - Resume Building

E. Networking and Social Media Build a resume that meets standards of Career Services Officer. G. Career Advancement
Articulate the reasons for professional attire.
Wear professional attire while on the worksite
Attend career workshop in professional dress.
Display appropriate professional attitude and demeanor while on the worksite.
Interview effectively
Attend mock interview, give appropriate answers to five 5 questions.
Complete a written job application in a prompt, professional manner with all information legible, error-free, and thorough.
Display understanding of the appropriate use of Social Media sites (Facebook, LinkedIn, and Twitter) during Career Services workshop

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment will be determined by the instructor based on what is in the best interest of the student's academic growth, including future employability of the student. Assessment may include, but isn't limited to:

- Major final project
- Weekly journal
- Creation and attainment of all learning objectives
- Participation in a career-focused workshop
- Consistent and prompt attendance at worksite
- Employer evaluation

General Course Requirements and Recommendations
To be determined by the instructor. A detailed course syllabi for each section of [BCO190 Co-op in Business](#) offered will be presented to the [School of Business, Entrepreneurship, and Professional Development](#) and Curriculum Committee "For Information Only" by the mid-semester point of the term the course is offered.

Course Goals
Cooperative education helps students make the school-to-work transition, develop career and program-related learning objectives, and work on applicable skills for employment. Placements should provide students with the opportunity to apply and expand upon knowledge learned in the classroom, and develop the skills acquired in their coursework to align with the standards and expectations set by the worksite.

Core Course Topics

1. Core Career-Focused Topics:

- A. Professional Dress and Demeanor (attitude, posture, courteousness)
- B. Workplace Communication
- C. Interviewing Skills
- D. Resume Building
- E. Networking and Social Media
- F. Seeking Employment
- G. Career Advancement

Build a resume that meets standards of Career Services Officer.

Articulate the reasons for professional attire.

Wear professional attire while on the worksite.

Attend career workshop in professional dress

Display appropriate professional attitude and demeanor while on the worksite.

Interview effectively.

Attend mock interview, give appropriate answers to five 5 questions.

Complete a written job application in a prompt, professional manner with all information legible, error-free, and thorough.

Display understanding of the appropriate use of Social Media sites (Facebook, LinkedIn, and Twitter) during Career Services workshop.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Assessment will be determined by the instructor based on what is in the best interest of the student's academic growth, including future employability of the student. Assessment may include, but isn't limited to: Major final project Weekly journal Creation and attainment of all learning objectives Participation in a career-focused workshop Consistent and prompt attendance at worksite Employer evaluation	
General Course Requirements and Recommendations To be determined by the instructor. A detailed course syllabi for each section of BCO 290 offered will be presented to the School of BEPD and Curriculum Committee "For Information Only" by the mid-semester point of the term the course is offered. Texts None	
Satisfies Honors Requirement No	Satisfies Wellness Requirement No

BEC133 - Basic Economics

Overview

Subject Economics & Finance	Academic Department Business & Economics	School Business, Entrepreneurshp, PD
Course Description Offers an overview of macroeconomics and microeconomics. Discusses markets, supply and demand equilibrium, firm decision making, aggregate output, monetary and fiscal policy, and the principles of international trade.		
Credit Hours 3		
Contact Hours 3		
Course Fee 0	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

- Core Course Topics
1. Introduction to Economics
2. Production Possibilities and Opportunity Cost
3. Supply, Demand, and Market Equilibrium
4. Profit Maximization
5. Market Structure
6. Aggregate Output
7. Unemployment and Inflation
8. The Federal Reserve System and Monetary Policy
9. Fiscal Policy
10. Trade and Comparative Advantage

Define economics.
Differentiate between microeconomics and macroeconomics.
Explain the central economic problem using the concepts of scarcity, opportunity cost, and tradeoffs.
Use a production possibilities frontier to illustrate the concepts of scarcity, opportunity cost, and tradeoffs.
Define the laws of supply and demand.
Illustrate supply curves and demand curves.
Employ supply curves and demand curves to explain the establishment of an equilibrium market price.
Solve firm profit-maximization problems using graphic or numeric cost and revenue analysis.
Define different market structures.
Analyze the effects of market structure on price and quantity of output.
Define Gross Domestic Product (GDP).
Select the component(s) of GDP impacted by a given market transaction.
Interpret the stages of the business cycle as they relate to GDP.
Define unemployment and inflation.
Explain the calculation of the unemployment rate and the calculation of the rate of inflation.
Interpret the stages of the business cycle as they relate to unemployment and inflation.
Explain the role of the Federal Reserve System.
List the macroeconomic goals of the Federal Reserve System.
Define monetary policy.
Identify the Federal Reserve's monetary policy tools.
Explain how the tools of monetary policy can impact an economic system.
Define fiscal policy.
Identify the federal government's fiscal policy tools.
Explain how the tools of fiscal policy can impact an economic system.
Differentiate between absolute advantage and comparative advantage.
Evaluate arguments in favor of and against unrestricted international trade.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Students will be assessed through tests, quizzes, assignments, and/or class participation.	
Satisfies Honors Requirement	Satisfies Wellness Requirement
No	No

Register for this Course

BEC151 - Principles of Macroeconomics

Overview

Subject Economics & Finance	Academic Department Business & Economics	School Business, Entrepreneurship, PD
Course Description Examines the theoretical operation of the economy as a whole. Covers the elements of a free market system, the measurement of macroeconomic performance, the creation and control of money, alternative models of government intervention to impact business cycles, economic growth, and international trade.		
Course Pre-requisite(s) ENG131 Introduction College Writing eligible		
Credit Hours 3		
Contact Hours 3		
Course Fee 0	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category Social Sciences	Michigan Transfer Agreement (MTA) Category Category 4: Social Sciences - Applied Degrees, Category 4: Social Sciences - Transfer Degrees	
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

- Core Course Topics
1. Introduction to Economics
 2. Introduction to Macroeconomics
 3. Gross Domestic Product
 4. Economic Growth and Productivity
 5. The Business Cycle
 6. Unemployment
 7. Inflation
 8. Short-Run Economic Fluctuations
 9. Alternate Macroeconomic Models
 10. Banking and the Creation of Money
 11. The Federal Reserve System
 12. Monetary Policy
 13. Fiscal Policy
 14. International Trade

Define economics.
Identify the elements of the economic way of thinking.
Define the laws of supply and demand.
Illustrate supply curves and demand curves.
Differentiate between macroeconomics and microeconomics.
Explain the central economic problem.
Define free market capitalism and central planning.
Evaluate the outcomes of free market capitalism and central planning.
Define Gross Domestic Product (GDP) as a measure of macroeconomic activity.
Explain the equality of output, income, and spending.
List the spending components of GDP.
Select the component(s) of GDP impacted by a given market transaction.
List the determinants of economic growth including the factors of production and compatible institutions.
Explain the connection between savings and investment.
List the stages of the business cycle.

Interpret the stages of the business cycle as they relate to economic variables such as GDP, unemployment, and inflation.
Define unemployment and the unemployment rate.
Describe the causes and effects of unemployment.
Interpret the unemployment rate and other labor market statistics.
Define inflation and deflation.
Describe the causes and effects of inflation.
Interpret the rate of inflation.
Use aggregate demand and aggregate supply to model the macroeconomy.
Create and employ graphs in an explanation of short-run economic fluctuations.
Compare and contrast the assumptions of different schools of macroeconomic thought.
Compare and contrast the conclusions of different schools of macroeconomic thought.
Define money and the money supply.
Define fractional reserve banking.
Interpret the money multiplier.
Demonstrate the creation of money through lending.
Describe the role of the Federal Reserve System (FRS).
Analyze the process by which the FRS controls the money supply and interest rates.
List the tools of monetary policy.
Describe the impact that the tools of monetary policy can have on an economic system.
Appraise the strengths and weaknesses of monetary policy.
Evaluate monetary policy recommendations using macroeconomic tools and models.
List the tools of fiscal policy.
Describe the impact that the tools of fiscal policy can have on an economic system.
Appraise the strengths and weaknesses of fiscal policy.
Evaluate fiscal policy recommendations using macroeconomic tools and models.
Apply the concept of comparative advantage to international trade.
Evaluate arguments in favor of and against free trade.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Students will be assessed through tests, quizzes, assignments, and/or class participation.	
Satisfies Honors Requirement	Satisfies Wellness Requirement
No	No

BEC152 - Principles of Microeconomics

Overview

Subject Economics & Finance	Academic Department Business & Economics	School Business, Entrepreneurship, PD
Course Description Examines how decision makers address the central economic problem of scarcity through markets and other mechanisms. Covers price theory, the elements of a market system, consumer behavior, production theory, market structures, labor markets, market imperfections, and government intervention.		
Course Pre-requisite(s) ENG131 Introduction College Writing eligible		
Credit Hours 3		
Contact Hours 3		
Course Fee 0	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category Social Sciences	Michigan Transfer Agreement (MTA) Category Category 4: Social Sciences - Applied Degrees, Category 4: Social Sciences - Transfer Degrees	
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

- Core Course Topics
1. Introduction to Economics
 2. Marginal Analysis and Decision Making
 3. Supply and Demand Model
 4. Equilibrium Price and Market Changes
 5. Elasticity
 6. Consumer Surplus and Producer Surplus
 7. Market System and Price Signals
 8. Government Involvement in Markets
 9. Consumer Behavior Theory
 10. Production and Cost Theory
 11. Market Structures and Firm Behavior
 12. Market Failures
 13. Labor Markets and Wages
 14. Public Choice Theory

Define economics.
Differentiate between microeconomics and macroeconomics.
Explain the basic economic questions.
Define opportunity cost, and identify the opportunity cost of a decision.
Explain the principles of diminishing marginal benefit and increasing marginal cost.
Summarize the economic way of thinking and the marginal approach to decision making.
Solve problems using the marginal approach.
Define the laws of supply and demand.
Identify the determinants of supply and demand.
Illustrate and interpret supply curves and demand curves.
Draw a supply and demand diagram, and identify market equilibrium.
Explain how market price tends to move towards equilibrium.
Use the supply and demand model to predict the impact of changes in supply and demand on equilibrium price and quantity.
Analyze a given price change, and offer an explanation for the price change.

Define and calculate elasticity.
Interpret a price elasticity coefficient.
Identify the determinants of price elasticity of demand and supply.
Estimate price elasticity of demand or supply for a product based on product and market characteristics.
Combine elasticity with the supply and demand model to analyze magnitudes of price changes.
Define consumer surplus and producer surplus.
Identify on a diagram the amount of consumer surplus and producer surplus.
Interpret the amount of consumer surplus, producer surplus, and total surplus generated by market activity.
State the conditions for the efficiency in terms of total surplus.
Identify the ways markets are linked.
Explain how market price acts as a signal that can efficiently coordinate resource allocation across all markets.
Compare and contrast the market systems method of allocation with alternative methods of allocation.
Explain how government interventions such as price controls, taxes, subsidies, and criminalization can affect market efficiency and the allocation of resources.
Use the supply and demand model to predict the impact of a given government intervention on price, quantity, and total surplus.
Explain dead weight loss, and identify it on a graph.
Define tax incidence, and explain how elasticity impacts the tax incidence.
Define utility.
Explain the law of diminishing marginal utility.
State the utility maximization rule.
Identify the factors that influence consumer behavior based on the utility maximization rule.
Differentiate between the short run and long run.
Differentiate between fixed and variable costs.
Identify the gains to division of labor and specialization.
Explain the law of diminishing returns.
Explain the relationship between quantity produced and marginal cost.
Define economies of scale, and identify the factors that generate economies of scale.
List types of market structures, give their characteristics, and give approximate examples of each
Explain why perfectly competitive markets minimize the cost of production and maximize the total value of production.
Explain why firms in a perfectly competitive market can only make a normal profit in the long run.

Identify barriers to entry and other sources of market power.
Compare and contrast market structures based on their degree of market power, efficiency, and allocation of resources.
Analyze firm behavior linking firm behavior to market structure.
Evaluate policies designed to promote or restrict competition.
Define market failure.
List sources of market failure.
Define externality, and identify examples of externalities.
Define public goods, and identify examples of public goods.
Define common resources, and explain the tragedy of the commons.
Assess government options for correcting market failures.
Identify the determinants of labor supply and demand.
Illustrate and interpret labor supply curves and demand curves.
Use the labor supply and demand model to predict the impact of changes in supply and demand on equilibrium wage and quantity.
Analyze a given labor market outcome, and offer an explanation for the wage change.
Explain the assumptions and the prediction of public choice theory
Analyze a political outcome, and use the economic way of thinking to explain that outcome.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Students will be assessed through tests, quizzes, assignments, and/or class participation.		
Satisfies Honors Requirement		Satisfies Wellness Requirement
No		No

BEC252 - Economics for Entrepreneurs

Overview

Subject Economics & Finance	Academic Department Business & Economics	School Business, Entrepreneurship, PD
Course Description This course invites students to take a deeper look at some of the principles of microeconomics while introducing new material often found in an intermediate microeconomics course or a managerial economics course. Central to the course is the application of economic theory to business decisions that an entrepreneur or manager will face. Topics include optimization, elasticity of demand, estimation of demand and of costs, production theory, concentration and competition, pricing strategies, game theory, and behavioral economics. The impact of macroeconomic conditions on businesses is also covered.		
Course Pre-requisite(s) A grade of C or better in either BEC151 Prin Macro Economics or BEC152 Prin Micro Economics AND eligibility for MATH115 College Algebra .		
Credit Hours 3		
Contact Hours 3		
Course Fee 0		Miscellaneous Department Fee 0
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

- Core Course Topics
1. Introduction to Managerial Economics
 2. Demand and Supply with Algebra
 3. Demand Elasticities with Algebra

4. Estimating Demand
5. Production Theory
6. Estimating Supply
7. Market Structure
8. Pricing Strategies
9. Game Theory
10. Uncertainty, Risk, and Information Asymmetry
11. Behavioral Economics and Choice Architecture
12. Macroeconomic Conditions

Explain optimization using a framework of marginal analysis.

Define and calculate profits.

Describe profit maximization.

Define utility and describe utility maximization.

Use algebra to solve for a market equilibrium.

Use algebra to calculate producer surplus and consumer surplus.

Calculate and interpret own-price elasticity of demand.

Calculate and interpret cross-price elasticity of demand.

Calculate and interpret income elasticity of demand.

Evaluate the economic incidence of a tax.

Use elasticities to evaluate a business decision.

List market research techniques for estimating demand and demand elasticities.

Choose the appropriate market research technique for a given situation.

Differentiate various statistical estimation techniques.

Define and calculate total product, average product, marginal product, marginal revenue product, the marginal rate of technical substitution, and the user cost of capital.

Explain diminishing marginal returns.

Identify the relevant range of production.

Decide the optimal level of a single resource.

Decide the optimal levels of multiple inputs.

Define and calculate the elements of total costs, average costs, and marginal costs.

Explain increasing, constant, and decreasing returns to scale.

Identify the minimum efficient scale.

List techniques for estimating costs.

Define market power, and explain how to identify it.

Describe the degree of concentration or competition in a market.

Interpret the various determinants of market structure.

Explain the impact of market power on firm decision making.

Explain the impact of potential competition.

Explain markup pricing.

Model price discrimination and identify its impact on profits and total gains from trade.

Describe various strategies for simultaneous pricing of multiple products.

Define game theory and strategic decision making.

Describe techniques for analyzing games, including Nash equilibrium.

Use a payoff matrix to analyze a game.

Analyze a sequential game.

Use game theory to evaluate a business decision.

Explain how to incorporate uncertainty and risk into economic models.

Identify sources of business risk and describe ways of incorporating risk into business decision making.

Define asymmetric information.

Describe strategies for overcoming information problems.

Describe the cognitive biases identified by behavioral economics.

Apply lessons from behavioral economics to business decisions.

Summarize various measures of macroeconomic conditions.

Evaluate the impact of macroeconomic conditions on demand.

Evaluate the impact of macroeconomic conditions on supply.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
Scenario-based problems requiring students to apply economic theory to business decisions will comprise at least 50% of the total grade.	
Satisfies Honors Requirement	Satisfies Wellness Requirement
No	No

Register for this Course

BFN130 - Beginning Investment

Overview

Subject	Academic Department	School
Economics & Finance	Business & Economics	Business, Entrepreneurshp, PD
Course Description		
Introduces the principles of investing by examining the security selection process. Covers an examination of cash equivalent, debt (bond), and equity (stock) asset classes as well as other investment options. Discusses how to select securities and mutual funds to build investment portfolios; the mechanics involved with setting up accounts; the buying and selling of securities; tax consequences; and the psychology of investing.		
Credit Hours		
3		
Contact Hours		
3		
Course Fee	Miscellaneous Department Fee	
0	0	
Academic Level		
Undergraduate		
General Education Category		
Wellness		
Eligible for Credit for Prior College Level Learning (CPCLL)		
No		

Goals, Topics, and Objectives

- Core Course Topics
1. Introduction to Investing
2. Financial Markets and Indexes
3. Risk and Return

4. Cash, Cash Equivalents, and Deposit Accounts
5. Equity (Stock) Investments
6. Bonds (Debt) Investments
7. Comparing Stocks and Bonds
8. Buying and Selling Stocks and Bonds
9. Evaluating Stocks and Bonds
10. Investing Strategies
11. Mutual Funds
12. Portfolio Construction and Retirement
13. Real Estate
14. Precious Metals, Commodities, Futures, Collectibles, and Crypto Currencies
15. The Federal Reserve and the Yield Curve
16. Options

Define Basic Investing Concepts.

List the Categories of Investments.

Explain Financial Intermediaries.

Explain the difference between Primary and Secondary Markets.

Define Equity (Stock) Markets.

Explain Stock Market Indexes.

Define Debt (Bond) Markets.

Discuss other Investing Markets.

Discuss Government regulation of Financial Markets.

Define Risk.

Discuss the different types of Financial Risk.

Explain Diversification.

Define and discuss Return.

Explain Compounding.

Discuss Cash and Cash Equivalents.

Discuss Time Deposits, Money Market Accounts, and Money Market Funds.

Define basic stock concepts.

Explain how a return is earned through stock ownership.

Compare and contrast Preferred and Common Stock.

Explain secured versus unsecured debt.

Explain the rating of corporate debt.

Explain the Term of Debt.

Discuss the different types of corporate bonds.

Explain how corporate bonds work and earning a return on bonds.

Discuss Government Bonds and Municipal Bonds.

Compare and contrast the risks and returns of stocks versus bonds.

Explain the impact of interest rates on stocks versus bonds.

Explain the impact of inflation or deflation on stocks versus bonds.

Discuss Convertible Securities.

Explain the different types of Brokerage Firms.

Compare Cash versus Margin Accounts.

Discuss the different types of orders when buying or selling securities.

Explain Short Selling.

Explain Stock Splits.

Discuss Fundamental Analysis.

Discuss Technical Analysis.

Explain the basics of Modern Portfolio Theory.

Explain the Efficient Market Hypothesis and Passive Investing.

Explain Active Investing.

Explain Focus Investing.

Discuss the Psychology of Investing.

Explain Dollar Cost Averaging.

Discuss the different types of Mutual Funds.

Explain how to buy and sell Mutual Funds.

Discuss the costs of investing in Mutual Funds.

Explain Asset Allocation.

Explain the use of Mutual Funds in Portfolio Construction.

Discuss the principles of Investing for Retirement.

Discuss the different types of retirement accounts.

Discuss Social Security.

Discuss the different types of real estate investing.

Discuss the Pros and Cons of investing in real estate.

Explain Depreciation.

Discuss Investing in Precious Metals.

Discuss Investing in Commodity Markets.

Discuss Futures Markets.

Discuss Investing in Collectibles.

Discuss Investing in Crypto Currencies.

Explain the role of Federal Reserve.

Explain Federal Reserve control of Interest Rates.

Discuss the Yield Curve.
Define Options.
Explain Call Options.
Explain Put Options.
Discuss basic Option Strategies.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Students will be assessed through tests, quizzes, homework, assignments, and/or class participation.

Satisfies Honors Requirement	Satisfies Wellness Requirement
No	Yes

Register for this Course

BFN141 - Personal Finance

Overview

Subject Economics & Finance	Academic Department Business & Economics	School Business, Entrepreneurship, PD
--------------------------------	---	--

Course Description
Examines common financial concerns such as budgeting, obtaining and managing credit, buying insurance, planning for taxes, purchasing a car and/or home, and saving for retirement. Discusses stocks, bonds, and mutual funds. Also provides information on career planning and employee benefits.

Credit Hours
3

Contact Hours
3

Course Fee 0	Miscellaneous Department Fee 0
-----------------	-----------------------------------

Academic Level
Undergraduate

Eligible for Credit for Prior College Level Learning (CPCLL)
No

Goals, Topics, and Objectives

- Core Course Topics
1. Introduction to Personal Finance and Financial Planning
 2. Time Value of Money
 3. Current Financial Situation Assessment
 4. Personal Goals
 5. Financial Information and Financial Professionals
 6. Financial Services Commonly Available to Households
 7. Consumer Credit and Household Debt
 8. Household Spending and Savings
 9. Purchase of a Car and a House
 10. Risk Management and Insurance Options
 11. Savings and Investment
 12. Career Planning
 13. Consumer Protection

Discuss the need for financial literacy.
Identify the household activities related to personal finance.
Identify life events that have a significant impact on personal finances.
Identify the steps in the financial planning process.
Calculate the future value of a single deposit or an annuity.
Calculate the present value of a future sum of money.
Determine the opportunity cost of a financial decision by calculating the time value of money.
Discuss record-keeping methods.
Create a balance sheet, and compute net worth.

Create cash flow statements.
Create a household budget.
Discuss the three time frames for financial goals: short term, intermediate term, and long term.
Explain the characteristics of effective financial goals.
Decide upon a set of personal financial goals.
Decide upon a set of personal non-financial goals.
Identify sources of financial information.
Identify types of financial professionals.
Explain how financial professionals and financial information providers may have a conflict of interest.
Discuss how to interview prospective financial professionals.
Assess financial information sources and financial professionals.
Compare and contrast financial institutions based on financial services, ownership structure, fees, and consumer protection.
Discuss reasons to avoid high-cost financial service providers such as check-cashing outlets, payday lenders, and pawnshops.
Compare and contrast savings instruments.
Compare and contrast payment methods.
Discuss how to manage a checking account.
Develop a plan to meet household financial service needs while minimizing institutional fees.
Discuss the advantages and disadvantages of using consumer credit.
Distinguish between the proper and improper uses of consumer credit.
Assess the sources of consumer credit.
Discuss the process for getting a loan or applying for a credit card.
Discuss common mistakes people make with credit cards.
Demonstrate how to check one's credit report.
Develop a plan to improve a credit report.
Analyze the causes of overspending.
Propose strategies for reducing monthly expenses.
Identify strategies for increasing savings.
Discuss the steps in the research-based buying process and the common mistakes made in each step.
Compare options of leasing or buying a car.
Calculate a vehicle price that is affordable based on income, debt obligations, interest rates, and other information.
Compare options of renting or buying housing.

Calculate a home price that is affordable based on income, debt obligations, mortgage rates, and other information.
Discuss how major purchases impact the ability to meet other financial goals.
Identify the risk management strategies available to households.
Discuss personal events that carry risk and strategies for reducing the financial impact of those events.
Identify insurance options available to households.
Explain the tradeoff between risk acceptance and insurance cost.
Design a total insurance plan to meet one's needs.
Identify the link between saving and investing.
Explain the tradeoff between risk and reward.
Explain the importance of diversification, and give examples of ways to diversify.
Distinguish between equity investments and debt investments.
Compare investment options based on the level of risk and the expected return.
Explain how to buy a stock and a bond.
Build an investment portfolio based on a set of financial goals.
Explain the relationship between career selection and the ability to meet financial and non-financial goals.
Research careers with respect to earning potential and job stability.
Evaluate industries and employers based on employee benefits offered.
Discuss the importance of continuous education and training.
Identify the major laws that provide consumer protection.
Explain the process of making a complaint to consumer protection agencies.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Students will be assessed through tests, quizzes, assignments, and/or class participation.		
Satisfies Honors Requirement		Satisfies Wellness Requirement
No		Yes

BFN253 - Principles of Finance

Overview

Subject Economics & Finance	Academic Department Business & Economics	School Business, Entrepreneurship, PD
Course Description Introduces the fundamentals of financial management, financial statements, time value of money, interest rates, and stocks and bonds. Also examines capital budgeting models, cash flow analysis, working capital management, financial ratio analysis, and firm performance.		
Course Pre-requisite(s) BAC131 Intro to Financial Accounting with a C grade or better AND BBA131 Intro to Business with a C grade or better		
Credit Hours 3		
Contact Hours 3		
Course Fee 0	Miscellaneous Department Fee 0	

Academic Level Undergraduate
Eligible for Credit for Prior College Level Learning (CPCLL) No
Goals, Topics, and Objectives
Core Course Topics 1. Introduction to Financial Management 2. Financial Statements 3. Time Value of Money 4. Interest Rates 5. Stocks and Bonds 6. Capital Budgeting Models 7. Cash Flow Analysis 8. Working Capital Management 9. Financial Ratio Analysis 10. Capital Funding 11. Dividends, Dividend Policy, and Stock Splits
Define financial management, and explain the main areas in finance.
Identify the relationship of the financial manager to other corporate functions.
Explain the various legal forms of business.
Analyze financial statements.
Calculate cash flow.
Explain the time value of money.
Calculate the future value and present value of a lump-sum payment.
Evaluate the future value and present value of annuities.
Describe annual percentage rate (APR), compounding periods, the periodic interest rate, and the effective annual rate (EAR).
Explain nominal and real interest rates, risk-free rates, and premiums.
Discuss the characteristics of stocks, the stock market, and stock valuation.
Discuss the characteristics of bonds, the bond market, and bond valuation.
Calculate the payback period, net present value, and internal rate of return.
Compare and contrast valuation techniques.
Examine cash flow and its impact on the growth of a business.
Assess the incremental cash flow for a new project.
Explain and calculate production, collection, and payment cycles.
Discuss managing accounts receivable, float, and inventories.
Analyze performance using short-term (liquidity) and long-term (leverage) solvency ratios, asset management ratios, and profitability ratios.
Calculate market value ratios.
Compare a firms ratios with industry averages.
Discuss the business life cycle and the problems and opportunities in each phase.
Compare and contrast sources of capital.

Explain the declaration date, ex-date, record date, and payment date.
Discuss low-, high-, and no-dividend payout policies.
Examine stock dividends, stock splits, and reverse splits.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
Students will be assessed through tests, quizzes, assignments, and/or class participation.	
Satisfies Honors Requirement	Satisfies Wellness Requirement

BIO130 - Evolution and Behavior

Overview

Subject Biology	Academic Department Biological Science	School Science, Tech, Engr & Math
Course Description Introduces principles of evolution and animal behavior (including human). Considers genetic, physiological, and evolutionary explanations of behaviors. Topics include evolution and natural selection, genetic inheritance, DNA structure and function, basic cell structure and function, innate behaviors, learning, motivation, communication, aggression, sexual behavior, territoriality, play, vestigial behaviors, selfishness, and altruism.		
Course Pre-requisite(s) ENG131 Introduction College Writing eligible		
Credit Hours 4		
Contact Hours 4		
Course Fee 10	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category Natural Sciences	Michigan Transfer Agreement (MTA) Category Category 6: Natural Sciences - Applied Degrees, Category 6: Natural Sciences - Transfer Degrees - Lecture Only	
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics
1. What is science?
2. What is life?
3. What is evolution? What is natural selection?
4. Who was Charles Darwin?
5. How do physiological or proximal and evolutionary or ultimate explanations answer "why" questions, but teleological explanations do not?
6. Why do we have diseases like Ebola virus, cancer, and cystic fibrosis? Why do bacteria develop antibiotic resistance? Why do we age?
7. What characteristics define and distinguish animals?
8. What are animal behavior, ethology, and behavioral biology?
9. What are the evolutionary and genetic bases of social behavior? What is meant by gene selfishness, and how does the concept explain the course of evolution?
10. How do cells divide and animals reproduce?
11. That are the roles of genes, chromosomes, and proteins in determining physical and behavioral traits?
12. How do chromosomes determine sex?
13. What are the mechanisms of evolutionary change, and how do they cause evolution to occur?
14. What is a species, and how do species form and become extinct?
15. What evidence supports evolution?
16. What is the history of human evolution?
17. How do humans compare and contrast with the great apes?
18. What is culture?
19. What are the causes of conflict between groups?

Provide a working definition of science.
List the characteristics of living organisms.
Summarize the processes of evolution natural selection
Describe the life and discoveries of Charles Darwin.
Distinguish between proximate and evolutionary explanations.

Explain the proximal and evolutionary causes of diseases like Ebola virus, cancer, and cystic fibrosis.
Explain why bacteria develop antibiotic resistance.
Speculate on the question of why we age.
Describe the characteristics of an animal.
Describe the genetic bases and evolutionary development of social behavior, including the concept of the selfish gene.
Define Animal Behavior, Ethology and Behavioral Biology.
Compare and contrast mitosis and meiosis.
Describe the roles that genes, chromosomes, and proteins and play in determining traits.
Describe how chromosomes determine sex in various animals, especially humans.
Describe the mechanisms of evolutionary change how they cause evolution to occur.
State the biological definition of a species.
Describe causes of extinction.
Explain scientific evidence that supports evolution.
Compare and contrast humans and the great apes.
Describe the history of human evolution.
Compare and contrast human societies with societies of other animals and evaluate culture as it might relate to other animals.
Propose explanations for the causes of conflict between groups.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
The main method of assessment of student learning will be lecture exams that include objective and short essay questions. Additional assignments will also be included.	
Satisfies Honors Requirement	Satisfies Wellness Requirement
No	No

Register for this Course

BIO131 - Introduction to Biology

Overview

Subject Biology	Academic Department Biological Science	School Science, Tech, Engr & Math
Course Description A foundational course emphasizing the unifying themes of biology. Explores various aspects of living systems, including biological chemistry, cell biology, genetics, evolution, diversity, structure and function relationships, energy transformations, plant and animal systems, ecology, biodiversity, and conservation. Introduces the scientific method and scientific reasoning. Three hours of lecture and three hours of lab per week.		
Course Pre-requisite(s) ENG131 Introduction College Writing eligible		
Credit Hours 4		
Contact Hours 6		
Course Fee 27	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category Natural Sciences	Michigan Transfer Agreement (MTA) Category Category 6: Natural Sciences - Applied Degrees, Category 6: Natural Sciences - Transfer Degrees - Lecture and Lab	
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Other Exam	

Goals, Topics, and Objectives

Core Course Topics

1. The nature of science and the properties of life

1. Scientific method

2. Scientific reasoning and experimental design

3. Properties of living things

4. Major themes in biology
2. Biological chemistry

1. Atomic structure and bonds

2. Water as a biological solvent

3. Effects of pH on living systems

4. Carbon-based macromolecules

5. Enzymes
3. Biology of cells

1. Prokaryotic and eukaryotic cell structure

2. Plant and animal cell structure

3. Membranes

4. Organelle structure and function

5. Cell cycle

6. Mitotic cell division
4. Genetics

1. Chromosomes

2. Meiotic cell division

3. Sexual reproduction

4. Errors in meiosis

5. Mendelian inheritance
5. DNA, RNA, and protein

1. DNA structure

2. DNA replication

3. Transcription

4. Translation

5. Mutations

6. The genetic basis of cancer
6. Evolution and classification

1. How populations change

2. Evidence for evolution

3. Mechanisms of evolution

4. Classification
7. Energy transformations

1. Energy in living systems

2. Cellular respiration and fermentation

3. Photosynthesis
8. Diversity

1. Prokaryotes

2. Viruses

3. Fungi

4. Protists

5. Plants

6. Animals

• Structure and function

• Major groups of plants

• Structure and function

• Major groups of animals
9. Human body systems

1. Organization and homeostasis

2. Tissues

3. Digestive system

4. Respiratory system

5. Cardiovascular system

6. Immune system

7. Endocrine system

8. Urinary system

9. Reproductive system
10. Ecology

1. Community ecology

2. Ecosystems and the biosphere

3. Biodiversity

4. The effects of humans on the environment

5. Conservation

Explain and apply the scientific method; demonstrate scientific reasoning.
Identify the properties of a properly-designed scientific experiment.
Conduct scientific experiments and clearly communicate results.

Demonstrate use of critical thinking skills in the analysis of experimental data.
Demonstrate proficiency in basic biological laboratory skills, in keeping with safety guidelines.
Recall, restate, and apply basic biological facts and concepts as listed in the individual unit objectives.
Describe the properties of living organisms.
Describe the chemical basis of living organisms.
Describe cell structure and function.
Explain the role of negative feedback in homeostasis.
Describe material cycling and energy flow in ecosystems.
Describe interactions among organisms and between organisms and their environment.
Predict inheritance patterns using knowledge of the relationship between DNA, RNA and proteins.
Explain how evolutionary theory applies to the structure and function of living organisms.
Explain the role of natural selection in evolution.
Explain how evolution accounts for both the unity and diversity of life.
Describe levels of organization and related functions in plants and animals.
Explain how human activity affects the natural world.
Demonstrate professional behavior in all aspects of the course.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
Lecture and lab exams, homework, and lab response sheets covering each major topic with the percentage of student achievement for these elements and the percentage of the total course being standard across sections.	
Satisfies Honors Requirement	Satisfies Wellness Requirement
No	No

Register for this Course

BIO134 - Essentials of Anatomy and Physiology

Overview

Subject Biology	Academic Department Biological Science	School Science, Tech, Engr & Math
Course Description		
A comprehensive study of all eleven body systems in a one-semester course. Lecture emphasizes how anatomy, chemistry, and cell biology permit the specific functioning of organs and systems. Lab reinforces understanding of the associated anatomic structures. Please note: BIO-134 is a 5 credit, content-heavy course, which requires a substantial time commitment and focused study beyond the conventional expectations in a standard 100 level science course. Four hours of lecture and two hours of lab per week.BIO-134 does not substitute for the BIO-233/BIO-234 sequence required by HFC's Nursing and Physical Therapist Assistant programs in the School of Health and Human Services (HHS). BIO-134 may serve as refresher/remedial course for the 233/234 sequence if taken within 5 years of original courses and permission is granted from the School of HHS.		
Course Pre-requisite(s) ENG131 Introduction College Writing eligible		
Credit Hours 5		
Contact Hours 6		
Course Fee 27	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category Natural Sciences	Michigan Transfer Agreement (MTA) Category Category 6: Natural Sciences - Applied Degrees, Category 6: Natural Sciences - Transfer Degrees - Lecture and Lab	
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals
BIO134 Essentials Anatomy&Physiology currently provides the academic foundation of Anatomy & Physiology for selected Allied Health curricula at HFC and for guest students from selected universities where a five credit, one-semester Anatomy and Physiology course is the standard.

- Core Course Topics**
- 1. Introduction to body organization and anatomical terms
 - 2. Basic chemistry
 - 3. Cell structure and function
 - 4. Histology of human tissues
 - 5. Integumentary system
 - 6. Skeletal system and joints
 - 7. Muscular system
 - 8. Nervous system
 - 9. Endocrine system
 - 10. Cardiovascular system
 - 11. Immune system and body defense
 - 12. Respiratory system
 - 13. Digestive system and metabolism
 - 14. Urinary system, fluid/electrolyte and acid/base balance
 - 15. Reproductive systems

Describe the position of the body in the anatomical position and state the anatomical terms identifying specific parts of the body.
Define homeostasis and describe an example related to the functioning of each system in the body.
For each class of organic molecule (carbohydrate, lipid, protein and nucleic acid), name its respective monomer building block(s), explain its value or importance for the needs of the human body, and briefly describe how its basic molecular structure differs from the other monomers.
Distinguish between each of the following cellular transport mechanisms by describing the basis for the directional movement of molecules: diffusion, osmosis, facilitated diffusion, active transport, filtration, phagocytosis, and pinocytosis.
Describe the structural and functional characteristics that distinguish each of the four fundamental tissue categories as well as their sub-categories where applicable: epithelial, connective, muscle, and nervous.
Name the bones of the axial and appendicular skeleton, and the bones involved in formation of each diarthrotic joint of the body.
For each designated muscle, describe its attachment points to the skeleton (origin and insertion), its action at that joint, and its relationship to other muscles as an antagonist or synergist.
Describe the relationship of a neuron to the following structures: Schwann cells, myelin sheath, synapses, and neurotransmitters.
Describe the relationship of sensory neurons and motor neurons of the peripheral nervous system to interneurons and the integrative functions of the central nervous system.
Explain the means by which the hypothalamus controls or regulates the secretory functions of both the anterior pituitary gland and the posterior pituitary gland.
Describe the difference between plasma and serum, hematocrit and hemoglobin content, erythrocyte and reticulocyte, antigen and antibody.
Trace the path of blood through both sides of the heart, naming the sequence of chambers, valves, and major blood vessels through which it flows.
Explain the respective roles of filtration and osmotic pressure in the exchange of materials between the blood and the tissue fluid surrounding cells of the body.
Describe the differences between cell-mediated Immunity and humoral immunity, describing the roles of T-cells, B-cells, memory cells, NK cells, and plasma cells.
Compare the transport of respiratory gases (oxygen and carbon dioxide) in the blood and explain the basis for the toxic effect of carbon monoxide.
Describe the general operation of the digestive system by relating the stages of mechanical digestion, chemical digestion, and absorption to the functioning of specific organs.

Describe what happens to a glucose molecule as it progresses through the three stages of cellular respiration, indicating where the carbon dioxide is generated, where most of the ATP is generated, and where oxygen is required.
State the kidney's role in determining the chemical composition of the blood by listing the normal components of urine and describing how the kidneys vary the amounts of the filtered wastes.
Define pH as a measurement and explain the relationship of the pH scale to acidic, neutral, and basic values. Describe the effects of pH imbalance on body function.
Describe the hormonal relay of information between the anterior pituitary gland, and organs of the male and female reproductive systems, by associating each hormone with the proper endocrine source and the effect the hormone will have on its target organ.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Academic achievement will be assessed including but not limited to the following methods: Four lecture exams using primarily objective questions will assess understanding of structural relationships and physiology. Three lab practical exams comprised of the anatomic models, multiple choice and True and False questions. The lab practical exams are designed to measure the student's ability to identify anatomic structures, organs, and systems as they are related to the specific function.

General Course Requirements and Recommendations
While there is no formal science prerequisite to this course, it is highly recommended that a student have some experience in college-level academic success before registering for **BIO134 Essentials Anatomy&Physiology**. Completing a course in Medical Terminology prior to or simultaneously with **BIO134 Essentials Anatomy&Physiology** is advised.

Texts	
Lecture: Marieb and Keller Essentials of Human Anatomy & Physiology, 12th ed., 2018, and its accompanying Student Workbook (workbook optional). Lab: Rivers' Course Objectives and Lab Guide to BIO 134, current printing	
Satisfies Honors Requirement	Satisfies Wellness Requirement

BIO135 - Microbiology for Allied Health Sciences

Overview

Subject Biology	Academic Department Biological Science	School Science, Tech, Engr & Math
Course Description For health service personnel not needing the extensive laboratory experience and breadth of material of BIO 251. Emphasizes the biology of medically important microbes, epidemiology and disease transmission, sterile technique, basics of immunity, the microbiology of wounds, and current regulations regarding blood-borne pathogens and bio-hazardous wastes. Three hours of lecture and two hours of lab per week.		
Course Pre-requisite(s) ENG131 Introduction College Writing eligible		
Credit Hours 4		
Contact Hours 5		
Course Fee 40	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category Natural Sciences	Michigan Transfer Agreement (MTA) Category Category 6: Natural Sciences - Applied Degrees, Category 6: Natural Sciences - Transfer Degrees - Lecture and Lab	
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals
Students will gain an appreciation of the many roles of microbes in human life and will master the material at a level to allow them to pass the microbiology section of a licensure exam for an allied health field.

The course topics and objectives are based on the Microbiology in Nursing and Allied Health (MINAH) Undergraduate Curriculum Guidelines established by the American Society for Microbiology. These recommendations and details regarding approved laboratory objectives are available from [The American Society for Microbiology](#).

