CRJ291 - Criminal Justice Internship 1

Overview

Subject	Academic Department	School
Criminal Justice	Social Sciences	Liberal Arts
Course Description		
This is an internship program that provides the student with field experience with municipal, county, state, and local criminal justice agencies and related agencies in the private sector. This includes but is not limited to: District, Circuit, and Juvenile Courts, halfway houses, detention centers, local, county and state police agencies, the FBI, U.S. Marshall Service, Drug Enforcement Agency and Homeland Security. The internship is available to students in both the Probation/Corrections and Parole and the Criminal Justice programs. Students will perform all of the duties of professionals in the given area at the staff level. Students will not have arrest authority or be authorized to carry guns but may accompany a ride along, shadow criminal justice personnel, work in crime labs, interview probation clients, and perform other administrative work. Students will receive hands on experience in their chosen field working alongside with and performing the duties of criminal justice professionals. The internship requires a minimum of 9 hours of work each week off campus at a criminal justice site. Students are also required to meet on campus with the HFC faculty member on a weekly basis by arrangement. This class can only be taken once.		
Course Pre-requisite(s)		
GPA of 2.8, Completion of 12 hours of CRJ courses, and written consent of CRJ director before registration.

Goals, Topics, and Objectives

Core Course Topics
1. Professional and ethical behavior in a criminal justice environment.
2. Interacting and relating to a variety of groups within the criminal justice sphere, including proper use of terminology.
3. Correspondence and reports in a criminal justice environment.
4. Common on the job issues in a criminal justice environment.
5. Appropriate methods for logging activity and assignments in a criminal justice environment.
6. Standards for professional behavior and performance in a criminal justice environment.
Demonstrate professional behaviors, especially ethical behaviors using guidelines established by the host agency.
Demonstrate how to interact with multiple groups, including government agencies, court house personnel, and related entities in the private sector.
Create a variety of appropriate and accurate written notes and reports including, but not limited to, e-mail, agendas, and short reports (need specific examples of types).
Identify issues related to the preservation of peace, the prevention of crime, and the protection of life and property.
Create appropriate records and documentation logs of daily assignments and activities to host agency standards.
Self assess on the job performance and professional behaviors.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
Students will meet with the HFC adviser for 30 minutes every two weeks to discuss progress and review documentation of the internship experience as well as any issues/concerns. Student may be asked to prepare a short report, or other activity, to bring to the meetings. Each student is required to write a portfolio quality terminal report describing what they learned during the internship. Report must also analyze strengths and weakness of the behavior demonstrated on the job; assess effectiveness of interactions with employees; The HFC adviser will contact the local law enforcement agency to determine student success based on the agreed upon learning outcomes.

Determined by department.	

Goals, Topics, and Objectives

Course Goals
To be able to correctly identify and execute basic tap steps and rhythms with correct technique., basic_html

Core Course Topics

- 1. Vocabulary of basic steps
- 2. Combinations
- 3. Rhythm and musicality
- 4. Postural Alignment/Weight Changing
- 5. Famous tap dancers

Identify vocabulary of basic steps.
Execute basic tap steps with correct technique.
Execute skill in given combinations and in composing combinations.

Distinguish among given rhythms.
Execute all steps and combinations with accurate musicality and timing.
Execute body alignment exercises and apply to balancing with weight changes.
List and explain contributions of selected celebrated tap dancers of the 20th century.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

- 1. Movement exams: identify vocabulary of steps from given demonstrations; and execute basic tap steps with correct technique and clear sounds.
- 2. Movement exam: execute given combinations with clarity and accuracy. Assignment: Compose combinations of steps with clarity.
- 3. Written exam: distinguish and identify rhythms from given recordings. Movement exams: execute all steps and combinations with accurate musicality and timing.
- 4. Movement exam: illustrate tap sound accuracy through balance in shifting and changing weight.
- 5. Assignment: oral, written and video or Power Point presentations of selected famous tap dancers of the 20th century.

Goals, Topics, and Objectives

Course Goals
To help students learn the basic patterns of Cha Cha, Rumba and East Coast Swing; Latin dances and Waltz and Foxtrot Ballroom dances, individually and with a partner.

Core Course Topics

- 1. Basics of American and International Styles of Selected Dances
- 2. Rhythm
- 3. Alignment, Technique and Dance Position
- 4. Leading and Following
- 5. Space

Execute basic patterns of Cha Cha, Rumba, East Coast Swing, Waltz and Foxtrot in American and International Styles.
Execute movement accurately with music rhythmic patterns.
Analyze the difference between each Ballroom and Latin dance position, alignment and technique.
Demonstrate alignment of the body and find the center of gravity individually and with a partner in each dance style.
Demonstrate receiving and giving weight with a partner.
Execute mirroring as a pair and individually.
Execute each dance style in the appropriate spatial patterns and throughout the general dance space.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
1.	Movement Exam: demonstrate given basics of all styles.
2.	Movement Exam: demonstrate movement connection of each dance style with the music rhythmic patterns. Written Exam: demonstrate knowledge of music, rhythm, terms and structure.
3.	Movement Exam: execute all dances with correct technique, alignment, placement and dance position.
4.	Movement Exam: execute with a partner smooth leading and following with accurate musicality.
5.	Written and Movement Exam: demonstrate knowledge of floor patterns and use of general space.

Goals, Topics, and Objectives

Core Course Topics - Basics of American and International Styles of Selected Dances - Dances learned in DNCA-131, Cha Cha, Rumba, East Coast Swing, Waltz and Foxtrot - Rhythm - Alignment, Technique and Dance Position - Leading and Following - Space	
Execute basic patterns of Latin dances, Mambo, Bolero and Jive and Ballroom dances, Tango and Viennese Waltz in both American and International Styles.	
Execute given complex patterns of Cha Cha, Rumba, East Coast Swing, Waltz and Foxtrot with a partner.	
Execute movement from all selected dances with rhythmic accuracy and timing.	
Analyze the difference between each dance position, alignment and technique in Mambo, Bolero, Jive, Tango and Viennese Waltz individually and with a partner.	
Align the body and center of gravity individually and with a partner in each dance style selected.	
Connect with a partner through weight sharing.	
Execute mirroring as a pair and individually.	
Execute each selected dance with appropriate spatial patterns and throughout the general dance space or line of dance.	

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
1.	Movement exam: Execute basics of Mambo, Bolero, Jive, Tango and Viennese as a soloist and with a partner.
2.	Movement exam: Execute given complex patterns of Cha Cha, Rumba, East Coast Swing, Waltz and Foxtrot with a partner.
3.	Movement exam: Execute given phrases from selected dances with rhythmic accuracy and timing.
4.	Movement, oral and/or written exam: Explain the difference between each dance position, body alignment and technique of Mambo, Bolero, Jive, Tango and Viennese Waltz individually and with a partner.
5.	Movement and oral exam: Execute and explain the aspects of alignment, center of gravity, weight sharing and mirroring in leading and following with a partner.

6. Movement exam: Execute each selected dance with appropriate and accurate spatial patterns in the general dance space and in the line of dance.

Goals, Topics, and Objectives

Course Goals
To be able to, through the oral and written French word, correctly identify; pronounce; translate; state the purpose; and execute with correct technique, basic Ballet movement vocabulary.

- Core Course Topics**
1. Vocabulary
 2. Technique and purpose
 3. Barre alignment and technique
 4. Movement combinations and phrases
 5. Major contributors
 6. Skeletal-muscular structures and function
 7. Musicality

Identify basic Ballet movement vocabulary in French and in English from a demonstration.
Execute movement terms with correct technique and explain their purpose.
Self evaluate alignment and execute correct technique.
Distinguish and apply barre exercises to movement in combinations and phrases
Discuss a major contributor to Ballet choreography and/or dancing.
Apply knowledge of anatomical function to development of strength, endurance, balance, and flexibility needed for efficient Ballet technique.
Execute accurate musicality with all basic movement vocabulary, combinations and phrases.

Assessment, Requirements, and Outcomes

- Assessment of Academic Achievement**
1. Written Exam: movement identification in French and English translation from a given demonstration. Oral Exam: French pronunciation.
 2. Written Exam: state and explain movement purposes. Movement Exam: technique execution from given movement vocabulary.
 3. Class Log: written record of given corrections and guidance and personal evaluation of technique for self correction.
 4. Movement Exam: demonstrating skill and knowledge of given combinations and phrases.
 5. Choreographer/Dancer Presentation: oral, written, video class presentation of an artist.
 6. Written exam: label skeletal muscular anatomy and explain the application to dance.
 7. Written exam: define musical terms. Movement exam: Execute selected movement with correct musicality/rhythm/timing.

Goals, Topics, and Objectives

Course Goals
To develop skill with more complex combinations of Ballet movement beyond the beginning level and to condition a body that is capable of more advanced level work.

- Core Course Topics**
1. Vocabulary
 2. Technique and purpose
 3. Combinations and phrases
 4. Turns
 5. Ballet Artists
 6. Skeletal-muscular structures and functions
 7. Body conditioning
 8. Musicality

Identify intermediate Ballet vocabulary in French and in English from a given demonstration.
Execute movement terms with correct technique and explain their purpose.
Execute movement combinations and phrases at the barre and at the centre.
Demonstrate skill/technique with selected turns.
Discuss a major artist/contributor to Ballet choreography or dancing.
Label and apply skeletal-muscular anatomy, function, and conditioning to dance.
Self evaluate fitness and body condition as it applies to dance skill.
Execute accurate musicality with all basic movement vocabulary, combinations and phrases.

Assessment, Requirements, and Outcomes

- Assessment of Academic Achievement**
1. Written Exam: movement identification in French and English translation from a given demonstration.
 2. Written Exam: state and explain movement vocabulary purposes. Movement Exam: execute technique from given movement vocabulary.
 3. Movement Exam: demonstrate skill/technique with given combinations and phrases.
 4. Movement Exam: demonstrate skill/technique in turning.
 5. Choreographer/Dancer Presentation: oral, written, video class presentation of an artist.
 6. Written Exam: identify skeletal and muscular structures and explain their function as they apply to dance movement.
 7. Fitness Testing: pre and post testing for muscular endurance, strength, balance and flexibility.
 8. Written Exam: define musical terms. Movement exam: Execute selected movement with correct musicality/rhythm/timing.

Goals, Topics, and Objectives

Course Goals
To be able to correctly identify and execute Modern dance movement vocabulary with correct technique and skill and to discover new ways to create and manipulate movement.

- Core Course Topics
- Basic Movement Vocabulary
 - Skill and Technique
 - Dance Elements
 - Modern Dance Pioneers and Current Choreographers
 - Skeletal-muscular structures and functions
 - Body Conditioning
 - Improvisation and Problem Solving
 - Musicality

Identify basic Modern Dance vocabulary from a demonstration.
Execute correct technique from given movement vocabulary.
Identify and explain the elements of Dance.
Identify selected pioneers of Modern Dance and current choreographers and explain their significance and contributions.
Label skeletal-muscular anatomy and functions as they apply to dance.
Describe fitness components of muscular endurance, strength, flexibility and balance as they apply to dance skill and assess personal improvement.
Create solutions to given movement problems through improvisation and classroom dance movement studies.
Execute all basic movement vocabulary, combinations and phrases with accurate musicality.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

- Written exam: identify movement vocabulary from a demonstration.
- Class Assignment: keep a written log of technique notes and individual corrections. Movement exam: execute given movement with correct technique.
- Written exam: list and explain the elements of dance.
- Classroom presentation: written, oral and video presentation of selected Modern Dance artists.
- Written exam: label skeletal-muscular anatomy and explain their functions as they apply to Dance.
- Fitness testing: pre- and post-tests for muscle endurance, strength, flexibility and balance.
- Class assignments and studies: create solutions to given movement problems.
- Movement exam: execute given movement with accurate musicality. Written exam: define music terms. Class Assignment/s: create rhythmic patterns and compose movement reflecting them.

Goals, Topics, and Objectives

Course Goals
To be able to execute advanced Modern Dance movement with correct technique and skill; develop choreographic skill; and improve stage presence and performance.
Core Course Topics
1. Advanced Movement Vocabulary
2. Modern Dance Techniques
3. Musicality
4. Modern Dance Choreographers
5. Composition
6. Dance Careers
Identify advanced Modern Dance movement vocabulary from a demonstration.
Explain and illustrate skill in selected Modern Dance techniques, e.g. Graham, Limon.
Execute movement phrases with musicality, accurate rhythm and timing.
Explain a Modern Dance choreographer's philosophy; and list and describe their works.
Compose movement phrases, dance studies and sections by employing improvisation and choreographic tools.
List and explain dance career options.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
1. Written exam: identify movement vocabulary from a demonstration.
2. Movement exam: Execute with accurate technique given movement phrases. Written exam: Explain given Modern Dance techniques and philosophies.
3. Movement exam: demonstrate movement phrases with accurate musicality, rhythm and timing.
4. Classroom presentation: Oral, written and video presentation of selected Modern Dance choreographers.
5. Classroom assignment/s: Compose movement phrases and/or sections of a dance, given the specific focus or theme.
6. Classroom assignment: List and explain various dance career options.

DNCA161 - Beginning Jazz Dance

Overview

Subject	Academic Department
Fine and Performing Arts	Fine & Performing Arts
Course Description	
Explores theatre style jazz dance. Primary emphasis is on developing knowledge of and experience in basic jazz movement vocabulary and technique accompanied by jazz and popular music. Course also includes study of music rhythms, a brief history of jazz, and the body instrument from an anatomical perspective.	
Course Pre-requisite(s)	
Eligible to take ENG courses at HFC.	
Credit Hours	
2	
Contact Hours	
3	
Course Fee	Miscellaneous Department Fee
10	0
Academic Level	
Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL)	Acceptable Prior Learning Credit
Yes	Other
Credit for Prior College Level Learning (CPCLL) Details	
Determined by department.	

Goals, Topics, and Objectives

Course Goals
To be able to identify and execute basic movement vocabulary with correct technique and skill in the Jazz genre.
Core Course Topics
1. Warm up and Isolations
2. Ballet, Modern and Jazz Alignment and Technique
3. Locomotor Movement
4. Skeletal-muscular Structures and Function
5. Musicality
6. History
7. Jazz Dance Artists

Execute aerobic work, isolations, and other body conditioning warm ups.
Execute Ballet, Modern and Jazz body positions and alignment exercises fundamental to Jazz Dance technique.
Examine body alignment and placement in Ballet for application to the Jazz Dance movement vocabulary.
Execute locomotor movement and turns across the floor with correct technique.
Label and apply skeletal muscular anatomy, function and conditioning as it applies to dance.
Execute accurate musicality with all basic movement vocabulary, combinations and phrases.
Explain the evolution of jazz dance from the 19th century.
Identify and explain the relevance of Jazz dance choreographers and dancers from the 1910's to the present day.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
1. Movement exam: Execute isolations, aerobic, endurance, strength and flexibility conditioning as it applies to Jazz Dance.	
2. Movement and written exams: Identify and execute with correct technique all given Ballet, Modern and Jazz movement vocabulary and positions.	
3. Movement exam: Execute all locomotor movement with correct technique.	
4. Written and movement exam: Label skeletal muscular structures, kinesiological terms, explain their functions as it applies to dance and execute exercises to strengthen and stretch specific muscles and muscle groups.	
5. Movement exam: Execute accurate musicality with given movement.	
6. Written exam: Explain the evolution of jazz dance history pre-dating the formal genre from the late 1800's to the present.	
7. Class assignment: Oral, written and video presentation of a Jazz choreographer or dancer.	
Satisfies Honors Requirement	Satisfies Wellness Requirement

Goals, Topics, and Objectives

Course Goals
To be able to correctly identify and execute Jazz movement beyond the basics with correct technique and skill.
Core Course Topics
1. Movement Vocabulary
2. Combinations, Phrases, Turns and Locomotor Movement
3. Skeletal-muscular Structures and Functions
4. Body Conditioning
5. Musicality
6. Jazz Dance Artists
Identify intermediate Jazz movement vocabulary, including French Ballet terms and state their purpose.
Execute with correct technique all given combinations, phrases, turns and locomotor movement across the dance space.

Label and apply skeletal-muscular anatomy and function as it applies to dance.
Self-evaluate fitness and body condition as it applies to dance skill.
Execute accurate musicality with all basic movement vocabulary, combinations and phrases.
Discuss choreographers and dancers who have made significant contributions to Jazz Dance.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
1. Written and movement exams: Identify intermediate Jazz movement vocabulary and purpose from a demonstration and execute selected correct movement from their terms.	
2. Movement exam: Execute all given combinations, phrases, turns and locomotor movement with correct technique.	
3. Written exam: Label skeletal-muscular structures. Movement and oral exam: Illustrate and explain anatomical function as it applies to alignment and technique.	
4. Class assignment: Do pre-testing for muscular endurance, strength, balance and flexibility. Analyze fitness level, according to a given criterion, and create goals and a plan for improvement. Conduct post-testing and self-evaluate.	
5. Movement exam: Execute all selected movement with accurate rhythm and timing.	
6. Class assignment: Oral, written and video presentation of a selected Jazz Dance choreographer or dancer.

DNCA171 - Beginning Hip Hop Dance

Overview

Subject	Academic Department
Fine and Performing Arts	Fine & Performing Arts
Course Description	
Exploration of Hip Hop Dance as an art form that offers a limitless way to express oneself in human movement. Primary emphasis is on developing skills and techniques of the basic Hip Hop movement vocabulary supplemented by instruction in Hip Hop dance history, terminology and the principles of time, space, and energy. Classroom physical practice will focus on anatomically correct body alignment, awareness of the body in space, musicality, strength, stamina, and flexibility. Care of the body and conditioning for dance is also emphasized. Students will be evaluated during the first week of class to determine if they should place into DNCA-1721 rather than DNCA-171 as this is an introductory class intended for those with no formal Hip Hop dance experience.	
Course Pre-requisite(s)	
Eligible to take ENG courses at HFC.	
Credit Hours	
2	

Contact Hours

3	
Course Fee	Miscellaneous Department Fee
0	0
Academic Level	
Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL)	
No	

Goals, Topics, and Objectives

Course Goals	1. Understand and practice the skills and combinations of hip hop dance movement at a beginning level.
	2. Demonstrate and practice proper conditioning of the dancers' body in preparation of dancing.
	3. Provide students with a knowledge and understanding of hip hop dance history, vocabulary, events, and performance.
	4. Prepare students for audition and entrance into four-year dance programs.
	5. Provide transferable technique course credit were applicable (some Dance programs will take a beginning level class, where others that require auditions to enter may not).
	Core Course Topics
	1. Anatomical Alignment
	2. Dancer Conditioning
	3. Hip Hop Dance Technique
	4. Musicality / Rhythmic Sensitivity
	5. Hip Hop Dance Vocabulary
	6. Hip Hop Dance History / Current Events / Performance
Explain musculoskeletal structure and its relationship to movement and energy in the body. Execute movement with connectivity and coordination of the parts to the whole.	
Demonstrate personal growth along with an increase in individual capacity of physical strength, endurance, balance, and flexibility as needed in a beginning level dance technique class.	
Demonstrate personal progression of the integration of alignment, conditioning, musicality, and use of energy to execute Hip Hop movement combinations and phrases.	
Sustain accurate rhythm, dynamics, accents, and musicality with movement vocabulary, combinations, and phrases and being able to do so while adjusting to a variety of music.	
Recognize, identify and apply Hip Hop Dance terminology.	
Analyze historical and current events and performance in Hip Hop Dance through interpretative reading, writing, observation, and/or discussion.	

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
Assessment of academic achievement may include but not be limited to written, oral, or movement exams to identify hip hop dance and skeletal and muscular terminology. Movement exams include the demonstration of beginning skill levels in technique, performance, and musicality. Interpretative reading and writing assignments and interactive discussion may also be used to assess academic achievement.

DNCA221 - College Dance Company I

Overview

Subject	Academic Department
Fine and Performing Arts	Fine & Performing Arts
Course Description	
This is the first of four semesters of College Dance Company, providing opportunities to perform in a wide variety of genres and venues with different choreographers. Dance forms performed include, but are not limited to, classical, modern, jazz, tap, ballroom and Latin. In addition, HFCC Full Circle Dance Company students have an opportunity to attend dance festivals, master classes, professional dance company concerts, and to have their choreography presented. Two or more performances of a final concert are scheduled on campus as well as other performances, both on and off campus. This course is open to college students and high school juniors and seniors by audition and interview. New dance students may audition in one of several scheduled group auditions or may schedule an individual audition with the director. A strong dance background is required.

Goals, Topics, and Objectives

Course Goals	To successfully complete a schedule of performances with a variety of choreographers, dance styles and venues.
	Core Course Topics
	1. Choreography
	2. Choreographic Interpretation/Performance Presence
	3. Choreographic Contribution
	4. Student choreography
	5. Production
	6. Team Spirit
	7. Class Preparedness
	8. Performances
	9. Log
Illustrate quick and accurate reading of all given, composed movement material.	
Execute movement, illustrating clear intent of various choreographers and adapting to their individual approach and style of movement.	
Illustrate performance and stage presence through maintaining character, creating nuances, and focus in all movement material and dances.	
Compose motifs, phrases or sections individually from a given task.	
Read, execute and successfully perform student choreography.	
Set efficiently and effectively choreography on other students. (Optional composition and inclusion through student choreography auditions.)	
Prepare and perform given tasks for all aspects of production.	
Demonstrate contributing and volunteering to help classmates with movement material.	
Illustrate working/rehearsing together without instructor guidance, when necessary.	
Illustrate all previously given movement material with correct technique and performance readiness.	

Illustrate modeling self disciplined behavior through attendance of all classes, pre-scheduled rehearsals and performances with punctuality, full preparedness and performance skill and presence.
Evaluate student, faculty and guest choreography.
Self critique performances of all dances.
Evaluate peer performances.
Analyze choreographer's intent for character interpretation.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
1. Class work: Illustrate quick and accurate reading of all given, composed movement material.	
2. Assignment: Log notes from choreographers, other rehearsing students, director's comments. Graded performance: Execute performance with choreographer's intent along with nuanced, focused character, wherever appropriate.	
3. Assignment and class work: Prepare and illustrate composed movement material, given a task or problem to solve.	
4. Class work: Perform learned student choreography and/or illustrate efficient and effective teaching of composed student pieces.	
5. Assignments: Prepare and perform all given tasks in and outside of class for all aspects of production.	
6. Class work: Illustrate helping classmates where needed and working in rehearsal without guidance.	
7. Class work: Illustrate all previously given movement material with technique and performance readiness.	
8. Performance and class work: Illustrate performance preparedness through hard work, consistent attendance and punctuality, and self reliance.	
9. Record all evaluation and criticism in ongoing log, throughout the course.

DNCA1421 - Intermediate Ballet I

Overview

Subject	Academic Department
Fine and Performing Arts	Fine & Performing Arts
Course Description	
Provides students with continued applied study of ballet technique based on skill level, supplemented by instruction in ballet history, current choreographers and companies, terminology and classical dance principles. The course provides students with the opportunity to explore multiple aspects of this traditional and foundational dance art. Learning activities include physical practice, observation, discussion, reading and writing to cultivate kinesthetic, aesthetic, and intellectual understanding of ballet. Classroom physical practice will focus on anatomically correct body alignment, placement, and turn-out, musicality, strength, stamina, and flexibility. Care of the body and conditioning for dance is also emphasized. The ballet work for Intermediate Ballet I is suitable for students starting to work on their intermediate ballet knowledge and skill set. Intermediate Ballet II and III provides an opportunity for students to continue the development of their ballet movement and expression skills. Student's will continue their academic growth through immersion in history, choreography, terminology and dance principles.	
Course Pre-requisite(s)	
Eligible to take ENG courses at HFC.

Goals, Topics, and Objectives

Course Goals
1. Develop more complex skills and combinations of ballet movement beyond the beginning level and to condition their body in preparation for more advanced level work.
2. Provide students with a knowledge-based immersion in Ballet history, vocabulary, events, and performance.
3. Prepare students for audition and entrance into four year dance programs.
4. Provide transferable technique course credit.
Core Course Topics
- Anatomical Alignment - Dancer Conditioning - Ballet Technique - Musicality / Rhythmic Sensitivity - Ballet Vocabulary - Ballet History / Current Events / Performance
Explain musculoskeletal structure and its relationship to movement and energy in the body. Execute movement with connectivity and coordination of the parts to the whole.
Show personal progression and demonstrate Increased individual capacity for physical strength, endurance, balance, and flexibility.
Show personal progression of the integration of alignment, conditioning, musicality, and use of energy to execute intermediate Ballet movement combinations and phrases at the barre and centre.
Sustain accurate rhythm, dynamics, accents, and musicality with movement vocabulary, combinations, and phrases. Adjust to a variety of music.

Identify and apply Ballet terminology and English translation.
Analyze historical and current events and performance in Ballet through interpretative reading, writing, observation, and discussion.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
Assessment of academic achievement may include but not be limited to written, oral, or movement exams to identify ballet and skeletal and muscular terminology. Movement exams include the demonstration of intermediate skill levels in technique, performance, and musicality. Interpretative reading and writing assignments and interactive discussion will be used to assess academic achievement.

DNCA1423 - Intermediate Ballet III

Overview

Subject	Academic Department
Fine and Performing Arts	Fine & Performing Arts
Course Description	
This is the third of three skill-based two-credit courses where students continue the applied study of ballet technique based on skill level, supplemented by instruction in ballet history, current choreographers and companies, terminology and classical dance principles. The course provides students with the opportunity to explore multiple aspects of this traditional and foundational dance art. Learning activities include physical practice, observation, discussion, reading and writing to cultivate kinesthetic, aesthetic, and intellectual understanding of ballet. Classroom physical practice will focus on anatomically correct body alignment, placement, and turn-out, musicality, strength, stamina, and flexibility. Care of the body and conditioning for dance is also emphasized.

Goals, Topics, and Objectives

Course Goals
1. Develop more complex skills and combinations of ballet movement beyond the beginning level and to condition their body in preparation for more advanced level work.
2. Provide students with a knowledge-based immersion in Ballet history, vocabulary, events, and performance.
3. Prepare students for audition and entrance into four year dance programs.
4. Provide transferable technique course credit.
Core Course Topics
- Anatomical Alignment - Dancer Conditioning - Ballet Technique - Musicality / Rhythmic Sensitivity - Ballet Vocabulary - Ballet History / Current Events / Performance

Explain musculoskeletal structure and its relationship to movement and energy in the body. Execute movement with connectivity and coordination of the parts to the whole.
Show personal progression and demonstrate increased individual capacity for physical strength, endurance, balance, and flexibility.
Show personal progression of the integration of alignment, conditioning, musicality, and use of energy to execute intermediate Ballet movement combinations and phrases at the barre and centre.
Sustain accurate rhythm, dynamics, accents, and musicality with movement vocabulary, combinations, and phrases. Adjust to a variety of music.
Identify and apply Ballet terminology and English translation.
Analyze historical and current events and performance in Ballet through interpretative reading, writing, observation, and discussion.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
Assessment of academic achievement may include but not be limited to written, oral, or movement exams to identify ballet and skeletal and muscular terminology. Movement exams include the demonstration of intermediate skill levels in technique, performance, and musicality. Interpretative reading and writing assignments and interactive discussion will be used to assess academic achievement.

DNCA1521 - Intermediate Modern Dance I

Overview

Subject	Academic Department
Fine and Performing Arts	Fine & Performing Arts

Course Description

Provides students with continued applied study of modern dance technique based on skill level, supplemented by instruction in modern dance history, current choreographers and companies, terminology and the principles of time, space, and energy. The course provides students the opportunity to explore multiple aspects of modern dance. Learning activities physical practice, observation, discussion, reading and writing to cultivate a kinesthetic, aesthetic, and intellectual understanding of modern dance. Classroom physical practice will focus on anatomically correct body alignment, awareness of the body in space, musicality, strength, stamina, and flexibility. Care of the body and conditioning for dance is also emphasized. The modern dance work for Intermediate Modern Dance I is suitable for students starting to work on their intermediate modern dance knowledge and skill set. Intermediate Modern Dance II and III provides an opportunity for students to continue the development of their modern dance movement and expression skills. Student's will continue their academic growth through immersion in history, choreography, terminology and dance principles.

Course Pre-requisite(s)
Eligible to take ENG courses at HFC.

Goals, Topics, and Objectives

- Course Goals
1. Develop more complex skills and combinations of ballet movement beyond the beginning level and to condition their body in preparation for more advanced level work.
 2. Provide students with a knowledge-based immersion in Modern Dance history, vocabulary, events, and performance.
 3. Prepare students for audition and entrance into four year dance programs.
 4. Provide transferable technique course credit.

Core Course Topics

- Anatomical Alignment
- Dancer Conditioning
- Modern Dance Technique
- Musicality / Rhythmic Sensitivity
- Modern Dance Vocabulary
- Improvisation and Choreography
- Modern Dance History / Current Events / Performance

Explain musculoskeletal structure and its relationship to movement and energy in the body. Execute movement with connectivity and coordination of the parts to the whole.
Show personal progression and demonstrate increased individual capacity of physical strength, endurance, balance, and flexibility.
Show personal progression of the integration of alignment, conditioning, musicality, and use of energy to execute intermediate Modern movement combinations and phrases.
Sustain accurate rhythm, dynamics, accents, and musicality with movement vocabulary, combinations, and phrases. Adjust to a variety of music.
Identify and apply Modern Dance terminology.
Show the relationship of improvised movement to composition of movement phrases and choreography. Compose movement phrases through improvisation and movement manipulation as a soloist, with a partner or in a small group.
Analyze historical and current events and performance in Modern Dance through interpretative reading, writing, observation, and discussion.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

Assessment of academic achievement may include but not be limited to written, oral, or movement exams to identify modern dance and skeletal and muscular terminology. Movement exams include the demonstration of intermediate skill levels in technique, performance, and musicality. Interpretative reading and writing assignments and interactive discussion will be used to assess academic achievement.

DRAF110 - Introduction to Industrial Drafting

Overview

Subject Industrial Drafting/CAD Techn	Academic Department Adv Manufacturing/Fabrication	School Business, Entrepreneurship, PD
Course Description Introduces the use of drafting instruments, lettering technique, geometric construction, orthographic projection, pictorial drawing, basic dimensioning for manufacturing, sectioning, auxiliaries, an introduction to assembly drawings, print reading, and interpretation of drawings.		
Credit Hours 3		
Contact Hours 5		
Course Fee 25	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics 1. Measuring with a scale 2. Identify and draw various ANSI line types 3. Free hand lettering 4. Orthographics 5. Auxiliary views 6. Section views 7. Screw Threads 8. Dimensioning 9. Assemblies
Measure a linear distance using a scale graduated in fractional inches, decimal inches and millimeters.
Accurately construct lines, circles, and arcs in specific relationship with each other with the use of a compass, triangles, and templates.
Draw and apply the various line types used on a mechanical drawing with the use of a compass, triangles, and templates.
Freehand letter dimensions and notes using conventional Gothic style.

Construct orthographic views from a given isometric drawing.
Solve for missing views in an orthographic arrange of views.
Create an auxiliary view using the reference line method.
Construct a half and full section view.
Identify and know the nomenclature of external and internal screw threads.
Apply basic dimensioning skills in dimensioning a part drawing for the purpose of manufacturing.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
All students will be required to complete a set of competencies measured through drawings, tests, written assignments, and achieving a cumulative average of 60% or above.	
Satisfies Honors Requirement	Satisfies Wellness Requirement

Goals, Topics, and Objectives

Core Course Topics
1. Use of computer: file system, hardware and software
2. The CAD environment
3. Organize feature management structures (tree etc.)
4. Opening CAD programs, manipulating, and saving files
5. Introduction to Part Design
6. Exploring dress-up features
7. Drawing part Design
8. Assembly modeling
9. Creating orthographic, section, and auxiliary views of a part

Demonstrate proper use of Computer Aided Drafting equipment.
Use 3D Solid Modeling software to create models.
Create orthographic drawings from 3D models.
Demonstrate proper file management procedures.
Prepare sketches for modeling.
Edit and update sketches related to 3D solid models.
Create part drawings using a variety of construction methods.
Use and control accuracy enhancement tools.

Change geometry utilizing editing commands.
Identify, create, and place appropriate orthographic, auxiliary and section views.

Course Fee 40 Miscellaneous Department Fee 0

Academic Level Undergraduate

Eligible for Credit for Prior College Level Learning (CPCLL) No

Goals, Topics, and Objectives

- Core Course Topics
- 1. Overview: configuring and navigating the environment
 - 2. Sketcher Workbench
 - 3. Part Design Workbench
 - 4. Drafting Workbench
 - 5. Assembly Workbench

- Identify the general screen layout, standard tool, and mouse functions.
- Construct a part in the sketcher workbench.
- Construct a model in the part design workbench.
- Bring a model into the drafting workbench and create sheets & views.
- Create text & dimensions in the drafting workbench.
- Construct a model using Boolean operation.
- Bring parts into the assembly workbench and apply constraints.

Academic Level Undergraduate

Eligible for Credit for Prior College Level Learning (CPCLL) No

Goals, Topics, and Objectives

- Core Course Topics
- 1. Editing parts
 - 2. Advanced techniques in Assembly Work Bench
 - 3. Advanced techniques in Part Work Bench
 - 4. Use of catalogs
 - 5. Use of Digital Mock Up (DMU) Work Bench

- Correct a problem with a design by re-ordering the Specification Tree.
- Project lines and surfaces from an existing part to make a new part.
- Construct a Part in the Assembly Tool Bench.
- Create a Design Table.

Insert a Part into a Catalog.

Make a part in context.

Replace Components in an Assembly.

Animate an assembly simulation.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement		
All students will be required to complete a set of competencies measured through drawings, tests, written assignments, and achieving a cumulative average of 60% or above.		
Satisfies Honors Requirement	Satisfies Wellness Requirement

DRAF126 - Solidworks Level III - Applications

Overview

Subject	Academic Department	School
Industrial Drafting/CAD Techn	Adv Manufacturing/Fabrication	Business, Entrepreneurshp, PD

Course Description
An advanced industrial applications course utilizing 3-dimensional (3D) advanced construction tools. Focuses on how to apply key concepts from prior SolidWorks courses to real-world industrial projects. Also examines how to create, edit, and export bills of materials; apply assembly modeling procedures; create exploded views; edit components in an assembly; add and constrain mates; utilize simulation Xpress tool; and perform basic motion analysis.

Course Pre-requisite(s)

Goals, Topics, and Objectives

Core Course Topics

- Offset Reference Planes
- 3D Construction Tools
- Bill of Materials
- Assembly Creation
- Assembly Mates
- Basic Motion Analysis
- Simulation Xpress

Create offset reference planes.

Create a revolved and an extruded boss feature.

Develop lofted, swept, and shell features.

Insert components to complete an assembly drawing.

Edit components in an assembly.

Assemble components for basic motion study.

Apply concentric and coincident mates.

Create and edit a bill of materials.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement		
All students will be required to complete a set of competencies measured through assignments, exams, and quizzes and achieving a cumulative average of 70%.		
Satisfies Honors Requirement	Satisfies Wellness Requirement

Goals, Topics, and Objectives

Core Course Topics

- Working in the Drafting Work Bench
- Generating views in Drafting Work Bench
- Application of dimensions, tolerances, notes and text in Drafting Work Bench
- Surfacing in the Generative Shape Design (GSD) Work Bench
- Making a solid part from surfaces

Configure dimensioning styles.

Apply various types of tolerance dimensions.

Apply various types of symbols found on a detail drawing.

Apply various types of call-outs/notes on a detail drawing.

Construct advanced views that are shown on a detail drawing.

Construct a complex surface by use of surfacing tools.

Make a solid model from a surface.

Assessment, Requirements, and Outcomes

Credit for Prior College Level Learning (CPCLL) Details
Approval for prior college-level learning will be based on drafting instructor review of a student portfolio AND a student interview.

Goals, Topics, and Objectives

Core Course Topics

- 1. Principles of orthographic projection
- 2. Placement and use of work lines
- 3. Application of orthographics to obtain necessary views
- 4. Identify status of geometry from given projections
- 5. Obtain needed views through use of projection
- 6. Secondary Auxiliary Views
- 7. Find relationships between given geometry
- 8. Hihedral angles

Comprehend the basic principles of orthographic projection.
Properly and accurately place and use work lines in the making of a mechanical drawing using orthographic projection.
Use orthographic projection to manipulate geometry to arrive at the necessary views on a mechanical drawing.
Apply the correct sequence of steps to obtain a necessary view.
Interpret a mechanical drawing that is made in orthographic projection.
Find the interception of surfaces piercing surfaces.
Apply procedures to determine the interception of a surface piercing a solid.
Find the solution of projection problems with the use of true length line, point view of a line, the edge view of a plane, and the true size and shape of a plane.
Derive a specified view by the use of auxiliary projection.
Demonstrate the ability to solve a projection problem given a set of criteria.
Find and measure spatial relationships between points, lines, and surfaces.

Goals, Topics, and Objectives

Core Course Topics

- 1. Sketch Task Environment
- 2. Model Task Environment

- 3. Drafting Application
- 4. Assembly

Create, fully constrain, and apply good editing techniques to a sketch.
Use solid creation commands to develop a 3-dimensional (3D) model from a properly constrained sketch.
Apply basic orthographic principles in creating 2-dimensional (2D) mechanical drawings.
Employ basic assembly techniques.
Modify and edit 3D solid models.
Develop base views, auxiliary views, and types of section views.
Interpret and manipulate the part navigator.

Assessment, Requirements, and Outcomes

DRAF142 - Industrial Detailing

Overview

Subject	Academic Department	School
Industrial Drafting/CAD Techn	Adv Manufacturing/Fabrication	Business, Entrepreneurshp, PD
Course Description		
Explores the making of working drawings using proper dimensioning techniques. Showing necessary views, placement of dimensions, use of different dimensioning styles, and calculation of tolerances are the basis of instruction. The function and relationship of mating parts in an assembly are considered when dimensioning to insure proper fit and function. Threads, fasteners, and common manufacturing operations are applied and dimensioned. Standard and commercial parts are selected from catalogs. Setup and application of CAD dimensioning styles and tolerances are utilized.		
Course Pre-requisite(s)

Goals, Topics, and Objectives

Core Course Topics
1. Prepare a drawing to be dimensioned.
2. Placement and spacing of dimensions on a drawing.
3. Dimensioning methods.
4. Part geometry, process, and function.
5. Use of datums.
6. Tolerancing/fit of parts.
7. Threads, fasteners, and locators.
8. Set up of dimensioning standards in CAD.
9. Dimensioning and tolerancing in CAD.
10. Geometric Dimensioning, and Tolerancing (GD&T).
11. Detail Drawings.
Draw an object correctly in orthographic projection to show all necessary views.
Establish and use a datum for dimensioning.
Use a datum for conventional, chart, and o-line dimensioning.
Calculate and apply tolerance dimensions to a part.
Draw and dimension a thread.

Draw and dimension common machining operations.
Set-up dimensioning parameters in a CAD drawing.
Properly dimension a CAD drawing.
Apply tolerance dimensions to a CAD drawing
Demonstrate basic knowledge of geometric dimensioning & tolerancing terms.
Demonstrate an ability to recognize individual parts of an assembly.
Create surfaces of a part in relation to others parts in an assembly.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
All students will be required to complete a set of competencies measured through drawings, tests, written assignments, and achieving a cumulative average of 60% or above.

DRAF210 - Die Design

Overview

Subject	Academic Department	School
Industrial Drafting/CAD Techn	Adv Manufacturing/Fabrication	Business, Entrepreneurshp, PD
Course Description		
Focuses on advanced drawing techniques in the layout and design of production press work dies. Typical dies covered are blank, cam pierce, form, cutoff, draw, and progressive. Press computations and accessories are put in perspective as they relate to design problems. Drawing assignments are done extensively on CAD.		
Course Pre-requisite(s)		
DRAF130 Technical Descriptive Geometr, DRAF142 Industrial Detail, and MATH100 Basic Tech Mathematics or above		
Credit Hours		
3		
Contact Hours		
5		
Course Fee	Miscellaneous Department Fee

Goals, Topics, and Objectives

Core Course Topics
1. Stamping Die Operations and Types of Stamping Dies
2. Press Types and Quick Die –Change Systems
3. Steps to Design a Die, Standard Die Parts
4. Work piece Part Processing
5. Material Specifications for Work pieces and Components
6. Material Strip Layout Analysis and Scrap Strip Analysis
7. Calculation of Die Clearance, Blanking Area, Blanking Force,
8. Die Mechanisms, Stock Gages, Stock Stripping and Feed Mechanisms
9. Die Assembly Drawing Practices Dimensions and Notes
Identify standard die components.
Select standard components from manufacturers catalogs.
Define the function of die components.
Analyze a detail drawing of part to be produced in a die and identify the types of die processes needed to produce the part.
Produce a material strip layout for a blanked part.
Design and draw a die member for a blank.
Design and draw a punch member for a blank.

Recognize the difference between blanking and piercing.
Compute standard press and material calculations given tables and/or formulas.
Apply standard detailing practices for drawing and dimensioning die components.
Create assembly drawings of die components.
Analyze die assembly drawings to recognize a given dies function and components.
Use and apply terminology of die making processes, part production processes, and material specification.

Goals, Topics, and Objectives

Core Course Topics
1. The design process
2. Machine parts, processes, function
3. Mechanisms and their function
4. Standard and commercial parts
5. Calculations
6. Drawing format and presentation
Identify critical surfaces and relationships between mating machine parts.
Apply steps for the design of a mechanism in a sequential order.
Differentiate a part that needs to be manufactured for a mechanism from a part that can be purchased or taken from a standard book.
Select a part needed for a mechanism from a commercial catalog or standard book.
Utilize a purchased part in a mechanism using the data from a commercial catalog.
Identify moving parts from static parts in a mechanism.
Identify load-bearing members in a mechanism.
Calculate values and load/power requirements in the design of a mechanism.

Design a mechanism to satisfy a design problem taking into account its function and load/power calculations.

Express a design for a mechanism with a finished mechanical drawing.

Approval for prior college-level learning will be based on drafting instructor review of a student portfolio AND a student interview.		

Goals, Topics, and Objectives

Core Course Topics
1. The Purpose of Tooling and Tool Design Objectives
2. Types of and Classification of Jigs and Fixtures
3. Principles of Locating and Support of the Workpiece
4. Principles of Clamping and Workholding
5. Workpiece Analysis and Part Processing
6. Dimensioning Assembly Drawings and Details
7. Template Jigs, Plate Jigs and Fixtures, Angle Plate Jigs and Fixtures, Channel and Box Jigs, Vice Jaw Jigs and Fixtures
8. Power Workholding and Modular Tools Welding and Inspection Tooling
9. Tooling Requirements for Numerical Controls NC-CNC
10. Tool Materials

Identify common Jig and Fixture components.

Define common Jig and Fixture terms.

Recognize different types of Jigs and Fixtures.

Determine what manufacturing processes will need to be employed to produce a part.

List the sequence of machining operations on a plan of production.

Sketch the workpiece in its As Received Condition for each operation.

Create a concept sketch of a jig assembly given a part detail drawing, plan of production, and the description of a workpiece requiring a machining operation.

Outline components on a jig or fixture assembly drawing.

Create a CAD Detail drawing dimensioned with datums and tolerances according to ANSI GDT standards.

Calculate tool tolerances for locator size and location given a detail drawing of a workpiece.

Select standard components from manufacturers catalogs.

Define the function of Jig and Fixture components.

Analyze a detail drawing of part to be produced in a Jig or Fixture and identify the processes needed to produce the part.

Design and draw a locating member for a jig.

Design and draw a clamping system.

Apply standard detailing practices for drawing representation and dimensioning of tooling components.

Create assembly drawings of tooling and tool components.

Analyze tooling assembly drawings to recognize a given tools function and components.

Goals, Topics, and Objectives

Core Course Topics
1. Elements of a product
2. Elements of design
3. Materials and processes
4. Design considerations and processes
5. Develop product concept
6. Drawing a product
Identify elements of good design including: materials, manufacturability, functionality, durability, cost, and appearance.
Evaluate a product and identify elements of good and poor design.
Express a design concept through the use of a sketch.
List considerations of function, cost, materials, manufacturability, appearance, and durability that are involved in the design of a product.
Design a product incorporating the elements of good design.
Design a product to perform a specified function within given parameters and specifications.

Effectively express a design for a product using principles of orthographic projection in a finished mechanical drawing and/or a physical model.

Goals, Topics, and Objectives

- Core Course Topics
- 1. Drawing set up, establish standards
 - 2. Creation of 3D parts
 - 3. Changing a 3D part
 - 4. Place 3D part into an assembly; orient, constrain, and animate
 - 5. Place 3D part into an assembly; orient, constrain, and animate
 - 6. Utilizing dimensions and text in drafting
 - 7. Creating a part by use of surfaces

- Create three-dimensional (3-D) drawings.
- Create complex three-dimensional surfaces.
- Construct three-dimensional geometric objects.
- Insert three-dimensional solid geometric objects into an assembly.
- Demonstrate the creation of basic three-dimensional solids.
- Apply various techniques to create advanced three-dimensional solid models.
- Explain the differences between wireframe, surface, and solid models.
- Orient 3D models in the world coordinate system.
- Create non-planar surfaces of various shapes.
- Create 3D solids of basic geometric shapes by extruding and revolving profile objects.
- Modify a solid model to edit faces and edges.
- Understand and utilize the drafting environment and its properties.
- Animate assemblies.

Interview Portfolio

Goals, Topics, and Objectives

- Core Course Topics
- 1. Use of computer: operating system, file system, hardware
 - 2. Configure the CAD environment
 - 3. Sketching and constraining
 - 4. Building a solid model
 - 5. Building a solid model from surfaces
 - 6. Editing a model
 - 7. Use of the Drafting environment
 - 8. Use of the Assembly environment
 - 9. Use of animation in an assembly

- Sketch 2D geometry using 3D parametric software.
- Constrain 2D geometry using dimensions and geometric constraints.
- Demonstrate use of interface, command entry and sequence, file preferences, and options in the construction of a model.
- Create a basic parametric model.
- Create features on model.
- Create a part by use of surfacing commands.
- Change a model by editing the sketch.
- Change a part by use of a history tree.
- Apply techniques needed for mathematical and scientific problem solving.
- Construct working drawings and views of parametric models using acceptable industry standards.
- Revise and update working drawings.
- Differentiate between dimensioning and tolerancing methods.
- Assemble parts using parametric assembly constraints.

Goals, Topics, and Objectives

Course Goals
To provide the instructional flexibility needed to address the specific needs of a targeted student population.
Core Course Topics
To be determined by the instructor.
To be developed by the instructor for each individual offering.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement		
All students will be required to complete a comprehensive final examination that assesses the learning of course objectives. This exam must be weighted in a manner so that this exam score is worth a minimum of fifteen percent of the final course grade. All additional assessment of student achievement is left to instructor discretion.		
General Course Requirements and Recommendations		
To be determined by the instructor. Detailed course syllabi for each section of DRAF297 Spec Topics Indust Draf Techno must be approved by the Department prior to the course being offered.

EDU250 - Humanities & Performing Arts Educators

Overview

Subject	Academic Department	School
Pre-Education	Health, Education, and Human Services	Health & Human Services
Course Description		
This course studies the aspects of human society and culture through an education lens. This course prepares the student majoring in education to incorporate the various visual and performing arts from multiple humanities into everyday education curricula. The course will cover the fundamental and formal elements, the major periods, styles and philosophies, as well as the functions and processes of the humanities and visual and performing arts. This course provides the educator with knowledge on how to effectively employ those creative processes through collaboration, communication, cooperation, and interaction within the classroom. This is an interactive course where the instructor, guest speakers, and students present topics. Knowledge will be applied through small and large group discussions and projects. Students participation requires completion of projects/assignments both during and outside of class. At least one humanities/fine arts field trip will be planned as an integral part of the course.		
Course Pre-requisite(s)

Goals, Topics, and Objectives

Core Course Topics
1. History and philosophy of humanities and fine arts.
2. Elements of music in the humanities and fine arts integrated into education curricula.
3. Elements of art in the humanities and fine arts integrated into the education curricula.
4. Elements of dance in the humanities and fine arts integrated into the education curricula
5. Elements of drama in the humanities and fine arts integrated into education curricula.
6. Adapting the humanities and fine arts curricula to address students with special needs.
7. Integrating humanities and fine arts with technology in the classroom.
Discuss the philosophical framework of fine arts and the humanities.
Explain the major periods and styles in humanities and fine arts.
Demonstrate the importance of the humanities as a developmental and motivational process.
Identify, compare, and contrast the basic components of music (rhythm, melody, harmony, tone color, and texture) from a fine arts and humanities perspective.
Organize and assess lesson plans incorporating the humanities and fine arts.
Identify, compare, and contrast the formal elements of art (line, color, shape, space, perspective, dimension, etc.) from a fine arts and humanities perspective.
Identify, compare, and contrast the basic elements of dance from a humanities and fine arts perspective.
Incorporate the creative processes inspired by the humanities and performing arts into an active learning environment.
Identify, compare, and contrast the basic elements of drama from a humanities and fine arts perspective.
Create appropriate lessons to engage all students, including the special needs student, in creative and collaborative activities involving the fine arts and humanities.

Incorporate fine arts and humanities into everyday classroom activities using various learning technologies (computers, web-based learning activities, websites, videos, software, etc.).

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement The academic achievement will be assessed using a combination of quizzes, exams, assignments, presentations, projects, participation, and/or final examination. Grading Scale To be determined by the instructor. Texts Determined by department faculty		
Satisfies Honors Requirement No		Satisfies Wellness Requirement No

EDU256 - Educational Psychology

Overview

Subject Pre-Education	Academic Department Health, Education, and Human Services	School Health & Human Services
Course Description Applies the principles and theories of educational psychology to teaching and learning in diverse school settings. Topics address all domains of learning and cognition. Theoretical examination includes the academic development of children socially, emotionally, cognitively, and physically. This course also includes the following content areas: special education, multicultural educational programs, principles and teaching methodologies, managing classroom discipline, motivating students to learn, leading classroom instruction, and assessing K-12 differences in students' learning. It is recommended that EDU-256 not be taken concurrently with PSY-152. Course Pre-requisite(s) ENG132 College Writing and Research and PSY131 Introductory Psychology both with a C grade or higher

Academic Level Undergraduate	
General Education Category Social Sciences	Michigan Transfer Agreement (MTA) Category Category 4: Social Sciences - Applied Degrees, Category 4: Social Sciences - Transfer Degrees
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Course Goals
To provide an integrative approach in which students will be expected to combine theoretical concepts with practical application. Students will be able to increase their knowledge of learners' learning processes. They will also be able to apply their knowledge of educational psychology theories and effective practices through classroom methods.

This course addresses the Michigan Department of Education's core teaching practices and teacher standards.

Core Teaching Practices
[Lower Elementary PK-3 Education Preparation Standards](#)
[Upper Elementary 3-6 Education Preparation Standards](#)
[Professional Standards 5-12](#)
[Special Education Preparation Standards](#)

- Core Course Topics**
1. Educational Psychology Theorists and their theories
 2. Educational Development of Children
 3. Learning and Cognition
 4. Student Motivation
 5. Classroom Management Theories and Interventions
 6. Methodologies and Instruction
 7. Student Differences and Diversity
 8. Testing and Measurement
 9. Special Education
 10. Current Educational Issues and Trends

Explain the concept of pedagogy and its implication for academic achievement.

Identify educational psychology theorists and their pedagogical practices.

Compare and contrast the different social developmental stages of children within the learning setting.

Compare and contrast the different emotional developmental stages of children within the learning setting.

Compare and contrast the different physical developmental stages of children within the learning setting.

Compare and contrast the different cognitive developmental stages of children within the learning setting.

Diagram the information processing system and explain its application to retention and retrieval.

Identify memory facilitation strategies and reasons for forgetting.

Demonstrate role modeling to facilitate learning.

Describe the techniques of operant learning (reinforcement and punishment).

Identify personal and classroom factors that influence motivation to learn.

Describe how students and teachers can enhance academic achievement.

Develop effective classroom management interventions.

Discuss appropriate and inappropriate use of consequences.

Compare and contrast direct teaching and constructivist teaching designs.

Describe the steps of the problem-solving process.

Define and describe ableism, its intersections with other oppressions (e.g. linguistic, racism, sexism, trans/homophobia, etc.), and how inclusive teaching practices can impact student experiences (academic, social, disciplinary) and identities and transform learning communities. Explain how socioeconomic status, ableism, and gender play a role in the educational attainment of children.

Generate ways to address the different learning styles of students.

Design a lesson to reach children of different intelligence(s).

Discuss the rise of multiculturalism and its impact on educational programs. The student will be aware of complex issues involving traumatic experiences. This includes learning about the development of the whole child, including but not limited to cultural and linguistic context, economic conditions of families, social-emotional needs, trauma, health status and disabilities, peer and adult relationships, childrens individual and developmental variations, opportunities to play and learn, family and community characteristics, and the influence and impact of technology and the media.

Identify the purposes for testing.

Identify ways to measure student learning.

Compare norm-referenced grading to criterion-referenced grading. The student will compare and contrast effective testing procedures to ineffective testing procedures as well as compare and contrast the different purposes for screening formative and cumulative testing (i.e., achievement vs. diagnostic).

Describe the purpose of special education laws.

Discuss the pros and cons of labeling children and tracking.

Discuss the different special education settings.

Describe the Individualized Education Plan (IEP) process.

Discuss and analyze contemporary educational issues and their implications for teaching and/or educational policy.

Assessment, Requirements, and Outcomes

- Assessment of Academic Achievement**
Assessment may include the following but be limited to:
- Lesson Plan
 - Test Analysis
 - Group presentations
 - Self-designed rubric

- Professional Article/Video Critique/Analysis
- Classroom Management Case Studies
- Classroom observations

General Course Requirements and Recommendations

The recommendation is that this course should be taken before [EDU201 Introduction to Education](#) and [EDU202 Intro to Education Practicum](#).

Grading Scale

Goals, Topics, and Objectives

Course Goals

This course seeks to increase student content knowledge of Geography, World History, American, and Michigan history and apply this to an elementary setting. Students will apply their knowledge of educational concepts and practices to the field of social studies education.

This course addresses the Michigan Department of Education's core teaching practices and teacher standards.

Core Teaching Practices

[Lower Elementary PK-3 Education Preparation Standards](#)
[Upper Elementary 3-6 Education Preparation Standards](#)
[Professional Standards 5-12](#)
[Special Education Preparation Standards](#)

Core Course Topics

- Social Studies in grades K-8, Grade Level Content Expectations
- Using Primary and Secondary Resources
- Connecting Self to Local Community
- Michigan History and Government
- American History and Government - Early Settlers through Reconstruction
- Purpose, Structure and Function of Government
- Core Democratic Values
- Early Western Hemisphere History
- Diverse Cultural Heritage Geography

Apply methods of social studies investigation.
Evaluate primary and secondary historical sources for use in the K-8 classroom.
Identify appropriate Grade Level Content Expectations.
Discuss the purpose of the C3 Framework.
Analyze methods of building civic responsibility and citizenship in children.
Analyze the foundations of the Core Democratic Values.
Demonstrate our diverse cultural heritage and explain how it informs our civic judgments.
Apply knowledge of American government and politics to explain current political decisions or debates.

Compare and contrast institutional structures of American local, state, and national governments.
Identify significant developments in American history through the Reconstruction period.
Identify significant events in early World History.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

Assessment of academic achievement may include, but not be limited to case studies, unit quizzes, community research projects, research papers, group assignments, portfolio review, essay, mid-term and final exams.

At least 50% of assessments are pedagogically relevant to elementary classrooms and reflective assignments

Grading Scale

As determined by the instructor.

EDU295 - Exceptional Children in Early Childhood

Overview

Subject Pre-Education	Academic Department Health, Education, and Human Services	School Health & Human Services
--------------------------	--	-----------------------------------

Course Description

Prepares early childhood professionals to teach young children with exceptional needs as well as collaborate with their families in an early childhood classroom or community based special education environment. Provides an overview of special education history, theory, models and laws pertaining to young children. This course includes the different exceptional needs young children may have as well as behavioral techniques designed to address them. Disabilities reviewed in this course will include but are not limited to developmental delay, autism, visual, hearing, and physical impairment, cerebral palsy, spina bifida, muscular dystrophy, spinal cord injury, and Down syndrome. This course provides the learner with an understanding of inclusion, community integration, and family/professional collaboration.

Course Pre-requisite(s)

[ENG131 Introduction College Writing](#) and [PSY131 Introductory Psychology](#) both with a C grade or higher

Credit Hours

3

Contact Hours

3

Course Fee 10	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Core Course Topics

- Special Education Theory and Law
- Individualized Family Service Plan (IFSP) and Individualized Education Plan (IEP)
- Community and Parent Collaboration
- Early Intervention Services
- The Learning Environment
- Emotional and Behavioral Techniques
- Developmental Delay
- Autism
- Congenital Disorders/Birth Defects
- Emotional and Behavioral Disorders
- Learning Disorders
- Hearing Impairment
- Visual Impairment
- Physical and Other Health Impairments

Apply special education theory to practice.
Identify the different special education laws and practices.
Compare and contrast an IFSP to the IEP referral process.
Compare and contrast different early childhood assessment tools.
Collect behavioral data on a child with exceptional needs.
Identify and locate effective early childhood intervention services.

Create a barrier free exceptional child learning environment.
Explain the importance of community and parent collaboration.
Identify the multiple at-risk factors contributing to the development of the following exceptional child disorders: developmental delay, autism, emotional and behavioral disorders, learning disorders, Attention Deficit/Hyperactivity Disorder (ADHD), congenital disorders/birth defects, hearing impairment, visual impairment, physical and other health impairments - fine and gross motor skills.
Identify the characteristics of young children who demonstrate the following exceptional child disorders: developmental delay, autism, emotional and behavioral disorders, learning disorders, ADHD, congenital disorders/birth defects, hearing impairment, visual impairment, physical and other health impairments - fine and gross motor skills.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Assessment may include but not be limited to:	
- Special education professional interview. - Case study identifying the disability the student has as well as locating resources for the parents of the child. - Create measurable goals and objectives. - Create their own early childhood assessment for a disorder. - Complete an IFSP/IEP. - Create a barrier free early childhood classroom including space, material, equipment, developmentally appropriate centers. - Write up progress notes following a mock meeting with a family regarding their child. - Collect data on a child's behavioral progress from a case study. - Written or objective assessments.	
General Course Requirements and Recommendations This course should be taken before EDU201 Introduction to Education and EDU202 Intro to Education Practicum .	
Grading Scale As determined by the instructor.	
Texts Textbooks selection as determined by the department.	
Satisfies Honors Requirement No	Satisfies Wellness Requirement No

EDU296 - Exceptional Child

Overview

Subject Pre-Education	Academic Department Health, Education, and Human Services	School Health & Human Services
Course Description Focuses on the characteristics, identification, assessment, and instruction of students with exceptionalities. Explores special education children's syndromes and their learning environments. Covers how to provide free and appropriate academic services to children with exceptionalities. Includes the theories, laws, and procedures surrounding special education. Course topics also include specific learning disabilities, autism, mild and severe behavior disorders, emotional impairment, intellectual disability, visual and hearing impairments, speech impairment, giftedness, physical impairments and chronic medical conditions. Additional discussions revolve around different special education learning environments such as inclusion, mainstreaming, pullout programs, resource rooms, co-teaching environments, and the self-contained classroom.		
Course Pre-requisite(s) PSY131 Introductory Psychology with a C grade or better		
Credit Hours 3		
Contact Hours 3		
Course Fee 10	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category Social Sciences		
Michigan Transfer Agreement (MTA) Category Category 4: Social Sciences - Applied Degrees, Category 4: Social Sciences - Transfer Degrees		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals This course seeks for students to become familiar with the characteristics, identifications, and assessment of students with exceptionalities. This course addresses the Michigan Department of Education's core teaching practices and teacher standards.	
Core Teaching Practices Lower Elementary PK-3 Education Preparation Standards Upper Elementary 3-6 Education Preparation Standards Professional Standards 5-12 Special Education Preparation Standards	
Core Course Topics - Special education terminology, labels and statistics - History of special education and the different special education roles - The special education policies, practices and programs - Addressing the cultural and linguistic diversity of special education students - The parent/guardian-professional relationship - Family and community social, emotional and economic characteristics	

- Persons with intellectual disabilities - Persons with learning disabilities - Persons with emotional or behavioral disorders - Gifted and talented persons - Speech and language disorders - Hearing Impairments - Visual Impairments - Persons with physical or health disabilities - Autism - Modifying the regular education environment to meet the needs of students with exceptionalities
Define and describe ableism, its intersections with other oppressions (e.g., linguicism, racism, sexism, trans/homophobia, etc.), and how inclusive teaching practices can impact student experiences (academic, social, disciplinary) and identities and transform learning communities.
Synthesize the legislative, historical, and sociological relationships between the disability rights movement, other civil rights movements, and educational equity.
Identify the different policies, practices, and programs related to special education.
Explain the effects of culture and language and their implications on diversity and exceptionalism.
Identify the components of an Individualized Education Plan (IEP).
Explain the IEP process.
Discuss the implications of the law on school practices.
Relate special education theory to educational practice.
Discuss the different special education perspectives and apply them to the field.
Compare and contrast the different roles of the special education professionals as they relate to the families and children they serve.
Identify the different professional group dynamic approaches used to provide educational programs to students with exceptionalities.
Identify and discuss the different familial interrelationships contributing to exceptional children's families.
Compare and contrast the aspects of the different exceptionalities.
Compare and contrast the different special education learning environments.
Analyze the different teaching approaches used with exceptional children within the classroom.
Define and describe ableism, its intersections with other oppressions (e.g., linguicism, racism, sexism, trans/homophobia, etc.), and how inclusive teaching practices can impact student experiences (academic, social, disciplinary) and identities and transform learning communities

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Assessment may include but not be limited to the following assignments: - With a partner, or individually, students will create a case study identifying multiple aspects of the exceptional child's home and school environment. - Individually, students will conduct an interview on ONE of the individuals given below. Suggestions for interview questions will be discussed in class. The interview will be 3-4 pages typed. 'A special education teacher 'A parent of a special education child 'A disabled teen or adult 'A teacher in an inclusive or co-taught classroom 'An administrator of special education. - Individually, students will analyze an article from a special education journal (i.e. Journal of Learning Disabilities, Teaching Exceptional Children). Article critique guidelines will be distributed in class. - Students will create a lesson from their major or minor area of study and adapt the lesson to meet the needs of at least two categories of exceptionalities. - Multiple choice examinations. At least 40% of the assessments must be reflective	
General Course Requirements and Recommendations This course should be taken before EDU201 Introduction to Education and EDU202 Intro to Education Practicum .	
Grading Scale As determined by the instructor.

EDU298 - Foundations of Educ With Pract Exp

Overview

Subject Pre-Education	Academic Department Health, Education, and Human Services	School Health & Human Services
Course Description An educational foundations and policy studies approach to the field of education. Course topics will include but not be limited to the history of U.S. education, philosophies of education from Plato to the current testing philosophy, multi-culturalism/diversity, and historical records of educational reform movements. Other material covered within the course includes social issues such as socioeconomic status (SES), race, gender, and culture affecting educational achievement, teacher certification process, professional organizations (such as unions) and their purpose, differentiated teaching methods from a diversity perspective, classroom management, and historical changes of school financing. Students will be introduced to lesson planning, instructional techniques, and classroom instruction through their placement in a classroom setting at the grade level/special education area of interest at which the student wishes to teach. They will incorporate integrated essays into their e-portfolio.This course integrates the social foundations approach to the field of education with a 40-hour pre-student teaching practicum. Course reflective topics will include but will not be limited to the history of U.S. education, philosophies of education, multi-culturalism/diversity, educational reform movements, social issues affecting educational achievement, teacher certification process, professional organizations (such as unions) and their purpose, differentiated teaching methods, classroom management, and school financing. Standardized state standards and high-stakes testing will be addressed as well. Students will be introduced to lesson planning, instructional techniques, and classroom instruction during this practicum experience.This course requires a 40-hour off-campus field placement.		

Course Pre-requisite(s) ENG131 Introduction College Writing, ENG132 College Writing and Research, PSY131 Introductory Psychology with a C grade or better.	Course Co-requisite(s) CIS221 Instruction Tech for Educators can be taken previously or concurrently.

Goals, Topics, and Objectives

Course Goals
To increase student knowledge of the learning environment from a teacher perspective through an experiential approach to learning. Students will apply their knowledge of educational concepts, laws, and practices in the field of education.

- Core Course Topics**
- The development of teaching skills and their relationship to research
 - Becoming a teacher and professional organizations
 - Different learning styles and approaches
 - Addressing student diversity through effective teaching methods
 - Family dynamics and social issues facing schools
 - The history of the educational system
 - Philosophy of education
 - School financing and the governing bodies influencing budgetary concerns.
 - School laws and the ethics of teaching
 - The impact of school reform
 - The relationship between curriculum, standards, and assessment
 - Classroom management
 - Direct lesson and constructivist approaches to teaching
 - State standardized testing and measurement
 - Integrating technology into the classroom
 - Teacher roles within the educational system
 - Societal perspectives of the field of teaching
 - Gardner's multiple intelligences and five minds' theories
 - Full inclusion
 - Diversity within the classroom
 - Curriculum and instruction
 - Differentiated learning
 - Standardized testing
 - Philosophy of education
 - School law and educational funding
 - Social implications on educational process

Compare and contrast the different historical philosophies of education as well as create their own.
Explain how socioeconomic, social, and emotional issues impact student learning.
Integrate social, cultural , and community factors into the reciprocal learning process.
Explain different school laws and the ethics of teaching related to those laws.
Explain the importance as well as the different roles of educational professional organizations.

Compare and contrast the different philosophies of education as well as create their own.
Compare and contrast the different theoretical models on multicultural education.
Analyze different learning styles and methodological approaches from diverse perspectives.
Integrate social, cultural, and community factors into the reciprocal learning process.
Analyze past and current political and social controversial issues pertaining to education.
Explain the history of the American education system as well as its origins from other cultures.
Compare and contrast the different historical educational reform movements within the U.S. school system.
Compare and contrast different curricula, content, and standards driving education from a historical perspective.
Compare and contrast the different philosophies of education as well as create their own
Apply the State standardized testing information on the Michigan Department of Education website to the students educational journey.
Compare and contrast different curricula, content, and standards driving education.
Explain the ways schools are financed and the governing bodies influencing budgetary decisions.
Explain the importance of an effective classroom management, including multi-tiered systems of support (MTSS).
Analyze and apply the family and community social and economic implications on the educational process.
Compare and contrast mastery learning to problem-based learning and identify instances of it in the classroom.
Explain differentiated instruction in detail. Explain how it has been addressed by their practicum teacher.
Apply different approaches in multicultural education at their practicum. Identify and understand the implications of the hidden curriculum on the observed students at the practicum.
Compare and contrast direct lesson approach to a constructivist teaching approach.
Use technology for classroom presentations.
Identify the life experiences and societal perspectives that have influenced their decision to become a teacher.
Interview their classroom teacher regarding inclusion and teaching students with special needs.
Apply different approaches in multicultural education at their practicum.
Explain school funding from a federal, state, and local perspective
Discuss school funding with their practicum teacher.
Create their own philosophy of education.
Apply Gardners multiple intelligence learning styles and other pedagogical perspectives.

Analyze the classroom where they are observing as well as the teacher's effectiveness.
Research practicum site and apply how family and community social-economic factors impact the educational process.
Apply multiple intelligence learning styles and other pedagogical perspectives.
Explain how standardized testing and high-stakes testing as well as the social and academic issues surrounding them affect the students at their practicum.
Identify and understand the implications of the hidden curriculum on the observed students at the practicum.
Analyze different classroom management techniques used within the classroom.
Analyze their classroom lesson plan and video.
Explain how standardized testing and high stakes testing as well as the social and academic issues surrounding them affect the students at their practicum. Analyze and apply the family and community social and economic implications on the educational process. Analyze different classroom management techniques used within the classroom. Analyze their classroom lesson plan and video. Compare and contrast mastery learning to problem-based learning and identify instances of it in the classroom.
Explain school funding from a federal, state, and local perspective.
Analyze the classroom where they are conducting field placement as well as the teacher's effectiveness.
Explain how standardized testing and high stakes testing as well as the social and academic issues surrounding them affect the students at their practicum.

ELEC103 - Basic Electricity

Overview

Subject	Academic Department	School
Electrical Engineering Technol	Adv Manufacturing/Fabrication	Business, Entrepreneurship, PD
Course Description		
Covers the fundamentals of electricity as applied to the electrical field. Topics include the electron theory, Ohm's Law, circuits, magnetism, inductance, capacitance, and alternating current circuits. Utilizes voltmeters, ammeters, power supplies, signal generators, and oscilloscopes to construct circuits during lab activities. Also utilizes computer simulations. Introduction to writing reports. Labs involve breadboards and the above-mentioned equipment and components. Extensive laboratory activities.

Goals, Topics, and Objectives	
Core Course Topics	
- Electron theory, electric charge, and Ohm's Law. - Prefixes, voltage sources, and voltmeter usage. - Resistor color code, ratings, types, and ohmmeter usage. - Ohm's Law. - Ammeter usage. - Multisim circuit simulation and analysis. - Series circuits and circuit breadboarding. - Multisim simulation with series circuits. - Voltage divider circuits, and open and short circuits. - Electrical power. - Parallel circuits. - Combination circuits. - Wheatstone Bridge. - Meter loading, cells, and batteries. - Soldering activities. - Magnetism and electromagnetism. - Alternating current and measurement of signals on an oscilloscope with utilization of signal generator. - Oscilloscope usage, D.C., A.C., and period measurements. - Capacitors and their properties in D.C. and A.C. circuits. - Capacitive reactance, RC circuits, filters, and phase shift. - RC circuit conditions. - Series and parallel RC circuits. - Inductors and their properties in D.C. and A.C. circuits. - RL circuit conditions. - Transformers, voltage and current ratio, and power transfer. - Ladder diagrams. - Multisim simulation with parallel circuits. - Multisim simulation with combination circuits. - Construction of capacitive and inductive circuits on breadboards.	
Define voltage, current, and resistance and explain the characteristics of each.	
Make basic circuit measurements utilizing a voltmeter, a current meter, an ohmmeter, and an oscilloscope.	
Explain Ohms Law and the Power Law.	
Determine the characteristics of a series circuit.	
Determine the characteristics of a parallel circuit.	
Analyze series-parallel circuits.	
Explain the principles of magnetism and electromagnetism.	
Determine and analyze voltage and current values from an A.C. sine wave.	
Describe the basic characteristics of an inductor in D.C. and A.C. circuits.	
Describe the basic characteristics of a capacitor in D.C. and A.C. circuits.	
Evaluate a lab by constructing a written report using data collected in lab	
Analyze data acquired in lab using MicroSoft Excel.	

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
- Unit and chapter tests given throughout the semester. - Analytical laboratory activities and performance exercises in which students demonstrate an understanding of assigned circuits. - Final exam in which common questions are asked covering the units and topics presented throughout the semester. The final exam is worth 25 percent of the course grade. - A lab report is worth 10% of the final grade.

ELEC106 - Basic Electronics

Overview

Subject Electrical Engineering Technol	Academic Department Adv Manufacturing/Fabrication	School Business, Entrepreneurshp, PD
---	--	---

Course Description
Introduces the fundamentals of solid-state components found in electronic circuits. Topics include solid state diodes, field effect transistors (FET), silicon controlled rectifiers (SCRs), insulated gate bi-polar transistors (IGBTs), buck and boost converters, and bipolar transistors. Discusses characteristics of these components and some basic circuits in which they are commonly used. Utilizes a software program to simulate various electronic circuits. Circuits are constructed in lab using these components. Extensive laboratory activities.

Course Pre-requisite(s)
[ELEC103 Basic Electricity](#) or Instructor permission.

80% written exam 95% lab exam

Other Exam Details
The credit for prior learning exam includes a written portion and a lab portion.

Goals, Topics, and Objectives

- Core Course Topics**
1. Introduction to basic circuits.
 2. Introduction to electronic circuit software program.
 3. Oscilloscope – D.C. measurements.
 4. Oscilloscope – A.C. and time measurements.
 5. Solid-state theory and testing of diodes.
 6. National Instruments Multisim rectifier circuit analysis.
 7. Diode rectifier circuit.
 8. Junction Field Effect Transistor theory.
 9. Junction Field Effect Transistor characteristic curves.
 10. Computer software to develop characteristic curves.
 11. Biasing a junction field effect transistor (JFET) amplifier.
 12. Junction field effect transistor (JFET) fixed and self-bias amplifier.
 13. Bipolar transistor theory.
 14. NPN characteristic curves.
 15. PNP characteristic curves.
 16. Computer software to develop characteristic curves.
 17. Common emitter amplifier.
 18. Common base amplifier.
 19. Common collector amplifier.
 20. Circuit analysis using Multisim Software.
 21. Buck-Boost Converter circuits.
 22. Insulated gate bi-polar transistor (IGBT) circuits.
 23. Silicon controlled rectifier SCR circuits.

Describe the basic diode characteristics.
Analyze the operation of a half-wave rectifier circuit.
Describe the basic structure and operation of bipolar junction transistors (BJT).
Analyze and explain the operation of the Bipolar Junction Transistor (BJT) as an amplifier.
Describe the basic structure and operation of a Junction Field Effect Transistor (JFET).
Analyze and explain the operation of a Junction Field Effect Transistor (JFET) as an amplifier.
Analyze and explain the operation of a buck-boost converter circuit.

Analyze and explain the operation of a insulated gate bi-polar transistor (IGBT).
Analyze and explain the operation of silicon controlled rectifier (SCR) circuits.

Assessment, Requirements, and Outcomes

- Assessment of Academic Achievement**
1. Unit and chapter tests given throughout the semester. Tests represent 50 percent of the course grade.
 2. Informal and Formal laboratory activities and performance exercises in which students demonstrate an understanding of assigned circuits. Formal laboratory activities are submitted as a written report and represents 25% of the course grade.
 3. Final exam in which common questions are asked covering the units and topics presented throughout the semester. The final exam is worth 25 percent of the course grade. A lab final exam is required.

ELEC115 - Digital Circuits 1

Overview

Subject Electrical Engineering Technol	Academic Department Adv Manufacturing/Fabrication	School Business, Entrepreneurshp, PD
---	--	---

Course Description
Introduces digital concepts including binary, hexadecimal, and BCD number systems; transistor transistor logic (TTL) and Complementary metal-oxide-semiconductor (CMOS) integrated circuit logic gate technology, Boolean algebra, logic tables, combinational logic, monostable and bistable multivibrators, storage registers and asynchronous counters. Included are Source and Sink output discussions to prepare students for the programmable logic controller (PLC) classes. Extensive discussion about number systems and registers to prepare students for the programmable logic controller (PLC) classes. The use of digital electronic simulation software. Extensive laboratory activities.

Course Pre-requisite(s)
[ELEC103 Basic Electricity](#) or Instructor permission.

Minimum Departmental Exam Score

80% written 95% lab exam

Departmental Exam Details
The credit for prior learning exam includes a written portion and a lab portion.

Goals, Topics, and Objectives

- Core Course Topics**
1. Digital concepts.
 2. Introduction to computer simulation software.
 3. Binary, decimal, hexadecimal, and BCD conversions.
 4. Computer simulation.
 5. Logic probe circuit.
 6. Construct logic probe.
 7. Logic gate circuits.
 8. Logic gate circuits from schematic symbols.
 9. Boolean algebra introduction.
 10. Logic gate circuits from Boolean expressions.
 11. Logic gate circuits and Boolean reduction.
 12. Combinational logic.
 13. NAND/NOR conversions.
 14. Logic gate circuits converting Boolean expressions to all NANDS/NORS.
 15. NAND/NOR conversions.
 16. Logic gate circuits converting Boolean expressions to all NANDS/NORS.
 17. 555 timer circuit.
 18. Flip-flops and related devices.
 19. Asynchronous counters.
 20. Mod 10 and mod 16 asynchronous up-counter.
 21. Digital concepts.
 22. Source or Sink Outputs.
 23. Number systems and registers.

Explain the differences between digital and analog systems.
Describe the parameters of a pulse waveform.

Explain the logic operations of AND, OR, NAND, NOR, and NOT gating circuits.
Convert between Binary, Decimal, Hexadecimal, and BCD number systems.
Apply rules and theorems of Boolean algebra to simplify a Boolean expression.
Utilize NAND or NOR gates to implement any combinational logic function.
Apply troubleshooting techniques to faulty logic circuits.
Utilize a digital electronic simulation software program.
Analyze source or sink components in a circuit.
Evaluate PLC number systems.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
1.	Unit and chapter tests given throughout the semester. Tests represent 50 percent of the course grade.
2.	Informal and formal laboratory activities and performance exercises in which students demonstrate an understanding of assigned circuits. Formal laboratory activities are submitted as a written report and represent 25 percent of the course grade.
3.	Final exam in which common questions are asked covering the units and topics presented throughout the semester. The final exam is worth 25 percent of the course grade.

ELEC120 - Basic Hydraulics

Overview

Subject Electrical Engineering Technol	Academic Department Adv Manufacturing/Fabrication	School Business, Entrepreneurship, PD
Course Description Introduces basic hydraulic principles, laws, components, and symbols. Topics include: safety; the use of tools; and procedures in the design, building, testing, troubleshooting, and repair of industrial hydraulic systems. Includes demonstrations and extensive laboratory activities.		
Credit Hours 3		
Contact Hours 4		
Course Fee 40	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics	
1.	History of Fluid Power.
2.	Basic Relationships of Fluid Power.
3.	Fluid Power Circuits/systems.
4.	Actuators - Characteristics, Applications, and Nomenclature.
5.	Common Failures of Actuators.
6.	Hydraulic Fluid - Properties, Laws, and Characteristics.
7.	Viscosity.
8.	Viscosity Index.
9.	Pour Point.
10.	Common Failures of Fluid.
11.	Fluid Conditioning and Contamination Control.
12.	Filtration/Strainer Considerations.
13.	Fluid Distribution.
14.	Rigid, Semi-rigid, and Flexible Conductors.
15.	Connector Characteristics and Considerations.
16.	Mounting Considerations.
17.	Common Failures of Conductors.
18.	Pascal's Law.
19.	Bernoulli's Law.
20.	Force/Pressure/Area/Velocity relationships to hydraulic systems.
21.	Hydraulic Pumps - Construction, Application, Nomenclature, and Common Failures.
22.	Principles and Theories of Hydraulic Pumps.

23.	Pump Displacement, Delivery, and RPM.
24.	Common Failures of Pumps.
25.	Control and Safety Ciderations of Hydraulic Systems.
26.	Flow Control.
27.	Speed Control.
28.	Pressure Control.
29.	Valves - Nomenclature, Applications, and Construction.
30.	Common Troubles of Hydraulic Systems.
31.	Component Symbols.
32.	Circuit Diagrams.
33.	Preventative Maintenance Recommendations.
Describe the history of hydraulics.	
Analyze the elements of a hydraulic circuits.	
Define Force, Pressure and Area, and explain the relationships of each.	
Explain Pascal's and Bernoulli's Laws, and how they affect the hydraulic system.	
Analyze various actuators used in hydraulics and identify their characteristics.	
Trouble-shoot various actuators by dismantling and identifying the various components.	
Describe the characteristics of fluid as it relates to hydraulics.	
Contrast various fluids and their characteristics.	
Describe the conductors used in the hydraulic industry and explain the related nomenclature.	
Explain various types of pumps used in hydraulics and their characteristics.	
Identify the contamination and contamination control requirements involved in a hydraulic system.	
Determine and analyze force, pressure, area, and velocity within a hydraulic circuit.	

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
1.	Unit and chapter tests given throughout the semester.
2.	Analytical laboratory activities and performance exercises in which students demonstrate an understanding of assigned components and/or systems.
3.	Technical documentation of data and results obtained from the hands-on activities.
4.	Final exam in which common questions are asked covering the units and topics presented throughout the semester.
Satisfies Honors Requirement	Satisfies Wellness Requirement
No	No

ELEC145 - AC/DC Rotating Machinery

Overview

Subject Electrical Engineering Technol	Academic Department Adv Manufacturing/Fabrication	School Business, Entrepreneurship, PD
Course Description Focuses on theory and application of D.C. motors and generators, A.C. alternators, and single-phase and three-phase induction motors. Also covers single-phase and three-phase transformers. Includes laboratory activities with verification of several circuit principles. Extensive laboratory activities.		
Course Pre-requisite(s) ELEC103 Basic Electricity or Instructor permission.		
Credit Hours 3		
Contact Hours 4		
Course Fee 50	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics

1. Introduction to D.C. motors and D.C. generators. Includes lab.
2. Lab demonstration of types of D.C. generators
3. Fundamentals of the D.C. generator. Includes lab.
4. Generator characteristics. Includes lab.
5. Load characteristics of a shunt and compound D.C. generator. Includes lab.
6. Effect of speed on shunt generators. Includes lab.
7. Load characteristics of a self-excited shunt and compound generator. Includes lab.
8. Counter E.M.F. of a D.C. motor. Motor torque and horsepower. Includes lab.
9. Fundamental motor equation.
10. D.C. motor characteristics and loading effects. Includes lab.
11. D.C. shunt motor and series motor loading conditions. Includes lab.
12. Introduction to single-phase transformers. Includes lab.
13. Coil polarities and transformer ratios. Includes lab.
14. Single-phase transformer relationships. Includes lab.
15. Transformer open- and short-circuit tests, single-phase transformer efficiency. Includes lab.
16. Three-phase transformers. Includes lab.
17. Delta & Wye configurations. Includes lab.
18. Transformer three-phase – open Delta connection. Includes lab.
19. Three-phase transformer loads. Includes lab.
20. Power factor correction.
21. Three-phase transformer problems.
22. Three-phase (poly-phase) induction motor – squirrel cage. Includes lab.
23. Three-phase induction motor characteristics and performance. Includes lab.
24. Load characteristics of the squirrel cage induction motor. Includes lab
25. Starting and running characteristics of a squirrel cage induction motor. Includes lab.
26. Running characteristics of the three-phase squirrel cage motor (no-load condition, locked rotor test, loaded condition). Includes lab.
27. Determining starting torque using locked rotor method of squirrel cage motor. Includes lab.
28. Starting characteristics of the squirrel cage induction motor. Includes lab.
29. Three-phase motors and circuit conditions. Includes lab.
Practice safety precautions and procedures when wiring and operating D.C. and A.C. rotating machines and induction type devices.
Identify the components of a D.C. motor and a D.C. generator as it relates to their physical construction.
Analyze, define, and understand the various common D.C. motor circuits and wiring configurations.
Analyze, understand, and explain the principles of operation of a D.C. motor.
Analyze the various common D.C. generator circuits and wiring configurations.
Analyze the principles of operation of a D.C. generator.
Analyze the loading effects on both D.C. motors and D.C. generators.
Analyze the principles of a single-phase transformer for both step-up and step-down applications.
Explain the construction and principles of operation of both a DELTA and a WYE three-phase transformer.
Understand the construction and operation of a three-phase squirrel cage induction type motor.
Analyze connections of DC and AC motors to determine operation and functionality.
Analyze connections of single phase and three-phase transformers to determine operation and functionality.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

1. Unit and chapter tests given throughout the semester. Tests represent 50 percent of the course grade.

2. Informal and Formal laboratory activities and performance exercises in which students demonstrate an understanding of assigned circuits. Formal laboratory activities are submitted as a written report and represents 25 percent of the course grade.

3. Final exam in which common questions are asked covering the units and topics presented throughout the semester. The final exam is worth 25 percent of the course grade.

ELEC161 - Fluid/Pneumatic Power Systems Certificat

Overview

Subject Electrical Engineering Technol	Academic Department Adv Manufacturing/Fabrication	School Business, Entrepreneurship, PD
Course Description This class will allow a student to acquire a credential in both hydraulics and pneumatics. Explores the principles of basic hydraulic principles and fluid power pneumatics as they apply to industrial systems. Examines various pneumatic/hydraulic components with respect to their functions within pneumatic/hydraulic power and control systems. This includes laws, components, and symbols. Topics include: safety; the use of tools; and procedures in the design, building, testing, troubleshooting, and repair of industrial pneumatic/hydraulic systems. Includes demonstrations and extensive laboratory activities.		
Credit Hours 3		
Contact Hours 4		
Course Fee 50	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics

1. Safety - Hydraulics and Pneumatics
2. History of Fluid Power
3. Basic Relationships of Fluid Power
4. Fluid Power Circuits/Systems
5. Actuators - Characteristics, Applications and Nomenclature
6. Viscosity and Viscosity Index
7. Compression Processes
8. Common Failures of Systems and Components
9. General Gas Law Calculations
10. Relationship of Force, Pressure and Area
11. Compressors and Pumps
12. Conductors and Fluid Distribution
13. Receivers, Reservoirs, Filtration, Regulation and Lubrication
14. Pressure, Direction, Speed and Flow Control
15. Preventative Maintenance on Systems
16. Power and Control Systems
17. Component Symbols and Circuit Diagrams
18. Circuit Design: Techniques
19. Circuit Design: Fabrication
20. Circuit Design: Circuit Assembly
21. Circuit Design: Troubleshooting
22. Extensive Laboratory Experiments
Demonstrate awareness of safety considerations when dealing with pneumatic and hydraulic equipment in the lab and on the job.
Describe the history of hydraulics and pneumatics.
Predict the behavior of a gas given changes in temperature and volume.
Calculate force, pressure, area and identify their relationship.
Analyze various actuators used in hydraulics/pneumatics and identify their characteristics.
Describe the characteristics of fluid as it relates to hydraulics.
Describe the characteristics of atmospheric air and the compression process.
Contrast various fluids and their characteristics.
Describe the conductors used in the hydraulic/pneumatic industry and explain the related nomenclature.
Explain various types of pumps used in hydraulics and their characteristics.
Explain the various types of compressors in pneumatics and their characteristics.

5. Complex numbers – real and imaginary (j-operator).
6. Rectangular to polar – polar to rectangular conversions.
7. Inductive reactance – circuit conditions; voltage and current phase shift.
8. A.C. circuits – inductance.
9. Vector analysis – series R-L circuit conditions.
10. Solving Series R-L circuits by complex numbers – rectangular and polar forms.
11. Frequency response of the R-L circuit configuration.
12. Solving parallel circuits by complex numbers – rectangular and polar forms.
13. Capacitive reactance – circuit conditions; voltage and current phase shift.
14. Series R-C circuits.
15. Vector analysis – series R-C circuit conditions.
16. Frequency response of the R-C circuit configuration.
17. Vector analysis – parallel R-C circuit conditions.
18. Frequency response of the R-L circuit configurations.
19. Series and parallel impedance in A.C. circuits.
20. Series RLC circuits.
21. Parallel RLC circuits.
22. Series resonant circuit conditions.
23. Parallel resonant circuit conditions.
24. Power factor correction.
25. Thevenin's theorem.
26. Superposition method of analysis.
27. Loop-mesh circuit analysis.
28. Nodal circuit analysis.

Solve D.C. single source series, parallel and combination circuitry.
Solve A.C. single source series, and parallel circuitry involving resistive, inductive, and capacitive components.
Analyze A.C. reactive circuit conditions, to calculate for impedance values, and to determine phase relationships using phasors (vectors).
Demonstrate an understanding of complex numbers (j-operator) as it would apply to A.C. reactive circuit analysis.
Solve A.C. reactive circuit conditions using both polar and rectangular forms of analysis.
Determine the real, reactive, and apparent power values for A.C. circuit conditions.
Demonstrate an understanding of the resulting effects of the power factor and when necessary correct the power factor condition for optimum circuit efficiency.
Solve D.C. multi-source circuits using Thevenin's theorem and to simplify the circuitry to the Thevenin's equivalent network.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
Unit and chapter tests given throughout the semester. Tests represent 50 percent of the course grade.	
Informal and Formal laboratory activities and performance exercises in which students demonstrate an understanding of assigned circuits. Formal laboratory activities are submitted as a written report and represents 25 percent of the course grade.	
Final exam in which common questions are asked covering the units and topics presented throughout the semester. The final exam is worth 25 percent of the course grade.

ELEC200 - Ladder Diagrams & Motor Controls

Overview

Subject Electrical Engineering Technol	Academic Department Adv Manufacturing/Fabrication	School Business, Entrepreneurship, PD
Course Description Covers the fundamentals of electrical ladder diagrams and motor control circuits. Presents ladder logic, as well as labels, documentation, and symbology of electrical drawing with the use of ladder diagrams for troubleshooting. Also discusses control circuits for three-phase motors and sequential control of electro-pneumatic devices. Several single-phase control circuits are included in laboratory exercises. Also included in the lab exercises are sequencing electro-pneumatic devices. Introduces students to the variable frequency drive to control three phase motor speed. Students connect more than 40 circuits in the lab.		
Course Pre-requisite(s) ELEC103 Basic Electricity or Instructor permission.		
Credit Hours 3		
Contact Hours 4		

Course Fee 40	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Core Course Topics	1. Electrical tools, instruments, and safety.
	2. Electrical symbols and line diagrams.
	3. Ladder logic and line diagrams.
	4. A.C. manual contractors and motor starters.
	5. Magnetism and magnetic solenoids.
	6. A.C. and D.C. contactors and magnetic motor starters.
	7. Forward and reversing starters.
	8. Time delay devices.
	9. Complex line diagrams and control devices.
	10. Plugging and anti-plugging.
	11. A.C. reduced voltage starters.
	12. Solid state electronic controls.
	13. Multi-speed motor controls.
	14. Single-phase starters and reversing circuits.
	15. Single phase multi-speed circuits.
	16. Sequencing of electro-pneumatic devices.
	17. Introduction to the variable frequency drive.
	18. Demonstrate the ability to connect over 40 complex circuits in the lab.
Demonstrate the proper use of electrical tools, instruments, and electrical safety procedures.	
Read and draw electrical ladder diagrams and recognize all electrical symbols.	
Apply use of electrical ladder diagrams to troubleshoot circuits.	
Demonstrate an understanding of and apply the concepts of motor starters and physically wire a manual motor starter circuit.	
Demonstrate knowledge of magnetic contactors and solenoids and wire them into electrical control circuits.	
Demonstrate an understanding of the operation of a magnetic motor starter circuit and successfully wire a magnetic starter.	
Demonstrate an understanding of the following concepts utilized in three phase A.C. motor control circuits and be able to implement them in the lab: forward and reverse starting, plugging and anti-plugging, multi-speed operation, and braking circuits.	
Demonstrate an understanding of the concept of reduced voltage starters.	
Compare three phase motor control circuits to single phase motor control circuits and be able to wire single phase motor control circuits.	
Demonstrate knowledge of electrical timers and apply them in electrical control circuits.	
Demonstrate application of industrial electronic control circuits.	
Demonstrate knowledge of electropneumatic directional control valve.	
Demonstrate knowledge and wiring of ladder diagrams that control the sequencing of cylinders for machine controls.	
Demonstrate knowledge of variable frequency drives to control motor speed.	

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
1. Tests given throughout the semester. Tests represent 50 percent of the course grade.	
2. Informal and Formal laboratory activities and performance exercises in which students demonstrate an understanding of assigned circuits. Formal laboratory activities are submitted as a written report and represents 50 percent of the course grade.	
3. Connection of over 40 complex circuits must be made operational by students.	
Satisfies Honors Requirement	Satisfies Wellness Requirement
No	No

ELEC235 - Siemens PLC/HMI Programming

Overview

Subject	Academic Department	School
Electrical Engineering Technol	Adv Manufacturing/Fabrication	Business, Entrepreneurshp, PD
Course Description A discussion of the Siemens PLC hardware and the Siemens HMI device is given. Step by step programming instructions are then explained to use the Siemens hardware and Siemens HMI device as a system. The student builds on the information discussed and learns both programming skills as well as troubleshooting skills through both lecture and lab situations. An extensive hands-on approach to programming and troubleshooting of the Siemens PLC/HMI system.		
Course Pre-requisite(s) ELEC200 Lad Diag & Mot Cntl or Instructor permission.		
Credit Hours 3		
Contact Hours 4		
Course Fee 50		
Miscellaneous Department Fee 0		
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals To prepare the student to be able to interpret a Siemens PLC/HMI PLC system in a minimum amount of time. Analyze Siemens PLC/HMI programs and troubleshoot.
Core Course Topics 1. Hardware and software introduction. 2. The Scan Cycle. 3. STOP, STARTUP, and RUN mode. 4. Data Types. 5. Project or Portal View. 6. Downloading/Uploading programs. 7. Input and Output Addresses. 8. Methods of Adding an HMI Panel. 9. HMI and PLC Tags. 10. Design PLC programs from scratch. 11. Design HMI Screens from scratch. 12. Timers. 13. Counters. 14. Latches. 15. Math Statements. 16. HMI Functions.
Demonstrate proficiency in entry-level PLC programming.
Design a Siemens PLC program to solve various control problems.
Construct a useable HMI interface to allow a user the ability to operate various parameters.
Evaluate a Siemens program and determine how it operates.
Troubleshoot a non-functioning Siemens PLC program.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement 1. Section tests. 2. Software program writing. 3. Additional assessment of student achievement may include assignments, quizzes, and exams. 4. A written final exam. 5. A programming final exam. 6. A final PLC/HMI project. 7. Final project.	Satisfies Honors Requirement No	Satisfies Wellness Requirement No

ELEC245 - Programmable Controllers

Overview

Subject	Academic Department	School
Electrical Engineering Technol	Adv Manufacturing/Fabrication	Business, Entrepreneurshp, PD
Course Description Begins with a thorough discussion of the Allen Bradley Controllogix/Compactlogix programmable controller system characteristics, followed by a detailed presentation on how to use the programmable controller to solve the automated control problem.		
Course Pre-requisite(s) ELEC115 Digital Circuits 1 and ELEC200 Lad Diag & Mot Cntl or Instructor permission.		
Credit Hours 3		
Contact Hours 4		
Course Fee 50		
Miscellaneous Department Fee 0		
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals To prepare the student to be able to adapt to any PLC system, regardless of the manufacturer, in a minimum amount of time.
Core Course Topics 1. Hardware and software introduction 2. RSLinx EtherNet/IP drivers 3. Power components 4. Internal relays, timers, and counters 5. Creating and monitoring RSLogix 5000 tags 6. Tag aliasing 7. Uploading, downloading and going online with the Logix controller 8. Creating and debugging logic within the ladder editor 9. RSLogix 5000 project organization
Understand the applications of a Programmable Logic Controller (PLC) and how it is part of an automation system.
Demonstrate proficiency in entry-level PLC programming.
Demonstrate proficiency in interfacing a PLC to basic electrical equipment.
Demonstrate proficiency in entering and executing a PLC program from a computer terminal.
Prepare and organize a machine control package used to emphasize the importance of graphical communication.
Demonstrate the ability to solve a control problem utilizing the logical capability of the PLC.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement 1. Tests given throughout the semester. Tests represent 40 percent of the course grade. 2. Informal and Formal laboratory activities and performance exercises in which students demonstrate an understanding of assigned circuits. Formal laboratory activities are submitted as a written report and represents 60 percent of the course grade.	Satisfies Honors Requirement No	Satisfies Wellness Requirement No

ELEC255 - Instrumentation Systems

Overview

Subject	Academic Department	School
Electrical Engineering Technol	Adv Manufacturing/Fabrication	Business, Entrepreneurshp, PD
Course Description Introduces instrumentation systems in a laboratory setting. Covers transducers including linear variable differential transformers (LVDTs), strain gages, accelerometers, load cells, magnetic pickups, and temperature detectors. Utilizes computer-based data acquisition including LabVIEW® graphical programming language.		
Course Pre-requisite(s) ELEC106 Basic Electronics		
Credit Hours 3		
Contact Hours 4		
Course Fee 40		
Miscellaneous Department Fee 0		

Academic Level
Undergraduate

Eligible for Credit for Prior College Level Learning (CPCLL)
No

Goals, Topics, and Objectives

- Core Course Topics
- 1. Computer-based data acquisition.
 - 2. Resistance potentiometer displacement measurements.
 - 3. Position transducers.
 - 4. Bridge-type position transducers.
 - 5. AC-AC type linear variable differential transformer (LVDT).
 - 6. Computer-based measurement of time variant displacement.
 - 7. DC linear variable differential transformer (DC LVDT).
 - 8. LabVIEW@ programming.
 - 9. The rotary variable differential transformer (RVDT).
 - 10. Strain Gage Installation.
 - 11. Strain Gage Soldering.
 - 12. Strain Gage Calibration.
 - 13. Vibration physics.
 - 14. Acceleration: the link with dynamics.
 - 15. Strain gage accelerometers.
 - 16. High impedance piezoelectric accelerometers.
 - 17. Low impedance piezoelectric accelerometers.
 - 18. Thermocouple experiment.

Analyze the operating principles of transducers including potentiometric transducers, Wheatstone Bridge, linear variable differential transformer (LVDT) transducers, strain gages, piezoelectric accelerometers, low impedance accelerometers, thermocouples and semiconductor temperature detectors.
Explain the concepts of measurement.
Demonstrate the concept of repeatability.
Analyze the linearity of a measurement system.
Construct a graph to show hysteresis of a measurement system.
Locate the sensitivity information related to sensors.
Explain the resolution of an instrumentation system.
Assess the mechanical resonance of a vibrating mechanical system.
Design a virtual instrument with LabView.
Analyze graphical data and interpret the results.
Collect data from sensors and formulate graphs.
Explain the operation of each type of sensor studied.
Write a report based on lab results.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
Note: Assessment of the achievement is demonstrated by students passing a final exam in which common questions related to the competencies are given. In addition, students will demonstrate achievement of the competencies through the various methods as listed below. 1. Conduct laboratory activities of various instrumentation systems using LabVIEW® where the acquisition of data is used to analyze the operating principles and characteristics of transducers including potentiometric transducers, Wheatstone Bridge, linear variable differential transformer (LVDT) transducers, strain gages, piezoelectric accelerometers, low impedance accelerometers, thermocouples, and semiconductor temperature detectors. 2. Conduct laboratory exercises and activities where measurement concepts are explored, identified, and observed to include repeatability, linearity, hysteresis, sensitivity, resolution, and mechanical resonance.

ELEC260 - Automation Controls and Robotics

Overview

Subject	Academic Department	School
Electrical Engineering Technol	Adv Manufacturing/Fabrication	Business, Entrepreneurship, PD

Course Description	
Utilizes control specifications written by the student for laboratory automation machines and industrial robots to implement controls for non-synchronous and synchronous operation of the machine. Covers techniques, terminology, and documentation currently used in automated manufacturing.	
Course Pre-requisite(s) ELEC235 Siemens PLC/HMI Programming or ELEC245 Programmable Controllers or Instructor permission.	
Credit Hours 3	
Contact Hours 4	
Course Fee 40	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Core Course Topics
1. Programming a machine using sequencer commands. 2. Power up and jog the robot. 3. Programming a touch screen panel to replace hard-wired pushbuttons. 4. Programming a robot and have an understanding of the program header information 5. Programming in RSLogix 5000 to control machine cycles. 6. Recover the Fanuc robot from common faults 7. Write a Fanuc robot program and teach positions to achieve the required tasks. 8. Know how to safely test a Fanuc robot program using single step and continuous testing 9. Develop and use position and data registers for the Fanuc robot 10. Teach a new Tool Center Point (TCP) for the Fanuc robot 11. Develop a pick and place program for the Fanuc robot 12. Manipulate Fanuc robot program files 13. Understand and use the different motion types and frames 14. Create Fanuc programs using circular interpolation 15. Copy, paste and edit programs 16. Remaster the Fanuc robot 17. Develop Fanuc robo programs that use branching, calling, LBL, JMP LBL, equal, less than or equal, greater than or equal, etc 18. Develop programs that utilize the inputs/outputs on the Fanuc robot 19. Create and assign macros on the Fanuc robot 20. Establish Ethernet communication with the Compactlogix Programmable Automation Controllers (PAC) 21. Develop PAC programs in RSLogix 5000 that interface to the Fanuc robot (Industrial Networking) and also utilize the Siemens touchscreen 22. Develop programs that utilize produced-consumed tags on the Allen-Bradley Compactlogix PAC 23. Understand the various sensors and the machine cycle on the FMS 200 (Flexible Manufacturing Systems) 24. Troubleshoot faults on the FMS 200
Interfacing the PLC to a wide variety of industrial equipment.
Demonstrate a proficiency in an advanced level of PLC programming.
Programming shift registers to track moving parts on a rotary indexing table and a lift and transfer machine.
Writing programs that use RSLogix 5000 software to control a variety of machine processes.
Demonstrate proficiency in trouble shooting programs while the machine is in the test/run mode
Perform touch screen panel (PanelView) programming.
Perform basic robot programming.
Troubleshoot working programs in Controllogix/Compactlogix.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
1. Informal and formal laboratory activities and performance exercises in which students demonstrate an understanding of assigned circuits. Formal laboratory activities are submitted as a written report and represent 80 percent of the course grade. 2. Final laboratory project. The final project is worth 20 percent of the course grade.

ELEC265 - Basic Troubleshooting 101

Overview

Subject	Academic Department	School
Electrical Engineering Technol	Adv Manufacturing/Fabrication	Business, Entrepreneurshp, PD

Course Description
Introduces the fundamentals of troubleshooting including analog and digital circuits. Topics include printed circuit board repair, power supply repairs and troubleshooting, transducers repair and troubleshooting, amplifier repair and troubleshooting, silicon controlled rectifiers (SCR's) repair and troubleshooting. The class will also include various digital electronic circuit repair and troubleshooting. Circuits are constructed by students with faults so troubleshooting and testing can be employed to find and repair the faulty circuits.

Course Pre-requisite(s)
ELEC103 Basic Electricity, ELEC115 Digital Circuits 1, ELEC145 AC/DC Rotating Machinery and ELEC200 Lad Diag & Mot Cntrl or instructor permission

Goals, Topics, and Objectives

Course Goals
This class is to prepare the student to be able to understand and troubleshoot basic electrical/electronic components and circuits.
Core Course Topics

1. Fundamentals of troubleshooting.
2. Troubleshooting with a meter.
3. Troubleshooting with an oscilloscope.
4. Troubleshooting board level components.
5. Circuit board foil repair.
6. Power supply repair topics.
7. Repairing transducers.
8. Troubleshooting an amplifier.
9. Other circuit repairs.

Analyze a circuit's operating characteristics based on a diagram.
Troubleshoot electrical problems using meters, oscilloscopes, signal generators and frequency counters.
Evaluate problems with various electrical devices.
Evaluate and create solutions to problems on circuit boards, including foil repair.
Troubleshoot and create solutions to problems related to power supplies, transducers, amplifiers and other circuits and equipment.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

- Section tests
- Software program writing
- Additional assessment of student achievement may include assignments, quizzes, and exams
- Final exam
- Final project

ELEC270 - Instrumentation II LabVIEW Programming

Overview

Subject	Academic Department	School
Electrical Engineering Technol	Adv Manufacturing/Fabrication	Business, Entrepreneurshp, PD

Course Description
Using the LabVIEW environment, students will develop virtual instrumentation. Various concepts related to using G Programming are discussed. This is a hands-on class. A Final Project is required.

Course Pre-requisite(s)
ELEC255 Instrumentation Systems Instrumentation or Instructor permission.

Credit Hours

Goals, Topics, and Objectives

Course Goals
This class is to prepare the student to be able to program using graphical programming language, also known as "G". LabView software will be used to create practical applications that will acquire, process, display, and store real-world data. Students will learn various concepts needed to create virtual instruments. These virtual instruments will be used in the development of these practical applications.

Core Course Topics

1. Hardware and software introduction.
2. Sample rate. Aliasing inaccuracy. Quantization error.
3. Creating Virtual Instrument Hierarchy. Controls. Indicators. Constants. Terminals.
4. Navigating in LabView. Use of the block diagram.
5. Data Types, Arrays and Clusters.
6. Sub Virtual Instruments.
7. Case Structure. Loops.
8. Charts and Graphs. Sequences.

Analyze a circuit's operating characteristics based on a diagram.
Troubleshoot electrical problems using meters, oscilloscopes, signal generators and frequency counters.
Evaluate problems with various electrical devices.
Evaluate and create solutions to problems on circuit boards, including foil repair.
Troubleshoot and create solutions to problems related to power supplies, transducers, amplifiers and other circuits and equipment.

ELEC276 - Elec Sys Analysis, Design & Troubleshoot

Overview

Subject	Academic Department	School
Electrical Engineering Technol	Adv Manufacturing/Fabrication	Business, Entrepreneurshp, PD

Course Description
The purpose of this course is to design, analyze, develop and acquire advanced electrical troubleshooting skills. In this course, students will analyze and develop microprocessors, signal processing, analog and digital sensors systems, programmable logic controllers (PLCs) and human machine interface (PLC/HMI) systems as well as, the communication used between systems and more as part of the student's development in the field of electrical technology. Troubleshooting skills will also be addressed for these systems. Extensive lab development including analysis, design and troubleshooting of complete systems. A final project is required. This course will deepen the understanding of knowledge acquired in other Electrical Engineering Technology courses especially ELEC-145, ELEC-185, ELEC-200, ELEC-235, ELEC-245, ELEC-255 and ELEC-270. The course will also explore more advanced topics as part of real-world learning relevance.

Course Pre-requisite(s)
ELEC145 AC/DC Rotating Machinery, ELEC185 Pneumatics, ELEC200 Lad Diag & Mot Cntrl, ELEC235 Siemens PLC/HMI Programming, ELEC245 Programmable Controllers, ELEC255 Instrumentation Systems and ELEC270 Instrumentation II LabVIEW Pr or instructor permission

Goals, Topics, and Objectives

Course Goals
This class is to prepare the student to be able to analyze, design and troubleshoot complete electrical/electronic systems.

Core Course Topics

1. Analyze programmable logic controller (PLC) hardware and Human Machine Interface (HMI) software.
2. Analyze PLC/HMI systems.
3. Analyze multiple types of sensors.
4. Analyze data from multiple types of sensors.
5. Analyze and troubleshoot programmable logic controller (PLC) communications.

Demonstrate proficiency in electrical systems analysis, design and troubleshooting.
Upon successful completion of this program, students should be able to:1. Demonstrate proficiency in electrical systems analysis, design and troubleshooting.2. Formulate maintenance plans for electrical systems.
Evaluate and determine how a system operates
Evaluate and troubleshoot a non-functioning electrical system.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

- Section tests.
- Software program writing.
- Additional assessment of student achievement may include assignments, quizzes, and exams.

ELEC290 - Co-op in Electrical Technology

Overview

Subject	Academic Department	School
Electrical Engineering Technol	Adv Manufacturing/Fabrication	Business, Entrepreneurshp, PD

Course Description

Cooperative education is a structured method of combining classroom-based education with practical work experience. A cooperative education experience, commonly known as a "co-op," provides academic credit for structured employment experience. Work experience must be directly related to the student's declared major to be eligible.To register for this course, a student must have completed 50% of core coursework, maintain an overall GPA of 2.0 and a program specific GPA of 2.5.

Course Pre-requisite(s)

Permission from Career Services Officer or Job Developer in the Office of Career Services

Credit Hours
2

Contact Hours
0.2

Course Fee	Miscellaneous Department Fee
0	0

Academic Level
Undergraduate

Eligible for Credit for Prior College Level Learning (CPCLL)
No

Goals, Topics, and Objectives

Course Goals

Cooperative education helps students make the school-to-work transition, develop career and program-related learning objectives, and work on applicable skills for employment. Placements should provide students with the opportunity to apply and expand upon knowledge learned in the classroom, and develop the skills acquired in their coursework to align with the standards and expectations set by the worksite.

Core Course Topics

1. Core Career-Focused Topics:
 - Professional Dress and Demeanor (attitude, posture, courteousness)
 - Workplace Communication
 - Interviewing Skills
 - Resume Building
 - Networking and Social Media
 - Seeking Employment
 - Career Advancement

1-3 program specific learning objectives will be developed by the instructor for each individual offering.
Students will create 1-3 learning objectives per credit to be approved by instructor for each individual offering.
Build a resume that meets standards of Career Services Officer.
Articulate the reasons for professional attire.
Wear professional attire while on the work site.
Attend career workshop in professional dress.
Display appropriate professional attitude and demeanor while on the work site.

Interview effectively.
Attend mock interview, give appropriate answers to five 5 questions.
Complete a written job application in a prompt, professional manner with all information legible, error-free, and thorough.
Display understanding of the appropriate use of Social Media sites (Facebook, LinkedIn, and Twitter) during Career Services workshop.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

Assessment will be determined by the instructor based on what is in the best interest of the student's academic growth, including future employability of the student. Assessment may include, but isn't limited to:

- Major final project
- Weekly journal
- Creation and attainment of all learning objectives
- Participation in a career-focused workshop
- Consistent and prompt attendance at worksite
- Employer evaluation

General Course Requirements and Recommendations

To be determined by the instructor. Detailed course syllabi will be standardized for all co-op courses and individual course requirements will be available to the AEC and College Council by request "For information only" for each term that the course is offered.

ELI101C - ELL Communication 1

Overview

Subject English Language Institute	Academic Department English Language Institute	School Liberal Arts
--	--	-------------------------------

Course Description
Introduces low-beginning-level college communication skills and interactions for non-native English speakers. Satisfactory completion qualifies students for ELI-102C. This course does not transfer nor count toward degree graduation requirements.

Course Pre-requisite(s)
A satisfactory score on the ELL placement test or ELI approval

Course Co-requisite(s)
None; however, [ELI101R ELL Reading & Listening 1](#) and [ELI101W ELL Writing & Grammar 1](#) are recommended

Credit Hours
2

Contact Hours
3

Course Fee 0	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Course Goals
[ELI101C ELL Communication 1](#) is designed to help English Language Learners (ELL) acquire low-beginning-level college communication skills and strategies.

Core Course Topics

- Academic interaction
- Analytical skills
- Collocations
- Note-taking
- Speaking skills
- Pronunciation skills

Practice American college classroom norms such as taking turns, agreeing/disagreeing, asking questions, and participating in groups.
Analyze speaker attitude.
Use collocations to express ideas.
Practice note-taking skills using pictures, guided notes, and diagrams.
Understand and produce complete written and spoken sentences.
Practice conversations using scripts.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement will be identified and implemented by the class instructor. Methods will include, but not be limited to, assignments, presentations, individual and/or group projects, and quizzes/tests.

General Course Requirements and Recommendations
In order to progress to the next level, students must:

- Actively participate in at least 80% of all class sessions
- Average 75% or higher on all assignments, presentations, projects, and quizzes/tests
- Make a final presentation (worth 25% of the final class grade)

ELI101R - ELL Reading & Listening 1

Overview

Subject English Language Institute	Academic Department English Language Institute	School Liberal Arts
Course Description Introduces low-beginning-level college-preparatory reading and listening skills for non-native English speakers. Satisfactory completion of this course qualifies students for ELI-102R. This course does not transfer nor count toward degree graduation requirements.		
Course Pre-requisite(s) A satisfactory score on the ELL placement test or ELI approval	Course Co-requisite(s) None; however, <u>ELI101W ELL Writing & Grammar 1</u> and <u>ELI101C ELL Communication 1</u> are recommended	
Credit Hours 5		
Contact Hours 6		
Course Fee 0	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals
ELI101R ELL Reading & Listening 1 is designed to help English Language Learners (ELL) acquire low-beginning-level reading and listening skills in order to understand and communicate in English.

Core Course Topics

1. Pre-reading strategies
2. Reading comprehension
3. Vocabulary
4. Greetings, introductions, and farewells
5. Listening skills
6. American culture

Use pictures to set a purpose for reading.
Demonstrate understanding by answering short questions in text and speech.
Demonstrate increased vocabulary.
Use appropriate greetings, introductions, and farewells.
Understand and produce complete written and spoken sentences.
Identify aspects of American culture.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement will be identified and implemented by the class instructor. Methods will include, but not be limited to, assignments, presentations, individual and/or group projects, quizzes, tests, and a final exam.

General Course Requirements and Recommendations

In order to progress to the next level, students must:

1. Actively participate in at least 80% of all class sessions
2. Average 75% or higher on all assignments, presentations, projects, quizzes, and tests
3. Take a final exam (worth 25% of the final class grade)

ELI101W - ELL Writing & Grammar 1

Overview

Subject English Language Institute	Academic Department English Language Institute	School Liberal Arts
Course Description Introduces low-beginning-level college-preparatory writing and grammar skills for non-native English speakers. Satisfactory completion qualifies students for ELI-102W. This course does not transfer nor count toward degree graduation requirements.		
Course Pre-requisite(s) A satisfactory score on the ELL placement test or ELI approval	Course Co-requisite(s) None; however, <u>ELI101R ELL Reading & Listening 1</u> and <u>ELI101C ELL Communication 1</u> are recommended	
Credit Hours 5		
Contact Hours 6		
Course Fee 0	Miscellaneous Department Fee 0	
Academic Level Undergraduate		

Eligible for Credit for Prior College Level Learning (CPCLL)
No

Goals, Topics, and Objectives

Course Goals
ELI101W ELL Writing & Grammar 1 is designed to help English Language Learners (ELL) acquire low-beginning-level writing and grammar skills in order to communicate in English.

Core Course Topics

1. Simple sentences and questions
2. Capitalization and punctuation
3. Nouns
4. Articles
5. Pronouns
6. Verbs
7. Word order
8. Vocabulary
9. Writing Process
10. Audience awareness

Write simple sentences and questions.
Identify and begin to use correct punctuation and capitalization.
Practice changing singular nouns to plural.
Recognize and identify articles.
Replace nouns with pronouns.
Practice writing sentences using regular, select irregular, and modal verbs in the simple present and past tense.
Recognize and use correct subject/verb/object word order in sentences and questions.
Recall and use new words.
Write, draft and edit new sentences.
Show evidence of audience in different writing tasks.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement will be identified and implemented by the class instructor. Methods will include, but not be limited to, assignments, quizzes, tests, and a final exam.

General Course Requirements and Recommendations

In order to progress to the next level, students must:

1. Actively participate in at least 80% of all class sessions
2. Average 75% or higher on all assignments, quizzes, and tests
3. Write at least two graded in-class handwritten writing assignments
4. Complete a final exam with an in-class handwritten writing assignment component (worth 25% of their final grade)

Goals, Topics, and Objectives

Course Goals
ELI102R ELL Reading & Listening 2 is designed to help English Language Learners (ELL) attain beginning-level reading and listening skills in order to understand more clearly and communicate more effectively in English.
Core Course Topics
1. Pre-reading strategies 2. Reading comprehension 3. Vocabulary and idioms 4. Academic and informal listening skills 5. American culture
Employ background knowledge to make connections between L1 and L2.
Identify main ideas and supporting details.
Demonstrate increased vocabulary and idiom knowledge.

Recognize and apply academic and informal language in presentations and discussions.
Identify aspects of American culture that differ from the native culture.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement will be identified and implemented by the class instructor. Methods will include, but not be limited to, assignments, presentations, individual and/or group projects, quizzes, tests, and a final exam.
General Course Requirements and Recommendations
In order to progress to the next level, students must:
1. Actively participate in at least 80% of all class sessions 2. Average 75% or higher on all assignments, presentations, projects, quizzes, and tests 3. Take a final exam (worth 25% of the final class grade)

Goals, Topics, and Objectives

Course Goals
ELL106W **ELL Writing & Grammar** 6 is designed to help English Language Learners (ELL) acquire high-intermediate-level writing and grammar skills in order to communicate more clearly and accurately in English.

- Core Course Topics
- 1. Sentence variety
 - 2. Punctuation and mechanics
 - 3. Transitional words and expressions
 - 4. Writing Process
 - 5. Paragraph and essay organization
 - 6. Thesis-driven short essays
 - 7. Supporting information/details
 - 8. Various modes
 - 9. Vocabulary
 - 10. Audience awareness
 - 11. Academic integrity, research, and sources

Write and evaluate a variety of compound and complex sentences using coordinating and subordinating conjunctions.
Construct complete sentences, avoiding run-ons, comma splices, and fragments.
Compose academic transitional expressions and connectors to link main ideas within paragraphs and paragraphs within essays.
Formulate, construct, and revise paragraphs and essays.
Write paragraphs to form essays with clearly stated topic sentences that are supported with logical reasons, evidence, and examples.
Formulate clear, concise thesis statements appropriate for short essays.
Organize supporting information in a clear pattern, such as time, space, category, or importance.
Differentiate among and write using various modes of development: narration; description; illustration; comparison/contrast; argumentation (including counter-argumentation and refutation); opinion, problem and solution, and/or cause/effect.
Illustrate the ability to use academic voice in writing, including vocabulary and transitions.
Show evidence of ability to analyze and write for different audiences.
Model and develop the ability to integrate sources using reported speech, quotes, paraphrases, and summaries to avoid plagiarism; recognize and practice researching credible sources, and/or explain and defend sources to show appropriate use.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement will be identified and implemented by the class instructor. Methods will include, but not be limited to, assignments, essays, quizzes, tests, and a final exam.

- General Course Requirements and Recommendations
In order to progress to the next level, students must:
- 1. Actively participate in at least 80% of all class sessions
 - 2. Average 75% or higher on all assignments, essays, quizzes, and tests
 - 3. Write at least two graded in-class handwritten essays
 - 4. Complete a final exam with an in-class handwritten essay component (worth 25% of their final grade)

ELL130 - Academic Writing and Reading for ELL

Overview

Subject	Academic Department	School
English Language Institute	English Language Institute	Liberal Arts

Course Description
Intended for English Language Learners (ELLs) whose placement scores indicate the need for instruction or review in order for them to write acceptable college compositions in ENG-131, or for ELLs who have successfully completed ELI-106 R, W, and C courses. Various methods such as lectures, group discussions, textbook exercises, peer review and conferences will be used to help students improve their expository writing skills. This course also emphasizes reading strategies and skills that will prepare English Language Learners for success in college level content-area and English composition courses. Students will learn how to make connections with a variety of authentic texts, practice strategies needed for critical reading, and expand their academic English vocabulary. Students must earn a grade of C or higher in ELL-130 before enrolling in ENG-131. This course is non-transferable.

Course Pre-requisite(s)
A satisfactory score on the ELL placement test or successful completion of ELL106R **ELL Reading & Study Skills** 6, ELL104W **ELL Writing & Grammar** 6, and ELL106C **ELL Communication** 6, or ELL approval.

Goals, Topics, and Objectives

Course Goals
ELL130 **Acad Writing & Reading for ELL** is designed to prepare English Language Learners (ELL) to write at the college level, using formal English standards for increased clarity and accuracy. It is also intended to help ELLs build their vocabulary, fluency, and reading strategies to be prepared for reading-dependent college-level classes.

- Core Course Topics
- 1. Reading comprehension
 - 2. Vocabulary study
 - 3. Writing process
 - 4. Audience awareness and writer intent when reading and writing
 - 5. Various modes
 - 6. Thesis-driven essays
 - 7. Paragraph and essay organization
 - 8. Supporting information/details
 - 9. Transitional words and expressions
 - 10. Sentence variety and construction
 - 11. Punctuation and mechanics
 - 12. Academic integrity and research
 - 13. Critical literacy

Integrate a variety of reading comprehension strategies including, but not limited to, connecting, questioning, predicting, visualizing, and summarizing.
Illustrate increased academic vocabulary.
Apply the Writing Process to plan, draft, revise, and proofread essays.
Create verbal and written evidence of the ability to analyze the author's purpose, audience, subject, tone, and context.
Identify, organize written and auditory information, and write using various modes of development: illustration; process; comparison/contrast; cause/effect, and/or argumentation (including counter-argumentation and refutation).
Formulate a narrowly-focused and precisely-worded thesis statement.
Identify topics and main ideas in a variety of written work and write paragraphs to form essays with clearly stated topic sentences supported with logical reasons, evidence, and examples.
Identify and organize supporting details in a clear pattern, such as time, space, or importance.
Use transitional expressions to link main ideas within paragraphs and to link paragraphs within essays.
Use a variety of sentence structures correctly, avoiding run-ons, comma splices, and fragments.
Write an essay with a minimal number of spelling, capitalization, punctuation, and grammatical errors.
Develop an ability to quote, paraphrase, summarize, and use in-text citations correctly to avoid plagiarism.
Look beyond the literal meaning of a text to determine its credibility, in order to analyze and evaluate the text's complete meaning and the author's intent.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement will be identified and implemented by the class instructor. Methods will include, but not be limited to, assignments, essays/a research paper, quizzes, tests, and a final exam.

General Course Requirements and Recommendations
Instructors should provide students with a wide range of readings (both narrative and expository) including short stories, news articles, research studies, and content-area textbook chapters, with ample opportunity for discussion and analysis of the author's purpose, patterns of organization, and strategies. While additional assignments are necessary and should be identified by individual instructors in their syllabi, the following are required in all

sections of [ELL130 Acad Writing & Reading for ELI](#). All students must: Complete an in-class handwritten writing sample within the first two weeks of the course. Attend at least one conference with their instructor. Write three to four essays. Write one essay besides the diagnostic in class (handwritten and the essay may not be revised). Complete a final project with in-class handwritten components (worth 25% of the final class grade).

Goals, Topics, and Objectives

Course Goals
[ELL182 Academic Reading for the ELL](#) is designed to help English Language Learners (ELL) build their vocabulary, fluency, and reading strategies in order to be prepared for reading-dependent college-level classes

Core Course Topics

- Reading comprehension strategies including connecting, questioning, predicting, paraphrasing and summarizing
- Locating and identifying topics, main ideas, supporting details and patterns of organization in authentic written and audio sources
- Author's or speaker's message, audience, purpose and tone
- Academic summary
- Textbook reading strategies, guided note taking and active learning strategies with written and audio sources
- Vocabulary study and idioms
- Academic discussion and presentation skills
- American cultural literacy Source credibility

Integrate a variety of reading comprehension strategies including, but not limited to, connecting, questioning, predicting, visualizing and summarizing.
Discriminate between topics, main ideas, supporting details within various patterns of organization in authentic written and audio fiction and non-fiction sources.
Create graphic organizers and verbal evidence of ability to read and listen critically and analyze the authors message, audience, purpose and tone.
Summarize text using academic English.
Create and modify notes from textbook reading.
Illustrate increased vocabulary and idiom knowledge.
Design and facilitate academic presentations and discussions.
Demonstrate college-level American cultural literacy.
Recognize and practice researching credible sources, and/or explain and defend sources to show appropriate use.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement will be identified and implemented by the class instructor. Methods will include, but not be limited to, assignments, individual and/or group projects, quizzes, tests, and a final exam.

General Course Requirements and Recommendations
Instructors should provide students with a wide range of readings (both narrative and expository) including short stories, poems, news articles, and content-area textbook chapters, with ample opportunity for discussion and analysis of author's purpose, patterns of organization, and strategies.

All students are required to take a final exam (worth 25% of the final class grade).

Credit for EMS100 EMT-Basic Fundamentals, EMS107 Basic Procedures Lab, and EMS109 EMT-Basic Clinical Externship (Corequisites) can be granted upon the presentation of a CURRENT EMT-Basic license from the State of Michigan and a National Registry of EMT-B certification.

Goals, Topics, and Objectives

Core Course Topics

- 1. Preparatory
- 2. Life Span Development & Public Health
- 3. Airway Management
- 4. Medicine
- 5. Traumatic Emergencies
- 6. Shock and Resuscitation
- 7. Special Populations
- 8. Clinical Behavior

Analyze the relationship between the law and ethics in EMS.
Evaluate and develop a management plan for a patient in cardiogenic, hypovolemic, neurogenic, anaphylactic, and septic shock.
Evaluate and develop a management plan for a patient with an altered mental status and an unknown history.
Evaluate and develop a management plan for the emergency care of a patient with an altered mental status and a loss of speech, sensory, or motor function.
Evaluate and develop a management plan for the emergency care of a patient with signs/symptoms of acute abdominal pain.
Differentiate proper from improper body mechanics for lifting and moving patients in emergency and non-emergency situations.
Differentiate between normal/healthy and detrimental physiological reactions to anxiety and stress.

Describe EMS systems, licensure, certification, registration, profession, professionalism, healthcare professional, ethics, peer review, Medical direction, and protocols.
Identify the role of EMS in local municipal & community prevention programs.
Describe the incidence, morbidity and mortality, and the human, environmental, and socioeconomic impact of unintentional and alleged unintentional injuries
Given several narrative circumstances, recommend a treatment plan in keeping with the ethical principles associated with EMS.
Distinguish between ethical and moral decisions in EMS.
Analyze disease risk in situations where the presence of contaminants poses a risk to the personnel, environment, patient, general public or equipment.
Describe the cellular environment and factors that precipitate disease in the human body.
Explain multiple organ dysfunction syndrome.
Describe neuroendocrine regulation.
Explain the inflammation response and its systemic manifestations.
Discuss the interrelationships between stress, coping, and illness
List the medications carried on the Basic-EMS unit and demonstrate their proper administration.
Recognize, manage and justify treatments for various respiratory emergencies.
State the generic name, medication forms, dose administration, action, indications and contraindications for the prescribed inhaler.
Recognize, manage and justify treatments for various cardiovascular emergencies.
Demonstrate the proper steps in the emergency medical care for the patient taking diabetic medicine with an altered mental status and a history of diabetes.
Differentiate between syncope and seizures.
Differentiate between the general category of those patients having an allergic reaction and those patients having an allergic reaction and requiring immediate medical care, including immediate use of an epinephrine auto injector.
List the signs/symptoms associated with poisoning and the proper patient management.
List the six factors that may make a drug or alcohol emergency life-threatening.
Differentiate between the various environmental emergencies including exposure to hot and cold environments, submersion, drowning, and diving emergencies.
Describe the characteristics of an individuals behavior which suggest that the patient is at risk for suicide.
Describe the procedures for handling abnormal deliveries, complications of pregnancy, and maternal complications of labor.
Discuss the steps of patient assessment, including the priority decision, as they relate to and are guided by the mechanism of injury.
Develop a treatment plan for the emergency medical care of the patient with signs and symptoms of shock.

Recommend the appropriate assessment/ treatment plans for the emergency care of patients with the following categorical injuries: soft tissue, burns, musculoskeletal, head/spinal trauma, eye/face/neck, and chest/abdomen/genitalia.
Identify the signs and symptoms of shock in the infant and child patient.
Summarize the emergency medical care strategies for respiratory distress and respiratory failure in the infant/child.
Explain the principles for interacting with patients and family members in situations involving death and dying.
Describe lifestyle changes you can make to help you deal with stress.
Describe measures you can take to protect yourself from exposure to diseases caused by pathogens and accidental and work-related injury.
Explain the importance of understanding basic pathophysiology.
Explain the concept of perfusion, including the physical and physiological components necessary to maintain perfusion.
Discuss the key physical and psychosocial characteristics of individuals in age groups from neonate to late adulthood.
Explain why an understanding of kinetics is helpful to understanding injury and trauma.
Describe accommodations and modifications to patient assessment and management required for patients with sensory impairments, patients with cognitive and emotional impairments, paralyzed patients, obese patients, homeless or poor patients, and abused patients.
Describe accommodations and modifications to patient assessment and management required for patients who are terminally ill and describe the philosophy of hospice care.
Discuss the components that should be included in a plan for responding to terrorism involving weapons of mass destruction.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement The entire Paramedic Program is a performance-based curriculum. All students completing each level of course-work will be required to pass both the applicable performance applications as well as a comprehensive topic exam. There are scheduled exams and a final written exam with discretionary quizzes throughout the program.	
General Course Requirements and Recommendations All course participants must be able to physically complete tasks associated with the performance-based assessments. All areas of final assessment, whether written and/or practical, must meet minimal competencies of 80% or better following testing criterion.Instructors (or their designees) reserve the right to require students to provide picture identification for test taking, graded papers or projects, or other appropriate purposes.	
Grading Scale Students will be assessed on the following scale:	
A+ = 97-100% A = 94-96% A- = 92-93% B+ = 88-91% B = 85-87% B- = 83-84% C+ = 81-82% C = 80% C- = 77-79% D+ = 74-76% D = 72-73% D- = 70-71% E < 69% and below

Credit for Prior College Level Learning (CPCLL) Details Credit for EMS100 EMT-Basic Fundamentals, EMS107 Basic Procedures Lab and EMS109 EMT-Basic Clinical Externship (Corequisites) can be granted upon the presentation of a CURRENT EMT-Basic license from the State of Michigan and a National Registry of EMT-B certification.	
Goals, Topics, and Objectives	
Core Course Topics 1. Clinical Behavior/Judgements 2. Assessments	
Construct well-written run reports based on the completed patient encounters.	
Perform multiple Vitals Assessments.	
Demonstrate proper body mechanics when lifting and moving patients.	
Demonstrate safe clinical decisions.	
Demonstrate a clear and concise verbal radio report.	
Demonstrate multiple Initial Patient Survey/Assessments.	
Demonstrate multiple Secondary Patient Survey/Assessments.	
Create a proper field impression for all basic level patients encountered.	
Perform proper BLS airway management.	
Assist EMS crews and hospital staff members at the skill level appropriate to classroom training at the time of the clinical experience.	

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement This curriculum is primarily evaluated on the mastery of skills. Students may demonstrate competency in less than the recommended hours or may need additional clinical/field experiences. Initial course hours must be completed during the scheduled semester. In addition to the skill mastery/ assessments, all course participants must demonstrate professional attributes at all times or disciplinary actions will take place, which may include removal from the program.	
General Course Requirements and Recommendations See the clinical handbook for uniform requirements.	
All course participants must be able to physically complete tasks associated with the duties of an EMT. See the clinical handbook for specifics.	
Due to the nature of this course, all students must have completed the Health Careers Medical packet, criminal background clearance, and proof of current health insurance prior to attending clinical.	
Instructors (or their designees) reserve the right to require students to provide picture identification for test taking, graded papers or projects or other appropriate purposes.	
Students must have proof of a current Healthcare Provider CPR card from American Heart Association or American Red Cross.

3. Airway Management, Respirations, and Artificial Ventilation
4. Assessment
5. Medicine
6. Shock and Resuscitation
7. Clinical Behavior/Judgment

Develop correct field impressions of preprogrammed cardiac patients. (Assessment; Clinical Behavior/Judgment; Medicine)
Develop correct field impressions of preprogrammed respiratory patients. (Assessment; Clinical Behavior/Judgment; Medicine)
Create a valid treatment plan for all patients assessed. (Assessment; Clinical Behavior/Judgment)
Demonstrate safe clinical decisions. (Clinical Behavior/Judgment)
Demonstrate proper body mechanics when lifting and moving patients.(Preparatory; Clinical Behavior/Judgment)

Justify all treatment plans based on the pathophysiology and clinical evaluation of the patient with a cardiac complaint/disorder. (Clinical Behavior/Judgment)
Justify all treatment plans based on the pathophysiology and clinical evaluation of the patient with a respiratory complaint/disorder. (Clinical Behavior/Judgment)
Evaluate and treat all cardiac dysrhythmias per ACLS protocol. (Clinical Behavior/Judgment; Shock and Resuscitation)
Demonstrate proper venous cannulation. (Pharmacology; Clinical Behavior/Judgment)
Demonstrate proper ventilation management techniques. (Airway Management; Clinical Behavior/Judgment)
Critique peers in scenario-based performances. (Clinical Behavior/ Judgment)
Hypothesize treatment alternatives to difficult patient management situations. (Clinical Behavior/Judgment)
Develop team leadership skills through scenario performance. (Clinical Behavior/Judgment)
Construct a well-written run report based on the completed patient scenario. (Preparatory)
Develop a clear and concise style of verbal, radio communication. (Preparatory)

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
The entire Paramedic Program is a performance-based curriculum. All students completing each level of course-work will be required to pass both the applicable performance applications as well as a comprehensive topic exam. There is a scheduled Mid-Term and Final practical exam with discretionary quizzes throughout the program. This particular course is primarily performance-based making attendance paramount.

General Course Requirements and Recommendations
EMS lab courses meet for full class sessions during the final exam.

All course participants must be able to physically complete tasks associated with the performance-based assessments. All areas of final assessment, whether written and/or practical, must meet minimal competencies of 80% or better following testing criterion.

Instructors (or their designees) reserve the right to require students to provide picture identification for test taking, graded papers or projects or other appropriate purposes.

Grading Scale
Students will be assessed on the following scale:

- 97-100% = A+
- 94-96% = A
- 92-93% = A-
- 88-91% = B+
- 85-87% = B
- 83-84% = B-
- 81-82% = C+
- 80% = C
- 77-79% = C-
- 74-76% = D+
- 72-73% = D
- 70-71% = D-
- <69% and below = E

EMS210 - Paramedic II

Overview

Subject	Academic Department	School
Allied Health	Health, Education, and Human Services	Health & Human Services

Course Description
Begins with an overview of basic pharmacology and then introduces students to advanced pharmacological concepts. Intravenous access with fluid and medication administration is presented along with airway management. This course leads into cardiac rhythm recognition and assessment of the cardiac patient.

Course Pre-requisite(s)	Course Co-requisite(s)
EMT Basic MI License, BIO134 Essentials Anatomy&Physiology or (BIO233 Anatomy and Physiology I and BIO234 Anatomy and Physiology II)	EMS200 Paramedic I, EMS206 Paramedic Procedures Lab I, and EMS291 Paramedic Clinical I
with "C" or better. Admission to the Program

Goals, Topics, and Objectives

Core Course Topics

- Pharmacology
- Special Patient Populations
- Clinical Judgement/Behavior
- Airway Management
- Medicine
- Trauma
- Anatomy and Physiology
- Pathophysiology

Differentiate among the chemical, generic (nonproprietary), official (USP), and trade (proprietary) names of a drug.
Explain the special considerations in drug treatment with regard to pregnant, pediatric, and geriatric patients. (Pharmacology; Special Populations)
List & differentiate the phases of drug activity including the pharmaceutical, pharmacokinetic, and pharmacodynamics phases. (Pharmacology)
Describe the processes called pharmacokinetics and pharmacodynamics, including theories of drug action, drug-response relationships, factors altering drug responses, predictable drug responses, iatrogenic drug responses, and unpredictable adverse responses.(Pharmacology)
Perform mathematical conversions from the household system to the metric system. (Pharmacology)
Formulate the correct drug and applicable dosage for a given set of patients using information gained through this course. (Pharmacology; Clinical Judgment)
Describe the indications, equipment needed, technique used, precautions, and general principles for the following: peripheral venous or external jugular cannulation, intraosseous needle placement and infusion, and obtaining a blood sample. (Pharmacology)
Compare the ventilation techniques used for an adult patient to those used for pediatric patients. And describe special considerations in airway management and ventilation for the pediatric patient. (Airway Management)
Describe the indications, contraindications, advantages, disadvantages, complications, liter flow range, and concentration of delivered oxygen for the following supplemental oxygen delivery devices: a nasal cannula, simple facemask, partial-rebreather mask, nonrebreather mask, and venturi mask.(Airway Management)
Explain the indications, contraindications, advantages, disadvantages, complications, equipment, and technique for the following: endotracheal intubation by direct laryngoscopy, digital endotracheal intubation, dual lumen airway, nasotracheal intubation, repaid sequence intubation, endotracheal intubation using sedation, open cricothyrotomy, needle cricothyrotomy and extubation. (Airway Management; Medicine; Trauma)
Given several preprogrammed patients with non-traumatic pulmonary problems, demonstrate the appropriate assessment, prehospital care, and transport. (Airway Management; Medicine)
Identify the epidemiology, anatomy, physiology, pathophysiology, assessment findings, and management (including perhospital medications) for the following respiratory diseases and conditions: Adult Respiratory Distress Syndrome, Bronchial Asthma, Chronic Bronchitis, Emphysema, Pneumonia, Pulmonary Edema, Pulmonary Thromboembolism, neoplasms of the lung, Upper Respiratory Infections, Spontaneous Pneumothorax, and Hyperventilation Syndrome. (A&P; Pathophysiology; Pharmacology; Medicine; Trauma; Airway Management;& Clinical Judgment)
Based on the pathophysiology and clinical evaluation of a patient with chest pain, appraise the clinical problems according to their life-threatening potential. (Medicine; Clinical Judgment)

Given several preprogrammed patients with cardiac complaints, provide the appropriate assessment, treatment, and transport.(Pharmacology; Medicine; Clinical Judgment)
Recognize, manage, and justify treatments for various cardiac dysrhythmias.(Medicine; Clinical Judgment)

EMS216 - Paramedic Procedures Lab II

Overview

Subject Allied Health	Academic Department Health, Education, and Human Services	School Health & Human Services
Course Description This laboratory course develops overall patient management skills. Covers equipment, assessment, evaluation, treatment, documentation, communication and more. Lab activities focus on the management of the cardiac patient, mega-code scenarios, spinal immobilization, traumatic injuries, and traumatic resuscitation.		
Course Pre-requisite(s) EMS200 Paramedic I, EMS210 Paramedic II, EMS206 Paramedic Procedures Lab I, and EMS291 Paramedic Clinical I		Course Co-requisite(s) EMS220 Paramedic III, EMS230 Paramedic IV, EMS292 Paramedic Clinical II
Credit Hours 2		
Contact Hours 4		
Course Fee 30	Miscellaneous Department Fee 0

- Core Course Topics**
- Preparatory
 - Pathophysiology
 - Pharmacology
 - Airway Management, Respirations, and Artificial Ventilation
 - Assessment
 - Medicine
 - Shock and Resuscitation
 - Trauma
 - EMS Operations
 - Clinical Behavior/Judgment

Develop correct field impressions of preprogrammed cardiac patients (Assessment; Clinical Behavior/Judgment; Medicine)
Demonstrate the successful management of Mega-code scenarios.(Shock and Resuscitation; Airway Management; Pharmacology; Clinical Behavior/Judgment)

Create a valid treatment plan for all patients assessed.(Assessment; Clinical Behavior/Judgment)
Demonstrate safe clinical decisions. (Clinical Behavior/Judgment)
Demonstrate proper body mechanics, when lifting and moving patients. (Preparatory; Clinical Behavior/Judgment)
Justify all treatment plans based on the pathophysiology and clinical evaluation of the patient with a cardiac complaint/disorder. (Pathophysiology; Clinical Behavior/Judgment; Medicine)
Justify all treatment plans based on the pathophysiology and clinical evaluation of the patient with a traumatic injury/ disorder.(Pathophysiology; Clinical Behavior/Judgment; Trauma)
Evaluate and treat all cardiac dysrhythmias per ACLS protocol. (Shock and Resuscitation; Clinical Behavior/Judgment)
Demonstrate proper venous cannulation and ventilation management techniques. (Clinical Behavior/Judgment; Pharmacology; Airway Management)
Demonstrate proper spinal injury management. (Trauma; Clinical Behavior/Judgment; EMS Operations)
Critique peers in scenario-based performances. (Clinical Behavior/ Judgment)
Hypothesize treatment alternatives to difficult patient management (Clinical Behavior/Judgment)
Develop team leadership skills through scenario performance. (Assessment; Clinical Behavior/Judgment)
Construct a well-written run report based on the completed patient scenario. (Preparatory)
Develop a clear and concise style of verbal, radio communication. (Preparatory)

EMS220 - Paramedic III

Overview

Subject Allied Health	Academic Department Health, Education, and Human Services	School Health & Human Services
---------------------------------	---	--

Course Description

Introduces the pathophysiology of respiratory disease and neurological emergencies, then integrates this knowledge with assessment findings to develop a field impression and deliver appropriate medical care, including an in-depth discussion of endocrine emergencies and the associated treatments. Significant course time details the anatomy, physiology, and pathophysiology of various types of trauma. The emphasis is on treating the "whole patient," avoiding treatment distractions of any singular injury.

Course Pre-requisite(s) EMS200 Paramedic I, EMS206 Paramedic Procedures Lab I, EMS210 Paramedic II, EMS291 Paramedic Clinical I	Course Co-requisite(s) EMS216 Paramedic Procedures Lab II, EMS230 Paramedic IV, EMS292 Paramedic Clinical II

1. Anatomy and Physiology
2. Pathophysiology
3. Pharmacology
4. Airway Management
5. Assessment
6. Medicine
7. Trauma
8. Special Patient Populations
9. EMS Operations
10. Clinical Behavior / Judgment

Compare various airway and ventilation techniques used in the management of pulmonary diseases. (Airway Management; Medicine)

Identify the epidemiology, anatomy, physiology, pathophysiology, assessment findings, and management (including prehospital medications) for the following respiratory diseases and conditions: Adult Respiratory Distress Syndrome, Bronchial Asthma, Chronic Bronchitis, Emphysema, Pneumonia, Pulmonary Edema, Pulmonary Thromboembolism, neoplasms of the lung, Upper Respiratory Infections, Spontaneous Pneumothorax, and Hyperventilation Syndrome. (A & P; Pathophysiology; Pharmacology; Medicine; Trauma, Airway Management & Clinical Judgment)

Recommend and justify the appropriate assessment, prehospital care, and transport for several preprogrammed patients with non-traumatic pulmonary problems. (Clinical Judgment; Airway Management)

Differentiate between neurologic emergencies based on assessment findings.(Medicine)

Recommend and justify appropriate assessment, prehospital care, and transport for several preprogrammed patients with non-traumatic neurological emergencies. (Clinical Judgment; Medicine)

Differentiate between different endocrine emergencies based on assessment and history. (Medicine)

Recommend and justify appropriate assessment, prehospital care, and transport for several preprogrammed patients with endocrine emergencies. (Clinical Judgment; Medicine)

Explain the "Golden Hour" concept, and describe how it applies to prehospital emergency medical service. (Trauma)

Compare and contrast the types of vehicle impacts and their expected injuries. (Trauma)

Recommend and justify appropriate scene size-up, initial assessment, focused assessment, detailed assessment, prehospital care, and transport for several preprogrammed patients involving simulated blunt trauma patients. (Assessment; Trauma; Clinical Judgment)

Recommend and justify appropriate scene size-up, initial assessment, focused assessment, detailed physical exam, ongoing assessment plan, prehospital care, and transport for several preprogrammed patients involving simulated penetrating trauma patients. . (Assessment; Trauma; Clinical Judgment)

Describe differences in administration of intravenous fluid in the normotensive, hypotensive, or profoundly hypotensive patients. (Pharmacology)

Recommend and justify appropriate scene size-up, initial assessment, rapid trauma assessment or focused history and physical exam, detailed physical exam, prehospital care, transport, and ongoing assessment for several preprogrammed, simulated and moulaged hemorrhage and shock patients.(Clinical Judgment; Trauma)

Develop/formulate treatment priorities for patients with soft-tissue injuries in conjunction with: Airway/face/neck trauma. Thoracic trauma (open/closed) and Abdominal trauma. (Clinical Judgment; Trauma)

Describe and apply the "Rule of Nines" and the "Rule of Palms" methods for determining body surface area percentage of a burn injury. (Trauma)

Recommend and justify the appropriate assessment and field management for several scenarios involving thermal, inhalation, electrical, and chemical burn injury and radiation exposure patients. (Clinical Judgment; Trauma; EMS Operations)

Appraise the complications of burn injuries caused by trauma, blast injuries, airway compromise, respiratory compromise, and child abuse. (Trauma; Special Pt. Populations)

Hypothesize injuries based on the mechanism of injury, including direct, indirect, and pathologic. (Trauma)

Recommend and justify appropriate scene size-up, initial assessment, rapid trauma assessment or focused history and physical exam, detailed physical exam, prehospital care, transport, and ongoing assessment for several preprogrammed, simulated and moulaged musculoskeletal injury patients. (Clinical Judgment; Trauma)

Explain the pathophysiology, assessment, and management of a patient with: scalp injury, skull fracture, cerebral contusion, intracranial hemorrhage (including epidural, subdural, subarachnoid, and intracerebral hemorrhage), axonal injury (including concussion and moderate and severe diffuse axonal injury), facial injury, and neck injury. (Pathophysiology; Trauma; Medicine; Clinical Judgment)

Develop a management plan for the removal of a helmet for a head-injured patient.(Trauma; Clinical Judgment)

Describe the assessment findings associated with and the management of solid and hollow organ injuries, abdominal vascular injuries, pelvic fractures, and other abdominal injuries. (Trauma; Clinical Judgment)

EMS230 - Paramedic IV

Overview

Subject Allied Health	Academic Department Health, Education, and Human Services	School Health & Human Services
Course Description Introduces pathophysiology of cardiovascular disease and discusses how to recognize and treat the associated dysrhythmias. Covers the following topics in a broad manner: anatomy and physiology (review), general pathophysiology, geriatric considerations, assessment and management of emergencies in the areas of hematology, gastroenterology, toxicology, substance abuse, urology and nephrology, behavioral and psychiatric disorders, and environmental emergencies.		
Course Pre-requisite(s) EMS200 Paramedic I, EMS210 Paramedic II, EMS206 Paramedic Procedures Lab I, and EMS291 Paramedic Clinical I		Course Co-requisite(s) EMS220 Paramedic III, EMS216 Paramedic Procedures Lab II, and EMS292 Paramedic Clinical II
Credit Hours 4		
Contact Hours 4		
Course Fee 15	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics 1. Preparatory 2. Pathophysiology 3. Life Span Development 4. Pharmacology 5. Medicine 6. Trauma 7. Special Patient Populations 8. Clinical Judgment	Utilizing the results of the patient history, assessment findings, and ECG analysis, differentiate between and provide a treatment plan for patients with a variety of conditions. (Clinical Judgment; Medicine) Identify and list the signs and symptoms of a dissecting thoracic or an abdominal aneurysm. (Medicine) Describe and identify the communication and documentation protocols with medical direction and law enforcement used for termination of resuscitation efforts. (Preparatory) Differentiate between gastrointestinal emergencies based on assessment findings. (Medicine)
--	---

Synthesize assessment findings and patient history information to accurately differentiate between pain of a urologic or nephrologic emergency and that of another origin. (Medicine)
Recommend and justify the appropriate assessment, treatment plan, and transport for several scenarios of poisoning or overdose patients. (Clinical Judgment; Medicine)
Describe the pathophysiology and clinical manifestations and prognosis associated with: Anemia, Leukemia, Lymphomas, Polycythemia, Disseminated Intravascular Coagulopathy, Hemophilia, Sickle Cell Disease, and Multiple Myeloma. (Pathophysiology; Medicine)
Explain the pathophysiology, predisposing factors, signs, symptoms and management of the following: Hypothermia, Superficial, and Deep Frostbite, Near-drowning, Decompression Illness, Diving Emergency, and Altitude Illness. (Pathophysiology; Trauma)
Differentiate between various behavioral and psychiatric disorders using the assessment and patient history findings. (Medicine)
Compare the pharmacokinetics of an elderly patient to that of a young patient, including drug distribution, metabolism, and excretion. (Pharmacology)
Describe the incidence, morbidity/mortality, risk factors, prevention strategies, pathophysiology, assessment, need for intervention and transport, and management for elderly medical patients with: pneumonia, COPD, pulmonary embolisms; AMI, heart failure, dysrhythmias, aneurysm, and hypertension; cerebral vascular disease, delirium, dementia, Alzheimer's, and Parkinson's disease; diabetes and thyroid disease; gastrointestinal problems, GI hemorrhage, and bowel obstruction; skin diseases and pressure ulcers; osteoarthritis and osteoporosis; hypothermia and hyperthermia; toxicological problems, including disorders, including depression and suicide. (Lifespan Development; Medicine; Trauma; Special Pt. Populations; Clinical Judgment)
Recommend and justify the appropriate management, treatment plan, and transport for geriatric patients preprogrammed with simulated injuries and various complaints.(Clinical Judgment; Special Patient Populations)

Describe the pathophysiology, assessment, and management of the following gynecological emergencies: Pelvic Inflammatory Disease (PID), ruptured ovarian cyst, cystitis, mittelschmerz, endometritis, endometriosis, ectopic pregnancy, and vaginal hemorrhage.
Recommend and justify the appropriate management with the following gynecological emergencies: Pelvic Inflammatory Disease (PID), ruptured ovarian cyst, cystitis, mittelschmerz, endometritis, endometriosis, ectopic pregnancy, and vaginal hemorrhage.
Differentiate between a normal and an abnormal delivery.
Summarize neonatal resuscitation procedures.
Describe the procedures for handling abnormal deliveries, complications of pregnancy, and maternal complications of labor.
Recommend and justify the appropriate assessment, management, and transport for the mother and child for several preprogrammed patients involving simulated delivery situations.
Describe age-appropriate sites, equipment, techniques, and complications of vascular access for infants and children.
Integrate advanced life support skills with basic cardiac life support for infants and children.
Describe the epidemiology, including the incidence, morbidity/mortality, risk factors, prevention strategies, pathophysiology, assessment, and treatment of infants and children with the following: respiratory distress/failure, hypoperfusion, cardiac dysrhythmias, neurological emergencies, trauma, abuse and neglect, special healthcare needs and SIDS.
Recommend and justify the appropriate assessment, treatment and transport for several preprogrammed simulated pediatric patients.
Explain the placement and view of the heart provided by bipolar, unipolar (augmented), and precordial ECG leads.
Describe QRS axis and axis deviation.
Identify 12-Lead ECG tracings of a variety of conduction abnormalities.

Goals, Topics, and Objectives

- Core Course Topics
- Preparatory
 - Pharmacology
 - Airway Management, Respirations, and Artificial Ventilation
 - Medicine
 - Clinical Behavior/Judgement

Demonstrate successful venipuncture using a proper, aseptic technique. (Pharmacology; Clinical Behavior/Judgement).
Demonstrate successful intravenous access using a proper, aseptic technique. (Pharmacology; Clinical Behavior/Judgement).
Perform proper BLS airway management. (Airway Management; Clinical Behavior/Judgement).
Apply the use of an oropharyngeal airway and tracheal suctioning. (Airway Management).
Demonstrate the proper technique for bag-valve-mask ventilation. (Airway Management).
Show the proper techniques for Endotracheal Intubation. (Airway Management).
Apply and analyze the three lead ECG. (Medicine).
Perform a comprehensive cardiac patient assessment. (Medicine).
Perform a comprehensive respiratory patient assessment. (Medicine).
Perform a comprehensive general medical assessment. (Medicine).

Perform a comprehensive neurological-complaint assessment. (Medicine).
Demonstrate the proper documentation of an EMS field report. (Preparatory; Clinical Behavior/Judgement).
Demonstrate the proper method of two-way radio communication per protocol. (Preparatory; Clinical Behavior/Judgement).
Develop a proper "field impression" for field experiences. (Clinical Behavior/Judgement).
Displays teamwork in a variety of settings. (Clinical Behavior/Judgement).
Serves others within the community. (Clinical Behavior/Judgement).

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
The curriculum is primarily evaluated on the mastery of skills. Students may demonstrate competency in less than the recommended hours or may need additional clinical/field experiences. Initial course hours MUST be completed during the scheduled semester or the student will not be allowed to continue on in the advanced level training. All course competencies MUST be successfully completed in order to graduate from the paramedic program. Documentation must be accurately submitted in a designated amount of time. Late work could result in the failure of this course.

In addition to the skill mastery assessments, all course participants must demonstrate professional attributes at all times or disciplinary actions will take place, which may include removal from the program.

SBL is required for successful completion of this course. This is defined as 8 hours total approved service hours.

Grading Scale
Students will be assessed on the following scale:

- 97-100% = A+
- 94-96% = A
- 92-93% = A-
- 88-91% = B+
- 85-87% = B
- 83-84% = B-
- 81-82% = C+
- 80% = C
- 77-79% = C-
- 74-76% = D+
- 72-73% = D
- 70-71% = D-
- <69% and below = E

EMS293 - Paramedic Clinical III

Overview

Subject	Academic Department	School
Allied Health	Health, Education, and Human Services	Health & Human Services

Course Description
This competency-based capstone course provides a field internship in order to develop team leadership. Students must complete designated tasks in specific topic areas and in team lead positions with EMS transports. Students who need extended rotations to complete tasks from earlier in the year (who received permission to continue on) can do so after the requisite skills for this rotation have been met. Each individual's program portfolio is completed and assessed this semester.NOTE: Due to the nature of this course, all students must have completed the Health Careers medical packet, drug screen, and criminal background clearance as required, and provide current ongoing proof of health insurance prior to attending advanced level clinical.

Course Pre-requisite(s)	Course Co-requisite(s)

ENG090A - Academic Literacies

Overview

Subject English	Academic Department English	School Liberal Arts
Course Description This course helps students develop their academic literacies in conjunction with college-level reading and writing in other courses. Course work will help students refine their reading and writing practices by asking them to think about how these skills work together in college and beyond. Course work will help students develop confidence as they learn how to meet the demands of reading and writing in diverse contexts.		
Course Pre-requisite(s) Students place into ENG090A Academic Literacies through guided self-placement and/or through multiple-measures assessment as determined by English Department guidelines. Students may appeal placement by scheduling an appointment with the Writing Center for an impromptu writing assessment.		Course Co-requisite(s) Any course that meets the College's Social Sciences or Humanities General Education Requirements (MTA). Please check with an advisor for the full list (advising@hfcc.edu), or request it from the School of Liberal Arts (lainfo@hfcc.edu) This is a mandatory co-requisite; students must remain enrolled in both sections.
Credit Hours 3		
Contact Hours 3		
Course Fee 10		Miscellaneous Department Fee 0
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals This course will assist students in meeting the challenges of college-level reading and writing in their college courses. Students will learn about and practice reading and writing processes both as individual and integrated skills. They will also explore academic literacies and study skills that will enhance their academic capabilities.	
Core Course Topics - Reading and Writing with Rhetorical Strategies - Situational reading and writing - Analytical reading and writing - Writing/Reading and audiences - Academic and non-academic voice - Rhetorical genres and modes - Reading Strategies - Reading for comprehension - Recognizing genres and patterns - Active reading - Taking notes on textbooks and research - Paraphrasing and Summarizing - Evaluating sources - Writing Process - Understanding contexts for writing and assignments - Developing topics, ideas, and drafts - Workshop and feedback - Revision as a writing strategy - Editing and proofreading - Academic Skills - Reading and writing about academic texts - Writing timed exams - Academic integrity - Academic engagement - Campus culture and academic support	
Adapt reading and writing strategies for application across curriculum.	
Determine appropriate resources to all upon for assistance with academic and non-cognitive difficulties.	
Demonstrate success in college level reading and writing assignments.	

Demonstrate success in college level reading and writing assignments.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement All assessment of student reading and writing is based on the above course outcomes and is left to the discretion of the individual instructor. Assessment should focus on student development in academic reading and writing and success in co-requisite course(s). ENG090A Academic Literacies may only be taken as a co-requisite course with another college-level course and it may only be taken once per semester. This course does not substitute for ENG131 Introduction College Writing , ENG131A Intro College Writing (ALP) , ENG131E Intro College Writing ALP-ELL , ENG132 College Writing and Research , or ENG135 Bus & Tech Writing & Research . Students who earn a grade of "S" (satisfactory) may enroll in ENG131 Introduction College Writing .	
General Course Requirements and Recommendations Instructors must assess student abilities in academic reading and writing within the first two weeks of the course to determine if they are appropriately placed. Instructors must review students' syllabi for other courses and conference with students about reading/writing work in those courses. Students must complete regular reading assignments and compose at least two academic writing assignments during the semester. These assignments should be drawn from concurrent coursework if possible, but if students are in courses with light reading/writing requirements, instructors may assign work appropriate to a three-credit hour course. Students must show evidence of writing and reading strategies throughout the course. Instructors may choose to assess student practice through journals, homework, portfolios, or other ongoing coursework related to the work students are doing in other classes. Students must receive orientation to academic success resources on campus including The Writing Center, The Learning Lab, the Library, and Assisted Learning Services. While instructors may use letter or numerical grades to assess course work, the final grade assigned must be S (satisfactory) or U (unsatisfactory). The grade of S shall be given if students successfully complete 75% of the course work. In addition, instructors are highly encouraged to: Create a supportive, empowering environment in their classrooms in order to invite students into college culture; Hold regular one-on-one conferences with students; Create a workshop or laboratory space that focuses on individualized instruction to meet the demands of academic literacy in a student's coursework; Use non-prescriptive, collaborative, and encouraging assessments including workshops, revision practices, and portfolios; Welcome and support the diverse identities, backgrounds, and academic experiences of our students as essential foundations for the college community.	
Texts The curricular committee that oversees this course maintains a list of approved texts.

ENG094 - Accelerated Learning Program:read&writin

Overview

Subject English	Academic Department English	School Liberal Arts
Course Description This course is intended for students whose placement review indicates the need for additional instructional support in order for them to be successful in ENG-131. ENG-094 is a co-requisite of ENG-131A as part of the Accelerated Learning Program and provides writing, reading, study skills, and non-cognitive instructional support of the ENG-131 curriculum. Course work will help students develop as college writers and readers through discussion, workshop, homework, and occasional reading and writing assignments that complement ENG-131 work.		
Course Pre-requisite(s) Students place into ENG094 ALP: Reading and Writing and the ALP program through self-placement or through multiple-measures assessment as determined by English Department guidelines. Students may appeal placement by scheduling an appointment with the Writing Center for an impromptu, final writing placement assessment.		Course Co-requisite(s) ENG131A Intro College Writing (ALP) section linked with the same instructor. This is a mandatory co-requisite. Students must remain enrolled in both sections to maintain enrollment in the ALP program.
Credit Hours 3		
Contact Hours 3		
Course Fee 10		Miscellaneous Department Fee 0
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals To help students become successful readers and writers in college. The course is explicitly designed as an accelerated learning class, pairing individualized developmental coursework with college-level coursework in order to help students more efficiently develop their college level reading and writing skills. Students should be engaged in developing their literacy and academic capabilities while receiving support for non-cognitive issues as they progress through the co-requisite ENG131 Introduction College Writing curriculum.	
Core Course Topics - Rhetorical Awareness - Situational writing - Writing for audiences - Academic and non-academic voice - Rhetorical genres and modes - Standardized language recognition - Writing Process - Understanding contexts and assignments - Developing topics and ideas - Writing drafts - Workshop and feedback - Revision - Editing and proofreading - Academic Skills - Writing the academic essay - Academic integrity - Academic engagement - Campus culture and academic support - Study skills - Reading - Vocabulary development - Narrative and expository text work - Disciplinary reading - Non-Cognitive Learning Issues - External and internal influences on education - Student services - Emotions and learning - Resistance and classroom engagement	
Demonstrate success in ENG-131.	

Determine appropriate resources to call upon for assistance with academic and non-cognitive difficulties.
Adapt reading and writing strategies for application across the curriculum.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
All assessment of student achievement is left to the discretion of the individual instructor. Assessment of ENG094 ALP: Reading and Writing is not contingent upon assessment in the co-requisite ENG131 Introduction College Writing class. ENG094 ALP: Reading and Writing replaces the ENG-093 and ENG-081 developmental sequence to accelerate enrollment into college level coursework. Students must earn a grade of S (satisfactory) in ENG-094 to meet their developmental English requirements before advancing to their next college level writing class. Students who do not pass ENG094 ALP: Reading and Writing must reenter the standard developmental sequence to take ENG-093 and, if necessary, ENG-081.

General Course Requirements and Recommendations

- Requirements:
- At least two individual conferences focusing on student reading and writing practices.
 - Formal instruction in academic reading.
 - An attendance/participation policy in accordance with instructor's ENG131 Introduction College Writing attendance policy.
- Recommendations:
- An emphasis on in-class participation.
 - Supplemental writing workshops for ENG131 Introduction College Writing assignments.
 - Frequent reading practice using ENG131 Introduction College Writing readings.
 - Frequent exploratory writing practice.
 - Building a supportive, communal classroom atmosphere.

In addition, instructors are highly encouraged to: Create a supportive, empowering environment in their classrooms in order to invite students into college culture;
Use non-prescriptive, collaborative, and encouraging assessments including workshops, revision practices, and portfolios;
Welcome and support the diverse identities, backgrounds, and academic experiences of our students as essential foundations for college community.

ENG095E - ALP for ELL: Reading & Writing

Overview

Subject English	Academic Department English	School Liberal Arts
Course Description Intended for English language learners (ELLs) who need additional instructional support in order to be successful in ENG-131. ENG-095E is a co-requisite of ENG-131E as part of the Accelerated Learning Program (ALP) and provides writing, reading, and study skills instructional support of the ENG-131 curriculum. Course work will help ELL students develop as college writers and readers through discussion, workshops, homework, and reading and writing assignments that complement ENG-131 work.		
Course Pre-requisite(s) A satisfactory score on the ELL placement test or ELI approval	Course Co-requisite(s) ENG131E Intro College Writing ALP-ELL section linked with the same instructor	
Credit Hours 3		
Contact Hours 3		
Course Fee 10	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

- Course Goals**
ENG095E ALP for ELL: Reading & Writing is explicitly designed as an accelerated learning class, pairing individualized ELL coursework with college-level coursework to help students develop their college level reading and writing skills.
- Core Course Topics**
- Locating and identifying topics, main ideas, supporting details and patterns of organization in authentic written and audio sources
 - Reading comprehension strategies including connecting, questioning, predicting, paraphrasing and summarizing
 - Vocabulary study
 - Research
 - Academic integrity
 - Source credibility
 - Writing Process
 - Punctuation and mechanics

Identify main idea and supporting details in college level essays and articles from outside sources
Draw inferences from readings that lead to class discussion
Demonstrate techniques for vocabulary acquisition and expansion
Conduct research using HFC library databases

Integrate information from outside sources into essays by correctly using in-text citations
Evaluate the credibility of sources found on the internet
Revise work after collaboration with other students and/or suggestions from the instructor
Minimize errors in grammar and mechanics

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of ENG095E ALP for ELL: Reading & Writing is not contingent upon assessment in the co-requisite ENG131 Introduction College Writing class. ENG095E ALP for ELL: Reading & Writing replaces the ENG-092 and ENG-082 ELL courses to accelerate enrollment into college level coursework. Students must earn a grade of S (Satisfactory) in ENG095E ALP for ELL: Reading & Writing before advancing to their next college level writing class. Students who do not pass ENG095E ALP for ELL: Reading & Writing must take ENG-092 and, if necessary, ENG-082. Students may not repeat ENG095E ALP for ELL: Reading & Writing.

Assessment of academic achievement will be identified and implemented by the class instructor. Methods will include, but not be limited to, assignments, essays, quizzes, tests, and a departmental exit essay.

General Course Requirements and Recommendations
While additional assignments are necessary and should be identified by individual instructors in their syllabi, the following are required in all sections of ENG095E ALP for ELL: Reading & Writing. All students must:

- Attend at least two individual conferences focusing on student reading and writing practices
- Brainstorm ideas for essay topics and essay development
- Rough draft workshop for ENG131E Intro College Writing ALP-ELL essays
- Peer review rough drafts
- Group discuss reading assignments to evaluate comprehension
- Participate in grammar review and assessment (i.e. quizzes or short tests)
- Practice vocabulary enhancement strategies
- Demonstrate research and citation techniques (i.e. college databases, internet searches, in-text citation practice, Works Cited generators)

Satisfies Honors Requirement	Satisfies Wellness Requirement

ENG131 - Introduction to College Writing

Overview

Subject English	Academic Department English	School Liberal Arts
Course Description ENG-131 is the first college-level composition course in a two-semester sequence. Students will be introduced to writing, reading, critical thinking, and using information at the college level. In particular, the course will help students develop writing that reveals rhetorical and academic flexibility.		
Course Pre-requisite(s) Students place into ENG131 Introduction College Writing through multiple-measures assessment as determined by English Department guidelines. Students who were required to take developmental coursework before ENG131 Introduction College Writing may also enroll in 131 by passing ENG090A Academic Literacies with a grade of S; 094 with a grade of S; or ELL182 Academic Reading for the ELL and ELL192 Academic Writing for the ELL with a C or better. Students may appeal placement by scheduling an appointment with the Writing Center for an impromptu, final writing placement assessment.