- Core Course Topics**
- 1. Theme 1: Microbial diversity
 - Categories of medically important microbes
 - 2. Theme 2: Microbial cell biology
 - Information flow within a cell
 - Regulation of cellular activities
 - Cellular structure and function
 - Growth and division
 - Cell energy metabolism
 - 3. Theme 3: Microbial genetics
 - Inheritance of genetic information
 - Causes and consequences of mutations
 - Exchange and acquisition of genetic information
 - 4. Theme 4: Interactions and impact of microbes and humans
 - Microbiome in health and disease
 - Microbial pathogenicity
 - Host defense mechanisms

- Identifying and managing infectious diseases
 - Disease transmission
 - Antimicrobial drugs and chemotherapy
 - Vaccines
 - Epidemiology and public health
 - Healthcare associated infections
5. Theme 5: Interactions and impact of microbes in the environment
- Ubiquity of microbes
 - Adaptation and natural selection
 - Symbiosis
 - Controlling microbial growth in the environment
 - Biofilms
6. Theme 6: Integrating Themes
- Microbial evolution
 - Scientific process and critical thinking

Describe the morphology, physiology, characteristics, and classification of diverse types of medically important microbes including prokaryotic, eukaryotic, and acellular pathogens.
Explain how genetic information is inherited, exchanged, and acquired by microbes, and how modification of genetic information occurs.
Describe how various environmental factors affect the growth of microbes.
Discuss ways in which microbes interact with other organisms and with their environment.
Discuss the complex interactions between humans and microbes and explain how these interactions impact human health.
Identify mechanisms of microbial pathogenicity.
List and describe common infectious diseases and discuss how they are diagnosed and treated.
Identify mechanisms by which human diseases can be transmitted and how transmission can be prevented.
Explain how the immune system responds to challenge by microbes, and how vaccinations are safe and effective in preventing the spread of disease.
Describe the impact of healthcare associated infections.
Explain how epidemiological principles are used to track and reduce the incidence of infectious disease.
Describe ways to control microbes in a health care setting by following Universal Precautions and infection control measures
Explain how antimicrobial substances are used to combat infectious agents.
Explain how antimicrobial resistance arises and describe activities that can limit the threat of antimicrobial resistance.
Interpret cases studies about microbiology by applying knowledge about microbes.
Apply appropriate microbiological methods to isolate, differentiate, and identify microbes
Demonstrate knowledge of the concepts of asepsis and sterility to safely work with live microbes.
Demonstrate scientific reasoning, analysis, and communication skills.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Details of the assessment of student achievement are left to the discretion of the individual instructor. However, a substantial part of the assessment (not to exceed 50%) should be based on evaluation of Laboratory Skills. The assessment of Theory and Laboratory Skills should be based on a variety of measures, including, where feasible, testing, written papers, oral communication, and practical applications of knowledge or skills.

General Course Requirements and Recommendations
Students should complete at least one major laboratory project that requires experimental design, application of laboratory techniques and analysis of data (e.g., identification of an unknown organism).

Texts
Texts will be chosen from among generally recognized microbiology texts.

BIO138 - Environmental Science Lecture

Overview

Subject Environmental Studies	Academic Department Biological Science	School Science, Tech, Engr & Math
Course Description Explores environmental science, an interdisciplinary study which combines ideas and information from the natural sciences (such as biology, chemistry, and geology) and the social sciences (such as economics, politics, and ethics) to present a general idea of how nature works and how everything in nature is interconnected. Emphasizes human modification of natural systems and strategies for promoting environmental health. Also discusses current environmental concerns.		
Course Pre-requisite(s) ENG131 Introduction College Writing eligible		
Credit Hours 3		

Contact Hours

Course Fee 10	Miscellaneous Department Fee 0
Academic Level Undergraduate	
General Education Category Natural Sciences	Michigan Transfer Agreement (MTA) Category Category 6: Natural Sciences - Applied Degrees, Category 6: Natural Sciences - Transfer Degrees - Lecture Only
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Other Exam
Credit for Prior College Level Learning (CPCLL) Details Score of 4 or 5 on AP Environmental Science Exam.	

Goals, Topics, and Objectives

- Course Goals**
This course will present the fundamental concepts of environmental science. After completing this course students will be able to:
1. Use scientific laws, principles, models, and concepts to understand environmental and resource problems and possible solutions.
 2. Understand how these concepts, problems and solutions are connected.
 3. Develop a list of principles, concepts, and rules to serve as guidelines in making decisions.
 4. Think logically and critically.
- Core Course Topics**
1. Sustainability
 2. Ecosystems
 3. Biodiversity
 4. The human population
 5. Climate & biodiversity
 6. Sustaining biodiversity
 7. Food, soil and pest management
 8. Risk, toxicology & human health
 9. Water pollution
 10. Air pollution
 11. Geology
 12. Energy
 13. Climate change & ozone depletion
 14. Sustainable cities
 15. Solid & hazardous waste
 16. Economics, environment & sustainability
 17. Politics, environment & sustainability
 18. Environmental worldviews, ethics & sustainability

Describe the three principles that nature has used to sustain itself for at least 3.5 billion years and list how we can use these principles to live more sustainably.
Explain how we can use these three principles to get us closer to the vision of a sustainable Earth.
Evaluate how our human ecological footprint affects the Earth.
Distinguish among the planetary management, stewardship and environmental wisdom worldviews.
Describe the steps involved in the scientific process.
Describe what happens when matter and energy undergo changes.
List the major components of an ecosystem
Describe what happens to matter and energy in an ecosystem.

Describe the following cycles: water, carbon, nitrogen, phosphorous and sulfur	Explain what food security is and why it is difficult to attain.
Explain what species diversity and biodiversity are and why they are important.	Define organic agriculture and compare its main components with those of conventional industrialized agriculture.
Explain how speciation, extinction and human activities affect biodiversity.	Define and distinguish among industrialized agriculture (high-input agriculture), plantation agriculture, hydroponics, traditional subsistence agriculture, traditional intensive agriculture, polyculture and slash-and-burn agriculture.
Distinguish among the following species interactions and give one example of each: competition, predation, and symbiosis.	Summarize the use of energy in industrialized food production.
Describe what limits the growth of populations.	Describe the advantages and disadvantages of modern pesticides.
Explain how living systems achieve some degree of stability or sustainability by undergoing constant change in response to changing environmental conditions.	Define integrated pest management (IPM) and discuss its advantages.
List the factors that can affect the birth rate and fertility rate of a country.	Describe how we can produce food more sustainably.
Explain how age structure affects population growth and economic growth.	Define risk and distinguish between risk assessment and risk management.
Describe how differences in climate lead to formation of tropical, temperate and polar deserts, grasslands and forests.	Define toxicology, toxicity, dose and response.
Describe how climate and vegetation vary with latitude and elevation.	Describe the major health hazards that we face.
Describe how human activities have affected the world's biomes.	Describe the biological and chemical hazards that we face.
Distinguish between a saltwater (marine) and a freshwater life zone and give examples of each	Describe how we perceive risks and how can we avoid the worst of them.
List the major ecological and economic services that are provided by marine and freshwater systems.	Discuss the causes and effects of water pollution.
List the human activities that pose major threats to marine ecosystems and the human activities that threaten coral reefs.	Describe the major water pollution problems in streams and lakes.
List three reasons why many extinction experts think that human activities are now causing a new mass extinction.	List the major pollution problems affecting groundwater and other drinking water sources.
Explain how the extinction of a species affects other species and ecosystem services.	List the major water pollution problems affecting oceans.
Describe the major effects of habitat loss and fragmentation.	Explain why preventing water pollution is the best way to deal with it.
Explain how pesticides such as DDT can be biomagnified in food chains and food webs.	Describe the layers of the atmosphere.
Describe the precautionary principle and explain how we can use it to help protect wild species and overall biodiversity.	List the major outdoor and indoor air pollutants and their harmful effects.
Describe the major ecological and economic benefits that forests provide.	Define acid deposition and explain why it is a problem.
List some of its major harmful environmental effects of deforestation.	Describe the health effects of air pollution.
List the ways to protect tropical forests and use them more sustainably.	Explain why preventing air pollution is more important than controlling it.
List the ways to reduce overgrazing and use rangelands more sustainably.	Describe the earth's major geological processes and hazards.
Explain how we should manage and sustain parks and nature reserves.	Define and explain the importance of the rock cycle.
Describe the major threats to aquatic biodiversity.	Define mineral resources and describe the environmental effects of using them.
Explain how we can protect and sustain marine and freshwater biodiversity.	Describe how we can apply the three scientific principles of sustainability in order to obtain and use nonrenewable mineral resources in a more sustainable way.
Describe how to manage and sustain marine and freshwater fisheries.	Define net energy and explain why it is important
Describe invasions of the U.S. Great Lakes by nonnative species.	List the advantages and disadvantages of using oil, natural gas, coal and nuclear energy.
	Explain why improving energy efficiency is an important energy goal

List the technologies we can use to cut energy waste.

List the advantages and disadvantages of using solar energy, hydropower, wind power, biomass, geothermal energy and hydrogen as energy resources.

Discuss how we can make the transition to a more sustainable energy future.

Explain why weather and climate are not the same and explain the differences between them

Describe the greenhouse effect and why is it so important to life on earth.

Describe how the earth's temperature and climate might change in the future.

List possible effects of a warmer atmosphere.

List thing that we can do to slow projected climate change.

Explain how we have depleted ozone in the stratosphere and what can we do about it.

Discuss how the problems of atmospheric warming and ozone depletion are connected

Describe the major population trends in urban areas.

List the major urban resources and environmental problems.

List the advantages and disadvantages of urbanization.

Describe the importance of urban land-use planning.

Discuss how cities can become more sustainable and livable.

Define solid waste and hazardous waste and explain why they are problems.

Describe a sustainable approach to dealing with solid and hazardous waste.

Discuss why reusing and recycling materials is so important.

List the advantages and disadvantages of burning or burying solid waste.

Discuss how we can make the transition to a more sustainable low-waste society.

Explain how economic systems are related to the biosphere.

Discuss how we can place values on natural capital and control pollution and resource use.

Describe how we can use economic tools to deal with environmental problems.

Describe how reducing poverty can help us deal with environmental problems.

List the methods we can use to shift to more environmentally sustainable economies.

Describe the role of government in making the transition to a more sustainable society.

Describe the process by which environmental policy is made.

Discuss the role of environmental law in dealing with environmental problems.

List the major roles of environmental groups.

Describe how we can improve global environmental security.

Describe how we can implement more sustainable and just environmental policies.

List the major environmental worldviews.

Describe the role of education in living more sustainably.

List the major shifts involved in achieving more sustainable societies.

Goals, Topics, and Objectives

Course Goals
This course will present the fundamental concepts of environmental science. After completing this course students will be able to:

* use scientific laws, principles, models, and concepts to understand environmental and resource problems and possible solutions.
* understand how these concepts, problems and solutions are connected.
* develop a list of principles, concepts, and rules to serve as guidelines in making decisions.
* think logically and critically.

Core Course Topics

1. Importance of Biodiversity
2. Groundwater modeling
3. Dichotomous keys
4. Soil quality measurements
5. Topographic maps
6. Geographic Information System (GIS)
7. Forestry measurements
8. Rouge River watershed, biodiversity, and macroinvertebrates
9. Energy conservation
10. Service learning
11. Population estimation
12. Natural selection
13. Greenhouse gases estimation
14. Tragedy of the commons

Collect and analyze experimental data.

Demonstrate use of critical thinking skills in the analysis of experimental data.

Write a formal lab report using a standard format.

Demonstrate familiarity with library resources and electronic media and use criteria with which to judge reliability of various resources.
Recall and restate basic scientific facts and concepts, as listed in the individual unit objectives.
Demonstrate proficiency in the use of basic laboratory equipment.
Analyze current environmental problems.
Interpret topographic maps.
Apply basic principles of Geographic Information System (GIS).
Demonstrate safe handling of equipment and supplies.

BIO143 - Zoology

Overview

Subject Biology	Academic Department Biological Science	School Science, Tech, Engr & Math
Course Description This course examines the diversity, evolutionary and ecological relationships, and structures and functions of the major animal groups. Animals will be studied with an emphasis on comparative anatomy and physiology, behavior, and ecology. Human impacts on biodiversity will be discussed. Lectures and labs are coordinated, with laboratory topics focused on taxonomy and anatomy using models, live specimens, behavioral experiments and dissection.		
Course Pre-requisite(s) ENG131 Introduction College Writing eligible: BIO131 Introduction to Biology or BIO134 Essentials Anatomy&Physiology or BIO135 Microbiology for AHS or BIO150 Bio: Organisms, Genes, Ecology or BIO152 Cell and Molecular Biology, with a grade of C or better OR a Biology 131 waiver. Biology 131 waiver information can be accessed through a link in the "Additional Information" section of Biology 131 course listings in the Self-Service Schedule.		
Credit Hours 4		
Contact Hours 6		
Course Fee 40	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category Natural Sciences	Michigan Transfer Agreement (MTA) Category Category 6: Natural Sciences - Applied Degrees, Category 6: Natural Sciences - Transfer Degrees - Lecture and Lab	
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics
1. The science of zoology, and its unifying concepts of ecology and evolution.
2. Cell theory and its importance in zoology.
3. The structure and function of the animal cell.
4. Evolution: the history, evidence, and mechanisms.
5. Species and speciation
6. Ecology of animals
7. Conservation Biology
8. Taxonomy and phylogeny of the Animal Kingdom
9. Origin of life and early evolution
10. Body plans and patterns of organization in animals
11. Major animal phyla with emphasis on morphology, and evolutionary relationships
12. Various systems across the Animal Kingdom (ex. skeletal, muscular, nervous, endocrine, digestive, circulatory, and respiratory).
13. Thermoregulation and homeostasis
14. Embryology and development
15. Animal reproduction
16. Dissection techniques
17. Microscope techniques
18. Laboratory Safety
19. Scientific process
Define the science and unifying themes of zoology.

Describe the various structures and functions of the animal cell.
Explain the history and mechanisms of the theory of evolution.
Provide examples of how evolutionary processes relate to animal diversity.
Describe how ecology effects species behavior and survival.
Analyze the threats to Earths biodiversity, providing examples from the animal kingdom.
Describe, using cladograms, the evolutionary origin of a phylum within the Animal Kingdom and its possible phylogenetic relationships with all other groups of organisms.
List the early evolutionary events of life on Earth.
Compare and contrast the various body plans and patterns of organization in animals.
Characterize the major phyla, and selected classes and orders, in terms of anatomical systems, body organization, ecology, and behavior.
Compare the forms and functions of invertebrate and vertebrate systems in instructor identified organisms.
Classify instructor identified animals with respect to temperature regulation.
Describe osmoregulatory and excretory structures in instructor identified animal groups.
Compare the embryology and development of instructor identified organisms, including the major developmental events that occur in human pregnancy.
Compare animal reproduction in instructor identified asexually and sexually reproducing organisms.
Demonstrate the ability to safely perform detailed dissections on representative specimens from major animal phyla.
Demonstrate the ability to correctly use compound and stereoscopic microscopes in a laboratory setting.
Recognize the taxonomy, external anatomy, and internal anatomy of a zoological specimen in a laboratory setting.
Design, conduct, and analyze data from basic scientific investigations.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Student assessment focuses on course objectives. Assessments include but are not limited to: lecture exams, homework, lecture quizzes, lab quizzes or practical exams, lab activities and assignments, and class projects.	
Texts Text will be selected from books and lab manuals designed for introductory zoology courses. Text will be the same across sections.	
Satisfies Honors Requirement No	Satisfies Wellness Requirement No

BIO150 - Biology: Organisms, Genes, and Ecology

Overview

Subject Biology	Academic Department Biological Science	School Science, Tech, Engr & Math
Course Description A one-term course that, with BIOLOGY 152, collectively forms the majors-level introductory biology course unit designed to meet the needs of students interested in transferring to four-year institutions and majoring in biological sciences or related fields, as well as students interested in entering programs in pharmacy, medicine, veterinary medicine, dentistry, and related areas. Course focuses on the nature of science, the diversity and the unity of life, evolution, inheritance, ecology, plant function and reproduction, animal physiology, and animal development. Through laboratory investigations, students develop cognitive and laboratory skills and gain experience with model organisms used in many areas of biological research. Three hours of lecture and three hours of lab per week.		
Course Pre-requisite(s) ENG131 Introduction College Writing eligible: BIO131 Introduction to Biology or BIO134 Essentials Anatomy&Physiology or BIO135 Microbiology for AHS or BIO152 Cell and Molecular Biology with a grade of C or better OR a Biology 131 waiver. Biology 131 waiver information can be accessed through a link in the "Additional Information" section of Biology 131 course listings in the Self-Service Schedule.

Goals, Topics, and Objectives

Course Goals
After completing [BIO150 Bio: Organisms, Genes, Ecology](#), students should:

1. Be further acquainted with the amazing similarities among all forms of life on Earth.
2. Be further acquainted with the intriguing differences among forms of life on Earth.
3. Be experienced in using critical thinking and the scientific method.
4. Have a lifelong appreciation of the importance of understanding how the science of biology, "the study of life", truly does relate to all aspects of life and society.
5. Be more familiar with the work of professional biologists.
6. Be prepared to enroll in more advanced classes in the Biological Sciences.
7. Have new ideas to explore in other classes and/or in daily life.
8. Find greater appreciation of the complexity and beauty of life forms.

Core Course Topics

1. Biology: the scientific study of life
2. Ecosystem structure
3. Population ecology
4. Community ecology
5. Energy flow and material cycling
6. Conservation biology
7. Plasma membranes
8. DNA structure and function
9. Cell cycle and mitosis
10. Meiosis
11. Chromosomes, genetic inheritance, chance and probability
12. Evolution: the basis of the unity and the diversity of life
13. Developmental evolutionary biology
14. Population genetics
15. Speciation and macroevolution
16. Geologic time
17. Diversity of life: Prokaryotic organisms
18. Diversity of life: Protista
19. Diversity of life: Plantae
20. Diversity of life: Fungi
21. Diversity of life: Animalia
22. Diversity of life: animal evolution and developmental biology
23. Plant structure & function
24. Plant reproduction and development
25. Animal cells and tissues
26. Animal nutrition and digestion
27. Animal circulation and gas exchange
28. Animal homeostasis, osmoregulation, and excretion
29. Mammalian reproduction

Synthesize evidence acquired by scientists and apply to daily lives and to current social and environmental issues.
Demonstrate knowledge of model organisms used in many areas of biological research.
Demonstrate broad ability to make and record accurate observations.
Demonstrate designated levels of proficiency with laboratory skills used by biologists.
Design and carry out a research project using the scientific method, including presenting your results and conclusions in both a written and oral format.
Analyze and interpret scientific data using descriptive and inferential statistical methods.
Explain and apply concepts of population, community, and ecosystem ecology.
Define levels of biodiversity and conservation strategies being adopted to slow the rate of species loss.

Predict inheritance, using the rules of chance and probability, in living organism based on given genotypes and/or phenotypes.
Analyze how forces that result in micro- and macro- evolution account for bot the unity and diversity of life on Earth.
Use the Hard Weinberg equation to illustrate principles of population genetics.
Synthesize teleological, physiological and evolutionary explanations for various biological processes.
Classify plants and animals in their various phyla and classes using traditional taxonomy and cladistics.
Illustrate the major eras of geologic time and the organisms that characterize each one.
Explain selected life processes in detail and apply the principles of those processes to natural phenomena.
Connect form and function in various animal systems.
Demonstrate mastery of selected biological facts as listed in the unit objectives.
Display professional behavior, courtesy, and attitude.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Student assessment focuses on course objectives. Assessments include but are not limited to lecture exams, homework, lab quizzes, lab assignments, lab reports, presentations, skill demonstrations, and professional behavior. A standardized point distribution will be utilized across sections.	
Texts Text will be a book designed for use by biology majors, such as <i>Biology</i> by Campbell, Reece, and Mitchell or OER text (ex. OpenStax). The same text will be used across sections.	
Satisfies Honors Requirement No	Satisfies Wellness Requirement No

BIO152 - Cell and Molecular Biology

Overview

Subject Biology	Academic Department Biological Science	School Science, Tech, Engr & Math
Course Description A one-term course that, with BIOLOGY 150, collectively forms the majors-level introductory biology course unit designed to meet the needs of students interested in transferring to four-year institutions and majoring in biological sciences or related fields, as well as students interested in entering programs in pharmacy, medicine, veterinary medicine, dentistry, and related areas. Course focuses on the diversity and unity of living organisms from the perspective of molecular and cell biology, including scientific inquiry, biological chemistry, cell structure and physiology, energy transformations, genes and gene expression, and biotechnology. Students develop critical thinking skills in the analysis of scientific information. Laboratory experiments enhance student understanding of course topics. Three hours of lecture and three hours of lab per week.		
Course Pre-requisite(s) ENG131 Introduction College Writing eligible; BIO131 Introduction to Biology or BIO134 Essentials Anatomy&Physiology or BIO135 Microbiology for AHS or BIO150 Bio: Organisms, Genes, Ecology with a grade of C or better OR a Biology 131 waiver: CHEM131 Principles of Chemistry or CHEM141 Prin Gen & Inorgan Chem I with a grade of C or better (CHEM141 Prin Gen & Inorgan Chem I recommended for biology majors). Biology 131 waiver information can be accessed through a link in the "Additional Information" section of Biology 131 course listings in the Self-Service Schedule.		

Credit Hours

4

Contact Hours

6

Course Fee 36	Miscellaneous Department Fee 0
Academic Level Undergraduate	
General Education Category Natural Sciences	Michigan Transfer Agreement (MTA) Category Category 6: Natural Sciences - Applied Degrees, Category 6: Natural Sciences - Transfer Degrees - Lecture and Lab
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

- Core Course Topics
1. Scientific inquiry and biological themes
 1. The science of biology
 2. Scientific reasoning
 3. Scientific method
 4. Themes and concepts of biology
 2. Chemistry
 1. Basic chemistry related to biological systems

2. Importance of water

3. Macromolecules of life
3. Cells: The building blocks of life

1. The study of cells: microscopy and cell fractionation

2. Cell theory

3. Prokaryotic cells

4. Eukaryotic cells

5. Cell structure and organelles

6. Membrane structure and function
4. Energy transformations in living organisms

1. Chemistry and physics of life: thermodynamics, enzymes, and metabolism

2. ATP: the energy currency of life

3. Cellular respiration and fermentation

4. Photosynthesis
5. Cell physiology

1. Cell communication

2. Feedback controls in cell physiology

3. Cell division

4. Cell cycle

5. Cell cycle control

6. Cancer and the cell cycle
6. DNA, RNA and Protein

1. DNA structure and function

2. DNA replication

3. The genetic code

4. Prokaryotic and eukaryotic transcription

5. RNA processing in eukaryotes

6. Ribosomes and protein synthesis

7. Regulation of gene expression

8. Cancer and gene expression

9. Development and gene expression
7. Biotechnology

Explain and apply the scientific method. Explain the role of inductive and deductive reasoning in the scientific process.
Design, plan, and carry out a valid biological experiment, record and analyze data, and present results and conclusions.
Demonstrate proficiency in standard biological laboratory skills, in keeping with laboratory safety guidelines.
Apply the themes of biology, including evolution, to explain and interpret natural phenomena.
Explain how chemical principles underlie biological processes.
Explain how the cell is the fundamental unit of life, describing the basic structures, functions, and processes of prokaryotic and eukaryotic cells.
Describe the structure of biological membranes, and explain their role in transport, signaling, and energy transformations.
Describe mitotic cell division and the cell cycle, explaining cell cycle control mechanisms in normal and cancer cells.
Explain how genes encode the genetic information of the cell, how they are regulated, and how they contribute to the mechanism of protein synthesis.
Explain how genetic information is conserved, modified, and passed on from one organism to another.
Explain how living organisms require the transfer and transformation of energy and matter.
Explain how interactions are essential in biological systems, emphasizing cell signaling and feedback regulation.
Explain how biotechnology is the application of biological processes to solve problems relevant to everyday life.
Communicate biological concepts in written form using scientific terminology.
Evaluate, analyze, and interpret scientific information using critical thinking.

Demonstrate professional behavior in all aspects of the course.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Student assessment focuses on course objectives. Assessments include but are not limited to: lecture exams, homework, lab quizzes and exams, lab assignments, presentations and skill demonstrations, with the percentage of student achievement for these elements and the percentage of the total course being standard across sections.

Where appropriate, instructors are encouraged to use both written and oral assessments, and to use these in both formal and informal settings. Instructors will also assess students' professional behavior.

Texts	
Texts will be chosen from among recognized "majors-level" texts.	
Satisfies Honors Requirement	Satisfies Wellness Requirement

BIO233 - Anatomy and Physiology I

Overview

Subject Biology	Academic Department Biological Science	School Science, Tech, Engr & Math
Course Description Lectures cover the principles and underlying concepts of chemistry, cell biology, histology, the integumentary system, articulations, the skeletal system, the muscular system, and the nervous system. Lab reinforces understanding of the associated anatomic structures. BIO-233 and BIO-234 are a two-semester sequence designed for the student who plans to pursue a career in a health field. Three hours of lecture and two hours of lab per week.		
Course Pre-requisite(s) ENG131 Introduction College Writing eligible: BIO131 Introduction to Biology or BIO134 Essentials Anatomy&Physiology or BIO135 Microbiology for AHS or BIO150 Bio: Organisms, Genes, Ecology or BIO152 Cell and Molecular Biology with a grade of C or better OR a Biology 131 waiver. Biology 131 waiver information can be accessed through a link in the "Additional Information" section of Biology 131 course listings in the Self-Service Schedule.

Goals, Topics, and Objectives

- Core Course Topics
1. Introduction to the human body

Anatomy and physiology overview

Overall levels of organization

Body cavities

Directional terms

Homeostasis

Stress

Basic terminology
2. Chemical level of organization

Atoms

Molecules and bonds

Chemical reactions

Inorganic compounds

pH

Organic compounds
3. Cellular level of organization and metabolism

Structures and functions of a cell

Membrane mechanisms

Cytoplasm

pH

Osmosis

Nucleus

Protein synthesis

DNA

RNA

Mitochondrial metabolism

Aging
4. Histology (tissues)

Overall functions

Types

Epithelium

Connective tissues

Membranes

Muscle tissue

- Neural tissue
 - Tissue injuries
 - Aging
5. Skin (Integumentary system)
- Layers: epidermis, dermis and subcutaneous
 - Accessory structures
 - Functions
 - Endocrine and nervous controls
 - Aging
 - Integration with other systems
6. Skeletal tissue (osteology)
- Structure and functions
 - Histology
 - Development and growth
 - Replacement, repair, and integration with other systems
7. Joints (articulations)
- Classification system
 - Form and function (interrelationships)
 - Aging
 - Diseases and disorders
8. Muscle tissue (myology)
- Anatomy (micro and macro)
 - Types of muscle tissue
 - Contraction physiology
 - Muscle mechanics
 - Exercise
 - Aging
 - Integration with other systems
9. Nerve tissue (neurology)
- Types
 - Structures
 - Overall functions
 - Neuroglia
 - Physiology mechanisms
 - Synapse
 - Medications
 - Disorders
 - Aging
 - Levels of neural organization
10. Brain
- Organization
 - Regions
 - Ventricles
 - Meninges (protection and support)
 - Cerebrum
 - Limbic system
 - Mesencephalon
 - Cerebellum
 - Pons
 - Medulla
 - Higher level integration
11. Cranial nerves
- Structure
 - Location
 - Functions
12. Somatic sensory and motor pathways
- Overall organization
 - Functions
 - Interrelationships
 - Higher order functions
 - Brain chemistry and behavior
 - Aging
13. Autonomic nervous system and higher order functions
- Divisions and organization (anatomy)
 - Sympathetic division
 - Parasympathetic division
 - Somatic division
 - Interactions, integration and controls
 - Aging

Relate and apply the concept of pH and osmosis to all relevant systems and topics.

Identify the major organs of each system and describe their primary functions

Identify the negative feedback mechanisms of each major system and how they interrelate.

Summarize the process of protein synthesis and its relevance to human physiology.

Distinguish between the levels of organization in each system and how they interrelate.

Demonstrate the ability to interpret and understand graphs and charts.

Assessment, Requirements, and Outcomes

- Assessment of Academic Achievement**
Student assessment is built into the course objectives. Objectives were written using terms that allow their achievement to be measured. Students will be assessed on:
- Specified lab skills to determine if they have achieved the level of proficiency designated. See previous Course Objectives section.
 - Occasional lab quizzes based on readings.
 - Lab materials learned will be assessed on lab practicals.
 - Lecture materials learned will be assessed on combinations of objective questions and other question formats.
 - Professional behavior and attitude.
 - Answers to questions posed by instructor in lecture and/or lab.

BIO234 - Anatomy and Physiology II

Overview

Subject Biology	Academic Department Biological Science	School Science, Tech, Engr & Math
Course Description Lectures cover the principles and underlying concepts of special senses, the endocrine system, the circulatory system, the lymphatic system, immunity, the respiratory system, and the digestive systems, metabolism and energetics, the urinary system, fluid, electrolyte and acid/base balance, and the reproductive systems. Lab reinforces understanding of the associated anatomic structures. BIO-233 and BIO-234 are a two-semester sequence designed for the student who plans to pursue a career in a health field. Three hours of lecture and two hours of lab per week.		
Course Pre-requisite(s) BIO233 Anatomy and Physiology I with a C grade or better.

Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

- Core Course Topics**
1. Special senses (eye, ear, taste and smell)
 - Receptors and receptor function
 - olfaction
 - gustation
 - vision
 - equilibrium
 - hearing
 2. Endocrine system
 - principles and mechanisms
 - endocrine glands
 - hormonal interaction
 - integration with other systems
 3. Hematology
 - functions of blood
 - composition
 - plasma
 - formed elements
 - hemostasis

Describe how form influences function.

Define roots, prefixes and suffixes of the medical terminology encountered to aid the understanding of new vocabulary.

Demonstrate a knowledge of fundamental anatomical and physiological processes and facts.

4. Cardiology	- heart anatomy - heart beat - cardiodynamics - cardiovascular system
5. Cardiovascular system	- physiology of cardiovascular system - blood vessels - blood pressure
6. Lymphatic system and immunity	- organization - body defenses (specific and non-specific) - the immune response - development of resistance - stress - aging - integration with other systems
7. Respiratory system	- structure and functions - upper vs. lower - lungs - pleural cavities and pleural membranes - physiology - controls - acid-base balance - birth and aging - integration with other systems
8. Digestive system	- structure and functions - esophagus - stomach - small intestine - large intestine - digestion and absorption - aging - integration with other systems
9. Metabolism and nutrition	- overview - carbohydrate - protein and lipid metabolism - diet and nutrition - bioenergetics - aging
10. Urinary system	- structures and functions - physiology of urine production - acid-base regulation - urine transport - storage and elimination - aging - integration with other systems.
11. Fluid, electrolyte and acid-base balance	- overall concepts - acid-base balance mechanisms (respiratory and urinary systems) - electrolyte basics - disturbances of acid-base balance - aging - integration with other systems.
12. Reproductive systems	- overview - male reproductive system - female reproductive system - menstrual cycle - aging - pregnancy - integration with other systems
Describe how form influences function.	
Define roots, prefixes and suffixes of the medical terminology encountered to aid the understanding of new vocabulary.	
Demonstrate a knowledge of fundamental anatomical and physiological processes and facts.	
Relate and apply the concept of pH and osmosis to all relevant systems and topics.

BIO251 - Microbiology

Overview

Subject Biology	Academic Department Biological Science	School Science, Tech, Engr & Math
Course Description Introduces microbes and their activities. Covers a wide range of material in lecture and laboratory exercises, including structure and function of diverse microbes, nutrition, growth, metabolism, microbial genetics, and the role of microbes in disease, immunity, and other selected applied areas. Emphasizes the biology of microbes and their interaction with humans and the environment, and in learning the techniques used to safely work with bacteria, viruses, and fungi. Recommended for students anticipating further study in biological or biomedical sciences. Three hours of lecture and five hours of lab each week.		
Course Pre-requisite(s) ENG131 Introduction College Writing eligible: BIO131 Introduction to Biology or BIO134 Essentials Anatomy&Physiology or BIO135 Microbiology for AHS or BIO150 Bio: Organisms, Genes, Ecology or BIO152 Cell and Molecular Biology with a C or better OR a Biology 131 waiver: CHEM131 Principles of Chemistry or CHEM141 Prin Gen & Inorgan Chem with a grade of C or better (CHEM141 Prin Gen & Inorgan Chem] recommended for biology majors). Biology 131 waiver information can be accessed through a link in the "Additional Information" section of Biology 131 course listings in the Self-Service Schedule.		
Credit Hours 5		
Contact Hours 8		
Course Fee 40	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category Natural Sciences	Michigan Transfer Agreement (MTA) Category Category 6: Natural Sciences - Applied Degrees, Category 6: Natural Sciences - Transfer Degrees - Lecture and Lab	
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals Students successfully completing this course will gain an appreciation of the many roles of microbes at a level to prepare them for further coursework in microbiology, cell biology, and biotechnology. Students will master the material at a level to allow them to perform basic microbiological techniques independently. The course topics and objectives are based on the American Society for Microbiology's Undergraduate Microbiology Curriculum Recommendations.
These recommendations and details regarding approved laboratory objectives are available from The American Society for Microbiology or at the website http://www.asmtusa.org
Core Course Topics - Theme 1: Microbial cell biology - Information flow within a cell - Regulation of cellular activities - Cellular structure and function - Growth and division - Cell energy metabolism - Theme 2: Microbial genetics - Inheritance of genetic information - Cause, consequences and uses of mutations - Exchange and acquisition of genetic information - Theme 3: Interactions and impact of microbes and humans - Host defense mechanisms - Microbial pathogenicity mechanisms

3.	Disease transmission
4.	Antibiotics and chemotherapy
5.	Genetic engineering
6.	Biotechnology
4.	Theme 4: Interactions and impact of microbes in the environment
1.	Adaptation and natural selection
2.	Symbiosis
3.	Microbial recycling of resources
4.	Microbes transforming environment
5.	Theme 5: Integrating Themes
1.	Microbial evolution
2.	Microbial diversity
Describe the morphology, physiology, and characteristics of diverse types of microbes, and compare these characteristics among the various groups.	
Describe how various environmental factors can affect the growth rate of microbes, and analyze data from experiments that investigate this phenomenon.	
Explain how genetic information is inherited, exchanged, and acquired and modified by microbes.	
Explain the basic principles of gene cloning, and give examples of its application in biotechnology. Discuss some of the ways microbes interact with other organisms and with their environment.	
Identify mechanisms of microbial pathogenicity and disease transmission, and give specific examples of them.	
Describe and discuss the symptoms, diagnosis, and treatment of diseases caused by common microbes.	
Explain how the various kinds of cells in the immune system respond to challenge by microbes, and use the example of vaccinations to illustrate prevent the spread of disease.	
Use the technical vocabulary of microbiology to read and interpret technical literature about microbiology.	
Demonstrate a basic proficiency in laboratory skills	
Solve a practical problem in microbiology using the scientific method, and communicate the results in a standard style used by microbiologists.	
Explain and practice safe microbiological procedures.	
Demonstrate an increased skill level in cognitive processes, analysis skills, and communication skills.	

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Details of the assessment of student achievement are left to the discretion of the individual instructor. However, a substantial part of the assessment (not to exceed 50%) should be based on evaluation of Laboratory Skills. The assessment of Theory and Laboratory Skills should be based on a variety of measures, including, where feasible, testing, written papers, oral communication, and practical applications of knowledge or skills.

General Course Requirements and Recommendations
Students should complete at least one major laboratory project that requires experimental design, application of laboratory techniques and analysis of data (e.g., identification of an unknown organism). Students should participate in exercises that require them to express their understanding of microbiological concepts.

Texts	
Texts will be chosen from generally recognized microbiology texts.	
Satisfies Honors Requirement	Satisfies Wellness Requirement

BIO270 - Exercise Physiology

Overview

Subject Biology	Academic Department Biological Science	School Science, Tech, Engr & Math
Course Description Explores the physiological principles of exercise with emphasis on the circulatory, respiratory, and muscular systems. Discusses what changes occur to the body during exercise and as a result of regular exercise. Establishes a scientific basis for how to prescribe exercise appropriately. Laboratory activities include measurement of oxygen uptake, fat and muscle composition, anaerobic ability, and muscular strength.		
Course Pre-requisite(s) BIO233 Anatomy and Physiology I and BIO234 Anatomy and Physiology II		
Credit Hours 4		

Contact Hours 5	
Course Fee 30	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Course Goals To develop a scientific understanding for the principles of exercise.	
Core Course Topics	1. Common Measurements in Exercise Physiology Describe the measurement of work, power, energy expenditure, and economy.
	2. Bioenergetics of Exercise Examine the differences in aerobic and anaerobic exercise.
	3. Exercise and the Immune System Summarize the effect exercise has on the immune system.
	4. The Nervous Systems Control of Movement Explain the role of the nervous system in muscle contraction.
	5. Respiration During Exercise Describe the structure and mechanics of breathing during exercise.
	6. Circulatory Response to Exercise Examine the circulatory systems response to exercise.
	7. Nutrition and Energy Examine the role of nutrition in energy production.
	8. Body Composition and its Role in Performance Evaluate methods of measuring body composition.
	9. Exercise in Challenging Environments Evaluate how to exercise safely in the heat, cold, and at high altitudes.
	10. Ergogenic Aids to Performance Evaluate the effectiveness of various pharmacological and nutritional aids to performance.
	11. Laboratory - Health Screening Demonstrate measurement of blood pressure, heart rate, and resting and exercise electrocardiogram.
	12. Laboratory - Pulmonary Function Evaluate static and dynamic pulmonary function.
	13. Laboratory - Measurement of VO2max Compare estimates of VO2max.
	14. Laboratory - Body Composition Assessment Calculate lean body mass and fat mass.
	15. Laboratory - Measurement of Muscular Power Graph the differences in aerobic and anaerobic power in classmates.
	16. Laboratory - Measurement of Absolute and Relative Muscular Strength Explain the differences in absolute and relative muscular strength.
	17. Laboratory - Electromyography Conclude the primary muscle mover in several exercises.
	Describe the measurement of work, power, energy expenditure, and economy.
	Examine the differences in aerobic and anaerobic exercise.
	Summarize the effect exercise has on the immune system.
	Explain the role of the nervous system in muscle contraction.
	Describe the structure and mechanics of breathing during exercise.
	Examine the circulatory systems response to exercise.
	Examine the role of nutrition in energy production.
	Evaluate methods of measuring body composition.
	Evaluate how to exercise safely in the heat, cold, and at high altitudes.
	Evaluate the effectiveness of various pharmacological and nutritional aids to performance.
	Demonstrate measurement of blood pressure, heart rate, and resting and exercise electrocardiogram.
	Evaluate static and dynamic pulmonary function.

Compare estimates of VO2max.
Calculate lean body mass and fat mass.
Graph the differences in aerobic and anaerobic power in classmates.
Explain the differences in absolute and relative muscular strength.
Conclude the primary muscle mover in several exercises.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
Assessment of academic achievement may include, but not be limited to case studies, quizzes, lab reports, group projects, individual projects, discussions, essays, and exams.	
Texts	
Chosen at the discretion of the instructor.	
Satisfies Honors Requirement	Satisfies Wellness Requirement
No	No

BLDA100 - Introduction to Autocad

Overview

Subject	Academic Department	School
Architecture/Construction Tech	Building Sciences	Business, Entrepreneurship, PD
Course Description		
This course introduces students to the built environment and the fundamentals of computer aided design as practiced in the field of architecture. The core competencies of plan, elevation, and section will be studied and developed using Autocad software to draw architectural floor plans, elevations, and construction details. Emphasis will be placed on the relationship of architectural views to the construction process.		
Credit Hours		
4		
Contact Hours		
5

60	0	
Academic Level		
Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL)	Acceptable Prior Learning Credit	
Yes	Interview	
Credit for Prior College Level Learning (CPCLL) Details		
Interview given in department-by-department faculty. Faculty will interview applicants based on submitted portfolio and will assess against evaluation rubric. Evaluation rubric and student checklist located in department office.		

Goals, Topics, and Objectives

Course Goals	
The goal of this course is to introduce students to the fields of architecture and construction and to develop skills using Autocad software to create architectural drawings as part of the construction process.	
Core Course Topics	
1. Introduction to the built environment	
2. Measurement, scale, and geometric construction	
3. Use Autocad software to draw plan and elevation drawings	
4. Use Autocad software to draw construction details	
5. Annotation and dimensioning	
6. Architectural documentation	

Describe the stages of a project from conceptualization to finished construction.
Define the role of design professionals, contractors, and trades people in relation to the built environment.
Define the imperial measurement system.
Explain the concept of architectural scale.
Construct geometric shapes using the appropriate method for each shape.
Draw residential floor plans.
Draw residential building elevations.
Draw construction details.

Draw residential building sections.
Draw all required annotation on construction documents.
Dimension construction documents following industry standards.
Organize architectural views to create balanced sheet layouts.
Print construction documents correctly based on scale and line weight.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
The following assessment tools will be common to all sections:	
• Assignments	
• Quizzes	
• Final Exam	
Satisfies Honors Requirement	Satisfies Wellness Requirement

BLDA110 - Visual Communications

Overview

Subject Architecture/Construction Tech	Academic Department Building Sciences	School Business, Entrepreneurship, PD
Course Description This course introduces students to a project based, hands on approach to visual communication in the fields of architecture and design. Traditional and digital methods and techniques will be used to explore basic principles of design, color theory, image production, composition, 3D modeling, lighting, and scene creation. Students will develop and present design projects using both digital media, and print media.		
Credit Hours 4		
Contact Hours 5		
Course Fee 60	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Interview	
Credit for Prior College Level Learning (CPCLL) Details Interview, given in department-by-department faculty. Faculty will interview applicants based on submitted portfolio and will assess against evaluation rubric. Evaluation rubric and student checklist located in The School of Business, Entrepreneurship, & Professional Development office.		