Goals, Topics, and Objectives

- Course Goals**
To prepare students to write clearly, read thoughtfully, think critically, and use information ethically at the college level.
- Core Course Topics**
- WRITE using different rhetorical strategies to communicate purposefully in a variety of situations while employing an effective writing process.

Students' achievement of the outcome will be measured by their ability to
 - demonstrate awareness of genre and audience;
 - create a text with a clear focus, either implied or stated in a thesis;
 - illustrate or prove points with adequate detail and evidence;
 - arrange ideas logically;
 - use rhetorically appropriate language; and
 - improve clarity and credibility through careful proofreading.
 - READ by applying strategies to understand a variety of texts.

Students' achievement of the outcome will be measured by their ability to
 - summarize the main ideas of a piece of writing and

- respond to and critique documents, including published and student texts.
3. THINK CRITICALLY by comparing and evaluating diverse viewpoints on a variety of topics and reaching conclusions based on available evidence and logic.
- Students' achievement of the outcome will be measured by their ability to
- demonstrate awareness of different sides of an issue through argumentation;
 - analyze writing strategies and contexts; and
 - evaluate sources for reliability, relevance, and usefulness.
4. USE INFORMATION by effectively integrating and synthesizing information from other sources into their writing.
- Students' achievement of the outcome will be measured by their ability to
- incorporate information from outside sources;
 - navigate source documentation style guides; and
 - document sources using both informal and formal citation styles to enhance credibility and avoid plagiarism.

Demonstrate awareness of genre and audience;
Create a text with a clear focus, either implied or stated in a thesis;
Illustrate or prove points with adequate detail and evidence;
Arrange ideas logically;
Use rhetorically appropriate language; and
Improve clarity and credibility through careful proofreading.
Summarize the main ideas of a piece of writing and
Respond to and critique documents, including published and student texts.
Demonstrate awareness of different sides of an issue through argumentation;
Analyze writing strategies and contexts; and
Evaluate sources for reliability, relevance, and usefulness.
Incorporate information from outside sources;
Navigate source documentation style guides; and
Document sources using both informal and formal citation styles to enhance credibility and avoid plagiarism.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
All assessment of student writing is based on the above course outcomes and is left to the discretion of the individual instructor. Assessment should focus on student development of rhetorical and academic writing skills and should involve conversation with students.

General Course Requirements and Recommendations
Requirements

- Students must produce several essays of significant length.
- Instructors must create assignments that introduce skills of academic summary, critical analysis, research, and documentation at some point during the semester.
- Instructors must offer at least one assignment that is not a traditional academic essay.
- Instructors must expose students to a variety of texts to help them develop rhetorical awareness.
- Students must complete at least one graded in-class writing assignment.

Recommendations
Instructors are highly encouraged to

- provide supportive feedback through activities such as workshops, conferences, revision practices, and portfolios;
- equip students for navigating college culture;
- welcome and support the diverse identities, backgrounds, and academic experiences of our students as essential foundations for college community; and
- provide students some orientation to academic success resources on campus such as the Writing Center, Learning Lab, Eshleman Library, and Assisted Learning Services.

Texts
Every two years, the College Writing Committee will approve two common textbooks (a rhetoric and a writing handbook) for English-131 classes.

ENG131 Introduction College Writing instructors who have taught the course at HFC for at least two semesters may select their own text(s), which must meet the curricular requirements of the ENG131 Introduction College Writing Course Master.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
All assessment of student writing is based on the above course outcomes and is left to the discretion of the individual instructor. Assessment should focus on student development of rhetorical and academic writing skills and should involve conversation with students.

General Course Requirements and Recommendations

Requirements

- Students must produce several essays of significant length.
- Instructors must create assignments that introduce skills of academic summary, critical analysis, research, and documentation at some point during the semester.
- Instructors must offer at least one assignment that is not a traditional academic essay.
- Instructors must expose students to a variety of texts to help them develop rhetorical awareness.
- Students must complete at least one graded in-class writing assignment.

Recommendations
Instructors are highly encouraged to

- provide supportive feedback through activities such as workshops, conferences, revision practices, and portfolios;
- equip students for navigating college culture;
- welcome and support the diverse identities, backgrounds, and academic experiences of our students as essential foundations for college community; and
- provide students some orientation to academic success resources on campus such as the Writing Center, Learning Lab, Eshleman Library, and Assisted Learning Services.

Texts
Every two years, the College Writing Committee will approve two common textbooks (a rhetoric and a writing handbook) for English-131 classes. [ENG131 Introduction College Writing](#) instructors who have taught the course at HFC for at least two semesters may select their own text(s), which must meet the curricular requirements of the [ENG131 Introduction College Writing](#) Course Master.

ENG131E - Intro to College Writing (ALP) for ELLs

Overview

Subject English	Academic Department English	School Liberal Arts
Course Description ENG 131E is the first college-level composition course in a two-semester sequence. Students will be introduced to writing, reading, critical thinking, and using information at the college level. In particular, the course will help students develop writing that reveals rhetorical and academic flexibility.		
Course Pre-requisite(s) A satisfactory score on the ELL placement test or ELI approval	Course Co-requisite(s) ENG095E ALP for ELL Reading & Writing section linked with the same instructor

Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals
To prepare students to write clearly, read thoughtfully, think critically, and use information ethically at the college level.

Core Course Topics

- WRITE** using different rhetorical strategies to communicate purposefully in a variety of situations while employing an effective writing process.

Students' achievement of the outcome will be measured by their ability to • demonstrate awareness of genre and audience; • create a text with a clear focus, either implied or stated in a thesis; • illustrate or prove points with adequate detail and evidence; • arrange ideas logically; • use rhetorically appropriate language; and • improve clarity and credibility through careful proofreading.
- READ** by applying strategies to understand a variety of texts.

Students' achievement of the outcome will be measured by their ability to • summarize the main ideas of a piece of writing and • respond to and critique documents, including published and student texts.
- THINK CRITICALLY** by comparing and evaluating diverse viewpoints on a variety of topics and reaching conclusions based on available evidence and logic.

Students' achievement of the outcome will be measured by their ability to • demonstrate awareness of different sides of an issue through argumentation; • analyze writing strategies and contexts; and • evaluate sources for reliability, relevance, and usefulness.
- USE INFORMATION** by effectively integrating and synthesizing information from other sources into their writing.

Students' achievement of the outcome will be measured by their ability to • incorporate information from outside sources; • navigate source documentation style guides; and • document sources using both informal and formal citation styles to enhance credibility and avoid plagiarism.

Demonstrate awareness of genre and audience;
Create a text with a clear focus, either implied or stated in a thesis;
Illustrate or prove points with adequate detail and evidence;
Arrange ideas logically;
Use rhetorically appropriate language; and
Improve clarity and credibility through careful proofreading.
Summarize the main ideas of a piece of writing and

Respond to and critique documents, including published and student texts.
Demonstrate awareness of different sides of an issue through argumentation;
Analyze writing strategies and contexts;
Evaluate sources for reliability, relevance, and usefulness.
Incorporate information from outside sources;
Navigate source documentation style guides; and
Document sources using both informal and formal citation styles to enhance credibility and avoid plagiarism.

ENG131H - Honors Introduction to College Writing

Overview

Subject English	Academic Department English	School Liberal Arts
Course Description ENG-131 is the first college-level composition course in a two-semester sequence. Students will be introduced to writing, reading, critical thinking, and using information at the college level. In particular, the course will help students develop writing that reveals rhetorical and academic flexibility. One or more assignments will focus on a theme related to the Honors Colloquium topic(s).		
Course Pre-requisite(s) Students place into ENG131H Honors Intro College Writing through multiple-measures assessment as determined by English Department guidelines. Students who were required to take developmental coursework before ENG131H Honors Intro College Writing may also enroll in 131H by passing ENG-081 and ENG-093 with a grade of S; 090A with a grade of S; 094 with a grade of S; or 082 and 092 with a C or better. Students may appeal placement by scheduling an appointment with the Writing Center for an impromptu, final writing placement assessment.

Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals To prepare students to write clearly, read thoughtfully, think critically, and use information ethically at the college level.	
Core Course Topics	
1. WRITE: compose clearly, using rhetorical strategies and processes for analysis and research writing.	Students' achievement of the outcome will be measured by their ability to
	• analyze literary works with attention to themes, conventions, and/or connections to personal or public contexts;
	• incorporate material from multiple sources, using direct quotation, paraphrase, and summary, as well as appropriate documentation; and
	• compose a coherent researched argument with a specific focus, supporting evidence, and a defensible conclusion.
2. READ: apply reading strategies to understand literary texts as well as college-level research texts.	Students' achievement of the outcome will be measured by their ability to
	• summarize the main ideas of a text;
	• respond to and critique documents, including published and student texts; and
	• utilize information from assigned course materials and/or individual research to fulfill a purpose.
3. THINK CRITICALLY: compare and evaluate diverse viewpoints on a variety of topics and reach conclusions based on researched information and evidence.	Students' achievement of the outcome will be measured by their ability to
	• evaluate sources for reliability, relevance, and usefulness;
	• make connections between texts and contexts related to a specific topic; and
	• synthesize ideas from multiple sources to analyze or further interpret a topic.
4. USE INFORMATION: utilize research strategies to identify and locate appropriate college-level sources and successfully integrate them into the student's own written work.	Students' achievement of the outcome will be measured by their ability to
	• develop effective search strategies to find and evaluate information;
	• synthesize source material with their own ideas as part of a researched argument;
	• navigate source documentation style guides; and
	• document sources using formal citation styles to enhance credibility and avoid plagiarism.
Analyze literary works with attention to themes, conventions, and/or connections to personal or public contexts;	
Incorporate material from multiple sources, using direct quotation, paraphrase, and summary, as well as appropriate documentation; and	
Compose a coherent researched argument with a specific focus, supporting evidence, and a defensible conclusion.	
Summarize the main ideas of a text;	
Respond to and critique documents, including published and student texts; and	
Utilize information from assigned course materials and/or individual research to fulfill a purpose.	
Evaluate sources for reliability, relevance, and usefulness;	
Make connections between texts and contexts related to a specific topic; and	
Synthesize ideas from multiple sources to analyze or further interpret a topic.	
Develop effective search strategies to find and evaluate information;	
Synthesize source material with their own ideas as part of a researched argument;	
Navigate source documentation style guides; and	
Document sources using formal citation styles to enhance credibility and avoid plagiarism.	

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
All assessment of student writing is based on the above course outcomes and is left to the discretion of the individual instructor. Assessment should focus on student development of academic reading, writing, and research skills, and should involve conversation with students.

- General Course Requirements and Recommendations**
Requirements
- Students will read three to six full-length works, which can include fiction, non-fiction, poetry, plays, etc.
 - Students must produce several essays, including at least one graded in-class writing assignment.
 - Students will receive instruction in research skills including search strategies, evaluation and synthesis of sources, and ethical documentation practices.
 - Students must produce a documented research essay (suggested length: five to eight pages) demonstrating the above skills, documented in either MLA or APA style, and worth a significant portion of the final course grade.

- Recommendations**
Instructors are highly encouraged to
- choose course texts that invite students into meaningful reading experiences and will expand their potential as college writers.
 - provide supportive feedback through activities such as workshops, conferences, revision practices, and portfolios;
 - equip students for navigating college culture;
 - welcome and support the diverse identities, backgrounds, and academic experience of our students as essential foundations for college community;
 - provide information to students about academic success resources on campus, such as the Writing Center, Learning Lab, and Assisted Learning Services; and
 - visit Eshleman Library for research instruction.

ENG135 - Business & Technical Writing & Research

Overview

Subject English	Academic Department English	School Liberal Arts
Course Description Designed for students interested in developing professional workplace communication and critical thinking skills, ENG-135 focuses on designing documents such as resumes, letters, memos, instructions, proposals, and an extensive, research-based documented report for the kinds of readers they will address as professionals. This course should be especially valuable for students pursuing careers in engineering business, computer science, automotive technology, allied health, and other technical fields.		
Course Pre-requisite(s) ENG131 Introduction College Writing with a C or better. (Note: C- grade is not transferable and is not accepted by some programs at HFC)		
Credit Hours 3		
Contact Hours 3		
Course Fee 10	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category English Composition, English Composition or Communications	Michigan Transfer Agreement (MTA) Category Category 1: English Composition - Applied Degrees, Category 1: English Composition - Transfer Degrees, Category 2: English Composition or Communications - Applied Degrees, Category 2: English Composition or Communications - Transfer Degrees	
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals
Students will learn to apply the rhetorical principles and techniques characteristic of professional communication. As a result of analyzing and writing documents, such as memos, letters, proposals, instructions, and reports, as well as preparing and delivering a short oral presentation, they will see how communication is an important dimension of professional effectiveness. They will become familiar with the following:

- The role of written, graphical, and oral communication within organizations.
- The challenges and problems associated with professional communication, including ethical concerns.
- The various audiences targeted by professional communication and the importance of adapting to them.
- The importance of information literacy in communicating effectively in professional settings.
- The methods of creating an effective professional voice or ethos in a document.
- The use of computer technology as a critical tool in professional communication.

Core Course Topics

1. Critical Thinking & Information Literacy	Ability to analyze and evaluate information and identify the need for research to draw conclusions, formulate inferences, solve problems and make decisions. Students will also demonstrate information literacy skills by locating, evaluating, selecting, organizing, synthesizing, and ethically documenting information from multiple sources using both informal and formal formats, as appropriate for diverse writing situations.
2. Communication	Ability to effectively communicate ideas appropriate to their discipline using standard English, through written and verbal communication.
	Ability to read and understand a document and to organize a response suitable for the intended audience.
	Ability to develop communication using effective rhetorical techniques and persuasive language.
	Ability to generate and develop a defensible inference based on available information.
	Ability to find and evaluate research material in terms of its credibility, accuracy, bias, and ethics.
	Ability to incorporate selected research material effectively and purposefully into an assignment by using quotation, paraphrase, and a formal documentation style and by distinguishing clearly between sources of information.
	Ability to synthesize those sources with the students own experience of a topic.
	Ability to use page design (including sectioning and headings) and visual aids to enhance a documents readability and persuasiveness.
	Ability to edit prose for grammatical correctness, accuracy, and diction and style appropriate for the audience.
	Ability to purposefully critique their own and others written documents.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Students will complete multiple written assignments that demonstrate business and technical writing principles. One major assessment instrument is the professional, documented, research-based report, required in all sections. That research-based report will be worth at least 20% of the final course grade. This assessment requires students to demonstrate mastery of written communication as well as information literacy skills: finding, evaluating, and using sources effectively and documenting those sources in an accepted format such as APA or MLA style. Texts English- 135 textbooks will satisfy the following criteria: • A highly rhetorical focus that emphasizes how to adapt content, style, and organization to various workplace situations and conventions and that is apparent through both instructional text and examples. • Sections on each of the communication genres taught, including oral presentations. • An emphasis on visual communication strategies, including instruction on using graphics and formatting and examples of such visual aids working coherently and purposefully with written text. • Ample instruction on information literacy principles and skills: finding, evaluating, and using sources with appropriate documentation. • Profiles and analyses of ethical issues particular to professional communication. • Affordability. • Portability. • Access to an electronic resource (e.g., a website) that supplements the text and that provides free exercises and models (preferred but not required). The approved book list is maintained by and available from the English-135 Committee Chair and is reviewed annually.

ENG139 - Creative Writing

Overview

Subject English	Academic Department English	School Liberal Arts
Course Description An elective writing course that provides students, at any level of experience, with a firm grasp of the fundamentals of imaginative self-expression. The assignments are diverse, ranging from traditional to contemporary forms of poetry, fiction, and drama, and imaginative non-fiction, in order to offer students a broad range of new opportunities for development of their own chosen subjects, and new ways to polish their own personal style. Course Pre-requisite(s) ENG131 Introduction College Writing eligible		
Credit Hours 3		

Contact Hours

3	
Course Fee 10	Miscellaneous Department Fee 0
Academic Level Undergraduate	
General Education Category Humanities and Fine Arts	Michigan Transfer Agreement (MTA) Category Category 5: Humanities and Fine Arts - Applied Degrees, Category 5: Humanities and Fine Arts - Transfer Degrees
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Core Course Topics 1. The Language of Imaginative Writing 2. Discussion of the Writer's Notebook and Journal 3. The Collage Essay 4. The Childhood or Memoir Poem 5. Traditional Forms vs. Free Verse 6. Writing the Dramatic Dialogue 7. Found Poetry: Collage and Cut-Outs 8. Beginnings and Endings of Fiction 9. Character Development 10. Plot Development 11. Integrating Dialogue and Action in a Scene 12. The Short-short 13. The Short Story 14. The Prose Poem 15. The Myth, Legend, or Icon Poem or The Personification Poem 16. Revision	
	Employ various techniques of invention and discovery to generate personally relevant subject matter for their creative works.
	Compose imaginative works, such as poems, fiction, drama, or non-fiction works that reveal an awareness of the importance of representation (showing) as well as narration (telling), and expressiveness (style) as well as exposition (explanation).
	Comprehend the writer-audience relationship and how it is effectively controlled using point of view, authorial voice, style and tone, humor, and expressive language.
	Implement and articulate an awareness of how all forms of imaginative writing uses oppositions to create tension within characters, poetic lines, dramatic plot twists, etc.
	Compare and contrast the different ways character development and discovery is created in poetry, fiction, non-fiction, and drama.
	Revise and re-see writings to create completeness and coherence in selected works. Students will be able to interpret evaluations and critiques, select works appropriate for revision, and carry out changes in the direction of improvement.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Assessment is based on four to five writings in the writer's portfolio, which may be revised throughout the semester.	
General:	• Students will produce a minimum of 2000 words of imaginative writing in various genres and forms.
Specific:	• Students will write poems, fiction, drama, and imaginative non-fiction revealing awareness of traditional and non-traditional formal patterns, styles, and techniques characteristic of creative writing. • Based on the instructor's evaluations, critiques, and suggestions, as well as their own and/or other students' judgment, students will select works from their creative writing portfolios for revision and re-submission, using critical thinking.
General Course Requirements and Recommendations Required: • Create material for their own compositions, using the writer's notebook, individual exercises, and guided in-class collaborations. • Examine published and unpublished models of traditional and non-traditional poems to identify techniques and approaches appropriate for their own imaginative writing. • Practice expressiveness language, tone, and authorial voice. • Write their own fiction, drama, and imaginative non-fiction considering the formats, techniques, and primary characteristics of these genres of prose writing. • Revise selected works based on evaluations and critiques, carrying out changes in the direction of improvement. • Engage in thoughtful discussions of assigned models, lecture topics, oral presentations of writing (both live and recorded), in-class exercises, and other course materials. • Comprehend and use concepts essential the writing and the discussion of imaginative writing, such as line, stanza, imagery, color, stage directions, dialogue, chapter, plot, character development, etc. Recommended: • Students should learn the value of keeping a writer's notebook and portfolio. • Students should learn steps writers take in preparing manuscripts for publication. This might include a journal review and the presentation of possible journals for the submission of work at the midterm or end of class. • Students should attend readings by poets or writers visiting campus or appearing at other venues. • Students should learn techniques for effective oral presentation of their own works.	

• Students should learn how to make helpful, constructive comments on the work of fellow students.

ENG231 - Intro to Literature: Poetry and Drama

Overview

Subject English	Academic Department English	School Liberal Arts
--------------------	--------------------------------	------------------------

Course Description
Focuses on reading, discussion, and written analysis of poems and plays in order to develop 1) skill in literary analysis and interpretation and 2) familiarity with the conventions of poetry and drama. The poems will be drawn from a variety of literary traditions; the plays range from ancient Greek tragedy to Shakespeare and modern drama.

Course Pre-requisite(s)
[ENG131 Introduction College Writing](#) with a C grade or better (Note: A "C-" grade is not transferable and is not accepted by some programs at HFC.)

Goals, Topics, and Objectives

- Core Course Topics**
1. Introduction to literature: genres, literary terms, and methods of discussing literature.
 2. Writing about poetry and drama.
 3. Works that illustrate the historical development of poetry in English.
 4. Poetry from other traditions.
 5. Greek drama.
 6. Shakespeare: Tragedy and comedy.
 7. Modern drama.

Formulate an interpretive thesis (as opposed to one which merely reports something factual about a literary text).

Compose an essay which either analyzes a literary text, for example by focusing on literary elements such as theme, character, setting, point of view, plot, imagery, metaphor, symbolism, etc., or analyzes the characteristic themes, features, and / or techniques of a given writer's works, or analyzes more than one literary text by comparing and contrasting works by more than one writer of the period or genre named in the course title.

Identify a range of key terms that are essential to an introductory-level understanding of literature, particularly poetry and drama.

Explain the crucial importance and /or distinctive achievement of William Shakespeare.

Explain the crucial importance and /or distinctive achievement of a major dramatist other than Shakespeare.

Explain the crucial importance and /or distinctive achievement of a major poet other than Shakespeare.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
General:

Assessment may include (but need not be limited to) quizzes, class participation, essays, and exams. But assessment must include a minimum of 2,000 words of formal literary analysis.

- Specific:**
1. Students will write at least one out-of-class essay of literary analysis that is at least 1,200 words in length.
 2. Students will take at least one written exam which requires them to analyze literature; whether a single essay or multiple shorter responses, this expository component will count for at least half of the credit for that exam.

General Course Requirements and Recommendations
Required:

1. Students will read substantial and representative selections from the works of the Greek tragedians, of Shakespeare, and of British, American, and other English-language poets.
2. Students will read a substantial and representative selection of literary texts that explore themes such as self-knowledge, revenge, conflict, war, nature, race, family, and love.
3. Students will regularly engage in thoughtful discussion of the assigned readings.
4. Students will study (through assigned readings and /or classroom discussion) the cultural contexts from which the literature emerges.

5. Students will study concepts that are essential to an introductory-level understanding of poetry and drama, such as literature, literary criticism, genre, setting, character, plot, figurative language, style, tone, diction, irony, flashback, allusion, poetry, verse, rhythm, meter, rhyme, metaphor, simile, personification, alliteration, apostrophe, enjambement, epic poetry, narrative poetry, lyric poetry, Italian sonnet, English sonnet, free verse, drama, tragedy, comedy, protagonist, antagonist, tragic hero, catharsis, hubris, catastrophe, dialogue, soliloquy, chorus, orchestra, strophe, and groundlings.

Recommended:

1. Students should learn appropriate biographical information about assigned writers when such information could be helpful in understanding the literature.
2. Students should take quizzes on assigned readings.
3. Students should keep a journal in which they record their responses to assigned readings and class discussions.
4. Students should learn to place the major assigned writers and texts on an historical time line.
5. Students should satisfactorily read at least one poem or scene aloud, either in class or in the instructor's office.
6. Instructors should welcome and support the diverse identities, backgrounds, and academic experience of our students as essential foundations for college community.

ENG232 - Introduction to the Short Story

Overview

Subject English	Academic Department English	School Liberal Arts
--------------------	--------------------------------	------------------------

Course Description
Focuses on reading, discussion, and written analysis of short stories in order to develop 1) skill in literary analysis and interpretation and 2) familiarity with the conventions of the short story. Stories are drawn from various literary traditions, although emphasis may be placed on the American tradition, which has been especially productive and influential. Emphasis may also be placed on the historical development of the short story as a distinct literary genre.

Course Pre-requisite(s)
[ENG131 Introduction College Writing](#) with a C or better (Note: A "C-" grade is not transferable and is not accepted by some programs at HFC.)

Credit Hours
3

Academic Level
Undergraduate

General Education Category
Humanities and Fine Arts

Michigan Transfer Agreement (MTA) Category
Category 5: Humanities and Fine Arts

Eligible for Credit for Prior College Level Learning (CPCLL)
No

Goals, Topics, and Objectives

- Core Course Topics**
1. Introduction to literary terms and methods of discussing literature.
 2. Precursors to the short story.
 3. The emergence of the short story in the nineteenth century.
 4. Twentieth-century short story.
 5. The contemporary short story.

Formulate an interpretive thesis (as opposed to one which merely reports something factual about a literary text).

Compose an essay which either " analyzes a literary text, for example by focusing on literary elements such as theme, character, setting, point of view, plot, imagery, metaphor, symbolism, etc., or " analyzes the characteristic themes, features, and / or techniques of a given writer's works, or " analyzes more than one literary text by comparing and contrasting works by more than one short story writer. 3. Identify a range of key terms that are essential to an introductory-level understanding of literature, particularly the short story.

Distinguish a short story from a work of fiction that more properly belongs in some other genre, such as a tale, folktale, tall tale, fable, parable, allegory, anecdote, play, screenplay, novella, or novel.

Explain how and when the short story emerged as a distinct literary genre, or, more particularly, how the American short story evolved.

Explain the ways in which the short story provides a literary experience which is both similar to and different from that of the novel. 7. Explain the importance and/or achievement of some of the key short story writers.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
General:

Assessment may include (but need not be limited to) quizzes, class participation, essays, and exams. But assessment must include a minimum of 2,000 words of formal literary analysis.

- Specific:**
1. Students will write at least one out-of-class essay of literary analysis that is at least 1,200 words in length.

General Course Requirements and Recommendations which requires them to analyze literature; whether a single essay or multiple shorter responses, this expository component will count for at least half of the credit for that exam.

- 1. Students will read at least 25 stories and, optionally, one novella.
- 2. Students will read short stories that come from a variety of nationalities, cultures or perspectives, and that represent various stages and notable achievements in the historical development of the genre.
- 3. Students will regularly engage in thoughtful discussion of the assigned readings.
- 4. Students will study (through assigned readings and/or classroom or online discussion) the cultural contexts from which the literature emerges.
- 5. Students will study concepts that are essential to an introductory-level understanding of the short story, such as literature, literary criticism, genre, theme, motif, structure, symbol, style, tone, irony, didacticism, romanticism, realism, naturalism, modernism, postmodernism, magical realism, narrative, fiction, short story, character, protagonist, antagonist, antihero, plot, exposition, conflict, suspense, foreshadowing, crisis, climax, resolution, slice of life, setting, point of view, narrator, stream of consciousness, epiphany, tale, folktale, tall tale, fable, parable, allegory, anecdote, frame story, novella, and novel.

- Recommended:**
- 1. Students should learn appropriate biographical information about assigned writers when such information could be helpful in understanding the literature.
 - 2. Students should take quizzes on assigned readings.
 - 3. Students should keep a journal in which they record their responses to assigned readings and class discussions.
 - 4. Students should learn to place the major assigned writers and texts on an historical time line.
 - 5. Students should be introduced to literary criticism (as opposed to book reviews) and recognize its prominent place in cultural and literary discussions.
 - 6. Instructors should welcome and support the diverse identities, backgrounds, and academic experience of our students as essential foundations for college community.

ENG233 - Introduction to the Novel

Overview

Subject **Academic Department** **School**
English English Liberal Arts

Course Description
Focuses on reading, discussion, and written analysis of novels in order to develop 1) skill in literary analysis and interpretation and 2) familiarity with the conventions of the novel. Students will read major novelists primarily from the nineteenth, twentieth, and twenty-first centuries. The titles chosen exemplify important developments and themes in prose fiction, each discussed as a statement of a particular author, a reflection of the times in which the work was written, and an enduring expression of human experience.

Course Pre-requisite(s)
ENG131 Introduction College Writing with a C grade or better (Note: A "C-" grade is not and is not accepted by some programs at HFC.)

Goals, Topics, and Objectives

- Core Course Topics**
- 1. Introduction to literary terms and methods of discussing literature.
 - 2. The role of the epic and the romance in the development of the novel.
 - 3. The role of the middle class in the development of the novel.
 - 4. The evolution of narrative point of view.
 - 5. The various genres of the novel, such as gothic, romantic, realistic, modernist, and postmodern.
 - 6. Literary purpose (e.g. didacticism or social purpose).

Formulate an interpretive thesis (as opposed to one which merely reports something factual about a literary text).

Compose an essay which either analyzes a literary text, for example by focusing on literary elements such as theme, character, setting, point of view, plot, imagery, metaphor, symbolism, etc., or analyzes the characteristic themes, features, and / or techniques of a given writer's works; or analyzes more than one literary text by comparing and contrasting works by more than one novelist.

Identify some of the key literary features that are essential to an introductory-level understanding of the novel.

Describe the typical characteristics of novelistic genres such as neoclassicism, romanticism, realism, naturalism, modernism, postmodernism, or magical realism as evidenced in a writer's works.

Explain a few of the key ways in which the novel evolved over time.

Explain the crucial importance and /or distinctive achievement of some of the key novelists.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
General:
Assessment may include (but need not be limited to) quizzes, class participation, essays, and exams. But assessment must include a minimum of 2,000 words of formal literary analysis.

- Specific:**
- 1. Students will write at least one out-of-class essay of literary analysis that is at least 1,200 words in length.
 - 2. Students will take at least one written exam which requires them to analyze literature; whether a single essay or multiple shorter responses, this expository component will count for at least half of the credit for that exam.

- General Course Requirements and Recommendations**
Requirements:
- 1. Students will read from four to seven novels.
 - 2. Students will read a selection of novels that represent a broad range of literary accomplishments in that genre.
 - 3. Students will regularly engage in thoughtful discussion of the assigned readings.
 - 4. Students will study (through assigned readings and / or classroom discussion) the cultural contexts from which the literature emerges.
 - 5. Students will study concepts that are essential to an introductory-level understanding of the novel, such as character, conflict, plot, setting, theme, symbol, point of view, metaphor, narrative style, epistolary novel, picaresque, stream-of-consciousness, motif, realism, romanticism, naturalism, magical realism, modernism, postmodernism, epiphany, structure, epic, romance, literary criticism, literary purpose (e.g. didacticism or social protest), irony, neoclassicism, romanticism, realism, naturalism, and magical realism.<

Goals, Topics, and Objectives

Core Course Topics
To be determined by the instructor who proposes a specific topic for this course.

Formulate an interpretive thesis (as opposed to one which merely reports something factual about a literary text).

Compose an essay which either analyzes a literary text, for example by focusing on literary elements such as theme, character, setting, point of view, plot, imagery, metaphor, symbolism, etc., or analyzes the characteristic themes, features, and / or techniques of a given writer's works, or analyzes more than one literary text by comparing and contrasting works by more than one writer of the period or genre named in the course title.

Identify some of the key literary terms that are essential to an introductory-level understanding of the literature named in the course title.

Identify features in a given text that would commonly be considered typical of the literature named in the course title.

Evaluate a few of the key ways in which the writers studied attempted to achieve the key goals of the literature named in the course title.

Explain the crucial importance and /or distinctive achievement of some of the key writers of the literature named in the course title.
Identify and analyze principal works and passages reflecting some of the pivotal themes of the literature named in the course title.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

General:

Assessment may include (but need not be limited to) quizzes, class participation, essays, and exams. But assessment must include a minimum of 2,000 words of formal literary analysis.

Specific:

- Students will write at least one out-of-class essay of literary analysis that is at least 1,200 words in length.
- Students will take at least one written exam which requires them to analyze literature; whether a single essay or multiple shorter responses, this expository component will count for at least half of the credit for that exam.

General Course Requirements and Recommendations

Required:

- Students will read substantial and representative selections from the works of major writers essential to an introductory-level understanding of the literature named in the course title.
- Students will read a substantial and representative selection of literary texts that explore the themes that are essential to an introductory-level understanding of the literature named in the course title.
- Students will regularly engage in thoughtful discussion of the assigned readings.
- Students will study (through assigned readings and / or classroom discussion) the cultural contexts from which the literature emerges.
- Students will study concepts that are essential to an introductory-level understanding of the literature named in the course title, as well as other standard literary terms that are necessary for the study of literature in this course, such as character, conflict, plot, setting, theme, symbol, point of view, metaphor, rhyme, meter, allusion, irony, autobiography, essay, short story, novel, lyric poetry, etc.

Recommended:

- Students should learn appropriate biographical information about assigned writers when such information could be helpful in understanding the literature.
- Students should take quizzes on assigned readings.
- Students should keep a journal in which they record their responses to assigned readings and class discussions.
- Students should learn to place the major assigned writers and texts on an historical time line.
- Students should satisfactorily read at least one short work or passage aloud, either in class or in the instructor's office.

ENG235 - American Literature Before 1900

Overview

Subject English	Academic Department English	School Liberal Arts
Course Description Focuses on reading, discussion, and written analysis of early American literature in order to understand its meaning and its relation to the development of American thought and tradition. Authors include Emerson, Poe, Hawthorne, Thoreau, Douglass, Melville, Dickinson, Whitman, and Twain.		
Course Pre-requisite(s) ENG131 Introduction College Writing with a C grade or better (Note: A C- grade is not transferable and is not accepted by some programs at HFC)		
Credit Hours 3		
Contact Hours 3		
Course Fee 15	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category Humanities and Fine Arts	Michigan Transfer Agreement (MTA) Category Category 5: Humanities and Fine Arts - Applied Degrees, Category 5: Humanities and Fine Arts - Transfer Degrees	
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics

- Introduction to literary terms and methods of discussing literature.
- Early American literature (optional): Pre-Columbian, Puritan, and / or Enlightenment / Revolutionary.
- Romanticism, transcendentalism, and reform (1820-1865).
- Realism and naturalism (1865-1900).

Formulate an interpretive thesis (as opposed to one which merely reports something factual about a literary text).
Compose an essay which either analyzes a literary text, for example by focusing on literary elements such as theme, character, setting, point of view, plot, imagery, metaphor, symbolism, etc., or analyzes the characteristic themes, features, and / or techniques of a given writer's works, or analyzes more than one literary text by comparing and contrasting works by more than one writer of the period or genre named in the course title.

Identify features in a given text from this period that would commonly be considered typical of American literature and would mark it as the expression of a distinctly American culture.
Evaluate a few of the key ways in which American writers of this period attempted to a) define or inaugurate a distinctively American literary tradition; b) incorporate aspects of American life (language, politics, frontier practices, etc.) into the literature; or c) produce texts that could bring American social and political life closer to the founding ideals of the republic.
Explain the crucial importance and / or distinctive achievement of some of the key American writers from this period.
Identify and analyze principal works and passages reflecting some of the pivotal themes in American culture.
Identify some of the key literary terms that are essential to an introductory-level understanding of American literature from this period.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

General:

Assessment may include (but need not be limited to) quizzes, class participation, essays, and exams. But assessment must include a minimum of 2,000 words of formal literary analysis.

Specific:

- Students will write at least one out-of-class essay of literary analysis that is at least 1,200 words in length.
- Students will take at least one written exam which requires them to analyze literature; whether a single essay or multiple shorter responses, this expository component will count for at least half of the credit for that exam.

General Course Requirements and Recommendations

Required:

- Students will read substantial and representative selections from the works of Emerson, Poe, Hawthorne, Thoreau, Melville, Douglass, Stowe, Whitman, Dickinson, Twain, Crane, and others.
- Students will read a substantial and representative selection of literary texts that explore the themes of nature, the frontier, racial identity, democracy, individualism, self-reliance, the burden of history, liberty, revolution, slavery, technology, immigration, urbanization, work, and violence.
- Students will regularly engage in thoughtful discussion of the assigned readings.
- Students will study (through assigned readings and / or classroom discussion) the cultural contexts from which the literature emerges.
- Students will study concepts that are essential to an introductory-level understanding of American literature before 1900, such as character, conflict, plot, setting, theme, symbol, point of view, metaphor, rhyme, meter, allusion, irony, autobiography, essay, short story, novel, lyric poetry, epic poetry, romanticism, transcendentalism, slave narrative, realism, naturalism, and local color.

Recommended:

- Students should learn appropriate biographical information about assigned writers when such information could be helpful in understanding the literature.
- Students should take quizzes on assigned readings.
- Students should keep a journal in which they record their responses to assigned readings and class discussions.
- Students should learn to place the major assigned writers and texts on an historical time line.
- Students should satisfactorily read at least one poem or passage aloud, either in class or in the instructor's office.

Course Fee 10	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category Humanities and Fine Arts	Michigan Transfer Agreement (MTA) Category Category 5: Humanities and Fine Arts - Applied Degrees, Category 5: Humanities and Fine Arts - Transfer Degrees	
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics

- Introduction to literary terms and methods of discussing literature.

2. Introduction to the autobiography and related genres.
3. The autobiography as a representation of American life.
4. Reading a selection of autobiographical texts representing the diverse populations and cultures that compose American society.
Formulate an interpretive thesis (as opposed to one which merely reports something factual about a literary text).
Compose an essay which either analyzes a literary text, for example by focusing on literary elements such as theme, character, setting, point of view, plot, imagery, metaphor, symbolism, etc., or analyzes the characteristic themes, features, and / or techniques of a given writer's works, or analyzes more than one literary text by comparing and contrasting works by more than one writer.
Identify a range of key terms that are essential to an introductory-level understanding of literature, particularly autobiographical literature.
Explain how the autobiography evolved over time, from the narrative to the memoir.
Explain the importance and /or distinctive achievement of key writers of autobiographical literature.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

General:

Assessment may include (but need not be limited to) quizzes, class participation, essays, and exams. But assessment must include a minimum of 2,000 words of formal literary analysis.

Specific:

- 1. Students will write at least one out-of-class essay of literary analysis that is at least 1,200 words in length.
- 2. Students will take at least one written exam which requires them to analyze literature; whether a single essay or multiple shorter responses, this expository component will count for at least half of the credit for that exam.

General Course Requirements and Recommendations

Required:

- 1. Students will read substantial and representative autobiographical selections from at least five influential figures in American society, such as Maya Angelou, James Baldwin, Mouroud Barghouti, William Bradford, Annie Dillard, Frederick Douglass, W.E.B. DuBois, Ralph Waldo Emerson, Benjamin Franklin, Harriet Jacobs, Thomas Jefferson, Maxine Hong Kingston, Thomas Paine, Sylvia Plath, Mary Rowlandson, Samuel Sewell, Era Bell Thompson, Henry David Thoreau, John Updike, Booker T. Washington, and Richard Wright.
- 2. Students will read a substantial and representative selection of literary texts that explore themes such as gender, social, economic, and political circumstances of two or more racial, ethnic, or religious groups that compose American society.
- 3. Students will regularly engage in thoughtful discussion of the assigned readings.
- 4. Students will study (through assigned readings and /or classroom discussion) the cultural contexts from which the literature emerges.
- 5. Students will study concepts that are essential to an introductory-level understanding of autobiographical literature, such as allegory, anecdote, antagonist/protagonist, biographical experience, captivity narrative, character, conflict, connotation, cultural studies, denotation, dialogue, diary, epistolary, fiction first-person narrator, gender criticism, genre, historical criticism, ideology, image, initiation story, irony, journal, memoir, motif, narrator, non-fiction novel, oral tradition, plot, satire, style, setting, symbol, theme, third-person narrator, and tone.

Recommended:

- 1. Students should learn appropriate biographical information about assigned writers when such information could be helpful in understanding the literature.
- 2. Students should take quizzes on assigned readings.
- 3. Students should keep a journal in which they record their responses to assigned readings and class discussions.
- 4. Students should learn to place the major assigned writers and texts on an historical time line.
- 5. Students should satisfactorily read at least one passage aloud, either in class or in the instructor's office.
- 6. Instructors should welcome and support the diverse identities, backgrounds, and academic experience of our students as essential foundations for college community.

Eligible for Credit for Prior College Level Learning (CPCLL)
No

Goals, Topics, and Objectives

Core Course Topics

- 1. Introduction to literary terms and methods of discussing literature.
- 2. Modern American fiction before 1945.
- 3. Modern American poetry before 1945.
- 4. Modern American drama.
- 5. American prose since 1945.
- 6. American poetry since 1945.

Formulate an interpretive thesis (as opposed to one which merely reports something factual about a literary text).
Compose an essay which either analyzes a literary text, for example by focusing on literary elements such as theme, character, setting, point of view, plot, imagery, metaphor, symbolism, etc., or analyzes the characteristic themes, features, and / or techniques of a given writer's works, or analyzes more than one literary text by comparing and contrasting works by more than one American writer of this period.
Identify some of the key literary terms that are essential to an introductory-level understanding of American literature since 1900.
Identify features in a given text that would commonly be considered typical of American literature since 1900. These features might include 1) literary experimentation, such as stream-of consciousness, use of multiple narrators, open-endedness, fragmentary structure, self-referentiality, mixture of high and low culture, etc.; and 2) political positions such as feminism, internationalism, multiculturalism, social protest, etc.
Explain the crucial importance and /or distinctive achievement of some of the key American poets, playwrights, and prose writers since 1900.
Identify and analyze principal works and passages reflecting some of the following pivotal themes: alienation, rural vs. urban life, materialism, race relations, identity, conformity/rebellion, technology, environment, and war.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

General:

Assessment may include (but need not be limited to) quizzes, class participation, essays, and exams. But assessment must include a minimum of 2,000 words of formal literary analysis.

Specific:

- 1. Students will write at least one out-of-class essay of literary analysis that is at least 1,200 words in length.
- 2. Students will take at least one written exam which requires them to analyze literature; whether a single essay or multiple shorter responses, this expository component will count for at least half of the credit for that exam.

General Course Requirements and Recommendations

Required:

- 1. Students will read substantial and representative selections from key American poets, playwrights, and prose writers since 1900, such as Theodore Dreiser, F. Scott Fitzgerald, William Faulkner, Arthur Miller, Tennessee Williams, Ralph Ellison, James Baldwin, Flannery O'Connor, Kurt Vonnegut, Saul Bellow, David Mamet, Louise Erdrich, Toni Morrison, and Sandra Cisneros, Robert Frost, Wallace Stevens, William Carlos Williams, Ezra Pound, T. S. Eliot, Langston Hughes, e. e. cummings, Gwendolyn Brooks, Allen Ginsberg, Robert Penn Warren, John Ashbery, Anne Sexton, Sylvia Plath, Gary Snyder, and Robert Pinsky.
- 2. Students will read a substantial and representative selection of literary texts that explore the following key themes: alienation, rural vs. urban life, materialism, race relations, identity, conformity/rebellion, technology, environment, and war.
- 3. Students will regularly engage in thoughtful discussion of the assigned readings.
- 4. Students will study (through assigned readings and / or classroom discussion) the cultural contexts from which the literature emerges.
- 5. Students will study concepts that are essential to an introductory-level understanding of American literature since 1900, such as character, conflict, plot, setting, theme, symbol, point of view, metaphor, rhyme, meter, allusion, irony, autobiography, essay, short story, novel, lyric poetry, realism, naturalism, Imagism, the Lost Generation, modernism, the Harlem Renaissance, the absurd, the Beats, postmodernism, the antihero, and multiculturalism.

Recommended:

- 1. Students should learn appropriate biographical information about assigned writers when such information could be helpful in understanding the literature.
- 2. Students should take quizzes on assigned readings.
- 3. Students should keep a journal in which they record their responses to assigned readings and class discussions.
- 4. Students should learn to place the major assigned writers and texts on an historical time line.

Goals, Topics, and Objectives

Core Course Topics

1. Introduction to literary terms and methods of discussing literature.
2. A brief history of Renaissance England and the English language.
3. Introduction to Shakespeare's stage.
4. Analysis and discussion of various plays by Shakespeare, including discussion of the genres (tragedies, comedies, and histories). Plays may be addressed chronologically or grouped by genre.
5. Introduction to Shakespeare's sonnets.

Formulate an interpretive thesis (as opposed to one which merely reports something factual about a literary text).
Compose an essay which either analyzes a Shakespearean text, for example by focusing on literary elements such as theme, character, setting, point of view, plot, imagery, metaphor, symbolism, etc., or analyzes the characteristic themes, features, and / or techniques of Shakespeare's works, or analyzes more than one Shakespearean text by comparing and contrasting them.
Identify some of the key literary terms that are essential to an introductory-level understanding of Shakespeare and English Renaissance literature.
Identify features in a given text that would commonly be considered typical of Shakespeare and English Renaissance literature..
Evaluate some political or artistic goals of Shakespeare's plays.
Explain Shakespeare's work in a historical or literary context.
Identify and analyze principal works and passages reflecting some of the Shakespeare's pivotal themes.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

General:

Assessment may include (but need not be limited to) quizzes, class participation, essays, and exams. But assessment must include a minimum of 2,000 words of formal literary analysis.

Specific:

1. Students will write at least one out-of-class essay of literary analysis that is at least 1,200 words in length.
2. Students will take at least one written exam which requires them to analyze literature; whether a single essay or multiple shorter responses, this expository component will count for at least half of the credit for that exam.

General Course Requirements and Recommendations

Required:

1. Students will read substantial and representative selections from the works of Shakespeare.
2. Students will read a substantial and representative selection of Shakespearean texts that explore many of Shakespeare's recurring themes, such as revenge, kingship, gender roles, social order and disorder, treatment of outsiders, ambition, human frailty, death, regeneration, mutability, the power and limitations of language, beauty, art/artifice, and nature.
3. Students will regularly engage in thoughtful discussion of the assigned readings.
4. Students will study (through assigned readings and / or classroom discussion) the cultural contexts from which the literature emerges.
5. Students will study concepts that are essential to an introductory-level understanding of Shakespeare, including such things as character, conflict, setting, theme, symbol, point of view, metaphor, rhyme, meter, allusion, irony, comedy, tragedy, history, romantic comedy, sonnet, conceit, iambic pentameter, soliloquy, groundlings, plot, conflict, climax, resolution, exposition, protagonist, antagonist, foreshadowing, and catharsis.

Recommended:

1. Students should learn appropriate biographical information about assigned writers when such information could be helpful in understanding the literature.
2. Students should take quizzes on assigned readings.
3. Students should keep a journal in which they record their responses to assigned readings and class discussions.
4. Students should learn to place the major assigned texts on an historical time line.
5. Students should satisfactorily read at least one poem or scene aloud, either in class or in the instructor's office.
6. Instructors should welcome and support the diverse identities, backgrounds, and academic experience of our students as essential foundations for college community.

ENG243 - Women's Literature

Overview

Subject	Academic Department	School
English	English	Liberal Arts
Course Description		
Focuses on the reading, discussion, and written analysis of literature by (or perhaps about) women from the Middle Ages to the present. The materials include drama, poetry, novels, short stories, diaries, memoirs, letters, and essays. Students will have the opportunity to explore 1) the interaction of dominant and marginal cultures as reflected in literature and 2) the relationship of the students' own experiences to other women's lives as portrayed in literature.		
Course Pre-requisite(s)		
ENG131 Introduction College Writing with a C grade or better (Note: A "C-" grade is not transferable and is not accepted by some programs at HFC.)		
Credit Hours		
3		

Contact Hours

General Education Category	Michigan Transfer Agreement (MTA) Category
Humanities and Fine Arts	Category 5: Humanities and Fine Arts - Applied Degrees, Category 5: Humanities and Fine Arts - Transfer Degrees
Eligible for Credit for Prior College Level Learning (CPCLL)	
No	

Goals, Topics, and Objectives

Core Course Topics

1. Introduction to literary terms and methods of discussing literature.
2. Introduction to literary movements and historical eras.
3. Introduction to feminism and feminist criticism.
4. Introduction to concepts of genre, publication, and authorship.
5. Introduction to aesthetic and cultural dimensions of women's literature.
6. Reading a wide and representative selection of women's literature.

Formulate an interpretive thesis (as opposed to one which merely reports something factual about a literary text).
Compose an essay which either analyzes a literary text, for example by focusing on literary elements such as theme, character, setting, point of view, plot, imagery, metaphor, symbolism, etc., or analyzes the characteristic themes, features, and / or techniques of a given writer's works, or analyzes more than one literary text by comparing and contrasting works by more than one woman writer from a different historical period, social class, or race.
Identify a range of key literary terms that are essential to an introductory-level understanding of literature by women.
Explain the crucial importance and/or distinctive achievement of some of the key women writers.
Identify and analyze principal works and passages reflecting some of the key themes reflected in literature by women.
Discuss the specific and peculiar functions of some of the literary genres as employed by women writers.
Practice methods of literary criticism and cultural theory within the study of women's literature.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

General: Assessment may include (but need not be limited to) quizzes, class participation, essays, and exams. But assessment must include a minimum of 2,000 words of formal literary analysis.

Specific:

1. Students will write at least one out-of-class essay of literary analysis that is at least 1,200 words in length.
2. Students will take at least one written exam which requires them to analyze literature; whether a single essay or multiple shorter responses, this expository component will count for at least half of the credit for that exam.

General Course Requirements and Recommendations

Required

1. Students will read substantial and representative selections of literature from various genres by women from the Middle Ages to the present.
2. Students will read a substantial and representative selection of literary texts that explore the following themes: femininity, feminism, gender roles, the Eve/Mary dichotomy, the cult of the Virgin, the cult of domesticity, the *femme fatale*, madness, marriage, women's suffrage, sexual orientation, oppression, conformity/rebellion, and marginalization.
3. Students will regularly engage in thoughtful discussion of the assigned readings.
4. Students will study (through assigned readings and / or classroom discussion) the cultural contexts from which the literature emerges.

5. Students will study concepts that are essential to an introductory-level understanding of literature by women writers, such as character, conflict, plot, setting, theme, symbol, point of view, metaphor, rhyme, meter, allusion, irony, autobiography, essay, short story, novel, lyric poetry, journal, diary, memoir, and epistle.	
Recommended:	
1. Students should learn appropriate biographical information about assigned writers when such information could be helpful in understanding the literature.	
2. Students should take quizzes on assigned readings.	
3. Students should keep a journal in which they record their responses to assigned readings and class discussions.	
4. Students should learn to place the major assigned writers and texts on an historical time line.	
5. Students should satisfactorily read at least one poem or passage aloud, either in class or in the instructor's office.

ENG245 - The Bible as Literature

Overview

Subject	Academic Department	School
English	English	Liberal Arts
Course Description		
Focuses on reading, discussion, and written analysis of major literary selections from the Hebrew and Christian bibles. The Bible will be studied not as a religious document but as literary text and a source of ideas and styles reflected in various works of world literature.		
Course Pre-requisite(s)		
ENG131 Introduction College Writing with a C grade or better (Note: A "C-" grade is not transferable and is not accepted by some programs at HFC.)		

Goals, Topics, and Objectives

Core Course Topics 1. Introduction to literary terms and methods of discussing literature. 2. Biblical allusion and the influence of the Hebrew and Christian bibles on world literature. 3. The Hebrew bible a. Genesis, Gilgamesh; b. Exodus, Numbers, Deuteronomy; c. Psalms, Song of Songs; d. Joshua, Judges, Samuel, Kings; e. Ecclesiastes, Proverbs; f. Jeremiah, Ezekiel, Isaiah, Daniel; g. Jonah, Ruth, Esther; h. Job. 4. The Christian bible a. The four Gospels, b. The letters of Paul, c. The Book of Revelations.	Formulate an interpretive thesis (as opposed to one which merely reports something factual about a biblical text).
Compose an essay which either analyzes a biblical text, for example by focusing on literary elements such as theme, character, setting, point of view, plot, imagery, metaphor, symbolism, etc., or analyzes the characteristic themes, features, and / or techniques of a given biblical writer's works, or analyzes more than one biblical text text by comparing and contrasting them.	
Identify major figures, settings, and artistic devices of the Hebrew and Christian bibles .	
Explain the history of canon formation, textual scholarship, translation into English, and interpretation of the Hebrew and Christian bibles.	
Analyze the impact of the Hebrew and Christian bibles on world literature, history, and culture.	

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement General: Assessment may include (but need not be limited to) quizzes, class participation, essays, and exams. But assessment must include a minimum of 2,000 words of formal literary analysis. Specific: 1. Students will write at least one out-of-class essay of literary analysis that is at least 1,200 words in length. 2. Students will take at least one written exam which requires them to analyze literature; whether a single essay or multiple shorter responses, this expository component will count for at least half of the credit for that exam.	
General Course Requirements and Recommendations Required: 1. Students will read substantial and representative selections from the Hebrew and Christian bibles.	

2. Students will read a substantial and representative selection of biblical passages that explore themes such as good, evil, love, war, family, wisdom, sex, death, faith, despair, power, justice, success, knowledge, deception, beauty, gender, ethnicity, race, and class.	
3. Students will read at least three literary passages that centrally employ a biblical allusion.	
4. Students will regularly engage in thoughtful discussion of the assigned readings.	
5. Students will study terms that are essential to an introductory-level understanding of biblical literature, such as testament, literature, genre, myth, allusion, epic, plot, character, setting, theme, allegory, simile, metaphor, irony, proverb, prophecy, dramatic narrative, epistle, parable, midrash, apocalypse, millennium, exegesis, Pentateuch, Apocrypha, Synoptics, and Wisdom.	
6. Students will study (through assigned readings and/or classroom discussion) the cultural contexts from which biblical literature emerges.	
Recommended:	
1. Students should learn appropriate information about methods for determining the authorship of various biblical texts.	
2. Students should take quizzes on assigned readings.	
3. Students should keep a journal in which they record their responses to assigned readings and class discussions.	
4. Students should learn to place the major assigned writers and texts on an historical time line.	
5. Students should satisfactorily read at least one biblical passage aloud, either in class or in the instructor's office.	
6. Instructors should welcome and support the diverse identities, backgrounds, and academic experience of our students as essential foundations for college community.

ENG246 - Introduction to Children's Literature

Overview

Subject English	Academic Department English	School Liberal Arts
Course Description Introduces the forms, themes, history, and uses of literature written for children ages three to twelve. Students learn to evaluate and select literature critically and understand its use in preschool, elementary, and middle school classrooms. Genres to be studied include traditional fiction/folktales, contemporary realistic fiction, picture books, fantasy/science fiction, historical fiction, biography, nonfiction, and poetry/verse.		
Course Pre-requisite(s) ENG132 College Writing and Research with a C grade or better (Note: A C- grade is not transferable and is not accepted by some programs at HFC.)		

Goals, Topics, and Objectives

Core Course Topics 1. Introduction to literary terms and methods of discussing literature. 2. The social construction of childhood and the history of children's literature. 3. Traditional literature: folk tales, myths, legends, fables, and fairy tales. 4. Picture books. 5. Poetry and verse. 6. Contemporary realism. 7. Fantasy / science fiction. 8. Historical fiction. 9. Nonfiction: biography / autobiography, history, travel, and science.	Formulate an interpretive thesis (as opposed to one which merely reports something factual about a literary text).
Compose an essay which either analyzes a literary text, for example by focusing on literary elements such as theme, character, setting, point of view, plot, imagery, metaphor, symbolism, etc., or analyzes the characteristic themes, features, and / or techniques of a given writer's works, or analyzes more than one literary text by comparing and contrasting works by more than one children's writer.	
Identify some of the key literary terms that are essential to an introductory-level understanding of children's literature.	
Estimate the reading level of a given text by considering the appropriateness of the content and the complexity of the language.	
Explain a few of the key ways in which children's writers have attempted to balance didacticism and pleasure.	
Explain the crucial importance and/or distinctive achievement of some key writers in the history of children's literature.	
Identify and analyze principal works and passages reflecting some of the pivotal topics in children's literature.	

Explain the ways in which a children's book may be censored and / or explain some of the common arguments for and against the censorship of children's books.
Locate and employ professional reviews and / or literary criticism about children's literature.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

General:

Assessment may include (but need not be limited to) quizzes, class participation, essays, and exams. But assessment must include a minimum of 2,000 words of formal literary analysis.

Specific:

- Students will write at least one out-of-class essay of literary analysis that is at least 1,200 words in length.
- Students will take at least one written exam which requires them to analyze literature; whether a single essay or multiple shorter responses, this expository component will count for at least half of the credit for that exam.

General Course Requirements and Recommendations

Required:

- Students will read substantial or representative selections from the works of at least five writers recognized as having made important contributions to the field of children's literature.
- Students will read a substantial or representative selection of literary texts that explore the topics of peer relations, family relations, personal loss (through death, divorce, etc.), overcoming obstacles, and social difference (race / ethnicity, class, gender, and disability).
- Students will regularly engage in thoughtful discussion of the assigned readings.
- Students will study (through assigned readings and / or classroom discussion) the cultural and historical contexts from which the literature emerges.
- Students will study concepts that are essential to an introductory-level understanding of children's literature, such as character, setting, perspective, metaphor, tone, theme, style, structure, layout (in picture books), rhyme, rhythm, image, censorship, human development (cognitive and/or moral), picture book, chapter book, realistic fiction, fantasy, historical fiction, verse, nursery rhyme, folktale, fairytale, fable, myth, and didacticism.

Recommended:

- Students should learn appropriate biographical information about assigned writers when such information could be helpful in understanding the literature.
- Students should take quizzes on assigned readings.
- Students should keep a journal in which they record their responses to assigned readings and class discussions.
- Students should learn to place the major assigned writers and texts on an historical timeline.
- Students should satisfactorily read at least one poem or passage aloud, either in class or in the instructor's office.
- Instructors should welcome and support the diverse identities, backgrounds, and academic experience of our students as essential foundations for college community.

ENG248 - African American Literature

Overview

Subject English	Academic Department English	School Liberal Arts
Course Description Focuses on reading, discussion, and written analysis of African American Literature from its eighteenth-century beginnings to the modern era, emphasizing representative texts in all genres, including poetry, slave narrative, fiction, essay, and drama.		
Course Pre-requisite(s) ENG131 Introduction College Writing with a C grade or better (Note: A "C-" grade is not transferable and is not accepted by some programs at HFC.)		
Credit Hours 3		
Contact Hours 3		
Course Fee 10	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category Humanities and Fine Arts	Michigan Transfer Agreement (MTA) Category Category 5: Humanities and Fine Arts - Applied Degrees, Category 5: Humanities and Fine Arts - Transfer Degrees	
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics

- Introduction to literary terms and methods of discussing literature.
- The Vernacular Tradition: spirituals; secular songs, ballads, and rhymes; gospel; folk tales; sermons; blues; jazz; and rap.
- Slave Narrative/Antebellum writing: Phillis Wheatley, David Walker, Olaudah Equiano, Frederick Douglass, William Wells Brown, Harriet Jacobs, and Harriet Wilson.
- Reconstruction/Post-Reconstruction literature: Booker T. Washington, Charles Chesnutt, Pauline Hopkins, W. E. B. DuBois, and Paul Laurence Dunbar.
- Harlem Renaissance literature: Alain Locke, Claude McKay, Zora Neale Hurston, Langston Hughes, Nella Larsen, Jean Toomer, and Countee Cullen.
- Realism, Naturalism, and Modernism: Richard Wright, Ann Petry, Ralph Ellison, Gwendolyn Brooks, James Baldwin, and Lorraine Hansberry.
- The Black Arts Movement: Malcolm X, Martin Luther King, Amiri Baraka, Sonia Sanchez, Haki Madhubuti, and Nikki Giovanni.
- Literature since 1970: Maya Angelou, Toni Morrison, Ernest Gaines, Ishmael Reed, John Edgar Wideman, Alice Walker, August Wilson, Gloria Naylor, Rita Dove, and Walter Mosley.

Formulate an interpretive thesis (as opposed to one which merely reports something factual about a literary text).
Compose an essay which either analyzes a literary text, for example by focusing on literary elements such as theme, character, setting, point of view, plot, imagery, metaphor, symbolism, etc., or analyzes the characteristic themes, features, and / or techniques of a given writer's works, or analyzes more than one literary text by comparing and contrasting works by more than one writer of the period or genre named in the course title.
Identify some of the key literary terms essential to an introductory-level understanding of the African American vernacular and literary traditions.
Identify features in a given text that would be considered typical of the African American vernacular and literary traditions.
Evaluate a few of the key ways African American writers have employed literature in the quest for black humanity, freedom, and literacy in the eighteenth and nineteenth centuries and for social equality, civil rights, integration, and educational / economic opportunity in the twentieth and twenty-first centuries.
Explain the crucial importance and/or distinctive achievement of major African American authors.
Identify and analyze principal works and passages reflecting some of the pivotal themes in African American literature.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

General:

Assessment may include (but need not be limited to) quizzes, class participation, essays, and exams. But assessment must include a minimum of 2,000 words of formal literary analysis.

Specific:

- Students will write at least one out-of-class essay of literary analysis that is at least 1,200 words in length.
- Students will take at least one written exam which requires them to analyze literature; whether a single essay or multiple shorter responses, this expository component will count for at least half of the credit for that exam.

General Course Requirements and Recommendations

Required:

- Students will read substantial and representative selections from the works of Phillis Wheatley, Frederick Douglass, W. E. B. DuBois, Langston Hughes, Zora Neale Hurston, Richard Wright, Ralph Ellison, James Baldwin, Lorraine Hansberry, Gwendolyn Brooks, Toni Morrison, Alice Walker, Ernest Gaines, and Walter Mosley.
- Students will read a substantial and representative selection of texts in the African American literary tradition that explore many of the following themes: the quests for humanity, freedom, literacy, social integration, and civil rights; racial uplift during Jim Crow era; quest for the American Dream / economic inclusion; importance of the black extended/surrogate family; significance of domestic sphere/female bond in black women's experience; sexual exploitation and victimization; effects of migration/urbanization; resistance to black male invisibility and emasculation; effects Western aesthetic on black psyche; reversals of racist mythology.
- Students will regularly engage in thoughtful discussion of the assigned readings.
- Students will study (through assigned readings and / or classroom discussion) the cultural contexts from which the literature emerges.
- Students will study concepts that are essential to an introductory-level understanding of African American literature, including literary elements such as characterization, plot, setting, theme, symbolism, allusion, figurative language; vernacular and literary genres such as gospel, blues, folk tales, ballads, autobiography, short story, essay, drama, novel, literary criticism, and poetic forms; and literary movements such as romanticism, realism, naturalism, modernism, and black nationalism.

Recommended:

- Students should learn appropriate biographical information about assigned writers when such information could be helpful in understanding the literature.
- Students should take quizzes on assigned readings.
- Students should keep a journal in which they record their responses to assigned readings and class discussions.
- Students should learn to place the major assigned writers and texts on an historical time line.

ENGR121 - Engineering Design and 3D Printing

Overview

Subject Pre-Engineering	Academic Department Pre-Engineering	School Science, Tech, Engr & Math
Course Description This course provides an introduction to the basic principles of engineering design, computer aided design (CAD) and additive manufacturing, with a focus on creating new designs to solve engineering problems using 3D printing technologies. Students will use industry standard 3D modeling software to create virtual prototypes of mechanical assemblies and gain hands-on experience with 3D printing through laboratory experiments and group design projects. Other topics include creating orthographic drawings, auxiliaries, sectioning, conventions, and dimensioning.		
Course Pre-requisite(s) MATH100 Basic Tech Mathematics -level or higher, or high school algebra, or eligible to take gateway MATH courses at HFC.		
Credit Hours 3		
Contact Hours 4		

Course Fee 30	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Core Course Topics
1. Introduction to design and 3D printing
◦ Define standards and conventions as applied to technical drawings
◦ Describe design processes related to problem solving in engineering
◦ Identify the standard dimensioning and tolerancing practices for mechanical drawings
◦ Describe additive manufacturing processes for building mechanical parts
2. Create 3D objects
◦ Create, edit and update sketches in different planes to create 3D objects
◦ Create 3D objects in 3D solid modeling environment using methods such as extruding, splitting, etc.
◦ Optimize virtual parts (weight, volume and surface finish optimization)
3. Orthographic, section, and auxiliary views of a part
◦ Create orthographic drawings from 3D models
▪ Apply the concept of cutting plans to create section views and sectioned 3D CAD models
▪ Apply section theory to computer models when designing
▪ Create auxiliary drawings from 3D models
4. 3D printing
◦ Export 3D designed files from 3D modeling environment for 3D printing
◦ Adjust the infill density and printing accuracy to minimize the filament cost
◦ Know the major components in DIY (Do-It-Yourself) 3D printers and be able to calibrate and tune them
◦ Operate open-source 3D printers
5. Engineering design process
◦ Identify a problem statement for their term project
◦ Work in teams to design and 3D print a prototype to address a problem
◦ Communicate the project outcomes effectively using visual and written means

Define standards and conventions as applied to technical drawings.
Describe design processes related to problem solving in engineering.
Identify the standard dimensioning and tolerancing practices for mechanical drawings.
Describe additive manufacturing processes for building mechanical parts.
Create, edit and update sketches in different planes to create 3D objects.
Create 3D objects in 3D solid modeling environment using methods such as extruding, splitting, etc.
Optimize virtual parts (weight, volume and surface finish optimization).
Create orthographic drawings from 3D models.
Apply the concept of cutting plans to create section views and sectioned 3D CAD models.
Apply section theory to computer models when designing.
Create auxiliary drawings from 3D models.
Export 3D designed files from 3D modeling environment for 3D printing.
Adjust the infill density and printing accuracy to minimize the filament cost.
Know the major components in DIY (Do-It-Yourself) 3D printers and be able to calibrate and tune them.
Operate open-source 3D printers.
Identify a problem statement for their term project.
Work in teams to design and 3D print a prototype to address a problem.

Communicate the project outcomes effectively using visual and written means.
--

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
• A series of assignments for 3D object designs in 3D modeling software	
• Term project for design and 3D printing to address a real-world problem	
• Class presentation and written reports	
• Tests

ENGR125 - Introduction Computation for Engineers

Overview

Subject Pre-Engineering	Academic Department Pre-Engineering	School Science, Tech, Engr & Math
Course Description	Use of computational tools, such as Excel, Python, and MATLAB, to solve engineering problems. Topics include data analysis, data visualization, algorithm development, programming, computational analysis, and introductory problem solving in engineering.	
Course Pre-requisite(s)	MATH100 Basic Tech Mathematics; level or higher, or high school algebra, or eligible to take gateway MATH courses at HFC.	
Credit Hours	3	

Contact Hours

4	
Course Fee 30	Miscellaneous Department Fee 0
Academic Level Undergraduate	
General Education Category Computer Technology	
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Core Course Topics
1. Introduction to programming
◦ Describe algorithm, sequencing, and order in programming
◦ Write programming syntax to solve a stepwise simple problem
◦ Recognize common programming errors and develop strategies for debugging code
◦ Define types of data, including numeric and strings, and list types of variables
2. Data analysis
◦ Describe introductory statistics functions such as frequency, summarizing, relations, and regression lines
◦ Write functions in Excel to analyze data such as average, sum, texts from dates, etc.
◦ Import datasets to Python and clean the data
◦ Create data frame manipulation and summarize the data in Python
◦ Build simple machine learning regression models in Python
◦ Create and manipulate matrices and vectors in MATLAB
◦ Import data to MATLAB, manipulate and summarize data, and export results
◦ Write syntax for conditional statements and loops to summarize and categorize data
3. Data visualization
◦ Plot 2D data using Excel and select appropriate formatting for charts
◦ Write syntax in MATLAB to create 2D and 3D plots
◦ Create interactive plots to evaluate data with respect to different categories or changes in inputs
4. Problem solving using numerical methods
◦ Set up mathematical equations to find a solution for a simple mechanical/electrical system
◦ Apply "goal seek", "what if analysis" and "solver" in Excel to solve a system of mathematical equations
◦ Solve problems involving linear equations, root finding, curve fitting, error properties, and numerical precision
◦ Create integrated functions in MATLAB to find solutions for mathematical equations
5. Engineering team solutions
◦ Work in teams to formulate a complex engineering problem into a system of mathematical equations
◦ Create a set of functions in MATLAB to provide a solution for a complex engineering problem
◦ Communicate project outcomes effectively using visual and written means

Describe algorithm, sequencing, and order in programming.
Write programming syntax to solve a stepwise simple problem.
Recognize common programming errors and develop strategies for debugging code.
Define types of data, including numeric and strings, and list types of variables.

Describe introductory statistics functions such as frequency, summarizing, relations, and regression lines.
Write functions in Excel to analyze data such as average, sum, texts from dates, etc.
Import datasets to Python and clean the data.
Create data frame manipulation and summarize the data in Python.
Build simple machine learning regression models in Python.
Create and manipulate matrices and vectors in MATLAB.
Import data to MATLAB, manipulate and summarize data, and export results.
Write syntax for conditional statements and loops to summarize and categorize data.
Plot 2D data using Excel and select appropriate formatting for charts.
Write syntax in MATLAB to create 2D and 3D plots.
Create interactive plots to evaluate data with respect to different categories or changes in inputs.
Set up mathematical equations to find a solution for a simple mechanical/electrical system.
Apply "goal seek", "what if analysis" and "solver" in Excel to solve a system of mathematical equations.
Solve problems involving linear equations, root finding, curve fitting, error properties, and numerical precision.
Create integrated functions in MATLAB to find solutions for mathematical equations.
Work in teams to formulate a complex engineering problem into a system of mathematical equations.
Create a set of functions in MATLAB to provide a solution for a complex engineering problem.
Communicate project outcomes effectively using visual and written means.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

- A series of assignments for manipulation of data in Excel, programming in MATLAB, and reporting
- Term project to find a solution using numerical methods for a real-world problem
- Class presentation and written reports
- Tests

General Course Requirements and Recommendations

For this course to satisfy the Computer Technology General Education Requirement, it is required to cover the following items in addition to the core topics listed above:

- Computer computation capacity (computer processor and required memory for computation), cloud computation, input and output, and storage devices.
- File management tasks in various locations (e.g. cloud and desktop) that include finding (e.g. using search techniques), organizing (e.g. using/creating folder structures on various drives), saving, zipping, and printing files.
- Submission of files through an online course platform, contacting instructors, and attaching files.
- Use of search engines to proficiently locate reliable information on the internet, search internet for instructions on how to debug MATLAB and Python codes.
- Create a term project report (e.g. edit, navigate, copy/paste, find/replace, headers/footers, insert pages, insert illustrations, spell check, tables, lists, etc.), format (e.g. font styles, margins, alignment, etc.), and configure (e.g. print/save to different formats, use templates) a document.
- Create various presentations to illustrate project and lab work outcomes (e.g. slide layouts, adding multimedia, animations, transitions, table/charts, etc.), view (e.g. slide sorter, notes page, etc.) and configure (e.g. print/save to different formats, use templates) a slideshow.

ENGR130 - Introduction to Engineering

Overview

Subject Pre-Engineering	Academic Department Pre-Engineering	School Science, Tech, Engr & Math
Course Description Introduces the engineering profession, problem solving fundamentals, applications, fields of study, career paths, teamwork skills, and ethics necessary in the engineering profession. Course work includes projects that deal with real world application of these aspects of engineering as related to engineering problems.		
Course Pre-requisite(s) <u>MATH100 Basic Tech Mathematics</u> level or higher, or high school algebra, or eligible to take gateway MATH courses at HFC.		
Credit Hours 3		
Contact Hours 3		
Course Fee 20	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category Natural Sciences	Michigan Transfer Agreement (MTA) Category Category 6: Natural Sciences - Applied Degrees, Category 6: Natural Sciences - Transfer Degrees - Lecture Only	
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Portfolio Review, Interview	

A student may be granted credit for this course through credit for prior college-level learning if s/he had work experience in a manufacturing or engineering environment and has worked with a team in design or manufacturing of prototypes. A portfolio of engineering-related projects showing the contribution of student is required. Student needs to submit a resume, and will be interviewed with an engineering instructor.

Interview Details

A student may be granted credit for this course through credit for prior college-level learning if s/he had work experience in a manufacturing or engineering environment and has worked with a team in design or manufacturing of prototypes. An interview with student is necessary to assess his/her engineering-related experience.

Goals, Topics, and Objectives

Course Goals

The course is intended to introduce the engineering profession to undergraduate students providing a general understanding of what is involved in the field, including problem solving fundamentals, applications, fields of study, career paths, teamwork skills and ethics.

Core Course Topics

- Engineering majors and career paths
 - Describe the different disciplines of engineering.
 - Differentiate engineering science from engineering technology.
 - List possible career paths that engineers follow.
 - Search for a job and the process to apply.
- Engineering education pathway
 - Describe a transfer program and a career program.
 - Describe the process to transfer to an engineering program.
- Engineering ethics and professional engineers
 - Describe the opportunities of Professional Engineering certification.
 - Discuss the importance of making ethical decisions in an engineering career.
- Engineering problem solving
 - Describe components of a basic electrical circuit.
 - Apply Excel and PowerPoint skills to data analysis and presentation.
 - Be able to find resultant of two vectors using a software or by hand.
 - Sketch a basic part by hand or by software.
- Dimensions, Units, and Unit Conversion
 - Describe the proper use of units and unit conversion.
- An overview of trigonometry and vectors
 - Describe the trigonometric ratio of a right triangle.
 - Add two vectors graphically.
- Engineering Design Process and its application to projects
 - List primary steps of an engineering design process.
 - Search patents and articles online.
 - Write a problem statement for their projects.
 - List design specifications for a basic project.
 - Apply teamwork skills in accomplishing a term project.
 - Apply skills learned in the course to a team-based design project.
 - Communicate project results via oral presentations.

Describe the different disciplines of engineering.
Differentiate engineering science from engineering technology.
List possible career paths that engineers follow.
Search for a job and the process to apply.
Describe a transfer program and a career program.
Describe the process to transfer to an engineering program.

Describe the opportunities of Professional Engineering certification.
Discuss the importance of making ethical decisions in an engineering career.
Describe components of a basic electrical circuit.
Apply Excel and PowerPoint skills to data analysis and presentation.
Be able to find resultant of two vectors using a software or by hand.
Sketch a basic part by hand or by software.
Describe the proper use of units and unit conversion.
Describe the trigonometric ratio of a right triangle.
Add two vectors graphically.
List primary steps of an engineering design process.
Search patents and articles online.
Write a problem statement for their projects.
List design specifications for a basic project.
Apply teamwork skills in accomplishing a term project.
Apply skills learned in the course to a team-based design project.
Communicate project results via oral presentations.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
May include:

- 1. Pre and post-course assessments and surveys
- 2. Problem sets
- 3. Exams
- 4. Team design project
- 5. Individual writing projects
- 6. Individual presentations
- 7. Group presentations

ENGR201 - Science of Materials

Overview

Subject Pre-Engineering	Academic Department Pre-Engineering	School Science, Tech, Engr & Math
----------------------------	--	--------------------------------------

Course Description
An introductory course in engineering materials. Particular emphasis is given to the correlation of material properties and internal structures; structure of materials; stress- strain curves; temperature effects; phase diagrams; ferrous and non-ferrous alloys; ceramics; polymers; composites; electrical, magnetic, and optical properties; corrosion and failure.

Course Pre-requisite(s)
[CHEM111 Chem Skills Pre-Professional](#) or [CHEM131 Principles of Chemistry](#) or [CHEM141 Prin Gen & Inorgan Chem I](#)

Credit Hours

No

Goals, Topics, and Objectives

Core Course Topics

1. Introduction to science of materials
 - Describe the concept of process-structure-property relationships.
 - List the major classifications of materials.
2. Atomic structure and interatomic bonding
 - Describe the different types of atomic structures.
 - Categorize bonds as ionic, covalent, or metallic.
 - Explain how the atomic structure and type of bond determines the properties of a material.
3. Structure of Crystalline Solids (metals and ceramics)
 - Describe various basic crystal structures.
 - Explain how the crystal structure affect the densities.
 - Describe crystallographic directions and planes.
4. Defects and Imperfections
 - Describe different types of defects.
 - Identify imperfections such as dislocations and vacancies in metals.
 - Demonstrate imperfections effect the properties of the material.
5. Diffusion mechanisms
 - Describe different types of diffusion.
 - List factors that influence diffusion.
6. Mechanical Properties
 - Apply the modulus of elasticity to graph elastic deformations by incorporating Hooke's Law.
 - Create plots of stress vs. strain diagrams from the measurement of the tensile strength of materials.
 - Describe elastic and plastic deformations.
7. Dislocations, slip, plastic deformation, and creep
 - Explain how dislocations and slip relate to deformations and creep.
 - Explain recovery, recrystallization and grain growth.
8. Fracture and fatigue
 - Apply the principles of fracture mechanics to predict materials probability of fatigue and failure.
 - Describe fracture concepts (e.g. ductility, brittleness, microstructures).
9. Phase Diagrams and phase transformations
 - Interpret phase diagrams of binary and multiphase alloys.
 - Calculate percentages of alloy material at a specific temperatures.
 - Evaluate the different phases and microstructures of ferrous metals from the phase diagrams.
 - Interpret transformation diagrams as it applies to carbon steel.
10. Manufacturing processes
 - Be familiar with common manufacturing processes for metals, ceramics, and polymers; their effects on structure; and their impact on sustainability.
11. Thermal processing of metal alloys
 - Understand how annealing, normalizing, quenching and precipitation hardening effect the hardness of materials.
12. Polymer Structures
 - Understand the mechanisms of polymerization.
13. Corrosion and degradation of Materials
 - Describe the process of degradation of metals and polymers.

Describe the concept of process-structure-property relationships.
List the major classifications of materials.
Describe the different types of atomic structures.
Categorize bonds as ionic, covalent, or metallic.
Explain how the atomic structure and type of bond determines the properties of a material.
Describe various basic crystal structures.
Explain how the crystal structure affect the densities.
Describe crystallographic directions and planes.
Describe different types of defects.
Identify imperfections such as dislocations and vacancies in metals.
Demonstrate imperfections effect the properties of the material.
Describe different types of diffusion.
List factors that influence diffusion.

Apply the modulus of elasticity to graph elastic deformations by incorporating Hooke's Law.
Create plots of stress vs. strain diagrams from the measurement of the tensile strength of materials.
Describe elastic and plastic deformations.
Explain how dislocations and slip relate to deformations and creep.
Explain recovery, recrystallization and grain growth.
Apply the principles of fracture mechanics to predict materials probability of fatigue and failure.
Describe fracture concepts (e.g. ductility, brittleness, microstructures).
Interpret phase diagrams of binary and multiphase alloys.
Calculate percentages of alloy material at a specific temperatures.
Evaluate the different phases and microstructures of ferrous metals from the phase diagrams.
Interpret transformation diagrams as it applies to carbon steel.
Be familiar with common manufacturing processes for metals, ceramics, and polymers; their effects on structure; and their impact on sustainability.
Understand how annealing, normalizing, quenching and precipitation hardening effect the hardness of materials.
Understand the mechanisms of polymerization.
Describe the process of degradation of metals and polymers.

ENGR232 - Statics

Overview

Subject Pre-Engineering	Academic Department Pre-Engineering	School Science, Tech, Engr & Math
Course Description Basic concepts and principles of statics with applications to Newton's Laws of Motion to engineering problems. Forces, moments, equilibrium, couples, free body diagrams, trusses, frames, internal forces, friction, area and mass moment of inertia.		
Course Pre-requisite(s) MATH180 Calculus 1 with a C grade or better		
Credit Hours 3		
Contact Hours 4		
Course Fee 10	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category Mathematics, Natural Sciences		Michigan Transfer Agreement (MTA) Category Category 3: Mathematics - Applied Degrees, Category 6: Natural Sciences - Transfer Degrees - Lecture Only, Category 6: Natural Sciences - Applied Degrees
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics
1. General Principles - To provide an introduction to the basic quantities and idealizations of mechanics. - To review the principles for applying the SI system of units.

2. Force Vectors
 - To express force and position in Cartesian vector form.
 - To introduce the dot product in order to determine the angle between two vectors or the projection of one vector onto another.
3. Equilibrium of a Particle
 - To introduce the concept of the free-body diagram for a particle.
 - To show how to solve particle equilibrium problems using the equations of equilibrium.
4. Force System Resultants
 - To discuss the concept of the moment of a force and show how to calculate it.
 - To provide a method for finding the moment of a force about a specified axis.
 - To define the moment of a couple.
 - To indicate how to reduce a simple distributed loading to a single resultant force.
5. Equilibrium of a Rigid Body
 - To introduce the concept of the free-body diagram for a rigid body.
 - To show how to solve rigid-body equilibrium problems using the equations of equilibrium.
6. Structural Analysis
 - To show how to determine the forces in the members of a truss using the method of joints and the method of sections.
 - To analyze the forces acting on the members of frames and machines composed of pin-connected members.
7. Internal Forces
 - To show how to use the method of sections to determine the internal loadings in a member.
8. Friction
 - To introduce the concept of dry friction and show how to analyze the equilibrium of rigid bodies subjected to this force.
 - To present specific applications of frictional force analysis on wedges and belts.
9. Center of Gravity and Centroid
 - To discuss the concept of the center of gravity, center of mass, and the centroid.
 - To show how to determine the location of the center of gravity and centroid for a system of composite shapes.
10. Moments of Inertia
 - To develop a method for determining the moment of inertia for an area.
 - To introduce the product of inertia and show how to determine the maximum and minimum moments of inertia for an area.

To provide an introduction to the basic quantities and idealizations of mechanics.
To review the principles for applying the SI system of units.
To express force and position in Cartesian vector form.
To introduce the dot product in order to determine the angle between two vectors or the projection of one vector onto another.
To introduce the concept of the free-body diagram for a particle.
To show how to solve particle equilibrium problems using the equations of equilibrium.
To discuss the concept of the moment of a force and show how to calculate it.
To provide a method for finding the moment of a force about a specified axis.
To define the moment of a couple.
To indicate how to reduce a simple distributed loading to a single resultant force.
To introduce the concept of the free-body diagram for a rigid body.
To show how to solve rigid-body equilibrium problems using the equations of equilibrium.
To show how to determine the forces in the members of a truss using the method of joints and the method of sections.
To analyze the forces acting on the members of frames and machines composed of pin-connected members.
To show how to use the method of sections to determine the internal loadings in a member.
To introduce the concept of dry friction and show how to analyze the equilibrium of rigid bodies subjected to this force.
To present specific applications of frictional force analysis on wedges and belts.

To discuss the concept of the center of gravity, center of mass, and the centroid.
To show how to determine the location of the center of gravity and centroid for a system of composite shapes.
To develop a method for determining the moment of inertia for an area.
To introduce the product of inertia and show how to determine the maximum and minimum moments of inertia for an area.

ENGR235 - Mechanics of Materials

Overview

Subject Pre-Engineering	Academic Department Pre-Engineering	School Science, Tech, Engr & Math
----------------------------	--	--------------------------------------

Course Description

An introduction to stress analyses with emphasis on both mechanics fundamentals and design applications. Elastic relationships between external forces acting on deformable bodies and the associated stresses and deformations; structural members subjected to axial load, torsion, and bending; and combined stresses.

Goals, Topics, and Objectives

Core Course Topics

- Moment of Inertia
 - Calculate Moments of Inertia for Areas
 - Apply Parallel-Axis Theorem for an Area
 - Find Moments of Inertia for Composite Areas
- Stress and Strain
 - Define Stress and Strain
 - Calculate Average Normal Stress in an Axially Loaded Bar
 - Calculate Average Shear Stress
- Mechanical Properties of Materials
 - Explain the Stress–Strain Diagram
 - Differentiate Stress–Strain Behavior of Ductile and Brittle Materials
 - Describe and Apply Poisson's Ratio
- Axial Load
 - Describe Elastic Deformation of an Axially Loaded Member
 - Solve Statically Indeterminate Axially Loaded Members
- Torsion
 - Calculate Torsional Deformation of a Circular Shaft and Angle of Twist
 - Solve Statically Indeterminate Torque-Loaded Members
- Beam Bending
 - Draw Shear and Moment Diagrams
 - Use Graphical Method for Constructing Shear and Moment Diagrams
 - Find Transverse Shear in Straight Members
 - Find Deflection of Beams Using Slope and Displacement by Integration
- Combined Loading
 - Explain Method for Designing Thin-Walled Pressure Vessels
 - Explain the State of Stress Caused by Combined Loadings
- Stress and Strain Transformation
 - List General Equations of Plane-Stress Transformation
 - Explain Principal Stresses and Maximum In-Plane Shear Stress
 - Understand Mohr's Circle–Plane Stress
 - List General Equations of Plane-Strain Transformation

Calculate Moments of Inertia for Areas

ENGR240 - Circuits

Overview

Subject Pre-Engineering	Academic Department Pre-Engineering	School Science, Tech, Engr & Math
----------------------------	--	--------------------------------------

Course Description

Intended for students planning to pursue an electrical engineering or biomedical engineering concentration. Topics covered include: Voltage, Current, Power, Resistance, Ohm's law, Kirchhoff's laws, Independent and Dependent Sources, Voltage Divider, Current Divider, Delta-Wye and Wye-Delta Transformations, Nodal and Mesh Analysis, Source Transformation, Thevenin and Norton Theorems, Maximum Power Transfer, Operational Amplifier Analysis, Inductance and Capacitance, Natural Response and Step Response of 1st and 2nd Order Systems, Sinusoidal Steady-State Analysis, Phasors. This course will incorporate a lab utilizing circuit components, breadboard, multimeter, oscilloscope, and function generator. Labs will also incorporate the use of an industry standard circuit simulation software package.

Course Pre-requisite(s)

Goals, Topics, and Objectives

Core Course Topics

- Circuit Variables
 - Voltage
 - Current
 - Ideal basic element
 - Power
 - Energy
- Circuit Elements
 - Voltage and current sources
 - Resistance
 - Circuit model
 - Kirchoff's laws
 - Dependent sources
- Simple Resistive Circuits
 - Resistors in series, parallel
 - Voltage-divider
 - Current divider
 - Wheatstone bridge
 - Delta-wye and wye-delta transformation
- Techniques of Circuit Analysis
 - Nodal analysis
 - Nodal analysis with dependent sources
 - Mesh analysis
 - Mesh analysis with dependent sources
 - Source transformation
 - Thevenin and Norton theorems
 - Maximum power transfer theorem
- Operational Amplifier
 - Terminal voltage and current
 - Inverting-amplifier
 - Summing amplifier
 - Non-inverting amplifier
 - Difference amplifier
 - Equivalent circuit
 - Differential mode
 - Common-mode rejection ratio
- Inductance and Capacitance
 - Inductor
 - Capacitor
 - Series-parallel combination of inductance and capacitance
- The Natural Response of RL and RC Circuits
 - Natural response of RL circuit
 - Natural response of RC circuit
- Step Response of 1st Order RL and RC circuit
 - Step response of RL circuit
 - Step response of RC circuit
 - Finding the step response of a 1st order RL or RC circuit
 - Integrating amplifier
- Natural Response and Step Response of RLC Circuits
 - Natural response of a parallel RLC circuit
 - Step response of parallel RLC circuit
- Sinusoidal Steady-State Analysis
 - Sinusoidal source
 - Sinusoidal response
 - Phasor and phasor domain
 - Kirchoff's laws in the phasor domain
 - Series-parallel and delta-wye simplification
 - Source transformation and Thevenin-Norton theorems
 - Nodal analysis
 - Mesh analysis
 - Phasor diagrams
- Industry standard circuit simulation software package utilization

Describe the voltage and current relationship for DC voltage and current sources, resistors, and DC dependent sources.
Analyze simple DC resistive circuits.
Demonstrate proficiency using advanced DC circuit analysis techniques.
Analyze operational amplifier circuits.
Describe voltage and current relationship for inductors and capacitors.
Analyze the natural response to 1st order RL and RC circuits.
Demonstrate knowledge of the step response of 1st order RL and RC circuits.
Analyze the natural response and step response of 2nd order RLC circuits.
Demonstrate proficiency using advanced AC circuit analysis techniques.
Demonstrate proficiency in building circuits and making measurements utilizing a breadboard, multimeter, oscilloscope, and function generator.
Demonstrate proficiency in building and analyzing circuits utilizing an industry standard circuit simulator software.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Exams will be administered throughout the course to assess the students' learning of the subject matter. All students will be required to complete a comprehensive final examination that assesses the learning of all course objectives. Students are required to conduct circuits laboratory experiments and write reports about their findings.
General Course Requirements and Recommendations
- Students must complete several homework assignments during the course of the semester. These assignments may be tied to the lecture, text, or lab, and require some design on the part of the student. - Students should complete at least one major computer project involving the design and analysis of a 1st or 2nd order circuit using a circuit simulation software package.

Texts	
Text will be chosen from among recognized "major-level" texts.

Student should achieve a score of 70% or higher in the departmental exam to receive credits for this course.	

Goals, Topics, and Objectives

Core Course Topics

- Forces and Force Systems
 - Describe forces and the effects of forces
 - Identify difference between scalar and vector quantities
 - Define orthogonal concurrent forces: resultants and components
 - Calculate resultants of co-planar force systems
 - Calculate moment of a force
 - List the Principle of Moments
 - Calculate resultant moment from couples
- Equilibrium of Force Systems

Describe circuit variables.

3.	a) Draw Free-Body Diagram and identify conditions of equilibrium
	b) Describe equilibrium of concurrent, parallel, and non-concurrent force systems
	c) Calculate unknown forces for an equilibrium system
7.	Truss and Frame Analysis
	a) Use method of joints and sections to calculate internal force in trusses
	b) Diagram frames and calculate internal and external reactions in frames
4.	Friction
	a) Identify friction and normal force
	b) Differentiate cases of actual from maximum static friction
	c) Identify frictions for different surface of contact
	d) Calculate friction for block with oblique surfaces and wedges
	e) Define friction with belts and perform primary friction calculation
5.	Centroids and Centers of Gravity
	a) Describe the center of gravity and list it for basic shape
	b) Calculate centroids for composite areas
6.	Area Moments of Inertia
	a) Describe the moment of inertia and find it from reference guide
	b) Calculate moment of inertia for composite areas
7.	Internal Forces
	a) Draw a Free-Body Diagram for a section of 2D rigid body and show internal forces and moments
	b) Calculate shearing force, normal force, and bending moment for an internal section of 2D rigid body
Describe forces and the effects of forces	
Identify difference between scalar and vector quantities	
Define orthogonal concurrent forces: resultants and components	
Calculate resultants of co-planar force systems	
Calculate moment of a force	
List the Principle of Moments	
Calculate resultant moment from couples	
Draw Free-Body Diagram and identify conditions of equilibrium	
Describe equilibrium of concurrent, parallel, and non-concurrent force systems	
Calculate unknown forces for an equilibrium system	
Use method of joints and sections to calculate internal force in trusses	
Diagram frames and calculate internal and external reactions in frames	
Identify friction and normal force	
Differentiate cases of actual from maximum static friction	
Identify frictions for different surface of contact	
Calculate friction for block with oblique surfaces and wedges	
Define friction with belts and perform primary friction calculation	
Describe the center of gravity and list it for basic shape	
Calculate centroids for composite areas	
Describe the moment of inertia and find it from reference guide	
Calculate moment of inertia for composite areas	
Draw a Free-Body Diagram for a section of 2D rigid body and show internal forces and moments	
Calculate shearing force, normal force, and bending moment for an internal section of 2D rigid body

ENGT265 - Mechanical Capstone Project

Overview

Subject	Academic Department	School
Pre-Engineering	Pre-Engineering	Science, Tech, Engr & Math
Course Description		
A capstone course requiring the design and development of a new product or process, by applying the engineering design process. This process includes background research and engineering analysis, prototype construction and testing, and communication and reporting. Students build critical thinking by applying their drafting and design skills in the development of new products.		
Course Co-requisite(s)		
ENGT245 Applied Statics can be taken previously or concurrently.

Portfolio Review	

Goals, Topics, and Objectives

Core Course Topics	
1. Work with sponsors, perform analyses and conduct research to develop requirements for a mechanical or industrial system or solution to a mechanical or industrial engineering problem	
2. Design the system or solution methods	
3. Implement a prototype, model or method according to the system or solution design	
4. Operate the prototype, model or method	
5. Evaluate the prototype, model or method with respect to the project requirements/constraints	
6. Document the process, products, and results	
7. Manage the projects and communicate the results	
Show the ability to start from a sponsor's statements of need, work with the sponsor, perform appropriate research and analyses, and apply relevant engineering standards to develop formal requirements for a mechanical system, an industrial system, or the solution to a mechanical or industrial problem.	
Develop multiple alternative approaches, design and implement a prototype, model, or method to meet those requirements by correctly applying appropriate engineering principles.	
Operate or implement the prototype, model, or method and evaluate the results against the requirements using objective performance measures.	
Plan and manage the project so as to use team resources efficiently and meet project requirements on time and on or under budget.	
Constructively address ethical dilemmas that may arise and potential adverse environmental, safety, health, and social impacts.	
Collaboratively produce written and oral reports that effectively communicate project information to target audiences—i.e., that are at the appropriate technical level for these audiences and follow disciplinary conventions of usage, vocabulary, format, and citation.	
Function effectively on a team, contributing to all major aspects of the design, implementation, and testing of an engineering project.	

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
1. Attendance is necessary for teamwork, communication, and collaboration with sponsor.	
2. Documentation in Engineering Notebook. The Notebook can be reviewed by instructor as a means of progress report.	
3. Electronic/web-based portfolios allow students to create, maintain, and share digital portfolios. The portfolio should be reviewed at least once a week by an instructor and provide feedback to students.	
4. Final Presentation.

FRE131 - Elementary French I

Overview

Subject Language Studies	Academic Department Language Studies	School Liberal Arts
Course Description Introduces the basic skills of reading, writing, speaking, and listening in French within communicative contexts. Covers the elementary pronunciation and grammatical principles necessary for comprehending and expressing simple ideas in both spoken and written French. Presents francophone culture.		
Course Pre-requisite(s) <u>ENG094 ALP: Reading and Writing/ENG095E ALP for ELL-Reading & Writing</u> eligible or instructor permission		
Credit Hours 4		
Contact Hours 4		
Course Fee 10	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category Humanities and Fine Arts	Michigan Transfer Agreement (MTA) Category Category 5: Humanities and Fine Arts - Applied Degrees, Category 5: Humanities and Fine Arts - Transfer Degrees	
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals FRE131 Elementary French I is designed to enable students to reach the Novice Mid level on the American Council on the Teaching of Foreign Languages (ACTFL) proficiency scale, focusing on language learning through communication, cultures, connections, comparisons, and communities.
Core Course Topics - Greetings, introductions, and farewells - Pronunciation - Alphabet - Numbers - Present-tense verbs - Future - Gender and number agreement - Affirmation and negation - Interrogatives - Vocabulary - Francophone culture

Use appropriate greetings, introductions, and farewells
Demonstrate beginning knowledge of pronunciation of French words
Demonstrate verbal and written knowledge of the French alphabet
Recognize and produce numbers, dates, and times
Demonstrate correct usage of present-tense indicative verb forms: regular and spelling change -er verbs; regular and irregular -ir verbs; avoir, être, aller, prendre, boire, and faire
Express the futur proche both orally and in writing using the aller + infinitive structure
Demonstrate knowledge of gender and number agreement of nouns, articles, descriptive possessive adjectives, and subject and direct object pronouns
Create simple affirmative and negative statements using appropriate word order
Develop and respond to interrogative questions relating to chapter/unit themes using appropriate word order
Develop and respond to interrogative questions relating to chapter/unit themes using appropriate word order
Write about, speak about, and interpret situations similar to those presented in each chapter/unit of the textbook

Compare and contrast elements of francophone culture that differ from the U.S. norm

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Assessment of academic achievement will be identified and implemented by the class instructor. Methods will include, but not be limited to: - Participation - Weekly/regular quizzes - Homework assignments - Chapter/unit tests - Oral/receptive-expressive exam(s) - Departmental writing assessment - Midterm/final exam	Texts All sections of this level will use a textbook (and any accompanying materials) selected by the course coordinator and approved by the World Languages Committee.
Satisfies Honors Requirement No	Satisfies Wellness Requirement No

FRE132 - Elementary French II

Overview

Subject Language Studies	Academic Department Language Studies	School Liberal Arts
Course Description Further builds reading, writing, speaking, and listening skills in French, focusing on communication in a cultural context. Develops students' knowledge of vocabulary, pronunciation and grammatical principles in order to comprehend and express everyday ideas in both spoken and written French. Presents francophone culture.		
Course Pre-requisite(s) A grade of C or better in FRE131 Elementary French I or in one year of high school French, or instructor permission		
Credit Hours 4		
Contact Hours 4		
Course Fee 10	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category Humanities and Fine Arts	Michigan Transfer Agreement (MTA) Category Category 5: Humanities and Fine Arts - Applied Degrees, Category 5: Humanities and Fine Arts - Transfer Degrees	
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals FRE132 Elementary French II is designed to enable students to reach the Novice High level on the American Council on the Teaching of Foreign Languages (ACTFL) proficiency scale, focusing on language learning through communication, cultures, connections, comparisons, and communities.
Core Course Topics - Phonetics - Present-tense verbs - Past-tense verbs - Commands - Gender and number agreement - Adverbs - Prepositions - Pronouns - Comparative and superlative structures - Narration - Francophone culture

Demonstrate basic knowledge of pronunciation of French words and phrases
Demonstrate correct usage of present-tense regular and irregular -re verbs; regular and irregular reflexive verbs; savoir and connaître, and venir
Recognize and produce passé composé (with both avoir and être) and imparfait, including regulars, irregulars, and reflexive verbs, as well as the passé récent
Recognize and produce simple formal and informal commands
Demonstrate correct usage of demonstrative adjectives with appropriate gender and number agreement

Demonstrate correct usage of select adverbs
Recognize and use select prepositions
Interpret and demonstrate correct usage of direct and indirect object pronouns, double object pronouns, as well as y and en
Compare and contrast using appropriate comparative and superlative structures
Interpret and produce simple narratives in the past using appropriate time markers and present, passé composé, and imparfait verb forms
Analyze aspects of francophone culture that differ from the U.S. norm, giving specific examples that illustrate such differences

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement will be identified and implemented by the class instructor. Methods will include, but not be limited to:
- Participation - Weekly/regular quizzes - Homework assignments - Chapter/unit tests - Oral and/or expressive-receptive exam(s) - Midterm/final exam

Texts	
All sections of this level will use a textbook (and any accompanying materials) selected by the course coordinator and approved by the World Languages Committee.	
Satisfies Honors Requirement	Satisfies Wellness Requirement
No	No

FRE231 - Second-Year French III

Overview

Subject	Academic Department	School
Language Studies	Language Studies	Liberal Arts
Course Description		
Follows FRE-132 and is the first of two intermediate-level French courses focusing on communication in a cultural context. Develops students' reading, writing, speaking, and listening skills in French, expands their vocabulary, and deepens their knowledge of pronunciation and grammatical principles in order to comprehend and express essential ideas in both spoken and written French. Presents francophone culture.		
Course Pre-requisite(s)		
A grade of C or better in FRE132 Elementary French II or in two years of high school French, or instructor permission		
Credit Hours

Goals, Topics, and Objectives

Course Goals
FRE231 Second-Year French III is designed to enable students to reach the Intermediate Low level on the American Council on the Teaching of Foreign Languages (ACTFL) proficiency scale, focusing on language learning through communication, cultures, connections, comparisons, and communities.
Core Course Topics
- Pronunciation - Past-tense verbs - Subjunctive verbs - Hypothetical expressions - Perfect verb forms - Commands - Gender and number agreement - Critical listening, speaking, and writing - Critical reading - Francophone culture
Demonstrate developing knowledge of pronunciation of French words and phrases

Demonstrate correct usage of present-tense verbs ouvrir, offrir, voir, recevoir, apercevoir, and croire
Recognize and produce both present and imperfect subjunctive forms, including regulars and irregulars, with appropriate independent verb clauses
Recognize and produce hypotheses using conditional verb forms appropriately, including regulars and irregulars
Demonstrate correct usage of both present and past perfect verb forms, including regular and irregular participles
Recognize and produce regular and irregular verbs in the future simple
Recognize and produce formal and informal commands, including regulars, irregulars and those with reflexive and direct and indirect object pronouns
Demonstrate correct usage of possessive adjectives and possessive pronouns with appropriate gender and number agreement
Demonstrate correct usage of indefinite and negative expressions in affirmative and negative statements and questions
Demonstrate correct usage of leque; various relative pronouns (qui, que, dont, and où); demonstrative pronouns, and reciprocal pronouns
Write simple descriptive, narrative, and informative essays related to themes presented in each chapter/unit of the textbook using appropriate register
Interpret short authentic audio and visual materials and respond critically in French
Summarize French-language materials in written compositions and oral presentations
Analyze cultural differences as manifested through language differences

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement will be identified and implemented by the class instructor. Methods will include, but not be limited to:
- Participation - Homework assignments - Weekly/regular quizzes - Weekly/regular compositions - Chapter/unit tests - Oral presentation(s)/project(s) - Midterm/final exam

Texts

Goals, Topics, and Objectives

Course Goals
FRE232 Second-Year French IV is designed to enable students to reach the Intermediate Mid level on the American Council on the Teaching of Foreign Languages (ACTFL) proficiency scale, focusing on language learning through communication, cultures, connections, comparisons, and communities.

Core Course Topics
1. Pronunciation
2. Past-tense verbs
3. Subjunctive verbs
4. Hypothetical expressions
5. Perfect verb forms
6. Commands
7. Gender and number agreement
8. Critical listening, speaking, and writing
9. Critical reading
10. Francophone culture
Demonstrate intermediate knowledge of pronunciation of French words and phrases
Interpret and produce personal and historical narratives in the past using the passé composé, imparfait, passé récent, and time markers appropriately
Use a variety of verbs in the present and imperfect subjunctive tenses in noun, adjective, and adverbial clauses
Express hypotheses using the conditional and imperfect subjunctive tenses with si clauses correctly in speech and writing
Employ the present perfect future, present perfect subjunctive, past perfect subjunctive, and conditional perfect verb tenses correctly in speech and writing
Produce indirect commands in speech and writing, including regulars, irregulars and those with reflexive and direct and indirect object pronouns
Demonstrate correct usage of past participles as adjectives with appropriate gender and number agreement
Interpret authentic audio and visual materials and respond critically in French
Summarize French-language research in written compositions and oral presentations
Analyze cultural differences as manifested through language differences

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement will be identified and implemented by the class instructor. Methods will include, but not be limited to:
• Participation • Homework assignments • Weekly/regular quizzes • Weekly/regular compositions • Chapter/unit tests • Oral presentation(s)/project(s) • Midterm/final exam

GEOG131 - Environmental Geography

Overview

Subject Geography	Academic Department Social Sciences	School Liberal Arts
Course Description An overview examining human environment interaction at all scales from local to global. Includes an overview of the physical environment and major earth systems with emphasis on the ways humans utilize and alter the earth's surface.		

Course Pre-requisite(s) Eligible to take ENG courses at HFC	
Credit Hours 4	
Contact Hours 4	
Course Fee 10	Miscellaneous Department Fee 0
Academic Level Undergraduate	
General Education Category Social Sciences	Michigan Transfer Agreement (MTA) Category Category 4: Social Sciences - Applied Degrees, Category 4: Social Sciences - Transfer Degrees
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Core Course Topics
1. Overview of Geography and Geographic Perspective
2. Spatial Analysis
3. Human Environment Interaction
4. Mapping
5. Human Resource Use
6. Processes that shape the earth
7. Plate Tectonics, Earthquakes, Volcanoes, Glaciation, and Climate
8. Pollution
9. Spatial distribution of ecosystems
10. Human alteration of the physical landscape
Explain spatial analysis and describe the geographic approach and perspective.
Explain the spatial organization of people, places, and environments on the earth's surface.
Explain the physical processes that shape major patterns on the earth's surface.
Explain how to use maps to interpret the past, understand the present, and plan for the future.
Describe the characteristics and spatial distribution of ecosystems on the earth's surface.
Discuss how culture influences the ways people interact with and use the environment
Identify the spatial variations of human resource use.
Provide examples of how human actions modify the physical environment.
Describe how physical systems affect human systems.
Discuss forms of pollution and the resulting impacts on the physical environment and humans.
Analyze an environmental problem from a geographic perspective by describing the nature of the problem, assessing the present and long term impacts on people and the environment, and determining the best possible solutions and actions needed to solve or mitigate the problem.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
Assessment of academic achievement may include (but is not limited to) exams, quizzes, essays, homework, and projects.	
Satisfies Honors Requirement	Satisfies Wellness Requirement
No	No

GEOG132 - World Regional Geography

Overview

Subject Geography	Academic Department Social Sciences	School Liberal Arts
Course Description An overview examining the spatial distribution of people and places around the world, with emphasis on the cultural, political, social, and economic aspects of regions. Topics are explored by examining ways that humans interact with the environment and one another. Emphasis is placed on the spatial variation of human activities at all scales from local to global.		

Course Pre-requisite(s)
Eligible to take ENG courses at HFC
Credit Hours
3

Contact Hours
3

Course Fee 10	Miscellaneous Department Fee 0
Academic Level Undergraduate	
General Education Category Social Sciences	Michigan Transfer Agreement (MTA) Category Category 4: Social Sciences - Applied Degrees, Category 4: Social Sciences - Transfer Degrees
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Core Course Topics	1. Overview of Geography and Geographic Perspective 2. Spatial Analysis and Global Perspective 3. Perception of People and Place 4. Population Distribution and Settlement Patterns 5. Regional Approach: overview of human geography including cultural, political, social, economic and historical geography in numerous world regions, including North America. 6. Spatial Distribution of Culture 7. Global Patterns of Development 8. Colonialism and the Uneven Spatial Distribution of Wealth 9. Human Use of the Environment 10. Population Growth, Immigration, and Migration 11. Global Current Events from a Geographic Perspective
Explain spatial analysis and describe the geographic approach and perspective.	
Explain the spatial organization of people and places on the earth's surface.	
Describe the human and physical characteristics of places.	
Explain how to use maps to interpret the past, understand the present, and plan for the future.	
Explain how culture and experience influence people's perceptions of places, regions, and peoples.	
Discuss the spatial distribution, characteristics, and complexity of cultural landscapes on the earth's surface.	
Discuss ethnocentrism from a spatial perspective at local, regional, national and global scales.	
Contrast characteristics of more developed countries with characteristics of less developed countries.	
Describe the processes determining the uneven spatial distribution of wealth at local, national, and global scales	
Explain several global issues (cultural, political, social, economic, environmental) from a geographic perspective.	
Compare and contrast human (cultural, political, social, economic) characteristics and environmental characteristics of the United States with several other countries.	
Analyze a global issue or challenge from a geographic perspective by describing the nature of the challenge, assessing the present and long term impacts on people and the environment, and determining the best possible decisions and actions needed to solve or mitigate the challenge.	

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
Assessment of academic achievement may include (but is not limited to) exams, quizzes, essays, homework, and projects.

Credit for Prior College Level Learning (CPCLL) Details Other	

Goals, Topics, and Objectives

Core Course Topics	1. Overview of Geography and Geographic Perspective 2. Spatial Analysis 3. Overview of Human Geography: cultural, economic, political, historical. 4. Overview of Physical Geography 5. Population and Human Settlement Patterns 6. Economic Activities 7. Human Resource Use 8. The Geography of Detroit
Explain spatial analysis and describe the geographic approach and perspective.	
Explain the spatial organization of people, places, and environments in Michigan.	
Explain how to use maps to interpret the past, understand the present, and plan for the future.	
Describe the human and physical characteristics of places in Michigan.	
Discuss population patterns and the historical geography of human settlement in Michigan.	
Identify the major economic activities of Michigan and explain the spatial distribution of those activities.	
Discuss cultural, social, economic, political and environmental patterns in Michigan within local, regional, national, and global contexts.	
Discuss resource use and provide examples of how human actions modify the physical environment in Michigan.	
Analyze a current issue or challenge in Michigan from a geographic perspective. Describe the nature of the challenge, assess the present and long term impacts on people and the environment, and determine the best possible solutions and actions needed to solve or mitigate the problem.	

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
Each instructor will identify and implement appropriate methods to assess the achievement of the learning objectives for the course.

GEOG221 - Geography of the Middle East

Overview

Subject Geography	Academic Department Social Sciences	School Liberal Arts
----------------------	--	------------------------

Course Description

Examines the cultural geography of Middle Eastern peoples, and the social, historical, economic and political geographies of the region. Includes an overview of the physical environment, and an examination of common stereotypes, perception of people and place, Arab immigration and settlement in the United States, and current Arab American issues.

Course Pre-requisite(s)
Eligible to take ENG courses at HFC

Credit Hours
3

Contact Hours
3

Course Fee 30	Miscellaneous Department Fee 0
Academic Level Undergraduate	
General Education Category Social Sciences	Michigan Transfer Agreement (MTA) Category Category 4: Social Sciences - Applied Degrees, Category 4: Social Sciences - Transfer Degrees
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Core Course Topics

- Overview of Geography, Geographic Perspective, and Spatial Analysis
- Global Perspective
 - Interaction between local, national, regional, and global scales.
- Perception of People and Place with Focus on United States and Middle East - Common Stereotypes and Misinformation
- Overview of Middle East Region
 - Human Geography: cultural, political, social, economic and historical geographies.
 - Physical Geography: environmental geography with focus on water and vulnerability to climate change.
- Cultural Geography of the Middle East
- Physical Geography of the Middle East
- Monotheism: Judaism, Christianity and Islam
- Colonialism, the Ottoman Legacy and Western Domination
- Settlement Patterns and Human Use of the Environment
- Political Instability and Challenges
- Population Patterns, Migration and Immigration in the United States
- Overview of Arab Americans
 - Immigration
 - Patterns of diversity: cultural, social, economic, political, country of origin
 - Current issues

Explain spatial analysis and describe the geographic approach and holistic, global perspective.
Explain the spatial organization of people and places in this region.
Describe human and physical characteristics in this region.
Explain how to use maps to interpret the past, understand the present, and plan for the future.
Identify common stereotypes and misconceptions in the United States about the people and places of this region.
Explain how culture and experience influence people's perceptions of places, regions and peoples.
Discuss ethnocentrism from a spatial perspective.
Describe the spatial variation of culture in this region.
Describe the spatial variation of the physical environment in this region.
Explain major processes leading to the current political instability and challenges in this region.
Explain several regional issues (cultural, political, social, economic, environmental) from a geographic perspective.
Discuss Arab Immigration in the United States and the cultural, political, social, and economic factors impacting settlement patterns.
Provide an overview of Arab Americans and discuss key issues related to Arab Americans.

Analyze an issue or challenge impacting this region utilizing a geographic perspective by describing the nature of the challenge, assessing the present and long term impacts on people and environment, and determining the best possible decisions and actions needed to solve or mitigate the challenge.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Each instructor will identify and implement appropriate methods to assess the achievement of the learning objectives for this course.	
Satisfies Honors Requirement No	Satisfies Wellness Requirement No

GEO131 - Physical Geology

Overview

Subject Geology	Academic Department Physics, Astronomy, and Earth Sciences	School Science, Tech, Engr & Math
Course Description Introduces the materials, processes, and concepts of geology. Topics include minerals, rocks, plate tectonics, earthquakes, volcanism, erosion, water, wind, glaciers, and geologic time. Laboratory work is devoted to hands-on projects involving geologic materials and processes, including rocks and minerals, maps, folds and faults, and dating of geologic features and events. This is a four (4) credit course with three (3) hours of lecture and two (2) hours of laboratory per week.		
Credit Hours 4		
Contact Hours 5		
Course Fee 22		Miscellaneous Department Fee 0
Academic Level Undergraduate		
General Education Category Natural Sciences		Michigan Transfer Agreement (MTA) Category Category 6: Natural Sciences - Applied Degrees, Category 6: Natural Sciences - Transfer Degrees - Lecture and Lab
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals
To give students the opportunity to understand the interactions between rock, water, air, and energy on and within the Earth; also, to develop students' confidence in scientific methodology, interpretation and reaction to scientific issues affecting the world.

Core Course Topics

- Minerals
- Rocks
- Plate Tectonics
- Geologic Time
- Mass Wasting
- River Systems
- Glaciers
- Deserts
- Volcanism
- Earthquakes
- Crustal Deformation

Identify and classify minerals.
Identify and classify igneous, sedimentary, and metamorphic rocks.
State the modes of occurrence of the three rock types.
Explain the basic tenets of the theory of plate tectonics, and how it serves as a "unifying theory" for geology.
Identify the major features of river systems, glaciers, and volcanoes.
List the controls on the character of volcanic eruptions.
Explain the roles of running water, ice, wind, and mass wasting (e.g. landslides) in shaping the Earth's surface.
Identify the major types of seismic waves, and explain the differences between them.
Explain how earthquakes occur.

List the major divisions of the geologic time scale, and explain how the time scale is constructed.
Use relative dating principles to place a sequence of geologic events and features in their correct order using a block diagram.
Compute absolute ages using radiometric dating principles.
Communicate concepts through the spoken and written word, and through data graphs and charts.
Apply rigorous thought and observation to scientific problems.
Arrange objects, events, or ideas in a specific order.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Student mastery of course objectives will be achieved through class participation, laboratory projects, weekly review questions, in-class quizzes, and exams; The course is divided into three (3) units, each of which will be presented with a combination of lectures, readings, and laboratories. Student mastery of course topics will be assessed on an ongoing basis through instructor scoring of lab and homework assignments and quizzes, and feedback to students on areas needing improvement. Assessment of overall mastery within each course unit will be accomplished through an exam scheduled to take place at the end of the unit. General Course Requirements and Recommendations This is a four (4) credit course with three (3) hours of lecture and two (2) hours of laboratory per week. Students are expected to attend all class sessions. Attendance is taken by the instructor. Texts Essentials of Geology, by Lutgens, F.K., and Tarbuck, E.J., published by Pearson Prentice-Hall, 2006Laboratory Manual in Physical Geology, edited by Richard M. Busch Satisfies Honors Requirement No		Satisfies Wellness Requirement No

GER131 - Elementary German I

Overview

Subject Language Studies	Academic Department Language Studies	School Liberal Arts
Course Description Introduces the basic skills of reading, writing, speaking, and listening in German within communicative contexts. Covers the elementary pronunciation and grammatical principles necessary for comprehending and expressing simple ideas in both spoken and written German. Presents the cultures of German-speaking countries. Course Pre-requisite(s) ENG094 ALP: Reading and Writing/ENG095E ALP for ELL-Reading & Writing eligible or instructor permission		
Credit Hours 4		
Contact Hours 4		
Course Fee 10	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category Humanities and Fine Arts	Michigan Transfer Agreement (MTA) Category Category 5: Humanities and Fine Arts - Transfer Degrees, Category 5: Humanities and Fine Arts - Applied Degrees	
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals GER131 Elementary German I is designed to enable students to reach the Novice Mid level on the American Council on the Teaching of Foreign Languages (ACTFL) proficiency scale, focusing on language learning through communication, cultures, connections, comparisons, and communities.	
Core Course Topics 1. Greetings, introductions, and farewells 2. Phonetics and alphabet 3. Numbers 4. Present-tense verbs 5. Commands 6. Gender, number, and case agreement 7. Prepositions 8. Negation 9. Word order 10. Pronouns 11. Vocabulary 12. Geography 13. Culture	
Use appropriate greetings, introductions, and farewells	

Demonstrate knowledge of phonetics and the alphabet through the comprehensible pronunciation and spelling of German words
Recognize and produce numbers, dates, and times
Demonstrate correct usage of present-tense verbs, including regular, irregular, separable-prefix, and modal verbs
Recognize and produce simple formal and informal commands
Demonstrate knowledge of gender and number agreement of nouns, definite and indefinite articles, and possessive pronouns in nominative and accusative cases
Recognize and produce select accusative (and dative) prepositions
Employ nicht and kein to negate sentences
Develop syntactically correct statements, yes/no questions, and questions using interrogatives
Demonstrate correct usage of nominative and accusative pronouns
Write about, speak about, and interpret situations similar to those presented in each chapter/unit of the textbook
Recognize major geographical features of German-speaking countries
Compare and contrast elements of German-speaking countries' cultures that differ from the U.S. norm

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Assessment of academic achievement will be identified and implemented by the class instructor. Methods will include, but not be limited to: - Participation - Weekly/regular quizzes - Homework assignments - Chapter/unit tests - Oral/receptive-expressive exam(s) - Departmental writing assessment - Midterm/final exam	
General Course Requirements and Recommendations Note: A grade of C- is not transferable and is not accepted by some programs at HFC.	
Texts All sections of this level will use a textbook (and any accompanying materials) selected by the course coordinator and approved by the World Languages Committee.	
Satisfies Honors Requirement No	Satisfies Wellness Requirement No

Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals
GER132 Elementary German II is designed to enable students to reach the Novice High level on the American Council on the Teaching of Foreign Languages (ACTFL) proficiency scale, focusing on language learning through communication, cultures, connections, comparisons, and communities.

- Core Course Topics
- 1. Present-tense verbs
 - 2. Past-tense verbs
 - 3. Future expressions
 - 4. Gender, number and case agreement
 - 5. Prepositions
 - 6. Word order
 - 7. Pronouns
 - 8. Comparative and superlative structures
 - 9. Conjunctions
 - 10. Vocabulary
 - 11. Essay Narration
 - 12. Culture

Demonstrate correct usage of present-tense reflexive verbs
Recognize and produce common regular and irregular verbs in the Perfekt and Imperfekt
Express the future using werden
Distinguish between and produce accusative and dative declinations of nouns, definite and indefinite articles, and possessive pronouns
Distinguish between and produce accusative (motion) and dative (location) after two-way prepositions; recognize and produce common verb-preposition combinations
Order adverbs and adverbial phrases correctly
Recognize and demonstrate correct usage of accusative and dative pronouns
Compare and contrast using appropriate comparative and superlative structures
Recognize and demonstrate correct usage of coordinating and some common subordinating conjunctions
Write about, speak about, and interpret simple dialogues and paragraphs related to themes presented in each chapter/unit of the textbook
Interpret and produce simple narratives in the present and past using appropriate time markers
Analyze aspects of German-speaking countries' cultures that differ from the U.S. norm, giving specific examples that illustrate such differences

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement will be identified and implemented by the class instructor. Methods will include, but not be limited to:

- Participation
- Weekly/regular quizzes
- Homework assignments
- Chapter/unit tests
- Oral and/or expressive-receptive exam(s)
- Midterm/final exam

General Course Requirements and Recommendations
Note: A grade of C- is not transferable and is not accepted by some programs at HFC.

Course Goals
GER231 Second-Year German III is designed to enable students to reach the Intermediate Low level on the American Council on the Teaching of Foreign Languages (ACTFL) proficiency scale, focusing on language learning through communication, cultures, connections, comparisons, and communities.

- Core Course Topics
- 1. Past-tense verbs
 - 2. Reported speech
 - 3. Hypothetical expressions
 - 4. Passive voice
 - 5. Gender, number and case agreement
 - 6. Prepositions
 - 7. Pronouns
 - 8. Conjunctions
 - 9. Vocabulary
 - 10. Essay composition
 - 11. Culture

Interpret fiction and non-fiction texts written in the Imperfekt
Recognize reported or indirect speech of Konjunktiv 1
Recognize and produce statements contrary to fact using Konjunktiv 2
Recognize and produce the passive voice
Demonstrate correct usage of adjective endings
Recognize and produce da und wo Komposita
Recognize and produce relative pronouns in compound clauses
Employ subordinating conjunctions to make arguments
Write about, speak about, and interpret intermediate dialogues and texts related to themes presented in each chapter/unit
Write simple descriptive, narrative, and informative essays related to themes presented in each chapter/unit of the textbook using register-appropriate vocabulary
Analyze cultural differences as manifested through language differences

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement will be identified and implemented by the class instructor. Methods will include, but not be limited to:

GER232 - Second-Year German IV

Overview

Subject	Academic Department	School
Language Studies	Language Studies	Liberal Arts

Course Description
Follows GER-231 and is the second of two intermediate-level German courses focusing on communication in a cultural context. Further develops students' reading, writing, speaking, and listening skills in German, expands their vocabulary, and deepens their knowledge of pronunciation and grammatical principles in order to comprehend and express a wide range of ideas in both spoken and written German. Presents the cultures of German-speaking countries.

Course Pre-requisite(s)
A grade of C or better in [GER231 Second-Year German III](#) or in three years of high school German, or instructor permission

Credit Hours
4

Contact Hours

No

Goals, Topics, and Objectives

Course Goals
[GER232 Second-Year German IV](#) is designed to enable students to reach the Intermediate Mid level on the American Council on the Teaching of Foreign Languages (ACTFL) proficiency scale, focusing on language learning through communication, cultures, connections, comparisons, and communities.

- Core Course Topics**
1. Present-tense verbs
 2. Past-tense verbs
 3. Pluperfect
 4. Infinitive constructions
 5. Prepositions
 6. Participles
 7. Conjunctions
 8. Critical listening, speaking, and writing
 9. Critical reading
 10. Culture

Compare and contrast non-equivalent uses of reflexive verbs
Interpret and produce personal and historical narratives in the past using Perfekt and Imperfekt, and time markers appropriately
Use the Plusquamperfekt to narrate past-tense events
Recognize and produce infinitive clauses, including um...zu
Recognize and produce common adjective and preposition combinations
Recognize and build Partizip I and Partizip II to describe nouns
Recognize and use two-part conjunctions
Interpret authentic audio and visual materials and respond critically in German
Summarize German-language texts in written compositions and oral presentations
Analyze cultural differences as manifested through language differences

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement will be identified and implemented by the class instructor. Methods will include, but not be limited to:

- Participation
- Homework assignments
- Weekly/regular quizzes
- Weekly/regular compositions

- Chapter/unit tests
- Oral presentation(s)/project(s)
- Midterm/final exam

General Course Requirements and Recommendations
Note: A grade of C- is not transferable and is not accepted by some programs at HFC.

Texts
All sections of this level will use a textbook (and any accompanying materials) selected by the course coordinator and approved by the World Languages Committee.

Goals, Topics, and Objectives

- Core Course Topics**
1. Accountability and Workplace Relationships
 2. Communication
 3. Conflict and Negotiation
 4. Role of Management in Healthcare
 5. Health Care Economic Basics
 6. Job Search Skills
 7. Resume Package
 8. Interview Techniques
 9. Etiquette and Dress
 10. Electronic Communication

Identify the characteristics of a team player.
Differentiate between responsibility and authority.
Explain the common barriers to communication.
Describe conflict management methods.
Describe basic characteristics of the health care economic environment.
Explain the role of management.
Discuss the possible responses to adverse management decisions.
Identify causes of resistance to change.
Prepare a resume, cover letter, reference sheet, and thank you letter.
Describe the various methods of a job search.
List employment websites for healthcare agencies in this region.
Discuss guidelines for conduct before, during, and after an employment interview.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of achievement is measured using a combination of tests, quizzes, assignments and participation.

- General Course Requirements and Recommendations
- Instructors (or their designees) reserve the right to require students to provide proper picture identification for test taking, graded papers or projects or other appropriate purposes.
 - HFCC Policy on Academic Dishonesty (Cheating) will be followed in this course.

Grading Scale

Grading scale for exams and the final grade:

- 98-100% = A+
- 93-97% = A
- 90-92% = A-
- 87-89% = B+
- 83-86% = B
- 80-82% = B-
- 76-79% = C+
- 70-75% = C
- 67-69% = D+
- 63-66% = D
- 60-62% = D-
- 59% & below = E

Other	

Goals, Topics, and Objectives

- Core Course Topics
- Medical Asepsis & Standard Precautions
 - Isolation Procedures / Handwashing
 - Vital Signs – Temperature, Pulse & Respiration
 - Blood Pressure
 - Body Mechanics & Patient Transfer

Explain the importance of infection control practices in maintaining the safety of the health care worker and patients.
Identify the preventive procedures included in the Standard Precautions.
Demonstrate proper hand washing procedure.
Describe the terminology used when assessing patient vital signs: body temperature, pulse, respiratory rate, & blood pressure.
Differentiate normal & abnormal values for body temperature, pulse, respiratory rate & blood pressure.
Perform correct measurements of patient vital signs: body temperature, pulse, respiratory rate, & blood pressure.
Discuss proper body mechanics and/or transportation of patients.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

Assessment of achievement is based on exams and skill checks.

- General Course Requirements and Recommendations
- Instructors (or their designees) reserve the right to require students to provide proper picture identification for test taking, graded papers or projects or other appropriate purposes.

- HFCC Policy on Academic Dishonesty (Cheating) will be followed in this course.

Grading Scale

The final grade will be computed based on the following:

- Exam 1 = 15%
- Exam 2 = 15%
- Exam 3 = 15%
- Hand washing Performance Skill = 5%
- Temp, Pulse, & Resp. Rate Performance Skill = 15%
- Blood Pressure Performance Skill = 10%
- Comprehensive Final Exam = 25%
- Total = 100%

Grading scale for exams and the final grade:

- 98-100% = A+
- 93-97% = A
- 90-92% = A-
- 87-89% = B+
- 83-86% = B
- 80-82% = B-
- 76-79% = C+
- 70-75% = C

Goals, Topics, and Objectives

- Core Course Topics
- Basic Computer Skills
 - Medical Informatics
 - Telemedicine
 - Information Technology in Healthcare
 - Information Technology in Public Health
 - Word Processing
 - Spreadsheets
 - Presentation Software
 - Security and Privacy

Define and discuss medical/health informatics.
Explain the differences between systems and application software.
Discuss uses of a differences among patient electronic record systems.
State the uses of telecommunications and networking.
Discuss the ethical, professional, and legal responsibilities of the health care worker with regards to information in the medical record.
Discuss the importance of technology and the impact of computer systems on patient care and treatment.

Define telemedicine and give examples of its uses in health care.
Discuss the applications for technology in various health care settings to include radiology, surgery, pharmacy, and rehab therapies, as well as public health.
Retrieve patient data using systems appropriate to the health care setting.
Demonstrate the input use of information systems for basic medical resources and data collection.
Navigate Henry Ford College network and the student portal.
Operate basic PC hardware, including common input, output, and storage devices.
Utilize an operating system to perform basic tasks, such as finding, saving, copying, and printing files.
Send and receive email, including attachments.
Utilize basic word processing, presentation, and spread sheet software.
Utilize a browser for Internet access, use search engines, identify appropriate search terms, and use a search engine effectively.
Explain the implications for computer technology in your selected allied health profession.
Discuss the impact of privacy and security related to the use of technology in healthcare.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Students will be assessed using quizzes and assignments based on Chapter assignments, 3 lab practicals (Word processing, Spreadsheets, and Presentation Software), and a final exam. General Course Requirements and Recommendations Basic Computer Skills - The student will receive instruction and practically apply skills in operating basic hardware, using a mouse, saving and retrieving files, downloading information, printing, etc., and using basic computer operations. Word Processing Software - The student will use word processing software to create documents and exercise basic word processing skills. Spreadsheet Software - The student will use spreadsheet software to create a health care related spreadsheet (to include a variety of basic formulas, graphs, charts, and functions). Presentation Software - The student will use presentation software to create a health care related presentation (to include using action buttons, preset animation, imported images, graphs, and charts). Internet Search - The student will use internet search skills to locate information on the internet, identify appropriate search terms, download files, and use search engines effectively. Course assignments and quizzes will be based on topics as outlined in the course syllabus. There will be three practical activities assigned (word processing, spread sheet, and presentation). Student Responsibility - The student will abide by the Henry Ford College computer Usage Policy. The student will demonstrate personal responsibility in the care and use of lab equipment, copyright laws, netiquette, privacy issues, and follow all academic policies, including but not limited to those on cheating and plagiarism. Instructors (or their designees) reserve the right to require students to provide proper picture identification for test taking, graded papers or projects or other appropriate purposes. HFC Policy on Academic Dishonesty (Cheating) will be followed in this course. Grading Scale Grading scale for exams and the final grade: 98-100% = A+ 93-97% = A 90-92% = A- 87-89% = B+ 83-86% = B 80-82% = B- 76-79% = C+ 70-75% = C 67-69% = D+ 63-66% = D 60-62% = D- 59% & below = E There is a final exam for this course. It is required for all students to take the final exam in order to complete the course. The grade will be calculated using the following: - Quizzes, assignments, and/or participation = 50% - Practical activities = 30% (10% each) - Final exam = 20%

HHS101 - Intro to Counseling & Interviewing Skill

Overview

Subject Social Work	Academic Department Health, Education, and Human Services	School Health & Human Services
Course Description Introduces the basic techniques of interviewing, counseling, and treatment therapies used in the mental health and social work fields. Course is comprised of two parts: theory and field experience. The theoretical portion will introduce interviewing, counseling, and treatment therapies through 45 hours of in-class instruction. The course will expand on the historical and political aspects of the field of social work. Field experience will provide students the opportunity to learn at cooperating mental health agencies, under the guidance of a licensed professional, for 45 clock hours of off-campus learning.		
Course Pre-requisite(s) HHS100 Introduction to Social Work , PSY131 Introductory Psychology		
Credit Hours 4		
Contact Hours 6		
Course Fee 25	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics - Counseling and social work theories - Counseling and social work techniques - Field experience
Discuss counseling, mental health, and social work philosophies, values, and ethics.
Analyze the historical factors affecting current counseling, mental health, and social work trends.
Compare and contrast different frameworks and the varying political systems motivating those frameworks.
Identify vulnerable groups within the U.S. society.
Identify and interpret political factors which contribute to societies' desires or refusals to supply needed services.
Define the roles and functions of a community-based social service technician or a member of a clinical treatment or recovery support services team.
Compare and contrast different counseling and social work techniques.
Identify processes, programs, organizations, and tangible resources that are available to those in need.
Participate in active listening and communication activities.
Identify the different professional roles available in the areas of counseling, mental health, and social work.
Demonstrate and apply knowledge about diversity.
Apply theory to practice within a field experience under the direction of a licensed professional counselor, social worker, or psychologist.
Participate in active listening and communication activities.
Define the roles and functions of a community-based social service technician or a member of a clinical treatment or recovery support services team.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement may include, but not be limited to case studies, field experience reports, quizzes, research projects, research papers, group assignments, or final exam.

HHS102 - Intro to Interpersonal Theory & Practice

Overview

Subject Social Work	Academic Department Health, Education, and Human Services	School Health & Human Services
Course Description Introduces interpersonal theories used when working with clients and provides students the opportunity to practice these theories at a field experience. Course is comprised of two parts: theory and field experience. The theoretical portion will focus on behavior modification, transactional analysis, cognitive approaches, assertiveness training, and addictions theory. Community resources and the referral process will also be researched and analyzed. The in-class theoretical portion of this course will consist of 45 hours of instruction. Field experience will provide students the opportunity to learn at a cooperating mental health agency, under the guidance of a licensed professional, for 45 clock hours of off-campus learning.		
Course Pre-requisite(s) HHS100 Introduction to Social Work , PSY131 Introductory Psychology		Course Co-requisite(s) PSY251 Abnormal Psychology
Credit Hours 4		
Contact Hours 4		
Course Fee 25	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics - Counseling and social work interpersonal theories and practice - Behavior Modification - Transactional Analysis - Cognitive Approaches - Assertiveness Training - Addictions Theory - Field experience
Discuss theoretical and philosophical mental health assumptions.
Identify issues with the application of counseling theories to intervention and planning.
Discuss the application of counseling theories to a diverse community of patients.
Discuss how interpersonal theory and practice are used in a clinical setting.
Describe processes and techniques used in the practice of counseling and social work.
Understand counseling outcomes and develop techniques for relaying information to patients.
Explore the components of behavior modification.
Analyze a behavior modification plan.
Describe transactional analysis.
Identify when transactional analysis has occurred.
Compare and contrast different cognitive approaches
Model the use of assertiveness training

Discuss addictions theory and its applications to social work and counseling practice.
Discuss the application of counseling theories to a diverse community of patients.
Integrate mental health ethical issues in to clinical practice.
Analyze the application of interpersonal theory to practice.
Analyze mental health issues.
Support mental health professional with cases.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement may include, but not be limited to case studies, field experience reports, quizzes, research projects, research papers, group assignments, or final exam.

HIST111 - Ancient World History

Overview

Subject History	Academic Department Social Sciences	School Liberal Arts
Course Description Covers the rise of civilization to the decline of major world civilizations in the early Common Era (c. 200 CE to c. 500 CE). Studies the ancient civilizations of Mesopotamia, Egypt, India, China, and the Greco-Roman world.		
Course Pre-requisite(s) Eligible to take ENG courses at HFC.		
Credit Hours 3		
Contact Hours 3		
Course Fee 10	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category Social Sciences, Humanities and Fine Arts		Michigan Transfer Agreement (MTA) Category Category 4: Social Sciences - Applied Degrees, Category 4: Social Sciences - Transfer Degrees, Category 5: Humanities and Fine Arts - Applied Degrees, Category 5: Humanities and Fine Arts - Transfer Degrees
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics - Origins of civilization in Mesopotamia, Egypt, India, and China. - Survey of the history and culture of: - Mesopotamia - Egypt - The Hittites - The Levant (especially the Phoenicians and Hebrews) - India - China up to the fall of the Han Dynasty - The Greco-Roman world - Rise of the major world religions: Zoroastrianism, Judaism, Christianity, Hinduism, and Buddhism. - Interactions between civilizations, including but not limited to trade and conquest. - Chinese and Greek philosophy. - Development of Greco-Roman participative government, especially Athenian.
Outline the political and cultural history of the ancient civilizations of Mesopotamia, Egypt, India, China, and the Greco-Roman world.
Trace the development of civilization from hunting and gathering to cities and civilization, with emphasis on the origins of agriculture worldwide.
Trace the development of writing in Mesopotamia. Identify and give the significance of cuneiform, hieroglyphics, Chinese characters, and the alphabet.
Describe the various types of political organization in these early civilizations.
Identify and define a city-state, a kingdom, and an empire.
Tell how early states are different from the modern nation-state.

Describe Greek and Roman representative-participative government and one hypothesis of how it arose.
Compare and contrast the Greco-Roman systems to the U.S. government.
Describe the importance of written law. Identify and give the significance of the laws of Ur-Nammu (Sumerian), Hammurabi, and the Twelve Tables (Roman).
Identify the basic ideas of the ancient philosophies of China—Legalism, Daoism, and Confucianism.
Identify the basic ideas of the Mandate of Heaven and explain its significance in Chinese History.
Identify the basic ideas of the ancient philosophies of the Greeks - the Pre-Socratics, Sophists, Socrates, and his pupils.
Identify and give the significance of Socrates, Plato, and Aristotle.
Identify the basic ideas of Hinduism and Buddhism. Identify and give the significance of or define caste, dharma, karma, reincarnation, and Siddhartha Gautama.
Identify the basic ideas of Zoroastrianism, Hebrew ethical monotheism, and Christianity.
Identify and give the significance of Moses, Jesus of Nazareth, and Zoroaster. Define monotheism, monolatry, and polytheism.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Assessment of academic achievement will be identified and implemented by the class instructor. Methods will include, but will not be limited to, individual projects, vocabulary, class participation (discussion and critiques), and tests.	
Texts A good, world history text which is truly global and devotes significant material to non-Western history (including Mesopotamia and Egypt); or Monographs that contain significant non-Western, non-Judeo-Christian materials.	
Supplemental materials should be non-Western whenever possible.

HIST112 - Medieval-Early Modern World History

Overview

Subject History	Academic Department Social Sciences	School Liberal Arts
Course Description Presents world civilizations during the transition from the Ancient classical times to the Modern Period, i.e., the Medieval and Early Modern periods (c. 500 CE - c. 1650 CE). The world civilizations include China from the Sui to the early Qing dynasties; Japan from its origins to the early Tokugawa Shogunate; early Arabia, the rise of Islam, and the Umayyad, Abbasid, Seljuk, and Ottoman empires; the Mongol Empire; the Aztec and Incan civilizations; and the European Middle Ages, Renaissance, and Reformation.		
Course Pre-requisite(s) Eligible to take ENG courses at HFC.		
Credit Hours 3		
Contact Hours 3		
Course Fee 10	Miscellaneous Department Fee 0	
Academic Level Undergraduate	Michigan Transfer Agreement (MTA) Category Category 4: Social Sciences - Applied Degrees, Category 4: Social Sciences - Transfer Degrees, Category 5: Humanities and Fine Arts - Applied Degrees, Category 5: Humanities and Fine Arts - Transfer Degrees	
General Education Category Social Sciences, Humanities and Fine Arts		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics 1. Survey of the history and culture of: - Islam and the Islamic empires (Umayyad, Abbasid, Seljuk, and Ottoman) - Medieval Europe - China from the Tang to the early Qing Dynasty - Japan to the early Tokugawa Period	
2. The Mongols, their place in and effect on Eurasian history	
3. Interactions between civilizations and peoples, Old and New Worlds, including but not limited to trade and conquest	

- The Renaissance, its origins, development, and effects
- The Reformation, its origins, development, and effects

Outline the political and cultural history of the civilizations of China, Sui to early Qing; Japan up to the early Tokugawa Shogunate; the Umayyad, Abbasid, Seljuk, Ottoman, and Mongol empires; the Aztec and Incan civilizations; and Europe through the Wars of Religion.
Describe the various types of political organization found in the Medieval and Early Modern periods and tell how they are different from the modern nation-state.
Identify, compare and contrast the basic ideas of Islam, Catholicism, Protestant Christianity, and Buddhism.
Describe the rise of Islam and the establishment of the Islamic Empire. Identify and give the significance of Mohammad, caliph, Sunni, Shia (Shi'ite), and the Umayyad and Abbasid Dynasties.
Identify and give the significance of the devshirme, Janissary Corps, sultan, Suleiman the Magnificent, and Sinan (Mimar Sinan).
Identify and give the significance of samurai, daimyo, shogun, Minamoto Yoritomo, the Fujiwara family, Oda Nobunaga, Hideyoshi, and Tokugawa Ieyasu.
Identify and give the significance of Khubilai Khan, Zhu Yuanzhang, Zheng He, and the Manchu.
Describe the feudal and manorial systems in Europe.
Describe the changes in European agriculture c.1000 CE and their effects on European society, including the revival of trade in Europe and the rise of commercial towns.
Describe the religious changes in Europe between c.1300 and c.1650. Identify and give the significance of John Wycliffe, the Pope, Martin Luther, John (Jean) Calvin, and the Council of Trent.
Identify and give the significance of Montezuma, Tenochtitlan, Atahualpa, Cuzco, Cortes, and Pizarro.
Identify and give the significance of the Peace of Augsburg and the Treaties (or Peace) of Westphalia. Identify their purposes, strengths, and weaknesses.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Assessment of academic achievement will be identified and implemented by the class instructor. Methods will include, but will not be limited to, individual projects, vocabulary, class participation (discussion and critiques), and tests.	
Texts One of the following: - A good, world history text which is truly global and devotes significant material to non-Western history (China and the Islamic World) - Monographs that contain significant non-Western, non-Judeo-Christian materials.	
Supplemental materials should be non-Western whenever possible.

HIST254 - History of Michigan

Overview

Subject History	Academic Department Social Sciences	School Liberal Arts
Course Description Presents a general survey of the historical development of Michigan from French exploration to the present. Studies the economic, social, and political development of the state as part of the history of the United States.		
Course Pre-requisite(s) Eligible to take ENG courses at HFC.		
Credit Hours 3		
Contact Hours 3		
Course Fee 10	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category Social Sciences, Humanities and Fine Arts	Michigan Transfer Agreement (MTA) Category Category 4: Social Sciences - Applied Degrees, Category 4: Social Sciences - Transfer Degrees, Category 5: Humanities and Fine Arts - Applied Degrees, Category 5: Humanities and Fine Arts - Transfer Degrees	
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals

Provides a scholarly look into the social, economic, and political development of Michigan, starting with the civilizations of the First Nations who originally inhabited this state and continuing to the present day. Course also takes advantage of the exceptional historical resources available to students online and through local libraries and historical societies to examine the ways in which national events impacted local communities and provides a thorough understanding of the ways in which Michigan was affected by larger movements in Colonial American and US history. It also introduces students to the ways in which the discipline of history is practiced.

Core Course Topics

- 1. First Nations' Cultures and Life in the Colonial Era
- 2. Early French Colonial America
- 3. French Michigan in the 18th Century
- 4. Pontiac's War and the War for American Independence

- 5. The Birth of the United States and the State of Michigan
- 6. Economic Transition in the Nineteenth Century: Fur, Copper, Iron Ore, and Lumber
- 7. The Development of Antebellum American Culture and Its Impact on Michigan.
- 8. Michigan and the Civil War
- 9. The Emergence of Industrialization and the Factory System in Michigan
- 10. The Automobile Culture and Capitalism
- 11. Ford's Michigan
- 12. Michigan in the Twentieth Century and the Growth of Urban America
- 13. The Rise and Decline of Detroit
- 14. Civil Rights and Minorities in Michigan
- 15. Michigan in Transition in the Twenty-First Century: Demography, Education, and War

Analyze First Nations' Cultures and Life in the Colonial Era.
Identify Major Aspects of French Colonial Life in America.
Summarize Major Events in the Birth of the United States and the State of Michigan.
Discuss the Economic Transition of the 19th Century in terms of Fur, Copper, Iron Ore, and Lumber.
Explain the Development of Antebellum American Culture and its Impact on Michigan.
Analyze the Role of Michigan in the American Civil War.
Describe the Emergence of Industrialization and the Factory System in Michigan.
Identify the Major Aspects of the Automobile Culture and Capitalism.
Summarize the Role of Michigan in the Twentieth Century and the Growth of Urban America.
Explain the Decline of Detroit after 1950.
Analyze the Civil Rights Movement and the Role of Minorities in Michigan.
Explain the Emergence of Conservative Politics in America and Michigan.
Discuss the Role of the Judiciary in Michigan.
Describe the Decline of Industrialization in Michigan.
Discuss the Role of Michigan in Transition to the Twenty-First Century.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

Assessment of academic achievement will be identified and implemented by the class instructor. Methods will include, but will not be limited to, individual projects, vocabulary, class participation (discussion and critiques), and tests.

Texts

These texts are only suggested. Individual instructors may choose other texts.

- Hyde, Charles K. The Dodge Brothers: The Men, the Motor Cars, and the Legacy. Detroit, MI: Wayne State University Press, 2005.

Goals, Topics, and Objectives

Core Course Topics

1. Society and Politics on the Eve of the Revolution
2. The British Empire and the War for North America
3. British Reforms and Colonial Resistance
4. From the Tea Act to the Declaration of Independence
5. The Disappointments of 1776
6. The War Widens and Deepens
7. The Impact of the Winter at Valley Forge
8. George Washington: His Character and the Challenges He Faced
9. Outsiders and Enemies: Native Americans and Loyalists
10. The African-American Challenge
11. Gender, Citizenship, and Religious Tolerance in the Republic
12. Peacetime Government under the Articles of Confederation
13. The Constitutional Convention, Ratification, and the Bill of Rights
14. The Consequences of the Revolution

Identify the Social, Economic, and Political Conditions in the American Colonies at the Time of the Seven Years' War.
Explain the Issues and Positions that Separated Britain from those American Colonials who desired a Greater Measure of Self-Government in the Period following the Seven Years' War.
Recognize the Difficulties faced by the Continental Congress in Prosecuting a War amid a Largely Ambivalent Colonial Population and against the Leading Colonial Power of the World.
Describe the Immense Difficulties faced by American Generals, such as George Washington, in Successfully Creating, Training, and Commanding a Largely Civilian Army against British Regulars
Investigate the Issue of Slavery, the Conditions of Free African-Americans and the Calls for Emancipation during this Era.
Analyze the Revolutionaries' Perceptions of and Attitudes toward American Indians and Loyalists during the Revolutionary War.
Analyze the Impact of Gender and Citizenship in a Revolutionary Republic.
Investigate the Concept of Religious Freedom within the Predominantly Populated American Protestant Republic.
Describe the Articles of Confederation, including the Accomplishments and Deficiencies under that Government.
Identify the Personalities, Ideas and Compromises at Work, along with the Resulting Document Produced during the Constitutional Convention of 1787.
Analyze the Political Aspects of the Ratification of the Constitution, along with the Resultant Struggle for a Bill of Rights.
Assess the Consequences of the Revolutionary War Era and Its Impact upon American Life Today.

HIT150 - Basic Coding: Theory and Practice

Overview

Subject	Academic Department	School
Health Careers	Health, Education, and Human Services	Health & Human Services
Course Description	An intermediate-level coding class that incorporates hands-on practice in the assignment of insurance codes using case studies and medical record simulations. Presents theory and practice of coding diseases and procedures using International Classification of Diseases, Tenth Revision, Clinical Modification (ICD-10-CM) for inpatient facilities. Explores the Prospective Payment System (PPS) and the significance of Diagnosis Related Groupings (DRG). This course utilizes electronic and paper-based medical documentation to serve as resources for coding for inpatient reimbursement, and the application of all federal laws related to patient health information in the process of medical business practices.	
Course Pre-requisite(s)	MOA101 Admin Medical Procedures I and MOA110 Process Hlth Insurance Claims both with a C grade or higher.

Goals, Topics, and Objectives

Core Course Topics
- Medical Documentation - Principles of Confidentiality of Medical Records - Coding Procedures, Signs, Symptoms - Basics of Coding to ICD-10-CM - Coding According to Body Systems - The Prospective Payment System - Coding for Obstetrical Conditions - Coding for Cardiovascular Conditions - Coding for Neoplasm - Coding for Injuries - Coding for Adverse Effects and Poisoning - V Coding and E Coding - Coding for Medical Complications
Apply the principles of coding according to ICD-10-CM for inpatient reimbursement.
Identify key items that require code assignment from the medical documentation and apply the correct codes.
Apply the principles of selection diagnoses and principle procedure code selection along with complications and co-morbidities.
Group coded items using existing software to arrive at the correct Diagnosis Related Grouping (DRG) and therefore optimum reimbursement for a given medical case study.
Explain the importance of the principles of confidentiality of medical information to include federal and state regulations.
Identify key contributing factor of a medical chart and explain the meaning behind it.
Explain the guidelines associated with each chapter of the ICD-10-CM.
Identify principle diagnoses and reason for the visit, and know the difference.
Explain present on admission (POA).
Perform coding procedures using legal and ethical standards of the profession.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement will include participation, assignments, examinations and final exam.
Assessment activities will use the following weighted percentages:
Professionalism/Participation; 10%
Assignments;30%
Examinations; 30%
Final Examination;30%
General Course Requirements and Recommendations
Although not a prerequisite, it is highly recommended that students take BIO 134 (Essentials of Anatomy and Physiology) prior to taking HIT 150. This information is the required knowledge necessary to code procedures and diagnostic statements using the ICD-10CM/ Current Procedural Terminology (CPT) coding system and to improve success on the national board exam certification examination.

- Make-up exam policy: The student will arrange to make up any missed examinations at the convenience of the instructor, to be completed before the next class session.
- Attendance: Student attendance is required for each class. Class will consist of application exercises and discussion along with computer laboratory exercises. These experiences cannot be made up.
- Although students are encouraged to discuss coding homework as a learning exercise, students will not furnish answers to classmates who have not done their homework.
- If a student misses a class meeting, it is his/her responsibility to gather needed materials and information.
- A student who is considering withdrawal from this course they should speak with the instructor first and follow the guidelines established in the HFC catalog.

Grading Scale
Student grades will be assigned using the following scale:

- 98-100% = A+
- 93-97% = A
- 90-92% = A-

- 87-89% = B+
- 83-86% = B
- 80-82% = B-
- 76-79% = C+
- 70-75% = C
- 67-69% = D+
- 63-66% = D
- 60-62% = D-
- 59% & below = E

Texts
Required textbooks to be determined through departmental approval.

HIT151 - Basic Medical Coding: Theory & Practice

Overview

Subject Medical Office Assistant	Academic Department Health, Education, and Human Services	School Health & Human Services
--	---	--

Course Description
An introductory to intermediate-level coding class that incorporates hands-on practice in the assignment of insurance codes using case studies and medical record simulations. Presents theory and practice of coding diseases and procedures using International Classification of Diseases, Tenth Revision, Clinical Modification (ICD-10-CM) for inpatient facilities. Explores the Prospective Payment System (PPS) and the significance of Diagnosis Related Groupings (DRG). This course utilizes electronic and paper-based medical documentation to serve as resources for coding for inpatient reimbursement, and the application of all federal laws related to patient health information in the process of medical business practices.

Course Pre-requisite(s)

Goals, Topics, and Objectives

- Core Course Topics**
1. Medical Documentation
 2. Principles of Confidentiality of Medical Records
 3. Coding Procedures, Signs, Symptoms
 4. Basics of Coding to ICD-10-CM
 5. Coding According to Body Systems
 6. The Prospective Payment System
 7. Coding for Obstetrical Conditions
 8. Coding for Cardiovascular Conditions
 9. Coding for Neoplasm
 10. Coding for Injuries
 11. Coding for Adverse Effects and Poisoning
 12. Coding for Medical Complications

Apply the principles of coding according to ICD-10-CM for inpatient reimbursement.

Identify key items that require code assignment from the medical documentation and apply the correct codes.

Apply the principles of selection diagnoses and principle procedure code selection along with complications and co-morbidities.

Group coded items using existing software to arrive at the correct Diagnosis Related Grouping (DRG) and therefore optimum reimbursement for a given medical case study.

Explain the importance of the principles of confidentiality of medical information to include federal and state regulations.

Identify key contributing factor of a medical chart and explain the meaning behind it.

Explain the guidelines associated with each chapter of the ICD-10-CM.

Identify principle diagnoses and reason for the visit, and know the difference.

Explain present on admission (POA).

Perform coding procedures using legal and ethical standards of the profession.

HIT230 - Ambulatory Coding

Overview

Subject Health Careers	Academic Department Health, Education, and Human Services	School Health & Human Services
----------------------------------	---	--

Course Description
Examines the theory and practice of coding techniques and coding systems used to capture billing data for care given to patients in settings other than acute care. Settings include but may not be limited to ambulatory surgery, emergency care, outpatient care, long term care, observation, and care rendered by health care practitioners especially physicians.

Course Pre-requisite(s)
HIT151 Basic Med Coding: Theory/Practwith a C grade or higher.

Credit Hours
3

Contact Hours
3

Course Fee 15	Miscellaneous Department Fee 0

Credit for Prior College Level Learning (CPCLL) Details
Licensure/Certification

Certified Professional Coder (CPC)

Licensure/Certification Details

CPC certification must be current. Department faculty will verify certification.

Goals, Topics, and Objectives

- Core Course Topics**
1. Introduction to Current Procedural Terminology (CPT)/Healthcare Common Procedure Coding System (HCPCS) Coding
 2. Surgical Procedure Coding
 3. Radiology Coding
 4. Laboratory and Pathology Coding
 5. Anesthesia and Medicine Coding
 6. Evaluation and Management Coding
 7. Coding Applicable to Observation Care
 8. Coding Applicable to Long Term Care
 9. Coding Applicable to Emergency Care

10. International Classification of Diseases, Tenth Edition, Clinical Modification (ICD-10-CM) Codes Explain the format and coding conventions of CPT/HCPCS coding.
Apply CPT/HCPCS codes to information from medical record simulations.
Apply the ICD-10-CM coding system to all diagnostic conditions and procedural services being evaluated for financial reimbursement.
Interpret the documentation found in a medical record and apply the correct code.
Utilize the Encoder-Pro medical software coding system to arrive at correct codes.
Assign appropriate Ambulatory Procedure Code (APC) to medical documentation.
Demonstrate honesty and integrity in the assignment of codes for reimbursement.
Recognize coding errors contribute to waste and fraud.
Perform coding using ethical and legal standards of professional behavior.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of achievement will be determined using participation, assignments, lab exercises, case studies, examinations and final examination. Assessment activities will use the following weighted percentages: Professionalism/Participation; 10% Case Studies/Assignments; 30% Examinations; 30% Final Examination; 30%
General Course Requirements and Recommendations
1. Make-up exam policy: The student will arrange to make up any missed examinations at the convenience of the instructor, to be completed before the next class session.
2. Attendance: Student attendance is required for each class. Class will consist of application exercises and discussion along with computer laboratory exercises. These experiences cannot be made up.
3. Although students are encouraged to discuss coding homework as a learning exercise, students will not furnish answers to classmates who have not done their homework.

HON151 - Honor Colloquium-History Culture Detroit

Overview

Subject	Academic Department	School
Honors Program	Honors	Liberal Arts
Course Description		
An interdisciplinary humanities course that examines the history and culture of Detroit.		
Course Pre-requisite(s)		
Honors Program Acceptance		
Credit Hours		
3		
Contact Hours		
3		
Course Fee		Miscellaneous Department Fee
10		0
Academic Level		
Undergraduate		

General Education Category	Michigan Transfer Agreement (MTA) Category
Humanities and Fine Arts	Category 5: Humanities and Fine Arts - Applied Degrees, Category 5: Humanities and Fine Arts - Transfer Degrees
Eligible for Credit for Prior College Level Learning (CPCLL)	
No	

Goals, Topics, and Objectives

Course Goals
A primary objective of the course is to encourage a sense of community among honors students and to provide a forum for the exchange of ideas among them. In addition, the course attempts to encourage students to develop an appreciation of the relationships among several academic disciplines and to broaden and intensify students' intellectual interests.
Core Course Topics
1. The City of Detroit: This Colloquium explores the city of Detroit as a landmark of industrial development, labor activism, and cultural complexity.
The course focuses on distinctive individuals, significant institutions, and artistic achievements central to the evolution of Detroit through the nineteenth, twentieth, and twenty-first centuries.
Describe a particular social, economic, political or cultural problem within a variety of contexts.
Evaluate the commentary of classmates, as well as the remarks of not only the assigned instructor but visiting lecturers within a seminar context.
Analyze the socio-economic and cultural issues that have and continue to shape the city of Detroit and surrounding region.
Compose an essay or presentation that includes a detailed summary, explicit interpretation, and rigorous evaluation of at least one of the seminar's principal texts.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
1,500 word (minimum) seminar essay - A minimum of four in-class essays and/or journal commentaries - Final presentation
General Course Requirements and Recommendations
The Honors Colloquium is organized by a member of the Honors faculty around a humanities theme. Typically, the convener enlists participation of other faculty from across the College to present guest lectures on an overarching theme. Students are exposed to a wide variety of perspectives and diverse topics, as well as teaching styles, through:
- Lectures on the context and themes given by various HFC faculty speaking in their areas of expertise and special interest - Classroom discussion - Reading assignments - Site visits to area exhibitions, performances, etc.

A primary objective of the course is to encourage a sense of community among honors students and to provide a forum for the exchange of ideas among them. In addition, the course attempts to encourage students to develop an appreciation of the relationships among several academic disciplines and to broaden and intensify students' intellectual interests.
Core Course Topics
1. Topic listed below.
Colloquium themes (chosen by an instructor appointed by the Honors Council) have included, for example, "American Foreign Policy," "Immigration," "Work Ethics," "The Culture of Consumerism."
Describe a particular social, scientific, or artistic problem within a variety of contexts.

Evaluate the commentary of classmates, as well as the remarks of not only the assigned instructor but also visiting lecturers within a seminar context.
Analyze the organizing principle of the Colloquium within both historical and contemporary frameworks.*
Compose an essay that includes a detailed summary, explicit interpretation, and rigorous evaluation of at least one of the seminar's principal texts.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement 1,500-word (minimum) seminar essay - A minimum of four in-class essays and/or journal commentaries - Final exam

HON231 - Honors Directed Study

Overview

Subject Honors Program	Academic Department Honors	School Liberal Arts
Course Description Challenges sophomore students to apply knowledge and research skills acquired in their freshman year in the Honors Program. Students work individually with a faculty member of their choice on a mutually-agreed-upon study topic. Coursework includes presenting a research summary before a meeting of Honors Program students and faculty at the end of each semester.		
Course Pre-requisite(s) Permission from the Honors Program Director	Course Co-requisite(s) Honors Program Acceptance	
Credit Hours 1		
Contact Hours 1		
Course Fee 10	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals The Honors directed study aims to deepen students' interests in topics while strengthening their research and oral presentation skills as a way of preparing them for continued studies at transfer institutions.
Core Course Topics Varies by academic field and discipline of the HP faculty willing to offer HP directed studies.
Course objectives determined by the individual instructor and stipulated in a written "Student Contract". See Course Requirements under XII/XIII below for detailed steps.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement - Student produces agreed upon project(s). - Project is presented in summary form to an assembly of students and faculty. - Student writes a 400 word (max.) abstract summarizing the project for distribution to the Honors Day Student Presentation assembly held at the end of the semester or makes a formal presentation of his/her research before public forum.	
General Course Requirements and Recommendations - The instructor will plan to meet with the student one hour per week for fifteen weeks. Missed sessions will be made up. - Individual faculty determine the assignments and projects the student will undertake in collaboration with the student. - Each instructor will draw up a contract (using the basic outlines of a course syllabus). The HP Directed Study contract will stipulate what is expected of both the instructor and the student in terms of readings, project goal, and the specific due dates for completion of the readings and the project(s). - It is highly recommended that due dates be determined for various stages of the project in addition to the final completion date, so that the student may receive critical feedback as well as avoid procrastination. - The instructor presents a progress report and distributes the contract to a meeting of Honors faculty during the semester. - Students enrolled in Honors Directed Studies will read at least one influential work in the discipline of the instructor offering the Directed Study. An "influential work" is a work that has had a major impact on the discipline or on scholarship in general. At the discretion of the instructor, the student will read the work in whole or in part. The purpose of this requirement is to introduce students to the seminal figures in various disciplines as well as the nature, rigor, and breadth of scholarly works.	

- Working under the supervision of the Honors Directed Study instructor, students also will work on a project(s) that will engage his/her analytical and research skills as well as result in a tangible outcome or product. The outcome may be a written paper, or any other tangible product suitable to the particular discipline in which the Directed Study is given (technical projects, creative writing, studio art, musical recital, audio or visual works, experimental research projects, business plans, etc.).
- The student will present and make available an abstract of his/her reading(s) and project(s) before a gathering of Honors Program students and faculty. The last Friday of each semester (Fall and Winter) will be set aside for this purpose.

Goals, Topics, and Objectives

Course Goals The Honors directed study aims to deepen students’ interests in topics while strengthening their research and oral presentation skills as a way of preparing them for continued studies at transfer institutions. The Honors Directed Study Abroad class will further introduce students to foreign study and global cultures through the intensive study of and in a specific country.	
Core Course Topics Vary by academic field and discipline of the Honors Program (Honors Program faculty leading the Directed Study Abroad but will be focused on important subjects relevant to the host country of the Honors Program Directed Study Abroad).	
Course objectives determined by the individual instructor and stipulated in a written "Student Contract." See Course Requirements below for detailed steps.	

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement - Student produces agreed upon project(s), including a journal to be kept abroad, participation in discussions and field trips, and a final project to be finished not later than the midterm of the Fall Term following the study abroad. - Student writes a 400 word (maximum) abstract summarizing the project for distribution to the Honors Day Student Presentation assembly held at the end of the semester or makes a formal presentation of his/her research before a public forum.	
General Course Requirements and Recommendations The faculty leading the Directed Study Abroad will determine the assignments and projects the student will undertake in collaboration with the student.	

- The instructor will draw up a "contract" (using the basic outlines of a course syllabus). The HP Directed Study Abroad contract will stipulate what is expected of both the instructor and the student in terms of readings, project goal, journal, and the specific due dates for completion of the readings and the project(s). It is highly recommended that due dates be determined for various stages of the project in addition to the final completion date, so that the student may receive critical feedback as well as avoid procrastination. - The instructor presents a progress report and distributes the contract to a meeting of Honors faculty upon return from the Directed Study Abroad. - Students enrolled in Honors Directed Study Abroad will read at least one influential work in the discipline of the instructor offering the Directed Study Abroad. An "influential work" is a work that has had a major impact on the discipline or on scholarship in general. At the discretion of the instructor, the student will read the work in whole or in part. The purpose of this requirement is to introduce students to the seminal figures in various disciplines as well as the nature, rigor, and breadth of scholarly works. - Working under the supervision of the Honors Directed Study Abroad instructor, students also will work on a project(s) that will engage his/her analytical and research skills as well as result in a tangible outcome or product. The outcome may be a written paper, or any other tangible product suitable to the particular discipline of the student with the approval of the Directed Study Abroad instructor (technical projects, creative writing, studio art, musical recital, audio or visual works, experimental research projects, business plans, etc.) and will include a substantial focus on the thematic matter particular to the country in which the Honors Directed Study Abroad is held.

HON236 - Honors Directed Study - Service Learning

Overview

Subject Honors Program	Academic Department Honors	School Liberal Arts
Course Description Challenges sophomore students to apply knowledge and research skills acquired in their freshman year in the Honors Program. Students work individually with a faculty member of their choice on a mutually-agreed-upon study topic anchored in community service. Coursework includes presenting a research summary before a meeting of Honors Program students and faculty at the end of each semester.		
Course Pre-requisite(s) Permission from the Honors Program Director		
Credit Hours 1		
Contact Hours 1		
Course Fee 10		Miscellaneous Department Fee 0
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals Aims to deepen students' interests in topics related to community service while strengthening their research and oral presentation skills as a way of preparing them for continued studies at transfer institutions. The course challenges students to engage in disciplined social service at an organization within metropolitan Detroit, to research historical, cultural, and political issues related to their work at the organization, and to interpret the significance of their service endeavors within the context of that research.
Core Course Topics Varies by academic field and discipline of the Honors Program faculty willing to offer the Honors Program directed studies.
Course objectives determined by the individual instructor and stipulated in a written "Student Contract".

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement - Student produces a journal that profiles and analyzes the community service activity undertaken. - Student writes a 400 word (maximum) abstract summarizing the project for distribution to the Honors Day Student Presentation assembly held at the end of the semester. - Student presents the project in summary form at the Honors Day Student Presentation assembly or, makes a formal presentation of the research before a public forum approved by the instructor and the Honors Program Director.	
General Course Requirements and Recommendations - The instructor will meet with the student in a face to face session one hour per week for fifteen weeks. Missed sessions will be made up. - The instructor in collaboration with the student determines the assignments and focus of the project the student will undertake. Each instructor will draw up a "contract" following the model provided by the Honors Program. The HP Directed Study contract will stipulate what is expected of both the instructor and the student in terms of readings, project goal, and the specific due dates for completion of the readings and the project(s). - In addition to assigned readings, the course work will require a minimum of fifteen hours of community service at a site or sites specified by the instructor in the contract. The instructor will select the assigned site(s) from a provided by the Honors Program Director. The student must perform at least one hour of service per week, verified by the appropriate contact at the site. - It is highly recommended that due dates be determined for various stages of the project in addition to the final completion date, so that the student may receive critical feedback as well as avoid procrastination. - The instructor will present a progress report and distribute the contract to a meeting of Honors faculty during the semester - Students enrolled in Honors Directed Study—Service Learning will read at least one influential work in the discipline of the instructor that is relevant to the service that they are performing in the community. An "influential work" is a work that has had a major impact on the discipline or scholarship in general. At the discretion of the instructor, the student will read the work in whole or in part. - In addition students enrolled in Honors Directed Study—Service Learning will maintain a journal that summarizes and analyzes their service experience each week and employs the required reading for the week to provide perspective to that experience. The student journal will constitute the primary outcome of the course. - The student will present and make available an abstract of this journal before a gathering of Honors Program students and faculty. The last Friday of each semester (Fall and Winter) will be set aside for this purpose.