Goals, Topics, and Objectives

Course Goals	
Students will be empowered to design, create, and present original, and composite design projects to prospective clients and employers.	
Core Course Topics	
1. Graphic Principles, Concepts and Terminology	
2. Traditional visual communication	
3. Digital Modeling	
4. Architectural scene creation	
5. Tradigital Visual communication	
6. Architectural presentation graphics	
7. Architectural portfolio	

Identify Examples of design elements in existing architecture and art
Apply basic color theory techniques to create a composite image
Identify examples of exemplary layout and composition in existing art and architecture
Develop 2D and 3D sketches
Sketch & render traditional elements of architectural entourage
Render 3D objects with shade and shadow
Develop basic and advanced 3D geometry using architectural modeling software
Create models of architectural objects using architectural drawings and images

Create, edit, and apply materials to digital geometry and models.
Create, and place architectural components and entourage in an architectural model
Locate cameras, and create scenes that properly present architecture.
Place lights, and create shadows that are geographically appropriate for each scene.
Develop composite images, using photographs, digital creations, and hand rendered images
Create digital presentations for large audiences
Create, print, and prepare presentation boards using composite images
Using graphics created in all ACT classes, students will create and present a digital, and physical architectural portfolio.

Assessment, Requirements, and Outcomes

BLDA120 - Introduction to Carpentry

Overview

Subject Architecture/Construction Tech	Academic Department Building Sciences	School Business, Entrepreneurship, PD
Course Description An introductory carpentry course developing the skills needed to perform layout, measurement, cutting, and fastening operations. These core competencies will be developed through individual projects. Emphasis will be placed on the safe and proper use of hand and power tools, proper layout, accuracy, and developing a sense of craftsmanship.

Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Interview	
Credit for Prior College Level Learning (CPCLL) Details The student interview must provide evidence that illustrates competency in all course learning objectives. Interview will be given in the department-by-department faculty. Faculty will interview applicants and assess against an evaluation rubric. Evaluation rubric and student checklist located in department office. Applicant may bring supporting evidence (pictures, letters, etc.) to the interview to support their request for credit.		

Goals, Topics, and Objectives

Course Goals The goal of this course is to introduce the student to the tools and procedures used to fabricate millwork and cabinetry in the construction industry.
Core Course Topics - Wood as a building material - Measurement, layout, and accuracy - Proper use of hand and power tools - Project design and material estimating - Hand and power tool skill development - Finish carpentry techniques
Describe the properties of wood and wood products used in the construction industry.
Explain the impact of wood properties.
Define the imperial measurement system.
Explain different procedures used for material layout.
Demonstrate accuracy related to individual projects.

Demonstrate the proper use of hand tools.
Demonstrate the proper use of power tools.
Design individual projects.
Document project design ideas.
Estimate required material needed to complete individual projects.
Develop proficiency using hand tools to complete individual projects.
Demonstrate proficiency using power tools to accurately process materials.
Analyze required fabrication techniques used in project assembly.
Demonstrate proficiency in multiple joining techniques.

Assessment, Requirements, and Outcomes

BLDA130 - Introduction to Revit

Overview

Subject Architecture/Construction Tech	Academic Department Building Sciences	School Business, Entrepreneurship, PD
Course Description This course introduces students to the built environment using Building Information Modeling (BIM) software. In this class students will use Revit software to construct three dimensional building models as a base to create floor plans, elevations, and construction details. Emphasis will be placed on the relationship of three dimensional modeling to the overall construction documentation process.		
Credit Hours 4		
Contact Hours 5		
Course Fee 60	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Interview	
Credit for Prior College Level Learning (CPCLL) Details Interview given in department-by-department faculty. Faculty will interview applicants based on submitted portfolio and will assess against evaluation rubric. Evaluation rubric and student checklist located in department office.		

Goals, Topics, and Objectives

Course Goals The goal of this course is to introduce students to Building Information Modeling (BIM) software and the development of two-dimensional architectural drawings based on a three-dimensional building model.
Core Course Topics - Develop three-dimensional building models - Use Revit software to create two-dimensional architectural views - Anotation and Dimension - Basic family creation using Revit software - Architectural documentation
Construct building models consisting of walls, floors, ceilings, and roofs
Develop camera views of building models for presentation and discussion
Evaluate building models for accuracy
Create floor plans
Modify building elevations
Develop building sections

Develop construction details
Draw all required annotation on construction documents
Dimension construction documents following industry standards
Develop basic parametric families
Modify family properties
Evaluate effectiveness of finished families
Organize architectural views to create balanced sheet layouts
Print construction documents correctly based on scale and line weight

Assessment, Requirements, and Outcomes

BLDA135 - Soils and Foundations

Overview

Subject Architecture/Construction Tech	Academic Department Building Sciences	School Business, Entrepreneurship, PD
Course Description This course examines the principles and behaviors of soils in construction. Topics include the study of physical and mechanical properties of soils, design considerations, and construction applications. Laboratory and field tests are performed, along with an introduction to design principles of concrete and foundations.		
Credit Hours 4		
Contact Hours 5		
Course Fee 60	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) Yes		Acceptable Prior Learning Credit Interview
Credit for Prior College Level Learning (CPCLL) Details Interview		

Goals, Topics, and Objectives

Core Course Topics
1. Soil composition and terminology
2. Soil types and structure
3. Properties of soils
4. Soil Classification
5. Engineering properties of soil
6. Soil Reports
7. Fundamentals of concrete
8. Shallow foundations
9. Deep foundations
Define soil material constituents and their origins.
Define the major soil types.
Identify shapes and sizes of particles to help determine soil types.
Assess the relationship of clay and water and the chemical composition of clays.
Define the basic soil structure, and explain how it relates to soil groupings and types.
Employ the indexing properties of soils, and explain how they relate to type and condition of soil, strength, and the compressibility of the soil.

Calculate the relative density of a soil.
Interpret the different classification systems of soils, including the United Soil Classification System and the American Association of State Highway and Transportation Officials (AASHTO) System.
Determine the plasticity index and the liquid limit of a soil sample.
Categorize the various methods of obtaining soil samples from the field.
Differentiate the effects of water on soils.
Appraise the common drainage and dewatering techniques used.
Apply how drainage is applied in construction, including the use of foundation drains, blanket drains, interceptor drains, filters, synthetic fabrics, land drainage, and soil percolation.
Define frost heave in soils.
Describe various methods of soil sampling.
Interpret and apply data from a soils report.
Create concrete test samples demonstrating proper concrete mix ratios.
Perform concrete compressive strength tests.
Identify and describe shallow foundations.
Identify and describe deep foundations.

BLDA140 - Construction Systems 1

Overview

Subject Architecture/Construction Tech	Academic Department Building Sciences	School Business, Entrepreneurship, PD
Course Description This class focuses on both residential and commercial construction framing systems, techniques, materials and methods. Course work will be a mix of hands on construction, physical modeling, digital modeling, and building detailing.		
Credit Hours 4		
Contact Hours 5		
Course Fee 60	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) Yes		Acceptable Prior Learning Credit Interview
Credit for Prior College Level Learning (CPCLL) Details Interview, given in department-by-department faculty. Faculty will interview applicants based on submitted portfolio and will assess against evaluation rubric. Evaluation rubric and student checklist located in School of Business, Entrepreneurship, and Professional Development office.		

Goals, Topics, and Objectives

Course Goals Students will gain a basic knowledge of both residential and commercial materials, and methods for structural foundations and framing
Core Course Topics
1. Residential and commercial foundation materials and systems
2. Framing methods and materials
3. Traditional and engineered wood products
4. Floor framing
5. Wall framing
6. Sheathing and engineered panel products
7. Framing openings
8. Rafters & trusses
9. Residential and Commercial Fasteners

Identify residential and commercial foundation types.
Design and install residential and commercial foundation systems.
Identify and install Structural framing members for both residential and commercial applications.
Identify and install engineered wood products in both residential and commercial applications.
Using traditional construction documents, layout and assemble a traditional floor frame.
Using traditional construction documents, layout and assemble a traditional wall assembly.
Add Windows, doors and openings to a traditional wall layout.
Demonstrate an understanding of structural bracing.
Identify and install structural sheathing and bracing.
Calculate the the requirements for structural headers and beams.
Identify residential and commercial truss components and assemblies.
Design and install structural trusses.
Identify, select, and install appropriate fasteners for various architectural connections.

BLDA150 - Environmental Bldg Systems

Overview

Subject Architecture/Construction Tech	Academic Department Building Sciences	School Business, Entrepreneurshp, PD
Course Description This course combines building systems design with fabrication and installation. Students will design mechanical, electrical, and plumbing systems based on design data, building codes, and sustainability. Students will also complete heat loss calculations and analyse building materials based on their thermal qualities. The practical fabrication and installation of plumbing and electrical systems will take place in the lab as it relates to the design of these systems. Emphasis will be on the interrelationship of environmental building systems and the challenges they pose to the designer related to building performance.		
Course Pre-requisite(s) BLDA100 Introduction to Autocad		
Credit Hours 4		
Contact Hours 5		
Course Fee 60	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Interview	
Credit for Prior College Level Learning (CPCLL) Details Interview given in department-by-department faculty. Faculty will interview applicants and will assess against evaluation rubric. Evaluation rubric and student checklist located in department office.		

Goals, Topics, and Objectives

Course Goals
The goal of this course is to introduce students to the design of mechanical, electrical, and plumbing systems and to develop an appreciation for the interrelationship of these systems to the built environment.
Core Course Topics
- Heat loss calculations - HVAC systems and duct design - HVAC documentation - Supply water and drainage system design

- Plumbing systems documentation - Plumbing system fabrication and installation - Electrical system design - Electrical system documentation - Electrical fabrication and installation
Analyze the thermal properties of construction materials.
Develop heat loss calculations for a residential structure.
Analyze the benefits of different heating systems.
Design supply and return air duct systems.
Draw a supply and return air duct system.
Annotate HVAC floor plans following industry standards.
Print HVAC drawings using correct scale and line weights.
Explain the plumbing codes as they relate to residential supply water and drainage systems.
Summarize the benefits of different plumbing materials.
Draw supply water and drainage systems.
Annotate plumbing floor plans following industry standards.
Print plumbing drawings using correct scale and line weights.
Following provided blueprints and using PEX piping, install a supply water system.
Following provided blueprints and using PVC piping, install a drainage system.
Demonstrate proper plumbing joining techniques using multiple materials.
Explain the electrical codes (NEC) related to residential design.
Develop a residential electrical floor plan.
Draw an electrical floor plan including all required lights, switches, and receptacles.
Annotate an electrical floor plan following industry standards.
Print electrical drawings using correct scale and line weights.
Following provided blueprints, install lights, switches, and receptacles.
Following provided blueprints, install an electric service panel.
Connect all lights, switches, and receptacles to the service panel.
Test the electrical installation for proper circuitry.

Assessment, Requirements, and Outcomes

BLDA230 - Residential Studio

Overview

Subject Architecture/Construction Tech	Academic Department Building Sciences	School Business, Entrepreneurship, PD
Course Description This studio course continues the study of the built environment. Students learn design fundamentals as they relate to design challenges within a residential structure including vertical circulation, detailing, and the space planning. Topics covered include design, layout, material selection, detailing, and documentation. Using three-dimensional design software, students will use modeling to solve design problems and create plan, elevation, and section views as part of the architectural design and documentation process. Emphasis will be placed on the use of digital and physical modeling to blend functionality, aesthetics, and sustainability.		
Course Pre-requisite(s) BLDA130 Introduction to Revit		
Credit Hours 4		
Contact Hours 5		
Course Fee 60	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) Yes		Acceptable Prior Learning Credit Interview
Credit for Prior College Level Learning (CPCLL) Details Interview given in department-by-department faculty. Faculty will interview applicants and assess against evaluation rubric. Evaluation rubric and student checklist located in department office.		

Goals, Topics, and Objectives

Course Goals The goal of this course is to introduce students to basic design fundamentals used in developing and documenting functional and aesthetically pleasing design solutions in a residential structure.
Core Course Topics 1. Detailing and design fundamentals 2. Vertical circulation design 3. Fenestration design and detailing 4. Space planning and documentation 5. Presentation and Construction document development

Determine client design requirements.
Develop design development drawings.
Determine proper level of detailing and documentation.
Design a stair layout using digital modeling software.
Explain the building codes related to stair design.
Compare different stair and railing construction techniques.
Select stair and railing components from vendor websites.
Design door and window layouts for a given space.
Explain the building codes related to means of egress.
Compare the functionality of different door and window types.
Analyze fenestration design as it relates to style and sustainability.
Design and draw a kitchen layout for a given space.
Design and draw a bathroom layout for a given space.
Design and draw a home office for a given space.
Draw required views to support space planning layouts.
Annotate and dimension construction documents.
Organize architectural views to create a balanced sheet layout.
Print construction documents correctly based on line weight and scale.
Print and display design development documents.

BLDA240 - Construction Systems 2

Overview

Subject Architecture/Construction Tech	Academic Department Building Sciences	School Business, Entrepreneurship, PD
Course Description This course focuses on building enclosure and performance with reference to finish systems, geographic location, cost, and proper installation techniques. Topics include reading and evaluating blueprints, and working with traditional hand and power tools. Lab activities examine residential and commercial enclosure systems, including insulation, interior and exterior finishes, weather barriers, doors, windows and flashing. Emphasis will be placed on building performance and sustainability.		
Credit Hours 4		
Contact Hours 5		
Course Fee 60	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) Yes		Acceptable Prior Learning Credit Interview

Goals, Topics, and Objectives

Course Goals The goal of this course is to properly identify, select, install and analyze various building systems to maximize building performance.
Core Course Topics 1. Doors 2. Windows 3. Cornice Details 4. Roof Systems 5. Exterior Finish Systems 6. Insulation systems and sustainability 7. Interior Finish Systems

Identify residential and commercial door assemblies and installation techniques.
Install residential doors.
Identify residential and commercial window assemblies and installation techniques.
Install residential windows.
Identify, design, and detail residential cornice sections.
Construct a residential cornice.
Identify residential and commercial roof types, styles, and systems.
Construct a residential roof system.
Identify commercial and residential exterior finish materials. Including but not limited to roofing materials, siding, and trim.
Design and construct an exterior finish system for a residence.
Identify commercial and residential materials and methods for acoustic and thermal building insulation.
Design and construct an insulated structural assembly.
Evaluate an insulated building assembly for energy efficiency and performance.

Identify interior finish materials, systems, and installation methods. Including but not limited to; drywall, paneling, finish flooring, tile, and ceilings.

BLDA250 - Surveying & Site Design

Overview

Subject Architecture/Construction Tech	Academic Department Building Sciences	School Business, Entrepreneurship, PD
---	--	--

Course Description

This course focuses on the principles of basic land surveying and site development. Topics include basic surveying methods, common hardware, surveying tools, site analysis and site design. Course work will be a combination of hands on data collection, digital modeling and construction documentation. Students will learn the principles of linear measurement, angle and elevation measurement, topography, building layout, and site analysis and design.

Interview, given in department-by-department faculty. Faculty will interview applicants and will assess against evaluation rubric. Evaluation rubric and student checklist located in [School of Business, Entrepreneurship, and Professional Development](#) office.

Goals, Topics, and Objectives

Course Goals

The goal of this course is to introduce students to basic surveying tools and methods, and the use of civil engineering software to create site plans and civil engineering drawings.

Core Course Topics

- Principles of surveying
- Surveying tools and techniques
- Linear and angle measurement
- Field procedure for building layout
- Creating digital maps and topography
- Site layout and design
- Civil engineering documentation

- | |
|---|
| Describe the different types of surveys and their uses. |
| Describe the acquisition of surveying data from local, state, and federal municipalities. |
| Accurately set up survey equipment in the field. |
| Use sight and digital survey equipment to gather survey data. |
| Define methods for linear and angle measurement. |
| Accurately measure linear distance and angles in the field. |
| Establish dimension control points in the field. |
| Lay out building corners and set batter boards. |
| Create topography maps from field data. |
| Lay out horizontal and vertical curves. |
| Draw contour map profiles from collected data. |

- | |
|--|
| Determine existing site conditions. |
| Locate and draw utilities, structure, proposed and existing conditions. |
| Annotate and dimension the site plan. |
| Organize civil engineering views to create balanced sheet layouts. |
| Print civil engineering documents correctly based on scale and line weights. |

BLDA260 - Construction Estimating

Overview

Subject Architecture/Construction Tech	Academic Department Building Sciences	School Business, Entrepreneurship, PD
---	--	--

Course Description

Covers the estimation of residential and commercial construction costs using the quantity survey method. Discusses the importance of using construction documents for accurate construction cost estimating related to material and labor. Course utilizes spreadsheet applications for preparing cost estimating forms for material, labor, and other costs.

Credit Hours

Interview, given in department-by-department faculty. Faculty will interview applicants based on submitted portfolio and will assess against evaluation rubric. Evaluation rubric and student checklist located in [School of Business, Entrepreneurship, and Professional Development](#) office.

Goals, Topics, and Objectives

Course Goals

The goal of this course is for students to identify and understand the residential and commercial project areas that must be estimated and use tools and methodologies best suited to quantify the materials, labor methods, and scheduling required for project delivery.

Core Course Topics

- Methods for Estimating
- Professional roles in the construction process
- Site development and coordination
- Foundations and Substructure
- Superstructure
- Exterior Finishes
- Interior Finishes
- Insulation and Mechanical Systems
- The bidding process

- | |
|--|
| Navigate and interpret basic architectural working drawings |
| Demonstrate basic calculations, including area and volume |
| Identify and understand basic types of estimates and their appropriate applications |
| Record a database of information on labor and material costs |
| Explain the application of mathematics and geometry in cost estimating |
| Identify and distinguish the roles and responsibilities of the various participants in the design and construction process |
| Identify and quantify the materials, methods, labor, and associated cost required for site design, development, and construction |

Identify and quantify the materials, methods, labor, and associated cost required to design and construct various residential and commercial foundation systems
Identify and quantify the materials, methods, labor, and associated cost required to design and construct various residential and commercial structural and framing systems
Identify and quantify the materials, methods, labor, and associated cost required to design and construct various residential and commercial exterior finish systems, including: masonry, siding, roofing, trim, paint
Identify and quantify the materials, methods, labor, and associated cost required to design and construct various residential and commercial interior finish systems, including: drywall, paneling, flooring, ceiling finishes, paint and trim
Identify and quantify the materials, methods, labor, and associated cost required to design and construct various residential and commercial insulation systems, heating and cooling systems, plumbing and electrical systems
Develop and prepare professional estimates and bidding documents

BLDA265 - Civil Technology Studio

Overview

Subject Architecture/Construction Tech	Academic Department Building Sciences	School Business, Entrepreneurship, PD
Course Description Students will explore the materials and methods used in the development of both civil and commercial construction projects. Students will analyze existing civil and commercial projects with a focus on the development of project specific details centered on material use, performance, and adherence to industry specific design guidelines. Projects will include: bridges, roadways, commercial site development, and civil construction details.		
Course Pre-requisite(s) BLDA250 Surveying & Site Design		
Credit Hours 4		
Contact Hours 5		
Course Fee 60	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Interview	
Credit for Prior College Level Learning (CPCLL) Details Interview		

Goals, Topics, and Objectives

Core Course Topics
- Materials and methods used to assemble components of commercial and civil construction projects. - Performance properties of materials within a structural assembly - Projects specifications, standards, and details - Construction detailing - Construction Documentation - Construction standards and codes
Demonstrate an understanding of multiple materials, based on their physical properties, and performance under different environmental and structural conditions.
Demonstrate an understanding of how different materials perform in a structural assembly. For example, reinforcing steel in foundations and structural concrete, expansion joints in roadways
Using local design standards for roadways, bridges, and other civil construction projects, create project specific details for commercial and civil projects that include: bridges, parking lots, storm drainage systems, roadway design, and utility layout and design.

Analyze existing construction projects and documents to develop construction details that adhere to industry standard principles of design and construction.
Demonstrate an understanding of traditional detailing techniques, including the use of lineweights, textures, and notation.
Develop a set of construction documents and details that demonstrate an understanding of the use of multiple materials in a structural assembly.
Demonstrate an understanding of proper material size, location and relationship in a structural assembly.
Demonstrate the ability to use local codes and building standards as a reference to develop commercial and civil design details.

BLDA270 - Commercial Design Studio

Overview

Subject Architecture/Construction Tech	Academic Department Building Sciences	School Business, Entrepreneurship, PD
Course Description Explores how to develop a commercial building for an assigned building site and use. Simulates "real-world" experiences in the transition from design to construction documents. Includes site planning, design development and a partial set of construction documents with plans, elevations, sections and details. Revit software is utilized for document production.		
Course Pre-requisite(s) BLDA130 Introduction to Revit		
Credit Hours 4		
Contact Hours 5		
Course Fee 60	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Interview	
Credit for Prior College Level Learning (CPCLL) Details Interview		

Goals, Topics, and Objectives

Course Goals
The goal of this course is to develop an understanding of commercial design and construction from basic site layout to detailed construction document drawings.
Core Course Topics
- Pre-Design Processes - Site Design - Building Schematic Design Development - Building Design Development - Commercial Detailing
Discuss the beginning processes for a commercial project including obtaining an architectural survey and appropriate soil exploration and testing.
Given a project site location and survey, develop an analysis of the site including information regarding zoning, soils, weather, solar positioning, topography, various sensory impressions, existing vegetation, circulation, adjacencies that may impact the design process.
Develop a site plan and supporting documentation and views suitable for actual submittal to the city based on posted submittal requirements.

Present, orally and visually, the site and project proposal as if given to the city planning commission.
Develop a schematic design development package, including: floor plans, elevations, and building sections
Develop a design development package of information including: exterior and interior material selections, wall types, floor(s), ceiling(s) and roof assemblies, glass and glazing assemblies, doors and windows, various MEP fixtures, a structural framing plan and a typical exterior wall section.
Translate design sketches into usable commercial construction details.

BLDE100 - Energy Industry Fundamentals

Overview

Subject	Academic Department	School
Energy Technology	Building Sciences	Business, Entrepreneurshp, PD
Course Description		
Covers basic emerging principles and concepts that affect the energy industry, compliance with safety and health procedures, how electric power and natural gas generation, transmission, and distribution work, and entry-level energy careers. Students will gain an understanding of the energy industry as a prerequisite to occupation-specific knowledge and an understanding of the careers available in the energy industry.		
Course Pre-requisite(s)		
Eligible to take ENG courses at HFC.

Goals, Topics, and Objectives

Core Course Topics
History and Organization of the U.S. Energy Industry
Safety in the Energy Industry
Electric Power Generation
Electric Power Transmission and Distribution
Energy Industry Fundamentals
Careers
Applied Math
Define the structure and organization of the Energy Industry.
Identify safety practices in the Energy Industry.
Identify electric power generation systems.
Differentiate between hydro, solar, wind, biofuel and geothermal energy*
Differentiate between the various areas of employment and employment qualifications defined by the energy industry.
Demonstrate applied math skills (ratios and proportions, fractions, decimals, measurement, etc.)*

Goals, Topics, and Objectives

- Core Course Topics
1. Introduction to Energy Technologies
 2. Renewable and Inexhaustible Energy Sources
 3. Non-Renewable Energy Sources
 4. Energy, Power, and the Environment
 5. Energy and Power conversions as applied in Building Technologies and Industrial Technology Programs (DOE-EERE)

Describe various energy sources and the basics of force, work and power
Describe Solar, thermal, solar voltaic, geothermal, wind, biomass, generation, and power co generation
Describe Fossil Fuels, Petroleum, Natural Gas, and Nuclear Energy
Compare various energy technologies from an environmental and economic standpoint
Demonstrate knowledge of the US and SI systems of measurement and convert from one system to another

BLDE103 - AC/DC Electricity

Overview

Subject Energy Technology	Academic Department Building Sciences	School Business, Entrepreneurshp, PD
Course Description Covers the fundamentals of DC and AC circuits and circuit calculations. Examines electrical definitions, units of electrical measure, use of meters, series and parallel resistive circuits, capacitance, and inductance. Also explores basic wiring techniques and how to troubleshoot circuit faults.		
Credit Hours 3		

Contact Hours

3

Course Fee 0	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Interview
Credit for Prior College Level Learning (CPCLL) Details Interview	

Goals, Topics, and Objectives

- Core Course Topics
1. DC and AC Electricity
 2. Electrical Safety
 3. Series/Parallel Circuits
 4. Ohm's Law/Power Formula
 5. Electrical Components
 6. Electrical Wiring

Describe concepts of AC theory, and be able to differentiate it from DC
Describe concepts of basic electricity theory; and define terms voltage, current, resistance, and power
Demonstrate in labs and on exams basic electrical safety
Describe concepts of series and parallel circuits, and explain the differences between them
Demonstrate a working knowledge of how and why conductor size and type affect the flow of current; be able to calculate proper conductor size in a circuit
Calculate line loss in an electrical conductor, good conductors vs. poor conductors, and semi-conductors
Demonstrate transformers, resistors, and relays/contactors usage
Demonstrate proper wiring techniques for basic AC and Dc projects

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
The following assessment tools will be common to all sections:

- Assignments
- Quizzes
- Final Exam

- Grading Scale
- 90-100 = A
 - 80-89 = B
 - 70-79 =C
 - 60-69 = D
 - 0 - 59 = E

Satisfies Honors Requirement No	Satisfies Wellness Requirement No

BLDE115 - Heating Technology

Overview

Subject Energy Technology	Academic Department Building Sciences	School Business, Entrepreneurshp, PD
Course Description Prepares students to work on residential and light commercial gas, oil, and electric forced-air and hot-water heating systems and related equipment. Explains standard equipment and systems, how to provide service checks, and the preliminary skills needed to installation, repair, and replace heating equipment using appropriate service tools and instruments. Laboratory activities included.		
Credit Hours 2		

Contact Hours

4

Course Fee 0	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

- Core Course Topics
1. Basic Heating/Air Conditioning
 2. Unit Orientation
 3. Electrical/Wiring Diagrams for Heating Applications
 4. Gas Furnace Controls
 5. Gas Furnace Planned Service Checks
 6. Troubleshooting Furnace Circuits
 7. Troubleshooting Other Furnace Components
 8. Forced Air Furnaces
 9. Installation
 10. Ignition Systems and Components
 11. Heating Unit Troubleshooting and Service
 12. Heating Unit Manufacturer Data Packages

Identify standard components of a heating system and their purpose.

Analyze relevant electrical diagrams.
Differentiate between forced air and hydronic heating systems.
Describe venting and drain systems associated with heating units.
Differentiate between various controls associated with heating systems.
Describe installation procedures.
Describe standard servicing and troubleshooting procedures.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

- Lecture/demonstration and online web site generated research
- Text-generated scenarios
- Team collaborative projects
- Hands-on laboratory exercises
- Internet activities and research
- Problem solving through scenarios

Texts To be determined by instructor.	Satisfies Wellness Requirement
Satisfies Honors Requirement No	No

BLDE150 - Construction Blueprint Reading

Overview

Subject Energy Technology	Academic Department Building Sciences	School Business, Entrepreneurshp, PD
------------------------------	--	---

Course Description
Explores mechanical (HVAC), architectural, and electrical drawings required for energy technology, plumbing and pipefitting, electrical, and construction related trades. Covers print reading, interpreting common symbols, working notes, views, and title blocks. Introduces project management and estimating. Note: Basic measurement and math skills required for print reading section.

Credit Hours
2

Contact Hours
2

Course Fee 0	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Core Course Topics

- Reading mechanical and architectural prints for construction
- Reading SI measurements and scale sizing of construction blueprints using basic math skills
- Reading blueprint symbols related to mechanical and architectural trades
- Reading mechanical and architectural blueprints according to print location grids

Demonstrate the difference between construction architectural prints and mechanical factory/shop prints.
Demonstrate and understand the scale sizes of different prints.
Apply fraction reducing skills to reading measuring scales and tapes.
Calculate the conversion between US standards and SI units.
Identify specific sections on blueprints.
Demonstrate the use of grid systems on prints.
Explain important note information on prints.
Describe extra notes on drawings.
Differentiate between different drawing views.
Describe the purpose and use clouded areas on blueprints.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

Each student must complete the weekly assigned chapter readings and questions at the end of each chapter. The reading and questions build on each of the skill sharpening sessions (5) and are the stepping stones toward the final. If this work is not completed each skills sharpening session will become more difficult and will be reflected when the student takes the final. Those that complete the weekly assignments will find this class not that difficult. Classroom verbal reading will be required along with a verbal review of each chapter every week. Skill Sharpening Sessions must be attended and completed or 10 points will be deducted for every week missed and not completed (late assessment). All skills sharpening sessions must be made up. It is your responsibility, not the instructor's, to make other arrangements.

Texts

BLDE151 - Air Conditioning Technology

Overview

Subject: Energy Technology
Academic Department: Building Sciences
School: Business, Entrepreneurship, PD

Course Description
Prepares students to be multi-level service technicians for residential HVAC equipment. Emphasizes hands-on troubleshooting and maintaining residential total systems. Covers a combination of heating and air-conditioning systems including system design and layout, equipment selection, duct sizing, venting, air balancing and adjustments, air quality control, psychometrics of air conditioning systems, applied installation, and repair of total systems. Also discusses electrical diagrams.

Acceptable Prior Learning Credit Interview
Credit for Prior College Level Learning (CPCLL) Details Interview

Goals, Topics, and Objectives

- Core Course Topics
- 1. Cooling systems residential and commercial.
 - 2. Psychometrics
 - 3. AC Service and Maintenance

- Cooling systems, residential and commercial. Psychometrics AC Service and Maintenance
- Explain basic refrigeration principles and components
- Demonstrate and apply principles of air distribution and psycho-metrics
- Calculate load calculation
- Demonstrate the principles and operations of residential HVAC systems
- Demonstrate ability to work on residential HVAC systems and perform concise HVAC service reports

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

BLDE200 - Commercial Heating

Overview

Subject: Energy Technology
Academic Department: Building Sciences
School: Business, Entrepreneurship, PD

Course Description
An advanced-level course in light commercial heating, large commercial-industrial burners, light commercial rooftop units, building and plant commercial-industrial heating controls, equipment, and systems. Discusses possible functions, operations, and components related to pneumatic, electronic, and direct digital control (DDC) building control systems. Also addresses use of controls to optimize energy savings. Laboratory activities.

Credit Hours
4

Contact Hours
4

Course Fee: 0
Miscellaneous Department Fee: 0
Academic Level: Undergraduate
Eligible for Credit for Prior College Level Learning (CPCLL): Yes
Acceptable Prior Learning Credit Interview
Credit for Prior College Level Learning (CPCLL) Details Interview

Goals, Topics, and Objectives

- Core Course Topics
- 1. Building & Plant Commercial-Industrial Heating Systems
 - 2. Light Commercial Heating System
 - 3. VVTs, VAVs, FPBs
 - 4. Electrical Control Systems
 - 5. Control Systems/DDC
 - 6. BAS Retrofit/Building Maintenance

- Identify the best practices, standards and the characteristics for operation and maintenance to show acceptable familiarity with typical power and process systems and equipment
- Apply the principles of light commercial heating including fuel system design, air distribution, design, and the operation of electric resistance, forced air, hydronic, and steam heating systems
- Perform installation, start-up checking, and operational tests as required by manufacturer's specifications and local and federal codes
- Install and service the heating systems of packaged air-conditioning units, commercial and industrial oil and gas burners, and large heating unit flame safeguard control systems
- Differentiate between single zone system, VVTs, VAVs, and FPBs
- Explain the principle behind and usage of VVTs/controls
- Demonstrate the principle behind and the usage of VAVs/controls
- Demonstrate the principle behind and the usage of FPBs/controls
- Explain relevant electrical/mechanical systems and how they work.
- Demonstrate pneumatic systems and how various air pressure relate to the system working properly in day, night, summer, and winter modes
- Demonstrate an understanding of the set up and function of digital systems
- Explain BAS and what systems are controlled in the commercial buildings

Assessment, Requirements, and Outcomes

BLDE202 - Electric Field Service Meterin

Overview

Subject: Energy Technology
Academic Department: Building Sciences
School: Business, Entrepreneurship, PD

Course Description

An introduction course on kilowatt-hour meters and meter operations. Several devices, procedures, and metering concepts are presented including basic electrical theory and electrical circuit meter diagrams associated with testing and connection devices. Students will become familiar with automatic compensations and adjustments built into watt-hour meters to maintain meter accuracy. Various instrument transformer applications are discussed. Students will be able to identify and demonstrate personal and electrical safety procedures for testing and diagnostics at various metering installations.

Goals, Topics, and Objectives

Core Course Topics

1. Safety
2. Watthour Meter Principles
3. Poly-Phase Metering Systems
4. Current, Voltage, Instrument Transformers - Metering
5. Poly-Phase Rated Transformer Principles
6. Field Meter Installation Checks and Inspections
7. Watthour Meters- Principles of Accuracy Testing
8. Self-Contained Poly-Phase Meter Testing
9. Demand Meters and Reactive Meters
10. Customer Relations - High Bill Complaints
11. Energy Diversion - Identification and Notification

Identify the various types of watthour meters used in an electric field installation and their purpose in delivering quality electric service.*
Identify the various types of instrument transformers and their function in providing proper current and voltage in an electric field metering system.*
Draw an electrical diagram, identifying how connections are made from meter to testing equipment, including metering components.*
Identify and define three different types of single and poly-phase metering configurations utilized.
Define the function of compensation and adjustments built into watthour metering systems.
Identify the steps of troubleshooting a meter and methods for identifying single, three-phase, poly-phase, and self-contained meter installations.
Define how a meter is protected against tampering and weather/animal/insect conditions.*
Define the application of current transformer class ratings, turns and current ratios and polarity testing methods.*
Identify and define the testing and calibration techniques of the various types of single-phase transformer-rated meters and the equipment used to conduct these tests.*
Identify safe isolation/protective procedures for inspection and testing of metering equipment, and demonstrate how a meter can be isolated utilizing appropriate tools/equipment.*

BLDE203 - Natural Gas Distribution and Maintenance

Overview

Subject	Academic Department	School
Energy Technology	Building Sciences	Business, Entrepreneurship, PD

Course Description

An introduction course on the fundamentals of natural gas distribution and maintenance. Topics to be covered are: Safety, proper excavation procedures, corrosion and pipe protection, gas leaks, mechanical joining, service line repairs and renewals, and main repair and fitting.

Course Pre-requisite(s)

[TAMA110 Industrial Appl of Basic Math](#), or its equivalent, or higher

Credit Hours

Core Course Topics

1. Safety
2. Excavation/Underground
3. Corrosion and Pipe Protection
4. Leaks
5. Mechanical Joining
6. Service Line Repairs and Renewals
7. Main Repairs and Fittings

Identify PPE.
Define the proper approach towards hazards commonly found on the job.
Define personal and on-the-job safety practices.
Identify traffic safety and worksite set up procedures.
Identify steps that must be taken prior to digging.
Identify common digging practices and equipment.
Define "behind the curb" (BC), "building a wall", and "street cut" terminology.
Identify post-construction work tasks.
Demonstrate how to read a map.
Demonstrate how to locate piping.
Identify the surveillance and damage prevention processes.
Define abnormal operating conditions.
Define Corrosion.
Identify the effects of corrosion.
Identify the different levels in the Spectrum of Corrosion.
Define corrosion control and monitoring.
Demonstrate how to perform a combustible gas indicator (CGI).
Define the leak detection process.
Define the proper response to a leak.
Define the leak grading process (3 levels).
Identify the various joining techniques.
Demonstrate pipe/tube joining.

Identify when the various methods of mechanical joining are used.
Identify the types of service line repairs.
Identify the preferred method for completing service line repairs.
Identify the steps for performing service line installations.
Identify the common fittings, clamps, and tees used to perform service line tasks.
Identify the types of "Main Repairs".
Identify the preferred methods of repair.
Identify the fittings used in "Main Repair".

BLDE205 - Refrigeration Technology

Overview

Subject Energy Technology	Academic Department Building Sciences	School Business, Entrepreneurshp, PD
------------------------------	--	---

Course Description

Prepares students as multi-level service technicians in the refrigeration field. Covers basic refrigeration system design and the components for various domestic, residential, and light commercial systems. Discusses refrigeration system tools, materials, and instruments. Also covers advanced electrical wiring, refrigeration characteristics, charging, evacuation, dehydration, and refrigerant recovery. Course work includes hands-on wiring and circuit troubleshooting related to both mechanical and electrical components. The EPA Section 608 Technician Certification test in refrigerant reclamation is given at the conclusion of the semester.

Goals, Topics, and Objectives

Core Course Topics

1. Circuit wiring
2. Refrigeration 608 certification
3. Commercial refrigeration electrical circuits
4. Basic Commercial Refrigeration
5. Refrigeration system troubleshooting
6. Refrigeration system piping

Demonstrate use of air conditioning simple and advanced electrical schematics.
Identify and prepare pictorial and ladder refrigeration electrical schematics.
Set up and wire electrical refrigeration diagrams in the laboratory.
Demonstrate Refrigerant Recovery/EPA 608 requirements.
Complete EPA section 608 certification exam.

Describe the concepts of series parallel circuits used in Pump Down Systems.
Create Electrical-Pictorial (wiring diagram) and Ladder (elementary diagram), showing conduits, components, and functional circuits, both power and control.
Develop a Mechanical Outline of the unit, showing the location of major and minor components and showing the refrigeration cycle and systems connected with it.
Describe Sequence of Operation: List all steps for starting and shutting down and for basic operation of the unit.
Arrange Troubleshooting Functional Breakdown: Identify all systems within the unit which will be isolated or checked during troubleshooting operations. List components within each system
Demonstrate use of Trane's Refrigeration Manual for sizing piping for a commercial air conditioning remote system.

BLDE207 - Underground Distribution

Overview

Subject Energy Technology	Academic Department Building Sciences	School Business, Entrepreneurshp, PD
------------------------------	--	---

Course Description

Designed as an introduction to operation and maintenance of underground electrical distribution systems. Electrical theory application for various distribution cables and underground cabinet terminations, cable splicing techniques and troubleshooting of underground circuits are explored. Distribution transformer applications are discussed. Students will be able to identify and demonstrate personal and electrical safety procedures utilized in switching, isolating, testing and diagnostic applications.

Goals, Topics, and Objectives

Core Course Topics

1. Introduction to Underground Electrical Distribution Systems
2. Safety
3. Underground Cables, Splicing, Terminations, and Tools
4. Installation of Underground Systems - Source and Load
5. Grounding, Draining, and Bonding Applications
6. Underground Distribution Transformers - Live-Front and Dead Front
7. Fusing and Protective Devices - Principles and Application
8. Testing and Maintenance of Underground Switchgear
9. Underground Troubleshooting, Switching and Isolating
10. Protective Procedures for Work on Underground Distribution Equipment

Identify the various types of cables used in an underground electric field installation and their purpose in delivering quality electric service.

Identify the various types of distribution transformers and their application in providing proper current and voltage in an underground system.
Draw an electrical schematic diagram, identifying how connections are made from source to load, including cables, switch cabinets, and various protective devices.*
Identify two different types of underground switching cabinets including switching procedures utilized.
Define the steps of troubleshooting an underground distribution circuit and methods for identifying fault location and isolating/restoration techniques.
Identify how a pad-mounted transformer is protected on source and load sides and disconnecting techniques.
Define the application of current transformers, voltage transformers and relay testing methods.
Identify and describe the inspection, tests, and maintenance of the various types of distribution cables and the equipment used to conduct these tests.
Describe sources of electrical and physical hazards at a transformer installation site, and methods of current /voltage protection for working on associated equipment.
Create an operating sequence for switching to de-energize and isolate an underground distribution cable.

BLDE208 - Overhead Distribution

Overview

Subject	Academic Department	School
Energy Technology	Building Sciences	Business, Entrepreneurshp, PD
Course Description		
Designed as an introduction to operation and maintenance of overhead electrical distribution systems. Electrical theory application for various distribution line construction and overhead line configurations, energizing and de-energizing techniques, troubleshooting, and grounding of overhead circuits are explored. Single and three phase distribution transformer applications are discussed. Students will be able to identify and demonstrate personal and electrical safety procedures utilized in overhead distribution switching, isolating, testing and diagnostic applications. Overhead service and power quality issues are analyzed in relation to balanced loading and overall customer satisfaction.		
Course Pre-requisite(s)

Goals, Topics, and Objectives

Core Course Topics
1. Safety Practices
2. Overhead Distribution Lines, Construction, Terminations, and Line Tools
3. Installation of Overhead Distribution Systems - Source and Load
4. Grounding, Shorting, and Bonding Applications
5. Overhead Distribution Transformers - Single and Three Phase
6. Fusing and Line Protective Devices - Principles and Application
7. Testing and Maintenance of Overhead Switchgear
8. Overhead Distribution Troubleshooting, Switching, and Isolating
9. Protective Procedures for Work on Overhead Distribution Equipment
Identify the various types of power and neutral conductors used in an overhead electric field installation and their purpose in delivering quality electric service.

Identify the various types of distribution transformers and their application in providing proper current and voltage in an overhead distribution system.
Draw an electrical schematic diagram, identifying how connections are made from source to load, including power conductors, single/three phase transformers and switches, and various line protective devices.
Identify three different types of overhead switching equipment including procedures utilized for isolating and in-line replacement.
Define the steps of troubleshooting an overhead distribution circuit and methods for identifying fault location and isolating/restoration techniques.
Identify how a three-phase transformer is protected on source and load sides and disconnecting/isolating techniques.
Define the application of overhead distribution current transformers, voltage transformers, relay applications and testing methods.
Identify and describe the inspection, tests, and maintenance of the various types of distribution circuit protection devices and the equipment used to conduct these tests.
Define sources of electrical and physical hazards at a transformer installation site, and methods of current /voltage protection for working on associated equipment.
Create an operating sequence for switching to de-energize and isolate a portion of an overhead distribution circuit.

Goals, Topics, and Objectives

Core Course Topics
1. Heat loss and heat gain calculations.
2. Selection of heating and cooling equipment.
3. Duct design layouts meeting industry duct design standards
4. Construction documents
5. Air balancing methods.
6. Selecting grilles, registers and diffusers
Calculate heat loss/heat gain for residential buildings HVAC systems.
Compare and select the appropriate heating and cooling equipment for a specified need.
Demonstrate lay out an effective duct design that will meet all current design standards and codes.

Develop a set of industry specific construction documents describing the environmental control systems
Demonstrate the ability to properly locate heating and cooling equipment on property according to mechanical codes and ordinances.
Calculate the flow rate for a building, individual rooms and the main trunk lines for supply and return ducts, branch lines and terminals.
Distinguish between and select registers, grilles, and diffusers by their cfm, spread, and throw requirement.

BLDE250 - Energy Audit & Certification

Overview

Subject Energy Technology	Academic Department Building Sciences	School Business, Entrepreneurshp, PD
Course Description For students seeking to become BPI certified residential energy auditors or to understand the principles of energy auditing. Includes training in the principles of energy transfer, building envelopes, energy auditing, air leakage, insulation, windows and doors, heating systems, cooling systems, indoor air quality, lighting, appliances, and water heating. Students will gain the skills required to perform building inspections and make cost effective recommendations for improving energy efficiency. At the conclusion of this class students will be able to sit for the Building Performance Institute (BPI) theory written test for Building Analyst certification.		
Credit Hours 4		
Contact Hours 4		
Course Fee 450	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Interview

Goals, Topics, and Objectives

Core Course Topics
- Residential Energy Use and Codes - Energy equipment and construction techniques - Building Shell and Energy Assessment - Energy Improvement - BPI Certification
Demonstrate an understanding of energy use, conservation, and management.
Describe knowledge of local and state building codes.
Describe basic knowledge of construction related to residential dwellings.
Ability to work with basic tools, heating test equipment, and a blower door.
Identify window types, and performance ratings.
Identify different types of residential insulation, and describe relative performance issues and opportunities.

Identify construction related issues related to air leakage and infiltration.
Identify and describe water heating systems and describe their impact on energy consumption.
Identify and describe various types of lighting and describe their impact on energy consumption.
Evaluate methods for reducing energy costs and improving building efficiency.
Analyze the overall condition and efficiency of heating and cooling systems.
Analyze the overall efficiency of a home and identify primary areas of air leakage in walls, ceilings and foundations.
Demonstrate energy savings through sealed windows, doors and other openings in a residential home including fireplaces, attic hatches and electrical outlets.
Prepare a plan for addressing future upgrades to the building including an economic analysis of payback periods for each planned upgrade.
Demonstrate the knowledge required to pass the BPI certification exam.

Assessment, Requirements, and Outcomes

BLDE260 - Energy Systems Management

Overview

Subject Energy Technology	Academic Department Building Sciences	School Business, Entrepreneurshp, PD
Course Description Presents the technical, economic, and regulatory aspects of energy efficient building energy management. Explores the latest energy and cost-reduction strategies. Focuses on laboratory exercises designed to simulate residential and commercial energy systems.		
Course Pre-requisite(s) Either: ENT-103, ENT-104, ENT-105, ENT-108, ENT 109, ENT 113, and ENT-119, or BLDE-110, BLDE115 Heating Technology , BLDE-120, BLDE-125, BLDE130 Heating&CoolingMechanicalCode , BLDE-135, BLDE-140, and BLDE-145, or Instructor Permission		
Credit Hours 3		
Contact Hours 3		
Course Fee 0	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals
To expose the student to energy audits for residential and commercial buildings. This relates to the student being able to suggest energy-saving techniques. The student will use Microsoft PowerPoint as part of learned presentation skills.
Core Course Topics
- Energy Codes and energy conservation - Principles of auditing buildings - Building Energy Auditing Tools - Building structure print reading - Energy Conservation Management - Energy Saving Techniques - Energy managers financial application methods

8. Life cycling and return on investment
Develop an appropriate energy management plans for residential (R), classified buildings.
Evaluate, calculate, and make recommendations for savings on electric bills.
Establish appropriate load management scenarios for selected commercial buildings, final project outcome.
Demonstrate the basic sequence of operations required for energy efficient load management of buildings.
Calculate a return on investment over the life cycle of the equipment.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
Labs, quizzes, tests, assignments	
Texts	
To be determined by instructor.	
Satisfies Honors Requirement	Satisfies Wellness Requirement

BLDE282 - Substation Operation and Maintenance

Overview

Subject	Academic Department	School
Energy Technology	Building Sciences	Business, Entrepreneurshp, PD
Course Description		
Introduces the operation and maintenance of substations and switchyards, and discusses commonly used equipment and the roles of various field personnel. Topics include safety practices, power transformers, circuit breakers, system performance, and substation batteries.		
Course Pre-requisite(s)		
TAMA110 Industrial Appl of Basic Math , its equivalent, or higher.		
Credit Hours		
3		
Contact Hours		
3		
Course Fee	Miscellaneous Department Fee	
0	0	
Academic Level		
Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL)		
No		

Goals, Topics, and Objectives

Core Course Topics
1. Safety
2. Power Transformers
3. Circuit Breakers
4. System Performance
5. Substation Batteries
Identify the various types of transformers.
Identify the various types of circuit breakers, reclosers, sectionalizers, and fuses and their function in a substation distribution system.
Draw an electrical power-flow diagram, including how electricity is distributed from source to load, and line protective devices.
Describe the different types of substation and switchyard configurations utilized.
Describe the function of substation DC control systems.
Describe the steps of a substation switching operation and methods of restoration.
Describe how a substation is protected against fault conditions.
Describe the application and relative sequence of reclosers, sectionalizers, and fuses.

Identify and describe the operation of the various types of capacitors, reactors, and fused disconnects utilized in a substation.
Identify safe isolation for work and maintenance of substation equipment, and explain how they can be isolated utilizing appropriate test equipment.
Demonstrate grounding methods and levels of fault current protection for substations.
Create an operating sequence for isolating, testing, and inspection of a substation breaker.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
As a part of this course, students will be assessed through:

BLDE295 - N American Technician Excellence Certifi

Overview

Subject	Academic Department	School
Energy Technology	Building Sciences	Business, Entrepreneurshp, PD
Course Description		
Explores various types of basic work knowledge of the Heating, Ventilation, Air Conditioning and Refrigeration (HVACR) systems that are installed in the HVACR field. Topics covered include safety, trade tools, heat and matter, electrical fundamentals, transformers and motors, electrical diagrams, and proper use of required test instruments. As a result of this class, students will learn about the structure and HVACR communication skills expected of them in the technology and skilled trade industry. This course helps to prepare students to take the NATE Core Certification Exam based on ACCA, NATE, and RSES information.

Goals, Topics, and Objectives

Core Course Topics
1. Safety
2. Trade Tools
3. Heat and Matter
4. Electrical Fundamentals
5. Electrical Diagrams
6. Selecting and properly using required test instruments
Perform basic mathematical calculations.
Identify and demonstrate the use of proper tools for each job/task.
Demonstrate proper safety procedures.
Demonstrate basic electrical fundamentals and how to read wiring diagrams.
Demonstrate proper use of test instruments

BLDE298 - Special Topics in Energy Technology

Overview

Subject Energy Technology	Academic Department Building Sciences	School Business, Entrepreneurship, PD
Course Description Explores selected topics as determined by the academic department and the instructor with emphasis on current energy technology trends. Specific special topics are announced together with the prerequisites each term. The student can repeat the course when different topics are offered, earning credit for each different topic. Course may be used toward fulfilling the specific degree requirements for an associate degree or certificate.		
Credit Hours 1		
Contact Hours 1		
Course Fee 0	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics To be determined by instructor.
To be developed by the instructor for each individual offering.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
All students will be required to complete a comprehensive final examination that assesses the learning of course objectives. This exam must be weighted in a manner so that this exam score is worth a minimum of fifteen percent of the final course grade. All additional assessment of student achievement is left to instructor discretion.	
General Course Requirements and Recommendations	
To be determined by the instructor. Detailed course syllabi for each section must be approved by the School prior to the course being offered. A copy of the specific course syllabi will be presented to AALC and the Curriculum Committee "for information only" at the first meeting after the beginning of the term the course is offered.

BLDI120 - Principles of Design

Overview

Subject Interior Design	Academic Department Building Sciences	School Business, Entrepreneurshp, PD
Course Description An introduction to the principles and elements of design that provide the foundation for aesthetic concepts in the interior design profession. Development of professional visual presentation techniques through the creation of interior design boards and models. Introduction to the design process and aesthetic conceptualization techniques.		
Credit Hours 3		
Contact Hours 3		
Course Fee 20	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category Humanities and Fine Arts	Michigan Transfer Agreement (MTA) Category Category 5: Humanities and Fine Arts - Applied Degrees, Category 5: Humanities and Fine Arts - Transfer Degrees	
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Other	
Credit for Prior College Level Learning (CPCLL) Details Determined by department.		

Goals, Topics, and Objectives

Course Goals To introduce students to design principles and elements as they relate to interiors. The course will also instruct students in the design process and techniques used in creating and presenting aesthetic concepts. Students will acquire technical and artistic skills necessary to produce quality presentation boards and models.
Core Course Topics - Interior design profession and career options. - Design vocabulary; written aesthetic concept statements and professional presentations - Principles and elements of design as they relate to interiors - Examination of acclaimed interior designers, architects and their work for the enhancement and development of students' personal style, sophistication and creativity. - ight-step design process - Visual presentation techniques - Interiors sample boards, quality craftsmanship and proficiency in graphic presentation. - Scaled models of residential structures.
Identify various career options, educational requirements, certifications, licensing, organizations and associations for interior design professionals.
Employ strong design vocabulary and communication skills as they pertain to interiors, including presentation outlines and concept statements in written, oral and visual presentations.
Assess and critique photographs of residential and commercial interiors in professional design magazines or in digital format, identifying the elements and principles of design used by the interior designer or architect.
Exhibit an enhanced level of personal style, sophistication and creativity developed through critiques of a broad range of interior environments.
Define the eight phases of the interior design process.
Demonstrate an ability to create innovative, professional quality presentation boards conveying aesthetic concepts.
Employ craftsmanship and professional graphic composition in the construction of presentation boards.
Construct a scaled model residential structure.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement - Mid-Term and Final Exams - Exercises and Assignments - Concept and presentation boards - Model building	Satisfies Honors Requirement No	Satisfies Wellness Requirement No

BLDI130 - Design & User Needs

Overview

Subject Interior Design	Academic Department Building Sciences	School Business, Entrepreneurship, PD
----------------------------	--	--

Course Description
Introduces human factors as they affect the design of interior environments including physiological, sociological, and psychological needs of users. Emphasizes the human factors of ergonomics, anthropometrics, universal design, and special populations as they relate to design standards, functionality, accessibility, and impact on the interior design practice.

Credit Hours
3

Contact Hours
3

Course Fee 20	Miscellaneous Department Fee 0
Academic Level Undergraduate	
General Education Category Humanities and Fine Arts	Michigan Transfer Agreement (MTA) Category Category 5: Humanities and Fine Arts - Transfer Degrees, Category 5: Humanities and Fine Arts - Applied Degrees
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Other
Credit for Prior College Level Learning (CPCLL) Details Determined by department	

Goals, Topics, and Objectives

Course Goals
To introduce students to human factors, ADA and universal design, environmental psychology and consideration of user needs for special populations. Students will learn to consider user needs as a primary factor in the design of the built environment through hands-on experiences and design research methods.

- Core Course Topics**
- Foundational theories of Environmental Psychology: explore environmental and behavioral theories including the development of self-actualization pyramids using criteria established by Abraham Maslow.
 - The psychology of behavior: territoriality, personal space, proxemics, crowding, and privacy.
 - Wayfinding and cognitive mapping.
 - Human dimensions and anthropometrics, and their impact on workplace function and productivity.
 - Designing environments to meet the needs of persons with physical and cognitive disabilities.
 - Human perception and environmental design with emphasis on how culture, education, economics, and ethnicity may impact interior environments.
 - Conducting and presenting scholarly research findings on topics related to the design of various environments and population segments.
 - Introduction to ADA and Universal Design and their impact on the built environment.
 - Analysis of functionality in the design of residential and commercial settings and the psychological connection between users and their environments.

Define terminology related to environmental design, user needs, design theory and environmental psychology.
Demonstrate, through hands-on activities and written documentation, the impact that proxemics, territoriality, privacy, and stress have on human behavior and the appropriate design response to these concerns.
Exhibit, through hands-on activities and written documentation, the issues surrounding wayfinding.
Apply the use of anthropometrics and ergonomics in the design of interior spaces and furnishings to improve function and productivity.
Identify connections between human physiological and cognitive disabilities with their subsequent impact on the design of the built environment.
Identify how sociological issues such as culture, education, economics, and ethnicity may create special needs for an interior environment.
Demonstrate an ability to research psychological and physiological design needs for special populations such as people with disabilities, children, elders, and homeless or low income individuals and families.
Identify the Americans with Disabilities Act, Accessible and Universal Design, and their impact on the built environment.
Demonstrate, through hands-on activities, presentations and written documentation, an ability to critique interior environments for human factor issues.

Assessment, Requirements, and Outcomes

- Assessment of Academic Achievement**
- Mid-Term and Final Exams
 - Hands-on Exercises and Assignments

Satisfies Wellness Requirement
No

BLDI140 - Interior Design Materials & Components

Overview

Subject Interior Design	Academic Department Building Sciences	School Business, Entrepreneurship, PD
----------------------------	--	--

Course Description
Investigates the characteristics, properties, and uses of materials, components and construction methods as specified by interior designers. Emphasizes performance, use, maintenance, and sustainability of materials and finishes. Also explores quantity calculations, installation methods, workroom practices, and resource development.

Credit Hours
3

Contact Hours
3

Course Fee 0	Miscellaneous Department Fee 0
Academic Level Undergraduate	
General Education Category Humanities and Fine Arts	Michigan Transfer Agreement (MTA) Category Category 5: Humanities and Fine Arts - Applied Degrees, Category 5: Humanities and Fine Arts - Transfer Degrees
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Other
Credit for Prior College Level Learning (CPCLL) Details Determined by department	

Goals, Topics, and Objectives

Course Goals
To familiarize students with a broad range of products, materials, and construction methods used in the creation of interior environments. Guest speakers will provide detailed product knowledge, and serve as a resource for student contact database. Field trips and Internet research will assist in the selection of appropriate materials. Calculation, quantification, and installation of materials will be explored. Students will learn the consequences of unit packaging and the potential for product waste.

- Core Course Topics**
- Characteristics and properties of residential and commercial interior materials and components.
 - Properties, characteristics and appropriate use of materials, finishes and furnishings.
 - Identify, classify, and analyze interior materials and products to determine if they meet user needs.
 - Carpet layout, yardage calculations, and installation methods.
 - Calculate wallcovering quantity requirements taking into account wall dimensions, pattern repeat, unit packaging, and product waste.
 - Guest speakers representing diverse interior product manufacturers will supplement textbook readings and lectures providing technical information.
 - Sustainable materials, environmentally responsible design and the LEED rating system.
 - Analyze and assess the appropriateness of the finishes and materials specified for flooring, walls, cabinetry, countertops, ceilings, doors, millwork and textiles.

Identify appropriate interior materials and finishes based upon user need, cost, product durability, maintenance and environmental impact.
Describe the properties and characteristics of materials and furnishings including textiles, wallcoverings, flooring materials, millwork, cabinetry, and other interior materials.
Recognize appropriate materials and product that meet user needs for a specific interior installation.
Analyze interior spaces to determine carpet layouts for appropriate seaming.
Calculate and specify various products and materials in residential and commercial settings.
Calculate and specify product and material quantities as they relate to unit packaging.
Produce and maintain a contact/resource file for present and future product information and assistance.
Identify sustainable products, materials, furniture, fixtures and finishes. and exhibit a basic working knowledge of the LEED process and credits related to interiors.
Recognize and critique existing residential and commercial interior surfaces for durability, functionality, wear, need for repair or replacement and sustainability properties.

Assessment, Requirements, and Outcomes

BLDI150 - Lighting & Environmental Systems Interio

Overview

Subject Interior Design	Academic Department Building Sciences	School Business, Entrepreneurshp, PD
Course Description Introduces the fundamentals of lighting design and basic understanding of acoustical, electrical, plumbing, and climate control systems and their impact on environmental, energy and economic issues. Emphasizes lighting design process, principles and theories, light sources, lamps, and energy conservation.		

Credit Hours
3

Contact Hours
3

Course Fee 20	Miscellaneous Department Fee 0
Academic Level Undergraduate	
General Education Category Humanities and Fine Arts	Michigan Transfer Agreement (MTA) Category Category 5: Humanities and Fine Arts - Applied Degrees, Category 5: Humanities and Fine Arts - Transfer Degrees
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Other

Credit for Prior College Level Learning (CPCLL) Details
Provide, in writing, a request to the department indicating the proposed rationale for requesting credit and describing the type of college-level learning upon which the request is based.

Submit work and documentation to substantiate the request.

Schedule an interview with the appropriate instructor(s) to discuss the request.

Upon review of the request, and documentation, the department will make a determination whether credit will be granted.

Goals, Topics, and Objectives

Course Goals
To provide students with knowledge and skills to resolve lighting design problems and gain basic understanding of mechanical systems and their environmental, energy and economic impact on interior design. Developing a working knowledge of these environmental systems so as to effectively communicate and collaborate with subcontractors throughout the design process. Students will explore building codes, perform lighting and energy calculations and examine construction practices in residential and commercial installations and integrate lighting as a major component in a commercial design project.

- Core Course Topics**
- Environmental systems: lighting, electrical, plumbing, acoustical, and HVAC.
 - Open office acoustical and lighting systems, fire detection, alarms, sprinkler systems, emergency lighting, HVAC, and other mechanical systems.
 - Construction drawings and lighting plans, plenum requirements as they relate to HVAC and air-supply options, plumbing, electrical fire suppression and other mechanical systems.
 - Safety building codes: doors, framing, glazing, partitions, corridor and stairway fire-resistance-ratings, fire protection, emergency lighting and life safety codes including exiting and egress requirement.
 - Sick building syndrome, indoor-air-quality contaminants, water quality, visual and acoustic comfort, thermal comfort and cooling systems.
 - Electrical and lighting energy usage, plumbing fixtures, water distribution, waste piping and water usage, HVAC, indoor air quality, efficiency and conservation, sustainability and LEED credits.
 - U.S. Green Building Council LEED rating system, Energy Star label and American Society of Heating, Refrigerating and Air-Conditioning Engineers (ASHRAE).
 - Lighting terminology, definitions, switching types, wiring, locations and codes, conduct measurements, and lighting calculations.
 - Functional and aesthetic lighting of interior spaces through the use of general, task and accent lights; incandescent, fiber optics and LED lights.
 - Reflected ceiling plans and standard electrical symbols.
 - Tear sheets and lighting specifications, fire suppression equipment, and switches.

Identify and define major building mechanical systems using technical terminology.
Critically analyze the constraints various environmental mechanical systems may place upon design solutions and evaluate the implications of altering existing structures.
Apply knowledge of functionality, installation, usage, and building codes for lighting and environmental systems in developing reflected ceiling plans for a commercial setting.
Identify and define applicable building code requirements for the protection of public health, safety, and welfare.
Assess the environmental impact of construction and mechanical systems.
Identify and define sustainability as it relates to energy efficient mechanical systems, construction and installation techniques and indoor air quality.

Illustrate a basic understanding of the LEED rating system established by the U.S. Green Building Council, U.S. EPA Energy Star label, and other green certification agencies.
Conduct lighting measurements and calculations.
Design innovative psychological and physiological lighting effects.
Demonstrate proficiency in graphic presentation of design solutions.
Synthesize design principles, lighting research and technical information in the resolution of lighting design problems.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement - Assignments - Collaborative Research: - Current Trends in Sustainable Mechanical Systems - Quizzes and Exams - Visits to construction sites	
Satisfies Honors Requirement No	Satisfies Wellness Requirement No

BLDI200 - Bath Design Studio

Overview

Subject Interior Design	Academic Department Building Sciences	School Business, Entrepreneurshp, PD
Course Description Course integrates the interior design process into large-scale residential and commercial bath design projects focusing on functional and aesthetic elements and the integral relationship to user needs, incorporating human factors and environmentally responsible design.		
Course Pre-requisite(s) BLDA100 Introduction to Autocad or Instructor Permission		

Credit Hours
4

Contact Hours
5

Course Fee 35	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Other
Credit for Prior College Level Learning (CPCLL) Details Determined by department	

Goals, Topics, and Objectives

Course Goals
This studio course will consist of bath projects wherein students will conceptualize and design luxury residential baths and commercial restrooms incorporating up-scale fixtures, products and materials creating state-of-the-art environments. Each project will require extensive research, creation of detailed programming documents, and an assessment of the mechanical and structural systems. Plumbing and electrical fixtures and equipment must be reviewed and implemented with energy and resource conservation being of utmost importance. These projects must meet the physiological and psychological needs of its users, comply with ADA guidelines and promote health, safety, and welfare of the public in general. The materials, products, finish selections and mechanical systems will also promote healthy indoor air quality and positively impact the environment in general.

- Core Course Topics**
- Space plan existing residential and to-be-built commercial interior environments.
 - NKBA format for mechanical plans, floor plans, elevations, specifications and installation documents for residential baths and commercial restrooms.
 - Basic residential and commercial building codes for fire, life and safety, ADA codes and environmentally responsible fixtures, finishes, equipment and appliances.
 - Current bath design trends, innovations, products and resources.
 - Environmentally responsible design: installation techniques, manufacturers, LEED credits, energy, resource, and water conservation.
 - Universal Design Principles, ADA guidelines and ageing-in-place as they relate to residential and commercial bath environments.
 - Residential and commercial bath design formats to comply with industry standards in preparation for certification exam.
 - Further develop technical computer drawing skills using state-of-the-art Kitchen/Bath software.
 - Calculate and prepare cost estimates, budgets, and bath product specifications.
 - How to further develop oral, written, and graphic communication skills conveying aesthetic and functional concepts and construction documentation of design solutions for bath design projects.

Demonstrate an ability to critically analyze design problems through the conceptualization, development, and creation of aesthetically pleasing, functional solutions to large-scale residential and commercial bath design projects.
Exhibit proficient technical and graphic communication skills using hand-drafted and/or computer generated construction and mechanical plans, floor plans, elevations, specifications and installation documents for large-scale bath projects using industry standard bath guidelines and recommended accessible bath guidelines.

Produce construction and mechanical plans in NKBA format for residential and commercial baths incorporating plumbing, electrical, lighting and ventilation systems.
Effectively utilize resources and academic research to assess current bath products and design trends.
Critically assess the environmental impact of specifying various cabinets, appliances, fixtures, and finishes for residential and commercial bath interior design projects.
Critically assess and apply universal design principles and ADA guidelines to residential and commercial bath design projects.
Display proficiency in the preparation of hand-drafted or computer-generated schematic drawings in compliance with industry certification exam format.
Exhibit advanced technical computer skills using state-of-the-art bath design software.
Accurately estimate costs, budget, and specify bath products.
Illustrate excellence in oral, written, and graphic communication skills in the critical analysis, assessment of user needs, aesthetic and functional concept development, production of construction documents and presentation of final bath design solutions.

Assessment, Requirements, and Outcomes

- Assessment of Academic Achievement
- Programming binder.
 - Technical construction packets with schematic drawings.
 - Story and presentation boards for residential and commercial projects.
 - Written aesthetic and functional design solutions.
 - Oral presentation of residential and commercial bath projects.

General Course Requirements and Recommendations

The following criteria will be required for each of the semester bath projects:

Programming Binder

- Research
- Concept Development
- Written Design Concepts
- Bath Design Guidelines

Technical Construction Packet—Hand-Drafted or Computer Generated

- Floor Plan
- Mechanical Plan
- Construction Plan
- Installation Plan
- Elevations

BLDI220 - Kitchen Design Studio

Overview

Subject Interior Design	Academic Department Building Sciences	School Business, Entrepreneurship, PD
Course Description A studio course integrating the interior design process into a large-scale kitchen design project focusing on functional and aesthetic elements and the integral relationship to user needs. Incorporates human factors and Universal Design principles.		
Course Pre-requisite(s) <u>BLDA130 Introduction to Revit</u> or Permission by Instructor		
Credit Hours 4		
Contact Hours 5		
Course Fee 35	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) Yes		Acceptable Prior Learning Credit Other
Credit for Prior College Level Learning (CPCLL) Details Determined by department		

Goals, Topics, and Objectives

- Course Goals
- This studio course will consist of a large-scale, residential remodel that meets the physiological and psychological needs of virtual clients. This course will focus on rehabilitating an existing home necessitating critical assessment of existing mechanical and structural systems, the alteration of these systems and their impact on the integrity of the building's architecture. Materials, products, finish selections and installation of mechanical systems promoting healthy indoor air quality are equally imperative to the success of the project.
- Core Course Topics
1. Space plans for existing and new construction residential interior environments.
 2. Kitchen mechanical plans, floor plans, elevations, cabinetry section cuts, specifications and installation documents
 3. Kitchen cabinetry, countertops, appliances, plumbing and electrical fixtures, finishes, and equipment.
 4. Assess current kitchen design trends and innovations and acquaint students with quality kitchen products and resources through academic internet research and guest speakers.
 5. Universal Design Principles, ADA guidelines, and ageing-in-place.
 6. Develop technical computer drawing skills using state-of-the-art kitchen/bath software.
 7. Calculate and prepare cost estimates, budgets, and kitchen product specifications.
 8. Develop oral, written, and graphic communication skills conveying aesthetic and functional concepts and construction documentation of design solutions for kitchen design projects.

Demonstrate an ability to solve interior design problems through conceptualization, development and creation of functional and aesthetically pleasing designs for a large-scale kitchen project.
Create kitchen mechanical plans, floor plans, elevations, cabinetry section cuts, specifications and installation documents that meet basic residential building codes for fire, life and safety. When required for the user needs, ADA guidelines, accessibility and Universal Design Principles will be incorporated.
Exhibit technical and graphic communication skills using manual drafted and/or computer generated construction and mechanical plans, floor plans, elevations, specifications and installation documents for a large-scale kitchen using National Kitchen and Bath Association (NKBA) guidelines.
Produce basic residential kitchen construction and mechanical plans incorporating plumbing, electrical, lighting and ventilation systems.
Effectively utilize resources and academic research to assess current kitchen products and design trends.
Display proficiency in the preparation of schematic drawings in compliance with NKBA exam format.
Exhibit basic technical computer skills using current industry standard software.
Estimate costs, budget, and specify kitchen products
Illustrate proficiency in oral, written, and graphic communication skills in the critical analysis, assessment of user needs, aesthetic and functional concept development, production of construction documents, and presentation of final kitchen design solutions.

Assessment, Requirements, and Outcomes

- Assessment of Academic Achievement
- Virtual Kitchen Projects
Assignments
Oral, written and visual presentations
- General Course Requirements and Recommendations
- Programming Binder

- Research
- Concept Development
- Written Design Concepts
- Kitchen Design Guidelines and Recommended Accessibility Guidelines

Technical Construction Packet—Hand-Drafted or Computer Generated

- Schematic Drawings using Industry Standard Graphic Presentation Format

BLDI230 - Residential Design Studio

Overview

Subject Interior Design	Academic Department Building Sciences	School Business, Entrepreneurship, PD
Course Description Introduces the interior design process and development of functional and aesthetically pleasing environments. Emphasizes programming, ideation, analysis, concept development, space planning, design development, documentation, and graphic communication culminating in the presentation of a residential project.		
Course Pre-requisite(s) ACT-110 or ACT 116 ; or ART-181; or INTR120 or equivalent		

Credit Hours
4

Contact Hours
5

Course Fee 35	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Other
Credit for Prior College Level Learning (CPCLL) Details Determined by department	

Goals, Topics, and Objectives

Course Goals
Provide students with the knowledge and technical skills to design functional, creative and aesthetically pleasing environments. Students will design a small-scale residential project including programming documents containing aesthetic concepts and sketches, research, and written concept statements. Students will also develop schematic and construction drawings, perspective drawings and presentation boards. Final design solutions will be orally presented to jurors.

- Core Course Topics**
- Existing and to-be-built residential spaces.
 - Eight-step interior design process.
 - Elements of the Programming Phase of the interior design process. Aesthetic and functional concept development through research, quick sketches, data collection, schematics, ideation and written concept statements.
 - Aesthetic and Functional Concept Storyboards.
 - Residential technical construction drawing packets including floor plan, kitchen and bath elevations, cabinet and interior sections, and furniture layout.
 - Existing space plan structural modifications, Universal Design guidelines and basic residential building codes.
 - Quality manufacturers of residential furniture, furnishings, finishes, cabinetry, flooring, plumbing, electrical, and lighting fixtures and appliances.
 - Professional sample presentation boards.
 - Product specification documents and written design statements.
 - Oral presentation techniques.

Analyze design problems in order to conceptualize, develop and create aesthetically pleasing and functional residential interiors.
Exhibit fundamental knowledge of the programming phase of the design process through documentation and compilation of research, analysis of data, and conducting ideation techniques in the development of an aesthetic concept for a residential project.
Produce and present conceptual storyboards conveying aesthetic and functional design concepts.
Demonstrate proficiency in manual drafting of floor plans, elevations, sections and furniture layouts.
Define and incorporate Universal Design principles and basic building codes into residential interior environments.
Research and differentiate the quality of residential furniture and furnishing manufacturers. Evaluate and specify residential furniture, cabinetry, and finishes.
Construct a scaled model of residential space.
Illustrate through project completion the ability to create sample boards showing evidence of successful finish, furniture, and lighting selections; display effective 3-dimensional visual representations and graphic technical documentation; exhibit effective oral and written communication skills; and demonstrate basic model building skills.

Assessment, Requirements, and Outcomes

- Assessment of Academic Achievement**
- Programming notebook.
 - Space planning exercises.
 - Comprehensive residential design project.
 - Schematic and construction manual drafting packet.
 - Two and three-dimensional rendered drawings of interiors.
 - Concept storyboards.
 - Sample and presentation boards.
 - Scaled model.

BLDI270 - Commercial Design Studio

Overview

Subject Interior Design	Academic Department Building Sciences	School Business, Entrepreneurshp, PD
Course Description Explores how to integrate the interior design process into a small-scale, non-residential design project focusing on functional and aesthetic elements, and the integral relationship to user needs. Also discusses how to incorporate human factors, Universal Design principles, and building codes into the design process. Emphasizes environmentally responsible product selection and specification.		
Course Pre-requisite(s) BLDA130 Introduction to Revit or Instructor Permission		
Credit Hours 4		

Contact Hours
5

Course Fee 0	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Other
Credit for Prior College Level Learning (CPCLL) Details Determined by Faculty	

Goals, Topics, and Objectives

Course Goals
To provide students with knowledge and skills to analyze and resolve design problems in non-residential settings. Students will be introduced to the concept of environmentally responsible design by incorporating Universal Design Principles and ADA codes into their projects and selecting sustainable materials using evidence based design research. Students will further develop manual and CAD graphic skills and orally present final projects to jurors. ,basic,html

- Core Course Topics**
- Commercial space planning.
 - Building type site visits.
 - Evidence-based design.
 - Commercial furniture, furnishings and finish specifications; basic building codes for fire, life and safety; ADA guidelines; accessibility and Universal Design Principles.
 - Environmentally responsible commercial furniture, fixtures, furnishings and finishes; LEED credits; sustainable installation methods.
 - Two and three-dimensional visual representations of commercial interiors.
 - Write highly developed programming documents, design solutions, and specifications.
 - Commercial presentation and sample boards.
 - Oral presentations.

Critically analyze design problems in order to conceptualize, develop and create aesthetically pleasing and functional commercial interiors.
Conduct site visits to identify user needs, collect data and analyze aesthetic and functional design concerns for various commercial building types.
Apply evidence-based design to the selection and specification of furniture, fixtures, furnishings, and finishes.
Assess and skillfully incorporate Universal Design Principles, ADA guidelines, and fire and basic life-safety codes into commercial design solutions.
Analyze and specify sustainable commercial furniture, fixtures, furnishings and finishes identifying availability of LEED credits.
Illustrate and further develop manual and AutoCAD drawing and presentations skills.
Apply effective written communication skills in articulating design solutions, programming, ideation, concept development product research, and specifications.
Demonstrate through project completion increased level of proficiency in graphic documentation, and the ability to create professional quality sample boards and visual presentation packages.
Exhibit enhanced oral presentation skills in conveying design solutions.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement - Programming Binder - Construction Drawing Packet (Computer Generated) - Perspective Drawings and Elevations (Manual or Computer Generated) - Storyboard and Final Presentation Boards - Research, documentation and specifications of environmentally responsible furniture and finishes	Satisfies Honors Requirement No	Satisfies Wellness Requirement No

BLDI290 - Professional Practice Interior Designers

Overview

Subject Interior Design	Academic Department Building Sciences	School Business, Entrepreneurship, PD
Course Description Exams the interior design profession, including the study of legal, financial, and ethical business practices with special emphasis on management, human resource practices, marketing, and advertising.		
Credit Hours 3		
Contact Hours 3		
Course Fee 0	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) Yes		Acceptable Prior Learning Credit Other
Credit for Prior College Level Learning (CPCLL) Details Determined by Faculty		

Goals, Topics, and Objectives

Course Goals
To provide students with knowledge of professional interior design business practices. Students will explore business models, professional ethics, accounting and record keeping, office management, human resource practices, marketing design services and advertising, project management and the bid process.

Core Course Topics

1. Interior design profession, career options, certification, professional associations, and licensing
2. Legal, financial and ethical issues in the business environment
3. Business formations, sales and income tax issues, registration of business name, advantages and disadvantages of business ownership, insurance and legal counsel
4. Financial advisors, accountants, bankers, establishing business credit, small business loans, business location, start up costs, office equipment, cash flow and budgeting
5. Office organization and management, letters of agreement, contracts, maintaining vital records, writing and submitting detailed specifications for purchasing products, installation instructions and custom design work
6. Professional design fees, determining profit margins, indirect job costs, retail/discount pricing, obtaining quotes, invoicing, FOB, delivery and installation charges
7. Bookkeeping, accounting, billing, and payroll
8. Project closeout, post-occupancy and client follow-up, warranties
9. Marketing, establishing a niche, advertising, customer service and building client relationships

Demonstrate through written construction documents, written contracts, research and critical analysis of issues relative to employment and liability, an understanding of the legal responsibilities of interior designers engaged in professional practice.
Exhibit basic understanding of the development and maintenance of financial records for an interior design practice through the development of spreadsheets in compliance with appropriate accounting principles and the requirements for filing business taxes.
Compare and contrast optional business models, marketing tools and developing desired client base through creation of a business model and company website for a mock interior design firm.
Create a mock interior design firm setting up a business model reflecting efficient office management, record keeping, specifying invoicing, purchasing, customer service, design, delivery and installation of a small commercial design project, and post occupancy evaluations.
Apply marketing and advertising techniques in the creation of a website for a mock design firm.
Analyze and discuss ethics in professional business conduct and service to the public.
Compare and contrast professional design organizations and apply to become a student member of a national interior design association or organization.
Identify and discuss career opportunities, certification, licensing and registration requirements for interior designers in the State of Michigan and research requirements for same in other states

Assessment, Requirements, and Outcomes

- Assessment of Academic Achievement**
- Research and creation of interior design firm
 - Interior Design Firm Website
 - Professional Practice Documentation Project:
 - Manage a small design project beginning with meeting the client through post occupancy evaluation
 - Prepare invoices/letters of agreement

- Design, select and specify furniture, finishes and lighting for a small commercial project
- Provide samples, specifications and unit packaging and photos of all items necessary to complete the project
- Measure, calculate, determine profit margins, invoice, purchase and deliver products to virtual clients
- Organize and maintain vital documents

Satisfies Honors Requirement No	Satisfies Wellness Requirement No

BLW253 - Business Law and the Legal Environment

Overview

Subject Economics & Finance	Academic Department Business & Economics	School Business, Entrepreneurshp, PD
Course Description Examines a variety of legal topics including the American Legal System, the laws of contracts, business organizations, personal injury and product liability. Focuses on understanding the legal environment in which businesses function.		
Course Pre-requisite(s) ENG131 Introduction College Writing with a C grade or better		
Credit Hours 4		
Contact Hours 4		
Course Fee 0	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics

1. The American Legal System
2. Agreements and Consideration in Traditional Contracts and E-Contracts
3. Business Organizations
4. Business Liabilities

Identify sources of American Law.
Explain how a court acquires jurisdiction over a defendant.
Describe how a case proceeds through the court system, from filing the initial complaint to appeals.
Describe the elements of an enforceable contract.
Explain when contracts are not enforceable.
Discuss issues related to a written contract.
Differentiate between the ways a partys contractual duty may be discharged due to performance or breach, and the remedies available in either situation
Describe the structure of each type of business entity.
Identify the differences between each type of business entity.
Explain an owners responsibility and liability for each of the business entities.
Explain the process for forming and dissolving each type of business entity.
Describe the elements of, and then differentiate, intentional torts, negligence, and strict liability under common law.
Explain how a business may be liable for an intentional tort, negligence, or strict liability under common law.
Explain how a business might be negligent or strictly liable in a product-liability lawsuit. Explain how a business acquires debt and the rights and remedies available to its creditors.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Students will be assessed through tests, quizzes, homework, presentations, and/or class participation.

LETTER GRADE	PERCENTAGE
A	93-100%
A-	90-92.9%
B+	87% - 89.9%
B	83% - 86.9%
B-	80% - 82.9%
C+	77% - 79.9%
C	73% - 76.9%
C-	70% - 72.9%
D+	67% - 69.9%
D	63% - 66.9%
D-	60% - 62.9%
E	<60%

BMA110 - Business Math

Overview

Subject Business Administration	Academic Department Business & Economics	School Business, Entrepreneurship, PD
------------------------------------	---	--

Course Description
Presents basic math problems in business scenarios. Coursework applies mathematical concepts in various personal and business situations such as payroll, taxes, bank reconciliations, profit/loss, commissions, discounts, depreciation, interest, annuities, and loans.

Credit Hours
3

Contact Hours
3

Course Fee 0	Miscellaneous Department Fee 0
Academic Level Undergraduate	
General Education Category Mathematics	Michigan Transfer Agreement (MTA) Category Category 3: Mathematics - Applied Degrees
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Other
Credit for Prior College Level Learning (CPCLL) Details Minimum Departmental Exam Score 75%	

Goals, Topics, and Objectives

- Core Course Topics
- Decimals and Fractions as Percents in Business
 - Payroll
 - Discounts
 - Markup
 - Simple and Compound Interest
 - Business and Consumer Loans
 - Depreciation
 - Business Statistics
 - Quantitative Literacy Learning Outcomes

Add, subtract, multiply, and divide numbers with decimals.
Calculate percentages.
Solve increase and decrease story problems related to business scenarios.
Calculate gross earnings for a variety of payroll methods including hourly, salary, piecework, and commission.

Calculate overtime earnings for a variety of payroll methods including hourly, salary, piecework, and commission.
Calculate equivalent earnings for different pay periods.
Calculate Social Security tax, Medicare tax, federal tax, and state tax on earnings.
Calculate series discounts.
Differentiate between single and series discounts.
Calculate the net cost equivalent of a series discount.
Calculate markup based on cost.
Calculate markup based on selling price.
Solve for cost or selling price based on markup.
Determine the break-even point.
Determine the amount of gross or absolute profit or loss.
Solve for simple interest.
Calculate maturity value on a simple interest account.
Solve for principal, rate, and time.
Differentiate between simple and compound interest.
Solve for compound interest.
Calculate maturity value on a compound interest account.
Estimate the value of an investment using future and present value.
Calculate finance charges based on various terms of agreement.
Calculate monthly payments, interest amounts, and payoff amounts of an installment loan, personal property loan, or real estate loan.
Use the straight-line method to solve for depreciation.
Solve for the mean, median, and mode of a list of numbers.
Computing any type of arithmetic or non- arithmetic calculation that is well defined
Analyzing information presented as tables, graphic figures, charts, etc
Creating a model to represent data or numerical information. (Deliverables: physical model, equation, graph, or table).
Applying a mathematical process to your industry or discipline specific problem.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Students will be assessed through tests, quizzes, assignments, and/or class participation.