HON251 - Great Works

Overview

Subject Honors Program	Academic Department Honors	School Liberal Arts
Course Description Introduces seminal works from a range of disciplines, including literature, philosophy, history, religion, anthropology, psychology, and science. Explores each great work in terms of its capacity not only to assess issues crucial to its own era but also in terms of its power to illuminate the parameters of ethical, social, and cultural principles in the modern world.		
Course Pre-requisite(s) ENG131 Introduction College Writing Honors, with a C or better		
Credit Hours 3		
Contact Hours 3		
Course Fee 25		Miscellaneous Department Fee 0
Academic Level Undergraduate		
General Education Category Humanities and Fine Arts		Michigan Transfer Agreement (MTA) Category Category 5: Humanities and Fine Arts - Applied Degrees, Category 5: Humanities and Fine Arts - Transfer Degrees
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals The Honors Great Works Seminar aims to reveal to students their ability to engage challenging material from multiple disciplines and diverse cultures, and to encourage the continuation of such self-culture for a lifetime.
Core Course Topics - Critical textual analysis of great works from throughout time and from all over the world. - Relationship of style, genre, history, and culture on a given great work. - The interdisciplinary conversation of great ideas that occurs across cultures and time. - Oral & written evaluation and synthesis/presentation of ideas and arguments.
Interpret meaning in various texts by paying close attention to the creator's choices of detail, vocabulary, and style.
Discuss the relationship between different genres of texts and the multicultural & interdisciplinary environments from which they spring.
Articulate a critical evaluation and appreciation of a work's strengths and limitations.
Evaluate the commentary of classmates, as well as the remarks of the instructor, within a seminar setting.
Evaluate the contemporary relevance of particular texts.
Write critical essays employing a strong thesis statement, appropriate textual citations, contextual and intertextual evidence for their assertions

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement 1,500 word (minimum) seminar essay - is a comparison and contrast of two of the required course readings selected by the instructor. - includes both a "summary" and an "analysis" section. - An oral final examination in which the instructor engages each student in conversation regarding course texts and themes.	
General Course Requirements and Recommendations This course is to be an interdisciplinary study of great works (defined broadly) over many cultures and times. While an instructor can choose specific themes and particular authors/creators to focus on, there should be an emphasis on using multiple disciplines and various media to explore with students the idea of what makes a work great.	
Texts Instructors should choose from the Honors Council approved list and coordinate their choices with the Honors Director.

Goals, Topics, and Objectives

Core Course Topics

- Foodborne Illnesses
- The Microworld: Pathogens, Viruses, Parasites, Fungi, and Biological Toxins
- Purchasing, Receiving, and Storage

4. The Flow of Food: Preparation, Cooking Food, Cooling and Reheating Food
5. The Flow of Food: Service: Holding Food and Serving Food
6. Facilities Sanitation
7. Food Safety Regulations, Standards, and Inspections
8. Physical Safety

Identify the dangers of foodborne illness.

Explain how to prevent foodborne illness.

Identify how food becomes unsafe.

Discuss key practices for ensuring safe food.

Identify and discuss The Micro World.

Calibrate a bi-metallic stem thermometer.

Discuss the three types of food contaminants/hazards.

Explain the prevention of cross-contamination.

Evaluate service techniques for food safety hazards.

Discuss monitoring of time and temperature.

Identify the steps in the flow of food through an establishment.

Discuss the elements of and procedure for supplier selection and approval.

List seven recommended receiving practices.

Discuss proper storage practices.

Discuss proper preparation and cooking practices.

Demonstrate proper cleaning and sanitizing practices.

Identify the various temperature zones of storage areas in an operation.

Enumerate and discuss the five steps of HACCP.

Discuss the benefits of employee training.

Identify the federal, state and local agencies involved in the food safety monitoring system.

Demonstrate proper handwashing.

Identify the equipment required for every handwashing station.

Locate MSDS sheets in the Culinary Arts department.

Discuss an IPM program.

Identify proper suppliers of food service chemicals.

Goals, Topics, and Objectives

Core Course Topics

1. The Value of Professional Ice Carving
2. Composition of Ice
3. Art and Science in Carving
4. Tools of the Trade
5. Safety Techniques
6. Area Preparation and Application of Techniques
7. Single-block Carving
8. Finishing Techniques
9. Storage and Display
10. Advanced Skills
11. Multi-block Techniques
12. Competition and Guidelines
13. Single-block Buffet Designs
14. Computers and Templates

Identify ice-carving equipment and tools.
Demonstrate proper safety standards with 100% accuracy during ice carving session.
Demonstrate proper chisel control.
Utilize and draw a template of an existing ice design to produce an ice sculpture.
Demonstrate the ability to create a design using an overhead projector, templates and free-hand drawing on the ice block.
Safely operate and maintain an electric chain saw.
Analyze various ice carving techniques using the National Ice Carving Association judging criteria.
Demonstrate basic ice carving techniques of rounding, sanding, and straight-cutting on ice.
Apply detailed finishing techniques to ice sculptures.
Create an ice sculpture from a single 300-pound block of ice.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

- Weekly Workstation Set-Up/Breakdown: 100 points
- Notebook: 40 points
- Quizzes (2 x 30 pts each): 60 points
- Projects (6 x 100 pts each): 600 points
- Final Exam - Written: 100 points
- Practical - Ice Show Competition: 100 points

HOSP190 - Co-op in Hospitality

Overview

Subject	Academic Department	School
Culinary Arts, Hospitality Mgm	Culinary Arts + Hospitality Management	Business, Entrepreneurshp, PD

Course Description
Cooperative education is a structured method of combining classroom-based education with practical work experience. A cooperative education experience, commonly known as a "co-op," provides academic credit for structured employment experience. Work experience must be directly related to the student's declared major to be eligible. To register for this course, a student must have completed 50% of core coursework, maintain an overall GPA of 2.0 and a program specific GPA of 2.5

Course Pre-requisite(s)

Credit for Prior College Level Learning (CPCLL) Details

Student will submit a formal request in writing to the faculty and Associate Dean for work experience to be considered for Credit for Prior College-Level Learning.

The student will complete an interview, a reflective paper, or a presentation to the faculty in which the student develops and describes the learning objectives supported by the work experience, how those learning objectives were achieved and how that learning was put into practice.

Finally, the student must also provide a portfolio (or something comparable) that shows the work completed and provide some form of documentation confirming the work experience (a resume does not suffice) for which Credit for Prior College-Level Learning is requested.

Goals, Topics, and Objectives

Course Goals

Cooperative education helps students make the school-to-work transition, develop career and program-related learning objectives, and work on applicable skills for employment. Placements should provide students with the opportunity to apply and expand upon knowledge learned in the classroom, and develop the skills acquired in their coursework to align with the standards and expectations set by the worksite.

Core Course Topics

1. Professional Dress and Demeanor (attitude, posture, courteousness)
2. Workplace Communication
3. Interviewing Skills
4. Resume Building
5. Networking and Social Media
6. Seeking Employment
7. Career Advancement

1-3 program specific learning objectives will be developed by the instructor for each individual offering.
Students will create 1-3 learning objectives per credit to be approved by instructor for each individual offering.
Build a resume that meets standards of Career Services Office.
Explain the reasons for professional attire.
Wear professional attire while on the worksite.
Display appropriate professional attitude and demeanor while on the worksite.
Interview effectively.
Attend mock interview, give appropriate answers to five (5) questions.
Complete a written job application in a prompt, professional manner with all information legible, error-free, and thorough.

Use of Social Media sites (e.g., Facebook, LinkedIn, etc.) during Career Services workshop.

Assessment, Requirements, and Outcomes

- Core Course Topics
1. Cuisines Around the World
 2. Culture and Religion's Influences on Food
 3. Herbs Around the World
 4. Cooking Techniques for International Cooking
 5. Food Safety and Sanitation
 6. Food Storage
 7. Kitchen Tools and Proper Use
 8. Business' Affect on the Food Industry
 9. Buffets

Identify similarities and differences between the cuisines of the various countries.

Analyze various spices and herbs from different countries.

Prepare and serve an ethnic luncheon or dinner menu from recipes found on various websites.
Demonstrate proper cooking techniques for international dishes.
Examine the history of culinary influences of a specific country or region.
Analyze the country's or region's topography.
Explain the major ingredients and foods commonly used throughout the cuisine in many cultures.
Perform various culinary techniques while preparing a specific food course of the menu.
Analyze the proper handling of correct procedures for receiving, storing, preparing and serving hot and cold food items.
Demonstrate safe work habits to prevent injuries and avoid common hazards.
Examine the proper temperatures between hot and cold food items.
Analyze the proper procedure and use of various tools and equipment in a kitchen.
Demonstrate proper selection of equipment and utensils for specific application.
Demonstrate proper scaling and measurement techniques.
Apply basic math skills to recipe conversions.
Prepare crusty, soft and specialty yeast products.
Demonstrate proper knife skills.
Demonstrate proper safety and sanitation in the kitchen.
Name foods available around the world and why they are prevalent.
Explain origins of classical French cookery.
Discuss how trade and wars affected the use of ingredients.
Discuss how religion affects foods that are eaten/not eaten in certain cultures.
Demonstrate proper dining room buffet service techniques.
Demonstrate various buffet set-ups.
Perform various active stations during a buffet service.

Goals, Topics, and Objectives

- Core Course Topics
- Standards of Professionalism
 - Sanitation and Safety
 - Food Handling and Personal Hygiene
 - Principles of Cooking and Food Science
 - Cooking Methods
 - Planning and Organizing Production
 - Concepts of Cooking Ingredients
 - Classifications of Foods

Define baking terms.
Identify equipment and utensils used in baking and discuss proper use and care.
Demonstrate proper selection of equipment and utensils for specific application.
Identify ingredients used in baking.
Demonstrate proper scaling and measurement techniques.
Apply basic math skills to recipe conversions.
Describe properties and list functions of various ingredients.
Define and describe quick-breads and the mixing methods utilized to produce them.
Define and describe pate choux, its uses, method of preparation, baking, and finishing.
Discuss nutritional concerns as they apply to baking.
Discuss recipe modifications to create more nutritionally beneficial baked goods and desserts.
Perform recipe yield conversions.
Perform the process of recipe costing.
Discuss service methods such as banquets, buffets and catering, and a la carte.
Demonstrate knife skills, hand tool and equipment operation, emphasizing proper safety techniques.
Identify the parts/components of a recipe.

Describe and use a standardized recipe.	Identify principles of menu layout and design.
Outline the procedure for writing a standardized recipe.	Create menu item descriptions following established truth-in-menu guidelines.
Identify and use utensils, pots and pans and demonstrate safe practices using stoves, mixers, ovens, etc.	Apply principles of nutrition to menu development.
Define and describe the sautéing process.	Develop a menu layout for a foodservice operation.
Define and describe the processes of pan-frying and deep-frying.	Discuss the availability of food and seasonal menus.
Define and describe the roasting and baking processes.	Discuss menu planning resources (internet, professional, and vendors).
Define and describe the process of grilling and broiling.	Discuss contemporary nutritional issues (i.e. vegetarianism, heart healthy menus, and religious dietary laws).
Define and describe the processes of braising and stewing, noting the similarities and differences.	Discuss how HACCP practices are addressed in the purchasing, receiving, storing, and issuing procedures.
Define and describe the process of shallow-poaching.	Explain regulations for inspecting and grading of meats, poultry, seafood, eggs, dairy products, fruits, and vegetables.
Define poaching and simmering and correctly identify the temperature range at which each occurs.	Outline yield and quality grades and National Association of Meat Purveyors (NAMP) specifications for meats.
Define and describe the boiling and steaming process.	Explain proper receiving and storing of cleaning supplies and chemicals.
Utilize standard weights and measures to demonstrate proper scaling and measurement techniques.	Explain the procedures for rotation of stock and for costing and evaluating, including FIFO and LIFO.
Identify and use herbs, spices, oils and vinegar, condiments, marinades, and rubs.	Describe proper procedures of issuing product according to requisition.
Evaluate the quality of herbs, spices, oils, vinegar, condiments, marinades, and rubs.	Identify microorganisms which are related to food spoilage and foodborne illnesses; describe their requirements and methods for growth.
Define stock and describe its uses.	List and describe symptoms common to foodborne illnesses and list various ways these illnesses can be prevented.
Identify different types of stocks.	List the major causes of food spoilage.
List the basic ingredients needed for making stocks.	Define food spoilage indicators.
Describe the functions of the ingredients.	Outline the flow of food through an establishment and list the various ways contamination may be prevented along the pathway.
Describe the process of making stocks.	Outline the requirements for proper receiving and storage of both raw and prepared foods.
Define, describe and explain the purpose of sauces.	Recognize sanitary and safety design and construction features of food production equipment and facilities. (i.e. NSF, UL, OSHA, ADA, etc)
List the basic ingredients needed for making grand and non-grand sauces.	Describe types of cleaners and sanitizers and their proper use.
Describe the functions of the ingredients in sauces.	Identify the seven HACCP Principles and the critical control points during all food handling processes as a method for minimizing the risk of foodborne illness.
Define and describe soup and identify its two basic categories.	Review Material Safety Data Sheets (MSDS) and explain their requirements in handling hazardous materials. Discuss right-to-know laws.
Describe the process of making each category of soup.	Describe appropriate measures for insects, rodents and pest control eradication.
Identify a variety of fruits, vegetables, starches, legumes, and grains.	List common causes of typical accidents and injuries in the foodservice industry and outline a safety management program.
Describe the various cuisines and contributions of leading culinarians.	Demonstrate appropriate emergency policies for kitchen and dining room injuries.
Identify professional organizations within the field; explain purposes and benefits.	Describe appropriate types of use of fire extinguishers used in the foodservice area.
Discuss/evaluate industry trends as they relate to career opportunities and the future of the industry.	
Discuss and evaluate industry trade periodicals.	
List basic menu planning principles.	

Review laws and rules of the regulatory agencies governing sanitation and safety in foodservice operation.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Total Possible Grade Points: 930	
- Class test (3 x 100 pts. ea.): 300 points - Workbook Assignments (19 x 20 pts. ea.): 380 points - Wiley Plus on-line computer program (10 assignments x 15 pts. ea.): 150 points - Final exam: 100 points	
General Course Requirements and Recommendations The following are required by the 2nd full week of class:	
- Chef Jacket - Chef Hat - Chef Apron	
Grading Scale	
90% - 100% = A 80% - 89% = B 70% - 79% = C 60% - 69% = D 0% - 59% = E

HOSP221 - Front Office Procedures & Guest Service

Overview

Subject Culinary Arts, Hospitality Mgm	Academic Department Culinary Arts + Hospitality Management	School Business, Entrepreneurshp, PD
Course Description Presents a systematic approach to the front office procedures by detailing the flow of business in the lodging operation. Examines the various jobs in the hotel/motel front office, and emphasizes guest relations and services, night audit, and check-out procedures.		
Course Pre-requisite(s) HOSP211 Intro to Hospitality Industry		
Credit Hours 3		
Contact Hours 3		
Course Fee 50	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics - The Front Office - Equipment - Reservation Process - Hotel Information System - Registration Process - Room Status Process - The Guest Accounting System - Night Audit - Check-out/Settlement
Identify various types of hotels in terms of service they provide for the guest.
Analyze (in classroom groups) various case studies of the lodging operation while stressing the "team" aspect for decision making.
Create an organizational chart for a mid-sized hotel.
List job specifications and tailor job descriptions for specific front office positions.
Explain the function and operation of basic front office equipment.
Identify the terms used in guest reservations.

Identify the process of guest registration.
Demonstrate the procedures for managing front office operations utilizing a computer.
Identify functions and procedures related to guest check-out.
Identify functions and procedures pertaining to settlement process for a guest at a hotel.
Describe the functions of the night audit and various financial reports prepared by the front desk.
Demonstrate the "Virtual Hotel Software - Performance for Front Desk Employees" on the computer.
Develop procedures for handling complaints.
Describe the elements of a security program in a lodging operation.
Compare the target markets of the various categories of lodging operations.
Discuss guest communications within the lodging industry.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
- Chapter Assignments - Virtual Hotel/Front Office Simulations - Group Case Studies - Progress Tests - Final Exam	
General Course Requirements and Recommendations Basic keyboarding skills; calculator	
Grading Scale	
90% - 100% = A 80% - 89% = B 70% - 79% = C 60% - 69% = D 0% - 59% = E

HOSP224 - Culinary Skills and Nutritional Cooking

Overview

Subject Culinary Arts, Hospitality Mgm	Academic Department Culinary Arts + Hospitality Management	School Business, Entrepreneurshp, PD
Course Description Introduces basic concepts in food preparation and techniques in food service operation. Explores proper use of kitchen procedures with hands-on food production methods, and discusses how to utilize the principles, standards, and practices involved in professional quantity food production. Instructor rotates students in the following production areas: pantry, soups, stocks, sauces, vegetables, and the entree department.		
Course Pre-requisite(s) Satisfactory completion of or enrollment in ENG-081 or ENG-082 or higher, or a satisfactory score on the English placement exam.		Course Co-requisite(s) Completed or concurrent enrollment in HOSP105 Applied Food Serv Sanitation , HOSP220 Intro to Baking & Cooking , and HOSP226 Fundamentals of Baking
Credit Hours 3		
Contact Hours 4.5		
Course Fee 55	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics - Standards of Professionalism - Safety and Sanitation - Knife Skills - The Senses and Food

5. Selecting and Using Proper Tools and Equipment
6. Working More Efficiently
7. Cooking Principles
8. Classifications of Stocks
9. Classifications of Soups
10. Leading and Secondary Sauces
11. Plate Presentation
12. Meat Cookery
13. Poultry Cookery
14. Fish and Shellfish Cookery
15. Vegetable and Starch Cookery
16. Conversions and Measurements
17. Food Service Terminology

Perform calculations using current technology (i.e. computers, calculators, POS).

Demonstrate knife skills, hand tool and equipment operation, emphasizing proper safety techniques.

Identify the parts/components of a recipe.

Describe and use a standardized recipe.

Outline the procedure for writing a standardized recipe.

Identify and use utensils, pots and pans, and demonstrate safe practices using stoves, mixers, ovens, etc.

Define and describe the sautéing process.

Prepare a variety of foods using the sauté techniques.

Evaluate the quality of sautéed items.

Define and describe the processes of pan-frying and deep-frying.

Fry a variety of foods to their proper doneness.

Evaluate the quality of fried foods.

Define and describe the roasting and baking processes.

Compare and contrast roasting to baking, poeiling, smoke-roasting, and spit-roasting.

Roast meats, poultry, and fish to the correct doneness to develop the best flavor and texture in the finished dish.

Evaluate the quality of roasted items.

Define and describe the process of grilling and broiling.

Grill and broil foods to the proper doneness.

Evaluate the quality of grilled and broiled items.

Define and describe the processes of braising and stewing, noting the similarities and differences.

Braise and stew foods to the proper doneness.

Evaluate the quality of braised and stewed items.

Define and describe the process of shallow-poaching.

Prepare shallow-poached foods properly and produce a sauce that incorporates the cooking liquid.

Evaluate the quality of shallow-poached items.

Define poaching and simmering and correctly identify the temperature range at which each occurs.

Poach and simmer foods to the proper doneness.

Evaluate the quality of poached and simmered foods.

Define and describe the boiling and steaming process.

Prepare boiled and steamed foods to the proper doneness.

Evaluate the quality of boiled and steamed items.

Utilize standard weights and measures to demonstrate proper scaling and measurement techniques.

Identify and use herbs, spices, oils and vinegars, condiments, marinades, and rubs.

Perform basic fabrication tasks with meat, poultry, seafood, and variety meats.

Using the basic cooking methods, prepare meat, seafood, poultry, and variety meats to the proper doneness.

Evaluate the quality of prepared meats, seafood, poultry and variety meats.

Define stock and describe its uses.

Identify different types of stocks.

List the basic ingredients needed for making stocks.

Describe the functions of the ingredients.

Describe the process of making stocks.

Prepare a variety of stocks.

Evaluate the quality of a properly made stock.

Define, describe and explain the purpose of sauces.

Identify and prepare the grand sauces.

Prepare a variety of non-grand/classical sauces.

List the basic ingredients needed for making grand and non-grand sauces.

Describe the functions of the ingredients in sauces.

Evaluate the quality of a properly made sauce.

Define and describe soup and identify it's two basic categories.

Prepare a variety of soups from each category.

Describe the process of making each category of soup.

Evaluate the quality of a properly made soup.

Identify a variety of fruits, vegetables, starches, legumes and grains.

Prepare a variety of fruits, vegetables, starches, legumes and grains using the basic cooking methods.

Evaluate the quality of prepared fruits, vegetables, starches, legumes and grains.
Identify and prepare a variety of breakfast batter products.
Evaluate the quality of prepared breakfast batter products.
Identify tools and equipment used in garde manger and menu planning, emphasizing safety and sanitation procedures.
Use cheese as an ingredient in recipes.
Discuss and demonstrate cooking techniques and storage principles and portion sizes for maximum retention of nutrients and effective weight management.
Demonstrate acceptable procedures when preparing potentially hazardous foods to include time/temperature principles.
Review Material Safety Data Sheets (MSDS) and explain their requirements in handling hazardous materials. Discuss right-to-know laws.
Develop cleaning and sanitizing schedule and procedures for equipment and facilities.
Demonstrate appropriate emergency policies for kitchen and dining room injuries.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Total Possible Grade Points: 480

- Class Presentation - daily lab evaluation (15 sessions x 20 points): 300 points
- Mid Term: 20 points
- Culinary Arts Notebook/Folder: 20 points
- Hospitality Banquets/Events: 40 points
- Final Practical Exam: 60 points
- Final Written Exam: 40 points

- Grading Scale
- 90% - 100% = A
 - 80% - 89% = B
 - 70% - 79% = C
 - 60% - 69% = D
 - 0% - 59% = E

Goals, Topics, and Objectives

Core Course Topics

1. The Kitchen Brigade System
2. Safety and Sanitation
3. Equipment Identification
4. Measurements and Following a Standardized Recipe
5. Quickbreads
6. Yeast Dough Products
7. Cookies and Bars
8. Pie Dough and Fillings
9. Cheesecakes
10. Laminated Yeast Dough Products
11. Doughnuts and Sweet Dough Products
12. Basic Cakes and Fillings
13. Custards, Puddings and Soft Fillings
14. Paté Choux Products

Define baking terms.
Identify equipment and utensils used in baking and discuss proper use and care.
Demonstrate proper selection of equipment and utensils for specific application.
Identify ingredients used in baking.
Demonstrate proper scaling and measurement techniques.
Apply basic math skills to recipe conversions.
Describe properties and list functions of various ingredients.
Define and describe the steps in the production of yeast-leavened breads.
Prepare a variety of yeast-leavened breads.
Evaluate the quality of yeast-leavened breads.
Define and describe quick-breads and the mixing methods utilized to produce them.
Prepare and evaluate the quality of a variety of quick-breads.
Define and describe the various types of pies and tarts and the mixing methods utilized to produce them.
Prepare a variety of pies and tarts.
Evaluate the quality of prepared pies and tarts.
Define and describe the variety of cookie types and the mixing methods utilized to produce them.
Produce a variety of types of cookies.
Evaluate the quality of prepared cookies.
Define and describe the variety of cake types and the mixing methods utilized to produce them.
Prepare a variety of cakes.
Evaluate the quality of prepared cakes.
Demonstrate basic icing and decorating techniques.
Evaluate the quality of iced and decorated cakes.
Define and describe the variety of laminated doughs.

Explain the process of lamination as it applies to doughs.
Prepare a variety of laminated dough products.
Evaluate the quality of prepared laminated dough products.
Define and describe pate choux, it's uses, method of preparation, baking and finishing.
Prepare a variety of pate choux products.
Evaluate the quality of prepared pate choux products.
Define and describe creams, custards, puddings and related sauces.
Describe the various types of uses of and preparation methods of various creams, custards, puddings and related sauces.
Prepare a variety of creams, custards, puddings and related sauces.
Evaluate the quality of prepared creams, custards, puddings and related sauces.
Define and describe the various types, uses, and methods of preparation of dessert sauces.
Prepare a variety of dessert sauces.
Evaluate the quality of prepared dessert sauces.
Discuss the application of mixes and other value-added products.
Define and describe a variety of fillings and toppings for pastries and baked goods.
Discuss methods of preparation and finishing techniques for various fillings and toppings.
Prepare a variety of fillings and toppings for pastries and baked goods.
Demonstrate the presentations of baked goods and desserts.
Evaluate the quality of presentations of baked goods and desserts.
Discuss recipe modifications to create more nutritionally beneficial baked goods and desserts.
Perform calculations using current technology (i.e. computers, calculators, POS).
Demonstrate knife skills, hand tool and equipment operation, emphasizing proper safety techniques.
Identify the parts/components of a recipe.
Describe and use a standardized recipe.
Identify and use utensils, pots and pans and demonstrate safe practices using stoves, mixers, ovens, etc.
Utilize standard weights and measures to demonstrate proper scaling and measurement techniques.
Demonstrate acceptable procedures when preparing potentially hazardous foods to include time/temperature principles.
Review Material Safety Data Sheets (MSDS) and explain their requirements in handling hazardous materials. Discuss right-to-know laws.

HOSP235 - Ice Carving for the Professional

Overview

Subject	Academic Department	School
Culinary Arts, Hospitality Mgm	Culinary Arts + Hospitality Management	Business, Entrepreneurship, PD
Course Description		
Demonstrates how to carve ice sculptures in single and multi-block designs, custom-colored logo designs, and functional ice carvings used on culinary food buffets. Offers advanced techniques in the use of hand and power tools.		
Course Pre-requisite(s)		
HOSP145 Ice Carving and Design		
Credit Hours		
3		
Contact Hours		
4		
Course Fee	Miscellaneous Department Fee	
90	0	
Academic Level		
Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL)		
No		

Goals, Topics, and Objectives

Core Course Topics
- The Value of Professional Ice Carving - The Science of Ice - The Sculptor's Tools and Equipment - Safe Practices and Procedures - Adding Colors to the Use of Ice Templates - Preparation of the Ice Carving Area, and Application of Techniques and Fusing - Managing the Ice Studio, and Transportation of Ice - Displaying and Lighting of Ice - Custom Design Techniques, and Special Event Sculpturing - Ice Sculpting Organizations, Competitions, and Festivals - The Business Side of Ice Sculpting - Applying Guidelines to Single-block Freestyle Designs - Time Management of Team Ice Sculptures - Practical Multi-block Techniques on Location
Apply ice carving techniques using power tools.
Demonstrate proper safety standards with 100% accuracy during ice carving session
Demonstrate proper chisel control
Utilize and draw a custom ice design using colors.
Demonstrate the ability to transfer designs using an overhead projector, templates, and free-hand drawings on the ice block.

Sculpt a functional ice liquor luge.
Analyze various ice carving techniques using the National Ice Carving Association Standards for judging, and applying them to the carved ice sculpture.
Demonstrate ice carving techniques using a freestyle ice design.
Apply detailed finishing techniques to ice sculptures.
Sculpt an ice sculpture using a multi-block ice design.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
- Weekly Workstation Set-Up/Breakdown: 100 points - Notebook: 40 points - Quizzes (2 x 30 pts each): 60 points - Projects (7 x 100 pts each): 700 points - Written Final Exam: 100 points - Practical Test (Ice Show Competition): 100 points - Total Possible Points: 1000

Goals, Topics, and Objectives

Core Course Topics	
- Kitchen Equipment; Safety and Sanitation - Petits-Fours - Individual Plated Desserts - Marzipan - Soufflés - Frozen Desserts - Candies - Confectionary Centerpieces - Modern Pastry Techniques - Tarts and Pies - Sugar Work	
Identify and use common and specialty ingredients used in baking.	
Convert recipes to a new yield.	

Cook sugar and isomalt for basic sugar display work.
Define and describe hot and cold soufflés.
Define and describe marzipan.
Define and describe various types of candies.
Discuss methods of preparation on/for cooking sugar and isomalt that is to be used for candies or sugar display pieces.
Discuss the method of preparation for marzipan.
Discuss the method of preparation for pastillage and royal icing.
Evaluate the quality of chocolate, chocolate confections and chocolate display pieces.
Evaluate the quality of cooked sugar and isomalt and prepared sugar display pieces.
Evaluate the quality of pastillage, royal icing and prepared displayed pieces.
Evaluate the quality of prepared marzipan items.
Evaluate the quality of various prepared candies.
Prepare bread dough and produce various decorative bread items.
Prepare display pieces using pastillage and royal icing.
Prepare sugar and/or isomalt display pieces.
Prepare various types of candies.
Produce various petit fours, including various finishing and display techniques.
Produce a variety of ice cream and sorbets.
Produce various hot and cold soufflés.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
- Class Evaluations (15 sessions x 20 pts each): 300 points - Homework and Notebook: 60 points - Special Project: 100 points - Final Exam: 100 points - Total Points Possible: 560

HOSP250 - Hospitality and Travel Marketing

Overview

Subject	Academic Department	School
Culinary Arts, Hospitality Mgm	Culinary Arts + Hospitality Management	Business, Entrepreneurship, PD

Course Description Explores the need and value of a cooperative marketing effort among hotels, airlines, restaurants, travel agents, and other important industry groups. Discusses research and analysis, the development and implementation of marketing plans and strategies, advertising, promotions, public relations, and pricing structures.		
Course Pre-requisite(s) HOSP211 Intro to Hospitality Industry		
Credit Hours 3		
Contact Hours 3		
Course Fee 25		
Miscellaneous Department Fee 0		
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics 1. Introduction: Marketing for Hospitality and Tourism 2. Service Characteristics of Hospitality and Tourism Marketing 3. The Role of Marketing in Strategic Planning 4. The Marketing Environment 5. Managing Customer Information to Gain Customers Insights 6. Consumer Markets and Consumer Buying Behavior 7. Organizational Buyer Behavior of Group Market 8. Customer Driven Marketing Strategy: Creating Value for Target Customers 9. Designing and Managing Products and Brands: Building Customer Value 10. Internal Marketing 11. Pricing: Understanding and Capturing Customer Value 12. Marketing Channels: Delivering Customer Value 13. Engaging Customers and Communicating Customer Value 14. Public Relations and Sales Promotion 15. Professional Sales 16. Direct, Online, Social Media and Mobile 17. Destination Marketing		
Define marketing and the marketing process.		
Identify the difference between hospitality marketing mix and the traditional marketing mix.		
List the steps of the marketing planning process.		
Define the five essential marketing intelligence tools.		
Describe the difference between the nature of products and the nature of services.		
List and discuss the various channels of distribution in hospitality marketing.		
Assess the customer's perception of risk.		
Compare quality control and quality assurance.		
Evaluate supply and demand of the hospitality product.		
Explain different types of operations, limited service, full service, etc.		
Review service levels and guest's perceptions.		
Judge the impact of geographic segmentation.		
Discuss demographic segmentation.		
Explain the line level employee's impact on the marketing effort.		
Define the product life cycle and the role it plays in marketing strategy.		
List and identify marketing concepts used to develop and introduce a new product.		
List the advertising process to develop an advertising campaign.		

List solutions to a marketing problem that many restaurants face having to appeal to families.
Develop a basic press kit for a property.
Identify the external and internal factors that influence consumer decision-making.
Evaluate interdepartmental relationships.
Define marketing positioning.
Discuss different pricing strategies: selling up, selling down, price ranges, etc.
List the ten keys to a positive customer reaction to a hospitality product.
Identify how organizational buyers differ from individual buyers.
Discuss the different laws and acts that affect marketing.
Define the product life cycle and the role it plays in marketing strategy.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement • In Class Participation (15 x 10) 150 points • Reading Quizzes (15 x 10) 150 points • Project Assignments: (8 x 25) 200 points • Final Presentation 50 points • Final Marketing Plan 50 points Total Possible Grade Points: 600	
Grading Scale • 90% - 100% = A • 80% - 89% = B • 70% - 79% = C • 60% - 69% = D • 0% - 59% = E

HOSP251 - Dining Room Service and Operations

Overview

Subject Culinary Arts, Hospitality Mgm	Academic Department Culinary Arts + Hospitality Management	School Business, Entrepreneurshp, PD
Course Description Applies basic principles of table service in the production dining room. Emphasizes effective serving procedures and techniques, including cordial and prompt attention to customers, proper dress and grooming practices, and in-depth knowledge of menu items.		
Course Pre-requisite(s) HOSP340 Ala Carte and Buffet Cookery		
Credit Hours 3		
Contact Hours 4		
Course Fee 70		
Miscellaneous Department Fee 0		
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics 1. Table Setting, Service Styles 2. Equipment Handling and Identification 3. Front of the House General Practices 4. Hospitality: Diet Restrictions, Faith & Medical 5. Proper Service Etiquette and Ethics 6. Wine Opening & Service 7. Beer & Cocktails essentials 8. Restaurant Menu Knowledge 9. Point of Sales System 10. Servsafe Alcohol 11. Guest Service Gold	
--	--

Demonstrate how to set up a dining room table and place setting prior to serving guests.
Develop and refine the eight behaviors common to professional servers.
Experience and demonstrate guest check procedures with 100% accuracy.
List the menu ingredients and describe the menu ingredients on the 5101 restaurant menu.
Describe the proper accounting procedures to balance a cash register.
Identify and describe the servers report and clock-in and clock-out procedures.
Describe American, English, French, and Russian service.
Explain inter-relationships and work flow between dining room and kitchen operations.
Describe the types of service jobs in the industry and the skills needed to successfully perform the tasks for each job.
Recognize and use safe and sanitary serving procedures.
Identify the parts of a cover and set up a variety of covers.
Describe the duties of a server and demonstrate the ability to perform them.
Create a summary of side-work duties and demonstrate the ability to perform them.
Describe the ways to handle customers with complaints and special needs and demonstrate ways to handle them.
Use suggestive selling techniques.
Prepare and serve a variety of tableside dishes.
Compare and contrast major "types of service".
Identify and discuss the presentation and service of alcoholic, non-alcoholic and de-alcoholized beverages including coffee and tea.
Identify equipment and glassware used for beverage preparation and service.
Discuss opening and closing procedures of a beverage operation.
Become ServSafe certified in responsible alcohol service.
Receive Guest Service Gold certification

Assessment, Requirements, and Outcomes

- Assessment of Academic Achievement
- Lab Participation : 11 weeks x 30 pts: 330 points
 - FDRP Assignments 8 x 15pts: 120
 - Class quizzes 9 x 10 pts: 90 points
 - Dining Room Associate Test: 50 points
 - Restaurant Paper: 50 points
 - Events (8 hours): 60 points
 - ServSafe Alcohol Exam: 50 points
 - Guest Service Gold Exam : 50 pts
 - Total Possible Grade Points: 800
- Grading Scale
- 90% - 100% = A
 - 80% - 89% = B
 - 70% - 79% = C
 - 60% - 69% = D
 - 0% - 59% = E

Goals, Topics, and Objectives

Core Course Topics

- Equipment List and Uses
- Batter Types
- Serving Sizes and Portions per Cake
- Types of Frosting
- Frosting Techniques
- Royal Icing and Gum Sugar
- Colors and Coloring Techniques
- Piping Animals and Figures
- Buttercream Transfer Method
- Airbrush Techniques
- Cupcake Sculptures
- Layer Cakes: Tiers, Structures, Supports and Desgin
- Fondant
- Gumpaste
- Wedding Cakes

Demonstrate basic cake decorating and methods for standard cones.
Identify equipment needed for cake decorating.
Prepare various types of cakes and icings.
Examine various cake borders and methods of preparation.
Distinguish between various color palette for icing and flowers.
Demonstrate various techniques of preparing flowers and other decorative items.
Analyze various types of icing for the art of cake design.
Identify various methods for assembling cakes.
Create advanced projects: basketweave cakes, air-brushing cakes, sculpture-style cakes.
Design and prepare a two-tier layer cake, structurally supported, properly frosted, and adorned with advanced decorations.
Develop advanced decorating and finishing techniques for cakes.
Evaluate the quality of decorated cakes.

Define and describe pastillage and royal icing.
Discuss the methods of preparation for pastillage and royal icing.
Prepare pastillage and royal icing.
Evaluate the quality of pastillage, royal icing and prepared display pieces.

Assessment, Requirements, and Outcomes

- Assessment of Academic Achievement
- Daily Evaluation (15 sessions x 20 pts each): 300 points
 - Notebook: 40 points

HOSP290 - Co-op in Hospitality

Overview

Subject
Culinary Arts, Hospitality Mgm

Academic Department
Culinary Arts + Hospitality Management

School
Business, Entrepreneurshp, PD

Course Description
Cooperative education is a structured method of combining classroom-based education with practical work experience. A cooperative education experience, commonly known as a "co-op," provides academic credit for structured employment experience. Work experience must be directly related to the student's declared major to be eligible. To register for this course, a student must have completed 50% of core coursework, maintain an overall GPA of 2.0 and a program specific GPA of 2.5

Course Pre-requisite(s)
Permission from Career Services Officer or Cooperative Education Officer

Credit Hours
2

Contact Hours
0.2

Course Fee
25

Miscellaneous Department Fee
0

Acceptable Prior Learning Credit
Other

Credit for Prior College Level Learning (CPCLL) Details
Student will submit a formal request in writing to the faculty and Associate Dean for work experience to be considered for Credit for Prior College-Level Learning.

The student will complete an interview, a reflective paper, or a presentation to the faculty in which the student develops and describes the learning objectives supported by the work experience, how those learning objectives were achieved and how that learning was put into practice.

Finally, the student must also provide a portfolio (or something comparable) that shows the work completed and provide some form of documentation confirming the work experience (a resume does not suffice) for which Credit for Prior College-Level Learning is requested.

Goals, Topics, and Objectives

Course Goals
Cooperative education helps students make the school-to-work transition, develop career and program-related learning objectives, and work on applicable skills for employment. Placements should provide students with the opportunity to apply and expand upon knowledge learned in the classroom, and develop the skills acquired in their coursework to align with the standards and expectations set by the worksite.

Core Course Topics

- 1. Professional Dress and Demeanor (attitude, posture, courteousness)
- 2. Workplace Communication
- 3. Interviewing Skills
- 4. Resume Building
- 5. Networking and Social Media
- 6. Seeking Employment
- 7. Career Advancement

1-3 program specific learning objectives will be developed by the instructor for each individual offering.
1-3 learning objectives per credit to be created by the student and approved by instructor for each individual offering.
Build a resume that meets standards of Career Services Officer.
List the reasons for professional attire.
Wear professional attire while on the worksite.
Attend career workshop in professional dress.
Display appropriate professional attitude and demeanor while on the worksite.
Interview effectively.
Attend mock interview, give appropriate answers to five questions.
Complete a written job application in a prompt, professional manner with all information legible, error-free, and thorough.
Differentiate the use of Social Media sites (Facebook, LinkedIn, and Twitter) during Career Services workshop.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Term Paper Weekly journal
Creation and attainment of all learning objectives
Participation in a career-focused workshop
Consistent and prompt attendance at worksite
Employer evaluation
Completion of 300 hours of work

Satisfies Honors Requirement
No

Satisfies Wellness Requirement

Course Fee 15	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

- Core Course Topics**
1. The Supervisor and Management Processes
 2. Effective Communication
 3. Recruiting and Selecting Employees
 4. Employee Orientation and Training
 5. Managing Productivity and Controlling Labor Costs
 6. Evaluating and Coaching Employees
 7. Discipline
 8. Special Supervision Concerns
 9. Building an Effective Team
 10. Motivation Through Leadership
 11. Structure of Unions and History of Organized Labor
 12. Collective Bargaining Simulation
 13. Managing Conflict
 14. Time Management
 15. Managing Change
 16. Professional Development and Future Trends

Identify the three levels of management in most hospitality properties and the basic management processes.
Identify job tasks of managers in the hospitality industry.
Identify the common barriers to effective communication.
Explain the steps that supervisors can take to speak effectively on the job.
Compose a proper business memo.
Compose an effective business email.
Describe how supervisors work with the human resources department to recruit new employees.
Identify the benefits of training for the employee, the guest, the property, and the supervisor.
Identify factors that affect the learning process and adult learning needs.
Forecast business volume using the base adjustment forecasting method and the moving average forecasting method.
Distinguish coaching from counseling and disciplining.

Identify the components of a progressive disciplinary program.
List actions that supervisors can and cannot take to influence a union organizing campaign.
Describe issues supervisors should be aware of as they assume the role of team leader.
Identify the stages of team development.
Explain how supervisors can increase employee participation in department activities.
Identify steps supervisors should follow during a meeting with employees in conflict.
Distinguish high-priority interruptions from low-priority interruptions, and summarize strategies for dealing with the latter.
Apply techniques to develop and enhance an effective discipline program.
Identify possible causes of disciplinary problems.
Determine productivity standards.
Calculate the answers to a weekly department hourly labor report.
Calculate the answers to a Productivity Standard/Staffing Guide.
Define sexual harassment as defined by the EEOC and, through situational analysis, determine whether a situation would be considered to be sexual harassment.
List the steps in effective delegation.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

- Class Participation - 30 sessions (two per week) x 10 pts: 300 points
- Class Activities, Assignments & Chapter Case Studies: 140 points
- Chapter Tests (4 x 200 pts each): 800 points
- EEOC Exam: 60 points

Total Possible Grade Points: 1300

Goals, Topics, and Objectives

Core Course Topics
1. History of Baking
2. Cake Mixing Methods; Basic Cake Decorating
3. Basic Baking Principles
4. Specialty Cakes
5. Pie and Fillings
6. Fruit Desserts

7. Royal Ice Design Skills
8. Art of Writing
9. Basic Syrups, Creams and Sauces
10. Custard, Pudding, Mousses and Soufflés
11. Frozen Desserts
12. Special Diets
13. Cookies
14. Decorating
15. Plated Desserts
Explain basic baking terms and how they pertain to baking.
Identify baking equipment and their uses in baking.
Understand and identify the properties of ingredients, and their impacts on baked products and how to correct problems.
Use the proper measuring equipment to measure out ingredients, and explain the importance of weighing baking ingredients.
Understand proper safety and sanitation procedures in the pastry kitchen.
Apply the correct formula necessary for conversion methods of recipes.
Produce and evaluate varieties of cake batters from sponge to genoise.
Create and evaluate the variations of frosting that are used in the assembling and finishing of tortes, gateaux and bite-size pastries.
Explain how to create laminated dough and the uses for it in baking. Also create pate au choux and the many uses for it in sweet to savory desserts.
Assemble and prepare a variety of frostings and fillings for tortes and pastries.
Demonstrate the assembly of a wedding cake and special occasion cake, with inscription, flowers and borders.
Understand and identify the different varieties of chocolate and how they are used in the bakery.
Produce and evaluate custards, puddings and mousses and how they pertain to baking and their many uses.
Create dessert sauces and discuss how they are used in plated dessert presentations.
Demonstrate the proper way of using marzipan, gum paste, glazes and rolled fondant in enrobing of cakes and pastry.
Produce and evaluate the varieties of meringues and how they are used in baking.
Understand the difference between ice cream, gelato, sorbet and frozen desserts.
Create and produce fresh fruit desserts, from fruit tarts to poached fruit, and understand how to select the proper fruits and how to handle them.
Discuss the application of mixes and other value-added product and they pertain to the industry.
Demonstrate proper presentation of baked goods and pastries, and evaluate the quality of presentation.
Discuss nutritional concerns to baking recipe modification to create nutritionally beneficial desserts and baked goods.
Demonstrate the difference between an individual and full-size dessert, and how to create them.
Design desserts for presentation using plate painting.
Explain the many components that go into a plate presentation.

Perform the procedure to create a balanced flavor composition in desserts, as well as pastries.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

Goals, Topics, and Objectives

Core Course Topics

1. Menus, Recipes, and Cost Management
2. Cooking Healthful Meals
3. Food Presentation and Garnish
4. Mise en Place
5. Cooking Meats and Game
6. Cooking Poultry and Game Birds
7. Cooking Fish and Shellfish
8. Cooking Vegetables
9. Legumes, Grains, and Pasta
10. Cooking for Vegetarian Diets
11. Salad Dressings and Salads
12. Sandwiches
13. Breakfast Preparation

Calculate and forecast purchase and preparation requirements.

Calculate food costs, beverage costs, and percentages.

Perform recipe yield conversions and recipe costing.

Determine selling prices of items by making calculations using current technology including a computer or calculator.

Explain inter-relationships and work flow between dining room and kitchen operations.

Demonstrate knife skills, hand tool, and equipment operation while emphasizing proper safety techniques.

Identify the parts/components of a standard recipe. Use standard recipes. Write a standard recipe.

Identify and properly use utensils, pots, and pans and demonstrate safe practices using stoves, mixers, ovens, etc.

Define and describe the sautéing process, prepare foods using the sauté technique. Evaluate the quality of sautéed items.

Define and describe the processes of pan frying and deep frying.

Define and describe the roasting and baking processes. Compare and contrast roasting to baking, poeling, smoke roasting and spit roasting. Roast meats, poultry and fish to the correct doneness. Evaluate the quality of roasted items.

Define and describe the processes of grilling and broiling. Grill and broil foods to the proper doneness. Evaluate the quality of grilled and broiled items.

Define and describe the processes of braising and stewing, noting the similarities and differences. Braise and stew foods to the proper doneness. Evaluate the quality of braised and stewed items.

Define and describe the process of shallow poaching. Prepare shallow poached food properly and produce a sauce that incorporates the cooking liquid. Evaluate the quality of shallow poached items.

Define poaching and simmering and correctly identify the temperature at which each occurs. Poach and simmer foods to the proper doneness. Evaluate the quality of poached and simmered foods.

Define and describe the boiling and steaming processes. Prepare boiled and steamed foods to the proper doneness. Evaluate the quality of boiled and steamed foods.

Utilize weights and measures to demonstrate proper scaling and measurement techniques.

Identify and use herbs, spices, oils and vinegar; condiments, marinades and rubs. Evaluate the quality of herbs, spices, oils and vinegar, condiments, marinades and rubs.

Perform basic fabrication tasks with meat, poultry, seafood and variety meats. Cook meat, seafood, and variety meats to the proper doneness. Evaluate the quality of prepared meats, seafood, poultry and variety meats.

Identify and prepare a variety of fruits, vegetables, starches, legumes and grains. Evaluate the quality of prepared fruits, vegetables, starches, legumes and grains.

Identify, define, describe, and prepare a variety of salad dressings. Evaluate the quality of salad dressings.

Identify, prepare and dress a variety of salad greens and components. Evaluate the quality of properly prepared and dressed salads.

Identify, describe, and prepare a variety of composed salads. Evaluate the quality of composed salads.

Identify and describe the purpose and elements of a sandwich. Prepare and evaluate a variety of hot and cold sandwiches.

Describe a variety of preparation techniques used in egg cookery, cook eggs using a variety of preparation techniques. Evaluate the quality of prepared eggs.

List basic menu planning principles, identify principles of menu layout and design. Create menu item descriptions following established truth in menu guidelines.

Plan a variety of menus, develop a menu layout for a food service operation.

Demonstrate acceptable procedures when preparing potentially hazardous foods to include time/temperature principles.

Review MSDS Sheets and explain their requirements in handling hazardous materials. Discuss right to know laws.

List common causes of typical accidents and injuries in the food service industry and outline a safety management program. Demonstrate emergency policies for kitchen and dining room injuries.
Describe appropriate types and uses of fire extinguishers used in the food service area. Review laws of the regulatory agencies governing sanitation and safety in food service operation.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Total Possible Grade Points: 980

- Class participation - first 2 weeks (4 sessions x 10 pts): 40 points
- Class participation (12 weeks x 20 pts x 2 sessions per week): 480 points
- Class quizzes (4 x 30 pts): 120 points
- Wiley Plus Homework: 80 points
- Menu Assignment: 100 points
- Banquets/Events: 60 points
- Final Exam - Written: 60 points
- Final Lab Practical: 40 points

Goals, Topics, and Objectives

- Core Course Topics
1. The Professional Garde Manger
 2. Cold Sauces and Soups
 3. Salads and Sandwiches
 4. Cured and Smoked Foods
 5. Sausage
 6. Terrines, Patés, Galantines, and Roulades
 7. Cheese
 8. Appetizers and Hors D'oeuvres
 9. Condiments, Crackers, and Pickles
 10. Buffet Presentation
 11. ACF Competition Rules and Guidelines
 12. American Regional Cuisine
 13. Cooking with Wine, Beer, and Spirits
 14. Herbs, Gardening, Local Foods, and Farm Markets
 15. Market Orders, Product Descriptions, and Market Forms

Analyze centerpieces for buffet or show presentation.
Describe the rules for a certified culinary salon.
Demonstrate the preparation of hors d'oeuvres and appetizers.

Identify and describe varieties of cheese.
Explain the procedures for making various types of sausage.
Recognize and identify aspects of regional American cuisine.
Enumerate and discuss classical leading sauces and their respective small sauce derivatives.
Explain how liquors are used in cooking.
Identify commonly used variety meats.
Discuss various types of buffets.
Design a layout for a theme buffet.
Create a salon-quality cold buffet to meet rules set by the American Culinary Federation.
Write an Excel-based market order with correct product descriptions and accurate forecast of quantities.
Prepare a variety of salads, pickles, and cured food using different methods.
Demonstrate advanced knife skills and classical cuts.
Prepare a variety of cold garnishes.
Prepare a cold food display of carved fruit or vegetables.
Design, prepare and evaluate cold party trays.
Define aspic gelée and describe it's functions. Demonstrate fundamental skills in the preparation and uses of aspic.
Identify tools and equipment used garde manger, emphasizing safety and sanitation procedures.
Prepare and evaluate mousse.
Prepare and evaluate paté.
Prepare and evaluate terrine.
Prepare and evaluate sausage.
Prepare emulsified sauces.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

- Class Evaluation (15 sessions x 20 pts each): 300 points
- Assignments and Quizzes: 100 points
- Notebook/Folder: 100 points

HOSP360 - Hospitality Purchasing

Overview

Subject	Academic Department	School
Culinary Arts, Hospitality Mgm	Culinary Arts + Hospitality Management	Business, Entrepreneurshp, PD
Course Description Explains standard procedures for purchasing food, and beverages and services for hotels, restaurants, and institutions. Emphasizes distribution, product line, government regulations, packaging, comparative versus price buying, yields, inventory, and quality controls.		
Course Pre-requisite(s) HOSP211 Intro to Hospitality Industry		
Credit Hours 3		
Contact Hours 3		
Course Fee 25		
Miscellaneous Department Fee 0		
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics

1. The Flow of Goods
2. Product Specifications
3. Service Specifications
4. Distribution
5. Corporate Purchasing Programs
6. Compliance
7. Financial Analysis of Purchasing Decisions

Discuss the concept of farm to fork, including the flow of goods in a food service operation.
Analyze market fluctuations and product cost.
Discuss legal and ethical considerations of purchasing.
Explain regulations for inspecting and grading of meats, poultry, seafood, eggs, dairy products, fruits and vegetables.
Write a bid specification.
Evaluate received goods to determine conformity with user specifications.
Conduct yield and quality tests on items such as canned, fresh, frozen, and prepared product by computing the edible (or usable) yield percentage.
Inventory food and non-food items using current technology.
Define and describe par stock.
Identify food bio-terrorism laws and RFID technology and the impact these regulations and technology have on food safety and sanitation.
Describe five elements of a corporate purchasing system.
Outline the vendor selection process.
Identify supplier support and sales tasks.
Participate in a trade show and product sampling.
List and describe different types of purchasing contracts.
Define compliance.
Perform a product match and market basket analysis.
Define strategic sourcing.

Assessment, Requirements, and Outcomes

Goals, Topics, and Objectives

Core Course Topics

1. Managing Revenue and Expense
2. Creating Sales Forecasts
3. Purchasing and Receiving
4. Managing Inventory and Production
5. Monitoring Food and Beverage Product Costs
6. Managing Food and Beverage Pricing
7. Managing the Cost of Labor
8. Controlling Other Expenses
9. Analyzing Results Using the Income Statement
10. Planning for Profit
11. Maintaining and Improving the Revenue Control System
12. Cost/Volume/Profit Analysis
13. Menu Analysis

List fixed costs.
Explain how fixed costs are controlled.
List variable costs.
Explain how variable costs are controlled.
Write a product specification.
Compute the edible portion cost of a serving of food.
Apply the formula necessary to decide whether to purchase convenience proportioned food, or to purchase raw ingredients and produce items from scratch.
Describe and explain different grades when purchasing meat, seafood, produce and grocery items.

Calculate check average.
Prepare an income statement (P&L) for a business.
Identify information necessary to prepare various forecasts used in a food and beverage operation.
Determine the amount of food that will be needed during the next order period by creating a forecast.
Calculate the selling price of menu items.
Calculate popularity index for menu items.
Identify and discuss spirits and their relationship to food in a bar or restaurant.
Identify and discuss types of beer and wine and their relationship to food in a bar or restaurant.
Compute the popularity index for menu items to forecast portion sales.
Calculate the standard cost of any drink, given a standard recipe and the current market price of ingredients.
Calculate the standard cost-to-sales ratio for any drink, given it's standard cost and sales price.
Identify and discuss the costs involved with theft.
Identify and discuss the costs involved with waste.
Discuss Michigan beer, wine and spirit laws.
Discuss how alcoholic beverages are obtained through distribution in Michigan.
List common vendor payment terms.

Goals, Topics, and Objectives

Course Goals
To help students understand the multiple dimensions of health across the life span and the impact that lifestyle choices can have on overall health and well-being.

Core Course Topics

1. Health: The foundation for life
2. Reproductive health
3. Drug use and abuse
4. Alcohol and tobacco
5. Environmental health
6. Nutrition
7. Body weight and management
8. Psychological health
9. Stress and its management
10. Violence and abuse
11. Physical fitness
12. Infectious disease
13. Chronic Disease
14. Diagnosis, prevention, and cancer treatment
15. Aging, dying, and death

Analyze quackery and fraud in wellness and recall how and where to find legitimate answers to health questions.
Recall methods and effectiveness of methods for family planning. Illustrate what behaviors increase the risk of sexually transmitted disease, how to recognize these diseases, and ways to protect from them.
Evaluate risk for drug/alcohol misuse.
Recall characteristics of drug/alcohol misuse. Recognize the dangers of smoking and how best to stop a smoking habit.
Evaluate physical surroundings for environmental hazards.
Demonstrate the basis of a healthy diet.

Demonstrate how healthy fat loss, weight gain, and weight maintenance is achieved.
Recall the characteristics of positive psychological health.
Recognize stressors in life and demonstrate various tools to help alleviate these stresses. Evaluate stress level and skills useful in controlling stress.
Recognize symptoms of abuse and how to seek assistance.
Design a program for improvement of strength, cardiovascular endurance, muscular endurance and flexibility. Recognize what is considered a good level of physical fitness.
Describe actions that decrease risk of infectious disease.
Evaluate risk for developing disease (cancer, diabetes, and cardiovascular) and learn ways to decrease this risk.
Develop a plan to decrease risk of cancer, heart disease, and diabetes.
Develop a plan to decrease risk of cancer, heart disease, and diabetes.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement will be identified and implemented by the class instructor. Methods will include, but not be limited to, individual projects, vocabulary, class participation (discussion and critiques), and tests.

- Grading Scale
- 94-100% = A
 - 90 - 93% = A-

1. Principles of adherence and motivation
 2. Human anatomy
 3. Kinesiology
 4. Nutrition
 5. Exercise physiology
 6. Posture, proprioception, balance, and flexibility
 7. Key components of class design

8. Exercise and movement selection, sequencing, choreography, program modifications, and music selection
9. Leading exercise one-on-one
10. Legal considerations with leading exercise
11. Exercise variety
Demonstrate a fitness library of information to cover components of fitness and other health topics to share with clients.
Recognize the primary muscle movers associated with a variety of exercises for strength and flexibility.
Demonstrate exercises through all planes of the body.
Apply basic principles of healthy eating to exercise clients.
Describe how chronic and acute exercise changes muscle physiology.
List ways to improve balance, flexibility, posture, and proprioception.
Apply various communication and teaching techniques presented in class and from various media (video, print, Internet).
Demonstrate how to train the components of physical fitness. Compose an aerobic exercise routine and a strength exercise sequence.
Synthesize proper exercises for various populations based upon safety and effectiveness.
Describe the legal issues (e.g. music copyright and injury liability) that are specific to the fitness industry.
Observe a variety of different exercise classes.

Goals, Topics, and Objectives

Course Goals	This class will introduce the basic concepts of nutrition. The emphasis is on the students' diet and on eating healthy for a lifetime.
Core Course Topics	1. The basics of nutrition 2. Evaluating nutrition information 3. Digestion, Absorption, and Transport of Nutrients 4. Carbohydrates, lipids, and proteins 5. Vitamins 6. Water and minerals 7. Energy balance and weight control 8. Nutrition and physically active lifestyles

9. Food safety
10. The role of nutrition in preventing chronic disease
11. Eating disorders
12. Nutrition at different life stages
Demonstrate how to evaluate nutrition health claims.
Practice using the various diet analysis programs available (e.g. MyPlate, Dietary Guidelines).
Compare and contrast the digestion of carbohydrates, lipid, and protein.
Distinguish between the good and bad fats. Plan meals and snacks that reduce animal protein intakes. Recognize the functions of carbohydrates, lipids, and protein.
Evaluate the use of vitamin supplements with respect to their potential health benefits and hazards. Recall the roles of the major vitamins. List food sources for the major vitamins.
Describe roles of minerals in achieving and maintaining good health.
Restate the principles of energy balance. Calculate weight gain, weight loss, and weight balance in a variety of subjects.
Design an individualized exercise program that includes all the components of health-related physical fitness. Summarize the role of exercise in weight management.
Describe procedures that can reduce the risk of foodborne illness. Differentiate between different pathogens that cause foodborne illness.
Paraphrase major health risks associated with excess body fat.
Outline major kinds of eating disorders, including risk factors and treatments for these conditions.
Compare the nutritional composition of infant formula with breast milk. Elaborate on the nutrition difference in nutrient composition at the different life stages.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	Assessment of academic achievement will be identified and implemented by the class instructor. Methods will include, but not be limited to, individual projects, vocabulary, class participation (discussion and critiques), diet analysis projects, laboratories, and tests.
General Course Requirements and Recommendations	Completion of diet analysis with diet analysis software.
Texts	Choice of textbook is left up to the discretion of the instructor.
Satisfies Honors Requirement	Satisfies Wellness Requirement
No	Yes

HPE162 - Introduction to Exercise Science

Overview

Subject	Academic Department	School
Exercise Science	Health, Education, and Human Services	Health & Human Services
Course Description	This course provides a foundation that students will need to be successful in future classes in exercise science, sports medicine, and fitness leadership. Sample topics covered in the class include sports nutrition, sports psychology, exercise physiology, exercise prescription, motor behavior, biomechanics, as well as an exploration into the career possibilities in the field.	
Credit Hours	3	
Contact Hours	3	
Course Fee	Miscellaneous Department Fee	
0	0	
Academic Level		
Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL)		
No		

Goals, Topics, and Objectives

Course Goals	The goal of this class is to provide the student with the necessary knowledge and experiences to succeed in further study of exercise science. This course provides information on scientific principles of exercise and their applications within the field of exercise science/kinesiology.
Core Course Topics	1. Introduction to Exercise Science

2. Introduction to Research in the Exercise Field
3. Exercise Physiology
4. Sports Medicine
5. Exercise and Sport Nutrition
6. Exercise and Sport Psychology
7. Motor Behavior and Biomechanics
8. Equipment and Assessment in Exercise Science
9. Professional Issues in Exercise Science

Examine the scientific study of human movement and its historical beginnings.
Explain the many and varied benefits of regular exercise and physical training.
Recognize standard research tools and the scientific process.
Discriminate between scientifically valid and invalid sources of exercise science information.
Describe basic structure and function of the human circulatory, skeletal, endocrine and muscular systems.
Distinguish the anaerobic and aerobic processes that provide energy for the working muscle.
Determine basic emergency treatment for common sport injuries and medical emergencies.
Illustrate the interaction of exercise, nutrition, and body composition.
Elaborate on the influence of personality, motivation, stress, and social factors on participation in physical activity.
Describe the study of biomechanics in relation to our understanding of human movement.
Identify the diversity of human motor performance and learning.
Utilize the basic tools and procedures to assess fitness levels and health risk.
List professional organizations and publications in the discipline of Exercise Science.
Identify current issues within the fields of Exercise Science.
Recognize the occupational opportunities available to Exercise Science majors.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Academic achievement will be assessed including but not limited to the following methods:

- Group discussions
- Chapter quizzes
- Homework assignments
- Observations
- Demonstrations
- Presentations
- Group projects

Grading Scale
Grading scale for exams and the final grade:

- 98-100% = A+
- 93-97% = A
- 90-92% = A-
- 87-89% = B+
- 83-86% = B
- 80-82% = B-
- 76-79% = C+
- 70-75% = C
- 67-69% = D+
- 63-66% = D
- 60-62% = D-
- 59% & below = E

HPE170 - Principles of Personal Training

Overview

Subject	Academic Department	School
Exercise Science	Health, Education, and Human Services	Health & Human Services

Course Description
Offers preparation for the American College of Sports Medicine (ACSM), the American Council on Exercise (ACE) Personal Trainer Certification Exam and other organizations. Covers the theories and practices necessary to create personalized exercise plans for clients and administer correct and safe exercise instruction. Consists of weekly three hours of online theory and two hours of hands-on activities in an exercise science lab setting.

Credit for Prior College Level Learning (CPCLL) Details
Licensure/Certification

Current ACSM, ACE, or comparable certification as a personal trainer.

Goals, Topics, and Objectives

Course Goals
The goal of this course is to prepare the student to train clients in a safe and knowledgeable manner after attaining certification.

Core Course Topics

- Role of Personal Trainer and Scope of Practice
- Science for Professional Trainers: Exercise Physiology, Human Anatomy, and Biomechanics
- Screening and Evaluation: Health Screening, Testing and Evaluation, Functional Assessments and Physiological Assessments
- Principles and Methods of Training: Developing exercise programs
- Principles of Motivation and Behavior Change
- Business and legal aspects of personal training

Determine the scope of practice of a Personal Trainer Discuss professional career environment and industry trends.
Identify anatomical structures of the musculoskeletal system.
Explain and demonstrate the biomechanical principles of movement.
Explain muscle contraction and energy systems.
Explain and demonstrate the physiological mechanisms of systems applied to exercise training.
Discuss the energy substrates for health and performance.
Explain and demonstrate the initial client consultation.
Describe participation guidelines Demonstrate fitness assessments techniques
Construct a comprehensive program design.
Develop and demonstrate resistance, cardiorespiratory, flexibility, and balance training programs.
Identify program options for special populations.
Identify metabolic and cardiovascular risk factors.
Describe the theories of behavior change.
Describe the principles of adherence to exercise
Demonstrate eliciting positive perceptions through effective coaching techniques.

Describe business types and employment opportunities for personal trainers
Discuss legal issues and responsibilities of personal trainers.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Written Exams

Demonstration of correct and safe exercises and teaching techniques

Practical Exam: design safe, science-based personal training programs for various populations.

Grading Scale
Percentage Grade:

HPE175 - Introduction to Sports Management

Overview

Subject Exercise Science	Academic Department Health, Education, and Human Services	School Health & Human Services
Course Description This course provides a comprehensive overview of the field of sport management, exploring its key concepts, principles, and applications. Students will gain a solid understanding of the historical development of sport management, the various segments within the industry (youth, community, scholastic, professional, and international sports), trends, and the essential managerial and leadership skills required for success in this dynamic field.		

Credit Hours
3

Contact Hours

Course Fee 0	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Core Course Topics

- Foundations of Sport Management
- Managerial Roles and Responsibilities:
- Career Opportunities in Sports management
- Leadership and Ethics in Sports Management
- Sustainability practices
- Sport Management Education and Research

Explore the history of Sports Management
Identify the fundamental principles and theories related sport management.
Explain the diverse roles and responsibilities of sport managers in various organizations, from clubs and leagues to professional teams.
Explore potential career paths within the sport management industry, including job opportunities and the skills needed to succeed.
Develop essential leadership skills crucial for effective management in sports management.
Explore the ethical challenges and responsibilities faced by sport managers in today's complex landscape.
Describe the importance of sustainability practices in the sports industry and how to incorporate them into management strategies.

Explore educational opportunities for undergraduate research in the field.
--

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Formative and summative lecture exams and quizzes. Writing assignments and discussion forum participation. Guide research

HPE200 - Exercise Facility, Equipment, and Safety

Overview

Subject Exercise Science	Academic Department Health, Education, and Human Services	School Health & Human Services
Course Description Training for how to build exercise facilities, purchase exercise equipment, and prevent and treat injuries associated with exercise.		

Credit Hours
3

Contact Hours
3

Course Fee 30	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Course Goals
To provide the knowledge and skills needed to operate an exercise facility following the guidelines of the American College of Sports Medicine. Skills needed for to safely respond and treat exercise related injuries.

Core Course Topics

- Emergency Preparedness
- Legal Responsibilities
- Equipment Selection
- Professional Organizations
- Assessment of Injuries
- Emergency care for sports injuries

Design an emergency procedures plan for a facility.
Discuss how the American with Disabilities Act impacts a facility.
Perform a facility/equipment safety check that is followed regularly.
Describe how to choose appropriate equipment for pools, fitness centers, locker rooms, gymnasiums, and child care centers.
Recall what trade organizations are available to help with the establishment of an exercise facility.
Perform an initial assessment and determine chief complaint.
Perform a focused assessment.
Describe the recognition and treatment for musculoskeletal injuries, cardiac conditions, environmental emergencies, breathing emergencies, and metabolic emergencies.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement may include, but not be limited to case studies, quizzes, lab reports, group projects, individual projects, discussions, essays, and exams.

Satisfies Honors Requirement
No

HPE212 - Measurement & Prescription of Fitness &

Overview

Subject
Exercise Science

Academic Department
Health, Education, and Human Services

School
Health & Human Services

Course Description
Examines various tests used for evaluating the health-related and skill-related components of physical fitness. Includes tests for body composition, flexibility, cardiovascular endurance, muscular endurance, muscular strength, speed, agility, and power. Students will learn how to interpret test results and accurately recommend exercise programs for improvement.

Credit Hours

Eligible for Credit for Prior College Level Learning (CPCLL)
No

Goals, Topics, and Objectives

Course Goals
Students will learn to accurately measure the skill and health-related components of fitness using a variety of assessments. In addition, students will interpret test results and recommend exercise for improvement of the components of fitness.

Core Course Topics

- 1. Introduction to Statistics
- 2. Health-related physical fitness
- 3. Skill-related physical fitness
- 4. Metabolic fitness
- 5. Preparation for change

Demonstrate calculation of basic statistical calculations (e.g. mean, median, and ranking).
Explain steps to follow when measuring the components of health-related physical fitness.
Interpret results of various fitness tests.
List exercises to improve components of health-related physical fitness.
Explain steps to follow when measuring the components of skill-related physical fitness.
Interpret results of various skill-related fitness tests.
List exercises to improve components of skill-related physical fitness.
Define metabolic fitness.
Justify lifestyle changes based on metabolic fitness results.
Demonstrate successful blood pressure measurement.
Calculate waist/hip girth measurements.
List tools available to access readiness for change in lifestyle (e.g. smoking cessations, beginning an exercise program, weight loss).
Describe tools for motivating clients.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement may include, but not be limited to case studies, quizzes, lab reports, group projects, individual projects, discussions, essays, and exams.

Goals, Topics, and Objectives

- Core Course Topics**
- 1. Sports and fitness facilities planning and management
 - 2. Industry standards for sport and fitness facilities
 - 3. Emergency management
 - 4. Equipment trends
 - 5. Personnel training and professional development

Recognize the principles of planning and managing sports and fitness facilities.
Identify the various components of indoor and outdoor sport and fitness facilities.
Analyze industry standards and regulations used to educate staff and public using sports and fitness facilities.
Interpret industry standards for planning, design, and operation of sports and fitness facilities.
Identify design and construction regulations
Discuss effective emergency management policies and procedures to address public access risks.
Identify public safety guidelines for appropriate response to incidents.
Identify and analyze emerging trends in sport and fitness facilities equipment and technology to stay updated with industry advancements.
Analyze training programs for professional staff, independent contractors, and the public to promote safe and responsible use of sport and fitness facilities.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Exams, quizzes, observation report, discussion forum, written assignments, special projects.

Grading Scale
Percentage Grade:

HPE253 - Nutrition for the Professional

Overview

Subject Exercise Science	Academic Department Health, Education, and Human Services	School Health & Human Services
-----------------------------	--	-----------------------------------

Course Description
Introduces health care professionals to the basics of nutrition and its application to disease, growth, and development.

Credit Hours
3

Contact Hours
3

Course Fee 10	Miscellaneous Department Fee 0
------------------	-----------------------------------

Academic Level
Undergraduate

Eligible for Credit for Prior College Level Learning (CPCLL)
No

Goals, Topics, and Objectives

Core Course Topics

1. Foundations of Nutrition
2. Planning a Healthy Diet
3. Digestion, Absorption, and Transport
4. Energy Nutrients: Carbohydrates, fat, and protein
5. Metabolism and Energy Balance
6. Weight Maintenance
7. Vitamin and Mineral Supplementation
8. Water
9. Nutrition through the Lifecycle
10. Nutrition and Disease

Explain how to prescribe diets that include food that the patient/client will eat. Explain the role family support and motivation play in achieving success with diet changes.
Experiment with the use of various online tools to prescribe a healthy diet (e.g. MyPlate, Dietary Guidelines). Discuss the components of a healthy diet.
Explain the steps of digestion, absorption, and transport of nutrients.
Explain the role that carbohydrates, lipids, and protein have in nutrition.
Define the components of energy balance. Recall factors that increase and decrease metabolism.
Analyze pros and cons of various weight loss regimens. Demonstrate an understanding of how to motivate and teach people about weight gain, weight loss, and weight maintenance.
Describe the function and food sources for major vitamins and minerals.
Recount the effects of dehydration. Recall appropriate fluid intakes.
Diagram changes in macronutrient requirements at the different life states.
Discuss the role nutrition has in the development of disease, and in the treatment and prevention of disease such as diabetes, GI disorders, heart disease, and cancer. Apply the principles of sound nutrition to clients/patients with specific problems such as diabetes or heart disease through case studies.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement will be identified and implemented by the class instructor. Methods will include, but not be limited to, individual projects, vocabulary, class participation (discussion and critiques), diet analysis project, laboratories, and tests.

Texts
Textbook for course to be selected by instructor.

Credit for Prior College Level Learning (CPCLL) Details
Certification by the National Strength and Conditioning Association or equivalent

Licensure/Certification Details

Valid certification from the National Strength and Conditioning Association or equivalent certification.

Goals, Topics, and Objectives

Course Goals
Teaches principles of strength training to prepare the student to work in entry level fitness industry positions with athletes and clients with general and/or special needs.

Core Course Topics

1. Biomechanics of Resistance Exercise
2. Bioenergetics of Aerobic and Anaerobic Exercise
3. Adaptations to Resistance Training Programs
4. Nutritional Strategies for Maximizing Performance
5. Program Design for Resistance Training
6. Program Design for Speed, Agility, and Power Training
7. Program Design for Special Populations

Demonstrate the proper technique for a variety of upper and lower body exercises.
Identify aerobic and anaerobic contributions to exercise.
Explain the neural, muscular, connective tissue, and endocrine responses to an acute and chronic strength-training program.
Outline recommendations for pre and post workout nutrition needs.
Outline recommendations for pre-competition, during-event, and post-competition nutrition needs.
Illustrate principles of resistance training prescription including 1) goals, 2) exercise selection, 3) training frequency, 4) exercise order, 5) resistance and repetitions, 6) volume, and 7) rest periods.
Describe techniques to develop speed, agility, and power.
Plan a resistance-training program for a variety of populations including children, elderly, and female.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement may include, but not be limited to case studies, quizzes, projects, group assignments, demonstrations, discussions, and exams.

HPE262 - Health & Phys Ed for Elementary Teachers

Overview

Subject Exercise Science	Academic Department Health, Education, and Human Services	School Health & Human Services
Course Description This course provides the theoretical framework of elementary and middle school health, physical activity, and safety curriculum. Students will gain knowledge and skills for the elementary classroom teacher on methods used to integrate health, nutrition, safety, and physical education into their daily curriculum. The course includes teaching strategies, projects, movement exercises, and games designed to engage the Pre-Elementary Education major. Developmental sequences and the health needs of children from elementary through middle school is included. Course emphasis is on providing learning experiences for children's development of lifelong positive health and fitness behaviors. Particular attention is given to the national health standards as well as the Michigan Model Modules.		
Credit Hours 3		
Contact Hours 3		
Course Fee 50	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals The goal of this class is to equip the future elementary education teacher with a strong knowledge base of the philosophy, theory and research of elementary physical education and health.
Core Course Topics - Foundations of Elementary and Middle School Health Education - Development of Positive Skills for Healthy Dietary and Physical Activity Habits - Management of Health Risk Issues - Fine and Gross Motor Skill Development - National and State Health Education Standards - Physical Activity and Curriculum Integration - Elementary and Middle School Student Developmental Changes - Infectious Diseases and Prevention - Lesson Plans Integrating Movement - Skill themes and movement concepts in educational gymnastics, dance, games, & cross-curricular fitness activities - Pros and Cons of Technology and Elementary Students' Physical Activity

Explain the health and physical education foundations behind current health education initiatives.
Analyze the effects of positive and negative dietary and physical activity habits on elementary and middle school student development.
Discuss current health risks involving the elementary and middle school student.
Create an age-appropriate health risk pamphlet.
Compare and contrast the different ways fine and gross motor skills are developed through physical activity.
Explain the purpose of the National and State health education standards.
Identify how these standards are met in the elementary and middle school setting.
Create a cross-curricular lesson plan integrating physical and health concepts.
Identify the differences in developmental changes from elementary through middle school.
Identify the infectious disease processes related to the elementary and middle school student.
Create age-appropriate lesson plan(s) addressing infectious diseases and prevention.
Create a cross-curricula lesson plan integrating movement.
Create a portfolio of educational physical activities, dances, games, and cross-curricular fitness activities.

Identify ways to engage students in physical activity at home and school with or without technology.
--

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
Assessment of academic achievement may include but not be limited to lesson plan creation, class discussion, tests, essays, ability to use and create elementary and middle school student health and physical education activities.	
General Course Requirements and Recommendations	
This course is a hybrid course: 50% on-ground and 50% on-line.

HPE270 - Exercise Physiology

Overview

Subject Exercise Science	Academic Department Health, Education, and Human Services	School Health & Human Services
Course Description Explores the physiological principles of exercise with emphasis on the circulatory, respiratory, and muscular systems. Discusses what changes occur to the body during exercise and as a result of regular exercise. Establishes a scientific basis for how to prescribe exercise appropriately. Laboratory activities include measurement of oxygen uptake, fat and muscle composition, anaerobic ability, and muscular strength.		
Course Pre-requisite(s) BIO233 Anatomy and Physiology I and BIO234 Anatomy and Physiology II		
Credit Hours 4		
Contact Hours 5		
Course Fee 30	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals To develop a scientific understanding for the principles of exercise.
Core Course Topics - Common Measurements in Exercise Physiology - Bioenergetics of Exercise - Exercise and the Immune System - The Nervous Systems Control of Movement - Respiration During Exercise - Circulatory Response to Exercise - Nutrition and Energy - Body Composition and its Role in Performance - Exercise in Challenging Environments - Ergogenic Aids to Performance - Laboratory - Health Screening - Laboratory - Pulmonary Function - Laboratory - Measurement of VO2max - Laboratory - Body Composition Assessment - Laboratory - Measurement of Muscular Power - Laboratory - Measurement of Absolute and Relative Muscular Strength - Laboratory - Electromyography

Describe the measurement of work, power, energy expenditure, and economy
Examine the differences in aerobic and anaerobic exercise
Summarize the effect exercise has on the immune system
Explain the role of the nervous system in muscle contraction
Describe the structure and mechanics of breathing during exercise
Examine the circulatory systems response to exercise
Examine the role of nutrition in energy production

Evaluate methods of measuring body composition
Evaluate how to exercise safely in the heat, cold, and at high altitudes
Evaluate the effectiveness of various pharmacological and nutritional aids to performance
Demonstrate measurement of blood pressure, heart rate, and resting and exercise electrocardiogram
Evaluate static and dynamic pulmonary function
Compare estimations of VO2max
Calculate lean body mass and fat mass
Graph the differences in aerobic and anaerobic power in classmates
Explain the differences in absolute and relative muscular strength
Conclude the primary muscle mover in several exercises

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Assessment of academic achievement may include, but not be limited to case studies, quizzes, lab reports, group projects, individual projects, discussions, essays, and exams.	
Grading Scale 100% - 96% = A+ 95% - 93% =A 92% - 89% = A- 88% - 86% = B+ 85% - 82% = B 81% - 79% = B- 78% - 75% = C+ 74% - 71% = C 70% - 63% = D 62% and below = E	Satisfies Wellness Requirement No

HPEA110 - Volleyball I

Overview

Subject Exercise Science	Academic Department Health, Education, and Human Services	School Health & Human Services
Course Description Covers the fundamental skills, strategy, history, rules, and values of volleyball. Discusses concept of team play and how to develop an appreciation for the sport as both player and spectator. Course also explores nutrition and health related fitness as it pertains to disease and weight prevention.		
Credit Hours 2		
Contact Hours 2		
Course Fee 10	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Other	
Credit for Prior College Level Learning (CPCLL) Details Determined by department.		

Goals, Topics, and Objectives

Course Goals HPEA110 Volleyball I is designed to teach beginner and intermediate volleyball skills while covering historic highlights as well as providing exposure to game strategy.
Core Course Topics - Cardiovascular training, flexibility, strength training and nutrition as it pertains to disease prevention and weight management. - Player positions and strategy. - Proper techniques-passing, setting, serving, spiking, setting and court management. - Rules and etiquette. - Terminology. - History of the game.

Demonstrate proper volleyball skills: passing, setting, court management, spiking and serving, and strategy.
Explain the basic volleyball terminology and the history of its evolution.
Demonstrate an awareness of healthy eating habits and training as it relates to disease prevention and weight management.
List player positions and how positions interrelate.
Assess fitness levels and demonstrate proper training techniques.
Describe the general history of the games' evolution.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement - Skill tests on volley, set, spike, and serve - Quizzes on textbook readings - Project demonstration - class may participate in a skills drill or conditioning activity - Participation - Final exam	
Grading Scale 94-100% = A 90 - 93% = A- 87 - 89% = B+ 83 - 86% = B 80 - 82% = B- 77 - 79% = C+ 73 - 76% = C 70 - 72% = C- 67 - 69% = D+ 63 - 66% = D 60 - 62% = D- - Below 60% = E	
Texts To be determined by the instructor.

Goals, Topics, and Objectives

Course Goals HPEA117 Strength Train & Phys Cond I is a sequential course designed to teach beginner and intermediate conditioning skills. The goal is to provide the knowledge and skills to live a healthy life.
Core Course Topics - Introduction to equipment, safety and training guidelines. - Proper mechanics for exercise, injury prevention, and benefits. - Components of fitness including flexibility, strength, cardiovascular and muscular endurance, body composition, and how to achieve higher fitness levels. - Assessment of fitness components and evaluation. - Other forms of resistive training equipment, including exercise balls, tubing, body weight and core exercises. - Exercises to develop the upper and lower body, abdominal muscles, and exercises to develop speed and power. - Nutrition, diet, and exercise as it relates to weight control. - Risk factors that cause diseases and preventive behavior.

9. Disease prevention, including cardiovascular training to prevent cardiovascular disease; strength training to prevent osteoporosis; weight control to prevent diabetes (Type 2); and other related problems.
Demonstrate strength training principles and proper techniques (fitness).
Discuss the components of fitness including flexibility, strength, cardiovascular and muscular endurance and body composition, and how to achieve higher level of fitness.
Explain related information regarding strength training (fitness).
Discuss risk factors that cause diseases and behaviors that lead to disease prevention.
Discuss a healthy diet, exercise, and nutrition as it relates to weight control (diet).
Assess and evaluate fitness levels after skills tests are taken (fitness).
Demonstrate an improved awareness of safety, proper use of equipment, and injury prevention.
Demonstrate knowledge of preventive health skills as well as cardiovascular training to prevent cardiovascular disease, strength training to prevent osteoporosis, and weight control to prevent diabetes (Type 2) and other related problems.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement		
1. Skill tests on strength, flexibility, cardiovascular endurance, muscular endurance and body composition.		
2. Participation.		
3. Written final exam.		
Grading Scale		
• 94 - 100% = A		
• 90 - 93% = A-		
• 87 - 89% = B+		
• 83 - 86% = B		
• 80 - 82% = B-		
• 77 - 79% = C+		
• 73 - 76% = C		
• 70 - 72% = C-		
• 67 - 69% = D+		
• 63 - 66% = D		
• 60 - 62% = D-		
• Below 60% = E

Goals, Topics, and Objectives

Course Goals
To help students learn and use the skills of Yoga to improve overall physical fitness, health, mental discipline, and self-awareness.
Core Course Topics
1. Breath and postures.

2. Skeletal-muscular anatomy.
3. Stress management.
4. Nutrition
5. Disease, and injury prevention and care.
6. Yoga philosophies.
Identify the postures and explain their benefits with breath control.
Identify basic skeletal-muscular anatomy and explain their functions as they apply to Yoga.
Analyze current health and make positive changes for overall body care, control and awareness to manage stress.
Analyze current diet and make positive changes for a healthy diet.
Analyze current health and fitness and make positive changes and choices for disease and injury prevention.
Apply basic Yoga philosophies including non-judgmental attitudes toward self and others and non-reactivity.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
Assessment of academic achievement will be identified and implemented by the class instructor. Methods will include, but not be limited to, individual projects, vocabulary, class participation (discussion and critiques), and tests.

HPEA155 - Relaxation Techniques for Stress Mgmt.

Overview

Subject Exercise Science	Academic Department Health, Education, and Human Services	School Health & Human Services
Course Description Covers stress and its effects on the body. Emphasizes ways to reduce stress such as Yogic breathing, meditation, and other relaxation techniques. Discusses time and money management; conflict resolution and effective communication; resolving anxiety; a healthy diet, and how to incorporate these into one's lifestyle.		
Credit Hours 2		
Contact Hours 2		
Course Fee 10	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) Yes		Acceptable Prior Learning Credit Other
Credit for Prior College Level Learning (CPCLL) Details Determined by department		

Goals, Topics, and Objectives

Course Goals
To effectively learn how to incorporate various skills and techniques for managing stress into one's everyday life.
Core Course Topics
1. Stress
2. Journaling
3. Relaxation Techniques Overview
4. Physical Activity and Exercise
5. Diet
6. Effective Communication
7. Anger Management and Problem Solving
8. Anxiety
9. Time Management
10. Money Management
Define and explain stress, stressors and their effects on the body. (stress management)
Create and write a personal mission statement.* (stress management)
Keep a log of thoughts, feelings and ideas in words and pictures. (stress management)

Explain and practice Yoga breathing, meditation, progressive muscle relaxation, visual imagery, and humor for stress management. (stress management)
Explain the effects of physical activity for stress management. (fitness)
Choose and practice effective activities for managing stress. (fitness)
Explain and practice healthy diet choices for managing stress. (diet and disease prevention)
Analyze current ways of communicating, and develop skills for effective listening, empathizing, being assertive, and communicating with clarity.* (stress management)
Analyze current approaches to solving problems, dealing with anger and resolving conflicts and develop ways of improving problem solving, resolving conflict and managing anger.* (stress management)
Examine current level of anxiety, develop coping mechanisms, and practice ways to reduce anxiety* (stress management)
Analyze current use of time, and formulate goals, establish priorities, and create a realistic schedule. (stress management)
List barriers to time management and time wasters. (stress management)
Analyze current spending and create a budget.* (stress management)
Set goals for short, medium and long term. (stress management)

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	- Assignment: define and explain stress, list personal stressors, and explain their effects on the body. - Assignment: keep a log throughout the term and journal thoughts, feeling, and ideas in words and pictures and create a personal mission statement. - Movement exam: illustrate Yoga and other deep breathing techniques and progressive muscle relaxation. - Assignment: explain the effects that physical activity have on managing stress and formulate a plan for incorporating a chosen activity into one's life. - Assignment: record daily diet and compare against a selected standard. Make recommendations for improvement. - Class work: role play to practice listening, empathizing, assertiveness and communicating with clarity. Assignment: Write an assertive letter as a consumer or citizen. - Class work: using selected approaches and models, practice role playing to manage anger, creatively solve problems, and effectively resolve conflicts. - Assignment: log contexts of anxiety and develop ways to handle effectively. - Assignment: formulate short, medium and long term goals, establish a daily schedule with priorities and implement. Examine personal barriers to effectively managing time and make adjustments for improvement. - Assignment: analyze personal spending habits and budget. Construct short, medium and long term money goals and design a savings plan to ascertain everything on the goal's lists as well as an efficient budget.
Assessment Plan for Wellness General Education Outcome	- Faculty will develop an assessment tool to evaluate the three areas of Wellness necessary to establish a positive pattern of lifelong wellness choices. - The assessment tool will be administered at the beginning and end of the course. - A minimum of two sections of each course will be randomly selected for evaluation. - The assessment tool will be given in the fall, 2013 and data will be evaluated in the winter, 2014. - Recommendations for changes will be implemented in the fall, 2014.

Goals, Topics, and Objectives

Course Goals HPEA210 Volleyball II is designed to teach fundamental and advanced volleyball skills, while covering historic highlights as well as exposure to game strategy.
Core Course Topics - Cardiovascular training, flexibility, strength training and nutrition as it pertains to disease prevention and weight management. - Player positions and strategy. - Proper techniques-passing, setting, serving, spiking, setting and court management. - Rules and etiquette. - Terminology. - History.
Demonstrate proper volleyball skills: (Passing, setting, spiking, serving, strategy, and court management).
Explain the basic volleyball terminology and history of its evolution.
Explain how the volleyball court is set up, rules of play, basic etiquette, and scoring procedures.
Demonstrate an awareness of healthful eating habits and training as it relates to disease prevention and weight management.
List player positions and how positions interrelate.
Assess fitness levels and demonstrate proper training techniques.
Analyze successful technique of professional volleyball players.
Lead in class tournament play.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	- Skill tests on volley, set, spike, and serve - Quizzes on textbook readings - Project demonstration - class may participate in a skills drill or conditioning activity - Participation - Final Exam
Grading Scale	94-100% = A 90 - 93% = A- 87 - 89% = B+ 83 - 86% = B 80 - 82% = B- 77 - 79% = C+ 73 - 76% = C 70 - 72% = C- 67 - 69% = D+ 63 - 66% = D 60 - 62% = D- - Below 60% = E

HPEA217 - Strength Training & Physical Condit II

Overview

Subject Exercise Science	Academic Department Health, Education, and Human Services	School Health & Human Services
Course Description Explores the principles of intermediate and advanced strength and cardiovascular conditioning including evaluation of all components of physical fitness. Emphasizes flexibility, strength, cardiovascular conditioning, muscular endurance, and body composition. Also covers nutrition and exercise as it relates to weight management and disease prevention, and risk factors.		
Credit Hours 2		
Contact Hours 2		

Course Fee 10	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Other
Credit for Prior College Level Learning (CPCLL) Details Determined by department	

Goals, Topics, and Objectives

Course Goals
HPFA217 Strength Train & Phys Cond II is a sequential course designed to teach intermediate and advanced conditioning skills. The goal is to provide the knowledge and skills to live a healthy life.

- Core Course Topics**
1. Introduction to equipment, safety, and training guidelines.
 2. Proper mechanics for exercise, injury prevention, and benefits.
 3. Components of fitness including flexibility, strength, cardiovascular and muscular endurance; body composition; and how to achieve higher fitness levels.
 4. Assessment of fitness components and evaluation.
 5. Other forms of resistive training equipment, including exercise balls, tubing, body weight and core exercises.
 6. Exercises to develop the upper and lower body, abdominal muscles, and exercises to develop speed and power.
 7. Nutrition, diet, and exercise as it relates to weight control.
 8. Risk factors that cause disease and preventative behavior.
 9. Disease prevention including cardiovascular training to prevent cardiovascular disease, strength training to prevent osteoporosis, weight control to prevent diabetes (Type 2), and other related problems.

Demonstrate strength training principles and proper techniques (fitness).
Discuss the components of fitness including flexibility, strength, cardiovascular and muscular endurance.
Demonstrate knowledge of how to achieve higher levels of fitness (fitness).
Explain physiological information regarding strength training (fitness).
Discuss risk factors that cause disease and behaviors that lead to disease prevention.
Discuss a healthy diet, exercise and nutrition as it relates to weight control (diet).
Assess and evaluate fitness levels after skills tests are taken (fitness).
Demonstrate an improved awareness of safety, proper use of equipment, and injury prevention.
Demonstrate knowledge of preventive health skills as well as cardiovascular training to prevent cardiovascular disease, strength training to prevent osteoporosis, and weight control to prevent diabetes (Type 2), and other related problems.
Design an individualized personal training program or related fitness assignment.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement 1. Skill tests on strength, flexibility, cardiovascular endurance, muscular endurance and body composition 2. Participation 3. Personal training program or related fitness assignment 4. Written final exam	
Grading Scale • 94-100% = A • 90 - 93% = A- • 87 - 89% = B+ • 83 - 86% = B • 80 - 82% = B- • 77 - 79% = C+ • 73 - 76% = C • 70 - 72% = C- • 67 - 69% = D+ • 63 - 66% = D • 60 - 62% = D- • Below 60% = E

HUM101 - Introduction to the Humanities

Overview

Subject Humanities	Academic Department Humanities	School Liberal Arts
Course Description Introduces the study of global humanities using an interdisciplinary approach. Focuses on the central concepts and the fundamental nature of the visual arts, music, drama, religion, philosophy, literature, and architecture. Stresses appreciation of the humanities through the study of individual works as well as group approaches. Focuses on the aesthetic and technical aspects of the humanities, as well as the understanding of the humanities in light of historical and cultural conditions.		
Course Pre-requisite(s) Eligible to take ENG courses at HFC.		
Credit Hours 3		

Contact Hours

Course Fee 10	Miscellaneous Department Fee 0
Academic Level Undergraduate	
General Education Category Humanities and Fine Arts	Michigan Transfer Agreement (MTA) Category Category 5: Humanities and Fine Arts - Applied Degrees, Category 5: Humanities and Fine Arts - Transfer Degrees
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Course Goals
To increase students' knowledge of the humanities and introduce students to the major figures, historical periods, and themes in the history of humankind.

Core Course Topics 1. Disciplines within the humanities 2. The various genres of music, literature, the arts (visual, dance, theater), and architecture. 3. Major religious and political structures present in the time-periods studied 4. Major leaders, philosophers, artists, and figures of the time-periods studied 5. The inter-related nature of politics, the arts, and culture throughout history
Examine how the arts, philosophy, religion, and/or language reflect and shape humanity and the values of cultures.
Explain major terms and concepts of the humanities from the various time periods.
Identify and appraise major artistic and philosophical works from representative cultural periods and social movements.
Develop an understanding of cross-cultural intersectionality as reflected in languages, the arts, religion, or philosophy.
Critically evaluate artistic, literary, and philosophical works and their contribution to the human experience.
Contrast the changing genres and styles of the humanities that marked different historical periods and cultures

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement 1. Students should have a variety of assessments including written essays, oral presentations, and/or multi-media/multi-genre projects. 2. Students will complete at least one project critiquing a work of visual, musical, or literary art 3. Students will complete at least one project comparing two different time-periods 4. Students will write at least one essay (which may meet one of the requirement of the projects above).	
General Course Requirements and Recommendations 1. This course is to be an interdisciplinary study of humanity throughout its existence. 2. While an instructor can choose a specific timeframe or theme to focus upon, there should be an emphasis on using multiple disciplines and various media to explore with students the story of humankind. 3. Instructors should consider focusing on a given time periods or cultural themes. (For example: Renaissance, Medieval, Enlightenment, Ancient or "Death and Dying," The Nature of Humankind," Technology and the Root of Humanity") 4. An emphasis should be placed on the interconnectivity of disciplines in the humanities and the natural progression and evolution of philosophical and/or social movements.

HUM105 - World Civilization I

Overview

Subject Humanities	Academic Department Humanities	School Liberal Arts
Course Description Introduces major themes and events in World History from the Ancient to the Early Modern Periods through the study of the arts (fine and performing), architecture, literature, religions, and/or philosophies of (selected) World Civilizations.		
Course Pre-requisite(s) Eligible to take ENG courses at HFC.		
Credit Hours 3		
Contact Hours 3		
Course Fee 10	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category Humanities and Fine Arts		Michigan Transfer Agreement (MTA) Category Category 5: Humanities and Fine Arts - Applied Degrees, Category 5: Humanities and Fine Arts - Transfer Degrees
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals To introduce students to great works of World arts, literature, religion, architecture, and/or philosophy in their historical contexts. Emphasis will be on the interconnection of the Humanities and History, as well as the interconnection of the world cultures and civilizations relevant to each theme. The World Civilizations included will vary depending on the theme of the individual class, but inclusion of at least one non-Western Civilization is strongly encouraged.
Core Course Topics 1. Major historical events, movements, trends, and figures of World Civilizations 2. Major artistic, architectural, literary, and philosophical works of World Civilizations 3. Major religions and religious developments of World Civilizations 4. The roles of peoples (e.g., tribal peoples) at the periphery of World Civilizations 5. The relationship between the arts, literature, religious traditions, and philosophies and historical events, movements, and trends
Identify, describe, and analyze the major historical trends, movements, people, and events of the selected period(s) of World Civilizations.
Identify, describe, and analyze major artistic, architectural, literary, and philosophical works from various World Civilizations from the Ancient to the Early Modern time periods.
Identify, describe, and analyze the religion traditions from various World Civilizations from the Ancient to the Early Modern time periods.
Compare and contrast historical periods or events from two or more time periods or civilizations.
Compare and contrast artistic, architectural, literary, and/or philosophical works from two or more time periods or civilizations.
Compare and contrast religious traditions across two or more time periods and/or civilizations.
Explain how (selected) works of art, architecture, literature, and/or philosophy relate to the historical events and development of their civilizations and time periods.
Explain how peoples at the periphery of the World civilizations (e.g., tribal peoples) have contributed to the development and/or movement of the arts, architecture, philosophy, literature, and/or religious traditions of the world.
Trace and describe the changes in art, architecture, philosophy, and/or religious traditions as they moved through time and space.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Each instructor will determine the assessment methods for her/his course. Multi-genre/multi-media projects are encouraged by the Humanities department.	
General Course Requirements and Recommendations 1. Students should be introduced to at least two major World Civilizations, at least one of them should be a non-Western Civilization, depending on the theme of the class. 2. Students should be introduced to the major disciplines within the Humanities. 3. Some form of written assignment is strongly suggested. 4. A research project focusing on a historical person or event or a work of art, architecture, literature, philosophy, or religious traditions is strongly suggested. This can be the above mentioned assignment.	
Texts Each instructor will select the teaching materials she/he feels are best suited to her/his course.	
Satisfies Honors Requirement No	Satisfies Wellness Requirement No

HUM204 - Introductio to American Cultural Studies

Overview

Subject Humanities	Academic Department Humanities	School Liberal Arts
Course Description This course is a basic introduction to the study of America and its culture. The course focuses on the ideals, fears, conflicts and realities of American culture over the past centuries. This course will include a wide number of humanities disciplines (visual arts, music, drama, religion, philosophy, literature, and architecture) to explore these topics. The use of popular academic cultural theories will also be presented. This course will explore dominant cultures as well as subcultures that are prevalent in America and the way these cultures shape who we think we are as a nation.		
Course Pre-requisite(s) Eligible to take ENG courses at HFC.		
Credit Hours 3		
Contact Hours 3		
Course Fee 10	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category Humanities and Fine Arts		Michigan Transfer Agreement (MTA) Category Category 5: Humanities and Fine Arts - Applied Degrees, Category 5: Humanities and Fine Arts - Transfer Degrees
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals To increase students' knowledge of American culture and the narratives that we construct to create a national identity, to introduce students to the methods used to study culture in the humanities and give students the skills to apply this knowledge to analyze and understand current events and their own world.
Core Course Topics 1. Cultural theories and the arguments made about how culture is formed 2. The various stories that make up our collective story of American identity and the importance of those narratives on current events 3. Dominant cultures and subcultures of both recent and past incarnations of the U.S. story 4. The inter-related nature of politics, the arts, religion, and culture throughout the life of the U.S.
Explain major terms and concepts of the cultural theories
Identify and appraise dominant and major subcultures of the country
Identify and critically evaluate cultural periods and social movements
Develop an understanding of how ideology shapes the country and influences the society and its relation to current events
Contrast the various subcultures and what these groups offer to the larger narrative of what it means to "be American"

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement 1. Students should have a variety of assessments including written essays, oral presentations, and/or multi-media/multi-genre projects 2. Students will write at least one essay 3. Students will complete a minimum of three methods of assessment	
General Course Requirements and Recommendations 1. This course is to be an interdisciplinary study of American culture 2. While an instructor can choose a specific theme(s) to focus upon, there should be an emphasis on using multiple disciplines and various media to explore with students the story of humankind 3. Instructors should consider including the subcultures that are prominent in SE Michigan and the Detroit metro area 4. There should be a mix of both primary and secondary texts

Goals, Topics, and Objectives

Course Goals

The Honors Great Works Seminar aims to reveal to students their ability to engage challenging material from multiple disciplines and diverse cultures, and to encourage the continuation of such self-culture for a lifetime.

Core Course Topics

1. Critical textual analysis of great works from throughout time and from all over the world.
2. Relationship of style, genre, history, and culture on a given great work.
3. The interdisciplinary conversation of great ideas that occurs across cultures and time.
4. Oral and written evaluation and synthesis/presentation of ideas and arguments.

Interpret meaning in various texts by paying close attention to the creator's choices of detail, vocabulary, and style.
Discuss the relationship between different genres of texts and the multicultural & interdisciplinary environments from which they spring.
Articulate a critical evaluation and appreciation of a work's strengths and limitations.
Evaluate the commentary of classmates, as well as the remarks of the instructor, within a seminar setting.
Evaluate the contemporary relevance of particular texts.
Write critical essays employing a strong thesis statement, appropriate textual citations, contextual and intertextual evidence for their assertions

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

1. 1,500 word (minimum) seminar essay
 - is a comparison and contrast of two of the required course readings selected by the instructor.
 - includes both a "summary" and an "analysis" section.
2. An oral final examination in which the instructor engages each student in conversation regarding course texts and themes.

General Course Requirements and Recommendations

This course is to be an interdisciplinary study of great works (defined broadly) over many cultures and times. While an instructor can choose specific themes and particular authors/creators to focus on, there should be an emphasis on using multiple disciplines and various media to explore with students the idea of what makes a work great.

Texts

Instructors should choose from the Honors Council approved list and coordinate their choices with the Honors Director.

Credit for Prior College Level Learning (CPCLL) Details	
Student will submit a formal request in writing to the faculty and Associate Dean for work experience to be considered for Credit for Prior College-Level Learning.	
The student will complete an interview, a reflective paper, or a presentation to the faculty in which the student develops and describes the learning objectives supported by the work experience, how those learning objectives were achieved and how that learning was put into practice.	

Finally, the student must also provide a portfolio (or something comparable) that shows the work completed and provide some form of documentation **Goals, Topics, and Objectives** does not suffice) for which Credit for Prior College-Level Learning is requested.

Course Goals

Cooperative education helps students make the school-to-work transition, develop career and program-related learning objectives, and work on applicable skills for employment. Placements should provide students with the opportunity to apply and expand upon knowledge learned in the classroom, and develop the skills acquired in their coursework to align with the standards and expectations set by the worksite.

Core Course Topics

1. Professional Dress and Demeanor (attitude, posture, courteousness)
2. Workplace Communication
3. Interviewing Skills
4. Resume Building
5. Networking and Social Media
6. Seeking Employment
7. Career Advancement

1-3 program specific learning objectives will be developed by the instructor for each individual offering.
Students will create 1-3 learning objectives per credit to be approved by instructor for each individual offering.
Build a resume that meets standards of Career Services Officer.
Career Services-defined: Articulate the reasons for professional attire.
Wear professional attire while on the worksite.
Attend career workshop in professional dress.
Display appropriate professional attitude and demeanor while on the worksite.
Interview effectively.
Attend mock interview, give appropriate answers to five 5 questions.
Complete a written job application in a prompt, professional manner with all information legible, error-free, and thorough. -Display solid understanding of the appropriate use of Social Media sites (Facebook, LinkedIn, and Twitter) during Career Services workshop.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

Assessment will be determined by the instructor based on what is in the best interest of the student's academic growth, including future employability of the student. Assessment may include, but isn't limited to:

Major final project
Weekly journal
Creation and attainment of all learning objectives
Participation in a career-focused workshop
Consistent and prompt attendance at worksite
Employer evaluation

General Course Requirements and Recommendations

To be determined by the instructor. Detailed course syllabi will be standardized for all co-op courses and individual course requirements will be available to the Area Council and College Council by request "For information only" for each term that the course is offered.

Credit for Prior College Level Learning (CPCLL) Details	
Student will submit a formal request in writing to the faculty and Associate Dean for work experience to be considered for Credit for Prior College-Level Learning.	
The student will complete an interview, a reflective paper, or a presentation to the faculty in which the student develops and describes the learning objectives supported by the work experience, how those learning objectives were achieved and how that learning was put into practice.	

Finally, the student must also provide a portfolio (or something comparable) that shows the work completed and provide some form of documentation confirming the work experience (a resume does not suffice) for which Credit for Prior College-Level Learning is requested.

Goals, Topics, and Objectives

Course Goals
Cooperative education helps students make the school-to-work transition, develop career and program-related learning objectives, and work on applicable skills for employment. Placements should provide students with the opportunity to apply and expand upon knowledge learned in the classroom, and develop the skills acquired in their coursework to align with the standards and expectations set by the worksite.

Core Course Topics
1. Core Career-Focused Topics: A. Professional Dress and Demeanor (attitude, posture, courteousness) B. Workplace Communication C. Interviewing Skills D. Resume Building E. Networking and Social Media F. Seeking Employment G. Career Advancement
1-3 program specific learning objectives will be developed by the instructor for each individual offering.
Students will create 1-3 learning objectives per credit to be approved by instructor for each individual offering.
Build a resume that meets standards of Career Services Officer.
Articulate the reasons for professional attire.
Wear professional attire while on the worksite.
Attend career workshop in professional dress.
Display appropriate professional attitude and demeanor while on the worksite.
Interview effectively
Attend mock interview, give appropriate answers to five 5 questions
Career Services-defined: Complete a written job application in a prompt, professional manner with all information legible, error-free, and thorough.
Display understanding of the appropriate use of Social Media sites (Facebook, LinkedIn, and Twitter) during Career Services workshop.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment will be determined by the instructor based on what is in the best interest of the student's academic growth, including future employability of the student. Assessment may include, but isn't limited to: • Major final project • Weekly journal • Creation and attainment of all learning objectives • Participation in a career-focused workshop • Consistent and prompt attendance at worksite • Employer evaluation - Portfolio - Interview.
General Course Requirements and Recommendations
To be determined by the instructor. Detailed course syllabi will be standardized for all co-op courses and individual course requirements will be available to the AEC and College Council by request "For information only" for each term that the course is offered.

Academic Level	Undergraduate	
General Education Category	Humanities and Fine Arts	Michigan Transfer Agreement (MTA) Category Category 5: Humanities and Fine Arts - Applied Degrees, Category 5: Humanities and Fine Arts - Transfer Degrees
Eligible for Credit for Prior College Level Learning (CPCLL)	Yes	Acceptable Prior Learning Credit Other
Credit for Prior College Level Learning (CPCLL) Details	Determined by department.	

Goals, Topics, and Objectives

Course Goals
To introduce students to design principles and elements as they relate to interiors. The course will also instruct students in the design process and techniques used in creating and presenting aesthetic concepts. Students will acquire technical and artistic skills necessary to produce quality presentation boards and models.

Core Course Topics
1. Interior design profession and career options.
2. Design vocabulary; written aesthetic concept statements and professional presentations
3. Principles and elements of design as they relate to interiors
4. Examination of acclaimed interior designers, architects and their work for the enhancement and development of students' personal style, sophistication and creativity.
5. Eight-step design process
6. Visual presentation techniques
7. Interiors sample boards, quality craftsmanship and proficiency in graphic presentation.
8. Scaled models of residential structures.
Identify various career options, educational requirements, certifications, licensing, organizations and associations for interior design professionals.
Employ strong design vocabulary and communication skills as they pertain to interiors, including presentation outlines and concept statements in written, oral and visual presentations.
Assess and critique photographs of residential and commercial interiors in professional design magazines or in digital format, identifying the elements and principles of design used by the interior designer or architect.
Exhibit an enhanced level of personal style, sophistication and creativity developed through critiques of a broad range of interior environments.
Define the eight phases of the interior design process.
Demonstrate an ability to create innovative, professional quality presentation boards conveying aesthetic concepts.
Employ craftsmanship and professional graphic composition in the construction of presentation boards.
Construct a scaled model residential structure.

Assessment, Requirements, and Outcomes

INTR294 - Kitchen and Bath Internship

Overview

Subject	Academic Department	School
Interior Design	Building Sciences	Business, Entrepreneurship, PD
Course Description		
Offers practical work experience within the student's program of study through an internship in the kitchen and bath industry. Must have completed most of the coursework in the Kitchen and Bath Design program before applying for an internship and this course.		
Course Pre-requisite(s)	INTR-250 or INTR-251 or instructor approval	
Credit Hours	2	
Contact Hours	2	
Course Fee	Miscellaneous Department Fee	
10	0	
Academic Level	Undergraduate	

Eligible for Credit for Prior College Level Learning (CPCLL)
No

Goals, Topics, and Objectives

Course Goals
This course will offer students an opportunity to employ all aspects of technical information and skills acquired in Kitchen and Bath studio courses to a practical, supervised work environment in the kitchen and bath industry. Students desiring to take the Associate Kitchen and Bath Designer certification exam will need to fulfill this internship under the guidance of a Certified Kitchen or Bath Designer approved by an INTR advisor. To monitor student compliance and substantive progress, periodic meetings on campus with instructor are required.

Core Course Topics
1. Standard business practices in the kitchen and bath industry.
2. Professional services offered by kitchen and bath designers.
3. Pricing, profit margins, mark-up and record keeping.
4. Apply kitchen and bath interior design skills in the workplace environment.
5. Good customer service.
Develop an understanding of the business practices in the kitchen and bath industry.
Recognize and identify professional services offered in kitchen and bath design.
Assess and appraise standard pricing, profit margins, mark-up and record keeping used in the kitchen and bath industry.
Employ good customer service and evaluate its impact on business/client relationships in the kitchen and bath industry.
Employ professional oral and written communication and presentation skills.
Illustrate in-depth knowledge and understanding of project ordering, scheduling, subcontracting, installation, and supervision of kitchen and bath projects.
Select kitchen and bath cabinetry, develop specifications using industry nomenclature.
Apply skills obtained from practical, hands-on kitchen and bath interior design experience.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
1. Actively participate in discussions with faculty.
2. Participate in approved Internship in Kitchen/Bath industry.
3. Document evidence of all work performed during internship.
4. Provide written evaluation from employing supervisor.
Satisfies Honors Requirement
No
Satisfies Wellness Requirement
No

Undergraduate		
General Education Category	Michigan Transfer Agreement (MTA) Category	
Humanities and Fine Arts	Category 5: Humanities and Fine Arts - Applied Degrees, Category 5: Humanities and Fine Arts - Transfer Degrees	
Eligible for Credit for Prior College Level Learning (CPCLL)		
No		

Goals, Topics, and Objectives

Course Goals
[ITAL131 Elementary Italian I] is designed to enable students to reach the Novice Mid-level on the American Council on the Teaching of Foreign Languages (ACTFL) proficiency scale, focusing on language learning through communication, cultures, connections, comparisons, and communities. Presents Italian culture.

Core Course Topics
1. Greetings, introductions, and farewells
2. Phonetics
3. Alphabet
4. Numbers
5. Present-tense verbs
6. Past-tense verbs
7. Gender and number agreement
8. Prepositions
9. Affirmation and negation
10. Interrogatives
11. Vocabulary
12. Italian culture
Use appropriate greetings, introductions, and farewells
Demonstrate knowledge of phonetics through the comprehensible pronunciation of Italian words
Demonstrate verbal and written knowledge of the Italian alphabet
Recognize and produce numbers, dates, and times
Demonstrate correct usage of present-tense indicative verb forms, including regulars, irregulars, and conoscere and sapere
Recognize and produce the passato prossimo tense with avere
Demonstrate knowledge of singular/plural, case, and gender agreement for nouns, pronouns, and adjectives
Recognize and use selected prepositions orally and in writing
Create simple affirmative and negative statements using appropriate word order
Develop and respond to interrogative questions relating to chapter/unit themes using appropriate word order
Write about, speak about, and interpret situations similar to those presented in each chapter/unit of the textbook
Compare and contrast elements of Italian culture that differ from the U.S. norm

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement will be identified and implemented by the class instructor. Methods will include, but not be limited to:
• Participation
• Weekly/regular quizzes
• Homework assignments
• Chapter/unit tests
• Oral and/or expressive-receptive exam(s)
• Departmental writing assessment
• Midterm/final exam
General Course Requirements and Recommendations
Note: A grade of C- is not transferable and is not accepted by some programs at HFC.
Texts
All sections of this level will use a textbook (and any accompanying materials) selected by the course coordinator and approved by the World Languages Committee.
Satisfies Honors Requirement
No
Satisfies Wellness Requirement
No

JOUR131 - News Writing

Overview

Subject Journalism	Academic Department Media Communication Arts	School Liberal Arts
-----------------------	---	------------------------

Course Description

Introduces news writing in its various forms such as news stories, thought-provoking opinions, and stimulating reviews. Examines the gathering, processing and writing of news and information on current matters using professional standards in both print and online news production. Analysis of current and historical case studies that illustrate demographic, social, and ethical aspects of journalism. Creative problem-solving strategies are encouraged throughout the course and culminate with the writing of a feature story in both print and online formats.

Course Pre-requisite(s)

Eligible to take ENG courses at HFC.

Credit Hours

3

Contact Hours

3

Course Fee 10	Miscellaneous Department Fee 0
Academic Level Undergraduate	
General Education Category Humanities and Fine Arts	Michigan Transfer Agreement (MTA) Category Category 5: Humanities and Fine Arts - Applied Degrees, Category 5: Humanities and Fine Arts - Transfer Degrees
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Course Goals

Students will gain an understanding of how to critically analyze writing of news, features, sports, opinions, editorials, and reviews using standards for both print and online news production. Students will gain critical insights about journalism standards for news production in the digital age. Students will learn to:

1. Analyze the role of the news media in American society.
 1. Analyze news stories, feature stories, opinions and reviews for a balanced perspective of information.
 1. Identify and evaluate accuracy and relevance of information in both print and online formats through critically written analyses.
 1. Collect facts and quotations necessary for accurate and balanced news writing.
 1. Integrate necessary information from a variety of sources into logical, organized, and clearly written news stories, opinions, reviews, and features.
 1. Write and edit a news story so that it is concise, neutral, accurate and balanced.
 1. Organize facts and properly attribute sources per journalism standards.
 1. Edit stories per Associated Press style guidelines.
 1. Edit writing to eliminate errors such as comma splices, run-ons, and fragments.
 1. Write in both print and online formats.
- Core Course Topics**
1. History of Journalism
 2. Journalism standards for gathering and reporting news
 3. Associated Press Stylebook guidelines for news writing
 4. Bias and accuracy in news writing
 5. Journalism and technology
 6. Journalism ethics in the digital age
 7. Analyze the role of news media in American society
 8. Write a feature story using journalism standards
 9. Write in both print and online mediums
 10. Compare and contrast public relations writing and news writing

Identify the main ideas and the main supporting details of news and feature stories.
Analyze the standard organizational structure of news stories, feature stories, opinions and reviews.
Analyze how professional writers use quotations and information from a variety of sources to write a balanced and accurate news story.
Evaluate bias and accuracy in sources.
Evaluate the effectiveness of various forms of writing news.
Examine ethical practices both current and historical in writing news for target audiences.
Write a feature story for both print and online mediums.
Compare and contrast public relations writing and news writing standards.

Compose written reports.
Integrate research material from different sources into a logically and clearly written document.
Identify and evaluate bias and credibility in print and online news production through written critical analyses.
Analyze current issues in writing for news in print and online.

Assessment, Requirements, and Outcomes

- Assessment of Academic Achievement
- Students will write a minimum of five writing assignments (not including the final exam).
 - News writing assignments will occur at regular intervals, and will increase in depth of reporting and use of information technology.
 - Quizzes on readings will occur at regular intervals leading to a cumulative final exam.
 - At least one news writing assignment must be submitted to the Mirror News per the student newspaper's submission guidelines.
 - One online, social media, or multimedia project.
 - One presentation or proposal pitching feature story to the class.
 - Written feature story that uses journalism standards for both print and online news production.
 - Written plan for media convergence of online and social media to complement and promote the feature story.
 - Student will create and conduct survey of class for audience response to feature story.
 - Final examination. Instructors have the option of selecting other forms of student achievement.

General Course Requirements and Recommendations
Note that a grade of C- (C minus) is not transferrable and is not accepted by some programs at HFC.

JOUR292 - Journalism Experience-Online News Writin

Overview

Subject Journalism	Academic Department Media Communication Arts	School Liberal Arts
Course Description	This Journalism learning experience is for students interested in writing for an online news publication. The experience will be under the direction of the faculty advisor for the Mirror News.	
Course Pre-requisite(s)	Instructor permission	
Credit Hours	1	
Contact Hours	1	
Course Fee	Miscellaneous Department Fee	
0	0	
Academic Level	Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL)	No	

Goals, Topics, and Objectives

- Course Goals
Students will:
- Create online news content
 - Practice professional journalism standards
 - Comply with Associated Press style and ethical guidelines
 - Develop academic responsibility and critical thinking skills in the field of journalism
 - Develop comprehension and practice of ethics in journalism
 - Develop the skills and talents needed to pursue a career in journalism or a journalism-related field
- Core Course Topics
- News writing standards
 - Identifying and analyzing sources
 - Assessing audience response
 - Evaluating bias and ethics in reporting
 - Associated Press style guidelines
 - Journalism standards with photos and captions
 - Journalism standards with audio and video content
 - Proposing story ideas and setting timeline for story completion
 - Editing and proofreading
 - Publishing content online

Apply journalism standards for news writing
Identify and analyze sources

Compare and contrast audience responses
Assess bias and ethics in reporting
Comply with Associated Press style guidelines
Practice journalism standards with photos and captions
Practice journalism standards with audio and video content
Propose story ideas and set a timeline for story completion
Edit and proofread for grammar, punctuation, and spelling
Design news story for online publication

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement may include, but not be limited to, weekly activity review meetings and online published content critiques.

General Course Requirements and Recommendations
This learning opportunity will provide students interested in careers in Journalism to obtain hands-on experience with producing online content. The student will be required to attend weekly meetings with the faculty adviser for the Mirror News. This opportunity provides students journalism experience beyond that generally available in the classroom. The experiential learning goals are: to encourage academic responsibility and critical thinking in the field of journalism, to develop the student's comprehension and practice of ethics in journalism, and to develop the student's skills and talents in pursuing a career in journalism or a journalism-related field.

Course Description

Cooperative education is a structured method of combining classroom-based education with practical work experience. A cooperative education experience, commonly known as a "co-op," provides academic credit for structured employment experience. Work experience must be directly related to the student's declared major to be eligible. To register for this course, a student must have completed 50% of core coursework, maintain an overall GPA of 2.0 and a program specific GPA of 2.5.

Course Pre-requisite(s)
Permission from Career Services Officer or Cooperative Education Officer

Eligible for Credit for Prior College Level Learning (CPCLL)
Yes

Acceptable Prior Learning Credit
Other

Credit for Prior College Level Learning (CPCLL) Details
Student will submit a formal request in writing to the faculty and Associate Dean for work experience to be considered for Credit for Prior College-Level Learning.

The student will complete an interview, a reflective paper, or a presentation to the faculty in which the student develops and describes the learning objectives supported by the work experience, how those learning objectives were achieved and how that learning was put into practice.

Finally, the student must also provide a portfolio (or something comparable) that shows the work completed and provide some form of documentation confirming the work experience (a resume does not suffice) for which Credit for Prior College-Level Learning is requested.

Goals, Topics, and Objectives

Course Goals
Cooperative education helps students make the school-to-work transition, develop career and program-related learning objectives, and work on applicable skills for employment. Placements should provide students with the opportunity to apply and expand upon knowledge learned in the classroom, and develop the skills acquired in their coursework to align with the standards and expectations set by the worksite.

- Core Course Topics
- Professional Dress and Demeanor (attitude, posture, courteousness)
 - Workplace Communication
 - Interviewing Skills
 - Resume Building
 - Networking and Social Media
 - Seeking Employment
 - Career Advancement

Apply classroom knowledge to "real-world" situations by experiencing meaningful legal work in a professional legal setting.
Demonstrate effective, professional-level oral and written communication skills by interacting with supervisors, co-workers, clients, and professionals outside of the co-op office
Apply ethical and professional work standards relating to client confidentiality, conflicts of interest, and the unauthorized practice of law.
Apply problem-solving and decision-making skills to work-related tasks and assignments
Develop a portfolio of sample documents drafted on the job (while protecting client confidentiality).
Maintain a Daily Log or Co-op Journal of work performed, including a summary of hours worked using standard billing practices, and a statement analyzing or applying legal concepts to work performed.
Prepare a Final Report summarizing the work performed and explaining how personal learning goals were or were not satisfied.
Students will create 1-3 learning objectives per credit to be approved by instructor for each individual offering.
Build a resume that meets standards of Career Services Officer.
Articulate the reasons for professional attire.
Wear professional attire while on the worksite.
Attend career workshop in professional dress.
Display appropriate professional attitude and demeanor while on the worksite.
Interview effectively.
Attend mock interview, give appropriate answers to five 5 questions

Complete a written job application in a prompt, professional manner with all information legible, error-free, and thorough.
Display understanding of the appropriate use of Social Media sites (Facebook, LinkedIn, and Twitter) during Career Services workshop.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment will be determined by the instructor based on what is in the best interest of the student's academic growth, including future employability of the student. Assessment may include, but isn't limited to:

- Major final project
- Weekly journal
- Creation and attainment of all learning objectives
- Participation in a career-focused workshop
- Consistent and prompt attendance at worksite
- Employer evaluation

General Course Requirements and Recommendations
To be determined by the instructor. Detailed course syllabi will be standardized for all co-op courses and individual course requirements will be available to the AEC and College Council by request "For information only" for each term that the course is offered.

LGL290 - Co-Op in Paralegal Studies

Overview

Subject Paralegal	Academic Department Business & Economics	School Business, Entrepreneurshp, PD
Course Description Cooperative education is a structured method of combining classroom-based education with practical work experience. A cooperative education experience, commonly known as a "co-op," provides academic credit for structured employment experience. Work experience must be directly related to the student's declared major to be eligible.To register for this course, a student must have completed 50% of core coursework, maintain an overall GPA of 2.0 and a program specific GPA of 2.5.		
Course Pre-requisite(s) Permission from Career Services Officer or Cooperative Education Officer

Eligible for Credit for Prior College Level Learning (CPCLL)
Yes

Acceptable Prior Learning Credit
Other

Credit for Prior College Level Learning (CPCLL) Details
Student will submit a formal request in writing to the faculty and Associate Dean for work experience to be considered for Credit for Prior College-Level Learning.

The student will complete an interview, a reflective paper, or a presentation to the faculty in which the student develops and describes the learning objectives supported by the work experience, how those learning objectives were achieved and how that learning was put into practice.

Finally, the student must also provide a portfolio (or something comparable) that shows the work completed and provide some form of documentation confirming the work experience (a resume does not suffice) for which Credit for Prior College-Level Learning is requested.

Goals, Topics, and Objectives

Course Goals
Cooperative education helps students make the school-to-work transition, develop career and program-related learning objectives, and work on applicable skills for employment. Placements should provide students with the opportunity to apply and expand upon knowledge learned in the classroom, and develop the skills acquired in their coursework to align with the standards and expectations set by the worksite.

- Core Course Topics
1. Professional Dress and Demeanor (attitude, posture, courteousness)
 2. Workplace Communication
 3. Interviewing Skills
 4. Resume Building
 5. Networking and Social Media
 6. Seeking Employment
 7. Career Advancement

Apply classroom knowledge to "real-world" situations by experiencing meaningful legal work in a professional legal setting.
Demonstrate effective, professional-level oral and written communication skills by interacting with supervisors, co-workers, clients, and professionals outside of the co-op office.
Apply ethical and professional work standards relating to client confidentiality, conflicts of interest, and the unauthorized practice of law.
Apply problem-solving and decision-making skills to work-related tasks and assignments.
Develop a portfolio of sample documents drafted on the job (while protecting client confidentiality)
Maintain a Daily Log or Co-op Journal of work performed, including a summary of hours worked using standard billing practices, and a statement analyzing or applying legal concepts to work performed.
Prepare a Final Report summarizing the work performed and explaining how personal learning goals were or were not satisfied.
Students will create 1-3 learning objectives per credit to be approved by instructor for each individual offering.
Build a resume that meets standards of Career Services Officer.
Articulate the reasons for professional attire.
Wear professional attire while on the worksite.
Attend career workshop in professional dress.
Display appropriate professional attitude and demeanor while on the worksite.
Interview effectively.
Attend mock interview, give appropriate answers to five 5 questions
Complete a written job application in a prompt, professional manner with all information legible, error-free, and thorough.
Display understanding of the appropriate use of Social Media sites (Facebook, LinkedIn, and Twitter) during Career Services workshop.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment will be determined by the instructor based on what is in the best interest of the student's academic growth, including future employability of the student. Assessment may include, but is not limited to:

- Major final project
- Weekly journal
- Creation and attainment of all learning objectives
- Participation in a career-focused workshop
- Consistent and prompt attendance at worksite
- Employer evaluation

General Course Requirements and Recommendations
To be determined by the instructor. Detailed course syllabi will be standardized for all co-op courses and individual course requirements will be available to the AEC and College Council by request "For information only" for each term that the course is offered.

Texts
See Division for list of required texts

LGL295 - Paralegal Internship

Overview

Subject
Paralegal

Academic Department
Business & Economics

School
Business, Entrepreneurship, PD

Course Description
An unpaid internship which provides paralegal students with the opportunity to apply classroom knowledge to "real-world" situations by experiencing meaningful legal work in a professional setting. Students engage directly with lawyers and other legal professionals to gain work experience directly related to their paralegal studies major.

Course Pre-requisite(s)
Instructor Permission

Credit Hours
3

Contact Hours

0.2

Course Fee
0

Miscellaneous Department Fee
0

Academic Level
Undergraduate

Eligible for Credit for Prior College Level Learning (CPCLL)
No

Goals, Topics, and Objectives

- Core Course Topics
1. Professional Ethics
 2. Learning Objectives
 3. Paralegal Work-Product
 4. Time Management
 5. Portfolio
 6. Self Assessment

Demonstrate professional and ethical behavior in a legal work environment.
Prepare personalized learning objectives and perform professional activities that meet each objective.
Perform work and assigned tasks in a manner commensurate with a professional paralegal.
Develop time management and billing skills in a manner similar to methods commonly used in a law office.
Create a portfolio of sample legal documents for use in searching for a paralegal position, while protecting client confidentiality.
Complete and document self-assessments of performance at the internship.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Students will be required to:

1. Prepare personalized learning objectives.
2. Maintain and submit a Daily Log of work using standard billing practices.
3. Prepare a Final Report assessing performance.

Grading Scale	
LETTER GRADE	PERCENTAGE
A	93-100%
A-	90-92.9%
B+	87% - 89.9%
B	83% - 86.9%
B-	80% - 82.9%
C+	77% - 79.9%
C	73% - 76.9%
C-	70% - 72.9%
D+	67% - 69.9%
D	63% - 66.9%
D-	60% - 62.9%
E	<60%

LGL299 - Special Topics in Law

Overview

Subject	Academic Department	School
Paralegal	Business & Economics	Business, Entrepreneurshp, PD

Course Description
Explores selected legal topics with emphasis on current legal trends. Specific special topic will be announced each term the course is offered. Course may be repeated when different topics are offered and a student may earn credit for each different topic. Course may be used toward fulfilling the specific degree requirements for an associate degree.

Course Pre-requisite(s)
[ENG131 Introduction College Writing](#) with a grade of C or better, or Instructor Permission

Credit Hours
3

Contact Hours
3

Course Fee	Miscellaneous Department Fee
0	0
Academic Level	
Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL)	
No	

Goals, Topics, and Objectives

Core Course Topics
Discuss the substantive law of the specific legal topic.
Perform research on the specific legal topic using computer-assisted research tools.
Evaluate the ethical considerations regarding the role of the paralegal in this subject area of law.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Students will be assessed through quizzes, tests, in-class and out-of-class assignments, drafting assignments, and/or class participation.

General Course Requirements and Recommendations
A detailed course syllabus for each section of PLGL 299 must be approved by the Business and Computer Technology Division prior to the course being offered. The syllabus will be presented to the College Council by the Associate Dean of the Business and Computer Technology Division "for information only."

MATH010 - Algebra Skills

Overview

Subject	Academic Department	School
Mathematics	Mathematics	Science, Tech, Engr & Math

Course Description	
A supplemental course for students taking certain sections of MATH-110: Intermediate Algebra. Topics include simplifying algebraic expressions, solving linear equations, graphs of linear equations, simplifying expressions using laws of integer exponents, and simplifying polynomial expressions.	
Course Co-requisite(s) MATH110 Intermediate Algebra	
Credit Hours	
2

Goals, Topics, and Objectives

Course Goals
To provide needed just-in-time mathematical support to qualified students who have not met the prerequisite for [MATH110 Intermediate Algebra](#)

- Core Course Topics
- Algebraic Expressions and Linear Equations
 - Use the order of operations.
 - Apply the distributive property.
 - Simplify algebraic expressions by distributing and combining like terms.
 - Translate sentences into linear equations.
 - Evaluate formulas with values given for some of the variables.
 - Verify a solution to an equation.
 - Solve one-step linear equations.
 - Solve two-step linear equations.
 - Solve a formula for one of its variables.
 - Graphing Linear Equations
 - Plot points in the Cartesian coordinate system.
 - Graph a linear equation by finding and plotting ordered pairs of solutions.
 - Identify the x- and y-intercepts of a graph.
 - Find the x- and y-intercepts of a line algebraically.
 - Graph a linear equation by finding and plotting intercepts.
 - Use slopes to determine whether two lines are parallel, perpendicular, or neither.
 - Find equations of lines given a point and the slope, two-points, or a graph.
 - Find the equation of a horizontal or vertical line given conditions on that line.
 - Polynomial Functions and Exponents
 - Evaluate exponential expressions.
 - Simplify exponential expressions using the laws of exponents.
 - Determine whether a polynomial is a monomial, binomial, or trinomial.
 - Determine the degree and coefficient of a term and determine the degree of a polynomial.
 - Evaluate polynomials.
 - Simplify polynomial expressions.

Algebraic Expressions and Linear Equations: Use the order of operations.
Algebraic Expressions and Linear Equations: Apply the distributive property.
Algebraic Expressions and Linear Equations: Simplify algebraic expressions by distributing and combining like terms.
Algebraic Expressions and Linear Equations: Translate sentences into linear equations.
Algebraic Expressions and Linear Equations: Evaluate formulas with values given for some of the variables.
Algebraic Expressions and Linear Equations: Verify a solution to an equation.
Algebraic Expressions and Linear Equations: Solve one-step linear equations.
Algebraic Expressions and Linear Equations: Solve two-step linear equations.
Algebraic Expressions and Linear Equations: Solve a formula for one of its variables.
Graphing Linear Equations: Plot points in the Cartesian coordinate system.
Graphing Linear Equations: Graph a linear equation by finding and plotting ordered pairs of solutions.

Graphing Linear Equations: Identify the x- and y-intercepts of a graph.
Graphing Linear Equations: Find the x- and y-intercepts of a line algebraically.
Graphing Linear Equations: Graph a linear equation by finding and plotting intercepts.
Graphing Linear Equations: Use slopes to determine whether two lines are parallel, perpendicular, or neither.
Graphing Linear Equations: Find equations of lines given a point and the slope, two points, or a graph.
Graphing Linear Equations: Find the equation of a horizontal or vertical line given conditions on that line.
Polynomial Functions and Exponents: Evaluate exponential expressions.
Polynomial Functions and Exponents: Simplify exponential expressions using the laws of exponents.
Polynomial Functions and Exponents: Determine whether a polynomial is a monomial, binomial, or trinomial.
Polynomial Functions and Exponents: Determine the degree and coefficient of a term and determine the degree of a polynomial.
Polynomial Functions and Exponents: Evaluate polynomials.
Polynomial Functions and Exponents: Simplify polynomial expressions.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
Pass MATH110 Intermediate Algebra with C or better or pass the MATH010 Algebra Skills final exam with the passing score determined by the Mathematics Department.	
Satisfies Honors Requirement	Satisfies Wellness Requirement
No	No

MATH031 - Quantitative Reasoning Skills Review

Overview

Subject Mathematics	Academic Department Mathematics	School Science, Tech, Engr & Math
Course Description A supplemental course for students taking certain sections of MATH-131: Mathematics for the Modern World. Topics include creating and interpreting various types of graphs; geometry, including area, volume and the Pythagorean Theorem; algebra; basic statistics; and arithmetic with signed numbers, fractions, and scientific notation.		
Course Pre-requisite(s) Eligible to take ENG courses at HFC	Course Co-requisite(s) MATH131 Math for the Modern World	
Credit Hours 2		
Contact Hours 2		
Course Fee 10	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals To provide needed just-in-time mathematical support to students who have not met the prerequisite for MATH131 Math for the Modern World
Core Course Topics
1. Arithmetic
1. Add, subtract, multiply or divide fractions.
2. Add, subtract, multiply or divide integers and other signed numbers.
3. Apply whole number exponent rules.
4. Use exponent rules with negative exponents.
5. Use the order of operations.
6. Convert between scientific and standard notation.
7. Multiply and divide numbers written in scientific notation.
8. Find the approximate square root of a number using a calculator.

9. Find the square roots of the first few perfect square whole numbers without a calculator.
2. Algebra
1. Differentiate between variables and constants.
2. Apply whole number exponent rules.
3. Use exponent rules with negative exponents.
4. Apply the commutative and associative properties.
5. Apply the distributive property.
6. Simplify algebraic expressions by distributing and combining like terms.
7. Write equations to model linear situations.
8. Write equations to model exponential situations.
9. Evaluate formulas with values given for the independent variables.
10. Verify a solution to an equation.
11. Solve linear equations in one variable analytically.
3. Graphs and graphing
1. Interpret or create a scatterplot.
2. Plot points in the Cartesian coordinate system.
3. Find the slope of a line given two points or the graph.
4. Write the equation of a line in slope-intercept form.
5. Find the y-intercept of a linear graph given the graph or the equation of the graph.
6. Interpret the slope as a rate in applied problems.
7. Graph a line using either a table of values or the slope and y-intercept.
4. Geometry
1. Apply formulas to find area and volume.
2. Explain the difference between length, area and volume.
3. Use the Pythagorean Theorem to solve problems about right triangles.
4. Use the Pythagorean Theorem or the distance formula to find the distance between two points.
5. Proportion
1. Increase or decrease a number by a percentage.
2. Calculate percent of increase or decrease.
3. Solve percent problems.
4. Write and solve proportions.
5. Solve problems using proportions.
6. Calculate a rate or unit rate.
6. Statistics
1. Calculate a median.
2. Calculate a mean.
3. Determine whether a median or mean better supports an argument based on data.
4. Calculate a standard deviation.

Arithmetic: Add, subtract, multiply or divide fractions.
Arithmetic: Add, subtract, multiply or divide integers and other signed numbers.
Arithmetic: Apply whole number exponent rules.
Arithmetic: Use exponent rules with negative exponents.
Arithmetic: Use the order of operations.
Arithmetic: Convert between scientific and standard notation.
Arithmetic: Multiply and divide numbers written in scientific notation.
Arithmetic: Find the approximate square root of a number using a calculator.
Arithmetic: Find the square roots of the first few perfect square whole numbers without a calculator.
Algebra: Differentiate between variables and constants.
Algebra: Apply whole number exponent rules.
Algebra: Use exponent rules with negative exponents.
Algebra: Apply the commutative and associative properties.
Algebra: Apply the distributive property.
Algebra: Simplify algebraic expressions by distributing and combining like terms.
Algebra: Write equations to model linear situations.

Algebra: Write equations to model exponential situations.
Algebra: Evaluate formulas with values given for the independent variables.
Algebra: Verify a solution to an equation.
Algebra: Solve linear equations in one variable analytically.
Graphs and Graphing: Interpret or create a scatterplot.
Graphs and Graphing: Plot points in the Cartesian coordinate system.
Graphs and Graphing: Find the slope of a line given two points or the graph.
Graphs and Graphing: Write the equation of a line in slope-intercept form.
Graphs and Graphing: Find the y-intercept of a linear graph given the graph or the equation of the graph.
Graphs and Graphing: Interpret the slope as a rate in applied problems.
Graphs and Graphing: Graph a line using either a table of values or the slope and y-intercept.
Geometry: Apply formulas to find area and volume.
Geometry: Explain the difference between length, area and volume.
Geometry: Use the Pythagorean Theorem to solve problems about right triangles.
Geometry: Use the Pythagorean Theorem or the distance formula to find the distance between two points.
Proportion: Increase or decrease a number by a percentage.
Proportion: Calculate percent of increase or decrease.
Proportion: Solve percent problems.
Proportion: Write and solve proportions.
Proportion: Solve problems using proportions.
Proportion: Calculate a rate or unit rate.
Statistics: Calculate a median.
Statistics: Calculate a mean.
Statistics: Determine whether a median or mean better supports an argument based on data.
Statistics: Calculate a standard deviation.

MATH041 - Introductory Statistics Skills

Overview

Subject Mathematics	Academic Department Mathematics	School Science, Tech, Engr & Math
Course Description A supplemental course for students taking certain sections of MATH-141. Topics include numbers and the number line, operations on numbers, sets, equations and inequalities, graphing points and lines in two dimensions, reading graphs and tables, and approximating areas. In addition, students will be able to apply mathematical tools in real-world settings and interpret results in context.		
Course Pre-requisite(s) Eligible to take ENG courses at HFC		Course Co-requisite(s) MATH141 Introduction to Statistics
Credit Hours 2		
Contact Hours 2		
Course Fee 10	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals
To provide needed just-in-time mathematical support for students who have not met the prerequisite for [MATH141 Introduction to Statistics](#). There will be an emphasis on reading, problem solving, and writing skills throughout the course as they are needed in the practice of statistics.

Core Course Topics	
1. Numbers and the Number Line	1. Plot points and intervals on the number line 2. Represent an inequality as an interval on the number line 3. Find the distance between two points on the number line 4. Find the midpoint between two points on the number line 5. Round decimals 6. Order decimal numbers 7. Convert numbers between scientific and standard notation 8. Convert between fractions, decimals, and percents
2. Operations on Numbers	1. Perform signed numbers arithmetic 2. Calculate powers of a numbers using technology 3. Calculate the square root of a number (using technology) 4. Use summation notation 5. Use order of operations in expressions and formulas
3. Sets	1. Use set notation 2. Use Venn diagrams 3. Find the complement of a set 4. Find the union and the intersection of two sets
4. Equations and Inequalities	1. Evaluate algebraic expressions 2. Solve a linear equation in one variable
5. Graphing Points and Lines in the Cartesian Coordinate System	1. Plot ordered pairs (x, y) in the rectangular coordinates system 2. Understand the slope as the change in y associated with a 1-unit change in x. 3. Find the slope of a line given two points or the graph 4. Identify and interpret slope as a rate of change 5. Write the equation of the line in slope-intercept form 6. Given the equation of the line, draw the graph of the line 7. Using the equation of the line, find the y-value associated with a given x-value. 8. Find a vertical distance between a point and a line
6. Reading Tables and Graphs and Approximating Areas	1. Extract information from tables and graphs 2. Given the total area under a curve or a histogram, approximate the area of a shaded region.
Numbers and the Number Line: Plot points and intervals on the number line	
Numbers and the Number Line: Represent an inequality as an interval on the number line	
Numbers and the Number Line: Find the distance between two points on the number line	
Numbers and the Number Line: Find the midpoint between two points on the number line	
Numbers and the Number Line: Round decimals	
Numbers and the Number Line: Order decimal numbers	

Numbers and the Number Line: Convert numbers between scientific and standard notation
Numbers and the Number Line: Convert between fractions, decimals, and percents
Operations on Numbers: Perform signed numbers arithmetic
Operations on Numbers: Calculate powers of a numbers using technology
Operations on Numbers: Calculate the square root of a number (using technology)
Operations on Numbers: Use summation notation
Operations on Numbers: Use order of operations in expressions and formulas
Sets: Use set notation
Sets: Use Venn diagrams
Sets: Find the complement of a set
Sets: Find the union and the intersection of two sets
Equations and Inequalities: Evaluate algebraic expressions
Equations and Inequalities: Solve a linear equation in one variable
Graphing Points and Lines in the Cartesian Coordinate System: Plot ordered pairs (x, y) in the rectangular coordinates system
Graphing Points and Lines in the Cartesian Coordinate System: Understand the slope as the change Graphing Points and Lines in the Cartesian Coordinate System: in y associated with a 1-unit change in x.
Graphing Points and Lines in the Cartesian Coordinate System: Find the slope of a line given two points or the graph
Graphing Points and Lines in the Cartesian Coordinate System: Identify and interpret slope as a rate of change
Graphing Points and Lines in the Cartesian Coordinate System: Write the equation of the line in slope-intercept form
Graphing Points and Lines in the Cartesian Coordinate System: Given the equation of the line, draw the graph of the line
Graphing Points and Lines in the Cartesian Coordinate System: Using the equation of the line, find the y-value associated with a given x-value.
Find a vertical distance between a point and a line
Reading Tables and Graphs and Approximating Areas: Extract information from tables and graphs
Reading Tables and Graphs and Approximating Areas: Given the total area under a curve or a histogram, approximate the area of a shaded region.

MATH095 - Bridge to Success in Mathematics

Overview

Subject Mathematics	Academic Department Mathematics	School Science, Tech, Engr & Math
Course Description Utilizes adaptive and/or modular software to assist students in learning or refreshing mathematics skills. Topics vary by individual student. Course supports satisfying mathematics prerequisites across disciplines. Requires regular on campus attendance and access to an online homework management system.		
Credit Hours 1		
Contact Hours 1		
Course Fee 0	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals 1. To develop in students a basic understanding of mathematical concepts, principles, and methods appropriate for their goals. 1. To develop in students skills necessary for success in subsequent mathematics courses and other courses requiring mathematical skills.	
Core Course Topics 1. Arithmetic 1. Perform operations with whole numbers. 2. Perform operations with fractions. 3. Perform operations with decimals. 4. Perform operations with signed numbers. 5. Round numbers. 2. Algebra 1. Solve percent problems. 2. Solve proportions. 3. Solve linear equations. 4. Solve and graph linear inequalities. 5. Graph lines. 6. Write equations of lines. 7. Solve systems of equations. 8. Determine whether a relation is a function. 9. Evaluate functions. 10. Apply laws of exponents. 11. Represent numbers with scientific notation. 12. Factor polynomial expressions. 13. Solve quadratic equations. 14. Graph quadratic functions. 15. Solve problems involving general polynomial functions. 16. Perform operations on rational expressions. 17. Solve rational equations. 18. Graph rational functions. 19. Simplify radical expressions. 20. Simplify expressions involving rational exponents. 21. Solve exponential equations. 22. Apply properties of logarithms. 23. Solve logarithmic equations. 3. Geometry and Trigonometry 1. Apply basic geometric principles to solve problems. 2. Apply right-angle trigonometric principles to solve problems. 3. Apply general trigonometric principles to solve problems.	

Arithmetic: Perform operations with whole numbers.
Arithmetic: Perform operations with fractions.
Arithmetic: Perform operations with decimals.
Arithmetic: Perform operations with signed numbers.
Arithmetic: Round numbers.
Algebra: Solve percent problems.
Algebra: Solve proportions.
Algebra: Solve linear equations.
Algebra: Solve and graph linear inequalities.

Algebra: Graph lines.
Algebra: Write equations of lines.
Algebra: Solve systems of equations.
Algebra: Determine whether a relation is a function.
Algebra: Evaluate functions.
Algebra: Apply laws of exponents.
Algebra: Represent numbers with scientific notation.
Algebra: Factor polynomial expressions.
Algebra: Solve quadratic equations.
Algebra: Graph quadratic functions.
Algebra: Solve problems involving general polynomial functions.
Algebra: Perform operations on rational expressions.
Algebra: Solve rational equations.
Algebra: Graph rational functions.
Algebra: Simplify radical expressions.
Algebra: Simplify expressions involving rational exponents.
Algebra: Solve exponential equations.
Algebra: Apply properties of logarithms.
Algebra: Solve logarithmic equations.
Geometry and Trigonometry: Apply basic geometric principles to solve problems.
Geometry and Trigonometry: Apply right-angle trigonometric principles to solve problems.
Geometry and Trigonometry: Apply general trigonometric principles to solve problems.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
- All students will be required to complete the minimum number of required hours using the course's online homework system. - Additional assessment of student achievement may include assignments, quizzes, and exams.	
General Course Requirements and Recommendations	
- Students must bring a non-graphing scientific calculator to all class sessions. - Access to an online homework management system is also required.	
Grading Scale	
S/U	
Satisfies Honors Requirement	Satisfies Wellness Requirement
No	No

Register for this Course

MATH100 - Basic Technical Mathematics

Overview

Subject Mathematics	Academic Department Mathematics	School Science, Tech, Engr & Math
Course Description		
For those in technology programs who have not completed one year of algebra and one year of geometry or who need to review beginning algebra and geometry. Covers a review of arithmetic; signed numbers; scientific notation; measurement conversions; and an introduction to beginning algebra, geometry, and statistics. Emphasizes practical technical applications and requires the use of a non-graphing scientific calculator.		

Credit Hours

4

Contact Hours

4

Course Fee 10	Miscellaneous Department Fee 0
Academic Level Undergraduate	
General Education Category Mathematics	Michigan Transfer Agreement (MTA) Category Category 3: Mathematics - Applied Degrees
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Course Goals	- To review arithmetic processes, and to introduce signed numbers, scientific notation, and measurement conversions. - To introduce the fundamentals of algebra and geometry which provide the necessary background for more advanced mathematics courses. - To develop the problem-solving skills needed to interpret, analyze, and solve application problems involving arithmetic and basic algebra, geometry, and statistics that relate to technical areas.
Core Course Topics	- Whole Numbers - Evaluate expressions using the order of operations. - Solve applied problems. - Fractions - Add and subtract fractions. - Multiply and divide fractions. - Solve applied problems. - Decimals and Percents - Convert between fractions, decimals, and percents. - Round decimals to a particular place value. - Solve applied problems. - Signed Numbers - Add and subtract signed whole numbers and fractions. - Multiply and divide signed whole numbers and fractions. - Scientific Notation - Use the rules of exponents for powers of 10. - Write numerical values in scientific notation. - Add, subtract, multiply, and divide using numerical values expressed in scientific notation. - Measurements - Understand basic concepts of the metric system. - Convert measurements within the U. S. system and within the metric system. - Use conversion factors to change measurements from the U. S. system to the metric system and vice versa. - Polynomials - Evaluate algebraic expressions by substitution. - Simplify algebraic expressions by removing grouping symbols and combining like terms. - Add and subtract polynomials. - Multiply monomials and polynomials. - Divide a monomial and a polynomial by a monomial. - Equations and Formulas - Solve linear equations. - Translate words into algebraic symbols. - Solve a formula or literal equation for a particular variable. - Solve applied problems. - Ratio and Proportion - Reduce ratios. - Solve proportions. - Solve applied problems. - Basic Geometry - Apply basic definitions and relationships for angles, lines, and geometric figures to solve applied problems. - Find the area and perimeter of quadrilaterals and triangles. - Use the Pythagorean Theorem to find the missing side of a right triangle. - Use the relationships of similar polygons to solve applied problems using proportions. - Find the circumference and area of circles. - Find the volume, lateral surface area, and total surface area of prisms, cylinders, and spheres. - Basic Statistics - Read and interpret bar, line, and circle graphs. - Find the mean, median, and mode for a set of data. - Scientific Calculator - Demonstrate proficiency in using a non-graphing scientific calculator for basic arithmetic operations. - Demonstrate proficiency in using a non-graphing scientific calculator to help solve applied problems involving measurement conversions, proportions, geometric figures, and statistics.

Whole Numbers: Evaluate expressions using the order of operations.
Whole Numbers: Solve applied problems.
Fractions: Add and subtract fractions.

Fractions: Multiply and divide fractions.
Fractions: Solve applied problems.
Decimals and Percents: Convert between fractions, decimals, and percents.
Decimals and Percents: Round decimals to a particular place value.
Decimals and Percents: Solve applied problems.
Signed Numbers: Add and subtract signed whole numbers and fractions.
Signed Numbers: Multiply and divide signed whole numbers and fractions.
Scientific Notation: Use the rules of exponents for powers of 10.
Scientific Notation: Write numerical values in scientific notation.
Scientific Notation: Add, subtract, multiply, and divide using numerical values expressed in scientific notation.
Measurements: Understand basic concepts of the metric system.
Measurements: Convert measurements within the U. S. system and within the metric system.
Measurements: Use conversion factors to change measurements from the U. S. system to the metric system and vice versa.
Polynomials: Evaluate algebraic expressions by substitution.
Polynomials: Simplify algebraic expressions by removing grouping symbols and combining like terms.
Polynomials: Add and subtract polynomials.
Polynomials: Multiply monomials and polynomials.
Polynomials: Divide a monomial and a polynomial by a monomial.
Equations and Formulas: Solve linear equations.
Equations and Formulas: Translate words into algebraic symbols.
Equations and Formulas: Solve a formula or literal equation for a particular variable.
Equations and Formulas: Solve applied problems.
Ratio and Proportion: Reduce ratios.
Ratio and Proportion: Solve proportions.
Ratio and Proportion: Solve applied problems.
Basic Geometry: Apply basic definitions and relationships for angles, lines, and geometric figures to solve applied problems.
Basic Geometry: Find the area and perimeter of quadrilaterals and triangles.
Basic Geometry: Use the Pythagorean Theorem to find the missing side of a right triangle.
Basic Geometry: Use the relationships of similar polygons to solve applied problems using proportions.
Basic Geometry: Find the circumference and area of circles.

Basic Geometry: Find the volume, lateral surface area, and total surface area of prisms, cylinders, and spheres.
Basic Statistics: Read and interpret bar, line, and circle graphs.
Basic Statistics: Find the mean, median, and mode for a set of data.
Scientific Calculator: Demonstrate proficiency in using a non-graphing scientific calculator for basic arithmetic operations.
Scientific Calculator: Demonstrate proficiency in using a non-graphing scientific calculator to help solve applied problems involving measurement conversions, proportions, geometric figures, and statistics.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement - All students are required to complete a comprehensive final examination that assesses the learning of all course objectives. This final examination must be weighted in a manner so that this exam score is worth a minimum of fifteen percent (15%) of the student's final course grade. In selected semesters this final exam may be a common final exam administered to all sections of MATH100 Basic Tech Mathematics. - All students will be required to complete at least two (2) proctored on-campus exams. The cumulative value of these exams must be at least forty percent (40%) of a student's final course grade. - Additional assessment of student achievement may include assignments, quizzes, and exams. - Application problems must be included on all exams, including the final exam. - The Critical Thinking Activities must be administered during the semester. Due to the challenging nature of these activities, instructors must use class time to start each activity and to engage students in the critical thinking portion of the problem-solving process. The collection of all critical thinking activities must be weighted in a manner so that the total of this collection is worth between six percent (6%) and twelve percent (12%) of the student's final course grade.	
General Course Requirements and Recommendations - Students must bring a non-graphing scientific calculator to all class sessions. - Application problems must be covered in all mathematics courses. In any course outline, every section that includes application problems must be covered.

MATH101 - Mathematics for Health Careers

Overview

Subject Mathematics	Academic Department Mathematics	School Science, Tech, Engr & Math
Course Description Explores the mathematical skills required for various careers in the health professions. Includes computational skills, essential algebraic concepts, problem-solving strategies, ratio and proportion, dimensional analysis, measurement and geometry, and an introduction to data analysis with problems chosen to represent those commonly encountered in health careers. Requires a non-graphing scientific calculator.		
Credit Hours 4		
Contact Hours 4		
Course Fee 10	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category Mathematics	Michigan Transfer Agreement (MTA) Category Category 3: Mathematics - Applied Degrees	
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals - To develop the basic mathematical skills necessary for health careers students. - To encourage the development of problem-solving skills.	
Core Course Topics - Arithmetic of Whole Numbers, Fractions, Decimals, and Percents - Find least common multiples of whole numbers. - Model and find equivalent fractions and mixed numbers. - Add, subtract, multiply, and divide fractions and mixed numbers. - Round decimals to a specific place value. - Add, subtract, multiply, and divide decimals. - Convert between fractions, decimals, and percents. - Perform arithmetic operations using the order of operations for whole numbers, fractions, and decimals. - Demonstrate proficiency using a calculator to perform basic operations with whole numbers, fractions, and decimals. - Arithmetic of Signed Numbers - Add and subtract signed numbers. - Multiply and divide signed numbers. - Scientific Notation - Convert between scientific notation and standard decimal notation. - Perform arithmetic operations on numbers in scientific notation.	

4. Measurements (Approximate Numbers)
1. Determine the accuracy, precision, maximum error, and percent error of a measurement.
2. Compare the accuracy, precision, maximum error, and percent error of a group of measurements.
3. Perform arithmetic operations on a group of measurements and round the results using the conventional rounding rules for measurements.
5. Ratio and Proportion
1. Write ratios, rates, and unit rates, and set up proportions.
2. Solve ratio, rate, and proportion application problems.
3. Solve percent applications using proportions.
6. Measurement Systems
1. Convert within the U.S. Customary system.
2. Perform arithmetic operations with measurements of weight, capacity, length, and time.
3. Convert measurements within the Metric measurement system.
4. Convert between the U.S. Customary system and the Metric system.
5. Convert measurements within the Apothecary measurement system.
6. Convert between the Apothecary system and the Metric system.
7. Convert between Fahrenheit and Celsius temperature scales.
7. Basic Algebra
1. Perform basic operations on polynomials.
2. Solve linear equations.
3. Graph linear equations.
8. Applications to Health Career Professions
1. Use dimensional analysis or proportions to solve application problems involving medication dosages.
9. Descriptive Statistical Measures
1. Compute and interpret the meaning of simple descriptive statistical measures.
2. Interpret tables and graphs such as bar graphs, histograms, line graphs, pie charts, and pareto graphs.
Arithmetic of Whole Numbers, Fractions, Decimals, and Percents: Find least common multiples of whole numbers.
Arithmetic of Whole Numbers, Fractions, Decimals, and Percents: Model and find equivalent fractions and mixed numbers.
Arithmetic of Whole Numbers, Fractions, Decimals, and Percents: Add, subtract, multiply, and divide fractions and mixed numbers.
Arithmetic of Whole Numbers, Fractions, Decimals, and Percents: Round decimals to a specific place value.
Arithmetic of Whole Numbers, Fractions, Decimals, and Percents: Add, subtract, multiply, and divide decimals.
Arithmetic of Whole Numbers, Fractions, Decimals, and Percents: Convert between fractions, decimals, and percents.
Arithmetic of Whole Numbers, Fractions, Decimals, and Percents: Perform arithmetic operations using the order of operations for whole numbers, fractions, and decimals.
Arithmetic of Whole Numbers, Fractions, Decimals, and Percents: Demonstrate proficiency using a calculator to perform basic operations with whole numbers, fractions, and decimals.
Arithmetic of Signed Numbers: Add and subtract signed numbers.
Arithmetic of Signed Numbers: Multiply and divide signed numbers.
Scientific Notation: Convert between scientific notation and standard decimal notation.
Scientific Notation: Perform arithmetic operations on numbers in scientific notation.
Measurements (Approximate Numbers): Determine the accuracy, precision, maximum error, and percent error of a measurement.
Measurements (Approximate Numbers): Compare the accuracy, precision, maximum error, and percent error of a group of measurements.
Measurements (Approximate Numbers): Perform arithmetic operations on a group of measurements and round the results using the conventional rounding rules for measurements.
Ratio and Proportion: Write ratios, rates, and unit rates, and set up proportions.
Ratio and Proportion: Solve ratio, rate, and proportion application problems.

Ratio and Proportion: Solve percent applications using proportions.
Measurement Systems: Convert within the U.S. Customary system.
Measurement Systems: Perform arithmetic operations with measurements of weight, capacity, length, and time.
Measurement Systems: Convert measurements within the Metric measurement system.
Measurement Systems: Convert between the U.S. Customary system and the Metric system.
Measurement Systems: Convert measurements within the Apothecary measurement system.
Measurement Systems: Convert between the Apothecary system and the Metric system.
Measurement Systems: Convert between Fahrenheit and Celsius temperature scales.
Basic Algebra: Perform basic operations on polynomials.
Basic Algebra: Solve linear equations.
Basic Algebra: Graph linear equations.
Applications to Health Career Professions: Use dimensional analysis or proportions to solve application problems involving medication dosages.
Descriptive Statistical Measures: Compute and interpret the meaning of simple descriptive statistical measures.
Descriptive Statistical Measures: Interpret tables and graphs such as bar graphs, histograms, line graphs, pie charts, and pareto graphs.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
- A comprehensive final examination, weighted in a manner that is worth at least fifteen percent (15%) of the final course grade, is required for all sections. - Additional assessment of student achievement may include assignments, quizzes, and exams. - Application problems must be included on all exams, including the final exam.	
General Course Requirements and Recommendations	
- A non-graphing scientific calculator is required of each student. Any calculator capable of calculating the values of trigonometric, logarithmic, and exponential functions is acceptable. - Application problems must be covered in all mathematics courses. In any course outline, every section that includes application problems must be covered.

MATH103 - Technical Mathematics

Overview

Subject Mathematics	Academic Department Mathematics	School Science, Tech, Engr & Math
Course Description For students in technology programs who have had MATH 100 or one year of Beginning Algebra. Covers functions and graphs, properties of lines, the trigonometric functions, systems of linear equations, rational expressions, quadratic equations, solution of right triangles, vectors, integer exponents, linear regression, complex numbers, and an introduction to the non-graphing scientific calculator. Requires a non-graphing scientific calculator for some formal assessments.		
Course Pre-requisite(s) MATH100 Basic Tech Mathematics with a C grade or better OR a satisfactory score on the placement test		
Credit Hours 4		
Contact Hours 4		
Course Fee 10		Miscellaneous Department Fee 0
Academic Level Undergraduate		
General Education Category Mathematics		Michigan Transfer Agreement (MTA) Category Category 3: Mathematics - Applied Degrees
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals	
1. To introduce trigonometry and develop proficiency in algebraic and trigonometric computations for problem solving in technical areas.	
2. To develop additional mathematical background for more advanced courses that require mathematical competency.	
3. To develop skills in the use of a non-graphing scientific calculator and to incorporate graphing utilities whenever appropriate to illustrate concepts and to solve problems.	
Core Course Topics	
1. Measurement	
1. Define the rules for significant digits.	
2. Define the accuracy and precision of measurement.	
3. Define approximate versus exact numbers.	
4. Perform basic arithmetic operations with measurements.	
2. Exponents and Radicals	
1. State the laws of exponents.	
2. Simplify algebraic expressions using the laws of exponents.	
3. Simplify square roots and cube roots.	
3. Linear Equations, Formulas, and Variation	
1. Solve linear equations algebraically.	
2. Solve formulas for the specified variable.	
3. Solve problems involving direct variation, inverse variation, and joint variation.	
4. Right Triangle Trigonometry	
1. Determine the values of the six trigonometric functions of any angle in degrees.	
2. Solve right triangles and solve applications of the right triangle.	
5. Functions and Graphs	
1. Define relations and functions.	
2. Determine the domain and range of relations and functions.	
3. Evaluate functions.	
4. Solve equations graphically.	
5. Determine the slope of a line.	
6. Determine the equation of a line satisfying given conditions including parallel and perpendicular lines.	
7. Find the distance between two points.	
8. Find the midpoint of a line segment.	
6. Trigonometric Functions	
1. Define and draw positive and negative angles in standard position.	
2. State the definitions of the six trigonometric functions associated with an angle in standard position.	
3. State the signs of the trigonometric functions of nonquadrantal angles and the values of the trigonometric functions of quadrantal angles.	
4. Define the reference angle of any nonquadrantal angle in standard position.	
5. Determine angles, using a scientific calculator, when the value of the trigonometric function is given.	
7. Vectors	
1. Add vectors geometrically.	
2. Resolve a vector into components.	
3. Perform vector addition by components.	
4. Solve vector application problems.	
8. Factoring and Algebraic Fractions	
1. Express polynomials in completely factored form.	
2. Reduce algebraic fractions to lowest terms.	
3. Multiply, divide, add, and subtract algebraic fractions.	
4. Simplify complex fractions.	
9. Systems of Linear Equations	
1. Solve a linear system of two equations in two variables, graphically and algebraically.	
2. Solve application problems using a system of two linear equations.	
10. Quadratic Equations	
1. Solve quadratic equations by factoring (whenever possible), using the square roots (whenever possible), and using the quadratic formula.	
2. Solve applications involving quadratic equations.	
11. Complex Numbers	
1. Perform basic operations of addition, subtraction, multiplication, and division on complex numbers.	
Measurement: Define the rules for significant digits.	
Measurement: Define the accuracy and precision of measurement.	
Measurement: Define approximate versus exact numbers.	
Measurement: Perform basic arithmetic operations with measurements.	
Exponents and Radicals: State the laws of exponents.	
Exponents and Radicals: Simplify algebraic expressions using the laws of exponents.	
Exponents and Radicals: Simplify square roots and cube roots.	
Linear Equations, Formulas, and Variation: Solve linear equations algebraically.	

Linear Equations, Formulas, and Variation: Solve formulas for the specified variable.
Linear Equations, Formulas, and Variation: Solve problems involving direct variation, inverse variation, and joint variation.
Right Triangle Trigonometry: Determine the values of the six trigonometric functions of any angle in degrees.
Right Triangle Trigonometry: Solve right triangles and solve applications of the right triangle.
Functions and Graphs: Define relations and functions.
Functions and Graphs: Determine the domain and range of relations and functions.
Functions and Graphs: Evaluate functions.
Functions and Graphs: Solve equations graphically.
Functions and Graphs: Determine the slope of a line.
Functions and Graphs: Determine the equation of a line satisfying given conditions including parallel and perpendicular lines.
Functions and Graphs: Find the distance between two points.
Functions and Graphs: Find the midpoint of a line segment.
Trigonometric Functions: Define and draw positive and negative angles in standard position.
Trigonometric Functions: State the definitions of the six trigonometric functions associated with an angle in standard position.
Trigonometric Functions: State the signs of the trigonometric functions of nonquadrantal angles and the values of the trigonometric functions of quadrantal angles.
Trigonometric Functions: Define the reference angle of any nonquadrantal angle in standard position.
Trigonometric Functions: Determine angles, using a scientific calculator, when the value of the trigonometric function is given.
Vectors: Add vectors geometrically.
Vectors: Resolve a vector into components.
Vectors: Perform vector addition by components.
Vectors: Solve vector application problems.
Factoring and Algebraic Fractions: Express polynomials in completely factored form.
Factoring and Algebraic Fractions: Reduce algebraic fractions to lowest terms.
Factoring and Algebraic Fractions: Multiply, divide, add, and subtract algebraic fractions.
Factoring and Algebraic Fractions: Simplify complex fractions.
Systems of Linear Equations: Solve a linear system of two equations in two variables, graphically and algebraically.
Systems of Linear Equations: Solve application problems using a system of two linear equations.
Quadratic Equations: Solve quadratic equations by factoring (whenever possible), using the square roots (whenever possible), and using the quadratic formula.

Quadratic Equations: Solve applications involving quadratic equations.
Complex Numbers: Perform basic operations of addition, subtraction, multiplication, and division on complex numbers.

Assessment, Requirements, and Outcomes

- Assessment of Academic Achievement
- All students are required to complete a comprehensive final examination that assesses the learning of all course objectives. This final examination must be weighted in a manner so that this exam score is worth a minimum of fifteen percent (15%) of the student's final course grade. In selected semesters this final exam may be a common final exam administered to all sections of MATH-103.
 - All students will be required to complete at least two (2) proctored on-campus exams. The cumulative value of these exams must be at least forty percent (40%) of a student's final course grade.
 - For proctored in-person formal assessments (quizzes, tests, and exams), the only technology students can use is a non-graphing scientific calculator. Quizzes, tests, and exams may have non-calculator parts. Class projects and informal assessments will require students to use a free graphing application to support learning.
 - Additional assessment of student achievement may include assignments, quizzes, and exams.
 - Application problems must be included on all exams, including the final exam.
- General Course Requirements and Recommendations
- A non-graphing scientific calculator is required for formal assessments.
 - Free graphing applications may be used to support learning for informal assessments and class work.
 - Application problems must be covered in all mathematics courses. In any course outline, every section that includes application problems must be covered.

MATH104 - Mathematics for Food Service Careers

Overview

Subject Mathematics	Academic Department Mathematics	School Science, Tech, Engr & Math
Course Description Explores the mathematical skills required for various careers in the food service profession. Topics include calculator usage, computational skills, ratio and proportion, percentages, measurement, dimensional analysis, and an introduction to data analysis with problems chosen to represent those commonly encountered in the food service profession. Requires a non-graphing scientific calculator.		
Credit Hours 4		
Contact Hours 4		
Course Fee 10	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category Mathematics	Michigan Transfer Agreement (MTA) Category Category 3: Mathematics - Applied Degrees	
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

- Course Goals
- To develop the basic mathematical skills necessary for food service careers students.
 - To encourage the development of problem-solving skills.
- Core Course Topics
- Arithmetic of Whole Numbers, Fractions, Decimals, and Percents
 - Add, subtract, multiply, and divide whole numbers.
 - Find least common multiples of whole numbers.
 - Model and find equivalent fractions and mixed numbers.
 - Add, subtract, multiply, and divide fractions and mixed numbers.
 - Round decimals to a specific place value.
 - Add, subtract, multiply, and divide decimals.
 - Convert between fractions, decimals, and percents.
 - Perform arithmetic operations using the order of operations for whole numbers, fractions, and decimals.
 - Demonstrate proficiency using a non-graphing scientific calculator to perform basic operations with whole numbers, fractions, and decimals.
 - Ratio and Proportion
 - Write ratios, rates, and unit rates.
 - Set up, solve, and check proportions.
 - Solve ratio, rate, and proportion application problems.
 - Solve percent applications using proportions.
 - Solve percent increase and decrease application problems using proportions.
 - Measurement Systems
 - Convert within the U.S. Customary system.
 - Perform arithmetic operations with measurements of weight, capacity, length, and time.
 - Convert between Fahrenheit and Celsius temperature scales.
 - Convert measurements within the Metric measurement system.
 - Convert between the U.S. Customary system and the Metric system.
 - Applications to Food Service Professions
 - Calculate the most economical purchase, total cost, total hourly wages, and salaries.
 - Solve application problems related to portion size, cost per serving, number of portions, amount to order, and yield percents.

- Solve application problems such as recipe conversions, recipe yields, and baker's percentage.
 - Solve application problems such as recipe conversions, extension costs, "As Purchased" (AP) and "Edible Portion" (EP) amounts and costs, recipe yield, and labor costs.
 - Solve application problems such as menu pricing, food costs, labor costs, and percents.
 - Calculate inventory, associated food costs, and food cost percentages.
 - Prepare and answer questions related to requisitions, invoices, and purchase orders.
 - Prepare and answer questions related to production reports.
 - Calculate beverage quantities and percentages.
 - Calculate customer checks, compute tax and gratuities, determine covers, write checks, and reconcile banking statements.
 - Calculate payroll, profits, and losses.
5. Descriptive Statistical Measures
- Compute and interpret the meaning of simple descriptive statistical measures.

Arithmetic of Whole Numbers, Fractions, Decimals, and Percents: Add, subtract, multiply, and divide whole numbers.
Arithmetic of Whole Numbers, Fractions, Decimals, and Percents: Find least common multiples of whole numbers.
Arithmetic of Whole Numbers, Fractions, Decimals, and Percents: Model and find equivalent fractions and mixed numbers.
Arithmetic of Whole Numbers, Fractions, Decimals, and Percents: Add, subtract, multiply, and divide fractions and mixed numbers.
Arithmetic of Whole Numbers, Fractions, Decimals, and Percents: Round decimals to a specific place value.
Arithmetic of Whole Numbers, Fractions, Decimals, and Percents: Add, subtract, multiply, and divide decimals.
Arithmetic of Whole Numbers, Fractions, Decimals, and Percents: Convert between fractions, decimals, and percents.
Arithmetic of Whole Numbers, Fractions, Decimals, and Percents: Perform arithmetic operations using the order of operations for whole numbers, fractions, and decimals.
Arithmetic of Whole Numbers, Fractions, Decimals, and Percents: Demonstrate proficiency using a non-graphing scientific calculator to perform basic operations with whole numbers, fractions, and decimals.
Ratio and Proportion: Write ratios, rates, and unit rates.
Ratio and Proportion: Set up, solve, and check proportions.
Ratio and Proportion: Solve ratio, rate, and proportion application problems.
Ratio and Proportion: Solve percent applications using proportions.
Ratio and Proportion: Solve percent increase and decrease application problems using proportions.
Measurement Systems: Convert within the U.S. Customary system.
Measurement Systems: Perform arithmetic operations with measurements of weight, capacity, length, and time.
Measurement Systems: Convert between Fahrenheit and Celsius temperature scales.
Measurement Systems: Convert measurements within the Metric measurement system.
Measurement Systems: Convert between the U.S. Customary system and the Metric system.
Applications to Food Service Professions: Calculate the most economical purchase, total cost, total hourly wages, and salaries.
Applications to Food Service Professions: Solve application problems related to portion size, cost per serving, number of portions, amount to order, and yield percents.
Applications to Food Service Professions: Solve application problems such as recipe conversions, recipe yields, and baker's percentage.

Applications to Food Service Professions: Solve application problems such as recipe conversions, extension costs, "As Purchased" (AP) and "Edible Portion" (EP) amounts and costs, recipe yield, and labor costs.
Applications to Food Service Professions: Solve application problems such as menu pricing, food costs, labor costs, and percents.
Applications to Food Service Professions: Calculate inventory, associated food costs, and food cost percentages.
Applications to Food Service Professions: Prepare and answer questions related to requisitions, invoices, and purchase orders.
Applications to Food Service Professions: Prepare and answer questions related to production reports.
Applications to Food Service Professions: Calculate beverage quantities and percentages.
Applications to Food Service Professions: Calculate customer checks, compute tax and gratuities, determine covers, write checks, and reconcile banking statements.
Applications to Food Service Professions: Calculate payroll, profits, and losses.
Descriptive Statistical Measures: Compute and interpret the meaning of simple descriptive statistical measures.

MATH110 - Intermediate Algebra

Overview

Subject Mathematics	Academic Department Mathematics	School Science, Tech, Engr & Math
Course Description Covers solving linear, quadratic, rational, and square root equations; solving linear inequalities; an introduction to functions; graphs of linear and quadratic functions; polynomial and rational expressions; rational exponents; and radical expressions. Includes techniques of problem solving and applications. Credit cannot be earned for both MATH-1091, MATH-1092, MATH-1093, MATH-1094 and MATH-110. Requires a non-graphing scientific calculator and access to an online homework management system.		
Course Pre-requisite(s) MATH010 Algebra Skills with a grade of S OR MATH103 Technical Mathematics with a C grade or better OR a satisfactory score on the Math placement test OR eligible to take gateway MATH courses at HFC		
Credit Hours 4		
Contact Hours 4		
Course Fee 10	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category Mathematics	Michigan Transfer Agreement (MTA) Category Category 3: Mathematics - Applied Degrees	
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals - To develop in students intermediate algebraic skills necessary for success in subsequent mathematics courses and other courses requiring mathematical skills. - To develop in students the problem-solving skills needed to interpret, analyze and solve applied problems requiring intermediate-level algebraic skills.
--

Core Course Topics Solve Linear Equations and Inequalities - Solve linear equations using both the multiplication and addition properties of equality. - Solve a linear equation containing fractions, decimals, parentheses, or all of these. - Solve linear inequalities using the multiplication and addition properties of inequality. - Express the solution of a linear inequality as an inequality, on a number line, in interval notation, and in set-builder notation. Functions and Graphs - Find the slope of a line given two points on a line. - Write the equation of a line in slope-intercept form. - Find the slope of a line given its equation. - Graph a linear equation using the slope and y-intercept. - Write equations of lines using slope-intercept form and point-slope form, including parallel and perpendicular lines. - Define a relation and express the domain and range of a relation in set builder or interval notation. - Determine algebraically or graphically whether a relation is a function. - Use function notation. - Solve application problems that can be modeled by a linear function. Polynomial Functions - Add, subtract, and multiply polynomials. - Multiply binomial squares and the sum and difference of two terms. - Factor polynomials by factoring out the greatest common factor. - Factor four-term polynomials by grouping. - Factor trinomials. - Factor perfect-square trinomials and the difference of two squares. - Apply the appropriate factoring strategy to factor a polynomial. - Solve quadratic equations by factoring. - Solve application problems that can be modeled by quadratic equations. Rational Expressions and Rational Equations - Simplify rational expressions. - Determine the domain of a rational function. - Perform algebraic operations of addition, subtraction, multiplication, and division on rational expressions. - Simplify complex fractions. - Solve rational equations algebraically. - Solve rational equations for a specified variable. - Solve application problems that can be modeled by rational equations. Radicals, Rational Exponents, and Complex Numbers - Evaluate perfect roots. - Convert expressions in radical form to exponential form and vice versa. - Simplify expressions involving rational exponents. - Simplify radical expressions. - Perform algebraic operations of addition, subtraction, and multiplication on radical expressions. - Rationalize the denominator of a radical expression. - Solve radical equations algebraically. - Solve application problems that can be modeled by using Pythagorean Theorem. - Write square roots with negative radicands as imaginary numbers. - Add, subtract, multiply, and divide with complex numbers. Quadratic Functions and Equations - Solve quadratic equations using the square root property. - Solve quadratic equations using the quadratic formula.

Solve Linear Equations and Inequalities: Solve linear equations using both the multiplication and addition properties of equality.
Solve Linear Equations and Inequalities: Solve a linear equation containing fractions, decimals, parentheses, or all of these.
Solve Linear Equations and Inequalities: Solve linear inequalities using the multiplication and addition properties of inequality.
Solve Linear Equations and Inequalities: Express the solution of a linear inequality as an inequality, on a number line, in interval notation, and in set-builder notation.
Functions and Graphs: Find the slope of a line given two points on a line.
Functions and Graphs: Write the equation of a line in slope-intercept form.
Functions and Graphs: Find the slope of a line given its equation.
Functions and Graphs: Graph a linear equation using the slope and y-intercept.
Functions and Graphs: Write equations of lines using slope-intercept form and point-slope form, including parallel and perpendicular lines.
Functions and Graphs: Define a relation and express the domain and range of a relation in set builder or interval notation.

Functions and Graphs: Determine algebraically or graphically whether a relation is a function.
Functions and Graphs: Use function notation.
Functions and Graphs: Solve application problems that can be modeled by a linear function.
Polynomial Functions: Add, subtract, and multiply polynomials.
Polynomial Functions: Add, subtract, and multiply polynomials.
Polynomial Functions: Factor polynomials by factoring out the greatest common factor.
Polynomial Functions: Factor four-term polynomials by grouping.
Polynomial Functions: Factor trinomials.
Polynomial Functions: Factor perfect-square trinomials and the difference of two squares.
Polynomial Functions: Apply the appropriate factoring strategy to factor a polynomial.
Polynomial Functions: Solve quadratic equations by factoring.
Polynomial Functions: Solve application problems that can be modeled by quadratic equations.
Rational Expressions and Rational Equations: Simplify rational expressions.
Rational Expressions and Rational Equations: Determine the domain of a rational function.
Rational Expressions and Rational Equations: Perform algebraic operations of addition, subtraction, multiplication, and division on rational expressions.
Rational Expressions and Rational Equations: Simplify complex fractions.
Rational Expressions and Rational Equations: Solve rational equations algebraically.
Rational Expressions and Rational Equations: Solve rational equations for a specified variable.
Rational Expressions and Rational Equations: Solve application problems that can be modeled by rational equations.
Radicals, Rational Exponents, and Complex Numbers: Evaluate perfect roots.
Radicals, Rational Exponents, and Complex Numbers: Convert expressions in radical form to exponential form and vice versa.
Radicals, Rational Exponents, and Complex Numbers: Simplify expressions involving rational exponents.
Radicals, Rational Exponents, and Complex Numbers: Simplify radical expressions.
Radicals, Rational Exponents, and Complex Numbers: Perform algebraic operations of addition, subtraction, and multiplication on radical expressions.
Radicals, Rational Exponents, and Complex Numbers: Rationalize the denominator of a radical expression.
Radicals, Rational Exponents, and Complex Numbers: Solve radical equations algebraically.
Radicals, Rational Exponents, and Complex Numbers: Solve application problems that can be modeled by using Pythagorean Theorem.

Radicals, Rational Exponents, and Complex Numbers: Write square roots with negative radicands as imaginary numbers.
Radicals, Rational Exponents, and Complex Numbers: Add, subtract, multiply, and divide with complex numbers.
Quadratic Functions and Equations: Solve quadratic equations using the square root property.
Quadratic Functions and Equations: Solve quadratic equations using the quadratic formula.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement - All students will be required to complete a comprehensive final examination that assesses the learning of all course objectives. - This final exam must be weighted in a manner so that this exam score is worth a minimum of fifteen percent (15%) of the final course grade. In selected semesters this final exam may be a common final exam administered to all sections of MATH110 Intermediate Algebra. - All students will be required to complete online homework. This online homework must be weighted in such a manner so that it is worth between six percent (6%) and twelve percent (12%) of the final course grade. - Additional assessment of student achievement may include assignments, quizzes, and exams. All major exams should be designed in such a manner so that there is some portion in which graphing calculators are NOT allowed. Students may only use a non-graphing scientific calculator in this course.	General Course Requirements and Recommendations - Students must bring a scientific calculator to all class sessions. - Access to an online homework management system is also required. - Application problems must be covered in all mathematics courses. Every section in any course outline that includes application problems must be covered. Application problems must not only be included on chapter exams but also on the final exam.

MATH112 - Trigonometry

Overview

Subject Mathematics	Academic Department Mathematics	School Science, Tech, Engr & Math
Course Description For students in a technical or science program that requires knowledge of trigonometry. Topics include angles, right triangle trigonometry, circular functions and their graphs, trigonometric identities and equations, the Laws of Sines and Cosines, vectors, and a variety of physical applications. Course does not satisfy the MATH-175 or MATH-180 prerequisite. Requires a non-graphing scientific calculator for formal assessments and access to an online homework management system.		
Course Pre-requisite(s) MATH103 Technical Mathematics OR MATH-094 OR MATH110 Intermediate Algebra with a C grade or better OR a satisfactory score on the Math placement test.		
Credit Hours 3		
Contact Hours 3		
Course Fee 10	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category Mathematics	Michigan Transfer Agreement (MTA) Category Category 3: Mathematics - Applied Degrees	
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals - To develop an understanding of a) trigonometry of angles, b) trigonometry of triangles, and c) trigonometry of functions. - To develop skills in a) solving triangles, b) proving trigonometric identities, and c) solving trigonometric equations. - To develop familiarity with mathematical and physical applications of trigonometry. - To develop skills in the use of non-graphing scientific calculators with respect to trigonometric values.	Core Course Topics - Angles - Find the complement and the supplement of an angle. - Calculate and convert angle degrees, minutes, and seconds. - Find measures of co-terminal angles. - Use geometric properties which apply to angles. - Solve applied problems. - Basic Trigonometric Functions - Define the six trigonometric functions. - Define and use reciprocal identities. - Define and use Pythagorean identities. - Define and use quotient identities.
--	--

5. Identify signs, domains, and ranges for trigonometric functions.
3. Right Triangle Trigonometry
1. Define the six trigonometric functions based on right triangle trigonometry.
2. Write trigonometric functions in terms of cofunctions.
3. Find reference angles and use them to find exact trigonometric function values.
4. Find trigonometric function values using a non-graphing scientific calculator.
5. Solve applied problems using right triangles.
4. Unit Circle
1. Convert between degree and radian angle measures.
2. Find arc length and area of a sector for circles.
3. Draw and use the unit circle to find exact trigonometric function values.
4. Find linear and angular speed.
5. Graphs of the Trigonometric Functions
1. Graph sine and cosine functions.
2. Graph vertical and horizontal translations, expansions, and contractions for the sine and cosine functions.
3. Graph tangent and cotangent functions.
4. Graph secant and cosecant functions.
6. Trigonometric Identities
1. Verify trigonometric identities using fundamental identities.
2. Verify trigonometric identities using sum and difference identities.
3. Verify trigonometric identities using double- and half-angle identities.
7. Inverse Trigonometric Functions
a. Define inverse trigonometric functions for sine, cosine, and tangent.
b. Find inverse trigonometric function values for sine, cosine, and tangent.
c. Solve applied problems.
8. Trigonometric Equations
1. Solve trigonometric equations using algebraic and trigonometric methods.
2. Solve applied problems.
9. Oblique Triangle Trigonometry
1. Use the Law of Sines.
2. Use the Law of Cosines.
3. Solve applied problems.
10. Vectors
1. Interpret vectors algebraically.
2. Perform vector operations.
3. Solve applied problems.
Angles: Find the complement and the supplement of an angle.
Angles: Calculate and convert angle degrees, minutes, and seconds.
Angles: Find measures of co-terminal angles.
Angles: Use geometric properties which apply to angles.
Angles: Solve applied problems.
Basic Trigonometric Functions: Define the six trigonometric functions.
Basic Trigonometric Functions: Define and use reciprocal identities.
Basic Trigonometric Functions: Define and use Pythagorean identities.
Basic Trigonometric Functions: Define and use quotient identities.
Basic Trigonometric Functions: Identify signs, domains, and ranges for trigonometric functions.
Right Triangle Trigonometry: Define the six trigonometric functions based on right triangle trigonometry.
Right Triangle Trigonometry: Write trigonometric functions in terms of cofunctions.
Right Triangle Trigonometry: Find reference angles and use them to find exact trigonometric function values.
Right Triangle Trigonometry: Find trigonometric function values using a non-graphing scientific calculator.
Right Triangle Trigonometry: Solve applied problems using right triangles.
Unit Circle: Convert between degree and radian angle measures.

Unit Circle: Find arc length and area of a sector for circles.
Unit Circle: Draw and use the unit circle to find exact trigonometric function values.
Unit Circle: Find linear and angular speed.
Graphs of the Trigonometric Functions: Graph sine and cosine functions.
Graphs of the Trigonometric Functions: Graph vertical and horizontal translations, expansions, and contractions for the sine and cosine functions.
Graphs of the Trigonometric Functions: Graph tangent and cotangent functions.
Graphs of the Trigonometric Functions: Graph secant and cosecant functions.
Trigonometric Identities: Verify trigonometric identities using fundamental identities.
Trigonometric Identities: Verify trigonometric identities using sum and difference identities.
Trigonometric Identities: Verify trigonometric identities using double- and half-angle identities.
Inverse Trigonometric Functions: Define inverse trigonometric functions for sine, cosine, and tangent.
Inverse Trigonometric Functions: Find inverse trigonometric function values for sine, cosine, and tangent.
Inverse Trigonometric Functions: Solve applied problems.
Trigonometric Equations: Solve trigonometric equations using algebraic and trigonometric methods.
Trigonometric Equations: Solve applied problems.
Oblique Triangle Trigonometry: Use the Law of Sines.
Oblique Triangle Trigonometry: Use the Law of Cosines.
Oblique Triangle Trigonometry: Solve applied problems.
Vectors: Interpret vectors algebraically.
Vectors: Perform vector operations.
Vectors: Solve applied problems.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
- All students are required to complete a comprehensive final examination that assesses the learning of all course objectives. This final examination must be weighted in a manner so that this exam score is worth a minimum of fifteen percent (15%) of the student's final course grade. In selected semesters this final exam may be a common final exam administered to all sections of MATH112 Trigonometry. - All students will be required to complete at least two (2) proctored on-campus exams. The cumulative value of these exams must be at least forty percent (40%) of a student's final course grade. - For proctored in-person formal assessments (quizzes, tests, and exams) the only technology students can use is a non-graphing scientific calculator. Quizzes, tests, and exams may have non-calculator parts. Class projects and informal assessments will require students to use a free graphing application to support learning. - Additional assessment of student achievement may include assignments, quizzes, and exams. - Application problems must be included on all exams, including the final exam. - All students will be required to complete online homework. This online homework must be weighted in such a manner so that it is worth between six percent (6%) and twelve percent (12%) of the final course grade.	
General Course Requirements and Recommendations	
- A non-graphing scientific calculator is required for formal assessments. - Free graphing applications may be used to support learning for informal assessments and class work. - Access to an online homework management system is required. - Application problems must be covered in all mathematics courses. In any course outline, every section that includes application problems must be covered.

MATH115 - College Algebra

Overview

Subject Mathematics	Academic Department Mathematics	School Science, Tech, Engr & Math
Course Description Covers analytic geometry, functions and their graphs, algebraic and graphical solutions of equations and inequalities, graphs and zeros of polynomial functions, conic sections, linear and polynomial modeling, systems of equations and inequalities, sequences and series, and the Binomial Theorem. Techniques of problem-solving and applications are included throughout the course requiring the frequent usage of graphing utilities. Requires a non-graphing scientific calculator for some formal assessments and access to an online homework system.		
Course Pre-requisite(s) MATH-109 OR MATH-1094 OR <u>MATH110 Intermediate Algebra</u> with a grade of C or better OR a satisfactory score on the placement test.		
Credit Hours 5		
Contact Hours 5		
Course Fee 10	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category Mathematics	Michigan Transfer Agreement (MTA) Category Category 3: Mathematics - Transfer Degrees - College Algebra Track, Category 3: Mathematics - Applied Degrees	
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Other Exam	
Credit for Prior College Level Learning (CPCLL) Details Other Exam Details 50, CLEP College Algebra exam, taken at any certified Testing Center, such as HFC's Workforce & Professional Development's Testing Center (313) 317-6600.		
Other Details A student may receive credit for Math-115 by earning a minimum score of 50 on the CLEP College Algebra exam.		

Goals, Topics, and Objectives

Course Goals 1. To develop the advanced algebraic skills needed in college-level science and mathematics courses. 2. To provide an introduction to functions. 3. To develop familiarity with some mathematical and physical applications of advanced algebra and analytic geometry. 4. To incorporate graphing utility whenever appropriate to illustrate concepts and solve problems. 5. To develop in students the problem-solving skills needed to interpret, analyze, and solve applied problems requiring college-level algebraic skills.
Core Course Topics 1. Solution of Equations and Inequalities 1. Solve linear equations and linear inequalities in one variable algebraically and graphically. 2. Solve quadratic equations and inequalities algebraically and graphically. 3. Solve rational equations and inequalities algebraically and graphically. 4. Solve radical equations algebraically and graphically. 5. Solve absolute value equations and inequalities algebraically and graphically. 6. Solve polynomial equations and inequalities algebraically and graphically. 2. Characteristics of Functions and their Graphs 1. Determine if an equation, graph, or table of values represents a function, and state the domain and range of the function. 2. Determine graphically and algebraically whether a function is even, odd, or neither. 3. Determine graphically if a function is increasing, decreasing, or constant. 4. Determine the location of maxima and minima using a graphing utility. 3. Basic functions and their transformations. 1. Graph identity, constant, square, cubic, square root, cube root, absolute value, greatest integer, reciprocal functions of the form 1/x and 1/(x squared), and piecewise-defined functions by hand, and check using the graphing utility. 2. Analyze and graph functions in terms of translations, reflections, and expansions or contractions. 3. Determine the graph of a function obtained from a series of transformations. 4. Operations on Functions 1. Find the sum, difference, product, quotient, and composition of two functions and their domains given their equations or graphs. 2. Evaluate composite functions. 3. Find and simplify the difference quotient of a function. 5. Linear Functions and their Graphs 1. Graph linear functions by hand, and check using a graphing utility. 2. Find the intercepts of a linear function algebraically and graphically. 3. Determine the slope of a line joining two points in the plane, and determine the slope of a line given its equation. 4. Produce a graph of a linear function by using slope and a point on a line. 5. Write equations of lines satisfying specified sets of conditions. 6. Write equations of parallel and perpendicular lines satisfying specified sets of conditions. 7. Estimate the equation of the line of best fit for a set of bivariate data algebraically and by using a regression program in a graphing utility. 8. Solve applied problems involving the line of best fit for a set of bivariate data. 6. Quadratic Functions and their Graphs 1. Graph quadratic functions by hand and check using a graphing utility. 2. Find the intercepts of quadratic functions algebraically and graphically. 3. Identify the vertex and axis of symmetry of a quadratic function both algebraically and by using a graphing utility. 4. Determine the maximum or minimum value of a quadratic function both algebraically and by using a graphing utility. 5. Solve applied maximum and minimum problems both algebraically and by using a graphing utility. 6. Determine a quadratic model for a given set of data using a graphing utility.

7. Quadratic Equations and Inequalities 1. Solve quadratic equations algebraically using factoring, the square root property, completing the square, and the quadratic formula, and verify solutions graphically. 2. Perform basic arithmetic operations on complex numbers, and solve quadratic equations with complex solutions. 3. Determine the number and type of solutions to a quadratic equation using the discriminant. 4. Solve equations that are quadratic in form algebraically, and verify solutions using a graphing utility. 5. Solve inequalities involving quadratic functions algebraically, and verify solutions using a graphing utility.
8. Polynomial Functions and their Graphs 1. Convert the standard form of a quadratic function into vertex form. 2. Identify the vertex and axis of symmetry of a quadratic function both algebraically and graphically (sketch by hand and by using a graphing utility). 3. Determine algebraically the intercepts of a polynomial function, and verify graphically. 4. Determine a polynomial function's intercepts, extreme values, turning points, and intervals of increase and decrease by using a graphing utility. 5. Determine the end behavior of a polynomial function using the degree of the polynomial and its leading coefficient. 6. Construct a polynomial function with specified zeros.
9. Polynomial Equations and Inequalities 1. Test factors for polynomial functions by using the Remainder and Factor Theorems, and factor polynomial functions to find the real zeros. 2. Solve polynomial equations by using the Rational Zeros Theorem and synthetic division in conjunction with a graphing utility. 3. Find the complex solutions of polynomial equations. 4. Solve polynomial inequalities algebraically and graphically.
10. Analytic Geometry and Conic Sections 1. Find the distance between two points in the coordinate plane by means of the distance formula, and find the midpoint of the segment joining the points. 2. Complete the square to write equations of circles and parabolas, vertical and horizontal, in standard form. 3. Determine the center and radius from the equation of the circle, and use these to sketch its graph by hand. 4. Write the equation of a circle satisfying a set of specified conditions. 5. Determine the vertex from the equation of a parabola, and use transformations to sketch its graph. 6. Write the equation of a parabola given its vertex and another point.
11. Systems of Equations and Inequalities 1. Solve 2 x 2 and 3 x 3 systems of linear equations by the methods of substitution and elimination. 2. Classify systems of equations as inconsistent, consistent, or dependent, and represent solutions of dependent systems. 3. Solve applied problems by using a system of linear equations. 4. Solve linear and nonlinear two-variable systems of inequalities graphically. 5. Solve systems of nonlinear equations graphically and algebraically.
12. Sequences and Series 1. Write terms of a sequence given its general term. 2. Write the terms of a sequence using a recursive definition. 3. Determine if a sequence is arithmetic, geometric, or neither. (Optional) 4. Given an arithmetic or geometric sequence of terms, write a general formula for the nth term of the sequence. (Optional) 5. Expand a sum of terms represented by summation notation, and express a finite sum in terms summation notation. (Optional) 6. Find the sum of a finite number of terms of a sequence using properties of sequences, and, in particular, find finite sums of arithmetic and geometric sequences. (Optional) 7. Find the sum of a geometric series if it exists. (Optional) 8. Expand powers of binomials.

Solution of Equations and Inequalities: Solve linear equations and linear inequalities in one variable algebraically and graphically.
Solution of Equations and Inequalities: Solve quadratic equations and inequalities algebraically and graphically.
Solution of Equations and Inequalities: Solve rational equations and inequalities algebraically and graphically.
Solution of Equations and Inequalities: Solve radical equations algebraically and graphically.
Solution of Equations and Inequalities: Solve absolute value equations and inequalities algebraically and graphically.
Solution of Equations and Inequalities: Solve polynomial equations and inequalities algebraically and graphically.
Characteristics of Functions and Their Graphs: Determine if an equation, graph, or table of values represents a function, and state the domain and range of the function.
Characteristics of Functions and Their Graphs: Determine graphically and algebraically whether a function is even, odd, or neither.
Characteristics of Functions and Their Graphs: Determine graphically if a function is increasing, decreasing, or constant.
Characteristics of Functions and Their Graphs: Determine the location of maxima and minima using a graphing utility.

Basic Functions and Their Transformations: Graph identity, constant, square, cubic, square root, cube root, absolute value, greatest integer, reciprocal functions of the form $1/x$ and $1/(x^2)$, and piecewise-defined functions by hand, and check using the graphing utility.	Polynomial Functions and Their Graphs: Identify the vertex and axis of symmetry of a quadratic function both algebraically and graphically (sketch by hand and by using a graphing utility).
Basic Functions and Their Transformations: Analyze and graph functions in terms of translations, reflections, and expansions or contractions.	Polynomial Functions and Their Graphs: Determine algebraically the intercepts of a polynomial function, and verify graphically.
Basic Functions and Their Transformations: Determine the graph of a function obtained from a series of transformations.	Polynomial Functions and Their Graphs: Determine a polynomial function's intercepts, extreme values, turning points, and intervals of increase and decrease by using a graphing utility.
Operations on Functions: Find the sum, difference, product, quotient, and composition of two functions and their domains given their equations or graphs.	Polynomial Functions and Their Graphs: Determine the end behavior of a polynomial function using the degree of the polynomial and its leading coefficient.
Operations on Functions: Evaluate composite functions.	Polynomial Functions and Their Graphs: Construct a polynomial function with specified zeros.
Operations on Functions: Find and simplify the difference quotient of a function.	Polynomial Equations and Inequalities: Test factors for polynomial functions by using the Remainder and Factor Theorems, and factor polynomial functions to find the real zeros.
Linear Functions and Their Graphs: Determine the slope of a line joining two points in the plane, and determine the slope of a line given its equation.	Polynomial Equations and Inequalities: Solve polynomial equations by using the Rational Zeros Theorem and synthetic division in conjunction with a graphing utility.
Linear Functions and Their Graphs: Produce a graph of a linear function by using slope and a point on a line.	Polynomial Equations and Inequalities: Find the complex solutions of polynomial equations.
Linear Functions and Their Graphs: Write equations of lines satisfying specified sets of conditions.	Polynomial Equations and Inequalities: Solve polynomial inequalities algebraically and graphically.
Linear Functions and Their Graphs: Write equations of parallel and perpendicular lines satisfying specified sets of conditions.	Analytic Geometry and Conic Sections: Find the distance between two points in the coordinate plane by means of the distance formula, and find the midpoint of the segment joining the points.
Linear Functions and Their Graphs: Estimate the equation of the line of best fit for a set of bivariate data algebraically and by using a regression program in a graphing utility.	Analytic Geometry and Conic Sections: Complete the square to write equations of circles and parabolas, vertical and horizontal, in standard form.
Linear Functions and Their Graphs: Solve applied problems involving the line of best fit for a set of bivariate data.	Analytic Geometry and Conic Sections: Determine the center and radius from the equation of the circle, and use these to sketch its graph by hand.
Quadratic Functions and Their Graphs: Graph quadratic functions by hand and check using a graphing utility.	Analytic Geometry and Conic Sections: Write the equation of a circle satisfying a set of specified conditions.
Quadratic Functions and Their Graphs: Find the intercepts of quadratic functions algebraically and graphically.	Analytic Geometry and Conic Sections: Determine the vertex from the equation of a parabola, and use transformations to sketch its graph.
Quadratic Functions and Their Graphs: Identify the vertex and axis of symmetry of a quadratic function both algebraically and by using a graphing utility.	Analytic Geometry and Conic Sections: Write the equation of a parabola given its vertex and another point.
Quadratic Functions and Their Graphs: Determine the maximum or minimum value of a quadratic function both algebraically and by using a graphing utility.	Systems of Equations and Inequalities: Solve 2×2 and 3×3 systems of linear equations by the methods of substitution and elimination.
Quadratic Functions and Their Graphs: Solve applied maximum and minimum problems both algebraically and by using a graphing utility.	Systems of Equations and Inequalities: Classify systems of equations as inconsistent, consistent, or dependent, and represent solutions of dependent systems.
Quadratic Functions and Their Graphs: Determine a quadratic model for a given set of data using a graphing utility.	Systems of Equations and Inequalities: Solve applied problems by using a system of linear equations.
Quadratic Equations and Inequalities: Solve quadratic equations algebraically using factoring, the square root property, completing the square, and the quadratic formula, and verify solutions graphically.	Systems of Equations and Inequalities: Solve linear and nonlinear two-variable systems of inequalities graphically.
Quadratic Equations and Inequalities: Perform basic arithmetic operations on complex numbers, and solve quadratic equations with complex solutions.	Systems of Equations and Inequalities: Solve systems of nonlinear equations graphically and algebraically.
Quadratic Equations and Inequalities: Determine the number and type of solutions to a quadratic equation using the discriminant.	Sequences and Series: Write terms of a sequence given its general term.
Quadratic Equations and Inequalities: Solve equations that are quadratic in form algebraically, and verify solutions using a graphing utility.	Sequences and Series: Write the terms of a sequence using a recursive definition.
Quadratic Equations and Inequalities: Solve inequalities involving quadratic functions algebraically, and verify solutions using a graphing utility.	Sequences and Series: Determine if a sequence is arithmetic, geometric, or neither. (Optional)
Polynomial Functions and Their Graphs: Convert the standard form of a quadratic function into vertex form.	Sequences and Series: Given an arithmetic or geometric sequence of terms, write a general formula for the n th term of the sequence. (Optional)

Sequences and Series: Expand a sum of terms represented by summation notation, and express a finite sum in terms summation notation. (Optional)
Sequences and Series: Find the sum of a finite number of terms of a sequence using properties of sequences, and, in particular, find finite sums of arithmetic and geometric sequences. (Optional)
Sequences and Series: Find the sum of a geometric series if it exists. (Optional)
Sequences and Series: Expand powers of binomials.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

- All students will be required to complete a comprehensive final examination that assesses the learning of all course objectives. This final exam must be weighted in a manner so that this exam score is worth a minimum of fifteen percent (15%) of the final course grade. In selected semesters this final exam may be a common final exam administered to all sections of [MATH115 College Algebra](#).
- All students will be required to complete at least two proctored on-campus exams. The cumulative value of those exams must be at least 40% of a student's final grade.
- All students will be required to complete online homework. This online homework must be weighted in such a manner so that it is worth between six percent (6%) and twelve percent (12%) of the final course grade.
- Additional assessment of student achievement may include assignments, quizzes, and exams.
- For proctored in-person formal assessments (quizzes, tests, and exams) the only technology students can use is a non-graphing scientific calculator. Quizzes, tests, and exams may have non-calculator parts. Class projects and informal assessments will require students to use a free graphing application to support learning.
- Application problems must not only be included on chapter exams but also on the final exam.

General Course Requirements and Recommendations

- A non-graphing scientific calculator is required for formal assessments.
- Free graphing applications may be used to support learning for informal assessments and class work.
- Access to an online homework management system is also required.
- Application problems must be covered in all mathematics courses. Every section in any course outline that includes application problems must be covered.

MATH122 - Mathematics for Elementary Teachers I

Overview

Subject Mathematics	Academic Department Mathematics	School Science, Tech, Engr & Math
Course Description For students who are involved in a curriculum for elementary teachers. Includes problem solving, set theory, number theory, numeration systems, whole numbers, and fractions. Addresses two aspects of teaching children mathematics - content and pedagogy - focused on Michigan Department of Education Standards for the Preparation of Teachers of Lower Elementary (Pre-K - 3) and Upper Elementary (Grades 3 - 6). Also addresses concept development, algorithms, children's mathematical work, and communication skills--both oral and written--important for teaching children.		
Course Pre-requisite(s) <u>MATH110 Intermediate Algebra</u> with a C grade or better OR a satisfactory Enrollment in <u>ENG131 Introduction College Writing</u> or <u>ENG131</u> score on the placement test		Course Co-requisite(s) Enrollment in <u>ENG131 Introduction College Writing</u> or <u>ENG131 Introduction College Writing</u> with a C grade or better
Credit Hours 4		
Contact Hours 5		
Course Fee 10	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category Mathematics	Michigan Transfer Agreement (MTA) Category Category 3: Mathematics - Transfer Degrees - Quantitative Literacy Track, Category 3: Mathematics - Applied Degrees	
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals

- To strengthen mathematical problem-solving skills pertaining to curricular topics related to the preparation of future elementary school teachers.
- To strengthen communication skills, both written and oral, of mathematical ideas.
- To strengthen mathematical competence in fundamental set theory and numeration systems that undergird
 - Whole-number concepts and operations and
 - Number theory fundamental to fraction operations.
- To develop pedagogical skills consistent with MDE Core Teaching Practices that are used for teaching mathematics to children.

Core Course Topics

- Michigan Department of Education Core Practices
 - Demonstrate knowledge of leading a group discussion.
 - Demonstrate knowledge of explaining and modeling content, practices and strategies.
 - Demonstrate knowledge of eliciting and interpreting individual students' thinking.
 - Demonstrate knowledge of implementing norms and routines for classroom discourse and work.
- Problem Solving (MDE Standards: B-K-M.9)
 - Solve word problems using a variety of strategies.

- Solve word problems employing Polya's four-step process.
- Numeration Systems (MDE B-K; M. 13, M.15. Pre-K - 3: M.9, M.10, M.11, M.12. Grades 3-6: M.5, M.6)
 - Identify the characteristics of tally and place-value numeration systems.
 - Give examples of tally and place-value numeration systems.
 - Represent Base 5 numerals using a variety of manipulatives.
 - Convert between Base 5 and Base 10 numeration systems.
 - Add, subtract and multiply in Base 5 numeration system.
 - Compose and decompose Base 10 numbers in a variety of ways.
 - Use a variety of manipulatives to represent Base 10 numbers.
 - State benefits and limitations of a variety of manipulatives.
- Set Theory
 - Define: set, subset, proper subset, null/empty set, element, universal set, complement of a set.
 - Demonstrate knowledge of element and subset relationships.
 - Perform operations on sets (union, intersection, complement).
 - Demonstrate knowledge of properties of set operations (commutativity, associativity, distributivity, identity).
 - Use Venn Diagrams to solve problems.
- Whole Numbers and Their Operations (MDE B-K; M.13, M.14, M.15. MDE Pre-K-3. MDE Grades 3-6: M.5, M. 6, M.7, M.8)
 - Use ordinal, cardinal, and nominal models to demonstrate whole numbers.
 - Compare whole numbers and develop the meaning of <, > and = with whole numbers.
 - Model and explain using manipulatives whole numbers operations.
 - Demonstrate knowledge and understanding of the standard algorithms for whole number operations.
 - Justify alternative algorithms for whole number operations.
 - Make connections among whole number operation algorithms.
 - Demonstrate proficiency in using estimation techniques for whole number operations.
 - Demonstrate proficiency in mental mathematics for whole number operations.
 - Demonstrate knowledge of the properties of whole number operations.
 - Solve problems involving whole numbers.
 - Respond to observations of children's mathematical work.
 - Develop sets of problems with varying degrees of difficulty
- Algebraic Reasoning (MDE B-K: M.10, M.11, M.12)
 - Demonstrate an understanding of the concept of variable and apply this knowledge to problem solving.
 - Demonstrate an understanding of equation solving and apply this knowledge to problem solving.
 - Apply knowledge of functions represented in a variety of forms.
 - Solve problems requiring equations in two variables.
- Number Theory
 - Define: the unit, prime number, composite number, even number, odd number, factor and multiple.
 - Demonstrate an understanding of greatest common factor (GCF) using a variety of techniques.
 - Demonstrate an understanding of least common multiple (LCM) using a variety of techniques.
 - Solve problems involving the concepts of GCF and LCM.
- Fractions (MDE: Pre-K-3: M.13, M.14, M.15, M.16. Grades 3 - 6: M.9, M.10, M.11, M.12)
 - Model fractions using a variety of manipulatives and hand-drawn methods.
 - Develop meaning of fraction using a variety of mathematical concepts.
 - Define fraction.
 - Compare fractions and develop the meaning of <, >, and = with fractions.
 - Model and explain fraction operations using manipulatives.
 - Demonstrate knowledge and understanding of standard algorithms for fraction operations.
 - Demonstrate proficiency in using estimation techniques for fraction operations.
 - Demonstrate proficiency in mental mathematics for fraction operations.
 - Demonstrate knowledge of the properties of fraction operations.
 - Solve problems involving fractions.
 - Observe and respond to children's mathematical work.
 - Develop sets of problems with varying degrees of difficulty.

Michigan Department of Education Core Practices: Demonstrate knowledge of leading a group discussion.
Michigan Department of Education Core Practices: Demonstrate knowledge of explaining and modeling content, practices and strategies.
Michigan Department of Education Core Practices: Demonstrate knowledge of eliciting and interpreting individual students' thinking.
Michigan Department of Education Core Practices: Demonstrate knowledge of implementing norms and routines for classroom discourse and work.
Problem Solving: Solve word problems using a variety of strategies.
Problem Solving: Solve word problems employing Polya's four-step process.
Numeration Systems: Identify the characteristics of tally and place-value numeration systems.
Numeration Systems: Give examples of tally and place-value numeration systems.

Numeration Systems: Represent Base 5 numerals using a variety of manipulatives.
Numeration Systems: Convert between Base 5 and Base 10 numeration systems.
Numeration Systems: Add, subtract and multiply in Base 5 numeration system.
Numeration Systems: Compose and decompose Base 10 numbers in a variety of ways.
Numeration Systems: Use a variety of manipulatives to represent Base 10 numbers.
Numeration Systems: State benefits and limitations of a variety of manipulatives.
Set Theory: Define: set, subset, proper subset, null/empty set, element, universal set, complement of a set.
Set Theory: Demonstrate knowledge of element and subset relationships.
Set Theory: Perform operations on sets (union, intersection, complement).
Set Theory: Demonstrate knowledge of properties of set operations (commutativity, associativity, distributivity, identity).
Set Theory: Use Venn Diagrams to solve problems.
Whole Numbers and Their Operations: Use ordinal, cardinal, and nominal models to demonstrate whole numbers.
Whole Numbers and Their Operations: Compare whole numbers and develop the meaning of <, > and = with whole numbers.
Whole Numbers and Their Operations: Model and explain using manipulatives whole numbers operations.
Whole Numbers and Their Operations: Demonstrate knowledge and understanding of the standard algorithms for whole number operations.
Whole Numbers and Their Operations: Justify alternative algorithms for whole number operations.
Whole Numbers and Their Operations: Make connections among whole number operation algorithms.
Whole Numbers and Their Operations: Demonstrate proficiency in using estimation techniques for whole number operations.
Whole Numbers and Their Operations: Demonstrate proficiency in mental mathematics for whole number operations.
Whole Numbers and Their Operations: Demonstrate knowledge of the properties of whole number operations.
Whole Numbers and Their Operations: Solve problems involving whole numbers.
Whole Numbers and Their Operations: Respond to observations of children's mathematical work.
Whole Numbers and Their Operations: Develop sets of problems with varying degrees of difficulty.
Algebraic Reasoning: Demonstrate an understanding of the concept of variable and apply this knowledge to problem solving.
Algebraic Reasoning: Demonstrate an understanding of equation solving and apply this knowledge to problem solving.
Algebraic Reasoning: Apply knowledge of functions represented in a variety of forms.

Algebraic Reasoning: Solve problems requiring equations in two variables.
Number Theory: Define: the unit, prime number, composite number, even number, odd number, factor and multiple.
Number Theory: Demonstrate an understanding of greatest common factor (GCF) using a variety of techniques.
Number Theory: Demonstrate an understanding of least common multiple (LCM) using a variety of techniques.
Number Theory: Solve problems involving the concepts of GCF and LCM.
Fractions: Model fractions using a variety of manipulatives and hand-drawn methods.
Fractions: Develop meaning of fraction using a variety of mathematical concepts.
Fractions: Define fraction.
Fractions: Compare fractions and develop the meaning of <, >, and = with fractions.
Fractions: Model and explain fraction operations using manipulatives.
Fractions: Demonstrate knowledge and understanding of standard algorithms for fraction operations.
Fractions: Demonstrate proficiency in using estimation techniques for fraction operations.
Fractions: Demonstrate proficiency in mental mathematics for fraction operations.
Fractions: Demonstrate knowledge of the properties of fraction operations.
Fractions: Solve problems involving fractions.
Fractions: Observe and respond to children's mathematical work.
Fractions: Develop sets of problems with varying degrees of difficulty.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
- Pre-Education students are required to create an e-portfolio as part of their academic work at HFC. Instructors must include a minimum of three e-portfolio assignments as part of course work. These assignments will be stored in each student's e-portfolio. - All students will be required to complete online homework. This online homework must be weighted in such a manner so that it is worth between six percent (6%) and twelve percent (12%) of the final course grade. - All students will be required to complete an arithmetic quiz (with no calculator) that is worth five percent (5%) of the final course grade. - All students will be required to complete a comprehensive final examination that assesses the learning of all course objectives. This exam must be weighted in a manner so that this exam score is worth a minimum of fifteen percent (15%) of the final course grade. In selected semesters this exam may be a common exam administered to all sections of MATH122 Math for Elem Teachers I. - All students will be required to complete journal assignments. - Additional assessment of student achievement may include assignments, quizzes, and exams. - Application problems must not only be included on chapter exams but also on the final exam.	
General Course Requirements and Recommendations	
- Application problems must be covered in all mathematics courses. Every section in any course outline that includes application problems must be covered. - No calculator may be used in this course.

MATH131 - Mathematics for the Modern World

Overview

Subject	Academic Department	School
Mathematics	Mathematics	Science, Tech, Engr & Math
Course Description		
For students pursuing a liberal arts curriculum or a program without a specified mathematics requirement. Topics include linear and exponential growth; statistics; personal finance; and geometry, including scale and symmetry. Emphasizes techniques of problem-solving and application of modern mathematics to understanding quantitative information in the everyday world.		

Course Pre-requisite(s)
([MATH010 Algebra Skills](#) OR [MATH031 Quantitative Reasoning Skills](#) with a grade of S, [MATH100 Basic Tech Mathematics](#) or [MATH101 Math for Health Career](#) with a B- grade or better, [MATH103 Technical Mathematics](#) with a C grade or better, a satisfactory score on the Math placement test, OR eligible to take gateway MATH courses at HFC) AND Eligible to take ENG courses at HFC

Credit for Prior College Level Learning (CPCLL) Details
Other Exam Details
50, CLEP College Mathematics exam, taken at any certified Testing Center, such as HFC's Workforce & Professional Development's Testing Center (313) 317-6600.

Other Details
A student may receive credit for Math-131 by earning a minimum score of 50 on the CLEP College Mathematics exam.

Goals, Topics, and Objectives

- Course Goals
- To generate an appreciation of the quantitative tools that help to present and explain issues arising in the media and students' daily lives.
 - To heighten communication skills, both written and oral, of mathematical ideas so that students can express quantitative evidence in support of an argument or purpose of a work.
 - To increase the ability to explain information presented in mathematical forms such as equations, graphs, diagrams, tables, and paragraphs and to convert relevant information between the forms.
 - To strengthen the ability to make judgments and draw appropriate conclusions based on the quantitative analysis of data, while recognizing the limits of this analysis.
 - To enhance mathematical competence in performing appropriate calculations and communicating results in the specific areas of modeling, personal finance, basic statistics, and geometry.

- Core Course Topics
- Number Sense
 - Solve problems involving rates and dimensional analysis
 - Write numbers in scientific notation
 - Solve application problems involving percentages
 - Financial Literacy
 - Solve application problems involving interest, annuities, and loans
 - Solve problems involving tax
 - Probability
 - Count the possible outcomes for events
 - Calculate probabilities
 - Find expected values
 - Distinguish between independent and dependent events
 - Statistics
 - Find descriptive statistics
 - Display data
 - Analyze statistical studies and sampling methods
 - Solve problems involving the normal distribution
 - Geometry
 - Solve problems involving perimeter, area, surface area, and volume.
 - Solve problems involving similar figures
 - Solve problems involving right triangles
 - Voting Methods
 - Determine the results of a vote using voting rules
 - Determine how to allocate resources or goods using a given apportionment

Number Sense: Solve problems involving rates and dimensional analysis.
Number Sense: Write numbers in scientific notation.
Number Sense: Solve application problems involving percentages.
Financial Literacy: Solve application problems involving interest, annuities, and loans.
Financial Literacy: Solve problems involving tax.
Probability: Count the possible outcomes for events.
Probability: Calculate probabilities.
Probability: Find expected values.
Probability: Distinguish between independent and dependent events.

Statistics: Find descriptive statistics.
Statistics: Display data.
Statistics: Analyze statistical studies and sampling methods.
Statistics: Solve problems involving the normal distribution.
Geometry: Solve problems involving perimeter, area, surface area, and volume.
Geometry: Solve problems involving similar figures.
Geometry: Solve problems involving right triangles.
Voting Methods: Determine the results of a vote using voting rules.
Voting Methods: Determine how to allocate resources or goods using a given apportionment.

Assessment, Requirements, and Outcomes

- Assessment of Academic Achievement
- All students will be required to complete a comprehensive final examination that assesses the learning of all course objectives. This exam must be weighted in a manner so that this exam score is worth a minimum of fifteen percent (15%) of the final course grade.
 - Additional assessment of student achievement may include assignments, quizzes, and exams.
 - Application problems must not only be included on chapter exams but also on the final exam.
- General Course Requirements and Recommendations
- A scientific calculator is required of each student.
 - Application problems must be covered in all mathematics courses. Every section of any course outline that includes application problems must be covered.

MATH141 - Introduction to Statistics

Overview

Subject Mathematics	Academic Department Mathematics	School Science, Tech, Engr & Math
Course Description Designed as a first course for students in business administration, education, social sciences, engineering, and other fields in which data are collected and predictions are made. Covers descriptive measures, the summarizing of data, an introduction to probability, discrete probability distributions, normal probability distributions, sampling distributions, estimation, confidence intervals, hypothesis testing, correlation, regression, chi square tests, one-way analysis of variance (ANOVA), and use of nonparametric tests. In addition, utilizes a statistical software package to conduct data analysis and solve applied problems. Requires a graphing calculator, with the TI-84 Plus series recommended. Also requires access to an online homework management system as well as a statistical software package.		
Course Pre-requisite(s) MATH041 Intro Statistics Skills Review with a grade of S, MATH080 - Missing course or MATH-094 with a B- grade or better, MATH110 Intermediate Algebra or MATH-131 with a C grade or better, OR a satisfactory score on the placement test OR eligible to take gateway MATH courses at HFC

Goals, Topics, and Objectives

- Course Goals
- To introduce students to the fundamental concepts of probability.
 - To present the basic techniques used in descriptive and inferential statistics.
 - To introduce students to the use of technology for data exploration and analysis.
 - To encourage students to communicate effectively in presenting the results of a statistical study. This may include (but not be limited to) emphasis on reading, problem solving, and writing skills throughout the course as they are needed in the practice of statistics.
- Core Course Topics
- Data Types
 - Distinguish between a population and a sample, between a parameter and a statistic, and between descriptive and inferential statistics.
 - Distinguish between qualitative data and quantitative data.

3. Classify data with respect to the four levels of measurement.
4. Identify the different types of sampling techniques.
2. Descriptive Statistics

1. Construct frequency distributions, frequency histograms, frequency polygons, relative frequency histograms, stem-and-leaf, and box-and-whisker plots.

2. Find and interpret the mean, median, and mode of a population and of a sample.

3. Find and interpret the range, variance, and standard deviation of a population and of a sample.

4. Interpret standard deviation by means of the Empirical Rule and Chebychev's theorem.

5. Find and interpret quartiles, percentiles and interquartile range of data set.

6. Find and interpret the standard score (z-score).
3. Probability

1. Identify the sample space of a probability experiment and identify simple events.

2. Distinguish between classical, empirical, and subjective types of probability.

3. Distinguish between dependent and independent events.

4. Determine if two events are mutually exclusive.

5. Calculate probabilities through the use of the Complement Rule, the Multiplication Rule, and the Addition Rule.
4. Discrete Probability Distributions

1. Distinguish between discrete random variables and continuous random variables.

2. Construct a discrete probability distribution and its graph.

3. Determine if a function is a probability distribution, and find the mean, standard deviation, and expected value of the distribution.

4. Find binomial probabilities using the binomial probability formula.

5. Find the mean and standard deviation of a binomial probability distribution.
5. Normal Probability Distributions

1. Find probabilities for normal distributions using both tables and technology.

2. Find specific data values of a normal distribution associated with a given probability using both tables and technology.

3. Verify the properties of sampling distributions.

4. Apply the Central Limit Theorem to find the probabilities associated with sample means.
6. Confidence Intervals

1. Construct and interpret confidence intervals for a population mean using both small and large sample techniques by means of tables and technology.

2. Construct and interpret confidence intervals for a population proportion by means of tables and technology.

3. Construct and interpret confidence intervals for the difference of proportions or means for two populations.

4. Determine the minimum sample size required when estimating the population mean and population proportion.

5. Construct and interpret confidence intervals for the population variance and standard deviation by means of both tables and technology.
7. Hypothesis Testing Using a Simple Sample

1. Conduct and present formal hypothesis tests involving the mean of a population using both small and large sample techniques.

2. Conduct and present formal hypothesis tests involving a population proportion.

3. Conduct and present formal hypothesis tests involving the standard deviation (or variance) of a population using a sample drawn from a normal population.
8. Hypothesis Testing with Two Samples

1. Conduct and present a hypothesis test for the difference between two population means using techniques for large independent samples, small independent samples, and dependent samples.

2. Conduct and present a hypothesis test for the difference between two population proportions.
9. Correlation and Regression

1. Determine the coefficient of correlation for a sample of bivariate data by means of technology and interpret the value in the context of the data.

2. Conduct and present a hypothesis test for the significance of a population correlation coefficient.

3. Determine the equation of a regression line for bivariate data by means of technology and use the equation to make predictions.

4. Determine the coefficient of determination for a sample of bivariate data by means of technology and interpret the value in the context of the data.
10. Chi-Square Tests and the F-Distribution

1. Test whether a frequency distribution fits a claimed distribution through use of the chi-square distribution.

2. Test whether two variables are independent by means of contingency tables and the chi-square distribution.

3. Perform a two-sample F-test to compare two variances.

4. Test claims involving three or more means through use of one-way-analysis of variance (ANOVA).
11. Nonparametric Tests

1. Test a population median and the difference between two population medians through use of the nonparametric Sign Test.

2. Determine if two samples (both independent and dependent) are selected from populations with the same distribution through use of the nonparametric Wilcoxon Tests.

3. Determine if three or more samples were selected from populations with the same distribution through use of the Kruskal-Wallis Test.

Data Types: Distinguish between a population and a sample, between a parameter and a statistic, and between descriptive and inferential statistics.

Data Types: Distinguish between qualitative data and quantitative data.

Data Types: Classify data with respect to the four levels of measurement.

Data Types: Identify the different types of sampling techniques.

Descriptive Statistics: Construct frequency distributions, frequency histograms, frequency polygons, relative frequency histograms, stem-and-leaf, and box-and-whisker plots.

Descriptive Statistics: Find and interpret the mean, median, and mode of a population and of a sample.

Descriptive Statistics: Find and interpret the range, variance, and standard deviation of a population and of a sample.

Descriptive Statistics: Interpret standard deviation by means of the Empirical Rule and Chebychev's theorem.

Descriptive Statistics: Find and interpret quartiles, percentiles and interquartile range of data set.

Descriptive Statistics: Find and interpret the standard score (z-score).

Probability: Identify the sample space of a probability experiment and identify simple events.

Probability: Distinguish between classical, empirical, and subjective types of probability.

Probability: Distinguish between dependent and independent events.

Probability: Determine if two events are mutually exclusive.

Probability: Calculate probabilities through the use of the Complement Rule, the Multiplication Rule, and the Addition Rule.

Discrete Probability Distributions: Distinguish between discrete random variables and continuous random variables.

Discrete Probability Distributions: Construct a discrete probability distribution and its graph.

Discrete Probability Distributions: Determine if a function is a probability distribution, and find the mean, standard deviation, and expected value of the distribution.

Discrete Probability Distributions: Find binomial probabilities using the binomial probability formula.

Discrete Probability Distributions: Find the mean and standard deviation of a binomial probability distribution.

Normal Probability Distributions: Find probabilities for normal distributions using both tables and technology.

Normal Probability Distributions: Find specific data values of a normal distribution associated with a given probability using both tables and technology.

Normal Probability Distributions: Verify the properties of sampling distributions.

Normal Probability Distributions: Apply the Central Limit Theorem to find the probabilities associated with sample means.

Confidence Intervals: Construct and interpret confidence intervals for a population mean using both small and large sample techniques by means of tables and technology.

Confidence Intervals: Construct and interpret confidence intervals for a population proportion by means of tables and technology.

Confidence Intervals: Construct and interpret confidence intervals for the difference of proportions or means for two populations.

Confidence Intervals: Determine the minimum sample size required when estimating the population mean and population proportion.

Confidence Intervals: Construct and interpret confidence intervals for the population variance and standard deviation by means of both tables and technology.

Hypothesis Testing Using a Simple Sample: Conduct and present formal hypothesis tests involving the mean of a population using both small and large sample techniques.

Hypothesis Testing Using a Simple Sample: Conduct and present formal hypothesis tests involving a population proportion.
Hypothesis Testing Using a Simple Sample: Conduct and present formal hypothesis tests involving the standard deviation (or variance) of a population using a sample drawn from a normal population.
Hypothesis Testing with Two Samples: Conduct and present a hypothesis test for the difference between two population means using techniques for large independent samples, small independent samples, and dependent samples.
Hypothesis Testing with Two Samples: Conduct and present a hypothesis test for the difference between two population proportions.
Correlation and Regression: Determine the coefficient of correlation for a sample of bivariate data by means of technology and interpret the value in the context of the data.
Correlation and Regression: Conduct and present a hypothesis test for the significance of a population correlation coefficient.
Correlation and Regression: Determine the equation of a regression line for bivariate data by means of technology and use the equation to make predictions.
Correlation and Regression: Determine the coefficient of determination for a sample of bivariate data by means of technology and interpret the value in the context of the data.
Chi-Square Tests and the F-Distribution: Test whether a frequency distribution fits a claimed distribution through use of the chi-square distribution.
Chi-Square Tests and the F-Distribution: Test whether two variables are independent by means of contingency tables and the chi-square distribution.
Chi-Square Tests and the F-Distribution: Perform a two-sample F-test to compare two variances.
Chi-Square Tests and the F-Distribution: Test claims involving three or more means through use of one-way-analysis of variance (ANOVA).
Nonparametric Tests: Test a population median and the difference between two population medians through use of the nonparametric Sign Test.
Nonparametric Tests: Determine if two samples (both independent and dependent) are selected from populations with the same distribution through use of the nonparametric Wilcoxon Tests.
Nonparametric Tests: Determine if three or more samples were selected from populations with the same distribution through use of the Kruskal-Wallis Test.

Assessment, Requirements, and Outcomes

- Assessment of Academic Achievement
- A comprehensive final examination, weighted in a manner that is worth at least (15%) of the final course grade, is required of all sections. In selected semesters this exam may be a common exam administered to all sections of [MATH141 Introduction to Statistics](#).
 - All students will be required to complete online homework. This online homework must be weighted in such a manner so that it is worth between six percent (6%) and twelve percent (12%) of the final course grade.
 - Additional assessment of student achievement may include assignments, quizzes, and exams.
 - Application problems must not only be included on chapter exams but also on the final exam.

- General Course Requirements and Recommendations
- A graphing calculator is required of each student and the Mathematics Department recommends and uses the TI-84 Series.
 - Access to an online homework management system is required.
 - Access to a statistical software package is required.
 - Application problems must be covered in all mathematics courses. Every section in any course outline that includes application problems must be covered.

MATH165 - Mathematics for Calculus

Overview

Subject Mathematics	Academic Department Mathematics	School Science, Tech, Engr & Math
------------------------	------------------------------------	--------------------------------------

Course Description
Topics include algebraic, graphical and numerical representations of functions, including transformations, composition and inverses of functions. Focuses on the study of polynomial, rational, root, exponential and logarithmic functions, and trigonometric and inverse trigonometric functions of real numbers. Also includes equation solving and trigonometric identities. Techniques of problem solving and applications are included throughout the course requiring the frequent usage of graphing utilities. Requires a non-graphing scientific calculator for some formal assessments and access to an online homework system.

Course Pre-requisite(s)
[MATH110 Intermediate Algebra](#) with a grade of B- or better OR placement into [MATH115 College Algebra](#)

Credit for Prior College Level Learning (CPCLL) Details Minimum Score on Other Exam At least 50 on the CLEP Precalculus exam	

Goals, Topics, and Objectives

- Course Goals
- To develop the advanced algebraic skills needed in college-level science and mathematics courses.
 - To develop an understanding of functions represented algebraically, graphically and numerically necessary for the study of higher level science and mathematics.
 - To develop an understanding of polynomial functions, rational functions, exponential functions, logarithmic functions and trigonometric functions of real numbers and angles.
 - To develop familiarity with some mathematical and physical applications of advanced algebra and trigonometry.
 - To incorporate graphing utilities whenever appropriate to illustrate concepts and solve problems.
 - To develop in students the problem-solving skills needed to interpret, analyze and solve applied problems requiring precalculus-level skills in advanced algebra and trigonometry.

- Core Course Topics
- Functions and Their Graphs
 - Determine if an equation, graph, or table of values represents a function, and state the domain and range of the function.
 - Determine graphically and algebraically whether a function is even, odd, or neither.
 - Test algebraically symmetry with respect to x-axis, y-axis, and the origin.
 - Determine the local minima and local maxima of a function and the interval(s) on which the function is increasing, decreasing and/or constant, given the graph of the function and using a graphing utility.
 - Graph identity, constant, square, cubic, square root, cube root, absolute value, greatest integer, and reciprocal functions of the form $1/x$ and $1/(x^2)$, and check using the graphing utility.
 - Analyze and graph functions in terms of translations, reflections, and expansions or contractions.
 - Determine the graph of a function obtained from a series of transformations.
 - Graph piecewise-defined functions and determine their domains and ranges.
 - Form the sum, difference, product, quotient, and composition of two functions and determine their domains, given their equations or graphs.
 - Find and simplify the difference quotient of a function.
 - Relate the difference quotient and average rate of change of a function.
 - Solve absolute value equations and inequalities algebraically and graphically.
 - With the aid of a graphing utility, determine points of maximization or minimization in situations dealing with distances, areas, and volumes of various geometric figures, as well as in real-world business situations involving revenues, costs, and profits.
 - Polynomial Functions and their Graphs
 - Determine algebraically the intercepts of a polynomial function, and verify graphically.
 - Determine a polynomial function's intercepts, extreme values, turning points, and intervals of increase and decrease by using a graphing utility.
 - Determine the end behavior of a polynomial function using the degree of the polynomial and its leading coefficient.
 - Construct a polynomial function with specified zeros.
 - Test factors of polynomial functions by using the Remainder and Factor Theorems, and factor polynomial functions to find the real zeros.
 - Solve polynomial equations by using the Rational Zeros Theorem and synthetic division in conjunction with a graphing utility.
 - Find the complex solutions of polynomial equations.
 - Solve polynomial inequalities algebraically and graphically.
 - Rational Functions
 - Find the domain of a rational function.
 - Find vertical and horizontal asymptotes and oblique asymptotes of the graph of a rational function algebraically, graphically, and numerically.
 - Find the x-intercept(s), y-intercept and coordinates of any hole(s) in the graph of a rational function.
 - Graph a rational function by hand and check it by using a graphing utility.
 - Solve rational equations and inequalities algebraically and graphically.
 - Solve application problems involving rational functions.
 - Exponential and Logarithmic Functions
 - Determine if a function is one-to-one and find its inverse if possible.
 - Define and graph basic exponential and logarithmic functions (with a strong emphasis on functions with base 10 and e) and their transformations, and identify their domains, ranges, intercepts and asymptotes both by hand and using a graphing utility.
 - Solve exponential and logarithmic equations both algebraically and graphically using a graphing utility.
 - Use exponential and /or logarithmic functions to solve problems involving compound interest and growth and decay.
 - Expand or condense logarithmic expressions using the properties of logarithms.
 - Use the change of base formula to find the logarithm of any base other than 10 or e.
 - Angles and Trigonometric Functions
 - Sketch a given angle in standard position.
 - Apply the relationship between arc length, area of a sector, central angle, and the radius of a circle and that between linear speed, angular speed, and the radius of a circle.

3. State the unit circle definitions and the domain and range of each of the six trigonometric functions for any real number t .

4. Find exact values of the six trigonometric functions of special real numbers in standard position if given partial information.

5. Evaluate the six trigonometric function of an acute angle of a right triangle.

6. Use the Reciprocal Identities, Quotient Identities, Even-Odd Identities, and the Pythagorean Identities to simplify trigonometric expressions.

7. Sketch the graphs of the sine, cosine, and tangent trigonometric functions and their transformations both by hand and by using a graphing utility, stating their periods, amplitudes, and phase shifts if applicable.

8. Find an equation for a sinusoidal graph.
6. Analytic Trigonometry

1. Define the inverse sine, inverse cosine, and inverse tangent functions, and determine their domains and ranges.

2. Evaluate the inverse sine, inverse cosine, and inverse tangent function values exactly when possible and, if not possible, approximate using a graphing utility.

3. Use properties of inverse functions to find the exact value of certain composite functions and solve equations.

4. Determine graphically whether an equation appears to be an identity if so verify algebraically.

5. Use identities, including, Quotient Identities, Reciprocal Identities, the Pythagorean Identities, the Even-Odd Identities, the Sum and Difference Identities, the Double Angle Identities, and the Half Angle Identities for sine, cosine and tangent to simplify expressions.

6. Determine exact solutions of trigonometric equations.

7. Estimate solutions to trigonometric equations by using a graphing utility.

Functions and Their Graphs: Determine if an equation, graph, or table of values represents a function, and state the domain and range of the function.
Functions and Their Graphs: Determine graphically and algebraically whether a function is even, odd, or neither.
Functions and Their Graphs: Test algebraically symmetry with respect to x-axis, y-axis, and the origin.
Functions and Their Graphs: Determine the local minima and local maxima of a function and the interval(s) on which the function is increasing, decreasing and/or constant, given the graph of the function and using a graphing utility.
Functions and Their Graphs: Graph identity, constant, square, cubic, square root, cube root, absolute value, greatest integer, and reciprocal functions of the form $1/x$ and $1/(x^2)$, and check using the graphing utility.
Functions and Their Graphs: Analyze and graph functions in terms of translations, reflections, and expansions or contractions.
Functions and Their Graphs: Determine the graph of a function obtained from a series of transformations.
Functions and Their Graphs: Graph piecewise-defined functions and determine their domains and ranges.
Functions and Their Graphs: Form the sum, difference, product, quotient, and composition of two functions and determine their domains, given their equations or graphs.
Functions and Their Graphs: Find and simplify the difference quotient of a function.
Functions and Their Graphs: Relate the difference quotient and average rate of change of a function.
Functions and Their Graphs: Solve absolute value equations and inequalities algebraically and graphically.
Functions and Their Graphs: With the aid of a graphing utility, determine points of maximization or minimization in situations dealing with distances, areas, and volumes of various geometric figures, as well as in real-world business situations involving revenues, costs, and profits.
Polynomial Functions and their Graphs: Determine algebraically the intercepts of a polynomial function, and verify graphically.
Polynomial Functions and their Graphs: Determine a polynomial function's intercepts, extreme values, turning points, and intervals of increase and decrease by using a graphing utility.
Polynomial Functions and their Graphs: Determine the end behavior of a polynomial function using the degree of the polynomial and its leading coefficient.
Polynomial Functions and their Graphs: Construct a polynomial function with specified zeros.
Polynomial Functions and their Graphs: Test factors of polynomial functions by using the Remainder and Factor Theorems, and factor polynomial functions to find the real zeros.

Polynomial Functions and their Graphs: Solve polynomial equations by using the Rational Zeros Theorem and synthetic division in conjunction with a graphing utility.
Polynomial Functions and their Graphs: Find the complex solutions of polynomial equations.
Polynomial Functions and their Graphs: Solve polynomial inequalities algebraically and graphically.
Rational Functions: Find the domain of a rational function.
Rational Functions: Find vertical and horizontal asymptotes and oblique asymptotes of the graph of a rational function algebraically, graphically, and numerically.
Rational Functions: Find the x-intercept(s), y-intercept and coordinates of any hole(s) in the graph of a rational function.
Rational Functions: Graph a rational function by hand and check it by using a graphing utility.
Rational Functions: Solve rational equations and inequalities algebraically and graphically.
Rational Functions: Solve application problems involving rational functions.
Exponential and Logarithmic Functions: Determine if a function is one-to-one and find its inverse if possible.
Exponential and Logarithmic Functions: Define and graph basic exponential and logarithmic functions (with a strong emphasis on functions with base 10 and e) and their transformations, and identify their domains, ranges, intercepts and asymptotes both by hand and using a graphing utility.
Exponential and Logarithmic Functions: Solve exponential and logarithmic equations both algebraically and graphically using a graphing utility.
Exponential and Logarithmic Functions: Use exponential and /or logarithmic functions to solve problems involving compound interest and growth and decay.
Exponential and Logarithmic Functions: Expand or condense logarithmic expressions using the properties of logarithms.
Exponential and Logarithmic Functions: Use the change of base formula to find the logarithm of any base other than 10 or e .
Angles and Trigonometric Functions: Sketch a given angle in standard position.
Angles and Trigonometric Functions: Apply the relationship between arc length, area of a sector, central angle, and the radius of a circle and that between linear speed, angular speed, and the radius of a circle.
Angles and Trigonometric Functions: State the unit circle definitions and the domain and range of each of the six trigonometric functions for any real number t .
Angles and Trigonometric Functions: Find exact values of the six trigonometric functions of special real numbers in standard position if given partial information.
Angles and Trigonometric Functions: Evaluate the six trigonometric functions of an acute angle of a right triangle.
Angles and Trigonometric Functions: Use the Reciprocal Identities, Quotient Identities, Even-Odd Identities, and the Pythagorean Identities to simplify trigonometric expressions.
Angles and Trigonometric Functions: Sketch the graphs of the sine, cosine, and tangent trigonometric functions and their transformations both by hand and by using a graphing utility, stating their periods, amplitudes, and phase shifts if applicable.
Angles and Trigonometric Functions: Find an equation for a sinusoidal graph.

Analytic Trigonometry: Define the inverse sine, inverse cosine, and inverse tangent functions, and determine their domains and ranges.
Analytic Trigonometry: Evaluate the inverse sine, inverse cosine, and inverse tangent function values exactly when possible and, if not possible, approximate using a graphing utility.
Analytic Trigonometry: Use properties of inverse functions to find the exact value of certain composite functions and solve equations.
Analytic Trigonometry: Determine graphically whether an equation appears to be an identity if so verify algebraically.
Analytic Trigonometry: Use identities, including, Quotient Identities, Reciprocal Identities, the Pythagorean Identities, the Even-Odd Identities, the Sum and Difference Identities, the Double Angle Identities, and the Half Angle Identities for sine, cosine and tangent to simplify expressions.
Analytic Trigonometry: Determine exact solutions of trigonometric equations.
Analytic Trigonometry: Estimate solutions to trigonometric equations by using a graphing utility.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
- All students will be required to complete a comprehensive final examination that assesses the learning of all course objectives. This final exam must be weighted in a manner so that this exam score is worth a minimum of fifteen percent (15%) of the final course grade. In selected semesters this final exam may be a common final exam administered to all sections of MATH165 Mathematics for Calculus. - All students will be required to complete at least two proctored on-campus exams. The cumulative value of those exams must be at least 40% of a student's final grade. - All students will be required to complete online homework. This online homework must be weighted in such a manner so that it is worth between six percent (6%) and twelve percent (12%) of the final course grade. - Additional assessment of student achievement may include assignments, projects, quizzes, and exams. - For proctored in-person formal assessments (quizzes, tests, and exams) the only technology students can use is a non-graphing scientific calculator. Quizzes, tests, and exams may have non-calculator parts. Class projects and informal assessments will require students to use a free graphing application to support learning. - All relevant application problems must be assessed throughout the semester. Application problems must be included in the final exam.	
General Course Requirements and Recommendations	
- A non-graphing scientific calculator is required for formal assessments. - Free graphing applications may be used to support learning for informal assessments and class work. - Access to an online homework management system is also required. - Application problems must be covered in all mathematics courses. Every section in any course outline that includes application problems must be covered.

Goals, Topics, and Objectives

Course Goals
- To develop an understanding of functions represented algebraically, graphically and numerically necessary for the study of higher level science and mathematics. - To develop an understanding of rational functions, exponential and logarithmic functions and trigonometric functions of real numbers and angles. - To develop familiarity with some mathematical and physical applications of advanced algebra and trigonometry. - To incorporate graphing utilities whenever appropriate to illustrate concepts and solve problems. - To develop in students the problem-solving skills needed to interpret, analyze and solve applied problems requiring precalculus-level skills in advanced algebra and trigonometry.

In the pre-requisite course, students demonstrate knowledge of polynomial functions and the fundamental theorem of algebra.

Core Course Topics
- Functions and Their Graphs - Determine the local minima and local maxima of a function and the interval(s) on which the function is increasing, decreasing and/or constant, given the graph of the function. - Form the sum, difference, product, quotient, and composition of two functions and determine their domains, given their equations or graphs. - Compute and relate the difference quotient and average rate of change of a function. - Graph piecewise-defined functions and determine their domains and ranges. - With the aid of a graphing utility, determine points of maximization or minimization in situations dealing with distances, areas, and volumes of various geometric figures, as well as in real-world business situations involving revenues, costs, and profits. - Rational Functions - Find the domain of a rational function. - Find vertical and horizontal asymptotes of the graph of a rational function algebraically, graphically, and numerically. - Find the x-intercept(s), y-intercept and coordinates of any hole(s) in the graph of a rational function. - Graph a rational function by hand and check it by using a graphing utility. - Solve application problems involving rational functions. - Exponential and Logarithmic Functions - Determine if a function is one-to-one and find its inverse if possible. - Define and graph basic exponential and logarithmic functions (with a strong emphasis on functions with base 10 and e) and their transformations, and identify their domains, ranges, intercepts and asymptotes both by hand and by using a graphing utility. - Solve exponential and logarithmic equations both algebraically and graphically using a graphing utility. - Use exponential and/or logarithmic functions to solve problems involving compound interest and growth and decay. - Expand or condense logarithmic expressions using the properties of logarithms. - Use the change of base formula to find the logarithm of any base other than 10 or e. - Use a graphing utility to obtain the power, exponential, logarithmic, or logistic functions of best fit of a given set of values and then determine the model of best fit. - Solve applied problems involving power, logarithmic, exponential, or logistic regression functions by using a graphing utility. - Angles and Trigonometric Functions - Sketch a given angle in standard position. - Convert angles measured in degrees to radian measure and vice versa. - Apply the relationship between arc length, area of a sector, central angle, and the radius of a circle and that between linear speed, angular speed, and the radius of a circle. - State the unit circle definitions and the domain and range of each of the six trigonometric functions for any real number t. - Find exact values of the six trigonometric functions of special real numbers or of angles in standard position if given partial information. - Use the Reciprocal Identities, Quotient Identities, Even-Odd Identities, and the Pythagorean Identities to simplify trigonometric expressions. - Sketch the graphs of the of sine, cosine, and tangent trigonometric functions and their transformations both by hand and by using a graphing utility, stating their periods, amplitudes, and phase shifts if applicable. - Find an equation for a sinusoidal graph. - Analytic Trigonometry - Define the inverse sine, inverse cosine, and inverse tangent functions, and determine their domains and ranges. - Evaluate the inverse sine, inverse cosine, and inverse tangent function values exactly when possible and, if not possible, approximate using a graphing utility. - Use properties of inverse functions to find the exact value of certain composite functions and solve equations. - Determine graphically whether an equation appears to be an identity. - Use the Quotient Identities, Reciprocal Identities, the Pythagorean Identities, the Even-Odd Identities, the Sum and Difference Identities, the Double Angle Identities, and the Half Angle Identities for sine, cosine and tangent to simplify expressions, to determine exact solutions of equations, or to verify identities. - Estimate solutions to trigonometric equations by using a graphing utility. - Applications of Trigonometric Functions - Evaluate the six trigonometric functions of an acute angle of a right triangle and use these values in applied problems. - Utilize the Law of Cosines and/or the Law of Sines, including the ambiguous case, to solve an oblique triangle in applied problems. - Use the formula for the area of a triangle in applied problems.

Functions and Their Graphs: Determine the local minima and local maxima of a function and the interval(s) on which the function is increasing, decreasing and/or constant, given the graph of the function.
Functions and Their Graphs: Form the sum, difference, product, quotient, and composition of two functions and determine their domains, given their equations or graphs.
Functions and Their Graphs: Compute and relate the difference quotient and average rate of change of a function.
Functions and Their Graphs: Graph piecewise-defined functions and determine their domains and ranges.

Functions and Their Graphs: With the aid of a graphing utility, determine points of maximization or minimization in situations dealing with distances, areas, and volumes of various geometric figures, as well as in real-world business situations involving revenues, costs, and profits.
Rational Functions: Find the domain of a rational function.
Rational Functions: Find vertical and horizontal asymptotes of the graph of a rational function algebraically, graphically, and numerically.
Rational Functions: Find the x-intercept(s), y-intercept and coordinates of any hole(s) in the graph of a rational function.
Rational Functions: Graph a rational function by hand and check it by using a graphing utility.
Rational Functions: Solve application problems involving rational functions.
Exponential and Logarithmic Functions: Determine if a function is one-to-one and find its inverse if possible.
Exponential and Logarithmic Functions: Define and graph basic exponential and logarithmic functions (with a strong emphasis on functions with base 10 and e) and their transformations, and identify their domains, ranges, intercepts and asymptotes both by hand and by using a graphing utility.
Exponential and Logarithmic Functions: Solve exponential and logarithmic equations both algebraically and graphically using a graphing utility.
Exponential and Logarithmic Functions: Use exponential and/or logarithmic functions to solve problems involving compound interest and growth and decay.
Exponential and Logarithmic Functions: Expand or condense logarithmic expressions using the properties of logarithms.
Exponential and Logarithmic Functions: Use the change of base formula to find the logarithm of any base other than 10 or e.
Exponential and Logarithmic Functions: Use a graphing utility to obtain the power, exponential, logarithmic, or logistic functions of best fit of a given set of values and then determine the model of best fit.
Exponential and Logarithmic Functions: Solve applied problems involving power, logarithmic, exponential, or logistic regression functions by using a graphing utility.
Angles and Trigonometric Functions: Sketch a given angle in standard position.
Angles and Trigonometric Functions: Convert angles measured in degrees to radian measure and vice versa.
Angles and Trigonometric Functions: Apply the relationship between arc length, area of a sector, central angle, and the radius of a circle and that between linear speed, angular speed, and the radius of a circle.
Angles and Trigonometric Functions: State the unit circle definitions and the domain and range of each of the six trigonometric functions for any real number t.
Angles and Trigonometric Functions: Find exact values of the six trigonometric functions of special real numbers or of angles in standard position if given partial information.
Angles and Trigonometric Functions: Use the Reciprocal Identities, Quotient Identities, Even-Odd Identities, and the Pythagorean Identities to simplify trigonometric expressions.
Angles and Trigonometric Functions: Sketch the graphs of the sine, cosine, and tangent trigonometric functions and their transformations both by hand and by using a graphing utility, stating their periods, amplitudes, and phase shifts if applicable.
Angles and Trigonometric Functions: Find an equation for a sinusoidal graph.
Analytic Trigonometry: Define the inverse sine, inverse cosine, and inverse tangent functions, and determine their domains and ranges.

Analytic Trigonometry: Evaluate the inverse sine, inverse cosine, and inverse tangent function values exactly when possible and, if not possible, approximate using a graphing utility.
Analytic Trigonometry: Use properties of inverse functions to find the exact value of certain composite functions and solve equations.
Analytic Trigonometry: Determine graphically whether an equation appears to be an identity.
Analytic Trigonometry: Use the Quotient Identities, Reciprocal Identities, the Pythagorean Identities, the Even-Odd Identities, the Sum and Difference Identities, the Double Angle Identities, and the Half Angle Identities for sine, cosine and tangent to simplify expressions, to determine exact solutions of equations, or to verify identities.
Analytic Trigonometry: Estimate solutions to trigonometric equations by using a graphing utility.
Applications of Trigonometric Functions: Evaluate the six trigonometric functions of an acute angle of a right triangle and use these values in applied problems.
Applications of Trigonometric Functions: Utilize the Law of Cosines and/or the Law of Sines, including the ambiguous case, to solve an oblique triangle in applied problems.
Applications of Trigonometric Functions: Use the formula for the area of a triangle in applied problems.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
- All students will be required to complete a comprehensive final examination that assesses the learning of all course objectives. This final exam must be weighted in a manner so that this exam score is worth a minimum of fifteen percent (15%) of the final course grade. In selected semesters this final exam may be a common final exam administered to all sections of MATH175 Precalculus. - All students will be required to complete at least two proctored on-campus exams. The cumulative value of those exams must be at least 40% of a student's final grade. - All students will be required to complete online homework. This online homework must be weighted in such a manner so that it is worth between six percent (6%) and twelve percent (12%) of the final course grade. - Additional assessment of student achievement may include assignments, quizzes, projects, and exams. - For proctored in-person formal assessments (quizzes, tests, and exams) the only technology students can use is a non-graphing scientific calculator. Quizzes, tests, and exams may have non-calculator parts. Class projects and informal assessments will require students to use a free graphing application to support learning. - All relevant application problems must be assessed throughout the semester. Application problems must be included in the final exam.	
General Course Requirements and Recommendations	
- A non-graphing scientific calculator is required for formal assessments. - Free graphing applications may be used to support learning for informal assessments and class work. - Access to an online homework management system is also required. - Application problems must be covered in all mathematics courses. Every section in any course outline that includes application problems must be covered.

MATH180 - Calculus I

Overview		
Subject	Academic Department	School
Mathematics	Mathematics	Science, Tech, Engr & Math
Course Description		
For students planning to pursue a course of study involving a concentration in mathematics. Topics include limits, continuity, the derivative, differentiation of algebraic, exponential, logarithmic, trigonometric and inverse trigonometric functions, applications of the derivative, antidifferentiation, and the definite integral. Numerical, graphical and algebraic approaches are used whenever possible. Credit cannot be earned for both MATH 153 and 180. Requires a non-graphing scientific calculator for some formal assessments, access to a free graphing utility application to support learning and during informal assessments, and access to an online homework system.		
Course Pre-requisite(s)		
MATH165 Mathematics for Calculus OR MATH175 Precalculus with a C or better OR a satisfactory score on the placement test.		
Credit Hours		
5		
Contact Hours		
5		
Course Fee	Miscellaneous Department Fee	
10	0	
Academic Level		
Undergraduate		
General Education Category	Michigan Transfer Agreement (MTA) Category	
Mathematics	Category 3: Mathematics - Applied Degrees, Category 3: Mathematics - Transfer Degrees - College Algebra Track	
Eligible for Credit for Prior College Level Learning (CPCLL)	Acceptable Prior Learning Credit	
Yes	Other Exam	
Credit for Prior College Level Learning (CPCLL) Details		
A student may receive credit for MATH-180 by earning one of the minimum scores from the following exams:		
1. At least 50 on the CLEP Calculus exam, or		

2. At least 3 on the Advanced Placement (AP) Calculus AB test,
3. At least 3 on the Advanced Placement (AP) Calculus BC test,
4. At least 5 on the International Baccalaureate-Standard Level (IB-SL) Mathematics Exam (IB-SL-based credit awarded only after completion of MATH-183 with a grade of C or higher), or
5. At least 5 on the International Baccalaureate-Higher Level (IB-HL) Mathematics Exam.

Goals, Topics, and Objectives

- Course Goals
1. To study the nature and significance of calculus for students of science, technology, engineering, and mathematics disciplines.
2. To demonstrate various applications of calculus to problems from the social sciences, physical sciences, and engineering.
3. To present an exposition of calculus that incorporates graphical, numerical, and algebraic analysis, without undue emphasis on theoretical abstraction or routine mechanical manipulation.
4. To use technology to illustrate calculus concepts and verify calculus solutions to application problems.
5. To provide students with an exposure to the logical reasoning of mathematics.
- Core Course Topics
1. Introduction to Limits
1. Determine limits of functions using numerical, algebraic and graphical methods.
2. Determine infinite limits and limits at infinity.
3. Determine continuity or discontinuity using the limit.
2. Derivatives of Functions
1. Find the derivative of functions using the limit definition of the derivative.
2. Differentiate algebraic, logarithmic, exponential, trigonometric and inverse trigonometric functions using derivative rules.
3. Differentiate composite functions using the chain rule.
4. Find the derivative of a function defined implicitly.
3. Applications of the Derivative
1. Use the derivative to find instantaneous rates of change and related rates of change in application problems.
2. Use the derivative to find properties of functions: maxima and minima, increasing, decreasing, concavity, points of inflection and use this information to sketch the graph of functions.
3. Solve optimization problems using the derivative.
4. Determine the linear approximation of functions using the derivative.
5. Apply the Mean Value Theorem.
6. Use the derivative to define and check the antiderivative function.
4. Integration of Functions
1. Approximate the area under a curve using the Riemann Sum with left endpoint, right endpoint, and midpoint.
2. Find the antiderivatives (indefinite integrals) of algebraic, logarithmic, exponential, trigonometric and inverse trigonometric functions using integration rules.
3. Approximate the definite integral using the Riemann Sum with left endpoint, right endpoint, and midpoint.
4. Find the definite integral using the Fundamental Theorem of Calculus.
5. Use the integral to find the average value of a function.
6. Determine the integral of composite functions using the substitution rule.
5. Applications of Integration
1. Find the position and velocity functions from the acceleration function using integration.
2. Find the net rate of change of a function using integration.
3. Determine the area between two curves by integration with respect to x or y.

Introduction to Limits: Determine limits of functions using numerical, algebraic and graphical methods.
Introduction to Limits: Determine infinite limits and limits at infinity.
Introduction to Limits: Determine continuity or discontinuity using the limit.
Derivatives of Functions: Find the derivative of functions using the limit definition of the derivative.
Derivatives of Functions: Differentiate algebraic, logarithmic, exponential, trigonometric and inverse trigonometric functions using derivative rules.
Derivatives of Functions: Differentiate composite functions using the chain rule.
Derivatives of Functions: Find the derivative of a function defined implicitly.
Applications of the Derivative: Use the derivative to find instantaneous rates of change and related rates of change in application problems.
Applications of the Derivative: Use the derivative to find properties of functions: maxima and minima, increasing, decreasing, concavity, points of inflection and use this information to sketch the graph of functions.
Applications of the Derivative: Solve optimization problems using the derivative.
Applications of the Derivative: Determine the linear approximation of functions using the derivative.

Applications of the Derivative: Apply the Mean Value Theorem.
Applications of the Derivative: Use the derivative to define and check the antiderivative function.
Integration of Functions: Approximate the area under a curve using the Riemann Sum with left endpoint, right endpoint, and midpoint.
Integration of Functions: Find the antiderivatives (indefinite integrals) of algebraic, logarithmic, exponential, trigonometric and inverse trigonometric functions using integration rules.
Integration of Functions: Approximate the definite integral using the Riemann Sum with left endpoint, right endpoint, and midpoint.
Integration of Functions: Find the definite integral using the Fundamental Theorem of Calculus.
Integration of Functions: Use the integral to find the average value of a function.
Integration of Functions: Determine the integral of composite functions using the substitution rule.
Applications of Integration: Find the position and velocity functions from the acceleration function using integration.
Applications of Integration: Find the net rate of change of a function using integration.
Applications of Integration: Determine the area between two curves by integration with respect to x or y.

MATH183 - Calculus II

Overview

Subject Mathematics	Academic Department Mathematics	School Science, Tech, Engr & Math
Course Description Topics include applications of the integral, techniques of integration, numerical integration, improper integrals, solutions of separable differential equations, infinite series, polynomial approximations of functions, power series, Taylor and Maclaurin series, and parametric and polar equations. Utilizes numerical, graphical, and algebraic approaches whenever possible. Includes applications throughout the course. Requires a non-graphing scientific calculator for some formal assessments, access to a free graphing utility application to support learning and during informal assessments, and access to an online homework system.

Credit for Prior College Level Learning (CPCLL) Details

A student may receive credit for MATH183 Calculus II by earning one of the minimum scores from the following exams:

- 1. At least 3 on the Advanced Placement (AP) Calculus BC test, or
- 2. At least 5 on the International Baccalaureate-Higher Level (IB-HL) Further Mathematics Exam.

Goals, Topics, and Objectives

Course Goals

- 1. To study the nature and significance of calculus for students of science, technology, engineering, and mathematics disciplines.
- 2. To demonstrate various applications of calculus to problems from the social sciences, physical sciences, and engineering.
- 3. To present an exposition of calculus that incorporates graphical, numerical, and algebraic analysis, without undue emphasis on theoretical abstraction or routine mechanical manipulation.
- 4. To use technology to illustrate calculus concepts and verify calculus solutions to application problems.
- 5. To provide students with an exposure to the logical reasoning of mathematics.

Core Course Topics

- 1. Applications of Integration
 - 1. Compute areas of regions between two curves.
 - 2. Compute the volumes of solids of revolution formed by revolving a region about horizontal or vertical lines using the Disk and the Washer Methods.
 - 3. Compute the arc length of a curve.
 - 4. Solve physical science problems involving mass, work, and force.
- 2. Integration Techniques
 - 1. Evaluate definite and indefinite integrals using substitution, parts, trigonometric identities, trigonometric substitution, partial fractions, and completing the square.
 - 2. Evaluate definite and indefinite integrals using tables.
 - 3. Approximate definite integrals using the midpoint rule, the trapezoidal rule, and Simpson's Rule, with and without the use of a graphing utility.
- 3. Improper Integrals
 - 1. Evaluate limits using L'Hopital's Rule.
 - 2. Determine whether an improper integral over infinite intervals converges or diverges and, if it converges, find its value.
 - 3. Determine whether an improper integral with an unbounded integrand converges or diverges and, if it converges, find its value.
 - 4. Use improper integrals to solve applications involving volumes of solids of revolution, areas, arc length, and other net change problems.
- 4. Introduction to Differential Equations
 - 1. Determine the order of a differential equation and whether it is linear or nonlinear.
 - 2. Verify that a function is a solution to a given differential equation.
 - 3. Solve separable differential equations.
- 5. Sequences
 - 1. Find the general term of a sequence given the initial terms of the sequence.
 - 2. Determine if a sequence converges or diverges and, if it converges, find its limit.
 - 3. Determine if a sequence is bounded, monotonic, or neither.
 - 4. Determine if a sequence is geometric.
 - 5. Draw a graph that represents a sequence using a graphing utility.
- 6. Infinite Series
 - 1. Determine if an infinite series is geometric and whether it converges or diverges and, if it converges, find the value to which it converges.
 - 2. Determine if an infinite series is telescoping and whether it converges or diverges and, if it converges, find the value to which it converges.
 - 3. Determine if an infinite series converges or diverges using the Divergence Test, the Integral Test, and the p-series Convergence Test.
 - 4. Estimate what a convergent infinite series converges to by using the Remainder Estimate for the Integral Test and a graphing utility.
 - 5. Determine if an infinite series converges or diverges using the Ratio, Root, Comparison, and Limit Comparison Tests.
 - 6. Determine if an infinite alternating series converges or diverges using the Alternating Series Test.
 - 7. Estimate what a convergent alternating series converges to by using the Remainder Theorem for Alternating Series and a graphing utility.
 - 8. Determine if an infinite series converges absolutely or conditionally.
 - 9. Solve application problems involving geometric series.
- 7. Power Series
 - 1. Find the nth-order Taylor polynomial of a given function centered at "a" and use it to approximate the function at a given value.
 - 2. Compute the absolute error in the remainder of a Taylor Polynomial of a given function centered at "a" using Taylor's Theorem along with a graphing utility.
 - 3. Find the interval of convergence and radius of convergence of power series by using the convergence and divergence tests of infinite series.
 - 4. Find a power series of a function by algebraically combining other power series and find the new interval of convergence.
 - 5. Find the derivative and the integral of a power series, the function represented by these processes, and the new interval of convergence for the resulting series.
 - 6. Find a Taylor and a MacLaurin Series for a given function and find the interval of convergence.
 - 7. Find derivatives and integrals using Taylor series, the functions represented by these processes, and the new intervals of convergence.
 - 8. Find limits of functions using Taylor Series.
- 8. Parametric and Polar Equations
 - 1. Graph parametric equations with and without the use of a graphing utility, making sure to indicate the orientation of the curve.
 - 2. Eliminate the parameter (if possible) in parametric equations to obtain Cartesian equations.
 - 3. Find parametric equations corresponding to Cartesian equations.
 - 4. Find dy/dx when y and x are defined in terms of a parameter t.
 - 5. Find the slope of the tangent line to a parametric curve at a specific point.
 - 6. Convert between Cartesian and polar coordinates.

- 7. Graph basic polar curves with and without the use of a graphing utility.
- 8. Find the slope of the tangent line to a polar curve at a specific point.
- 9. Find the points at which a polar curve has a horizontal or a vertical tangent line.
- 10. Find analytically all points of intersection of given polar curves.
- 11. Find the areas of regions bounded by polar curves.
- 12. Find the arc length of a polar curve.

Applications of Integration: Compute areas of regions between two curves.

Applications of Integration: Compute the volumes of solids of revolution formed by revolving a region about horizontal or vertical lines using the Disk and the Washer Methods.

Applications of Integration: Compute the arc length of a curve.

Applications of Integration: Solve physical science problems involving mass, work, and force.

Integration Techniques: Evaluate definite and indefinite integrals using substitution, parts, trigonometric identities, trigonometric substitution, partial fractions, and completing the square.

Integration Techniques: Evaluate definite and indefinite integrals using tables.

Integration Techniques: Approximate definite integrals using the midpoint rule, the trapezoidal rule, and Simpson's Rule, with and without the use of a graphing utility.

Improper Integrals: Evaluate limits using L'Hopital's Rule.

Improper Integrals: Determine whether an improper integral over infinite intervals converges or diverges and, if it converges, find its value.

Improper Integrals: Determine whether an improper integral with an unbounded integrand converges or diverges and, if it converges, find its value.

Improper Integrals: Use improper integrals to solve applications involving volumes of solids of revolution, areas, arc length, and other net change problems.

Introduction to Differential Equations: Determine the order of a differential equation and whether it is linear or nonlinear.

Introduction to Differential Equations: Verify that a function is a solution to a given differential equation.

Introduction to Differential Equations: Solve separable differential equations.

Sequences: Find the general term of a sequence given the initial terms of the sequence.

Sequences: Determine if a sequence converges or diverges and, if it converges, find its limit.

Sequences: Determine if a sequence is bounded, monotonic, or neither.

Sequences: Determine if a sequence is geometric.

Sequences: Draw a graph that represents a sequence using a graphing utility.

Infinite Series: Determine if an infinite series is geometric and whether it converges or diverges and, if it converges, find the value to which it converges.

Infinite Series: Determine if an infinite series is telescoping and whether it converges or diverges and, if it converges, find the value to which it converges.

Infinite Series: Determine if an infinite series converges or diverges using the Divergence Test, the Integral Test, and the p-series Convergence Test.

Infinite Series: Estimate what a convergent infinite series converges to by using the Remainder Estimate for the Integral Test and a graphing utility.

Infinite Series: Determine if an infinite series converges or diverges using the Ratio, Root, Comparison, and Limit Comparison Tests.
Infinite Series: Determine if an infinite alternating series converges or diverges using the Alternating Series Test.
Infinite Series: Estimate what a convergent alternating series converges to by using the Remainder Theorem for Alternating Series and a graphing utility.
Infinite Series: Determine if an infinite series converges absolutely or conditionally.
Infinite Series: Solve application problems involving geometric series.
Power Series: Find the n th-order Taylor polynomial of a given function centered at "a" and use it to approximate the function at a given value.
Power Series: Compute the absolute error in the remainder of a Taylor Polynomial of a given function centered at "a" using Taylor's Theorem along with a graphing utility.
Power Series: Find the interval of convergence and radius of convergence of power series by using the convergence and divergence tests of infinite series.
Power Series: Find a power series of a function by algebraically combining other power series and find the new interval of convergence.
Power Series: Find the derivative and the integral of a power series, the function represented by these processes, and the new interval of convergence for the resulting series.
Power Series: Find a Taylor and a MacLaurin Series for a given function and find the interval of convergence.
Power Series: Find derivatives and integrals using Taylor series, the functions represented by these processes, and the new intervals of convergence.
Power Series: Find limits of functions using Taylor Series.
Parametric and Polar Equations: Graph parametric equations with and without the use of a graphing utility, making sure to indicate the orientation of the curve.
Parametric and Polar Equations: Eliminate the parameter (if possible) in parametric equations to obtain Cartesian equations.
Parametric and Polar Equations: Find parametric equations corresponding to Cartesian equations.
Parametric and Polar Equations: Find dy/dx when y and x are defined in terms of a parameter t .
Parametric and Polar Equations: Find the slope of the tangent line to a parametric curve at a specific point.
Parametric and Polar Equations: Convert between Cartesian and polar coordinates.
Parametric and Polar Equations: Graph basic polar curves with and without the use of a graphing utility.
Parametric and Polar Equations: Find the slope of the tangent line to a polar curve at a specific point.
Parametric and Polar Equations: Find the points at which a polar curve has a horizontal or a vertical tangent line.
Parametric and Polar Equations: Find analytically all points of intersection of given polar curves.
Parametric and Polar Equations: Find the areas of regions bounded by polar curves.
Parametric and Polar Equations: Find the arc length of a polar curve.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

MATH222 - Mathematics for Elementary Teachers II

Overview

Subject Mathematics	Academic Department Mathematics	School Science, Tech, Engr & Math
Course Description For students who are involved in a curriculum for elementary teachers. Topics include rational numbers, proportional reasoning, algebraic reasoning. Also, topics from geometry including Van Hiele levels of understanding, definitions of geometric concepts, measurement, conversions between units, concepts of perimeter, area and volume, derivations of formulas, flat patterns and symmetry; Addresses two aspects of teaching children mathematics - content and pedagogy - focused on Michigan Department of Education Standard for the Preparation of Teachers of Lower Elementary (Pre-K - 3), Upper Elementary (Grades 3 - 6), and Middle Grades (Grades 5 - 9). Also, addresses concept development, algorithms, children's mathematical work, communication skills--both oral and written--important for teaching children, and problem-solving skills.		
Course Pre-requisite(s) MATH121 or MATH122 Math for Elem Teachers I and ENG131 Introduction College Writing , both with a C or better		
Credit Hours 4		
Contact Hours 5		
Course Fee 10	Miscellaneous Department Fee 0	
Academic Level Undergraduate	Michigan Transfer Agreement (MTA) Category Category 3: Mathematics - Applied Degrees, Category 3: Mathematics - Transfer Degrees - Quantitative Literacy Track	
General Education Category Mathematics		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals	
- To strengthen mathematical problem-solving skills pertaining to curricular topics related to the preparation of future elementary school teachers. - To strengthen communication skills, both written and oral, of mathematical ideas. - To strengthen mathematical competence in rational numbers, algebraic and proportional reasoning, and geometry. - To develop pedagogical skills consistent with MDE Core Teaching Practices that are used for teaching mathematics to children.	
Core Course Topics	
- Michigan Department of Education Core Practices - Demonstrate knowledge of leading a group discussion. - Demonstrate knowledge of explaining and modeling content, practices and strategies. - Demonstrate knowledge of eliciting and interpreting individual students' thinking. - Demonstrate knowledge of implementing norms and routines for classroom discourse and work. - Proportional Reasoning - Identify additive and multiplicative comparisons. - Apply the understanding of ratio to a variety of contexts. - Represent proportional situations using a variety of models. - Apply proportional reasoning using the unit-rate method. - Integers - Model integers using a variety of models such as colored chips, number line, and charged particle. - Use the relations of $<$, $>$, and $=$ with integers. - Model and explain integer operations using manipulatives. - Develop and use the rules for integer operations. - Demonstrate knowledge of the properties of integer operations. - Solve problems involving integers. - Decimals (MDE Grades 3 - 6: M.9, M.10, M.11, M.12) - Model decimals using a variety of manipulatives and hand-drawn methods. - Model decimals using a variety of mathematical concepts. - Compare decimals and develop the meaning of $<$, $>$, and $=$ with decimals. - Model and explain decimal operations using manipulatives.	

5. Demonstrate knowledge and understanding of the standard algorithms for decimal operations.
6. Demonstrate proficiency in mental mathematics for decimal operations.
7. Convert between fraction and decimal equivalents for both terminating and repeating decimals.
8. Solve problems involving decimals.
9. Respond to observations of children's mathematical work.
10. Develop sets of problems with varying degrees of difficulty.
5. Algebraic Reasoning (MDE: B-K: M.9, M.10, M.11, M.12.)
1. Apply the concept of variable to problem solving.
2. Demonstrate an understanding of children's approaches to problem solving.
3. Apply equation solving to problem solving.
4. Apply knowledge of functions represented in a variety of forms.
6. Introductory Geometry (MDE: B-K: M.5, M.6, M.7, M.8.)
1. Demonstrate an understanding of the Van Hiele levels of geometric understanding and implications for instruction.
2. Use coordinate grids to locate objects in a variety of contexts.
3. Decompose and recompose shapes.
4. Give descriptions, properties and real-world models of points, rays, lines, planes, line segments and angles.
5. Define terms related to angles and angle relationships.
6. Define various types of polygons and their parts.
7. Identify and model properties of and relationships among various types of polygons.
8. Describe, classify and understand relationships among types of 2- and 3-dimensional objects.
9. Define various types of polyhedra and curved shapes in 3 dimensions.
10. Identify and model properties of and relationships among various types of polyhedra and curved shapes in 3 dimensions.
11. Perform translations, rotations, reflections and combinations of these transformations on geometric figures.
12. Describe and analyze tessellations with polygons, particularly but not exclusively, with regular polygons.
7. Concepts of Measurement (MDE: B-K: M.17, M.18, M.19, M.20)
1. Develop the concepts of perimeter, area and volume using non-standard units and appropriate tools and units.
2. Measure with standard units (English and metric) and nonstandard units for length, area and volume.
3. Convert between various units, including those of length, area and volume, by using proportions and dimensional analysis.
4. Do "rough" conversions between the metric system and the English system.
5. Find the perimeter of a geometric figure, including polygons and circles.
6. Derive and apply area formulas to find areas of rectangles, squares, triangles, parallelograms, trapezoids and circles.
8. Data Analysis (MDE: B-K: M. 21, M.22, M. 23, M.24)
1. Unpack mathematical content and identify mathematical competence for collecting, representing, using and organizing information
2. Use concrete materials in purposeful, relevant activities for collecting, representing, using and organizing information.
3. Use graphs to interpret data.
Michigan Department of Education Core Practices: Demonstrate knowledge of leading a group discussion.
Michigan Department of Education Core Practices: Demonstrate knowledge of explaining and modeling content, practices and strategies.
Michigan Department of Education Core Practices: Demonstrate knowledge of eliciting and interpreting individual students' thinking.
Michigan Department of Education Core Practices: Demonstrate knowledge of implementing norms and routines for classroom discourse and work.
Proportional Reasoning: Identify additive and multiplicative comparisons.
Proportional Reasoning: Apply the understanding of ratio to a variety of contexts.
Proportional Reasoning: Represent proportional situations using a variety of models.
Proportional Reasoning: Apply proportional reasoning using the unit-rate method.
Integers: Model integers using a variety of models such as colored chips, number line, and charged particle.
Integers: Use the relations of <, >, and = with integers.
Integers: Model and explain integer operations using manipulatives.
Integers: Develop and use the rules for integer operations.
Integers: Demonstrate knowledge of the properties of integer operations.
Integers: Solve problems involving integers.

Decimals: Model decimals using a variety of manipulatives and hand-drawn methods.
Decimals: Model decimals using a variety of mathematical concepts.
Decimals: Compare decimals and develop the meaning of <, >, and = with decimals.
Decimals: Model and explain decimal operations using manipulatives.
Decimals: Demonstrate knowledge and understanding of the standard algorithms for decimal operations.
Decimals: Demonstrate proficiency in mental mathematics for decimal operations.
Decimals: Convert between fraction and decimal equivalents for both terminating and repeating decimals.
Decimals: Solve problems involving decimals.
Decimals: Respond to observations of children's mathematical work.
Decimals: Develop sets of problems with varying degrees of difficulty.
Algebraic Reasoning: Apply the concept of variable to problem solving.
Algebraic Reasoning: Demonstrate an understanding of children's approaches to problem solving.
Algebraic Reasoning: Apply equation solving to problem solving.
Algebraic Reasoning: Apply knowledge of functions represented in a variety of forms.
Introductory Geometry: Demonstrate an understanding of the Van Hiele levels of geometric understanding and implications for instruction.
Introductory Geometry: Use coordinate grids to locate objects in a variety of contexts.
Introductory Geometry: Decompose and recompose shapes.
Introductory Geometry: Give descriptions, properties and real-world models of points, rays, lines, planes, line segments and angles.
Introductory Geometry: Define terms related to angles and angle relationships.
Introductory Geometry: Define various types of polygons and their parts.
Introductory Geometry: Identify and model properties of and relationships among various types of polygons.
Introductory Geometry: Describe, classify and understand relationships among types of 2- and 3-dimensional objects.
Introductory Geometry: Define various types of polyhedra and curved shapes in 3 dimensions.
Introductory Geometry: Identify and model properties of and relationships among various types of polyhedra and curved shapes in 3 dimensions.
Introductory Geometry: Perform translations, rotations, reflections and combinations of these transformations on geometric figures.
Introductory Geometry: Describe and analyze tessellations with polygons, particularly but not exclusively, with regular polygons.
Concepts of Measurement: Develop the concepts of perimeter, area and volume using non-standard units and appropriate tools and units.

Concepts of Measurement: Measure with standard units (English and metric) and nonstandard units for length, area and volume.
Concepts of Measurement: Convert between various units, including those of length, area and volume, by using proportions and dimensional analysis.
Concepts of Measurement: Do "rough" conversions between the metric system and the English system.
Concepts of Measurement: Find the perimeter of a geometric figure, including polygons and circles.
Concepts of Measurement: Derive and apply area formulas to find areas of rectangles, squares, triangles, parallelograms, trapezoids and circles.
Data Analysis: Unpack mathematical content and identify mathematical competence for collecting, representing, using and organizing information.
Data Analysis: Use concrete materials in purposeful, relevant activities for collecting, representing, using and organizing information.
Data Analysis: Use graphs to interpret data.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
- Pre-Education students are required to create an e-portfolio as part of their academic work at HFC. Instructors must include a minimum of three e-portfolio assignments as part of course work. These assignments will be stored in each student's e-portfolio. - All students will be required to complete online homework. This online homework must be weighted in such a manner so that it is worth between six percent (6%) and twelve percent (12%) of the final course grade. - All students will be required to complete a comprehensive final examination that assesses the learning of all course objectives. This exam must be weighted in a manner so that this exam score is worth a minimum of fifteen percent (15%) of the final course grade. In selected semesters this exam may be a common exam administered to all sections of MATH 222. - All students will be required to complete journal assignments. - Additional assessment of student achievement may include assignments, quizzes, and exams. - These application problems must not only be included on chapter exams but also on the final exam.	
General Course Requirements and Recommendations	
- Application problems must be covered in all mathematics courses. Every section in any course outline that includes application problems must be covered. - A scientific calculator is required of each student.

MATH275 - Discrete Mathematics

Overview

Subject Mathematics	Academic Department Mathematics	School Science, Tech, Engr & Math
Course Description For students in a computer engineering or computer science program. Covers logic, methods of proof, set theory, algorithms, recursion, correctness, relations, partial orderings, graphs, trees, Boolean algebra, grammars, and finite-state machines. Includes various applications throughout the course. Requires a non-graphing scientific calculator for some formal assessments, access to a free graphing utility application to support learning and during informal assessments, and access to an online homework system.		
Course Pre-requisite(s) MATH180 Calculus 1 with a C or better OR concurrent enrollment in MATH180 Calculus 1		
Credit Hours 4		
Contact Hours 5		
Course Fee 10	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category Mathematics	Michigan Transfer Agreement (MTA) Category Category 3: Mathematics - Applied Degrees, Category 3: Mathematics - Transfer Degrees - College Algebra Track	
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals
1. To provide an introduction to the mathematical reasoning required to read, comprehend, and construct mathematical arguments.
2. To provide methods for working with discrete structures-the abstract mathematical structures used to represent discrete objects and the relationships between these objects.
3. To demonstrate classes of problems solved by the specification of algorithms.
4. To present applications of discrete mathematics-in particular, applications to computer science.

Core Course Topics
1. Logic and Proof
1. Define the negation of a proposition.
2. Define (using truth tables) the disjunction, conjunction, exclusive or, conditional, and biconditional of the propositions p and q.
3. Define the converse, inverse, and contrapositive of a conditional statement.
4. Determine whether two propositions are logically equivalent.
5. Determine whether an argument is valid.
6. Describe what is meant by, and give examples of, direct proofs and proofs by contradiction.
7. Prove a biconditional statement.
8. Apply the rules of logic to evaluate and construct mathematical arguments and proofs.
2. Sets and Functions
1. Determine whether one set is a subset of another.
2. Determine the cardinality of a set.
3. Determine the union, intersection, difference, and symmetric difference of two sets.
4. Explain the relationship between logical equivalences and set identities.
5. Define the domain, codomain, and range of a function.
6. Define what it means for a function to be one-to-one or onto and give examples of functions that are or are not one-to-one or onto.
7. Define and apply various types of functions encountered in discrete structures, including the ceiling and floor functions and recursive functions.
3. Algorithms
1. Describe algorithms, including search and sort algorithms, that will accomplish various tasks.
2. Express an algorithm in pseudocode.
3. Determine properties of an algorithm, including its computational complexity.
4. Induction and Recursion
1. Prove a statement by mathematical induction.
2. Prove a statement using strong induction.
3. Give recursive definitions and describe recursive algorithms.
4. Solve problems involving basic results from number theory, matrices, sequences and summations, and recursive definitions.
5. Use assertions to determine the correctness of a program.
5. Counting
1. Solve problems, including probability problems, that require counting principles (including the product rule, the sum rule, and principle of inclusion-exclusion).
2. State, and solve problems involving, the Pigeonhole Principle.
3. Determine, and solve problems involving, the number of permutations or combinations of n objects taken r at a time.
6. Relations
1. Describe properties of a relation, including an n-ary relation.
2. Represent a relation using various methods.
3. Determine whether a relation is an equivalence relation.
4. Determine whether a relation is a partial ordering.
7. Graphs and Trees
1. Describe properties of graphs, including paths and connectedness.
2. Determine whether a graph is bipartite.
3. Determine whether two graphs are isomorphic.
4. Determine whether a graph is a tree.
5. Apply results relating the numbers of edges and vertices of various types in trees.
8. Boolean Algebra
1. Compute the complement of a Boolean function.
2. Compute the sum and product of Boolean functions.
9. Modeling Computation
1. Describe properties of finite-state machines.

Logic and Proof: Define the negation of a proposition.
Logic and Proof: Define (using truth tables) the disjunction, conjunction, exclusive or, conditional, and biconditional of the propositions p and q.
Logic and Proof: Define the converse, inverse, and contrapositive of a conditional statement.
Logic and Proof: Determine whether two propositions are logically equivalent.
Logic and Proof: Determine whether an argument is valid.
Logic and Proof: Describe what is meant by, and give examples of, direct proofs and proofs by contradiction.
Logic and Proof: Prove a biconditional statement.
Logic and Proof: Apply the rules of logic to evaluate and construct mathematical arguments and proofs.
Sets and Functions: Determine whether one set is a subset of another.
Sets and Functions: Determine the cardinality of a set.

Sets and Functions: Determine the union, intersection, difference, and symmetric difference of two sets.
Sets and Functions: Explain the relationship between logical equivalences and set identities.
Sets and Functions: Define the domain, codomain, and range of a function.
Sets and Functions: Define what it means for a function to be one-to-one or onto and give examples of functions that are or are not one-to-one or onto.
Sets and Functions: Define and apply various types of functions encountered in discrete structures, including the ceiling and floor functions and recursive functions.
Algorithms: Describe algorithms, including search and sort algorithms, that will accomplish various tasks.
Algorithms: Express an algorithm in pseudocode.
Algorithms: Determine properties of an algorithm, including its computational complexity.
Induction and Recursion: Prove a statement by mathematical induction.
Induction and Recursion: Prove a statement using strong induction.
Induction and Recursion: Give recursive definitions and describe recursive algorithms.
Induction and Recursion: Solve problems involving basic results from number theory, matrices, sequences and summations, and recursive definitions.
Induction and Recursion: Use assertions to determine the correctness of a program.
Counting: Solve problems, including probability problems, that require counting principles (including the product rule, the sum rule, and principle of inclusion-exclusion).
Counting: State, and solve problems involving, the Pigeonhole Principle.
Counting: Determine, and solve problems involving, the number of permutations or combinations of n objects taken r at a time.
Relations: Describe properties of a relation, including an n -ary relation.
Relations: Represent a relation using various methods.
Relations: Determine whether a relation is an equivalence relation.
Relations: Determine whether a relation is a partial ordering.
Graphs and Trees: Describe properties of graphs, including paths and connectedness.
Graphs and Trees: Determine whether a graph is bipartite.
Graphs and Trees: Determine whether two graphs are isomorphic.
Graphs and Trees: Determine whether a graph is a tree.
Graphs and Trees: Apply results relating the numbers of edges and vertices of various types in trees.
Boolean Algebra: Compute the complement of a Boolean function.
Boolean Algebra: Compute the sum and product of Boolean functions.
Modeling Computation: Describe properties of finite-state machines.

Assessment, Requirements, and Outcomes

- Assessment of Academic Achievement
- All students will be required to complete a comprehensive final examination that assesses the learning of all course objectives. This final exam must be weighted in a manner so that this exam score is worth a minimum of fifteen percent (15%) of the final course grade. In selected semesters this final exam may be a common final exam administered to all sections of [MATH275 Discrete Mathematics](#).
 - All students will be required to complete at least two proctored on-campus exams. The cumulative value of those exams must be at least 40% of a student's final grade.
 - Additional assessment of student achievement may include assignments, quizzes, projects, and exams.
 - For proctored in-person formal assessments (quizzes, tests, and exams) the only technology students can use is a non-graphing scientific calculator. Quizzes, tests, and exams may have non-calculator parts. In some classes, projects and informal assessments may require students to use a free graphing application to support learning.
 - All relevant application problems must be assessed throughout the semester. Application problems must be included in the final exam.
- General Course Requirements and Recommendations
- A non-graphing scientific calculator is required for proctored in-person formal assessments.
 - Free graphing applications will be used to support learning, informal assessments, and class work.
 - Access to an online homework management system is also required.
 - Application problems must be covered in all mathematics courses.

MATH280 - Calculus III

Overview

Subject Mathematics	Academic Department Mathematics	School Science, Tech, Engr & Math
Course Description Covers topics such as the calculus of vector-valued functions, the differential calculus of functions of more than one variable, directional derivatives, gradients, partial derivatives, multiple integration, vector fields, and line integrals. Various applications are covered throughout the course. Utilizes numerical, graphical, and algebraic approaches whenever possible. Requires a non-graphing scientific calculator for some formal assessments, access to a free graphing utility application to support learning and during informal assessments, and access to an online homework system.		
Course Pre-requisite(s) <u>MATH183 Calculus II</u> with a C or better		
Credit Hours 5		
Contact Hours 5		
Course Fee 10	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category Mathematics	Michigan Transfer Agreement (MTA) Category Category 3: Mathematics - Applied Degrees, Category 3: Mathematics - Transfer Degrees - College Algebra Track	
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

- Course Goals
- To study the nature and significance of calculus for students of science, technology, engineering, and mathematics disciplines.
 - To demonstrate various applications of calculus to problems from the social sciences, physical sciences, and engineering.
 - To present an exposition of calculus that incorporates graphical, numerical, and algebraic analysis, without undue emphasis on theoretical abstraction or routine mechanical manipulation.
 - To use technology to illustrate calculus concepts and verify calculus solutions to application problems.
 - To provide students with an exposure to the logical reasoning of mathematics.
- Core Course Topics
- Vectors and Vector -Valued Functions
 - Perform vector addition and scalar multiplication of vectors algebraically and geometrically.
 - Identify and solve problems involving vectors in the plane and in 3-space both geometrically and algebraically.
 - Compute the dot product for vectors in 2 and 3 dimensions and the cross product for vectors in 3 dimensions.
 - Use the dot and cross products in applications such as computing the angle between 2 vectors, vector projections, scalar components, work and torque.
 - Construct vector-valued functions in order to describe lines and curves in 3-space.
 - Determine limits of vector-valued functions using numerical, algebraic and graphical methods.
 - Determine continuity or discontinuity of vector-valued functions.
 - Determine derivatives and integrals of vector-valued functions.
 - Find the vector components of velocity and acceleration for particle motion in 3-space.
 - Find the length of a curve in 3-space and be able to parameterize a given curve with respect to arc length.
 - For a given curve, determine the unit tangent, unit normal, unit binormal and curvature.
 - Functions of Several Variables
 - Determine the equation of a plane in 3-space using both the vector form and the scalar form.
 - Write the equation for a given quadratic surface.
 - Draw accurate and useful renditions of a surface given an equation by hand and using appropriate graphing application software.
 - Use graphs of level curves (contour maps) to obtain information about an arbitrary surface.
 - Determine limits of functions of several variables using numerical, algebraic and graphical methods.
 - Determine continuity or discontinuity of functions of several variables.
 - Find the first and second partial derivatives of functions using differentiation rules.
 - Determine the gradient and directional derivatives for a function of several variables.
 - Use the appropriate chain rule to differentiate composite functions of several variables.

10. Use the gradient and directional derivatives to find instantaneous rates of change and related rates of change in application problems.
11. Use the gradient and directional derivatives and the Second Partial's Test to find properties of functions of several variables: maxima and minima and saddle points, and use this information to sketch the graph of functions.
12. Solve optimization problems using the method of Lagrange Multipliers.
13. Use the gradient and tangent plane to determine the linear approximation of a function of several variables.
3. Integration of Functions of Several Variables

1. Integrate functions of 2 variables over regions in the xy-plane using Riemann sums and iterated integrals with respect to rectangular and/or polar coordinates.

2. Integrate functions of 3 variables over 3-dimensional regions using Riemann sums and iterated integrals with respect to rectangular, cylindrical, or spherical coordinates.

3. Use multiple integrals to solve application problems involving areas, volumes, masses, first and second moments, centers of mass, and moments of inertia.
4. Vector Fields

1. Sketch vector fields by hand.

2. Interpret vector fields as models of fluid flow.

3. Compute line integrals over curves in 2- or 3-space.

4. Determine whether a vector field is conservative or not.

5. Use the Fundamental Theorem for Line Integrals to compute line integrals under appropriate conditions.

6. Use Green's Theorem in the plane in flux form or in circulation form to compute line integrals.

7. Compute the 2-dimensional divergence and curl for a vector field in 2-dimensions.

8. Use line integrals to solve application problems involving work, mass, circulation and heat flux.

9. Compute the 3-dimensional divergence and curl for a vector field in 3-dimensions.

10. Compute surface integrals of scalar-valued functions.

11. Compute surface integrals of vector fields.

12. Use Stokes' Theorem to evaluate line and surface integrals.

13. Use the Divergence Theorem to calculate flux.

Vectors and Vector-Valued Functions: Perform vector addition and scalar multiplication of vectors algebraically and geometrically.
Vectors and Vector-Valued Functions: Identify and solve problems involving vectors in the plane and in 3-space both geometrically and algebraically.
Vectors and Vector-Valued Functions: Compute the dot product for vectors in 2 and 3 dimensions and the cross product for vectors in 3 dimensions.
Vectors and Vector-Valued Functions: Use the dot and cross products in applications such as computing the angle between 2 vectors, vector projections, scalar components, work and torque.
Vectors and Vector-Valued Functions: Construct vector-valued functions in order to describe lines and curves in 3-space.
Vectors and Vector-Valued Functions: Determine limits of vector-valued functions using numerical, algebraic and graphical methods.
Vectors and Vector-Valued Functions: Determine continuity or discontinuity of vector-valued functions.
Vectors and Vector-Valued Functions: Determine derivatives and integrals of vector-valued functions.
Vectors and Vector-Valued Functions: Find the vector components of velocity and acceleration for particle motion in 3-space.
Vectors and Vector-Valued Functions: Find the length of a curve in 3-space and be able to parameterize a given curve with respect to arc length.
Vectors and Vector-Valued Functions: For a given curve, determine the unit tangent, unit normal, unit binormal and curvature.
Functions of Several Variables: Determine the equation of a plane in 3-space using both the vector form and the scalar form.
Functions of Several Variables: Write the equation for a given quadratic surface.
Functions of Several Variables: Draw accurate and useful renditions of a surface given an equation by hand and using appropriate graphing application software.
Functions of Several Variables: Use graphs of level curves (contour maps) to obtain information about an arbitrary surface.
Functions of Several Variables: Determine limits of functions of several variables using numerical, algebraic and graphical methods.

Functions of Several Variables: Determine continuity or discontinuity of functions of several variables.
Functions of Several Variables: Find the first and second partial derivatives of functions using differentiation rules.
Functions of Several Variables: Determine the gradient and directional derivatives for a function of several variables.
Functions of Several Variables: Use the appropriate chain rule to differentiate composite functions of several variables.
Functions of Several Variables: Use the gradient and directional derivatives to find instantaneous rates of change and related rates of change in application problems.
Functions of Several Variables: Use the gradient and directional derivatives and the Second Partial's Test to find properties of functions of several variables: maxima and minima and saddle points, and use this information to sketch the graph of functions.
Functions of Several Variables: Solve optimization problems using the method of Lagrange Multipliers.
Functions of Several Variables: Use the gradient and tangent plane to determine the linear approximation of a function of several variables.
Integration of Functions of Several Variables: Integrate functions of 2 variables over regions in the xy-plane using Riemann sums and iterated integrals with respect to rectangular and/or polar coordinates.
Integration of Functions of Several Variables: Integrate functions of 3 variables over 3-dimensional regions using Riemann sums and iterated integrals with respect to rectangular, cylindrical, or spherical coordinates.
Integration of Functions of Several Variables: Use multiple integrals to solve application problems involving areas, volumes, masses, first and second moments, centers of mass, and moments of inertia.
Vector Fields: Sketch vector fields by hand.
Vector Fields: Interpret vector fields as models of fluid flow.
Vector Fields: Compute line integrals over curves in 2- or 3-space.
Vector Fields: Determine whether a vector field is conservative or not.
Vector Fields: Use the Fundamental Theorem for Line Integrals to compute line integrals under appropriate conditions.
Vector Fields: Use Green's Theorem in the plane in flux form or in circulation form to compute line integrals.
Vector Fields: Compute the 2-dimensional divergence and curl for a vector field in 2-dimensions.
Vector Fields: Use line integrals to solve application problems involving work, mass, circulation and heat flux.
Vector Fields: Compute the 3-dimensional divergence and curl for a vector field in 3-dimensions.
Vector Fields: Compute surface integrals of scalar-valued functions.
Vector Fields: Compute surface integrals of vector fields.
Vector Fields: Use Stokes' Theorem to evaluate line and surface integrals.
Vector Fields: Use the Divergence Theorem to calculate flux.

Assessment, Requirements, and Outcomes

- Assessment of Academic Achievement
- All students will be required to complete a comprehensive final examination that assesses the learning of all course objectives. This final exam must be weighted in a manner so that this exam score is worth a minimum of fifteen percent (15%) of the final course grade. In selected semesters this final exam may be a common final exam administered to all sections of [MATH280 Calculus III](#).

- All students will be required to complete at least two proctored on-campus exams. The cumulative value of those exams must be at least 40% of a student's final grade.
 - All students will be required to complete online homework. This online homework must be weighted in such a manner so that it is worth between six percent (6%) and twelve percent (12%) of the final course grade.
 - Additional assessment of student achievement may include assignments, quizzes, projects, and exams.
 - For proctored in-person formal assessments (quizzes, tests, and exams) the only technology students can use is a non-graphing scientific calculator. MATH283 - Linear Algebra

Overview

Subject Mathematics	Academic Department Mathematics	School Science, Tech, Engr & Math
Course Description Introduces matrix and linear algebra. Covers systems of linear equations, matrix operations and properties of matrices, determinants, the n-dimensional real vector space, general vector spaces, inner product spaces, linear transformations, and eigenvalues and eigenvectors. Presents various applications. Requires a non-graphing scientific calculator for some formal assessments, access to a free graphing utility application to support learning and during informal assessments, and access to an online homework system.		
Course Pre-requisite(s) MATH183 Calculus II with a C or better

Credit for Prior College Level Learning (CPCLL) Details Other Exam Details A student may receive credit for <u>MATH283 Linear Algebra</u> by earning at least 5 on the International Baccalaureate-Higher Level (IB-HL) Further Mathematics Exam.		

Goals, Topics, and Objectives

- Course Goals**
1. To provide an introduction to the concepts and techniques of linear algebra and matrix algebra for students of engineering, mathematics, the physical sciences, and the social sciences.
 2. To illustrate some of the widespread applications of matrix algebra and linear algebra.
 3. To demonstrate the axiomatic method in the context of matrix theory and vector space theory.
- Core Course Topics**
1. Systems of Linear Equations
 1. Solve a system of linear equations using Gaussian elimination or Gaussian elimination with back-substitution.
 2. Solve a homogeneous system of linear equations.
 3. Determine whether a matrix is in row-echelon or reduced-row-echelon form.
 4. Use elementary row operations on an augmented matrix, perhaps combined with back-substitution, to solve a system of linear equations.
 5. Set up and solve a system of equations to fit a polynomial function to a set of data points.
 6. Write and solve a system of linear equations in the form $Ax = b$.
 2. Matrices
 1. Use properties of matrix operations to solve matrix equations.
 2. Find the transpose of a matrix, the inverse of a matrix, and the inverse of a matrix product (if they exist).
 3. Factor a matrix into a product of elementary matrices.
 4. Complete proofs involving matrix properties and operations.
 5. Solve an application problem involving stochastic matrices, cryptography, input-output models, or least-squares regression (two of these four).
 3. Determinants
 1. Use expansion by cofactors to find the determinant of a matrix.
 2. Use elementary row or column operations to evaluate the determinant of a matrix.
 3. State conditions that yield zero determinants.
 4. Find the determinants of elementary and triangular matrices.
 5. Use the determinant to determine whether a matrix is singular or nonsingular.
 6. Recognize equivalent conditions for a nonsingular matrix.
 7. Complete proofs involving determinant properties and operations.
 4. Vector Spaces
 1. Perform vector operations on vectors in R^n .
 2. Prove or disprove that a given set of vectors with two operations is a vector space.

3. Prove or disprove that a given subset W of a vector space V is a subspace of V .
 4. Write a linear combination of a finite set of vectors from a vector space V .
 5. Determine whether a set S of vectors in a vector space V spans V .
 6. Determine whether a set S of vectors in a vector space V is linearly independent.
 7. Determine whether a set S of vectors in a vector space V is a basis for V .
 8. State standard bases for the vector spaces R^n , $M_{m,n}$, and P_n .
 9. Find a basis for, and the dimension of, the column space or row space of a matrix.
 10. Find a basis for, and the dimension of, the nullspace of a matrix.
 11. Express the general solution of a consistent system $Ax = b$ in the form $xp + xh$.
 12. Find the transition matrix from a basis B to a different basis B' in R^n .
 13. Find the coordinate vector for a vector in a vector space V with respect to a nonstandard basis.
 14. Apply the concept of linear independence to find the general solution of a differential equation or apply the concept of a transition matrix to perform a rotation of axes to graph a conic section (one of these two).
5. Inner Product Spaces
1. Find the length of a vector and a unit vector in the same direction as (or in the opposite direction from) a vector.
 2. Given two vectors, find the distance between them, their dot product, and the angle between them.
 3. Determine whether two vectors are orthogonal, parallel, or neither.
 4. Prove or disprove that a given function defines an inner product on a vector space.
 5. Find the inner product of two vectors.
 6. Find the projection of a vector onto a vector or subspace.
 7. Determine whether a set of vectors is orthogonal, orthonormal, or neither.
 8. Find the coordinates of a vector relative to an orthonormal basis.
 9. Use the Gram-Schmidt orthonormalization process.
 10. Find an orthonormal basis for the solution space of a homogeneous system.
 11. Find the QR-factorization of an $m \times n$ matrix of rank n .
6. Linear Transformations
1. Prove or disprove that a given function from one vector space to another is a linear transformation.
 2. Find the image and preimage of a vector under a linear transformation.
 3. Find the kernel, the range, and the bases for the kernel and the range of a linear transformation T , and determine the nullity and rank of T .
 4. Determine whether a linear transformation is one-to-one or onto.
 5. Determine whether two vector spaces are isomorphic.
 6. Find the standard matrix for a linear transformation.
 7. Use the standard matrix for a linear transformation to find the image of a vector.
 8. Find the standard matrix of a composition of two linear transformations.
 9. Determine whether a linear transformation is invertible, and find its inverse if it exists.
 10. Find the matrix of a linear transformation relative to a nonstandard basis.
 11. Use the definition and properties of similar matrices.
 12. Identify linear transformations defined by reflections, expansions, contractions, shears, and/or rotations.
7. Eigenvalues and Eigenvectors
1. Find the characteristic equation and the eigenvalues and corresponding eigenvectors of a matrix A .
 2. Determine whether a matrix is diagonalizable or orthogonal.
 3. Find a nonsingular matrix P that diagonalizes a matrix A (if possible).
 4. Find, if possible, a basis B for the domain of a linear transformation T such that the matrix of T relative to B is diagonal.
 5. Find the eigenvalues of a symmetric matrix and determine the dimension of the corresponding eigenspace.
 6. Find an orthogonal matrix P that diagonalizes A .
 7. Use an age transition matrix to solve a population problem, solve a system of first-order linear differential equations, find a matrix of the quadratic form associated with a quadratic equation, or perform a rotation of axes to rotate a quadric surface (two of these four).

Systems of Linear Equations: Solve a system of linear equations using Gaussian elimination or Gaussian elimination with back-substitution.

Systems of Linear Equations: Solve a homogeneous system of linear equations.

Systems of Linear Equations: Determine whether a matrix is in row-echelon or reduced-row-echelon form.

Systems of Linear Equations: Use elementary row operations on an augmented matrix, perhaps combined with back-substitution, to solve a system of linear equations.

Systems of Linear Equations: Set up and solve a system of equations to fit a polynomial function to a set of data points.

Systems of Linear Equations: Write and solve a system of linear equations in the form $Ax = b$.

Matrices: Use properties of matrix operations to solve matrix equations.

Matrices: Find the transpose of a matrix, the inverse of a matrix, and the inverse of a matrix product (if they exist).

Matrices: Factor a matrix into a product of elementary matrices.

Matrices: Complete proofs involving matrix properties and operations.

Matrices: Solve an application problem involving stochastic matrices, cryptography, input-output models, or least-squares regression (two of these four).

Determinants: Use expansion by cofactors to find the determinant of a matrix.

Determinants: Use elementary row or column operations to evaluate the determinant of a matrix.

Determinants: State conditions that yield zero determinants.

Determinants: Find the determinants of elementary and triangular matrices.

Determinants: Use the determinant to determine whether a matrix is singular or nonsingular.

Determinants: Recognize equivalent conditions for a nonsingular matrix.

Determinants: Complete proofs involving determinant properties and operations.

Vector Spaces: Perform vector operations on vectors in $\mathbb{R}^n$.

Vector Spaces: Prove or disprove that a given set of vectors with two operations is a vector space.

Vector Spaces: Prove or disprove that a given subset W of a vector space V is a subspace of V .

Vector Spaces: Write a linear combination of a finite set of vectors from a vector space V .

Vector Spaces: Determine whether a set S of vectors in a vector space V spans V .

Vector Spaces: Determine whether a set S of vectors in a vector space V is linearly independent.

Vector Spaces: Determine whether a set S of vectors in a vector space V is a basis for V .

Vector Spaces: State standard bases for the vector spaces $\mathbb{R}^n$, $M_{m,n}$, and P_n .

Vector Spaces: Find a basis for, and the dimension of, the column space or row space of a matrix.

Vector Spaces: Find a basis for, and the dimension of, the nullspace of a matrix.

Vector Spaces: Express the general solution of a consistent system $Ax = b$ in the form $x_p + x_h$.

Vector Spaces: Find the transition matrix from a basis B to a different basis B' in $\mathbb{R}^n$.

Vector Spaces: Find the coordinate vector for a vector in a vector space V with respect to a nonstandard basis.

Vector Spaces: Apply the concept of linear independence to find the general solution of a differential equation or apply the concept of a transition matrix to perform a rotation of axes to graph a conic section (one of these two).

Inner Product Spaces: Find the length of a vector and a unit vector in the same direction as (or in the opposite direction from) a vector.

Inner Product Spaces: Given two vectors, find the distance between them, their dot product, and the angle between them.

Inner Product Spaces: Determine whether two vectors are orthogonal, parallel, or neither.

Inner Product Spaces: Prove or disprove that a given function defines an inner product on a vector space.

Inner Product Spaces: Find the inner product of two vectors.

Inner Product Spaces: Find the projection of a vector onto a vector or subspace.

Inner Product Spaces: Determine whether a set of vectors is orthogonal, orthonormal, or neither.

Inner Product Spaces: Find the coordinates of a vector relative to an orthonormal basis.

Inner Product Spaces: Use the Gram-Schmidt orthonormalization process.

Inner Product Spaces: Find an orthonormal basis for the solution space of a homogeneous system.

Inner Product Spaces: Find the QR-factorization of an $m \times n$ matrix of rank n .

Linear Transformations: Prove or disprove that a given function from one vector space to another is a linear transformation.

Linear Transformations: Find the image and preimage of a vector under a linear transformation.

Linear Transformations: Find the kernel, the range, and the bases for the kernel and the range of a linear transformation T , and determine the nullity and rank of T .

Linear Transformations: Determine whether a linear transformation is one-to-one or onto.

Linear Transformations: Determine whether two vector spaces are isomorphic.

Linear Transformations: Find the standard matrix for a linear transformation.

Linear Transformations: Use the standard matrix for a linear transformation to find the image of a vector.

Linear Transformations: Find the standard matrix of a composition of two linear transformations.

Linear Transformations: Determine whether a linear transformation is invertible, and find its inverse if it exists.

Linear Transformations: Find the matrix of a linear transformation relative to a nonstandard basis.

Linear Transformations: Use the definition and properties of similar matrices.

Linear Transformations: Identify linear transformations defined by reflections, expansions, contractions, shears, and/or rotations.

Eigenvalues and Eigenvectors: Find the characteristic equation and the eigenvalues and corresponding eigenvectors of a matrix A .

Eigenvalues and Eigenvectors: Determine whether a matrix is diagonalizable or orthogonal.

Eigenvalues and Eigenvectors: Find a nonsingular matrix P that diagonalizes a matrix A (if possible).

Eigenvalues and Eigenvectors: Find, if possible, a basis B for the domain of a linear transformation T such that the matrix of T relative to B is diagonal.

Eigenvalues and Eigenvectors: Find the eigenvalues of a symmetric matrix and determine the dimension of the corresponding eigenspace.

Eigenvalues and Eigenvectors: Find an orthogonal matrix P that diagonalizes A .

Eigenvalues and Eigenvectors: Use an age transition matrix to solve a population problem, solve a system of first-order linear differential equations, find a matrix of the quadratic form associated with a quadratic equation, or perform a rotation of axes to rotate a quadric surface (two of these four).

Assessment, Requirements, and Outcomes

- Assessment of Academic Achievement
- All students will be required to complete a comprehensive final examination that assesses the learning of all course objectives. This final exam must be weighted in a manner so that this exam score is worth a minimum of fifteen percent (15%) of the final course grade. In selected semesters this final exam may be a common final exam administered to all sections of [MATH283 Linear Algebra](#).
 - All students will be required to complete at least two proctored on-campus exams. The cumulative value of those exams must be at least 40% of a student's final grade.
 - All students will be required to complete online homework. This online homework must be weighted in such a manner so that it is worth between six percent (6%) and twelve percent (12%) of the final course grade.
 - Additional assessment of student achievement may include assignments, quizzes, projects, and exams.
 - For proctored in-person formal assessments (quizzes, tests, and exams) the only technology students can use is a non-graphing scientific calculator. Quizzes, tests, and exams may have non-calculator parts. In some classes, projects and informal assessments may require students to use a free graphing application to support learning.
 - All relevant application problems must be assessed throughout the semester. Application problems must be included in the final exam.
- General Course Requirements and Recommendations
- A non-graphing scientific calculator is required for proctored in-person formal assessments.
 - Free graphing applications will be used to support learning, informal assessments, and class work.
 - Access to an online homework management system is also required.
 - Application problems must be covered in all mathematics courses.

MATH288 - Differential Equations

Overview

Subject Mathematics	Academic Department Mathematics	School Science, Tech, Engr & Math
Course Description Introduces ordinary differential equations by means of algebraic, numerical, and graphical analysis (including phase-plane analysis). Examines first order differential equations, second and higher order linear equations, methods for nonhomogeneous second order equations, series solutions, Laplace transforms, linear systems, and linearization of nonlinear systems. Covers various applications throughout the course. Requires a non-graphing scientific calculator for some formal assessments, access to a free graphing utility application to support learning and during informal assessments, and access to an online homework system.		
Course Pre-requisite(s) <u>MATH280 Calculus III</u> with a C or better OR concurrent enrollment in <u>MATH280 Calculus III</u>		
Credit Hours 5		
Contact Hours 5		
Course Fee 10	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category Mathematics	Michigan Transfer Agreement (MTA) Category Category 3: Mathematics - Applied Degrees, Category 3: Mathematics - Transfer Degrees - College Algebra Track	
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

- Course Goals
- To provide an introduction to the nature and significance of differential equations for students of engineering, mathematics, and science.
 - To demonstrate various applications of differential equations to problems from the physical sciences and engineering.
 - To provide methods for solving differential equations that have proved useful in a wide variety of applications.
 - To present an exposition of differential equations that incorporates algebraic, numerical and graphical analysis, without undue emphasis on theoretical abstraction or routine mechanical manipulation.
 - To use technology to graph solutions of ordinary differential equations (ODEs) and to do explorations and projects involving ODEs.
- Core Course Topics
- Introduction to Differential Equations
 - Determine the order of a differential equation and whether it is linear or nonlinear.
 - Verify that a function or family of functions solves a differential equation.
 - Determine parameter values such that a member of a family of solutions solves a given initial-value problem.
 - First-Order Differential Equations
 - Relate a solution curve to the direction field for a differential equation.
 - Solve a separable differential equation.
 - Solve a first-order linear differential equation.
 - Solve an exact differential equation.
 - Use an appropriate substitution to rewrite and solve a differential equation.
 - Apply Euler's method to obtain a numerical approximation of a differential-equation solution-function value.
 - Higher-Order Differential Equations
 - Verify that a set of functions is a fundamental set of solutions of a differential equation.
 - Use reduction of order to find a second solution of a second-order differential equation given one solution.
 - Solve a homogeneous linear differential equation with constant coefficients.
 - Apply the method of undetermined coefficients to solve a nonhomogeneous linear differential equation with constant coefficients.

- Apply the method of variation of parameters to solve a linear second-order differential equation.
 - Solve a Cauchy-Euler equation.
- Series Solutions of Linear Equations
 - Find a Taylor-series solution of an initial-value problem.
 - Find power-series solutions of a differential equation about an ordinary point.
 - Modeling with Differential Equations
 - Solve a problem in the physical sciences (such as a growth or decay problem, a mixture problem, or a Newton's Law of Cooling problem) whose solution utilizes a first-order linear differential equation.
 - Solve a problem in the physical sciences (such as a spring/mass-system problem) whose solution utilizes a second-order linear differential equation.
 - Solve a problem in the sciences (such as a logistic-growth problem) whose solution utilizes a nonlinear differential equation.
 - Solve a problem in the sciences (such as a connected-mixing-tanks problem or a predator-prey problem) whose solution utilizes a system of differential equations.
 - The Laplace Transform
 - Calculate the Laplace transform of a function using the definition of Laplace transform.
 - Use algebraic manipulation or a table to find the Laplace transform of a function or its derivatives.
 - Use algebraic manipulation or a table to find an inverse Laplace transform.
 - Use the Laplace transform to solve an initial-value problem.
 - Use the Laplace transform to solve a system of linear differential equations.
 - Systems of Differential Equations
 - Solve a system of linear differential equations by elimination.
 - Solve a system of linear differential equations by elimination using the Laplace transform.
 - Solve a system of linear differential equations using the eigenvalue method.
 - Analyze the phase plane for a linear system.
 - Linearize a nonlinear system of differential equations.

Introduction to Differential Equations: Determine the order of a differential equation and whether it is linear or nonlinear.

Introduction to Differential Equations: Verify that a function or family of functions solves a differential equation.

Introduction to Differential Equations: Determine parameter values such that a member of a family of solutions solves a given initial-value problem.

First-Order Differential Equations: Relate a solution curve to the direction field for a differential equation.

First-Order Differential Equations: Solve a separable differential equation.

First-Order Differential Equations: Solve a first-order linear differential equation.

First-Order Differential Equations: Solve an exact differential equation.

First-Order Differential Equations: Use an appropriate substitution to rewrite and solve a First-Order Differential Equations: differential equation.

First-Order Differential Equations: Apply Euler's method to obtain a numerical approximation of a differential-equation solution-function value.

Higher-Order Differential Equations: Verify that a set of functions is a fundamental set of solutions of a differential equation.

Higher-Order Differential Equations: Use reduction of order to find a second solution of a second-order differential equation given one solution.

Higher-Order Differential Equations: Solve a homogeneous linear differential equation with constant coefficients.

Higher-Order Differential Equations: Apply the method of undetermined coefficients to solve a nonhomogeneous linear differential equation with constant coefficients.

Higher-Order Differential Equations: Apply the method of variation of parameters to solve a linear second-order differential equation.

Higher-Order Differential Equations: Solve a Cauchy-Euler equation.

Series Solutions of Differential Equations: Find a Taylor-series solution of an initial-value problem.

Series Solutions of Differential Equations: Find power-series solutions of a differential equation about an ordinary point.

Modeling with Differential Equations: Solve a problem in the physical sciences (such as a growth or decay problem, a mixture problem, or a Newton's Law of Cooling problem) whose solution utilizes a first-order linear differential equation.
Modeling with Differential Equations: Solve a problem in the physical sciences (such as a spring/mass-system problem) whose solution utilizes a second-order linear differential equation.
Modeling with Differential Equations: Solve a problem in the sciences (such as a logistic-growth problem) whose solution utilizes a nonlinear differential equation.
Modeling with Differential Equations: Solve a problem in the sciences (such as a connected-mixing-tanks problem or a predator-prey problem) whose solution utilizes a system of differential equations.
The Laplace Transform: Calculate the Laplace transform of a function using the definition of Laplace transform.
The Laplace Transform: Use algebraic manipulation or a table to find the Laplace transform of a function or its derivatives.
The Laplace Transform: Use algebraic manipulation or a table to find an inverse Laplace transform.
The Laplace Transform: Use the Laplace transform to solve an initial-value problem.
The Laplace Transform: Use the Laplace transform to solve a system of linear differential equations.
Systems of Differential Equations: Solve a system of linear differential equations by elimination.
Systems of Differential Equations: Solve a system of linear differential equations by elimination using the Laplace transform.
Systems of Differential Equations: Solve a system of linear differential equations using the eigenvalue method.
Systems of Differential Equations: Analyze the phase plane for a linear system.
Systems of Differential Equations: Linearize a nonlinear system of differential equations.

Assessment, Requirements, and Outcomes

MCA131 - Intoduction to Media Communication

Overview

Subject Media Communication Arts	Academic Department Media Communication Arts	School Liberal Arts
Course Description This course explores the role of media and communication in shaping society, culture, and public opinion across digital, social, and print platforms such as books, radio, TV, film, video games, PR, advertising, social media, global media, and more. Through historical, economic, ethical, and cultural perspectives, students will examine how media affects our daily lives and influences our interactions, values, and understanding of the world.		

Course Pre-requisite(s) Eligible to take ENG131 Introduction College Writing at HFC.	
Credit Hours 3	
Contact Hours 3	
Course Fee 10	Miscellaneous Department Fee 0
Academic Level Undergraduate	
General Education Category Humanities and Fine Arts	Michigan Transfer Agreement (MTA) Category Category 5: Humanities and Fine Arts - Transfer Degrees, Category 5: Humanities and Fine Arts - Applied Degrees
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Other Exam, Other
Credit for Prior College Level Learning (CPCLL) Details Other	

Goals, Topics, and Objectives

Course Goals The goal of this course is to introduce and foster media literacy by examining the history, evolution, and critical issues in electronic, digital, social, and print media. Students will explore how media and communication—particularly in news and entertainment, as shaped by media industries—affect our daily lives, societal values, and global perspectives, equipping them to critically analyze the impact of converging media and communication on culture, public affairs, and ethics.	
Core Course Topics - Mass Communication, Culture and Media Literacy - Convergence and Reshaping of Mass Communication - Books - Newspapers - Magazines - Film - Radio, Recordings, and Popular Music - Television, Cable, and Mobile Video - Video Games - The Internet and Social Media - Public Relations - Advertising - Theories and Effects of Mass Communication - Media Freedom, Regulation, and Ethics - Global Media	

Define mass communication and relate how media literacy is critical and necessary in all aspects of it
Explain the role of converging media in changing political and cultural dynamics on the local, national and global stage
Illustrate the history of how print communication technologies originated and developed into what they are today (i.e. books, newspapers and magazines)
Illustrate the history of how electronic and digital communication technologies originated and developed into what they are today (i.e. film, radio, recordings, TV, cable and mobile video, social media, video games, Internet and world wide web)
Identify the behind-the-scenes operations and decision-making processes of all major media industries
Compare and contrast a variety of relationships between the media and their audiences and analyze what the role of PR and Advertising has evolved into in the changing times
Justify the general theory that media content provides insight into ourselves and our culture and explain the value and importance in media effects research
Know of the ongoing government regulation of the U.S. media, as well as the constitutional and principles that guide it
Analyze the ethical and philosophical issues that arise in media culture and contrast the range of viewpoints regarding each issue
Develop and assess a realistic world view based on an appropriate plan for media use and compare and differentiate global media with that of U.S. media

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement - Tests/quizzes on key historical events, persons, laws, and theories - Evaluation of topic-based analysis, personal reflection, directed discussion forums, and critical writing assignments

MCA132 - Film History and Criticism

Overview

Subject Media Communication Arts	Academic Department Media Communication Arts	School Liberal Arts
Course Description This course explores the medium of film as an art form, an industry, and a source of entertainment, examining its historical, cultural, and technical evolution. Students will analyze cinematic techniques, genres, and influential movements to assess films' visual and narrative elements, understand cinema's personal, social, and global impact, and appreciate its role in shaping our world-from early movies to contemporary films.		
Course Pre-requisite(s) Eligible to take ENG131 Introduction College Writing at HFC.		
Credit Hours 3		
Contact Hours 3		

Course Fee 15	Miscellaneous Department Fee 0

Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Other Exam, Other
Credit for Prior College Level Learning (CPCLL) Details Minimum Departmental Exam Score 80.00	
Skilled Demonstration Details Skilled demonstration, given in department by department faculty. Faculty will assess demonstration based on evaluation rubric. Evaluation rubric and student checklist located in The School of Liberal Arts office.	
Portfolio Review Details Portfolio must contain evidence that illustrates competency in all course learning objectives not already measured through the skilled demonstration. Department faculty will evaluate submitted portfolios based on the evaluation rubric. Evaluation rubric and student checklist located in The School of Liberal Arts office.	

Goals, Topics, and Objectives

- Course Goals**
The goal of this course is to provide students with a comprehensive understanding of film as both an art form and an industry by exploring its technical, cultural, and historical, evolution. Through the examination of cinematic techniques, film genres, and powerful movements, students will learn to critically analyze films' visual and narrative elements, understand the social and global impact of cinema, and recognize the shifting landscape from early movies to contemporary filmmaking styles and practices. Ultimately, students will gain a deeper appreciation and enjoyment of film as a medium that reflects and influences our world.
- Core Course Topics**
- The nature, magic and verisimilitude of the film experience, including explicit and implicit meaning and analysis
 - The early inventors and their inventions that led to the motion picture
 - The early films and their filmmakers, 1890–1915
 - Genre and the three stages of film production
 - Stages of filmmaking: Production, Distribution and Exhibition
 - Continuity, Narrative, and the Hollywood System, 1915-1930
 - Mise en scene, German Expressionism, and the introduction of "talkies", 1915-1930
 - Montage, Editing and Russia in the 1920's
 - The Hays Code, MPAA and ratings/censorship in film
 - Hollywood's Golden Era, 1930-1950
 - Italian Neo-Realism and the French New Wave, 1945-1965
 - Hollywood, the Rise of Independents and Foreign Films, 1950-1970
 - The New Hollywood and American Independent Films, 1970-1990's
 - Global cinema
 - The business of modern film and the franchise/cinematic universe model of filmmaking

MCA151 - Digital Audio Editing

Overview

Subject Media Communication Arts	Academic Department Media Communication Arts	School Liberal Arts
Course Description This course explore the fundamentals of digital audio editing and theory through hands-on projects using professional audio software in the department's computer lab and podcast studios.		
Course Pre-requisite(s) Eligible to take ENG131 Introduction College Writing at HFC. As this is a computer-based course, some basic knowledge of computer operations is highly recommended.		
Credit Hours 1		
Contact Hours 1		

Course Fee 10	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Other
Credit for Prior College Level Learning (CPCLL) Details Other	

Goals, Topics, and Objectives

- Course Goals**
The goal of this course is to provide an introductory tutorial on professional digital audio production software with intermediate to advanced features for multitrack recording, mixing, and output. This software is the key tool for production projects in MCA 251: Audio Production, making this course a co-requisite for MCA 251 and recommended for the first 8 weeks of the semester. Non-MCA 251 students are also welcome to enroll.
- Core Course Topics**
- Overview of editing: definition, goals, major historical approaches
 - The hardware needed for digital audio editing
 - The software platform(s) in use: major function and features
 - Industry standards and ethics in editing

Explain the basic definition of Editing: Its purpose, goals and historical approaches
Describe the necessary hardware and software minimally needed to accomplish professional quality digital audio editing
Define and demonstrate the major functional procedure of the computer operating system in use
Identify and give examples of the major features of the software program(s) in use
Demonstrate a knowledge of the major editing capabilities of the software program in use: such as levels and digitizing, editing voices, working with music, sound effects, processing, editing audio for video, and multi-track mixing

Interpret a working knowledge of industry standards and ethics, and justify what is needed for an audio project to be brought to that level

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement		
1. Tests, quizzes, or project completion over cognitive areas of hardware, software, and techniques		
2. Digital audio editing exercises: recording, cut & paste/trimming, processing, mixdown, and outputting to various digital formats		
Satisfies Honors Requirement	Satisfies Wellness Requirement

MCA157 - Digital Video Editing

Overview

Subject Media Communication Arts	Academic Department Media Communication Arts	School Liberal Arts
Course Description This course offers an intensive introduction to digital video editing using industry-standard software in the Media Communication Arts video lab. Students will work on hands-on exercises and projects, exploring both hardware and software applications essential for professional video editing.		
Course Pre-requisite(s) Eligible to take <u>ENG131 Introduction College Writing</u> at HFC. As this is a computer-based course, basic knowledge of computer operations is necessary.		
Credit Hours 1		
Contact Hours 1		

Goals, Topics, and Objectives

- Course Goals**
The goal of this course is to provide a foundational introduction to digital video editing using industry-standard software, covering essential editing techniques, tools, and industry practices. Students will gain hands-on experience with editing functions like trimming, transitions, titling, and special effects, as well as explore hardware, software, and operating systems required for professional-quality editing. By understanding historical editing approaches and key industry standards, students will be equipped to produce polished digital video content.
- Core Course Topics**
- Overview of editing: definition, goals, major historical approaches
 - The hardware needed for digital video editing
 - The computer operating system and software platform in use: major function and features
 - The software program in use: major functions and features.
 - The three major types of editing: Mise en scene, Continuity, and Montage
 - Industry standards and ethics of video editing

Explain the basic definition of Editing: Its purpose, goals and historical approaches
Describe the necessary hardware and software minimally needed to accomplish professional quality digital video editing
Explain and demonstrate the major functional procedures of the computer operating system in use
Describe and give examples of the major features of the software program in use
Demonstrate knowledge of the major editing capabilities of the software program in use: such as capturing, cut and paste, trimming, transitions, titling, special effects, audio sweetening, and output options such as digital file sharing, cloud storage, and uploading to the Internet
Compare and contrast the three major types of editing: Mise en scene, Continuity, and Montage
Interpret a working knowledge of industry standards and ethics, and evaluate what is needed for a video project to be brought to that level

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement		
• Tests/quizzes over cognitive areas of hardware, software, and techniques		
• Digital video editing exercises/projects: capturing, cut & paste/trimming, titling/transitions/special effects, audio sweetening, and outputting to various media formats		
• Verbal defense and debate of projects and how they relate to current industry standards

MCA189 - Introduction to WHFR Radio

Overview

Subject Media Communication Arts	Academic Department Media Communication Arts	School Liberal Arts
Course Description This course offers an introduction to WHFR-FM, the college's non-commercial, educational broadcast and internet radio station. Students will learn essential station rules, operational procedures, and equipment usage, while developing foundational skills in broadcast writing and on-air announcing, including music, public service, promotional, and/or sports/news. Open to all students, this course is required for those interested in joining the WHFR staff and contributing to station operations and programming. Upon successful completion, students will be eligible to volunteer as WHFR staff members.		
Course Pre-requisite(s) Eligible to take ENG131 Introduction College Writing at HFC. As this is a computer-based course, basic knowledge of computer operations is necessary.		
Credit Hours 1		
Contact Hours 1		
Course Fee 10	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

- Course Goals**
The goal of this course is to equip students with essential knowledge and skills for contributing to WHFR-FM, the college's non-commercial, educational radio station. Through understanding WHFR's structure, station rules, and FCC regulations, as well as hands-on experience with studio equipment, students will develop foundational abilities in broadcast writing, on-air announcing, and ethical broadcasting practices.
- Core Course Topics**
- WHFR facts and management structure
 - WHFR rules and regulations
 - WHFR studio equipment and utilization
 - Public service and promotional announcements
 - FCC rules and regulations

Identify and describe in detail WHFR facts, WHFR management structure, WHFR rules and regulations, as well as FCC rules and regulations
Operate the key studio recording equipment in a basic way
Access and utilize WHFR digital music server
Write an effective public service and promotional announcement
Identify, interpret and debate the ethical implications of FCC radio broadcast rules and regulation and potential misuse of the WHFR airwaves

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement		
• Final exam over facts, management, and WHFR and FCC rules and regulations		
• Written 30-second PSA and Promo scripts		
• New music review with WHFR digital music server or physical media		
• Mentoring with a current DJ		
• Voice check performance		
• Completion of studio floor plan		
• Critique of a one hour WHFR program		
• Recorded sample DJ show in a specified length

MCA235 - Topics in Film and Media

Overview

Subject Media Communication Arts	Academic Department Media Communication Arts	School Liberal Arts
Course Description Offers special study in an area of film or another media-related medium, organized by theme, genre, historical period, or other criteria. Specific topics are listed in the semester class schedule; see individual course syllabi in the School of Liberal Arts office.		

Course Pre-requisite(s)
Eligible to take ENG courses at HFC.
Credit Hours
3

Contact Hours
3

Course Fee 15	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Core Course Topics

1. Major aspects of specific filmic or media topic/genre.

2. Historical examination of specific filmic or media topic/genre.

3. Thorough present-day analysis of specific filmic or media topic/genre as it relates to society and today's mass media culture.

Explain history, changes and popularity analysis of specific filmic or media topic/genre

Categorize, both verbally and in essay form, major aspects of specific filmic or media topic/genre

Defend and debate social relevance and role in today's media culture as it relates to specific filmic or media topic/genre*

Assessment, Requirements, and Outcomes

- Assessment of Academic Achievement
- Tests/quizzes of covered material through the semester.
 - Graded group and individual analysis, both verbal and written, of evaluation on major topics related to genre..

MCA241 - Media Writing

Overview

Subject Media Communication Arts	Academic Department Media Communication Arts	School Liberal Arts
Course Description This course explores techniques and critical analysis involved in media writing across traditional and digital platforms, including scriptwriting for commercials, public service announcements, broadcast and digital content, as well as screenwriting for film and television. Students will gain hands-on experience with industry-standard practices, focusing on impactful and ethical storytelling across cinematic, broadcast, internet, and social media.		
Course Pre-requisite(s) Eligible to take ENG131 Introduction College Writing at HFC As this course utilizes some specialized computer-based software, basic knowledge of computer operations is necessary.

Goals, Topics, and Objectives

Course Goals

The goal of this course is to equip students with essential skills in media and screenwriting, focusing on writing techniques for radio, TV, film, and digital platforms. Students will analyze industry trends, practice professional scriptwriting and screenwriting mechanics, and critically evaluate media content, preparing them to create impactful, ethically informed work across various media formats.

Core Course Topics

1. Fundamentals of Media Writing

2. Writing for Radio, Digital Audio, and Podcasts

3. Writing for Television and Digital Video

4. Storyboarding

5. Public Service Announcements (PSAs) and Campaigns for Broadcast and Social Media

6. Concept development for TV and Film storytelling

7. Crafting Loglines for TV, Film, and Online Content

8. Adapting Source Material for Screen

9. Dramatic Script Development: Treatment and First Act Excerpts

10. Blogs and Other Forms of Digital Storytelling

Identify and differentiate between major formats in radio, film, broadcast, copy, and scriptwriting

Learn and apply the mechanics of scriptwriting across different media platforms

Create industry-standard commercials and campaigns for radio, television, and digital media

Analyze current industry trends, content, and practices in commercial media advertising

Understand and critically evaluate motives, biases, and stereotypes in media creation

Develop public service campaigns and announcements for radio, television, and online platforms

Apply ethical principles and rules specific to writing for media, including political advertising

Analyze and apply traditional dramatic elements and story structures in broadcast and film, including character development, dialogue, and scene creation

Analyze popular films/TV shows for screenplay content, trends, and narrative techniques, including Three-Act Structure

Craft a professional treatment/synopsis for television or feature film

Adapt existing work into suitable storytelling devices

Apply screenplay mechanics, formatting and style to craft appropriate film/tv scenes

Compose and justify key components of Act 1 of a film script or TV pilot using current professional screenwriting software

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

- Graded typed scripts for radio, TV, broadcast, and internet, including commercial, promotional, and public service announcements, in proper format
- Graded collaborative writing and presentation of commercial campaign and script
- Quizzes on related materials
- Creation of successful storyboard and copy platform/broadcast campaign
- Blog concept and execution of first post
- Podcast concept, introduction, and sample short episode creation
- Participation in discussions and analysis of media writing across broadcast, digital, and internet platforms, based on real-world examples
- Participation in discussions and analysis of TV and film examples, including industry trends and screenwriting techniques

MCA243 - Media Performance

Overview

Subject Media Communication Arts	Academic Department Media Communication Arts	School Liberal Arts
Course Description This course offers experience in media performance, focusing on techniques for effective communication in front of the camera and microphone. Students will develop skills in announcing, interviewing, voiceover, and on-camera performance, building confidence in vocal delivery, body language, and character portrayal within a professional media studio environment. Emphasis is placed on industry standards, studio protocol, and adaptability across a variety of audio and visual media platforms, including independent and social media performance roles. Additionally, this class offers insights for those students interested in directing or producing to collaborate effectively with talent, and for media writers to explore the performance side of character development.		
Course Pre-requisite(s) Eligible to take ENG131 Introduction College Writing at HFC.		
Credit Hours 3		
Contact Hours 3		
Course Fee 25	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Other	
Credit for Prior College Level Learning (CPCLL) Details Other		

Goals, Topics, and Objectives

Course Goals
The goal of this course is to prepare students with essential skills for media performance across voice, camera, and broadcast platforms. Emphasizing vocal techniques, news and entertainment script interpretation, character development, and announcing/voiceover/acting skills, students will strengthen their industry knowledge, audition preparation, and equipment navigation, gaining confidence in the media studio environment. Through hands-on practice and ensemble work in diverse audio and visual performances, they will build professionalism, ethical awareness, and adaptability for impactful media performances in front of the camera and microphone.

- Core Course Topics**
1. Voice Development and Vocal Techniques
 2. Studio Protocol, Mic Techniques, Warm-ups, and Level Checks
 3. Voicing Audio Commercials & Promo/Public Service Announcing
 4. Character Voice Development and Performance
 5. Doubles, Tags, and Effective Voiceover styles for Broadcast
 6. News Delivery for Radio, TV, and Digital Platforms
 7. Performing in Front of the Camera With Floor Manager/Director Support
 8. Interviewing Skills for Broadcast Journalists/Talk Show/Podcast Hosts
 9. Ensemble Performance: News, Talk Show, or Interview Segment
 10. Interpreting and Performing TV and/or Film Scenes
 11. Auditions, Unions, Demos, and Marketing Yourself in the Business
 12. Industry Roles and Emerging Trends in Media Performance
 13. The Business of Media Performance: Standards, Ethics, and Professional Practices

Develop and apply core vocal and visual techniques for effective media performances
Apply studio protocols including mic technique, warm-ups, timing, and level checks to enhance on-mic and on-camera presence
Analyze and interpret a range of industry roles and emerging trends by working with various media scripts, reflection and self-critique, and building adaptability and professionalism as a media talent
Prepare and perform diverse radio and broadcast scripts—including commercials, PSAs, tags, doubles, and news segments—using industry-standard delivery styles
Explore the art of character creation and voiceover for animation, gaming, audiobooks, and other digital media
Navigate teleprompter and memorized scripts for television and visual media, such as commercials, PSAs, news, and dramatic scenes, demonstrating proficiency across multiple formats
Engage in ensemble performance for a news, talk show, or interview segment, applying interviewing skills and delivering effective introductions and conclusions
Analyze and perform scenes for film or TV with attention to character interpretation, articulating choices in performance style and narrative impact
Identify and evaluate ethical, social, and professional standards in the media performance industry, recognizing the business's effects on individuals and society
Explore the practical aspects of media performance, including auditions, unions, demos, and self-marketing strategies

Assessment, Requirements, and Outcomes

- Assessment of Academic Achievement**
- Comprehensive Mid-Term and Final Exam on the pertinent theoretical and critical knowledge
 - Participation of class discussion, constructive critiques, and analysis of the industry and its key players, through the use of examples, research, and popular opinion
 - Critiques, both verbal and written of each individual and group performance as they take place with emphasis on student self-analysis as well as instructor critique and grading to industry standard
 - Overall review of portfolio of work performed

MCA251 - Audio Production

Overview

Subject Media Communication Arts	Academic Department Media Communication Arts	School Liberal Arts
Course Description This course introduces students to professional audio recording and production techniques, including microphone setup, digital multi-track editing, and mixing. Using industry-standard software, students will complete hands-on projects to develop foundational skills in audio programming and production.		

Course Pre-requisite(s)
Eligible to take [ENG131 Introduction College Writing](#) at HFC. [MCA151 Digital Audio Editing](#) (to be taken either in advance or in the 1st 8 weeks of corresponding semester). As some components of this course are computer-based, knowledge of basic computer operation is necessary.

Course Co-requisite(s)
[MCA151 Digital Audio Editing](#) (to be taken in the 1st 8 weeks of the corresponding semester).

Goals, Topics, and Objectives

Course Goals
The goal of this course is to provide students with foundational skills and knowledge in audio production, focusing on sound principles, digital recording, and multitrack production techniques. Students will learn to operate key equipment—including microphones, consoles, and digital audio workstations—while developing practical skills in mixing, editing, and project planning. Emphasis is placed on understanding the impact of audio in mass media and evaluating media literacy in the sound production industry.

- Core Course Topics**
1. Sound & Hearing
 2. Microphones & Miking
 3. Consoles & Mixing
 4. Analog vs Digital Production
 5. Digital Recording Formats
 6. The Computer as a Digital Studio and Audio Programming
 7. Multitrack Digital Production
 8. Saving and Editing Digital Audio Projects
 9. Media Literacy in the Business of Sound
 10. Foley Sound Creation

Identify and explain elementary principles of sound creation, transmission, and interpretation
Identify and operate a variety of digital audio production equipment: microphones and miking
Identify and operate a variety of digital audio production equipment: consoles and miking
Evaluate the differences between analog and digital production formats
Describe the major recording formats and the advantages of each
Produce a basic digital short in a recorded segment
Explore Foley sound creation
Plan multitrack digital recording project
Execute multitrack digital recording project
Illustrate the basic saving and editing techniques for audio projects
Evaluate the role of audio in mass media and its effect on media literacy/ believability of media content

Assessment, Requirements, and Outcomes

- Assessment of Academic Achievement**
- Test/quiz over each content area
 - Production projects, including Commercial/PSA, Audio for Video Exercise, Digital Cut & Paste Exercise, Interview Recording and Editing Project, and Digital multi-track Recording and Mix

MCA257 - Video Production

Overview

Subject Media Communication Arts	Academic Department Media Communication Arts	School Liberal Arts
-------------------------------------	---	------------------------

Course Description

This course introduces the fundamental concepts and skills of film and video production, covering the entire production process from planning to editing. Emphasis is placed on key equipment and essential techniques, with an exploration of the unique aspects of different media formats. Students will complete individual and group projects, working both in the studio and on location to gain hands-on experience.