Grading Scale

BSC130 - Tech Foundations Supply Chain Mgt

Overview

Subject Supply Chain Management	Academic Department Business & Economics	School Business, Entrepreneurshp, PD
Course Description Introduces students to the information necessary to be competent in the activities common across all facilities within the supply chain including safety, quality control, communications, teamwork, good workplace conduct, familiarity with the key computer systems that underpin supply chain operations, product receiving, product storage, order processing, packing and shipment, inventory control, safe handling of hazardous materials, evaluation of transportation modes, customs, and dispatch and tracking operations. Prepares students to successfully pass the Certified Logistics Associate assessment and the Certified Logistics Technician assessment that would allow Certified Logistics Associate (CLA) and a Certified Logistics Technician (CLT) recognition by the Manufacturing Skill Standards Council (MSSC). MSSC is a 501(c)3 non-profit, national, industry-led, training, assessment and certification organization. BSC-130 is the first course in the series of 5 BSC courses.		

Credit Hours
3

Contact Hours
3

Course Fee 550	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Licensure/certifications
Credit for Prior College Level Learning (CPCLL) Details Certified Logistics Associate and Certified Logistics Technician	
Certified Logistics Associate (CLA) and Certified Logistics Technician (CLT) by the Manufacturing Skill Standards Council (MSSC) must be current. Department faculty will verify certifications. Verified CLA and CLT certifications, and the CLA and CLT CPCLL application, will be copied, signed, dated, and retained in the School Office.	

Goals, Topics, and Objectives

Course Goals - To help students and trainees develop the knowledge necessary to become a front-line worker and beyond in the field of supply chain logistics. - To help students prepare for Certified Logistics Associate (CLA) and Certified Logistics Technician (CLT) national certifications, recognized by the Manufactures Skill Standards Council (MSSC). - To addresses work activities and related skills involved with moving material though out the supply chain: to and from production sites, warehouses, distribution centers and within the various transportation modes (truck, air, rail, water and pipeline).
Core Course Topics - Global Supply Chain Logistics - The Logistics Environment - Material Handling Equipment - Safety Principles - Safety Material Handling & Equipment Operation - Quality Control Principles - Work Communication - Teamwork & Good Workplace Conduct to Solve Problems - Information Systems and 4.0 Technologies - Product Receiving - Product Storage - Order Processing - Packaging and Shipment - Inventory Control - Safe Handling of Hazardous Materials - Evaluation of Transportation Modes - Dispatch and Tracking Operations

18. Measurement Conversion*
Describe principal elements of the global supply chain logistics life cycle, the roles and responsibilities of the front-line worker, and the five modes of transportation.
Identify and list the major security requirements, the improved international logistics security, and how logistics activities impact the environment.
List and describe examples of manually operated equipment, lift trucks, and loading docks.
Describe the functions and types of conveyors, and automated systems.
Identify the principle federal safety organizations and their functional requirements.
Explain the characteristics of a safe, clean, and orderly work environment.
List emergency safety procedures, safety markings, and types of fire extinguishers.
List and identify the basic safety handling practices, functionality and use of personal protective equipment, and equipment safety features.
Identify and characterize key quality control systems, and provide examples of how front-line workers support these systems.
Explain quality audits, and present quality improvement recommendations to supervisors.
Explain methods of effective communication between shifts, with both internal and external customers, and through speaking, writing, reading and listening skills.
Describe a high-performance team and an effective team leader.
Explain ways to set team goals and how to resolve conflict.
Describe typical requirements for good workplace conduct.
Identify commonly used computer systems and software applications that capture logistical information.
Explain the uses of software systems by front-line workers. *Identify the key 4.0 technologies impacting warehouse operations
Describe activities essential to receiving, unloading, and checking.
List and describe standard documents for receipt of material.
Describe the procedures for identifying and reporting overages, shortages, or damages.
List key issues affecting how materials are stored, types of storage, and other methods of storage and retrieval.
Describe order cycle and procurement processes.
Explain pick ticket inspection, how audits are conductive, the staging of material, and steps involved in developing a packing manifest.
Identify the process for selecting appropriate packing material and packaging tools best suited for handling and packaging products.
Describe the process to ensure that outbound counts are accurate and steps to verify that the right package is securely loaded into the right trail.
Describe fundamentals of inventory control.
List and explain the most common inventory control systems and methods for accurate inventory counting.

Describe methods for capturing logistics information.
List government regulations related to hazardous material.
Identify safe working practices for unloading and loading hazardous material.
List other safe work practices for transfer and storage of hazardous material.
Describe each mode of transportation (Truck, Air, Rail, Water, Pipeline) and its advantages and disadvantages.
List the main considerations in determining the best mode of transportation and examples of transportation documentation.
Explain shipping documentation.
Describe the main factors related to vehicle routing, tracking cargo, and basic customs terminology.
Calculate basic weight and volume.
Convert U.S. measurements to metric and metric to U.S. measurements.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
As a part of this class, students will complete: Manufacturing Skill Standards Council certification exams for Certified Logistics Technician (CLT)	
General Course Requirements and Recommendations	
Access to the internet on a computer.

BSC230 - Logistics and Distribution Strategy

Overview

Subject Supply Chain Management	Academic Department Business & Economics	School Business, Entrepreneurshp, PD
Course Description Focuses on the complexities of logistics and transportation in the field of Supply Chain Management (SCM). Covers the critical link of transportation in SCM, various modes of transportation (air, water, rail, pipeline, road), global transportation planning, execution, and management. Upon successful completion of this course, students should be able demonstrate competency in the following logistical areas: importance of logistics in SCM, information management systems, demand and order management, customer service, inventory control, facility location, warehouse management, packing and materials handling, transportation modes, transportation management, and international logics.		
Course Pre-requisite(s) BSC130 Tech Foundation SCM with grade of C or better or Instructor Permission		
Credit Hours 3		
Contact Hours 3		
Course Fee 75	Miscellaneous Department Fee 0	

Academic Level Undergraduate	Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Other
Credit for Prior College Level Learning (CPCLL) Details Assessment tool on file with department.		
Goals, Topics, and Objectives		
Course Goals To provide a framework and foundation for the role of transportation from a micro and macro perspective in supply chain management. This course discusses and evaluates the theoretical and managerial dimensions of transportation in supply chains, including regulations and public policy. Focus on each of the five modes of transportation emphasizing their operating and service characteristics, cost structure and current challenges. Strategic activities and challenges involved in the movement of goods through the supply chain will be reviewed and evaluated.		
Core Course Topics		
1. Transportation and Its Role in the Supply Chain		
2. Transportation Regulation		
3. Costing and Pricing Policies		
4. Motor Carriers		
5. Railroads		
6. Airlines		
7. Water Transportation		
8. Pipeline		
9. Risk Management		
10. Global Transportation Planning		
11. Third Party Logistics (3PL)		
Describe the changing forces in logistics and transportation and the changing global economy.		
Recognize the the role of transportation in the movement of goods and services.		
Explain the development of supply chain management and the importance of transportation to the supply chain.		
Identify the historical and economic significance of transportation and its social, political, and environmental trends.		
Recognize the role of Federal, State and Local agency regulations in the transportation industry.		
List transportation safety and security regulations.		
Explain the relationship between a rate and a price.		
Describe the strategic role of pricing for transportation firms.		
Describe the advantages and disadvantages of the motor carrier industry.		
Identify the operating and service characteristics in the motor carrier industry.		
Discuss the the nature of costs in the motor carrier industry.		
Describe the advantages and disadvantages of the railroad industry.		
Identify the operating and service characteristics in the railroad industry.		
Discuss the the nature of costs in the railroad industry.		
Describe the advantages and disadvantages of the airline industry.		
Identify the operating and service characteristics in the airline industry.		
Discuss the the nature of costs in the airline industry.		
Describe the advantages and disadvantages of the water transportation industry.		
Identify the operating and service characteristics in the water transportation industry.		
Discuss the the nature of costs in the water transportation industry.		
Describe the advantages and disadvantages of the pipeline industry.		

Identify the operating and service characteristics in the pipeline industry.
Discuss the the nature of costs in the pipeline industry.
Discuss the nature of transportation risk.
Indicate the primary categories and types of transportation risk.
Recognize key transportation security regulations and initiatives.
Recognize the importance of proper global transportation planning.
Explain the role of International Commercial Terms (INCOTERM) in determining transportation responsibilities.
Describe payment term options.
Identify global freight documentation.
Identify the different types of third-party logistics service providers.
Discuss reasons why companies seek to integrate third-party logistic services.
Summarize the process for outsourcing transportation and logistic activities.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
All assessment of student achievement is left to the discretion of the individual instructor.

BSC240 - Operations and Supply Chain Management

Overview

Subject Supply Chain Management	Academic Department Business & Economics	School Business, Entrepreneurship, PD
------------------------------------	---	--

Course Description
Explores the essential principles of Operations Management in Supply Chain Management (SCM). Emphasizes designing, planning, sourcing, processing, and distributing goods and services in SCM. Upon successful completion of this course, students should be able to demonstrate competency in the following SCM areas: operations and supply chain management, supply chain strategy and design, global supply chain procurement, demand forecasting methods, inventory management, scheduling and production design, lean systems, quality management, and project management.

Course Pre-requisite(s)
BSC130 Tech Foundation SCM with grade of C or better or Instructor Permission

Credit Hours
3

Contact Hours
3

Course Fee 0	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Other

Credit for Prior College Level Learning (CPCLL) Details
Assessment tool on file with department.

Goals, Topics, and Objectives

Course Goals
To provide a framework and foundation for the role of operations management within an organization and across firms that make up the supply chain. This course discusses and evaluates the theoretical and managerial dimensions of operations management which include the design, supply, production, and delivery of goods and services to customers. The course focuses on organizing the firm's manufacturing capacity and service processes, monitoring quality, inventories and lean systems.

- Core Course Topics
1. Managing Operations Across the Supply Curve
 2. Global Procurement and Distribution
 3. Sales and Operations Planning
 4. Forecasting Demand
 5. Inventory Management
 6. Capacity and Facilities Design
 7. Resource Planning
 8. Lean Systems
 9. Quality

Explain operations management.
Describe the basic roles and processes in operations management. Define the planning activities associated with managing operations across the supply chain.
Discuss outsourcing as a strategic decision.
Explain the basic elements of procurement and spend analysis
Address the advantages and disadvantages of different modes of transportation.
Explain the interface of marketing and finance with sales and operation planning.
Describe sales and operations processes and the various tools and techniques to adjust capacity and manage demand.
Explain the strategic role of forecasting in supply chain management.
Describe the forecasting processes, and identify the components of forecasting demand.
Calculate demand based on various time-series models.
Discuss the key elements and costs of inventory and the relationship between inventory costs and customer service.
Utilize basic inventory models to calculate order quantity and related measures.
Determine appropriate reorder point and calculate quantity based on periodic inventory review.
Explain different strategies for capacity design based on economies of scale and the best operating level.
Describe the advantages and disadvantages of different types of layouts in both manufacturing and service setting.
Describe Material Requirements Planning (MRP) systems, and explain the the MRP process.
Determine resource capacity and load percent.
Describe basic Enterprise Resource Planning (ERP) systems and their scope of implementation.
Explain how the basic elements of lean eliminate waste, create flow, and continuously improve operations.

Explain how the concepts of lean and six sigma work together to achieve process improvement.
Create strategies for implementing lean in service industries.
Define the dimensions of quality, and explain the benefits and costs of good quality and the costs of poor quality.
Utilize quality tools and the Define, Measure, Analyze, Improve and Control (DMAIC) methodology in problem solving.
Recognize quality awards and International Organization for Standardization (ISO) certifications.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
All assessment of student achievement is left to the discretion of the individual instructor.

BSC250 - Purchasing and Supply Chain Management

Overview

Subject	Academic Department	School
Supply Chain Management	Business & Economics	Business, Entrepreneurship, PD

Course Description
Introduces the critical function in Supply Chain Management (SCM) known as purchasing. Covers purchasing decisions, strategies, procedures, supplier selections, and negotiations. Upon successful completion of this course, students should be able to demonstrate competency in the following areas of SCM: purchasing strategies, legal aspects of purchasing, material management, just-in-time (lean) purchasing, procurement, strategic outsourcing, global sourcing, total quality management, cost and price determination, and bargaining and negotiations.

Course Pre-requisite(s) BSC230 Logistics & Distribution Strat with a C grade or better AND BSC240 Operations & Supply Chain Mgmt with a C grade or better OR Instructor Permission.	Course Co-requisite(s) BSC260 Global Logistics Supply Chain
--	--

Credit Hours

Contact Hours
3

Course Fee 0	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Other
Credit for Prior College Level Learning (CPCLL) Details Assessment tool on file with department.	

Goals, Topics, and Objectives

Course Goals
To understand the integration and applications of purchasing within the supply chain. In today's global economy, students must possess analytical, technical, and negotiation skills in order to manage the transformation of raw materials and components into finished goods. Course topics included purchasing strategies and procedures, selection of suppliers, outsourcing, negotiation strategies, pricing and cost analysis.
Core Course Topics
1. Purchasing and the Supply Chain
2. Legal Aspects of Purchasing

- Materials Management
- Inventory Management
- Lean Purchasing
- Purchasing Procedures
- Supplier Selection and Evaluation
- Outsourcing
- Global Sourcing
- Supply Chain Partnerships
- Total Quality Management and Purchasing
- Price Determination
- Bargaining and Negotiations

Explain the role of purchasing in the supply chain.
Outline how purchasing contributes to the firm's profitability.
Identify the important elements of the strategic planning process.
Describe the purchasing manager's legal authority.
Explain how contracts and purchase orders are executed.
Discuss the importance of ethics in purchasing.
Identify the activities of material management.
Discuss the relationship between purchasing and material management.
Identify the primary reasons for holding inventory.
Describe the ABC analysis and the Economic Order Quantity (EOQ) model.
Explain the differences between fixed-order quantity and variable-order inventory systems.
Describe lean production systems, Just-In-Time (JIT) inventory, and Material Requirements Planning (MRP).
Discuss the relationship between JIT and purchasing.
Identify the critical JIT purchasing advantages and disadvantages.
Discuss the steps in the purchasing cycle.
Identify the main activities in a typical purchasing department.
Define routine versus non-routine purchasing and buying methods.
Identify the qualifications of a good supplier.
Describe the key elements of the make-versus-buy decision.
Explain appropriate supplier techniques.
Define outsourcing and list the advantages, and disadvantages of outsourcing.
Identify the hidden costs of outsourcing.
Explain the difference between core and noncore competencies.
Discuss the factors and variables of global sourcing.
Describe how total costs are determined.
Identify the quantitative and qualitative aspects of global sourcing.
Analyze global sourcing alternatives.

Describe the elements of supply chain partners.
Identify the benefits and risks of supplier partnerships.
Define the buyer-supplier factors to achieve a successful partnership.
Identify purchasing's function within an overall quality assurance program.
Define total quality management (TQM).
Discuss the advantages of Six Sigma implementation
Discuss the relationship between cost and price.
Explain various pricing methods.
Describe how price/cost analysis is used for the negotiation process.
Describe the differences between bargaining and negotiations.
Explain the six psychological factors that affect bargaining, and identify the elements of negotiations.
Discuss the implementation of a bargaining strategy.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
All assessment of student achievement is left to the discretion of the individual instructor.

BSC260 - Global Logistics & Supply Chain Mgmt

Overview

Subject Supply Chain Management	Academic Department Business & Economics	School Business, Entrepreneurship, PD
Course Description This course is the Capstone of the Supply Chain Management (SCM) program. Upon successful completion of this course, students should be able to demonstrate knowledge in SCM in order to think critically and design SCM strategies necessary to support the firm's global strategic decisions. This course should prepare students for higher-level learning in the field of SCM with emphasis in the following areas: globalization and international trade, supply chain relationships, supply chain strategies, collaborative planning, procurement and ethical standards, information flows and technology, measuring and managing logistic performance, supply chain vulnerabilities, sustainable supply chain systems, reverse logistics, service supply chains, and emerging supply change designs.		
Course Pre-requisite(s) BSC230 Logistics & Distribution Strat with a C grade or better AND BSC240 Operations & Supply Chain Mgmt with a C grade or better OR Instructor Permission.		Course Co-requisite(s) BSC250 Purchasing & Supply Chain Mgmt

Note: BSC260 Global Logistics Supply Chain Global Logistics and Supply Chain Management to replace prior course offering BBA-254 Logistics and Supply Chain Management.		

Goals, Topics, and Objectives

Course Goals This course is the Capstone of the Supply Chain Management (SCM) program. Upon successful completion of this course, students should be able to demonstrate knowledge in SCM in order to think critically and design SCM strategies necessary to support the firm's global strategic decisions. When completed, this course should prepare students for higher-level learning in the field of SCM.
Core Course Topics - Globalization and the Supply Chain - Supply Chain Relationships - Supply Chain Strategies - Collaborative Planning with Logistics Service Providers - Procurement and Ethical Standards - Information Flows and Technology - Measuring and Managing Logistic Performance - Supply Chain Vulnerabilities - Sustainable Supply Chain Systems - Reverse Logistics - Service Supply Chains - Emerging Supply Change Designs
Explain globalization; and assess the global impact on the supply chain caused by social, technical, cultural, and political forces.
Examine the roll of multinational companies and their role in global trade.
Explain outsourcing and the factors affecting outsourcing decisions.
Identify problems faced by outsourcing companies that can result in failure.
Examine the outsourcer-outsoucee relationship and the integration and collaboration in the global supply chain.
Discuss the evolution of manufacturing from craft production, to mass production, to lean production, and to mass customization.
Explain lean and agile logistics strategies.
Compare and contrast the similarities and differences between lean production and agile supply chains.
Describe and differentiate the various types of companies that provide logistics services.
Examine carrier responsibilities and documentation.
Identify factors that should be considered when selecting the logistics service provider.
Describe the differences between procurement, sourcing and purchasing.
Identify the motivations and differences between buyers and sellers.
Explain the value and risk factors of goods and services to a firm and the level of dependency relative to the product.
Discuss ethical behavior and concept of sustainability.
Define the role of information technology in the supply chain.
Explain the need for visibility and transparency across the supply chain network and outline the barriers to achieving it.

Describe various information technologies and the use of RFID in the supply chain to provide real-time information visibility.
Explain the basic forms of performance measurement.
Illustrate the trend towards measurement of a wider array of activities, and the driving forces behind this trend.
Describe the role of benchmarking, commonly used metrics, and key performance indicators.
Explain why supply chain risk, robustness, and resilience have emerged as important themes in supply chain management.
Discuss the need for a holistic approach to managing supply chain vulnerabilities.
Explain the terms carbon footprint, food miles, and reverse logistics.
Illustrate the best practices in the attempt to reduce environmental footprints.
Explain the basics of reverse logistics.
Describe the various recovery options in reverse logistics such as reuse, remanufacturing, and recycling.
Identify key success factors for the implementation of reverse logistic systems.
Highlight the increased importance of service supply chains in the global economy.
Define service, service science, and service supply chains.
Compare and contrast manufacturing and service supply chains.
Review the many logistics and supply chain strategies and practices employed today.
Discuss the need to synchronize the design of supply chains with the design of a product.
Outline the skills and knowledge areas required of logistics and supply chain managers in the future.

CHEM111 - Chem Skills Pre-Professional Programs

Overview

Subject Chemistry	Academic Department Chemistry	School Science, Tech, Engr & Math
Course Description Includes the study of dimensional analysis; atomic structure; stoichiometry; molarity; the periodic table; nomenclature; reactions and equations, and properties of gases. This course is for students majoring in science, engineering, mathematics, pharmacy, or other pre-professional programs who would benefit from further preparation for the standard general chemistry sequence required in these programs. May not be used to satisfy elective requirements for the AS in Chemistry program. Students in other programs should consult with their program advisor about eligibility for use as an elective. Three hours of lecture and two hours of laboratory per week.		
Course Pre-requisite(s) Eligible to take a gateway MATH course at HFC or a satisfactory score on the Math placement exam, and ENG131 Introduction College Writing eligible.		
Credit Hours 4		

Contact Hours

Course Fee 25	Miscellaneous Department Fee 0
Academic Level Undergraduate	
General Education Category Natural Sciences	Michigan Transfer Agreement (MTA) Category Category 6: Natural Sciences - Applied Degrees, Category 6: Natural Sciences - Transfer Degrees - Lecture and Lab
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Other

Credit for Prior College Level Learning (CPCLL) Details
A student may receive credit for [CHEM111 Chem Skills Pre-Professional](#) by earning either:

- A minimum score of 50 on the CLEP Chemistry Exam
- A score of 4 or higher on the AP Chemistry Exam
- A score of 4 or higher on the International Baccalaureate-Higher Level (IB-HL) Chemistry Exam
- A score of 5 or higher on the International Baccalaureate-Standard Level (IB-SL) Chemistry Exam

Goals, Topics, and Objectives

Core Course Topics
1. Calculations: exponential and scientific notation
2. Measurements: metric system, significant figures
3. Dimensional analysis: units conversions, problem solving, percentages
4. The nature of matter: phases, mixtures, compounds, and elements
5. Basic atomic theory: atoms, protons, neutrons, electrons, and ions
6. Periodic table: symbols, names, periods, groups, atomic weights
7. Nomenclature: naming compounds and writing formulas
8. Chemical equations: balancing, molecular, and ionic
9. Stoichiometry
10. Properties of gases
11. Introduction to safety in the chemistry laboratory
Use a calculator to evaluate mathematical expressions involving scientific notation
Solve problems using dimensional analysis (unit conversion)
Distinguish among elements, compounds (both ionic and covalent), and mixtures
Determine the structure of atoms and ions in terms of subatomic particles including electron configuration and orbitals.
Predict chemical and physical properties using the periodic table
Name chemicals from formulas for simple ionic and binary compounds and common acids. Common "ate" ion formulas should be committed to memory
Write formulas from names of chemicals for simple ionic and binary compounds and common acids. Common "ate" ion formulas should be committed to memory
Write and balance chemical equations, including molecular and ionic forms
Identify oxidation numbers, the substance oxidized, the substance reduced, the oxidizing agent, the reducing agent, product of oxidation and product of reduction.
Solve chemical problems using mole conversions

Solve stoichiometry problems (mole-mole, mole-mass and mass-mass problems) using dimensional analysis
Perform calculations involving common concentration units (mass percent and molarity)
Describe properties of ideal gases
Solve problems involving gas laws
Apply principles of safety rules and demonstrate knowledge of the location of common laboratory and safety equipment
Demonstrate proficiency in the use of chemical equipment
Analyze and interpret measurement data, using mathematical models, and/or observed chemical behavior, expressed in chemical equations, to draw conclusions regarding the nature of matter
Demonstrate cooperative learning skills
Demonstrate use of critical thinking skills in analyzing data, making connections and relating to chemical patterns

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
Students will be assessed in lecture using exams, assignments/quizzes, and a comprehensive final. Students will be assessed in lab using reports, quizzes and lab-exams. The overall course grade is determined using the categories and values listed below.	
CATEGORY	PERCENTAGE
Lecture Exams	40-50%
Laboratory (reports, quizzes, lab-exams)	25%
Assignments/Quizzes	up to 10%
Final Exam	25%

No student will receive a passing grade in [CHEM111 Chem Skills Pre-Professional](#) unless that student has earned at least a 55% in the laboratory.

CHEM131 - Principles of Chemistry

Overview

Subject Chemistry	Academic Department Chemistry	School Science, Tech, Engr & Math
Course Description	Introduces general inorganic chemistry. Major topics include measurements, atomic structure, bonding, chemical periodicity, stoichiometry, gas laws, solution chemistry, nuclear chemistry, and acid/base chemistry. May meet requirements in Nursing and Health Careers programs. Three hours of lecture and two hours of laboratory per week.	
Course Pre-requisite(s)	Eligible to take a gateway MATH course at HFC or a satisfactory score on the Math placement exam, and ENG131 Introduction College Writing eligible.	
Credit Hours	4	
Contact Hours	5	
Course Fee 25	Miscellaneous Department Fee 0

Credit for Prior College Level Learning (CPCLL) Details
A student may receive credit for [CHEM131 Principles of Chemistry](#) by earning a score of 4 or higher on the AP Chemistry Exam and providing a portfolio that demonstrates 30 hours of appropriate college level chemistry laboratory experience. An interview may also be required.
A student may receive credit for [CHEM131 Principles of Chemistry](#) by earning either:

- A score of 4 or higher on the AP Chemistry Exam and providing a portfolio that demonstrates 30hr of appropriate college level chemistry laboratory experience. An interview may also be required.
- A score of 5 or higher on the International Baccalaureate-Higher Level (IB-HL) Chemistry Exam.
- A score of 6 or higher on the International Baccalaureate-Standard Level (IB-SL) Chemistry Exam.

Goals, Topics, and Objectives

Course Goals
The purpose of this course is to illustrate through classroom instruction and laboratory experiments some of the fundamental principles and laws governing general chemistry. The curriculum is designed to provide a chemistry foundation that prepares students for further careers including Nursing and Health Careers programs and assist students develop problem solving and critical thinking skills.
Core Course Topics
1. Matter, Energy, and Measurements
2. Atoms, Atomic Structure, and the Periodic Table
3. Chemical Bonds and Nomenclature
4. Chemical Reactions and Stoichiometry
5. Properties of Gases and the Gas Laws
6. Solutions, Concentration Units, and Intermolecular Forces
7. Nuclear Chemistry
8. Acids, Bases, and pH

Associate the correct units with measurements of length, mass, volume, temperature, density, and heat.
Perform unit conversion and problem solving using the dimensional analysis method.
Identify the names of elements based on their elemental symbol.
Differentiate between elements, compounds, and mixtures.
Use the periodic table as a tool to explain and predict trends in atomic structure and properties.
Convert between the names and the chemical formulas of compounds and molecules.
Draw Lewis structure for atoms, molecules, and ions.
Determine the polarity of bonds.
Perform calculations using Avogadro's number.
Balance chemical equations.
Use stoichiometry to calculate mass relationships in a chemical reaction.
Use the Gas Laws to calculate how changes in pressure, temperature, and/or volume affect an ideal gas.
Relate the nature and importance of intermolecular forces to characteristic physical properties.
Distinguish between solutes and solvents.
Characterize a solution as saturated, unsaturated, or supersaturated.
Calculate the concentration of solutions.
Distinguish electrolytes from non electrolytes.
Define the properties of acids and bases.
Calculate pH and pOH of solutions.
Perform titration calculations.
Distinguish among alpha, beta, and gamma radiation and the appropriate shielding for each.
Calculate the amount of radioisotope remaining after a given number of half-lives.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Students will be assessed in lecture using exams, assignments, quizzes, and a comprehensive final. Students will be assessed in lab using reports, quizzes, and lab-exams. The overall course grade is determined using the categories and values listed below.

CATEGORY	PERCENTAGE
Lecture Exams (4)	40%
Laboratory (reports, quizzes, lab-exams)	25%
Assignments/Homework	10%
Quizzes	5%
Final Exam (cumulative)	20%

No student will receive a passing grade in [CHEM131 Principles of Chemistry](#) unless that student has earned at least a 65% in the laboratory.

CHEM132 - Principles Organic&Biological Chemistry

Overview

Subject Chemistry	Academic Department Chemistry	School Science, Tech, Engr & Math
----------------------	----------------------------------	--------------------------------------

Course Description
This is the second course in a traditional two-semester General, Organic, and Biochemistry (GOB) sequence. Emphasizes nomenclature and functional group reactivity. Addresses the structure and function of lipids, carbohydrates, proteins, and nucleic acids at an introductory level. There are three hours of lecture and three hours of laboratory each week.

Course Pre-requisite(s)
[CHEM131 Principles of Chemistry](#) or [CHEM141 Prin Gen & Inorganic Chem I](#) or equivalent course, with a grade of C or better

Goals, Topics, and Objectives

- Core Course Topics
- Organic Chemistry and the Diversity of Organic Compounds
 - Nomenclature: Structure; Physical Properties; and Reactions of the following organic compounds:
 - Hydrocarbons (alkanes, alkenes, alkynes and arenes)
 - Alcohols, Ethers and Thiols
 - Amines
 - Aldehydes and Ketones
 - Carboxylic Acids, Esters and Amides
 - Chirality
 - Structure; Function; and Reactions of the following biological molecules:
 - Lipids
 - Carbohydrates
 - Proteins
 - Nucleic Acids

Write the molecular and structural formulas of organic compounds.
Name and identify physical properties and characteristic reactions of hydrocarbons.
Identify and name organic molecules containing functional groups.
Identify physical properties of molecules containing functional groups.
Identify the following characteristic reactions involving functional groups: acid/base, oxidation/reduction, hydration/dehydration, condensation/hydrolysis
Describe the concept of chirality and the importance of stereoisomers.
Recognize and specify the configuration of a stereocenter using the R,S System.
Identify physical properties, reactions and functions of the following biological molecules: lipids, carbohydrates, proteins, nucleic acids

Describe membrane structure and transport.
Combine amino acids to form proteins and describe the levels of protein structure.
Identify factors that affect protein stability.
Describe the structures of DNA and RNA.
Describe the processes of replication, transcription and translation.
Demonstrate proficiency with the use of the following equipment: semi-microscale and traditional glassware, melting point apparatus, Bunsen burners, water aspirators, hot plate/stirrers
Demonstrate proficiency with the following techniques: distillation, recrystallization, graphical analysis, melting point and boiling point determinations, filtration, chemical waste disposal
Demonstrate the ability to predict physical properties and reactions between molecules based on an understanding of functional groups chemistry.
Demonstrate the use of critical thinking skills in the analysis of experimental data.

Assessment, Requirements, and Outcomes

A student may receive credit for [CHEM141 Prin Gen & Inorganic Chem I](#) by earning either:

- A score of 4 or higher on the AP Chemistry Exam and providing a portfolio that demonstrates 60hr of appropriate college level chemistry laboratory experience. An interview may also be required.
- A score of 6 or higher on the International Baccalaureate-Higher Level (IB-HL) Chemistry Exam.

Goals, Topics, and Objectives

Course Goals
This course is designed to prepare students for further courses in chemistry or to satisfy the requirement for a first semester course in chemistry for other fields of science. In addition to acquainting the student with the basic principles of chemistry, the course objective for [CHEM141 Prin Gen & Inorganic Chem I](#) is to assist the student in developing critical thinking and problem solving skills.

- Core Course Topics
- The classification of matter: phases, mixtures, compounds, and elements
 - Measurements: metric system, significant figures
 - Dimensional analysis: unit conversions, problem solving, percentages
 - Basic atomic theory: atoms, protons, neutrons, electrons, and ions
 - Periodic table: symbols, names, periods, groups, atomic weights

6. Nomenclature: naming compounds and writing formulas
7. Chemical equations: balancing; molecular, ionic, and oxidation-reduction
8. Mole conversions: Avogadro's number, molecular weights
9. Stoichiometry: including limiting reactant
10. Empirical formulas: from per cent composition and experimental data
11. Solutions: molarity, dilutions, solution stoichiometry, titrations
12. Gases: gas laws, gas stoichiometry, kinetic molecular theory, real gases
13. Thermochemistry: calorimetry, Hess' Law, enthalpies of formation, First Law of thermodynamics, heat and work, (optional: warming/cooling curves)
14. Electromagnetic radiation: wavelength, frequency, photon energies, photoelectric effect
15. Atomic Hydrogen: Bohr theory, wavefunctions, quantum numbers
16. Electron configurations: ground state atoms and ions
17. Periodic properties: atomic size, ionization energies, electron affinities, electronegativity
18. Chemical bonding: ionic, covalent, orbital overlap, bond lengths, bond energies
19. Lewis Dot Diagrams: resonance, molecular shapes and polarities
20. Valence Bond Theory: hybridization, double and triple bonds
21. Safety and related environmental concerns in the chemistry laboratory
22. (Molecular Orbital Theory; optional)

Write and balance chemical equations, including molecular, ionic, and redox.

Name chemicals from formulas.

Write formulas from names of chemicals.

Distinguish among elements, compounds, and mixtures.

Describe the structure of atoms and ions in terms of subatomic particles.

Predict chemical and physical properties using the periodic table.

Solve problems using dimensional analysis (unit conversion).

Solve chemical problems using mole conversions.

Solve chemical problems using concentrations.

Differentiate the various electromagnetic radiations and their interaction with matter.

Use quantum theory to describe the hydrogen atom.

Write ground state electron configurations for atoms and ions.

Relate electron configurations to various periodic properties.

Relate thermochemical properties to heat changes in chemical processes.

Draw Lewis Dot structures.

Use Lewis Dot structures to predict molecular geometry and properties.

Solve gas law problems.

Relate kinetic molecular theory to the states of matter.

Display professional behavior, courtesy, and attitude.

Observe, analyze, and interpret laboratory data, collected from experiments built on core course topics, both qualitatively and quantitatively.

Demonstrate proficiency in laboratory techniques used in various experiments.

Demonstrate critical thinking skills in identification of laboratory unknowns.

Practice appropriate safety procedures in the laboratory.

Use environmentally sound chemical laboratory practices.

Prepare neatly and accurately written lab reports using calculations, graphs, explanations, and chemical equations.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Students will be assessed in lecture using exams, assignments/quizzes/homework, and a comprehensive final. Students will be assessed in lab using reports, quizzes, and lab-tests. The overall course grade is determined using the categories and values listed below.

CHEM142 - Principles Gen & Inorganic Chemistry II

Overview

Subject Chemistry	Academic Department Chemistry	School Science, Tech, Engr & Math
Course Description Emphasizes properties of liquids and solutions, reaction rates, chemical equilibria, thermodynamics, electrochemistry, acid/base chemistry, nuclear chemistry and descriptive chemistry of the more common elements (as time allows). Three hours of lecture and four hours of laboratory per week.		
Course Pre-requisite(s) CHEM141 Prin Gen & Inorgan Chem I with a grade of C or better. MATH175 Precalculus recommended.		

Credit Hours
5

Contact Hours
7

Course Fee 27	Miscellaneous Department Fee 0
Academic Level Undergraduate	
General Education Category Natural Sciences	Michigan Transfer Agreement (MTA) Category Category 6: Natural Sciences - Applied Degrees, Category 6: Natural Sciences - Transfer Degrees - Lecture and Lab
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Course Goals
This course is designed to prepare students for further courses in chemistry or to satisfy the requirement in other fields of science for a two semester sequence in general chemistry. In addition to extending the student's knowledge of the basic principles of chemistry, the course objective for **CHEM142 Prin Gen & Inorgan Chem II** is to assist the student in developing critical thinking and problem solving skills.

- Core Course Topics**
1. The condensed phases
 - Liquids, solids, intermolecular forces, vapor pressure and other physical properties, phase diagrams
2. Properties of solutions
 - Solubility, concentration units, colligative properties
3. Chemical kinetics
 - Rate laws, integrated forms of the rate laws, mechanisms
4. Chemical equilibria: definitions, LeChatelier's Principle, equilibrium constants
5. Acid/Base equilibria: acids, bases, buffers, pH, titrations, hydrolysis of salts
6. Equilibria involving solids and complexes
 - Precipitate formation, selective precipitation, precipitation from complex ions, dissolving precipitates in favor of complex ions, naming complex ions
7. Chemical thermodynamics
 - Laws of thermodynamics, heat, work, enthalpy, entropy, free energy, spontaneity, and equilibrium constants
8. Electrochemistry
 - Voltaic and electrolytic cells, standard reduction potentials, Nernst Equation, Faraday's laws, relationship to free energy and equilibrium constants
9. Nuclear chemistry
 - Types of nuclear decay, stability of nuclei, writing nuclear equations, occurrences of natural and man-made radiation in the environment, disposal of nuclear waste and other contemporary issues related to use of radionuclides, kinetics and thermodynamic calculations associated with nuclear systems
10. Safety and related environmental concerns in the chemistry laboratory

Identify the intermolecular forces in the condensed phases of pure substances.

Predict the physical properties of pure substances using intermolecular forces.

Solve vapor pressure problems for pure materials.
Use cooling/warming curves to calculate heat changes for pure materials.
Calculate various concentration units for solutions.
Solve problems involving colligative properties of solutions.
Describe and explain the factors affecting reaction rates.
Determine the rate law for a reaction from experimental data.
Solve problems utilizing the integrated form of the rate law.
Evaluate a proposed mechanism for a reaction in light of experimental data.
Solve chemical equilibria problems in the gas phase and in solution with special emphasis on acid-base chemistry.
Describe how to construct buffers by the two common laboratory methods.
Solve buffer problems utilizing the Henderson-Hasselbalch equation.
Identify, interpret, and construct titration curves from experimental data for the four most encountered systems.
Calculate the pH at any point on a titration curve.
Solve chemical equilibria problems for systems involving solids and complex ions.
Write names and formulas for complex ions.
Describe mathematically and verbally the laws of thermodynamics.
Solve problems involving thermodynamic quantities.
Use Standard Reduction Potentials to differentiate voltaic and electrolytic cells.
Apply the Nernst Equation to voltaic cell systems.
Apply Faraday's laws to electrochemical systems.
Apply standard thermodynamic and electrochemical data to equilibrium systems.
Differentiate the various types of nuclear decays, their interactions with matter and their impact upon the environment.
Write nuclear reactions.
Solve problems based on nuclear equations.
Display professional behavior, courtesy, and attitude in both lecture and laboratory environments.
Observe, analyze, and interpret laboratory data, collected from experiments/exercises built on the core course topics, both qualitatively and quantitatively.
Demonstrate proficiency in laboratory techniques used in various experiments.
Demonstrate critical thinking skills in identification of unknowns.
Practice appropriate safety procedures in the laboratory.

Use environmentally sound chemistry laboratory practices.
Prepare neatly and accurately written lab reports using calculations, graphs, explanations, and chemical equations.

CHEM241 - Organic Chemistry I

Overview

Subject Chemistry	Academic Department Chemistry	School Science, Tech, Engr & Math
Course Description Introduces organic chemistry. Emphasizes structural theory, stereochemistry, physical properties, reaction mechanisms, and functional group chemistry. This course covers the first semester of a full year course. It is a lecture course designed to meet the requirements for science majors, pre-professional biology, pre-professional chemistry, as well as premedical, pre-dental, pre-pharmacy, pre-veterinary, and chemical engineering students. Students should check requirements for organic chemistry at their intended transfer institution. Four hours of lecture per week without lab.		
Course Pre-requisite(s) CHEM141 Prin Gen & Inorganic Chem I with a grade of C or better		
Credit Hours 4		

Contact Hours

Course Fee 15	Miscellaneous Department Fee 0
Academic Level Undergraduate	
General Education Category Natural Sciences	Michigan Transfer Agreement (MTA) Category Category 6: Natural Sciences - Applied Degrees, Category 6: Natural Sciences - Transfer Degrees - Lecture Only
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Course Goals After completing Chemistry 241, students should:	1. Be further acquainted with how organic chemistry impacts their lives on a daily basis. 2. Be able to understand the basic mechanisms by which alkanes, alkenes, alkynes, alkyl halides, ethers, thiols, and alcohols react. 3. Be able to name basic organic molecules, molecules containing functional groups, as well as cyclic and bicyclic compounds. 4. Be able to predict physical properties of organic molecules. 5. Be able to predict the results of some chemical reactions. 6. Be able to propose a synthesis of some basic organic molecules. 7. Be experienced in using critical thinking and the scientific method. 8. Be more familiar with the work of organic chemists. 9. Be prepared to enroll in higher level classes in chemistry. 10. Find greater appreciation for the complexity and beauty of the interrelationship between organic chemistry and biology.
Core Course Topics 1. Chemistry is the study of stuff (matter) 2. Organic Chemistry and the diversity of Organic Compounds 3. Drawing Organic Compounds 4. Predicting acid-base equilibrium by using pKa's 5. Chirality ("Handedness") in Organic Chemistry 6. Nomenclature; Structure; Physical and Chemical Properties of: Alkanes, Cycloalkanes, Alkenes, Alkynes, Alkyl Halides, and Alcohols 7. Thorough study of the following reaction mechanisms: ◦ Addition reactions to alkenes: H-X, (hydrohalogenation, with possible rearrangements); H2O (hydration via: acid catalyzed oxymercuration/demercuration; hydroboration/oxidation); X-X (halogenation); H2O (vicinal halohydrin formation) ◦ Oxidation of alkenes (dihydroxylation, ozonolysis) ◦ Reduction of alkenes (transition metal catalyzed hydrogenation) ◦ Alkyne Reactions: Formation of Alkynes by halogenation/double elimination; Reduction of alkynes by Na in NH3; HgSO4/H2SO4 catalyzed addition of water (including tautomerization); Hydroboration of Alkynes (including tautomerization); Addition of X2; Addition of HX; Addition of carboxylic acids ◦ Radical halogenation of alkanes, allylic halogenation, and benzylic halogenation ◦ Reactions of alkyl halides and sulfonates: SN1; SN2; E1; E2; Neighboring Group Participation, and Rearrangement ◦ Reactions of alcohols: Reaction with H-X; Dehydration Reaction with SOCI2 and PBr3; Conversion to alkyl sulfonates; Oxidation using Chromic acid (including Chromate ester formation); Pinacol Rearrangement; Oxidation with NADP+ ◦ Reactions with ethers: Lysis using H-X; Hydrolysis; Nucleophilic opening of epoxides	

- Reactions forming ethers: Condensation of alcohols; Williamson Ether Synthesis; Sharpless Asymmetric Epoxidation
- Reactions of alkenes with alcohols

Demonstrate various levels of proficiency with predicting the mechanisms of reactions of various classes of organic molecules including, but not limited to alkanes, alkenes, alkyl halides, and alcohols.
2. Demonstrate the use of critical thinking skills in the analysis of chemical reactions.