Course Pre-requisite(s)

Eligible to take [ENG131 Introduction College Writing](#) at HFC. [MCA157 Digital Video Editing](#) (to be taken in advance or in the 1st 8 weeks of the corresponding semester). As some components of this course are computer-based, knowledge of basic computer operation is necessary.

Goals, Topics, and Objectives

Course Goals

The goal of this course is to provide students with a foundational understanding of film and video production, focusing on key equipment and essential techniques throughout the production process. Students will explore various production formats, lighting, camera operation, and editing skills while examining industry roles, ethical standards, and current trends. Through hands-on individual and group projects in both studio and location settings, students will gain practical experience and insight into the professional world of video production.

Core Course Topics

1. Film & Video Formats
2. Basic Script Requirements
3. Cameras & Lenses
4. Basic Lighting
5. Location Production
6. Studio Production
7. Editing
8. Individual Project Management
9. Industry Analysis and Careers in the Field
10. Media Ethics and Standards in Video

Course Description

This course is designed to build on foundational knowledge and equip students with advanced tools to further develop their skills in multimedia production. Through hands-on projects such as drone, gimbal, and glide camera operation, students will explore advanced techniques in shooting, lighting, editing, and special effects across specialized formats for news, entertainment, and education, working both on location and in studio settings.

Goals, Topics, and Objectives

Course Goals

The goal of this course is to equip students with advanced video production skills, emphasizing specialized techniques such as drone, gimbal, and glide camera operation, sophisticated lighting setups, and special effects. Students will create projects across various formats, while developing post-production plans and exploring distribution strategies. Through collaborative projects and ethical analysis, students will be prepared to meet industry standards and produce professional media content for news, entertainment, and education, with a focus on continuity, production values, and responsible storytelling.

Core Course Topics

1. Instructional, Educational and Informational Videos: Purpose and Standard Production Guidelines for Specialized Video Formats
2. Advanced Special Effects Techniques
3. Advanced Camera Techniques Using Equipment Such as Drones, Gimbals and Glides
4. Enhanced Lighting Choices and Techniques
5. Advanced Editing Techniques
6. Post Production Planning
7. Distribution Choices
8. Group Work: The Team Approach to Video Production
9. Industry Standards and Analysis for Ethical and Professional Considerations
10. Dramatic Scenes Focusing on Continuity and Advanced Production Values
11. Documentaries Using Appropriate Production Guidelines

Plan and produce short instructional/educational/informational videos, including dramatic scenes, documentaries and special effect sequences

Advanced camera techniques using equipment such as drones, gimbals, and glides

Execute advanced lighting skills

Execute advanced editing and special effects skills

Generate post-production plan of work to achieve desired end results

Compare and contrast distribution options for video

Debate choices for content/editing as a group to support a final product as it relates to responsible media production

Evaluate industry standards while assessing ethical implications of media production choices/techniques

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

- Tests on the pertinent theoretical and critical knowledge
- Review of portfolio of video work produced

MCA261 - Broadcast Journalism

Overview

Subject
Media Communication Arts

Academic Department
Media Communication Arts

School
Liberal Arts

Course Description

This course offers an immersive experience in broadcast journalism, covering news writing, production, and ethical considerations for radio, television, and digital media. Students will work on the news team of WHFR-FM 89.3, Henry Ford College's student-run station, contributing high-quality broadcast stories through written copy, audio actualities, and prerecorded interviews. In addition, students will produce TV news packages and stories in the studio, gaining hands-on experience with industry-standard equipment and techniques while upholding professional ethical standards in journalism.

Course Pre-requisite(s)

Eligible to take [ENG131 Introduction College Writing](#) at HFC. Some basic knowledge of computer operation is highly recommended.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

- Tests/quizzes on the pertinent theoretical and critical knowledge

Skilled demonstration, given in department by department faculty. Faculty will assess demonstration based on evaluation rubric. Evaluation rubric and student checklist located in The School of Liberal Arts office.

Portfolio Review Details

Portfolio must contain evidence that illustrates competency in all course learning objectives not already measured through the skilled demonstration. Department faculty will evaluate submitted portfolios based on the evaluation rubric. Evaluation rubric and student checklist located in The School of Liberal Arts office.

Goals, Topics, and Objectives

Course Goals

The goal of this course is to prepare students for professional broadcast journalism by developing skills in news writing, research, and production across radio, television, and online platforms. Through hands-on projects at WHFR-FM, students will gain experience in creating broadcast news stories, from writing and editing copy to producing actualities, sound bites, and Interviews. Emphasis is placed on understanding media laws, ethical standards, and the evolving role of social media in news. Students will also analyze what constitutes 'news' in today's media landscape, preparing them to make informed, responsible contributions to the field of broadcast journalism.

Core Course Topics

1. What is "News"?
2. Print and Online Sources and Areas of Research for Broadcast News
3. Mechanics of Radio, Television, and Online News Writing
4. Radio News Story Guidelines and Show Production for WHFR Radio
5. Newsroom Tasks and the Role of the News Director
6. Media Laws and Ethics for Broadcast News Writing
7. Actualities and Sound Bites: Recording, Editing and Proper Layout
8. Interviewing
9. Television and Online News Packages
10. News Across Social Media

Analyze and debate the topic of what constitutes "news" in a media literate society
Develop and integrate the research and rewrite of print and other sources required for broadcast news stories
Interpret and evaluate the standard mechanical form and style of broadcast news stories
Write, revise, and produce by deadline standard broadcast news stories to fit the mission of WHFR's format, covering local and HFC news events, as applicable
Explain the job of News Director and demonstrate the role for at least one class news broadcast
Evaluate a minimum of 5 class news broadcasts for legal and ethical consequences and industry standards
Record and edit actualities and sound bites, incorporated into news stories, submitted by deadline, over the class broadcast period
Conduct, record, and edit if necessary one 3-5 minute radio interview for potential airing on WHFR
Create a television news package script to reflect minimum industry standards
Discuss and debate how social media is affecting the knowledge base of our news interpretation as a society

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

- Tests/quizzes on the pertinent theoretical and critical knowledge
- Critique and grading of "newsworthiness and air-ability" of weekly story choices and mechanics
- Review of portfolio of final draft of all scripts produced, including sound bites and TV package if applicable

Goals, Topics, and Objectives

Course Goals

The goal of this course is to provide students with the opportunity to demonstrate and apply the knowledge and skills they have gained throughout the Media Communication Arts Associate of Arts program. By emphasizing practical application, thoughtful reflection, and showcasing their achievements, the course prepares students for graduation and future academic or professional opportunities.

Core Course Topics

1. Assessment of Media Communication Arts basics, Film History and Criticism, Media Writing, Media Performance, Audio Production, Video Production, and Broadcast Journalism
2. Collection of portfolio of technical work
3. Assessment of writing samples
4. Prioritizing of significance of Media theories and approaches in the 21st century

Prove knowledge of core MCA subject matter through successful assessment and technical acumen
Finalize a portfolio review of work in MCA 131, 132, 241, 243, 251, 257, and 261
Develop a subjective priority list and essay of theoretical knowledge learned
Produce and defend an essay of critical analysis on a specific topic agreed upon by student and instructor

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

- Review of portfolio for quality and specific industry standards
- Evaluate critical essay/presentation's expression and depth of insight

MCA294 - Media Communication Arts Internship

Overview

Subject
Media Communication Arts

Academic Department
Media Communication Arts

School
Liberal Arts

Course Description

This course provides hands-on experience supporting media-related work in a variety of setting options, such as a radio or TV station, local community access facility, social media agency, advertising firm, public relations office, non-profit, or other organization that integrates media as part of their operations or outreach efforts. Students will complete 125-150 hours of work, either volunteer or paid, as determined by the host organization. Internship opportunities vary each semester, and students must collaborate with the instructor to secure placement at least ONE MONTH before the semester begins. This experience offers valuable industry insights, skill development, and professional networking in the dynamic field of media communication.

Course Pre-requisite(s)
This internship should be taken towards end of student's MCA degree completion. Pre-approval from Instructor is required before enrolling. Eligible to take [ENG131 Introduction](#) [College Writing](#) at HFC.

Goals, Topics, and Objectives

- Course Goals**
The goal of this course is to provide students with on-the-job media experience in a professional setting, enabling them to explore the daily operations, workflows, and practices of an organization while contributing meaningfully to media-related tasks that support its objectives.
- Core Course Topics**
1. The workings of a real-world media facility to showcase basic knowledge learned and gain advanced experience in that specific field.
 2. Project log and related samples/recordings for completed skills used in resume or portfolio support.
 3. Successful integration into a working media environment.
 4. Industry and specific facility evaluation as it relates to coursework, future career trends, and networking opportunities.
 5. The impact of specific media outlet, its role in society and ethical standards.

Evaluate and apply completed coursework learned in a real-world media environment.
Illustrate and defend when asked about project log and maintenance system for personal resume or portfolio.
Successfully integrate in student's chosen field with working professionals and contribute to the success of the specific facility in an ongoing way.
Synthesize behind-the-scenes knowledge of the inside workings of a specific media outlet and ongoing examples of what it takes to be successful.
Create a first impression as a contributor to the specific media outlet for possible future employment or resume reference.
Generate valuable networking contacts through association as a contributor to the specific media outlet for possible future employment or resume reference.
Outline and define the overall impact of the media outlet, its critical role in society locally, globally and ethically, and how the student's input made a difference through an agreed-upon written log, project, or critical essay at the semester's end.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement • Evaluation log to be completed and graded at semester's end of student's contribution to specific media outlet • Final evaluation by media supervisor of facility student was placed in • Final graded student presentation, written and/or verbal, expressing evaluation of student's analysis of media entity and its impact on our local society

MCA295 - Media Communication Arts Directed Study

Overview

Subject Media Communication Arts	Academic Department Media Communication Arts	School Liberal Arts
Course Description This course offers students the opportunity to design and execute a self-directed project within the Media Communication Arts field under the mentorship of a faculty advisor. Students will conceptualize, plan, and develop a project that may be scholarly, creative, technical, or a combination of these approaches. Projects should reflect the student's academic and/or professional interests and must receive prior approval from the instructor. Regular progress reviews and critical reflection will support the creation of a high-quality final outcome.		
Course Pre-requisite(s) Instructor Permission Only, Eligible to take ENG131 Introduction College Writing at HFC.		
Credit Hours 3		
Contact Hours 3		
Course Fee 10	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

- Course Goals**
The goal of this course is to provide an opportunity for students to explore and engage deeply with a topic in the Media Communication Arts field through scholarly, creative, technical, or blended approaches, working closely with a faculty mentor to develop a comprehensive project that demonstrates enhanced understanding, critical insight, and appreciation for the subject matter.
- Core Course Topics**
1. Discussion and submission of a specific project proposal which, after acceptance by instructor, becomes the class project.
 2. The use of critical thinking to relate aspects of this project to support and enhance the importance of a media-literate society.
 3. Project work and completion, with guidance from the instructor at critical stages.
 4. Creation of a measurement plan which, after acceptance by instructor, becomes the class contract.

Propose a project based on some aspect of Media Communication Arts with instructor approval
Organize a measurement plan to allow for assessment with instructor approval
Successfully structure and produce a significant project in a Media Communication Arts area, either scholarly, creative, technical, or a combination of approaches
Present and defend overall decision for the importance of topic choice and final project as it relates to supporting a media literate society

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Instructor will assess the quantity and quality of the work based on the parameters of the project itself, whether written, produced, or presented/performed.

MFMT151 - Power Engin Stationary Steam Core Skills

Overview

Subject Energy Technology	Academic Department Building Sciences	School Business, Entrepreneurship, PD
Course Description Prepares a student to function effectively as an entry-level Stationary Steam Engineer or in the capacity as introductory power plant personnel. Provides basic skills, knowledge, and familiarization with power, process, and heating-cooling plants through the study of basic principles and how they apply to the various types of equipment and systems found in such plants. Emphasizes the need for a hands-on approach where possible in a workplace laboratory setting and this is provided in the cogeneration lab with appropriate activities. Covers general workplace and personal safety along with hazardous or environmental concerns. Mandatory field trips and plant visits.

Credit for Prior College Level Learning (CPCLL) Details
This course is identified as a departmental course for which a learner can receive college credit for prior college-level learning and/or skills acquired outside the traditional classroom. Terms of the HFCC Credit for Prior College-Level Learning Policy may be met by review of the appropriate documentation, skill, certifications, and/or knowledge acquired by the learner and submitted for evaluation by the appropriate departmental faculty. As required, one or more of the following may be considered in the evaluation process:

1. field experience,
2. licenses held,
3. completing course exams and/or.
4. completion of laboratory performance sequences or steady-state lab sessions and/or,
5. completing a portfolio,
6. completion of an equivalent course or series of courses at other institutions.

Goals, Topics, and Objectives

- Core Course Topics**
1. Heat/Power Plant Orientation
 2. Heat/Power Plant Systems - Familiarization
 3. Types of Steam BoiStationary Steam Engineering - Steam-Heat Basics
 4. Codes & Safety
 5. Boiler Operation
 6. Boiler Auxiliaries & Accessories
 7. Fuels - Combustion
 8. Mechanical Equipment & Systems
 9. Air Compression Systems
 10. Heat Rejection - Cooling Towers
 11. Water Treatment
 12. Heating, Air Conditioning
 13. Instruments & Control Systems
 14. Plant Electrical Distribution
 15. Industrial Technologies Energy Management DOE-EERE Energy Qualification
 16. Building Technologies DOE-EERE Commercial, Industrial Energy Management Qualification
 17. Power/Process/Heating Plant Best Practices and Base Line Case Studies Basics

Demonstrate knowledge of and understanding of skills required to operate/maintain power and facilities plant and electrical generation, electrical distribution equipment and systems.*

Distinguish between the requirements for heat/power plant orientation related to field conditions and education and training processes.
Identify/describe the function of components and systems in typical steam power/process plants.
Identify/describe the function of components and systems in typical steam/electric generating and cogeneration plants.
Heat/Power Plant Systems - Familiarization
Distinguish between the requirements of heat/power plant systems and their familiarization related to field conditions and education and training processes.
*Identify/describe function of components in typical steam, water, fuel, gases and other distribution systems found in operating power and process plants.
Stationary Steam Engineering - Codes and Safety
Distinguish between the requirements for codes and safety related to field conditions and education and training processes.
Identify/describe the principles and function of the basic boiler/plant steam cycle, water cycle, and fuel/combustion systems and cycles.
Codes & Safety
Distinguish between the requirements for codes & safety related to field conditions and education and training processes.
Identify safe practices, describes code references for application to power plants and power and heating boilers.
Communication & Technical Data
Distinguish between the requirements for communication & technical data related to field conditions and education and training processes.
Interpret and apply technical information/data from manufacturers on equipment and systems.
Boiler Operation
Distinguish between the requirements for boiler operation related to field conditions and education and training processes.
Classify various types of boilers and identify boiler components/cycles.
Boiler Auxiliaries & Accessories
Distinguish between the requirements for boiler auxiliaries & accessories related to field conditions and education and training processes.
Demonstrate familiarity with-uses startup, shutdown, normal operating and emergency operation instructions for pumps, turbines, auxiliaries, accessories and other plant rotating or stationary equipment from knowledge of actual equipment or manufacturers technical instructions.
Fuels - Combustion
Distinguish between the requirements for fuels and combustion related to field conditions and education and training processes.
Identify characteristics of fuels, basic combustion and combustion efficiency and demonstrate a constructive knowledge of safe practices for adjusting or operating combustion systems.
Mechanical Equipment and Systems
Distinguish between the requirements for mechanical equipment and systems related to field conditions and education and training processes.

Identify/explain the basic elements and characteristics of the maintenance process, tools, materials, instruments and equipment necessary for constructive mechanical equipment and systems maintenance.
Air Compression Systems
Distinguish between the requirements for air compression systems related to field conditions and education and training processes.
Identify/explain characteristics of air compression, various types compressors, their operation and maintenance.
Heat Rejection - Cooling Towers
Distinguish between the requirements for heat rejection - cooling towers related to field conditions and education and training processes.
Identify/explain characteristics of various types of cooling towers, water treatment for cooling towers their components and their systems.
Water Treatment
Distinguish between the requirements for water treatment related to field conditions and education and training processes.
Identify/explain characteristics of power plant basic water treatment and treatment systems.
Heating, Air Conditioning
Distinguish between the requirements for heating, air conditioning related to field conditions and education and training processes.
Identify/explain characteristics of various types of steam and hot water heating, cooling/chiller air handling, rooftop and other HVACR systems and the typical operating and maintenance procedures for each.
Instruments & Control Systems
Distinguish between the requirements for instruments & control systems related to field conditions and education and training processes.
Identify/explain characteristics and principles of various types automatic control systems and their components including pneumatic and electric/ electronic and digital systems.
Plant Electrical Distribution
Distinguish between the requirements plant electrical distribution related to field conditions and education and training processes.
Identify typical power/building electrical distribution systems and their associated components.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement The assessment for this course will include lab experiences for each objective and exams covering each major topic with the percentage of student achievement for these elements and the percentage of the total course being determined by the individual instructor.	
Texts Prescribed by the subject matter expert FT instructor responsible for curricular development and implementation of this course.	
Satisfies Honors Requirement No	Satisfies Wellness Requirement No

MFMT224 - Automated Control Systems I

Overview

Subject Energy Technology	Academic Department Building Sciences	School Business, Entrepreneurshp, PD
Course Description Provides practical application of repair and maintenance skills to automated control systems. Includes various commercial-industrial plant heating, power, process, building and facilities equipment and systems. Covers the fundamentals of instrumentation calibration, solid-state components, microprocessors, logic circuits, and programmable logic controllers (PLC) areas. Learners must be prepared to access simulation, computer interface, and similar materials online for completion of this course. Plant visits may be required.		

Course Pre-requisite(s)
Instructor Permission
Credit Hours
2

Contact Hours
2

Course Fee 30	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Other

Credit for Prior College Level Learning (CPCLL) Details
This course is identified as a departmental course for which a learner can receive college credit for prior college-level learning and/or skills acquired outside the traditional classroom. Terms of the HFC Credit for Prior College-Level Learning Policy may be met by review of the appropriate documentation, skill, certifications, and/or knowledge acquired by the learner and submitted for evaluation by the appropriate departmental faculty. As required, one or more of the following may be considered in the evaluation process: A. field experience B. licenses held C. completing course exams and/or D. performance sequences and/or E. competing a portfolio. F. assessment of private trade school or other extensive college level industry training and learning by a departmental faculty member

Goals, Topics, and Objectives

- Core Course Topics
1. Safety.
 2. Solid State Devices.
 3. Power Supplies.
 4. Test Equipment.
 5. Circuit Board Soldering.
 6. Integrated Circuits.
 7. Digital versus Analog Systems.
 8. Numbering Systems.
 9. Logic Circuits.
 10. Logic Analysis and Simplification.
 11. Programmable Logic Devices (PLC).
 12. Microprocessor Operations.
 13. Troubleshooting and Testing Digital Circuits.
 14. Principles of Control and Measurement.
 15. Calibration.
 16. Application of Instrumentation.
 17. Application of Loop Tuning.
 18. Programming Microprocessor-based Controllers.
 19. PLC Applications.

Identify various instrumentation equipment and systems and their function which require attention during the course of normal operation.
Describe the required service, maintenance and operational activities for various instrumentation equipment and systems necessary to ensure sustainability of operation on a daily basis."
Analyze operation of various instrumentation equipment and systems using the proper procedures and using the resulting data to ensure sustainability of efficiency of these elements."
Document acceptable practices or bench marks for operation and maintenance of equipment and systems in a practical field environment in each of the basic areas indicated below:"
Safety
Solid State Devices
Power Supplies
Test Equipment
Circuit Board Soldering
Integrated Circuits
Digital versus Analog Systems
Numbering Systems
Logic Circuits
Logic Analysis and Simplification
Programmable Logic Devices (PLC)

Microprocessor Operation.
Apply skill and knowledge to accomplish productive operation and maintenance activities in field situations and scenarios in the following various instrumentation areas:"
Troubleshooting and Testing Digital Circuits
Control and Measurement
Calibration
Set-up of Instrumentation
Loop Tuning
Programming Microprocessor-based Controllers
PLC Operations and Maintenance.

Assessment, Requirements, and Outcomes

- Assessment of Academic Achievement**
Students will demonstrate their competence in the subject matter and objective areas by one or more of the following based upon the indication of industry standards and requirements: Written exam or multiple quizzes on specific subjects Online quizzes, exams, or exercises Performance-based exercises, labs, or industry practical training Scenario or context-based exerciStudents will demonstrate their competence in the subject matter and objective areas by one or more of the following based upon the indication of industry standards and requirements:
1. Written exam or multiple quizzes on specific subjects
 2. Online quizzes, exams, or exercises
 3. Performance-based exercises, labs, or industry practical training
 4. Scenario or context-based exercises, activities from field situations
 5. Written paper, report, project, or collaborative exercise
 6. Presentations, learning object development, or creative research
 7. Proctored, supervised, or real workplace experience
 8. Independent study, internship, externship, or co-op education experience
 9. Performance-type experiences-exercises approved by instructor

MFMT241 - Power Engin Refrigeration License Review

Overview

Subject Energy Technology	Academic Department Building Sciences	School Business, Entrepreneurship, PD
------------------------------	--	--

Course Description
Advanced-level course providing refrigeration system operators, refrigeration journeymen, refrigeration service, and maintenance technicians with a comprehensive review in preparation to take a 1st, 2nd, or 3rd Class Refrigeration Operator License exam, the Refrigeration Journeyman License exam, similar related exams or to prepare for commercial or industrial refrigeration operation and maintenance positions. Covers the fundamentals of refrigeration, identification, and functions of various refrigeration systems and equipment with special commercial and industrial refrigeration systems covered on the license exams. Access to computers is critical for the mandatory computer-aided field research which requires visits to current refrigeration industry web sites. Students must be computer literate with web browsers, word processing, spreadsheets, e-mail, and other computer-online activities. Laboratory activities. May require field trips. NOTE: License exams are not included in this course.

Course Pre-requisite(s)
Advanced refrigeration field experience or Instructor Permission

Credit Hours
5

Contact Hours
5

Course Fee 50	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Other

Credit for Prior College Level Learning (CPCLL) Details
This course is identified as a departmental course for which a learner can receive college credit for prior college-level learning and/or skills acquired outside the traditional classroom. Terms of the HFCC Credit for Prior College-Level Learning Policy may be met by review of the appropriate documentation, skill, certifications, and/or knowledge acquired by the learner and submitted for evaluation by the appropriate departmental faculty. As required, one or more of the following may be considered in the evaluation process: A. field experience B. licenses held C. completing course exams and/or D. performance sequences and/or E. competing a portfolio. F. assessment of private trade school or other extensive college level industry training and learning by a departmental faculty member

Goals, Topics, and Objectives

- Core Course Topics
1. Refrigeration Terms/Definitions and Refrigeration Operator Codes
 2. Refrigerants: Physical and Refrigerating Properties, Liquid Feed Devices or Expansion Valves
 3. Evaporators and Compressor Basics I
 4. Condensers and Flow Equipment

5. Electrical Controls and Control Valves, and Instruments & Meters
6. Lubrication and Compressor Drives
7. Food Preservation
8. Defrosting and Humidity in Refrigeration
9. Heat Calculations and Defrosting
10. Compressor Calculations II
11. Refrigerant Lines and Pressure Drops
12. Brine in Refrigeration and Liquid Cooling
13. Complete Refrigeration Systems, Carbon Dioxide- Dry Ice, and Ice Making
14. Absorption Systems, Centrifugal Chiller Systems, and Air Conditioning Systems
15. Operation and Maintenance of Refrigerating Systems and Enclosures
16. Commercial and Industrial Refrigeration Certification and Licensing
17. Industrial Energy Management - Quick Energy Profiler (PEP) (DOE-EERE)
18. Refrigeration and Boiler Plant Best Practices (includes Base Line Case Studies)

Refrigeration Terms/Definitions and Refrigeration Operator Codes
Demonstrate technical and practical field conditions mastery of advanced refrigeration terms/definitions and in the refrigeration operator code subject areas.*
Refrigerants: Physical and Refrigerating Properties, Liquid Feed Devices or Expansion Valves
Demonstrate technical and practical field conditions mastery in the major refrigerants and in the metering device subject areas.*
Evaporators and Compressor Basics I
Demonstrate technical and practical field conditions mastery in the advanced refrigerant evaporator and compressor subject areas.*
Condensers and Flow Equipmen
Demonstrate technical and practical field conditions mastery in the refrigerant condenser and flow accessories subject areas.
Electrical Controls and Control Valves, and Instruments & Meters
Demonstrate technical and practical field conditions mastery in the refrigerant controls and refrigeration field instruments and test equipment subject areas.
Lubrication and Compressor Drives
Demonstrate technical and practical field conditions mastery in the refrigeration lubrication and compressor drive subject areas.
Food Preservation
Demonstrate technical and practical field conditions mastery in the refrigeration food preservation area.
Defrosting and Humidity in Refrigeration
Demonstrate technical and practical field conditions mastery in the refrigeration defrost and humidity control subject areas.
Heat Calculations and Defrosting
Demonstrate technical and practical field conditions mastery in the refrigeration planning, installation and heat calculations subject areas.
Compressor Calculations II
Demonstrate technical and practical field conditions mastery in the advanced refrigeration compressor calculation and installation subject areas.
Refrigerant Lines and Pressure Drops
Demonstrate technical and practical field conditions mastery in the refrigeration line installation, piping and pressure drop problem handling subject areas.

Brine in Refrigeration and Liquid Cooling
Demonstrate technical and practical field conditions mastery in the refrigeration brine and liquid cooling subject areas.
Complete Refrigeration Systems, Carbon Dioxide-Dry Ice, and Ice Making
Demonstrate technical and practical field conditions mastery in the refrigeration dry ice and ice-making subject areas.
Absorption Systems, Centrifugal Chiller Systems, and Air Conditioning Systems
Demonstrate technical and practical field conditions mastery in the refrigeration centrifugal and absorption chiller system subject areas.
Operation and Maintenance of Refrigerating Systems and Enclosures
Demonstrate technical and practical field conditions mastery in the refrigeration operation and maintenance subject areas.
Commercial and Industrial Refrigeration Certification and Licensing
Demonstrate technical and practical field conditions mastery of the materials required for exams in the refrigeration certification and licensing subject areas.
Industrial Energy Management - Quick Energy Profiler (PEP) (DOE-EERE)
Demonstrate technical and practical field conditions mastery in the industrial refrigeration management subject areas.
Refrigeration and Boiler Plant Best Practices (includes Base Line Case Studies)
Demonstrate technical and practical field conditions mastery in the refrigeration best practices and base line case studies areas.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement The assessment for this course will include lab experiences for each objective and exams covering each major topic with the percentage of student achievement for these elements and the percentage of the total course being determined by the individual instructor.	
General Course Requirements and Recommendations Student must have access to a computer to complete the requirements for the course. This may be at home or when without a home computer the student must access computer lab computers on campus on a regular basis throughout the course. Student must be computer literate with web browsers, word processing, spread sheets, e-mail, and other computer-online activities.	
Texts Prescribed by the subject matter expert FT instructor responsible for curricular development and implementation of this course.	
Satisfies Honors Requirement No	Satisfies Wellness Requirement No

MFMT248 - Power Engineering - Steam License Review

Overview		
Subject Energy Technology	Academic Department Building Sciences	School Business, Entrepreneurshp, PD
Course Description An advanced-level course for engineers seeking 1st or 2nd Class Steam License. Course reviews various power engineering subjects including boilers, basic thermodynamics, boiler operation, maintenance, plant efficiency, pumps, auxiliaries, power plant accessories, turbines, engines, electrical, compressors, internal combustion engines, and national, state and local steam and boiler codes. Explores how to solve typical power plant problems. Also offers information on how to study, sketch, analyze, and describe the function of systems and components on commercial-industrial power and process plant equipment and systems. NOTE: License exams are not included in this course.		
Course Pre-requisite(s) Instructor Permission		
Credit Hours 5		
Contact Hours 5		
Course Fee 50	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) Yes		Acceptable Prior Learning Credit Other

Credit for Prior College Level Learning (CPCLL) Details

This course is identified as a departmental course for which a learner can receive college credit for prior college-level learning and/or skills acquired outside the traditional classroom. Terms of the HFCC Credit for Prior College-Level Learning Policy may be met by review of the appropriate documentation, skill, certifications, and/or knowledge acquired by the learner and submitted for evaluation by the appropriate departmental faculty. As required, one or more of the following may be considered in the evaluation process: 1. field experience. 2. licenses held. 3. completing course exams and/or. 4. performance sequences and/or. 5. competing a portfolio. 6. assessment of private trade school or other extensive college level industry training and learning by a departmental faculty member.

Goals, Topics, and Objectives

Core Course Topics

1. Codes and Code Orientation, Governmental License-Registration Agencies, NFPA, Appropriate Ordinances
2. Basic Thermodynamics, Practical Power Engineering Science, Heat Engines, Basic Combustion, Gas Laws, Steam Tables, Steam Calorimetry
3. Boilers, Types, Construction, and Calculations
4. Boilers, Problems, Sketches, Questions, Operation and Maintenance, and Boiler Controls
5. Pumps and Auxiliaries, Pump Theory and Calculations, Piping, Boiler Feedwater Pumps and Controls, Injectors
6. Treatment, Testing, Boiler Blowdown Systems, and Water Treatment Systems
7. Combustion, Boiler Efficiency, and Emission Controls
8. Fuels - Firing, Gas, Oil, and Coal Systems
9. Steam Engines, Heat Engines, and Basic Plant Cycles
10. Steam Turbine Types, Construction, and Calculations
11. Steam Turbine Lubrication, Governing, Operation and Maintenance, Condensers, and Generator Controls
12. Internal Combustion Engines and Compressors
13. Power Plant Basic Electrical Theory and Calculations, AC, DC, Machines And Generators, Transformers, Rectifiers, Converters
14. Power Plant Electrical Systems, Generation, Distribution Circuit Protection, Operation and Maintenance
15. Industrial Energy Management and Quick Energy Profiler (PEP) Qualification (DOE-EERE)
16. Boiler Plant Best Practices and Base Line Case Studies Basics
17. Practical/Lab Exercises and Practice Exams and Exercises and Activities for Typical License Exams

Codes and Code Orientation, Governmental License-Registration Agencies, NFPA, Appropriate Ordinances
Demonstrate technical and practical field conditions mastery in the codes and licensing subject areas.*
Basic Thermodynamics, Practical Power Engineering Science, Heat Engines, Basic Combustion, Gas Laws, Steam Tables, Steam Calorimetry
Demonstrate technical and practical field conditions mastery in the practical steam and heat application areas.
Boilers, Types, Construction, and Calculations
Demonstrate technical and practical field conditions mastery in the boiler construction and calculation areas to meet or exceed the needs and expectations of license agency examiners, employers or evaluators/ instructors and to meet license agency exam requirements and/or pass these exams or college administered industry example exams.*
Boilers, Problems, Sketches, Questions, Operation and Maintenance, and Boiler Controls
Demonstrate technical and practical field conditions mastery in the boiler problem, operation, maintenance and controls subject areas.
Pumps and Auxiliaries, Pump Theory and Calculations, Piping, Boiler Feedwater Pumps and Controls, Injectors
Demonstrate technical and practical field conditions mastery in the boiler pumps and auxiliaries subject areas.
Treatment, Testing, Boiler Blowdown Systems, and Water Treatment Systems
Demonstrate technical and practical field conditions mastery in the boiler water treatment subject areas.
Combustion, Boiler Efficiency, and Emission Controls
Demonstrate technical and practical field conditions mastery in the boiler combustion, efficiency and emission controls subject areas.
Fuels - Firing, Gas, Oil, and Coal Systems
Demonstrate technical and practical field conditions mastery in the boiler fuels, firing systems subject areas.
Steam Engines, Heat Engines, and Basic Plant Cycles

Demonstrate technical and practical field conditions mastery in the steam engine, heat engine, basic plant cycles subject areas.
Steam Turbine Types, Construction, and Calculations
Demonstrate technical and practical field conditions mastery in the steam turbine construction and calculations subject areas.
Steam Turbine Lubrication, Governing, Operation and Maintenance, Condensers, and Generator Controls
Demonstrate technical and practical field conditions mastery in the steam turbine lubrication, governing and operation and maintenance subject areas.
Internal Combustion Engines and Compressors
Demonstrate technical and practical field conditions mastery in theinternal combustion engine and compressors subject areas.
Power Plant Basic Electrical Theory and Calculations, AC, DC, Machines And Generators, Transformers, Rectifiers, Converters
Demonstrate technical and practical field conditions mastery in the power plant electrical equipment, machines and system subject areas.
Power Plant Electrical Systems, Generation, Distribution Circuit Protection, Operation and Maintenance
Demonstrate technical and practical field conditions mastery in the power plant electrical generation, distribution and protection system subject areas.
Industrial Energy Management and Quick Energy Profiler (PEP) Qualification (DOE-EERE)
Demonstrate technical and practical field conditions mastery in the industrial energy management subject areas.*
Boiler Plant Best Practices and Base Line Case Studies Basics
Demonstrate technical and practical field conditions mastery in the boiler plant best practices and base line studies subject areas*
Practical/Lab Exercises and Practice Exams and Exercises and Activities for Typical License Exams
Demonstrate technical and practical field conditions mastery upon taking practice lab example and field type licensing exams.

MGT230 - Principles of Management

Overview

Subject Management	Academic Department Business & Economics	School Business, Entrepreneurship, PD
Course Description		
Examines the functions, principles, history, environments, and philosophy of modern management as well as the nature and structure of organizations. Emphasizes recent developments in organizational decision making, styles of managerial leadership, and the role of effective communication in management. Also explores motivating, managing, recruiting, and terminating employees.		
Course Pre-requisite(s)		
Eligible to take ENG courses at HFC		
Credit Hours		
3		

Contact Hours

3

Course Fee 0	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Other
Credit for Prior College Level Learning (CPCLL) Details Other	

Goals, Topics, and Objectives

Core Course Topics
1. Introduction to Management
2. Management History and Theoretical Approaches
3. The Managerial Environment
4. International Management
5. Planning
6. Decision Making
7. Organizational Culture and Design
8. Human Resource Management
9. Organizational Change and Innovation
10. Human Capital
11. Motivation
12. Role of Groups and Teams in Organizations
13. Leadership
14. Communication Managerial Control
Analyze the relationship among the four functions of management and their effects on organizational success.
Compare and contrast the levels of managerial skills, types of managers, and managerial roles.
Describe effective and efficient management.
Compare and contrast entrepreneurship and intrapreneurship.
Discuss the history of managerial thought.
Evaluate management theories.
Appraise the concept of learning organizations.
a. Compare and contrast internal and external stakeholders.
Analyze the Task Environment and General Environment.
Evaluate the role of ethics and social responsibility in managerial decision making.
Evaluate the impact of diversity on managerial behavior.
Describe the impact of globalization on management.
Assess why and how companies expand internationally and the challenges they face.
Describe the role culture plays in managerial decision making.
Distinguish the different levels of planning.
Analyze the planning process and goal setting.
Explain the formulation of competitive strategy, strategic management, strategic planning, and their processes.
Identify and analyze organization strengths, weaknesses, opportunities and threats (i.e., "SWOT" analysis).
Compare and contrast rational and non-rational decision making.
Appraise the advantages and disadvantages of utilizing individual and group decision making.

Discuss the types of organizations and the building blocks of organizational structure.
Analyze the role of organizational culture.
Identify and discuss the activities of human resource management.
Evaluate major laws and proper procedures associated with human resource management.
Compare and contrast inside and outside forces impacting organizational development.
Discuss the effect of change and the challenges of overcoming the resistance to change.
Identify and list different personality characteristics and their effects on the organization.
Recognize the sources and consequences of job-related stress and how to reduce its impact.
Compare and contrast motivational theories.
Compare and contrast groups and teams.
Analyze the stages of team development.
Describe the process of developing and managing effective teams.
Differentiate the various approaches to effective leadership.
Compare and contrast the sources and benefits of power and the uses of persuasion.
Examine the communication process and the methodologies for effective communication in an organization.
Analyze techniques for enhancing organizational effectiveness.
Discuss the levels and areas of control and barriers to effective measurement.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
Students will be assessed through tests, quizzes, assignments, presentations, class participation, group activities, case studies, and/or projects.	
Grading Scale

MGT231 - Leadership and Teambuilding

Overview

Subject Management	Academic Department Business & Economics	School Business, Entrepreneurship, PD
Course Description Explores how to develop and improve supervisory skills. Covers effective leadership techniques, how to identify and evaluate various leadership styles, and development of teambuilding skills.		
Credit Hours 3		
Contact Hours 3		
Course Fee 0	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPLL) No		

Goals, Topics, and Objectives

Core Course Topics

1. Communication and Listening Skills
2. Critical Thinking and Problem Solving
3. Building an Effective High-Performance Team
4. Management vs. Leadership
5. Keys to Successful Supervision
6. Successful Workplace Relationships
7. The Role of Human Resources
8. Decision Making
9. Strategic Planning and Goal Setting
10. Change in the Modern Organization
11. Creativity and Innovation
12. Organizational Structure and Design
13. Working in a Virtual World: Technology as a Way of Life
14. Organizational Controls
15. Sustainability and Corporate Social Responsibility

Evaluate methods of communication, and identify effective and efficient communication channels.
Analyze effective verbal and nonverbal communication skills.
Discuss effective listening skills.
Critique approaches to recognize and communicate sensitive work-related issues.
Define and assess the critical thinking process.
Examine methodologies for determining and solving business and human resource problems and opportunities.
Describe the stages of team building.
Analyze supervisory motivational techniques.
Identify and minimize potential barriers to effective team building.
Describe the effect of diversity on team dynamics.
Describe the differences between being a manager and a leader.
Identify the traits and skills required to transition from a manager to a leader.
Compare and contrast leadership styles and appropriate applications.
Differentiate the different forms of leadership.
Describe the different types of ethical dilemmas.
Assess how to handle business decisions ethically.
Assess the behaviors required to build successful relationships.

Compare and contrast motivation theories to create a productive work environment.
Formulate strategies to understand, support, and utilize diversity.
Discuss the effect globalization has had on leadership.
Describe what Human Resources can do to foster change.
Discuss how Human Resources can support critical decision making.
Analyze the legal requirements associated with hiring activities.
Compare and contrast types of decisions.
Explain the systematic approach to decision making.
Define the elements and steps in the strategic planning process.
Discuss the role and results of change.
Analyze the diversity imperative in change.
Describe why creativity and innovation are important in business.
Compare and contrast intrapreneurship and entrepreneurship.
Analyze different organizational designs.
Compare and contrast different forms of business ownership.
Describe how technology affected work during the industrial revolutions.
Analyze the challenges of working in a virtual world.
Describe the control process.
Analyze how organizational control effect ethical behavior.
Compare and contrast the different forms of sustainability.
Describe corporate social responsibility.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Students will be assessed through tests, quizzes, assignments, case studies, presentations, class participation, group activities, and/or role playing.

Grading Scale

MGT237 - Organizational Behavior

Overview

Subject Management Academic Department Business & Economics School Business, Entrepreneurship, PD

Course Description Introduces psychological theory, research, and practice in the business environment. Examines selection criteria and predictors, training and development, performance appraisal, employee motivation and satisfaction, and occupational health. Analyzes and evaluates effective teamwork strategies, leadership theories, and union-management relationships.

Course Pre-requisite(s) Eligible to take ENG courses at HFC and MGT230 Principles of Management with a C grade or better

Credit Hours
3

Contact Hours
3

Course Fee 0 Miscellaneous Department Fee 0

Academic Level Undergraduate

Eligible for Credit for Prior College Level Learning (CPCLL)
No

Goals, Topics, and Objectives

- Core Course Topics
- History of Industrial/Organizational (I/O) Psychology
 - Research Methods in Industrial/Organizational (I/O) Psychology
 - Criteria and Standards for Decision Making
 - Psychological Assessment Predictors
 - Human Resource Topics
 - Organizations and Organizational Change
 - Teams and Teamwork
 - Organizational Attitudes and Behavior
 - Workplace Psychological Health
 - Motivation
 - Leadership
 - Union-Management Relations

Define I/O psychology.
Differentiate between I/O psychology and other fields of psychology.
Explain the need for cross-cultural psychology.
Analyze the Empirical Research Process.
Compare and contrast primary and secondary research methods on the ability to obtain sound data.
Analyze ethical issues in research.
Criteria and Standards for Decision Making
Differentiate conceptual and actual criteria.
Explain criterion deficiency, relevance, and contamination.
Perform a work analysis.
Appraise the nine major job performance criteria.
Assess the quality of predictors using the concepts of reliability and validity.
Analyze the use of psychological tests and inventories, interviews, work samples, and situational exercises.
Discuss controversial methods of assessment.
Human Resource Topics

Analyze the social and legal context for sound human resource decisions.
Appraise the process for selecting, processing, placing, and classifying employees.
Compare and contrast training and development methodologies.
Examine the relationship between performance management and performance appraisal.
Differentiate performance appraisal methods.
Interpret the three theories of organizations.
Examine the components of social systems.
Evaluate downsizing, outsourcing, offshoring, mergers, acquisitions, globalization, and their effects on the organization.
Analyze organizational change and overcoming resistance to change.
Identify the different types of teams.
Discuss the benefits of teamwork.
Diagram team structure.
Interpret how teams make decisions and share mental models.
Examine the organizational attitudes of job satisfaction, job involvement, commitment and organizational justice, and their effects on the organization.
Evaluate how organizations affect employee behavior.
Apply the psychological contract concept to employee behavior.
Workplace Psychological Health
Analyze the relationship between mental, emotional, and physical well-being of employees and work/family conflict and how the relationships affect workplace behavior.
Explain the psychological effects of unemployment, reorganization, and other workplace stress.
Evaluate the effect of drug abuse and alcoholism on the workplace.
Examine the global exploitation of children in the workplace.
Compare and contrast motivational concepts and theories.
Apply motivational strategies.
Analyze the six major categories in leadership research.
Compare and contrast the theoretical approaches to leadership.
Analyze cross-cultural leadership issues.
Analyze diversity issues in leadership.
Describe the purpose of a union.
Illustrate the formation of a union and functions of the union contract.
Analyze research on union and management behaviors.
Assess the relationship of I/O psychology to industrial relations.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Students will be assessed through tests, quizzes, assignments, case studies, presentations, and/or class participation.

MGT241 - Small Bus Mgt & Entrepreneurship

Overview

Subject Management

Academic Department Business & Economics

School Business, Entrepreneurship, PD

Course Description
Examines the role of small business and entrepreneurship in the current economy with emphasis on launching and operating a new business. Also explores the purpose of and need for a business plan, and other important aspects such as financial needs, marketing plans, personnel and operational management, legal issues, and location. Includes the individual creation of a business plan for a start-up company.

Course Pre-requisite(s)
Eligible to take ENG courses at HFC

Credit Hours
3

Contact Hours
3

Course Fee 0

Miscellaneous Department Fee 0

Academic Level
Undergraduate

Eligible for Credit for Prior College Level Learning (CPCLL)

Goals, Topics, and Objectives

- Core Course Topics
1. Small Business and Entrepreneurship
 2. Small Business Legal Forms
 3. Financial Management
 4. Legal Environment
 5. Marketing
 6. International Small Business
 7. Professional Small Business Management
 8. Human Resource Management
 9. The Business Plan

1. Small Business and Entrepreneurship
a. Define small business.
b. Define entrepreneurship.
c. Appraise the characteristics of a small business.
d. Describe the characteristics of a successful entrepreneur.
e. Evaluate the advantages and disadvantages of being self-employed.

f. Discuss social responsibility, ethics, and strategic planning and the role they play in a small business.
g. Explain competitive advantage.
h. Write mission and vision statements.
2. Small Business Legal Forms
a. Compare and contrast the forms of business organization.
b. Compare and contrast franchising, buying an existing business, and starting a new business.
3. Financial Management
a. Analyze accounting records and financial statements.
b. Describe financial recordkeeping for a small business.
c. Describe methods for financing a small business.
4. Legal Environment
a. Identify the laws and regulations that affect a small business.
b. Explain the types of bankruptcy.
c. Examine the elements of a contract.
d. Discuss the protection of intellectual property.
5. Marketing
a. Evaluate the product-selection process.
b. Explain competitive advantage in product and business creation.
c. Analyze the role of inventory and methods of inventory control.
d. Describe small business distribution and channels of distribution.
e. Evaluate the elements for selecting a location.
f. Identify considerations in pricing.
g. Perform a breakeven analysis.
h. Describe promotional mix and the factors affecting it.
i. Explain how a small business can use and is affected by the Internet.
6. International Small Business
a. Identify factors to consider in globalization.
b. Discuss opportunities for importing and exporting.
c. Evaluate economic and cultural challenges.
7. Professional Small Business Management
a. Analyze management functions, activities, and organizational structures.
b. Describe the stages of small business growth and the accompanying managerial challenges.

8. Human Resource Management
a. Explain a job analysis and its purpose.
b. Compare and contrast recruitment sources.
c. Evaluate employee selection tools.
d. Categorize compensation and benefit systems.
e. Describe effective discipline and termination procedures.
f. Discuss employee training and development.
9. The Business Plan
a. Create a business plan containing: 1. Mission Statement 2. Vision Statement 3. Description of business and feasibility 4. Competitive analysis 5. Market analysis and plan 6. Sales projections 7. Location analysis 8. Formal financial information 9. Plan for obtaining financing

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Students will be assessed through tests, quizzes, assignments, and/or class participation, and creation of a business plan individually by each student.

LETTER GRADE	PERCENTAGE
A	93-100%
A-	90% - 92.9%

MOA101 - Administrative Medical Procedures I

Overview

Subject Medical Office Assistant	Academic Department Health Careers	School Health & Human Services
Course Description Introduces the profession of medical assisting. Emphasizes administrative skills utilized in ambulatory care. Discusses administrative and clinical duties of the Medical Assistant Practitioner. Also includes but is not limited to medical office receptionist duties, maintaining medical records, billing, and fee collection, medical practice finance, computer applications, and emergency preparedness.		
Course Pre-requisite(s) Permission of the program director and AH100 Medical Terminology with a C or better		
Credit Hours 4		
Contact Hours 4		
Course Fee 50	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics
1. Introduction to Medical Assisting
2. Medical Law Ethics
3. Organization of the Health Care Delivery System
4. Patient Education
5. Patient Reception
6. Telephone Techniques
7. Managing Appointments
8. Written Communication
9. Health Information Management/Protection
10. Electronic Applications in the Medical Office
11. Medical Office Management
12. Emergency Preparedness
13. Credit Arrangements and Fee Collection
14. Medical Bookkeeping and Accounting
15. Banking Services and Procedures
16. Career Strategies
Describe the professional role of the medical assistant.
Define the legal scope of practice for a medical office assistant.
Describe the administrative and clinical duties of the medical assistant.
Explain fees, credit arrangements related to reimbursement for services.
Explain the importance of obtaining certification for the medical assistant.
Perform telephone triage of emergency patients.
Utilize open-ended interview questions to assess the patient.
Perform Computer Prescription Order Entry (CPOE)
Discuss the career options available to a properly credentialed medical assistant or medical insurance specialist.
Demonstrate honesty and integrity in the performance of all medical business practices.
Demonstrate empathy and awareness of other's feelings when communicating with patients, physicians, and staff members.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement will be determined using a combination of learning activities, participation, unit tests and final examination.
General Course Requirements and Recommendations
Emphasis will be on individual learning experiences which will include active participation of students in classroom activities. A cooperative rather than a competitive atmosphere is encouraged. Students are responsible for making arrangements in advance of an absence with a classmate to obtain any missed work. This course will consist of specific units of study. Each student is responsible for completion of all the required (*) learning competencies. Students must be present for the final examination.

Grading Scale

The grading scale is:

- 99-100% = A+
- 94-98% = A
- 90-93% = A-
- 87-89% = B+
- 83-86% = B
- 80-82% = B-
- 76-79% = C+
- 70-75% = C
- 65-69% = D+
- 60-64% = D
- 59% and below = E

MOA110 - Processing Health Insurance Claims

Overview

Subject	Academic Department	School
Medical Office Assistant	Health Careers	Health & Human Services
Course Description An introductory-level insurance billing course centering on the medical office. Presents the coding systems used in conjunction with the International Classification of Diseases, Tenth Revision, Clinical Modification (ICD-10-CM) and the Current Procedural Terminology (CPT) manual. Also discusses how information is used to process health insurance claims for Blue Cross/Blue Shield (BCBS), Medicare, Medicaid, Tricare, Commercial, and Workers Compensation.		
Course Pre-requisite(s) <u>AH100 Medical Terminology</u> with a C grade or higher, Permission of Program Director		

Credit Hours
2

Contact Hours
3

Course Fee	Miscellaneous Department Fee

Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Core Course Topics

1. Introduction to Medical Insurance
2. Insurance Specialist & Medical Assistant-Roles & Responsibilities
3. Diagnostic Coding
4. Procedure Coding
5. Healthcare Common Procedure Coding System (HCPCS) Coding
6. The Life Cycle of an Insurance Claim
7. Managed Health Care
8. Blue Cross Blue Shield (BCBS)
9. Medicaid
10. Medicare
11. Tricare
12. Commercial Insurance Carriers
13. Ethical and legal standards in business practices

Describe the process used to identify and select diagnostic codes using the ICD-10-CM coding system.
Describe the process used to identify and select procedure codes using the CPT manual coding system.
Describe the process used to identify and select procedure codes using the HCPCS coding system.
Complete an insurance claim form for the following carriers: Blue Cross/Blue Shield (BCBS),Health Maintenance Organization (HMO), Medicare, Medicaid, Tricare, and Worker's Compensation.
Utilize the ICD-10-CM and the CPT manuals to complete a paper-based and an electronic insurance claim form.
Explain the advantages of the Affordable Care Act and how it impacts the delivery of health care in ambulatory services.
Demonstrate honesty and integrity in the performance of medical billing and insurance coding practices.
Apply ethical and legal standards in the performance of all medical business practices.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment will consist of learning activities, participation, examinations and a final exam.

The following four components identify the value given to each assessment category. *Examinations, 30% Learning Activities, 30% Attendance/Participation, 10% Final Examination, 30%*

Grading Scale

Grades will be assigned using the following scale:

- 97-100% = A+
- 95-96% = A
- 93-94% = A-
- 91-92% = B+
- 88-90% = B
- 85-87% = B-
- 83-84% = C+
- 80-82% = C
- 78-79% = D+

- 76-77% = D
- 72-75% = D-
- 71% and below = E

MOA122 - Intro to Medical Assistant Clinical Proc

Overview

Subject	Academic Department	School
Medical Office Assistant	Health Careers	Health & Human Services
Course Description An introductory level clinical course for students in the medical assistant program. The student will wear program clinical attire, (HFC scrubs, lab coat), and will be introduced to OSHA, CDC, emergency preparedness, along with universal and standard precautions. The student will be able to apply safety knowledge learned in the course while mastering content in the class such as a complete physical exam, specialty exams, patient transfer and vital signs.		
Course Pre-requisite(s) <u>AH132 Intro to Healthcare Profession</u> and permission of program director		

Credit Hours
2

Contact Hours
3

Course Fee	Miscellaneous Department Fee
100	0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Core Course Topics

1. OSHA, universal and standard precautions
2. Measure and record vital signs
3. Complete physical exam
4. Specialty exams
5. Patient transfer

Compare structure and function of the human body across the life span.
Describe the infection cycle including: The infectious agent, Reservoir, Susceptible host, Means of transmission, Portals of entry, Portals of exit.
Identify methods of controlling the growth of microorganisms.
Define the principles of standard precautions.
Define personal protective equipment (PPE) for: All body fluids, secretions, and excretions, Blood, Non-intact skin, Mucous membranes.
Measure and record: Height, Weight, Length (infant), Head circumference (infant), Pulse oximetry.
Perform pulmonary function testing.
Perform patient screening using established protocols.
Instruct and prepare a patient for a procedure or a treatment.
Assist provider with a patient exam.
Document on a growth chart.
Participate in blood-borne pathogen training.
Select appropriate barrier/personal protective equipment (PPE).
Demonstrate proper disposal of biohazardous material: Sharps, Regulated wastes.
Document patient care accurately in the medical record.

Develop a plan for separation of personal and professional ethics.
Incorporate critical thinking skills when performing patient assessment.
Incorporate critical thinking skills when performing patient care.
Show awareness of a patient's concerns related to the procedure being performed.
Recognize the implications for failure to comply with Center for Disease Control (CDC) regulations healthcare settings.
Explain to a patient the rationale for performance of a procedure.
Demonstrate sensitivity to patient rights.
Protect the integrity of the medical record.

Assessment, Requirements, and Outcomes

- Assessment of Academic Achievement
- Cognitive assessment will be done through various program rubrics, quizzes, and tests, that align with the national standards and guidelines curriculum for medical assistants. (MAERB)
 - Program rubrics will be used to assess demonstration of competencies for the required psychomotor standards of the program, with critical elements identified. Students will use student centered learning stations set up in the classroom to re-mediate, and to initiate various scenario possibilities to ensure that students have strong clinical and critical thinking/problem solving skill sets.
 - Appropriate assessment methods will be used to analyze cognitive retention, application to environment/scenario, while following all required industry safety standards.

Grading Scale
Students will be assessed on the following scale:

- The grading scale is:
- 99-100% = A+
 - 94-98% = A
 - 90-93% = A-
 - 87-89% = B+
 - 83-86% = B
 - 80-82% = B-
 - 76-79% = C+
 - 70-75% = C
 - 65-69% = D+
 - 60-64% = D
 - 59% and below = E

All medical assistant students will be required to follow national accreditation guidelines and pass 100% of all psychomotor and affective competencies, and pass the cognitive domain at a minimum of 85% to pass the class, and move forward to MOA-150.

MOA152 - Medical Assistant Clinical Procedure II

Overview

Subject	Academic Department	School
Medical Office Assistant	Health Careers	Health & Human Services

Course Description
An advanced-level medical assistant course that explores the clinical functions of the medical practice. Presents topics such as phlebotomy, administration of medication, electrocardiography, assisting with minor surgery, and treatments. Students practice the concepts of medical and surgical asepsis, and routine diagnostic tests and procedures.

Course Pre-requisite(s)
[MOA101 Admin Medical Procedures](#) and [MOA122 Intro Med Asst Clinical Proced](#) with a grade B- or higher, and [MATH100 Basic Tech Mathematics](#) or higher with a C or higher , and [BIO134 Essentials Anatomy&Physiology](#) with a C or higher or [BIO233 Anatomy and Physiology](#) and [BIO234 Anatomy and Physiology II](#) with a C grade or better).

Goals, Topics, and Objectives

- Core Course Topics
- Medical and Surgical Asepsis
 - Minor Surgery

- Sterilization and Disinfection
- Pharmacology
- Administration of Medications
- Hematology
- Phlebotomy
- Spirometry: Peak Flow Measurements
- Electrocardiogram
- Special Populations: Pediatrics and Geriatrics
- Medical Laboratory Tests: Blood Chemistry, Microbiology and Urinalysis

Explain the principles of medical vs surgical asepsis.
Describe the physical examination procedure including equipment, and patient preparation.
Discuss the pharmaceutical agents (medications) required for the medical office assistant.
Demonstrate competence in all required clinical procedures in the laboratory setting.
Calculate common medical dosages seen in medical assisting.
Enter medication into the Computer Pharmacy Order Entry System.
Apply OSHA Standard Precautions in the performance of all job duties.
Demonstrate empathy in personal interactions with patients, physicians and staff members.
Demonstrate awareness of the legal scope practice for medical assistants.
Perform all clinical procedures according to the ethical standards of the profession.
Perform: electrocardiography, venipuncture, capillary puncture, pulmonary function testing
Perform patient screening using established protocols
Verify the rules of medication administration: right patient, right medication, right dose, right route, right time, right documentation
Select proper sites for administering parenteral medication
Administer oral medications
Administer parenteral (excluding IV) medications
Instruct and prepare a patient for a procedure or a treatment
Assist provider with a patient exam
Perform a quality control measure
Obtain specimens and perform: CLIA waived hematology test, CLIA waived chemistry test, CLIA waived urinalysis, CLIA waived microbiology test
Calculate proper dosages of medication for administration
Differentiate between normal and abnormal test results
Maintain lab test results using flow sheets
Document on a growth chart
Prepare items for autoclaving
Perform sterilization procedures

Prepare a sterile field
Perform within a sterile field
Perform wound care
Perform dressing change
Demonstrate proper disposal of biohazardous material: sharps, regulated waste
Instruct a patient according to patient's special dietary needs
Perform compliance reporting based on public health statues
Report an illegal activity in the healthcare setting following proper protocol
Complete an incident report related to an error in patient care
Comply with: safety signs, symbols, labels
Demonstrate proper use of: eyewash equipment, fire extinguishers, sharp disposal containers
Use proper body mechanics
Participate in a mock exposure event with documentation of specific steps
Evaluate the work environment to identify unsafe working conditions

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement The emphasis in this course will be on individual learning experience which will include active student participation in classroom and laboratory activities, A cooperative rather than a competitive learning atmosphere is encouraged. Students are expected to attend all classroom and laboratory sessions. Assessment of academic achievement will be determined using a combination of learning activities, participation, examinations, and the final exam.	
Grading Scale The grading scale is:	
A+ = 99-100% A = 94-98% A- = 90-93% B+ = 87-89% B = 83-86% B- = 80-82% C+ = 76-79% C = 70-75% D+ = 65-69% D = 60-64% E = 59% and below	
The final course grade will determined using the following criteria:	
Examinations, 30% Learning Activities, 30% Attendance/Participation, 10% Final Examination, 30%	
Texts Required textbooks will be determined by the department faculty. Satisfies Honors Requirement No	Satisfies Wellness Requirement No

MOA165 - Physician Billing Concepts

Overview

Subject Medical Office Assistant	Academic Department Health Careers	School Health & Human Services
Course Description This course is designed to build upon the knowledge gained in MOA-101, and MOA-110. The process of electronic claims preparation is practiced through classroom simulations. The student will use medical office computer applications to establish patient, insurance, facility data bases. This information allows the user to prepare statements, bill insurance companies, post payments to the patient account, and generate statements and other financial documents utilized in the physician's office.		
Course Pre-requisite(s) AH100.Medical Terminology with a C grade or better, either prior or at the same time		
Credit Hours 4		
Contact Hours 4		

Course Fee 20	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) No	
Goals, Topics, and Objectives Core Course Topics 1. Office Ergonomics 2. Paper Claims: Commercial, Blue Cross/Blue Shield(BCBS), and Medicaid 3. Electronic Claims: Commercial, Blue Cross/Blue Shield (BCBS), and Medicaid 4. Ethical/Legal Standards in Claims Preparation 5. Patient Intake Procedures 6. Patient Statements 7. Accounts Receivable	
Initiate patient registration and verify current insurance coverage.	
Explain the Health Maintenance Organization (HMO) referral and authorization request process.	
Use the Current Procedural Terminology (CPT) and International Classification of Diseases, Tenth Revision, Clinical Modification (ICD-10-CM) to demonstrate medical necessity for billing.	
Perform insurance verification, certification, and authorization for health insurance carriers such as Blue Cross/Blue Shield (BCBS), Medicaid, and Health Maintenance Organization (HMO) plans.	
Construct a complete electronic claim for traditional insurance carriers such as BC/BS, Medicare, Medicaid, Commercial Carriers, Tricare, and Workmen's Compensation.	
Demonstrate scope of practice for a medical insurance specialist.	
Demonstrate honesty and integrity in the performance of all medical business practice.	
Exercise ethical/legal standards in claims preparation and submission.	

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Assessment of academic achievement will be based on assignments, quizzes, unit tests, and final examination.	
General Course Requirements and Recommendations Emphasis will be placed upon individual learning experience. Active participation in class assignments will be encouraged and required. A cooperative rather than competitive atmosphere will be encouraged. In case of absence, it is the student's responsibility to obtain missed information from a classmate. A test will be administered at the completion of each unit. Each student is responsible for completion of the worksheets and review questions as assigned.	
Grading Scale Student grades will be assigned using the following scale:	98-100% = A+ 93-97% = A 90-92% = A- 87-89% = B+ 83-86% = B 80-82% = B- 76-79% = C+ 70-75% = C 67-69% = D+ 63-66% = D 60-62% = D- 59% & below = E

The course grade will be based on the following criteria: Examinations(unit tests); 30% Case Studies/Assignments; 30% Professionalism/Participation; 10% Final Examination;30%	
Texts Required textbooks determined by the program faculty. Satisfies Honors Requirement No	Satisfies Wellness Requirement No

Goals, Topics, and Objectives

Core Course Topics - The Hospital Environment - Types of Facilities - Hospital Billing Process - Patient Registration - Accounts Receivable Management - Hospital Medical Insurance - Center for Medicare and Medicaid Services (CMS) - Skilled Nursing Facility Consolidated Billing - International Classification of Diseases, Tenth Revision (ICD-10) Diagnostic and Surgical Codes - Uniform Billing Form for Hospital
Outline the key elements of hospital billing systems.
Compare and contrast the types of billing systems.
Discuss the hospital insurance billing process.
Explain hospital insurance coding and payment methods.
Describe the use of the Uniform billing claim used by hospitals and ambulatory centers to bill medicare and third party payers.
Explain condition, occurrence, and value coding.
Relate revenue coding to charges.
Explain diagnosis and procedure coding.
Prepare a successful Uniform Billing Form for Hospitals claim form.
Explain revenue coding to charges.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Assessment of academic achievement will include assignments, quizzes, and tests.
General Course Requirements and Recommendations Active participation in class assignments will be encouraged and required. Cooperative rather than a competitive atmosphere will be encouraged. - Students are expected to attend all sessions of the class. - In case of absence, it is the student's responsibility to contact a classmate in advance to obtain missed materials. - Failure to officially withdraw from the class may result in a grade of E.
Students graduating from the Medical Insurance Specialist program should be able to demonstrate cognitive knowledge based on academic subject matter required for competence in the field. They will be able to incorporate cognitive knowledge in the performance of psychomotor and affective learning domains.
Grading Scale Grades will be assigned using the following scale: 98-100% = A+ 93-97% = A 90-92% = A- 87-89% = B+ 83-86% = B 80-82% = B- 76-79% = C+ 70-75% = C 67-69% = D+ 63-66% = D 60-62% = D- 59% & below = E
Texts Required textbooks to be determined by program faculty.

MOA170 - Med Correspond - Electronic Hlth Record

Overview

Subject Medical Office Assistant	Academic Department Health Careers	School Health & Human Services
Course Description Focuses on the variety of medical correspondence found in ambulatory health care facilities. Introduces the procedures used for initiating and documenting patient care using an electronic health record system. Also covers medical office workflow, practice finance, medical billing and coding, clinical procedures, and administrative functions of the front office. Laboratory activities.		
Course Pre-requisite(s) MOA101 Admin Medical Procedures I, MOA110 Process Hlth Insurance Claims andBIO134 Essentials Anatomy&Physiology or (both BIO233 Anatomy and Physiology I and BIO234 Anatomy and Physiology II); all with a C grade or better.		
Credit Hours 3		
Contact Hours 4		
Course Fee 53	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics - Introduction to Electronic Health Records - Medical Office Workflow - Appointment Scheduling - Patient Registration - Open Orders Processing - Referrals - Patient History and Physical Examination - Prescribing Medications - Evaluation/Management - Accounts Receivable - Posting Charges and Payments - Billing and Coding Using the EHR - Administrative and Charting Duties Using the EHR - Clinical Case Studies - Front-Desk Case Studies
Describe the history of electronic health records.
Differentiate between open and closed systems.
Describe the Medical Office Workflow.
Explain the role of HITECH.
Describe the purpose and function of CCHIT.
Discuss the impact of the AARA.
Describe major insurance carriers.
Describe evaluation and management levels of service.
Psychomotor Domain
Perform Patient Registration.
Perform documentation of patient care.
Perform medical billing procedures. *Complete a workflow clinical case study using all components of the electronic health record.
Describe the importance of participating in continuing education activities to increase knowledge and use of electronic health records.

Demonstrate honesty and integrity in the performance of all administrative and clinical medical assistant duties.
Explain the importance of following HIPAA guidelines regarding confidentiality and security in regard to protected health information.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Assessment of academic achievement will include assignments, worksheets, group project, tests and final exam. The following weighted percentages will be used when determining the assigned final grade: Worksheets: 15% Assignments: 20% Tests: 15% Group Projects: 25% Final Exam: 25%	
General Course Requirements and Recommendations The student will require access to the internet to complete homework assignments outside of class. Emphasis will be directed toward helping each student achieve the required goals. Students are responsible for all material and assignments. Students are expected to spend time outside of class studying and practicing new skills. Medical Assistant students graduating from a program accredited through the Commission on Accreditation of Allied Health Education Programs (CAAHEP) will demonstrate cognitive knowledge based on academic subject matter required for competence in the field. They will be able to demonstrate cognitive knowledge in the performance of psychomotor and affective learning domains.	
Grading Scale Student grades will be assigned using the following scale:	
98-100% = A+ 93-97% = A 90-92% = A- 87-89% = B+ 83-86% = B 80-82% = B- 76-79% = C+ 70-75% = C 67-69% = D+ 63-66% = D 60-62% = D- 59% & below = E	
Texts Required textbooks to be determined by program faculty.

MOA181 - Medical Collection and Legal Issues

Overview

Subject Medical Office Assistant	Academic Department Health Careers	School Health & Human Services
Course Description An advanced physician billing course focusing upon payment posting, fee schedules, HMO capitation reports, rejections, billable/non-billable services, claim status, and collections. Also discusses ethics in relation to billing and billing issues.		
Course Pre-requisite(s) HIT151 Basic Med Coding: Theory/Pract , MOA165 Physician Billing Concepts , and AH100 Medical Terminology all with a "C" grade or higher.		
Credit Hours 3		
Contact Hours 3		
Course Fee 20	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics - Data Management Terms, Review Center for Medicare and Medicaid Services, Billing Forms, Type and Place Codes. - Pre-Test Paper and Electronic Claim Forms for Medicare, Medicaid, Commercial, and Traditional Insurance Carriers such as Blue Cross/Blue Shield - HIPAA/Referrals - Post Payments for Traditional Health Insurance Carriers such as Blue Cross and Blue Shield and Coordination of Benefits (COB) Claims - Post Payments for Traditional Health Insurance Carriers such as Blue Cross and Blue Shield (Electronic) - Working Rejections and Traditional Health Insurance Carrier Corrections - Post Payments for Medicare Paper and COB Claims - Post Payments for Medicare Electronic - Working Rejections and Medicare Corrections
Determine the approved amount with appropriate adjustments for payment and co-payment factors.
Demonstrate both manual and computer post payments.
Analyze work rejections; and relate to write offs, re-billing, and status.

Formulate bills for second- and third-insurance carriers.
Generalize the basic collection laws.
Prepare capitation reports/referrals.
Analyze the impact of Health Insurance Portability and Accountability Act of 1996 (HIPAA) upon the billing process.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Assessment of academic achievement will include participation, assignments, quizzes, tests, and final exam.	
General Course Requirements and Recommendations Students graduating from the Medical Insurance Specialist program will demonstrate cognitive knowledge based on academic subject matter. They will incorporate cognitive knowledge in the performance of psychomotor and affective learning domains.	
Grading Scale Student grades will be assigned using the following scale:	
Grading scale: 98-100% = A+ 93-97% = A 90-92% = A- 87-89% = B+ 83-86% = B 80-82% = B- 76-79% = C+ 70-75% = C 67-69% = D+ 63-66% = D 60-62% = D- 59% & below = E	
Texts Required textbooks to be determined by program faculty.	
Satisfies Honors Requirement No	Satisfies Wellness Requirement No

MOA190 - Medical Office Externship

Overview

Subject Medical Office Assistant	Academic Department Health Careers	School Health & Human Services
Course Description Offers a capstone clinical externship for the medical assistant student, including 165 hours of clinical experience at an assigned ambulatory care facility. The course includes a structured class component.		
Course Pre-requisite(s) MOA152 Med Assist. Clinical Proc II , with a B- grade or higher		
Credit Hours 4		
Contact Hours 11		
Course Fee 20	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics - Administrative Competencies - Clerical Functions - Perform Bookkeeping Procedures - Process Insurance Claims - Clinical Competencies - Fundamental Procedures - Specimen Collection - Diagnostic Testing - Patient Care - General Competencies - Professional Communications - Legal Concepts - Patient Instruction - Operational Functions
Perform clerical functions including scheduling appointments, referrals, and organizing medical records.

Perform bookkeeping procedures including accounts receivable and accounts payable procedures.
Perform fundamental procedures including handwashing, standard precautions, disposal of biohazardous materials, and sterilization techniques.
Perform electrocardiography, respiratory tests and CLIA Waived tests.
Perform in-person and telephone triage.
Record vital signs.
Administer oral and parenteral (excluding IV) medications.
Perform within the legal scope of practice for the medical assistant.
Demonstrate knowledge and role of the medical assistant in emergency preparedness.
Design an emergency evacuation plan.
Display the appropriate professional behaviors required of a medical assistant in an ambulatory care setting.
Deliver an instructional session on either health maintenance or disease prevention for a selected patient according to their needs.
Perform a successful venipuncture on a selected patient following proper procedures and techniques.
Outline the American Association of Medical Assistants (AAMA) certification process.
Describe the benefits of the Certified Medical Assistant (CMA) designation.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement will include weekly clinical journals, midterm evaluation, externship experience checklist, class presentations and assignments, completion and adherence to student contract and mock CMA exam.
General Course Requirements and Recommendations
1. The program needs to ensure that the externship experience and instruction of students are meaningful and parallel in content and concept with materials presented in lecture and laboratory sessions. Clinical externship sites should be selected so that each student is afforded a variety of experiences, while at the same time all students are provided consistent learning opportunities. 2. Accreditation standards require that students do not receive compensation/payment, monetary or otherwise, from any clinical site for any portion of their clinical externship. A supervised, unpaid externship at an ambulatory health care setting performing administrative and clinical procedures must be completed prior to graduation.

Grading Scale
Student grades will be assigned using the following scale:

- The grading scale is:
- 99-100% = A+
 - 94-98% = A
 - 90-93% = A-
 - 87-89% = B+
 - 83-86% = B
 - 80-82% = B-
 - 76-79% = C+
 - 70-75% = C
 - 65-69% = D+
 - 60-64% = D
 - 59% and below = E

MOA205 - Insurance Coding & Reimbursement

Overview

Subject	Academic Department	School
Medical Office Assistant	Health Careers	Health & Human Services

Course Description	
Further develops the methods and skills necessary for optimal reimbursement for services rendered in a healthcare setting. Explores billing and reimbursement cycle, HIPAA, diagnostic coding and procedural coding, coding compliance, and claims processing as well as physician and hospital coding reimbursement. Also provides an overview of the key financial circumstances impacting the healthcare delivery system.	
Course Pre-requisite(s)	
HIT151 Basic Med Coding: Theory/Pract , MOA165 Physician Billing Concepts, and AH100 Medical Terminology all with a "C" grade or higher.	
Credit Hours	
3	
Contact Hours	
3	
Course Fee	Miscellaneous Department Fee
20	0
Academic Level	
Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL)	
No	

Goals, Topics, and Objectives

- Core Course Topics
- The Healthcare Environment
 - Revenue Reimbursement Cycle of Physician and Hospital
 - Claims Processing and Compliance
 - Center for Medicare and Medicaid Services (CMS):
 - Overview of Medicare
 - Overview of Medicaid
 - Uniform Billing Form for Hospital
 - CMS Form 500, Uniform Billing Form for Physician
 - HIPAA Transactions Overview (Testing and Certification)
 - Submitting Claims/Claims Adjustments/Troubleshooting Claims

Explain the billing and reimbursement cycle.
Discuss Health Insurance Portability and Accountability Act of 1996 (HIPAA) and Legal Medical Record compliance in relation to medical billing.
Differentiate between diagnostic coding and procedural coding in relation to reimbursement.
Apply standards of coding compliance.
Summarize provider charges and payment methods.
Describe claims processing, follow-up and collections.
Compare and contrast physician and hospital coding reimbursement.
Demonstrate honesty and integrity in the performance of all medical billing practices.
Apply ethical and legal standards to the performance of insurance billing for reimbursement.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement will include participation, assignments, quizzes, tests and final exam.
General Course Requirements and Recommendations
Instructors (or their designees) reserve the right to require students to provide proper picture identification for test taking, submission of graded papers, projects or other appropriate applications. Active participation in class assignments will be encouraged and required. Cooperative rather than competitive atmosphere will be encouraged.
Students graduating from the Medical Insurance Specialist Program should be able to demonstrate cognitive knowledge based on academic subject matter required for competence. They will incorporate cognitive knowledge in the performance of psychomotor and affective learning domains.

Grading Scale
Student grades will be assigned using the following scale:

- 98-100% = A+
- 93-97% = A
- 90-92% = A-
- 87-89% = B+
- 83-86% = B
- 80-82% = B-
- 76-79% = C+
- 70-75% = C
- 7-69% = D+
- 63-66% = D
- 60-62% = D-
- 59% & below = E

MTT100 - Machine Tool Processes I

Overview

Subject Machine Tool Technology	Academic Department Adv Manufacturing/Fabrication	School Business, Entrepreneurshp, PD
------------------------------------	--	---

Course Description
An entry-level course in manufacturing processes involving turning, threading, drilling, reaming, tapping, and milling. Covers part processing, machines, and tooling used along with speeds and feeds and inspection techniques in relation to operations. Safety is an integral part of the course. Laboratory activities.

Credit Hours

4

Contact Hours

Student Interview and Portfolio Review

Goals, Topics, and Objectives

- Core Course Topics
1. Lab orientation, safety, and machining tips
 2. Make-up and carbon content of various metals
 3. Measuring tools and instruments
 4. Tolerances
 5. Hand tools and layout
 6. Threads and fasteners
 7. Lathe, safety and correct use of the machine
 8. Thread cutting on the lathe
 9. Vertical milling machines, safety, and correct use of the machine
 10. Milling tools
 11. Feeds and speeds for different machines and metals
 12. Outside diameter (O.D.) grinder use and safety
 13. Surface grinder

Implement proper safety practices regarding machine tools.
Recognize proper set up for basic machine tool operations.
Determine proper speeds and feeds for machining.
Determine proper tooling for operations to be performed.
Apply proper gauging instruments for tolerances specified.
Process basic parts to completion.
Analyze completed part accuracy.

MTT105 - Print Reading for Manufacturing

Overview

Subject Machine Tool Technology	Academic Department Adv Manufacturing/Fabrication	School Business, Entrepreneurshp, PD
------------------------------------	--	---

Course Description
Surveys the fundamentals of print reading and focuses on concepts and techniques used in various segments of the manufacturing industry. Covers print reading components, such as title blocks, parts lists, geometric terms, and construction. Topics include how to read multi-view drawings, which include section views and auxiliary views, and how to develop strategies for recognizing part shape and size through multiple styles of industrial drawings. Also emphasizes an understanding of part process completion, industrial materials, fasteners, cams, gears, numerical control, and surface finish.

Goals, Topics, and Objectives

- Core Course Topics
1. Introduction to Drafting and Print Reading
 2. Object Representation
 3. Sectional and Auxiliary Views
 4. Measuring Systems
 5. Geometric Dimensioning and Tolerancing
 6. Detail and Assembly Prints
 7. Materials and Machining
 8. Threads and Fasteners
 9. Gears and Cams
 10. Numerical Control

Identify parts of an industrial drawing.
Recognize basic views of projection.
Explain various parts of a title block.
Identify different line types: hidden lines, center lines, and object lines.
Interpret drafting symbols, tolerance, and dimensioning.

Propose processes necessary for part completion and materials needed.
Visualize a completed part from the information given in a drawing.
Analyze assembly drawings by examining individual components.

MTT110 - Machine Tool Processes II

Overview

Subject Machine Tool Technology	Academic Department Adv Manufacturing/Fabrication	School Business, Entrepreneurshp, PD
------------------------------------	--	---

Course Description
A hands-on course offering advanced manufacturing processes experience on the lathe, mills, and grinders. Emphasizes the proper usage and safety protocols of equipment and tools used in performing machining operations. Also covers the efficient use and the troubleshooting of carbide, ceramic, and diamond-cutting tool materials.

Goals, Topics, and Objectives

- Core Course Topics
1. Safety review
 2. Preparation for Machining (S/F & GD & T)
 3. Advanced Milling Machine operations.
 4. Threads and thread cutting.
 5. Mill Cutters and Machinability of materials.
 6. Cutting Tools & Tool Life.
 7. Speeds/Feeds.
 8. Tapers.
 9. Rapid Spacers - Dividing Head.
 10. Special Milling Operations.
 11. Gears & Gear Cutting.
 12. Carbide, Ceramic, and Diamond Tools.
 13. Abrasives - Grinder

Implement proper safety practices regarding machine tools.
Select and apply abrasives efficiently.
Identify tapers and their application.
Describe gears and their application.
Determine proper machine setup for part interchangeability.
Interpret surface-finish characteristics.
Interpret GD & T symbols and their applications.

MTT140 - Introduction to CNC

Overview

Subject Machine Tool Technology	Academic Department Adv Manufacturing/Fabrication	School Business, Entrepreneurship, PD
Course Description An entry-level course covering the basic concepts of computer numerical control (CNC). Also explores set-up, operation, and programming of a CNC mill and CNC lathe. Laboratory activities.		
Course Pre-requisite(s) <u>MTT100 Machine Tool Processes I</u>		
Credit Hours 3		
Contact Hours 4		
Course Fee 50	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Other	
Credit for Prior College Level Learning (CPCLL) Details Student Interview and Portfolio Review		

Goals, Topics, and Objectives

Core Course Topics	
1. Introduction to Numerical Control / History of CNC Milling and Turning	
2. Milling Machine Programming	
3. CAD/CAM	
4. CNC/DNC	

5. Program Set-Up
6. G & M codes
7. Milling Machine Set-up
8. Machine Axis and Nomenclature
9. Right hand coordinate System
10. Axis Motion
11. EIA standards: RS-267-A
12. Cartesian Coordinate System
13. Fixed Zero / Floating Zero
14. Introduction to Right Angle Trigonometry
15. Manual Contour Programming
16. Machine Start Up
17. Cutter Compensation
18. Setting Zero
19. Pocket Milling
20. CNC Lathe - Operation / Program
Identify axis motion nomenclature of CNC machines.
Apply absolute and incremental programming techniques to CNC programming.
Calculate tool position using right-angle trig.
Write a simple program for drilling on a VMC.
Write a simple milling program employing cutter compensation with both linear and circular interpolations.

Assessment, Requirements, and Outcomes

MTT145 - CNC Operations

Overview

Subject Machine Tool Technology	Academic Department Adv Manufacturing/Fabrication	School Business, Entrepreneurshp, PD
Course Description Introduces the concept of computer numerical control (CNC) operations as they exist in the manufacturing environment. Examines setup, operation and programming of the CNC mill and lathe through MDI and off-line programming. Extensive laboratory activities.		
Course Pre-requisite(s) <u>MTT140 Introduction to CNC</u>		
Credit Hours 4		
Contact Hours 6		
Course Fee 50	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Other	
Credit for Prior College Level Learning (CPCLL) Details Student Interview and Portfolio Review		

Goals, Topics, and Objectives

Core Course Topics	
1. Review of Pocket Milling	
2. Review of Tool Compensation	
3. Work Coordinate System	
4. Sub – Routines / Sub – Programs	
5. Thread Milling	
6. Mirror Imaging	
7. Fourth Axis Programming	
8. Plane Selection	
9. Introduction to CNC Lathe (CNC TURNING)	
10. Tool Zero	
11. Setting Tool Length Offsets	
12. Setting Part Zero	
13. Using Cycles	
14. Rough Turning	
15. Rough Boring	
16. Drilling	

17. Threading
18. Tool Selection
19. Soft Jaws use and application
20. Live Tools
21. Communications
22. Set –Up of PC
23. Set – Up of Controller
24. DNC
25. Tooling and Tool Selection
26. Fixturing

Demonstrate safe practices while setting up and operating CNC machines.
Apply both circular and general pocket milling cycles to a part program on a VMC.
Apply work coordinate shifts in part programming.
Setup both work and tooling, and input the data into the offset tables.
Setup and program 4th-axis work on a VMC in the application of indexing and simultaneous 4th-axis motion.
Program a VMC to thread mill by use of standard thread milling formulas.
Set cutting tools for a CNC turning center.
Set work coordinates for the CNC turning center.
Calculate and set proper feed and speeds based on cutting tool and work material.
Write rough turning cycle using the proper programming techniques.
Write a threading cycle for a turning operation for a CNC turning center.

MTT146 - Introduction to Machine Tool Probing

Overview

Subject	Academic Department	School
Machine Tool Technology	Adv Manufacturing/Fabrication	Business, Entrepreneurship, PD
Course Description	Covers the elementary functions and application of the electronic probe on a Vertical Machining Center. Topics include set-up and calibration of the probe and use and application of the following cycles - Bore/Boss measuring cycle, Web/Pocket measuring cycle, and internal and external cycles. Laboratory activities.	
Course Pre-requisite(s)	MTT145 CNC Operations	
Credit Hours	1	
Contact Hours	1	
Course Fee	Miscellaneous Department Fee	
50	0	
Academic Level	Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL)	Acceptable Prior Learning Credit	
Yes	Other	
Credit for Prior College Level Learning (CPCLL) Details	Student Interview and Portfolio Review	

Goals, Topics, and Objectives

- Core Course Topics
1. Probes
2. Macros
3. Variable Data Tables
4. Set-up and Calibration of Table Probes
5. Length and Diameter Measuring Cycles
6. Set-up and Calibration of Spindle Probe

7. Protected Positioning
8. Single Surface Measurement
9. Use Protected Positioning and a Single Surface Measurement Cycle
10. Web/Pocket, Bore/Boss, Internal Corner, and External Corner Measuring Cycles
11. Combining Cycles
12. Tolerance Checking Using Probe

Identify a macro program.
Identify macro data table and manually input data.
Identify a macro alarm.
Describe the use of the macro edit lock.
Describe the calibration of a spindle and table probe.
Apply the tool length and diameter measuring cycles.
Apply the protected positioning cycle.
Apply X, Y, Z single-surface measuring cycles.
Apply web/pocket and core/boss measuring cycles.
Apply internal and external corner measuring cycle.
Construct passing variable macro arguments.
Evaluate the efficiency of probe measuring procedures.

MTT147 - Basic Macro Programming for CNC

Overview

Subject	Academic Department	School
Machine Tool Technology	Adv Manufacturing/Fabrication	Business, Entrepreneurship, PD
Course Description	Introduces macro programming as applied to CNC machine tools. Basic elements of this type of programming include defining a macro, defined variables vs. undefined variables, and the use and application of arithmetic, logical and Boolean operators. Includes both classroom and application-based activities in the CNC laboratory.	
Course Pre-requisite(s)	MTT145 CNC Operations	
Credit Hours	1	
Contact Hours	1.5	
Course Fee	Miscellaneous Department Fee	
50	0	
Academic Level	Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL)	Acceptable Prior Learning Credit	
Yes	Other	
Credit for Prior College Level Learning (CPCLL) Details	Student Interview and Portfolio Review	

Goals, Topics, and Objectives

- Core Course Topics
1. Macros and Macro Variables
2. Macro Lock Edit
3. Variable Data Tables
4. Entering Data via a Macro Statement
5. Calling a Macro
6. Control Statements
7. Address Constant Substitution
8. Programmable Messages
9. Introduce a Programmable Message to the Above Program
10. Arithmetic, Logical, Boolean Operators
11. Programmable Timers

12. System Overrides
13. DPRNT Statements
14. Program Structure
15. Debugging a Macro
16. Enter, Test, and Debug Macro
17. Writing a Macro - Concept - Goals - Limits
18. Flowcharting Macro - Flowcharting Symbols
19. Prove Out Input Testing of Macro
20. Variable Setting and Verification
21. Macro Interrupt (non-Haas)
22. Modal Macro Calls (non-Haas)
23. Writing Macros for Other Controls

Identify a macro program and find the macro data table.
Employ a macro program using G65 or an alias.
Describe the difference among a local, common, global, and system variables.
Apply passing variable macro arguments.
Apply a control statement within a macro.
Apply arithmetic, logical, and Boolean operators.
Utilize system timers and programmable messages.
Apply the DPRNT statement.
Write and debug a macro program.

MTT148 - Advanced CNC Probing

Overview

Subject Machine Tool Technology	Academic Department Adv Manufacturing/Fabrication	School Business, Entrepreneurshp, PD
Course Description Coursework further explores the use and application of the electronic probe on CNC machine tools. Examines how to write cycles to use the probe in such activities as vector measuring, 4th axis applications, stock allowance, and angle measurement along with work coordinate offset measurement. Also covers how to prove work on the CNC vertical machining center. Laboratory activities.		
Course Pre-requisite(s) <u>MTT145 CNC Operations</u> , <u>MTT146 Introd to Machine Tool Probing</u> , <u>MTT147 Basic Macro Programmi for CNC</u>		
Credit Hours 1		
Contact Hours 1		
Course Fee 50	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Other	
Credit for Prior College Level Learning (CPCLL) Details Student Interview and Portfolio Review		

Goals, Topics, and Objectives

- Core Course Topics
1. Probe mechanics, software, calibration, and outputs
2. Vector measuring cycles
3. Pitch circle diameter cycles
4. 4th axis cycles
5. Stock allowance cycles
6. Optimizing probe
7. Multiple stylus variable loading
8. SPC offset cycles
9. Feature-to-feature cycles
10. Angle measuring cycles
11. Probe output (Renishaw)

12. Probe output (DPRNT)
13. Ballbar theory, plot reading, programming

Install probe software and make the initial settings necessary for operation.
Identify the different types of calibration and their purpose.
Identify variable outputs and their storage locations.
Apply 4th axis measuring cycles.
Apply pitch circle diameter cycles.
Apply stock allowance cycles.
Apply macro for multiple stylus data loading.
Apply feature-to-feature data cycles.
Apply SPC tool offset update cycles.
Apply angle-measuring cycles.
Apply the probe output features.
Optimize a probing cycle.
Write a program to inspect multiple features on a part and output results.

MTT150 - Statistical Process Ctrl (SPC) in Manf

Overview

Subject Machine Tool Technology	Academic Department Adv Manufacturing/Fabrication	School Business, Entrepreneurshp, PD
Course Description Covers the use of Statistical Process Control (SPC) in manufacturing to achieve optimum product quality at lowest cost. Development of statistical charts and their interpretation related to process improvement are integral parts of the course. Also covers formulas pertaining to various charts, gage R & R, Cp, and Cpk.		
Credit Hours 3		
Contact Hours 4		
Course Fee 50	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Other	
Credit for Prior College Level Learning (CPCLL) Details Student Interview and Portfolio Review		

Goals, Topics, and Objectives

- Core Course Topics
1. Introduction to Manufacturing Tools and Methods.
2. History of SPC
3. Implementation
4. Benefits
5. Basic Concepts
6. Variation
7. Quality Inspection versus Detection Systems
8. Internal / External Customers
9. Control Plans / Process
10. Gaging
11. Data Collection and Analysis
12. Control Charts
13. Construction of Charts

14. Process Sheets
15. Problem Solving
16. Process / Machine Capability
17. Continuous Improvement

Describe the practical use for Statistical Process Control and related tools and methods required in manufacturing processes.

Describe how to relate and apply gaging, data collection, and problem solving techniques in a manufacturing environment.

Interpret Statistical Process Control Charts in a manufacturing environment.

Evaluate the problem-solving techniques used and the tools and methods required in a manufacturing environment.

MTT170 - Advanced Computer Assisted N/C Program

Overview

Subject	Academic Department	School
Machine Tool Technology	Adv Manufacturing/Fabrication	Business, Entrepreneurshp, PD
Course Description A study in advanced methods of part programming using CAD/CAM software (Mastercam, Catia, and UG NX) on a personal computer. Emphasizes programming three-dimensional (3-D) parts. Class assignments include multiple-part programming.		
Course Pre-requisite(s) MTT160 Comp Assisted N/C Programming

Goals, Topics, and Objectives

- Core Course Topics
1. 2D wall definitions
2. Machining 2D Wall Definitions
3. 3D CAD screen layout
4. View Ports
5. Viewing Windows
6. Surface Types
7. Part Construction
8. Surface Generation
9. Surface Editing
10. 3 & 4 Curve Surface Generation
11. Composite Surface
12. Machining
13. Projecting onto surfaces

Define 2D wall terminology.

Describe the 3D portals for viewing.

Demonstrate the application of tool boundaries and paths to a 3D CAD drawing.

Describe the different methods of surface generation.

Describe the types and methods of 3D machining.

Create, store, and retrieve 3D drawings.

Select the proper surfacing technique for part production.

Academic Level
Undergraduate

Eligible for Credit for Prior College Level Learning (CPCLL)
No

Goals, Topics, and Objectives

Core Course Topics

1. Review of CNC Milling / Turning.

2. Estimating material cost for CNC production parts.

3. Estimating Tooling costs for CNC production parts.

4. Process small batch production parts.

Demonstrate the ability to work in a team environment, sharing duties and responsibilities.

Estimate part costs by using commonly practiced quoting techniques.

Analyze and determine the most efficient programming method relative to manual vs. CAD/CAM programming.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

Each group will be required to submit 3 projects as assigned. All assigned projects will be accompanied by the proper documentation as presented in the requirements. Each student is required to submit a typewritten document which details the following: group activity (as a group or team), individual contribution to the team. All students will keep a time log to validate course lecture hours and lab hours. This log will be turned in at the end of the semester.

MUS107 - Chorus 1

Overview

Subject
Music

Academic Department
Fine & Performing Arts

School
Liberal Arts

Course Description
First of four semesters of Concert Choir including preparation and performance of a broad spectrum of choral music from classical to popular, show tunes, and jazz. At least two performances are scheduled each semester, sometimes accompanied by band or orchestra. These courses are open to college students and adult members of the community. New singers may audition before or during the first week of class. No preparation is necessary, but the demonstration of the ability to sing in tune and hold a part (soprano, alto, tenor, or bass) is required.

Course Pre-requisite(s)
AuditionEligible to take ENG courses at HFC.

Goals, Topics, and Objectives

Course Goals

The goal of this course is to challenge musicians to develop individual and ensemble performance skills in vocal music and to perform in concert on campus and/or in the community.

Core Course Topics

1. Vocal Warmup

2. Rehearsals

3. Sight-reading

4. Musical voice (personal tone)

5. Performances

Demonstrate a vocal warmup routine, including stretching, breathing, vocalizing, and conducting exercises at an introduction level.

Perform their appropriate vocal part (soprano, alto, tenor, or bass), on representative choral literature, in sectional, full chorus, and mixed standing arrangement rehearsals at an introduction level.

Demonstrate introduction level in sight-reading skills.
Demonstrate introduction level in the understanding of the dynamic contrast in development of one's musical "voice" or musical tone.
Perform in a variety of live music events, including informal sing-alongs, on-campus programs, off-campus programs, and formal concerts, at an introduction level.

Assessment, Requirements, and Outcomes

Goals, Topics, and Objectives

Course Goals

The purpose of the course shall be to allow students to receive credit for private music lessons taken from approved music teachers. The student will develop individual performance skills.

Core Course Topics

- The private teacher is responsible for directing the study and performance skill development for each student.
- Appropriate scales, exercises, techniques, and repertoire will be included as part of the study.

Perform ascending and descending major and related minor (natural, harmonic, melodic) scales (0-1 sharps/flats) and tonic arpeggio on: -vocalists: voice & piano (one octave, single line) -percussionists: any keyboard instrument (one octave, single line) -pianists: piano (two octaves, both hands in octaves) -all other instrumentalists: own instrument (one octave).
--

Perform 4-6 minutes of material (e.g. sonata, concerto, art song, etude, etc.) representative of the student's development in order to demonstrate improved tone, technique, musicianship, and ease of confidence in solo performance before jury of music faculty.

Assessment, Requirements, and Outcomes

Goals, Topics, and Objectives

Course Goals
Piano class is open to any student and is especially intended for those who wish to become vocal or instrumental music teachers, or elementary classroom teachers, and have had little or no keyboard experience. In addition to basic technique, the emphasis is on hand-eye coordination. Ample practice facilities are available in the Music Wing of the MacKenzie Fine Arts Center.
Core Course Topics
1. Technical five-finger exercises 2. Note reading 3. Scales 4. Melodies with accompaniment
Perform the ascending and descending C major scale, hands together, one octave
Identify and play notes, with and without accidentals, of the treble and bass staves
Perform representative technical etude (e.g. Hanon)
Demonstrate proper posture and hand/finger position at the piano keyboard
Perform representative solo piano piece, from memory
Perform simple arrangement of "Happy Birthday" in F major, from memory

Goals, Topics, and Objectives

Course Goals
This course builds upon skills developed in Piano 1; continuation of daily exercises and gradual progression to intermediate repertoire will be accomplished.

Core Course Topics

1. Technical five-finger exercises
2. Note reading
3. Scales
4. Melodies with accompaniment

Perform the ascending and descending major scales in F major and G major, hands together, one octave
Perform I, IV, and V chords in C major, F major, and G major, hands separate
Perform ascending and descending chromatic scale, one octave from C to C, hands separate, naming notes
Perform representative technical etude (e.g. Hanon)
Perform representative solo piano piece, from memory
Perform intermediate arrangement of "Happy Birthday" in F major, from memory

Assessment, Requirements, and Outcomes

MUS121 - Jazz Improvisation 1

Overview

Subject Music	Academic Department Fine & Performing Arts	School Liberal Arts
Course Description First of four semesters of jazz improvisation in which skills are developed through the study of jazz theory and the performances of a variety of jazz styles in a small group, jazz combo setting.		
Course Pre-requisite(s) Read Music		
Credit Hours 2		

Contact Hours

2

Course Fee 10	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Other
Credit for Prior College Level Learning (CPCLL) Details Determined by department	

Goals, Topics, and Objectives

Course Goals
This course is intended to develop individual and ensemble skills necessary for successful performing in small group performances of jazz music.

Core Course Topics

1. Chord/melody relationships
2. Scale patterns derived from chords

Perform ascending and descending major and related minor (harmonic) scales (0-1 sharps/flats) on:
vocalists: voice & piano (one octave, single line)
percussionists: any keyboard instrument (one octave, single line)
pianists: piano (two octaves, both hands in octaves)
all other instrumentalists: own instrument (one octave)
Perform iim7-V7-I maj7 arpeggios in same keys as #1 above
Perform ascending and descending blues scales in same keys as #1 above
Improvise utilizing major/minor scales over iim7-V7-I maj7 chord progressions and blues scales over blues progressions
Perform melodies to standard songs in various jazz styles
Demonstrate improved tone, technique, musicianship, and ease of confidence in public jazz performance

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

- Class Participation
- Performance, individually and in groups

Goals, Topics, and Objectives

Course Goals
This course includes the development of singing skills. The class voice approach will challenge the individual student to develop his/her singing ability to its highest level.
Core Course Topics
- Regular warm up - Effective interpretation, stage presence, self-confidence - Performances
Demonstrate good singing posture
Demonstrate a proper warm up procedure, involving stretching, breathing, and vocalizing techniques
Sing "The Star Spangled Banner " accurately, from memory
Sing one Italian art song accurately, from memory
Sing one popular song accurately, from memory

Demonstrate good breath control, diction, tone quality, and ease of confidence in solo performance before classmates

MUS126 - Recording Studio Engineering 1

Overview

Subject Music	Academic Department Fine & Performing Arts	School Liberal Arts
Course Description	This course provides hands-on experience in digital audio engineering. Students will learn to engineer recording sessions by working in an actual recording studio with live musicians. The course covers basic techniques in setting up recording sessions, preparing computer files, microphone usage and placement, digitizing principals, audio acquisition options, midi integration and session management.	
Course Pre-requisite(s)	Course Co-requisite(s)	
ENG-093 eligible	MUS127 Audio Mastering 1

Credit for Prior College Level Learning (CPCLL) Details
The exam will be a course final exam or a revised final exam from a recent semester as administered by the presiding faculty member.

Skilled Demonstration Details
The student will be given scenarios that represent course objectives covered during the semester and be asked to demonstrate the correct methods of addressing the tasks and problems in the scenario using the equipment, computer and software in the studio.

Other Details
Determined by department

Goals, Topics, and Objectives

Core Course Topics
- Mics & techniques - Pre-amps, EQ's & Compression - Electronic Music and the digital environment - Digital recording software - Pre-production - Tracking - The sessions
Identify various types of microphones and demonstrate the appropriate application and placement of each.
Identify and describe different grades of pre-amps, equalizers, and compression software and devices.
Use appropriate pre-amps, equalizers, and compression software and devices, given a specific recording applications.
List and identify the use of each component of a state-of-the-art recording environment.
Create a comprehensive recording session using professional level software such as ProTools.*
Identify the pre-production needs for a simple recording session.*
Create appropriate tracks and equipment patching that anticipate post-production concerns, given a simple recording session scenario.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
When appropriate, objectives will be assessed using small projects consisting of actual musicians in a recording session.
Theoretical knowledge will be assessed using short quizzes.

General Course Requirements and Recommendations The student will be responsible for the costs of the recording studio, including equipment, yet organized computer software set up, the recording session itself, and clean up.

MUS127 - Audio Mastering 1

Overview

Subject Music	Academic Department Fine & Performing Arts	School Liberal Arts
Course Description Provides hands-on experience and guided practice in digital audio mixing and mastering. Explains how to prepare complex digital audio files for duplication and audio for mixing. Also covers basic techniques in mixing room acoustics, software plug-ins, how to troubleshoot various audio problems, equalization, stereo imagery, noise limitation, and bit conversion. Uses professional audio production software.		
Course Pre-requisite(s) ENG-093 eligible	Course Co-requisite(s) <u>MUS126 Recording Studio Engineering 1</u>	
Credit Hours 3

3	
Course Fee 40	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Other
Credit for Prior College Level Learning (CPCLL) Details Determined by department	

Goals, Topics, and Objectives

Core Course Topics

1. The mixing/mastering environment
2. Trouble shooting problems in audio files
3. Learning how to shape the music
4. Stereo imagery
5. Mastering

List and describe acoustical considerations associated with a mixing/mastering environment.
Prepare a given digital audio file for mixing by cleaning the tracks, moving parts as appropriate, normalizing levels.
Identify and trouble shoot problems with a given digital audio file by using plug-ins, applying affects, and creating presets.
Shape the sound of a given digital audio file by defining the frequencies of the mix, identifying EQ's for various instruments, and using pre-recorded reference material.
Create the stereo imagery associated with industry standard music with a given digital audio file.
Create width and depth in the mix of a given digital audio file by mastering noise, mastering EQ, limiting and bit converting.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

When appropriate, objectives will be assessed using small projects consistent with the course objectives.

Students will be observed and evaluated on their ability to work on projects and solve problems common to audio file preparation.

Theoretical knowledge will be assessed using short quizzes.

The final assessment of the course will be a major project consisting of the complete preparation, mixing and mastering of a digital audio file consisting of multiple tracks containing instruments and vocals typical of a pop music recording session.

General Course Requirements and Recommendations

Strong computer skills and a fundamental understanding of music theory is recommended.

Goals, Topics, and Objectives

Course Goals

The dominant focus of attention of musical production will be on live performances by the class members in a musical production open to the public.

Core Course Topics

1. Basic orientation including:
 - Casting your show
 - Rehearsal schedule
 - Acting in a musical production
 - Creative costuming
 - Lighting
 - Make-up
 - Creative blocking
 - Set design
 - Choreography
 - Curtain calls
 - Recording techniques
 - Sound systems:
 - Microphones
 - Mixers
 - Amplifiers
 - Speakers
 - Cables
2. Implementation of skills and techniques
 - In a major musical production and/or in a solo selection and participation in one ensemble within the class.

Perform all chorus selections of the current musical theatre production.
Perform all solo/ensemble selections assigned.
Produce a variety of vocal tones for delivery of lines and songs.
*Perform in synchronization with other musicians, with and without a conductor.
Demonstrate ability to coordinate stage direction movement ("blocking") with singing and delivering lines.
Demonstrate make-up technique and costume preparation appropriate to role.
Demonstrate appropriate stage presence during public performances.
Demonstrate ability to stay in character during public performances.
Demonstrate improved tone, technique, musicianship, and ease of confidence in public performances.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

- Class Participation
- Performance, individually and in groups
- Evaluation of public performances

Credit for Prior College Level Learning (CPCLL) Details Determined by department	

Goals, Topics, and Objectives

Course Goals The goal of this course is to provide liberal arts and technical students an opportunity to develop an open-mindedness toward all music. General music listening experience using specific music vocabulary will be introduced.
Core Course Topics 1. Elements of music 2. Organization of music 3. Chronology of Western Civilization Music 4. Genre and Style

Identify the elements used in a musical composition including pitch, time, timbre and instrumentation.
Identify the structure of a musical composition, including simple to complex forms, composite forms, and free and miscellaneous forms.
Identify the general conventions of periods in Western music history, including Early, Renaissance, Baroque, Classical, Romantic, Modern, Contemporary-Jazz, Pop, and Rock & Roll, and identify major composers from each of these periods.
Identify the defining elements of a musical genre or style, including musical content, as well as lyrical considerations and political or personal subtexts.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement • Homework Assignments • Written quizzes, tests • Listening quizzes, tests • Written concert reviews	
Texts To be determined by instructor. Satisfies Honors Requirement No	Satisfies Wellness Requirement No

MUS132 - Music Literature

Overview

Subject Music	Academic Department Fine & Performing Arts	School Liberal Arts
Course Description This class explores the development of listening skills and traces the musical trends of different time periods of Western Music History. With a deep look at music through the lens of symphonic and chamber music, students can expect open discussions on the definition of art and a challenge to preconceived notions of what music is and how it can be experienced.		
Credit Hours 3		
Contact Hours 3		
Course Fee 10	Miscellaneous Department Fee 0	
Academic Level Undergraduate		

General Education Category Humanities and Fine Arts	Michigan Transfer Agreement (MTA) Category Category 5: Humanities and Fine Arts - Applied Degrees, Category 5: Humanities and Fine Arts - Transfer Degrees
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Other
Credit for Prior College Level Learning (CPCLL) Details Determined by department	

Goals, Topics, and Objectives

Course Goals Students will learn to listen to and identify different styles, idiosyncrasies, and philosophies of composers and time periods, with emphasis on form, timbre, and creative trends.
Core Course Topics 1. Early music 2. The Common Practice Era (Baroque, Classic, and Romantic) 3. Nationalism in Music 4. Impressionism vs Expressionism 5. Serialism vs Minimalism 6. Experimentalism vs Populism 7. Current Trends in Contemporary Classical Music 8. Defining Music

Identify the sound of early notated music from Medieval through the Renaissance
Identify commonalities between the three periods of the Common Practice Era. Distinguish the differences in form, instrumentation, and style that separate these three periods.
Identify the sound of certain Nationalistic elements in mid-to-late Romantic music.
Articulate the elements of French Impressionism, both in art and music. Identify Impressionist pieces, especially in contrast to the antithetical style of Expressionism.
Determine the defining characteristics of modernist music of the 20th century, through comparison of contrasting styles--like serialism and other dissonant atonality against the hyper-tonal minimalist movement.
Understand the reactionary and diverse nature of 20th century music through comparison of extremes.
Understand the current trends in 21st century classical music, including neo-tonality, eclecticism, multi-media, and other trends, including recent and current pieces by notable living composers.
Identify and challenge the defining criteria of music.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement • Listening Exams • Concert Attendance

Credit for Prior College Level Learning (CPCLL) Details
Determined by department

Goals, Topics, and Objectives

Course Goals
The goal of this course is to introduce popular music and its impact socially, culturally, economically, and politically since 1950.
Core Course Topics
1. The roots of Rock: overview of the Fifties' style.
2. Transition: The early 1960's.
3. The British Invasion.
4. Folk Rock, Soul, and Motown.
5. The 1970's, 80's, and early 90's (Acid Rock, Punk Rock, Disco, MTV, Rap).
6. The musicians.
7. The industry.
8. The audience.
9. Society in general.
Identify basic musical concepts found in various pop and rock styles.
Identify the popular music basic facts and dates (significant events, influential figures, milestone songs, albums, concerts, sociological factors affecting pop music).
Describe factors affecting artistic thought and development.
Describe factors affecting consumers of popular music.
Show how situations in a given time period anticipate events in subsequent periods.
Develop a continuum of thought that ties popular music development together in a logical sequence.
Analyze the reasoning used by key players in the music industry and identify the premises and assumptions used in that reasoning.*

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

Goals, Topics, and Objectives

Course Goals
The goal of this course is to introduce the fundamentals of music notation, structure and symbols and assist students who are not fully prepared to absorb the full thrust of music theory courses.
Core Course Topics
1. Pitch notation reading
2. Rhythm notation reading
3. Rhythm reading (performance)

4. Intervals
5. Scales
6. Triads
7. Keyboard fundamentals
Identify and write notes on treble and bass staves.
Identify and write all accidentals, including flat, sharp, double flat, double sharp, and natural symbols.
Identify and write the most common time signatures (2/4, 3/4, 4/4, 6/8, 9/8, 12/8).
Perform beat and division of beat in the time classifications represented by the time signatures above.
Construct and identify (utilizing Roman Numerals) triads in major keys.
Perform major scales in one or more keys at a keyboard.
Perform major scale vocally utilizing solfeggio.
Perform "Happy Birthday" in F major three times, playing melody on the piano all three times while singing: note names, solfeggio and lyrics.
Construct and identify (utilizing Roman Numerals) triads in major keys showing the ability to identify the abstract patterns and apply them in different keys.*

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
• Homework assignments	
• Written and oral quizzes, tests

Determined by department		

Goals, Topics, and Objectives

Core Course Topics
1. The review of rudiments. Exercises in note writing, clefs, stems, rhythmic values, major and minor scales, proper writing of key signatures, and identification of modes
2. Study of major, minor, perfect augmented, and diminished intervals
3. Chord spelling
4. Chords derived from major and minor scales
5. Analysis of all above factors in music the student is currently performing
Compose rhythms in basic time signatures

Identify the melodic and harmonic elements within major and minor keys
Construct major and minor scales
Construct triads and determine their quality
Construct major, minor, perfect, diminished, and augmented intervals
Identify melodic and harmonic elements in music the student is currently performing*
Correlate all written theory with the co-requisite Aural Music Skills 1 (MUS 141) course

Assessment, Requirements, and Outcomes

Credit for Prior College Level Learning (CPCLL) Details Determined by department		

Goals, Topics, and Objectives

Course Goals This second semester level of music theory adds to the theoretical knowledge and raises the level of musicianship. The goal of this course is to enable students to handle more complex materials, including the analysis of triads, phrase structure, harmonic progressions, voice leading, and four part harmonization.
Core Course Topics - Music Theory Review (MUS138 Music Theory 1). - Melodic sources in major and minor keys. - Harmonic sources in major and minor keys. - Four-part voicing of chords (SATB). - Figured bass. - Cadences.

Identify the melodic and harmonic sources within the major and minor keys.
Construct major and minor scales.
Construct appropriate chords and their quality.
Voice chords in SATB according to a given figured bass.
Identify and construct cadences in a given context.

Correlate all written theory with the co-requisite Aural Music Skills 2 (MUS 142) course.*

MUS143 - Vocal Jazz Ensemble 1

Overview

Subject Music	Academic Department Fine & Performing Arts	School Liberal Arts
------------------	---	------------------------

Course Description First of four sequential semesters of vocal jazz ensemble, covering preparation and performance of a variety of jazz and popular music in an ensemble of 8-20 voices. Group performs for various HFC and community functions. New singers may audition before or during the first week of class. No preparation is necessary, but the demonstration of the ability to sing in tune and hold a challenging part (soprano, alto, tenor, or bass) is required.
Course Pre-requisite(s) AuditionEligible to take ENG courses at HFC.
Credit Hours 1

3	
Course Fee 15	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Interview
Credit for Prior College Level Learning (CPCLL) Details Determined by department	

Goals, Topics, and Objectives

Course Goals
The purpose of this course is to challenge musicians to develop individual and ensemble performance skills in vocal jazz music. The student will take part in campus and community concerts.

Core Course Topics

- Vocal Warmup
- Rehearsals
- Sight-reading
- Musical voice (personal tone)
- Performances

Demonstrate a vocal warmup routine, including vocal jazz harmony and improvisation exercises, at an introduction level.
Perform their appropriate vocal part (soprano, alto, tenor, or bass), on representative vocal jazz literature, in sectional, full chorus, and mixed standing arrangement rehearsals, at an introduction level.
Demonstrate introduction level in sight-reading skills.
Demonstrate introduction level in the understanding of the dynamic contrast in development of one's musical "voice" or musical tone.
Perform in a variety of live music events, including informal jam sessions, on-campus programs, off-campus programs, and formal concerts, at an introduction level.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement - Class Participation - Performance, individually and in groups	Satisfies Honors Requirement No	Satisfies Wellness Requirement No
Texts Repertoire will be determined by the instructor.

Goals, Topics, and Objectives

Course Goals
The purpose of this course is to challenge musicians to develop individual and ensemble performance skills in vocal jazz music. The student will take part in campus and community concerts.

- Core Course Topics**
1. Vocal Warmup
 2. Rehearsals
 3. Sight-reading
 4. Musical voice (personal tone)
 5. Performances

Demonstrate a vocal warmup routine, including vocal jazz harmony and improvisation exercises, at an introduction to reinforcement level.
Perform their appropriate vocal part (soprano, alto, tenor, or bass), on representative vocal jazz literature, in sectional, full chorus, and mixed standing arrangement rehearsals, at an introduction to reinforcement level.
Demonstrate introduction to reinforcement level in sight-reading skills.
Demonstrate introduction to reinforcement level in the understanding of the dynamic contrast in development of one's musical "voice" or musical tone.
Perform in a variety of live music events, including informal jam sessions, on-campus programs, off-campus programs, and formal concerts, at an introduction to reinforcement level.

MUS152 - Music Notation With Finale 1

Overview

Subject Music	Academic Department Fine & Performing Arts	School Liberal Arts
Course Description This course provides basic instruction in the use of "Finale," by Coda. "Finale" is the industry standard for music software. Students will use the music technology lab to gain hands-on experience with "Finale." Topics to be covered include basic document setup, using templates, tool palettes, importing and saving files, and file playback. To register for this course, students must have a basic knowledge of how to use a computer and file playback.		
Course Pre-requisite(s) Read Music

Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Other
Credit for Prior College Level Learning (CPCLL) Details Determined by department	

Goals, Topics, and Objectives

Course Goals
The goal of this course is to help students/musicians who are interested in creating polished manuscripts but lack the training to do so.

- Core Course Topics**
1. Computer use review.
 2. Document set up.
 3. Creating a single melody score.
 4. Creating a piano score.
 5. Adding lyrics.
 6. Changing musical elements and part formatting.

Enter and edit staff and group attributes utilizing Staff Tool.
Enter and edit music utilizing Simple Entry, Speedy Entry, and Speedy Entry with MIDI Keyboard Tools.

Enter expressions and titling utilizing Staff Expression and Title Tools.
Enter and edit lyrics utilizing Lyrics Tool.
Formatting parts and set up parts and scores utilizing Page Layout Tool.
Print all documents.
Set up a "Finale" document utilizing Default Document, Setup Wizard, or templates to include all the necessary parts and in a way that shows good judgement in how to meet the objective.

MUS154 - Arab Music Appreciation

Overview

Subject Music	Academic Department Fine & Performing Arts	School Liberal Arts
Course Description Arab Music Appreciation is a course designed to provide basic knowledge on Arab music while allowing the student to gain a deeper understanding of the variations of Arab culture through its music.		
Course Pre-requisite(s) Eligible to take ENG courses at HFC.		
Credit Hours 3		
Contact Hours 3		
Course Fee 0	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category Humanities and Fine Arts	Michigan Transfer Agreement (MTA) Category Category 5: Humanities and Fine Arts - Applied Degrees, Category 5: Humanities and Fine Arts - Transfer Degrees	
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals
The goal of this course is to provide liberal arts, technical students, and community residents an opportunity to gain basic and general knowledge of Arab & Middle Eastern Music so as to allow the student to comprehend and understand a performance of Arab music. General music listening, vocabulary, and instrumentation among other items will be introduced in the course.

- Core Course Topics**
1. Historical Background of Arab Music
 2. Historical figures in Arab music
 3. Arab Musical Instruments
 4. The Arab Music Ensemble
 5. Arab Music Ethos
 6. Improvisation Arab Music Repertoire

Identify and describe the origins of Arab music.
Identify significant historical figures in Arab music and differentiate between them and their styles.
Visually identify various types of Arab musical instruments and distinguish between the sounds each makes.
Identify and distinguish between different types of Arab music ensembles and their performance practices.
Compare and contrast Arab and western music styles.
Analyze how improvisation is used in Arab music, including the concepts of Tarab.
Identify and summarize representative Arab vocal and instrumental repertoire.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

Written homework assignments, quizzes and tests; listening quizzes and tests; and written concert reviews.

Texts

To be determined by the instructor.

MUS156 - Music Technology

Overview

Subject	Academic Department	School
Music	Fine & Performing Arts	Liberal Arts

Course Description

This course covers computer literacy as relevant to the contemporary musician. In addition to computer basics like file management, word processing, and spreadsheets, students will be introduced to music notation software and digital recording techniques. A focus of the class is navigating through the complex menus of music software, understanding methods of collaboration, exploring current software options, and the creation of professional looking sheet music and professional sounding recordings. This course fulfills general education and institutional outcomes for computer technology. Students are required to read music notation for this class.

Course Pre-requisite(s)

Eligible to take ENG courses at HFC.

Goals, Topics, and Objectives

Core Course Topics

1. Operating System Orientation
2. Networks
3. Microsoft Office and Online Options
4. Music Notation Software
5. Recording Basics
6. Basic Post-Production
7. MIDI
8. Copyrights, Security, Privacy, and Ethics

Describe the basic functions and parts of a computer including inputs, outputs, processing and storage. Explain the difference between computer hardware and software. Demonstrate how to search for and locate files. Demonstrate how to launch and close programs and applications.

Demonstrate how to log into and out of the HFC Network. Perform multiple searches using various search engines and search modifiers on the internet. Explain the uses and differences between Ethernet and WIFI for accessing the internet.

Perform basic word processing functions to prepare a document that incorporates a variety of formatting options. Prepare a spreadsheet that incorporates basic formulas and a variety of formatting options. Prepare and view a slide show using basic presentation software functions. Describe popular online alternatives to Microsoft Office.

Demonstrate how to enter notes, rehearsal marks, double barlines and other markers using music notation software. Demonstrate how to add dynamics, expressions, and articulations to a piece of music in music notation software. Demonstrate how to transpose music, and how to format a page of music so it is ready for printing. Perform various functions such as export and save as in order to share music notation files with other programs and applications.

Describe the basic functions of a Digital Audio Workstation (DAW), including the use of an audio interface, audio input levels, and basic plug-ins. Demonstrate how to add and label markers, name tracks, and organize a music project in a DAW. Perform basic edits in a DAW including moving, deleting, copying, pasting, duplicating, and looping clips. Describe different types of microphones and their uses in audio recording.

Perform a basic Mixdown of an audio project in a DAW and employ various ways of sharing files and media from one DAW to another program or application. Demonstrate how to import and export various types of files using a DAW.

Define what MIDI is and how it is being used currently in music technology. Create and edit MIDI in both music notation software and in a DAW. Perform a transfer of MIDI files between music notation software and a DAW.

Discuss basic copyright laws as they pertain to the use of music and music technology. Recognize common threats to computer security and privacy including viruses, phishing, and identity theft. Demonstrate proper ethical and legal behavior in an online environment. Examine the issues related to plagiarism, cracked software, and illegal downloads.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

- Re-creation of Published Sheet Music
- Recording Project
- PowerPoint Presentation of Projects
- Portfolio Review
- Participation in Discussions and Collaborations

General Course Requirements and Recommendations

A basic understanding of music notation (i.e. the ability to read music) is required.

Goals, Topics, and Objectives

Course Goals

The goal of this course is to prepare students to be able to operate sound reinforcement for live HFC Music ensemble concerts and make audio recordings of HFC Music ensemble concerts. Students who are successful in this course will be able to apply the learned skills in a variety of professional opportunities.

Core Course Topics

1. Sound System Equipment
2. Sound System Setup
3. Sound System Operation
4. Recording Equipment
5. Recording System Setup
6. Recording System Operation
7. Recording
8. Editing

Identify all the elements of a sound reinforcement system, including microphones, mixers, amplifiers, speakers, and a variety of cord types (including power, microphone, speaker, patch), and describe their proper functions.

Arrange sound system equipment in a proper setup for the amplification needs of vocal and/or instrumental groups for rehearsals and live concerts.

Operate a sound system to meet the performance needs of a vocal and/or instrumental groups for live concerts.

Identify all the elements of an audio recording system, including microphones, mixers, recording software and device (e.g. Avid ProTools on a laptop computer), and a variety of cord types (including power, microphone, patch), and their proper functions.

Arrange recording system equipment in a proper setup for the recording needs of vocal and/or instrumental groups for rehearsals and live concerts.

Operate a recording system to meet the audio recording needs of a vocal and/or instrumental groups for live concerts.
Create a rough mix recording of live music concerts, using appropriate mixing software (e. g. Avid ProTools).

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Private teacher evaluation of final reinforcement & recording project, e. g. operate sound reinforcement, operate audio recording and create a rough mix recording of a live music concert.	
Texts Text to be determined by instructor.	
Satisfies Honors Requirement No	Satisfies Wellness Requirement No

MUS191 - Audio Recording Technology 1

Overview

Subject Music	Academic Department Fine & Performing Arts	School Liberal Arts
Course Description Provides hands-on experience and guided practice in digital audio engineering, digital audio mixing, and basic digital audio mastering. Explores how to engineer recording sessions by working in an actual recording studio with live musicians. Covers basic techniques in microphone usage and placement, digitizing principals, audio acquisition options, midi integration and session management. Explains how to prepare complex digital audio files for duplication and audio for mixing. Also covers basic techniques in mixing room acoustics, software plug-ins, how to troubleshoot various audio problems, equalization, stereo imagery, noise limitation, and bit conversion. Applies core skills, workflows, and concepts of recording, editing and mixing on an Avid Pro Tools system learned in MUS-192: Pro Tools 101.		
Course Pre-requisite(s) Eligible to take ENG courses at HFC.		Course Co-requisite(s) MUS192 Pro Tools 101 MUS134 Music Fundamentals
Credit Hours 4		
Contact Hours 4		
Course Fee 30	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) Yes		Acceptable Prior Learning Credit Interview, Other
Credit for Prior College Level Learning (CPCLL) Details Determined by department		

Goals, Topics, and Objectives

Course Goals Designed as an introduction to the fundamentals of audio recording technology and to develop basic skills in the following areas: audio engineering, audio mixing and mastering, and basic competency in Avid Pro Tools software.
Core Course Topics - Analog and Digital Audio - The Listening Environment - Microphone Selection and Placement Techniques - Hardware and Signal Flow - Fundamentals of MIDI Theory - Multitrack Recording (MTR) E - diting and Mixing - Mixdown and Mastering - Audio Signal Processing - The Recording Engineer and Other Roles Found in the Studio

Compare and contrast analog and digital audio. Understand hard-disk recording, including sample rate and bit depth.
Identify acoustical considerations associated with the listening environment and differentiate (aurally) mono from stereo and in-phase from out-of-phase audio.
Analyze the different types of microphones and microphone patterns used in studio recording and demonstrate appropriate microphone selection and placement techniques.
Identify the use of each hardware component of a state-of-the-art recording environment, including the various functions of a mixing console and audio signal routing. Demonstrate the basic functions of recording consoles and patch bays for signal routing.
Integrate the fundamentals of MIDI theory, including basic communication protocols and hardware interfacing.
Identify the pre-production needs for a recording session and produce a recording that consists of MIDI-generated and acoustical sound sources for a multitrack audio recording.

Demonstrate the basic operation of Avid Pro Tools for editing and mixing to produce a three-dimensional mix (height, width, and depth).
Convert (mixdown) an audio project within Avid Pro Tools and perform basic mastering techniques used for audio recordings.
Categorize the differences between host-based (native) systems and DSP-accelerated systems and perform fundamental signal processing techniques including basic equalization, effects and dynamics processing.
Differentiate between the roles of the recording engineer and other possible members of a studio including: the artist, the musicians, the producer, the mixing engineer, the assistant engineer, etc.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement - Small projects: music session, post session, and MIDI session - Quizzes and exams - Observation of ability to work on projects and solve problems - Major class and/or minor individual project consisting of:	
Recording, editing, mixing and mastering a basic pop song (or other mainstream genre) using live musicians in an actual recording studio.	
General Course Requirements and Recommendations Requirements: - Basic computer skills Recommendations: - Fundamental understanding of music theory - Computer capable of running the latest version of Avid Pro Tools software - Latest version of Avid Pro Tools Software	
Texts Texts to be determined by instructor	
Satisfies Honors Requirement No	Satisfies Wellness Requirement No

MUS192 - Pro Tools 101

Overview

Subject Music	Academic Department Fine & Performing Arts	School Liberal Arts
Course Description Introduces the fundamental uses of the nationally recognized Avid Pro Tools software, and teaches core skills, workflows, and basic concepts of recording, editing, and mixing on an Avid Pro Tools system. Provides an outline for the audio enthusiast with relatively little Pro Tools experience. Prepares for part one of the Avid Pro Tools online exam for certification. Part two of the online exam for certification is offered in MUS-292: Pro Tools 110. Successful completion of both parts of the exam constitutes Avid Pro Tools certification.		
Course Pre-requisite(s) Eligible to take ENG courses at HFC.Instructor permission		
Credit Hours 2		
Contact Hours 2		
Course Fee 25	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals Introduces the fundamental skills necessary to use Avid Pro Tools software to create and work with digital audio projects, including basic recording, editing, and mixing.
Core Course Topics - Pro Tools Background - Getting started with Pro Tools - Pro Tools Basic Controls - Creating Your First Session - Making Your First Audio Recording - Importing and Working with Media - Making Your First MIDI Recording - Selecting and Navigating - Editing Your Media - Mixing and Creating a Bounce

Define the Pro Tools Digital Audio Workstation, and explain the history and evolution of Pro Tools. Summarize the basic audio characteristics, audio to digital conversion, Pro Tools system configurations, and cross-platform issues.

Develop an understanding of Pro Tools software installation, Pro Tools file structure, Pro Tools menu structure, and the main Pro Tools windows, including how to start up Pro Tools.
Identify the basic functions of the edit tools, edit modes, time scales and rulers, and MIDI control features.
Demonstrate how to create and configure a Pro Tools document, add and work with tracks, control playback, and saving, locating, and opening Pro Tools files.
Describe how to plan and prepare for recording. Demonstrate how to record, manage and organize audio.
Identify important considerations prior to importing audio and demonstrate the process of importing both.
Describe the basics of MIDI in Pro Tools. Determine how to set the base meter and tempo, how to prepare to Record MIDI, and how to use virtual instruments. Create a basic MIDI recording and demonstrate how to view MIDI data in various ways.
Describe the universe view, and the different types of selections available in Pro Tools. Demonstrate how to work with selections, adjust the session view, and add markers to your session.
Differentiate between various playback options and the edit modes. Demonstrate basic editing techniques including: moving, trimming, creating fades, and undoing your work.
Utilize basic mixer terminology when working in the Mix Window, including the use of Plug-ins, and basic automation. Create a successful bounce (stereo mixdown) to be played back on multiple devices. Explain and justify ways and reasons to back up a Pro Tools session.

MUS212 - Jazz Band 4

Overview

Subject Music	Academic Department Fine & Performing Arts	School Liberal Arts
Course Description Fourth of four semesters of jazz band, including preparation and performance of Big Band music in a variety of jazz styles from swing to contemporary. This group, which performs several concerts each semester, is open to college students and adult members of the community who play saxophone, trumpet, trombone, piano, guitar, bass, or drums.		
Course Pre-requisite(s) MUS211 Jazz Band 3		
Credit Hours 1		
Contact Hours 3		

Course Fee 15	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Interview
Credit for Prior College Level Learning (CPCLL) Details Determined by department	

Goals, Topics, and Objectives

Course Goals
The purpose of the course shall be to allow musicians to rehearse and to perform a variety of big band compositions. In addition, students will develop an appreciation of jazz styles through performance and ensemble interpretation.

Core Course Topics

- Regular warm-up
- Concentrated rehearsals
- Sight-reading

- Musical voice (personal tone)
- Performance

Perform an appropriate warmup on their instrument.
Demonstrate mastery level of discriminating listening habits, with emphasis on mastery level of interpretation of jazz band literature.
Demonstrate mastery level in sight-reading skills.
Demonstrate mastery level in the understanding of the dynamic contrast in development of one's musical "voice" or musical tone.
Perform at mastery level in end-of-semester concert (e. g. HFC Jazz Concert).

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

- Class Participation
- Evaluation of public performance
- Student self appraisals

MUS213 - Applied Music (one Credit) 3

Overview

Subject Music	Academic Department Fine & Performing Arts	School Liberal Arts
Course Description Four sequential semesters of weekly half-hour private lessons intended to improve vocal or instrumental musicianship through study with a professional teacher. Students should contact the applied music lead teacher during the first week of the semester for teacher assignments. A juried performance is required at the conclusion of each semester. In addition to tuition, the student must also pay a fee to the private instructor.		
Course Pre-requisite(s) MUS115 Applied Music (1 Credit) 2

Goals, Topics, and Objectives

Course Goals The purpose of the course shall be to allow students to receive credit for private music lessons taken outside the college from approved music teachers. The student will develop individual performance skills.
Core Course Topics - The private teacher is responsible for directing the study and performance skill development for each student. - Appropriate scales, exercises, and techniques will be included as part of the study.
Perform ascending and descending major and related minor (natural, harmonic, melodic) scales (4-5 sharps/flats) and tonic arpeggio on:
vocalists: voice & piano (one octave, single line)
percussionists: any keyboard instrument (one octave, single line)
pianists: piano (two octaves, both hands in octaves)
all other instrumentalists: own instrument (one octave)
Perform 4-6 minutes of material (e.g., sonata, concerto, art song, etude, etc.) representative of the students' development
Demonstrate improved tone, technique, musicianship, and ease of confidence in solo performance before jury of music faculty.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

Goals, Topics, and Objectives

Course Goals
This course is intended to develop individual and ensemble skills necessary for successful performing in small group performances of jazz music.

Core Course Topics

1. Chord/melody relationships.
2. Scale patterns derived from chords.

Perform ascending and descending major and related minor (harmonic) scales (4-5 sharps/flats) on: - vocalists: voice & piano (one octave, single line) - percussionists: any keyboard instrument (one octave, single line) - pianists: piano (two octaves, both hands in octaves) - all other instrumentalists: own instrument (one octave).
Perform arpeggios in same keys as #1 above.
Perform ascending and descending blues scales in same keys as #1 above.

Improvise utilizing major/minor scales over chord progressions and blues scales over blues progressions.
Perform melodies to standard songs in various jazz styles.
Demonstrate improved tone, technique, musicianship, and ease of confidence in public jazz performance.*

MUS226 - Recording Studio Engineering 2

Overview

Subject Music	Academic Department Fine & Performing Arts	School Liberal Arts
Course Description Emphasizes advanced digital recording techniques and independent problem solving in the recording process. Covers recording sessions, computer files, microphone usage and placement, digitizing principals, audio acquisition options, midi integration, and session management. Students work in an actual digital recording studio recording a wide variety of instrumental and vocal ensembles.		
Course Pre-requisite(s) <u>MUS126 Recording Studio Engineering 1</u> or Instructor Permission		Course Co-requisite(s) <u>MUS227 Audio Mastering 2</u>
Credit Hours 3		
Contact Hours 3		
Course Fee 15	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) Yes		Acceptable Prior Learning Credit Other
Credit for Prior College Level Learning (CPCLL) Details Determined by department		

Goals, Topics, and Objectives

Course Goals Students completing this course will be able to work in a professional studio environment. They will have the experience, knowledge, and skills necessary to create quality recordings and to manage a recording session under a variety of conditions using the latest digital recording software and hardware.
Core Course Topics 1. Advanced microphone utilization 2. Creative use of outboard processors 3. The recording environment as a creative stimulus 4. Identifying needs unique to uncommon musical instrument combinations 5. Producing a session from start to finish
Set up a digital recording session on the computer appropriate for a given situation.
Choose and set up recording equipment appropriate for a variety of musical ensembles.
Describe and demonstrate the sonic differences achieved by combining different hardware with various spatial placements specific to a given situation.
Create new recording tactics that address the needs of a specific recording situation.
Demonstrate mastery of digital recording hardware by using the various hardware components in the digital recording system to create recordings that satisfy the musicians' needs.
Overcome the limits of the recording environment by using the various techniques and tools available in the modern digital recording studio.
Integrate mixed media, including MIDI instruments, recorded sounds, sampled sounds, live instruments, and virtual instruments, into a coherent recording environment.
Transfer audio recordings from an analog medium into the digital realm.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement • Quizzes and exams • Written summaries • Individual project	
General Course Requirements and Recommendations Students should have strong computer skills. A fundamental understanding of music theory is recommended.	
Satisfies Honors Requirement No	Satisfies Wellness Requirement No

MUS227 - Audio Mastering 2

Overview

Subject Music	Academic Department Fine & Performing Arts	School Liberal Arts
------------------	---	------------------------

Course Description This course provides hands-on experience and guided practice in advanced digital audio mixing and mastering. Students will learn to prepare complex digital audio files for duplication. The course covers advanced techniques in mixing room acoustics, preparing audio for mixing, software plug-ins, trouble shooting audio problems, equalization, stereo imagery, noise limitation, and bit conversion. Students will learn to edit sound files for a variety of applications including CDs, DVDs, TV, radio, theater, and the Internet. Students will work with professional audio production software in a working digital recording studio.		
Course Pre-requisite(s) <u>MUS127 Audio Mastering 1</u>	Course Co-requisite(s) <u>MUS226 Recording Studio Engineering 2</u>	
Credit Hours 3		
Contact Hours 3		
Course Fee 15	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Other	
Credit for Prior College Level Learning (CPCLL) Details Determined by department		

Goals, Topics, and Objectives

Course Goals Students completing this course will have acquired the knowledge and skills necessary to deliver commercial quality digital recordings for a wide variety of clients. They will be able to edit, mix, and master digital audio files to the standards appropriate for a given genre.
Core Course Topics 1. Setting up a recording session using a variety of media 2. Advanced audio editing using pitch correction and timing correction. 3. Advanced processing: equalization, spatial effects, dynamics, modulation effects, and complex audio plug-ins. 4. Advanced mixing: automation, genre matching, balance, separation, clarity, and warmth. 5. Post production: creating and delivering a digital audio file for production/broadcast.
Render virtual instruments into audio files in preparation for processing and mixing.
Correct deficiencies in recorded audio using pitch correction, equalization, and compression to obtain a sound that is optimal for the mixing process.
Correct timing issues using audio quantization, splicing, and elastic audio.
Prepare the master project/session file for mixing in accordance with the guidelines published by the Producers and Engineers Wing of the Recording Academy.
Create different mixes of a single audio file that are appropriate for two or more genres as determined by comparable commercial recordings, including the use of reverb, delay, and other special effects as necessary.
Render the multi-track mix into a single file that is ready for mastering.
Create a Redbook standard CD master with commercial friendly audio levels and sound quality.
Create edits for use in TV spots and film scores.
Convert CD audio into sound files ready for digital distribution.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement • Class critiques • Quizzes and exams • Instructor grading and portfolio review	
General Course Requirements and Recommendations Students should have strong computer skills. A fundamental understanding of music theory is recommended.

Goals, Topics, and Objectives

Course Goals
The dominant focus of attention of musical production will be on live performances by the class members in a musical production open to the public.

Core Course Topics
1. Basic orientation including: - Casting your show - Rehearsal schedule - Acting in a musical production - Creative costuming - Lighting - Make-up - Creative blocking - Set design - Choreography - Curtain calls - Recording techniques - Sound systems (microphones, mixers, amplifiers, speakers, and cables)
2. Implementation of skills and techniques. In a major musical production and/or in a solo selection and participation in one ensemble within the class.

Perform all chorus selections of the current musical theatre production.
Perform all solo/ensemble selections assigned.
Produce a variety of vocal tones for delivery of lines and songs.
Perform in synchronization with other musicians, with and without a conductor.
Demonstrate ability to coordinate stage direction movement ("blocking") with singing and delivering lines.
Demonstrate make-up technique and costume preparation appropriate to role.
Demonstrate appropriate stage presence during public performances.
Demonstrate ability to stay in character during public performances.
Demonstrate improved tone, technique, musicianship, and ease of confidence in public performances.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
1. Class Participation	
2. Individually and group performances.	
3. Evaluation of public performances.

MUS229 - Advanced Studies in Audio Recording

Overview

Subject Music	Academic Department Fine & Performing Arts	School Liberal Arts
Course Description This course serves as the capstone class for the Recording Arts Certificate program. It provides for special study in audio recording and is intended for students completing the Certificate program. Students choose the topic for study and design an instructional plan under the guidance and approval of the instructor. The students will complete a major project that demonstrates skills and knowledge learned in the program. The project will then be presented to the other students at the end of the semester.		
Course Pre-requisite(s) Instructor Permission		

Credit Hours
2

Contact Hours
2

Course Fee 20	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Course Goals
This course will provide students in the Recording Arts Certificate program with the opportunity to explore in depth, the topics and skills related to digital audio recording based upon their interests.

Core Course Topics
1. The project will be developed by each student under the guidance and approval of the instructor. Topics must relate to the application of digital recording knowledge and skills gained through participation in the Recording Arts Certificate program.
2. Project Development
3. Skill Assessment and Proposal Development
4. Problem Solving
5. Project Evaluation
6. Demonstration and Presentation

Identify and describe a project specific to their interest in the recording field that includes a minimum of three skill sets learned in the Recording Arts Certificate program.
Demonstrate organizational skills related to the recording process by creating an instructional proposal for the identified project.
Identify and assemble the necessary elements to complete their project including but not limited to: equipment, performers, space, time, and permissions.
Anticipate problems that may be encountered during the project and select the appropriate solutions to those problems.
Demonstrate the ability to work independently by completing the project according to the described instructional plan.
Evaluate the project by identifying successes and failures encountered during the project.
Express the technical aspects of a recording project by presenting the evaluation to the class.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
1. Written projects.	
2. Individual recording project with oral presentation.	
3. Peer review.	
Satisfies Honors Requirement	Satisfies Wellness Requirement
No	No

Goals, Topics, and Objectives

Course Goals
This course develops the student’s ability to apply intelligent listening habits to the varied forms and styles of Western music from Greek Antiquity to 1750. Historical style analysis and accuracy of listening and identification are developed.

- Core Course Topics**
- 1. Musical Antiquity
 - 2. Medieval Music 1
Development of chant, Development of organum, Evolution of the Mass
 - 3. Medieval Music 2
Comparison and contrast of ars antiqua and ars nova, Formes fixes, Motet, relevant composers
 - 4. Renaissance
Comparison and contrast of mass, madrigal, and motet with each other and the previous period, Development of instrumental forms, Humanism, Relevant composers
 - 5. Baroque
Vocal music, Instrumental music, Opera, Relevant composers

Recognize musical compositions from each era
Demonstrate a knowledge of the social background of each era
Distinguish among major composers
Locate and list CDs which are examples of styles and genres studied in class
Demonstrate a knowledge of musical style in each of the traditional historical periods of music history
Demonstrate a basic knowledge of the elements used in a musical composition and determine the logical and artistic reasons for their use

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement • Homework assignments • Written quizzes, tests • Listening quizzes, tests

MUS238 - Music Theory 3

Overview

Subject Music	Academic Department Fine & Performing Arts	School Liberal Arts
Course Description Covers secondary dominants and borrowed chords, the use of the Neapolitan sixth, advanced modulation techniques, and how to identify non-chord tones.		
Course Pre-requisite(s) MUS139 Music Theory 2		
Credit Hours 3		
Contact Hours 3		
Course Fee 10	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category Humanities and Fine Arts	Michigan Transfer Agreement (MTA) Category Category 5: Humanities and Fine Arts - Applied Degrees, Category 5: Humanities and Fine Arts - Transfer Degrees	
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Other	
Credit for Prior College Level Learning (CPCLL) Details Determined by department		

Goals, Topics, and Objectives

Core Course Topics 1. Review of secondary dominants and chords borrowed from the parallel minor. 2. Intense study of typical and atypical usage of N6 chord. 3. Study of typical and atypical use of Aug 6 chords. 4. Correct application of ninth, eleventh, and thirteenth chords, including jazz voicing. 5. Study of altered dominants and chromatic mediants. 6. Analysis and original composition. 7. A complete study of chord progression. 8. Coordination of all tonal part writing procedures.		
Consolidate use of secondary dominants and borrowed chords.		
Practice the use of the Neapolitan sixth.		
Demonstrate a mastery of advanced modulation techniques.		

Identify non-chord tones.
Interpret chord progressions including diatonic, chromatic, and thirds progressions.

Assessment, Requirements, and Outcomes

MUS243 - Vocal Jazz Ensemble 3

Overview

Subject	Academic Department	School
Music	Fine & Performing Arts	Liberal Arts
Course Description	Third of four sequential semesters of vocal jazz ensemble, covering preparation and performance of a variety of jazz and popular music in an ensemble of 8-20 voices. Group performs for various HFC and community functions.	
Course Pre-requisite(s)	MUS144 Vocal Jazz Ensemble 2 or Audition	

Credit Hours

Determined by department	

Goals, Topics, and Objectives

Course Goals
The purpose of this course is to challenge musicians to develop individual and ensemble performance skills in vocal jazz music. The student will take part in campus and community concerts.
Core Course Topics
1. Vocal Warmup
2. Rehearsals
3. Sight-reading
4. Musical voice (personal tone)
5. Performances

Demonstrate a vocal warmup routine, including vocal jazz harmony and improvisation exercises, at a reinforcement to mastery level.
Perform their appropriate vocal part (soprano, alto, tenor, or bass), on representative vocal jazz literature, in sectional, full chorus, and mixed standing arrangement rehearsals, at a reinforcement to mastery level.
Demonstrate reinforcement to mastery level in sight-reading skills.
Demonstrate reinforcement to mastery level in the understanding of the dynamic contrast in development of one's musical "voice" or musical tone.
Perform in a variety of live music events, including informal jam sessions, on-campus programs, off-campus programs, and formal concerts, at a reinforcement to mastery level.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

- Class Participation
- Performance, individually and in groups

MUS291 - Audio Recording Technology 2

Overview

Subject	Academic Department	School
Music	Fine & Performing Arts	Liberal Arts
Course Description	Provides hands-on experience and guided practice in digital recording techniques, advanced digital audio mixing and mastering, and independent problem solving in the recording process. Covers recording sessions, computer files, microphone usage and placement, digitizing principals, audio acquisition options, midi integration, preparing complex digital audio files for duplication, advanced techniques in mixing room acoustics, preparing audio for mixing, software plug-ins, troubleshooting audio problems, equalization, stereo imagery, noise limitation, bit conversion, and session management. Students work in an actual digital recording studio recording a wide variety of instrumental and vocal ensembles. Builds upon the basic competency developed during MUS-191 and MUS-192. Applies advanced skills, workflows, and concepts of recording, editing and mixing on an Avid Pro Tools system learned in MUS-292: Pro Tools 110.	
Course Pre-requisite(s)	MUS191 Audio Recording Technology 1 MUS192 Pro Tools 101	Course Co-requisite(s) MUS292 Pro Tools 110

Goals, Topics, and Objectives

Course Goals
Designed to expand on the knowledge gained in [MUS191 Audio Recording Technology 1](#) and [MUS192 Pro Tools 101](#), and to develop more advanced techniques in audio recording technology, including: mixing and mastering, mix preparation, advanced editing, automation, advanced signal processing, sound design, audio restoration, file delivery for multiple audio formats, critical thinking in the recording environment, and advanced competency in Avid Pro Tools Software.

Core Course Topics

1. Critical Listening Skills
2. Sound Design
3. Advanced Audio Signal Processing
4. Audio Restoration
5. Critical Problem Solving
6. Drum Replacement
7. Advanced Mixing
8. Quantizing and Adjusting Timing of Audio Files
9. Advanced Mastering
10. Creating and Delivering Audio Files for Multiple Formats

Differentiate (aurally) when instruments or voices are in or out of tune. Identify isolated frequency bands of various instruments and pre-recorded music, and determine (aurally) proper presence, ambience, and balance of audio signals
Demonstrate techniques for original sound design, including synthesis, sampling, and advanced signal processing.
Utilize specialized signal processing (plugins) to improve the performances of musicians and singers. Develop an awareness of signal processing that includes either frequency-based or time-based processing, and demonstrate intermediate real-time and file-based signal processing techniques using Pro Tools, including delay-based effects, and side-chain applications in dynamics processors.
Differentiate (aurally) noise types (hum, buzz, RF interference), distortion types (intermodulation, harmonic), and identify and trouble shoot problems with a given audio file (noise reduction and audio repair).
Analyze and produce new recording tactics that address the needs of a specific recording situation.
Demonstrate replacing and reinforcing recorded drums using triggering software, tools, and advanced techniques.
Practice mix automation techniques used in recording consoles and Pro Tools.
Adjust and quantize the timing of a performance within Pro Tools, utilizing advanced techniques including elastic audio.
Develop common mastering techniques used for music and sound recordings and recognize digital artifacts of compression algorithms.
Evaluate common mastering techniques used for different release media, and create audio files in multiple formats.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

- Class critiques
- Quizzes and exams
- Written summaries
- Portfolio assembly and review
- Major Individual project consisting of:

Recording, editing, mixing, automating, and mastering a multitrack song or audio recording demonstrating proficiency in all aspects of the project.

General Course Requirements and Recommendations

Requirements:

- Strong computer skills

Recommendations:

- Fundamental understanding of music theory
- Computer capable of running the latest version of Avid Pro Tools software
- Latest version of Avid Pro Tools Software

MUS292 - Pro Tools 110

Overview

Subject Music	Academic Department Fine & Performing Arts	School Liberal Arts
------------------	---	------------------------

Course Description

Expands upon the principles taught in MUS-192: Pro Tools 101 and introduces the core concepts and skills you will need to operate a Pro Tools system running mid-sized sessions with dozens of tracks. Teaches more advanced skills, and workflows involved in recording, editing, and mixing on an Avid Pro Tools system. Prepares for part two of the Avid Pro Tools online exam for certification. Part one of the certification test is offered in MUS-192: Pro Tools 101. Successful completion of both parts of the exam constitutes Avid Pro Tools certification.

Course Pre-requisite(s)

Eligible to take ENG courses at HFC.Instructor Permission

Goals, Topics, and Objectives

Course Goals
Builds on the fundamental skills learned in [MUS192 Pro Tools 101](#); Pro Tools 101 to create and work with digital audio projects within Pro Tools as well as more advanced recording, editing, and mixing techniques.

Core Course Topics

1. Getting Started
2. Managing Session Data and Media Files
3. Recording MIDI and Audio
4. Working with MIDI and Virtual Instruments
5. Working with Elastic Audio
6. Editing and Fine-Tuning a Performance
7. Additional Editing and Media Management
8. Basic Mixing and Signal Flow
9. Writing and Editing Automation
10. Using Advanced Mixing Techniques and Creating Final Media

Demonstrate how to open a session or project, and add tracks. Utilize Track List, Edit Window, and Mix Window display options.
Identify Pro Tools software capabilities, and digital video options. Determine the use of Workspace Browsers, and Soundbase to locate files. Demonstrate how to import files, import session data, and how to work with clips and clip groups.
Demonstrate how to set up a session, record selections, use loop recording, and audition record takes.
Discuss sample-based versus tick-based tracks and explain MIDI-compatible tracks and track views. Demonstrate how to use virtual instruments, how to audition and playback MIDI, and how to edit MIDI data.
Explain and experiment with elastic audio, including elastic audio track views, warping sound with elastic audio, experimenting with tempo using elastic audio and improving the quality of warped audio. Perform the necessary edits to tighten a rhythmic performance, and to change pitch with elastic audio.
Demonstrate use of the Smart Tool, using fades, quantizing, and MIDI real-time properties.
Utilize clip looping, layered editing, AudioSuite Plug-Ins, and working with the clip list to accomplish editing various editing tasks.
Employ features such as track colors, icons, and status indicators to organize mixes and signal flow. Demonstrate the use of inserts, sends and returns for effects processing. Differentiate between various common uses for gain-based, and time-based plug-ins. Discuss creation and use of Master Fader tracks.
Adapt the various automation modes to utilize automation in a session. Employ graphical editing of automation, cutting, copying and pasting automation data, and removing automation from a track.

Identify how to work with track subsets, how to route track signals, and how to group tracks in various ways. Demonstrate how to create a distribution-ready bounce. Explain and justify the need for creating an archive.

MUS299 - Recording Arts Capstone

Overview

Subject	Academic Department	School
Music	Fine & Performing Arts	Liberal Arts

Course Description

As the capstone for the Recording Arts Certificate program, course provides special study in audio recording and is intended for students completing the Certificate program. Students choose the topic for study and design an instructional plan under the guidance and approval of instructor. Must complete a major project that demonstrates skills and knowledge learned in the program, and project is presented at the end of the semester.

Course Co-requisite(s)

MUS291 Audio Recording Technology 2, MUS292 Pro Tools 110

Goals, Topics, and Objectives

Course Goals

Provides for in-depth exploration of the topics and skills related to digital audio recording based upon personal interests. Allows for project development under the guidance and approval of the instructor. Topics must relate to the application of digital recording knowledge and skills gained through participation in the Recording Arts Certificate program.

Core Course Topics

- Project Development and Organization
- Project Evaluation
- Demonstration and Presentation

Demonstrate the ability to create, propose, and develop an audio project in line with interests, and establish a basic timeline by which to complete each portion of the project.

Evaluate the ongoing status of proposed project and modify as needed to ensure completion of project by the end of the school semester.

Prepare and present an in-class demonstration of the final project.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

- Written Projects
- Individual recording project with oral presentation
- Peer review

NCS112 - Competency Evaluated NursingAssis(CENA)

Overview

Subject	Academic Department	School
Nursing	Nursing	Health & Human Services

Course Description

Prepares individuals to become a Nurse Aide. This course serves as the educational foundation for the Nursing Care Skills certificate. Aides render care to clients in hospitals, long-term care facilities, and in home-care. This course, and the Nursing Care Skills certificate, consists of 35 hours of course work in theory, 45 hours of laboratory activities, and 20 hours in a clinical agency. The course requires consistent attendance from 9:00 a.m. - 2:30 p.m. four days a week.

Course Pre-requisite(s)

High School diploma/GED; or a "C" grade or better in [ENG131 Introduction College Writing](#) or a satisfactory score on the English placement exam. Current Basic Life Support (CPR) card from American Red Cross or American Heart Association. Drug screening and criminal background check.

Licensure/Certification Details

Upon successful completion of the course, students are eligible to take the State of Michigan Nurse Aide Competency exam for certification. Students must pass a knowledge test and a clinical skills test to receive the Certified Nursing Assistant (CNA) designation. This exam is not included in this course.

Goals, Topics, and Objectives

Course Goals

* That 97% of our students will pass the state of Michigan competency evaluated nurse assistant exam on the first attempt

* That 90% of our students will earn a B grade or better in this course.

Core Course Topics

- Introduction to Health Care and the Role of the Nursing Assistant
- Nursing Assistant as a Member of the Health Care Team
- Human Interaction Skills
- Infection Control in Health Care
- Basic Emergency Care/safety/Employability skills
- Personal Care Skills
- Care of the Residents Environment
- Care of the Resident with an Cognitive Impairment
- Creating an Environment for Restraint Elimination, Reduction, and Appropriate Use
- Vital Signs, Weight, and Height
- Meeting Nutrition and Hydration Needs
- Elimination
- Restorative/Rehabilitative Care
- Care of the Resident with a Developmental Disability
- Death and Dying
- Care of the Resident with Depression
- Care of the Resident with a Communicable Disease
- Major Body Systems - Integumentary, Musculoskeletal, Nervous, Cardiovascular, Respiratory, Urinary, Endocrine, Reproductive and Lymphatic

Identify the roles and responsibilities of the nurse aide in delivering competent health care in long-term and acute settings.

Develop a relationship, communicate, and interact competently on a one-to-one basis with the residents.

Demonstrate sensitivity to residents' emotional, social, and mental health through skillful, directed interactions.

Prepare residents to attain and maintain functional independence.

Demonstrate behavior in support and promotion of residents' rights.

Demonstrate observational and documenting skills needed in the assessment of residents' health, physical condition, and well-being.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

Assessment of Academic Achievement will be identified and implemented by the class instructor. Methods will include, but not be limited to, grades on individual projects, vocabulary, class participation (discussion and critiques) and tests on material.

General Course Requirements and Recommendations

- Students must attain 80 percent on a test to demonstrate proficiency.
- Drug screening and criminal background check must be done and paid by the student.

Grading Scale

Student grades will be assigned using the following scale:

- 98-100% = A+
- 95-97% = A
- 92-94% = A-
- 90-91% = B+
- 87-89% = B
- 85-86% = B-
- 81-84% = C+
- 80% = C
- 78-79% = C-
- 75-77% = D+
- 73-74% = D
- 71-72% = D-

Describe, define, and differentiate the principles of pharmacology, pharmacokinetics, and pharmacodynamics for the stated drug classifications.
Describe, define, and differentiate the terms: toxicity, overdose, adverse drug reactions, adverse effects, drug interactions, idiosyncratic reactions, anaphylactic shock, allergic reaction, tolerance, cumulative effect, synergism, and potentiation.
Identify drug interactions (Drug-drug, OTC, reactional medications, supplements)
Describe factors that affect medication absorption and response.
Describe the advantages versus disadvantages of the drug administration routes.
Calculate medication dosages with 90% or higher accuracy.
Describe the nurse's role in safe administration of medications.
Recognize the nursing process, evidence-based practice, and National Client Safety Standards to safely administer the medications.
Utilize the nursing process, evidence-based practice, and National Client Safety Standards to safely administer the medications.
Describe equitable accessibility to medications.
Use the principles of safe medication administration when considering the legal and ethical responsibility of administering medications.
Identify how to effectively communicate and manage medication order discrepancies and medication errors.
State drug classifications, actions and interactions associated with pathophysiology of disease.
Assess learning needs and implement appropriate teaching.
Illustrate common life span considerations in teaching clients about their medications.
List the names and describe actions, indications, possible side effects, and adverse effects of anticoagulant and antiplatelet medications.
Identify and describe reversal agents and treatments for anticoagulants and antiplatelet medications.
List the names and describe actions, indications, possible side effects, and adverse effects of insulin and other glucose lowering medications.
Describe the treatment for hyperglycemia and hypoglycemia.
List the names and describe actions, indications, possible side effects, and adverse effects of insulin and other glucose lowering medications.
Describe the treatment for hyperglycemia and hypoglycemia.
List the names, describe actions, indications, possible side effects, and adverse effects of the medications for pain.
Define multimodal pain control.
Differentiate between analgesic and antipyretic agents.
Identify and describe reversal agents and treatments for medications for pain.
List the names and describe actions, indications, possible side effects, and adverse effects of CNS depressant and stimulants.
List the names and describe actions, indications, possible side effects, and adverse effects of thyroid medications.

List the names and describe actions, indications, possible side effects, and adverse effects of genitourinary medications.
List the names and describe actions, indications, possible side effects, and adverse effects of respiratory medications.
List the names and describe actions, indications, possible side effects, and adverse effects of cardiac/cardiovascular medications.
List the names and describe actions, indications, possible side effects, and adverse effects of medications used to treat seizures, Alzheimer's disease and Parkinson's disease.
List the names and describe actions, indications, possible side effects, and adverse effects of medications that affect the adrenal system.
List the names and describe actions, indications, possible side effects, and adverse effects of gastrointestinal medications.
List the names and describe actions, indications, possible side effects, and adverse effects of immunosuppressant medications.
List the names, describe actions, list indications, possible side effects, and adverse effects of medications for immunizing medications.
List the names and describe actions, indications, possible side effects, and adverse effects of cholinergic and anticholinergic medications.
Compare the different types of IV fluid replacement therapies and indications for use.
Describe the proper technique to administer eye drops and eye ointments.
List the names, describe actions, possible side effects, and adverse effects of medications for mental health disorders.
List the names and describe actions, indications, possible side effects, and adverse effects of reversal medications for benzodiazepines.
List the names, describe actions, possible side effects, and adverse effects of medications for labor and delivery, women's health.
List the names, describe actions, possible side effects, and adverse effects of medications for Pediatrics.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessments of academic achievement may include, but are not limited to medication dosage calculations, simulation, case studies, quizzes, and exams.

Grading Scale
Theory grade of 80% or higher required to pass course.

Course grading scale:

- 97-100 = A+
- 94-96 = A
- 92-93 = A-
- 88-91 = B+
- 85-87 = B
- 83-84 = B-
- 81-82 = C+
- 80 = C
- 77-79 = C-
- 74-76 = D+
- 72-73 = D

NSG117 - Medical-Surgical Nursing I

Overview

Subject Nursing	Academic Department Nursing	School Health & Human Services
--------------------	--------------------------------	-----------------------------------

Course Description

Introduces the first semester nursing student to the role of the professional nurse as the provider of care for adult clients and a member of the profession. Explains how to utilize critical thinking skills in a systematic, problem solving process as a framework for providing care. Provides a framework for best practices, to think critically, assess factors that influence safe and effective care delivery, and integrate theory with care of clients. This course includes supervised clinical agency/laboratory practicums. Course comprised of four hours of theory and one day of clinical/lab per week.

Course Pre-requisite(s) BIO233 Anatomy and Physiology I, BIO134 Essentials Anatomy&Physiology, ENG131 Introduction College Writing, HCS131 Computers in Health Care or CIS100 Intro Info Tech, PSY131 Introductory Psychology, One of the following Math courses: MATH115 College Algebra, MATH131 Math for the Modern World, MATH141 Introduction to Statistics, MATH165 Mathematics for Calculus, MATH175 Precalculus, MATH180 Calculus I, All with a minimum grade of C, or instructor permission.	Course Co-requisite(s) NSG101 Begin Health &Phys Assessment, NSG116 Pharmacology for NSG Practice

26. Mobility

Locate and begin to use evidence based research to improve client outcomes.
Utilize effective strategies to communicate, including computer based charting, with clients and other members of the health care team.
Begin to apply the nursing process and standards of care to manage ill or injured adult clients and to promote health and wellness.
Identify cultural diversity using the professional nursing values of legal, ethical and caring behaviors for the adult client.
Explain effective strategies to collaborate with other members of the health care team to provide quality care and maintain client safety while reducing the risk of harm to the client.

Utilize critical thinking and clinical reasoning to make sound clinical judgement.
Demonstrate advocacy for the adult client to facilitate the client's autonomy and full partnership in their care.
Demonstrate competency in the learned technical skills used to care for clients in clinical, utilizing cognitive and psychomotor skills.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessments of academic achievement may include , but are not limited to skills demonstration, written assignments, research papers, case studies, multiple choice testing and hands-on clinical practice.

Grading Scale
Theory Grade of 80% or better and a Satisfactory grade in clinical.
Course Grading Scale:

- 97-100 = A+

NSG121 - Psychiatric Mental Health Nursing

Overview

Subject Nursing	Academic Department Nursing	School Health & Human Services
Course Description Introduces the second semester nursing student to the role of the nurse as a provider of care for clients with mental health disorders with emphasis on therapeutic communication techniques. Course presents the mental-health/mental-illness continuum as a framework for differentiating between healthy and unhealthy mental health behaviors. Discusses how to utilizes critical thinking skills, in a systematic, problem solving process, to provide safe and effective care to clients in the psychiatric mental health setting. This course includes supervised clinical agency/laboratory practicums. Course comprised of two hours of lecture and six hours of lab/clinical per week.		
Course Pre-requisite(s) NSG101 Begin Health & Phys Assessment, NSG116 Pharmacology for NSG NSG119 Medical-Surgical Nursing II or Nursing department permission. Practice NSG117 Medical-Surgical Nursing I with a minimum grade of C		
Course Co-requisite(s)

2. Clinical Decision Making
3. Communication
4. Culture
5. Diversity
6. Evidence Based Practice
7. Health
8. Illness
9. Safety
10. Wellness
11. Addictions
12. Advocacy
13. Anxiety
14. Cognition
15. Collaboration
16. Ethics
17. Grief
18. Health Care Systems
19. Legal
20. Mood and Affect
21. Patient Education
22. Psychosis
23. Self
24. Stress and Coping
25. Spirituality
26. Violence

Incorporate evidence-based practice in the care of clients in the psychiatric mental health setting.

Utilize effective strategies (therapeutic and interpersonal communication skills) to communicate with clients and others of the health care team.

Utilize the nursing process and standards of care to safely manage care of clients in the psychiatric mental health setting.

Discuss the importance of understanding cultural variation when planning and implementing care.

Collaborate with clients, significant others, and members of the health care delivery team to promote optimal care.

Give examples of critical thinking and clinical reasoning to make sound clinical judgments in the care of clients in the psychiatric mental health setting.

Identify the rights of mental health clients when advocating for compassionate care.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessments of academic achievement may include, but are not limited to skills demonstration, written assignments, research papers, case studies, multiple choice testing and hands-on clinical practice

Grading Scale
Theory Grade of 80% or better and a Satisfactory grade in clinical.

Course grading scale:

- 97-100 = A+
- 94-96 = A

- 92-93 = A-
- 88-91 = B+
- 85-87 = B
- 83-84 = B-
- 81-82 = C+
- 80 = C
- 77-79 = C-
- 74-76 = D+
- 72-73 = D
- 70-71 = D-
- 69 and below = E

NSG202 - Medical-Surgical Nursing III

Overview

Subject Nursing	Academic Department Nursing	School Health & Human Services
--------------------	--------------------------------	-----------------------------------

Course Description
Focuses on nursing care and concepts related to the healthy adult client as well as the adult client with common, acute, or chronic illness exemplars. Emphasizes the use of critical thinking skills in a systematic, problem solving process, as a framework for providing safe and effective care to restore and promote health in adults. Discusses how to research best practices and integrate theory in the care of adult clients and their families in a variety of clinical settings. This course includes supervised clinical agency/laboratory practicums. Course comprised of four hours of theory and a clinical/lab per week.

Course Pre-requisite(s) <i>NSG119 Medical-Surgical Nursing II, NSG121 Psychiatric Mental Health Nurs</i> with minimum grade of C.	Course Co-requisite(s) <i>NSG217 Pediatric Nursing, NSG218 Women's Hlth & Maternity Care</i> or Nursing department permission.

Medical Surgical HESI exam with score 900 or higher. Maximum number of attempts: two. Students must also perform a medical surgical simulation demonstration.

Skilled Demonstration Details

Medical Surgical Simulation demonstration, given in department-by-department faculty. Faculty will assess demonstration based on evaluation rubric. Evaluation rubric and student checklist located in The School of Health and Human Services office. Student must pass the graded rubric with an 80% or higher with the maximum number of attempts: two. Students must also take an exam.

Goals, Topics, and Objectives

Core Course Topics

- Caring
- Clinical Decision Making
- Communication
- Culture
- Diversity
- Evidence Based Practice
- Health
- Illness
- Safety
- Wellness
- Cellular Regulation
- Collaboration
- Elimination
- Fluid and Electrolytes
- Immunity
- Infection
- Inflammation
- Leadership and Management
- Oxygenation
- Perfusion
- Professionalism
- Time Management and Organization

Apply evidence-based research to improve clients' outcomes.
Use effective strategies to communicate, including computer-based charting, with clients and other members of the health care team.

Apply the nursing process and standards of care to manage ill or injured adult clients and to promote health and wellness.
Illustrate cultural diversity using the professional nursing values of legal, ethical and caring behaviors for the adult client.
Categorize effective strategies to collaborate with other members of the health care team to provide quality care and maintain client safety while reducing the risk of harm to the client.
Demonstrate critical thinking and clinical reasoning to make sound clinical judgments.
Explain advocacy for the adult client to facilitate the client's autonomy and full partnership in their care.
Demonstrate competency in the learned technical skills used to care for clients in clinical, utilizing cognitive and psycho-motor skills.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessments of academic achievement may include, but are not limited to skills demonstration, written assignments, research papers, case studies, multiple choice testing and hands-on clinical practice.

Grading Scale
Theory grade of 80% or better and a satisfactory grade in clinical.

NSG209 - Medical-Surgical Nursing IV

Overview

Subject Nursing	Academic Department Nursing	School Health & Human Services
--------------------	--------------------------------	-----------------------------------

Course Description
Continues to study the role of the professional nurse as the provider of care for adult clients with complex needs and as a member of the profession. Builds on previous knowledge using critical thinking skills in a systematic, problem solving process as a framework for providing safe and effective care to restore and promote health in adult clients. Focuses on nursing care and concepts related to the healthy adult client as well as, the adult client with common, acute, or chronic illness exemplars. Also explores how to demonstrate proficiency in performing increasing complex nursing skills, and how to research best practices and integrate theory into the care of adult clients and their families in a variety of clinical settings. This course includes supervised clinical agency/laboratory practicums. This course includes supervised clinical agency/laboratory practicums. Course is comprised of a combination of theory and a clinical/lab experience per week.

Course Pre-requisite(s) <i>NSG202 Medical-Surgical Nursing III, NSG217 Pediatric Nursing, NSG218 Women's Hlth & Maternity Care</i> with minimum grade of C.	Course Co-requisite(s) <i>NSG202 Medical-Surgical Nursing III, NSG212 Professional Transitions or Nursing department permission.</i>

NSG218 - Women's Health & Maternity Care

Overview

Subject Nursing	Academic Department Nursing	School Health & Human Services
--------------------	--------------------------------	-----------------------------------

Course Description
Introduces the role of the professional nurse as the provider of care for women and their families throughout childbearing and beyond. Addresses health issues within the context of the family environment while recognizing female maturational milestones and discusses how to utilize critical thinking skills, in a systematic, problem solving process, as a framework for providing safe and effective care. Focuses on relationship-based, family-centered nursing that promotes health and manages illness when caring for the childbearing woman and her family. Coursework also discusses how to research best practices and integrate theory in the care of women from adolescence beyond menopause, with an emphasis on maternity care. This course is comprised of a combination of theory and a clinical/lab experience per week.

Course Pre-requisite(s) NSG119 Medical-Surgical Nursing II, NSG121 Psychiatric Mental Health Nurs with minimum grade of C.	Course Co-requisite(s) NSG117 Medical-Surgical Nursing I, NSG202 Medical-Surgical Nursing III or Nursing department permission.

Evaluate evidence based research to improve health/wellness and illness outcomes for women, families and communities.
Illustrate effective strategies to communicate with women and their families as well as other members of the health care team.
Apply the nursing process and standards of care to safely manage women's health, maternity and newborn care.
Plan care to promote wellness and safety for the woman throughout the lifespan and the newborn.
Identify client's unique needs related to their cultural diversity and demonstrates caring behaviors when adapting nursing care for the woman and her family.
Distinguish unique legal and ethical issues and implications for care when dealing with this population.
Choose effective strategies to collaborate with other members of the health care team to provide quality care and maintain client safety, while reducing the risk of harm.
Employ critical thinking and clinical reasoning to make sound clinical judgments when caring for the woman, her newborn(s) and her family.
Analyze the nurse's role in advocacy for the woman, the fetus, the newborn, and families.
Support families' autonomy to facilitate their full partnership throughout care.

NSG285 - Pathophysiology for Nurses

Overview

Subject Nursing	Academic Department Nursing	School Health & Human Services
Course Description Enhances basic knowledge and understanding of human diseases. Reviews the etiology and the pathogeneses of diseases using the system approach. Also reviews etiology, risk factors, long term effects, and prognosis of commonly occurring health issues. Course Pre-requisite(s) BIO233 Anatomy and Physiology I and BIO234 Anatomy and Physiology II, or the equivalent with a "C" grade or better. Students waiting to enter the nursing program or those who are currently in a BSN completion program.		

Credit Hours

4

Contact Hours

4

Course Fee 50	Miscellaneous Department Fee 0
Academic Level Undergraduate Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Core Course Topics

- Review of human disease including Immunity, Cellular Function & Dysfunction, Respiratory, Cardiovascular, Renal, Musculoskeletal, Integumentary, Reproductive, Gastrointestinal, Endocrine and Nervous Systems.
- Review normal and abnormal anatomy, physiology, and pathophysiology.
- Commonly prescribed classifications of medication.
- Defense mechanisms, adaptation, and genetic influences of diseases.
- Signs and symptoms of diseases.
- Diagnostic laboratory tests and their relevance to diagnosis of the disorder or disease.
- Problems and Responses of Immune Response, Cellular Function & Dysfunction, Respiratory, Cardiovascular and Renal; to include normal anatomy and physiology as it relates to the disease process
- Problems and Responses of Musculoskeletal, Integumentary, Reproductive, Gastrointestinal, Endocrine and Nervous Systems; to include normal anatomy and physiology as it relates to the disease process.

Demonstrate enhanced critical thinking skills necessary for care of the adult with commonly occurring medical, and surgical health problems using the systems approach.
Explain pathophysiological factors that affect health and ability to care for self.
Identify diagnostic tests and common interventions necessary to care for patients.
Review commonly prescribed medications used to treat disorders.
Discuss primary, secondary, and tertiary health care systems. Review of disease prevention is incorporated into the course.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

Assessments of academic achievement may include, but are not limited to written assignments, research papers, case studies and multiple-choice question style testing.

Grading Scale

Theory Grade of 80% or better required for passing the course.

Students grades will be assigned using the following scale:

- 97-100 = A+
- 94-96 = A
- 92-93 = A-
- 88-91 = B+
- 85-87 = B
- 83-84 = B-
- 81-82 = C+
- 80 = C
- 77-79 = C-
- 74-76 = D+

Overview

Subject	Academic Department	School
Ophthalmic Technician	Health, Education, and Human Services	Health & Human Services

Introduces the roles and responsibilities of health care professionals directly involved in vision care. Provides an overview of the comprehensive medical eye examination, including documentation protocol, units on ophthalmic terminology, and abbreviations. Also discusses career options and key elements of medical ethics for ophthalmic medical personnel.

Acceptance into the Ophthalmic Technician Program: [BIO134 Essentials Anatomy&Physiology](#) or both [BIO233 Anatomy and Physiology I](#) and [BIO234 Anatomy and Physiology II](#) all with a C or higher.

Contact H

25

Undergraduate

No

Course Goals
At the conclusion of this course, the student should be able to effectively explain the career of ophthalmic technology and list the job duties performed by ophthalmic medical personnel.

1. Certification of Allied Health Personnel in Ophthalmology
2. Medical Ethics for Ophthalmic Medical Personnel
3. Ophthalmic Practice Management and Coding
4. International Sight Preservation Efforts and Ophthalmic Medical Personnel
5. Comprehensive Medical Eye Examination
6. Visual Acuity Examination
7. Color Vision Assessment
8. Screening Pupils and Peripheral Vision
9. Ocular Alignment and Binocular Vision
10. Biomicroscopy and Anterior Chamber Evaluation
11. Intraocular Pressure and Tonometry
12. Emergency Appointments

Describe a protocol for performing basic visual assessments.

Assessment of Academic Achievement
Assessment of academic achievement will include quizzes, unit examinations, and written assignments.

- Instructors (or their designees) reserve the right to require students to provide proper picture identification for test taking, graded papers or projects or other appropriate purposes.
- HFC Policy on Academic Dishonesty (Cheating) will be followed in this course.

Student grades will be assigned using the following scale:

- 92-93 = A-
- 88-91 = B+
- 85-87 = B
- 83-84 = B-
- 81-82 = C+
- 80 = C
- 77-79 = C-
- 74-76 = D+
- 72-73 = D
- 70-71 = D-
- < 69% and below = E

Required Textbooks to be determined by program faculty approval.

Overview

Subject	Academic Department	School
Ophthalmic Technician	Health, Education, and Human Services	Health & Human Services

Course Description
Focuses on the structures and functions of the eye and orbit. Explains the clinical manifestations of select pathophysiologic conditions of the eye specific to ophthalmic technology.

Course Pre-requisite(s)
Acceptance into the Ophthalmic Technician Program and BIO134 Essentials Anatomy&Physiology or both BIO233 Anatomy and Physiology I and BIO234 Anatomy and Physiology II all with a C grade or higher.

3

3

25 0

Undergraduate

Core Course Topics

1. Topography of the Eye and Orbit
2. Embryology of the Eye
3. Blood Supply to the Eye and Orbit
4. External Adnexa
5. Lacrimal System
6. The Globe
7. Extraocular Muscles
8. Visual Pathway
9. Binocular Function
10. Strabismus
11. Ocular Disorders and Systemic Disease

Describe blood supply to the orbit.

Identify nerves found in the orbit.

Describe layers, glands, and function of the eyelids.

Identify origins, insertions, and actions of extraocular muscles.

Describe structures contained within the globe

Describe aqueous humor dynamics

Trace the blood supply to and drainage from the eye and orbit

Compare differences between rods and cones

Describe the anatomy of the sensory visual pathway.

List primary causes of blindness in the United States.
Describe the common sequence of visual field loss in glaucoma.
Differentiate between selected examples of ocular infectious or inflammatory disorders.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement will include quizzes, unit examinations, and written assignments.
General Course Requirements and Recommendations
Instructors (or their designees) reserve the right to require students to provide proper picture identification for test taking, graded papers or projects or other appropriate purposes.
Grading Scale
Student grades will be assigned using the following scale:
97-100 = A+ 94-96 = A 92-93 = A- 88-91 = B+ 85-87 = B 83-84 = B- 81-82 = C+ 80 = C 77-79 = C- 74-76 = D+ 72-73 = D 70-71 = D- < 69% and below = E
Texts
Required textbooks to be determined by program faculty.

OPT150 - Applied Ophthalmic Optics

Overview

Subject	Academic Department	School
Ophthalmic Technician	Health, Education, and Human Services	Health & Human Services
Course Description	Studies the fundamental optical principles including the electromagnetic spectrum, properties of light as waves and particles, geometric optics, and object-image relationships. Develops the clinical applications of optical principles.	
Course Pre-requisite(s)	OPT101 Intro to Ophthalmic Technology , OPT134 Ocular Anatomy and Pathology	
Credit Hours	3	
Contact Hours	3	
Course Fee	Miscellaneous Department Fee	
75	0	
Academic Level	Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL)	No	

Goals, Topics, and Objectives

Core Course Topics
- Basic Optical Math - Physical Optics - Geometric Optics - Stigmatic and Astigmatic Imagry - Physiological Optics - Principles of Opticianry - Applied Optics, Selected Topics
Discuss the nature and properties of light.
Compute vergence and thin lens equations.
Analyze the relationship between accommodation and any refractive error.
Interpret and transpose a spectacle prescription.
Measure spectacle frame data.

Analyze properties of ophthalmic lenses.
Analyze optical prism power and base direction.
Apply optical principles to ophthalmic clinical problems.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement will include quizzes, unit examinations, and written assignments.
General Course Requirements and Recommendations
- Instructors (or their designees) reserve the right to require students to provide proper picture identification for test taking, graded papers or projects or other appropriate purposes. - HFC Policy on Academic Dishonesty (Cheating) will be followed in this course.
Grading Scale
Student grades will be assigned using the following scale:
97-100 = A+ 94-96 = A 92-93 = A- 88-91 = B+ 85-87 = B 83-84 = B- 81-82 = C+ 80 = C 77-79 = C- 74-76 = D+ 72-73 = D 70-71 = D- < 69% and below = E

OPT160 - Ocular Measurements I

Overview

Subject	Academic Department	School
Ophthalmic Technician	Health, Education, and Human Services	Health & Human Services
Course Description	Discusses basic ophthalmic equipment and measurement protocol, instrument calibration, maintenance, and infection control. Students apply concepts to specific clinical situations related to vision care.	
Course Pre-requisite(s)	OPT101 Intro to Ophthalmic Technology , OPT134 Ocular Anatomy and Pathology	
Credit Hours	5	
Contact Hours	5	
Course Fee	Miscellaneous Department Fee	
75	0	
Academic Level	Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL)	No	

Goals, Topics, and Objectives

Core Course Topics
- Techniques in Biomicroscopy - Intraocular Pressure Assessment - Instruments and Protocol for Visual Acuity Assessment - Visual Field Testing - Instruments for Analyzing Spectacle Prescriptions - General Instrument Maintenance and Infection Control - Instruments and Protocol for Contact Lens Fitting - Instruments and Protocol for Binocular Function - Instruments and Protocol for Assisting in Minor Surgery
Describe infection control procedures for ophthalmic instruments.
Explain methods to clean and sterilize surgical instruments.
Demonstrate calibration and maintenance procedures for ophthalmic instruments.
Apply ocular dressings and shields.

Measure and record distance and near vision.
Measure interpupillary distance for far and near.
Measure spectacle and contact lens power.
Perform screening tests of stereo vision.
Perform screening tests of color vision.
Perform measurements of ocular alignment.
Perform manual and automated measurement of peripheral vision.
Perform applanation tonometry with a schematic eye.
Analyze protocol for performing screening assessments.
Develop a strategy to assess subnormal acuity.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement will include unit examinations, and written assignments.
General Course Requirements and Recommendations
Instructors (or their designees) reserve the right to require students to provide proper picture identification for test taking, graded papers or projects or other appropriate purposes.

OPT180 - Ocular Measurements II

Overview

Subject	Academic Department	School
Ophthalmic Technician	Health, Education, and Human Services	Health & Human Services
Course Description	Offers an overview of special tests and procedures ordered for subspecialty services such as cornea and external disease, glaucoma, neuro-ophthalmology, oculoplastics, pediatric ophthalmology, and retina. Presents a decision-making approach to the process of data collection. Emphasizes designing an appropriate examination strategy based upon the type of problem presented.	
Course Pre-requisite(s)	OPT150 Applied Ophthalmic Optics, OPT160 Ocular Measurements I	

Credit Hours
5

Contact Hours
5

Course Fee
25

Miscellaneous Department Fee
0

Academic Level

Goals, Topics, and Objectives

- Core Course Topics
1. Introduction to Refractometry
 2. General Clinical Protocol
 3. Cornea Clinical Protocol
 4. Oculoplastic Clinical Protocol
 5. Glaucoma Clinical Protocol
 6. Pediatric Clinical Protocol
 7. Vitreoretinal Clinical Protocol
 8. Neuro-ophthalmology Clinical Protocol
 9. Ocular Medications

Identify strategies used to evaluate clinical cases.
Formulate and deliver a patient presentation.
Demonstrate competency performing basic assessments.
Develop the examination protocol based on the type of problem presented for General Clinical Protocol.
Develop the examination protocol based on the type of problem presented for Cornea Clinical Protocol.
Develop the examination protocol based on the type of problem presented for Oculoplastic Clinical Protocol.
Develop the examination protocol based on the type of problem presented for Glaucoma Clinical Protocol.
Develop the examination protocol based on the type of problem presented for Pediatric Clinical Protocol.
Develop the examination protocol based on the type of problem presented for Vitreoretinal Clinical Protocol.
Develop the examination protocol based on the type of problem presented for Neuro-ophthalmology Clinical Protocol.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement will include tests, quizzes, and assignments.

General Course Requirements and Recommendations

- Instructors (or their designees) reserve the right to require students to provide proper picture identification for test taking, graded papers or projects or other appropriate purposes.

Grading Scale
Student grades will be assigned using the following scale:

- 97-100 = A+

OPT200 - Clinical Optical Procedures

Overview

Subject
Ophthalmic Technician

Academic Department
Health, Education, and Human Services

School
Health & Human Services

Course Description
Focuses on the physiology of image formation and refractive errors, optical calculations involving use of the retinoscope, phoropter, trial lenses and trial frame, accommodation rulers, and instruments used in evaluating contact lenses.

Course Pre-requisite(s)
[OPT180 Ocular Measurements II](#)

Credit Hours
5

Contact Hours
5

Course Fee

Goals, Topics, and Objectives

- Core Course Topics
1. Basic Concepts in Retinoscopy
 2. Neutralizing Spherical Errors
 3. Neutralizing Astigmatic Errors
 4. Refining Astigmatic Errors
 5. Accommodation and Presbyopia
 6. Strabismus and Anisometropia
 7. Medical Problems and Refractive Errors
 8. Pre-Fit Evaluation for Contact Lenses
 9. Soft vs. Rigid Contact Lenses
 10. Contact Lens Verification and Care
 11. Contact Lens Management
 12. Case Studies in Contact Lens Troubleshooting

Discuss physiology of image formation.
Classify tools for measuring refractive errors.
Distinguish static from dynamic refractive errors.
Neutralize retinal reflexes.
Detect an astigmatic retinal reflex with a retinoscope.
Modify results to account for vertex distance.
Analyze appropriateness of measurement technique.
Measure accommodation.
Identify a correct contact lens fit.
Assess contact lens parameters.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement will include quizzes, unit examinations, and written assignments.

General Course Requirements and Recommendations
Instructors (or their designees) reserve the right to require students to provide proper picture identification for test taking, graded papers or projects or other appropriate purposes.

Goals, Topics, and Objectives

- Core Course Topics
1. The Camera – Basic Photographic Principles
 2. The Eye – Review of Ocular Anatomy
 3. Patient, Data, and Image Management
 4. Ophthalmic Pharmacology
 5. Film and Digital Photography
 6. Fundus Photography
 7. Fluorescein Angiography
 8. Indocyanine Green Angiography
 9. Optical Coherence Tomography
 10. Slit Lamp Photography
 11. Specular Microscopy

Describe the function and components of 35 mm and digital camera systems and image acquisition equipment.
Explain patient preparation for selected imaging modalities.
Describe techniques of ocular image production.
Recognize possible complications of intravenous dyes.
Identify phases of circulation in fluorescein angiography.
Recognize sources of imaging artifacts.
Select appropriate scanning and data analysis protocols for the ocular condition.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement will include quizzes, examinations (mid-term/final), and written assignments.

General Course Requirements and Recommendations

- Instructors (or their designees) reserve the right to require students to provide proper picture identification for test taking, graded papers or projects or other appropriate purposes.
- HFC Policy on Academic Dishonesty (Cheating) will be followed in this course.

Grading Scale
Student grades will be assigned using the following scale::

- 97-100 = A+
- 94-96 = A
- 92-93 = A-
- 88-91 = B+
- 85-87 = B

Discuss complications of common ocular surgical procedures.
Create a tool for patient education and surgical counseling.
Identify current trends in ophthalmic healthcare delivery and emerging job markets for ophthalmic personnel.
Compare the technicians to physicians role in providing technical care as benchmarked by Preferred Practice Pattern guidelines of the American Academy of Ophthalmology.
Attain passing scores on all content areas for national certification exam.
Demonstrate essential knowledge, skills, and attitudes that correlate with performance as an ophthalmic technician.
Plan and implement a service-learning project.

Assessment, Requirements, and Outcomes

OPT290 - Clinical Externship I

Overview

Subject	Academic Department	School
Ophthalmic Technician	Health, Education, and Human Services	Health & Human Services
Course Description		
Offers structured clinical experiences in which students observe and participate in selective practical activities at affiliating ophthalmology clinics. Discusses skill development in charting, communicating with patients, performing non-invasive tests, calibrating, and maintaining ophthalmic equipment typical to a standard exam room. Requires students to document 240 clinical hours.		
Course Pre-requisite(s)		
OPT180,Ocular Measurements II		
Credit Hours		
4		
Contact Hours		
15		
Course Fee	Miscellaneous Department Fee	
125	0	
Academic Level

Goals, Topics, and Objectives

- Core Course Topics
- Administrative and Clerical Duties.
 - History Taking.
 - Communication Skills.
 - Basic Skills.
 - Color Vision.
 - Pupil Function.
 - Contact Lenses.
 - Equipment Maintenance and Repair.
 - Medical Ethics and Legal Issues.

Demonstrate professional and ethical behaviors.

Perform competently within the scope of training and education.
Obtain and document the patients medical history through oral interview and records.
Distinguish between subjective and objective components of a complete medical eye examination.
Examine a patients record and extract information pertinent to the current appointment.
Communicate appropriately in verbal and written form with patients and professional staff.
Maintain patient confidentiality.
Identify issues related to insurance and reimbursement.
Apply correct ophthalmic terminology and abbreviations to basic body structures and functions.
Administer and record specified topical medications at the direction of the physician.
Prepare examination rooms and maintain ophthalmic clinical equipment.
Perform measurements of visual acuity.
Perform lensometry of spectacle lenses.
Measure interpupillary distance and pupil size.
Measure color vision using pseudoisochromatic plates.
Perform manual and automated visual field testing.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Assessment of academic achievement will include performance during formative and summative practical examinations and clinic logs.		
General Course Requirements and Recommendations - Students will be introduced to the clinical environment and will demonstrate proficiency in obtaining medical information and performing selected clinical tasks. - Instructors (or their designees) reserve the right to require students to provide proper picture identification for test taking, graded papers or projects or other appropriate purposes. - Students must pass this course with a "C" or better to remain in the <u>Ophthalmic Technician AAS Degree</u>.		
Grading Scale Student grades will be assigned using the following scale: 97-100 = A+ 94-96 = A 92-93 = A- 88-91 = B+ 85-87 = B 83-84 = B- 81-82 = C+ 80 = C 77-79 = C- 74-76 = D+ 72-73 = D 70-71 = D- < 69% and below = E

OPT293 - Clinical Externship II

Overview

Subject Ophthalmic Technician	Academic Department Health, Education, and Human Services	School Health & Human Services
Course Description Continues structured clinical experiences while emphasizing speed, accuracy, and clarity in advanced clinical skills. Students must document 360 clinical hours.		

Course Pre-requisite(s) OPT290 Clinical Externship I, OPT202 Optical Clinical Procedures	
Credit Hours 6	
Contact Hours 24	
Course Fee 25	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) No	
Goals, Topics, and Objectives	
Core Course Topics	
1. Ophthalmic Microbiology	
2. Ophthalmic Pharmacology	
3. Ocular Motility	
4. Optics / Opticianry	
5. Tonometry	
6. Visual Fields	
7. Specialized Ophthalmic Testing	
Skillfully and accurately perform clinical and diagnostic tests and patient services in conformation with the didactic curriculum.	
Deccmonstrate knowledge of potential side effects of ocular medication.	
Assess visual acuity in children and adults.	
Perform non-contact, tonopen, and applanation Tonometry.	
Measure vertex distance.	
Use a slit lamp to assess ocular structures.	
Demonstrate tests of ocular motility.	
Perform stereopsis tests.	
Identify ocular misalignments.	
Measure amplitude of accommodation.	
Measure the refractive state of the eye.	
Complete lab requests for culturing specimens from patients with ocular problems.	
Measure corneal curvature and thickness.	
Measure axial length.	
Identify a correct contact lens fit.	
Relate tactfully and sympathetically to patients.	
Consistently demonstrate reliability, self-discipline, cooperativeness, and professional deportment and demeanor in clinical activities.	
Demonstrate proficiency in both written and spoken communication	

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Assessment of academic achievement will include performance during formative and summative practical examinations and clinic logs.		
General Course Requirements and Recommendations - Students will build on previous patient care experiences and will demonstrate proficiency in performing more advanced clinical tasks. - Instructors (or their designees) reserve the right to require students to provide proper picture identification for test taking, graded papers or projects or other appropriate purposes.		
Grading Scale Student grades will be assigned using the following scale: 97-100 = A+ 94-96 = A		

- 92-93 = A-
- 88-91 = B+
- 85-87 = B
- 83-84 = B-
- 81-82 = C+
- 80 = C
- 77-79 = C-

1. Ophthalmic Microbiology and Pharmacology
 2. Ocular Motility
 3. Contact Lenses
 4. Optics / Opticianry
 5. Tonometry
 6. Visual Fields
 7. Specialized Ophthalmic Testing
 8. Ophthalmic Photography
 9. Ophthalmic Surgical Assisting

Skillfully and accurately perform clinical and diagnostic tests and patient services in conformation with the didactic curriculum.
Identify cause and effect of the most common systemic conditions with ocular manifestations.
Select imaging technique appropriate for various ocular conditions.
Obtain clear fundus photographs.
Recognize common artifacts in digital images.
Perform tests of tear function.
Demonstrate proper gowning and gloving technique.
Perform preoperative hand scrub.
Identify sterile field and instruments for common ocular procedures.
Assist in minor ophthalmic surgery.
Clean and sterilize ophthalmic microsurgical instruments.

Assess post-operative patient acuity.
Relate tactfully and sympathetically to patients.
Consistently demonstrate reliability, self-discipline, cooperativeness, and professional deportment and demeanor in clinical activities.
Demonstrate proficiency in both written and spoken communication

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement will include performance during formative and summative practical examinations, and clinic logs.

General Course Requirements and Recommendations
Students will build competency and confidence in performing routine clinical tasks as part of the eye care team.

Instructors (or their designees) reserve the right to require students to provide proper picture identification for test taking, graded papers or projects or other appropriate purposes.

Grading Scale
Student grades will be assigned using the following scale:

- 97-100 = A+
- 94-96 = A
- 92-93 = A-
- 88-91 = B+
- 85-87 = B
- 83-84 = B-
- 81-82 = C+
- 80 = C
- 77-79 = C-
- 74-76 = D+
- 72-73 = D
- 70-71 = D-
- < 69% and below = E

OPT297 - Clinical Externship III

Overview

Subject
Ophthalmic Technician

Academic Department
Health, Education, and Human Services

School
Health & Human Services

Course Description
Continues structured clinical experiences with emphasis on gaining autonomy in performing basic procedures, while adding new experiences in digital imaging and surgical assisting. Students must document 320 clinical hours.

Course Pre-requisite(s)
[OPT293 Clinical Externship II](#), [OPT220 Ophthalmic Photography](#), [OPT240 Ophthalmic Surgical Assisting](#)

Credit Hours
6

Contact Hours
20

Course Fee
25

Miscellaneous Department Fee

Academic Level
Undergraduate

Eligible for Credit for Prior College Level Learning (CPCLL)
No

Goals, Topics, and Objectives

- Core Course Topics
1. Ophthalmic Microbiology and Pharmacology
 2. Ocular Motility
 3. Contact Lenses
 4. Optics / Opticianry
 5. Tonometry
 6. Visual Fields
 7. Specialized Ophthalmic Testing
 8. Ophthalmic Photography
 9. Ophthalmic Surgical Assisting

Skillfully and accurately perform clinical and diagnostic tests and patient services in conformation with the didactic curriculum.
Identify cause and effect of the most common systemic conditions with ocular manifestations.

Select imaging technique appropriate for various ocular conditions.
Obtain clear fundus photographs.
Recognize common artifacts in digital images.
Perform tests of tear function.
Demonstrate proper gowning and gloving technique.
Perform preoperative hand scrub.
Identify sterile field and instruments for common ocular procedures.
Assist in minor ophthalmic surgery.
Clean and sterilize ophthalmic microsurgical instruments.
Apply and remove eye dressings.
Assess post-operative patient acuity.
Relate tactfully and sympathetically to patients.
Consistently demonstrate reliability, self-discipline, cooperativeness, and professional deportment and demeanor in clinical activities.
Demonstrate proficiency in both written and spoken communication

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement will include performance during formative and summative practical examinations, and clinic logs.
General Course Requirements and Recommendations
Students will build competency and confidence in performing routine clinical tasks as part of the eye care team.
Instructors (or their designees) reserve the right to require students to provide proper picture identification for test taking, graded papers or projects or other appropriate purposes.
Grading Scale
Student grades will be assigned using the following scale:

- 97-100 = A+
- 94-96 = A
- 92-93 = A-
- 88-91 = B+
- 85-87 = B
- 83-84 = B-
- 81-82 = C+
- 80 = C
- 77-79 = C-
- 74-76 = D+
- 72-73 = D
- 70-71 = D-
- < 69% and below = E

PHIL130 - Introduction to Philosophy

Overview

Subject	Academic Department	School
Philosophy	Humanities	Liberal Arts
Course Description		
An introduction to the perennial problems that have occupied philosophers primarily in the Western tradition, including appearance vs. reality, the mind/body problem, free will vs. determinism, the nature of morality, the existence of God, and the justification of political power.		
Course Pre-requisite(s)		
Eligible to take ENG courses at HFC.		
Credit Hours		
3		
Contact Hours		
3		

Course Fee	Miscellaneous Department Fee
10	0
Academic Level	
Undergraduate	
General Education Category	Michigan Transfer Agreement (MTA) Category
Humanities and Fine Arts	Category 5: Humanities and Fine Arts - Applied Degrees, Category 5: Humanities and Fine Arts - Transfer Degrees
Eligible for Credit for Prior College Level Learning (CPCLL)	
No	

Goals, Topics, and Objectives

Course Goals
The goal of this course is to provide students with knowledge of the major questions and problems that have arisen in the discipline of philosophy, and various attempts to answer these questions and solve these problems, and to cultivate an ability to evaluate the various arguments given by influential philosophers concerning these questions and problems.
Core Course Topics
1. Definition and branches of philosophy
2. Influential philosophers
3. Appearance vs. reality
4. Mind/body problem
5. Free will vs. determinism
6. Existence of God
7. Nature of morality
8. Nature and justification of political power
Define philosophy and its various branches.
Identify the major problems and questions that have occupied philosophers in the Western tradition (appearance vs. reality, mind/body problem, free will vs. determinism, the existence of God, nature of morality, nature and justification of political power).
Explain various attempts to solve the major problems in the Western philosophical tradition.
Evaluate the arguments given by influential philosophers and schools of thought concerning the major problems of philosophy.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
All assessment of student achievement is left to the discretion of the individual instructor. Assessment methods include but are not limited to quizzes, exams, writing assignments, and group projects.

Determined by department	

Goals, Topics, and Objectives

Course Goals
The goal of this course is to give the student the skills needed to think logically when they speak, listen, read, write and make decisions in life. The students will know how to recognize and avoid illogical thinking.
Core Course Topics
1. Philosophy
2. Arguments
3. Deduction/Induction
4. Language
5. Definitions
6. Categorical Statements

7. Categorical Syllogisms
8. Propositional (Symbolic) Logic
9. Truth Tables
10. Natural Deductions (Proofs)
11. Fallacies

Define philosophy and its various branches.

Identify arguments and their parts, and distinguish them from non-arguments.

Distinguish between deductive and inductive arguments.

Generate the truth values of categorical statements and the validity/invalidity of immediate inferences using the Square of Opposition and operations such as conversion and obversion.

Translate categorical syllogisms into standard form and employ traditional methods (Venn diagrams, rules of the syllogism) to test for validity.

Translate ordinary language statements and arguments into symbolic form.

Employ truth tables and natural deductions to test/prove the validity/invalidity of deductive arguments.

Demonstrate proficiency in detecting and avoiding a variety of fallacious arguments.

Identify types of inductive arguments and appropriate questions to determine whether they are strong or weak.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
All assessment of student achievement is left to the discretion of the individual instructor.

PHIL133 - History of Philosophy to 18th Century

Overview

Subject Philosophy	Academic Department Humanities	School Liberal Arts
Course Description Introduces the history of Western philosophy from its origins in ancient Greece to the rise of science. Includes a study of pre-Socratics, major Greek philosophers, medieval philosophy, and rationalist and empiricist philosophy of the modern era.		
Course Pre-requisite(s) Eligible to take ENG courses at HFC.		
Credit Hours 3		

Contact Hours

Credit for Prior College Level Learning (CPCLL) Details Determined by department	

Goals, Topics, and Objectives

Course Goals
The goal of this course is to provide students with knowledge of the major figures in the history of philosophy, an understanding of the development of philosophical ideas over the centuries, and an awareness of the enterprise of philosophy.

Core Course Topics

1. Philosophy

2. Arguments

3. Pre-Socratics

4. Socrates

5. Plato

6. Aristotle

7. Medieval Philosophy

8. Descartes

9. Locke
10. Early Modern Rationalism
11. Early Modern Empiricism

Define "philosophy" and its various branches.

State the major questions considered by influential philosophers and schools of thought of the Ancient, Medieval, and Early Modern periods.

Explain the answers given by influential philosophers and schools of thought of the Ancient, Medieval, and Early Modern periods listed above to the major philosophical questions of their day.

Describe the philosophical method of argumentation.

Summarize the arguments given by influential philosophers and schools of thought of the Ancient, Medieval, and Early Modern periods listed above.

Assessment, Requirements, and Outcomes

Goals, Topics, and Objectives

Course Goals
The goal of this course is to provide students with knowledge of major figures in the history of philosophy, understanding of the development of philosophical ideas over the centuries, and an awareness of the enterprise of philosophy.

Core Course Topics

1. Philosophy

2. Arguments

3. Early Modern Rationalism

4. Early Modern Empiricism

5. Kant

6. German Idealism

7. Existentialism

8. Logical Positivism

9. Late Modern Philosophy

10. Wittgenstein

Define "philosophy" and its various branches.

State the major questions considered by influential philosophers and schools of thought of the Modern period.

Explain the answers given by influential philosophers and schools of thought of the Modern period listed above to the major philosophical questions of their day.

Describe the philosophical method of argumentation.

Summarize the arguments given by influential philosophers and schools of thought of the Modern period.

PHIL137 - Topics in Philosophy

Overview

Subject Philosophy	Academic Department Humanities	School Liberal Arts
Course Description A non-historical approach to philosophy for serious students interested in the professions or for professionals interested in focusing on topics of professional or personal significance. Section offerings are sufficiently diverse to acquaint serious students or professionals with the extensive scope of philosophy. Diverse areas such as philosophy of religion, philosophy of science, aesthetics, philosophy of law, business ethics, biomedical ethics, philosophy of language, etc. may be the current topic offered that semester. Topics vary each semester and with each instructor.		
Course Pre-requisite(s) Eligible to take ENG courses at HFC.		
Credit Hours 3		

Contact Hours
3

Course Fee 10	Miscellaneous Department Fee 0
Academic Level Undergraduate

Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Other
Credit for Prior College Level Learning (CPCLL) Details Determined by department	

Goals, Topics, and Objectives

Course Goals
The goal of this course is to go deeper and in more detail into specific problems in philosophy. The student will cover more original text from philosophers and develop an understanding of the complexities of philosophical reasoning.
Core Course Topics
1. Topics will vary with the specific topic covered that semester.

Define philosophy and its various branches.
Describe the issues involved in the philosophical problem.
Express the major positions taken by people in the field on this problem.
Relate various examples and real-life scenarios to the philosophical problem.
Express and evaluate arguments concerning the issues involved in the philosophical problem.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

Credit for Prior College Level Learning (CPCLL) Details Other	

Goals, Topics, and Objectives

Course Goals
The goal of this course is to provide students with a knowledge of the basics of biotechnology, an understanding of the most influential moral theories, and the practical skills involved in effectively discussing moral dilemmas in biotechnology.
Core Course Topics
1. Philosophy
2. Biotechnology
3. Arguments
4. Ethics
5. Justice
6. Dialogue

Define "philosophy" and its various branches.
Define "biotechnology" and describe various kinds.
Identify and break down arguments into parts.
Explain and question popular approaches to moral issues.
Explain the most influential ethical theories.
Explain various theories of justice.
Examine specific moral dilemmas in biotechnology and demonstrate ability to effectively discuss them with the help of the most influential theories of ethics and justice.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
All assessment of student achievement is left to the discretion of the individual instructor. Recommended assessments include quizzes, exams, and Ethics Bowl competitions.

Credit for Prior College Level Learning (CPCLL) Details Determined by department	

Goals, Topics, and Objectives

Course Goals
The goal of this course is to provide the student with the conceptual tools to be able to discuss and formulate ethical decisions covering the problems encountered in society, using criteria of critical thinking and objectivity.
Core Course Topics
1. Philosophy
2. Arguments
3. Descriptive Ethics/Normative Ethics/Metaethics
4. Ethical Theories
5. Applications to Ethical Problems

Define philosophy and its various branches.
Identify and explain the differences between descriptive ethics, normative ethics, and metaethics.
Identify, explain, and apply major ethical theories offered throughout the history of philosophy.
Identify deficiencies in ethical theories based on critical thinking and argumentation.
Recognize ethically important components of contemporary moral issues.
Discuss contemporary moral issues using major ethical theories offered throughout the history of philosophy.

Assessment, Requirements, and Outcomes

PHIL201 - Eastern Philosophy

Overview

Subject Philosophy	Academic Department Humanities	School Liberal Arts
Course Description An exploration of the metaphysical, epistemological, and ethical frameworks of select philosophical traditions rooted in East Asia.		
Course Pre-requisite(s) Eligible to take ENG courses at HFC.		
Credit Hours 3		
Contact Hours 3		
Course Fee 10	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category Humanities and Fine Arts		
Michigan Transfer Agreement (MTA) Category Category 5: Humanities and Fine Arts - Applied Degrees, Category 5: Humanities and Fine Arts - Transfer Degrees		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals
The goal of this course is to provide students with an understanding of the major views of influential philosophers from the Eastern tradition and the skills to both evaluate the quality of the arguments given by select Eastern philosophers and compare the views of Eastern philosophers with those found in the Western philosophical tradition.
Core Course Topics
1. Metaphysical, Epistemological, and Ethical Problems in Eastern Philosophy
2. Eastern Philosophers (including, but not limited to, those from the Indian Vedanta tradition, the Buddha, Lao Tzu, and Confucius) and Texts
3. Differences Between Eastern and Western Philosophies
4. Arguments of Eastern Philosophers
Identify the basic problems of Eastern philosophy in the fields of metaphysics, epistemology, and ethics.
Summarize the views of select Eastern philosophers (including, but not limited to, those from the Indian Vedanta tradition, the Buddha, Lao Tzu, and Confucius) as expressed in philosophical texts.
Compare the metaphysical, epistemological, and ethical views of select Eastern philosophers with those expressed in the Western philosophical tradition.

Evaluate the quality of the arguments given in support of the views of select Eastern philosophers.

Assessment, Requirements, and Outcomes

PHYS131 - General Physics I

Overview

Subject	Academic Department	School
Physics	Physics, Astronomy, and Earth Sciences	Science, Tech, Engr & Math
Course Description		
Introduces the principles of physics, including units on mechanics, heat, and sound. Partially fulfills the physics requirement in pre-medicine, pre-dentistry, teaching, and law. Three hours of lecture and three hours of laboratory per week.		
Course Pre-requisite(s)		
MATH103 Technical Mathematics or MATH112 Trigonometry or MATH165 Mathematics for Calculus or MATH175 Precalculus with a C or better or placement into MATH180 Calculus 1 on the math placement test or one-year of high-school algebra with a grade of C or better and a passing grade on the physics pretest.		
Credit Hours

Academic Level	Michigan Transfer Agreement (MTA) Category	
Undergraduate	Category 6: Natural Sciences - Applied Degrees, Category 6: Natural Sciences - Transfer Degrees - Lecture and Lab	
General Education Category	Natural Sciences	
Eligible for Credit for Prior College Level Learning (CPCLL)		
No		

Goals, Topics, and Objectives

Course Goals
The goal of this course is to develop and strengthen critical thinking skills and scientific literacy through the study and application of physical principles.
Core Course Topics
1. Kinematics in one and two dimensions
2. Newton's laws
3. Circular motion
4. Work and energy
5. Impulse and momentum
6. Torque and equilibrium
7. Elasticity and simple harmonic motion
8. Fluids
9. Waves and sound
10. Heat and thermodynamics

Apply kinematic equations in one and two dimensions correctly.
Apply Newtons laws correctly to conceptual and numerical problems.
Determine velocity and acceleration for uniform circular motion.
Describe the motion of an object using work, kinetic energy, and potential energy.
Determine the changes in motion in terms of impulse and momentum.
Determine torque on a body and quantify its effects for a static system.
Describe simple harmonic motion using kinematics, dynamics, and energy.
Explain Pascals principle, Archimedes principle, and Bernoullis principle.
Demonstrate how different properties of a medium affect the speed of a wave.
Describe a wave using the terms wavelength, frequency, amplitude, and speed.

Explain heat and its relationship to temperature and phase changes.
Manipulate equipment safely and effectively to collect and analyze data.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement		
Student learning will be assessed through classroom examinations including a cumulative final exam. Students will submit a written lab report for each experiment performed which will be used to assess if the student followed instructions, collected the data correctly, analyzed the data, and was able to draw an appropriate conclusion from the analysis. Conceptual understanding and problem-solving skills will be evaluated using homework, collaborative activities or projects, and exams.

No		

Goals, Topics, and Objectives

Course Goals	
The goal of this course is to develop and strengthen critical thinking skills and scientific literacy through the study and application of physical principles.	
Core Course Topics	
1. Ohm's Law and Power in Circuits	
2. Series, Parallel, and Combination Circuits	
3. Kirchhoff's Rules	
4. Electric Force and Electric Fields	
5. Electric Potential Energy and Electric Potential	
6. Magnetic Force and Magnetic Fields	
7. Induction and Transformers	
8. AC Circuits	
9. Optics	
10. Modern Physics	

Analyze a circuit containing one or more resistors with one or more voltage sources.
Determine electric force on a particle due to one or more charges.
Determine the electric field and electric potential due to one or more charges.
Determine the magnetic force on a moving charge and a current-carrying wire, as well as the magnetic torque on a current-carrying coil, due to the presence of a magnetic field.
Determine the magnetic field near permanent magnets, around current-carrying wires, inside current-carrying loops, and through current-carrying solenoids.
Describe the motion of a charged particle due to present electric and magnetic fields.
Determine the induced emf and resulting current for a conductive loop transformer in the presence of a changing magnetic field or a transformer stepping up or down voltage.

Analyze a series AC circuit containing a resistor, inductor, and capacitor.
Describe continuous and discrete emission spectra using Weins Law and Bohrs Model.
Describe the characteristics and phenomena of light, including reflection, refraction, dispersion, diffraction, interference, polarization, and Doppler Effect.
Predict and depict image formation for curved mirrors and thin lenses.
Manipulate equipment safely and effectively to collect and analyze data.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement		
Student learning will be assessed through classroom examinations including a cumulative final exam. Students will submit a written lab report for each experiment performed which will be used to assess if the student followed instructions, collected the data correctly, analyzed the data, and was able to draw an appropriate conclusion from the analysis. PHYS133 - Principles of Physics

Overview

Subject	Academic Department	School
Physics	Physics, Astronomy, and Earth Sciences	Science, Tech, Engr & Math
Course Description		
Explores physical principles of motion, energy, fluids, electro-magnetism, waves, light, radiation, and the atom. Course is designed to meet the need for a one semester course in physics in many program areas including Allied Health, Teacher Education, Business, and Social Science. Three hours of lecture and two hours of laboratory per week.		
Course Pre-requisite(s)		
One year of high school algebra with a grade of C or better OR a satisfactory score on the Math placement exam OR eligible for gateway MATH courses at HFC.

Goals, Topics, and Objectives

Course Goals	
The goal of this course is to develop and strengthen critical thinking skills and scientific literacy through the study and application of physical principles.	
Core Course Topics	
1. Scientific Method	
2. Kinematics and Newton's Laws	
3. Work and Energy	
4. Impulse and Momentum	
5. Torque and Static Equilibrium	
6. Elasticity and Fluids	
7. Heat and Specific Heat	
8. Waves and Sound	
9. Electricity and Magnetism	
10. Light	
11. Modern Physics	

Apply the scientific method to real world problems.
Describe the motion of a body under constant acceleration.
Explain how Newtons Laws apply to linear and circular motion.
Use energy conservation to analyze falling, swinging, and oscillating motion.
Analyze collisions involving two or more bodies.

Use static equilibrium to analyze forces acting on different parts of a body.
Analyze the pressure in a fluid using Boyles Law, Archimedes Principle, Pascals Principle, and Bernoullis Principle.
Explain how heat is related to temperature and phase changes.
Demonstrate how different properties of the medium affect the speed of a wave.
Describe a wave using the terms wavelength, frequency, amplitude, and speed.
Explain standing waves and how they apply to various musical instruments.
Explain simple, series, and parallel circuits.
Describe electric force, electric fields, magnetic force, and magnetic fields.
Describe the characteristics and phenomena of light, including reflection, refraction, dispersion, diffraction, interference, polarization, and Doppler Effect.
Predict and depict image formation for thin lenses.
Manipulate equipment safely and effectively to collect and analyze data.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Student learning will be assessed through classroom examinations including a cumulative final exam. Students will submit a written lab report for each experiment performed which will be used to assess if the student followed instructions, collected the data correctly, analyzed the data, and was able to draw an appropriate conclusion from the analysis. Conceptual understanding and problem-solving skills will be evaluated using homework, collaborative activities or projects, and exams.

Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Other	
Credit for Prior College Level Learning (CPCLL) Details A student may receive credit for PHYS231 Engineering Physics I by earning either: 1. A score of 4 or higher on AP Physics C: Mechanics Exam 2. A score of 6 or higher on the International Baccalaureate-Higher Level (IB-HL) Physics Exam.		

Goals, Topics, and Objectives

- Core Course Topics
1.

Vector Addition and Multiplication

2.

Kinematics of one- and two-dimensional systems.

3.

Dynamics of Motion

4.

Momentum and Impulse

5.

Work, Energy, and Energy Conservation

6.

Thermodynamics

7.

Kinematics and Dynamics of Rotational Motion

8.

Gravitation and Planetary Motion

9.

Simple Harmonic Motion

Demonstrate the ability to solve complex physics problems by breaking them down into smaller constituents.
Describe the motion of an object in both one and two dimensions using the correct kinematic variables. This includes the interpretation of kinematic graphs.
Identify the various forces acting on a system of objects and apply Newtons Laws to that system using vector addition.
Describe the concepts of work, kinetic energy, and potential energy and apply the principals of conservation of mechanical energy to physical systems.
Use the concepts of impulse and momentum to solve problems involving colliding objects.
Describe the rotational motion of an object using the correct kinematic and dynamic variables.
Apply Newtons Law of Universal Gravitation and Keplers Laws to orbital motion.
Analyze the periodic motion of undamped and damped harmonic oscillators.
Use kinetic molecular theory to examine heat transfer and thermal equilibrium.
Apply skills and models learned in the course to hands-on laboratory experiments.
Apply teamwork skills in conducting laboratory experiments, data interpretation, and communicating results.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement • Student learning will be assessed through a combination of in-classroom examinations, including a final exam. • Students will communicate lab results for each experiment performed during instructor supervised laboratory sessions. • Students will practice techniques introduced in class via assigned homework problems. • Conceptual understanding will be evaluated through classroom discussions and on the class exams.

PHYS232 - Engineering Physics II

Overview

Subject Physics	Academic Department Physics, Astronomy, and Earth Sciences	School Science, Tech, Engr & Math
Course Description Designed to meet the requirements of engineering students and physics majors. Covers electrostatics, including electric fields, forces, and potential; electrical circuits, including resistors, capacitors, and inductors; magnetic fields and forces; induction; electromagnetic waves; and optical systems, including diffraction, refraction, and image formation. Four hours of lecture and three hours of laboratory activities per week.		
Course Pre-requisite(s) PHYS231 Engineering Physics I with a C grade or better and MATH183 Calculus II with a C grade or better		
Credit Hours 5		
Contact Hours 7		
Course Fee 22	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category Natural Sciences	Michigan Transfer Agreement (MTA) Category Category 6: Natural Sciences - Applied Degrees, Category 6: Natural Sciences - Transfer Degrees - Lecture and Lab	
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Other	
Credit for Prior College Level Learning (CPCLL) Details A student may receive credit for PHYS232 Engineering Physics II by earning either: 1. A score of 4 or higher on AP Physics C: Electricity and Magnetism Exam. 2. A score of 6 or higher on the International Baccalaureate-Higher Level (IB-HL) Physics Exam.		

Goals, Topics, and Objectives

Core Course Topics

1. Electric charge, field, force, and potential
2. Capacitance and dielectrics
3. Basic electrical circuits, involving resistors, capacitors, inductors, and EMFs
4. Magnetic fields and forces
5. Electromagnetic Induction
6. Maxwell's Equations
7. Electromagnetic Waves
8. Optical systems, including diffraction, refraction, and image formation.

Demonstrate the ability to solve complex physics problems by breaking them down into smaller constituents.
Apply electrostatic principles to find the electric field, electric potential, and forces produced by charge distributions.
Demonstrate the working principles of capacitors.
Apply electrostatic concepts to describe the motion of charged particles in conductors.
Analyze resistive circuits to determine equivalent resistance, current, and power dissipation.
Use Amperes Law and the Biot-Savart Law to determine magnetic fields.
Calculate the magnetic forces on moving charged particles.
Apply Faraday's Law and Lenz's Law to determine the magnitude and direction of induced emf and current.
Analyze circuits involving resistors, capacitors, inductors, and AC EMF sources.
Determine the properties of electromagnetic waves, including intensity, polarization, and how they are derived from Maxwells Equations.
Describe diffraction, interference, and refraction using the wave properties of light.
Determine the characteristics of images formed in optical systems involving lenses and mirrors.
Apply skills and models learned in the course to hands-on laboratory experiments.
Apply teamwork skills in conducting laboratory experiments, data interpretation, and communicating results.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

- Student learning will be assessed through a combination of in-classroom examinations, including a final exam.

• Students will communicate lab results for each experiment performed during instructor supervised laboratory sessions.

• Students will practice techniques introduced in class via assigned homework problems.

• Conceptual understanding will be evaluated through classroom discussions and on the class exams.

PLMB101 - Fundamentals of Plumbing & Pipefitting

Overview

Subject
Energy Technology

Academic Department
Building Sciences

School
Business, Entrepreneurshp, PD

Course Description

Introduces plumbing principles. Topics include the proper selection of materials for installation and repair of gas, domestic water, sewer, soil, waste, vent systems, and various pipefitting systems. Utilizes blueprints and isometric diagrams throughout the course. Some laboratory activities.

Credit Hours

3

Contact Hours

3

Course Fee

30

Miscellaneous Department Fee

0

Academic Level

Undergraduate

Eligible for Credit for Prior College Level Learning (CPCLL)

No

Goals, Topics, and Objectives

Course Goals

To provide students with knowledge and skills to understand and develop the proper procedures utilized in the selection of materials for the installation and repair of sewer, soil, waste, and vent systems. Understandings of the fundamentals and equipment and procedures relative to sewer, soil, waste and vent systems. Be able to use critical-thinking and problem-solving skills in addressing the procedures, safety issues, and planning to complete successful residential and commercial systems.

Core Course Topics

1. Safety and introduction to plumbing principles.
2. Plumbing and pipfitting blueprint reading, symbology, and application of isometric drawings.
3. Plumbing and pipefitting materials used in residential and commercial applications, special fittings, and specific materials restrictions as per codes.
4. Specialty plumbing and pipefitting tools for installation of no-hub, cast-iron, and flexible plumbing.
5. Introduction to gas piping in buildings, materials and safety, and sizing procedures for gas branches and mains.
6. Calculations for the sizing of storm and sanitary drains.
7. Joining and installation procedures for drains and sizing procedures for roof and parking lot drains.
8. Plumbing and pipefitting fixtures, application and installation procedures, plumbing traps, types, and restrictions.
9. Specialty fixtures and their installation including water fountains, slop sinks, and hot tub heaters.
10. Testing and inspecting plumbing and pipefitting systems, and principles of rough and finish plumbing.

Explain the proper layout of plumbing systems.
Select the proper size building drains and vents using the Michigan State Plumbing Codes.
Select the proper materials for installing various pipe-fitting systems.
Apply the proper techniques for repair of hot-water systems.
Discuss and describe the proper procedures for doing material take-offs from blueprints.
Demonstrate the use of isometric diagrams related to plumbing/ pipefitting.
Solve practical shop exercises in the proper layout and design of sewer, soil, waste, and vent systems.
Demonstrate the selection and proper use of tools.
Demonstrate the use of hsp math in the piping grade.
Solve practical math problems used in piping systems.
Demonstrate being able to find information quickly from a reference source.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

All assessment of student achievement is left to the discretion of the individual instructor.

Satisfies Honors Requirement

PLMB110 - Drains, Wastes, and Vents

Overview

Subject
Energy Technology

Academic Department
Building Sciences

School
Business, Entrepreneurshp, PD

Course Description

Introduces the Michigan State Plumbing Code and the proper selection of materials for the installation and repair of sewer, soil, waste, and vents systems. Covers proper procedures for the design, sizing, and construction of residential plumbing systems. Introduces commercial systems and plumbing cross-connections. The use of blueprints and isometric diagrams are reviewed throughout the course. Also includes how to test plumbing systems in their various stages.

Credit Hours

Goals, Topics, and Objectives

Course Goals

To provide students with knowledge and skills to understand and develop the proper procedures utilized in the selection of materials for the installation and repair of sewer, soil, waste, and vent systems. Candidates will learn foundation of skills and understandings of the fundamentals, equipment and procedures relative to sewer, soil, waste and vent systems. Develop critical thinking and problem solving skills in addressing the procedures, safety issues and planning to complete successful residential and commercial systems.

Core Course Topics

1. Safety and plumbing principles.
2. Plumbing blueprint reading, symbols, and application of isometrics.
3. Plumbing materials used in residential and commercial applications, special fittings, and specific materials restrictions as per codes.
4. Specialty plumbing tools for installation of no-hub, cast-iron, and flexible plumbing.
5. Gas piping in buildings, materials and safety applications, and sizing procedures for gas branches and mains.
6. Sizing of storm and sanity drains.
7. Joining and installation procedures for drains and sizing procedures for roof and parking lot drains.
8. Plumbing fixtures, application and installation procedures, plumbing traps, types and restrictions, and sizing of water supply piping.
9. Specialty fixtures, water fountains, slop sinks, hot water heaters, and installation procedures for specialty fixtures.

Explain the proper layout of plumbing systems.
Design building drains, vent, and water distribution systems using sizing tables.
Define techniques for renovating plumbing systems.
Define the proper techniques for testing back-flow preventers.
Discuss and describe the proper procedures for doing material take-offs from blueprints.
Demonstrate the use of isometric diagrams for plumbing pipe-fitting systems.
Perform practical shop exercises in the proper layout and design of sewer, soil, waste and vent systems.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

All students will be required to complete a comprehensive final examination that assesses the learning of all course objectives. This exam must be weighted in a manner so that this exam score is worth a minimum of fifteen percent of the final course grade. This exam is to be a common exam administered to all sections of [TAPP110 Drains, Wastes, & Vents](#).

PLMB115 - Water Supply & Distribution Systems

Overview

Subject Energy Technology	Academic Department Building Sciences	School Business, Entrepreneurshp, PD
Course Description Enables students interested in construction, apprenticeship, multi-skilled technician, and plumbing industries to properly select materials and methods of installation/protection of potable water supply and distribution systems. Students will review fixtures, choosing materials, appliances, appurtenances and best installation practices for sustainable potable water supply systems and will also become familiar with inspecting, testing, plumbing repair and related systems.		
Course Pre-requisite(s) PLMB101 Fund of Plumbing & Pipefitting , PLMB110 Drains, Wastes, and Vents		
Credit Hours 2		
Contact Hours 2		
Course Fee 30	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Skilled Demonstration	
Credit for Prior College Level Learning (CPCLL) Details Skilled Demonstration Details A hands-on demonstration to display competence of course learning objectives.		

Goals, Topics, and Objectives

Core Course Topics

1. Potable Water Systems
2. Backflow Prevention and Devices

3. Potable Water System Testing
4. Potable Water System Repair

Design and install a potable water supply system according to plumbing codes.
Define plumbing fixtures and appliances as related to potable plumbing.
Define common causes of back-flow and back-flow prevention devices.
Identify terms related to water reclamation and and recycling.
Define methods for performing potable water supply and distribution piping tests and repair.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

The following will be used to assess student's academic achievement:

- Quizzes
- Tests
- Labs 70% and above throughout semester

PLMB118 - Plumbing, Pipefitting Material Joining

Overview

Subject Energy Technology	Academic Department Building Sciences	School Business, Entrepreneurshp, PD
Course Description Introduces plumbing and pipe-fitting materials joining. Topics included are mechanical joints/pipe-cutting, brazing with turbo torches and oxyacetylene, soldering with LP and MAPP gases, plastic PVC pipe-joining, flared fittings, plastic fusion welding, and dielectric fittings. Students are required to study the theory behind these methods and perform hands-on labs.		
Credit Hours 3		
Contact Hours 3		
Course Fee 30	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics

1. Mechanical Joints
2. Pipe soldering: LP and MAPP Gases
3. Turbo Torch Soldering and Welding
4. Oxyacetylene brazing and welding
5. Cutting various types of piping material
6. Dielectric Fittings: Copper vs Blackpipe/Galvanized Pipes
7. Flared/Compression Fittings

Demonstrate the cleaning and soldering of copper pipes; brazing and silver soldering with a turbo-torch.
Demonstrate how to cut and thread pipes; braze, weld, join and cut various pipes.
Identify and use tools for various types of piping materials.
Demonstrate PVC pipe joining and the use of glues and heat fusion.
Demonstrate the ability to work with 2 dissimilar piping metals using dielectric fittings.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

PLMB120 - Steam and Hot Water Systems

Overview

Subject: Energy Technology
Academic Department: Building Sciences
School: Business, Entrepreneurship, PD

Course Description
For technical construction apprentices and those interested in seeking basic pipefitting -plumbing skills. Introduces principles of steam and hydronic systems, converter trap sizing, steam traps, and skimming boilers. Also examines the proper selection, sizing, and installation of pipe and fittings related to hydronic and steam systems. Application exercises allow students the opportunity to design and lay out typical systems. Laboratory activities.

Course Pre-requisite(s)
[ENT103 - Missing course](#), [ENT104 - Missing course](#) and [ENT105 - Missing course](#)

ENT-103, ENT-104, and ENT-105

Credit Hours

2

Contact Hours

2

Course Fee: 40
Miscellaneous Department Fee: 0

Academic Level: Undergraduate

Eligible for Credit for Prior College Level Learning (CPCLL): No

Goals, Topics, and Objectives

Core Course Topics

- 1. Principles of heat flow in a building; use and application of heat charts and formulas.
- 2. Heat loss calculations.
- 3. Planning a heating systems.
- 4. Steam heating systems: one-pipe, two-pipe, and steam traps.
- 5. Steam heating system design: placement of pipe and specific connections.
- 6. Class project: steam heating design.
- 7. Hot water heating systems: direct-return, reverse-return, air control, and vents.
- 8. Radiant panel heating panels, hot water boilers, and controls.
- 9. Boiler fittings, valves, steam gauges, and relief valves.
- 10. Design of a radiant heating system.
- 11. Class project: series loop, one zone system.
- 12. Class project -one pipe system.
- 13. Class project: two pipe reverse-return system.

Describe the principles of heat loss in a structure.
Differentiate between steam and hot water systems.
Identify the procedures for how to lay out functioning heating systems.
Classify the different types of systems according to their pipe arrangements.
Identify the safety equipment required by Michigan state law for work on boilers and furnaces.
Design steam and hydronic systems using manufacturer sizing tables.
Demonstrate the selection process for sizing the vent and chimney liner using GAMA tables.
Describe relevant combustion safety devices and their use.

Assessment, Requirements, and Outcomes

PLMB225 - Plumbing Design

Overview

Subject: Energy Technology
Academic Department: Building Sciences
School: Business, Entrepreneurship, PD

Course Description
Topics include health and safety, water supply, water wastes, piping materials, and building plans and drawings. The proper use of plumbing tools and equipment selection emphasizing overall job safety is integrated into the course material. Also covers the components of plumbing systems and installations.

Course Pre-requisite(s)
[ENT124 - Missing course](#) and [PLMB110 Drains, Wastes, and Vents](#)

Credit Hours

4

Contact Hours

4

Course Fee: 40
Miscellaneous Department Fee: 0

Academic Level: Undergraduate

Eligible for Credit for Prior College Level Learning (CPCLL): No

Goals, Topics, and Objectives

Core Course Topics

- 1. Types of work involved in plumbing/pipefitting.
- 2. Procedures for ensuring a potable water supply.
- 3. The purpose of codes and licensing in Michigan.
- 4. Advanced plumbing/pipefitting principles.
- 5. Proper use of tools for various job applications.
- 6. Practices to ensure a safe working environment.
- 7. Math problems common in plumbing/pipefitting.
- 8. Public and private waste disposal.
- 9. Proper safety procedures for working with gases.
- 10. Piping materials used in piping trades.
- 11. Correct selection of appropriate plumbing fixtures.
- 12. How to select appropriate valves and faucets.

Design plumbing systems.
Identify the National Standards Plumbing Code Principles.
Identify and use proper tools.
Define safe trade practices.
Solve math problems used in designing piping/plumbing systems.
Analyze the inter-workings of a piping/plumbing system in residential and commercial settings.
Apply the State of Michigan Mechanical-Plumbing Codes.
Compare and contrast the various materials used in the piping/plumbing industry.
Distinguish between the various components of plumbing systems.

Assessment, Requirements, and Outcomes

PLMB240 - Plumbing Materials & Components

Overview

Subject: Energy Technology
Academic Department: Building Sciences
School: Business, Entrepreneurship, PD

Course Description
Examines water distribution and pipe sizing. Topics include hot water systems, tanks, drains, wastes, vent systems, construction drawings and diagrams, and system sizing. Introduces material joining through soldering, and brazing. Includes the various plastic pipes and fittings being used in today's industry. Explores how to evaluate issues related to water pipe sizing in buildings, including concepts of water flow and water supply fixture units.

Goals, Topics, and Objectives

Core Course Topics

1. Water distribution system: layout and sizing methods.
2. Pipe sizing.
3. Appliances used in plumbing systems.
4. Mechanical drawings and their application in piping installations.
5. Safety procedures and safety issues related to welding.
6. Importance of venting a plumbing system.
7. Design features and use of pumps and ejectors.
8. Plumbing codes used for sizing water distribution systems.
9. Policy and procedures for using rigging.

Assess a water distribution system and its individual parts.
Evaluate the advantages of thermoplastic piping materials compared to other materials used in plumbing systems.
Identify in a drawing the various parts of the drains, wastes, and vent systems.
Describe the operation of the plumbing trap.
Demonstrate the basic skills of pipe welding.
Organize a safe approach for handling materials on the job.
Apply symbols used for standard materials on prints.
Demonstrate safe rigging practices and use of equipment in hoisting and rigging.
Differentiate and calculate the relationships between pressure, force, and area in liquid systems.
Demonstrate the basic skills of soldering, brazing, and flame-cutting.

PLMB250 - Plumbing Pipefitting Code

Overview

Subject Energy Technology	Academic Department Building Sciences	School Business, Entrepreneurshp, PD
------------------------------	--	---

Course Description

Explores how to utilize the State of Michigan Plumbing Code to solve real-life problems (International Plumbing Code). Covers study habits and processes necessary to interpret and apply the code. Also helps prepare students for entry- level positions in the plumbing, multi-skilled maintenance, repair, and apprenticeship fields.

Credit Hours
2

Contact Hours

Course Fee 40	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Course Goals

To provide the knowledge and skills to understand and abide by the established plumbing codes.

Core Course Topics

1. Code regulations, terms and history
2. Pipe joints and connections.
3. Drain systems and storm drain systems.
4. Plumbing system venting, traps interceptors and backflow preventers.
5. Plumbing fixtures.
6. Potable water supplies.
7. Plumbing materials and fixtures.
8. Plumbing-pipefitting inspections, tests and maintenance.

Interpret building plumbing and pipefitting diagrams using accepted conventions.
Identify which article applies to a given situation.
Select the correct material for a plumbing or pipefitting job.
Cite articles and sub-articles from the code that apply to specified problems.
Size a plumbing system according to the code.
Understand the content and structure of the Michigan Plumbing Code (or most recent version).
Fast reference the Code book for relevant information.
Identify all sections of the Code by reference numbers and titles.

PLMB255 - Plumbing Fixture Installation

Overview

Subject Energy Technology	Academic Department Building Sciences	School Business, Entrepreneurshp, PD
------------------------------	--	---

Course Description

Covers the operation and availability of common plumbing fixtures and appliances. Focuses on the selection and installation of fixtures in residential, commercial, and industrial applications. The control and accessories used in fuel burning appliances, the differences in vent capacity and vent type, and the steps necessary to place an appliance in service are covered. Explores how electricity is incorporated into a piping system including concepts of energy savings and safety.

Course Pre-requisite(s)

Goals, Topics, and Objectives

Course Goals

This course is for the advanced student in the pipefitter/plumber program. Students will gain knowledge in the areas of designing system, profitability, and the codes involved in the plumbing construction business. Students will be exposed to the required design of the drains, waste, and vent systems and the introduction of basic electricity, its components, and application in the piping industry.

Core Course Topics

1. Productivity and profitability in the plumbing trade.
2. Installation of plumbing fixtures in residential and commercial applications.
3. Comprehensive review of the national fuel codes.
4. Use of a transit level related to elevations and grades.
5. Calculations involving the capacities of volume and weight of water.
6. Requirements involved for the sizing of storm drains.
7. The effect of temperature in plumbing and pipe fitting systems.
8. Introduction to basic electricity.
9. Proper applications of control wiring.

Design and install commercial, industrial, and institutional fixtures and appliances.
Demonstrate skills in reading blueprints and specifications of buildings and site plans.
Assemble proper fixture fittings and trim for residential, commercial, industrial, and institutional systems.
Demonstrate the use of the various ordinances involved in construction.
Calculate the volume and areas of cylindrical and rectangular tanks.
Evaluate types of appliance vent systems and their installation.
Apply knowledge of safety and accessibility when working in different environments.
Interpret electric systems and how they are incorporated in the piping industry.
Compare various types of temperature controls.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Final Exam accounts for 25% of the final grade. Skill Sharpening Sessions (5) account for 50% of the grade. Attendance and being on time, class participation, and homework assignments account 25% of the grade. More than 3 absences = failure of the class. Classroom participation is a requirement. Professionalism is expected at all times, and tardiness and absences will not be tolerated.	
Texts Required course materials are available in the department.

PLMB275 - Pract Plumbing Lab-State License Prep

Overview

Subject Energy Technology	Academic Department Building Sciences	School Business, Entrepreneurship, PD
Course Description For the apprentice and journeyman. Covers the subject of pipes and tubes, their uses, the materials of which they are made, and some of the related general specifications. Also covers existing and new process skills related to plumbing-pipefitting. Course is 25% lecture related to safety, tools, equipment, and demonstrations prepping; the rest of the course emphasizes laboratory activities.		
Course Pre-requisite(s) Instructor Permission		
Credit Hours 4		
Contact Hours 4		
Course Fee 50	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics - Plumbing and pipe-fitting and their differences. - Various types of piping used in plumbing and pipe-fitting - Various types of industry piping joints. - State of Michigan Piping Test Project. - Drains, wastes, and vents. - Gas, hydronic, and refrigeration piping.
Explain the various types of joints used with common piping materials.
Demonstrate an understanding of pipe sizes and schedules as required by blueprints and specifications.
Describe the two general processes for manufacturing steel pipe.

Compare and contrast pipe, mild steel, extra strong, double extra strong, piping ID, and OD dimensions.
Perform threading pipe with fittings and install fittings per piping diagrams.
Demonstrate proper skills when administering the four types of piping end finishes.
Understand standard pipe nomenclature related to carbon and alloy steel.
Describe brass and copper pipe, how they are manufactured, and their uses and applications.
Demonstrate appropriate skills on cutting and joining of cast iron vent piping.
Repair exist cast iron piping.
Define the two principle classes of copper tubing.
Demonstrate proper skills for preparing copper tubing for various applications.
Demonstrate proper skills for PVC piping and thermal plastic.
Demonstrate proper assembly of drains, wastes and vents according to the plumbing codes.
Define the types of piping, gas, hydronic and refrigeration.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Practical testing in the lab environment.

POLS101 - Am Gov:Democrat Partic Civic Engagement

Overview

Subject Political Science	Academic Department Social Sciences	School Liberal Arts
Course Description Examines principles and problems of American political institutions, including the role of government and politics in society, the balancing of liberty with authority, and the theories of the state. Probes mechanisms of citizen empowerment and control (public opinion, pressure groups, political parties, elections), and formal structure. Public policy as a means to meet societal needs is analyzed and evaluated along with the tools that citizens can use to influence the public policy process. Also examines foreign and domestic public policy and contemporary events. Includes how to write effective arguments as well as how to formally present political arguments.		
Course Pre-requisite(s) Eligible to take ENG courses at HFC.		
Credit Hours 4		
Contact Hours 4		

Course Fee 10	Miscellaneous Department Fee 0
Academic Level Undergraduate	
General Education Category Social Sciences	Michigan Transfer Agreement (MTA) Category Category 4: Social Sciences - Transfer Degrees, Category 4: Social Sciences - Applied Degrees
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Other
Credit for Prior College Level Learning (CPCLL) Details Determined by department.	

Goals, Topics, and Objectives

Core Course Topics - American Democracy and Political Culture - Constitutional Framework and Federalism - Executive Branch - Legislative Branch - Judicial Branch - Civil Liberties - Civil Rights

8. Political Parties and Interest Groups
9. Political Socialization and Public Opinion
10. The Mass Media Role in Politics and Public Policy
11. Citizen Participation and Electoral Politics
12. Civic Participation and Responsibility
13. Domestic Economic Policy
14. Educational and Social Policy
15. American Foreign Policy

Identify and explain the institutions of U.S. government and the constitutional framework: The legislative, executive, and judicial branches of government.
Describe the public policy process.
Explain civil rights and civil liberties from a historical perspective, and analyze how civil rights and civil liberties impact American society today.
Describe how American democracy is based on citizen participation and the electoral process.
Discuss extra-constitutional institutions and their impact on Americans.
Compose a strategic political participation action plan for articulating political voice.
Distinguish between civil rights and liberties and civic responsibilities.
Evaluate the norms and values of democratic societies and institutions with the actions of political participation.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
Each instructor will identify and implement appropriate methods to assess the achievement of the learning objectives for the course.	
General Course Requirements and Recommendations	
Civic Action Activity surrounding a contemporary political will be a central focus of this course. Students will develop a Strategic Plan for raising their concern/issue on the public and the political agenda at a local, state, national, or international level.	
Texts	
Common text book to be determined by Political Science Department.

Goals, Topics, and Objectives

Course Goals	
All associate degree recipients from Henry Ford College will be able to demonstrate an understanding of American society, with emphasis on major ideas and events that have influenced American society, OR social and political institutions that shape American society, OR diverse populations and cultures that compose American society.	
Core Course Topics	
1. Constitutional Framework	
2. Executive Branch	
3. Legislative Branch	
4. Judicial Branch	

5. Civil Liberties and Civil Rights
6. Extra-constitutional institutions
7. Citizen Participation and Electoral Politics
8. Public Policy Process

Identify and explain the institutions of U.S. government and the constitutional framework: legislative, executive, and judicial branches of government.
Describe the public policy process. Describe how policy is developed and implemented.
Explain civil rights and civil liberties from a historical perspective and analyze how civil rights and civil liberties impact American society today.
Describe how American Democracy is based on citizen participation and the electoral process.
Discuss extra-constitutional institutions and their impact on American society.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Each instructor will identify and implement appropriate methods to assess the achievement of the learning objectives for the course. In addition, [POLS131 Intro Amer Gov't & Pol Sci](#) also fulfills the General Education Learning Objective: Civil Society and Culture. Therefore, all instructors teaching the course will participate in a common form of assessment.

Part I: Multiple Choice Questions Content Assessment. This test assesses the General Education Requirements, for outcome #1 Civil Society and Culture.	
1. A set of multiple-choice questions has been prepared for use in all sections of POLS131 Intro Amer Gov't & Pol Sci .	
2. Questions will be provided to each instructor at the end of the semester. These questions can be used in connection with the final exam.	
3. Students will use a separate ScanTron form for these questions.	
4. The instructor should scan the forms and the scores will be calculated into the final grade for each student. The assessment test should represent <i>at least 5 percent of the final exam grade</i> ; ScanTron forms should be turned in to the Political Science Faculty Coordinator for Assessment after final grades for the semester are due. The Coordinator of Instructional Assessment will combine forms from all sections of POLS131 Intro Amer Gov't & Pol Sci for analysis.	
5. Multiple-choice questions cover the seven domains in Section XIV, learning objectives identified above in Section X to focus on the assessing the Civil Society and Culture General Education Outcome. Faculty members should be sure to incorporate these topics into the course during the semester.	
1. Questions will be provided to each instructor at the end of the semester. These questions are to be used in connection with the final exam.	
2. Students will use a separate ScanTron form for these questions.	
3. The instructor should scan the forms and the scores will be calculated into the final grade for each student. The assessment test should represent <i>at least 5 percent of the final exam grade</i> .	
4. ScanTron forms should be turned in to the Social Science Division Secretary after final grades for the semester are due.	
5. The Coordinator of Instructional Assessment will combine forms from all sections of POLS131 Intro Amer Gov't & Pol Sci for analysis.	
6. Multiple-choice questions cover scenarios that analytically explore how American System of Government and Politics works through the interaction of institutions, laws, acts, and precedence.	
7. Each faculty member teaching POLS131 Intro Amer Gov't & Pol Sci will incorporate a written assignment into the course requirements. This will no longer be part of the General Education Outcome assessment process. The assignment can be completed outside of class which provides an appropriate period of time for students to complete. The assignment can take one of the following forms:	
1. A journal project in which students summarize and analyze three or more articles on a country, region (e.g., Latin America or the Pacific Rim), or a social or policy issue with global implications (e.g., immigration policy, global warming, or child labor).	
2. A research paper that contrasts the United States with one or more countries, using three recent, substantive articles from newspapers, magazines, or scholarly journals.	
3. A research paper that explores an issue of general concern and how political and government action is dealing with the given issue using three recent, substantive articles from newspapers, magazines, or scholarly journals.	
4. A critical review of an article, which has global implications, from a professional journal, in which the student summarizes the article, relates the topic to class materials, and properly cites the source.	
5. Essay questions that are given in class as part of exams, quizzes, or other assignments. Students should complete such assignments on their own.	
6. Written Assignments on-line assignments submitted through the College's learning management system.

Goals, Topics, and Objectives

Core Course Topics
1. Law, Courts, and Politics
2. Law and Legal Systems
3. Federal Courts
4. State Courts
5. Lawyers and Legal Representation
6. Judges
7. Mobilizing the Law: Litigants, Interest Groups, Court Cases, and the Media
8. Trial Courts: The Preliminary Stages of Criminal Cases
9. Trial Courts: Bargaining and Sentencing in Criminal Cases
10. Trial Courts: The Preliminary Stages of Civil Cases
11. Trial Courts: Dispositions of Civil Cases
12. Trial
13. The Appellate Process
14. The Supreme Court: Deciding What to Decide
15. The Supreme Court: The Justices and Their Decisions
16. Final Research Project
Define the organization of the federal courts.
Identify the U.S. courts as legal and political institutions.
Demonstrate an understanding of time and chronology with regard to the American legal system and respective landmark court decisions.
Compare adversarial legal systems versus non-adversarial legal systems.
Identify sources to support a position, analyze which sources best support the position taken, and summarize the supporting sources into a written argument.
Analyze cause and effect in social/political phenomena as it relates to decisions made throughout the years by the U.S. courts.
Trace elements of change and continuity with regard to landmark court decisions.
Analyze and describe the impact of major court decisions, personalities, citizen stakeholders, special interest groups, and places with regard to the decisions made by the U.S. courts.
Compare and contrast the American legal system with the legal systems of other nations.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment methods for this course include weekly assignments and discussion board activities and a mid-term and final written research project.

Goals, Topics, and Objectives

Course Goals
Provide students with an opportunity to learn about leadership in organizations and the community. Allow students to evaluate leadership styles in unique settings and develop strategic thinking around methods for achieving effective leadership in differing contexts. Provide students with an introduction to tools for critically evaluating strategic actions and planning in organizations and the community.

Core Course Topics
1. Leadership Survey
1. Examine different styles and types of leadership.
2. Examine what is leadership.
3. Explore different styles of leadership.
4. Evaluate key components of human leadership.
2. Leadership and Organizations
1. Examine Leadership in Organizations and the Community.
2. Describe the attributes of leadership in organizations and the community.
3. Power Analysis (By leadership, in organization and community)
1. Identify power within organizations and communities: Attributes of Power, Identifying Power, and Identifying power variables at play in organization and community.
2. Evaluate leadership's use of power to effect change.
4. Power and Relationship
1. Build Power in Organizations, Networks, and the Community.
2. Examine Listening and Inclusion in organizational leadership.
3. Explore Compromise and Consensus building in organizations.
5. Diversity, Inclusion and Power Dynamics and Change
1. Examine the Power Dynamics in Organization based on diversity and organization within organization.
2. Examine how Diversity and Inclusion Impact Organizational change.
6. Building Networks
1. Evaluate mechanisms to build effective networks between organization community.
2. Analyze networks to foster power of organization.
3. Describe organizations and community environment.
7. Environmental Analysis (Issues, Agendas, Goals, Objectives, Timelines, Partners, Opponents, Strengths, Weakness, Barriers)
1. Explore established rules.
2. Analyze changing rules.
3. Evaluate Alternatives.
8. Norms and Values of Democratic Society
1. Evaluate actions based on democratic norms and values including but not limited to: inclusion, diversity, liberty, and community.
Examine different styles and types of leadership.
Examine what is leadership.
Explore different styles of leadership.
Evaluate key components of human leadership.
Examine Leadership in Organizations and the Community.
Describe the attributes of leadership in organizations and the community.
Identify power within organizations and communities: Attributes of Power, Identifying Power, and Identifying power variables at play in organization and community.
Evaluate leadership's use of power to effect change.
Build Power in Organizations, Networks, and the Community.
Examine Listening and Inclusion in organizational leadership.
Explore Compromise and Consensus building in organizations.
Examine the Power Dynamics in Organization based on diversity and organization within organization.

Examine how Diversity and Inclusion impact Organizational change.
Evaluate mechanisms to build effective networks between organization community.
Analyze networks to foster power of organization.
Describe organizations and community environment.
Explore established rules.
Analyze changing rules.
Evaluate Alternatives.
Evaluate actions based on democratic norms and values including but not limited to: inclusion, diversity, liberty, and community.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Leadership action plan in an organization and/or community. Final Evaluation of Course

- Grading Scale
- 90-100% = A
 - 80-89% = B
 - 70-79% = C
 - 60-69% = D
 - 59% and below = E

POLS152 - International Relations

Overview

Subject Political Science	Academic Department Social Sciences	School Liberal Arts
Course Description Introduces the diverse phenomena of international relations, the complex patterns of political and economic conflict, American foreign policy, and the interdependence between nation-states and non-governmental organizations. Coursework encourages the student to think critically and analytically about the world and develop a healthy skepticism toward simple solutions to complex world problems.		
Course Pre-requisite(s) Eligible to take ENG courses at HFC.		
Credit Hours 3		
Contact Hours 3		
Course Fee 10	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category Social Sciences	Michigan Transfer Agreement (MTA) Category Category 4: Social Sciences - Applied Degrees, Category 4: Social Sciences - Transfer Degrees	
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

- Core Course Topics
- Structure of the International Systems
 - International Political Theory
 - International Conflict and Conflict Resolutiona. Ethnicity, Conflict, and Cooperation
 - Globalization and Internationalization of Society
 - Human Rights and Political Democracy
 - International Political Economy

Critically evaluate the concepts and historical patterns, developments, and relationships between and among states.
Describe what mechanisms are, and can be used for relations between states.
Critically evaluate the competing theories that dominate international relations theory, practice and politics.

Explore the formal mechanisms present for international interactions especially those of political, economic, and national and international security concerns.
Discuss the role that International Governmental Organizations (IGOs) play in international conflict, commerce, and other interactions among and between states.
Identify the most important IGOs including the United Nations, the World Court, and the European Union.
Identify how Nongovernmental Organizations influence practice, policy, and decision-making processes among and between states.
Compare and contrast how various players on the international scene can impact events and issues internationally.
Discuss the patterns of globalization occurring today, and how these factors influence peoples lives in their community and communities throughout the world.
Address the conditions of human rights and group rights from various perspectives; explore how the international community can influence these patterns in particular locals.
Discuss major international issues and how IGOs, NGOs, states, and global citizens can influence the resolution of these issues.
Identify issues of conflict and analyze how and why they occur and what are some of the primary mechanisms for conflict resolution.
Analyze the nexus of domestic and international politics. Be able to evaluate where they influence each other.
Examine of the economic structures and mechanisms that regulate and influence state interaction; especially the International Monetary Fund (IMF), the World Bank (WB), and the World Trade Organization (WTO).

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Each instructor will identify and implement appropriate methods to assess the achievement of the learning objectives for the course.
1. Exams (Multiple Choice and/or Essay)
2. Written Assignment. Each faculty member teaching **POLS152 International Relations** will incorporate at least one written assignment into the course requirements. The assignment can be completed outside of class and given an appropriate period of time for students to complete. The written assignment should be used as an assessment for the General Education Outcome of Civil Society and Culture. The results should be reported by the faculty member to the faculty Assessment Coordinator for inclusion in SPOL.
The assignment must take one of the following forms:

- A research paper in which students explore and analyze a current international issue. The papers should utilize minimum of 5 sources including scholarly journals, major newspaper articles, or other substantive sources.
- Multiple writing assignments determine by instructor: online Discussion Board Assignments, Critical Thinking Responses Essays, and/or Critical Issue Essays and Presentations.

POLS155 - State & Local Government

Overview

Subject Political Science	Academic Department Social Sciences	School Liberal Arts
Course Description Examines political institutions and processes in the fifty states, including their cultures and constitutions, as well as the public policies of state governments in areas such as education, social welfare, and the environment. Uses Michigan and Metropolitan Detroit as a basis for comparison to study state and local governments. This course is appropriate as a lead-in for those interested in the fields of political science, public administration, and criminal justice.		
Course Pre-requisite(s) Eligible to take ENG courses at HFC.		
Credit Hours 3		
Contact Hours 3		
Course Fee 10	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category Social Sciences	Michigan Transfer Agreement (MTA) Category Category 4: Social Sciences - Applied Degrees, Category 4: Social Sciences - Transfer Degrees	
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics

- 1. Capacity of State and Local Government
- 2. Federalism and the States
- 3. State Constitutions
- 4. Elections and Citizen Participation
- 5. Parties, Interest Groups, and Campaigns
- 6. State Legislatures
- 7. Governors
- 8. Public Administration and State and Local Bureaucracies
- 9. State Judiciaries
- 10. Community Political Systems
- 11. Forms of Local Government
- 12. State and Local Relations
- 13. Taxing and Spending at the State and Local Level
- 14. Economic Development
- 15. Education Policy
- 16. Criminal Justice Policy
- 17. Social Welfare and Health Policy

Categorize state constitutions among the fifty states.
Describe the models of judicial selection.
Describe Federalism and the relationship between the states and the federal government.
Compare and contrast the part-time legislature versus the professional legislature and its relationship with the executive branch of the state.
Compare and contrast the powers of state governors.
Describe city charters and different structures of local government.
Describe bureaucratic politics in states and communities.
Describe the politics of fiscal policy at the state and local level.
Explain the development of policies for criminal justice, education, social welfare, and health at the state and local Level.
Compare and contrast Michigans culture, policies, constitution, and governmental structure with other state and local governments.
Compare and contrast the political and governmental relationship between the city and suburbs within major metropolitan areas (e.g. Metro Detroit).
Explain the financing and activities of campaigns and political parties at the state level.
Explain various economic development strategies used by states and local communities around the United States.

Assessment, Requirements, and Outcomes

Goals, Topics, and Objectives

Core Course Topics

- 1. Events of Peace and Conflict: Social, Economic, Political, Ideological, Territorial, and Ethno-Cultural dominated conflict. (#1, 2, 6)
- 2. Theories, Concepts and Examples of Conflict and War. (#3, 7, 8)
 - i. Political, Economic, and Ideological factors in conflict. ii. Social, Territorial, and Ethno-Cultural factors in conflict.
- 3. Theories, Concepts and Examples of Conflict Resolution (#1, 7, 8)
 - i. Negative Peace 1. Diplomacy, Negotiations, and Conflict Resolution 2. Peace through strength 3. Disarmament and Arms Control 4. International Organizations and Law 5. Ethical and Religious Perspectives ii. Positive Peace 1. Human Rights 2. Ecological Well-being 3. Economic Well-being 4. Non-Violence
- 4. Institutions of Conflict Resolution (#4, 5)
- 5. Methods and Practices of Conflict Resolution (#4, 8)

Apply the concepts and theories of conflict analysis and resolution.
Describe the social, economic, political, ideological, territorial, and ethno-cultural components as they relate to the intensity and type of conflict.
Evaluate conflicts at the inter-state and intra-state level from the economic, social, political, ideological, territorial, and ethno-cultural perspectives.
Describe the role that various actors play in conflict development, escalation, and resolution.
Describe the most important actors involved in international conflict resolution today.
Discuss the impact of conflict on individuals, groups, and state relations as well as on human rights.
Discuss major contemporary and historical conflicts. Analyze the roles of various actors in the development and resolution of the conflict.
Identify economic, social, political, ideological, and ethno-cultural conditions as they related to peace and conflict.
Analyze contemporary events of peace and conflict resolution and evaluate options for conflict resolution and peace building.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

Each instructor will identify and implement specific appropriate methods to assess the achievement of the learning objectives for the course.

Assessment of Course Should Include the following:

- 1. Exams (Multiple Choice and/or Essay)
- 2. Written Assignment. Each faculty member teaching [POLS200 Intro to Peace and Conflict](#) will incorporate at least one written assignment into the course requirements. The assignment can be completed outside of class and given an appropriate period of time for students to complete. PSCI131 - Introduction to Physical Science

Overview

Subject Physical Science	Academic Department Physics, Astronomy, and Earth Sciences	School Science, Tech, Engr & Math
Course Description Topics explored include physics, chemistry, astronomy, meteorology, and geology. Non-science majors have an opportunity to better understand and appreciate the interaction between energy and matter in nature. Laboratory experiences are designed to improve scientific interest and to develop confidence in dealing with science.		
Credit Hours 4		
Contact Hours 5		
Course Fee 18	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category Natural Sciences	Michigan Transfer Agreement (MTA) Category Category 6: Natural Sciences - Applied Degrees, Category 6: Natural Sciences - Transfer Degrees - Lecture and Lab	
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals

While developing the major topics of physical science, the overall goals are to help non-science majors understand and appreciate the interaction of energy and matter in nature, to help students improve their scientific understanding, and to develop confidence in their interpretation and reaction to scientific issues affecting the world.

Core Course Topics

1. History of Astronomy
2. The Earth-Moon System
3. The Solar System
4. Spectroscopy
5. Telescopes
6. The Sun
7. Stellar Birth, Evolution, and Death
8. Minerals
9. Rocks
10. Plate Tectonics
11. The Ocean Floor
12. Ocean Water
13. Ocean Currents
14. Tides
15. Waves
16. Ocean Life

17. The Atmosphere
18. Relative and Absolute Humidity
19. Condensation Altitude
20. Cloud Formation and Cloud Types
21. Wind
22. High and Low Air Pressure
23. Cyclones and Anticyclones
24. Air Mass Characteristics
25. Frontal Boundaries
26. Thunderstorms, Tornadoes, and Hurricanes
Demonstrate knowledge of Earth and celestial systems
Categorize various types of information using logic and reasoning
Apply scientific concepts learned in one context of the course to other course topics
Analyze data on specific components of Earth systems, e.g. oceans
Interpret the likelihood of various outcomes given a particular set of initial conditions
Interpret the meaning of visually-presented scientific information (e.g. graphs and charts)
Exhibit professionalism and safe laboratory behavior

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
Student achievement will be assessed using exams, laboratory assignments, quizzes, and take-home reading assignments.	
General Course Requirements and Recommendations	
This is a four (4) credit course with three (3) hours of lecture and two (2) hours of laboratory per week. A student is expected to attend all class sections. Attendance is taken by the instructor.	
Satisfies Honors Requirement	Satisfies Wellness Requirement

Goals, Topics, and Objectives

Course Goals
The goal of this course is to strengthen critical thinking skills and scientific literacy through the study of the objective and subjective phenomena related to sound and light.
Core Course Topics
1. Vibrating Systems
2. Waves
3. Sound & Hearing
4. Musical Intervals & Scales
5. Musical Instruments
6. Architectural Acoustics
7. The Nature & Speed of Light
8. Geometric Optics & Optical Instruments
9. Interference and Diffraction
10. Basic Color Theory
11. Light & Color in Nature

Relate the subjective properties of sound and light to their corresponding objective properties.
Describe the characteristics and phenomena of sound waves, including reflection, interference, and the Doppler Effect.
Describe the structure of the human ear and explain how it works.
Explain musical intervals is in terms of steps in a scale and numerical frequency ratios.
Describe how standing waves are produced on strings, in tubes, and on membranes.
Categorize musical instruments by their physical characteristics.
Predict and depict image formation for curved mirrors and thin lenses.
Explain how optical instruments such as microscopes and telescopes work.
Describe the structure of the human eye and explain how it works.
Identify primary, secondary, and complementary colors.
Demonstrate a basic knowledge of color addition and color subtraction.
Describe the characteristics and phenomena of light, including reflection, refraction, dispersion, diffraction, interference, and polarization.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
Students will be assessed of their learning by exams, class participation, homework and laboratory performance.	
General Course Requirements and Recommendations	
Students are expected to attend all class sessions. Attendance is taken by the instructor during all class meetings.	
Texts	
Lab Manual (with accompanying textbook/eBook): Sound and Light Experiments - LoPresto & Murrell	
Satisfies Honors Requirement	Satisfies Wellness Requirement

PSY131 - Introductory Psychology

Overview

Subject	Academic Department	School
Psychology	Social Sciences	Liberal Arts
Course Description		
Introduces elementary concepts and principles related to the scientific study of behavior and of the mental processes of cognition and affective states. Variables examined include the history of psychology, the scientific method, theory, biological foundations, psychological processes related to cognition and affective states, developmental changes over time, and applications related to healthy and unhealthy personalities.		
Course Pre-requisite(s)

Goals, Topics, and Objectives

Course Goals
The initial goal of the course is to provide structure and teaching for the acquisition of a hierarchical organization of facts and concepts constituting elementary knowledge of the science of behavior and mental processes. Since the goals of this science are to enhance each student's ability to describe, understand, predict and influence human behavior, thinking critically about themselves and others is a second and more important course goal.
Core Course Topics
1. History of psychology and its research methods
2. The biological foundations of psychology

3. Sensation and perception
4. States of consciousness
5. Learning
6. Memory
7. Cognition, language and intelligence
8. Motivation and emotion
9. Personality
10. Stress and health psychology
11. Psychological disorders
12. Therapies
13. Social psychology
14. Development

1.0 Understand scientific method as applied to psychology and can: 1.1 distinguish between scientific and nonscientific statements (i.e., between explanations and interpretations). 1.2 recognize examples of standard experimental designs. 1.3 select correct designs for different research problems. 1.4 recognize examples of various experimental controls. 1.5 discuss elementary statistical problems relevant to research.
2.0 Know technical terms and can: 2.1 select correct definitions of terms. 2.2 match terms and definitions. 2.3 distinguish between correct and incorrect usage of terms. 2.4 state correct definition of terms.
3.0 Understand basic psychological concepts and can: 3.1 recognize new examples of various concepts. 3.2 distinguish among examples of closely related concepts. 3.3 recognize correct and incorrect interpretations of statements in which basic concepts appear. 3.4 recognize correct and incorrect usage of concepts. 3.5 state concepts in own words.
4.0 Understand theories of human behavior and can: 4.1 identify different theories based on descriptions. 4.2 match prominent psychologists with their theories. 4.3 recognize new applications of different theories. 4.4 match procedures with theories. 4.5 appraise the adequacy of a given theory.
5.0 Understand behavioral problems and can: 5.1 identify behavioral principles operating in various real and hypothetical cases. 5.2 select best analysis of real and hypothetical cases. 5.3 describe several economic, sociological, and political aspects of behavioral problems. 5.4 contrast the treatment of individuals with behavioral problems in the United States with the treatment of similar patients in other countries.
6.0 Understand behavior-change and behavior-influence procedures and can: 6.1 list steps in various procedures. 6.2 identify descriptions of various procedures. 6.3 select correct interpretations of different procedures. 6.4 recognize new examples of procedures. 6.5 recognize correct and incorrect applications of procedures.
7.0 Appreciate the role of the scientific method in psychology and can: 7.1 explain why evidence-based approaches are key to establishing all sciences. 7.2 differentiate between evidence-based approaches and those that lack supporting data.
7.3 report on a popular conception of behavior that is not based on evidence. 7.4 share research that appears to refute a previously held belief about human or animal behavior.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
Each instructor will implement appropriate methods for assessing the achievement of the learning objectives of the course with the following exceptions:	
Each student will be required to write at least one critical thinking paper, with guidelines determined by each instructor. Either a comprehensive final examination covering the entire coursework or a midterm covering the first half and an exam covering the second half.	
Satisfies Honors Requirement	Satisfies Wellness Requirement
No	No

PSY152 - Child Psychology

Overview

Subject Psychology	Academic Department Social Sciences	School Liberal Arts
Course Description Covers physical, cognitive, social, and emotional development through adolescence. Explores a variety of theories, recent research, and practical application.		
Course Pre-requisite(s) PSY131 Introductory Psychology with grade of C or higher		
Credit Hours 3		
Contact Hours 3		

Course Fee 10	Miscellaneous Department Fee 0
Academic Level Undergraduate	
General Education Category Social Sciences	Michigan Transfer Agreement (MTA) Category Category 4: Social Sciences
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Core Course Topics	
1. The Foundations of Child Psychology 2. Research Methods in Child Psychology 3. Genetic Foundations of Child Psychology 4. Prenatal Development, Pregnancy, and Birth 5. Infancy and Toddlerhood a. Physical Development b. Cognitive Development c. Social Development d. Emotional Development 6. Early Childhood a. Physical Development b. Cognitive Development c. Social Development d. Emotional Development 7. Middle Childhood a. Physical Development b. Cognitive Development c. Social Development d. Emotional Development 8. Adolescence a. Physical Development b. Cognitive Development c. Social Development d. Emotional Development	
Describe the field of child psychology	
Compare and contrast major research methods used in child psychology	
Analyze child psychology theorists and their theories	
Describe the genetic mechanisms that impact development	
Describe the various processes of prenatal development, pregnancy, and birth	
Evaluate the different physical, cognitive, social, and emotional developmental changes in infancy and toddlerhood	
Evaluate the different physical, cognitive, social, and emotional developmental changes in early childhood	
Evaluate the different physical, cognitive, social, and emotional developmental changes in middle childhood	
Evaluate the different physical, cognitive, social, and emotional developmental changes in adolescence	
Explain the impact of culture, ethnicity, gender, and socioeconomic status on development	

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
Each instructor will implement appropriate methods for assessing the achievement of the learning objectives of the course with one exception: Each student will be required to write at least one critical thinking assignment, with guidelines determined by the instructor.

PSY251 - Abnormal Psychology

Overview

Subject Psychology	Academic Department Social Sciences	School Liberal Arts
Course Description This course covers the epidemiology, etiology, treatment, and ethical and legal considerations associated with psychopathology in society. Evidence-based criteria will be used to examine individual, group, community and cross-cultural therapeutic techniques.		
Course Pre-requisite(s) PSY131 Introductory Psychology , C or better		

Credit Hours
3

Contact Hours
3

Course Fee 10	Miscellaneous Department Fee 0
Academic Level Undergraduate	
General Education Category Social Sciences	Michigan Transfer Agreement (MTA) Category Category 4: Social Sciences - Applied Degrees, Category 4: Social Sciences - Transfer Degrees
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

- Core Course Topics
1. Historical perspectives on psychopathology
 2. Contemporary perspectives on psychopathology
 3. Legal, ethical, and professional issues related to psychopathology
 4. Assessment and diagnosis of psychopathology
 5. Neurodevelopmental disruptive disorders
 6. Eating, sleeping, and elimination disorders
 7. Schizophrenia and other psychotic disorders
 8. Mood disorders and suicide
 9. Neurocognitive disorders
 10. Stress and trauma-related disorders
 11. Anxiety and obsessive-compulsive disorders
 12. Somatic symptom and dissociative disorders
 13. Personality disorders
 14. Substance-related and addictive disorders
 15. Sexual and gender disorders

Describe several historical treatments for psychopathology.
Evaluate the psychoanalytic paradigm in terms of today's evidence-based standards.
Explain why the concept of defense mechanism is not falsifiable.
Compare different treatment paradigms for a specific disorder.
Analyze a vignette to identify the client's disorder and formulate an evidence-based treatment plan.
Discuss why the multiaxial diagnostic approach was removed from the Diagnostic and Statistical Manual of Mental Disorders.
Evaluate the impact of schizophrenia and other psychotic disorders on society.
Appraise the present use and misuse of psychoactive medications.
Relate current evidence-based approaches to treating eating disorders.
Explain why the personality disorders are frequently unresponsive to treatment.
Summarize the epidemiological evidence relating to the incidence and prevalence of psychopathology in society.
Present the symptomatology of an individual with a neurocognitive disorder.
Differentiate between sexual disorders that are treatable versus those that are typically intractable.
Analyze several strengths and weaknesses of treatment strategies for addiction.
Contrast cross-cultural approaches to the diagnosis and treatment of selected psychopathological disorder.
Evaluate the strengths and weaknesses of the Diagnostic and Statistical Manual of Mental Disorders and the International Classification of Diseases with regard to diagnosing schizophrenia.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement - Exams consisting of objective questions and short essays. - Written case analysis of patients depicted in various educational videos. - Written analyses of selected films with psychopathological content.	Satisfies Honors Requirement No	Satisfies Wellness Requirement No

PSY253 - Lifespan Development

Overview

Subject Psychology	Academic Department Social Sciences	School Liberal Arts
Course Description Covers the processes of change and stability in human development from conception through death. Course begins with the study of prenatal concerns and progresses through the years of infancy, childhood, adolescence, adulthood and aging. Discusses theory, research, and application associated with the biological, cognitive, affective, and social domains of development.		
Course Pre-requisite(s) PSY131 Introductory Psychology with a C grade or higher		
Credit Hours 3		
Contact Hours 3		
Course Fee 10		Miscellaneous Department Fee 0
Academic Level Undergraduate		
General Education Category Social Sciences		Michigan Transfer Agreement (MTA) Category Category 4: Social Sciences - Applied Degrees, Category 4: Social Sciences - Transfer Degrees
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

- Course Goals
This course emphasizes development across the lifespan. Students will gain knowledge and perspective of the interrelatedness of the biological, cognitive, affective, and social domains as they examine how and why people change or remain the same over the course of a lifetime.
- Core Course Topics
1. Lifespan development basics
 2. Developmental research designs
 3. Heredity and environment in the development process
 4. Theories of development
 5. Pregnancy, prenatal development, and birth
 6. Infancy and toddlerhood: Physical, cognitive, emotional, and social development: Major developmental issues
 7. Early and middle childhood: Physical, cognitive, emotional, and social development: Major developmental issues
 8. Adolescence: Physical, cognitive, emotional, and social development: Major developmental issues
 9. Adulthood: Physical, cognitive, emotional, and social development: Major developmental issues
 10. Death and dying

Define the field of lifespan development.
Summarize basic developmental issues and major factors that impact development.
Compare and contrast developmental research designs and apply research findings.
Explain the influence of genetics and environment on development.
Differentiate the current major theoretical perspectives of development.
Describe the processes of pregnancy, prenatal development, and birth.
Explain and analyze the physical, cognitive, social, and emotional developmental issues of infancy and toddlerhood.
Explain and analyze the physical, cognitive, social, and emotional developmental issues of adolescence.
Explain and analyze the physical, cognitive, social, and emotional developmental issues of adulthood.
Explain issues surrounding death and dying.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Each instructor will implement appropriate methods for assessing the achievement of the learning objectives of the course. These methods may include, but are not necessarily limited to, objective and/or written examinations, papers, Internet assignments, and library projects.

In addition, each student will be required to produce a critical thinking paper/project relevant to lifespan development. The details of the assignment are at the discretion of the instructor.

Texts
Textbook selection is determined by the department.

Goals, Topics, and Objectives

- Core Course Topics
1. Research methods
 2. Social perception
 3. Social cognition
 4. The self
 5. The need to justify our actions
 6. Attitudes and attitude change
 7. Conformity
 8. Group processes
 9. Interpersonal Attraction
 10. Aggression
 11. Prosocial behavior
 12. Prejudice

Understand scientific method as applied to social psychology and can:
Distinguish between scientific and nonscientific statements.
Recognize examples of standard experimental designs.
Select correct designs for different research problems.
Recognize examples of various experimental controls.
Know technical social psychology terms and can:
Select correct definitions of terms.
Match terms and definitions.
Distinguish between correct and incorrect usage of terms.
State the correct definition of terms.
Understand basic social psychology concepts and can:

Recognize new examples of various concepts.
Distinguish among examples of closely related concepts.
Recognize correct and incorrect interpretations of statements in which basic concepts appear.
Recognize correct and incorrect usage of concepts.
State concepts in own words.
Understand social psychology theories and can:
Identify different theories based on descriptions.
Match prominent social psychologists with their theories.
Recognize new applications of different theories. 4.4 match hypotheses with theories.
Appraise the adequacy of a given theory.
Understand social psychological problems and can:
Identify psychological principles operating in various real and hypothetical cases.
Select the best analysis of real and hypothetical cases.
Describe how status, role, and class impact social psychological problems.
Contrast the psychological approach to selected social psychological problems with the sociological view.
Understand procedures for putting social psychology in action and can:
List steps in various procedures.
Identify descriptions of various procedures.
Select correct interpretations of different procedures.
Recognize new examples of procedures.
Recognize correct and incorrect applications of procedures.
Appreciate the role of the scientific method in social psychology and can:
Explain why evidence-based approaches are key to establishing the science of social psychology.
Distinguish between evidence-based approaches and those that lack supporting data.
Report on a popular conception of social behavior that is not based on evidence.
Identify research that appears to refute a previously held belief about social behavior.

PSY257 - Health Psychology

Overview

Subject Psychology	Academic Department Social Sciences	School Liberal Arts
Course Description Explores the psychological dimensions of health and the prevention and management of illness. Emphasizes interaction between biological, social, and psychological factors in health and medical problems. Topics include the history and research methods of health psychology, biological foundations of health and illness, stress, prevention and positive psychology, exercise, sleep, and injury control, nutrition and eating disorders, substance abuse, chronic and life-threatening illnesses, complementary and alternative medicine, pain management, and the role of health psychology in healthcare settings.

Goals, Topics, and Objectives

Course Goals This course explores the psychological dimensions of health and the prevention and management of illness. The interaction between biological, social, and psychological factors in health and medical problems is emphasized.
Core Course Topics
1. Introducing Health Psychology
1. Describe the development of health psychology as a discipline.
2. Describe the scope of the field of health psychology.
3. Explain how the biopsychosocial model promotes the understanding of health and illness.
4. Describe the basic concepts that guide the work of the health psychologist.
2. Research in Health Psychology
1. Compare and contrast research methods used in the field of health psychology.
3. Biological Foundations of Health and Illness
1. Describe the biological foundations of health and illness.
4. Stress
1. Describe the physiology of stress.
2. Compare and contrast the major models of stress and illness.
3. Explain the psychosocial sources of stress.
4. Analyze the importance of psychological factors, gender, ethnicity and culture, spirituality, sexuality, and age involved in health and illness.
5. Coping with Stress
1. Describe various coping strategies and factors affecting the ability to cope.
2. Explain the various coping interventions.
3. Analyze the importance of psychological factors, gender, ethnicity and culture, spirituality, sexuality, and age involved in health and illness.
6. Staying Healthy
1. Explain major theories of health and behavior.
2. Compare and contrast the types of prevention.
3. Explain positive psychology and thriving.
4. Analyze the importance of psychological factors, gender, ethnicity and culture, spirituality, sexuality, and age involved in health and illness.
7. Exercise, Sleep, and Injury Control
1. Describe physical activity, exercise, and fitness, and highlight their benefits.
2. Describe sleep and its role in a healthy lifestyle.
3. Describe injury control and its role in a healthy lifestyle.
4. Analyze the importance of psychological factors, gender, ethnicity and culture, spirituality, sexuality, and age involved in health and illness.
8. Nutrition, Obesity, and Eating Disorders
1. Explain the relationship between nutrition and disease.
2. Explain factors involved in weight determination.
3. Describe obesity from a biopsychosocial perspective, including causal factors, prevention, and treatments.
4. Describe eating disorders from a biopsychosocial perspective, including causal factors, prevention, and treatments.
5. Analyze the importance of psychological factors, gender, ethnicity and culture, spirituality, sexuality, and age involved in health and illness.
9. Substance Abuse
1. Describe mechanisms of drug action and models of addiction.
2. Describe alcohol use and abuse from a biopsychosocial perspective, including causal factors, prevention, and treatments.
3. Describe tobacco use (including electronic cigarettes) and abuse from a biopsychosocial perspective, including causal factors, prevention, and treatment.
4. Describe electronic cigarette and marijuana use from a biopsychosocial perspective.
5. Analyze the importance of psychological factors, gender, ethnicity and culture, spirituality, sexuality, and age involved in health and illness.
10. Cardiovascular Disease and Diabetes
1. Describe cardiovascular disease and diabetes from a biopsychosocial perspective, including risk factors, prevention, and treatments.

2. Analyze the importance of psychological factors, gender, ethnicity and culture, spirituality, sexuality, and age involved in health and illness.
11. Cancer
1. Describe cancer from a biopsychosocial perspective, including risk factors, prevention, treatments, and coping mechanisms.
2. Analyze the importance of psychological factors, gender, ethnicity and culture, spirituality, sexuality, and age involved in health and illness.
12. HIV/AIDS and Other Communicable Diseases
1. Explain the HIV/AIDS epidemic from a biopsychosocial perspective.
2. Describe symptoms and stages, medical and psychosocial interventions, and coping with HIV and AIDS.
3. Explain other communicable diseases from a biopsychosocial perspective.
4. Analyze the importance of psychological factors, gender, ethnicity and culture, spirituality, sexuality, and age involved in health and illness.
13. The Role of Health Psychology in Health Career Settings
1. Describe the criteria used to recognize and interpret symptoms.
2. Describe characteristics of those seeking treatment and explain patient adherence to treatment.
3. Explain the patient-provider relationship, including factors affecting the relationship, relationship models, communication, and the role of the Internet.
4. Describe the current and changing health care system.
5. Analyze the importance of psychological factors, gender, ethnicity and culture, spirituality, sexuality, and age involved in health and illness.
14. Managing Pain
1. Describe the various aspects of pain, including measurement, physiology, psychosocial factors involved, and treatment.
2. Analyze the importance of psychological factors, gender, ethnicity and culture, spirituality, sexuality, and age involved in health and illness.
15. Complementary and Alternative Medicine
1. Compare and contrast traditional medicine with complementary and alternative medicine across cultures.
2. Explain the effectiveness of complementary and alternative medicine.
3. Explain how complementary and alternative medicine is indicative of a paradigm shift in medicine and healthcare in the United States.
4. Analyze the importance of psychological factors, gender, ethnicity and culture, spirituality, sexuality, and age involved in health and illness.

Describe the development of health psychology as a discipline.

Describe the scope of the field of health psychology.

Explain how the biopsychosocial model promotes the understanding of health and illness.

Describe the basic concepts that guide the work of the health psychologist.

Compare and contrast research methods used in the field of health psychology.

Describe the biological foundations of health and illness.

Describe the physiology of stress.

Compare and contrast the major models of stress and illness.

Explain the psychosocial sources of stress.

Analyze the importance of psychological factors, gender, ethnicity and culture, spirituality, sexuality, and age involved in health and illness.

Describe various coping strategies and factors affecting the ability to cope.

Explain the various coping interventions.

Explain major theories of health and behavior.

Compare and contrast the types of prevention.

Explain positive psychology and thriving.

Describe physical activity, exercise, and fitness, and highlight their benefits.

Describe sleep and its role in a healthy lifestyle.

Describe injury control and its role in a healthy lifestyle.

Explain the relationship between nutrition and disease.

Explain factors involved in weight determination.
Describe obesity from a biopsychosocial perspective, including causal factors, prevention, and treatments.
Describe eating disorders from a biopsychosocial perspective, including causal factors, prevention, and treatments.
Describe mechanisms of drug action and models of addiction.
Describe alcohol use and abuse from a biopsychosocial perspective, including causal factors, prevention, and treatments.
Describe tobacco use (including electronic cigarettes) and abuse from a biopsychosocial perspective, including causal factors, prevention, and treatment.
Describe electronic cigarette and marijuana use from a biopsychosocial perspective.
Describe cardiovascular disease and diabetes from a biopsychosocial perspective, including risk factors, prevention, and treatments.
Describe cancer from a biopsychosocial perspective, including risk factors, prevention, treatments, and coping mechanisms.
Explain the HIV/AIDS epidemic from a biopsychosocial perspective.
Describe symptoms and stages, medical and psychosocial interventions, and coping with HIV and AIDS.
Explain other communicable diseases from a biopsychosocial perspective.
Describe the criteria used to recognize and interpret symptoms.
Describe characteristics of those seeking treatment and explain patient adherence to treatment.
Explain the patient-provider relationship, including factors affecting the relationship, relationship models, communication, and the role of the Internet.
Describe the current and changing health care system.
Describe the various aspects of pain, including measurement, physiology, psychosocial factors involved, and treatment.
Compare and contrast traditional medicine with complementary and alternative medicine across cultures.
Explain the effectiveness of complementary and alternative medicine.
Explain how complementary and alternative medicine is indicative of a paradigm shift in medicine and healthcare in the United States.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Each instructor will identify and implement appropriate methods to assess the achievement of the learning objectives for the course. These methods can include, but are not necessarily limited to, true-false, multiple-choice, matching, and essay examinations, as well as out-of-class papers, Internet assignments, audio and/or video conferences, and library projects.	
Texts Determined by full-time faculty. Satisfies Honors Requirement No	Satisfies Wellness Requirement No

PTA102 - Introduction Physical Therapy Practice

Overview

Subject Physical Therapy Assistant	Academic Department Health, Education, and Human Services	School Health & Human Services
--	---	--

Course Description Introduces the field of physical therapy. Discusses the roles of various health professionals, the concept of the rehab team, the history and scope of physical therapy, legal and ethical issues related to communication and the practice of physical therapy, and organizational structures of various types of physical therapy facilities. Also covers the role of the Physical Therapist Assistant (PTA), various methods of documentation used in physical therapy, and the structure and function of the American Physical Therapy Association (APTA). Examines current issues and trends in physical therapy and the Guide to Physical Therapy Practice.	
Course Pre-requisite(s) Admission to the <u>Physical Therapy Assistant AAS Degree</u> program	
Credit Hours 2	
Contact Hours 2	
Course Fee 15	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

- Core Course Topics
- History and Scope of Physical Therapy Practice
 - Professional Roles in Health/Care Rehabilitation Team
 - Role of The PTA
 - Guide to Physical Therapy Practice
 - APTA / Michigan Physical Therapy Association (MPTA)
 - Cultural Competence in Health Care
 - Ethical and Legal Issues in Physical Therapy
 - Reimbursement in Physical Therapy
 - Communication
 - Teaching and Learning in Physical Therapy
 - Documentation
 - Laws, Regulations, and Policies
 - Research and Evidence Based Practice

Outline important events in the history and development of the scope of physical therapy practice, specifically the PTA.
Describe the structure and function of the APTA.
Identify the role of the Physical Therapist (PT), PTA, and other members of the health care team and define their areas of responsibility utilizing the APTA Standards of Practice.
Differentiate between state regulations of both the PT and the PTA.
Explain the general organizational structure of a physical therapy department.
Identify the various settings where PTs and PTAs work.
Discuss and identify medical ethics and biomedical ethical principles in health care.
Be able to identify unethical behavior.
Explain the guide for conduct that PTAs are morally bound to follow.
Demonstrate good verbal, nonverbal, and written communication skills and describe the significance of effective communication.
Describe the purpose of medical records and legal issues related to their use.
Differentiate between the various types of documentation used in physical therapy practice.
Describe the various components in The Guide to PT Practice.
Describe the current advocacy issues related to the physical therapy profession.
Explain the difference between the types of insurance coverage for physical therapy services.
Identify the role of the PTA in obtaining insurance reimbursement, quality assurance, and supervision.

Explain the standards of billing and coding practices used in physical therapy services.
Demonstrate awareness of components of culture and belief systems relative to self and others.
Recognize the importance of understanding self and issues of personal biases and influences that affect self.
Identify specific laws, regulations, and policies related to the practice of physical therapy.
Access research literature from various sources, both print and electronic, and discuss the main elements of a research study.
Explain different research methodology, levels of evidence, and measurement science including reliability and validity.
Identify types of abuse and identify the appropriate authorities in which to report suspected abuse cases.
Describe the International Classification of Functioning, Disability, and Health.
Identify statements of impairments, activity limitations, and participation restrictions.
Define the terms diversity, equity, and inclusion.
Identify the social determinants of health that affect patient/client management in physical therapy.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Students will be assessed through a series of quizzes, written midterm, written final exam, written assignments, presentations, discussions, and group activities.

General Course Requirements and Recommendations
Students must pass this course with a "B-" or better to remain in the PTA Program. They must also pass at least one of the written exams with an 80% or higher in order to pass this course. For each written exam the student does not pass, he/she will also be required to complete a written review of the exam to be submitted to the instructor prior to taking the final exam. Instructors (or their designees) reserve the right to require students to provide picture identification for test taking, graded papers or projects or other appropriate purposes.

Grading Scale
Students will be assessed on the following scale:

- 99-100% = A+
- 93-98.9% = A
- 90-92.9% = A-
- 87-89.9% = B+
- 83-86.9% = B
- 80-82.9% = B-
- 76-79.9% = C+
- 70-75.9% = C
- 60-69.9% = D
- <60% = E

Texts
To be determined by program faculty.
Satisfies Honors Requirement
No

Satisfies Wellness Requirement

PTA110 - Therapeutic Techniques for PTA I

Overview

Subject	Academic Department	School
Physical Therapy Assistant	Health, Education, and Human Services	Health & Human Services
Course Description Provides instruction in patient care with an emphasis on physical therapy interventions. Covers massage, body mechanics, bed mobility and positioning, passive range of motion (PROM) exercise, transfers, gait training, patient and family education, and the use of wheelchairs and assistive devices. Guided laboratory setting.		
Course Pre-requisite(s) Admission to the Physical Therapy Assistant AAS Degree (PTA) Program		
Credit Hours 2		
Contact Hours 3		
Course Fee 35		
Academic Level Undergraduate		
Miscellaneous Department Fee 0		

Eligible for Credit for Prior College Level Learning (CPCLL)
No

Goals, Topics, and Objectives

- Core Course Topics**
- Body Mechanics/Positioning
 - Medical Equipment
 - Bed Mobility
 - Massage
 - Documentation of Therapeutic Procedures
 - PROM
 - Wheelchairs and Assistive Devices
 - Transfers
 - Gait

Identify patients orientation to time, person, place, and situation.
Identify activities, positioning, postures, and assistive devices that aggravate or relieve pain, can produce associated skin trauma, or other disturbed sensations.
Identify pain behavior, soreness, and reaction during specific movements or activities.
Utilize established questionnaires, graphs, behavioral scales, or visual analog scale for pain.
Demonstrate proper body mechanics during all techniques learned in this course.
Inspect and measure physical environment in preparation for bed mobility, transfers and gait.
Demonstrate proper care and handling of various types of medical equipment (bed pans, IVs, catheters, etc.) and be able to discuss the alternatives.
Identify patients soft tissue restrictions utilizing passive range of motion.
Identify safety factors while performing transfers, gait, locomotion, wheelchair management and mobility with and without assistive devices.
Provide patient assistance during bed mobility, wheelchair mobility, transfers, gait and locomotion, using proper technique.
Discuss and demonstrate proper use of the tilt table.
Demonstrate proper wheelchair management and mobility.
Assess the patients and/or caregivers ability to care for their assistive device(s).
Measure appropriate components of assistive devices.
Identify normal and abnormal gait characteristics and patterns with and without assistive devices.
Identify the affects of various terrains, differing environments on patients gait and locomotion.
Identify present and potential barriers and possible modifications for the environment, home, and/or work.
Determine the need for adaptive/assistive devices for transfers, gait and locomotion, self-care, and home management techniques through communication and observation and offer recommendations.
Discuss physiological benefits and identify adverse responses to connective and soft tissue massage techniques.
Demonstrate, safely and correctly, a variety of manual therapy techniques to mobilize connective and soft tissues.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Students will be assessed on a series of written exams, lab checkoffs, lab practical, written assignments and a final exam

General Course Requirements and Recommendations

Students must pass this course with a "B-" or better to remain in the PTA Program. They must also pass at least one of the written exams with an 80% or higher in order to pass this course. For each written exam the student does not pass, he/she will also be required to complete a written review of the exam to be submitted to the instructor prior to taking the final exam. Students must demonstrate competence in all of the lab checkoffs and practicals, according to the PTA program student handbook.

Instructors (or their designees) reserve the right to require students to provide picture identification for test taking, graded papers or projects or other appropriate purposes.

Grading Scale

Students will be assessed on the following scale:

- 99-100% = A+
- 93-98.9% = A
- 90-92.9% = A-
- 87-89.9% = B+
- 83-86.9% = B
- 80-82.9% = B-
- 76-79.9% = C+
- 70-75.9% = C
- 60-69.9% = D
- <60% = E

PTA118 - Exercise Techniques I

Overview

Subject	Academic Department	School
Physical Therapy Assistant	Health, Education, and Human Services	Health & Human Services

Course Description

Provides instruction in therapeutic exercise procedures utilized by physical therapist assistants. Topics include assessment of joint motion and muscle strength, implications of range of motion (ROM) and muscle testing for exercise prescription, types of exercise, basic exercise programs, and the use of exercise equipment. Theory only-no lab activities.

Course Pre-requisite(s)

[PTA102 Intro to PT Practice](#), [PTA110 Therapeutic Techniques PTA I](#),
[PTA132 Kinesiology for PTAs](#), and [PTA168 Dev Across Lifespan for PTAs](#)

Course Co-requisite(s)

[PTA122 Exercise Techniques Lab](#)

Goals, Topics, and Objectives

Core Course Topics

- General Information Regarding ROM and manual muscle testing (MMT)
- ROM Exercise
- Strengthening Exercise
- Aerobic Exercise
- Joint Mobility
- Balance and Coordination Activities
- Specialty Exercise: Aquatic
- Specialty Exercise: Obstetrics
- Posture and Postural Dysfunction Treatment
- Genitourinary System Interventions

Explain the process of assessing range of motion, strength, and flexibility including the functional applications.
Describe normal and abnormal movement of the peripheral joint or extremity during the performance of specific movement tasks.
Classify muscle, joint, and soft tissues characteristics and identify restrictions as related to peripheral joint mobility, range of motion, and muscle strength/power/ endurance.
Describe the theory and rationale for soft tissue mobilization and non-thrust peripheral joint mobilization.
Discuss principles, purposes, indications, contraindications, precautions, and effects of various types of therapeutic exercise including: aerobic endurance, aquatic, balance and coordination, conditioning/ reconditioning, postural awareness training, strengthening- active, active assistive, and all types of resistive, and stretching.

Define proper management for the cardiac-compromised patient and the obstetrical patient.
Discuss rationale for and describe the appropriate use of various types of therapeutic exercise equipment.
Identify types of established exercise protocols used and recognize the impact of abnormal results on the physical therapy plan of care.
Identify factors affecting patient motivation during treatment and with home exercise programs.
Identify barriers in environment, home or work that may impact exercise instruction.
Identify compensatory head, trunk and/or limb movement during ROM/ strength assessment and therapeutic exercise.
Evaluate a journal article for conciseness, accuracy, and effectiveness of research and application to physical therapy practice.
Develop interventions to address muscle impairments based on postural assessment.
Explain genitourinary system physical therapy interventions and their applications for rehabilitation including bladder program, biofeedback, and pelvic floor training.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

Students will be assessed through a series of written exams, written assignments, case presentations, and a final written exam.

General Course Requirements and Recommendations

Students must pass this course with a "B-" or better to remain in the PTA Program. They must also pass at least one of the written exams, with 80% or higher, in order to pass this course. For each written exam the student does not pass, he/she will also be required to complete a written review of the exam to be submitted to the instructor prior to taking the final exam.

Instructors (or their designees) reserve the right to require students to provide picture identification for test taking, graded papers or projects or other appropriate purposes.

Grading Scale

Students will be assessed on the following scale:

- 99-100% = A+
- 93-98.9% = A
- 90-92.9% = A-
- 87-89.9% = B+
- 83-86.9% = B
- 80-82.9% = B-
- 76-79.9% = C+
- 70-75.9% = C
- 60-69.9% = D
- <60% = E

PTA122 - Exercise Techniques Lab

Overview

Subject	Academic Department	School
Physical Therapy Assistant	Health, Education, and Human Services	Health & Human Services

Course Description

Provides the opportunity for application of the techniques learned in PTA 118. Focuses on therapeutic exercise procedures utilized by physical therapist assistants as well as assessment of joint motion and muscle strength, implications of range of motion (ROM) and muscle testing for exercise prescription, types of exercise, basic exercise programs, and the use of exercise equipment. Guided lab setting.

Course Pre-requisite(s)

[PTA102 Intro to PT Practice](#), [PTA110 Therapeutic Techniques PTA I](#),
[PTA132 Kinesiology for PTAs](#), and [PTA168 Dev Across Lifespan for PTAs](#)

Course Co-requisite(s)

Goals, Topics, and Objectives

Core Course Topics

- 1. Review of Bony Landmarks and Muscle Actions
- 2. Against Gravity/Gravity Eliminated Motions
- 3. Use of Manual Contacts
- 4. Hip Assessment and Exercise
- 5. Knee Assessment and Exercise
- 6. Ankle Assessment and Exercise
- 7. Foot Assessment and Exercise
- 8. Scapula/Shoulder Assessment and Exercise
- 9. Elbow/Forearm Assessment and Exercise
- 10. Wrist/Hand Assessment and Exercise
- 11. Cervical assessment and exercise
- 12. Lumbar Assessment and Exercise
- 13. Balance and Coordination
- 14. Aerobic Exercise
- 15. Aquatic Exercise
- 16. Obstetrical Exercise
- 17. Postural Dysfunction Intervention
- 18. Body Composition

Measure range of motion (including muscle length) both functionally and by using a goniometer, tape measure, flexible ruler, and inclinometer.
Measure muscle strength, power, and endurance both functionally and by manual muscle testing or dynamometry.
Identify the various states of muscle tone and mass and the impact of pain and soreness during ROM/strength assessment and therapeutic exercise.
Design and teach an exercise program, within the Physical Therapist (PT) plan of care, for a simulated patient, including selection of exercise, progression of exercise and assembling a home program.
Use various types of therapeutic exercise equipment, with appropriate rationale.
Measure perceived exertion, dyspnea, or angina during activity using Rated Perceived Exertion (RPE) scale, dyspnea scale, anginal scale, or visual analog scale.
Measure anthropometric characteristics of height, weight, and body fat composition.
Identify factors affecting patient motivation during treatment and with home exercise programs.
Modify exercise instruction based on patients ability to process commands.
Manage barriers in environment, home, or work that may impact exercise instruction and make recommendations for modification.
Identify compensatory head, trunk and/or limb movement during ROM/ strength assessment and therapeutic exercise.
Measure residual limb and/or adjacent segment for range of motion and strength.
Develop interventions to address muscle impairments based on postural assessment.
Assess vital signs before, during, and after exercise.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Students will be assessed through a series of lab practicals, class demonstrations, and a final comprehensive lab practical.

General Course Requirements and Recommendations
Students must pass this course with a "B-" or better to remain in the PTA Program. They must also demonstrate competence on all lab practicals according to the PTA Program Student Handbook. Instructors (or their designees) reserve the right to require students to provide picture identification for test taking, graded papers or projects or other appropriate purposes.

Grading Scale
Students will be assessed on the following scale:

- 99-100% = A+
- 93-98.9% = A
- 90-92.9% = A-
- 87-89.9% = B+
- 83-86.9% = B
- 80-82.9% = B-
- 76-79.9% = C+

- 70-75.9% = C
- 60-69.9% = D
- <60% = E

PTA132 - Kinesiology for PTA's

Overview

Subject Physical Therapy Assistant	Academic Department Health, Education, and Human Services	School Health & Human Services
Course Description Reviews surface anatomy and functional anatomy, muscles and muscle function, proper posture and analysis of posture, and gait analysis and deviations. Medical Terminology is reinforced. A lab component familiarizes the student with functional aspects of human motion.		
Course Pre-requisite(s) Admission to Physical Therapy Assistant AAS Degree (PTA) Program		
Credit Hours 3		
Contact Hours 4.5		
Course Fee 25	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics

- 1. Kinesiology basics: Bones, Palpation
- 2. Joints
- 3. Muscles
- 4. Biomechanics
- 5. Arthrokinematics / Osteokinematics
- 6. 2 - Joint Muscles
- 7. Lower Extremity Concepts
- 8. Upper Extremity Concepts
- 9. TMJ Concepts
- 10. Spine Concepts
- 11. Nervous System
- 12. Posture
- 13. Gait

Describe concepts related to osteokinematics, arthrokinematics, and kinetics.
Apply principles of motion and biomechanics as they relate to the human body.
Define anatomical position, planes, and axes and their relationship.
Describe and differentiate the structures of a joint.
Classify and locate the various types of articulations in the body and demonstrate all joint movements.
Define tendons, ligaments, fascia, origins, and insertions.
Identify attachments, actions, and innervations for selected muscles of the body.
Relate gross anatomical muscle and bony structures to surface anatomy.
Identify and locate selected bony landmarks and muscles on classroom models.
Identify the various types of muscle contractions.
Distinguish the cooperative action of muscles in controlling joint motions.

Recognize normal and abnormal alignment of trunk and extremities at rest.
Describe resting posture in any position.
Describe the sensory and motor parts of a neuron, neuromuscular junction, and a synapse.
Differentiate the neural and muscular components of selected reflexes as well as the function and control of the reflex.
Define normal and abnormal muscle tone.
Compare and contrast upper and lower motor neuron lesions including their effect on reflexes and muscle tone.
Identify normal and abnormal gait characteristics.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement will include written exams, lab exams, one final written exam, one final lab exam, and various homework assignments.
General Course Requirements and Recommendations
Students must pass this course with a "B-" or better to remain in the PTA Program. They must also pass at least one of the written exams, with 80% or higher, and one of the lab exams, with 80% or higher, in order to pass this course. For each written exam the student does not pass, he/she will also be required to complete a written review of the exam to be submitted to the instructor prior to taking the final exam.
Instructors (or their designees) reserve the right to require students to provide picture identification for test taking, graded papers or projects or other appropriate purposes.
Grading Scale
Students grades will be assigned using the following scale:
99-100% = A+ 93-98.9% = A 90-92.9% = A- 87-89.9% = B+ 83-86.9% = B 80-82.9% = B- 76-79.9% = C+ 70-75.9% = C 60-69.9% = D <60% = E

PTA144 - Physical Therapy Modalities

Overview

Subject	Academic Department	School
Physical Therapy Assistant	Health, Education, and Human Services	Health & Human Services
Course Description		
Covers the principles, indications, contraindications, and precautions of physical agents including heat, cold, water, electrical stimulation, traction, light, and sound. Guided laboratory setting.		
Course Pre-requisite(s)		
PTA102 Intro to PT Practice, PTA110 Therapeutic Techniques PTA1, PTA132 Kinesiology for PTAs, and PTA168 Dev Across Lifespan for PTAs		
Credit Hours		
2		
Contact Hours		
3		
Course Fee	Miscellaneous Department Fee	
55	0	
Academic Level		
Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL)		
No		

Goals, Topics, and Objectives

Core Course Topics
- Electrical Stimulation: TENS, NMES, Hi-Volt, IFC / Pre-mod, and Iontophoresis - Ultrasound - Intermittent Compression - Traction - Superficial Thermal Modalities - Hydrotherapy - Specialty Modalities: UV, Unframed, Laser, and Diathermy - Lymphatic System: Tests and Measures and Interventions

Describe the effects (both generalized and localized), indications, contraindications, and precautions for the therapeutic use of various forms of heat and cold.
Describe the effects (both generalized and localized), indications, contraindications, and precautions for the therapeutic use of all types of electrical stimulation.
Describe the effects, indications, contraindications, precautions, and principles associated with the therapeutic use of ultraviolet, infrared, diathermy, and hydrotherapy.
Describe the neurophysiological principles of pain perception and the treatment of pain with TENS and other forms of electrical stimulation.
Explain the different kinds of electrical currents, their characteristics including waveform, and the uses of each.
Implement safety measures to be used in the application of all various types of therapeutic agents.
Assess integumentary integrity by the following: performing gross sensory tests to identify intact or impaired sensation, observation of continuity of skin color and nail beds, comparison of skin temperature, and identification of tissue mobility/turgor/texture.
Measure anthropometric characteristics of edema through girth, volumetrics and palpation.
Demonstrate an acceptable level of skill in the application (accurate, safe, effective, and timely) of these selected therapeutic agents: selected types of electrical stimulation, ultrasound/phonophoresis, mechanical traction (both cervical and lumbar), and thermal agents (HP/CP).
Monitor patients response to treatment prior to, during, and immediately following the application of therapeutic agents.
Evaluate a journal article for conciseness, accuracy, and effectiveness of research and application to physical therapy practice.
Identify tests and measures used in assessing the lymphatic system.
Describe lymphatic system physical therapy interventions and their application in rehabilitation.
Describe the physical properties and effects of diathermy, electromagnetic radiation, ultrasound, and ultraviolet radiation.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
The assessment standards will consist of written exams, lab checkoffs, one final written exam, and one final comprehensive lab exam.
General Course Requirements and Recommendations
Students must pass this course with a "B-" or better to remain in the PTA Program. They must also pass at least one of the written exams and one of the lab exams in order to pass this course. For each written exam the student does not pass, he/she will also be required to complete a written review of the exam to be submitted to the instructor prior to taking the final exam.
Instructors (or their designees) reserve the right to require students to provide picture identification for test taking, graded papers or projects or other appropriate purposes.
Grading Scale
Students will be assessed on the following scale:
99-100% = A+ 93-98.9% = A 90-92.9% = A- 87-89.9% = B+ 83-86.9% = B 80-82.9% = B- 76-79.9% = C+ 70-75.9% = C 60-69.9% = D <60% = E

PTA168 - Developmen Across the Lifespan for PTAs

Overview

Subject Physical Therapy Assistant	Academic Department Health Careers	School Health & Human Services
Course Description Examines the normal gross motor development of humans from infancy on. Relates early developmental sequence and reflexive maturation to rehabilitation techniques utilized with adult patients. Discusses the development of adults, the aging process, and death and dying. Psychosocial and cognitive issues throughout the life span are integrated in human development.		
Course Pre-requisite(s) Admission into the Physical Therapy Assistant AAS Degree (PTA) Program		
Credit Hours 3		
Contact Hours 3		
Course Fee 20	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

- Core Course Topics
1. Mental function/Culture/Lifespan Communication
 2. Prenatal Development and the Newborn
 3. Infancy
 4. Preschool, Middle Childhood
 5. Adolescence
 6. Transition to Adulthood
 7. Adulthood
 8. Aging and Disablement in Adulthood
 9. Death and Dying
 10. Environmental Contexts and Wellness
 11. Assessment of Human Performance
 12. Disability Throughout the Lifespan

Identify the concepts and principles of growth and development.
Identify the causative factors in congenital anomalies.
Identify and describe developmental milestones including postural, righting, and equilibrium reactions.
Report infants basic performance level and attainment of developmentally appropriate reflexes through observation of instrumental activities of daily living, adaptive skills, and play.
Identify the sequence and function of motor development.
Explain the relationship of normal reflex movement to gross motor development.
Describe the acquisition of language and cognitive abilities.
Discuss the theories of growth, development, and aging.
Describe the psychosocial and mental aspects throughout the lifespan.
Describe the physical changes associated with aging.
Discuss the impact of the special problems facing the elderly including chronic illnesses, long-term care, and victimization.
Discuss communication modification required due to aging and chronic illness.
Describe the stages in death and dying as outlined by Elizabeth Kubler-Ross.
Compare the Life Span perspective of development to more traditional approaches to development.
Develop an awareness and better understanding of his/her own feeling toward death and dying.

Recognize the impact of disability on individuals and their family/social relations throughout the lifespan.
Perform components of data collection using appropriate tests and measures regarding mental health aspects in physical therapy interventions across the life span.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement The assessment standards will consist of quizzes and written exams, a midterm and final written exam, individual and group projects incorporating written information and presentations, classroom and online assignments and discussions.
General Course Requirements and Recommendations Students must pass this course with a "B-" or better to remain in the PTA Program. The student must pass either the midterm or the final exam with at least an 80% in order to pass this course. For each written exam the student does not pass, he/she will also be required to complete a written review of the exam to be submitted to the instructor prior to taking the final exam. Instructors (or their designees) reserve the right to require students to provide picture identification for test taking, graded papers or projects or other appropriate purposes.
Grading Scale Students will be assessed on the following scale: 99-100% = A+ 93-98.9% = A 90-92.9% = A- 87-89.9% = B+ 83-86.9% = B 80-82.9% = B- 76-79.9% = C+ 70-75.9% = C 60-69.9% = D <60% = E

PTA225 - Applied Pathology for PTAs

Overview

Subject Physical Therapy Assistant	Academic Department Health, Education, and Human Services	School Health & Human Services
Course Description Examines the signs, symptoms, etiology, course, prognosis, medical intervention, and treatment of diseases with an emphasis on diseases commonly encountered in physical therapy. Medical Terminology will be reinforced. Also highlights patient care with emphasis on physical therapy interventions relevant to the body system involved in various pathologies. Topics include aseptic technique and wound care, cardiac rehabilitation and chest physiotherapy (CPT), and selected manual therapy techniques. Guided lab setting.		
Course Pre-requisite(s) BIO234 Anatomy and Physiology II (with a C or better), PTA102 Intro to PT Practice , PTA110 Therapeutic Techniques PTA I , PTA168 Dev Across Lifespan for PTAs , and PTA132 Kinesiology for PTAs		
Credit Hours 4		
Contact Hours 4		
Course Fee 40	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics
1. Biopsychosocial and Environmental aspects of Pathology
2. Immune System
3. Infectious diseases
4. Handwashing / Universal Precautions
5. Integumentary System: Tissue Healing
6. Integumentary System: Skin Disease, Burns, Ulcers
7. Integumentary System: Wound Care / Sterile Procedures
8. Cardiopulmonary System: Cardiovascular System
9. Cardiopulmonary System: Respiratory System
10. Cardiopulmonary System: Vital Signs
11. Cardiopulmonary System: Chest PT
12. Neuromuscular System: Nervous System, Neuroanatomy
13. Neuromuscular System: Cerebrovascular Accident (CVA), Traumatic Brain Injury (TBI)
14. Neuromuscular System: Spinal Cord Injury (SCI), Epilepsy, Degenerative Diseases
15. Musculoskeletal Skystem: Diseases, Disorders
16. Other Systems: Hepatic
17. Other Systems: Endocrine
18. Other Systems: Oncology
19. Other Systems: Hematology

Identify organs and describe the functions of selected organ systems.
Use common prefixes, suffixes, and terminology in describing the pathology of various diseases, trauma, and/or their development.
Describe the changes in the body in response to cellular injury, acute and chronic inflammation, and bacterial/viral/fungal infections.
Describe the etiology, pathology, signs, symptoms, prognosis, diagnosis, and treatment of various diseases.
Discuss epidemiologic factors (incidence, disease outcomes, and risk factors) for selected pathologic conditions.
Discuss environmental factors and their role in the development of certain pathologic conditions.
Demonstrate an understanding of the biopsychosocial aspects of health care and their effect on disease processes.
Explain stress and its impact on health conditions and identify interventions in physical used in stress management.
Describe the clinical manifestations and clinical implications of selected psychopathologic disorders across the life span including but not limited to schizophrenia, bipolar disorder, organic brain syndrome, phobias, and conversion disorders.
Describe the role of physical therapy intervention, specifically the role of the Physical Therapist Assistant (PTA), on commonly seen pathologic disorders across the life span.
Describe an actual patients experience with a pathologic disorder through an interview process.
Define normal ranges for vital signs of infants, children, and adults at rest.
Identify the factors that may cause vital signs to vary at rest and during activity.
Demonstrate the ability to obtain accurate measures of the following vitals- radial pulse, carotid pulse, blood pressure, respiratory rate, and pulse oximetry at rest, during or after activity.
Differentiate normal from abnormal cardiopulmonary responses during Activities of Daily Living (ADLs), Instrumental Activities of Daily Living (IADLs), and exercise and identify and respond to signs of distress.
Identify autonomic responses of papillary reactions, alertness, heart rate, blood pressure, respiratory rate, nausea, and diaphoresis to positional changes.
Identify normal and abnormal thoracabdominal movements, breathing patterns, and cough with activity and at rest, through observation without the use of a stethoscope.
Perform and instruct patient in proper and safe airway clearance techniques including cough, chest PT, and breathing strategies.
Identify normal and abnormal characteristics of the integumentary system and wounds through observation and report.
Identify activities, positioning, postures, and adaptive devices that aggravate the skin/wound/scar or can produce additional skin trauma.
Identify various types and characteristics of burns, pressure sores and other wounds.
Suggest assistive and adaptive devices to protect wounds and promote healing and apply these devices correctly and safely.
Apply and remove selective dressings or agents including identifying precautions for dressing removal and types of debridement.
Explain the rationale of standard precautions in infection control.
Demonstrate sterile techniques and proper procedure for handwashing.

Review medical health record and identify normal and abnormal lab values.
Identify the impact of pharmacology used to treat the cardiovascular, pulmonary, and metabolic systems on physical management.
Describe nonpharmacological medical management of the cardiovascular, pulmonary, and metabolic systems including diagnostic imaging and other medical tests.
Describe pain (acute and chronic) and identify pain management interventions utilized in physical therapy.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
The assessment standard will consist of written exams, various class projects, written assignments, check-offs, a written final exam, and a comprehensive lab exam.

General Course Requirements and Recommendations
Students must pass this course with a "B-" or better to remain in the PTA Program. They must also pass at least one of the written exams, with 80% or higher, in order to pass this course. Students must demonstrate competence in all lab check-offs according to the PTA Program Student Handbook. For each written exam the student does not pass, he/she will also be required to complete a written review of the exam to be submitted to the instructor prior to taking the final exam.

Students must complete [BIO234 Anatomy and Physiology II](#) or equivalent to be enrolled in this course.

Instructors (or their designees) reserve the right to require students to provide picture identification for test taking, graded papers or projects or other appropriate purposes.

Grading Scale
Students will be assessed on the following scale:

- 99-100% = A+
- 93-98.9% = A
- 90-92.9% = A-
- 87-89.9% = B+
- 83-86.9% = B
- 80-82.9% = B-
- 76-79.9% = C+
- 70-75.9% = C
- 60-69.9% = D
- <60% = E

Goals, Topics, and Objectives

- Core Course Topics
- Pathology and Treatment Principles
 - Tissue Healing
 - Functional Assessment and Training
 - Closed Kinetic Chain
 - Gait
 - Balance
 - Shoulder Injuries and Treatment
 - Elbow Injuries and Treatment
 - Wrist/Hand Injuries and Treatment
 - Palpation and Special Tests Upper Extremity (U/E)
 - Hip Injuries and Treatment
 - Knee Injuries and Treatment
 - Ankle/Foot Injuries and Treatment

14. Palpation and Special Tests Lower Extremity (L/E)
15. Prevention of Injury
16. Manual Therapy
17. Orthotics and Prosthetics
18. Amputation and Treatment
19. Pharmacology and Diagnostic Imaging
Describe the role of the Physical Therapist Assistant (PTA) in the management of musculoskeletal disorders.
Describe the properties of tendon, muscle, bone, ligament, and meniscus, as well as injury and repair of these tissues and practical considerations for rehabilitation.
Identify key clinical findings for various types of tissue lesions associated with orthopedic injuries of the extremities.
Analyze the effects of immobilization and degeneration on orthopedic injuries of the extremities.
Examine the biomechanics of all joints of the extremities and discuss its role in injury, treatment, and prevention of orthopedic injuries of the extremities.
Describe normal and abnormal alignment and movement of peripheral joints or extremities at rest and during specific movement tasks.
Compare and contrast hypo- and hypermobility of joints and identify the common treatments associated with each.
Differentiate the clinical manifestations, etiology, pathology, diagnosis, treatment, and prognosis of various orthopedic injuries of the extremities.
Identify various orthopedic congenital deformities of the extremities, the clinical manifestations, and management of these disorders.
Describe the common surgical procedures performed on each joint of the extremities including management and special precautions related to each procedure.
Describe the common evaluation procedures and special tests utilized by the physical therapist for patients with orthopedic injuries of the extremities and explain what the results of these tests indicate.
Recommend appropriate assistive, adaptive, or protective equipment for the patient with an orthopedic injury of the extremity, based on architectural barriers.
Assess physiological responses of patients with orthopedic injuries of the extremities during community/work/leisure activities, non-routine occurrences, and self-care and home management activities.
Assess components of safe community and work environments for patients with orthopedic injuries of the extremities with the goal of injury prevention.
Organize functional training programs for patients with an orthopedic injury of the extremity.
Demonstrate proper positioning, handling, and transferring of patients with orthopedic injuries of the extremities.
Instruct a patient with an orthopedic injury of the extremity in therapeutic exercise and functional activities for self-care, home management, community and work reintegration.
Recognize the effects of various terrains and differing environments on gait, locomotion, and balance of the patient with an orthopedic injury of the lower extremity.
Develop a treatment plan, within the PT plan of care, for various types of orthopedic injuries of the extremities progressing from first day of treatment through discharge including a home exercise program.
Provide functional training in self-care, home management, community, or work for patients with an extremity orthosis or prosthesis.
Demonstrate safe and proper technique for mobilization of selected soft tissues and non-thrust mobilization for selected peripheral joints.

Describe components of an extremity orthotic and prosthetic device and identify skin condition and safety while using the device.
Recommend, apply, and instruct patients in the use of orthotic or prosthetic devices and apparel correctly and safely and identify the ability of the patient to manage the orthotic or prosthetic device.
Describe immediate post-operation management of a patient with an amputation.
Identify the impact of pharmacology used to treat the musculoskeletal system on physical management.
Describe non pharmacological medical management of the musculoskeletal system including diagnostic imaging and other medical tests.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement The assessment standards will consist of written exams, quizzes, case studies, cumulative final written exam, and final lab practical. General Course Requirements and Recommendations Students must pass this course with a "B-" or better to remain in the PTA Program. They must pass at least one of the written exams, with at least an 80%. For each written exam the student does not pass, he/she will also be required to complete a written review of the exam to be submitted to the instructor prior to taking the final exam. Students must demonstrate competence in the lab practical according to the PTA Program Student Handbook, in order to pass this course. Failure to complete these standards will result in required remediation or dismissal from the PTA Program. Instructors (or their designees) reserve the right to require students to provide picture identification for test taking, graded papers or projects or other appropriate purposes.		
Grading Scale Students will be assessed on the following scale:		
99-100% = A+ 93-98.9% = A 90-92.9% = A- 87-89.9% = B+ 83-86.9% = B 80-82.9% = B- 76-79.9% = C+ 70-75.9% = C 60-69.9% = D <60% = E		
Texts To be determined by the program faculty.		
Satisfies Honors Requirement No		Satisfies Wellness Requirement No

PTA254 - Spinal Orthopedics

Overview

Subject Physical Therapy Assistant	Academic Department Health, Education, and Human Services	School Health & Human Services
Course Description Presents the etiology, course, prognosis, medical intervention, and treatment of orthopedic conditions of the spine. Covers physical therapy intervention. Guided lab setting.		
Course Pre-requisite(s) PTA118 Exercise Techniques I , PTA122 Exercise Techniques Lab , PTA144 Physical Therapy Modalities , and PTA225 Applied Pathology for PTAs		
Credit Hours 3		
Contact Hours 4		
Course Fee 15		Miscellaneous Department Fee 0
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics	
1.	Anatomy and Biomechanics of the Spine
2.	Neurovascular Healing
3.	Postural Assessment
4.	Lumbar Spine: Disorders
5.	Lumbar Spine: Palpation and Special Tests
6.	Lumbar Spine: Treatment
7.	Lumbar Spine: Mobility
8.	Lumbar Spine: Stability
9.	Pelvic Girdle and Hip: Disorders
10.	Pelvic Girdle and Hip: Palpation and Special Tests
11.	Pelvic Girdle and Hip: Treatment
12.	Cervical Spine: Disorders

13. Cervical Spine: Palpation and Special Tests
14. Cervical Spine: Treatment
15. Cervical Spine: Mobility
16. Cervical Spine: Stability
17. Temporalmandibular Joint (TMJ): Disorders
18. TMJ: Palpation and Special Tests
19. TMJ: Treatment
20. Thoracic Spine: Disorders
21. Thoracic Spine: Treatment
22. Manual Therapy Techniques
23. Discharge Planning
24. Pharmacology and Diagnostic Imaging

Identify key clinical findings for various types of tissue lesions associated with orthopedic injuries of the spine.
Analyze the effects of immobilization and degeneration on orthopedic injuries of the spine.
Describe normal and abnormal alignment and movement of the head and trunk at rest and during specific movement tasks.
Assess and identify postural abnormalities and asymmetry on a mock patient.
Differentiate the clinical manifestations, etiology, pathology, diagnosis, treatment, and prognosis of various orthopedic injuries of the spine including chronic pain as well as the TMJ.
Identify various orthopedic congenital deformities of the spine, the clinical manifestations, and management of these disorders.
Describe the common surgical procedures for the spine including management and special precautions related to each procedure.
Describe the common evaluation procedures and special tests utilized by the physical therapist for patients with an orthopedic injury of the spine and pelvic girdle. Explain what the results of these tests indicate.
Describe how to perform a claudication time test for a non-complex patient.
Recognize architectural barriers and recommend appropriate assistive, adaptive, or protective equipment for the patient with an orthopedic injury of the spine.
Observe the performance level of a spinal orthopedic patient with respect to adaptive skills, community/work/leisure activities, environmental and work tasks, and self-care and home management activities with or without the use of devices or equipment.
Recognize physiological responses of patients with an orthopedic injury of the spine during community/work/leisure activities, nonroutine occurrences, and self-care and home management activities.
Recognize components of safe community and work environments for patients with an orthopedic injury of the spine with the goal of injury prevention.
Develop and present an instructional training program (such as body mechanics and postural awareness training) to prevent an orthopedic injury of the spine.
Demonstrate proper positioning, handling, and transferring of patients with an orthopedic injury of the spine.
Instruct spinal orthopedic patients in therapeutic exercise and functional activities for self-care, home management, community and work reintegration.
Develop a treatment plan, within the Physical Therapist (PT) plan of care, for various types of orthopedic injuries of the spine progressing from first day of treatment through discharge including a home exercise program.
Provide functional training in self-care, home management, community, or work for patients with a spinal orthosis.
Develop appropriate interventions for patients with spinal conditions and TMJ disorders based upon the PT plan of care.

Identify the impact of pharmacology used to treat the musculoskeletal system on physical management.
Describe non pharmacological medical management of the musculoskeletal system including diagnostic imaging and other medical tests.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
The assessment standards will consist of written exams, quizzes, written assignments, case studies, group presentation, cumulative final written exam, and final lab practical.

General Course Requirements and Recommendations
Students must pass this course with a "B-" or better to remain in the PTA Program. They must pass at least one of the written exams, with at least an 80%. For each written exam the student does not pass, he/she will also be required to complete a written review of the exam to be submitted to the instructor prior to taking the final exam. Students must demonstrate competence in the lab practical according to the PTA Program Student Handbook, in order to pass this course. Failure to complete these standards will result in required remediation or dismissal from the PTA Program.

Instructors (or their designees) reserve the right to require students to provide picture identification for test taking, graded papers or projects or other appropriate purposes.

Grading Scale
Students will be assessed on the following scale:

- 99-100% = A+
- 93-98.9% = A
- 90-92.9% = A-
- 87-89.9% = B+
- 83-86.9% = B
- 80-82.9% = B-
- 76-79.9% = C+
- 70-75.9% = C
- 60-69.9% = D
- <60% = E

Texts To be determined by program faculty.

PTA262 - Rehabilitation of Neurological Cond 1

Overview

Subject Physical Therapy Assistant	Academic Department Health, Education, and Human Services	School Health & Human Services
Course Description Reviews basic neuroanatomy and neurophysiology followed by instruction in the theory and rationale of the treatment approach for the patient with neurological involvement. Emphasizes the functional approach to patient treatment including use of Neurodevelopmental Treatment (NDT) and Proprioceptive Neuromuscular Facilitation (PNF) for adults with neurological conditions such as traumatic brain injury and cerebrovascular accidents.		
Course Pre-requisite(s) PTA118 Exercise Techniques I , PTA122 Exercise Techniques Lab , PTA144 Physical Therapy Modalities , and PTA225 Applied Pathology for PTAs		Course Co-requisite(s) PTA265 Rehab Neuro Conditions Lab
Credit Hours 2		
Contact Hours 2		
Course Fee 0	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

- Core Course Topics**
- Neuroanatomy
 - Neurologic Assessment
 - Sensory System
 - Coordination
 - Balance
 - Functional Assessment
 - Facilitation/ Inhibition
 - Motor Control / Motor Learning
 - NDT
 - PNF
 - Architectural Barriers
 - Wheelchair Management
 - Home Management Plan
 - Family Instruction / Education
 - Cerebrovascular Accident (CVA)
 - Traumatic Brain Injury (TBI)
 - Spinal Cord Injury (SCI)
 - Pediatric Perspectives
 - Other Neurological Disorders

20. Pharmacology and Diagnostic Imaging
Identify the major components of the central and peripheral nervous systems.
Describe the clinical significance of injury and/or dysfunction in the major components of the central and peripheral nervous systems.
Explain the motor and sensory involvement in various neurological conditions.
Identify changes in muscle tone and mass.
Recognize a patients response to both auditory and visual stimuli as part of a thorough assessment of cranial nerve integrity.
Recognize the speech, language, and cognitive problems, which may occur secondary to various neurological conditions including expressive and receptive abilities/deficits.
Recognize changes in the direction and magnitude of a neurological patients state of arousal, attention, mentation, cognition, and level of recall.
Compare and contrast the physical involvement of patients with paraplegia and quadriplegia.
Demonstrate knowledge of specific neurological conditions with respect to etiology, physical problems, tests and measures, and treatment techniques appropriate to those conditions.
Recognize architectural barriers and recommend appropriate adaptive or protective equipment for the neurological patient.
Describe a neurological patients performance level with respect to adaptive skills, community/work/leisure activities, environmental and work tasks, and self-care and home management activities with or without use of devices or equipment.
Recognize head, trunk, and limb movement during specific movement tasks and identify stereotypic movements and postural/righting/equilibrium reactions including recognition of gross and fine motor skills.
Demonstrate knowledge of sensory changes, balance, and coordination.
Recognize activities, positioning, postures, and assistive and adaptive devices that can produce associated skin trauma or aggravate wounds/ scars for the neurological patient.
Recognize physiological responses of neurological patients during community, work, and leisure activities, non-routine occurrences, and self-care and home management activities.
Recognize components of safe community and work environments for the neurological patient.
Demonstrate knowledge of basic NDT and PNF principles.
Demonstrate knowledge about proper positioning, handling, and transferring of patients with neurological conditions.
Demonstrate proper documentation of rehabilitation procedures for neurological patients.
Recognize the effects of various terrains and differing environments on a neurological patients gait, locomotion, and balance.
Write home programs and instruct patients and families in the execution of home programs for the neurologically impaired clients.
Identify the impact of pharmacology used to treat the neuromuscular and nervous systems on physical management.
Describe nonpharmacological medical management of the neuromuscular and nervous systems including diagnostic imaging and other medical tests.
Perform components of data collection for appropriate tests and measures as it relates to mental health aspects in neurological rehabilitation.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
The assessment standards will consist of written exams, written final exam, written assignments, case studies, and presentations.

General Course Requirements and Recommendations
Students must pass this course with a "B-" or better to remain in the PTA Program. They must also pass at least one of the written exams, with an 80% or higher, in order to pass this course. For each written exam the student does not pass, he/she will also be required to complete a written review of the exam to be submitted to the instructor prior to taking the final exam.

Instructors (or their designees) reserve the right to require students to provide picture identification for test taking, graded papers or projects or other appropriate purposes.

Grading Scale
Students will be assessed on the following scale:

- 99-100% = A+
- 93-98.9% = A
- 90-92.9% = A-
- 87-89.9% = B+
- 83-86.9% = B
- 80-82.9% = B-
- 76-79.9% = C+
- 70-75.9% = C
- 60-69.9% = D
- <60% = E

Goals, Topics, and Objectives

- Core Course Topics**
1. Neuroanatomy
 2. Neurologic Assessment
 3. Sensory Assessment
 4. Coordination Assessment and Treatment
 5. Balance Assessment and Treatment
 6. Functional Assessment Tools
 7. Assessment of Motor Function
 8. Facilitation / Inhibition Techniques
 9. NDT
 10. PNF
 11. CVA Treatment Intervention
 12. Architectural Barriers
 13. Wheelchair Management Training
 14. Home Management Plan
 15. Family Instruction / Education
 16. TBI Treatment Intervention
 17. Spinal Cord Injury (SCI) Treatment Intervention
 18. Pediatric Treatment Interventions
 19. Other Neurological Disorders

Describe the clinical significance of injury and/or dysfunction in the major components of the central and peripheral nervous system.
Identify changes in muscle tone and mass.
Recognize a patients response to both auditory and visual stimuli as part of a thorough assessment of cranial nerve integrity.

Recognize the speech, language, and cognitive problems, which may occur secondary to various neurological conditions including expressive and receptive abilities/deficits.
Recognize changes in the direction and magnitude of a neurological patients state of arousal, attention, mentation, cognition, and level of recall.
Determine a neurological patients ability to process commands.
Compare and contrast the physical involvement of patients with paraplegia and quadriplegia.
Administer standard questionnaires and conduct interviews regarding Activities of Daily Living (ADLs), Instrumental Activities of Daily Living (IADLs) and environmental/home/ work barriers with patients and others.
Recognize architectural barriers and recommend appropriate adaptive or protective equipment for the neurological patient.
Identify a neurological patients performance level with respect to the need for adaptive skills for community/work/leisure activities, environmental and work tasks, and self-care and home management activities with or without use of devices or equipment.
Recognize head, trunk, and limb movement during specific movement tasks and identify stereotypic movements and postural/righting/ equilibrium reactions including recognition of gross and fine motor skills, to incorporate into the treatment of the patient.
Assess sensation, balance, and coordination.
Recognize activities, positioning, postures, and assistive and adaptive devices that can produce associated skin trauma or aggravate wounds/ scars for the neurological patient.
Identify physiological responses of neurological patients during community, work, and leisure activities, non-routine occurrences, and self-care and home management activities and adapt treatment as needed.
Recognize components of a safe community and work environments for the neurologically impaired patient.
Demonstrate skill in performing basic NDT and PNF techniques.
Perform proper positioning, handling, and transferring of patients with neurological conditions.
Instruct a neurological patient in proper wheelchair management and mobility activities.
Instruct neurological patients in therapeutic exercise (such as neuromuscular re-education, perceptual training, sensory re-training) and functional activities for self-care, home management, community, and work re-integration.
Demonstrate proper documentation of rehabilitation procedures for neurological patients such as, mat activities, pre-gait and gait training activities, and balance and coordination activities.
Recognize the effects of various terrains and differing environments on a neurological patients gait, locomotion, and balance and adjust treatment and pt education as needed.
Perform a variety of functional assessments for the neurologically impaired patient.
Write home programs and instruct patients and families in the execution of home programs for the neurologically impaired clients.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

The assessment standards will consist of lab practical exams, lab exams, case studies, presentation, written assignments, and group activities.

General Course Requirements and Recommendations

Students must pass this course with a "B-" or better to remain in the PTA Program. Students must demonstrate competence in the lab practical according to the PTA Program Student Handbook, in order to pass this course. PTA272 - Professional Issues in Physical Therapy

Overview

Subject	Academic Department	School
Physical Therapy Assistant	Health, Education, and Human Services	Health & Human Services
Course Description		
This is intended to integrate classroom and clinical experiences. The course facilitates the transition of the PTA student to the PTA professional. Elements of professionalism are discussed including integrity in practice, advocacy, core and value-based behaviors, ethical principles and reasoning, and professional relationships with other health care professionals, the public, supervisors, PT's and clinical instructors. The course prepares the student PTA for a career in physical therapy including resume and cover letter writing, interviewing skills, educational opportunities, and continuing education. The course also offers preparation for the NPTE.		
Course Pre-requisite(s)		
PTA250 Extremity Orthopedics , PTA254 Spinal Orthopedics , PTA262 Rehab Neurological Cond 1 , PTA265 Rehab Neuro Conditions Lab , and PTA291 Clinical Extern 1		
Credit Hours		
2		
Contact Hours		
2		
Course Fee	Miscellaneous Department Fee	
240	0	
Academic Level		
Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL)		
No		

Goals, Topics, and Objectives

- Core Course Topics
1. Practice Exam and Assessment Tool (PEAT)
 2. Self-Assessment
 3. Job Placement and Interviewing
 4. Resume and Cover Letter Writing
 5. Communication
 6. Physical Therapist and Physical Therapist Relationship
 7. Role of the Physical Therapist Assistant
 8. Health Care Professional Roles
 9. Reimbursement
 10. Fraud, Waste, and Abuse in Physical Therapy Services
 11. Laws and State Practice Act for Michigan
 12. Continuing Education and Career Development
 13. Licensure Exam Preparation

Identify the role of PTA's in the future of health care.
Compose a cover letter.
Write a formal resume.
Write a job description for a Physical Therapist Assistant.
Identify characteristics of a good job interview.
Explain the role of various persons in a typical physical therapy setting.
Analyze current reimbursement issues in physical therapy.
Discuss basic principles of management in a physical therapy setting, including policies and procedures, meetings, budget, and quality assurance.

Complete two pre-licensure practice tests in preparation of the national PTA licensure exam.
Understand the State practice act for Michigan.
Identify cases of fraud, waste, and abuse in the utilization of and payment for physical therapy services.
Identify career development opportunities and create a career plan for the next five years.
Review APTAs Values Based Behaviors for the PTA and complete VBB self-assessment.
Identify effective communication skills and describe how these skills are essential in the healthcare setting.
Completion of licensure examination preparation course.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
The assessment standards will consist of discussions, group activities, quizzes, written assignments, completion of two PEAT exams, and participation in NPTE review course.	
General Course Requirements and Recommendations	
Students must pass this course with a "C" or better to remain in the PTA program. They must complete all assignments as listed above in order to pass this course. Instructors (or their designee) reserve the right to require students to provide picture identification for test taking, graded papers or projects, or other appropriate purposes.	
Grading Scale	
99-100% = A+ 93-98.9% = A 90-92.9% = A- 87-89.9% = B+ 83-86.9% = B 80-82.9% = B- 76-79.9% = C+ 70-75.9% = C 60-69.9% = D <60% = E

PTA291 - Clinical Externship 1

Overview

Subject	Academic Department	School
Physical Therapy Assistant	Health, Education, and Human Services	Health & Human Services
Course Description	A part-time, supervised clinical practicum at affiliated physical therapy departments. Students participate in patient treatment under the delegation and supervision of a licensed physical therapist. Students begin to integrate information from all previous course work to assist in those delegated components of patient care.	
Course Pre-requisite(s)	PTA118 Exercise Techniques I, PTA122 Exercise Techniques Lab, PTA144 Physical Therapy Modalities, PTA225 Applied Pathology for PTAs	
Credit Hours	2	
Contact Hours	8	
Course Fee	Miscellaneous Department Fee	
45	0	
Academic Level	Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL)	No	

Goals, Topics, and Objectives

Core Course Topics
1. Competencies outlined through the American Physical Therapy Association (APTA)
2. Roles of the Healthcare Team
3. Chart Review
4. The Physical Therapy Evaluation
5. Physical Therapist (PT)/Physical Therapist Assistant (PTA) Relationship
6. Physical Therapy Intervention
7. Data Collection
8. Ethical and Professional Behaviors

Demonstrate professional behaviors.
Demonstrate appropriate ethical behaviors using guidelines established by the APTA.
Define the roles of the PT, PTA physical therapy aide/technician, staff, and transporters.
Describe the roles of other members of the Rehab team (i.e. Psychiatrist, Occupational Therapist (OT), Speech-Language Pathologist (SLP), Social Worker, Vocational Specialist, Recreation Therapist).
Explain how responsibilities are delegated to PTAs, aides, and clerical staff.
Describe the characteristics of an effective student-clinical instructor relationship.
Perform selected treatment under the supervision of a physical therapist.
Apply learned theories and techniques to direct patient.
Communicate verbally in language appropriate to patients and professional staff.
Create appropriate and accurate written notes and reports.
Examine a patients medical record, and be able to extract information pertinent to the PTA for treatment.
Identify issues related to insurance, reimbursement, supervision, and quality assurance.
Identify aspects of a patients social or psychological history, which may affect the outcome of his/her therapy.
Self assess clinical performance and professional behaviors.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
Students will be assessed through a series of written assignments, clinical instructor evaluations, and self-assessment.	
General Course Requirements and Recommendations	
Students must pass this course with an "S" or better to remain in the PTA Program. In order to receive a passing grade of "S" for this course, students are expected to:	
- Meet with the ACCE after each externship. - Complete all of the assignments in a timely manner. - Completion of weekly logs for each affiliation. - Receive a rating of at least "Satisfactory" on all three of the clinical evaluation forms completed by the clinical instructor.	
Grading Scale	
Students will be assessed on the following scale: Satisfactory Unsatisfactory	
Texts	
Recommended: Rothstein, et al. "The Rehabilitation Specialist's Handbook." F.A.Davis. Current edition.	
Satisfies Honors Requirement	Satisfies Wellness Requirement
No	No

PTA295 - Clinical Externship II

Overview

Subject	Academic Department	School
Physical Therapy Assistant	Health Careers	Health & Human Services
Course Description	A full-time supervised clinical practicum at affiliated physical therapy departments. Students participate in patient treatment under the delegation and supervision of a licensed physical therapist. Students integrate classroom knowledge and laboratory experience to achieve the competencies of an entry-level physical therapist assistant as outlined by the American Physical Therapy Association (APTA).	
Course Pre-requisite(s)	PTA250 Extremity Orthopedics, PTA254 Spinal Orthopedics, PTA262 Rehab Neurological Cond 1, PTA265 Rehab Neuro Conditions Lab, and PTA291 Clinical Extern 1	
Credit Hours	9	
Contact Hours	35	
Course Fee	Miscellaneous Department Fee	
85	0	

Academic Level
Undergraduate

Eligible for Credit for Prior College Level Learning (CPCLL)
No

Goals, Topics, and Objectives

Core Course Topics

- 1. Professionalism: Ethical Practice
- 2. Professionalism: Legal Practice
- 3. Professionalism: Professional Growth
- 4. Interpersonal: Communication
- 5. Interpersonal: Inclusivity
- 6. Technical/Procedural: Clinical Reasoning
- 7. Technical/Procedural: Interventions: Therapeutic Exercise and Techniques
- 8. Technical/Procedural: Interventions: Mechanical and Electrotherapeutic Modalities
- 9. Technical/Procedural: Interventions: Functional Training and Application of Devices and Equipment
- 10. Business: Documentation
- 11. Business: Resource Management

Practices according to the Standards of Ethical Conduct; demonstrates respect for self, the patient/client, and colleagues in all situations.
Practices according to legal and professional standards, including all federal, state, and institutional regulations related to patient/client care and fiscal management.
Accepts and is receptive to feedback; participates in planning and/or self-assessment to improve clinical performance; contributes to the advancement of the clinical setting through educational opportunities; seeks out opportunities to improve knowledge and skills.
Demonstrates professional verbal and nonverbal communication with all stakeholders (e.g., patients/clients, caregivers, intra/interprofessional colleagues); adapts to diverse verbal and nonverbal communication styles during patient/client interactions; utilizes communication resources (e.g., interpreters) as appropriate; incorporates appropriate strategies to engage in challenging encounters with patients/clients and others; facilitates ongoing communication with physical therapist regarding patient/client care.
Delivers physical therapy services with consideration for patient/client diversity and inclusivity for all regardless of age, disability, ethnicity, gender identity, race, sexual orientation, or other characteristics of identity; Provides equitable patient/client care that does not vary in quality based on the patient's/client's personal characteristics (e.g., ethnicity, socioeconomic status).
Strategically gathers, interprets, and synthesizes information from multiple sources to make effective clinical judgments; applies current knowledge and clinical judgement while supporting the physical therapist with clinical activities; ensures patient/client safety during the episode of care; presents a logical rationale for clinical decisions with all stakeholders (e.g., patients/clients, caregivers, intra/interprofessional colleagues).
Performs selected therapeutic exercises, manual therapy techniques, airway clearance, and integumentary repair and protection techniques in a competent manner.
Applies selected mechanical and electrotherapeutic modalities in a competent manner.
Performs functional training in self-care and home management, including therapeutic activities; performs application and adjustment of devices and equipment in a competent manner.
Produces quality documentation that includes changes in the patient's/client's status, a description and progressions of specific interventions used, and communication among providers; maintains organization of patient/client documentation.
Participates in the efficient delivery of physical therapy services; demonstrates appropriate understanding of time management and appropriate use of clinical supplies and equipment when supporting physical therapy services.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

The Physical Therapist Assistant Clinical Performance Instrument 3.0 (CPI) will be used in the evaluation of student performance. It is expected that each student will receive a minimum of a mid-term and final evaluation for each clinical experience.

The grade for each rotation will be determined by the HFC instructor for [PTA295 Clinical Externship II](#). It will be based on the completed CPI 3.0 and recommendations from the student's clinical instructor. To successfully complete the course, by the end of the first 7-week full time rotation, the student must be at advanced intermediate in the 11 performance criteria with no areas of significant concern. At the end of the second 7-week full time rotation, the student must be at entry-level performance in 11 area with no areas of significant concern.

General Course Requirements and Recommendations

The HFC instructor for PTA 295 will determine the student's grade. Students must pass this course with an "S" to remain in the PTA Program.