Recognize and give examples of the importance of searching for patterns when one is studying the sciences and carrying out investigations and/or experiments.

Name organic and biochemical molecules possessing a variety of structural complexity.

Predict the physical properties of molecules based on an understanding of functional groups.

Predict reactions between molecules base on an understanding of functional groups and bonding.

Describe how chemical properties and reactions mediate biological processes such as: i. How solubility mediates where drugs and other chemicals go in the human body; ii. The role of pH in maintaining enzyme activity; iii. The importance of buffers in maintaining the appropriate pH; iv. How isomerism can change a molecule's bioavailability/reactivity; v. Demonstrate proficiency in performing retrosynthetic analysis; vi. Demonstrate proficiency with course management software such as HFC Online. viii. Display professional behavior, courtesy, and attitude

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

Student assessment is built into the course objectives. Objectives were written using wording which allows their achievement to be measured. Students will be assessed on:

- In Class Questions, both verbal and written.
- Pre Class Questions, both written and electronic.
- On-line Web Based Learning (OWL) provided by text publisher which allows students to complete homework type problems, receive immediate feedback, and allows them to redo the material until they get it right.
- Lecture examinations consisting of objective questions and short essays.
- Professional behavior and attitude.

CHEM242 - Organic Chemistry II

Overview

Subject Chemistry	Academic Department Chemistry	School Science, Tech, Engr & Math
----------------------	----------------------------------	--------------------------------------

Course Description

Builds on the concepts introduced in CHEM-241. Emphasizes acid-base chemistry, spectroscopy, and retrosynthetic analysis. Reaction mechanisms and physical properties of the following functional groups will be explored: carbonyl chemistry (aldehydes, ketones, and carboxylic acid derivatives); carboxylic acids; amines; carbohydrates; lipids; amino acids, proteins; and nucleotides. This course is designed to meet the requirements for science majors, pre-professional biology, pre-professional chemistry, as well as premedical, pre-dental, pre-pharmacy, veterinary, and chemical engineering students. Four hours of lecture per week without lab.

Course Pre-requisite(s)

[CHEM241 Organic Chemistry I](#) with a grade of C or better.

Credit Hours

4

Eligible for Credit for Prior College Level Learning (CPCLL)
No

Goals, Topics, and Objectives

Course Goals

- After completing Chemistry 242, students should:
 - Be further acquainted with how organic chemistry impacts their lives on a daily basis.
 - Be able to understand the basic mechanisms by which alkenes, alkynes, ethers, aldehydes, ketones, carboxylic acids, carboxylic acid derivatives (acid halides, anhydrides, esters, amides, nitriles), other acid derivatives (sulfonamides, imides, phosphoric anhydrides, chromic anhydrides), amines, aromatics and other conjugated systems react.
 - Be experienced in using critical thinking and the scientific method.
 - Be more familiar with the work of organic chemists.
 - Be prepared to enroll in higher level classes in chemistry and biochemistry.

- Find greater appreciation for the complexity and beauty of the interrelationship between organic chemistry and biology.

Core Course Topics

- Continued application of many concepts mastered in [CHEM241 Organic Chemistry I](#) such as: Drawing Organic Compounds Predicting acid-base equilibria by using pKa's Chirality ("Handedness") in chemical reactions and interactions of biochemicals
- Nomenclature; Structure; Physical and Chemical Properties of: Alkanes and Cycloalkanes Alkenes Alkyl halides Alcohols Ethers
- Nomenclature; Structure; Physical and Chemical Properties of: ethers, aldehydes, ketones, carboxylic acids, carboxylic acid derivatives (acid halides, anhydrides, esters, amides, nitriles), other acid derivatives (sulfonamides, imides, phosphoric anhydrides, chromic anhydrides), amines, aromatics and other conjugated systems
- Thorough study of the following reaction mechanisms:
 - Williamson ether synthesis; Acid-catalyzed addition of alcohols to alkenes (formation of ethers); Epoxidation of alkenes using RCO₃H Halohydrin formation; Internal S_N2 Acid-catalyzed opening of epoxides; Nucleophilic opening of epoxides
 - Grignard addition to aldehydes and ketones; Addition of terminal alkyne anions to aldehydes and ketones; Formation of a cyanohydrin; Phosphonium ylide formation / Wittig reaction; Acid catalyzed formation of hemiacetals and acetals; Reactions of 1,3-dithiane anions with electrophiles; Imine formation from aldehydes and ketones; Keto/Enol tautomerization. (i) Acid-catalyzed, (ii) Base-catalyzed: Acid-Catalyzed alpha-halogenation of a ketone; Base-Catalyzed alpha-halogenation of a ketone (Haloform reaction); NaBH₄ reduction of aldehydes and ketones; Wolff-Kishner Reduction Fischer esterification; Formation of methyl esters using diazomethane (CH₂N₂)
 - Reaction of carboxylic acids with SOCl₂; decarboxylation of beta-carbonyl containing carboxylic acids; Fischer Esterification
 - Nucleophilic acyl substitution: Acid-catalyzed hydrolysis of carboxylic acid derivatives; Base-catalyzed hydrolysis of carboxylic acid derivatives; Reactions of Carboxylic acid derivatives with alcohols; Reaction of acid halides with amines to give amides; Reactions of esters with Grignard reagents and organolithium reagents; Reduction of Carboxylic acid derivatives; The Hofmann rearrangement of primary amides
 - Base-catalyzed aldol reactions/Base-catalyzed dehydrations; Acid-catalyzed aldol reactions/Acid-catalyzed dehydrations; Claisen condensation; Dieckmann condensation; Formation of Isopentenyl pyrophosphate (precursor to cholesterol/ hormones/terpenes); Alkylation/Acylation of enamines; Acetoacetic/Malonic ester syntheses; Michael reaction: (Conjugate addition (1,4) of stabilized enolate anions);
 - Kolbe synthesis: carboxylation of phenol towards the pharmaceutical synthesis of aspirin; Benzylic Resonance Electrophilic aromatic substitution; Chlorination Formation of the nitronium ion/Sulfonation; Friedel-Crafts alkylation/Friedel-Crafts acylation and generation of acyl cation; Other Friedel-Crafts Reactions Formation of the nitrosyl cation (NO⁺)
 - Reactions of secondary amines with the nitrosyl cation to give N-nitrosamines; Reactions of primary amines with the nitrosyl cation to give diazonium ions; The Tiffeneau-Demjanov rearrangement; The Hofmann Elimination; The Cope elimination 1,2 and 1,4-addition to a conjugated diene.
 - The Claisen rearrangement.
 - Acid-catalyzed formation of glycosides (review acetal formation).
 - Formation of dimethylallyl cation/Reaction to geranyl pyrophosphate (time permitting); From Squalene to Lanosterol (time permitting); Oxidation of an alcohol by NAD⁺; Unsaturated fatty acids from saturated fatty acids using FAD oxidation; Claisen reactions in biochemistry; Reverse aldol reactions in biochemistry; The reactions in Glycolysis; The reactions in the citric acid cycle; The reactions in the biosynthesis of: fatty acids, terpenes, and steroids.

Demonstrate various levels of proficiency with predicting the mechanisms of reactions of various classes of organic molecules including, but not limited to ethers, aldehydes, ketones, carboxylic acids, carboxylic acid derivatives (acid halides, anhydrides, esters, amides, nitriles), other acid derivatives (sulfonamides, imides, phosphoric anhydrides and esters, chromic anhydrides), amines, aromatics and other conjugated systems.

Demonstrate the use of critical thinking skills in the analysis of chemical reactions.

Recognize and give examples of the importance of searching for patterns when one is studying the sciences and carrying out investigations and/or experiments.

Name complicated organic and biochemical molecules.

Devise a synthesis for relatively elaborate organic compounds (using retrosynthetic analysis).

Predict the physical properties of molecules based on an understanding of functional groups.

Predict reactions between molecules base on an understanding of functional groups and bonding.

Describe how chemical reactions mediate biological processes.

Demonstrate competence with identification of functional groups and organic reactions of biomolecules.

Determine the structure of organic species using spectroscopic data.

Demonstrate proficiency with course management software such as HFC Online.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

Student assessment is built into the course objectives. Objectives were written using wording which allows their achievement to be measured. Students will be assessed on:

- In Class Questions, both verbal and written.
- Pre Class Questions, both written and electronic.
- On-line Web Based Learning (OWL) provided by text publisher which allows students to complete homework type problems, receive immediate feedback, and allows them to redo the material until they get it right.
- Lecture examinations consisting of objective questions and short essays.
- Professional behavior and attitude.

CHEM243 - Microscale Organic Chemistry Lab I

Overview

Subject	Academic Department	School
Chemistry	Chemistry	Science, Tech, Engr & Math
Course Description Microscale glassware and analytical techniques are used to study fundamental organic reactions and the synthesis of organic compounds. Techniques include distillation (simple, fractional, and steam), crystallization, and extraction. Analysis of compounds includes melting points, boiling points, refractive indices, infrared spectroscopy, and chromatography (gas, thin layer, column). Approximately one hour of lecture and three hours of laboratory per week. This meets the Organic Laboratory requirement necessary to enter into Pharmacy, Medical, Dental, and Veterinary schools. Many schools require students to also take Organic Lab II CHEM-244.		

Course Pre-requisite(s)	Course Co-requisite(s)
CHEM141 Prin.Gen & Inorganic Chem for the equivalent and CHEM241 Organic Chemistry I, with a grade of C or better	CHEM241 Organic Chemistry I can be a co-requisite with Instructor Permission

Credit Hours

Academic Level Undergraduate	
General Education Category Natural Sciences	Michigan Transfer Agreement (MTA) Category Category 6: Natural Sciences - Applied Degrees, Category 6: Natural Sciences - Transfer Degrees - Lecture Only
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Course Goals
- After completing Chemistry 243, students should: - Be skilled in the use of specialized instrumentation. - Be adept at making careful measurements and observations. - Be able to purify organic compounds. - Be able to keep an up-to-date laboratory notebook. - Be experienced in using critical thinking and the scientific method. - Be more familiar with the work of professional chemists. - Be able to use the chemical literature for research. - Be able to write detailed, accurate, and thorough scientific reports. - Be prepared to enroll in higher level classes in chemistry.
Core Course Topics
- Lab Procedures and Safety - Using the Chemical Literature (primary and secondary references) - Proper Laboratory notebook preparation and maintenance - Measurement of Physical Properties: boiling point, melting point, and refractive index. - Distillation: Simple Distillation (semimicro); Fractional Semimicroscale Distillation (FSMD) - Solvent Extraction and Determining a Partition Coefficient; Solvent Extraction using Acid-Base Properties - Williamson Ether Synthesis - Esterification: Isoamyl Acetate Synthesis - Infrared Spectroscopy (students will learn how to independently operate a modern spectrophotometer) - Photochemical Isomerization of Alkenes: Isomerization of cis-1,2-Dibenzoylethylene - Thin Layer Chromatography (TLC) - Infrared unknowns - The Wittig reaction and the Horner-Wadsworth-Emmons-Arbuzov variation - Diels-Alder Reaction: Synthesis of 9,10-Dihydroanthracene-9,10-a-b-Succinic anhydride - Diazonium Coupling Reaction: Synthesis of Methyl Red - Friedel-Crafts Acylation of Ferrocene - Cost Analysis Scaleup a reaction from microscale to multi-tonne scale and perform a cost analysis.

Demonstrate various levels of proficiency with laboratory skills used by scientists. Each lab objective will be listed in the laboratory assignments. Each objective will be characterized as requiring familiarity, competence, or expertise on the part of the student. During the laboratory periods, the student will then be assessed to determine whether they have the level of proficiency expected.

Demonstrate the use of critical thinking skills in the analysis of experimental data.

Operate proficiently the following equipment: microscale, semi-microscale and traditional glassware, melting point apparatus, refractometers, infrared spectrophotometer, thin layer chromatographic plates, fume hoods, safety glasses, burners, hot plates, syringes, hazardous chemicals.

Employ proficiently the following techniques: microscale distillation; recrystallization; infrared sampling; melting point determination; boiling point determination; solvent evaporation; solvent extraction; delivery of microscale quantities; and hazardous waste disposal.

Recognize and give examples of the importance of searching for patterns when one is studying the sciences and carrying out investigations and/or experiments.

Describe and analyze reaction mechanisms and their relationship to experimental manipulation.

Demonstrate the ability to predict the physical properties of molecules based on an understanding of functional groups.

Show familiarity with traditional library resources and electronic media and use criteria with which to judge the reliability of various resources.

Perform a cost analysis using chemical catalogs for a large scale organic synthesis.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

Student assessment is built into the course objectives. Objectives were written using wording which allows their achievement to be measured. Students will be assessed on:

- Performance in the lab setting.
- Laboratory reports.
- Lab material and skills will be assessed on a lab practical midterm and final. These exams have both practical and theoretical portions. Both of these exams last 4 hours.
- In Class Questions
- Pre Class Questions, both written and electronic.

Texts

Text book is designed for use by students entering into health related careers such as Pharmacy, Medical, Dental, and Veterinary. One such book being Microscale Organic Laboratory, 4th Ed. Dana W. Mayo, Ronald M. Pike, Peter K. Trumper NewYork: John Wiley & Sons, Inc., 2000.

CHEM244 - Microscale Organic Chemistry Lab II

Overview

Subject	Academic Department	School
Chemistry	Chemistry	Science, Tech, Engr & Math
Course Description Microscale glassware and analytical techniques are used in this follow-up course to CHEM-243. The primary focus of this course is multi-step organic syntheses and proper research techniques. Practical techniques from the previous course will be applied towards the synthesis of a novel polyaromatic hexaphenylbenzene, an antibacterial drug sufanilamide, triphenylmethanol, and cholesta-3,5-dien-3-ol acetate. Products will be analyzed (melting point/boiling point, infrared analysis, chromatographic properties (TLC, GC), solubility, refractive index) and compared to literature values to verify their veracity. Research will involve a critical analysis of competitive synthetic methods of a recent pharmaceutical agent. The sequence CHEM-241, CHEM-242 (Lecture I and II) and CHEM-243, CHEM-244 (Laboratory I and II) will transfer to all Michigan universities to meet their Organic Chemistry requirements for Science Majors. Approximately one hour of lecture and three hours of lab per week.		

Course Pre-requisite(s)	Course Co-requisite(s)
CHEM243 Microscale Organic Chem Lab I and CHEM242 Organic Chemistry II, with a grade of C or better	CHEM242 Organic Chemistry II can be a co-requisite

Goals, Topics, and Objectives

Course Goals

After completing Chemistry 244, students should be:

- Skilled in the use of specialized instrumentation.
- Adept at making careful measurements and observations.
- Able to purify organic compounds.
- Able to keep an up-to-date laboratory notebook.
- Experienced in using critical thinking and the scientific method.
- More familiar with the work of professional chemists.
- Able to use the chemical literature for research.
- Prepared to enroll in higher level classes in chemistry and biochemistry.

Core Course Topics

- Lab Safety
- Using the Chemical Literature (primary and secondary references)

3. Proper Laboratory notebook preparation and maintenance

4. Further exploration of Research Methods

5. Grignard Reaction With A Ketone: Triphenylmethanol

6. Hydroboration-Oxidation of an Alkene: Octanol

7. Multistep Organic Synthesis I:

The Benzooin Condensation of Benzaldehyde: Benzoin

Copper(II) Ion Oxidation of Benzoin: Benzil

Tetraphenylcyclopentadienone

Acetylation of Aniline: 2,2,2-Trifluoroacetanilide

Synthesis of (E)-Stilbene using a Horner-Wadsworth-Emmons-Arbuzov protocol

Bromination of (E)-Stilbene: meso-Stilbene Dibromide

Dehydrohalogenation of meso-Stilbene Dibromide: Diphenylacetylene Hexaphenyl Benzene

8. Multistep Organic Synthesis II:

Chlorosulfonation of 2,2,2-Trifluoroacetanilide: p-(Trifluoroacetamido)benzenesulfonyl chloride

Preparation of Arene Sulfonamide: Sulfanilamide

Demonstrate various levels of proficiency with laboratory skills used by scientists. Each lab objective will be listed in the laboratory assignments. Each objective will be characterized as requiring familiarity, competence, or expertise on the part of the student. During the laboratory periods, the student will then be assessed to determine whether they have the level of proficiency expected.

Demonstrate the use of critical thinking skills in the analysis of experimental data.

Demonstrate proficiency with the use of the following equipment: microscale, semi-microscale and traditional glassware, melting point apparatus, refractometers, infrared spectrophotometer, thin layer chromatographic plates, fume hoods, safety glasses, burners, hot plates, syringes, rotary evaporator, and hazardous chemicals.

Demonstrate proficiency with the following techniques: microscale distillation, recrystallization, infrared sampling, melting point determination, boiling point determination, solvent evaporation, delivery of microscale quantities, and hazardous waste disposal.

Recognize and give examples of the importance of searching for patterns when one is studying the sciences and carrying out investigations and/or experiments

Describe and analyze reaction mechanisms and their relationship to experimental manipulation.

Predict the physical properties of molecules based on an understanding of functional groups.

Show familiarity with traditional library resources and electronic media and use criteria with which to discriminate the reliability of various resources.

Determine the identity of an unknown using formula analysis, NMR data, infrared data, density and refractive index.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

Student assessment is built into the course objectives. Objectives were written using wording which allows their achievement to be measured. Students will be assessed on:

1. Laboratory reports.

2. Lab course material and skills will be assessed on a lab final. This exam will have both practical and theoretical portions. This exam last 4 hours.

3. In Class Questions

4. Pre Class Questions, both written and electronic.

5. A research project.

Goals, Topics, and Objectives

Course Goals
To provide students the fundamentals of Control and Instrumentation, utilizing digital learning materials and hands-on labs.

Core Course Topics

- Theory of soldering and the proper use of soldering tools including wicks and suckers.
- Troubleshooting methodologies including: the Simpler Method and Half Splitting.
- Circuit diagnostic indications of faulted components, shorts and opens.
- Electrical Static Discharge and Electromagnetic Interference concerns with modern technology.

Demonstrate the proper use of soldering equipment to remove and install electronic components and to create splices.

Develop a graphical representation of the troubleshooting methods used to isolate faults in a sequencing machine and an electronic circuit.

Demonstrate the ability to isolate faults in circuits to include failed components, shorts and opens and use common test equipment

Demonstrate common methods of preventing Electrical Static Discharge when handling and soldering electronic components and modules.

Assessment, Requirements, and Outcomes

- Assessment of Academic Achievement
 - Pre and Post exams
 - Completion of assigned labs evaluated using standard rubrics (see Division).

Successful completion of current Post Assessment (85%) and instructor assessment of lab activities.

Goals, Topics, and Objectives

Course Goals
To provide students the opportunity to learn the fundamentals of Sensors and Photoeyes.

Core Course Topics

1.

Introduction to process control including the measurement of flow, temperature, pressure, level, and analytics and their related transducers.
2.

Industrial positioning sensors including optical and proximity sensors.
3.

Process control test equipment
4.

Target composition, size, shape, and orientation effects on sensor detection.

Demonstrate the use of common circuits, transmitters and transducers for the measurement of process variables of flow, level, temp, pressure and analytic monitoring on a working process control system.
Construct a circuit to determine the working range of the devices and whether or not they exhibit hysteresis and use optical and proximity sensors
Determine the programed settings of a transmitter and determine if it is working properly by using common test equipment, process simulators and digital manometers.
Determine the operational effect on various sensors by using targets composed of different materials, sizes and part orientation.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

- Pre and Post exams
- Completion of assigned labs evaluated using standard rubrics (see Division).

CIMEL107 - Final Control Elements

Overview

Subject Electrical Engineering Technol	Academic Department Adv Manufacturing/Fabrication	School Business, Entrepreneurshp, PD
Course Description This course explores automation output devices including AC, DC, and servo motors, variable speed drives, relays, motor starters and sizing of components for various applications. Pre-requisites: CIMEL 106 or Instructor Permission.		
Course Pre-requisite(s) CIMEL106 or Instructor Permission		
Credit Hours 1		
Contact Hours 1.5		

Goals, Topics, and Objectives

Course Goals
To provide students the opportunity to learn the fundamentals of Final Control Elements, utilizing digital learning materials and hands-on labs.
Core Course Topics

1.

DC Motor fundamentals including an evaluation of armature and field currents in series, shunt and compound configurations.
2.

AC motor fundamentals including induction and synchronous operation and an evaluation of no-load, full load, and starting currents.
3.

Fundamentals of Variable Frequency drives and how they control motor speed, including a block diagram analysis and common settings/programming
4.

Classical motor starter circuits reflecting overloads, stop/start circuitry, and forward/reversing configurations

Construct and evaluate the torque, speed regulation and currents of DC motors wired in Series, Shunt and Compound configurations.
Construct, measure, and evaluate the currents associated with starting no-load and full load conditions of a AC induction motor
Demonstrate the proper set up of a variable frequency drive to control: Acceleration, Deceleration, and speed control of an AC motor.
From an electrical print, wire a motor starter circuit to include: start/ stop, overloads, and proper use of the Auxiliary contacts of the motor starter in the control of an AC induction motor.*

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

- Pre and Post exams

- Completion of assigned labs evaluated using standard Rubrics (see Division).

Texts See Division for required texts/materials.	Satisfies Wellness Requirement
Satisfies Honors Requirement	No

CIMEL108 - Introduction to PLCs

Overview

Subject Electrical Engineering Technol	Academic Department Adv Manufacturing/Fabrication	School Business, Entrepreneurshp, PD
Course Description Introduces various elements of basic PLCs including the identification of programmable logic control systems as well as overview of PLC system architectures. Provides instruction in basic numbering systems, computer terminology, PLC functions, program structures, and point addressing basics. Pre-requisites: CIMEL 107 or Instructor Permission.		
Course Pre-requisite(s) CIMEL107 <u>Final Control Elements</u> or Instructor Permission		
Credit Hours 1		
Contact Hours 1.5		
Course Fee 246	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Other	
Credit for Prior College Level Learning (CPCLL) Details Successful completion of current Post Assessment (85%) and instructor assessment of lab activities.		

Goals, Topics, and Objectives

Course Goals
To provide students the opportunity to learn the fundamentals of Introduction to PLCs, utilizing digital learning materials and hands-on labs.
Core Course Topics

1.

PLC Hardware Overview
2.

Basic Numbering Systems and Computer Terminology
3.

Basic PLC Functions, Instructions, Program Structures and Language Standards
4.

Relationships between the "and", "or", and "not" functions to their PLC equivalents

List the functionality of the components of a typical PLC system
Convert values from the decimal based system into, binary, octal, hexadecimal and ASCII.
Match the PLC logic rungs to the the "and", "or", and "not" functions when given typical PLC logic .

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

- Pre and Post exams
- Completion of all assigned labs evaluated using standard Rubrics (see Division).

Texts See Division for required texts/materials.	Satisfies Wellness Requirement
Satisfies Honors Requirement	No

CIMEL109 - Plc Hardware and Software

Overview

Subject Electrical Engineering Technol	Academic Department Adv Manufacturing/Fabrication	School Business, Entrepreneurshp, PD
Course Description Introduces memory and project organization within a PLC processor, the installation, wiring and configuration of I/O modules, as well as how to start a new project. Pre-requisites: CIMEL 108 or Instructor Permission.		
Course Pre-requisite(s) CIMEL108 Introduction to PLCs or Instructor Permission		
Credit Hours 1		
Contact Hours 1.5		
Course Fee 246	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Other	

Credit for Prior College Level Learning (CPCLL) Details
Successful completion of current Post Assessment (85%) and instructor assessment of lab activities.

Goals, Topics, and Objectives

Course Goals To provide students the opportunity to learn the fundamentals of PLC Hardware and Software, utilizing digital learning materials and hands-on labs.
Core Course Topics 1. RSLogix and RSLinx 2. PLC Program Elements, Memory Allocation and Address Types and Formats 3. Input/Output (I/O) Addressing 4. I/O Configuration
Establish communication between the PLC and laptop computer.
Upload, download, and edit PLC programs.
Add an input and output module to the I/O chassis by hand.
Configure new I/O in RSLogix 5000.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement • Pre and Post exams • Completion of all assigned labs evaluated using standard Rubrics (see Division).	Satisfies Wellness Requirement No
Texts See Division for required texts/materials. Satisfies Honors Requirement No

CIMEL110 - Programming PLCs

Overview

Subject Electrical Engineering Technol	Academic Department Adv Manufacturing/Fabrication	School Business, Entrepreneurshp, PD
Course Description Introduces various elements of programming PLCs. Addresses the basic elements of PLC programming and routines. Requires student to program using ladder logic, structured text, sequential function chart, and function block languages. Pre-requisites: CIMEL 109 or Instructor Permission.		
Course Pre-requisite(s) CIMEL109 PLC Hardware & Software or Instructor Permission		
Credit Hours 1		
Contact Hours 1.5		
Course Fee 246	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Other	
Credit for Prior College Level Learning (CPCLL) Details Successful completion of current Post Assessment (85%) and instructor assessment of lab activities.		

Goals, Topics, and Objectives

Course Goals To provide students the opportunity to learn the fundamentals of Programming PLCs, utilizing digital learning materials and hands-on labs.
Core Course Topics 1. Basic PLC Programming tasks (i.e. titles, tasks, routines, configurations and their attributes) 2. Ladder Diagram Programming 3. Mathematic Instructions and Matrix (file) Fundamentals 4. Ladder Diagrams, Structured Text, Sequential Functions Charts and Function Block Programming Techniques
Create a ladder diagram program in a routine.
Design, enter, edit and run a program to control simple pneumatic machine functions.
Edit a program to include production counts and hourly averages using mathematic function.
Construct equivalent logic programs using ladder logic, structured text, sequential functions, and function blocks.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement • Pre and Post exams • Completion of all assigned labs evaluated using standard rubrics (see Division).

CIMEL111 - PLC Communication

Overview

Subject Electrical Engineering Technol	Academic Department Adv Manufacturing/Fabrication	School Business, Entrepreneurshp, PD
Course Description Introduces various elements of industrial communications using PLCs. Addresses common types of control communications in an industrial environment. Includes discussion of PLC addressing used in communications. Pre-requisites: CIMEL 110 or Instructor Permission.		
Course Pre-requisite(s) CIMEL110 Programming PLCs or Instructor Permission		
Credit Hours 1		
Contact Hours 1.5		
Course Fee 246	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Other	
Credit for Prior College Level Learning (CPCLL) Details Successful completion of current Post Assessment (85%) and instructor assessment of lab activities.		

Goals, Topics, and Objectives

Course Goals To provide students the opportunity to learn the fundamentals of PLC Communciation, utilizing digital learning materials and hands-on labs.
Core Course Topics 1. Communication Systems in a Conventional Industrial Networks 2. Ethernet TCP/IP Protocol 3. Communication Systems in PLCs
List common types of data communications and their characteristics.
Setup a system using TCIP/IP protocol.
Troubleshoot a PLC communication system.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement • Pre and Post exams • Completion of all assigned labs evaluated by using standard rubrics (see Division).	Satisfies Wellness Requirement No
Texts See Division for required texts/materials. Satisfies Honors Requirement No

CIMEL112 - Introduction to Robotics

Overview

Subject Electrical Engineering Technol	Academic Department Adv Manufacturing/Fabrication	School Business, Entrepreneurshp, PD
Course Description Introduces industrial robotic safety standards, historic timeline of industrial robots, industrial classification of robots, common industrial applications of robots, basic system components found in industrial robot applications, robotic motion concepts and common robot terms and definitions used in computer integrated manufacturing (CIM). Pre-requisites: CIMEL 111 or Instructor Permission.		
Course Pre-requisite(s) CIMEL111 PLC Communication or Instructor Permission		
Credit Hours 1		
Contact Hours 1.5		
Course Fee 246	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Other	
Credit for Prior College Level Learning (CPCLL) Details Successful completion of current Post Assessment (85%) and instructor assessment of lab activities.		

Goals, Topics, and Objectives

Course Goals
To provide students the opportunity to learn the fundamentals of Introduction to Robotics, utilizing digital learning materials and hands-on labs.
Core Course Topics
1. Robotic Safety Standards
2. Industrial Robotic Overview and History
3. Linematics and The Robotic Coordinate System
4. End of Arm Tooling (EOAT)
5. Computer Integrated Manufacturing (CIM)
Demonstrate industrial robotic safety standards.
Delineate the history of industrial robots and list common applications.
Employment planning of motion characteristics of a robotic coordinate system.
Break down requirements for common End Of Arm Tooling (EOAT) devices and sensors related to both the system and written robotics program.
Diagram a basic Computer Integrated Manufacturing (CIM) proces

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Pre and Post exams
Completion of all assigned labs evaluated using standard Rubrics (see Division).
Texts
See Division for required texts/materials.
Satisfies Honors Requirement

Goals, Topics, and Objectives

Course Goals
To provide students the opportunity to learn the fundamentals of Programming/Editing RobotsRobot, utilizing digital learning materials and hands-on labs.
Core Course Topics
1. Robot Start Up and Motions
2. Robotic Programs
3. Programming Instructions
4. Creating and Writing Programs
5. Copying, Editing, and Deleting a Program
6. Using the Robot Program
Power up and jog the robot through its range of motion.
Load and execute a robotic program
Create, modify, and execute a material handling program.*
Copy, edit, and delete a program.

Monitor, force, and use input and output signals in a robot program.

Successful completion of current Post Assessment (85%) and instructor assessment of lab activities.		

Goals, Topics, and Objectives

Course Goals
To provide students the opportunity to learn the fundamentals of Robot Maintenance and PM, utilizing digital learning materials and hands-on labs.
Core Course Topics
1. Mastering Concepts
2. Performing PM on Robot Components
3. Program Backups
Execute the required tasks for robot backup system while saving and restoring programs files.
Demonstrate the ability to generate new master count numbers and re-master a robot when original mastering count numbers have been lost.*
Back-up systems and replace backup batteries on robotics equipment.
Perform recommended preventive maintenance lubrication procedures of all required robot components and the End Of Arm Tooling (EOAT) devices or sensors used with the manipulator.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Pre and Post exams
Completion of all assigned labs evaluated using standard rubrics (see Division)

Goals, Topics, and Objectives

Course Goals
To provide students the opportunity to learn the fundamentals of Error Codes and Troubleshooting, utilizing digital learning materials and hands-on labs.

- Core Course Topics
1. Use of the controller’s maintenance manual
 2. Alarms and recovery actions
 3. Error codes and recovery actions
 4. Robot and robot cell safety

Implement all steps necessary to recover from a faulted condition using the robot controller maintenance manual and given an alarm fault.

Recover from a fault condition including fuses and circuit boards using robot controller maintenance manual and a list of error codes.

Draw a flow chart illustrating the sequence of actions to place the system into Automatic Mode recovering from a safety signal.

Demonstrate all required safety practices when working with a robot in both simulator mode and active production cell environments.

Assessment, Requirements, and Outcomes

- Assessment of Academic Achievement
- Pre and Post exams
 - Completion of all assigned labs evaluated using standard rubrics (see Division).

To provide students the opportunity to learn the fundamentals of Integration of PLCs and Robotics, utilizing digital learning materials and hands-on labs.

- Core Course Topics
1. Systems integration and control architecture and their relationships to safety
 2. Common interface signals between PLC & robot
 3. Robot Interfacing signals association with material handling and spot welding systems
 4. Vision applications

List several methods of interlocking safety signals between and PLC and robot controller.

Identify common interface signals regarding the selection of robot program number and initiation from the PLC.

List the expected interface signals between the robot and the weld controller.

Distinguish between and vision inspection and vision guidance and identify their characteristics when given three vision applications.

CIS100 - Introduction to Information Technology

Overview

Subject
Computer Information Systems

Academic Department
Computer Technology

School
Business, Entrepreneurshp, PD

Course Description
This course is a survey of computer, information and digital technology. Covers computer hardware, networks, operating systems, file management, and common productivity software, including word processing, spreadsheet, and presentation software. Professional email, computer security, privacy, netiquette, ethics, and social media practices are examined. An introduction to artificial intelligence and its application to various fields is also covered. This course satisfies the HFC’s General Education Computer Technology requirement.

Departmental Exam

Credit for Prior College Level Learning (CPCLL) Details
Minimum Departmental Exam Score

85.00

Goals, Topics, and Objectives

- Core Course Topics
1. Computer Hardware: Input, Output, Processing, and Storage
 2. Computer Networks
 3. Operating Systems, File Management and Utility Programs
 4. Productivity Software
 5. Computer Security, Privacy, Netiquette, Ethics, and Social Media
 6. Artificial Intelligence

Operate basic computer hardware including common input, output, and storage devices.

Describe important concepts related to computer hardware, e.g., memory, secondary storage, storage units, speed, etc.

Log into and out of a computer network including the HFC Network.

Compose a professional email.

Send and open e-mail including attachments.

Describe the difference between various types of networks, e.g., HFC Network, LANs, WANs, the Internet, etc.

Effectively use the World-Wide-Web, search engines and other information resources online.

Describe the purpose and functions of an operating system (OS).

Differentiate the major operating systems, e.g., Windows, Mac, Linux, etc.
Perform file management tasks including finding, organizing, saving, copying, and printing files in client, network and cloud-based environments.
Utilize common utility program including compression/zip and pdf files.
Utilize client, network and cloud-based application and productivity software.
Create word processing documents that incorporate a variety of formatting options.
Create spreadsheets that incorporate data, information, formulas, functions, data analysis and a variety of formatting options.
Create, modify, and view a professional slideshow using a variety of presentation software features.
Recognize common malware threats to computer security and privacy such as viruses, phishing, spoofing, ransomware, and identity theft.
Identify common methods of malware, security, and privacy protection such as antivirus software, safe browsing and email usage, software updates, strong passwords, firewalls, and VPNs.
Identify common computer ethical and netiquette standards and expectations.
Describe the benefits and risks of social media.
Describe various types of artificial intelligence, e.g., weak, strong, multi-model.
Describe applications of A.I. in various fields, such as education, health care, national defense, manufacturing, graphics, and software engineering.
Demonstrate the effective use of multiple current A.I. systems.
Describe the ethical implications to artificial intelligence, e.g., academic integrity, bias, hallucinations, career skills, misinformation, deepfakes.

CIS111 - SQL for Database Development

Overview

Subject	Academic Department	School
Computer Information Systems	Computer Technology	Business, Entrepreneurshp, PD

Course Description
An intermediate-level course familiarizing the student with the SQL language used to retrieve and modify tables and data within a SQL Server database management system. Covers outer joins, summary queries, and subqueries. Also discusses using normalization techniques to design and create database structures, views, scripts, stored procedures, scalar functions, and triggers.

Course Pre-requisite(s)

Goals, Topics, and Objectives

Core Course Topics 1. An introduction to relational databases and SQL 2. How to work with SQL server databases 3. How to retrieve data from a single table 4. How to retrieve data from two or more tables 5. How to code summary queries 6. How to code subqueries 7. How to modify data within a table

8. SQL server data types
9. How to design a database
10. How to create and implement a database
11. How to code scripts, views, stored procedures, triggers, and scalar functions

Compose SQL statements that retrieve data from one table structure using the SELECT-FROM-WHERE-ORDER BY syntax.

Generate SQL statements that retrieve data from more than one table coding the correct join relationship within the FROM clause.

Write SQL statements that incorporate a subquery within the SELECT list, FROM clause, or WHERE clause.

Construct SQL statements using the UPDATE, INSERT and DELETE statement that modify data within a table structure.

Organize, plan, and implement a database structure using normalizing techniques based on example documents used within a business entity.

Code SQL views, stored procedures, triggers, and scalar functions.

Skills-based assessment proficient score, assessment administered by the Computer Information Systems department faculty. Faculty will assess skills-based assessment based on evaluation rubric. Assessment information located in Department Office. Students must also complete a departmental exam and have proper licensure/certification.

Licensure/Certification
CompTia Network+ Certification or TestOut Network Pro Certification

Licensure/Certification Details
CompTia Network+ Certification OR TestOut Network Pro Certification must be current. Department faculty will verify certification(s). Verified certifications, and the Credit for Prior College-Level Learning application will be signed, copied, and retained in the Department Office. Students must also complete a departmental exam and a skilled demonstration.

Goals, Topics, and Objectives

Core Course Topics

1. Networking Standards and the OSI Model

2. Transmission Basics and Networking Media

3. TCP/IP Protocols

4. Topologies and Ethernet Standards

5. WANs and Remote Connectivity

6. Networking Hardware

7. Troubleshooting Basic Network Issues

8. Basic Wireless Networking Concepts

Discuss networking standards and the OSI Model.

Analyze TCP/IP configurations using both command line and GUI tools.

Identify both LAN and WAN topologies and discuss their strengths and weaknesses.

Explain the differences between common networking hardware components.

Describe basic Wireless LAN concepts.

Goals, Topics, and Objectives

- Core Course Topics
1. Numbering Systems
 2. Arithmetic
 3. Algebra
 4. Boolean Algebra and Logic
 5. Basic Statistics and Functions
 6. Measurement and Units
 7. Basic Geometry
 8. Basic Physics
 9. Culminating Project

Describe how the binary numbering system is used in computing.
Describe how the octal numbering system is used in computing.
Describe how the decimal numbering system is used in computing.
Describe how the hexadecimal numbering system is used in computing.
Convert numbers between binary, octal, decimal and hexadecimal numbering systems on paper.
Describe how computers use data types and memory to store numbers.
Apply numbering systems in a practical computer program
Troubleshoot computer programs with mathematical anomalies resulting from how computers process and store numbers.
Perform basic addition, subtraction, multiplication, and division calculations with whole numbers, fractions, decimals, and percentages with and without a computer program.
Calculate power and modulus with and without a computer program.
Create practical computer programs using arithmetic, e.g. payroll, loan calculator, grade calculator, etc.
Describe variables, constants, expressions and equations.
Describe the order of operations and associativity.
Design a computer algorithm involving algebra based on provided program specifications.
Create practical computer programs using variables, constants, equations and expressions.
Describe relational and logical operators.
Describe relational and logical operator precedence.

Solve truth tables for a variety of conditions and expressions.
Design a computer algorithm using Boolean logic based on provided program specifications.
Create practical computer programs using Boolean logic.
Solve for the mean, median, and mode of a list of numbers with and without a computer program.
Utilize built-in programming language functions for formatting numbers, generating random numbers and calculating statistics.
Perform practical calculations involving measurement and units with and without a computer program.
Perform practical geometric calculations with and without a computer program.
Perform practical physics calculations with and without a computer program.
Apply mathematical, algorithmic and programming techniques in a practical culminating project, e.g. encryption, game physics, data science, sorting algorithms, etc.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Assessment of academic achievement may include (but is not limited to) exams, quizzes, homework, and laboratory assignments.	
Satisfies Honors Requirement No	Satisfies Wellness Requirement No

CIS122 - Web Internet Technologies

Overview

Subject Computer Information Systems	Academic Department Computer Technology	School Business, Entrepreneurshp, PD
Course Description An introductory-level course covering the Internet, networking, web development, and security. Skills demonstrated include web development and secure programming in HTML, CSS, JavaScript, PHP, and web database connectivity.		
Credit Hours 3		
Contact Hours 4		
Course Fee 45	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Departmental Exam, Skilled Demonstration, Portfolio Review, Other	
Credit for Prior College Level Learning (CPCLL) Details Minimum Departmental Exam Score 80.00		
Departmental Exam Details Departmental exam, given in department by department faculty. Faculty will grade exam based on evaluation rubric. Evaluation rubric and exam topics and objectives located in Division Office.		
Skilled Demonstration Details Skills-based assessment score of 80% or higher, assessment administered by the Computer Information Systems department faculty. Faculty will assess skills-based assessment based on evaluation rubric. Assessment information located in Division Office. Students must also complete a departmental exam, provide a portfolio, and have full-time work experience.		
Portfolio Review Details Technical, performance-based portfolio of work that illustrates competency in the course learning objectives. Department faculty will evaluate submitted portfolios. Evaluation rubric and additional information located in Division Office.		
Other Details Eligible candidates must have worked full-time in a position for at least two years within the past four years where the job title and primary job responsibilities directly relate to the course subject matter, with documentation of such from the employer to be reviewed by the Computer Information Systems department.		

Goals, Topics, and Objectives

- Core Course Topics
1. Web development education and career paths
 2. Client/server architecture
 3. Web development process and technologies
 4. FTP/web site publishing
 5. HTML and CSS web page development
 6. Dynamic, server-side web programming
 7. Database integration

8. Web site testing
9. Web site debugging
10. Web/Internet security

Identify educational, training, certification and career paths in web development.
Explain the role of networking protocols and technologies in the Internet and Web.
Explain how the client/server networking architecture is involved in and impacts web development.
Describe the web development process and the technology/tools used to carry it out.
Demonstrate how to FTP/publish a web site.
Create HTML and CSS-based web pages.
Use JavaScript and PHP to develop secure, dynamic web pages.
Integrate a database into a web page/site.
Test web pages and code.
Debug web pages and code.
Describe various Internet and web security threats and protection techniques.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement may include (but is not limited to) exams, quizzes, homework, and laboratory assignments.
Satisfies Honors Requirement
No

Satisfies Wellness Requirement
No

CIS125 - Principles of Programming Logic

Overview

Subject	Academic Department	School
Computer Information Systems	Computer Technology	Business, Entrepreneurshp, PD

Course Description
An introductory-level course presenting programming logic concepts and skills. Emphasizes structured methods of programming. Covers input, output, selection/decisions, loops, arrays, data validation, functions, and modules. A computer lab is used for debugging, compilation and testing.

Credit Hours
4

Contact Hours

Goals, Topics, and Objectives

- Core Course Topics
1. Computer Hardware and Software
2. Problem Solving and Program Development
3. Constants and Variables
4. Input, Process, Output
5. Arithmetic Operations and Expressions
6. Selection/Decisions Statements
7. Repetition/Loop Statements
8. Modules and Functions
9. Arrays
10. Data Validation

Describe how programs work and how data is stored.
Create programs that effectively utilize input, output, decisions, loops, functions, and arrays.

Write programs that follow common style techniques for readability and ease of maintenance.
Use test data for program testing and input validation.
Use a language develop logic skills and create programs.
Demonstrate effective debugging skills.
Contrast and evaluate alternative methods for solving problems.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement may include (but is not limited to) exams, quizzes, homework, and laboratory assignments.

CIS126 - HTML/CSS Web Programming

Overview

Subject	Academic Department	School
Computer Information Systems	Computer Technology	Business, Entrepreneurshp, PD

Course Description
Covers Hyper Text Markup Language (HTML) coding practices for both current and future browsers. Uses HTML, Cascading Style Sheets (CSS) extensively validating according to the guidelines of the World Wide Web Consortium (W3C). Introduces JavaScript language. Includes the creation and publishing of a website using HTML and CSS.

Eligible for Credit for Prior College Level Learning (CPCLL)	
No	

Goals, Topics, and Objectives

- Core Course Topics
1. Internet and World-Wide-Web (WWW) concepts
2. HTML5
3. CSS3
4. Web design best practices
5. Page layout best practices
6. User and web accessibility
7. Website promotion and SEO
8. JavaScript
9. Multimedia and Interactivity
10. Domain names, hosting, and publishing a web site

Explain Internet and world-wide-web concepts related to web development
Code HTML5 web pages.
Create the body and content of a web page with HTML tags, attributes, values, e.g. headings, paragraphs, hyperlinks, images, tables, forms, etc.
Demonstrate proficient use of CSS (Cascading Style Sheets) to format the appearance of web pages and provide layout.
Define web design best practices.
Create web page layouts using the most recent industry best practices.
Implement user accessibility best practices, e.g. mobile/responsive, people with disabilities, etc.
Use W3C to validate HTML and CSS.
Identify recommended practices for web site promotion and Search Engine Optimization (SEO)

Create and use a JavaScript in a web page.
Incorporate multimedia and Interactivity into a web page.
Explain what acquiring a domain name, hosting, and publishing a web site entails.
Publish a web site.

CIS129 - Intro to UNIX With Shell Scripting

Overview

Subject	Academic Department	School
Computer Information Systems	Computer Technology	Business, Entrepreneurshp, PD
Course Description An intermediate-level course covering the fundamentals of the UNIX Operating System, including the file system, editor, and standard UNIX utilities. Emphasizes how the UNIX shell operates, and also presents advanced forms of utilities, regular expressions, and shell scripts.		
Course Pre-requisite(s) CIS125 Prin of Programming Logic		
Credit Hours 4		
Contact Hours 4		
Course Fee 50	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Departmental Exam, Skilled Demonstration, Licensure/certifications	

Credit for Prior College Level Learning (CPCLL) Details Skilled Demonstration Details Skills-based assessment proficient score, assessment administered by the Computer Information Systems department faculty. Faculty will assess skills-based assessment based on evaluation rubric. Assessment information located in Department Office. Students must also complete a departmental exam and have proper licensure/certification.
Licensure/Certification CompTia Linux+ Certification OR TestOut Linux Pro Certification OR another well-recognized, professional-level Linux industry certification
Licensure/Certification Details CompTia Linux+ Certification OR TestOut Linux Pro Certification OR another well-recognized, professional-level Linux industry certification. Certification must be current and verified by department faculty. Verified certification, and the Credit for Prior College-Level Learning application will be signed, copied, and retained in the School of BEPD Office. Students must also complete a departmental exam and a skilled demonstration.

Goals, Topics, and Objectives

Core Course Topics 1. UNIX Operating System basics 2. UNIX File System 3. The VI editor 4. UNIX Boot Process 5. Exploring the shell 6. UNIX Communication 7. Shell Scripting
Describe the UNIX file system.
Demonstrate proficient use of the VI editor.
Discuss the different shells available.
Demonstrate proficient use of standard UNIX utilities such as sed, grep and awk.
Write and debug UNIX shell scripts.

CIS130 - C# Programming

Overview

Subject	Academic Department	School
Computer Information Systems	Computer Technology	Business, Entrepreneurshp, PD
Course Description An intermediate programming course using C# for Windows application development. Covers coding and debugging techniques for an object oriented environment. Different Microsoft graphical user interface projects will be used such as Windows Forms, Windows Presentation Foundation (WPF), and ASP Web Forms.		
Course Pre-requisite(s) CIS125 Prin of Programming Logic or Instructor Permission		
Credit Hours 3		

Contact Hours

4	
Course Fee 45	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Core Course Topics 1. Introduction to Visual Studio, the IDE environment 2. How to design a Graphical User Interface application 3. How to code and test a Windows applications 4. How to work with numeric and string data 5. How to code control structures 6. How to code methods and event handlers 7. How to handle exceptions and validate data 8. How to use arrays and collections 9. How to work with dates and strings 10. More skills for working with Windows ASP.NET web forms 11. How to debug an application 12. How to create and use classes
Modify the properties of an object using the Visual Studio design environment.
Create an application that will utilize the following controls: label, text box, button, list box, check box, radio button, image control, toolbar buttons, menu structure and a timer control.
Utilize variables with the correct data type and variable scope.
Design and code an application that will make use of the following C# statements: Assignment statement, Switch, IF, Do While, For loop.
Utilize Visual Studio Design Environment to create an application.
Evaluate a C# application that contains run-time errors utilizing the debug tools.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
Assessment of academic achievement may include (but is not limited to) exams, quizzes, homework, and laboratory assignments

Goals, Topics, and Objectives

Core Course Topics

1. Mobile application operating systems
2. Technology and business trends impacting mobile applications.
3. Mobile application best practices.
4. Architecture of mobile applications.
5. Design and functionality of mobile applications.
6. Security issues in the mobile application environment.
7. Software engineering concepts in building mobile applications.

Identify popular versions of mobile application operating systems.
Explain the technology and business trends impacting mobile applications.
Identify mobile application best practices.
Describe the architecture of mobile applications.
Create and deploy basic mobile applications for a leading mobile application platform.
Critique the design and functionality of mobile applications.
Identify security issues in the mobile application environment.
Explain software engineering concepts in building mobile applications.

Certification must be current (within 3 years).	

Goals, Topics, and Objectives

Core Course Topics

1. On-Premise Windows Server Installation and Configuration
2. Cloud and Azure
3. IP Address Management

4. Azure and On-Premise Active Directory
5. Manage Servers in Hybrid Environment
6. Azure and On-Premise Storage and File Services
7. Virtualization and Containers
8. On-Premise and Hybrid Network Connectivity

Install and configure on-premise Windows Server Operating System.
Create and deploy Cloud resources in Azure.
Configure IP Addresses, Domain Name Services and Dynamic Host Configuration Protocol services.
Install and configure both Azure and on-premise Active Directory services.
Manage both cloud and on-premise servers.
Configure and manage both Azure and on-premise storage and file services.
Create, deploy and manage server virtualization in both Azure and on-premise servers.
Establish and manage network connectivity between on-premise and Azure cloud resources.

CIS159 - A+ Technical Support

Overview

Subject	Academic Department	School
Computer Information Systems	Computer Technology	Business, Entrepreneurship, PD

Course Description

Explores the hardware and software sections of the CompTIA A+ certification exam in detail. Covers installation, configuration, and troubleshooting of various hardware components. Also covers operating systems from a PC repair technician perspective and discusses how the operating system interacts with the PC's hardware, the boot process, troubleshooting, and interaction with application software. The student will engage in hands-on lab activities with actual hardware components, operating systems, and application installations.

3. Data Types
4. Variable Declaration, Scope, and Storage Classes
5. Expressions and Assignments
6. User-Defined Functions and Library Functions
7. Arrays
8. Pointers and Addresses
9. Strings
10. Structures
11. Data Files
12. Data Validation

Design, write, compile and execute a C program
Identify the primitive data types in C.
Create a program to perform input/output (IO) operations.
Utilize selection statements.
Utilize loop statements.
Create, use and manipulate arrays.
Utilize user-defined and library functions.
Create, use and manipulate strings.
Evaluate and recognize when to use pointers.
Demonstrate the use of pointers.
Effectively apply variable scope in a program.
Demonstrate file input/output.
Create and use structures.
Use test data for program testing and input validation.

CIS171 - Java Programming

Overview

Subject Computer Information Systems	Academic Department Computer Technology	School Business, Entrepreneurshp, PD
Course Description An intermediate-level course which examines Java programming language and its various components. Emphasizes designing, coding, testing, and debugging programs using the Java language through laboratory exercises and detailed lectures.		
Course Pre-requisite(s) CIS170 C Programming or both CIS130 C# Programming and CIS172 JavaScript		
Credit Hours 3		

Contact Hours
4

Course Fee 45	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Portfolio Review, Licensure/certifications

Credit for Prior College Level Learning (CPCLL) Details
Portfolio Review Details

Student will present CIS Department with a portfolio of at least two years full-time Java development industry work experience related to the course learning outcomes as well as a valid certification in Java Development as described below. The portfolio will be evaluated using a rubric.

Licensure/Certification
Oracle Certified Associate or Professional in Java Development

Licensure/Certification Details
Student possess a recent (among the two most recent editions) Oracle Certified Associate or Professional in Java Development. Credential will be reviewed by CIS Department.

Goals, Topics, and Objectives

- Core Course Topics
1. Creating a Java Class
 2. Using Data - Constants, Variables, and GUI Input
 3. Methods, Classes and Object Concepts
 4. Decisions
 5. Looping (while and for loops)
 6. Characters, Strings and the StringBuilder
 7. Arrays and Array Concepts
 8. Inheritance Concepts
 9. Exception Handling
 10. File I/O
 11. GUI Concepts (Swing and JavaFX)

Create variables with the correct data type and variable scope.
Create user-defined methods (functions).
Create classes and objects.
Explain Java's place in the internet and batch programming environments.
Demonstrate proficiency in the fundamental organization of a Java program.
Demonstrate proficiency in debugging.
Write a program to include file and record processing.
Demonstrate proficient use of Java to design and implement traditional as well as Graphical User Interface programs from user specifications.
Employ object-oriented programming concepts to design and implement complex and sophisticated application programs.
Employ event-driven programming concepts to design and implement complex and sophisticated application programs.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Assessment of academic achievement may include (but is not limited to) exams, quizzes, homework, and laboratory assignments.

CIS172 - JavaScript

Overview

Subject Computer Information Systems	Academic Department Computer Technology	School Business, Entrepreneurshp, PD
Course Description An intermediate-level course which explores the JavaScript programming language and its various components. Emphasizes designing, coding, testing, and debugging programs using the JavaScript language through laboratory exercises and detailed lectures.		
Course Pre-requisite(s) CIS122 Web Internet Technologies and CIS126 HTML/CSS Web Programming or Instructor Permission		
Credit Hours 3		

Contact Hours
4

Course Fee 45	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

- Core Course Topics
1. Introduction to JavaScript
 2. Variables, Data Types, and Operators
 3. Functions, Events, and Control Structures
 4. Browser Object Model (BOM) and Document Object Model (DOM)
 5. Validating Form Data
 6. Object-Oriented JavaScript
 7. JSON
 8. Debugging and Error Handling
 9. Managing State Information
 10. AJAX
 11. Libraries
 12. Touchscreens and Mobile Devices
 13. Secure Coding

Explain the scope and purpose of JavaScript.
Create practical JavaScripts that demonstrate the use of data types, operators, functions, events, control structures, strings, and arrays.
Manipulate the Browser Object Model (BOM) and Document Object Model (DOM) to access or manipulate elements, content properties, attributes, nodes, control windows, etc.
Calculate and validate data in HTML forms using browser-based and custom validation.
Demonstrate object-oriented programming in JavaScript using both built-in classes and custom classes.
Demonstrate the practical use of JSON.
Demonstrate debugging and error handling in JavaScript.
Explain how to maintain web page state information via client-side and server-side techniques
Implement AJAX in a web page to dynamically update web page content.
Utilize JavaScripts libraries for dynamic web page development, e.g. JQuery, Modernizr, etc.
Create JavaScripts that demonstrate programming for touchscreens and mobile devices, e.g. relevant events, APIs, testing tools, etc.
Explain JavaScript secure coding considerations and techniques.

Assessment, Requirements, and Outcomes

CIS190 - Co-op in Computer Information Systems

Overview

Subject Computer Information Systems	Academic Department Computer Technology	School Business, Entrepreneurship, PD
Course Description Cooperative education is a structured method of combining classroom-based education with practical work experience. A cooperative education experience, commonly known as a "co-op," provides academic credit for structured employment experience. Work experience must be directly related to the student's declared major to be eligible. To register for this course, a student must have completed 50% of core coursework, maintain an overall GPA of 2.0 and a program specific GPA of 2.5.		
Course Pre-requisite(s) Permission from Career Services Officer or Cooperative Education Officer		
Credit Hours 1		
Contact Hours 0.2		
Course Fee 0	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

- Course Goals**
Cooperative education helps students make the school-to-work transition, develop career and program-related learning objectives, and work on applicable skills for employment. Placements should provide students with the opportunity to apply and expand upon knowledge learned in the classroom, and develop the skills acquired in their coursework to align with the standards and expectations set by the worksite.
- Core Course Topics**
- Professional Dress and Demeanor (attitude, posture, courteousness)
 - Workplace Communication
 - Interviewing Skills
 - Resume Building
 - Networking and Social Media
 - Seeking Employment
 - Career Advancement

1-3 program specific learning objectives will be developed by the instructor for each individual offering.
Students will create 1-3 learning objectives per credit to be approved by instructor for each individual offering.
Build a resume that meets standards of Career Services Officer.
Articulate the reasons for professional attire.
Wear professional attire while on the worksite, Attend career workshop in professional dress.
Display appropriate professional attitude and demeanor while on the worksite.
Interview effectively, Attend mock interview, give appropriate answers to five 5 questions.
Complete a written job application in a prompt, professional manner with all information legible, error-free, and thorough.
Display understanding of the appropriate use of Social Media sites (Facebook, LinkedIn, and Twitter) during Career Services workshop.

Assessment, Requirements, and Outcomes

- Assessment of Academic Achievement**
Assessment will be determined by the instructor based on what is in the best interest of the student's academic growth, including future employability of the student. Assessment may include, but isn't limited to:
- Major final project
 - Weekly journal
 - Creation and attainment of all learning objectives
 - Participation in a career-focused workshop
 - Consistent and prompt attendance at worksite
 - Employer evaluation

General Course Requirements and Recommendations	
General Course Requirements and Recommendations A course syllabus will be developed by the instructor each semester the course is offered. The syllabus will include the standardized co-op Core-Career Focused Topics as well as Program-defined, Student-defined, and Career Services-defined learning objectives.

CIS211 - Web Server Administration

Overview

Subject Computer Information Systems	Academic Department Computer Technology	School Business, Entrepreneurship, PD
Course Description Introduces the installation, configuration, and management of web server software. Offers hands-on experience in installing and administering server software platforms such as Apache Web Server. Covers web server security, performance monitoring and tuning, virtual hosting, and supporting database and dynamic content. Intended for network, server, or web administration; web development; or computer information system students.		
Course Pre-requisite(s) CIS129 Intro to UNIX Shell Script		
Credit Hours 2		
Contact Hours 2		
Course Fee 0	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

- Core Course Topics**
- Operating system and server platform selection
 - HTTP protocol
 - Web server installation
 - Web server security
 - Virtual hosting
 - Dynamic content
 - Database connectivity
 - Web Server performance monitoring and tuning
 - Domain Name System (DNS)
 - Analytics and webmaster tools
 - Web server hosting options

Explain operating system and server platform selection factors.
Explain details of the HTTP protocol and how it works.
Install several of the industry dominant web servers.
Describe the various techniques available to secure a web server.
Configure virtual hosting.
Configure a web server with dynamic content and database connectivity.
Describe various techniques available to monitor and tune a web server.
Explain details of the Domain Name System (DNS) and how it works.
Setup web server analytics and webmaster tools.
Describe web server hosting options.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
Assessment of academic achievement may include (but is not limited to) exams, quizzes, homework, and laboratory assignments.	
Satisfies Honors Requirement	Satisfies Wellness Requirement
No	No

Register for this Course

CIS221 - Instructional Tech Educators (Pre K-12)

Overview

Subject	Academic Department	School
Computer Information Systems	Computer Technology	Business, Entrepreneurship, PD
Course Description		
Covers basic computer literacy, including Microsoft Office, popular alternate productivity suites (e.g. Google Docs), use of the world-wide-web, and security, privacy, responsibility and ethics in a technological and online world. Also introduces future teachers to educational software, apps, devices, resources, and the pedagogy of technology integration. Includes the development of an electronic portfolio which demonstrate various ways of incorporating technology in the classroom environment. This course is designed as the first course in Instructional Technology for the early childhood and pre-education student and fulfills the HFC Institutional Outcome in Computer Technology.		

Credit Hours

3

Contact Hours

3

Course Fee	Miscellaneous Department Fee
75	0

Academic Level
Undergraduate

General Education Category
Computer Technology

Eligible for Credit for Prior College Level Learning (CPCLL)
No

Goals, Topics, and Objectives

Core Course Topics

- Computer and technological devices
- Operating systems and file/folder structure, organization and access
- Use of classroom technology to enhance student learning and classroom management
- Productivity software suites
- Communication and collaboration
- Development of digital age learning activities that facilitate and inspire student learning and creativity with appropriate assessments
- Digital citizenship, responsibility, privacy and ethics, including copyright and fair use.
- Multimedia and visual learning
- American with Disabilities Act (ADA) and Special Needs
- Professional growth and leadership

Operate basic computer/tablet/smartboard LCD hardware, including input, output, and storage devices.
Perform file management tasks, including finding, organizing, saving, copying, and printing files.
Use basic word processing functions to prepare documents that incorporate a variety of formatting options.
Locate information on the Internet, identify appropriate search terms, download files, and use a search engine effectively.
Prepare a spreadsheet that would be used in an educational setting and incorporate basic formulas and a variety of formatting options.
Create and view a slideshow using basic presentation software functions.
Create lesson plans and rubrics that demonstrate effective technology integration into the pre-K through grade 12 classroom based on established pedagogical approaches.
Use technology to demonstrate effective teacher-to-the-student, and teacher-to-parent, and student-to-student communication and collaboration e.g. send/open e-mail and attachments, eportfolio, web site/blog, social media, messaging, learning management systems (LMS), classroom management platforms.
Identify issues and recommendations related to computer/technology ethics, responsibility and netiquette.
Recognize common threats to computer security, malware, and privacy, such as viruses, phishing, and identity theft; and identify methods of prevention.
Create and host a multimedia video.
Utilize technology to design and create visual diagrams/mind maps.
Create and host a web site.
Create an educational portfolio.

Explain the importance of the American with Disabilities Act (ADA) and accommodations for students with special needs in education and computer/technological considerations related to it.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
Assessment of academic achievement will include, but is not limited to, quizzes, projects, construction of a web site, and an electronic portfolio of course work and artifacts demonstrating computer and technological literacy and pedagogically-based integration of technology in the pre-K through grade 12 classroom and environment.	
Satisfies Honors Requirement	Satisfies Wellness Requirement

CIS222 - Web Database Development with PHP

Overview

Subject	Academic Department	School
Computer Information Systems	Computer Technology	Business, Entrepreneurship, PD
Course Description		
An intermediate-level course in which a database-backed web site using PHP and SQL is developed. Also covers HTML, CSS, PHP, database design, JSON, Git, and security.		
Course Pre-requisite(s) CIS122 Web Internet Technologies		

Credit Hours

4

Contact Hours

4

Course Fee	Miscellaneous Department Fee
45	0

Academic Level
Undergraduate

Eligible for Credit for Prior College Level Learning (CPCLL)
No

Goals, Topics, and Objectives

Core Course Topics

- HTML, CSS, and PHP
- Modular Programming
- PHP Programming Control Structures Models
- PHP Arrays
- PHP Functions
- JSON Data Sets
- Database-backed Web Sites
- Version Control Software

Integrate HTML, CSS, and PHP to develop interactive web applications.
Demonstrate modular programming design with PHP.
Demonstrate effective use of programming control structures in PHP, e.g. loops, decision statements, etc.
Demonstrate effective use of arrays in PHP.
Demonstrate effective use of functions in PHP.
Demonstrate effective use of objects in PHP.
Develop PHP pages that interact with JSON data sets.
Design and create a database-backed website in PHP and MySQL.
Develop database queries to search, insert, update and delete data and structure in a MySQL database.
Identify appropriate programming practices and standards for secure web and database applications.
Use Git to to commit, push, pull, and further manipulate version controls on software.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement may include (but is not limited to) exams, quizzes, homework, and laboratory assignments.

CIS225 - Web Frameworks

Overview

Subject	Academic Department	School
Computer Information Systems	Computer Technology	Business, Entrepreneurship, PD

Course Description
An advanced-level course covering client- and server-side web development frameworks. Web frameworks will be used to create both dynamic front-end user-interfaces and web applications. Popular web frameworks will be used, e.g. Bootstrap, AngularJS, Ember, Django.

Course Pre-requisite(s)
[CIS111 SQL for Database Development](#) and [CIS122 Web Internet Technologies](#) and [CIS172 JavaScript](#)

Credit Hours
3

Eligible for Credit for Prior College Level Learning (CPCLL)
No

Goals, Topics, and Objectives

- Core Course Topics
1. Popular Web Framework and Languages
 2. Client-Side Web Frameworks
 3. Server-Side Web Frameworks
 4. Cross-Platform Development
 5. Application Programming Interfaces (APIs)

Identify the industrys most popular client-side and server-side web frameworks and the programming languages used in each.
Describe how client-side web framework are used to speed up development time and create cross-platform, accessible, responsive, and dynamic user-interfaces and web sites.
Describe how server-side web frameworks are used to speed up development time and create dynamic web sites and applications.
Use a client-side web framework to create a web page/site.
Use a server-side web framework (web application framework) to create a web page/site.
Demonstrate the use of web frameworks to create cross-platform web sites, e.g. desktops, mobile devices, etc.
Utilize an Application Programming Interface (API) to add functionality to a web page.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement may include (but is not limited to) exams, quizzes, homework, and laboratory assignments.

CIS227 - Content Management Systems

Overview

Subject	Academic Department	School
Computer Information Systems	Computer Technology	Business, Entrepreneurship, PD

Course Description
Covers the installation, configuration and publishing of a several industry leading Content Management Systems (CMS). Additional topics include: templates, information architecture concepts, content management, widgets, use of HTML and CSS, user management, logins, usability, page design, backend database administration, modules/plugin-ins, security, and web project management.

Course Pre-requisite(s)
[CIS126 HTML/CSS Web Programming](#) and [ART107 Photoshop](#)

Credit Hours
4

Contact Hours
4

Course Fee	Miscellaneous Department Fee
45	0

Academic Level
Undergraduate

Eligible for Credit for Prior College Level Learning (CPCLL)
No

Goals, Topics, and Objectives

- Core Course Topics
1. Web site development process
 2. Web page design, layout, and structure
 3. Web site implementation
 4. Web site functionality
 - a. Web pages
 - b. HTML tags
 - c. CSS
 5. Web Authoring Software/Editor/Content Management Systems (CMS)
 6. Interactive and multimedia elements
 7. Web site development and maintenance efficiency
 8. Web page standards
 - a. HTML and CSS W3C Validation
 - b. Cross-browser testing
 - c. Accessibility testing
 9. Dynamic web programming

Explain the entire web site development process from beginning to end.
Create effective web site designs considering users, layout, color, fonts, and navigation.
Perform web site design activities including site hierarchy diagrams, wire frames, and storyboards.
Explain web site implementation factors, including domain name acquisition, hosting, usability, testing, launch, and maintenance.
Execute the following actions within a web authoring software/editor/ Content Management System (CMS): Create a new web site with pages logically organized within it.
Execute the following actions within a web authoring software/editor/ Content Management System (CMS): Incorporate various HTML tags within web pages, e.g. images, hyperlinks, tables, forms.
Execute the following actions within a web authoring software/editor/ Content Management System (CMS): Utilize inline, embedded and external CSS.
Create interactive, multimedia web pages by inserting elements, e.g. sound, video, streaming multimedia, Adobe Flash, JavaScript/ JQuery, Spry.
Incorporate plug-ins and social media into a web site.
Demonstrate various techniques to improve the efficiency of building and maintaining a web site such as templates, external CSS, snippets, library items and Content Management System (CMS) Themes and Modules.
Perform activities that ensure web pages are industry standards compliant, such as HTML and CSS W3C page validation, cross-browser testing, and accessibility testing.
Explain the use of databases and dynamic web programming languages in web sites.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement may include (but is not limited to) exams, quizzes, homework, laboratory assignments, and the creation of a web presence.

Course Fee 50	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Departmental Exam, Skilled Demonstration, Licensure/certifications
Credit for Prior College Level Learning (CPCLL) Details Skilled Demonstration Details Skills-based assessment proficient score, assessment administered by the Computer Information Systems department faculty. Faculty will assess skills-based assessment based on evaluation rubric. Assessment information located in Department Office. Students must also complete a departmental exam and have proper licensure/certification.	
Licensure/Certification CompTia Linux+ Certification OR TestOut Linux Pro Certification OR another well-recognized, professional-level Linux industry certification	
Licensure/Certification Details CompTia Linux+ Certification OR TestOut Linux Pro Certification OR another well-recognized, professional-level Linux industry certification. Certification must be current and verified by department faculty. Verified certification, and the Credit for Prior College-Level Learning application will be signed, copied, and retained in the School of BEPD Office. Students must also complete a departmental exam and a skilled demonstration.	

Goals, Topics, and Objectives

Core Course Topics
1. Overview of Unix/Linux, system planning, installation, and the Administrator role
2. Operating System security
3. UNIX and Linux File Systems: Command and Graphical Interfaces
4. UNIX Editors: Text and Graphical
5. Advanced system administration tasks
6. Hardware and system resources management
7. Logs and configuration files
8. Unix/Linux scripts and other automated procedures
9. Network connections
10. Backup
Identify features of the System Administrators job.
Plan a UNIX system based on user requirements and industry standards.
Install a Linux Operating System.
Define and apply file security concepts in a UNIX or Linux system.
Define and apply user and group security methods to a network.
Demonstrate proficient use of system utilities and shell scripts.
Develop and perform server penetration tests.

CIS230 - C++ Programming

Overview

Subject Computer Information Systems	Academic Department Computer Technology	School Business, Entrepreneurship, PD
Course Description An advanced-level course expanding upon arrays, pointers, structures, templates, and file I/O. Test Driven Development (TDD), refactoring, and UML diagrams concepts are applied. Covers theory and application in areas such as the standard template libraries including vectors, lists, stacks, queues, sets, and maps. Object oriented principles of classes, data, inheritance and dynamic binding are covered.		

Course Pre-requisite(s)
CIS170 C Programming

Credit Hours
3

Contact Hours
4

Course Fee 45	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Core Course Topics
1. C++ Basics
2. Functions
3. Parameters and Overloading
4. Arrays
5. Structures and Classes
6. Constructors
7. TDD (Test Driven Development) and Refactoring
8. UML Diagrams
9. Operator Overloading, friends, and references
10. Strings
11. Pointers and Dynamic Arrays
12. Inheritance
13. STL's (vectors, lists, stacks, queues, sets, and maps) and Iterators
14. Polymorphism
Input, compile and execute a C++ program using basic programming concepts.
Design and create a program using functions.
Create a program using separate compilation, prototypes and header files.
Demonstrate the use of structures.
Code, manipulate and utilize character strings.
Demonstrate proficient use of linear and multidimensional arrays.
Declare, initialize and manipulate pointers.
Create and use references.
Develop a program using TDD.
Demonstrate refactoring.
Develop programs from UML diagrams.
Demonstrate proficient use of operator overloading.
Demonstrate proficient use of arrays of pointers.
Design and create a program using function pointers.
Design and create classes, subclasses and objects.
Explain and demonstrate the use of STL's (vectors, lists, stacks, queues, sets, and maps) and iterators.
Demonstrate proficient use of exception handling.
Demonstrate proficient use of Constructor and destructor functions.
Demonstrate proficient use of friend classes and functions.
Create and use the NEW and DELETE operators.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
Assessment of academic achievement may include (but is not limited to) written exams, hands-on activities and programs.

CIS232 - Advanced C# Database Programming

Overview

Subject	Academic Department	School
Computer Information Systems	Computer Technology	Business, Entrepreneurshp, PD

Course Description
An advanced-level course focusing on writing Windows applications that interface with a database management system using the C# language. Covers using data sources for Rapid Application Development and structuring a three-tier application architecture.

Course Pre-requisite(s)
[CIS111 SQL for Database Development](#) & [CIS130 C# Programming](#)

Credit Hours
4

Contact Hours
4

Course Fee	Miscellaneous Department Fee
45	0

Academic Level
Undergraduate

Eligible for Credit for Prior College Level Learning (CPCLL)
No

Goals, Topics, and Objectives

- Core Course Topics**
- How to work indexers, delegates, events, and operators.
 - How to work with inheritance, interfaces and generics
 - How to work with data sources and datasets
 - How to work with bound controls and parameterized queries
 - How to write your own data access code
 - How to work with LINQ

Compose a Windows application using data sources.

Design and code a Windows application using bound controls and parameterized queries.

Develop business and database classes that utilize property procedures, methods, indexers, delegates, events, inheritance and polymorphism.

Design, code and test a Windows application using the reporting features of Visual Studio.

Develop a Windows application using the LINQ language.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
Written exams and hands-on lab activities

Goals, Topics, and Objectives

- Core Course Topics**
- Cross-platform development tools.
 - Mobile applications using an application development framework.
 - Rapid prototyping techniques for mobile interfaces.
 - Marketing for mobile applications.
 - Social networking software integration.
 - Mobile application security.
 - GEO positioning, accelerometer, and rich gesture based UI handling.
 - Software engineering for mobile applications.

Describe the enterprise scale requirements of mobile applications.

Design and develop mobile applications using an application development framework.

Utilize rapid prototyping techniques to design and develop sophisticated mobile interfaces.

Compare and contrast browser-based approaches, cross-platform development tools, and hybrid approaches that take advantage of underlying phone functionality.

Explain GEO positioning, accelerometer, and rich gesture based UI handling.

Promote mobile applications in the market, including social networking software integration.

Demonstrate mobile application security concepts.

Implement software engineering concepts in building mobile applications.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
Assessment of academic achievement may include (but is not limited to) exams, quizzes, homework, and laboratory assignments.

Goals, Topics, and Objectives

- Core Course Topics**
- IP Telephony concepts
 - Introduction of voice protocols
 - Components of Voice over IP system
 - How TCP/IP integrates Voice
 - QoS Issues

6. Introduction to SIP
7. Configuration of a VoIP System
8. Troubleshooting common VoIP issues

Identify basic IP Telephony concepts.
Summarize QoS issues.
Discuss the steps to digitized voice via CODECs.
Explain how TCP/IP and SIP move voice across a network.
Configuration of a VoIP PBX System.

Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Licensure/certifications
Credit for Prior College Level Learning (CPCLL) Details Licensure/Certification Current Oracle Certified Associate (OCA) in Oracle Database Administration Licensure/Certification Details Student possess a recent (among the two most recent editions) Oracle Certified Associate (OCA) certifications in Oracle Database Administration. Credential will be reviewed by CIS Department.	

Goals, Topics, and Objectives

Core Course Topics
1. Introduction to database management systems
2. The Database Administrator (DBA)
3. Planning and designing a database
4. Oracle installation and upgrade
5. Oracle architecture and components
6. Database security
7. Database monitoring and tuning
8. Oracle and third-party database administration software and tools
9. Client/server connectivity
10. Database backup and recovery
Differentiate a personal database from a large-scale enterprise database.
Describe the role of a Database Administrator (DBA).
Describe planning and design aspects to a database.
Install and upgrade an Oracle instance.
Configure an Oracle instance.
Describe the Oracle architecture and its various components.
Implement database security methods such as Perform user, roles, privileges, and profiles.
Monitor and tune database performance based on usage.
Perform database administration tasks using Oracle and third-party software and tools.
Configure client access to the server, e.g. windows, web, application.
Implement the appropriate database backup and recovery strategies based on organizational needs.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Assessment of academic achievement may include (but is not limited to) exams, quizzes, homework, and laboratory assignments.

The portfolio will be evaluated using a rubric.	
Licensure/Certification Oracle Certified Professional in Java Development Licensure/Certification Details Student possess a recent (among the two most recent editions) Oracle Certified Professional certification in Java Development. Credential will be reviewed by CIS Department.	

Goals, Topics, and Objectives

Core Course Topics
1. Advanced Graphical User Interfaces (GUI), e.g. Swing, JavaFX
2. Data Structures (Lists, stacks, queues, hashmaps, treemaps)
3. File I/O
4. Database Connectivity
5. Efficiency of Algorithms
6. Java Server Pages (JSP)
7. Multithreading
8. Generics
9. Recursion
10. Java Frameworks
11. Test Driven Development
Explain the difference between Swing and JavaFX.
Create GUI applications using advanced techniques such as anonymous classes and lambda expressions.
Create data structures.
Perform file input/output (I/O).
Access a database using Java.
Explain Big-O notation and how to determine the efficiency of an algorithm.
Create a dynamic web (HTTP) page using a Java Server Page.
Explain when to use multithreading.
Create a multithreaded program.
Implement Java Generics.
Create Java methods using recursion.

Describe various Java frameworks, such as Struts, Spring/MVC, and JSF.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
Assessment of academic achievement may include (but is not limited to) exams, quizzes, homework, and laboratory assignments.	
Satisfies Honors Requirement	Satisfies Wellness Requirement
No	No

CIS272 - Project Management

Overview

Subject Computer Information Systems	Academic Department Computer Technology	School Business, Entrepreneurshp, PD
Course Description An advanced-level course which studies project management techniques that provide a foundation for the CompTIA IT Project+ certification and Project Management Body of Knowledge (PMBOK). Also covers project integration, scope, time, cost, quality, human resources, communications, risk, and procurement management. Utilizes Microsoft Project software to manage a project.		
Course Pre-requisite(s) CIS100 Intro Info Tech		
Credit Hours 4		
Contact Hours 4		
Course Fee 45	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Licensure/certifications	
Credit for Prior College Level Learning (CPCLL) Details Licensure/Certification Details Current Project Management Professional (PMP) certification or Certified Associate in Project Management (CAPM) certification.		

Goals, Topics, and Objectives

- Core Course Topics
1. Project Management in Information Technology Context
 2. Business Case
 3. Integration Management
 4. Scope Management
 5. Time Management
 6. Cost Management
 7. Quality Management
 8. Human Resource Management
 9. Communications Management
 10. Risk Management
 11. Procurement Management
 12. Microsoft Project Software

- Create a project charter.
- Develop a business case that includes a requirements document.
- Describe project management integration.
- Identify stakeholders and define customer expectations.
- Define project scope and work breakdown structure.
- Develop a project schedule.
- Develop cost estimates.
- Describe methodologies for quality assurance.
- Develop a human resource plan.
- Develop a communication plan.
- Perform risk assessment and mitigation.
- Develop a procurement management plan.

Utilize Microsoft Project software to manage a project.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
Assessment of academic achievement may include (but is not limited to) exams, quizzes, homework, and laboratory assignments.	
Satisfies Honors Requirement	Satisfies Wellness Requirement
No	No

Register for this Course

CIS276 - Digital Forensics

Overview

Subject Computer Information Systems	Academic Department Computer Technology	School Business, Entrepreneurshp, PD
Course Description Examine the fundamental principles, theory and application of computer investigations, computer forensics tools, information protection, professional development and cybersecurity. Explores various types of cybercrime and investigative techniques. Students will discuss emerging technologies used in law enforcement in relation to computer-related crimes scenes, evidence collection and analysis. Students will evaluate and synthesize technical and legal issues in relation to digital evidence. Students will apply various skills and techniques, combined with numerous investigative software tools to analyze seized electronic media. Students subject to background investigation prior to admittance.		
Course Pre-requisite(s) CIS100 Intro Info Tech , with a grade of "C" or better.		
Credit Hours 3		
Contact Hours 4		
Course Fee 50	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

- Core Course Topics
1. What is Computer Forensics?
 2. Investigating Cyber Crime
 3. Legal Issues Relating to Cyber Crime Investigation
 4. The Role of Law Enforcement and the Courts Regarding Computer Forensics
 5. Social, Legal and Technological Aspects in Computer Forensics
 6. Computer Forensics Reporting
 7. Digital Forensics Profession and Investigations
 8. Data Acquisition
 9. Windows, Linux and Macintosh File Systems
 10. Digital Forensic Tools
 11. Email and Social Media Investigation
 12. Mobile Device Forensics

- Explain the field of digital forensics.
- Restate limitations on expectation of privacy.
- Identify and discuss the categories of computer crimes and what constitutes a cybercrime.
- Summarize how to prepare a digital forensic investigation using a systematic approach.
- Describe how to prepare a digital forensic investigation for the public and private sector.
- Restate how to conduct an investigation including critiquing a case.
- Describe types of fraud and investigative techniques.
- Describe certification and physical requirements for digital forensic labs.
- Discuss data acquisition methods, tools and validation.
- Explain acceptable methods for searching and analyzing evidence.
- Explain guidelines for processing law enforcement crime scenes (digital evidence storage and hashes).

Differentiate Windows, MacOS and Linux file system structures.
Use digital forensic software and hardware tools.
Define digital graphics and audio file formats.
Apply procedure of a live acquisition, analysis of virtual machines, network forensics and network monitoring tools.
Summarize email and social media investigations.
Summarize mobile device and cloud forensics.
Describe guidelines for report writing for high-tech investigations.
Demonstrate the responsible, ethical, and professional behavior required for expert witness testimony.Summarize the rules of evidence and legal foundations.
Summarize courtroom procedures and effective testimony.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Students will be assessed through tests, quizzes, in-class activities/presentations, case studies, outside assignments, and/or class participation.	
Satisfies Honors Requirement	Satisfies Wellness Requirement
No	No

Register for this Course

CIS280 - Information Assurance and Security

Overview

Subject Computer Information Systems	Academic Department Computer Technology	School Business, Entrepreneurship, PD
Course Description An intermediate-level course that provides a comprehensive understanding of Information Assurance and Security as defined in the National Training Standard for Information Systems Security Professionals. Emphasizes Information Assurance Skills that are necessary to address government and industry security needs.		
Course Pre-requisite(s) CIS129 Intro to UNIX Shell Script & either CNT110 CCNA: Networking I or CIS112 Intro to Networking		
Credit Hours 4		
Contact Hours 4		
Course Fee 45	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics
1. Information Security
2. Need for Security
3. Legal, Ethical, and Professional Issues in Information Security
4. Risk Management
5. Planning for Security
6. Security Technology: Firewalls and VPNs
7. Intrusion Detection and Prevention Systems and other security tools
8. Cryptography
9. Physical Security
10. Implementing Information Security
11. Security and Personnel
12. Information Security Maintenance
Demonstrate foundation knowledge of information security/assurance within the organization
Demonstrate knowledge of the profession, its organizations, goals and leadership roles, literature/publications, issues and research foundations.