Grading Scale

Students will be assessed on the following scale-Satisfactory/Unsatisfactory

Satisfies Honors Requirement

No

Satisfies Wellness Requirement

No

RAD109 - Clinical Education I

Overview

Subject Radiography Technician	Academic Department Health, Education, and Human Services	School Health & Human Services
Course Description This is an introductory, structured, competency based clinical course designed in concert with American Society of Radiologic Technologists (ASRT) curriculum and American Registry of Radiologic Technologist (ARRT) competencies. Course offers experiences in chart recognition, basic patient assessment, patient communication, and basic departmental procedures and policies. Equipment manipulation, chest, abdomen, and upper extremity radiographic positioning are emphasized.		
Course Pre-requisite(s) Acceptance into Radiographer AAS Degree Program		
Credit Hours 3		

Contact Hours

20

Course Fee 90	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Core Course Topics

- 1. Patient Chart Recognition
- 2. Basic Patient Assessment
- 3. Patient communication
- 4. Basic imaging department procedures and policies
- 5. Basic radiographic equipment manipulation
- 6. Chest, abdomen, and upper extremity positioning

Explain the basic administrative structure of the hospital system and radiology department.
Apply radiation protection principles, practices and procedures.
Prepare the room and patient for a radiographic exam.
Record the proper medical history as mandated by the clinical site.
Assure the patients safety during the exam.
Demonstrate the use of proper body mechanics when transferring patients.
Demonstrate the use of universal precautions in the clinical setting.
Align the x-ray tube and the image receptor accurately to capture the radiographic image.
Demonstrate correct manipulation of radiographic and fluoroscopic equipment.
Identify anatomy in the radiographs submitted for demonstration of competency.
Explain all pertinent rules regarding professionalism as mandated by the clinical site.
Maintain patient confidentiality.
Demonstrate Competency in at least four examinations including: equipment, chest (PA and lateral), abdomen, and upper extremity.
Complete Procedure Tests under the supervision of a Clinical Instructor to include decubitus chest, AP cort chest, upright abdomen, 1st digit, 3rd or 4th digit, and scaphoid.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

The final course grade will be calculated using a combination of tests, quizzes, assignments, presentations and participation.

General Course Requirements and Recommendations

Must obtain a grade of "C" or better to remain in the [Radiographer AAS Degree](#) program.

Grading Scale		
The grading scale is:		
93-100% = A 85-92% = B 80-84% = C 73-79% = D 0-72% = E		
Texts		
To be determined by program faculty.		
Satisfies Honors Requirement		Satisfies Wellness Requirement
No		No

RAD111 - Principles of Radiation Protection

Overview

Subject Radiography Technician	Academic Department Health, Education, and Human Services	School Health & Human Services
Course Description This course provides the student with an overview of the principles of radiation protection including responsibilities of the radiographer to patients, personnel, and the public. The concepts of "As Low as Reasonably Achievable", stochastic and nonstochastic effects, and occupational effective dose limits are addressed. Regulatory agencies will be identified and their involvement in radiation protection will be discussed.		
Course Pre-requisite(s) Acceptance into Radiographer AAS Degree Program.		
Credit Hours 2		
Contact Hours 2		
Course Fee 0	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics
1. History of Radiography
2. Introduction to Radiation Protection
3. Interaction of X-radiation with Matter
4. Radiation Quantities and Units
5. Dose Limits for Exposure to Ionizing Radiation
6. Radiation Monitoring
7. Equipment Design for Radiation Protection
8. Management of Patient Radiation dose during Diagnostic X-ray Procedures
9. Management of Imaging Personnel Radiation Dose

Discuss the historical development of radiologic technology.
Explain ionizing radiation and its ability to damage tissue.
Discuss the different types of radiation.
Describe the types of radiation noting their origin and properties.
List the basic radiation quantities.
Describe the Standard International (SI) & systems of radiation units.
List the SI radiation units.
Explain the purpose and importance of personnel monitoring devices.
Identify several types of personnel monitoring devices.
Differentiate between radiation survey instruments and calibration instruments giving examples for each.
Explain the importance of radiation protection for both the patient & and the radiographer.
Explain equipment design for radiation protection.

Identify and describe equipment operation regulations involving patient and radiographer radiation protection.
Describe the concept of effective absorbed dose equivalent limits.
Identify and describe the federal and state regulatory agencies involved in establishing and enforcing radiation protection guidelines.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
The final course grade will be calculated using a combination of tests, quizzes, assignments, presentations and participation.	
General Course Requirements and Recommendations	
Must obtain a grade of "C" or better to remain in the Radiographer AAS Degree program.	
Grading Scale	
The grading scale is:	
93-100% = A 85-92% = B 80-84% = C 73-79% = D 0-72% = E	
Texts	
Textbook(s) to be determined through program faculty approval.

RAD114 - Introduction to Radiology & Patient Care

Overview

Subject	Academic Department	School
Radiography Technician	Health, Education, and Human Services	Health & Human Services
Course Description		
This course is designed to introduce the basic concepts of patient care including patient interactions, body mechanics, patient transfer techniques, vital signs, infection control, emergency situations, age specific care, oxygen administration, basic pharmacology and venipuncture.		
Course Pre-requisite(s)		
Acceptance into Radiographer AAS Degree Program		
Credit Hours		
3		
Contact Hours		
3		
Course Fee	Miscellaneous Department Fee	
55	0	
Academic Level		
Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL)		
No		

Goals, Topics, and Objectives

Core Course Topics
1. Communication with Patients
2. Professional Responsibilities of the Radiographer to Include the American Registry of Radiologic Technologists (ARRT) Code of Ethics and the American Society of Radiologic Technologist (ASRT) Practice Standards.
3. Medicolegal Issues in the Diagnostic Imaging Profession
4. Body Mechanics and Patient Transfer Techniques
5. Patient History and the Assessment of Vital Signs
6. Infection Control, Aseptic and Non-Aseptic Technique
7. Venipuncture
8. Pharmacology, Radiopharmaceuticals and Contrast Media
9. Medical Emergencies and Critical Thinking
10. Human Diversity
11. Patient Diversity
12. Hospital and Healthcare Institutions Administration and Careers.

Discuss the basic responsibilities of being a member of the healthcare and administrative teams and careers pathways.
Explain the importance of the ARRT Radiographer's Code of Ethics and the ASRT Practice Standards.
Discuss the professional relationships with other technologists, physicians, and hospital staff in an ethical manner.
Discuss medicolegal issues in the diagnostic imaging profession.
Discuss the psychological approach to patient care and steps to consider each patient as an individual and as a member of a diverse community.

Explain age specific care.
Describe the significance of patient rights and the responsibility of the radiographer in respecting these rights.
Describe and demonstrate proper body mechanics utilized during patient transfer.
Discuss the importance of maintaining all patient lines, catheters and equipment during patient transfer for portable radiography.
Explain the emotional and ethical responsibilities of a radiographer in dealing with terminally ill patients and their families.
Demonstrate the proper techniques in obtaining patient vital signs.
Define and describe the basic principles of asepsis.
Explain the concepts of infection control and Standard Precautions.
Demonstrate proper techniques in venipuncture.
Explain basic suction operation, oxygen administration, and care of O2 tanks.
Define and describe drug and contrast media classifications, methods of administration, dosages, contraindications and adverse reactions.
Define and describe radiopharmaceutical and the area of medical imaging where they are used.
Discuss the radiographers role in typical clinical emergency situations and critical thinking.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
The final course grade will be calculated using a combination of tests, quizzes, assignments, presentations and participation.
General Course Requirements and Recommendations
Must obtain a grade of "C" or better to remain in the Radiography program.
Grading Scale
The grading scale is:
93-100% = A 85-92% = B 80-84% = C 73-79% = D 0-72% = E
Texts
Textbook(s) to be determined through program faculty approval.
Satisfies Honors Requirement
No
Satisfies Wellness Requirement
No

RAD118 - Radiographic Positioning

Overview

Subject	Academic Department	School
Radiography Technician	Health, Education, and Human Services	Health & Human Services
Course Description	This lecture/laboratory course is one of a four course curriculum in radiographic positioning and procedures. This course introduces fundamental radiology positioning terminology and provides instruction in standard imaging procedures for chest, abdomen, and upper extremity. Positioning skills will be practiced and reinforced through laboratory assignments. Consideration is given to the evaluation of optimal diagnostic images.	
Course Pre-requisite(s)	Acceptance into Radiographer AAS Degree Program	
Credit Hours	3	
Contact Hours	4	
Course Fee	Miscellaneous Department Fee	
35	0	
Academic Level		
Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL)		
No		

Goals, Topics, and Objectives

Core Course Topics
- Radiographic Positioning Terminology - Chest Positioning - Abdomen Positioning - Upper Extremity Positioning Including Digit Hand, Elbow, and Humerus - Beside Portable Radiography
State standard radiographic positioning terminology.
Demonstrate the correct patient position, part placement, and central ray entrance landmarks for radiographic procedures of the chest, abdomen, and upper extremity.
Identify the structures demonstrated in chest, abdomen, and upper extremity radiographic images.
Evaluate these images for positioning, centering, appropriate anatomy and overall image quality.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
The final course grade will be calculated using a combination of tests, quizzes, assignments, presentations and participation.
General Course Requirements and Recommendations
Must obtain a grade of "C" or better to remain in the Radiographer AAS Degree program.
Grading Scale
The grading scale is:
93-100% = A 85-92% = B 80-84% = C 73-79% = D 0-72% = E
Texts

RAD158 - Radiographic Positioning II

Overview

Subject	Academic Department	School
Radiography Technician	Health, Education, and Human Services	Health & Human Services
Course Description	This lecture/laboratory course is one of a four course curriculum in radiographic positioning and procedures. This course provides instruction in standard imaging procedures for shoulder girdle, lower extremity, and pelvic girdle. Positioning skills will be practiced and reinforced through laboratory assignments. Consideration is given to the evaluation of optimal diagnostic images.	
Course Pre-requisite(s)	RAD-101, RAD109 Clinical Education I, RAD111 Prin Radiation Protection, RAD114 Basic Patient Care Radiography and RAD118 Radiographic Positioning	
Credit Hours	3	
Contact Hours	4	
Course Fee	Miscellaneous Department Fee	
70	0	
Academic Level		
Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL)		
No		

Goals, Topics, and Objectives

Core Course Topics
- Foot, Toes, Ankle, and Calcaneus Anatomy and Positioning - Tibia and Fibula, Knee Anatomy and Positioning - Shoulder Girdle and Acromioclavicular (AC) Joints Anatomy and Positioning - Clavicle and Scapula Anatomy and Positioning - Femur, Hip and Pelvis Anatomy and Positioning
Demonstrate and describe the correct patient position, part placement, and central ray entrance landmarks for radiographic procedures of the shoulder girdle, lower extremity, and pelvic girdle.
Identify the structures demonstrated in shoulder girdle, lower extremity, and pelvic girdle radiographic images.
Evaluate these images for positioning, centering, appropriate anatomy and overall image quality.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
The final course grade will be calculated using a combination of tests, quizzes, assignments, presentations and participation.

General Course Requirements and Recommendations
Must obtain a grade of "C" or better to remain in the Radiographer AAS Degree program.

- Grading Scale
The grading scale is:
- 93-100% = A
 - 85-92% = B
 - 80-84% = C
 - 73-79% = D
 - 0-72% = E

RAD161 - Imaging Equipment

Overview

Subject Radiography Technician	Academic Department Health, Education, and Human Services	School Health & Human Services
Course Description This course focuses upon the equipment routinely utilized to produce diagnostic images. The major emphasis will be on the construction and operation of the diagnostic x-ray tube, digital imaging systems, and fluoroscopic imaging systems. Basic principles of advanced imaging equipment such as Computed Tomography (CT) and Magnetic Resonance Imaging (MRI) are introduced.		
Course Pre-requisite(s) RAD-101, RAD109 Clinical Education I , RAD111 Prin Radiation Protection , RAD114 Basic Patient Care Radiography , and RAD118 Radiographic Positioning		
Credit Hours 1		
Contact Hours 1		
Course Fee 0		
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

- Core Course Topics
- Radiographic Equipment
 - X-ray Tube
 - Automatic Exposure Control Systems
 - Fluoroscopic Equipment
 - Image Intensification Tube
 - Flat Panel Fluoroscopy
 - Tomography and Computed Tomography
 - Magnetic Resonance Imaging
 - Digital and Computed Radiography
 - Bedside Portable Radiography

Describe the components and function of a diagnostic x-ray tube.
Describe the components and function of automatic exposure control (AEC) devices.
Explain line-focus principle.
Describe the components and function of an image intensifier tube.
Describe several advantages of computed radiography over screen-film radiography.
Define direct digital radiography and indirect digital radiography.
Discuss basic computed tomography (CT) equipment components and functions.
Discuss basic magnetic resonance imaging component and functions.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
The final course grade will be calculated using a combination of tests, quizzes, assignments, presentations and participation.

General Course Requirements and Recommendations
Must obtain a grade of "C" or better to remain in the Radiographer AAS Degree program.

- Grading Scale
The grading scale is:
- 93-100% = A
 - 85-92% = B
 - 80-84% = C
 - 73-79% = D
 - 0-72% = E

Texts
Textbook(s) to be determined through program faculty approval.

RAD171 - Principles of Exposure

Overview

Subject Radiography Technician	Academic Department Health, Education, and Human Services	School Health & Human Services
Course Description This lecture/lab course focuses upon the factors that govern and influence the production of quality radiographic images. The course details the main properties of radiographic density/brightness, contrast, recorded detail/spatial resolution and distortion. Exposure calculations will be introduced.		
Course Pre-requisite(s) RAD-101, RAD109 Clinical Education I , RAD111 Prin Radiation Protection , RAD114 Basic Patient Care Radiography , and RAD118 Radiographic Positioning		
Credit Hours 3		
Contact Hours 3		
Course Fee 0		
Miscellaneous Department Fee 0		
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

- Core Course Topics
- Math Review
 - Radiographic Image Formation
 - Radiographic Image Quality: Photographic Properties
 - Scatter Control
 - Radiographic Image Quality: Geometric Properties
 - Introduction to Digital Imaging
 - Digital Image Receptors
 - Exposure Factor Selection
 - Automatic Exposure Control
 - Repeat Radiograph Analysis
 - Total Exposure - mAs, kVp Lab Activity
 - Grid Use and Scatter Control Lab Activity
 - Detail/Distortion Lab Activity
 - Automatic Exposure Control Lab Activity

Discuss elements of a radiographic image.
Apply a problem solving process to image analysis.
Describe an effective image analysis method.
Describe the role of the radiographer in image analysis.
Apply the process for evaluating images for adequate density/ brightness, contrast, recorded detail/spatial resolution, and acceptable limits of distortion.
Explain how the radiographer determines that an adequate level of penetration has been applied to produce an acceptable image.
Analyze the images to determine the appropriate use of beam restriction.
Differentiate between technical factor problems, procedural factor problems, and equipment malfunctions.
Critique images for appropriate technical and procedural factors and employ corrective actions if necessary.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
The final course grade will be calculated using a combination of tests, quizzes, assignments, presentations and participation.

General Course Requirements and Recommendations
Must obtain a grade of "C" or better to remain in the [Radiographer AAS Degree](#) program.

Grading Scale
The grading scale is:

- 93-100% = A
- 85-92% = B
- 80-84% = C
- 73-79% = D
- 0-72% = E

RAD181 - Fluoroscopy Studies

Overview

Subject Radiography Technician	Academic Department Health, Education, and Human Services	School Health & Human Services
--	---	--

Course Description
This course is one in a series of four courses in radiographic positioning and procedures. The course provides instruction in standard imaging procedures for contrast studies of the digestive and the genitourinary tracts. Consideration is given to special radiographic contrast studies. Consideration is also given to the evaluation of optimal diagnostic images.

Course Pre-requisite(s)
RAD-101, [RAD109 Clinical Education I](#), [RAD111 Prin Radiation Protection](#), [RAD114 Basic Patient Care Radiography](#) and [RAD118 Radiographic Positioning](#)

Credit Hours
1

Contact Hours
1

Course Fee 35	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

- Core Course Topics**
- Contrast Media: Classifications, Methods of Administration, Dosage, Contraindications and Adverse Reactions
 - Equipment and Technical Considerations
 - Radiographic Contrast Studies of the Digestive Tract: Esophagus, Stomach, Small Bowel - routine and air contrast, Large Bowel - routine and air contrast
 - Radiographic Contrast Studies of the Genitourinary Tract: Intravenous Pyelogram, Nephrotomography, and Voiding Cystourethrogram
 - Special Studies: Endoscopic Retrograde Cholangiopancreatography, Hysterosalpingogram, Arthrography, Myelogram, and Venogram

Explain the purpose of contrast media.
Name the type, dosage, and route of administration commonly used to perform radiographic contrast and special studies.
Explain the patient preparation for various contrast and special studies.
Demonstrate and describe the correct patient position, part placement, and central ray landmarks for radiographic contrast studies of the following anatomic systems, gastrointestinal and genitourinary.
Describe the correct patient position, part placement, and central ray landmarks for special radiographic contrast studies of the biliary tract, the pancreatic duct, the spinal column, fallopian tubes, joints and veins.
Identify in radiographic images the evaluation criteria for each contrast study image.
Evaluate images for positioning, centering, appropriate anatomy and overall image quality.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
The final course grade will be calculated using a combination of tests, quizzes, assignments, presentations and participation.

General Course Requirements and Recommendations
Must obtain a grade of "C" or better to remain in the [Radiographer AAS Degree](#) program.

Grading Scale
The grading scale is:

- 93-100% = A

- 85-92% = B
- 80-84% = C
- 73-79% = D
- 0-72% = E

RAD190 - Clinical Education II

Overview

Subject Radiography Technician	Academic Department Health, Education, and Human Services	School Health & Human Services
--	---	--

Course Description
This is second in a sequence of structured, competency based clinical courses in concert with American Society of Radiologic Technologist (ASRT) curriculum and ASRT competencies. Course offers experiences in chart recognition, basic patient assessment, patient communication, and basic departmental procedures and policies. Equipment manipulation, chest, abdomen, upper extremity, lower extremity and shoulder girdle radiographic positioning are emphasized.

Course Pre-requisite(s)
RAD-101, [RAD109 Clinical Education I](#), [RAD111 Prin Radiation Protection](#), [RAD114 Basic Patient Care Radiography](#) and [RAD118 Radiographic Positioning](#)

Credit Hours
3

Contact Hours
20

Course Fee 70	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

- Core Course Topics**
- Introductory Mobile Imaging to include Equipment Manipulation and Positioning
 - Basic Patient Care and Interactions
 - Basic Radiographic Equipment Manipulation
 - Chest, Abdomen, Upper Extremity, Lower Extremity, and Shoulder Girdle Positioning

Explain the basic administrative structure of the hospital system and radiology department.
Apply radiation protection principles, practices and procedures.
Prepare the room and patient for a radiographic exam.
Obtain and record the proper medical history as mandated by the clinical site.
Assure the patients safety during the exam.
Utilize proper body mechanics when transferring patients.
Apply universal precautions in the clinical setting.
Align the x-ray tube and the image receptor accurately to capture the radiographic image.
Demonstrate correct manipulation of radiographic, fluoroscopic and mobile equipment.
Identify anatomy in the radiographs submitted for demonstration of competency.
Adopt all pertinent rules regarding professionalism as mandated by the clinical site.
Maintain patient confidentiality.
Maintain competency in previously mastered examinations.

Demonstrate Competency in at least seven (7) examinations which may include: lower extremity, hip, pelvis, clavicle, scapula, shoulder, Acromioclavicular (AC) joints, and contrast studies - gastrointestinal, genitourinary or other.
Complete Procedure tests under the supervision of a Clinical Instructor to include: elbow, humerus, calcaneus, tibia/fibula, knee - AP portable and cross-table lateral, scapula, shoulder routine, shoulder scapular Y and shoulder inferosuperior axial.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
The final course grade will be calculated using a combination of tests, quizzes, assignments, presentations and participation.
General Course Requirements and Recommendations
Must obtain a grade of "C" or better to remain in the Radiographer AAS Degree program.

Grading Scale
The grading scale is:

- 93-100% = A
- 85-92% = B
- 80-84% = C
- 73-79% = D
- 0-72% = E

Texts
Textbook(s) to be determined through program faculty approval.

Satisfies Honors Requirement

RAD196 - Clinical Education Level 3

Overview

Subject Radiography Technician	Academic Department Health, Education, and Human Services	School Health & Human Services
Course Description The third course in a sequence of structured, competency based, clinical courses offering experiences in chart recognition, patient assessment, patient communication, equipment manipulation, and chest, abdomen, lower extremity, upper extremity, shoulder, and pelvis radiographic positioning.		
Course Pre-requisite(s) BIQ234 Anatomy and Physiology II , RAD158 Radiographic Positioning II , RAD161 Imaging Equipment , RAD171 Principles of Exposure , RAD181 Fluoroscopy Studies , RAD190 Clinical Education II		
Credit Hours 4		
Contact Hours 20		
Course Fee 0	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

- Core Course Topics
- In concert with American Society of Radiologic Technologists (ASRT) Curriculum and American Registry of Radiologic Technologists (ARRT) competencies: Continued development of radiographic and mobile equipment skills.
 - Continued performance of mastered clinical competencies.
 - Introductory trauma radiography.
 - Shoulder girdle and pelvic girdle positioning.

Assess and apply radiation protection principles, practices, and procedures.
Properly prepare the x-ray room and patient for a radiographic exam.
Collect and record the proper medical history as mandated by the clinical site.
Assure the patients safety during the exam.
Demonstrate the use of proper body mechanics when transferring patients.
Demonstrate the use of universal precautions in the clinical setting.
Demonstrate accurate alignment of the x-ray tube and the image receptor to capture the radiographic image.
Differentiate anatomy in the radiographs submitted for demonstration of competency.

Demonstrate all pertinent rules regarding professionalism as mandated by the clinical site.
Adopt patient confidentiality standards.
Demonstrate the maintenance of competency in previously mastered examinations.
Complete Competency Tests in at least fourteen (14) examinations which may include the following: chest, abdomen, upper extremities, lower extremities, shoulder girdle, portable hip, and trauma hip.
Complete the following Procedure Tests under the supervision of a Clinical Instructor: femur and hip, anteroposterior (AP) portable hip, and trauma axiolateral cross table hip.
During two weeks of afternoon clinical rotations: modify radiographic examinations for trauma patients and conduct trauma radiographic examinations under direct supervision.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment is based on student performance during Competency and Procedures Examinations, week clinical staff evaluations, and student attendance.
General Course Requirements and Recommendations
Must obtain a grade of "C" or better to remain in the Radiographer AAS Degree program.

Grading Scale
The grading scale is:

- 93-100% = A
- 85-92% = B
- 80-84% = C
- 73-79% = D
- 0-72% = E

Texts
Textbook(s) to be determined through program faculty approval.

RAD209 - Intermediate Clinical Education

Overview

Subject Radiography Technician	Academic Department Health, Education, and Human Services	School Health & Human Services
Course Description This is fourth in a sequence of structured, competency based clinical courses in concert with American Society of Radiologic Technologist (ASRT) curriculum and American Registry of Radiologic Technologist (ARRT) competencies. Course emphasizes increasing technical proficiency in all previously covered radiographic procedures and introduces vertebral column, skull, facial bones, nasal bones, and sinuses. Experience in pediatric radiography is offered.		
Course Pre-requisite(s) RAD196 Clinical Education Level 3 , RAD284 Principles Computed Tomography		
Credit Hours 3		
Contact Hours 20		
Course Fee 90	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

- Core Course Topics
- Intermediate Radiographic and Mobile Equipment Manipulation
 - Introductory Pediatric Radiography
 - Introductory Vertebral Column and Bony Thorax Radiography
 - Introductory Skull, Sinus, and Facial Bone Radiography

Apply radiation protection principles, practices and procedures.
Prepare the room and patient for a radiographic exam.
Obtain and record the proper medical history as mandated by the clinical site.
Assure the patients safety during the exam.

Utilize proper body mechanics when transferring patients.
Apply universal precautions in the clinical setting.
Align the x-ray tube and the image receptor accurately to capture the radiographic image.
Identify anatomy in the radiographs submitted for demonstration of competency.
Adopt pertinent rules regarding professionalism as mandated by the clinical site.
Maintain patient confidentiality.
Maintain competency in previously mastered examinations.
Analyze, organize and perform examinations on pediatric patients to include use of adequate shielding and immobilization.
Modify radiographic examinations for pediatric patients. 1.Complete Competency Tests in at least sixteen (16) examinations which may include: cervical spine, thoracic spine, lumbar spine, sacrum/coccyx, sacroiliac joints, ribs, sternum, sternoclavicular joints, portable hip, trauma hip, contrast studies, surgical radiographic studies to include C-arm and retrograde cystograms, and pediatric studies.
Complete Procedure Tests under the supervision of a Clinical Instructor to include thoracic spine, cervical spine, sacrum/coccyx, skull, and facial bones.
Apply previously mastered clinical skills to non-routine patients.
Perform multiple radiographic examinations on a single patient.
Conduct advanced radiographic image analysis.
Produce quality radiographic images with intermediate technical proficiency.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Assessment of academic achievement will include a combination of tests, quizzes, assignments, presentations and participation.		
General Course Requirements and Recommendations Must obtain a grade of "C" or better to remain in the <u>Radiographer AAS Degree</u> program.		
Grading Scale The grading scale is: 93-100% = A 85-92% = B 80-84% = C 73-79% = D 0-72% = E		
Texts Textbook(s) to be determined through program faculty approval.		
Satisfies Honors Requirement No	Satisfies Wellness Requirement No

RAD214 - Pathology and Cross Sectional Anatomy

Overview

Subject Radiography Technician	Academic Department Health, Education, and Human Services	School Health & Human Services
Course Description This course is designed to introduce concepts related to disease and etiological considerations with emphasis on radiographic appearance of disease and impact on exposure factor selection. The course is designed to establish a knowledge base in basic cross sectional anatomy of head, neck, thorax, and abdomen.		
Course Pre-requisite(s) <u>RAD196 Clinical Education Level 3</u> <u>RAD284 Principles Computed Tomography</u>		
Credit Hours 2		
Contact Hours 2		
Course Fee 0	Miscellaneous Department Fee 0	

Academic Level Undergraduate
Eligible for Credit for Prior College Level Learning (CPCLL) No
Goals, Topics, and Objectives Core Course Topics - Introduction to Pathology Principles - Trauma and Physical Injury - Skeletal System Pathology - Respiratory System Pathology - Cross Sectional Anatomy of the Thorax - Respiratory System Pathology - Gastrointestinal and Hepatobiliary System Pathology - Cross Sectional Anatomy of the Abdomen - Reproductive System Pathology - Reproductive and Urinary Systems Pathology - Circulatory System Pathology - Lymph and Endocrine Systems Pathology - Nervous System Pathology - Cross Sectional Anatomy of the Head and Neck - Contrast Media
Define basic terms related to pathology.
Describe the basic manifestations of pathological conditions and their relevance to radiologic procedures.
Discuss the classifications of trauma.
Describe imaging procedures used in diagnosing disease.
List the causes of tissue disruption.
Describe the healing process.
Identify the complications connected with the repair and replacement of tissue.
Describe the various systemic classifications of disease in terms of etiology, types, common sites, complications, and prognosis.
Describe the radiographic appearance of diseases.
Identify imaging procedures and interventional techniques appropriate for diseases common to each body system.
Identify diseases caused by or contributed to by genetic factors.
Describe radiographic procedures and exposure factor selection appropriate for different types of disease.
Identify major anatomical structures found within cross sectional images of the head, neck, thorax, and abdomen.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Assessment of academic achievement will include tests, quizzes, assignments, and presentations.		
General Course Requirements and Recommendations Must obtain a grade of "C" or better to remain in the <u>Radiographer AAS Degree</u> program.		
Grading Scale Student grades will be assigned using the following scale: 93-100% = A 85-92% = B 80-84% = C 73-79% = D 0-72% = E		
Texts Textbook(s) to be determined through program faculty approval.		
Satisfies Honors Requirement No	Satisfies Wellness Requirement No

RAD228 - Radiographic Procedures

Overview

Subject Radiography Technician	Academic Department Health, Education, and Human Services	School Health & Human Services
Course Description This lecture/laboratory course is one of a four course curriculum in radiographic positioning and procedures. Course provides instruction in standard imaging procedures for the vertebral column, bony thorax, skull, facial bones, and sinuses. Positioning skills will be practiced and reinforced through laboratory assignments. Consideration is given to the evaluation of optimal diagnostic images.		
Course Pre-requisite(s) RAD196 Clinical Education Level 3, RAD284 Principles Computed Tomography		
Credit Hours 3		
Contact Hours 3		
Course Fee 35		
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics
1. Vertebral column anatomy and disorders
2. Lumbar, thoracic, and cervical spine anatomy and positioning
3. Sacrum, coccyx, and sacroiliac joint anatomy and positioning
4. Bony thorax anatomy and positioning
5. Special spine studies
6. Cranium: Anatomy, positioning landmarks and lines
7. Skull positioning
8. Facial bones anatomy and positioning
9. Paranasal anatomy and positioning
Identify and describe the localization points and baselines utilized in positioning of the vertebral column, bony thorax, skull, facial bones, and paranasal sinuses.
Demonstrate and describe the correct patient position, part placement, and central ray entrance landmarks for the following radiographic procedures: vertebral column, bony thorax, skull, orbits, facial bones, nasal bones, zygomatic arches, mandible, and paranasal sinuses.
Cite the structures demonstrated in these radiographic images.
Evaluate these images for correct positioning, accurate centering, demonstration of appropriate anatomy, and overall image quality.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement will include a combination of tests, quizzes, assignments, presentations and participation.
General Course Requirements and Recommendations
Must obtain a grade of "C" or better to remain in the Radiography program.
Grading Scale
The grading scale is:
93-100% = A 85-92% = B 80-84% = C 73-79% = D 0-72% = E
Texts
Textbook(s) to be determined through program faculty approval.

RAD267 - Radiation Physics

Overview

Subject Radiography Technician	Academic Department Health, Education, and Human Services	School Health & Human Services
Course Description This lecture course focuses upon fundamental physics for radiologic technology including electrostatics, electrodynamics, electromagnetic induction, fundamentals of x-ray generating equipment, x-ray production, and beam characteristics. X-ray photon interactions with matter will be reviewed.		
Course Pre-requisite(s) RAD196 Clinical Education Level 3, RAD284 Principles Computed Tomography		
Credit Hours 4		
Contact Hours 4		

Course Fee 0	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) No	
Goals, Topics, and Objectives	
Core Course Topics	
1. Fundamental Principles of Physics	
2. Math Review	
3. Atomic Structure and Matter	
4. Electromagnetic Energy	
5. Electrodynamics	
6. Electromagnetism	
7. Generators, Motors and Transformers	
8. Rectification	
9. X-ray Tube and Circuits	
10. X-ray Production, Emission, and Spectra	
11. X-ray Emission Properties	
12. X-ray Interactions with Matter	
13. X-ray Properties	
List the fundamental units of measurement.	
Describe the difference between fundamental and derived units of measurement.	
Calculate measurements of velocity, momentum, force, work, and power when given the appropriate information.	
Describe fundamental atomic structure.	
Describe electron shells and electron binding energy.	
Describe the process of ionization of an atom.	
Describe the electromagnetic spectrum.	
Differentiate between non-ionizing and ionizing electromagnetic radiation.	
Describe the common properties of all electromagnetic energy.	
Solve problems using wave equation calculations.	
Solve problems using inverse square law calculations.	
Define potential difference, current and resistance.	
Solve problems using Ohms Law calculations.	
Describe the principles of magnetism and electromagnetism.	
Identify the general components and functions of the x-ray tube and filament circuits.	
Explain the role of rectification in the x-ray tube circuit.	
Describe the conditions necessary to produce x-radiation.	
Compare the production of bremsstrahlung and characteristic radiations.	
Describe and discuss the properties of x-rays. Describe the x-ray emission spectra.	
Identify the factors that affect the x-ray emission spectra.	
Discuss various x-ray photon interactions with matter including energy range, site of interaction in the atom, the effect on the atom, and the effect on the x-ray photon.	

Describe and diagram the various interactions of x-rays and matter.
Discuss the clinical significance of photoelectric effect and modified scattering in diagnostic imaging.
Explain the impact of technical factor changes upon the x-ray beam characteristics.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement will include a combination of tests, quizzes, assignments, presentations and participation.

General Course Requirements and Recommendations
Must obtain a grade of "C" or better to remain in the [Radiographer AAS Degree](#) program.

Grading Scale
The grading scale is:

- 93-100% = A
- 85-92% = B
- 80-84% = C
- 73-79% = D
- 0-72% = E

Texts
Textbook(s) to be determined through program faculty approval.

RAD271 - Digital Image Acquisition and Management

Overview

Subject Radiography Technician	Academic Department Health, Education, and Human Services	School Health & Human Services
--	---	--

Course Description
This course addresses all technical aspects of digital image acquisition, manipulation, and storage. Course includes digital imaging characteristics, types of imaging systems and system components, digital image acquisition and manipulation, and digital image archiving systems. Also included are principles of imaging system quality assurance and maintenance.

Course Pre-requisite(s)
[RAD214 Pathology & Cross Sect Anatomy](#), [RAD228 Radiographic Procedures](#), [RAD267 Radiation Physics](#), and [RAD209 Intermediate Clinical Education](#)

Credit Hours
2

Contact Hours
2

Eligible for Credit for Prior College Level Learning (CPCLL)
No

Goals, Topics, and Objectives

- Core Course Topics**
- Digital image characteristics
 - Define terminology associated with digital imaging.
 - Computed radiography (CR) equipment and image acquisition
 - Describe CR imaging systems, to include the PSP plate and reader components.
 - Recognize and correct image acquisition errors with each system type.
 - Digital radiography (DR) equipment and image acquisition, to include direct and indirect conversion systems
 - Describe DR imaging systems, to include direct and indirect conversion systems.
 - Recognize and correct image acquisition errors with each system type.
 - Compare the advantages and limitations of each system type.
 - Digital image processing and manipulation
 - Describe how digital images are processed and the various types of manipulates that may be applied to an image.
 - Demonstrate various image manipulations.
 - Compare the advantages and limitations of each system type.
 - As Low As Reasonably Achievable (ALARA) principles as related to digital imaging
 - Examine the potential impact on patient exposure and methods of practicing the ALARA principle with digital imaging.
 - Relate exposure indicator values to technical factor selection, part/beam/receptor alignment, and patient exposure with digital imaging.
 - Fundamentals of imaging informatics
 - Describe the role of imaging informatics in the Healthcare industry, to include various information and networking systems.
 - Describe the **Health Insurance Portability and Accountability Act (HIPAA)** as it relates to electronic information.
 - Quality management principles for digital imaging and imaging informatics systems
 - Discuss quality management for digital imaging systems, informatics systems, and ancillary equipment.

Define terminology associated with digital imaging.

Describe CR imaging systems, to include the PSP plate and reader components.
Recognize and correct image acquisition errors with each system type.
Describe DR imaging systems, to include direct and indirect conversion systems.
Compare the advantages and limitations of each system type.
Describe how digital images are processed and the various types of manipulates that may be applied to an image.
Demonstrate various image manipulations.
Examine the potential impact on patient exposure and methods of practicing the ALARA principle with digital imaging.
Relate exposure indicator values to technical factor selection, part/ beam/receptor alignment, and patient exposure with digital imaging.
Describe the role of imaging informatics in the Healthcare industry, to include various information and networking systems.
Describe the Health Insurance Portability and Accountability Act (HIPAA) as it relates to electronic information.
Discuss quality management for digital imaging systems, informatics systems, and ancillary equipment.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
The final course grade will be calculated using a combination of tests, quizzes, assignments, presentations and participation.

General Course Requirements and Recommendations
Students must receive a grade of "C" or better to remain in the [Radiographer AAS Degree](#) program.

Grading Scale
The grading scale is:

- 93-100% = A
- 85-92% = B
- 80-84% = C
- 73-79% = D
- 0-72% = E

Texts
Textbook(s) to be determined through program faculty approval.

RAD274 - Principles of Radiation Biology

Overview

Subject Radiography Technician	Academic Department Health, Education, and Human Services	School Health & Human Services
--	---	--

Course Description
This lecture course provides an overview of the principles of the interaction of radiation with living systems. Radiation effects on molecules, cells, tissues, and the body as a whole are presented. Factors affecting biological response to radiation exposure are presented, including acute and chronic effects.

Course Pre-requisite(s)
[RAD214 Pathology & Cross Sect Anatomy](#), [RAD228 Radiographic Procedures](#), [RAD267 Radiation Physics](#), and [RAD209 Intermediate Clinical Education](#)

Credit Hours
2

Contact Hours

Goals, Topics, and Objectives

- Core Course Topics**
- Human Biology
 - Chemical Composition of the Cell
 - Cell Structures
 - Cell Reproduction

5. Law of Bergonie and Tribondeau
6. Physical and Biological Factors that Affect Radiosensitivity
7. Radiation Dose - Response Relationships
8. Molecular and Cellular Radiobiology
9. Early Effects of Radiation
10. Acute Radiation Syndromes
11. Late Effects of Radiation
12. Embryo and Fetal Effects of Radiation

Describe the structures and functions of the human cell.
Differentiate between somatic and germ cells.
Describe the process of cell division for both somatic and germ cells.
Describe the principles of target theory.
Distinguish between direct and indirect effect of radiation on cells.
Describe the physical factors that affect radiation response.
Describe the biological factors affect radiation response.
Evaluate the radiosensitivity of tissue and organs.
Describe the purpose and construction of dose-response relationship curves.
Identify the different types of dose-response relationship curves.
Describe the stages of acute radiation syndrome and the radiation dose ranges associated with each specific syndrome.
Describe local tissue effects following exposure to high doses of radiation and the dose ranges associated with each specific effect.
Explain the long-term effects associated with excessive radiation exposure.
Discuss the correlation between radiation exposure and malignancy.
Discuss embryo and fetal effects of radiation exposure.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement will include a combination of tests, quizzes, assignments, presentations and participation.
General Course Requirements and Recommendations
Students must receive a grade of "C" or better to remain in the Radiographer AAS Degree program.

RAD284 - Principles of Computed Tomography

Overview

Subject	Academic Department	School
Radiography Technician	Health, Education, and Human Services	Health & Human Services
Course Description		
This online course provides entry level radiography students with principles related to computed tomography (CT) imaging.		
Course Pre-requisite(s)		
RAD158 Radiographic Positioning II, RAD161 Imaging Equipment, RAD171 Principles of Exposure, RAD181 Fluoroscopy Studies, and RAD190 Clinical Education II		
Credit Hours		
1		

Contact Hours	
1	
Course Fee	Miscellaneous Department Fee
10	0
Academic Level	
Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL)	
No	

Goals, Topics, and Objectives

Core Course Topics
1. Historical Development, 2. Scanner Generations 3. Conventional and Helical Scanning 4. Components of the CT Imaging System 5. Display Console 6. Application of CT terminology 7. Image Reconstruction: Image Matrix, CT numbers, and Artifacts 8. Factors Affecting Image Quality 9. Data Storage Techniques 10. Radiation Protection 11. Diagnostic Applications 12. Contrast Media
Describe the components of the CT imaging system.
Differentiate between conventional and spiral/helical CT scanning.
Explain the function of collimators on CT.
List the computer data processing steps.
Name the functions of the array processor used for image reconstruction.
Define the term algorithm and explain its impact on image scan factors and reconstruction.
Define the terms raw data and image data.
Explain the difference between reconstructing and reformatting an image.
Describe the application of the following terms to CT: pixel, matrix, voxel, linear attenuation coefficient, CT/Hounsfield number, partial volume averaging, window width (ww) and window level (wl), spatial resolution, contrast resolution, noise, annotation, region of interest (ROI), and standard vs. volumetric data acquisition.
Name the common controls found on CT operator consoles and describe how and why each is used.
Analyze CT images for appearance of artifacts.
Explain how artifacts can be reduced or eliminated.
List and describe current data storage techniques used in CT.
Name the radiation protection devices that can be used to reduce patient dose in CT and describe the correct application of both.
Identify the types and applications of contrast media used in CT.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement will include a combination of tests, quizzes, assignments, presentations and participation.
General Course Requirements and Recommendations
Students must receive a grade of "C" or better to remain in the Radiographer AAS Degree program.

RAD286 - Registry Review

Overview

Subject Radiography Technician	Academic Department Health, Education, and Human Services	School Health & Human Services
-----------------------------------	--	-----------------------------------

Course Description
Provides a comprehensive review designed to prepare radiologic technology students for the American Registry of Radiologic Technologists (ARRT) certification examination. An orderly review based on the ARRT radiography content specifications is presented. Test preparation and test-taking strategies are also discussed.

Course Pre-requisite(s)
[RAD271 Digital Image Acquisition Mgt.](#), [RAD274 Principles Radiation Biology](#), and [RAD290 Advanced Clinical Education](#)

Credit Hours
2

Contact Hours
2

Course Fee 80	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Core Course Topics - ARRT Certification & Application Handbook - Test Taking Skills and Strategies - Introduction to Corectec Radiography Review Course - Patient Care: Patient Interactions and Management - Safety: Radiation Physics and Radiology - Image Production: Image Acquisition and Technical Evaluation, Equipment Operation and Quality - Procedures: Head, Spine and Pelvis; Thorax and Abdomen; Extremitities - Timed Mock Registry Examination - Exit Survey
Complete a thorough review of the following: patient care, safety, image production, and procedures.
State the content specifications of the ARRT Certification examination.
Explain the testing format used by the ARRT.
Discuss the importance of the ARRT exam and professional certification.
Discuss basic test preparation and test taking strategies.
Pass a timed mock registry exam with a score of 80%.
Assess student ARRT content category strengths and weaknesses in preparation for the ARRT exam.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Assessment of academic achievement will include a combination of tests, quizzes, assignments, presentations and participation. General Course Requirements and Recommendations Students must pass the exit exam given in this course with an 80% before they will be allowed to graduate from the Radiographer AAS Degree program.	
Grading Scale The grading scale is: 93-100% = A 85-92% = B 80-84% = C 73-79% = D 0-72% = E

RAD290 - Advanced Clinical Education

Overview

Subject Radiography Technician	Academic Department Health, Education, and Human Services	School Health & Human Services
-----------------------------------	--	-----------------------------------

Course Description
This is fifth in a sequence of structured, competency based clinical courses in concert with American Society of Radiologic Technologist (ASRT) curriculum and American Registry of Radiologic Technologists (ARRT) competencies. Course emphasizes headword including skull, facial bones, paranasal sinuses, and increasing technical proficiency in all previously covered radiographic procedures. Students will continue to develop trauma radiography skills and advanced mobile radiography skills.

Course Pre-requisite(s)
[RAD209 Intermediate Clinical Educatio](#), [RAD214 Pathology & Cross Sect Anatomy](#), [RAD228 Radiographic Procedures](#), [RAD267 Radiation Physics](#)

Credit Hours
3

Contact Hours
20

Course Fee 70	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Core Course Topics - Advanced Radiographic and Mobile Equipment - Advanced Trauma Radiography - Intermediate Pediatric Radiography - Advanced Skull, Sinus, and Facial Bone Radiography - Clinical management of Routine, Non-routine, Pediatric, Geriatric, and Trauma patients in the Imaging Department.
Apply radiation protection principles, practices and procedures.
Prepare the room and patient for a radiographic exam.
Obtain and record the proper medical history as mandated by the clinical site.
Assure the patients safety during the exam.
Utilize proper body mechanics when transferring patients.
Apply universal precautions in the clinical setting.
Align the x-ray tube and the image receptor accurately to capture the radiographic image.
Identify anatomy in the radiographs submitted for demonstration of competency.
Adopt pertinent rules regarding professionalism as mandated by the clinical site.
Maintain patient confidentiality.
Maintain competency in previously mastered examinations.
Complete Competency Tests on at least fifteen (15) examinations.
Complete Procedure Tests under the supervision of a Clinical Instructor to include mandible and sinuses.
Apply previously mastered clinical skills to non-routine patients.
Analyze, organize, and efficiently perform multiple radiographic examinations on a single patient.
Modify radiographic examinations for trauma patients.
Conduct trauma radiographic examinations with confidence and ease under indirect supervision.
Produce quality radiographic images with appropriate program exit level clinical competency.

Demonstrate clinical competency by completing a minimum of five (5) exit practical competency rechecks from the following categories: chest, abdomen, upper extremity, lower extremity, vertebral column, cranium, contrast examination, portable examination, and cystourethrography examination.
Demonstrate program exit level competency by successfully completing exit practical and written scenario tests.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement will include a combination of tests, quizzes, assignments, presentations and participation.
General Course Requirements and Recommendations
Students must receive a grade of "C" or better to remain in the Radiographer AAS Degree program.

Grading Scale
The grading scale is:

- 93-100% = A
- 85-92% = B
- 80-84% = C
- 73-79% = D
- 0-72% = E

RAD296 - Capstone Clinical Education

Overview

Subject Radiography Technician	Academic Department Health, Education, and Human Services	School Health & Human Services
Course Description This is sixth in a sequence of structured, competency based clinical courses emphasizing final mastery of all aspects of professional, entry level radiologic technology. Structured clinical experiences are offered in selected specialty rotations which may include Ultrasound, Computed Tomography, Magnetic Resonance Imaging, Radiation Therapy, Mammography, and Positron Emission Tomography.		
Course Pre-requisite(s) <u>RAD271 Digital Image Acquisition Mgt., RAD274 Principles Radiation Biology, RAD290 Advanced Clinical Education</u>		
Credit Hours 1.5		
Contact Hours 25		
Course Fee 0	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics
1. Advanced Radiographic and Mobile Equipment Manipulation
2. Advanced Radiographic Procedures
3. Clinical Management of Routine, Non-routine, Pediatric, Geriatric, and Trauma Patients in the Imaging Department
Apply radiation protection principles, practices, and procedures.
Prepare the room and patient for a radiographic exam.
Record the proper medical history as mandated by the clinical site.
Assure the patients safety during the exam.
Use proper body mechanics when transferring patients.
Use universal precautions in the clinical setting.
Align the x-ray tube and the image receptor accurately to capture the radiographic image.
Identify anatomy in the radiographs submitted for demonstration of competency.
Adopt pertinent rules regarding professionalism as mandated by the clinical site.

Maintain patient confidentiality.
Demonstrate continued competency in previously mastered examinations.
Explain the basic principles of the specialty imaging rotation chosen by student.
Demonstrate Competency in at least eight (8) examinations.
Apply previously mastered clinical skills to non-routine patients.
Analyze, organize, and perform efficient multiple radiographic examinations on a single patient.
Produce quality radiographic images with appropriate program exit level clinical competency.
Demonstrate clinical competency by completing a minimum of five (5) exit practical competency rechecks from the following nine categories: chest, abdomen, upper extremity, lower extremity, vertebral column, cranial examination, contrast examination, portable examination, and cysto examination.
Demonstrate program exit level clinical competency by successfully completing exit practical and written scenario test outs.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement will include a combination of tests, quizzes, assignments, presentations and participation.
General Course Requirements and Recommendations
Students must receive a grade of "C" or better to remain in the Radiographer AAS Degree program.

Grading Scale
The grading scale is:

REEN110 - Geothermal Sys & Water Furnace Tech

Overview

Subject Energy Technology	Academic Department Building Sciences	School Business, Entrepreneurship, PD
Course Description Introduces the topic of geothermal energy, identifies geothermal energy sources, and provides an overview of how geothermal energy is used. Emphasizes residential heating using ground source heat pump technology. Covers the installation of a geothermal furnace in a residential application including an initial survey of the home and property, sizing of the unit, and the choice of the type of loop system to use. Also covers installation and maintenance of a geothermal heating system. Access to a working water furnace system and to on campus geothermal wells is available for laboratory activities.		
Credit Hours 2		
Contact Hours 2		
Course Fee 40	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics
1. Introduction to Geothermal Energy.
2. Geothermal Energy Systems in use today.
3. Geothermal Power Generation.
4. Heat Pump Technology.
5. Geothermal Furnace Systems.
6. Site Location Survey for Water Furnace Installation
7. Choice and location of Water Loop.
8. Installation and testing of Loop System.
9. Water Furnace Heating Cycle.

10. Water Furnace Cooling Cycle.
11. Operation dnd Maintenance of a Water Furnace System.
12. Geothermal Energy's Effect on the Environment and Economy.

Define geothermal energy.

Describe how geothermal systems function.

Describe where geothermal energy is used worldwide.

Describe how water furnace systems function.

Define two types of loop systems used in water furnaces.

Perform a survey on a residential application for the installation of a water furnace.

Describe the steps in installation of a water furnace.

Demonstrate the typical operation and maintenance of a water furnace for heating and cooling.

Discuss how the use of geothermal energy will affect the environment and the economy.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

Methods for measuring achievement of objectives:

1. Tests will be given throughout the semester. Test scores represent 65% of the course grade.

2. Laboratory activities and performance exercises will be done where students will demonstrate an understanding of practical applications. These will make up 10% of the course grade.

3. A written final exam will be given which will represent 25% of the course grade.

REEN120 - Wind, Solar, and Fuel Cell Technology

Overview

Subject

Energy Technology

Academic Department

Building Sciences

School

Business, Entrepreneurship, PD

Course Description

Explores the theory of operation and the practical applications of solar thermal, solar photovoltaic, wind turbine, and fuel cell technologies. Discusses the benefits and drawbacks of alternative energy installations, the technical components of each system, and accommodating siting requirements for each type of installation. Principles of energy conversion, energy efficiency, and energy storage are also addressed.

Goals, Topics, and Objectives

Core Course Topics

1. Introduction to Renewable Energy Systems.

2. Passive solar heating systems.

3. Active solar heating systems / storage and use of solar energy.

4. Solar cells and solar photovoltaic systems / review of electrical systems.

5. Solar cells and solar photovoltaic systems.

6. Photovoltaic lab, set up tear down of photo cell system.

7. Wind systems and wind generation demonstration.

8. Wind system locations and installations.

9. Advantages and disadvantages of wind systems.

10. Fuel cell systems and theory of operation.

11. Fuel cell demonstration.

12. Fuel cell lab, set up, and operation of miniature fuel cell units.

13. Future of fuel cell applications, and automotive and residential.

14. Economics of renewable energy.

Differentiate between renewable energy and alternative energy.

Differentiate between passive and active solar systems.

Describe how photovoltaic systems function.

Describe how wind systems function.

Describe how fuel cell systems function.

Explain how fuel cell systems can be applied to automobiles.

Compare site feasibility of solar panels against wind turbines.

Examine how renewable energy will affect the environment and the economy.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

Methods for measuring achievement of objectives:

1. Tests will be given throughout the semester. Test scores represent 65% of the course grade.

2. Laboratory activities and performance exercises will be done where students will demonstrate an understanding of practical applications. These will make up 10% of the course grade.

REEN130 - Smart Home Control Technology

Overview

Subject

Energy Technology

Academic Department

Building Sciences

School

Business, Entrepreneurship, PD

Course Description

Examines both the advantages and the drawbacks of using smart home technology. Explores all of the options currently available in the different types of systems and technologies. Topics discussed include the economics of smart home technology, smart home technology and conservation of energy, and how smart home technology can improve standards of living. Demonstrations of the technology and laboratory exercises are included.

Goals, Topics, and Objectives

Core Course Topics

1. Overview of conservation techniques and economic savings using smart home technology.

2. Survey of available companies and products

3. Heating and AC Control

4. Lighting Control

5. Security and Alarm Systems

6. Entertainment Systems

7. Communication and Data Systems

8. Monitoring and Remote Control

9. Wireless Technology

10. Installation in new construction

11. Installation of smart home technologies during remodeling

12. Installation of smart home technologies in existing homes.

13. Local and national building codes governing smart home technology systems

14. Summary, smart home technologies conservation and substantial economic savings.

Define the term, "smart home technology."

Demonstrate how smart home technology can be integrated into a home.

Describe the various technologies available for use today.

Calculate how the use of smart home technology can conserve energy.

Describe how smart home technology can be used along with renewable energy sources such as solar energy systems.
Examine the economics of using smart home technology.
Evaluate how the use of smart home technology can affect the standard of living in a home.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Methods for measuring achievement of objectives:	
1. Tests will be given throughout the semester. Test scores represent 65% of the course grade.	
2. Laboratory activities and performance exercises will be done where students will demonstrate an understanding of practical applications. These will make up 10% of the course grade.	
3. A written final exam will be given which will represent 25% of the course grade.	
Satisfies Honors Requirement No	Satisfies Wellness Requirement No

REEN140 - Cogeneration and Backup Power

Overview

Subject Energy Technology	Academic Department Building Sciences	School Business, Entrepreneurshp, PD
Course Description Introduces the topics of cogeneration and backup power for use in a residence or business. Explores the various types of both backup power units and uninterruptible power units available today. Addresses site survey, planning, cost, and the installation and maintenance of the units.		
Credit Hours 2		
Contact Hours 2		
Course Fee 40	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics
1. Introduction to cogeneration of power
2. Size and scale of cogeneration systems
3. Economics of power cogeneration
4. Using renewable energy sources for cogeneration
5. Need for uninterruptible power supplies
6. Types of UPS systems
7. Batteries and battery maintenance
8. Maintenance of UPS systems
9. National electrical code requirements for UPS and backup systems
10. Survey and planning for installing a residential backup generator
11. Installation of a residential backup generator system
12. Installation of a residential backup generator system
13. Maintenance of a residential backup generator system
14. Locations of backup power systems
Define the term cogeneration of power.
Describe both the advantages and disadvantages of power cogeneration to either a home or business settings.
Examine the economics of cogeneration power.
Describe how cogeneration of power with sources of renewable energy could affect the environment.
Describe applications where uninterruptible power sources are needed.
Survey a residential location for the feasibility of installation of a backup power unit including sizing and location of the unit.
Describe the steps in installation of a backup power unit.
Demonstrate the typical maintenance of a backup power unit.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Methods for measuring achievement of objectives:	
1. Tests will be given throughout the semester. Test scores represent 65% of the course grade.	
2. Laboratory activities and performance exercises will be done where students will demonstrate an understanding of practical applications. These will make up 10% of the course grade.	
3. A written final exam will be given which will represent 25% of the course grade.

REEN160 - Energy Auditing/Weatherization

Overview

Subject Energy Technology	Academic Department Building Sciences	School Business, Entrepreneurship, PD
Course Description For students seeking to become BPI certified residential energy auditors or to understand the principles of energy auditing. Includes training in the principles of energy transfer, building envelopes, energy auditing, air leakage, insulation, windows and doors, heating systems, cooling systems, indoor air quality, lighting, appliances, and water heating. Students will gain the skills required to perform building inspections and make cost effective recommendations for improving energy efficiency. At the conclusion of this class students will be able to sit for the Building Performance Institute (BPI) theory written test for Building Analyst certification. REEN 161 is the next class for BPI preparation and field certification class. The candidate must pass the REEN 160 class (first twelve weeks of one semester) and BPI written theory test to proceed to REEN 161 (last four weeks of the same semester). Recommend co-requisite of REEN 161.		
Credit Hours 3		
Contact Hours 3		
Course Fee 240	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics
1. Introduction to residential energy.
2. Energy and building shell.
3. Air leakage/Insulation.
4. Windows and doors.
5. Heating and cooling.
6. Lighting and appliances.
7. Water heating.
8. Health and safety.
Conduct comprehensive inspections of the energy efficiency of homes.
Analyze date and prepare written reports recommending cost-effective measures for energy improvements.
Describe basic knowledge of construction related to residential dwellings, ability to work with basic tools, heating test equipment, and a blower door.
Demonstrate an understanding of energy use, conservation, and management.
Educate homeowners on energy conservation and sustainability practices.
Describe knowledge of local and state building codes.
Analyze lighting data in order to make money saving calculations.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
1. Tests will be given throughout the semester. Test scores represent 20% of the course grade.	
2. Class participation will be 20% of the grade. Presentations will be required.	
3. Final exam will be 25% of the grade.	
4. Attendance accounts for 10% of the final grade.	
5. Field Audits account for 25% of the final grade.	
Satisfies Honors Requirement No	Satisfies Wellness Requirement No

REEN161 - Energy Aud/Weatherization Certificat Lab

Overview

Subject Energy Technology	Academic Department Building Sciences	School Business, Entrepreneurship, PD
Course Description This certification lab class allows students to apply in the field the concepts introduced in REEN 160. Students will learn industry-defined standards, basic energy efficiency improvements, how to evaluate energy consumption, and how to calculate energy costs. Other topics include how to use industry tools to measure energy consumption in residential settings and preparation for the Building Performance Institute (BPI) Building Analyst field exam. Along with the written exam offered in REEN 160, the field exam offered in REEN 161 enables students to complete the BPI certification process. It is strongly recommended that s student pass REEN 160 and the BPI written theory test first before proceeding with REEN 161.		
Course Pre-requisite(s) REEN160 Energy Auditing/Weatherization	Course Co-requisite(s) REEN160 Energy Auditing/Weatherization	

Credit Hours

1

Contact Hours

1

Course Fee 240	Miscellaneous Department Fee 0

Goals, Topics, and Objectives

Core Course Topics

1. Field Certification Preparation Lab - Energy Use and Building Shell
2. Field Certification Preparation Lab - Air Leakage/Insulation
3. Field Certification Preparation Lab - Windows and Doors
4. Field Certification Preparation Lab - Heating and Cooling
5. Field Certification Preparation Lab- Lighting and Appliances
6. Field Certification Preparation Lab - Water Heating
7. Field Certification Preparation Lab - Health and Safety

Apply course information in order to pass BPI field certification exam.
Apply concepts of energy conservation related to residential buildings.
Formulate a plan to help consumers resolve heating, cooling and air leakage problems.
Evaluate methods for reducing energy costs and improving building efficiency.
Analyze the overall condition and efficiency of heating and cooling systems.
Analyze the overall efficiency of a home and identify primary areas of air leakage in walls, ceilings and foundations.
Demonstrate energy savings through sealed windows, doors and other openings in the a residential home including fireplaces, attic hatches and electrical outlets.
Prepare a plan for addressing future upgrades to the building including an economic analysis of payback periods for each planned upgrade.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

Student academic achievement will be assessed via tests, class participation, final field test exam, and written field audits. All other assessment of student achievement is left up to the discretion of the individual instructors/test proctors.

Satisfies Honors Requirement No	Satisfies Wellness Requirement No

REEN170 - Battery Technologies

Overview

Subject Energy Technology	Academic Department Building Sciences	School Business, Entrepreneurship, PD
Course Description Covers the development of battery technology over the years. Focuses on applications of emerging technology. Topics include, but are not limited to, battery construction, cell characteristics, electric data, energy density, capacity retention, and cycle life of batteries. Also includes fundamental formulations and design aspects in secondary batteries used in electric propulsion. Provides overview of battery technology including acid, nickel		

metal hydride, and lithium ion cells with their applications for use in hybrid and electric vehicles. Discusses how to evaluate storage battery technologies, simple voltaic cells with aqueous electrolytes, primary non-rechargeable batteries, and secondary rechargeable batteries. Course work examines developments in stationary and new propulsion systems for hybrid, plug-in hybrid, and electric vehicles.

Credit Hours

Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Course Goals

This course develops student's knowledge in the advancements of battery technologies for the purpose of encouraging students to pursue opportunities and achievements in the battery technology field.

Core Course Topics

1. Concepts of cells and batteries.
2. Chemical techniques and electrode processes.
3. Concepts in the standardization of batteries.
4. General characteristics and applications of primary batteries.
5. Secondary battery purpose, performance factors, and functions.
6. Power and energy for electric, hybrid, and plug-in vehicle propulsion.
7. Performance, design, and functionality considerations.
8. New developments, innovative designs, chemical processes, and material properties.
9. Battery selection for consumer electronics.

Distinguish and recognize the components of batteries, the classification for types of batteries, and the applications for determining battery usage.
Describe the conversions of chemical energy into electrical energy.
Illustrate battery characteristics, capacity, and energy output that affect battery performance.
Examine regulatory and safety standards and performance factors involved with battery standardization.
Compare design and characteristics of primary batteries, discrete batteries, rechargeable batteries, and secondary batteries.
Categorize the various types of battery electrodes to identify the chemical operation found in the batteries.
Evaluate key criteria in selecting a battery for consumer applications incorporating battery usage, design, and applications.
Explain vehicle integration of hybrid electric vehicles (HEV) batteries and energy storage technologies for hybrid vehicles.
Compare HEV battery performances.
Evaluate future battery methodologies, performance factors, and potential applications.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

- Tests 20%
- Class participation 20%
- Attendance 20%
- Presentations 20%
- Final exam 20%

REEN180 - Hydropower

Overview

Subject Energy Technology	Academic Department Building Sciences	School Business, Entrepreneurship, PD
------------------------------	--	--

Course Description

This course examines hydropower as a major component of the world renewable energy mix. This course provides a comprehensive overview of the technical application and social, economic, and environmental implications of hydropower as a method of energy generation. Topics include hydropower plant types, development of new hydropower facilities, retrofitting obsolete power stations, and the role of small scale hydropower.

Credit Hours

Goals, Topics, and Objectives

Core Course Topics

1. Hydropower Development
2. Benefits and Highlights of Hydropower
3. Potential of Hydropower
4. Hydropower and the Environment
5. Hydropower Stations
6. Construction of Hydropower Plants
7. Hydropower Research and Development
8. Economic Opportunities of Hydropower
9. New Hydropower Installations
10. Old Hydropower Electric Systems and Retrofitting Dams to Produce Electricity.

Explain the development of hydro-power.

Examine the benefits of hydro-power.

Evaluate the potential of hydro-power.

Compare and contrast hydro-power locations to the surrounding environment.

Identify the types of hydro-power stations, old and new.

Explain the importance of an adequate water supply.

Recognize the factors related to the construction and assembly of hydro-power plants.

Describe new designs and mechanical concepts in hydro-power.

Evaluate economic and environmental factors related to hydro-power production, new systems and retrofits.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

1. Tests 30%
2. class participation 20%
3. attendance 10%

RTH100 - Principles of Respiratory Care

Overview

Subject	Academic Department	School
Respiratory Therapy	Health, Education, and Human Services	Health & Human Services

Course Description

An in-depth study of the cardiopulmonary system from fetal development through old age in health and disease. Topics include Respiratory Care history, cardiopulmonary anatomy and physiology, the effects of aging on the pulmonary system, basic pulmonary assessment and an introduction to basic pulmonary diseases

Course Pre-requisite(s)
Admission to the [Respiratory Therapist AAS Degree](#) Program

Credit Hours

Goals, Topics, and Objectives

Core Course Topics

1. History of Respiratory Care
 - Explain the significant developments leading to the current practice of respiratory care in North America.
2. Profession of Respiratory Therapy
 - Identify the national and state professional organizations for respiratory care.
 - Discuss the accreditation, credentialing and medical direction aspects of the respiratory care profession.
 - Discuss the traditional and non-traditional role of Respiratory Therapists in health care.
3. Gross Anatomy of the Cardiopulmonary System
 - Describe the gross anatomy of the cardio-respiratory system.
4. Anatomy & Physiology of the Respiratory System
 - Describe the histology of the respiratory system.
 - Compare the roles of the diaphragm, accessory muscles and abdominal muscles during the respiratory cycle.
 - Describe the primary and secondary functions of the major components of the respiratory system.
5. Anatomy & Physiology of the Lung Acinus
6. Physiology of Ventilation
 - Differentiate between the pressures and pressure gradients required to create airflow during the respiratory cycle.
 - Describe the role of airway resistance and respiratory system compliance during the respiratory cycle.
7. Control of Ventilation
 - Explain the role of the nervous system in the control of ventilation
 - Describe the role of the central and peripheral chemoreceptors in the regulation of breathing.
 - Differentiate the regulation of breathing in individuals with chronic hypercapnia versus healthy persons.
8. Introduction to Respiratory Disease
 - List the major components of a health history.
9. Signs and Symptoms of Respiratory Disease
 - Evaluate the signs and symptoms of patient values in relation to respiratory disease.
10. Laboratory Tests in Respiratory Disease
 - Evaluate laboratory values in relation to respiratory disease.
11. Basic Assessment of the Pulmonary Patient
 - Identify and describe the components of the chest physical examination.
 - Evaluate clinical information of a patient's overall cardiopulmonary status by inspection, palpation, and auscultation.
 - List and discuss the diagnostic tests relevant to the development of a respiratory care plan.
 - Justify the use of low FIO2's in patients with chronic hypercapnia.
12. Chronic Obstructive Pulmonary Disease
 - Define, identify risk factors, and describe pathophysiology of COPD.
 - Describe the anatomical alterations and clinical manifestations of COPD.
13. Asthma
 - Define, identify risk factors, and describe pathophysiology of asthma.
 - Describe the anatomical alterations and clinical manifestations of asthma
14. Miscellaneous Respiratory Diseases in the Adult
 - Describe the effects of aging on the components of the respiratory system.

Explain the significant developments leading to the current practice of respiratory care in North America.

Identify the national and state professional organizations for respiratory care.

Discuss the accreditation, credentialing and medical direction aspects of the respiratory care profession.

Discuss the traditional and non-traditional role of Respiratory Therapists in health care.

Describe the gross anatomy of the cardio-respiratory system.

Describe the histology of the respiratory system.

Compare the roles of the diaphragm, accessory muscles and abdominal muscles during the respiratory cycle.

Describe the primary and secondary functions of the major components of the respiratory system.

Differentiate between the pressures and pressure gradients required to create airflow during the respiratory cycle.

Describe the role of airway resistance and respiratory system compliance during the respiratory cycle.

Explain the role of the nervous system in the control of ventilation
Describe the role of the central and peripheral chemoreceptors in the regulation of breathing.
Differentiate the regulation of breathing in individuals with chronic hypercapnia versus healthy persons.
List the major components of a health history.
Evaluate the signs and symptoms of patient values in relation to respiratory disease.
Evaluate laboratory values in relation to respiratory disease.
Identify and describe the components of the chest physical examination.
Evaluate clinical information of a patients overall cardiopulmonary status by inspection, palpation, and auscultation.
List and discuss the diagnostic tests relevant to the development of a respiratory care plan.
Justify the use of low FiO2s in patients with chronic hypercapnia.
Define, identify risk factors, and describe pathophysiology of COPD.
Describe the anatomical alterations and clinical manifestations of COPD.
Define, identify risk factors, and describe pathophysiology of asthma.
Describe the anatomical alterations and clinical manifestations of asthma
Describe the effects of aging on the components of the respiratory system.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment will be based on written exams and one comprehensive final exam.
General Course Requirements and Recommendations
Students must pass this course with a "C" grade or higher to remain in the [Respiratory Therapist AAS Degree Program](#).

Grading Scale
Student grades will be assigned using the following scale:

- 93-100% = A
- 90-92% = A-
- 87-89% = B+
- 83-86% = B
- 80-82% = B-
- 77-79% = C+
- 75-76% = C
- 72-74% = D+
- 60-71% = D
- 59% and below = E

RTH130 - Therapeutic Procedures

Overview

Subject	Academic Department	School
Respiratory Therapy	Health, Education, and Human Services	Health & Human Services

Course Description
This course provides instruction in beginning therapeutic procedures utilized by the respiratory therapist. Course content includes basic patient and pulmonary assessment, pulse oximetry, basic gas laws, medical gas administration, oxygen therapy delivery systems, and lung expansion techniques. Students practice these procedures in a guided laboratory setting. Course includes 2 hours of lecture and 3 hours of lab each week.

Course Pre-requisite(s)
Admission to the [Respiratory Therapist AAS Degree Program](#)

Credit Hours
4

Contact Hours
6

Course Fee 100	Miscellaneous Department Fee 0

Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

- Core Course Topics
- Vital Signs
 - Describe the components that make up a patient's vital signs.
 - List the normal values for each of the vital signs and common causes of deviation from normal in the adult.
 - Demonstrate the techniques for obtaining vital signs.
 - Discuss the operating principles, clinical indications, and limitations of pulse oximetry.
 - Basic Pulmonary Assessment
 - Identify the major components of a health history.
 - Define the four major chest examination techniques.
 - Define the terms used to describe breathing patterns during inspection of the chest.
 - Demonstrate the measurement and calculation of the components of basic pulmonary assessment including lung volumes, lung capacities, minute ventilation, peak expiratory flowrates, and negative inspiratory force.
 - Pressure/Volume/Temperature/Flow
 - Contrast solids, liquids, and gases.
 - Compare and contrast common systems of weights and measurements.
 - Describe Dalton's law of partial pressures.
 - Identify combined gas law, Boyle's law, Charles' law, and Gay-Lussac's law.
 - Describe the physical properties, chemical symbols, and uses of oxygen, air, carbon dioxide, helium, nitric oxide, nitrous oxide, and nitrogen.
 - Medical Gas Therapy
 - Compare and contrast gaseous and liquid storage methods for medical gases.
 - Discuss the established safety systems for the various equipment connections to ensure the delivery of a specific medical gas.
 - Calculate the duration of flow for oxygen from a gas and liquid storage system.
 - Describe the design, use, and troubleshooting of various bulk gas supply systems.
 - Describe the operation of reducing valves, flow measuring devices and regulators.
 - Compare low-flow and high-flow oxygen delivery systems.
 - Oxygen Therapy
 - Describe the various oxygen delivery devices and their use.
 - Compare and contrast the various oxygen delivery devices and when to apply each type of device.
 - Oxygen Analyzers
 - Describe the principles of operation and indication for the use of oxygen analyzers.
 - Humidity and Aerosol
 - Compare the advantages and disadvantages of humidifiers for patient use during oxygen delivery.
 - Describe the operation and utilization of bland aerosol delivery systems.
 - Given a variety of case studies, recommend the appropriate oxygen delivery device and humidity/aerosol deliver system for patient use.
 - Home Oxygen Use
 - Describe the types and use of home oxygen systems.
 - Lung Expansion Techniques
 - Describe cough, deep breathing, and incentive spirometry for the purpose of lung hyperexpansion.
 - Demonstrate the techniques of deep breathing and incentive spirometry.

RTH160 - Respiratory Therapy Pharmacology

Overview

Subject Respiratory Therapy	Academic Department Health, Education, and Human Services	School Health & Human Services
Course Description This course focuses on the appropriate and effective administration of respiratory care medications, including an overview of pharmacology, terminology, routes, techniques of administration, and calculation of dosages. The National Asthma Education and Prevention Program (NAEPP) Guidelines for Asthma Management are emphasized.		
Course Pre-requisite(s) RTH100 Principles of Respiratory Care and RTH130 Therapeutic Procedures both with a C or better		
Credit Hours 2		
Contact Hours 2		
Course Fee 0	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics	
1. Basic Pharmacological Principles	Describe the mechanisms of action, indications, contraindications, side effects, strength, dosage, and route of administration for the following respiratory pharmacological agents: bronchodilators (sympathomimetics, parasympatholytics, and methylxanthines), anti-asthmatic agents (mast cell stabilizers and leukotriene modifiers), anti-inflammatory agents, anti-microbial agents, mucolytics.
2. Bronchodilators	- Describe the components of Bronchodilator Protocols. - Utilize a Bronchodilator Protocol to select a correct treatment regimen for a variety of case studies.
3. Calculation of Drug Dosages	Calculate drug dosages from solutions whose concentrations are expressed as % strengths.
4. Aerosol Delivery Devices	- Compare and contrast jet nebulizers, ultrasonic nebulizers, pressurized metered dose inhalers, and dry powder inhalers for aerosol drug administration. - Discuss issues involved in the selection of a device for aerosol delivery.
5. Inhalation Pharmacology	- Describe the factors that effect aerosol deposition in the lungs. - Discuss the indications, complications, and hazards of aerosol drug therapy. - Distinguish between spacers and valved holding chambers.
6. Pharmacological Management of Asthma	- Discuss the triggers, pathogenesis, clinical manifestations, and treatment of asthma. - Discuss asthma management according to the NAEPP Guidelines. - Determine the best stepwise approach to manage a patient's asthma for a variety of case studies.
7. NAEPP Asthma Management Guidelines	- Discuss asthma management according to the NAEPP Guidelines. - Determine the best stepwise approach to manage a patient's asthma for a variety of case studies.
8. Bronchodilator Protocol	- Describe the components of Bronchodilator Protocols. - Utilize a Bronchodilator Protocol to select a correct treatment regimen for a variety of case studies.
9. Ultrasonic Therapy	Describe ultrasonic nebulizers and their action
10. Mucolytics	Describe mucolytics and their action
11. Case Studies	

Describe the mechanisms of action, indications, contraindications, side effects, strength, dosage, and route of administration for the following respiratory pharmacological agents: bronchodilators (sympathomimetics, parasympatholytics, and methylxanthines), anti-asthmatic agents (mast cell stabilizers and leukotriene modifiers), anti-inflammatory agents, anti-microbial agents, mucolytics.
Describe the components of Bronchodilator Protocols.
Utilize a Bronchodilator Protocol to select a correct treatment regimen for a variety of case studies.
Calculate drug dosages from solutions whose concentrations are expressed as % strengths.
Compare and contrast jet nebulizers, ultrasonic nebulizers, pressurized metered dose inhalers, and dry powder inhalers for aerosol drug administration.
Discuss issues involved in the selection of a device for aerosol delivery.
Describe the factors that effect aerosol deposition in the lungs.

Discuss the indications, complications, and hazards of aerosol drug therapy.
Distinguish between spacers and valved holding chambers.
Discuss the triggers, pathogenesis, clinical manifestations, and treatment of asthma.
Discuss asthma management according to the NAEPP Guidelines.
Determine the best stepwise approach to manage a patients asthma for a variety of case studies.
Describe ultrasonic nebulizers and their action
Describe mucolytics and their action

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment will be based on quizzes and assignments, & written exams, and a comprehensive final exam.
General Course Requirements and Recommendations
Students must pass this course with a "C" or better to remain in the Respiratory Therapist AAS Degree program.

Goals, Topics, and Objectives

Core Course Topics
1. Basic Life Support for the Healthcare Provider Demonstrate competency in all course skill requirements for BLS for Healthcare Providers in accordance with the American Heart Association.
2. Pharyngeal and Artificial Airways Describe the structure, function, clinical indications, hazards and care of patients with adjunct artificial airways.
3. Suctioning - Describe the assessment process for establishing the need for suctioning. - Discuss the indications, complications, and hazards of the various suctioning techniques. - Demonstrate the procedures for performing each suctioning technique.
4. Resuscitation Describe the selection, function, use and care of resuscitation equipment including resuscitation bags.
5. Bronchial Hygiene Therapy Describe the assessment process for bronchial hygiene therapy.

- Discuss the indications, complications, and hazards of each bronchial hygiene therapy technique.
 - Demonstrate the procedures for performing each bronchial hygiene therapy technique.
 - Describe the components of Bronchial Hygiene Protocols.
 - Utilize a Bronchial Hygiene Protocol to develop a correct treatment regimen for a variety of case studies.
6. Airway Management
 - Discuss the indications for artificial airways.
7. Intubation and Tracheotomy
 - Demonstrate the procedures for nasal and oral intubation.
 - Describe the procedure of tracheotomy.
8. Endotracheal and Tracheostomy Tubes
 - Describe the physical aspects, indications, hazards and complications of endotracheal and tracheostomy tubes.
9. Bronchoscopy and BAL
 - Describe the indications, complication and hazards of bronchoscopy procedures.
 - Discuss bronchoscopy techniques and BAL (Bronchoalveolar lavage).
10. Lung Expansion Techniques
 - Discuss the indications, complications and hazards of each lung expansion technique.
 - Demonstrate the procedures for performing each lung expansion technique.
 - Describe the components of Lung Expansion Protocols.
 - Utilize Lung Expansion Protocol to develop a correct treatment regimen for a variety of case studies.
11. Disease States of the Airway
 - Describe the anatomic alterations of the lungs caused by secretion producing disorders.
 - Explain the major pathophysiologic mechanisms activated throughout the respiratory system as a result of the anatomic alterations in secretion producing disorders.
 - Identify the common clinical manifestations that develop as a result of the anatomic alterations and pathophysiologic changes in secretion producing disorders.

Demonstrate competency in all course skill requirements for BLS for Healthcare Providers in accordance with the American Heart Association.
Describe the structure, function, clinical indications, hazards and care of patients with adjunct artificial airways.
Describe the assessment process for establishing the need for suctioning.
Discuss the indications, complications, and hazards of the various suctioning techniques.
Demonstrate the procedures for performing each suctioning technique.
Describe the selection, function, use and care of resuscitation equipment including resuscitation bags.
Describe the assessment process for bronchial hygiene therapy.
Discuss the indications, complications, and hazards of each bronchial hygiene therapy technique.
Demonstrate the procedures for performing each bronchial hygiene therapy technique.
Describe the components of Bronchial Hygiene Protocols.
Utilize a Bronchial Hygiene Protocol to develop a correct treatment regimen for a variety of case studies.
Discuss the indications for artificial airways.
Demonstrate the procedures for nasal and oral intubation.
Describe the procedure of tracheotomy.
Describe the physical aspects, indications, hazards and complications of endotracheal and tracheostomy tubes.
Describe the indications, complication and hazards of bronchoscopy procedures.
Discuss bronchoscopy techniques and BAL (Bronchoalveolar lavage).
Discuss the indications, complications and hazards of each lung expansion technique.
Demonstrate the procedures for performing each lung expansion technique.

Describe the components of Lung Expansion Protocols.
Utilize Lung Expansion Protocol to develop a correct treatment regimen for a variety of case studies.
Describe the anatomic alterations of the lungs caused by secretion producing disorders.
Explain the major pathophysiologic mechanisms activated throughout the respiratory system as a result of the anatomic alterations in secretion producing disorders.
Identify the common clinical manifestations that develop as a result of the anatomic alterations and pathophysiologic changes in secretion producing disorders.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Assessment of academic achievement will include performance evaluations, worksheets and homework assignments, course exams, lab practical exams, and a final exam.	
Grading Scale Student grades will be assigned using the following scale:	
93-100% = A 90-92% = A- 87-89% = B+ 83-86% = B 80-82% = B- 77-79% = C+ 75-76% = C 72-74% = D+ 60-71% = D 59% and below = E	
Texts To be determined by program faculty.

RTH180 - RT Clinical Sciences

Overview

Subject Respiratory Therapy	Academic Department Health, Education, and Human Services	School Health & Human Services
Course Description This course focuses on the clinical application of science to the practice of respiratory care. Topics include oxygenation, acid-base balance, ventilation in health and disease, basic microbiology, common microbial pathogens seen with pulmonary infection and the physical principles of spontaneous and mechanical ventilation. Emphasis is placed on blood gas interpretation, capnography, arterial puncture techniques, and disinfection and sterilization of respiratory care equipment.		
Course Pre-requisite(s) <u>RTH100 Principles of Respiratory Care</u> and <u>RTH130 Therapeutic Procedures</u> both with a C or better		
Credit Hours 3		
Contact Hours 3		
Course Fee 0	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics	
1. Oxygenation	- Explain the physiological basis of oxygenation and ventilation. - Calculate oxygen content for arterial, venous and pulmonary capillary blood. - Describe the methods of oxygen transport. - Explain the significance and factors that affect the oxygen dissociation curve. - Describe the methods used to measure oxygenation. - Differentiate between shunts and deadspace.
2. Oxygen & CO2 Transportation	- Calculate oxygen content for arterial, venous and pulmonary capillary blood. - Describe the methods of oxygen transport. - Describe the methods of CO2 transport.
3. Acid-Base Homeostasis	Explain the principles relevant to acid-base balance in respiratory care.
4. Blood Gas Classification	Discuss the blood gas parameters that measure ventilation.

▫ Interpret blood gas results, including oxygenation and acid/base parameters. ▫ Describe the indices of oxygenation and ventilation.
5. Obtaining ABG's ▫ Describe the correct procedure for obtaining arterial blood samples.
6. Blood Gas Electrodes ▫ Describe the various blood gas electrodes and how they work.
7. Non-Invasive Monitoring of Oxygenation and Ventilation ▫ Describe the various techniques for non-invasive monitoring of oxygenation and ventilation.
8. Basic Microbiology ▫ Describe the major organisms causing community-acquired, nosocomial, and ventilator-associated pneumonias. ▫ Explain the different types of interactions that occur between microorganisms and the human body.
9. Microbial Pathogens in Pulmonary Disease ▫ Describe how the human body defends itself against pathogenic microorganisms.
10. Sterilization & Disinfection ▫ Describe the various sterilization & disinfection techniques.
11. Physics of Ventilation ▫ Use the Equation of Motion to describe patient-ventilator interaction in mechanical ventilation.
Explain the physiological basis of oxygenation and ventilation.
Calculate oxygen content for arterial, venous and pulmonary capillary blood.
Describe the methods of oxygen transport.
Explain the significance and factors that affect the oxygen dissociation curve.
Describe the methods used to measure oxygenation.
Differentiate between shunts and deadspace.
Describe the methods of CO2 transport.
Explain the principles relevant to acid-base balance in respiratory care.
Discuss the blood gas parameters that measure ventilation.
Interpret blood gas results, including oxygenation and acid/base parameters.
Describe the indices of oxygenation and ventilation.
Describe the correct procedure for obtaining arterial blood samples.
Describe the various blood gas electrodes and how they work.
Describe the various techniques for non-invasive monitoring of oxygenation and ventilation.
Describe the major organisms causing community-acquired, nosocomial, and ventilator-associated pneumonias.
Explain the different types of interactions that occur between microorganisms and the human body
Describe how the human body defends itself against pathogenic microorganisms.
Describe the various sterilization & disinfection techniques.
Use the Equation of Motion to describe patient-ventilator interaction in mechanical ventilation.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Assessment will be based on assignments, quizzes, exams and a final exam.	
General Course Requirements and Recommendations Students must pass this course with a "C" or better to remain in the Respiratory Therapist AAS Degree Program .	
Grading Scale Student grades will be assigned using the following scale:	
93-100% = A 90-92% = A- 87-89% = B+	

- 83-86% = B
- 80-82% = B-
- 77-79% = C+
- 75-76% = C
- 72-74% = D+
- 60-71% = D
- 59% and below = E

RTH195 - Introduction to Clinical Therapeutics

Overview

Subject Respiratory Therapy	Academic Department Health, Education, and Human Services	School Health & Human Services
--------------------------------	--	-----------------------------------

Course Description
Selected experience in health care facilities for clinical practice with oxygen delivery systems and basic patient assessment techniques.

Course Pre-requisite(s)
[RTH100 Principles of Respiratory Care](#) and [RTH130 Therapeutic Procedures](#) both with a grade of C or better

Credit Hours
1.5

Contact Hours
16

Course Fee 75	Miscellaneous Department Fee 0
------------------	-----------------------------------

Academic Level
Undergraduate

Eligible for Credit for Prior College Level Learning (CPCLL)
No

Goals, Topics, and Objectives

- Core Course Topics
- Standard Precautions
 - Infection Control
 - Health Insurance Portability and Accountability Act (HIPAA)
 - Basic Patient Assessment
 - Medical Records
 - Oxygen Therapy

Describe standard precautions required in the patient care setting.

Describe infection control procedures required in the patient care setting.

Utilize standard precautions and infection control procedures in the clinical setting.

Delineate Health Insurance Portability and Accountability Act (HIPAA) guidelines used in the patient care setting.

Demonstrate compliance with the Health Insurance Portability and Accountability Act (HIPAA) guidelines when dealing with patients and their medical records in the health care setting.

Demonstrate appropriate professional behaviors when dealing with physicians, hospital staff, fellow students, patients, and patient families.

Assess a patients medical record to extract pertinent information.

Correlate learned theory and techniques to direct patient care included in an oxygen rounds assignment. (i.e. indications for oxygen therapy, equipment, monitoring patients on oxygen, etc.)

Obtain accurate measurements of pulse, pulse oximetry, and respiratory rate utilizing correct technique.

Obtain basic patient assessment findings.

Recommend oxygen therapy changes based on findings of basic patient assessment.

Communicate verbally in language appropriate to patients and professional staff.

Communicate appropriately and accurately in written form in appropriate notes and reports.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Written documentation, observation of clinical practice, weekly clinical logs, shared feedback forms, physician interaction reports, affective final evaluation, and clinical competency evaluations are used to assess attainment of objectives in the area of knowledge, skills, and affective behaviors.

General Course Requirements and Recommendations
Students must pass this course with a "C" or better to remain in the [Respiratory Therapist AAS Degree](#) program.

Grading Scale
Student grades will be assigned using the following scale:

- 93-100% = A
- 90-92% = A-
- 87-89% = B+
- 83-86% = B
- 80-82% = B-

RTH210 - Ventilator Management 1

Overview

Subject Respiratory Therapy	Academic Department Health, Education, and Human Services	School Health & Human Services
--------------------------------	--	-----------------------------------

Course Description
A study of the theories, techniques, and equipment involved in the initiation, maintenance, and discontinuation of mechanical ventilation in the adult patient. Laboratory experiences with a variety of adult mechanical ventilators.

Course Pre-requisite(s)
[RTH160 Resp Therapy Pharmacology](#), [RTH170 Therapeutic Procedures II](#), [RTH180 RT Clinical Sciences](#), [RTH195 Intro to Clinical Therapeutics](#) all with a C or better

Credit Hours
4

Contact Hours
6

Course Fee 75	Miscellaneous Department Fee 0

Goals, Topics, and Objectives

- Core Course Topics
- Principles of Mechanical Ventilation
 - Theory of Mechanical Ventilation
 - Components of the Ventilator Circuit
 - Compliance and Resistance
 - Modes of Ventilation: Indications and Changing Modes
 - Initiation of Ventilatory Support
 - Initial Ventilator Settings in Volume and Pressure Targeted Ventilation
 - Ventilator Check-Out Procedure
 - Patient Ventilator System Monitoring
 - Recommending Parameter Changes during Mechanical Ventilation
 - Effects and Complications of Mechanical Ventilation
 - Discontinuation and Weaning from Mechanical Ventilation

Describe the normal mechanics by which spontaneous ventilation occurs.

Describe the mechanism of positive pressure ventilation and its effect on body systems.

Discuss the hazards associated with positive pressure ventilation, especially barotrauma and volutrauma.

Compare and contrast volume and pressure targeted/control ventilation.

Discuss the traditional modes of ventilation, each of their uses, advantages and disadvantages.

Identify the criteria to establish the need for mechanical ventilation.
Describe the use of Positive End Expiratory Pressure/Continuous Positive Airway Pressure (PEEP/CPAP) as methods to improve oxygenation.
Discuss the use of patient assessment to improve ventilation.
Discuss the ventilatory techniques and methods used to improve ventilation.
Discuss the appropriate use and setting of alarms in the patient ventilator system.
Explain the methods available to effectively monitor patients on life support.
Identify the waveform patterns utilized in mechanical ventilation.
Describe the information and troubleshooting capabilities of waveform patterns.
Demonstrate the operation of commonly utilized adult mechanical ventilators.
Set-up and demonstrate initial settings, parameter changes and troubleshooting capabilities with mechanical ventilation.
Discuss the use of non-invasive positive pressure ventilation.
Recommend initial ventilator settings and ventilator parameter changes given case studies.
Discuss the primary factors to consider when evaluating a patient for ventilator weaning.
Describe the methods available in the weaning process.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment will be based on completion of assignments, lab practicals, course exams, lab and a comprehensive final exam.

General Course Requirements and Recommendations
Students must pass this course with a "C" or better to remain in the [Respiratory Therapist AAS Degree Program](#).

Grading Scale
Student grades will be assigned using the following scale:

- 93-100% = A
- 90-92% = A-
- 87-89% = B+
- 83-86% = B
- 80-82% = B-
- 77-79% = C+
- 75-76% = C

RTH220 - Respiratory Care Neonates & Pediatrics

Overview

Subject Respiratory Therapy	Academic Department Health, Education, and Human Services	School Health & Human Services
---------------------------------------	---	--

Course Description
Introduces the principles of respiratory care for the neonatal or pediatric patient with cardiopulmonary disease or abnormalities. Covers anatomy, physiology, pathophysiology, and assessment of the neonatal and pediatric patient with cardiopulmonary abnormalities and diseases. Offered as an eight-week course.

Course Pre-requisite(s)
[RTH210 Ventilator Mgt I](#) and [RTH289 Clinical Therapies II](#) both with a C grade or better

Credit Hours
1.5

Contact Hours	1.5	
Course Fee	0	Miscellaneous Department Fee

Academic Level	Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL)	No	
Goals, Topics, and Objectives		
Core Course Topics		
1. Pregnancy and Fetal Development		
• Explain the development and growth of the cardiopulmonary system of the fetus from conception to birth.		
2. High Risk Pregnancy		
3. Fetal-Neonatal Transition		
• Describe the structures and the path of blood flow through fetal circulation.		
• Describe factors that cause the change from fetal to adult circulation.		
• Describe the factors that affect the initiation of neonatal breathing.		
4. Neonatal Assessment & Care of the Newborn		
• Describe the factors that affect the initiation of neonatal breathing.		
• Discuss the various conditions that can lead to premature birth.		
• Assign an appropriate APGAR score in related patient scenarios.		
• Compare cardiopulmonary anatomical and physiological differences among the infant, child, and adult.		
• Describe the components evaluated during the neonatal physical examination.		
5. Neonatal Resuscitation		
• Discuss the development of complications during and after the birthing process.		
• Describe each step of the neonatal resuscitation process.		
6. Special Problems in the Newborn		
• Describe the anatomic alterations of the lungs caused by neonatal/pediatric disorders encountered by the respiratory therapist.		
7. Neonatal Pulmonary Disorders		
• Explain the major pathophysiologic mechanisms activated throughout the respiratory system as a result of the anatomic alterations.		
8. Neonatal Congenital Anomalies & Cardiovascular Conditions		
• Explain the various Congenital Anomalies and Cardiovascular conditions in the neonate.		
9. Pediatric Assessment & Pediatric Pulmonary Disorders		
• Identify the common clinical manifestations that develop as a result of the anatomic alterations and pathophysiologic changes.		
• Formulate a treatment plan for selected neonatal/pediatric disorders encountered by the respiratory therapist.		
Explain the development and growth of the cardiopulmonary system of the fetus from conception to birth.		
Describe the structures and the path of blood flow through fetal circulation.		
Describe factors that cause the change from fetal to adult circulation.		
Describe the factors that affect the initiation of neonatal breathing.		
Discuss the various conditions that can lead to premature birth.		
Assign an appropriate APGAR score in related patient scenarios.		
Compare cardiopulmonary anatomical and physiological differences among the infant, child, and adult.		
Describe the components evaluated during the neonatal physical examination.		
Discuss the development of complications during and after the birthing process.		
Describe each step of the neonatal resuscitation process.		
Describe the anatomic alterations of the lungs caused by neonatal/pediatric disorders encountered by the respiratory therapist.		
Explain the major pathophysiologic mechanisms activated throughout the respiratory system as a result of the anatomic alterations.		
Explain the various Congenital Anomalies and Cardiovascular conditions in the neonate.		
Identify the common clinical manifestations that develop as a result of the anatomic alterations and pathophysiologic changes.		

Formulate a treatment plan for selected neonatal/pediatric disorders encountered by the respiratory therapist.

RTH240 - Cardiopulmonary Diagnostics

Overview

Subject Respiratory Therapy	Academic Department Health, Education, and Human Services	School Health & Human Services
Course Description This course discusses basic pulmonary function testing and electrocardiographic testing. Basic theory and techniques for testing are covered. Students are expected to perform and evaluate these tests for use by the physician. This course is offered as an eight-week course.		
Course Pre-requisite(s) BIQ234 Anatomy and Physiology II with a C grade or higher, and permission of the <u>Respiratory Therapist AAS Degree</u> Program Director		
Credit Hours 1.5		
Contact Hours 1.5		
Course Fee 0	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics
1. Pulmonary Function Testing: Spirometry - Define the components of forced spirometry measurements. - State normal values for forced spirometry measurements. - Describe the techniques used to obtain forced spirometry measurements. - Recommend the use of pulmonary function testing including forced spirometry, lung volumes, and diffusing capacity.
2. Pulmonary Function Testing: Lung Volumes - Define the components of lung volumes, diffusion, and gas distribution measurements. - State normal values for lung volumes, diffusion, and gas distribution measurements. - Describe the techniques used to obtain lung volumes, diffusion, and gas distribution measurements. - Compare and contrast lung volume measurements. - Compare and contrast how indirect methods are used to measure residual volume and capacities containing residual volume.
3. Pulmonary Function Testing: Specialty Testing Recommend the use of specialized pulmonary function testing including pre- and post-bronchodilator testing, bronchial provocation challenge and cardiopulmonary exercise testing.
4. Pulmonary Function Testing: Equipment, Quality Assurance Procedures, etc - Evaluate the accuracy and reliability of pulmonary function tests (PFT). - Interpret pulmonary function tests (PFT) results including normal, obstructive, restrictive, and combined studies.
5. Cardiac Testing: Electrocardiography - Describe the function of the electrocardiograph (ECG) and its components. - Explain the use of the electrocardiograph (ECG) in the evaluation of cardiac function. - Identify the electrocardiograph (ECG) pattern for normal patterns and each of the arrhythmias. - Interpret electrocardiograph (ECG) strips.

Define the components of forced spirometry measurements.
State normal values for forced spirometry measurements.

Describe the techniques used to obtain forced spirometry measurements.
Recommend the use of pulmonary function testing including forced spirometry, lung volumes, and diffusing capacity.
Define the components of lung volumes, diffusion, and gas distribution measurements.
State normal values for lung volumes, diffusion, and gas distribution measurements.
Describe the techniques used to obtain lung volumes, diffusion, and gas distribution measurements.
Compare and contrast lung volume measurements.
Compare and contrast how indirect methods are used to measure residual volume and capacities containing residual volume.
Recommend the use of specialized pulmonary function testing including pre- and post-bronchodilator testing, bronchial provocation challenge and cardiopulmonary exercise testing.
Evaluate the accuracy and reliability of pulmonary function tests (PFT).
Interpret pulmonary function tests (PFT) results including normal, obstructive, restrictive, and combined studies.
Describe the function of the electrocardiograph (ECG) and its components.
Explain the use of the electrocardiograph (ECG) in the evaluation of cardiac function.
Identify the electrocardiograph (ECG) pattern for normal patterns and each of the arrhythmias.
Interpret electrocardiograph (ECG) strips.

RTH250 - Advanced Mechanical Ventilation

Overview

Subject Respiratory Therapy	Academic Department Health, Education, and Human Services	School Health & Human Services
Course Description Emphasizes the assessment and management of respiratory care patients. Students apply techniques and concepts to treat patients with disease states seen in the critical care areas. This lecture/lab course includes advanced mechanical ventilatory techniques for premature neonates through adults. Participants develop treatment plans utilizing patient-driven protocols.		
Course Pre-requisite(s) RTH210 Ventilator Mgt 1 and RTH289 Clinical Therapies II both with a C grade or better		
Credit Hours 4		

Contact Hours

6

Course Fee
100

Miscellaneous Department Fee

Goals, Topics, and Objectives

Core Course Topics

1. Neuromuscular Disease
 - Identify the pathophysiology and common clinical manifestations that develop as a result of neuromuscular disease.
2. Traumatic Injuries: Pneumothorax, Bronchopulmonary Fistula, Chest Wall Injuries, Pulmonary Contusion
 - Discuss the causes, respiratory clinical signs and manifestations for traumatic injuries.
3. Acute Lung Injury / Acute Respiratory Distress Syndrome
 - Describe the anatomic alterations of the lungs caused by disorders encountered in the critical care areas.
 - Explain the major pathophysiologic mechanisms activated throughout the respiratory system as a result of the anatomic alterations.
 - Identify the common clinical manifestations that develop as a result of the anatomic alterations and pathophysiologic changes.
 - Formulate a treatment plan for selected disorders.
4. Pneumonia: Community Acquired, Aspiration, Ventilator Associated
 - Discuss the causes, respiratory clinical signs and manifestations for pneumonia and aspiration.
5. Burns and Inhalational Injury
 - Discuss the causes, respiratory clinical signs and manifestations for burns and inhalational injuries.
6. Pressure Targeted and Volume Guaranteed Ventilation, BiPhasic ventilation, Non-invasive ventilation
 - Recommend initial ventilator settings and appropriate ventilator changes in related patient scenarios.
7. Pulmonary pathophysiology seen in the critically ill pulmonary patients.
 - Describe the anatomic alterations of the lungs caused by disorders encountered in the critical care areas.
8. Advanced Mechanical Ventilation in Adults
 - Discuss the advanced modes of mechanical ventilation, their uses, advantages, and disadvantages.
 - Recommend initial ventilator settings and appropriate ventilator changes in related patient scenarios.
9. Weaning from Mechanical Ventilation and End of Life Management
 - Describe the methods available in the weaning process including end of life management.
10. Pharmacological Agents in the Intensive Care Unit (ICU)
 - Describe the indications, mechanism of action and delivery of Nitric Oxide for pulmonary hypertension.
 - Describe the various pharmacologic agents used for patients on mechanical ventilation.
11. Mechanical Ventilation of Neonates and Pediatrics
 - Identify the criteria to establish the need for mechanical ventilation in neonates and children.
 - Describe the types and modes of ventilation used to ventilate neonates and children.
 - Explain the methods available to effectively monitor neonates and children on life support.
 - Describe the anatomic alterations of the lungs caused by prematurity and pulmonary disorders in neonates and pediatric patients.
 - Demonstrate the operation of commonly utilized neonatal/pediatric mechanical ventilators.
 - Set-up and demonstrate initial settings, changes, and troubleshooting capabilities with neonatal/pediatric continuous (CMV - continuous mechanical ventilation) life support.
 - Describe respiratory care procedures in the treatment of infants and children.
12. Infant Continuous Positive Airway Pressure (CPAP) and High-Flow Nasal Cannula
 - Identify the criteria to establish the need for CPAP and High-Flow Nasal Cannula in neonates and children.
 - Discuss the appropriate use of continuous positive airway pressure (CPAP) and high-flow nasal cannula with neonates and children.
 - Explain the methods available to effectively monitor neonates and children on life support.
13. Specialty Treatment and Ventilation in Neonatal and Pediatric Patients
 - Describe the use of High Frequency Oscillatory Ventilation.
 - Describe the use of High Frequency Jet Ventilation.
 - Describe respiratory care procedures in the treatment of neonates, infants and children.
 - Describe recruitment techniques used in neonates, infants and children.

Discuss the causes, respiratory clinical signs and manifestations for burns and inhalational injuries.

Recommend initial ventilator settings and appropriate ventilator changes in related patient scenarios.

Discuss the advanced modes of mechanical ventilation, their uses, advantages, and disadvantages.

Describe the methods available in the weaning process including end of life management.

Describe the indications, mechanism of action and delivery of Nitric Oxide for pulmonary hypertension.

Describe the various pharmacologic agents used for patients on mechanical ventilation.

Identify the criteria to establish the need for mechanical ventilation in neonates and children.

Describe the types and modes of ventilation used to ventilate neonates and children.

Explain the methods available to effectively monitor neonates and children on life support.

Describe the anatomic alterations of the lungs caused by prematurity and pulmonary disorders in neonates and pediatric patients.

Demonstrate the operation of commonly utilized neonatal/pediatric mechanical ventilators.

Set-up and demonstrate initial settings, changes, and troubleshooting capabilities with neonatal/pediatric continuous (CMV - continuous mechanical ventilation) life support.

Describe respiratory care procedures in the treatment of infants and children.

Identify the criteria to establish the need for CPAP and High-Flow Nasal Cannula in neonates and children.

Discuss the appropriate use of continuous positive airway pressure (CPAP) and high-flow nasal cannula with neonates and children.

Describe the use of High Frequency Oscillatory Ventilation.

Describe the use of High Frequency Jet Ventilation.

Describe respiratory care procedures in the treatment of neonates, infants and children.

Describe recruitment techniques used in neonates, infants and children.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

Assessment will be based on assignments, lab practicals, course exams, and a final exam.

General Course Requirements and Recommendations

This course must be passed with a "C" or better to remain in the [Respiratory Therapist AAS Degree](#) program.

Grading Scale

Student grades will be assigned using the following scale:

- 93-100% = A
- 90-92% = A-
- 87-89% = B+
- 83-86% = B
- 80-82% = B-
- 77-79% = C+
- 75-76% = C
- 72-74% = D+
- 60-71% = D
- 59% and below = E

Texts

RTH270 - Therapeutic Clinical Management

Overview

Subject Respiratory Therapy	Academic Department Health, Education, and Human Services	School Health & Human Services
Course Description This course provides the student an opportunity to apply in simulated settings concepts learned throughout the respiratory therapist program. Students spend time working on computerized clinical case study simulations, selecting appropriate patient information, and managing patients.		
Course Pre-requisite(s) RTH220 Respiratory Care Neo & Pediatr , RTH240 Cardiopulmonary Diagnostics , RTH250 Advance Mechanical Ventilation , and RTH-292 all with a grade of C or better		
Credit Hours 2		
Contact Hours 2		
Course Fee 0		
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics
1. National Board for Respiratory Care (NBRC) Review of Computerized Clinical Simulations
- Evaluate all patient data to determine the appropriateness of a prescribed respiratory care plan. - Modify a prescribed respiratory care plan to achieve desired patient outcomes. - Develop respiratory care plans in a variety of settings (eg. Protocols).
2. Obstructive Lung Diseases
- List the initial ventilator settings in obstructive and restrictive lung disease patients requiring acute application of mechanical ventilation. - Discuss the monitoring and weaning of chronic pulmonary disease patients from mechanical ventilation.
3. Acute Lung Injury & ARDS
- Discuss the ventilator settings in patients with ALI and ARDS. - Describe the changes in ventilation settings and techniques to treat patients with ALI and ARDS.
4. Post-Operative Case
- Describe the initial ventilator settings for post-operative patients with and without prior pulmonary disease. - Discuss weaning of patients requiring post-operative ventilator support.
5. Neuromuscular Disorders
- Discuss monitoring procedures for patients with Neuromuscular Disorders. - Describe ventilation settings and weaning for patients with neuromuscular disorders.
6. Neonatal & Pediatric Disease Management
*Discuss the treatment regimens for neonatal and pediatric disorders commonly encountered by the respiratory therapist, including persistent fetal circulation, RDS, PPHN, Meconium Aspiration, Croup, Epiglottitis.
7. Near Drowning & Inhalation Disease
Describe the methods of ventilation for patients with inhalation disorders.
8. Neonatal Resuscitation Program (NRP) and Pediatric Advanced Life Support (PALS)
1. Discuss the treatment regimens for neonatal and pediatric resuscitation.

Evaluate all patient data to determine the appropriateness of a prescribed respiratory care plan.
Modify a prescribed respiratory care plan to achieve desired patient outcomes.
Develop respiratory care plans in a variety of settings (eg. Protocols).
List the initial ventilator settings in obstructive and restrictive lung disease patients requiring acute application of mechanical ventilation.
Discuss the monitoring and weaning of chronic pulmonary disease patients from mechanical ventilation.
Discuss the ventilator settings in patients with ALI and ARDS.
Describe the changes in ventilation settings and techniques to treat patients with ALI and ARDS.
Describe the initial ventilator settings for post-operative patients with and without prior pulmonary disease.
Discuss weaning of patients requiring post-operative ventilator support.
Discuss monitoring procedures for patients with Neuromuscular Disorders.

Describe ventilation settings and weaning for patients with neuromuscular disorders.
Discuss the treatment regimens for neonatal and pediatric disorders commonly encountered by the respiratory therapist, including persistent fetal circulation, RDS, PPHN, Meconium Aspiration, Croup, Epiglottitis
Describe the methods of ventilation for patients with inhalation disorders.
Discuss the treatment regimens for neonatal and pediatric resuscitation.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Assessment will be based on assignments, computer simulation assignments, and course exams.
General Course Requirements and Recommendations This course must be passed with a "C" or better to remain in the Respiratory Therapist AAS Degree program.
Grading Scale Student grades will be assigned using the following scale:
93-100% = A 90-92% = A- 87-89% = B+ 83-86% = B 80-82% = B- 77-79% = C+ 75-76% = C 72-74% = D+ 60-71% = D 59% and below = E

Texts To be determined by program faculty.

RTH285 - Advanced Respiratory Concepts

Overview

Subject Respiratory Therapy	Academic Department Health, Education, and Human Services	School Health & Human Services
Course Description A study of the current theory and techniques encountered by the respiratory therapist in a variety of clinical settings. Emphasis is placed on advanced ventilator applications, advanced cardiopulmonary monitoring, pulmonary rehabilitation, smoking cessation and the respiratory care professional's dynamic role in the health care setting.		
Course Pre-requisite(s) RTH220 Respiratory Care Neo & Pediatr , RTH240 Cardiopulmonary Diagnostics , RTH250 Advance Mechanical Ventilation , and RTH-292 with a C grade or higher.		
Credit Hours 3		
Contact Hours 3		
Course Fee 0		Miscellaneous Department Fee 0
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics
1. Advanced Cardiopulmonary life Support (ACLS)
- Identify the electrocardiograph(ECG) pattern for each of the arrhythmias required in the study of American Heart Association(AHA) Advanced Cardiac Life Support (ACLS). - Describe the use of drug therapy, pacemakers, and defibrillators in the treatment of cardiac arrhythmias.
2. Introduction to Hemodynamics
- Discuss the importance of cardiopulmonary homeostasis. - Describe the hemodynamic principles of the cardiovascular system.
3. Pulmonary Artery Catheters/Derived Hemodynamic Parameters
- Explain the components of the Pulmonary Artery Catheter, its indications and complications. - Explain the importance of the measurements obtained and derived from the PAP catheter. - Determine Cardiac Outputs. - Interpret hemodynamic calculations.
4. Hemodynamic Clinical Applications
- Discuss pharmacological influences on hemodynamic parameters. - Discuss a variety of pharmacological agents influence on the cardiopulmonary system. - Recommend a therapeutic plan based on a patient's hemodynamic status.

5. Pulmonary Rehabilitation
 - Describe the goals and objectives pulmonary rehabilitation aims to achieve.
 - Discuss the indications, contraindications, and hazards associated with pulmonary rehabilitation.
 - Describe the evaluation and selection process of patients to a pulmonary rehabilitation program.
6. Smoking Cessation
7. Patient Education
 - State the rationale for patient education in the practice of respiratory care.
 - Identify the major components of the patient education process.
8. New therapeutics in Respiratory Care
 - Discuss the most recent research, technology, and/or procedures in the field of respiratory care.
9. Transitioning to an Entry-Level Respiratory Therapist.
 - Prepare a resume package.
 - Apply techniques that will improve job-seeking skills.
 - Analyze factors that influence job retention.
 - Prepare to complete the NBRC examinations for becoming an RRT.
 - Discuss tools needed to apply for NBRC examinations and LARA licensure.

Identify the electrocardiograph(ECG) pattern for each of the arrhythmias required in the study of American Heart Association(AHA) Advanced Cardiac Life Support (ACLS).

Describe the use of drug therapy, pacemakers, and defibrillators in the treatment of cardiac arrhythmias.

Discuss the importance of cardiopulmonary homeostasis.

Describe the hemodynamic principles of the cardiovascular system.

Explain the components of the Pulmonary Artery Catheter, its indications and complications.

Explain the importance of the measurements obtained and derived from the PAP catheter.

Determine Cardiac Outputs.

Interpret hemodynamic calculations.

Discuss a variety of pharmacological agents influence on the cardiopulmonary system

Recommend a therapeutic plan based on a patients hemodynamic status.

Describe the goals and objectives pulmonary rehabilitation aims to achieve.

Discuss the indications, contraindications, and hazards associated with pulmonary rehabilitation.

Describe the evaluation and selection process of patients to a pulmonary rehabilitation program.

State the rationale for patient education in the practice of respiratory care.

Identify the major components of the patient education process.

Discuss the most recent research, technology, and/or procedures in the field of respiratory care.

Prepare a resume package.

Apply techniques that will improve job-seeking skills.

Analyze factors that influence job retention.

Prepare to complete the NBRC examinations for becoming an RRT.

Discuss tools needed to apply for NBRC examinations and LARA licensure.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement will be based on assignments, project, course exams, NBRC Self-Assessment Exams and a final exam.

General Course Requirements and Recommendations
This course includes the NBRC self-assessment exit examinations that must be passed to successfully complete this course. All RTH courses must be completed with a "C" grade or higher.

Grading Scale
Student grades will be assigned using the following scale:

- 93-100% = A
- 90-92% = A-
- 87-89% = B+
- 83-86% = B
- 80-82% = B-
- 77-79% = C+
- 75-76% = C
- 72-74% = D+
- 60-71% = D
- 59% and below = E

RTH288 - Intermediate Clinical Therapies

Overview

Subject Respiratory Therapy	Academic Department Health, Education, and Human Services	School Health & Human Services
Course Description Development of the clinical skills related to airway management, bronchial hygiene, resuscitation procedures, and oxygenation. Students evaluate, modify, and monitor patients' responses to respiratory care regimens. A seven-week directed clinical experience in selected clinical sites.		
Course Pre-requisite(s) RTH160 Resp Therapy Pharmacology, RTH170 Therapeutic Procedures II, RTH180 RT Clinical Sciences, RTH195 Intro to Clinical Therapeutics, and BIO234 Anatomy and Physiology II - all courses with a grade of "C" or better.		

Goals, Topics, and Objectives

- Core Course Topics**
1. Patient Assessment, Oxygen Therapy, and Pulse Oximetry
 - Select the proper mode of administration, and set-up and assure proper function of the selected oxygen delivery device.
 - Monitor the patient's response to the prescribed oxygen therapy, and recommend changes in the approach taken according to individual patient needs.
 - Evaluate a patient's oxygenation and ventilator status through the use of patient assessment skills, pulmonary mechanics, pulse oximetry, and/or arterial blood gas (ABG) results.
2. Bronchial Hygiene
 - Deliver bronchial hygiene therapy according to departmental procedure.
 - Monitor the patient's response and alter the bronchial hygiene therapy according to the individual patient needs.
3. Bronchodilator Therapy
 - Recommend the appropriate aerosol and/or bronchodilator therapy.
 - Deliver aerosol and/or bronchodilator therapy according to departmental procedure.
 - Monitor the patient's response and alter the aerosol and/or bronchodilator treatment regimen according to the individual patient needs.
 - Recommend the appropriate bronchial hygiene therapy.
4. Generalized Patient Care Procedures
 - Incorporate the general floor respiratory care techniques during a typical shift assignment.
 - Demonstrate compliance with the Health Insurance Portability and Accountability Act (HIPAA) guidelines when dealing with patients and their medical records in the health care setting.
 - Apply appropriate professional behaviors when dealing with physicians, hospital staff, fellow students, patients, and patient families.
 - Communicate verbally in language appropriate to patients and professional staff.
 - Communicate appropriately and accurately in written form in appropriate notes and reports.
5. Infection Control
 - Utilize standard precautions and infection control procedures in the clinical setting.
6. Airway Management and Cardiopulmonary Resuscitation
 - Maintain patent airway, provide emergency care, cardiopulmonary resuscitation (CPR), or some portion of CPR as required in the clinical situation.
7. Lung Expansion Therapy
 - Recommend the appropriate lung expansion therapy.
 - Deliver lung expansion therapy according to departmental procedure.
 - Monitor the patient's response and alter the lung expansion therapy according to the individual patient needs.

8. Arterial Blood Gas
• Demonstrate the proper procedure for obtaining an arterial blood sample through arterial puncture.
Select the proper mode of administration, and set-up and assure proper function of the selected oxygen delivery device.
Monitor the patient's response to the prescribed oxygen therapy, and recommend changes in the approach taken according to individual patient needs.
Evaluate a patient's oxygenation and ventilator status through the use of patient assessment skills, pulmonary mechanics, pulse oximetry, and/or arterial blood gas (ABG) results.
Deliver bronchial hygiene therapy according to departmental procedure.
Monitor the patient's response and alter the bronchial hygiene therapy according to the individual patient needs.
Recommend the appropriate aerosol and/or bronchodilator therapy.
Deliver aerosol and/or bronchodilator therapy according to departmental procedure.
Monitor the patient's response and alter the aerosol and/or bronchodilator treatment regimen according to the individual patient needs.
Recommend the appropriate bronchial hygiene therapy.
Incorporate the general floor respiratory care techniques during a typical shift assignment.
Demonstrate compliance with the Health Insurance Portability and Accountability Act (HIPAA) guidelines when dealing with patients and their medical records in the health care setting.
Apply appropriate professional behaviors when dealing with physicians, hospital staff, fellow students, patients, and patient families.
Communicate verbally in language appropriate to patients and professional staff.
Communicate appropriately and accurately in written form in appropriate notes and reports.
Utilize standard precautions and infection control procedures in the clinical setting.
Maintain patent airway, provide emergency care, cardiopulmonary resuscitation (CPR), or some portion of CPR as required in the clinical situation.
Recommend the appropriate lung expansion therapy.
Deliver lung expansion therapy according to departmental procedure.
Monitor the patient's response and alter the lung expansion therapy according to the individual patient needs.
Demonstrate the proper procedure for obtaining an arterial blood sample through arterial puncture.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Written documentation, observation of clinical practice, weekly clinical logs, shared feedback forms, affective final evaluation, and clinical competency evaluations assessing students in the areas of knowledge, skills, and affective behavior are used to assess attainment of objectives.
Grading Scale
• 93-100% = A
• 90-92% = A-
• 87-89% = B+
• 83-86% = B
• 80-82% = B-
• 77-79% = C+
• 75-76% = C
• 72-74% = D+
• 60-71% = D
• 59% and below = E

RTH295 - Clinical Therapeutics Practicum

Overview

Subject Respiratory Therapy	Academic Department Health, Education, and Human Services	School Health & Human Services
Course Description	Directed clinical experience that develops therapeutic clinical skills for critical care areas and diagnostic labs. Emphasis is on assessing needs, designing care plans, and implementing and evaluating the procedures especially for mechanical ventilator support and systemic oxygenation. Fifteen hours per week.	
Course Pre-requisite(s)	RTH210 Ventilator Mgt I and RTH289 Clinical Therapies II both with a C or better	
Credit Hours	7	
Contact Hours	7	
Course Fee	Miscellaneous Department Fee	
0	0	
Academic Level	Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL)	No	

Goals, Topics, and Objectives

Core Course Topics
1. Initiating & Monitoring Mechanical Ventilatory Support
Determine the indication for mechanical ventilation. Assemble and verify proper function of the ventilator before placement on the patient. Initiate, conduct and modify prescribed ventilator settings including modes of ventilation to achieve adequate acid/base balance, ventilation and oxygenation while monitoring patient's response to respiratory therapy. Evaluate a patient's ventilation and oxygenation status through the use of invasive and noninvasive monitoring including but not limited to patient assessment skills, pulse oximetry, capnography, electrocardiography (ECG), bedside pulmonary mechanics, Arterial Blood Gas (ABG) results and/or hemodynamic parameters. Demonstrate a comprehensive patient-ventilator system check. Correlate learned theory and techniques and apply that knowledge to direct patient care included in a critical care assignment. (i.e. ventilatory support, equipment, monitoring patients, etc.) Use correct universal precautions and infection control procedures in the clinical setting.
2. Specialty clinical rotation
Observe Pulmonary Diagnostic testing

Discuss the role of the Respiratory Therapist in Pulmonary Rehabilitation Discuss Home Care modalities for Respiratory Care Apply appropriate modalities for patients in Long Term Care Facilities
3. Communication
Communicate verbally in language appropriate to patients and professional staff. Communicate appropriately and accurately in written form in appropriate notes and reports. Demonstrate compliance with the Health Insurance Portability and Accountability Act (HIPPA) guidelines when dealing with patients and their medical records in the health care setting. Apply appropriate professional behaviors when dealing with physicians, hospital staff, fellow students, patients & patient families.
4. Clinical Procedures in Respiratory Care
Demonstrate the proper procedure for arterial blood sampling through arterial puncture and arterial line sampling. Incorporate all respiratory modalities as required during a typical shift assignment. Conduct therapeutic procedures to achieve maintenance of a patent airway, removal of bronchopulmonary secretions, adequate spontaneous ventilation and/or arterial and tissue oxygenation according to individual patient needs. Provide emergency care, cardiopulmonary resuscitation or some portion of the procedures involving patients to include intubation, extubation, bronchoscopies, and transport for special procedures.

Determine the indication for mechanical ventilation.
Assemble and verify proper function of the ventilator before placement on the patient.
Initiate, conduct and modify prescribed ventilator settings including modes of ventilation to achieve adequate acid/base balance, ventilation and oxygenation while monitoring patient's response to respiratory therapy.
Evaluate a patient's ventilation and oxygenation status through the use of invasive and noninvasive monitoring including but not limited to patient assessment skills, pulse oximetry, capnography, electrocardiography (ECG), bedside pulmonary mechanics, Arterial Blood Gas (ABG) results and/or hemodynamic parameters.
Demonstrate a comprehensive patient-ventilator system check.
Correlate learned theory and techniques and apply that knowledge to direct patient care included in a critical care assignment. (i.e. ventilatory support, equipment, monitoring patients, etc.)

Goals, Topics, and Objectives

Core Course Topics

- Management of Mechanical Ventilatory Support
 - Determine the indication for mechanical ventilation.
 - Assemble and verify proper function of the ventilator before placement on the patient.
 - Initiate, conduct and modify prescribed ventilator settings including modes of ventilation to achieve adequate acid/base balance, ventilation and oxygenation while monitoring patient's response to respiratory therapy.
 - Recommend, institute and modify weaning procedures based on patient's response.
 - Conduct therapeutic procedures to achieve maintenance of a patent airway, removal of bronchopulmonary secretions, adequate spontaneous ventilation and/or arterial and tissue oxygenation according to individual patient needs. Demonstrate a comprehensive patient-ventilator system check.
 - Incorporate all respiratory care modalities during a typical shift assignment.
- Diagnostic Testing
 - Evaluate a patient's ventilation/oxygenation status through the use of invasive and noninvasive monitoring including but not limited to: patient assessment skills, pulse oximetry, capnography, electrocardiography (ECG), bedside pulmonary mechanics, Arterial Blood Gas (ABG) results and/or hemodynamic parameters.
 - Recommend and/or make necessary modifications in therapeutic procedures, and ventilatory support based on patient's response. Provide emergency care, cardiopulmonary resuscitation or some portion of the procedures involving patients to include intubation, extubation, bronchoscopy and transport for special procedures.
 - Demonstrate the proper procedure for arterial blood sampling through arterial puncture and arterial line sampling.
- Pulmonary Rehabilitation
 - Discuss Pulmonary rehabilitation techniques and application for the patient.
- Special Procedures
 - Discuss special procedures in the critically ill patient.
- Home Care
 - Discuss Home Care equipment and application.
- Neonatal / Pediatrics.
 - Discuss Neonatal and Pediatric Respiratory Care therapeutics.
- Communication & Professional Behaviors
 - Comply with the Health Insurance Portability and Accountability Act (HIPPA) guidelines when dealing with patients & their medical records in the health care setting.
 - Apply appropriate professional behaviors when dealing with physicians, hospital staff, fellow students, patients & patient families.
 - Demonstrate correct use of universal precautions and infection control procedures in the clinical setting.

- Correlate learned theory and techniques and apply that knowledge to direct patient care included in a critical care assignment. (i.e. ventilatory support, equipment, managing patients, etc.)
- Communicate verbally in language appropriate to patients and professional staff.
- Communicate appropriately and accurately in written form in appropriate notes and reports.
- Demonstrate professional behaviors appropriate to the registered respiratory therapist.

Determine the indication for mechanical ventilation.

Assemble and verify proper function of the ventilator before placement on the patient.

Initiate, conduct and modify prescribed ventilator settings including modes of ventilation to achieve adequate acid/base balance, ventilation and oxygenation while monitoring patient's response to respiratory therapy.

Recommend, institute and modify weaning procedures based on patient's response.

Conduct therapeutic procedures to achieve maintenance of a patent airway, removal of bronchopulmonary secretions, adequate spontaneous ventilation and/or arterial and tissue oxygenation according to individual patient needs. Demonstrate a comprehensive patient-ventilator system check.

Incorporate all respiratory care modalities during a typical shift assignment.

Evaluate a patient's ventilation/oxygenation status through the use of invasive and noninvasive monitoring including but not limited to: patient assessment skills, pulse oximetry, capnography, electrocardiography (ECG), bedside pulmonary mechanics, Arterial Blood Gas (ABG) results and/or hemodynamic parameters.

Recommend and/or make necessary modifications in therapeutic procedures, and ventilatory support based on patient's response. Provide emergency care, cardiopulmonary resuscitation or some portion of the procedures involving patients to include intubation, extubation, bronchoscopy and transport for special procedures.

Demonstrate the proper procedure for arterial blood sampling through arterial puncture and arterial line sampling.

Discuss Pulmonary rehabilitation techniques and application for the patient.

Discuss special procedures in the critically ill patient.

Discuss Home Care equipment and application.

Discuss Neonatal and Pediatric Respiratory Care therapeutics.

Comply with the Health Insurance Portability and Accountability Act (HIPPA) guidelines when dealing with patients & their medical records in the health care setting.

Apply appropriate professional behaviors when dealing with physicians, hospital staff, fellow students, patients & patient families.

Demonstrate correct use of universal precautions and infection control procedures in the clinical setting.

Correlate learned theory and techniques and apply that knowledge to direct patient care included in a critical care assignment. (i.e. ventilatory support, equipment, managing patients, etc.)

Communicate verbally in language appropriate to patients and professional staff.

Communicate appropriately and accurately in written form in appropriate notes and reports.

Demonstrate professional behaviors appropriate to the registered respiratory therapist.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

Written documentation, observation of clinical practice, weekly clinical logs, shared feedback forms, physician interaction reports, affective and clinical management, final evaluations, and clinical competency evaluations are used to assess attainment of objectives in the area of knowledge, skills, and affective behaviors.

SCI210 - Intro to Science for Elementary Educator

Overview

Subject Biology	Academic Department Biological Science	School Science, Tech, Engr & Math
Course Description An inquiry based course that provides students a broad overview of both science instruction and the process of science. Students will investigate, discuss and design experiments using the group inquiry method of instruction. This is the first science course in a sequence intended for pre-service elementary school education majors. Two combined classroom/lab sessions per week.		
Credit Hours 4		
Contact Hours 4		
Course Fee 30	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category Natural Sciences	Michigan Transfer Agreement (MTA) Category Category 6: Natural Sciences - Applied Degrees, Category 6: Natural Sciences - Transfer Degrees - Lecture and Lab	
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics - Observation and Measurement using the Metric system - Inferences and Predictions, Theories and Laws - Design of an experiment, identifying and isolating variables - Hypothesis formation and testing - Critiquing of a scientific experiment - Graphing and presenting data - Reading and interpreting graphs, charts and tables - Presenting a student designed experiment - Use the skills above to learn and present material in life science, environmental science, and human biology - Use the skills above to learn and present material in physical science, electricity, and energy - Use the skills above to learn and present material in earth science.
Design and conduct basic scientific investigations.
Develop solutions to problems through observation, reasoning, and investigations.
Manipulate simple scientific instruments that aid in observation and data collection.
Use simple metric measurement devices to obtain data for use in scientific investigations.
Develop science process skills for information gathering and problem solving.
Use multimedia sources of information in support of experimental investigations.
Synthesize scientific information from reference books and other sources of technical information.
Diagram procedures in the form of step-by-step instructions, formulas, flow diagrams, and sketches.

Discuss topics in groups by making clear presentations, restating or summarizing what others have said and asking for clarification and elaboration.
Develop an awareness of the need for scientific evidence when interpreting data.
Generate questions about the physical and living world based on observation.
Generate answers to questions that can be investigated empirically.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Assessment of academic achievement will be based on class participation, class readings, examinations, e-portfolio submissions, and various class assignments.	
Satisfies Honors Requirement No	Satisfies Wellness Requirement No

SCI212 - Earth Science for Educators

Overview

Subject Science Education	Academic Department Biological Science	School Science, Tech, Engr & Math
Course Description An inquiry-based course covering topics in the earth sciences - geology, meteorology, and astronomy. Course content is designed to give students a thorough familiarity with concepts critical to teaching earth science at the K-6 level. The course emphasizes three skills: investigation, critical thinking, and organization. Learning is primarily through student inquiry and discovery of core concepts, with guidance and facilitation provided by the instructor. Two combined classroom/lab sessions per week.		
Course Pre-requisite(s) Eligible to take gateway MATH course at HFC or a satisfactory score on the Math placement exam.		
Credit Hours 4		
Contact Hours 4		
Course Fee 30	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category Natural Sciences	Michigan Transfer Agreement (MTA) Category Category 6: Natural Sciences - Applied Degrees, Category 6: Natural Sciences - Transfer Degrees - Lecture and Lab	
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics - Minerals - Rocks - Plate Tectonics - Geologic Time - The Atmosphere - Earth-Sun Relations - Air Circulation - Atmospheric Moisture - Clouds - Weather Patterns - Storms - History of Astronomy - Celestial Motion - The Moon - The Solar System - The Sun - Light - The Universe
Describe the Earth's surface.
Explain how the Earth's features change over time.
Analyze the effects of technology on the Earth's surface and resources.
Describe the characteristics of water and where it is found on the Earth's surface.

Describe how water moves.
Analyze the interaction of human activities with the hydrosphere.
Describe what makes up weather and how it changes over various time frames.
Explain what causes different types of weather.
Analyze the relationships between human activities and the atmosphere.
Discuss similarities and differences between our planet and sun and other planets and star systems.
Explain how solar system objects move.
Explain scientific theories on the origin of the solar system.
Explain how humans learn about the universe.
Design questions that provide new information about the world.
Critique reports and presentations of other students, providing a balanced assessment of positive and negative points.
Design investigations using appropriate methods and techniques.
Demonstrate appropriate use of technology in communicating findings of investigations.
Analyze claims for scientific merit and explain how scientists decide what constitutes scientific knowledge.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

Student mastery of course content will be assessed using the following tools:

1. Oral presentations of findings from experiments and investigations.
2. Reports:

1. Periodic written reports summarizing and analyzing class discussions.

2. Critique of discussion reports by other students in "working groups," semester-long cohorts of 3-5 students who will assess one another's work before it is turned in to the instructor.
3. Periodic instructor review of student working group critiques to ensure students have grasped the purpose and technique of assessing another's work.
4. Periodic instructor review of student notes and folders to ensure adequate awareness of class discussions and proper organization of course materials.
5. Three exams, one at the end of each course unit, each involving an oral and a written component. The oral component will consist of a presentation on findings from the student's unit-long research into a particular topic that bridges the unit subject and some aspect of K-6 education. The written component will cover relevant fundamentals from the unit and application of education techniques and critical thinking skills to those fundamentals.
6. Development by each student of an e-portfolio, which will contain three components:

1. Scientific Literacy: A written documentation of growth of the student's personal knowledge in the earth sciences, and previous misconceptions about science that the student has corrected during the course.

2. Science Standards: Design an activity that would be appropriate for teaching a particular earth science concept, chosen from the Michigan Curriculum Framework Science Benchmarks, to elementary school students.

3. Science/Technology/Society, a description of a current scientific controversy and a defense of one side of this controversy using well-reasoned arguments supported by evidence from external sources.

SCI213 - Learning By Inquiry: Life Science

Overview

Subject	Academic Department	School
Science Education	Biological Science	Science, Tech, Engr & Math

Course Description

An inquiry based course covering the necessary tools, knowledge, and motivation to teach basic biological concepts. Topics include how to integrate major biological themes, and how the topics covered in the course fulfill the National Science Education Standards. At least one field trip is required. Two combined classroom/lab sessions per week.

Credit Hours

4

Contact Hours

4

Course Fee 30	Miscellaneous Department Fee 0
Academic Level Undergraduate	
General Education Category Natural Sciences	Michigan Transfer Agreement (MTA) Category Category 6: Natural Sciences - Applied Degrees, Category 6: Natural Sciences - Transfer Degrees - Lecture and Lab
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Core Course Topics

1. Characteristics of Life

▫ Design age-appropriate modules that would be accessible to K-12 age students, and that would help them understand the difference between living and nonliving things.
2. Cell Structure and function

▫ Diagram various types of cells.

▫ Discuss the function of various cell components.
3. Habitats

▫ Explain the scientific definition of a habitat.

▫ Analyze the components of a habitat.

▫ Assess how organisms in a particular habitat are adapted to it.
4. Human impact on the environment

▫ Evaluate current controversies surrounding human environmental impact.

▫ Design exercises that would allow K-12 age students to understand how scientists measure environmental change.
5. Photosynthesis

▫ Explain the role of photosynthetic organisms in the global food web.

▫ Design experiments showing how photosynthesis works.
6. Food chains and food webs

▫ Describe how energy is transferred in food chains and webs.

▫ Design a project in which K-12 students would find and analyze examples of how humans have altered food chains and webs.
7. Community relationships

▫ Explain the components of a biological community and how they are interconnected.
8. Life cycles

▫ Evaluate the differences between several types of life cycles.

▫ Design an experiment appropriate for K-12 students that tests how well an organism's life cycle is adapted to its habitat.
9. Genetics

▫ Evaluate the roles of genes, chromosomes, DNA, and amino acids in determining an organism's physical characteristics.
10. Evolution

▫ Discuss what evolution is and is not.

▫ Design experiments in which students can observe evolution's effects on a population.
11. Natural Selection

▫ Explain why natural selection is a passive, rather than an active, process.

▫ Design an exercise, appropriate for K-12 students, showing how natural selection works.
12. Classification of organisms

▫ Explain the importance of a standard biological nomenclature system.

▫ Assess an organism's traits in order to determine the appropriate classification.
13. Digestion & excretion

▫ Explain the differences between the digestive and excretory systems of various types of animals.
14. Animal and plant transport systems

▫ Evaluate the differences between animal and plant transport systems.

▫ Diagram a typical transport system for an animal and for a plant.
15. Circulatory systems

▫ Analyze the components of animal and plant circulatory systems.

▫ Design an experiment that shows how a circulatory system works.
16. Gas exchange in animals

▫ Design an experiment that illustrates gas exchange through a membrane.

▫ Explain how gas exchange works.

▫ Discuss why gas exchange is important for life systems.
17. Reproductive strategies

▫ Analyze various reproductive strategies for plants and animals.

▫ Explain how a given strategy increases the chance for a lineage to survive.

Design age-appropriate modules that would be accessible to K-12 age students, and that would help them understand the difference between living and nonliving things.
Diagram various types of cells.
Discuss the function of various cell components.
Explain the scientific definition of a habitat.
Analyze the components of a habitat.
Assess how organisms in a particular habitat are adapted to it.

Evaluate current controversies surrounding human environmental impact.
Design exercises that would allow K-12 age students to understand how scientists measure environmental change.
Explain the role of photosynthetic organisms in the global food web.
Design experiments showing how photosynthesis works.
Describe how energy is transferred in food chains and webs.
Design a project in which K-12 students would find and analyze examples of how humans have altered food chains and webs.
Explain the components of a biological community and how they are interconnected.
Evaluate the differences between several types of life cycles.
Design an experiment appropriate for K-12 students that tests how well an organism's life cycle is adapted to its habitat.
Evaluate the roles of genes, chromosomes, DNA, and amino acids in determining an organism's physical characteristics.
Discuss what evolution is and is not.
Design experiments in which students can observe evolution's effects on a population.
Explain why natural selection is a passive, rather than an active, process.
Design an exercise, appropriate for K-12 students, showing how natural selection works.
Explain the importance of a standard biological nomenclature system.
Assess an organism's traits in order to determine the appropriate classification.
Explain the differences between the digestive and excretory systems of various types of animals.
Evaluate the differences between animal and plant transport systems.
Diagram a typical transport system for an animal and for a plant.
Analyze the components of animal and plant circulatory systems.
Design an experiment that shows how a circulatory system works.
Design an experiment that illustrates gas exchange through a membrane.
Explain how gas exchange works.
Discuss why gas exchange is important for life systems.
Analyze various reproductive strategies for plants and animals.
Explain how a given strategy increases the chance for a lineage to survive.

Assessment, Requirements, and Outcomes

SCO190 - Co-op in Science

Overview

Subject Science Education	Academic Department Biological Science	School Science, Tech, Engr & Math
Course Description Cooperative education is a structured method of combining classroom-based education with practical work experience. A cooperative education experience, commonly known as a "co-op," provides academic credit for structured employment experience. Work experience must be directly related to the student's declared major in STEM to be eligible. To register for this course, a student must have completed 50% of core coursework, maintain an overall GPA of 2.0 and a program specific GPA of 2.5.		
Course Pre-requisite(s) Permission from Career Services Officer or Job Developer in the Office of Career Services and permission from the Dean or Associate Dean of the School of STEM.		
Credit Hours 1		
Contact Hours 0.2		
Course Fee 0	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals
Cooperative education helps students make the school-to-work transition, develop career and program-related learning objectives, and work on applicable skills for employment. Placements should provide students with the opportunity to apply and expand upon knowledge learned in the classroom, and develop the skills acquired in their coursework to align with the standards and expectations set by the worksite.

Core Course Topics

1. Core Career-Focused Topics:
- Resume Building

▫ Professional Dress and Demeanor (attitude, posture, courteousness)

▫ Workplace Communication

▫ Interviewing Skills

▫ Networking and Social Media

▫ Seeking Employment

▫ Career Advancement

1-3 program specific learning objectives will be developed by the instructor for each individual offering.
Students will create 1-3 learning objectives per credit to be approved by instructor for each individual offering.
Build a resume that meets standards of Career Services Officer.
Attend a career workshop in professional dress.
Articulate the reasons for professional attire.
Wear professional attire while on the worksite.
Display appropriate professional attitude and demeanor while on the worksite.
Interview effectively.
Participate in a mock interview and give appropriate answers to five questions.
Complete a written job application in a prompt, professional manner with all information legible, error-free, and thorough.
Display an understanding of the appropriate use of Social Media sites during a Career Services workshop.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment will be determined by the instructor based on what is in the best interest of the student's academic growth, including future employability of the student. Assessment may include, but is not limited to:
▫ Weekly journal ▫ Participation in a career-focused workshop ▫ Consistent and prompt attendance at worksite ▫ Reflective paper ▫ Interview

• Presentation • Final project • Employer evaluation General Course Requirements and Recommendations A course syllabus will be developed by the instructor each semester the course is offered. The syllabus will include the standardized co-op Core-Career Focused Topics as well as Program-defined, Student-defined, and Career Services-defined learning objectives.	
Satisfies Honors Requirement No	Satisfies Wellness Requirement No

SCO290 - Co-op in Science

Core Course Topics

1. Core Career-Focused Topics:
 - Resume Building
 - Professional Dress and Demeanor (attitude, posture, courteousness)
 - Workplace Communication
 - Interviewing Skills
 - Networking and Social Media
 - Seeking Employment
 - Career Advancement

Display an understanding of the appropriate use of Social Media sites during a Career Services workshop.

Describe what it means to use the sociological perspective.

Describe what it means to say that reality is socially constructed.
Distinguish between different approaches/theories in sociology.
Illustrate ways that culture influences human behavior.
Describe ethnocentrism.
Discuss and illustrate major cultural components that shape social life.
Define and illustrate statuses and roles.
Describe characteristics of social structure at the micro level, e.g. social groups.
Describe one major social institution (e.g. economy, political system, family, health care system, religion, etc.) and how it shapes social life.
Describe the characteristics of participant observation/ethnographic methods.
Describe the characteristics of experimental methods.
Describe the characteristics of survey research methods.
Describe social stratification.
Identify social classes in the United States.
Distinguish social stratification from social mobility.
Distinguish between sex and gender.
Illustrate the process of gender role socialization.
Describe patterns of gender inequality.
Distinguish between race and ethnicity.
Identify historical patterns of racial/ethnic inequality.
Identify and discuss major issues related to racial/ethnic/cultural diversity.
Demonstrate the use of a sociological perspective, by explaining and illustrating the application of sociological concepts in the analysis of a reading, video or classroom activity.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement		
Each instructor will identify and implement appropriate methods to assess the achievement of the learning objectives for the course.		
• All instructors teaching SOC131 Introduction to Sociology will include a set of common multiple-choice and one essay question on the final exam. • A panel of instructors will assess a sample of the essay questions each year using a common rubric.		
Satisfies Honors Requirement	Satisfies Wellness Requirement

SOC132 - Marriage & the Family

Overview

Subject	Academic Department	School
Sociology	Social Sciences	Liberal Arts
Course Description		
This course aims to provide an overview of the historical and contemporary contexts that shape our understanding of marriages and families. Topics of discussion include definitions of marriage and family, diverse family structures, gender roles, partner selection, relationship formation, parenting, the intersection of family and work, family violence, divorce, and remarriage. Additionally, the course incorporates valuable insights from cross-cultural and historical comparisons.		
Course Pre-requisite(s)

Goals, Topics, and Objectives

Core Course Topics
1. The social construction of ideas about marriage and family. (Learning Objectives 1, 6) 2. The connections between family and other social institutions. (Learning Objective 2) 3. The role of class in marriage and family. (Learning Objectives 3, 6) 4. The role of class in marriage and family. (Learning Objectives 3, 6) 5. Contemporary problems related to marriage and family. (Learning Objectives 3, 6) 6. Theoretical perspectives on marriage and family. (Learning Objective 4) 7. Contemporary marriage and family issues. (Learning Objective 5)
Provide examples of how aspects of family life are socially constructed, varying between cultures, across times, and between individuals.
Explain how family life is influenced by other major social institutions, such as the economy, government, or religion.
Describe ways in which sociological factors, such as class, religion, or race influence personal decisions in dating and marriage.
Describe how sociological theories examine and explain features of family life.
Describe contemporary controversies related to marriage and family.
Analyze how ones own views and values concerning marriage and family are linked to ones background (i.e., gender, race/ethnicity, religion, etc.).

SOC151 - Contemporary Social Problems

Overview

Subject	Academic Department	School
Sociology	Social Sciences	Liberal Arts
Course Description		
Focuses on understanding current social problems in U.S. society, such as economic, racial, and gender inequality, from a sociological perspective. Because the course relates to social issues, the exact set of problems covered can change from semester-to-semester. Other issues covered in recent semesters include climate change, crime, and social movements intended to solve social problems. The primary goals of this course are increasing student awareness of social problems and their causes, as well as possible solutions.

Goals, Topics, and Objectives

Core Course Topics
1. Using the sociological imagination to understand social problems (objectives 1,6)

2. The social construction of social problems (2,6)
3. The role of power in social problems (3)
4. Problems of racial inequality (3,6)
5. Problems of class inequality (3,6)
6. Problems of gender inequality (3,6)
7. Theoretical perspectives on social problems (4)
8. Identification and understanding of specific social problems (5)
Explain the difference between an individual-based approach to studying social problems and a sociological approach.
Provide examples of how social problems are socially constructed, varying between cultures, across time, and between individuals.
Describe how power (especially as power relates to class, race, and gender) plays a role in the U.S.s identification of social problems.
Describe how sociological theories examine and explain contemporary social problems.
Identify and explain several contemporary social problems facing U.S. society.
Analyze how an individuals identification of social problems is linked to their values and to their background (i.e., their class, race, gender, etc.).

SOC152 - Women, Men, and Society

Overview

Subject	Academic Department	School
Sociology	Social Sciences	Liberal Arts
Course Description		
Women, Men, and Society uses a sociological approach to examine a wide variety of issues related to gender, such as gender roles, gender socialization, and gender inequality. The course looks at how and why experiences of women and men can differ in areas such as employment, politics, and family life. The course also examines issues related to sexual orientation and gender identity.		
Course Pre-requisite(s)		
Eligible to take ENG courses at HFC.

Goals, Topics, and Objectives

Core Course Topics
1. The Sociological Study of Gender
a. distinguish between sex and gender b. explain why gender is socially constructed c. recognize how gender intersects with other forms of inequality
2. Gender Socialization
a. define Sociology's stance in nature-nurture discussion b. describe the impact of the main agents of socialization c. discuss gender differences between different cultures
3. The Gender Gap in Pay
a. identify the current percentage in the pay gap b. recognize how the pay gap has changed over time c. describe factors behind the gap in pay
4. Institutional Forms of Gender Inequality
a. describe gender inequality in politics/government b. describe gender inequality in mass media c. describe forms of inequality in other social institutions, such as family
5. Sexual Orientation and Gender Identity
a. define sexual orientation and gender identity b. recognize examples of homophobia c. discuss types of discrimination against LGBTQ+
The Sociological Study of Gender a. distinguish between sex and gender b. explain why gender is socially constructed c. recognize how gender intersects with other forms of inequality

Gender Socialization a. define Sociology's stance in nature-nurture discussion b. describe the impact of the main agents of socialization c. recognize how gender is a type of social performance
The Gender Gap in Pay a. identify the current percentage in the pay gap b. recognize how the pay gap has changed over time c. describe factors behind the gap in pay
Institutional Forms of Gender Inequality a. describe gender inequality in politics/government b. describe gender inequality in mass media c. describe forms of inequality in other social institutions, such as family
Sexual Orientation and Gender Identity a. define sexual orientation and gender identity b. recognize examples of homophobia c. discuss types of discrimination against LGBTQ+

SOC212 - Leadership Diverse Communities Organizat

Overview

Subject	Academic Department	School
Sociology	Social Sciences	Liberal Arts
Course Description		
The purpose of Leadership in Diverse Communities and Organizations is to examine and assess the intricacies of traditional leadership praxis and the complexity of leading non-traditional organizations. While the course addresses traditional leadership theories, it also identifies innovative theories and approaches that acknowledge and value the multiplicity of social capital all shareholders bring to an organization. Additionally, the sociological perspective is employed to enable students to critically view their own lived experiences as framework from which to critically assess issues of equity and privilege.		
Course Pre-requisite(s)		
Eligible to take ENG courses at HFC.

Portfolio of experience and course work		

Goals, Topics, and Objectives

Core Course Topics
1. Leadership and Team Building
o Explain basic principles and practices of leadership.
o Describe models and theories from non-profit, private and government sectors.
o Apply principles of leadership, including vision, motivation, and emotional intelligence.
o Describe competencies of goal setting, risk-taking, ethics, in community change.
o Integrate personal experience and beliefs with current research and practice.
2. Power and Power Mapping
o Describe the various types of power.
o Demonstrate techniques of power analysis.
o Complete a power map for a specific area or issue.
o Conduct a classroom demonstration of power mapping.
3. Communication Skills
o Utilize effective verbal and written communication.
o Employ public speaking skills in presentations.
o Display cultural competencies communication styles and methods.
4. Organizational Development and Leadership
o Assess resource development needs in communities and organizations.
o Describe fund-making methods.
o Describe strategic planning methods.
o Conduct an elementary SWOT analysis
5. Pre-Practicum Research
o Design a model action campaign.
o Create outreach materials.
o Conduct outreach and recruitment.
o Develop implement strategies.
o Present model campaign.

6. Career Exploration
Conduct research on job opportunities by sector. Develop a resume. Identify practicum priorities.
Explain basic principles and practices of leadership.
Describe models and theories from non-profit, private and government sectors.
Apply principles of leadership, including vision, motivation, and emotional intelligence.
Describe competencies of goal setting, risk-taking, ethics, in community change.

SOC251 - Ethnic & Racial Diversity in Society

Overview

Subject Sociology	Academic Department Social Sciences	School Liberal Arts
Course Description	Introduces students to the sociological study of ethnic and racial groups. Students explore key concepts and issues in connection with definitions of race and ethnicity, immigration, patterns of group inequality and domination, discrimination and prejudice. Focuses on the diversity of U.S. society and explores the experiences of Native Americans and immigrant groups, including those from Africa, Asia, and Europe. Emphasis on current patterns and consequences of immigration will be studied. Ethnic and racial diversity in other societies will also be explored.	
Course Pre-requisite(s)	SOC131 Introduction to Sociology	
Credit Hours	3	
Contact Hours	3	
Course Fee 10	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category Social Sciences	Michigan Transfer Agreement (MTA) Category Category 4: Social Sciences - Applied Degrees, Category 4: Social Sciences - Transfer Degrees	
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Other	
Credit for Prior College Level Learning (CPCLL) Details Determined by department		

Goals, Topics, and Objectives

Core Course Topics
Understanding Race and Ethnicity (objectives 1,6). The Legacy of Colonialism (objectives 2, 3, 4, 5, 6). Historic and Contemporary Social Movements (objective 2, 4). Historic and Contemporary issues concerning Affirmative Action (objectives 3, 5). Contemporary issues concerning Multi-cultural Education in the United States (objective 4).
Distinguish race from ethnicity.
Identify both contemporary and historical patterns of ethnic and racial inequality in U.S. and globally.
Define and illustrate biological, cultural, and structural explanations as they relate to race and social stratification.
Distinguish the differences and commonalities that exist between racism, prejudice, ethnocentrism, nationalism, and colonialism.
Describe social stratification as it relates to racism in the United States.
Analyze the significance of race and ethnicity in relationship to social mobility in the United States, and identify structural causes of inequality to support the analysis.

SOC253 - Sociology of Deviance

Overview

Subject Sociology	Academic Department Social Sciences	School Liberal Arts
Course Description	Explores how one becomes deviant, the social construction of deviant behavior, the impact of societal responses to deviance, and processes used to control deviant behavior. Offers a wide range of perspectives and theoretical formulations to explain the onset, persistence, and desistence of deviance. Also discusses both formal and informal responses to deviant behaviors including criminalization and stigmatization, and their cross-cultural variation. Additionally, course examines particular forms of deviance including homicide, domestic violence, mental illness, alcohol and drug abuse, sexual deviance, property and white collar/organized crimes.	
Course Pre-requisite(s)	SOC131 Introduction to Sociology	
Credit Hours	3	
Contact Hours	3	
Course Fee 15	Miscellaneous Department Fee 0	

Academic Level Undergraduate	
General Education Category Social Sciences	Michigan Transfer Agreement (MTA) Category Category 4: Social Sciences - Applied Degrees, Category 4: Social Sciences - Transfer Degrees
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Other
Credit for Prior College Level Learning (CPCLL) Details Determined by department	

Goals, Topics, and Objectives

Course Goals This course introduces the sociological approach to understanding deviant behavior. A wide range of perspectives and theoretical formulations will be used to explain the onset, persistence and desistence of deviance.
Core Course Topics 1. Introduction to the Study of Deviant Behavior. 2. Sociological Theories of Deviant Behavior. 3. Violence and Deviant Behavior. 4. Deviance and Interpersonal Relationships. 5. Mental Illness. 6. Alcohol and Drug Abuse. 7. White Collar and Organized Crime.

Define deviant behavior
Explain how social/legal norms are created and violated
Explain the consequences of social/legal norm violation
Describe how deviance is socially constructed
Analyze how power is involved in defining and labeling deviance.
Illustrate stigmatization and the formation of deviant identities
Explain the micro and macro sociological approaches to the study of deviant behavior
Describe sociological theories associated with specific forms of deviant behavior
Describe the theoretical formulations that derive from the conflict and functionalist perspectives
Analyze recent advances in the theoretical foundations of the study of deviance
Explain the types and definitions of homicide, assault and battery
Describe the trends and patterns of homicide in the US
Define domestic violence and explain types, forms and risk factors
Describe the characteristics of victims and offenders
Analyze the cultural, social and medical definitions of rape, sexual assault, and child sexual abuse
Analyze definitions of sexual deviance in theUSand across the globe
Analyze the cultural, social and medical definitions of mental illness
Explain the various forms and prevalence of mental illness
Explain the nature and prevalence of alcohol and drug abuse in theUSand across the globe
Evaluate applicable theories as explanations of alcohol and drug abuse
Explain the nature and definitions of various property crimes such as burglary, robbery and larceny-theft
Describe the prevalence of property crimes in theUSand across the globe

Explain the nature and definitions of white collar crimes
Describe the prevalence of white-collar crimes in the US and across the globe

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
To be determined by the instructor. However, a wide range of assessment including (but not limited to) true and false, multiple choice, matching, short answer, research paper, internet assignments, newspaper searches, article analysis and library projects may be utilized.	
Texts	
To be determined by instructor.	
Satisfies Honors Requirement	Satisfies Wellness Requirement
No	No

SOC254 - Social Psychology

Overview

Subject Sociology	Academic Department Social Sciences	School Liberal Arts
Course Description Introduces the social forces affecting people's lives and how people affect their group. This course examines three areas of behavior resulting from intentional influence, membership in a group, and social interaction. Self-perception, behavior and attitude, attraction, aggression, altruism and group processes are also explored. This course may be taken for credit in either psychology or sociology but not both.

Eligible for Credit for Prior College Level Learning (CPCLL) Yes		Acceptable Prior Learning Credit Other
Credit for Prior College Level Learning (CPCLL) Details Determined by department		

Goals, Topics, and Objectives

Core Course Topics 1. The Self 2. Self-Presentation and Social Perception 3. Social 4. Attitudes 5. Persuasion 6. Prejudice and Discrimination 7. Social Influence 8. Group Behavior 9. Interpersonal Attraction 10. Intimate Relationships 11. Aggression 12. Prosocial Behavior: Helping Others
Explain how the self influences and is influenced by the social environment;
Explain the psychology of the self and the important functions that the self as a construct serves;
Describe the ways in which people interpret, analyze, remember, and use information about the social world;
Comparing multiple perspectives on attitude formation, discuss attitudes and how they develop;
Determine and analyze the effectiveness of a persuasive message;
Explain the social and psychological causes of prejudice and discrimination and describe ways to reduce negative intergroup behavior and evaluations;
Explain the concept of social influence and describe the social and psychological factors that influence conformity, compliance, and obedience;

Discuss the characteristics of group behavior, including leadership and decision making;
Describe interpersonal attraction and explain the concepts of affiliation needs;
Define and explain the concept of aggression from both social and psychological viewpoints.
Analyze the helping process or prosocial behavior by answering some basic questions: Why do we help others? When do we help others? Who among us is most likely to help? Who are we likely to help?
Analyze a current social issue by applying the concepts and theories learned in social psychology.*

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Each instructor will identify and implement appropriate methods to assess the achievement of the learning objectives for the course.

SPC131 - Intro to Public Speaking

Overview

Subject Speech	Academic Department Media Communication Arts	School Liberal Arts
Course Description This course explores how to develop public speaking skills through practice in preparing and delivering speeches for various audiences and situations.		
Course Pre-requisite(s) Eligible to take ENG131 Introduction College Writing at HFC.		
Credit Hours 3		
Contact Hours 3		
Course Fee 10	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category English Composition or Communications, Humanities and Fine Arts		
Michigan Transfer Agreement (MTA) Category Category 2: English Composition or Communications - Transfer Degrees, Category 2: English Composition or Communications - Applied Degrees, Category 5: Humanities and Fine Arts - Applied Degrees, Category 5: Humanities and Fine Arts - Transfer Degrees		
Eligible for Credit for Prior College Level Learning (CPCLL) Yes		
Acceptable Prior Learning Credit Other		
Credit for Prior College Level Learning (CPCLL) Details Other		

Goals, Topics, and Objectives

Course Goals
The goal of this course is to develop and improve effective public speaking skills in social, professional, and public situations.
Core Course Topics

1. Basic communication concepts, models, and terms
2. Types of listening and development of listening skills and self-awareness of listening behaviors
3. Public speaking apprehension and methods/techniques to deal with speech anxiety and confidence building
4. Extemporaneous speaking
5. The importance of preparation and various rehearsal techniques
6. Audience analysis and appreciation of diversity
7. Speech topic and purpose selection
8. Speech outlines
9. Types of supporting material, including selection, evaluation, and effective use
10. Speech organizational patterns
11. Presentation aids - types, design, preparation, and use
12. Speech delivery methods, modes, and techniques (voice, face, gestures, and movement)
13. Ethics of public speaking and listening
14. Research skills
15. Speaking using new media technologies
Understand and describe basic communication concepts, models, and terminology
Analyze listening expectations and responses through active listening and nonverbal feedback, identifying main ideas, supporting details, and distinguishing between logical and emotional arguments
Develop poise and gain confidence when speaking in various settings

Gain awareness of personal speech habits and characteristics
Successfully recognize, analyze, and adapt to diverse audience expectations and responses
Distinguish between effective and ineffective topic selection
Logically and effectively organize main points of a topic to thoughtfully compose and critically evaluate written and spoken messages
Identify, gather, evaluate, and use appropriate supporting material for speeches
Analyze and critique various speech techniques, organizational patterns, content, and purpose
Design, prepare, and effectively use presentation aids
Exercise proper delivery methods and techniques, including voice modulation, gestures, facial expressions, and movement
Analyze the ethics of public speaking and listening, and the impact it can have on others
Develop speaking notes and proper bibliographies through effective research techniques
Develop confidence in delivering speeches in various digital public speaking formats, both synchronously and asynchronously
Establish critical thinking skills to identify misinformation and assess credibility during online research or when utilizing generative AI for speech writing and organization
Evaluate speaker credibility by detecting bias, prejudice, and ethnocentrism, and observing consistency between verbal and nonverbal messages
Establish proficiency in the key components of effective public speaking: timing, adequate practice, clear deliverables, and meeting deadlines

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement • Speaking Projects: Four formal academically researched speeches: One Introductory, One Informative, One Persuasive, One Special Occasion, and including extemporaneous speaking, with speech outlines as applicable • Additional informal speeches/activities • Speech evaluation/self-analysis • Audience and peer evaluation/analysis • Tests/Quizzes/Exams: Graded activities and/or quizzes, and final examination/project (written and/or oral)

SPC145 - Interpersonal Communication

Overview

Subject Speech	Academic Department Media Communication Arts	School Liberal Arts
Course Description This course explores the process of communication between individuals in formal and informal, face-to-face and digital settings across family, social, and work groups. Examines the social, linguistic, cultural, and psychological factors impacting interpersonal communication.		
Course Pre-requisite(s) Eligible to take ENG131 Introduction College Writing at HFC.		
Credit Hours 3		
Contact Hours 3		
Course Fee 10	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category English Composition or Communications		
Michigan Transfer Agreement (MTA) Category Category 2: English Composition or Communications - Transfer Degrees, Category 2: English Composition or Communications - Applied Degrees		
Eligible for Credit for Prior College Level Learning (CPCLL) Yes		
Acceptable Prior Learning Credit Other		
Credit for Prior College Level Learning (CPCLL) Details Other		

Goals, Topics, and Objectives

Course Goals The goal of this course is to help students understand the concepts, principles, and theories essential to improving interpersonal oral and written communication skills.		
Core Course Topics - The nature of the communication process - The influence of communicative behaviors on personal relationships, groups, and society - Self-concept: awareness, acceptance, actualization, and self-disclosure - Perception: perceiver and perceived - Active listening and feedback - Language and the symbolic process in oral and written communication - Nonverbal communication - Interpersonal relationships: intimate, family, social, and work groups, and the concepts of intimacy and distance in relationships - Communication climates and overcoming barriers - Ethical communication and conflict management - Social media communication and technology (digital communication) - Cultural awareness		
Understand and describe the communication process including basic communication concepts, terms and models		
Demonstrate interpersonal skills in areas of listening, ethics, in verbal and nonverbal communication, among others within personal and professional relationships		
Recognize the elements of interpersonal communication situations, including forms and functions of non-verbal behavior		
Find and evaluate research material in terms of credibility, bias, accuracy, and ethics		
Describe the origin of the self-concept: awareness, acceptance, actualization, and self-disclosure, and its effect on communication		
Identify errors in the perception process and its effect on communication		
Demonstrate active listening skills		
Use empathy and perception-checking skills to prevent misunderstanding in interpersonal relationships		
Understand and assess the competencies related to communicating with those from other diverse cultural contexts		
Assess and articulate the values, beliefs and attitudes in communication situations, including the ethical dimensions of situations		
Analyze self-disclosure in relationships		
Demonstrate conflict resolution skills and problem-solving methods		
Understand how the use of technology changes the way we create, maintain, and dissolve interpersonal relationships		

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement • Quizzes and/or written exams • Summary and analysis of case studies • In-class reflective papers on interpersonal communication topics • Class presentations, individual or group • Major collaborative research-based oral and written project • Research paper or project		
Satisfies Honors Requirement	Satisfies Wellness Requirement

SPN131 - Elementary Spanish I

Overview

Subject Language Studies	Academic Department Language Studies	School Liberal Arts
Course Description Introduces the basic skills of reading, writing, speaking, and listening in Spanish within communicative contexts. Covers the elementary pronunciation and grammatical principles necessary for comprehending and expressing simple ideas in both spoken and written Spanish. Also presents Hispanic culture. Note: A "C-" grade is not transferrable and is not accepted by some programs at HFC.		
Course Pre-requisite(s) ENG024 ALP: Reading and Writing / ENG025E ALP for ELL-Reading & Writing eligible or instructor permission		
Credit Hours 4		
Contact Hours 4		
Course Fee 10	Miscellaneous Department Fee 0	
Academic Level Undergraduate		

General Education Category Humanities and Fine Arts	Michigan Transfer Agreement (MTA) Category Category 5: Humanities and Fine Arts - Applied Degrees, Category 5: Humanities and Fine Arts - Transfer Degrees
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Course Goals SPN131 Elementary Spanish I is designed to enable students to reach the Novice Mid level on the American Council on the Teaching of Foreign Languages (ACTFL) proficiency scale, focusing on language learning through communication, cultures, connections, comparisons, and communities.
Core Course Topics
1. Greetings, introductions, and farewells
2. Phonetics
3. Alphabet
4. Numbers
5. Present-tense verbs
6. Future
7. Gender and number agreement
8. Affirmation and negation
9. Interrogatives
10. Vocabulary
11. Hispanic culture

Use appropriate greetings, introductions, and farewells.
Demonstrate knowledge of phonetics through the comprehensible pronunciation of Spanish words.
Demonstrate verbal and written knowledge of the Spanish alphabet.
Recognize and produce numbers, dates, and times.
Demonstrate correct usage of present-tense indicative verb forms, including regulars, irregulars, some common reflexives, ser and estar, and gustar.
Express the future both orally and in writing using the ir + a + infinitive structure.
Demonstrate knowledge of gender and number agreement of nouns, articles, descriptive and unstressed possessive adjectives, and subject and direct object pronouns.
Create simple affirmative and negative statements using appropriate word order.
Develop and respond to interrogative questions relating to chapter/unit themes using appropriate word order.
Write about, speak about, and interpret situations similar to those presented in each chapter/unit of the textbook.
Compare and contrast elements of Spanish culture that differ from the U.S. norm.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Assessment of academic achievement will be identified and implemented by the class instructor. Methods will include, but not be limited to:
- Participation - Weekly/regular quizzes - Homework assignments - Chapter/unit tests - Oral/receptive-expressive exam(s) - Departmental writing assessment - Midterm/final exam

Texts All sections of this level will use a textbook (and any accompanying materials) selected by the course coordinator and approved by the World Languages Committee. Satisfies Honors Requirement No	Satisfies Wellness Requirement No

SPN132 - Elementary Spanish II

Overview

Subject Language Studies	Academic Department Language Studies	School Liberal Arts
-----------------------------	---	------------------------

Course Description Further builds reading, writing, speaking, and listening skills in Spanish, focusing on communication in a cultural context. Develops students' knowledge of vocabulary, pronunciation and grammatical principles in order to comprehend and express everyday ideas in both spoken and written Spanish. Presents Hispanic culture.
Course Pre-requisite(s) A grade of C or better in SPN131 Elementary Spanish I or in one year of high school Spanish, or instructor permission

Credit Hours 4

Contact Hours 4

Course Fee 10	Miscellaneous Department Fee 0
Academic Level Undergraduate	
General Education Category Humanities and Fine Arts	Michigan Transfer Agreement (MTA) Category Category 5: Humanities and Fine Arts - Applied Degrees, Category 5: Humanities and Fine Arts - Transfer Degrees
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Course Goals SPN132 Elementary Spanish II is designed to enable students to reach the Novice High level on the American Council on the Teaching of Foreign Languages (ACTFL) proficiency scale, focusing on language learning through communication, cultures, connections, comparisons, and communities.
Core Course Topics
1. Present-tense verbs
2. Past-tense verbs
3. Future
4. Commands
5. Passive voice
6. Gender and number agreement
7. Pronouns
8. Comparative and superlative structures
9. Conjunctions
10. Narration
11. Hispanic culture

Demonstrate correct usage of present-tense indicative stem-changing and irregular reflexive verbs, saber and conocer, and verbs of preference similar to gustar.
Recognize and produce preterit and imperfect verb forms, including regulars, irregulars, and reflexives.
Recognize and produce simple future verb forms, including irregulars.
Recognize and produce simple formal and informal commands.
Recognize and produce the passive voice with se.
Demonstrate correct usage of demonstrative adjectives with appropriate gender and number agreement.
Interpret and demonstrate correct usage of direct and indirect object pronouns.
Compare and contrast using appropriate comparative and superlative structures.
Interpret and demonstrate correct usage of coordinating and some common subordinating conjunctions such as cuando and mientras.
Interpret and produce simple narratives in the past using appropriate time markers and present, preterit, and imperfect verb forms.
Analyze aspects of Hispanic culture that differ from the U.S. norm, giving specific examples that illustrate such differences.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Assessment of academic achievement will be identified and implemented by the class instructor. Methods will include, but not be limited to:
- Participation - Weekly/regular quizzes - Homework assignments - Chapter/unit tests - Oral and/or expressive-receptive exam(s) - Midterm/final exam

Texts All sections of this level will use a textbook (and any accompanying materials) selected by the course coordinator and approved by the World Languages Committee.

SPN231 - Intermediate Spanish I

Overview

Subject Language Studies	Academic Department Language Studies	School Liberal Arts
-----------------------------	---	------------------------

Course Description Follows SPN-132 and is the first of two intermediate-level Spanish courses focusing on communication in a cultural context. Develops students' reading, writing, speaking, and listening skills in Spanish, expands their vocabulary, and deepens their knowledge of pronunciation and grammatical principles in order to comprehend and express essential ideas in both spoken and written Spanish. Presents Hispanic culture.	
Course Pre-requisite(s) A grade of C or better in SPN132 Elementary Spanish II or in two years of high school Spanish, or instructor permission	
Credit Hours 4	
Contact Hours 4	
Course Fee 10	Miscellaneous Department Fee 0
Academic Level Undergraduate	
General Education Category Humanities and Fine Arts	Michigan Transfer Agreement (MTA) Category Category 5: Humanities and Fine Arts - Transfer Degrees, Category 5: Humanities and Fine Arts - Applied Degrees
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Course Goals
[SPN231 Intermediate Spanish I](#) is designed to enable students to reach the Intermediate Low level on the American Council on the Teaching of Foreign Languages (ACTFL) proficiency scale, focusing on language learning through communication, cultures, connections, comparisons, and communities.