Demonstrate knowledge of the foundations of information security including legal, regulatory and policy issues, understanding general threats against information systems including denial of service, spoofing and hijacking.*
Identify, analyze and manage viruses, worms, Trojan horses, Rootkits, Botnets, Spyware, Adware, logic bombs and Advanced Persistent Threats (APT)*
Demonstrate knowledge of security objectives and policy development.*
Demonstrate knowledge of cryptography and public key infrastructure (PKI)*
Assess and demonstrate knowledge of target hardening of network devices, operating systems and applications.*

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Assessment of student performance will be determined by written tests, research papers, PowerPoint presentations, and hands-on lab activities.	
Satisfies Honors Requirement	Satisfies Wellness Requirement
No	No

CIS290 - Co-op in Computer Information Systems

Overview

Subject Computer Information Systems	Academic Department Computer Technology	School Business, Entrepreneurshp, PD
Course Description Cooperative education is a structured method of combining classroom-based education with practical work experience. A cooperative education experience, commonly known as a "co-op," provides academic credit for structured employment experience. Work experience must be directly related to the student's declared major to be eligible.To register for this course, a student must have completed 50% of core coursework, maintain an overall GPA of 2.0 and a program specific GPA of 2.5		
Course Pre-requisite(s) Permission from Career Services Officer or Cooperative Education Officer		
Credit Hours 2		
Contact Hours 0.2		
Course Fee 0	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals
Cooperative education helps students make the school-to-work transition, develop career and program-related learning objectives, and work on applicable skills for employment. Placements should provide students with the opportunity to apply and expand upon knowledge learned in the classroom, and develop the skills acquired in their coursework to align with the standards and expectations set by the worksite.
Core Course Topics
1. Professional Dress and Demeanor (attitude, posture, courteousness)
2. Workplace Communication
3. Interviewing Skills
4. Resume Building
5. Networking and Social Media
6. Seeking Employment
7. Career Advancement

1-3 program specific learning objectives will be developed by the instructor for each individual offering.
Students will create 1-3 learning objectives per credit to be approved by instructor for each individual offering.
Build a resume that meets standards of Career Services Officer.
Articulate the reasons for professional attire.
Wear professional attire while on the worksite.
Attend career workshop in professional dress.
Career Services-defined Display appropriate professional attitude and demeanor while on the worksite.

Interview effectively.
Career Services-defined Attend mock interview, give appropriate answers to five 5 questions
Complete a written job application in a prompt, professional manner with all information legible, error-free, and thorough.
Display understanding of the appropriate use of Social Media sites (Facebook, LinkedIn, and Twitter) during Career Services workshop.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
Assessment will be determined by the instructor based on what is in the best interest of the student's academic growth, including future employability of the student. Assessment may include, but isn't limited to:	
- Major final project - Weekly journal - Creation and attainment of all learning objectives - Participation in a career-focused workshop - Consistent and prompt attendance at worksite - Employer evaluation	

General Course Requirements and Recommendations	
General Course Requirements and Recommendations A course syllabus will be developed by the instructor each semester the course is offered. The syllabus will include the standardized co-op Core-Career Focused Topics as well as Program-defined, Student-defined, and Career Services-defined learning objectives.	
Texts	
See Division for list of required texts	
Satisfies Honors Requirement	Satisfies Wellness Requirement

CIS294 - Software Engineering

Overview

Subject	Academic Department	School
Computer Information Systems	Computer Technology	Business, Entrepreneurshp, PD
Course Description		
A capstone course involving the study and application of software engineering principles to design and develop software. Emphasizes written and oral communication skills necessary for the information technology professional through participation in a software project designed to reinforce course material.		
Course Pre-requisite(s)		
CIS111 SQL for Database Development, CIS122 Web Internet Technologies, and one of the following: CIS130 C# Programming, CIS230 C++ Programming, CIS171 Java Programming, or CIS222 Web Database Dev with PHP		
Credit Hours		
3		
Contact Hours		
3		
Course Fee	Miscellaneous Department Fee

Academic Level		
Undergraduate		
General Education Category	Michigan Transfer Agreement (MTA) Category	
English Composition or Communications	Category 2: English Composition or Communications - Applied Degrees	
Eligible for Credit for Prior College Level Learning (CPCLL)		
No		

Goals, Topics, and Objectives

Core Course Topics
- Software development and design methodologies - Process models - Requirements engineering - Data and object models - Diagramming using various UML diagrams, and data flow diagrams, entity relationship diagrams - Software development and collaboration tools (version control, diagramming, communication, Kanban method) - API development and integration. - User interface design - Software testing and quality - Presentation principles - Security analysis and planning - Software development, integration, and implementation - Collaboration and team communication
Describe software development and design methodologies.
Create software using traditional process models and agile processes.
Conduct requirements analysis and create a system requirement specification.

Develop use cases.
Create data and object models
Diagram using various UML diagrams, and data flow diagrams, entity relationship diagrams.
Use software development and collaboration tools using version control software, diagramming software, communication software, and Kanban software.
Integrate APIs into a software application.
Create accessible and professional user interfaces.
Develop, integrate, and implement a multifaceted software application as a team.
Communicate with team members and other teams to collaborate and resolve conflicts.
Participate in code reviews and refactoring.
Conduct unit, integration, and validation testing.
Analyze security concerns.
Develop a system disaster recovery and back up plan.
Create Data Flow Diagrams, Entity-Relationship Diagrams.
Create and give a professional presentation.
Analyze and evaluate information in order to identify the need for research to draw conclusions, formulate inferences, solve problems and make decisions in the context of Computer Information Systems.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
Written assignments and tests, oral presentations, and a group project requiring the selection, evaluation, use, and documentation of appropriate research material from external sources.	
Satisfies Honors Requirement	Satisfies Wellness Requirement
No	No

CIS295 - Network Design and Implementation

Overview

Subject	Academic Department	School
Computer Information Systems	Computer Technology	Business, Entrepreneurshp, PD
Course Description		
A capstone course covering the design, implementation, and support of a Local Area Network (LAN). Examines basic LAN design methods and tools, Network Operating Systems, LAN implementation considerations, LAN hardware, and network troubleshooting techniques. Includes the design and implementation of a LAN in a lab setting complete with file servers, system backups, wireless and wired clients, printing, Internet Access, configuration of switches, VLANs, routers, VPNs, and firewalls.		
Course Pre-requisite(s)		
CNT220 CCNA: Networking IV, CIS124, CIS224 or CIS229 UNIX System Administration, and CIS113 Wireless LANs or CIS224.		
Credit Hours		
3		
Contact Hours		
3		
Course Fee	Miscellaneous Department Fee	
50	0	
Academic Level		
Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL)		
No		

Goals, Topics, and Objectives

Core Course Topics
- Basics of LAN Design - Customer Needs Assessment - Network Design - Implementation Plan and Timelines

5. Install and Configure all Server and LAN components
6. Network Testing & Evaluation
7. Implementation Project Presentations

Analyze customer requirements for a new Local Area Network (LAN).
Design a LAN solution detailing structured cabling components, switches, routers, desktop and server hardware, network and client operating systems.
Create a technical project plan and timeline for implementation.
Install, configure and fully implement your network design.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

- The above objectives will be verified by their design proposal.
- The working implementation of the designed LAN.
- The group presentation made explaining their design.

Satisfies Honors Requirement

No

Satisfies Wellness Requirement

No

CIS296 - Information Assurance Methodology

Overview

Subject Computer Information Systems	Academic Department Computer Technology	School Business, Entrepreneurshp, PD
---	--	---

Course Description

A capstone course providing hands-on experiences in the planning, implementation, and maintenance of Information Security systems. Covers security technologies and tools, footprinting, scanning and enumeration, web browser security, access control, data management and recovery, log security issues, network intrusion detection systems, virtual private networks, encryption and malware prevention, and defense. Analyzes and implements information security techniques through laboratory exercises.

Course Pre-requisite(s)

Goals, Topics, and Objectives

Core Course Topics

1. Footprinting
2. Scanning & Enumeration
3. Windows OS Processes & Services
4. Vulnerability Identification & Research Validation
5. Vulnerability Validation
6. System Remediation
7. Windows Browser Security & Configuration
8. Data Management
9. Data Backup & Recovery
10. Access Control
11. Host IDS
12. Log Security
13. Windows Privacy & Anti-forensics Issues
14. Software Firewalls
15. Linksys Firewalls Router and Access Control Points
16. Network IDS
17. Network Traffic Analysis
18. VPN and Remote Access
19. Digital Certificates
20. Password Circumvention
21. Antivirus
22. Malware Prevention
23. Linux Labs
24. Critical Thinking and Information Literacy in Information Assurance

Recognize and describe the clear distinction between the actions taken by an ethical information security professional as opposed to the activities of a computer hacker.

Demonstrate knowledge and practice common tasks performed by Information Security (InfoSec) personnel in the course of their duties or career.
Identify, practice (hands-on activities), and analyze common computer security technology systems (software and hardware).
Identify and document security issue(s) of the Incident Response scenario presented by your Instructor.
Analyze and document the security risks and vulnerabilities associated with the Security Incident Response scenario presented by your Instructor.
Design a security solution detailing short and long term objectives to resolve the identified security issue(s).
Evaluate and select security tools for the proposed security solution. Defend and document your security tool choices.
Document the proposed security network architecture with diagrams, PowerPoint presentations, hardware equipment, software list, and a budget.
Create new security policies required to support your security network architecture solution.
Demonstrate design feasibility by implementing a prototype of the proposed security network architecture.
Define the technical project plan and timeline for implementing your security network architecture solution.
Analyze and document the security benefits, possible technical issues, and required resources needed to complete your project.
Analyze and evaluate information in order to identify the need for research to draw conclusions, formulate inferences, solve problems and make decisions in the context of Computer Information Systems.
Demonstrate information literacy by locating, evaluating, selecting, organizing, synthesizing, and ethically documenting information from multiple sources using both informal and formal formats, in the context of Computer Information Systems.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

- Assessment of student performance will be determined by lab assignments, examinations, Discussion Boards and a Documentation Binder with documentation and cited sources or references.
- All additional assessment of student achievement is left to the discretion of the instructor.

CNT110 - CCNA: Networking I

Overview

Subject
CISCO Academy

Academic Department
Computer Technology

School
Business, Entrepreneurship, PD

Course Description
The first in a series of three courses designed to help prepare students for entry-level networking jobs and the CCNA (Cisco Certified Network Associate) certification. Introduces networking models, protocols, and elements that connect users, devices, applications, and data through the Internet and across modern computer networks. By the end of the course, students can perform basic configurations for routers and switches and build simple local area networks (LANs) that integrate IP addressing schemes and foundational network security. Strongly recommended that students be very familiar with working within a Windows environment and using a Web browser before taking this course. Note: Course topics help students prepare for the CCNA certification exam, but the exam is not included in this course. Industry certification exams are administered by an independent testing agency.

Departmental Exam Details

A student may be granted credit for this course through credit for prior college-level learning if s/he scores a proficient score on a written assessment, on a skills-based demonstration, and has a current CCNA or higher Cisco certification. Departmental exam is given in department by department faculty. Faculty will grade exam based on evaluation rubric. Evaluation rubric and exam topics and objectives located in School's Office.

Skilled Demonstration Details

A student may be granted credit for this course through credit for prior college-level learning if s/he scores a proficient score on a written assessment, on a skills-based demonstration, and has a current CCNA-level or higher Cisco certification. Skills-based demonstration is given in department by department faculty. Faculty will assess demonstration based on evaluation rubric. Evaluation rubric and student checklist located in School's Office.

Licensure/Certification

Current CCNA certification

Licensure/Certification Details

A student may be granted credit for this course through credit for prior college-level learning if s/he scores a proficient score on a written assessment, on a skills-based demonstration, and has a current CCNA-level or higher Cisco certification. Department faculty will verify certification. Verified certification and the CPCLL application will be copied, signed, dated, and retained in the School's Office.

Goals, Topics, and Objectives

- Core Course Topics
1. Network components
 2. Network topologies
 3. Basic switch and end device configuration
 4. Network protocols and models
 5. Purpose and characteristics of OSI Model layers
 6. Number systems
 7. Ethernet switching
 8. Address resolution
 9. Basic router configuration
 10. IPv4 and IPv6 Addressing
 11. Network security fundamentals
 12. Network troubleshooting

Implement initial settings including passwords, IP addressing, and default gateway parameters on a network switch and end devices.

Explain how network protocols enable devices to access local and remote network resources.
Explain how physical layer protocols, services, and network media support communications across data networks.
Calculate numbers between decimal, binary, and hexadecimal systems.
Explain how media access control in the data link layer supports communication across networks
Explain how Ethernet operates in a switched network.
Explain how routers use network layer protocols and services to enable end-to-end connectivity.
Explain how ARP (address resolution protocol) and ND (network discovery) enable communication on a network.
Implement initial settings on a router and end devices.
Calculate an IPv4 subnetting scheme to efficiently segment a network.
Implement an IPv6 addressing scheme.
Use various tools to test network connectivity.
Compare the operations of transport layer protocols in supporting end-to-end communication.
Explain the operation of application layer protocols in providing support to end-user applications.
Configure switches and routers with device hardening features to enhance security.
Implement a network design for a small network to include a router, a switch, and end devices.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Students will be assessed based on lab work, standardized multiple-choice online chapter assessments, a midterm, and a final exam with a hands-on, skills-based assessment partly developed by Cisco Systems.

Grading Scale	
LETTER GRADE	PERCENTAGE
A+	97-100%
A	93-96%
A-	90-92%
B+	87-89%
B	83-86%
B-	80-82%
C+	77-79%
C	73-76%
C-	70-72%

Overview

Subject CISCO Academy	Academic Department Computer Technology	School Business, Entrepreneurship, PD
Course Description The second in a series of three courses designed to help prepare students for entry-level networking jobs and the CCNA (Cisco Certified Network Associate) certification. Focuses on switching technologies and router operations that support small-to-medium business networks and includes wireless local area networks (WLANs) and security concepts. Students learn key switching and routing concepts. Students perform basic network configuration and troubleshooting, identify and mitigate LAN security threats, and configure and secure a basic WLAN. Note: course topics help students prepare for the CCNA certification exam, but the exam is not included in this course. Industry certification exams are administered by an independent testing agency.

Current CCNA certification
Licensure/Certification Details
A student may be granted credit for this course through credit for prior college-level learning if s/he scores a proficient score on a written assessment, on a skills-based demonstration, and has a current CCNA-level or higher Cisco certification. Department faculty will verify certification. Verified certification and the CPCLL application will be copied, signed, dated, and retained in the School's Office.

Goals, Topics, and Objectives

- Core Course Topics
- Basic switch and router configuration
 - Switching concepts
 - VLANs, VLAN configuration, and inter-VLAN routing
 - STP purpose and operation
 - Etherchannel
 - DHCPv4 concepts
 - SLAAC and DHCPv6 concepts
 - FHRP concepts
 - LAN security concepts
 - Switch security configurations
 - WLAN concepts and configuration
 - Routing concepts
 - IP static routing configuration and troubleshooting

Configure devices by using security best practices.
Explain how Layer 2 switches forward data.
Implement and troubleshoot VLANs, trunking, and inter-VLAN routing in a switched network.
Explain how STP enables redundancy in a Layer 2 network.
Describe, configure, and troubleshoot EtherChannel on switched links.
Implement DHCPv4 to operate across multiple LANs.
Configure dynamic address allocation in IPv6 networks.
Explain how FHRPs provide default gateway services in a redundant network
Explain how vulnerabilities compromise LAN security.
Implement switch security to mitigate LAN attacks.
Implement a WLAN using a wireless router and WLC.

Explain how routers use information in packets to make forwarding decisions.
Configure and troubleshoot IPv4 and IPv6 static and default routes.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Students will be assessed based on lab work, standardized multiple-choice online chapter assessments, a midterm, a final exam with a hands-on, skills-based assessment partly developed by CISCO Systems.

Grading Scale	
LETTER GRADE	PERCENTAGE

CNT210 - CCNA: Networking III

Overview

Subject CISCO Academy	Academic Department Computer Technology	School Business, Entrepreneurship, PD
Course Description This is the third course in a series of four courses in the Cisco Certified Network Associate (CCNA) Certificate of Achievement at HFC. This course focuses on the architectures and considerations related to designing, securing, operating, and troubleshooting enterprise networks. This course covers wide area network (WAN) technologies and quality of service (QoS) mechanisms used for secure remote access. This course also introduces software-defined networking, virtualization, and automation concepts that support the digitalization of networks. Students gain skills to configure and troubleshoot enterprise networks, and learn to identify and protect against cybersecurity threats. They are introduced to network management tools and learn key concepts of software-defined networking, including controller-based architectures and how application programming interfaces (APIs) enable network automation.		
Course Pre-requisite(s) <u>CNT110 CCNA: Networking I</u> current version, or instructor permission <u>CNT120 CCNA: Networking II</u> current version, or instructor permission		
Credit Hours 4		

Licensure/Certification Details A student may be granted credit for this course through credit for prior college-level learning if s/he scores a proficient score on a written assessment, on a skills-based demonstration, and has a current CCNA-level or higher Cisco certification (or expired no more than 3 years). Department faculty will verify certification. Verified certification and the CPCLL application will be copied, signed, dated, and retained in the School's Office.
--

Goals, Topics, and Objectives

Core Course Topics 1. Open Shortest Path First (OSPF) Features and Characteristics 2. Current State of Cybersecruity 3. Purpose of Access Control Lists (ACLs) 4. Network Address Translation (NAT) Characteristics 5. Purpose of Wide Area Networks (WANs) 6. Virtual Private Network (VPN) Technology 7. Network Transmission Quality 8. Device Discovery with Cisco Discovery Protocol (CDP) 9. Hierarchical Networks 10. Network Documentation and Troubleshooting 11. Cloud Computing 12. Automation Overview
Describe basic OSPF features and characteristics
Describe best practices for protecting a network.
Configure IPv4 ACLs to filter traffic to meet networking requirements.
Configure NAT services on the edge router to provide IPv4 address scalability.
Explain how VPNs and IP Security (IPsec) secure site-to-site and remote access connectivity.
Explain how networking devices implement Quality of Service (QoS).
Use CDP to map a network topology.
Explain how network documentation is developed and used to troubleshoot network issues.
Explain the purpose and characteristics of network virtualization.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Students will be assessed based on lab work, standardized multiple-choice online chapter assessments, a midterm, and a final exam with a hands-on, skills-based assessment partly developed by Cisco Systems.

Grading Scale
Students will be assessed based on lab work, standardized multiple-choice online chapter assessments, a midterm, a final exam with a hands-on, skills-based practical assessment partly developed by Cisco Systems.

CNT220 - CCNA: Networking IV

Overview

Subject CISCO Academy	Academic Department Computer Technology	School Business, Entrepreneurshp, PD
Course Description This course is the last in a series of four courses in the Cisco Certified Network Associate (CCNA) Certificate of Achievement at HFC and focuses on Network Security. This course equips students with the knowledge and skills needed to prepare for entry-level security specialist careers. This course is a hands-on, career-oriented e-learning solution that emphasizes practical experience. It is a blended curriculum with both online and classroom learning. This course aims to develop an in-depth understanding of network security principles as well as the tools and configurations required to secure a network.		
Course Pre-requisite(s) CNT210 CCNA: Networking III current version, or instructor permission		
Credit Hours 4		
Contact Hours 4		
Course Fee 75		
Miscellaneous Department Fee 0		
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) Yes		
Acceptable Prior Learning Credit Departmental Exam, Skilled Demonstration, Licensure/certifications		
Fees associated with Credit for Prior College Level Learning application 50.0		

Goals, Topics, and Objectives

Core Course Topics • Securing Networks • Mitigating Threats • Authentication, Authorization and Accounting (AAA) • Access Control Lists (ACLs) • Firewall Technologies • Cryptographic Services • Virtual Private Networks (VPNs) • Introduction to the Cisco Adaptive Security Appliance (ASA) • Network Security Testing
Explain network threats, mitigation techniques and the basics of securing a network
Configure command authorization using privilege levels and role-based Command Line Interface (CLI)
Configure Authentication, Authorization, Accounting (AAA) to secure a network
Implement Access Control Lists (ACLs) to filter traffic and mitigate network attacks on a network
Explain how the types of encryption, hashes, and digital signatures work together to provide confidentiality, integrity, and authentication.
Implement security measures to mitigate Layer 2 attacks
Explain how the types of encryption, hashes, and digital signatures work together to provide confidentiality, integrity, and authentication
Implement secure Virtual Private Networks (VPNs)
Explain how the Adaptive Security Appliance (ASA) operates as an advanced stateful firewall
Implement an ASA firewall configuration
Test network security and create a technical security policy

CNT260 - Network Security

Overview

Subject CISCO Academy	Academic Department Computer Technology	School Business, Entrepreneurshp, PD
Course Description Introduces network security. Emphasizes security terminology and concepts, network security design, security threats and vulnerabilities, security assessment tools and techniques, application, host, and data security, access control concepts and implementation, risk management and business continuity, and basic cryptography through laboratory exercises and detailed lectures. Course topics typically help students prepare for the CompTIA Security+ certification exam. NOTE: This exam is not included in this course. Industry certification exams are administered by an independent testing agency.		
Course Pre-requisite(s) CNT120 CCNA: Networking II or CIS112 Intro to Networking; or Instructor Permission		
Credit Hours 4		
Contact Hours 4		
Course Fee 50		
Miscellaneous Department Fee 0		
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics • Network Security Terminology and Concepts • Network Security Design and Implementation • Risk Management and Business Continuity • Network Security Threats and Vulnerabilities • Security Assessment Tools and Techniques • Application, Host, Data, and Wireless Security • Access Control Concepts and Implementation • Basic and Advanced Cryptography • Malware and Social Engineering • Application and Network Attacks • Vulnerability Assessment and Mitigating Attacks
Describe basic network security terminology and concepts
Explain the security function of various network devices and technologies.
Distinguish and differentiate between network design elements.
Explain the security concerns associated with basic networking devices, network media, security topologies and systems.
Explain the security implications of physical security, risk management, disaster recovery, business continuity, and security policies and procedures.
Analyze and differentiate among different types of network attacks.
Assess various tools and techniques used to discover security threats and vulnerabilities.
Plan the appropriate actions to mitigate vulnerability and risk.
Explain the importance of application, host, and data security.
Differentiate between and explain best practices of authentication, authorization, and access control.
Implement security control best practices related to account management.
Explain general cryptography terminology and concepts.
Apply appropriate cryptographic tools.
Explain the concept of public key infrastructure (PKI).

Implement PKI.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Students will be assessed based on lab work, multiple-choice and essay type chapter tests, a midterm, and a final exam. Grading Scale

COLL101 - College Success

Overview

Subject Counseling	Academic Department Counseling	School Student Services
Course Description Intended for students seeking to maximize their college experience; students will discover ways to achieve academic success by learning how to navigate a diverse campus environment. An emphasis will be given to using academic support systems, thinking critically with career decision-making, program planning, time management, and college financing, together with implementing success motivators, study habits, and testing strategies. Students will create action plans that will help them focus on achieving academic and career success.		
Credit Hours 3		
Contact Hours 3		
Course Fee 12	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics
1. The college process
2. The career world
3. Time management, values, academic success and stress
4. Study habits, test taking strategies, and anxiety
5. Academic support systems and rebounding from failing situations
6. Money Management and Financing college
7. Valuing Diversity
8. Critical Thinking
Identify resources and policies using the college website.
Discuss diversity and engage in at least one activity that exposes diversity.
Calculate a grade point average (GPA).
Complete career assessments and analyze the results.
Report on one career and defend its viability as a career option.

Prepare an academic plan that supports a career choice.

Complete values and time assessments.

Analyze value-time assessments to create a study plan for reducing stress and improving success.

Discuss distractions interfering with college and prepare an action plan to cope with distractions.

Identify a learning style and use it to reduce stress and anxiety.

Taking notes and then describe the importance of note taking.

Identify at least one test taking strategy to alleviate test anxiety and construct an action plan using that strategy.

Identify personal motivators and explain how they can be used to promote academic success.

Use at least one academic support system and report on the experience.

Identify the different levels of academic degrees, their corresponding costs, and at least one college that might have transfer potential.

Describe and explain the differences between financial aid options.

Identify alternatives to reducing dependency on financial aid.

Prepare a financial plan to support academic and career goals.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Assessment of student learning may include, but not be limited to, writing assignments, special research reports, career inventories, Interviews and oral reports.	
General Course Requirements and Recommendations This is a hybrid course which requires the student to complete online assignments.	
Grading Scale Students must attain at least 60% to pass the class.	
Texts As determined by the Counseling Division.	
Satisfies Honors Requirement No	Satisfies Wellness Requirement No

COLL103 - College Reconnect

Overview

Subject Counseling	Academic Department Counseling	School Student Services
Course Description This course is specifically designed to help Adult students transition to college and achieve academic and career success. As an Adult Learner you will learn how to navigate coming back to a college environment, familiarize yourself with online education, manage time, maximize your learning, discover ways to stay motivated, think critically, take tests and develop a career/academic plan. Being successful in these areas is the goal of this course.		
Credit Hours 1		
Contact Hours 1		
Course Fee 0	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics
1. Clarify and develop meaningful values.
2. Set and accomplish realistic goals.
3. Determine your learning style.
4. Learn to manage time and develop organizational skills.
5. Develop critical thinking ability.
6. Develop reading and writing skills.
7. Communicate effectively—both verbally and in writing.

8. Develop good test taking skills. Clarify and develop meaningful values.
Set and accomplish realistic goals.
Determine your learning style.
Learn to manage time and develop organizational skills.
Develop critical thinking ability.
Develop reading and writing skills.
Communicate effectivelyboth verbally and in writing.
Develop good test taking skills.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Attendance, class participation, and submitting assignments on time.

General Course Requirements and Recommendations
This course is taught 100% online in synchronous format. Synchronous format means that there will be weekly real-time class meetings in which you must be present. These meetings will be conducted using the "Microsoft Teams Application." You need Internet access and a supported web browser like Chrome, Firefox or Safari in order to complete this class and the required assignments. The textbook is a part of the online materials. This is a 1-credit course, which means that the student has to attend 1 1/2 hours of instruction and put in additional study time for required assignments. Class participation means you are present and participate in real time chat during the sessions. The class week begins on Monday and ends Sunday night. The HFC Moodle system contains the additional readings and exercises for each week that should be completed by Sunday night before the next class.
Texts
The Adult Learner's Companion: A Guide For The Adult College Student, 2nd edition by Deborah Davis, Ph.D.
Satisfies Honors Requirement

COMM151 - Introduction to Social Media

Overview

Subject Journalism	Academic Department Media Communication Arts	School Liberal Arts
Course Description Introduces students to different social media platforms and how they are used by people and organizations. Students will critically examine various social media forms in the context of society. Students will be exposed to the rules of ethical communication, create a basic social media communication plan, and gain basic understanding of social media analytics.		
Course Pre-requisite(s) ENG131 Introduction College Writing eligible		
Credit Hours 3		
Contact Hours 3		
Course Fee 10	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Portfolio Review, Interview, Other	
Credit for Prior College Level Learning (CPCLL) Details Portfolio Review Details		

Goals, Topics, and Objectives

Course Goals
To introduce students to digital literacy by demonstrating productive social media use, and establishing a framework for understanding and evaluating the various platforms.
Core Course Topics
1. Description of social media
2. Social media and strategic alternatives
3. Benefits of social media on individuals and groups
4. Purposes of social media platforms, their history, relevance and use as a participatory culture
5. Influences of social media communication on individuals, businesses and society
6. Social media plan development and data analytics
7. The power and political economy of social media
8. Ethics in the digital world
Describe social media.

Identify various social media and strategic alternatives.
Examine the collective and individual benefits of social media.
Differentiate between the various purposes of social media platforms.
Analyze the different social media platforms as a participatory culture.
Compare and contrast the history and relevance of current social media communication platforms.
Evaluate the positive and negative influences of social media communication on individuals, businesses and society.
Develop a basic social media plan and evaluate the data through social media analytics.
Discuss and debate the power and political economy of social media.
Recognize the role of ethics in the digital world.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of Academic Achievement determined by instructor, but may include:

- Summary and analysis of Case Studies
- Quizzes
- Written exams
- Discussions
- Essay/Papers
- Collaborative research projects
- Presentations

Satisfies Honors Requirement
No
Satisfies Wellness Requirement
No

COMM190 - Co-op in Communications

Overview

Subject Journalism	Academic Department Media Communication Arts	School Liberal Arts
Course Description Cooperative education is a structured method of combining classroom-based education with practical work experience. A cooperative education experience, commonly known as a "co-op," provides academic credit for structured employment experience. Work experience must be directly related to the student's declared major to be eligible.To register for this course, a student must have completed 50% of core coursework, maintain an overall GPA of 2.0 and a program specific GPA of 2.5.		
Course Pre-requisite(s) Permission from Career Services Officer or Job Developer in the Office of Career Services		
Credit Hours 1		
Contact Hours 0.2		
Course Fee 0	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Other	
Credit for Prior College Level Learning (CPCLL) Details Student will submit a formal request in writing to the faculty and Associate Dean for work experience to be considered for Credit for Prior College-Level Learning.		

The student will complete an interview, a reflective paper, or a presentation to the faculty in which the student develops and describes the learning objectives supported by the work experience, how those learning objectives were achieved and how that learning was put into practice.
Finally, the student must also provide a portfolio (or something comparable) that shows the work completed, and provide some form of documentation confirming the work experience (a resume does not suffice) for which Credit for Prior College-Level Learning is requested.

Goals, Topics, and Objectives

Course Goals
Cooperative education helps students make the school-to-work transition, develop career and program-related learning objectives, and work on applicable skills for employment. Placements should provide students with the opportunity to apply and expand upon knowledge learned in the classroom, and develop the skills acquired in their coursework to align with the standards and expectations set by the worksite.
Core Course Topics
1. Core Career-Focused Topics:
A. Professional Dress and Demeanor (attitude, posture, courteousness)
B. Workplace Communication
C. Interviewing Skills
D. Resume Building
E. Networking and Social Media
F. Seeking Employment G. Career Advancement

1-3 program specific learning objectives will be developed by the instructor for each individual offering.
Students will create 1-3 learning objectives per credit to be approved by instructor for each individual offering.
Build a resume that meets standards of Career Services Officer.
Articulate the reasons for professional attire.
Wear professional attire while on the worksite, Attend career workshop in professional dress.
Display appropriate professional attitude and demeanor while on the worksite.
Interview effectively, Attend mock interview, give appropriate answers to five 5 questions
Complete a written job application in a prompt, professional manner with all information legible, error-free, and thorough.
Display understanding of the appropriate use of Social Media sites (Facebook, LinkedIn, and Twitter) during Career Services workshop.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment will be determined by the instructor based on what is in the best interest of the student's academic growth, including future employability of the student. Assessment may include, but isn't limited to:
- Major final project - Weekly journal - Creation and attainment of all learning objectives - Participation in a career-focused workshop - Consistent and prompt attendance at worksite - Employer evaluation

General Course Requirements and Recommendations
To be determined by the instructor. Detailed course syllabi will be standardized for all co-op courses and individual course requirements will be available to the AEC and College Council by request "For information only" for each term that the course is offered.
Texts

COUN110 - Human Potential Seminar

Overview

Subject	Academic Department	School
Counseling	Counseling	Student Services
Course Description		
Examines how to identify and apply positive life skills in order for each individual to discover and any use their strengths, talents and abilities. Covers empathy, peak experiences, internal and external motivational factors, goal setting and values clarification.		
Credit Hours		
2		
Contact Hours		
2		
Course Fee	Miscellaneous Department Fee	
2	0	
Academic Level		
Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL)		
No		

Goals, Topics, and Objectives

Course Goals
The overall goal is the actualizing of autonomous, healthy persons who can love self and others and use their potential.
Core Course Topics
- Self Development - How Experiences Shape Personality - Positive Empathetic Regard - Personal Goal Setting - Positive Past History - Life Experiences

7. Personal Satisfaction, Success, and Achievements

8. Personal Motivation

9. Values Clarification

10. Strengths and Abilities

11. Goal Setting

Create a pre-self knowledge inventory.

Define self-affirming, self-motivating, self-determining and empathetic positive regard for other people.

Discuss the statement by Herbert Otto indicating that "the average normal person uses no more than 10% of his or her potential."

Evaluate the people and experiences that have helped shape the way you think and feel about yourself today.

Write a summary of a happy moment, a decision you made that changed your life, an achievement you are proud of and a goal you achieved or are working on.

Analyze how one's personal experience unfolds.

Examine your empathetic recall experience.

Analyze your verbal and nonverbal communication with a classmate.

List your helper and killer words.

Apply the criteria for successful goal setting to your long and short term goals

Develop a long range goal you will achieve by the end of class.

Define peak experience.

Record your peak experiences throughout your life span.

Construct twenty (20) peak experiences that have had an affect on your life.

Discuss the list of little peak things that have a positive impact on your life.

Explain how personal satisfactions, successes and achievements have influenced your life.

Write a list of all of your lifetime satisfactions, successes and achievements.

Label your internal and external motivators.

Identify your primary and secondary motivators.

Select your most motivational experiences.

Identify your top five values.

Analyze your participation in the values auction and your goal setting plan.

List your 25 strengths, abilities or talents.

Identify how you are going to use these to achieve your educational, career, academic and personal goals.

Judge your level of success with your short and long term goals

Demonstrate a plan to include goal setting in your daily life.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement		
Assessment of student learning may include, but not be limited to, writing assignments, special research reports, interviews and oral reports.		
Grading Scale		
Student must attain at least 60% to pass the class.

COUN111 - Advanced Human Potential Seminar

Overview

Subject Counseling	Academic Department Counseling	School Student Services
Course Description Use the group process and the tools developed in COUN-110 to further develop life skills that enable each individual to discover his or her potential and to deal more effectively and efficiently with conflicts, blocks, failures, and life-style problems.		
Course Pre-requisite(s) COUN110 Human Potential Seminar, COUN119 Issues in Personal Growth, COUN125 Life Work Planning or Instructor Permission. C- or better in COUN110 Human Potential Seminar or COUN119 Issues in Personal Growth or COUN125 Life Work Planning.		
Credit Hours 2		
Contact Hours 2		
Course Fee 2	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals
The goal of COUN111 Adv Human Potential Seminar is the actualizing of autonomous, healthy persons who can love self and others, and use their own human potential to effectively deal with conflicts, lack of confidence or life style planning problems.

- Core Course Topics
1. Personal Interactions and Life Experiences
 2. Values Clarification
 3. Conflict
 4. Failure
 5. Human Potential
 6. Life Style
 7. Action Goal Plan

Describe how personal interactions and life experiences can have a positive effect on how you live your life.*

Define self-affirming, self-determining, and self-motivating.

Analyze 2-3 life experiences that demonstrate how you see yourself and how you can become more self-affirming.

Identify 3-4 specific experiences that demonstrate how you use your potential, how you live your life, and how you can become more self-determining.

Identify a list of personal values.

Describe the five (5) most important values in which you presently invest your time that will help you become more self-determining and self-motivated.

Identify and discuss the four (4) components of conflict (intrapersonal/ interpersonal; clashes/blocks; positive/negative; conflict/problem).

Identify and discuss 2-3 previous conflict situations in defined periods of time to chart your personal history of dealing with conflict.

Analyze the seven (7) methods of preventing the potential conflicts from occurring.

Identify one (1) personal conflict, and analyze the conflict using the 12 step conflict resolution/management process for becoming more self-affirming, self-determining, and developing greater empathic regard for others.

Define Failure.

Discuss the nine (9) questions that help define failure and how to deal with failure to promote becoming more self-motivating.

Identify, analyze, and share 1-2 personal failures using the nine questions "dealing with failure successfully"

Identify and set two (2) personal goals that will help you successfully deal with failure and move you toward becoming more self-affirming, self-determining, and self-motivating, and developing greater greater empathic regard for others.

Define human potential.

Discuss the eight (8) step "Discovering Your Potentialities" questions that lead to becoming more self-affirming, self-determining, and self-motivating.

Identify 3-4 potential helpers and potential killers, and describe how they help or prevent you from maximizing the use of your potential.

Analyze your response to the eight (8) step "Discovering Your Potentialities" questions, and how you can become more self-affirming, self-determining, and self-motivating. *

Establish two (2) personal goals to develop specific potentialities.

Define life style

Analyze your current life style.

Identify 5-8 personal life style changes you desire to make (real me/ desired me).

Identify 2-3 personal examples for each segment of the life style considerations and life style meaning questions that lead toward becoming self-affirming, self-determining, and self-motivating.

Describe three (3) personal decisions that will be supported by 2-3 short term goals and 3-4 long term goals that address the decision making process around conflicts, failure, and life style planning.

Analyze one (1) decision dealing with personal conflict, failure, or life style-planning and the supporting short term and long term goals plans.

Assessment, Requirements, and Outcomes

COUN116 - Assertiveness in Daily Living

Overview

Subject Counseling	Academic Department Counseling	School Student Services
Course Description An advanced course in assertiveness focusing on communication problems with parents, siblings, friends, relatives and strangers, including specific assertive strategies of successful communication with difficult people. Emphasizes how to refuse a request, ask for a favor, respond to criticism and manage one's anger.		
Course Pre-requisite(s) COUN115 Assertiveness Training or instructor's permission.		
Credit Hours 1		
Contact Hours 1		
Course Fee 3	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics 1. Defining Assertiveness 2. Passiveness, assertiveness, aggressiveness, and passive-aggressiveness 3. Assertive behavior in typical daily living situations 4. Assertive behavior with difficult people		
Definition of assertiveness.		
Show the value of behaving assertively.		
Define passive, aggressive, and passive-aggressiveness behavior.		
Analyze how these behaviors negatively impact communication.		
Role play each of these poor communication models.		
Role play difficult daily living situations using the following assertive techniques: asking for a favor, paying "no" without feeling guilty, responding to criticism, negotiating a workable compromise, conflict resolution with parents, friends, siblings, strangers, store clerks and asking for what you want in life.		
Incorporate assertive role-playing techniques while interacting with difficult people (who often hold positions of power) to resolve conflict without getting angry. These techniques will solve passive and aggressive behavioral problems. Some examples of difficult people in daily living situations can be: parents, siblings, extended family members, friends, children, educators, customer service representatives, law enforcement officials, other governmental representatives, medical personnel and banking officials.		

Assessment, Requirements, and Outcomes

COUN125 - Life Work Planning

Overview

Subject Counseling	Academic Department Counseling	School Student Services
Course Description Examines and analyzes one's own resources, strengths and constraints to determine what is realistic for future change. Covers decision-making tools which can be utilized for effective planning resulting in alignment between one's life and work goals. Potential challenges are examined through problem-solving techniques.		
Credit Hours 3		
Contact Hours 3		
Course Fee 10	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics	
1. Self-analysis	
2. Discovering the world of work	
3. Enhancements to one's life work journey	
4. Barriers to one's life work journey	
5. How to make decisions to improve one's life work journey	
6. How to develop a life work plan and report on it	
Take a series of assessments that measure one's interests, values, experiences, abilities and personality.	
Produce a list of possible careers.	
Create a life work profile based on the assessments.	
Identify careers from the World of Work Map that match one's life work profile.	
Identify factors that can make one's life work journey go smoothly.	
Identify factors that have the potential to make one's life work journey difficult.	
Identify how one makes decisions based upon models of decision making.	
Experience decision making exercise that test one's decision making capabilities.	

Identify one major decision within the life arena or work arena that needs to be addressed.

Create a personal plan to operationalize the decisions one is willing to make to improve in either the life or work arena.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Assessment of student learning may include, but not be limited to, writing assignments, critical analysis reports, career inventories, Interviews, oral reports and developing a comprehensive life plan.		
Grading Scale Students much attain at least 60% to pass the class.		
Satisfies Honors Requirement No	Satisfies Wellness Requirement Yes

COUN128 - Active Parenting

Overview

Subject Counseling	Academic Department Counseling	School Student Services
Course Description Explores how to apply the basic principles of active parenting to both children and teens. Also discusses topics such as, but not limited to: how to parent children at different developmental states, the development of a child's ethnic identity, effective punishment strategies, challenges faced by working parents, step-families and communication patterns.		

Credit Hours
2

Contact Hours
2

Course Fee 0	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Course Goals
The goal is to promote student development and their understanding of: (1) the general concepts, goals and strategies of parenting; (2) how to parent children at different developmental states; and (3) how parenting may vary according to life circumstances.

Core Course Topics

- The Process of Parenting
- The Influence of Culture on Parenting
- How Parents Support Children's Growth and Development
- Parenting during each Developmental Stage
- Issues of Single and Working Parents
- Challenges of Parenting in a Complex Family Structure
- Parenting in Challenging Times

Explain the three (3) dynamic forces (child, parent, society) involved in the parenting process and how they interact.

Explain the role played by the three (3) dynamic forces of the parenting process.

Describe two (2) steps that are involved in the development of a child's ethnic identity.

Define the term acculturation.

Explain four (4) parenting styles.

Explain the role that unconditional regard plays in the development of high self-esteem, according to Susan Harter.

Analyze the Victim Triangle (persecutor, rescuer and victim)*.

Evaluate the effectiveness of how either you discipline your child or a friend disciplines their child.*

Explain Jean Piagets four (4) cognitive developmental stages.

Explain Erik Eriksons eight (8) psychosocial developmental stages.

Define the five (5) developmental levels (infant, toddler, preschooler, school-age child and adolescent).

Explain two (2) current issues faced by single parents or working parents.

Explain the three (3) family types in terms of work and parenting characteristics (high-status, low-stress, main-secondary).

Analyze the challenge of being a working parent.

Explain three (3) forms of step families (neotraditional, matriarchal, or romantic),

Explain four (4) family communication patterns (consensual, pluralistic, protective and laissez faire).

Define three (3) forms of child abuse (physical, sexual, emotional).

Explain four (4) coping strategies parents use when caring for children and older parents.

Explain three (3) factors that place families at high risk for maltreatment (social context in which family lives, stresses of everyday life, personal qualities parents bring to parenting).

Assessment, Requirements, and Outcomes