Core Course Topics

- 1. Subjunctive verbs
- 2. Hypothetical expressions
- 3. Reciprocity
- 4. Perfect verb forms
- 5. Commands
- 6. Gender and number agreement
- 7. Prepositions
- 8. Affirmation and negation
- 9. Conjunctions
- 10. Essay composition
- 11. Critical listening, speaking, and writing
- 12. Critical reading
- 13. Hispanic culture

Recognize and produce both present and imperfect subjunctive forms, including regulars and irregulars, with appropriate independent verb clauses.
Recognize and produce hypotheses using conditional verb forms appropriately, including regulars and irregulars.
Express reciprocity correctly both orally and in writing.
Demonstrate correct usage of both present and past perfect verb forms, including regular and irregular participles.
Recognize and produce formal and informal commands, including regulars, irregulars and those with reflexive and direct and indirect object pronouns
Demonstrate correct usage of stressed possessive adjectives and possessive pronouns with appropriate gender and number agreement
Recognize and produce sentences using por and para appropriately
Demonstrate correct usage of indefinite and negative expressions in affirmative and negative statements and questions
Demonstrate correct usage of indicative and subjunctive verb modes in dependent clauses introduced by adverbial and adjectival conjunctions
Write simple descriptive, narrative, and informative essays related to themes presented in each chapter/unit of the textbook using appropriate register
Interpret short authentic audio and visual materials and respond critically in Spanish
Summarize Spanish-language materials in written compositions and oral presentations
Analyze cultural differences as manifested through language differences

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement will be identified and implemented by the class instructor. Methods will include, but not be limited to:

- Participation

SPN290 - StudyAbroad Spanish Lang&Hispan Culture

Overview

Subject Language Studies	Academic Department Language Studies	School Liberal Arts
Course Description Develops students' knowledge of the Spanish language and Hispanic culture in a Spanish-speaking country under the direction of a World Languages faculty member. Includes language and cultural lessons prior to departure and a researched reflection on a particular theme of interest presented upon students' return. Specific travel information announced at least one semester prior to departure.		
Course Pre-requisite(s) A grade of C or better in SPN131 Elementary Spanish I , SPN132 Elementary Spanish II , SPN231 Intermediate Spanish I , or SPN232 Intermediate Spanish II or equivalent, or instructor permission		
Credit Hours 3		
Contact Hours 3		
Course Fee 2500	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category Humanities and Fine Arts		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals SPN290 StudyAbroad Spanish Lang Cult is designed to provide opportunities for language practice in speaking, listening, reading, and writing Spanish. As a Study Abroad course, this course promotes the knowledge of a Spanish-speaking country and its people and helps students understand how language and culture connect. This course also encourages academic responsibility, critical thinking, and an understanding of research methods, the results of which will be presented as a researched essay, report, or other creative project.	
Core Course Topics 1. Phonetics 2. Vocabulary and idioms 3. Listening comprehension 4. Grammatical structures 5. Research and critical analysis 6. Culture	

Demonstrate knowledge of phonetics through the comprehensible pronunciation of Spanish as spoken in the destination country.
Interpret and correctly apply vocabulary and idioms of the country and region of travel Interpret and respond appropriately to conversational themes with an emphasis on varieties and accents of the country and region of travel.
Develop and use grammatical structures that support informal and academic discourse.
Synthesize and analyze information on particular issues relating to the Spanish language and Hispanic literatures and cultures from primary and secondary sources.
Compare and contrast stereotypes of and experiences with the Spanish language and Hispanic cultures with U.S. stereotypes and experiences.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement will be identified and implemented by the class instructor. Methods will include, but are not limited to:
- Participation in lessons and activities prior to travel, during travel, and upon return - Frequent consultations with the instructor - Periodic written summary of work performed/reflective portfolio - Final project and presentation
General Course Requirements and Recommendations
- Prior to leaving the United States, the students and instructor will choose a mutual area of interest such as one aspect of basic language, literature, culture, etc. - The instructor will then assist the students in identifying resources for investigation (books, web sites, journal articles, places to visit, people to interview, etc.), at least some of which will be in Spanish. - The students will conduct pre-travel research on their own. - The students and instructor will travel to a Spanish-speaking country and put into practice their newly acquired linguistic and cultural knowledge. - While in a Spanish-speaking country, the students, aided by the instructor, will do further research on their selected topic. - Upon returning to the United States, the students will present a paper, report, or project along with a bibliography by the end of the semester.
Texts
All sections of this level will use a textbook and/or accompanying materials selected by the course coordinator and approved by the World Languages Committee.
Satisfies Honors Requirement
No
Satisfies Wellness Requirement
No

SRG101 - Introduction to Surgical Technology

Overview

Subject	Academic Department	School
Surgical Technician	Health, Education, and Human Services	Health & Human Services
Course Description		
The course introduces the fundamentals of operating room techniques, emphasizing principles and practices of asepsis and sterilization. Physical and psychosocial aspects of the patient are explored. Included are the roles and responsibilities of the surgical technologist and other surgical team members; accountability and legal aspects; identification of common equipment, instruments, and supplies; students practice scrubbing, gowning, and gloving. Selected laboratory practice required.		
Course Pre-requisite(s)	Course Co-requisite(s)	
Acceptance into the Surgical Technologist program, RIO135 Microbiology for AHS, and RIO233 Anatomy and Physiology I both with a C grade or higher.	SRG105 Intro to Surgical Tech Lab	
Credit Hours		
4		
Contact Hours		
4		
Course Fee	Miscellaneous Department Fee	
25	0	
Academic Level		
Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL)		
No		

Goals, Topics, and Objectives

Core Course Topics
- Communication Skills and Teamwork - Legal Issues, Documentation, and Risk Management - Healthcare Facility Organization and Management - Physical Environment - Methods of Disinfection and Sterilization - Environmental Disinfection of the Operating Room - Hemostasis, Suture, and Wound Healing - Biopsychosocial Needs of the Patient - Patient Transport and Surgical Positioning - Urinary Catheterization

- Surgical Counts - Basic Instrumentation - Environmental Hazards - Aseptic Technique
Describe the surgical technologist, nature of their work, employment options, and possible career opportunities.
Describe hospital organization, noting the relationship of the surgical area to the other departments of the hospital.
Compare and contrast the surgical team members, noting the moral, professional, and legal responsibility of each.
Identify the surgical patient's needs before, during, and after surgery.
Explain the principles and practices of surgical asepsis.
Describe sutures and suturing techniques used in surgical procedures.
Categorize basic surgical instruments and instrument categories, common supplies, and equipment and their uses.
Describe and demonstrate scrubbing, gowning, and gloving for surgical procedures.
Demonstrate basic surgical positioning and urinary catheterization.
Analyze basic surgical positioning factors including anesthesia, surgeon's preference, patient considerations, and safety.
Describe common forms of sterilization used for surgical instruments and supplies.
Describe the types of wounds, wound healing, infection, and blood replacement.
Differentiate among various methods of hemostasis.
Describe objectives and priorities in emergency situations.
Demonstrate the principles of safe transport of the patient to the OR, including transfer on and off the OR table.
Describe legal issues, documentation and Risk Management as they pertain to the operating room (OR) setting.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement will include unit exams, quizzes, and a cumulative final.
General Course Requirements and Recommendations
Students must pass this course with a "C" or better grade to remain in the Surgical Technologist AAS Degree Program.
Students must follow all classroom/ clinical policies described in the most current Surgical Technologist AAS Degree Student Handbook.
Grading Scale
Student grades will be assigned using the following scale:
99-100% = A+ 94-98% = A 90-93% = A- 87-89% = B+ 83-86% = B 80-82% = B- 76-79% = C+ 70-75% = C 65-69% = D+ 60-64% = D 60% and below = E
Texts
Required: Textbook(s) as determined by program faculty. Recommended: Textbook(s) as determined by program faculty.

SRG102 - Surgical Technology Introduction

Overview

Subject Surgical Technician	Academic Department Health, Education, and Human Services	School Health & Human Services
Course Description The course introduces the fundamentals of surgical technology. Physical and psychosocial aspects of the patient are explored. Included are the roles and responsibilities of the surgical technologist and other surgical team members, accountability and legal aspects, healthcare facility organization, the physical environment of the operating room, safety standards, emergency situations and All Hazard preparations.		
Course Pre-requisite(s) Acceptance into the Surgical Technologist program, BIO135 Microbiology for AHS , and BIO233 Anatomy and Physiology I both with a C grade or higher.	Course Co-requisite(s) SRG105 Intro to Surgical Tech Lab	
Credit Hours 2		
Contact Hours 2		
Course Fee 25	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

- Core Course Topics
1. Communication Skills and Teamwork
 2. Professional organizations
 3. Legal Issues, Documentation, and Risk Management
 4. Healthcare Facility Organization and Management
 5. Physical Environment and Hazards
 6. Biopsychosocial Needs of the Patient
 7. Technology of the Operating Room
 8. Protected Health Information
 9. Microbiology review and Preventing Disease Transmission

Describe the surgical technologist, nature of their work, employment options, and possible career opportunities.
Identify surgical technology professional organizations.
Analyze the components of effective teamwork and communication.
Describe hospital organization, noting the relationship of the surgical area to the other departments of the hospital.
Compare and contrast the surgical team members, noting the moral, professional, and legal responsibility of each.
Describe objectives and priorities in emergency situations.
Describe legal issues, documentation and Risk Management as they pertain to the operating room (OR) setting
Analyze the critical elements related to the development of surgical conscience.
Distinguish and assess cultural and religious influences of the surgical patient.
Discuss the procedure for a patient death in the operating room (OR).
Evaluate the unique physical and psychological needs of each vulnerable patient population.
Analyze the role of the surgical technologist in the protection of self, patients, and others from hazards in the operative environment.
Recognize OR design types and working environment.
Discuss best practices for utilizing electronic medical records (EMR) and protected health information (PHI).
Describe the role of advanced technology in patient care.
Compare and contrast the structure and characteristics of different microorganisms.

Relate the infectious process to surgical practice.
Recognize developing emergency situations, initiate appropriate action, and assist in the treatment of the patient.
Discuss the various roles the CST can fulfill during an all-hazards event.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Assessment of academic achievement will include unit exams, quizzes, and a cumulative final.	
General Course Requirements and Recommendations Students must pass this course with a "B-" or better grade to remain in the Surgical Technologist AAS Degree Program . Students must follow all classroom/ clinical policies described in the most current Surgical Technologist AAS Degree Student Handbook .	
Grading Scale Student grades will be assigned using the following scale:	
• 99-100% = A+ • 94-98% = A • 90-93% = A- • 87-89% = B+ • 83-86% = B • 80-82% = B- • 76-79% = C+ • 70-75% = C • 65-69% = D+ • 60-64% = D • 60% and below = E	
Texts Required: Textbook(s) as determined by program faculty.Recommended: Textbook(s) as determined by program faculty.	
Satisfies Honors Requirement No	Satisfies Wellness Requirement No

SRG104 - Fundamentals of Surgical Technology

Overview

Subject Surgical Technician	Academic Department Health, Education, and Human Services	School Health & Human Services
Course Description The course introduces the fundamentals of operating room techniques, emphasizing principles and practices of asepsis and sterilization. Physical and psychosocial aspects of the patient are explored. Included are the roles and responsibilities of the surgical technologist and other surgical team members; identification of common equipment, instruments, and supplies; the perioperative phases and environment; students practice scrubbing, gowning, and gloving, and preparation of the sterile surgical fields.		
Course Pre-requisite(s) Acceptance into the Surgical Technology program, SRG102 Surgical Technology Intro with a B- or higher, AH100 Medical Terminology, BIO233 Anatomy and Physiology I, BIO135 Microbiology for AHS or BIO251 Microbiology, all with a C or higher.		Course Co-requisite(s) SRG106 Fund. of Surgical Tech Lab
Credit Hours 2		
Contact Hours 2		
Course Fee 25	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics 1. Physical Environment 2. Methods of Disinfection and Sterilization 3. Environmental Disinfection of the Operating Room 4. Hemostasis, Suture, and Wound Healing 5. Biopsychosocial Needs of the Patient 6. Patient Transport and Surgical Positioning 7. Urinary Catheterization 8. Surgical Counts 9. Basic Instrumentation 10. Environmental Hazards 11. Aseptic Technique 12. Perioperative techniques and environment.	
Identify the surgical patient's needs before, during, and after surgery.	
Compare and contrast sterile techniques and practices related to the principles of asepsis.	

Identify the principles and procedures related to disinfection and sterilization.
Describe sutures and suturing techniques used in surgical procedures.
Categorize basic surgical instruments and instrument categories, common supplies, and equipment and their uses.
Differentiate the types of special equipment utilized in the OR.
Demonstrate proper care, handling, and assembly of accessory equipment.
Describe and demonstrate scrubbing, gowning, and gloving for surgical procedures.
Demonstrate basic surgical positioning and urinary catheterization.
Analyze basic surgical positioning factors including anesthesia, surgeon's preference, patient considerations, and safety.
Describe common forms of sterilization used for surgical instruments and supplies.
Describe the types of wounds, wound healing, infection, and blood replacement.
Differentiate among various methods of hemostasis.
Describe objectives and priorities in emergency situations.
Demonstrate the principles of safe transport of the patient to the OR, including transfer on and off the OR table.
Verify the preoperative routines that must be completed.
Explain the concepts for maintaining the sterile field.
Explain in detail the procedure for counting instruments, sponges, and sharps.
Summarize the steps of the postoperative routines.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
Assessment of academic achievement will include unit exams, quizzes, and a cumulative final.	
General Course Requirements and Recommendations

SRG105 - Introduction to Surgical Technology Lab

Overview

Subject Surgical Technician	Academic Department Health, Education, and Human Services	School Health & Human Services
Course Description The course introduces the fundamentals of operating room techniques, emphasizing principles and practices of asepsis and sterilization. Physical and psychosocial aspects of the patient are considered throughout the various procedures in the operating process. Included are the roles and responsibilities of the surgical technologist and other surgical team members; identification and handling of common equipment, instruments, and supplies; students are introduced to and practice the sterile and unsterile rules in the operating room. This is a laboratory course.		
Course Pre-requisite(s) Acceptance into the Surgical Technologist AAS Degree program, BIO135 Microbiology for AHS , and BIO233 Anatomy and Physiology I both with a C grade or higher.		Course Co-requisite(s) SRG101 Intro Surgical Technology

Credit Hours

Goals, Topics, and Objectives

Core Course Topics
- Communication Skills and Teamwork - Physical Environment - Methods of Disinfection and Sterilization - Environmental Disinfection of the Operating Room - Hemostasis, Suture, and Wound Healing - Biopsychosocial Needs of the Patient - Patient Transport and Surgical Positioning - Urinary Catheterization - Surgical Counts - Basic Instrumentation - Aseptic Technique - Environmental Hazards
Demonstrate the roles of surgical team members, noting the moral, professional, and legal responsibility of each.
Identify the surgical patient's needs before, during, and after surgery.
Assess the patient's vital signs, before, during, and after surgery.
Demonstrate the principles and practices of surgical asepsis.
Identify sutures and suturing techniques that are commonly used in surgical procedures.
Identify basic surgical instruments and instrument categories, common supplies, and equipment and their uses.
Demonstrate basic hand hygiene.
Demonstrate scrubbing, gowning, and gloving for surgical procedures.
Demonstrate basic surgical prepping, positioning, and draping.
Demonstrate proper urinary catheterization techniques.
Modify surgical prepping, positioning, and draping based on factors including anesthesia, surgeon's preference, patient considerations, and safety.
Demonstrate safety throughout the patient surgical experience.
Demonstrate preparation for common forms of sterilization used for surgical instruments and supplies.
Describe common decontamination processes.
Describe objectives and priorities in emergency situations.

Demonstrate the principles of safe transport of the patient to the OR, including transfer on and off the OR table.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement will include quizzes and competencies.

General Course Requirements and Recommendations
Students must pass this course with a "C" or better grade to remain in the Surgical Technologist AAS Degree Program.

Students must follow all classroom/ clinical policies described in the most current Surgical Technologist AAS Degree Student Handbook.

Students are required to wear the navy blue HFC program scrubs during all lab classes.

Grading Scale
Student grades will be assigned using the following scale:

- 97-100% = A
- 93-96% = A-
- 90-92% = B+
- 87-89% = B

SRG120 - Surgical Procedures I

Overview

Subject	Academic Department	School
Surgical Technician	Health, Education, and Human Services	Health & Human Services

Course Description

Designed to continue to develop the concepts from SRG-104. It features general, gynecology, genitourinary, orthopedic, otorhinolaryngology, and endoscopy surgical procedures. The course also emphasizes the scheme or steps as well as the instrumentation of these surgical interventions. One or two half day operating room (OR) observations are required.

Course Pre-requisite(s) BIO234 Anatomy and Physiology II, SRG104 Fund. of Surgical Technology, and SRG106 Fund. of Surgical Tech Lab	Course Co-requisite(s) SRG140 Surgical Techniques I, SRG209 Surgical Externship I
---	--

Credit Hours

4

Contact Hours

4

Course Fee 75	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Core Course Topics

1. Abdominal Incisions and Closures
2. General Surgery Procedures
3. Gynecological Surgical Procedures
4. Genitourinary Surgical Procedures
5. Otorhinolaryngology Surgical Procedures
6. Orthopedic Surgical Procedures
7. Interventional Radiology

Describe the surgical patient as a person.
Differentiate the abdominal incisions and closures.
Summarize the perioperative care of the surgical patient.
Describe the appropriate regional anatomy.
Identify surgical instruments, supplies, and equipment used for: general, gynecology, genitourinary, orthopedics, otorhinolaryngology, and endoscopy procedures.
Describe the schemes or steps of common surgical procedures within each covered specialty.
Explain the possible complications and preventions in these surgical specialties.
Describe and apply the principles for creating and maintaining the sterile field and the principles of draping the surgical patient.
Describe the immediate pre-operative and post-operative care of the patient.
Explain productivity during set-up and scrubbing of surgical procedures.
Analyze and apply the use of related specialty items.
Identify the intraoperative requirements for the basic procedures, including the necessary supplies, equipment, and their uses.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

Assessment of academic achievement will include unit exams, quizzes, Operating Room (OR) observation assignments, and a cumulative final.

General Course Requirements and Recommendations

- Students must pass this course with a "B-" or better grade to remain in the [Surgical Technologist AAS Degree](#) Program.
- Students must follow all classroom/clinical policies described in the most current [Surgical Technologist AAS Degree](#) Program Student Handbook.
- Students are required to wear HFC navy scrubs for all SRG lab classes.

Grading Scale

Student grades will be assigned using the following scale:

- 99-100% = A+
- 94-98% = A
- 90-93% = A-
- 87-89% = B+
- 83-86% = B
- 80-82% = B-
- 76-79% = C+
- 70-75% = C

SRG140 - Surgical Techniques I

Overview

Subject Surgical Technician	Academic Department Health, Education, and Human Services	School Health & Human Services
--------------------------------	--	-----------------------------------

Course Description

Laboratory course designed to develop basic aseptic and sterile techniques used in the perioperative care of the surgical patient. This course focuses on the surgical scrub, gowning and gloving, setting up a sterile field, draping, handling of surgical instruments, and surgical counts. Students practice techniques in a guided lab setting.

Course Pre-requisite(s) SRG104 Fund. of Surgical Technology, SRG106 Fund. of Surgical Tech Lab, and BIO234 Anatomy and Physiology II	Course Co-requisite(s) SRG120 Surgical Procedures I, SRG209 Surgical Externship I

Goals, Topics, and Objectives

Core Course Topics

1. Operating Room Preparation
2. Surgical Scrub, Gowning, and Gloving
3. Sterile Field for Minor Surgical Procedures
4. Opening Count for Minor Surgical Procedures
5. Pass Instruments for Minor Surgical Procedures

Demonstrate an understanding of aseptic techniques used in surgery while performing lab skills.
Demonstrate room preparation for a basic surgical procedure.
Demonstrate the proper clothing, PPE, and personal preparation necessary to do a surgical scrub.
Demonstrate proper technique of a surgical hand scrub.
Demonstrate the proper donning of a surgical gown and gloves.
Demonstrate the correct draping and preparation of the mayo stand, back table, and ring stand for a basic surgical procedure.
Demonstrate correct aseptic technique within the created sterile field.
Demonstrate the correct identification, handling, and passing of basic surgical instruments.
Demonstrate an opening count for a basic surgical procedure.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

Students will be assessed based on their performance in each of the identified areas of practice. Students must complete each unit with a passing grade to satisfactorily complete the course. There will be a cumulative final lab practical and students must earn a passing grade on the final lab practical to complete this course.

General Course Requirements and Recommendations

- Students must pass this course with a "B-" or better grade to remain in the [Surgical Technologist AAS Degree](#) Program.
- Students must follow all classroom/clinical policies described in the most current [Surgical Technologist AAS Degree](#) Program Student Handbook.
- Students are required to wear HFC navy scrubs for all SRG lab classes.

- Core Course Topics
- Operating Room Preparation
 - Surgical Scrub, Gowning, and Gloving
 - Skin Prep and Catheterization
 - Sterile Field Preparation
 - Draping
 - Surgical Counts
 - Wound Dressings
 - Instrument Handling

Demonstrate an understanding of aseptic techniques used in surgery while performing lab skills.
Demonstrate room preparation and set up for a surgical procedure.
Demonstrate a skin prep and catheterization.
Demonstrate proper scrubbing, gowning, and gloving of self.
Demonstrate proper technique for gowning and gloving other team members.
Demonstrate the proper draping and preparation of the mayo stand, back table, and ring stand for a surgical procedure.
Demonstrate the proper draping of the surgical patient.
Demonstrate the proper Identification, handling, and passing of basic surgical instruments for a surgical procedure.
Demonstrate all necessary counts for a surgical procedure.
Demonstrate the proper cleaning and dressing of a surgical wound at the conclusion of surgery.
Demonstrate the proper breakdown of the sterile field and removal of your gown and gloves at the conclusion of a surgical procedure.
Demonstrate briefing and debriefing as related to surgical procedures.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Students will be assessed based on their performance in each of the identified areas of practice. Students must complete each unit with a passing grade to satisfactorily complete the course. There will be a cumulative timed final lab practical and students must earn a passing grade on the final lab practical to complete this course.

General Course Requirements and Recommendations
* Students must pass this course with a "C" or better grade to remain in the [Surgical Technologist AAS Degree](#) Program.

* Students must follow all classroom/clinical policies described in the most current [Surgical Technologist AAS Degree](#) Program Student Handbook.

* Students are required to wear HFC navy scrubs for all SRG lab classes.

SRG160 - Surgical Pharmacology

Overview

Subject Surgical Technician	Academic Department Health, Education, and Human Services	School Health & Human Services
Course Description A study of medications used in the operating room with an emphasis on the common drugs used in the surgical area. This course examines the administration, actions, interactions, side effects, and terminology of perioperative medications. Included are legal responsibilities of the surgical technologist and common calculations performed in a sterile field. The student must present two reports as well as complete a term paper.		
Course Pre-requisite(s) SRG104 Fund. of Surgical Technology , SRG106 Fund. of Surgical Tech Lab , BIO234 Anatomy and Physiology II , MATH100 Basic Tech Mathematics or higher		
Credit Hours 3		
Contact Hours 3		
Course Fee 50	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics - Basic Mathematics - Basic Pharmacology, Including Drug Relations and Administration - Legal/Ethical Responsibilities of the Surgical Technologist & OR Team Members as it Relates to Surgical Pharmacology - Antibiotics, Diagnostic Agents, Diuretics, Gastric Drugs, Hormones - Drugs that Effect Coagulation, Ophthalmic Drugs, Preoperative and Intraoperative Medications - Blood and Fluid Replacements - Anesthesia - Emergency Situations & Medications	Apply the common pharmacology terms, abbreviations, and symbols.
---	--

Explain the principles and practices of surgical pharmacology.
Identify the classifications of drugs used in the surgical area.
Describe the common drugs used during the perioperative phases of care.
Categorize the actions and mode of administration of the more common surgical medications.
Describe drugs found on a cardiac arrest cart and their actions.
Describe symptoms of toxicity and over dose.
Compare and contrast methods, agents, and techniques of anesthesia administration.
Explain anesthesia complications and interventions.
Prepare and manage medications and solutions commonly used within the operative field.
Explain the ethical and legal responsibilities of the surgical technologist and other OR team members as they relate to surgical pharmacology.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement will be based on class participation, student presentations/reports, quizzes, unit exams, and a cumulative final.

General Course Requirements and Recommendations
Students must pass this course with a "B-" or better grade to remain in the [Surgical Technologist AAS Degree](#) Program.

Students must follow all classroom/ clinical policies described in the most current [Surgical Technologist AAS Degree](#) Student Handbook.

Grading Scale
Student grades will be assigned using the following scale:

- 99-100% = A+
- 94-98% = A
- 90-93% = A-
- 87-89% = B+
- 83-86% = B
- 80-82% = B-
- 76-79% = C+
- 70-75% = C
- 65-69% = D+
- 60-64% = D
- 60% and below = E

SRG209 - Surgical Externship I

Overview

Subject Surgical Technician	Academic Department Health, Education, and Human Services	School Health & Human Services
Course Description A clinical practicum further developing concepts presented in previous SRG courses. Students are assigned to an affiliate agency where they actively participate as members of the surgical team, developing skills necessary to "scrub" and assisting in "circulating" during surgical procedures under supervision. Sixteen hours per week.		
Course Pre-requisite(s) SRG104 Fund. of Surgical Technology , SRG106 Fund. of Surgical Tech Lab , BIO234 Anatomy and Physiology II		Course Co-requisite(s) SRG120 Surgical Procedures I , SRG140 Surgical Techniques I
Credit Hours 5		
Contact Hours 16		
Course Fee 100	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics

- Preclinical lab practice and assessments

2. Preference Cards
3. OR Room Setup and Turnovers
4. Sterile Field and Aseptic Technique
5. Instrumentation and Steps for Course Specialties
6. Draping
7. Intraoperative Scrubbing

Demonstrate skills to assist in the perioperative preparation of the surgical patient.
Select appropriate surgeon's preference card.
Handle sterile items, set-up a sterile field, and maintain sterile technique.
Identify and select the appropriate instruments, sutures, and supplies for procedures.
Scrub, gown, and set up a sterile field without contamination within an acceptable amount of time.
Demonstrate principles and practices of surgical asepsis.
Organize and arrange sterile items on OR back table and Mayo stand.
Demonstrate proper techniques of safe patient care.
Demonstrate a safe level of practice and knowledge in selected surgical areas.
Demonstrate an awareness of the patient as well as the task.
Apply knowledge of common instruments and schemes for: general surgery, gynecology, urology, otorhinolaryngology, orthopedic surgery, and endoscopy procedures.
Demonstrate anticipation of surgeon's needs and acceptance of responsibilities in the clinical area.
Assist surgeon in draping the patient and placement of electrosurgical items, suction, and light handles.
Demonstrate dexterity and good coordination skills during surgical procedures.
Count sponges, instruments, and sharps at the appropriate time.
Explain circulating duties.
Assist with cleaning and transporting patient from OR table to stretcher.
Communicate clearly and effectively with peers and hospital staff.
Utilize concepts of medical, moral, legal ethics, patients' rights, and basic needs.
Demonstrate ability to do room change-overs.
Demonstrate ability to prepare instruments and supplies for sterilization.
Maintain a Scrub Log as outlined by the program.
Demonstrate basic skills for an entry level surgical technologist.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement will be based on examinations, clinical evaluations, clinical attendance, and student log forms. This course requires a minimum 80% average to pass the course.

- General Course Requirements and Recommendations**
Students must pass this course with a "C" or better grade to remain in the Surgical Technologist AAS Degree Program. Students must follow all classroom/ clinical policies described in the most current Surgical Technologist AAS Degree Clinical Student Handbook. By the completion of SRG290 Clinical Externship II and including clinical case load from SRG209 Surgical Externship I and SRG290 Clinical Externship II students MUST complete the following Surgical Rotation Case Requirements:
- The total number of cases the student must complete = 120.
 - Maximum number of Second Scrub Role cases that can be applied towards the 120 cases are 10 in General Surgery and 30 in the other surgical specialties.
 - Student must complete 30 cases in General Surgery.
 - 20 of these cases must be in the First Scrub Role.
 - Students must complete 90 cases in various surgical specialties.
 - 60 must be in the First Scrub Role.
 - These cases must be evenly distributed between a minimum of 5 surgical specialties.
 - No more than 15 cases can be counted in any one specialty.
 - Up to 10 diagnostic Endoscopic cases and 5 vaginal delivery cases can be counted towards the maximum number of Second Scrub Role cases.

Grading Scale
Student grades will be assigned using the following scale::

- 99-100% = A+
- 94-98% = A
- 90-93% = A-
- 87-89% = B+
- 83-86% = B
- 80-82% = B-
- 76-79% = C+
- 70-75% = C
- 65-69% = D+
- 60-64% = D
- 60% and below = E

SRG220 - Surgical Procedures II

Overview

Subject Surgical Technician	Academic Department Health, Education, and Human Services	School Health & Human Services
Course Description Designed to further develop the student's knowledge of advanced surgical procedures. It features cardiovascular, thoracic, neurologic, oral, ophthalmic, plastic and reconstruction, pediatric, and geriatric surgical procedures.		
Course Pre-requisite(s) SRG120 Surgical Procedures I, SRG140 Surgical Techniques I, SRG160 Surgical Pharmacology, SRG209 Surgical Externship I, all with a B- or better		Course Co-requisite(s) SRG240 Issues in Surgical Technology, SRG290 Clinical Externship II
Credit Hours 4		
Contact Hours 4		
Course Fee 75	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

- Core Course Topics**
- Cardiovascular Surgery Procedures
 - Thoracic Surgical Procedures
 - Neuro Surgical Procedures
 - Ophthalmic Surgical Procedures
 - Oral, Plastic and Reconstructive Surgical Procedures
 - Pediatric and Geriatric Surgical Procedures

Summarize the perioperative care of the surgical patient.
Explain regional anatomy related to each advanced surgical procedure.
Identify the intraoperative requirements for the advanced procedures, including surgical instruments, supplies, and equipment used for: cardiovascular, thoracic, neurologic, oral, ophthalmic, reconstruction, pediatric, and geriatric procedures.
Describe the schemes or steps of common surgical procedures within each covered specialty.

Explain the possible complications and preventions within these surgical specialties.
Explain the proper care of surgical specimens.
Summarize the various types and uses of surgical dressings.
Describe the efficiency and effectiveness during set-up of the surgical procedures.
Analyze and apply the use of related specialty items.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement will be based on unit exams, quizzes, and a cumulative final.
General Course Requirements and Recommendations
- Students must pass this course with a "B-" or better grade to remain in the Surgical Technologist AAS Degree Program. - Students must follow all classroom/clinical policies described in the most current Surgical Technologist AAS Degree Program Student Handbook. - Students are required to wear HFC navy scrubs for all SRG lab classes.
Grading Scale
Student grades will be assigned using the following scale:
99-100% = A+ 94-98% = A 90-93% = A- 87-89% = B+ 83-86% = B 80-82% = B- 76-79% = C+ 70-75% = C 65-69% = D+ 60-64% = D 60% and below = E

SRG240 - Issues in Surgical Technology

Overview

Subject Surgical Technician	Academic Department Health, Education, and Human Services	School Health & Human Services
Course Description	Students will identify and discuss advanced surgical procedures focusing upon trauma, transplants, major orthopedic procedures, and the basic principles in the application of robotics in surgery. Electrical elements/concerns in the operating room will be discussed. All-Hazard Preparation will be discussed. The course will also emphasize the elements of professional development including professional organizations, leadership, teamwork, certification and continuing education. Students will discuss the role of the AST and its impact upon careers in surgical technology. Employability skills will be reviewed and applied. Students will be introduced to techniques and exercises in preparation for the national Certified Surgical Technologist (CST) exam. Written and oral presentations by the students are key elements of this course. NOTE: All students will be required to sit for the NBSTSA - CST exam as part of this course.	
Course Pre-requisite(s)	Course Co-requisite(s) SRG102 Surgical Technology Intro, SRG140 Surgical Techniques I, SRG160 SRG220 Surgical Procedures II, SRG290 Clinical Externship II, Surgical Pharmacology, SRG209 Surgical Externship I, all with a B- or better	
Credit Hours	4	
Contact Hours	4	
Course Fee	Miscellaneous Department Fee	
75	0	
Academic Level	Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL)	No	

Goals, Topics, and Objectives

Core Course Topics
- Surgical Application of Robotics - All-Hazard Preparation - National Certification Exam Preparation - ST Professional Associations and Activities - Employment Strategies - Surgical Trauma - Organ Harvesting - Advanced Surgical Procedures

Apply the advanced surgical concepts used within the surgical setting, especially in more advanced surgical procedures.
Apply the basic concepts and terminology for robotics, and electricity as they pertain to the safe care of the patient in the OR.
Describe All-Hazard Preparation and the related competency domains.
Define personal and professional relationships with others on the surgical team.
List professional organizations related to surgery.
Prepare a resume and identify techniques to keep it current.
Apply factors that will increase job-seeking skills.
Analyze factors that influence job retention.
List methods of continuing education.
Identify possible career opportunities.
Apply various techniques to improve their success in taking the national certification.
Complete application for national CST exam.
All students will be required to complete the NBSTSA CST exam.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
This is a seminar style course. Assessment of academic achievement will include a combination of class participation, assignments, and presentations.
General Course Requirements and Recommendations
A minimum grade of 80% is required to pass this course.
Grading Scale
Student grades will be assigned using the following scale:
99-100% = A+ 94-98% = A 90-93% = A- 87-89% = B+ 83-86% = B 80-82% = B- 76-79% = C+ 70-75% = C 65-69% = D+ 60-64% = D 60% and below = E

SRG290 - Clinical Externship II

Overview

Subject Surgical Technician	Academic Department Health Careers	School Health & Human Services
Course Description	A practicum that further develops clinical proficiency. Students are assigned to an affiliated agency where they practice skills related to surgical techniques and principles. They participate as members of the surgical team, developing skills necessary to "scrub" and assist in "circulating" during surgical procedures. Students will be required to function in the first-scrub role in most surgical procedures. Twenty-four hours per week.	
Course Pre-requisite(s)	Course Co-requisite(s) SRG102 Surgical Technology Intro, SRG140 Surgical Techniques I, SRG160 SRG220 Surgical Procedures II, SRG240 Issues in Surgical Technology, Surgical Pharmacology, SRG209 Surgical Externship I, all with a B- or better	
Credit Hours	8	
Contact Hours	15	
Course Fee	Miscellaneous Department Fee	
205	0	
Academic Level	Undergraduate	

Eligible for Credit for Prior College Level Learning (CPCLL)
No

Goals, Topics, and Objectives

Core Course Topics

- 1. Preference Cards
- 2. OR Room Setup and Turnovers
- 3. Sterile Field and Aseptic Technique
- 4. Instrumentation and Procedural Steps for All Surgical Specialties
- 5. Draping, Specimens, and Dressings
- 6. Flash Autoclave Use

Demonstrate skills to assist in the perioperative preparation of the surgical patient.
Select appropriate surgeon's preference card.
Handle sterile items, set-up a sterile field, and maintain sterile technique.
Identify and select the appropriate instruments, sutures, and supplies for procedures.
Scrub, gown, and set up a sterile field without contamination within an acceptable amount of time.
Demonstrate principles and practices of surgical asepsis.
Organize and arrange sterile items on OR back table and Mayo stand.
Demonstrate proper techniques of safe patient care.
Demonstrate a safe level of practice and knowledge in all surgical areas.
Demonstrate an awareness of the patient as well as the task.
Operate Flash Autoclaves.
Demonstrate progressive ability to work as a member of the OR team.
Apply knowledge of common instruments and schemes for: ophthalmic, cardiovascular, thoracic, neuro, oral, plastic-reconstruction surgery, pediatric, and geriatric surgical procedures.
Demonstrate anticipation of surgeon's needs and acceptance of responsibilities in the clinical area.
Assist the surgeon in draping the patient and placement of electrosurgical items, suction, and light handles.
Demonstrate dexterity and good coordination skills during surgical procedures.
Count sponges, instruments, and sharps with minimum supervision.
Explain circulating duties.
Assist with cleaning and transporting patient from OR table to stretcher.
Communicate clearly and effectively with peers and hospital staff.
Utilize concepts of medical, moral, legal ethics, patients' rights, and basic needs.
Demonstrate ability to do room change-over.
Demonstrate ability to prepare instruments and supplies for sterilization.
Demonstrate ability to prepare medications and fluids in the sterile field.
Explain principles of drains, suction tubes, and dressings.

Explain patient's vital signs and recognize variations from normal.
Maintain a Scrub Log as outlined by the department.
Demonstrate clinical skills for entry level surgical technologist.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement will include examinations, clinical evaluations, clinical attendance, and student log forms.

General Course Requirements and Recommendations
A minimum grade of 80% is required to pass this course to complete the [Surgical Technologist AAS Degree](#) (SRG) Program. SSC131 - Survey of the Social Sciences

Overview

Subject	Academic Department	School
Sociology	Social Sciences	Liberal Arts
Course Description Surveys the several disciplines found under the general heading of social sciences: Anthropology, Economics, Geography, Ecology and Demography, Psychology, Sociology and Political Science. This course also presents the development of each discipline and its important concepts. This course meets the HFCC General Education and graduation requirement for the American Society, Events, Institutions and Cultures outcome.

Goals, Topics, and Objectives

- Core Course Topics
- 1. The scientific method
 - 2. Human origins
 - 3. Culture
 - 4. Ecology, geography and demography
 - 5. The family as a social institution
 - 6. Educational systems as social institutions
 - 7. Religion as a social institution
 - 8. U.S. government and political system
 - 9. Social class and racial stratification

Discuss the basic principles and assumptions that guide social scientists in the scientific analysis of social life.

Identify the purpose of social science and identify the similarities and differences between social science, natural science, biological science and the humanities.

Identify the basic elements of a scientific perspective, including curiosity, skepticism, objectivity, a cause-and-effect orientation, and the use and limits of experimental methods.

Describe the steps in the scientific method and explain the role of theories, hypotheses and data collection.

Describe the use of statistics and correlations in the effort to identify the causes and solutions to problems.

Demonstrate an understanding of scientific theories of human origins.

Summarize Darwin's theory of evolution.

Explain the role of mutation in the theory of evolution.

Describe the relation of DNA to genes and genetic engineering.

Describe the differences between primates, hominids and humans.

Describe what culture includes, in both the material and non-material realms, and how it influences human behavior and thinking.

Explain why culture is necessary to hold society together.

Define the key characteristics of culture.

Explain several factors that bring about cultural change.

Explain several factors that promote cultural stability.

Explain the doctrine of cultural relativism.

Describe the ways that geography, ecology, and demography affect human social life.

Describe the differences between disciplines of geography, ecology, and demography.

Describe some of the ways geography influences human social life.

Describe demographic determinants of population growth in relation to different parts of the world today.

Describe some of the major threats to the ecological balance in today's world.

Discuss the main characteristics of family life used by social scientists to classify the family institution in different societies.

Describe the variations in forms of family life with regard to the number of mates, selection of mates, family control, and reckoning of descent.

Explain what it means to refer to the functions of the family and describe at least three key functions of families in human societies.

Describe characteristics of family life in the contemporary United States with regard to child-rearing, mate selection and marriage, divorce and alternative family forms.

Choose three of the characteristics of family life in 5.3 and explain how they affect the functions of families in the U.S. today.

Discuss the similarities and differences in educational institutions in different societies.

Explain why the U.S. school system is referred to as a "unitary school system" and how this system is different from those in other countries.

Explain how K-12 education is financed and the social consequences of this method of financing.

Explain how schools serve as agents of social control.

Describe the main problems facing the American school system and recent developments in American education.

Discuss how religious traditions function in societies and in the lives of individuals.

Describe how systems of religious beliefs, practices, and values affect culture and society.

Explain how religions and their institutions promote both social stability and change.

Describe how religions affect the lives of individuals in a society.

Identify and describe in general terms the characteristics of the major world religious traditions.

Explain the U.S. Constitutional principles and the characteristics of the American political system.

Discuss the differences between presidential and parliamentary forms of democracy.

Explain the concept of judicial review.

Describe federalism and tell how a federal form of government differs from unitary and confederal systems.

Discuss the major concepts used by social scientists in the analysis of social class and racial stratification.

Explain the differences between stratification based on castes and stratification based on social classes.

Explain the difference between social stratification and social mobility.

Define the concept of class consciousness and discuss some reasons why class consciousness in the U.S. has historically been low.

Compare and contrast the use of race and ethnic group as ways of classifying people and discuss problems with using these categories.

Compare and contrast prejudice and discrimination.

Demonstrate an understanding of the foundations and operations of American social/political institutions and culture in the context of a diverse global community.

Identify and describe the foundations of American social/political institutions.

Analyze the operations of American social/political institutions and culture in the context of a diverse global community.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

Each instructor will identify and implement appropriate methods to assess the achievement of the Learning Objectives for the course. All instructors teaching the course will participate in two common forms of assessment:

1. A comprehensive final examination which includes a course assessment consisting of 35 multiple-choice questions. These 35 questions will be answered on a separate ScanTron form and will constitute at least 10% of the final exam grade.
2. A written assignment to be completed outside of class and given an appropriate period of time for completion. This assignment will focus on one of the topics identified in the Topical Course Outline, and will involve comparisons with, or connections between, the United States and another society, nation or culture. This may involve international comparisons or multicultural issues within the United States (i.e., immigrant communities). This assignment will constitute 20% of the final course grade.
 - The assignment must take one of the following forms.
 - A journal project in which students summarize and analyze 5 or more articles on (a) a country, (b) a region (e.g., Latin America or the Pacific Rim), or (c) a social or policy issue with global implications (e.g., immigration policy, global warming, or child labor).

- A research paper that contrasts the United States with one or more countries, addressing one of the institutional domains of the course: culture, family, educational systems, religion as a social institution, government/political systems, social class/ racial stratification. - A critical review of an article from a professional journal which has global implications, in which the student summarizes the article, relates the topic to class materials, and properly cites the source.

SSC235 - Topics in Social Science

Overview

Subject Sociology	Academic Department Social Sciences	School Liberal Arts
Course Description Provides special study on a topic in the Social Sciences, organized by subject, field of inquiry, or other criteria. This course may be taken twice for credit, six hours maximum, but the two topics must be different. Specific topics and any prerequisites are listed in the current semester's class schedule or may be obtained through the Social Science Division office.		
Course Pre-requisite(s) <u>ENG131 Introduction College Writing</u> eligible and Instructor Permission		
Credit Hours 3		
Contact Hours 3		
Course Fee 10	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics 1. Methodology - Apply the methodology or methodologies of the discipline to a given issue. See individual syllabus for details. 2. Content-specific issue - Identify and give the significance of the issue of the specific course." See individual syllabus for details. - Develop and evaluate solutions to a problem or problems relating to the specific issue if applicable. See individual syllabus for details.	Apply the methodology or methodologies of the discipline to a given issue. See individual syllabus for details.
Identify and give the significance of the issue of the specific course. See individual syllabus for details.	
Develop and evaluate solutions to a problem or problems relating to the specific issue if applicable. See individual syllabus for details.

SSCO190 - Co-op in Social Science

Overview

Subject Sociology	Academic Department Social Sciences	School Liberal Arts
Course Description Cooperative education is a structured method of combining classroom-based education with practical work experience. A cooperative education experience, commonly known as a "co-op," provides academic credit for structured employment experience. Work experience must be directly related to the student's declared major to be eligible. To register for this course, a student must have completed 50% of core coursework, maintain an overall GPA of 2.0 and a program specific GPA of 2.5.		
Course Pre-requisite(s) Permission from Career Services Officer or Job Developer in the Office of Career Services		
Credit Hours 1		
Contact Hours 0.2		
Course Fee 0	Miscellaneous Department Fee 0	
Academic Level Undergraduate		

Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Other
Credit for Prior College Level Learning (CPCLL) Details Student will submit a formal request in writing to the faculty and Associate Dean for work experience to be considered for Credit for Prior College-Level Learning.	
The student will complete an interview, a reflective paper, or a presentation to the faculty in which the student develops and describes the learning objectives supported by the work experience, how those learning objectives were achieved and how that learning was put into practice.	
Finally, the student must also provide a portfolio (or something comparable) that shows the work completed and provide some form of documentation confirming the work experience (a resume does not suffice) for which Credit for Prior College-Level Learning is requested.	

Goals, Topics, and Objectives

Course Goals Cooperative education helps students make the school-to-work transition, develop career and program-related learning objectives, and work on applicable skills for employment. Placements should provide students with the opportunity to apply and expand upon knowledge learned in the classroom, and develop the skills acquired in their coursework to align with the standards and expectations set by the worksite.
Core Course Topics 1. Core Career-Focused Topics: A. Professional Dress and Demeanor (attitude, posture, courteousness) B. Workplace Communication C. Interviewing Skills D. Resume Building E. Networking and Social Media F. Seeking Employment G. Career Advancement
1-3 program specific learning objectives will be developed by the instructor for each individual offering.
Students will create 1-3 learning objectives per credit to be approved by instructor for each individual offering.
Career Services-defined: Build a resume that meets standards of Career Services Officer.
Articulate the reasons for professional attire.
Wear professional attire while on the worksite.
Attend career workshop in professional dress.
Display appropriate professional attitude and demeanor while on the worksite.
Interview effectively.
Attend mock interview, give appropriate answers to five 5 questions.
Complete a written job application in a prompt, professional manner with all information legible, error-free, and thorough.
Display understanding of the appropriate use of Social Media sites (Facebook, LinkedIn, and Twitter) during Career Services workshop.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
Assessment will be determined by the instructor based on what is in the best interest of the student's academic growth, including future employability of the student. Assessment may include, but isn't limited to:	
Major final project	
Weekly journal	
Creation and attainment of all learning objectives	
Participation in a career-focused workshop	
Consistent and prompt attendance at worksite	
Employer evaluation	
General Course Requirements and Recommendations	
To be determined by the instructor. Detailed course syllabi will be standardized for all co-op courses and individual course requirements will be available to the Area Council and College Council by request "For information only" for each term that the course is offered.	
Satisfies Honors Requirement	Satisfies Wellness Requirement
No	No

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment will be determined by the instructor based on what is in the best interest of the student's academic growth, including future employability of the student. Assessment may include, but isn't limited to:
Major final project
Weekly journal
Creation and attainment of all learning objectives
Participation in a career-focused workshop
Consistent and prompt attendance at worksite
Employer evaluation

General Course Requirements and Recommendations
To be determined by the instructor. Detailed course syllabi will be standardized for all co-op courses and individual course requirements will be available to the Area Council and College Council by request "For information only" for each term that the course is offered.

Goals, Topics, and Objectives

- Core Course Topics**
- Social work philosophy, values, and ethics (National Association of Social Workers (NASW) Ethics)
 - Analyze the historical factors affecting current social work trends.
 - Social work professions, degrees and certifications
 - Compare and contrast the different professional social worker roles.
 - History of social welfare practices
 - Analyze the historical factors affecting current social work trends.
 - Social work system approaches
 - Identify and discuss the application of social systems approaches.
 - Compare and contrast the different professional social worker roles.
 - Social work resources
 - Discuss vulnerable groups and their representation in human services agency as well as their social, financial, and political challenges.
 - Vulnerable groups served at internship
 - Discuss vulnerable groups and their representation in human services agency as well as their social, financial, and political challenges.
 - Human services social work resources at internship
 - Discuss vulnerable groups and their representation in human services agency as well as their social, financial, and political challenges.
 - Social worker professionalism
 - Compare and contrast the different professional social worker roles.

Analyze the historical factors affecting current social work trends.
Compare and contrast the different professional social worker roles.
Identify and discuss the application of social systems approaches.
Discuss vulnerable groups and their representation in human services agency as well as their social, financial, and political challenges.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement may include, but not limited to case studies, quizzes, research projects, research papers, daily interactive journals, group assignments, and final exam.

General Course Requirements and Recommendations
Students must have a cleared criminal background check within the last year.

Grading Scale
Students must earn at least 70% to earn a C grade.

Grading scale for exams and the final grade:

- 98-100% = A+
- 93-97% = A
- 90-92% = A-
- 87-89% = B+
- 83-86% = B
- 80-82% = B-

Goals, Topics, and Objectives

Core Course Topics

1. Counseling and social work interpersonal theories and practice
 - Discuss theoretical and philosophical mental health assumptions.
 - Identify issues with the application of counseling theories to intervention and planning.
 - Discuss the application of counseling theories to a diverse community of patients.
 - Discuss how interpersonal theory and practice are used in a clinical setting.
 - Describe processes and techniques used in the practice of counseling and social work.
 - Understand counseling outcomes and develop techniques for relaying information to patients.
2. Behavior Modification
 - Explore the components of behavior modification.
 - Analyze a behavior modification plan.
3. Transactional Analysis
 - Describe transactional analysis.
 - Identify when transactional analysis has occurred.
4. Cognitive Approaches
 - Compare and contrast different cognitive approaches.
5. Assertiveness Training
 - Model the use of assertiveness training.
6. Addictions Theory
 - Discuss addictions theory and its applications to social work and counseling practice.

Discuss theoretical and philosophical mental health assumptions.
Identify issues with the application of counseling theories to intervention and planning.
Discuss the application of counseling theories to a diverse community of patients.

SWK290 - Social Work Practicum

Overview

Subject Social Work	Academic Department Health, Education, and Human Services	School Health & Human Services
------------------------	--	-----------------------------------

Course Description
This course is 24 hours per week of field experience. Field experience will provide students the opportunity to learn at a cooperating mental health agency, under the guidance of a licensed professional, for 360 clock hours of off-campus learning for 15 weeks. This course is an introduction to the clinical environment, giving students the opportunity to apply social work principles and interventions appropriate for a social work technician.

Course Pre-requisite(s)

Goals, Topics, and Objectives

Course Goals
Students will develop the knowledge and skills to work at a social work technician.

Core Course Topics
1. Professional and Ethical Behavior
Students will apply social work values, ethics and principles according to the NASW Code of Ethics, in interactions within the clinical setting
2. Scope of Practice
Students will practice within the scope of training and education. Students will describe the environments and social service delivery practice and context in which intervention occurs. Students will implement services that are appropriate to the social work technician practice.
3. Basic Social Work Skills
Students will work, under the supervision of a licensed professional, with individuals, families, and in-group dynamics such as completing a biopsychosocial intake through oral interview and records. Students will apply basic social work skills and techniques to engage, assess, and/or intervene at the micro, mezzo, and macro levels.
4. Diversity and Inclusion
Students will work with clients who are diverse in ethnicity, culture, gender, social class, mental and physical disabilities, and sexual orientation. Students will advocate for clients within a culturally competent framework. Students will describe the importance of diversity in the delivery of social work services.
5. Assessment and Referral
Students will utilize available community resources to assist clients based on the ecosystem, mezzo, micro, and macro.
6. Communication Skills
Students will demonstrate professional verbal and written communication with patients and professional staff.

Apply social work values, ethics and principles according to the NASW Code of Ethics, in interactions within the clinical setting
Practice within the scope of training and education.
Describe the environments and social service delivery practice and context in which intervention occurs.

Describe the safe work practices related to the core topics and identify at least one critical safety awareness issue related to the core topic.

Solve at least one shop mathematics problem related to the core topic.

Provide a written item that discusses the relevance of the core topic as it relates to the learners skilled trade or occupation.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
The instructor will develop the assessment process including the three Major Core Course Objectives as stated above relating to the core topic.

- Identify one critical safety awareness issue
- Solve at least one shop related mathematics problem
- Provide a written item relating the core topic to the learner's occupation

General Course Requirements and Recommendations
To be determined by the instructor and approved by the ST&AD faculty and director

Texts
Texts, handouts, and/or workbooks will be determined by the Skilled Trades & Apprenticeship Department with approval by the Division.

Satisfies Honors Requirement	Satisfies Wellness Requirement

Tael103 - DC and AC Electricity

Overview

Subject	Academic Department	School
Skilled Trade & Apprenticeship	Skilled Trade and Apprentice Education	Business, Entrepreneurshp, PD

Course Description
Introduces DC and AC electrical theory, including electrical definitions, units of electrical measure, series and parallel resistive circuits, capacitance, inductance, AC voltage measurements, and AC calculations. Explores usage of meters and oscilloscopes.

Course Pre-requisite(s)
Tael103 DC & AC Electricity or TAE Apprentice Coordinator/Instructor Permission

Credit Hours
4

Contact Hours
4

Course Fee	Miscellaneous Department Fee
15	0
Academic Level	
Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL)	Acceptable Prior Learning Credit
Yes	Departmental Exam, Other Exam, Skilled Demonstration, Licensure/ certifications, Interview

Credit for Prior College Level Learning (CPCLL) Details
Departmental Exam
Other Exam
Skilled Demonstration
Licensure/certifications
Interview

Goals, Topics, and Objectives

- Core Course Topics
1. Introduction and Classroom Organization
 2. Static Electricity
 3. Resistors
 4. Series Resistive Circuits
 5. Parallel Resistive Circuits
 6. Series and Parallel Combination Circuits
 7. Measuring Instruments
 8. Wire Tables and Conductor Sizes
 9. Conduction in Liquid and Gases
 10. Alternating Current
 11. Magnetic Induction
 12. Switch Contact Configurations

Describe the concepts of basic electrical theory and define the terms voltage, current, resistance, and power.
Demonstrate the use of Ohm's Law and Power calculations in an electrical circuit.
Complete electrical measurements using electrical test equipment.
Describe the concepts of series and parallel circuits and explain the differences between concepts.
Calculate series and parallel circuit values.
Describe the concepts of capacitance and inductance.
Describe the concept of AC theory and be able to differentiate it from DC.
Demonstrate a working knowledge of how conductor size and type affect the flow of current and able to calculate proper conductor size in a circuit.
Calculate line loss in an electrical conductor.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Methods for measuring achievement of objectives may include, but are not limited to:	
1. Quizzes / Tests	
2. Laboratory Activities	
3. Mid-Term Exam	
4. Final Exam	
Texts Texts, handouts, and/or workbooks will be determined by the TAE Department.	
Satisfies Honors Requirement	Satisfies Wellness Requirement
No	No

Tael105 - AC Theory and Equipment

Overview

Subject	Academic Department	School
Skilled Trade & Apprenticeship	Skilled Trade and Apprentice Education	Business, Entrepreneurshp, PD

Course Description
Examines alternating current theory. Includes right triangle trigonometry and complex numbers to facilitate the AC calculations. Discusses concepts of reactance, impedance, and power factor. Compares single phase and three phase power. Introduces single phase and three phase alternators, motors, transformers, and both heating and lighting loads.

Course Pre-requisite(s)
Tael103 DC & AC Electricity or TAE Apprentice Coordinator/Instructor Permission

Credit Hours
4

Contact Hours
4

Course Fee	Miscellaneous Department Fee
15	0
Academic Level	
Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL)	
No	

Goals, Topics, and Objectives

- Core Course Topics
1. AC Volatage Measurements and Calculations
 2. Right Triangle Trigonometry
 3. Inductive and Capacitive Reactance
 4. Series RL and RC Circuits
 5. Series RLC Circuits, Complex Numbers, & Oscilloscope Measurements
 6. Series and Parallel RLC Circuits
 7. Resonant Circuits
 8. Power Factor
 9. Inductive and Resistive Loads, & Power Factor Correction
 10. Single-Phase Transformers
 11. Three-Phase Voltage Concepts
 12. Delta and Wye Distribution
 13. Three-Phase Transformers
 14. AC Equipment and Loads

Describe the concepts of AC theory and be able to differentiate it from DC.
Calculate RMS, Peak, Average, and Peak to Peak AC voltage.
Define the concepts of reactance and impedance.
Calculate reactance and impedance in an AC circuit.
Utilize right triangle trig and complex numbers in AC voltage calculations.
Describe the difference between three phase voltage and single phase voltage and be able to do three phase Delta and Wye calculations.
Wire single phase and three phase transformers in the laboratory.
Calculate the power factor for an AC circuit and be able to accomplish power factor correction in an AC circuit.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Methods for measuring achievement of objectives:	
1. Tests will be given throughout the semester. Tests scores represent 65% of the course grade.	
2. Laboratory activities and performance exercises will be done where students will demonstrate an understanding of practical applications. These will make up 10% of the course grade.	
3. A written final exam will be given which will represent 25% of the course grade.	
Texts Texts, handouts, and/or workbooks will be determined by the TAE Department.

Tael106 - Electronics Theory

Overview

Subject	Academic Department	School
Skilled Trade & Apprenticeship	Skilled Trade and Apprentice Education	Business, Entrepreneurship, PD
Course Description		
Stresses the fundamental theories of electronic components and elementary semi-conductor circuit applications. Covers power supplies, amplifiers, oscillators, and semi-conductor controls. Includes use of test equipment, including oscilloscopes and meters.		

Course Pre-requisite(s)
Tael103 DC & AC Electricity or TAE Apprentice Coordinator/Instructor Permission

Credit Hours
4

Contact Hours
4

Course Fee	Miscellaneous Department Fee
20	0
Academic Level	
Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL)	
No	

Goals, Topics, and Objectives

Core Course Topics

1. Semiconductor Theory
2. Semiconductor Diodes
3. Power Supplies
4. Voltage Regulators
5. Transistors Chapter 6
6. Transistor Amplifiers
7. FETs and Multi-Stage Amplifiers
8. Power Amplifiers
9. Operational Amplifiers
10. SCRs, TRIACs, DIACs, and UJTs
11. Solid State Transducers
12. Electronic Circuit Repair
13. Electronic Circuit Repair

Describe how semiconductors function.
Describe the function of semiconductor circuits including power supplies, amplifiers, oscillators, and semiconductor switching circuits.
Explain the process of rectification.
Draw schematics for half wave and bridge power supply circuits and then be able to construct these circuits in the laboratory.
Calculate the output voltage for a half wave and bridge power supply.
Explain the process of amplification.
Draw a schematic for a transistor amplifier and construct this circuit in the laboratory.
Use electronic test equipment properly in the laboratory to test electronic circuits assembled in the laboratory.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

Methods for measuring achievement of objectives:

1. Tests will be given throughout the semester. Tests scores represent 50% of the course grade.
2. Laboratory activities and performance exercises will be done where students will demonstrate an understanding of practical applications. These will make up 25% of the course grade.
3. A written final exam will be given which will represent 25% of the course grade.

Texts
Texts, handouts, and/or workbooks will be determined by the TAE Department.

Goals, Topics, and Objectives

Core Course Topics

1. Digital concepts and number systems
2. Gates
3. Logic circuits
4. Logic circuit lab
5. CMOS and TTL specifications
6. Encoders / decoders and seven segment displays
7. Flip flops
8. Counters
9. Shift registers
10. Shift registers with lab component
11. Binary math - arithmetic circuits
12. Arithmetic Circuits

Demonstrate a working knowledge of the Binary, Octal, Hexadecimal, and Decimal number systems and be able to convert any of these number systems into any of the other three.
Describe the functioning of digital gate circuits.
Demonstrate a working knowledge of Boolean algebra and be able to translate Boolean expressions into functional gate circuits.
Describe the functionality of the following digital circuits: counters, registers, adders, subtractors, and digital display circuits.
Construct the following digital circuits: counters, registers, adders, subtractors, and digital display circuits.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

Methods for measuring achievement of objectives:

1. Tests will be given throughout the semester. Tests scores represent 65% of the course grade.
2. Laboratory activities and performance exercises will be done where students will demonstrate an understanding of practical applications. These will make up 10% of the course grade.
3. A written final exam will be given which will represent 25% of the course grade.

Texts
Texts, handouts, and/or workbooks will be determined by the TAE Department with approval by the Industrial Technology Division.

Tael145 - DC and AC Motors

Overview

Subject	Academic Department	School
Skilled Trade & Apprenticeship	Skilled Trade and Apprentice Education	Business, Entrepreneurship, PD
Course Description		
Covers DC and AC motor fundamentals. Includes DC generators; series, shunt, and compound DC motors; single-phase and three-phase AC induction motors; and synchronous, wound rotor, and universal motors. Compares AC alternators to DC generators.		
Course Pre-requisite(s) Tael105 AC Theory & Equipment or TAE Apprentice Coordinator/Instructor Permission		
Credit Hours		
4		
Contact Hours		
4		
Course Fee		
15	Miscellaneous Department Fee	
	0	
Academic Level		
Undergraduate		

Eligible for Credit for Prior College Level Learning (CPCLL)
No

Goals, Topics, and Objectives

Core Course Topics
1. Introduction to D.C. motors and D.C. generators
2. Fundamentals of the D.C. generator
3. Generator characteristics
4. Load characteristics of a shunt and compound D.C. generator
5. Effect of speed on shunt generators
6. Load characteristics of a self-excited shunt and compound generator
7. Counter E.M.F. of a D.C. motor / motor torque and horsepower
8. Fundamental motor equation
9. D.C. motor characteristics and loading effects
10. D.C. shunt motor and series motor loading conditions
11. Introduction to single-phase transformers
12. Coil polarities and transformer ratios
13. Single-phase transformer relationships
14. Transformer open- and short-circuit tests, single-phase transformer efficiency
15. Three-phase transformers
16. Delta & Wye configurations
17. Transformer three-phase – open Delta connection
18. Three-phase transformer loads
19. Power factor correction
20. Three-phase transformer problems
21. Three-phase (poly-phase) induction motor – squirrel cage
22. Three-phase induction motor characteristics and performance
23. Load characteristics of the squirrel cage induction motor
24. Starting and running characteristics of a squirrel cage induction motor
25. Running characteristics of the three-phase squirrel cage motor (no-load condition, locked rotor test, loaded condition)
26. Determining starting torque using locked rotor method of squirrel cage motor
27. Starting characteristics of the squirrel cage induction motor
28. Three-phase motors and circuit conditions
Describe how DC motors and DC generators functionally operate.
Operate DC motors and generators successfully in the laboratory.
Describe how AC alternators operate.
Operate an AC alternator successfully in the laboratory.
Describe how three phase and single phase induction motors operate.
Operate AC motors successfully in the laboratory.
Calculate motor losses and state the efficiency of an AC inductor motor.
Describe how synchronous and wound-rotor induction motors operate.
Operate synchronous and wound-rotor motors successfully in the laboratory.
Describe how universal motors operate.
Operate universal motors successfully in the laboratory.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Methods for measuring achievement of objectives:
1. Tests will be given throughout the semester. Tests scores represent 55% of the course grade.
2. Laboratory activities and performance exercises will be done where students will demonstrate an understanding of practical applications. These will make up 20% of the course grade.
3. A written final exam will be given which will represent 25% of the course grade.

TAE1200 - Ladder Diagrams & Motor Controls

Overview

Subject	Academic Department	School
Skilled Trade & Apprenticeship	Skilled Trade and Apprentice Education	Business, Entrepreneurshp, PD
Course Description	Discusses the fundamentals of electrical ladder diagrams and motor control circuits. Covers ladder logic, labels, documentation, symbology of electrical drawings, and the use of ladder diagrams for troubleshooting. Examines several single phase control circuits, and explores how to design and draw control circuits for three-phase induction motors.	
Course Pre-requisite(s)	TAE1145 DC and AC Motors or TAE Apprentice Coordinator/Instructor Permission	
Credit Hours	4	
Contact Hours	4	
Course Fee	15	
	Miscellaneous Department Fee	
	0	
Academic Level	Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL)	No	

Goals, Topics, and Objectives

Core Course Topics
1. Electrical tools, instruments, and safety.
2. Electrical symbols and line diagrams.
3. Ladder logic and line diagrams.
4. AC manual contactors and motor starters.
5. Magnetism and magnetic solenoids.
6. AC contactors and magnetic motor starters.
7. Forward and reversing starters.
8. Time delay devices.
9. Complex line diagrams and control devices.
10. Plugging and anti-plugging.
11. AC reduced voltage starters.
12. Solid state electronic controls.
13. Multi-speed motor controls.
14. Single-phase starters and reversing circuits.
15. Single phase multi-speed circuitism.
Demonstrate a clear understanding of electrical tools, instruments, and electrical safety procedures.
Read and correctly draw electrical ladder diagrams and recognize all electrical symbols.*
Troubleshoot electrical circuits using electrical ladder diagrams.
Describe and apply the concepts of motor starters and physically wire a manual motor starter circuit.
Demonstrate knowledge of magnetic contactors and solenoids and wire them into electrical control circuits.
Describe the operation of a magnetic motor starter circuit and successfully wire a magnetic starter.
Describe the following concepts utilized in three phase AC motor control circuits and be able to implement them in the lab: forward and reverse starting, plugging and anti-plugging, multi-speed operation, and braking circuits.
Describe the concept of reduced voltage starters.
Compare three phase motor control circuits to single phase motor control circuits and be able to wire single phase motor control circuits.
Demonstrate knowledge of electrical timers by applying them in electrical control circuits.
Perform application of industrial electronic control circuits.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Methods for measuring achievement of objectives:
1. Tests will be given throughout the semester. Tests scores represent 35% of the course grade.
2. Laboratory activities and performance exercises will be done where students will demonstrate an understanding of practical applications. These will make up 35% of the course grade.
3. A written final exam will be given which will represent 30% of the course grade.

Texts

TAEI235 - Siemens PLC/HMI Programming

Overview

Subject	Academic Department	School
Skilled Trade & Apprenticeship	Skilled Trade and Apprentice Education	Business, Entrepreneurship, PD

Course Description
This course addresses Siemens PLC's and HMI's from both a hardware and software perspective. The student builds on the information discussed and learns both programming and troubleshooting skills through both lecture and lab situations.

Course Pre-requisite(s)
[TAEI 200 Ladder Diagrams & Control](#) or Instructor permission

Credit Hours
4

Contact Hours
4

Course Fee	Miscellaneous Department Fee
10	0
Academic Level	
Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL)	
No	

Goals, Topics, and Objectives

Course Goals
To prepare the student to program, maintain and troubleshoot a Siemens PLC/HMI PLC system.

Core Course Topics

1. Hardware and software introduction
2. The Scan Cycle
3. STOP, STARTUP, and RUN mode
4. Data Types
5. Project and Portal Views
6. Downloading/Uploading programs
7. Input and Output Addresses
8. Methods of Adding an HMI Panel
9. HMI and PLC Tags

Demonstrate proficiency in entry-level PLC programming.
Design a Siemens PLC program to solve various control problems.
Construct a useable HMI interface to allow a user the ability to operate various parameters.
Evaluate a Siemens program and determine how it operates.
Troubleshoot a non-functioning Siemens PLC program.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Assessment of student achievement may include lab assignments, quizzes, and exams.

TAEI245 - Programmable Logic Controllers (plc)

Overview

Subject	Academic Department	School
Skilled Trade & Apprenticeship	Skilled Trade and Apprentice Education	Business, Entrepreneurship, PD

Course Description
Discusses Allen Bradley PLC-5/25 programmable controller system characteristics. Covers how to use the programmable controller to solve the automated control problem and how to adapt to any PLC system, regardless of the manufacturer. Major course work involves writing several PLC programs and then successfully executing the programs in a laboratory setting.

Course Pre-requisite(s)
[TAEI 200 Ladder Diagrams & Control](#) or TAE Apprentice Coordinator/Instructor Permission

Credit Hours
4

Contact Hours
4

Course Fee	Miscellaneous Department Fee
15	0
Academic Level	
Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL)	
No	

Goals, Topics, and Objectives

Core Course Topics 1. Programmable logic controller (PLC-5) fundamentals. 2. Data table configuration. 3. Input and output hardware connections. 4. Input and output programming commands. 5. Bit storage, timer, and counter concepts. 6. PLC programming concepts. 7. Pneumatic air logic and components. 8. PLC troubleshooting.
Describe the applications of a Programmable Logic Controller (PLC) and how it is part of an automation system.
Write a simple PLC program that includes input to output statements, counters, and timers.
Interface a PLC to basic electrical equipment.
Enter and execute a PLC program from a computer terminal.
Prepare and organize a machine control package used to emphasize the importance of graphical communication.
Solve a control problem utilizing the logical capability of the PLC.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Methods for measuring achievement of objectives:

1. Two written tests will be given during the semester. Both of these tests will be graded on a Pass/Fail basis and must be successfully passed to pass the class. Students may retake the test until a passing score is achieved.
2. Group laboratory activities and performance exercises are done in which students demonstrate an understanding of assigned circuits.
3. Six programming assignments will be completed and executed in the laboratory. If four are successfully completed along with the quizzes and group labs, a grade of C will be earned. If five are completed, then the grade will be a B. If all six programming assignments are completed, then the student will receive an A.

TAEI260 - Automation Controls and Robotics

Overview

Subject	Academic Department	School
Skilled Trade & Apprenticeship	Skilled Trade and Apprentice Education	Business, Entrepreneurship, PD

Course Description
An advanced-level course on the programmable controller. Discusses techniques, terminology, and documentation currently used in automated manufacturing. Emphasizes how to write control specifications for laboratory automation machines and industrial robots which are then used to implement controls for non-synchronous and synchronous operation of the machines.

Course Pre-requisite(s)
[TAEI 245 Program Logic Controller](#) or TAE Apprentice Coordinator/Instructor Permission

Credit Hours
4

Contact Hours
4

Course Fee	Miscellaneous Department Fee
15	0
Academic Level	
Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL)	
No	

Goals, Topics, and Objectives

Core Course Topics 1. PLC 5 software. 2. Addressing PLC 5 files, elements, and bits. 3. Using the ladder editor. 4. Symbolic addressing. 5. Timers and counters. 6. Writing a ladder logic program.
--

7. Shift register.
8. Sequencer instruction.
9. Use of the FAL instruction.
10. Six laboratory exercises to demonstrate competencies

Interface the PLC to a wide variety of industrial equipment.
Write a complex PLC program that includes input to output statements, counters, timers, shift registers, and sequencers.
Program shift registers to track moving parts on a rotary indexing table and a lift and transfer machine.
Program sequencers on a variety of pick and place machines.
Write programs that use 6200 and RSLogix software to control a variety of machine processes.
Troubleshoot programs while the machine is in the test/run mode.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Methods for measuring achievement of objectives:
1. Informal and formal laboratory activities are completed by the students. Performance exercises allow the students to demonstrate an understanding of assigned circuits. Formal laboratory activities are submitted as a written report and represent 80 percent of the course grade.
2. A final laboratory project will be completed by all students. This final project will represent 20 percent of the course grade.
Texts
Texts, handouts, and/or workbooks will be determined by the TAE Department.

TAEI265 - National Electrical Code

Overview

Subject	Academic Department	School
Skilled Trade & Apprenticeship	Skilled Trade and Apprentice Education	Business, Entrepreneurship, PD
Course Description	This course covers the pertinent aspects of Chapters 1 through 4 of the 2017 National Electrical Code (NEC) as they apply to electrical examinations and installations in all types of buildings and structures covered by the Code. Also covered are essential rules of the Skilled Trades Regulation Act 407 of 2016 and the 2017 Michigan Electrical Code Rules Part 8. The course content is disseminated by lecture utilizing PowerPoint presentations.	
Course Pre-requisite(s)	TAEI103 DC & AC Electricity: DC & AC Theory	
Credit Hours	2	
Contact Hours	2	
Course Fee	Miscellaneous Department Fee	
3	0	
Academic Level	Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL)	No	

Goals, Topics, and Objectives

Core Course Topics
1. Introduction to the National Electric Code.
2. Branch circuits and feeders.
3. Calculations for branch circuits and feeders.
4. Services and grounding.
5. Wiring methods and conductors.
6. Lighting fixtures and receptacles.
7. Motors.
8. Transformers.
Explain the significance of the National Electrical Code and how it governs electrical work.
Describe branch and feeder circuits and work branch and feeder circuit calculations.
Define over-current protection.
Describe a proper service installation and explain the grounding of the service.

Describe proper wiring methods.
Calculate proper conductor sizes.
Describe proper installation of lighting fixtures and receptacles.
Describe proper installation of transformers.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
1. Tests will be given throughout the semester. Tests represent 30% of the course grade.
2. A mid-term exam will be given which will represent 30% of the course grade.
3. A final exam will be given which will represent 40% of the course grade
Texts
Texts, handouts, and/or workbooks will be determined by the TAE Department.
Satisfies Honors Requirement

TAEI273 - Fire Alarm Systems for Electricians

Overview

Subject	Academic Department	School
Skilled Trade & Apprenticeship	Skilled Trade and Apprentice Education	Business, Entrepreneurship, PD
Course Description	Provides an overview of fire alarm systems. Reviews fire alarm system requirements from the International Building Code and the National Fire Protection Association (NFPA) 72 Standard for fire alarm and signaling systems. Discusses the basics of detection, notification, suppression, and cabling requirements for residential and commercial applications.	
Course Pre-requisite(s)	TAEI103 DC & AC Electricity: DC & AC Theory	
Credit Hours	1	
Contact Hours	1	
Course Fee	Miscellaneous Department Fee	
0	0	
Academic Level	Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL)	No	

Goals, Topics, and Objectives

Core Course Topics
1. Fire alarm systems.
2. Fire detection.
3. Fire notification.
4. Fire suppression.
5. Detecting devices.
6. National Electrical Code standards.
7. NICET Requirements.
Compare and contrast basic fire alarm terms: Detection, Notification, and Suppression.
Analyze Building Code requirements for Fire Alarm systems.
Identify various types of detection devices.
Identify various types of notification appliances.
Classify suppression components.
Explain basic wiring methods per National Fire Protection Association (NFPA) 72 and National Electrical Code (NEC) standards.
Explain system testing and acceptance requirements.
Explain National Institute for Certification in Engineering Technologies (NICET) requirements.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
1. Tests will be given throughout the semester. Tests represent 30% of the course grade.

2. A mid-term exam will be given which will represent 30% of the course grade.
3. A final exam will be given which will represent 40% of the course grade

TAE1275 - Residential Wiring

Overview

Subject	Academic Department	School
Skilled Trade & Apprenticeship	Skilled Trade and Apprentice Education	Business, Entrepreneurship, PD

Course Description
Course explores the history and fundamentals of residential wiring including the inspectors perspective, and the aspects of the National Electrical Code (NEC) that apply to residential construction and repairs. Electrical supplies, hardware and their associated wiring techniques for residential applications are explained. The method of instruction is classroom lecture utilizing PowerPoint.

Course Pre-requisite(s)
TAE1103 DC & AC Electricity: DC & AC Theory

Credit Hours
2

Contact Hours
2

Course Fee	Miscellaneous Department Fee
10	0

Academic Level
Undergraduate

Eligible for Credit for Prior College Level Learning (CPCLL)
No

Goals, Topics, and Objectives

- Core Course Topics
1. Introduction to Residential Wiring and the National Electric Code
2. Branch circuits and feeders.
3. General lighting branch circuits.
4. Small appliance circuits.
5. Specialty circuits.
6. Calculations for branch circuits and feeders.
7. Services & grounding.
8. Feeder panels.
9. Service calculations (including short-circuit calculations).
10. Wiring heating units and air conditioning.
11. Wiring motors and transformers.
12. Low voltage wiring.
13. Wiring garages, outbuildings, swimming pools and spas.
14. Putting it all together & estimating.

Explain the significance of the National Electrical Code and how it governs electrical work.
Describe branch and feeder circuits.
Calculate branch and feeder currents.
Describe proper installation of lighting fixtures and receptacles.
Describe proper installation of small appliance circuits.
Describe proper installation of specialty circuits.
Describe a proper service installation and explain the grounding of the service.
Explain proper installation of heating and air conditioning circuits.
Explain proper installation of motors and transformers.
Explain proper installation of low voltage wiring.
Explain proper wiring of garages, outbuildings, swimming pools, and spas.
Estimate the cost of an electrical wiring project.

Assessment, Requirements, and Outcomes

- Assessment of Academic Achievement
1. Tests will be given throughout the semester. Tests represent 30% of the course grade.
2. A mid-term exam will be given which will represent 30% of the course grade.

TAE1276 - Commercial Wiring

Overview

Subject	Academic Department	School
Skilled Trade & Apprenticeship	Skilled Trade and Apprentice Education	Business, Entrepreneurship, PD

Course Description
Covers the fundamentals of commercial wiring, especially the aspects of the National Electrical Code that specifically apply to commercial construction and repairs. Discusses electrical supplies, hardware appropriate for commercial applications, and commercial wiring techniques. The method of instruction is classroom lecture utilizing PowerPoint presentations.

Course Pre-requisite(s)
TAE1103 DC & AC Electricity: DC & AC Theory**TAE1105 AC Theory & Equipment:** AC Theory & Equipment

Credit Hours
2

Contact Hours
2

Course Fee	Miscellaneous Department Fee
0	0

Academic Level
Undergraduate

Eligible for Credit for Prior College Level Learning (CPCLL)
No

Goals, Topics, and Objectives

- Core Course Topics
1. Commercial blueprint reading.
2. Commercial branch circuit distribution.
3. Electrical grounding in commercial applications.
4. Motor controls in commercial equipment.
5. Overcurrent protection in commercial wiring (fuses, circuit breakers, ground fault protection).
6. Conductor sizing.
7. Power factor correction.

Explain the significance of the National Electrical Code and how it governs commercial installations.
Identify the functions and components of a unit substation.
Describe the components of a busway and its methods of support.
Explain the different types of wire insulation and their applications.
Use the appropriate wire table to determine conductor sizes.
Determine the ampere rating of various motors using the NEC.
Define and use the concept of power factor.
Describe the operation of circuit breakers, fuses, and ground-fault protective devices.
List the important considerations in lamp selection for site lighting.
Identify the different classes, divisions, and groups of hazardous locations.
Troubleshoot a circuit fault utilizing electrical drawings.
Lay out an commercial installation utilizing electrical drawings.

Assessment, Requirements, and Outcomes

- Assessment of Academic Achievement
1. Tests will be given throughout the semester. Tests represent 30% of the course grade.
2. A mid-term exam will be given which will represent 30% of the course grade.

3. A final exam will be given which will represent 40% of the course grade.

Texts

Texts, handouts, and/or workbooks will be determined by the TAE Department.

TAEI280 - Low Voltage & Communication Wiring

Overview

Subject
Skilled Trade & Apprenticeship

Academic Department
Skilled Trade and Apprentice Education

School
Business, Entrepreneurshp, PD

Course Description

Covers installation and maintenance of signal/low voltage wiring and signal transmission, including PC board, and fiber optic repair and maintenance. Cover troubleshooting, installation procedures, and repair techniques in a lab setting. Emphasizes safety procedures and protocols.

Course Pre-requisite(s)

[TAEI 105 AC Theory & Equipment](#) or TAE Apprentice Coordinator/Instructor Permission

Credit Hours

2

No

Goals, Topics, and Objectives

Core Course Topics

1. Voltage and Power Loss in Lines
2. High Frequency AC Lines
3. Decibel Calculations
4. Wavelength and Standing Wave Reflections
5. Coax Cable and Twisted Pairs
6. Fiber Optic Cable
7. Fiber Optics
8. Telephone and Voice Communication
9. Current Loops and Sensors
10. Computer Networks

Calculate voltage loss in transmission cables.
Calculate AC signal loss and express it in decibels.
Read and interpret basic schematics and wiring diagrams, and use them to wire equipment.
Apply safe and proper methods in using tools.
Identify several types of copper cable and describe the proper use and installation of this cable.
Describe proper uses of shielding and grounding.
Identify several types to fiber optic cable and describe the proper use and installation of this cable.
Explain the function of a current loop circuit.
Explain the functioning of a telephone circuit.
Explain the functioning of RF communication circuits.
Identify proper methods of installation for coax cable and twisted pair.
Analyze typical computer networks.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

1. Tests will be given throughout the semester. Tests represent 65% of the course grade.
2. A mid-term exam will be given which will represent 10% of the course grade.
3. A final exam will be given which will represent 25% of the course grade

Texts

Texts, handouts, and/or workbooks will be determined by the TAE Department.

TAEI290 - High Voltage Power Distribution

Overview

Subject	Academic Department	School
Skilled Trade & Apprenticeship	Skilled Trade and Apprentice Education	Business, Entrepreneurship, PD
Course Description		
Covers the generation, transmission, and distribution of primary electrical power. Includes underground and overhead distribution systems, types of wire and cables, switching equipment, protective devices, test equipment, personal safety items, OSHA safety rules, and methods of providing protection when working on de-energized electrical equipment.		
Course Pre-requisite(s)		
ELEC103 Basic Electricity or ENT-103 or TAEI103 DC & AC Electricity or Instructor Permission		
Credit Hours		
2		
Contact Hours		
2		
Course Fee		
3	Miscellaneous Department Fee	0
Academic Level		
Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL)		
No		

Goals, Topics, and Objectives

Core Course Topics
1. Overview - high voltage power.
2. OSHA safety rules & personal safety equipment.
3. Generation and transmission of power.
4. Substations.
5. Substation equipment and maintenance.
6. Overhead lines.
7. Underground distribution.
8. High voltage test equipment.
9. High voltage rubber safety equipment.
10. Electrical print reading and documentation.
11. Switching, tagging, and documentation.
12. Troubleshooting - isolation and correction of faults.
13. Ground faults - identification and isolation.
14. Review - OSHA safety requirements.
Explain the concepts of electrical power generation, transmission, and distribution.
Explain OSHA high voltage safety procedures and identify high voltage safety equipment.
Explain the function of a substation.
Identify substation equipment and explain substation maintenance procedures.
Explain how power is distributed using overhead lines.
Explain how power is distributed using underground cables.
Identify high voltage electrical test equipment and explain the proper use of this equipment.
Read an electrical print.
Explain the concepts of lock-out, switching, and tagging, and the proper documentation needed when working on high voltage equipment.
Identify common electrical faults, and explain how they can be isolated utilizing appropriate test equipment.
Identify ground faults and explain how they can be isolated.
Generate a flow chart illustrating troubleshooting methodology.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Tests will be given throughout the semester. Tests represent 75% of the course grade. A final exam will be given which will represent 25% of the course grade.

Texts	Texts, handouts, and/or workbooks will be determined by the TAE Department.

TAEI291 - Elec Power Distribution & Transmission

Overview

Subject	Academic Department	School
Skilled Trade & Apprenticeship	Skilled Trade and Apprentice Education	Business, Entrepreneurship, PD
Course Description		
Covers the fundamentals of electrical power distribution, including substation and transmission line protection as well as construction. Also examines transmission lines, operation of distribution transformers, instrument transformers, circuit breakers, reclosers, sectionalizers, fuses, relays, and disconnects.		
Credit Hours		
2		
Contact Hours		
2		
Course Fee		
0	Miscellaneous Department Fee	0
Academic Level		
Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL)		
No		

Goals, Topics, and Objectives

Core Course Topics
1. Introduction to Electrical Power
2. Basic Concepts, Three Phase Review
3. Electrical Power Distribution
4. Distribution Transformers
5. Instrument Transformers and Voltage Line Drops
6. Circuit Breakers
7. Reclosers, Sectionalizers, Fuses
8. Relays and Disconnects
9. Electrical Power Transmission
10. Transmission Line Protection
11. Transmission Line Construction
Identify the different types of transformers used in a substation and their purpose in electrical power distribution.
Identify the different types of circuit breakers and fuses employed in a substation distribution system.
State how electrical power is transmitted and distributed including line protection devices.
Describe the different types of transmission line constructions used.
Explain the operation of a substation, its layout, and construction methods.
Explain how a substation is protected against faults.
Describe the application and relative ratings of reclosers and sectionalizers.
Identify and explain the operation of the different types of relays and disconnects used in a substation.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
1. Tests will be given throughout the semester. Tests represent 65% of the course grade.
2. Laboratory activities and performance exercises will be done where students will demonstrate an understanding of practical applications. These will make up 10% of the course grade.
3. A final exam will be given which will represent 25% of the course grade

Texts	Texts, handouts, and/or workbooks will be determined by the TAE Department.

TAFD117 - Industrial Computer Applications

Overview

Subject	Academic Department	School
Skilled Trade & Apprenticeship	Skilled Trade and Apprentice Education	Business, Entrepreneurship, PD

Course Description
Introduces computer systems and associated components typically found in the industrial environment. Presents basic skills in word processing, database, spreadsheet, email, specialized vendor software, and communication software. Also covers Internet and Intranet environments, including searching for industry manuals and parts, downloading software and drivers, and other related tasks. Utilizes the Windows operating system in conjunction with proprietary software. Discusses the HFC learning management systems. Laboratory activities.

General Education Category
Computer Technology

Eligible for Credit for Prior College Level Learning (CPCLL)
No

Goals, Topics, and Objectives

Core Course Topics

1. Course overview
2. Computer basics
3. Input and output devices
4. Processing and storage
5. Computer security and protection
6. Computer ergonomics
7. Software installation
8. File management
9. Peripheral devices
10. Overview of computer applications
11. Word processing software
12. Spreadsheet software
13. Presentation software
14. Database software
15. Email management systems
16. Communication software
17. Internet basics
18. Web browser and search tools
19. Electronic data sheets
20. Computer programming
21. CAD/CAM software
22. Simulation software

Describe the history of computers from the abacus to Zenith.
Explain the basic calculator functions including addition, subtraction, multiplication, division, and scientific notation.
Identify and explain the function and use of the keys on a standard keyboard. Identify, explain, and use the elementary personal computer commands.
Identify and use peripheral computer hardware.
Identify the different operating systems; i.e. machine language, DOS, and Windows.
Explain the function and use of data storage systems and their components.
Identify and use data storage media, including Cloud storage.
Prepare, save, and retrieve documents utilizing word processing, spreadsheets, data bases, and computer graphics software programs.
Demonstrate rudimentary computer programming with proprietary software.
Demonstrate the use of an elementary CAD program with proprietary software.
Demonstrate verbal and written communication skills through class presentations and written reports.

Utilize and maintain a weekly log or journal of all course activities.
Utilize and maintain a personal spreadsheet to track course progress.
Utilize the intranet to send and receive assigned and personal emails.
Utilize a web browser to access information from the Internet.
Utilize simulation software to introduce the AMTEC integrated manufacturing system trainer.
Utilize individual and group problem solving skills to work through class projects.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
The final grade for this course will consist of an accumulation of grades and scores earned on various projects during the semester. They are as follows:

1. Weekly Competencies = 40%
2. AMTEC Curriculum = 25%
3. Worksheets = 10%
4. Internet Assignments = 10%
5. Shop Talks = 5%
6. Shop Memos = 5%
7. Class Journal = 5%

Texts	Texts, handouts, and/or workbooks will be determined by the TAE Department.

TAFD120 - Industrial Safety Awareness

Overview

Subject	Academic Department	School
Skilled Trade & Apprenticeship	Skilled Trade and Apprentice Education	Business, Entrepreneurship, PD

Course Description
Presents a comprehensive approach to safety, designed to give the skilled tradesperson the knowledge of safety fundamentals and practices, from the causes of accidents to the study of safety hazards and rules associated with equipment and tools utilized in modern industrial facilities. Successful completers will be issued the Occupational Safety and Health Administration (OSHA) 30-Hour card for General Industry.

Credit Hours

Contact Hours

2

Course Fee	Miscellaneous Department Fee
15	0

Academic Level
Undergraduate

Eligible for Credit for Prior College Level Learning (CPCLL)
No

Goals, Topics, and Objectives

Core Course Topics

1. Introduction to OSHA
2. The Occupational Safety and Health Act (OSHA)
3. The General Duty Clause
4. OSHA Inspections, Citations, and Penalties, OSHA Record Keeping
5. MIOSHA, Safety Rights and Responsibilities.
6. Hazard Communication and the SDS
7. Asbestos Awareness
8. Flammable and Combustible Liquids, Cylinder Safety and HAZWOPER
9. Machine Guarding and Workplace Security
10. Personal Protective Equipment
11. Lock-out/Tag-out
12. Permit Required Confined Space Entry
13. Electrical Safety and Arc Flash Safety
14. Hand and Power Tool Safety
15. Welding and Laser Safety
16. Safety and Health Programs
17. Walking and Working Surfaces, Ladder and Scaffold Safety, Fall Protection
18. Hoists, Cranes, and Materials-Handling Equipment
19. Means of Egress , Fire Safety, Violence in the Workplace
20. Industrial Hygiene, Ergonomics, and Blood Borne Disease Transmission

Explain the purpose and function of the Occupational Health and Safety Administration (OSHA).
Explain the purpose and function of the Michigan Occupational Health and Safety Administration (MIOSHA).
Identify and explain safety rights and responsibilities of employers and employees.
Identify and explain hazard communication standards.
Demonstrate the basics of machine shop safety including lock-out and tag-out.
Explain electrical safety, power- and hand-tool safety, equipment safety, and machine guarding.
Identify and explain basic health safety issues including occupational stress.
Explain the basics of confined space entry.
Explain the safety issues of materials handling equipment and processes.
Identify the basics of fire safety as it relates to the industrial environment.
Explain the concepts of Welding and Laser hazards found in the workplace.
Demonstrate the ability to select and utilize the proper personal protective equipment to match the job task.
Demonstrate the ability to perform first aid, CPR, and utilize an AED to the current standard.
Explain the concepts of workplace security and violence in the workplace.
Explain the purpose and intent of industrial safety.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Worksheets and review sheets for OSHA topics will be assigned for the course. The cumulative score of the assignments will account for 100% of semester grade. General Course Requirements and Recommendations REQUIREMENTS FOR OBTAINING AN OSHA 30-HOUR GENERAL INDUSTRY OUTREACH TRAINING COURSE COMPLETION CARD To be eligible to receive an OSHA 30-Hour General Industry Outreach Training Course Completion Card, students must meet each of the following requirements: 1 - The course Instructor must be authorized by OSHA to conduct the 30-Hour General Industry Outreach Training Program. 2 - Students complete all assigned worksheets and review sheets for the course. 3 - Students must have no absences from class presentation. Upon successful completion of the above requirements, the necessary paperwork will be filed for the student to receive an OSHA 30 Hour General Industry Outreach Training Program Course Completion Card issued by the Occupational Safety and Health Administration. Texts Texts, handouts, and/or workbooks will be determined by the TAE Department. <table><tr><td>Satisfies Honors Requirement</td><td>Satisfies Wellness Requirement</td></tr><tr><td>No</td><td>No</td></tr></table>		Satisfies Honors Requirement	Satisfies Wellness Requirement	No	No

TAFD126 - Proc Industry Health, Environ & Safety

Overview

Subject Skilled Trade & Apprenticeship	Academic Department Skilled Trade and Apprentice Education	School Business, Entrepreneurship, PD
Course Description Offers exposure to the various safety, health, environmental, and safety issues directly associated with the process industries. Includes hazard recognition, types of hazards, cyber security, engineering controls, administrative controls, personal protective equipment, safety-related equipment, first aid, and governmental regulations. Emphasizes extensive hands-on experiences. Course Pre-requisite(s) TAFD120 Industrial Safety Awareness or TAFD125 - Missing course & TAFD117 Industrial Computer Applicatio & TAPT100 Intro to Process Tech Practice or TAE Apprentice Coordinator/Instructor Permission Credit Hours 4 Contact Hours 4		

Course Fee 0	Miscellaneous Department Fee 0
Academic Level Undergraduate	Eligible for Credit for Prior College Level Learning (CPCLL) Yes
Credit for Prior College Level Learning (CPCLL) Details This course is identified as a departmental course for which a learner can receive college credit for prior college-level learning and/or skills acquired outside the traditional classroom. Terms of the HFC Credit for Prior College-Level Learning Policy may be met by review of the appropriate documentation, skill, certifications, and/or knowledge acquired by the learner and submitted for evaluation by the appropriate departmental faculty. As required, one or more of the following may be considered in the evaluation process: 1)Field experience, 2)Licenses held, 3)Completing course exams and/or, 4)Performance sequences and/or, 5)Competing a portfolio, 6)Assessment of private trade school or other extensive college level industry training and learning by a departmental faculty member.	
Acceptable Prior Learning Credit Departmental Exam, Skilled Demonstration, Portfolio Review, Licensure/ certifications, Other	
Goals, Topics, and Objectives Core Course Topics - Hazard Types and Their Effects - Recognizing Chemical Hazards - Recognizing Biological Hazards - Equipment and Energy Hazards - Fire and Explosion Hazards - Pressure, Temperature, and Radiation Hazards - Hazardous Atmospheres and Respiratory Hazards - Working Area and Height Hazards - Hearing and Noise Hazards - Construction, Maintenance, and Tool Hazards - Vehicle and Transportation Hazards - Natural Disasters and Inclement Weather - Physical Security and Cyber Security - Recognizing Ergonomic Hazards - Recognizing Environmental Hazards - Introduction to Hazard Controls - Engineering Controls: Alarms and Indicator Systems - Engineering Controls: Process Containment and Process Upset Controls - Administrative Controls: Programs and Practices - Permitting Systems - Personal Protective Equipment and First Aid - Monitoring Equipment - Fire, Rescue, and Emergency Response Equipment	
Discuss the safety, health, and environmental hazards found in the process industries.	
Describe the intent and application of the primary regulations impacting the process industries.	
Discuss, locate, and utilize OSHA 1910.119 Process Safety Management (PSM).	
Discuss, locate, and utilize OSHA 1910.132 - Personal Protective Equipment (PPE).	
Discuss, locate, and utilize OSHA 1910.1200 - Hazard Communication (HAZCOM).	
Discuss, locate, and utilize OSHA 1910.120 - Hazardous Waste Operations and Emergency Response (HAZWOPER).	
Discuss, locate, and utilize DOT CFR 49.173.1 - Hazardous Materials - General Requirements for Shipments and Packaging.	
Discuss, locate, and utilize EPA CFR 264.16 - Resource Conservation and Recovery Act (RCRA).	
Describe the role of the process technician in achieving successful compliance with all local, county, state, and federal regulations.	
Describe the personal attitudes and behaviors that can help to prevent workplace accidents and incidents.	
Describe the components of the fire triangle and the fire and fire tetrahedron.	
Identify the consequences of non-compliance with regulations: Legal -Moral and Ethical -Safety, Health, and Environmental.	

Explain the managerial and engineering controls used in the industry to minimize hazards and maximize worker and system protection in the workplace.
Describe and demonstrate the correct use of personal protective equipment (PPE).
Describe the intent of the OSHA - Voluntary Protection Program (VPP).
Describe the application of the International Organization of Standards (ISO)-14000 as it relates to the process industries.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Students will be required to complete Chapter Reviews as assigned. Each Chapter Review will have an assigned point value. Students will be administered four online Module Exams. Module Exams will cover specific course material as assigned. Students will be required to participate in a minimum of four online discussions of select topics using an online Discussion Board. Students will be required to create a Safety Resource Library. Students will be required to complete four (4) Assignments, each with an assigned point value. Assignments can be downloaded and completed. A hard copy of the completed Assignments must be turned in for credit. Students will be administered an online comprehensive Final Exam. Students will be required to maintain a student spreadsheet - recording attendance, Chapter Review scores, Discussion Board scores, Module Exam scores, Assignments, and Final Exam score. Completed spreadsheet will be turned in and will be used as part of the calculation of the final grade. The scores of the scheduled Chapter Reviews, Module Exams, Discussion Boards, Safety Resource Library, Assignments, Final Exam, and Student Spreadsheet will be used to calculate the semester grade.	
Texts	Texts, handouts, and/or workbooks will be determined by the TAE Department.
Satisfies Honors Requirement	Satisfies Wellness Requirement

TAFD130 - Industrial Applications Physical Science

Overview

Subject Skilled Trade & Apprenticeship	Academic Department Skilled Trade and Apprentice Education	School Business, Entrepreneurship, PD
Course Description Offers the apprentice lecture exposure to the applications of physics and chemistry found in today's industrial workplace. Covers the six elemental machines; applications of forces, motion, and work; and the chemistry of industrial materials and chemical interactions in the environment.		
Course Pre-requisite(s) TAMA120 Indust Appl of Algebraic Princ or TAE Apprentice Coordinator/Instructor Permission		
Credit Hours 3		
Contact Hours 3		
Course Fee 25	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category Natural Sciences	Michigan Transfer Agreement (MTA) Category Category 6: Natural Sciences - Applied Degrees	
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics - Introduction-Fundamental Concepts of Measurement - Measurement Related to the Fundamental Physical Quantities - Description of Linear Motion - Industrial Applications of Force and Motion - Universal Gravitation - Industrial Applications of Circular Motion - Industrial Applications of Forces - Industrial Applications of Work and Power - Energy: Its Forms and Kinds - Machines and their Industrial Applications - Effects of Temperature and Heat - Chemical Building Blocks - Compounds, Molecules, and Ions - Organic Chemistry - Chemistry and the Environment
Describe how the physical and chemical properties of industrial processes and materials affect safety in the workplace.
Utilize both English and metric units of measure in physical science applications.
Define the concepts of mass, force, and motion and identify their practical applications in the workplace.

Define the concepts of energy, work, and power and identify their practical applications in the workplace.
Apply the concepts of mass, force, motion, energy, work, and power to the six basic machines.
Describe the physical and chemical properties of matter.
Describe the structure of atoms and molecules.
Identify the practical applications of reactions involving oxidation and reduction.
Discuss the chemistry of the environment, including air pollution, the chemistry of trace metals, hazardous waste in the ground and water, and radioactive wastes.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Assessment of academic achievement may include (but is not limited to) exams, quizzes, and homework	
Texts	Texts, handouts, and/or workbooks will be determined by the TAE Department.

TAFD150 - Applied Technology

Overview

Subject	Academic Department	School
Skilled Trade & Apprenticeship	Skilled Trade and Apprentice Education	Business, Entrepreneurship, PD
Course Description An introductory course, appropriate for all trades, which uses practical concepts and examples to examine fluid power, electricity, mechanical power transfer, and rigging. Emphasizes appropriate safety procedures and protocols.		
Course Pre-requisite(s) <u>TAFD150 Applied Technology</u> or TAE Apprentice Coordinator/Instructor permission		
Credit Hours 3		
Contact Hours 3		
Course Fee	Miscellaneous Department Fee	
25	0	
Academic Level		
Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics - Introduction to fluid power. - Hydraulics. - Pneumatics. - Introduction to electricity. - Electricity DC & measuring instruments. - Electricity AC & circuits. - Introduction to mechanical power transmission (MPT), anti-friction bearings, and couplings. - Chain drives and V-belt drives. - Gear drives. - Introduction to rigging and selection of lifting devices. - Selection of attachments. - Interpretation of rigging capacity charts and tags, inspection of equipment, safety considerations, and hoists. - Hand signals. - Calculations & safety.
Explain the generation of power through electricity and fluid power.
Calculate problems associated with hydraulic/pneumatic problems.
Explain the concepts of distribution of power through mechanical power transmission, fluid power, and electricity.
Explain the concept of control of power through mechanical power transmission, fluid power, and electricity.
Calculate DC electrical values.

Explain the importance of the concept of systems in the areas of mechanical power transmission, fluid power, and electricity.
Identify the various devices utilized in mechanical power transmission, fluid power, and electricity.
Identify various rigging devices and equipment.
Calculate rigging weight and sling load values.
Describe proper rigging techniques, operations, and the appropriate application of devices.
Explain the importance of safety as it relates to rigging, mechanical power transmission, fluid power, and electricity.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement All students will be required to complete five tests: one for calculations, one for fluid power, one for electricity, one for rigging, and one for mechanical power transmission. The student will be considered to have completed the course by receiving a cumulative average grade of 70%. General Course Requirements and Recommendations Calculator Use: Students are encouraged to bring a calculator to all class sessions. Any scientific calculator will be sufficient for this course.		
Texts Texts, handouts, and/or workbooks will be determined by the TAE Department.		
Satisfies Honors Requirement	Satisfies Wellness Requirement

TAFD295 - Industrial Maintenance Externship

Overview

Subject Skilled Trade & Apprenticeship	Academic Department Skilled Trade and Apprentice Education	School Business, Entrepreneurship, PD
Course Description Provides field experience in an advanced manufacturing mechatronics environment with students working a minimum of four hours per week throughout the 15 week semester. Offers first-hand the activities, work-practices, and procedures of mechatronics maintenance personnel. Intended for those who have never worked in, or been exposed to, mechatronic manufacturing maintenance in an industrial production facility. Students will work with the divisional faculty/staff to identify field placements.		
Course Pre-requisite(s) Must have completed 45 credit hours or TAE Apprentice Coordinator/Instructor Permission		
Credit Hours 2		
Contact Hours 2		
Course Fee 0	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) Yes		Acceptable Prior Learning Credit Other

Goals, Topics, and Objectives

Core Course Topics - The facility design - i.e. Mass production, Job shop - Plant specific maintenance tasks and procedures - Types of mechatronic equipment/systems used in production - Mechatronic relationships (systems approach) i.e. electro-pneumatic, mechanical-hydraulic - Organizational maintenance practices
Identify the facility operational style.
Identify the product created.
Explain the maintenance requirements of the facility.
Identify the machinery used in the facility.
Explain the mechatronic relationships of the operational systems.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement The instructor and facilities supervisor or maintenance mentor will assess the student based upon his/her projects/work. This will include an assessment of the student's demonstrated interest and willingness to learn and any contributions made to the in-plant maintenance team. A 500-word essay related to the student's experience will be required. The student will also research and deliver a 15-minute presentation on a maintenance issue
--

within the facility. General Course Requirements and Recommendations This course will give the learner experience in the mechatronic manufacturing maintenance arena.		
Texts Texts, handouts, and/or workbooks will be determined by the TAE Department.		
Satisfies Honors Requirement	Satisfies Wellness Requirement	
No	No

TAFP150 - Introduction to Industrial Hydraulics

Overview

Subject Skilled Trade & Apprenticeship	Academic Department Skilled Trade and Apprentice Education	School Business, Entrepreneurship, PD
Course Description Introduces the principles of fluid power as applied to industrial systems. Presents various hydraulic components and their functions within fluid power systems. Laboratory activities.		
Course Pre-requisite(s) TAFD150 <u>Applied Technology</u> or TAE Apprentice Coordinator/Instructor permission		
Credit Hours 4		
Contact Hours 4		
Course Fee 20	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics - Introduction, Safety Policies and Procedures, Review - Basic Hydraulic Theory, Transmission of Force, Laws of Power Hydraulics - Components Used to Control Hydraulic Energy, Technical Terms, Hydraulic Symbols - Hydraulic Fluid, Fluid Conductors, Seals - Reservoirs and Contamination Control - Hydraulic Pumps - Hydraulic Actuators - Directional Valves - Pressure Controls - Flow Controls - Cartridge and Stack Valves, Proportional and Servo Valves - Hydraulic Accessories - Hydraulic Systems - Troubleshooting and Noise Control
Utilize safe work practices when dealing with hydraulic equipment in the lab.
Describe the behavior of a fluid. Match fluid power terminology and symbology, to a description of their function.
Identify various cylinder types, styles, and their function in a fluid power system.
Apply simple fluid power laws to fluids under load and flow conditions.
Describe the functions of reservoirs, filters, and strainers as components of a fluid power system.
Match petroleum and synthetic base fluids to their characteristics.
Identify various pump types, styles, internal components, and their function within the fluid power system.
Identify various valve types, styles, internal components, and their function within the fluid power system.
Analyze the operation/function of simple relief, compound relief, and pressure control valves circuit.
Identify various conductors and their corresponding sizing/assembly methods.
Assemble and debug various hydraulic circuit from an ANSI prints.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement		
All assessment of student achievement is left to the discretion of the individual instructor. Final grade will be a combination of quiz grades, lab assignments, and the final exam.		
Texts		
Texts, handouts, and/or workbooks will be determined by the TAE Department.		
Satisfies Honors Requirement	Satisfies Wellness Requirement

TAFP160 - Pneumatic Power and Control

Overview

Subject	Academic Department	School
Skilled Trade & Apprenticeship	Skilled Trade and Apprentice Education	Business, Entrepreneurshp, PD
Course Description		
Explores the principles of fluid power pneumatics as applied to industrial systems. Examines various pneumatic components with respect to their functions within pneumatic power and control systems.		

Credit Hours
4

Contact Hours
4

Course Fee	Miscellaneous Department Fee
20	0
Academic Level	
Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL)	
No	

Goals, Topics, and Objectives

Core Course Topics
1. Basic Relationships, Safety Policies and Procedures
2. Characteristics of Compressed Air, Terminology and Symbols Used in Pneumatics, Physical Properties
3. Compressed Air Production, Types of Compressors, Criteria for Selection of Compressors
4. Distribution of Compressed Air, Contamination, Compressed Air Filters, and Pressure Regulation
5. Compressed Air Lubrication, Service Unit
6. Pneumatic Working Elements, Pneumatic Cylinders, Types of Mounting, and Cylinder Construction
7. Calculations for Cylinders and Rotary Operation Pneumatic Elements
8. Basic Units and Cylinder with Mounted Air Control Block Hydro-pneumatic Systems
9. Feed Unit, Rotary Index Table, Collet Chuck, Air Cushion Sliding Table, Vacuum Suction Nozzle, and Vacuum Suction Head
10. Valves and Directional Valves
11. One-way Valves and Pressure Control Valves
12. Shut-off Valve, Valve Combinations, and Program Control Unit
13. Proximity Sensing Devices, Air Barrier, Back-pressure Sensor, Pressure Amplifiers - single stage and two stage
14. Pneumatic-electric Signal Conversion, Signal Converter, and Signal Converter Contractor

Define basic pneumatic terms.
Describe basic pneumatic concepts.
Diagram a pneumatic circuit to code.
Analyze a pneumatic system.
Identify the basic pneumatic components.
Identify the characteristics of air power.
Describe trouble concerns in components of a pneumatic power system.
Analyze and troubleshoot pneumatic hydraulic circuits according to standard practices.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement		
Assessment of academic achievement may include (but is not limited to) exams, quizzes, homework, and laboratory assignments.		
Texts		
Texts, handouts, and/or workbooks will be determined by the TAE Department.		
Satisfies Honors Requirement	Satisfies Wellness Requirement

TAFP270 - Fluid Pow Sys:CircuitDesign&Troublesho

Overview

Subject	Academic Department	School
Skilled Trade & Apprenticeship	Skilled Trade and Apprentice Education	Business, Entrepreneurshp, PD
Course Description		
Explores the principles of fluid power design and troubleshooting as applied to industrial systems. Presents various hydraulic circuits and discusses functions, efficiencies, and troubleshooting guidelines within fluid power systems.		
Course Pre-requisite(s)		
TAFP150 Intro to Industrial Hydraulics or TAE Apprentice Coordinator/Instructor Permission		

Credit Hours
4

Contact Hours
4

Course Fee	Miscellaneous Department Fee
25	0
Academic Level	
Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL)	
No	

Goals, Topics, and Objectives

Core Course Topics
1. Safety policy and procedures and linear actuator circuits.
2. Pressure gauges and control - direct acting pressure relief valves.
3. Pressure control - pilot operated relif valve circuits.
4. Pressure control - multiple relief valve control circuits.
5. Pumps - variable displacement and volumetric efficiency.
6. Pumps - pressure compensated circuits.
7. Flow control - meter-in and meter-out circuits and pressure compensated circuits.
8. Pressure and flow control - counter balance circuits and load holding with check valve circuits.
9. Pressure control - actuator sequencing circuits.
10. Pressure control - reducing valve circuits and load sensing circuits.
11. Directional control - pilot operated directional control valve circuits.
12. Linear circuit control - regenerative cylinder circuits.
13. Pressure control - cross port relief valve circuits.
14. Troubleshooting.

Demonstrate industry safety standards when working with hydraulic equipment.
Use ISO/ANSI fluid power terminology and symbology when discussing and diagramming fluid power systems.
Design, assemble, set-up, adjust, and operate a hydraulic system containing conventional industrial hydraulic components.
Troubleshoot a defective hydraulic circuit, identifying the fault(s) and preparing a report recommending remedial action.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement		
All assessment of student achievement is left to the discretion of the individual instructor. Final grade will be a combination of quiz grades, lab assignments, and the final exam.

TAFP280 - Applied Electrohydraulics

Overview

Subject	Academic Department	School
Skilled Trade & Apprenticeship	Skilled Trade and Apprentice Education	Business, Entrepreneurshp, PD
Course Description		
Introduces basic electrohydraulic fundamentals, components, and procedures relative to troubleshooting, maintenance, and set-up of proportional and servo valves. Presents theory and practice of electrohydraulics with an emphasis on hands-on laboratory experiences.		
Course Pre-requisite(s)		
TAFP150 Intro to Industrial Hydraulics or TAE Apprentice Coordinator/Instructor Permission		

Credit Hours
3

Contact Hours

Course Fee	Miscellaneous Department Fee
10	0
Academic Level	
Undergraduate	

Eligible for Credit for Prior College Level Learning (CPCLL)
No

Goals, Topics, and Objectives

Core Course Topics

- 1. Introduction of safety policies/procedures and overview of electrohydraulic technology.
- 2. Proportional pressure control valves.
- 3. Proportional pressure control valve amplifiers.
- 4. Proportional directional valves.
- 5. Proportional directional valve amplifiers.
- 6. Load compensation with pressure compensators.
- 7. Proportional flow control valves.
- 8. Proportional flow control valve amplifiers.
- 9. Electronic controls for proportional valves.
- 10. Introduction to servo technology.
- 11. Servo valve technology.
- 12. Open to closed loop control circuits.
- 13. Filtration of hydraulic systems equipped with servo and proportional valves.
- 14. Proportional and servo valve systems.

Demonstrate industry safety standards when working with hydraulic equipment in the lab.
Disassemble, inspect, reassemble, and calibrate proportional and servo valves in accordance with manufacturers specifications and instructions.
Interpret and apply valve specifications from reference literature and/or service manuals for troubleshooting, set-up, or calibration purposes.
Assemble, set-up, and calibrate an operational hydraulic system containing proportional and/or servo valves and controls using positional, velocity, or force control by working from an ISO/ANSI print.
Identify various proportional and servo valves, their controls, styles, internal components, and their function within a fluid power system.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement All assessment of student achievement is left to the discretion of the individual instructor. Final grade will be a combination of quiz grades, lab assignments, and the final exam.

TAGD110 - Basic Shape and Size Interpretation

Overview

Subject Skilled Trade & Apprenticeship	Academic Department Skilled Trade and Apprentice Education	School Business, Entrepreneurship, PD
Course Description Introduces the concepts of shape and size description of normal surfaced, inclined (single-angle) surfaced, and cylindrical objects. Presents traditional and computer-based drafting techniques. Covers projection of three-dimensional objects into two-dimensional representations, the reverse process, and sketching and modeling of objects.		

Credit Hours

3

Contact Hours

3

Course Fee 20	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Core Course Topics

- 1. Introduction to drafting equipment and the Alphabet of Lines.
- 2. Use and care of drafting instruments, lettering, and title blocks.
- 3. Drawing normal surfaces.
- 4. Orthographic projection of normal surfaces.
- 5. Modeling and pictorial drawing of normal surfaces.
- 6. Geometric constructions and orthographic projection of cylindrical surfaces.
- 7. Drawing cylindrical surfaces and sub-titles.
- 8. Modeling and pictorial drawing of cylindrical surfaces.
- 9. Section views.
- 10. Auxiliary views.

- 11. Dimensioning normal surfaces.
- 12. Dimensioning cylindrical surfaces.
- 13. Assembly drawings.
- 14. Material lists, change blocks, and notes.

Demonstrate the use and maintenance of basic drafting instruments.
Utilize various drawings of example objects to develop special relationships.
Introduce the use of 3-dimensional models to develop spatial relationships.
Use spacial relationships to draw objects.
Utilize actual objects that will be manufactured in other classes as drawing objects in this class.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement All students will be required to complete a comprehensive final examination that assesses the learning of all course objectives. This exam will consist of four drawings, at least one being a CAD drawing. This exam must be weighted in a manner so that the exam score is worth a minimum of fifteen percent of the final course grade. This exam is to be a common exam administered to all sections of TAGD110 Basic Shape & Size Interpret .		
General Course Requirements and Recommendations The student will be required to bring to class drafting equipment that will be identified in the first session (or mailed to the students prior to the first meeting).		
Texts Texts, handouts, and/or workbooks will be determined by the TAE Department.		
Satisfies Honors Requirement	Satisfies Wellness Requirement

TAGD120 - Advanced Graphic Interpretation

Overview

Subject Skilled Trade & Apprenticeship	Academic Department Skilled Trade and Apprentice Education	School Business, Entrepreneurship, PD
Course Description Introduces the concepts of shape and size description of oblique surfaced objects, sectioning, processes used in the manufacturing environment, and geometric and traditional tolerancing. Requires knowledge of traditional and computer-based drafting techniques.		
Course Pre-requisite(s) TAGD110 Basic Shape & Size Interpret or TAE Apprentice Coordinator/Instructor Permission		
Credit Hours 3		

Contact Hours

3

Course Fee 20	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Core Course Topics

- 1. Threaded fasteners and non-threaded fasteners.
- 2. Processing notes and oblique surfaces.
- 3. Drawing oblique surfaces.
- 4. Dimensioning oblique surfaces.
- 5. Castings, forgings, and cutting/viewing planes.
- 6. Full sections and partial sections.
- 7. Revolved, removed, aligned sections, and sectioning of ribs and webs.
- 8. Weldments.
- 9. Tolerances.
- 10. Tolerances and fits.
- 11. Geometric dimensioning and tolerances and form tolerances.
- 12. Profile, orientation, and runout tolerances.
- 13. Location tolerances.
- 14. Assembly drawings.

Describe advanced projection of oblique and slanted surfaces.
Utilize various drawings of example objects to develop advanced spatial relationships.
Explain the use of GD&T in detail drawings.

Calculate tolerances.
Explain sectioning techniques.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
All students will be required to complete a comprehensive final examination that assesses the learning of all course objectives. This exam will consist of four drawings, at least one being a CAD drawing. This exam must be weighted in a manner so that the exam score is worth a minimum of fifteen percent of the final course grade. This exam is to be a common exam administered to all sections of [TAGD120 Advanced Graphic Interpretatio](#).

General Course Requirements and Recommendations
The student will be required to bring the drafting equipment used in previous drafting courses. Modeling clay is also required.

TAGD130 - Assembly Detailing

Overview

Subject	Academic Department	School
Skilled Trade & Apprenticeship	Skilled Trade and Apprentice Education	Business, Entrepreneurshp, PD

Course Description
Presents the concept of detailing of assembly drawings, including modeling of complex shapes and pictorial drawings of details. Through the use of traditional and computer-based drafting techniques, students explore drawing individual parts in their proper orientation. Modeling clay is required.

Course Pre-requisite(s)
[TAGD120 Advanced Graphic Interpretatio](#) or TAE Apprentice Coordinator/Instructor Permission

Credit Hours
2

Contact Hours
2

Course Fee	Miscellaneous Department Fee
20	0
Academic Level	
Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL)	
No	

Goals, Topics, and Objectives

- Core Course Topics
- Introduction to sketching.
 - Sketching details from a pictorial assembly.
 - Drawing from sketches.
 - Sketching details from a working drawing.
 - Modeling details from sketches.
 - Drawing complex shapes from sketches.
 - Sketching details from an exploded view assembly.
 - Drawing details from sketches.
 - Determining tolerances and fits.
 - Complex assemblies.
 - Sketching details from complex assembly drawings.
 - Modeling details from complex assembly drawings.
 - Drawing details from sketches.
 - Interpreting assembly drawings.

Match irregular planes and surfaces to determine spatial relationships.
Identify the various types of assembly drawings.
Model complex details through visualization.
Demonstrate the process to produce an assembly drawing.
Utilize various drawings of example objects to develop assembly drawings.
Use 3-dimensional models to develop assembly drawings.
Utilize detail drawings to draw an assembly drawing.
Utilize actual objects that will be manufactured in other classes as drawing objects for this class.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
All students will be required to complete a common [TAGD130 Assembly Detailing](#) comprehensive final examination that assesses the learning of all course objectives. This exam will consist of two parts, the first part consisting of a drawing project and the second part will be a team assembly drawing assignment. This exam must be weighted in a manner so that this exam score is worth a minimum of fifteen percent of the final course grade.

General Course Requirements and Recommendations
The student will be required to bring the drafting equipment used in the previous two drafting courses ([TAGD110 Basic Shape & Size Interpret](#) and [TAGD120 Advanced Graphic Interpretatio](#)). Modeling clay is also required.

Texts
Texts, handouts, and/or workbooks will be determined by the TAE Department.

Eligible for Credit for Prior College Level Learning (CPCLL)	
No	

Goals, Topics, and Objectives

- Core Course Topics
- Describing a double angled cut on a rectangular work piece.
 - Solving a double angled cut on a rectangular work piece.
 - Single rotation and single tilt.
 - Shop applications of double angle cuts.
 - Shop applications of double angle cuts.
 - Describing a double angled axis for a bored hole in a rectangular work piece.
 - Solving a double angled axis for a bored hole in a rectangular work piece.
 - Shop applications.
 - Shop applications.
 - Describing the axis of 2 double angled bored holes in a work piece.
 - Solving the axis of 2 double angled bored holes in a work piece.
 - Single rotation with a double tilt.
 - Shop applications.
 - Shop applications.

Utilize graphing and analytical tools to understand angles of tilt and rotation.
Use the trigonometry functions to solve tetrahedron and pentahedron problems.
Solve actual shop problems using analytical (solid trigonometry) and graphical methods (multiple auxiliary views).
Solve actual shop problems using given techniques.
Solve problems related to special relationships.
Develop the ability to work in 3-dimensions using 2-dimensional representations.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
All students will be required to complete a comprehensive final examination that assesses the learning of all course objectives. This exam must be weighted in a manner so that the exam score is worth a minimum of fifteen percent of the final course grade. TAGD150 - Tool, Jig, and Fixture Design

Overview

Subject Skilled Trade & Apprenticeship	Academic Department Skilled Trade and Apprentice Education	School Business, Entrepreneurship, PD
Course Description Focuses on the mastery of tool-design principles as applied to the industrial workplace. Covers tolerances, fits, principles of tool design, template jigs and fixtures, plate and channel jigs, and materials joining fixtures. Discusses economical design principles and the teamwork approach to various projects.		
Course Pre-requisite(s) TAGD130 Assembly Detailing and TAMA200 Indust Appl Trigonometric Principa or TAE Apprentice Coordinator/Instructor Permission		
Credit Hours 2		

Contact Hours
2

Course Fee 20	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Core Course Topics
1. Tolerances and fits.
2. Standard parts and bill of material.
3. Supporting and locating principles.
4. Workholding and tool construction principles.
5. Template jigs for drilling.
6. Template jigs for other operations.
7. Template jigs for milling.
8. Plate jigs and fixtures.
9. Angle plate fixtures.
10. Channel jig.
11. Box jigs.
12. Vice jigs and fixtures.
13. Vice jigs and fixtures.
14. Materials joining fixtures.
Utilize manual and computer assisted drawings to make tool drawings.
Solve actual shop problems using team problem solving techniques on several projects.
Solve actual shop problems from industrial drawings of tools and fixtures.
Solve problems related to industrial applications.
Interpret actual industrial drawings of tools and fixtures.
Develop tools from actual industrial applied parts.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement All students will be required to complete a comprehensive final examination that assesses the learning of all course objectives This exam must be weighted in a manner so that the exam score is worth a minimum of fifteen percent of the final course grade. Goals, Topics, and Objectives

Core Course Topics
1. Gage design theory.
2. Typical go-no go gages.
3. Go-no go gage applications.
4. Gaging contours.
5. Template gages.
6. Inspection fixtures.
7. Coordinate measuring equipment.
8. Coordinate measurement fixturing.
9. Coordinate measuring.
10. Cam layout.
11. Air gages.
Utilize manual and computer assisted drawings to make gage and cam layout drawings.
Solve actual shop problems using team problem solving techniques on several projects.
Solve actual shop problems from industrial drawings of gages and fixtures.
Solve problems related to industrial applications.
Interpret actual industrial drawings of gages and fixtures.
Develop gages from actual industrial applied parts.

Assessment, Requirements, and Outcomes

TAGD160 - Press Working Fundamentals

Overview

Subject Skilled Trade & Apprenticeship	Academic Department Skilled Trade and Apprentice Education	School Business, Entrepreneurship, PD
Course Description Discusses basic metal deformation theory, presses and ancillary equipment, die construction, and die component identification. Covers various die types and draws the various detail components using both traditional and computer-aided drafting.		
Course Pre-requisite(s) TAGD130 Assembly Detailing or TAE Apprentice Coordinator/Instructor Permission		
Credit Hours 2		

Contact Hours
2

Course Fee 20	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Core Course Topics

- 1. Stress/strain relationships.
- 2. Press working forces.
- 3. Mechanical presses.
- 4. Mechanical press driving mechanisms and number of actions.
- 5. Special presses and equipment.
- 6. Die shoes, guide pins, and heels.
- 7. Punches, buttons, and punch holders.
- 8. Backing plates, risers, and cutting steels.
- 9. Composite steels and trimming die cutters.
- 10. Forming steels, bending, curling, and beading.
- 11. Forming steels, flanging, and side movement control.
- 12. Large area deformation of metals and drawing.
- 13. Draw die punches.
- 14. Progressive dies.

Describe metal deformation.
Explain the use of strain/stress diagrams of various metals.
Utilize various drawings of example objects to develop spatial relationships.
Visualize and explain the die assembly and motion of it.
Interpret actual industrial drawings of die assemblies.
Utilize actual dies that have been manufactured in other classes as drawing projects for this class.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
All students will be required to complete a comprehensive final examination that assesses the learning of all course objectives This exam must be weighted in a manner so that the exam score is worth a minimum of fifteen percent of the final course grade. TAGD165 - Cutting and Forming Dies

Overview

Subject Skilled Trade & Apprenticeship	Academic Department Skilled Trade and Apprentice Education	School Business, Entrepreneurship, PD
Course Description Presents basic die design criteria and methods. Introduces various die types and draws the various die assemblies using both traditional and computer-aided drafting.		
Course Pre-requisite(s) TAGD130 Assembly Detailing or TAE Apprentice Coordinator/Instructor Permission		
Credit Hours 3		
Contact Hours 3		
Course Fee 20	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics

- 1. Blanking dies.
- 2. Blanking die design project.
- 3. Pierce dies.
- 4. Pierce die design project.
- 5. Forming dies.
- 6. Solid forming die design project.
- 7. Flanging die design project.
- 8. Draw dies.
- 9. Stretch draw dies.

- 10. Stretch draw die design project.
- 11. Trimming dies.
- 12. Trim die design project.
- 13. Progressive dies.

Utilize manual drawing techniques to make sketches and drawings to design dies.
Design various styles of dies.
Utilize various drawings of example objects to develop spatial relationships.
Visualize and explain die design.
Interpret actual industrial drawings of die assemblies.
Utilize actual dies that have been manufactured in other classes as drawing projects for this class.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

TAGD171 - Descriptive Geometry: Lines and Planes

Overview

Subject Skilled Trade & Apprenticeship	Academic Department Skilled Trade and Apprentice Education	School Business, Entrepreneurship, PD
Course Description Covers basic descriptive geometry theory, and explores how to use orthographic principles to find true views of lines and planes.		
Course Pre-requisite(s) TAGD120 Advanced Graphic Interpretatio or TAE Apprentice Coordinator/Instructor Permission		
Credit Hours 2		
Contact Hours 2		
Course Fee 20	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics

- 1. Lines, planes, notation, fold lines, and projection of points into space.
- 2. True lengths of lines.
- 3. Point view of a line, distance between a point and a line, and the perpendicular line principle.
- 4. Intersecting and non-intersecting lines.
- 5. Parallel and skewed (non-parallel) lines.
- 6. Planes.
- 7. Horizontal, frontal, and profile planes.
- 8. Edge views of planes.
- 9. Points and planes.
- 10. True angles.

Explain the concept of fold lines and reference planes for the purpose of creating auxiliary views.
Explain the technique of locating lines and points in space.
Explain the three principle viewing directions as well as inclined and oblique views.
Solve actual shop problems using given techniques.

Solve problems related to special relationships.
Develop the ability to work efficiently and effectively in 3-dimensions using 2-dimensional representations.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
All students will be required to complete a comprehensive final examination that assesses the learning of all course objectives This exam must be weighted in a manner so that the exam score is worth a minimum of fifteen percent of the final course grade. Overview

Subject Skilled Trade & Apprenticeship	Academic Department Skilled Trade and Apprentice Education	School Business, Entrepreneurship, PD
Course Description Presents basic descriptive geometry theory and practice. Discusses how to use orthographic principles to find true views of planes and solids and their intersections.		
Course Pre-requisite(s) TAGD171 Desc Geometry: Lines & Planes or TAE Apprentice Coordinator/Instructor Permission		

Credit Hours
2

Contact Hours
2

Course Fee 20	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

- Core Course Topics**
- Intersections of lines with planes and solids.
 - Intersections of multiple lines with a plane.
 - Intersections of planes.
 - Determining the bearing, slope, and grade of lines in space.
 - Finding the strike and dip of planes.
 - Introduction of cutting planes.
 - Edge view method.
 - Line projection method.
 - Cutting sphere method.
 - Applications of the four methods.
 - Introduction to developments.
 - Radial line developments.
 - Triangulation method of constructing developments.

Explain the concept of the relationship between lines, planes, and solids.
Explain and identify the various types intersections of solids and planes.
Solve descriptive geometry problems involving lines, planes, and solids using manual and computer-assisted methods.
Solve descriptive geometry problems requiring developments.
Solve actual shop problems using given techniques.
Solve problems related to special developments.
Work successfully in 3-dimensions using 2-dimensional representations.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
All students will be required to complete a comprehensive final examination that assesses the learning of all course objectives This exam must be weighted in a manner so that the exam score is worth a minimum of fifteen percent of the final course grade. This exam is to be a common exam administered to all sections of [TAGD172 Desc Geom: Planes, Solid & Dev](#).

General Course Requirements and Recommendations The student will be required to bring the drafting equipment used in the previous two drafting courses (TAGD 110 and TAGD 120). Modeling clay is also required.	
Texts Texts, handouts, and/or workbooks will be determined by the TAE Department.	
Satisfies Honors Requirement	Satisfies Wellness Requirement

TAGD280 - Panel Tipping

Overview

Subject Skilled Trade & Apprenticeship	Academic Department Skilled Trade and Apprentice Education	School Business, Entrepreneurship, PD
Course Description Discusses how to convert vehicle body position drawings to required die positions in various die operations. Explores strip stock development and part clearance-interference conditions.		
Course Pre-requisite(s) TAGD172 Desc Geom: Planes, Solid & Dev or TAE Apprentice Coordinator/Instructor Permission		

Credit Hours
2

Contact Hours
2

Course Fee 3	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

- Core Course Topics**
- Descriptive geometry fundamentals including true size of a surface.
 - True size surface and development of an angle between two surfaces.
 - Constructing true surfaces including constant size flanges and working with compound angles.
 - Determining clearance or interference between body components.
 - Developing strip stock to join two surfaces at a compound angle.
 - Development of an intersection between complex curved surfaces.
 - Initial exposure to vehicle body drafting and the concept of vehicle body lines.
- | |
|--|
| Explain the methods for projecting sheet components into true view and develop optimum die position. |
| Design strip stock to join sheet metal components which are positioned at a compound angle. |
| Solve descriptive geometry problems involving vehicle body positioning. |
| Construct a specified angle between two sheet metal components. |
| Explain clearance and interference between components. |
| Solve shop problems related vehicle body positioning. |
| Explain vehicle body lines and component positioning. |

TAMA110 - Industrial Applications Basic Math Princ

Overview

Subject Skilled Trade & Apprenticeship	Academic Department Skilled Trade and Apprentice Education	School Business, Entrepreneurship, PD
--	--	---

Course Description

Utilizes shop problems to help students relate math to various job situations. Topics include addition, subtraction, multiplication, and division of whole and mixed numbers and common and decimal fractions; percents, averages, and estimates; graphs, tables, and statistical measure; powers and roots; linear, angular, and circular measure; surface area, volume, and cubic measure; ratios and proportion; and metrics and metric conversion.

Portfolio Review	

Goals, Topics, and Objectives

Core Course Topics

1. Assessment, whole numbers, and fractional review
2. Addition and subtraction of common fractions
3. Addition and subtraction of mixed numbers
4. Multiplication and division of common fractions
5. Decimal fractions
6. Percents, averages, and estimates
7. Graphs, tables, and statistical measures
8. Powers and roots
9. Linear, angular, and circular measure
10. Surface area measure
11. Volume and cubic measure
12. Ratio and proportions
13. Metrication
14. Metric conversions

Add, subtract, multiply, and divide whole and mixed numbers in shop applications.
Add, subtract, multiply, and divide common and decimal fractions in shop applications.
Convert percents to decimals and decimals to percents in shop applications.
Solve shop problems using averaging and estimating.
Analyze graphs and tables used in technical written materials and reports.
Solve practical shop application problems requiring the use of statistical measure.
Use a hand-held calculator in the manipulation of shop problems.
Solve shop problems requiring the use of powers and roots.
Identify standard English units of linear measure.
Solve practical shop applications requiring surface area measurement.
Solve practical shop applications involving volume and cubic measure.
Solve practical shop applications of metric and metric conversions.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

1. **Quizzes:** The best 5 of 6 accounts for 75% of the semester grade. Make-ups on missed quizzes will be at the discretion of the Instructor. The first quiz missed will be dropped. Any additional missed quizzes will be recorded as a 0 or zero. All in-class quizzes will be administered with closed books and no notes allowed and only during regularly scheduled class periods.
2. **Final:** The final examination will account for 25% of the semester grade. The final must be taken to pass the course. The Final will be administered with closed books and no notes allowed and only during regularly scheduled class periods.

General Course Requirements and Recommendations

Calculator Use: Students are encouraged to bring a calculator to all class sessions. Any scientific calculator will be sufficient for this course.

Texts	
Texts, handouts, and/or workbooks will be determined by the TAE Department.

Goals, Topics, and Objectives

Core Course Topics

1. The concept of symbols and terms.
2. Application of positive and negative numbers.
3. Application of symbols in addition and subtraction.
4. Application of symbols in multiplication and division.
5. Concepts of equations.
6. Solving equations by subtraction and addition.
7. Solving equations by multiplication and division.
8. Multiplication and division of numbers and letters with exponents.
9. Roots of numbers.
10. Use of algebraic formulas and equations.
11. Complex equations, special formulas, and handbook data.
12. Formulas.

Identify and apply the common terms and symbols used in algebra.
Solve application problems requiring the use of signed numbers.
Apply the concept of the Cartesian coordinate system.
Solve practical shop application problems using equations.
Apply the concepts of exponents in practical shop problems.
Apply the concepts of root values in practical shop problems.
Utilize algebraic formulas and equations in practical shop applications.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

Assessment of academic achievement may include (but is not limited to) exams, quizzes, homework, and laboratory assignments.

TAMA130 - Industrial Appl of Geometric Principles

Overview

Subject	Academic Department	School
Skilled Trade & Apprenticeship	Skilled Trade and Apprentice Education	Business, Entrepreneurshp, PD
Course Description		
Covers the fundamental principles of plane geometry with emphasis on application to the industrial environment. Explores angular, circular, linear, area, and volume measurement in relation to the types of geometric figures and configurations found in industry.		

Course Pre-requisite(s)
TAMA120 Indust Appl of Algebraic Princ or TAE Apprentice Coordinator/Instructor Permission

Course Fee 3	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

- Core Course Topics
1. Introduction to plane geometry.
 2. Angular measure.
 3. Angular geometric principles.
 4. Triangles.
 5. Similar figures.
 6. Polygons.
 7. Circles.
 8. Areas of common polygons.
 9. Areas of circles, sectors, segments, and ellipses.
 10. Prisms and cylinders.
 11. Pyramids and cones.
 12. Spheres and composite objects.

Identify lines, points, and angles.
Solve practical problems involving lines, points, and angles.
Describe the different types of triangles and other polygons.
Solve practical applied problems involving triangles and other polygons.
Solve geometrical problems as applied to the shop floor.
Identify the types of circles, spheres, and ellipses.
Solve practical applied problems involving circles, spheres, and ellipses.
Identify the types of cones, cylinders, and pyramids.
Solve practical applied problems involving cones, cylinders, and pyramids.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
All students will be required to complete a comprehensive final examination that assesses the learning of all the course objectives. This exam must be weighted in a manner so that this exam score is worth a minimum of fifteen percent of the final course grade. TAMA200 - Industrial Appl of Trigonomic Principles

Overview

Subject Skilled Trade & Apprenticeship	Academic Department Skilled Trade and Apprentice Education	School Business, Entrepreneurship, PD
---	---	--

Course Description
Focuses on trigonometric principles as applied to the industrial workplace. Covers trigonometric functions, solution of right triangles, solution of oblique triangles, and problem solving techniques.

Course Pre-requisite(s)
TAMA130 Indust Appl Geometric Prin or TAE Apprentice Coordinator/Instructor Permission

Credit Hours
3

Contact Hours
3

Course Fee 3	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

- Core Course Topics
1. Trigonometric functions-sine, cosine, and tangent.
 2. Trigonometric functions-secant, cosecant, and cotangent.
 3. Inverse trigonometric functions-arcsine, arc-cosine, and arctangent.
 4. Solution of right triangles.
 5. Industrial applications of right triangles.
 6. Solution of oblique triangles using the altitude method.
 7. Solution of oblique triangles using the law of sines.
 8. Solution of oblique triangles using the law of cosines.
 9. Solution of oblique triangles using the law of cotangents.
 10. Industrial applications of oblique triangles.

Solve right angle trigonometry problems.
Solve oblique triangle trigonometry problems.
Solve industrial application problems.
Identify the basic trigonometry functions.
Solve trigonometry problems as applied to the shop floor.
Develop a basic problem setup methodology for industrial applications.
Explain the three basic and three reciprocal trigonometric functions.
Identify the trigonometric functions and inverse functions on the calculator.
Solve various industrial applications of right angle trigonometry.
Explain the sine, cosine, cotangent laws and altitude method for solution of oblique triangles.
Solve various industrial applications of oblique triangle trigonometry.

TAMN100 - Shop Tools and Techniques

Overview

Subject Skilled Trade & Apprenticeship	Academic Department Skilled Trade and Apprentice Education	School Business, Entrepreneurship, PD
---	---	--

Course Description
Introduces the basic tools, safety protocols, and technical information required by the skilled trades. Includes non-precision and precision measurement tools and methods, layout tools and techniques, hand and bench tools, drills and drilling machines, principles of metal cutting and metal cutting saws, pedestal grinders, and various manufacturing processes.

Credit Hours
3

Contact Hours
3

Course Fee 20	Miscellaneous Department Fee 0
Academic Level Undergraduate	

Eligible for Credit for Prior College Level Learning (CPCLL)
No

Goals, Topics, and Objectives

Core Course Topics

- 1. Shop safety, basic measurement, squares, and surface plates.
- 2. Basic and semi-precision layout.
- 3. Vernier calipers, height gages, and other calipers.
- 4. Physics of metal cutting, machinability, and metal cutting saws.
- 5. Outside micrometers and transfer instruments.
- 6. Grinding wheels, pedestal grinders, and off-hand grinders.
- 7. Inside micrometers, depth micrometers, depth gages, and dial gages.
- 8. Drilling machines, drills, cutting speeds, and feeds.
- 9. Hand tools, thread cutting tools, and finishing processes.
- 10. Drilling, reaming, tapping, and drilling operations.
- 11. Angular measurement.
- 12. Gage blocks and precision layout.
- 13. Gages and comparison measurement.

Explain the type, use, and applications of the common basic measuring tools.
Explain the type, use, and applications of precision measuring tools.
Select, demonstrate, and utilize the basic layout tools and techniques.
Demonstrate and utilize precision layout tools and techniques.
Explain the concept of metal cutting.
Explain the use of metal cutting saws, accessories, and techniques.
Demonstrate and utilize metal cutting saws, accessories, and techniques.
Explain the use of drills, drilling machines, drilling accessories, and techniques.
Demonstrate, and utilize drills, drilling machines, drilling accessories, and techniques.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
All students will be required to complete a set of competencies, work sheets, and tests. The student will be considered to have completed the course by receiving a cumulative average grade of 70%.
General Course Requirements and Recommendations
Calculator Use: Students are encouraged to bring a calculator to all class sessions. Any scientific calculator will be sufficient for this course.

TAMN120 - Machine Tool Applications

Overview

Subject Skilled Trade & Apprenticeship	Academic Department Skilled Trade and Apprentice Education	School Business, Entrepreneurshp, PD
---	---	---

Course Description
Presents the mechanisms, operation, tooling, and accessories of the lathe and milling machine. Covers precision measurements and measuring devices, basic machine tool operations, metal cutting theory, cutting tools and cutting tool materials, and cutting fluids. Emphasizes safety protocols in a lab setting.

Course Pre-requisite(s)
[TAMA120 Indust Appl of Algebraic Princ](#) or TAE Apprentice Coordinator/Instructor Permission

Credit Hours

2

Contact Hours

2

Course Fee 10	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Core Course Topics

- 1. Outside and inside micrometers: dial bore and height gages.
- 2. Angular measurement: tool and techniques of semi-precision layout and precision layout.
- 3. Physics of metal cutting: machinability and cutting fluids.
- 4. Saws and sawing: drilling machines, drills, and drilling.
- 5. High speed steel cutting tools: carbide cutting tools and operating conditions.
- 6. Ceramic and cermet: cutting tools - polycrystalline cutting tools.
- 7. Engine lathe parts: lathe accessories and safety protocols.
- 8. Cutting speeds, feeds, and depth-of-cut: lathe centers.
- 9. Facing between centers: facing operations, turning between centers, turning operations, and special lathe operations.
- 10. Tapers and taper turning: additional lathe accessories.
- 11. Threads and thread cutting: additional lathe machining.
- 12. Milling machines and accessories: milling cutters.
- 13. Cutting speeds and feeds: milling machine setups.
- 14. Vertical milling machines: dividing heads.

Develop and demonstrate an understanding of precision measuring devices and precision layout techniques.
Develop and demonstrate an understanding of basic machine tools (saws, drills, and grinders) and their safe and efficient operation.
Develop and demonstrate an understanding of commonly utilized cutting tools and their recommended applications.
Develop and demonstrate an understanding of intermediate machine tools (lathes and mills) and their safe and efficient operation.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
All assessment of student achievement is left to the discretion of the individual instructor. Final grade will be a combination of quiz grades and attendance.

Texts Texts, handouts, and/or workbooks will be determined by the TAE Department.

TAMN130 - Advanced Manufacturing Processes

Overview

Subject Skilled Trade & Apprenticeship	Academic Department Skilled Trade and Apprentice Education	School Business, Entrepreneurshp, PD
---	---	---

Course Description
Explains the use of conventional abrasives and super abrasives, as well as traditional grinding machines. Covers advanced milling applications utilizing the horizontal boring mill; application of basic and advanced cutting tool materials; electrical discharge machining and wire cutting; electrochemical, abrasive flow, ultrasonic, and abrasive water jet machining; electromagnetic, electro spark, and powder metallurgy forming; various laser applications; and rapid prototype development and robotics/automation.

Course Pre-requisite(s)

Goals, Topics, and Objectives

Core Course Topics

- 1. Conventional Abrasives
 - Superabrasives for Grinding
- 2. Grindability of Materials
 - Surface Grinders
 - Surface Grinder Accessories and Operations
- 3. Cylindrical Grinders
 - Cylindrical Grinding Operations
- 4. Universal Tool and Cutter Grinder
 - Jig Grinder
- 5. Conventional Cutting Tools
 - Advanced Cutting Tools
 - Advanced Cutting Tool Technology
- 6. Horizontal Boring Mill
 - Jig Bore

7.	Electrical Discharge Machining (EDM)	
	◦ EDM Tap Removal	
8.	Electrical Discharge Wire Cutting	
	◦ Electro-Chemical Machining (ECM)	
9.	Explosive Forming Process	
	◦ Electro-Spark Forming Process	
	◦ Electro-Magnetic Forming Process	
	◦ Powder Metallurgy Process	
10.	Abrasive Flow Machining	
	◦ Ultrasonic Machining	
11.	Laser Technology	
12.	Abrasive Water Jet Machining	
	◦ Chemical Milling	
13.	Rapid Prototype Development	
	◦ Design for Manufacture	
	◦ 3-D Solid Modeling	
14.	Robotics	
	◦ Robotics Technology	
	◦ Automation	
	◦ Automation Processes	
Develop and demonstrate an understanding of abrasives used in the manufacturing industry.		
Develop and demonstrate an understanding of commonly used cutting tools used in the manufacturing industry.		
Develop and demonstrate an understanding of horizontal boring mills and jig bores commonly used in the manufacturing industry.		
Develop and demonstrate an understanding of non-traditional manufacturing processes used in the manufacturing industry.		
Develop and demonstrate an understanding of non-traditional forming processes commonly used in the manufacturing industry.		
Develop and demonstrate an understanding of rapid prototype development processes and techniques commonly used in the manufacturing industry.		
Develop an understanding of three-dimensional solid modeling as it applies to the manufacturing industry.		
Develop and demonstrate an understanding of robotics and automated systems commonly used in the manufacturing industry.

Academic Level		
Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL)		
No		

Goals, Topics, and Objectives

Core Course Topics	
1.	MPT systems, anti-friction bearings
2.	Bearing failures, fits and bearing mounting designs
3.	Lubrication, shields and seals
4.	Bearing mounting and maintenance
5.	Installation and removal of bearings
6.	Couplings and U-joints
7.	Power transmission drive chain
8.	Power transmission belts, clutches and brakes
9.	Conveyors and flat belts
10.	Install and align a drive chain, a V-belt, and a flat rubber belt
11.	SSpeed reducers
12.	Dismantling, inspection, and assembling a gear-type speed reducer
13.	Reactive, preventive, and predictive maintenance
14.	Introduction to shaft alignment and vibration analysis
15.	Assembling a conveyor system
Upon completion of this course the student will be able to: Practice the various proper shop safety procedures.	
Identify the principles of lubrication utilized in MPT systems.	
Explain the basic bearing principles and purposes.	
Demonstrate the installation and removal tools used in MPT systems.	
Remove and mount bearings, hubs, sprockets and gears.	
Identify the different styles of flexible and rigid couplings.	
Identify MPT drive chain systems and components.	
Identify MPT belt drive systems and components.	
Install and align chain and belt drives.	
Explain the various conveyor systems and their applications.	
Identify the various speed reducers and their applications.	
Identify the different types of clutches and brakes.	
Explain the difference between reactive, preventive, and predictive maintenance principles.	
Identify the different shaft alignment principles and techniques.	
Explain the principles of vibration analysis.	
Objectives which involve critical thinking or problem solving.	

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement		
All students will be required to complete a comprehensive final exam that assesses the learning of all course objectives. TAMT115 - Maintenance Trades Print Reading

Overview

Subject	Academic Department	School
Skilled Trade & Apprenticeship	Skilled Trade and Apprentice Education	Business, Entrepreneurship, PD

Course Description

Covers shape description; conventions and symbols; size description; notes and instruction associated with manufacturer's and maintenance-related drawings, including castings, weldments, and machined parts; electrical/electronic schematics and ladder diagrams; piping and fluid power-related drawings and schematics; structural and architectural drawings; and sheet-metal and plant layout. For apprentices and trainees in industrial plant maintenance trades.

Core Course Topics

1. Tolerances
2. Fits and Holes
3. Fasteners
4. Inclined/Oblique Surfaces
5. Auxiliary Views
6. Pictorial Drawings
7. Castings and Weldments
8. Assembly Drawings (Machine Parts)
9. Electronics and Electrical Schematics
10. Piping Diagrams and Fluid Power Circuits
11. Structural Drawings and Prints
12. Architectural Drawings and Prints
13. Sheet Metal Drawings and Layouts
14. Plant Layout Drawings and Prints

Calculate tolerances, clearance and interference fits, and sizes for shafts and holes.

Select correct fasteners for industrial applications.

Identify inclined, oblique, and auxiliary surfaces and views on blueprints.

Explain machine assembly from pictorial and assembly drawings.

Identify specific parts from weldment, casting, electronic, electrical, piping, and fluid power prints.

Identify specific structural steel components from structural, architectural, and plant layout drawings.

Sketch and develop sheet metal layouts.

Assessment, Requirements, and Outcomes

TAMT123 - Maint Print Read: Struct Steel & Convey

Overview

Subject
Skilled Trade & Apprenticeship

Academic Department
Skilled Trade and Apprentice Education

School
Business, Entrepreneurship, PD

Course Description

Explores how to create a basic shop drawing of structural steel shapes and perform print reading of conveyor structures. Also introduces structural steel detail drawings and how print reading techniques relate to conveyors. Requires the purchase of the following materials for use during week 6 and beyond: 1/4" grid drawing paper, triangles (45 and 30 -60 -90), ruler/architects scale, eraser, scissors, rubber cement, colored pencils or highlighters, and drawing pencils (H and HB lead).

Course Pre-requisite(s)
TAGD110 Basic Shape & Size Interpret, TAMA120 Indust Appl of Algebraic Princ, or TAE Apprentice Coordinator/Instructor Permission

Credit Hours

2

Contact Hours

2

Course Fee
20

Miscellaneous Department Fee
0

Academic Level
Undergraduate

Eligible for Credit for Prior College Level Learning (CPCLL)
No

Goals, Topics, and Objectives

Core Course Topics

1. Use of steel charts and identification of structural steel terms.
2. Simple stresses.
3. Bending moment, section modulus, and beam selection.
4. Fasteners (bolts).
5. Welding symbols and strength of welds.
6. Drawing of a seated beam.
7. Drawing of a framed beam.
8. Drawing of a column.
9. Print reading: monorail conveyors.
10. Print reading: power and free conveyors.
11. Print reading: bucket elevators.
12. Print reading: chain conveyors.
13. Print reading: belt conveyors.
14. Dimensional guidelines for conveyor installations.

Utilize manuals, tables, and charts to locate structural steel member data.

Determine the size of simple beams and columns.

Calculate the loads applied to fasteners and specific types of welds.

Draw simple beams and columns using traditional techniques.

Identify the basic conveyor components.

Demonstrate how to successfully read drawings which show various conveyor layouts.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

All students will be required to complete a common [TAMT123 Main Print Read: Struct Steel](#) comprehensive final examination that assesses the learning of all course objectives. This exam must be weighted in a manner so that this exam score is worth a minimum of fifteen percent of the final course grade.

General Course Requirements and Recommendations

Students will be required to bring the following drawing equipment beginning in the sixth week: ¼" grid drawing paper, triangles (45° and 30°-60°-90°), ruler/architects scale, eraser, scissors, rubber cement, colored pencils or highlighters, and drawing pencils (H and HB lead).

Texts

Texts, handouts, and/or workbooks will be determined by the TAE Department.

Satisfies Honors Requirement

TAMT126 - Maintenance Print Reading: Plant Layout

Overview

Subject
Skilled Trade & Apprenticeship

Academic Department
Skilled Trade and Apprentice Education

School
Business, Entrepreneurship, PD

Course Description

Introduces the techniques and procedures of plant layout and material handling. Discusses how to analyze and develop information in order to produce a plant layout. Covers print reading skills with emphasis on industrial equipment drawings and how to make simple plant layout drawings for the production of a part using basic drafting techniques.

Course Pre-requisite(s)
TAGD110 Basic Shape & Size Interpret or TAE Apprentice Coordinator/Instructor Permission

Credit Hours

2

Contact Hours

2

Course Fee
20

Miscellaneous Department Fee
0

Academic Level
Undergraduate

Eligible for Credit for Prior College Level Learning (CPCLL)
No

Goals, Topics, and Objectives

Core Course Topics

- 1. Plant layout and material handling.
- 2. Process design.
- 3. Flow analysis techniques.
- 4. Workstation layout – space requirements.
- 5. Material handling equipment – print reading review of conveyors: monorail, chain, and roller.
- 6. Print reading: plant layout.
- 7. Print reading: machinery layout.
- 8. Development of a plant layout.
- 9. Print reading: exhaust systems.
- 10. Print reading: drum and monorail washers.
- 11. Print reading: machine support frame details.
- 12. Print reading: catwalks, platforms, and crossover stairways.

Plan a plant layout.
Explain what factors are required for a production process.
Draw a plant layout of a production process.
Demonstrate a familiarity of various industrial equipment in order to showcase basic print reading skills.
Read plant layout drawings which shows various industrial plant equipment.
Utilize various drawings of example industrial equipment to develop print reading skills.
Develop organizational skills in making and reading a plant layout.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
All students will be required to complete a common TAMT126 Main Print Read: Plant Layout comprehensive final examination that assesses the learning of all course objectives. This exam must be weighted in a manner so that this exam score is worth a minimum of fifteen percent of the final course grade.	
General Course Requirements and Recommendations	
Students will be required to bring the following drawing equipment beginning in the eighth week: ¼" grid drawing paper, triangles (45° and 30°-60°-90°), ruler/architects scale, eraser, scissors, rubber cement, colored pencils or highlighters, and drawing pencils (H and HB lead).	
Texts	
Texts, handouts, and/or workbooks will be determined by the TAE Department.

TAMT200 - Predictive Maintenance Shaft Align & Cou

Overview

Subject	Academic Department	School
Skilled Trade & Apprenticeship	Skilled Trade and Apprentice Education	Business, Entrepreneurship, PD
Course Description		
Provides specialized instruction in the practices and equipment used in shaft alignment, and the end-to-end and parallel alignments of machines. Explores machine failures due to rotating shaft misalignment and vibration created from shaft center lines not being in the same plane. Covers inefficiencies and increased wear due to misalignment, shaft alignment methods, soft foot, thermal growth, rim, face, reverse dial indicator, and MPT couplings.		
Course Pre-requisite(s)		
TAMT110 Mechanical Power Transmission or TAE Apprentice Coordinator/Instructor Permission		
Credit Hours		
2		
Contact Hours		
2		
Course Fee	Miscellaneous Department Fee	
15	0	
Academic Level		
Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL)		
No		

Goals, Topics, and Objectives

- Core Course Topics
- 1. Introduction to shaft alignment and shaft misalignment effect of machinery.
 - 2. Solid couplings, alignment equipment, and tools.
 - 3. Flexible couplings, site preparation and the rough alignment procedure.
 - 4. Rough alignment procedure (horizontal).
 - 5. Grid couplings, and rim and face alignment procedure (vertical).
 - 6. Rim and face alignment procedure (horizontal).
 - 7. Rubber insert couplings and reverse dial indicator alignment procedure.
 - 8. Reverse dial indicator graphing techniques.

- 9. Chain couplings and visible laser alignment procedure.
- 10. Thermal growth patterns in machinery and graphing techniques.
- 11. Multi-shaft alignment procedures.
- 12. Proper coupling selection, installation, and alignment.

Identify the various misalignment types.
Perform the basic site preparation procedure.
Identify and correct the condition of soft foot.
Solve problems using the shim formula.
Calculate expansion/contraction problems with relation to shaft alignment.
Identify the tolerances allowed for a specific machinery application and correctly chose the proper coupling required.
Demonstrate the rough alignment procedure.
Demonstrate the rim and face alignment procedure.
Demonstrate the reverse dial indicator alignment procedure.
Demonstrate the visible laser alignment procedure.
Explain the theory of thermal growth patterns in machinery.
Identify, install, and disassemble the various couplings used in MPT systems.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
All students will be required to complete a comprehensive final examination that assesses the learning of all course objectives. This exam will consist of two parts, the first part consisting of a written portion and the second part will be an actual shaft alignment. This exam must be weighted in a manner so that this exam score is worth a minimum of fifteen percent of the final course grade. This exam is to be a common exam administered to all sections of TAMT200 Predictive Maint Shaft Align .	
General Course Requirements and Recommendations	
Calculator Use: Students are encouraged to bring a calculator to all class sessions. Any scientific calculator will be sufficient for this course.	
Texts	
Texts, handouts, and/or workbooks will be determined by the TAE Department.	
Satisfies Honors Requirement	Satisfies Wellness Requirement
No	No

TAMT210 - Predictive Maintenanc Vibration Analysis

Overview

Subject	Academic Department	School
Skilled Trade & Apprenticeship	Skilled Trade and Apprentice Education	Business, Entrepreneurship, PD
Course Description		
Provides specialized instruction in diagnosing and resolving machinery vibration in rotating equipment, the most cost-effective methods to reduce maintenance costs, and how to extend machinery life.		
Course Pre-requisite(s)		
TAMT110 Mechanical Power Transmission, TAMT200 Predictive Maint Shaft Align, Instructor Permission		
Credit Hours		
2		
Contact Hours		
2		
Course Fee	Miscellaneous Department Fee	
15	0	
Academic Level		
Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL)		
No		

Goals, Topics, and Objectives

- Core Course Topics
- 1. Vibration analysis and machine vibration.
 - 2. History of vibration analysis, and preventive and predictive maintenance.
 - 3. Predictive maintenance philosophy.
 - 4. Types of machine vibration.
 - 5. Vibration characteristics.
 - 6. Vibration types and data.

7. Vibration terms.
8. Process of vibration analysis.
9. Hardware and software.
10. Imbalance vibration.
11. Misalignment vibration.
12. Bearing fault vibration.
13. Resonance.
14. Advanced analysis techniques.

Explain the benefits of a vibration analysis, predictive maintenance program.

Identify the sources of vibration.

Identify and successfully demonstrate the various types of equipment used to detect vibration.
--

Explain the meaning of frequencies as it relates to vibration.
--

Explain the meaning of resonance as it relates to vibration.
--

Identify the phase and amplitude symptoms of coupling misalignment.

Identify vibration due to rolling element bearings.

Identify vibration due to imbalance.

Explain the effects of gear vibration.
--

Identify the point in time to call for vibration expertise.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
Assessment of student achievement may include lab assignments, quizzes, and exams.	
Texts	
Texts, handouts, and/or workbooks will be determined by the TAE Department.	
Satisfies Honors Requirement	Satisfies Wellness Requirement
No	No

TAMT220 - Advanced Rigging

Overview

Subject	Academic Department	School
Skilled Trade & Apprenticeship	Skilled Trade and Apprentice Education	Business, Entrepreneurship, PD
Course Description		
Presents safe rigging practices and equipment used by mechanical trades people. Covers fiber and wire rope, block and tackle, lift and rigging chain, proof test, safe working load, design factor, sling geometry, fittings, and lifting and moving equipment.		
Course Pre-requisite(s)		
TAMA130, Indust Appl Geometric Prin or TAE Apprentice Coordinator/Instructor Permission		
Credit Hours		
2		
Contact Hours		
2		
Course Fee		
20	Miscellaneous Department Fee	0
Academic Level		
Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL)		
No		

Goals, Topics, and Objectives

Core Course Topics
1. Introduction to lab procedures and rigging overview.
2. Planning for a lift.
3. Fiber and synthetic-fiber rope.
4. Wire rope.
5. Wire rope, chain fittings, and endings and hooks.
6. Basics of wire, chain, wire mesh, and synthetic slings and hitches.
7. Angle of inclination, resultant stress, and headroom.
8. Design of spreader bars.
9. Equipment for pulling and drifting loads.
10. Types of hoists and cranes, signaling, and lifting capacities.
11. Scaffolds, ladders, man lifts, and safety devices.

12. Practical rigging problems.
13. Team project planning.

Explain the properties and limitations of fiber rope.

Explain the properties and limitations of synthetic rope.

Demonstrate and explain the uses and limitations of wire rope.
--

Demonstrate and explain the uses and applications of lift and load chain.

Identify the uses and applications of rigging accessories.
--

Explain the procedures to make a planned move or lift.
--

Demonstrate and explain the principles of slings.

Demonstrate and explain the types of hook-ups.
--

Demonstrate correct crane signals.

Calculate loads and sling angles.

Explain OSHA regulations and their impact on planned rigging moves or lifts.
--

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
All students will be required to complete a comprehensive final examination that assesses the learning of all course objectives. This exam will consist of two parts, the first part consisting of a written portion and the second part will be an actual rigging assignment. This exam must be weighted in a manner so that this exam score is worth a minimum of fifteen percent of the final course grade. This exam is to be a common exam administered to all sections of TAMT220 Advanced Rigging

TAMT260 - Gearing

Overview

Subject	Academic Department	School
Skilled Trade & Apprenticeship	Skilled Trade and Apprentice Education	Business, Entrepreneurship, PD
Course Description		
Discusses the calculation of standard American National, United States V, Metric, Acme, and Worm screw threads. Covers standard notations and formulas for spur gears, bevel gears, worm and worm wheels, and helical gears. Also explains replacement of spur gears with helical gears, the use of idler gears, and discusses calculations for plain and differential indexing.		
Course Pre-requisite(s)		
TAMA200, Indust Appl Trigonometric Princip or TAE Apprentice Coordinator/Instructor Permission		
Credit Hours		
2		
Contact Hours		
2		
Course Fee		
3	Miscellaneous Department Fee	0
Academic Level		
Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL)		
No		

Goals, Topics, and Objectives

Core Course Topics
1. Gear ratios and lead screws.
2. Compound gearing.
3. Screw threads.
4. Spur gears and circular pitch.
5. Bevel gears.
6. Miter gears.
7. Worm gears.
8. Parallel shaft gearing.
9. Angular shaft gearing.

Solve problems involving standard screw threads using standard notation and formulas.
Solve gear ratio problems.
Assemble a gearbox involving spur gears.
Assemble a gearbox involving bevel gears.
Assemble a gearbox involving worm gears.
Calculate and replace a spur gear set with a bevel gear set.
Solve problems involving duplication of gears, shaft angles of less than or greater than 90 degrees and replacing spur gears with helical gears.
Inspect a gearbox for wear and damage.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement All students will be required to complete a comprehensive final examination that assesses the learning of all course objectives. This exam must be weighted in a manner so that this exam score is worth a minimum of fifteen percent of the final course grade. This exam is to be a common exam administered to all sections of TAMT240 Gearing .	
General Course Requirements and Recommendations Calculator Use: Students are encouraged to bring a calculator to all class sessions. Any scientific calculator will be sufficient for this course.

TAPI105 - Intro to Industrial & Pneumatic Controls

Overview

Subject Skilled Trade & Apprenticeship	Academic Department Skilled Trade and Apprentice Education	School Business, Entrepreneurship, PD
Course Description Introduces the basic principles and techniques used in the measuring and controlling of an industrial process. Stresses measuring, tuning, and calibration of pneumatic instrumentation and controls. Examines pressure, temperature level, flow, and analytic control systems. Covers fundamental control techniques including open loop and closed loop control, and three modes of control - cascade, adaptive, feed forward, and feedback. Studies fundamental methods of calibration and repair of pneumatic controllers, transducers, transmitters, and control valves. Laboratory activities.		
Credit Hours 3		
Contact Hours 3		
Course Fee 30	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics - Introduction: safety, measurement principles, and instrument and control applications. - Process control. - Temperature measuring devices: pressure, level, flow, and analytic. - Automatic control. - Automatic control simulations. - Control integration: measuring devices and automatic control. - Principles and techniques of calibration basic errors. - Pneumatic equipment calibration. - Control valves. - Positioners.
Describe the differences between on-off control and modulating control.
Describe the parts of a control loop.
Identify and describe the purpose of each component in a closed loop.
Draw a control loop using the proper ANSI/ISA symbols.

Describe flow, temperature, pressure, analytic, and level control.
Calculate the transfer function.
Use standard instrumentation test equipment properly.
Relate transfer function in standard instrumentation signals.
Describe the use of final control elements in a closed loop.
Demonstrate safe working practices.
Describe the fundamentals of equipment calibration.
Calibrate a transducer, transmitter, controller, and recorder.
Use a P&ID to trace a pneumatic circuit.
Troubleshoot, repair, and calibrate a pneumatic instrument.
Maintain, repair, and bench calibrate a pneumatic control valve and positioner.
Describe types and dynamics of control valves.
Select a control valve using a computer program.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Methods for measuring achievement of objectives: - Tests will be given throughout the semester. Tests scores represent 50% of the course grade. - Laboratory activities and performance exercises will be done where students will demonstrate an understanding of practical applications. These will make up 25% of the course grade. - A written final exam will be given which will represent 25% of the course grade.	
Texts Texts, handouts, and/or workbooks will be determined by the TAE Department.	
Satisfies Honors Requirement No	Satisfies Wellness Requirement No

TAPI120 - Instrumentation: Print Reading

Overview

Subject Skilled Trade & Apprenticeship	Academic Department Skilled Trade and Apprentice Education	School Business, Entrepreneurship, PD
Course Description Explores drawing, reading, and interpreting standard instrumentation and electrical drawings, diagrams, and schematics. Emphasizes using ANSI, ISA, SAMA, and IEEE standard symbols and other accepted industry protocols. Also stresses appropriate techniques in using drawings, diagrams, and schematics to troubleshoot and locate equipment.		
Course Pre-requisite(s) TAPI105 Intro Indust & Pneumatic Ctrl's or TAE Apprentice Coordinator/Instructor Permission		
Credit Hours 2		
Contact Hours 2		
Course Fee 20	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics - Introduction: diagram and drawing standards. - Symbols library and drawing standards. - Drawing standards and sources. - ISA and SAMA standards: process and instrument drawings, lab b loop tracing. - Instrumentation drawings and diagrams: electrical diagrams. - Wiring diagram and loop diagram. - Piping diagrams: hydraulic diagrams. - Blueprint reading: control valve sectional (lab).

9. Sheet metal drawings: ventilation systems.
10. Building drawings: locating components in drawings.
11. Plant floor: locating component in plants.

Draw a loop diagram.

Select the appropriate diagram to use in troubleshooting a problem.

Explain the use of drawings and symbols as a means of communication.

Compare the different parts of a diagram.

Interpret instrument components in an instrument diagram.

Locate equipment in a facility using a standard drawing.

Interpret electrical diagrams and schematics.

Develop a drawing using a supplied details.

Describe the operation of a system using a ladder diagram.

Trace a signal path on a standard diagram.

Eligible for Credit for Prior College Level Learning (CPCLL)		
No		

Goals, Topics, and Objectives

- Core Course Topics
1. Orientation, course review, math refresher, and piping pointers.

2. Pipe measuring methods, fitting take-off.

3. 45-degree offsets, overview of piping systems.

4. Threading pipe and metallic piping materials in a pipe threading lab.

5. Nonmetallic piping.

6. Tubing, metallic, and nonmetallic in a tubing lab.

7. Hoses.

8. Pipe fittings in a copper soldering lab.

9. Common valves, design, and application.

10. Special valves, design, and application in a valve repack lab.

11. Strainers, filters, and traps in a PVC pipe lab.

12. Piping accessories.

13. Cross connection control and backflow prevention.

Explain the safety practices for bending, cutting, and installing pipe and tubing.

Describe the procedures for laying out pipe for cutting.

Describe and practice the necessary calculations for correctly sizing pipe.

Describe, discuss, and perform the necessary calculations to determine cut size of various pipe materials.

Describe the proper procedures for cutting pipe with hand and power tools.

Describe and demonstrate the proper procedures for bending pipe and tubing.

Solve practical shop exercises in the bending of pipe and tubing.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
All students will be required to complete a comprehensive final examination that assesses the learning of all course objectives. This exam must be weighted in a manner so that this exam score is worth a minimum of fifteen percent of the final course grade. TAPP110 - Drains, Wastes, and Vents

Overview

Subject	Academic Department	School
Skilled Trade & Apprenticeship	Skilled Trade and Apprenticeship Education	Business, Entrepreneurship, PD
Course Description		
Discusses how to properly select materials for the installation and repair of sewer, soil, waste, and vent systems. Covers proper procedures for the design and layout of residential and commercial systems, and the use of blueprints and isometric diagrams.		
Credit Hours		
2		
Contact Hours		
2		
Course Fee	Miscellaneous Department Fee	
30	0	
Academic Level		
Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL)		
No		

Goals, Topics, and Objectives

Core Course Topics

1. Safety protocols and introduction to plumbing principles.

2. Plumbing blueprint reading, symbology, and application of isometrics.

3. Using blueprints and cross connections - definition and applications.

4. Plumbing materials used in residential and commercial applications, special fittings, and specific materials restrictions as per codes.

5. Specialty plumbing tools for installation of no-hub, cast-iron, and flexible plumbing.

6. Introduction to gas piping in buildings, materials and safety applications, sizing procedures for gas branches and mains.

7. Applications - gas mains and branches.

8. Calculations for the sizing of storm and sanity drains.

9. Joining and installation procedures for drains and sizing procedures for roof and parking lot drains.

10. Plumbing fixtures, application and installation procedures, plumbing traps, and types and restrictions.

11. Calculations for the sizing of water supply piping.

12. Specialty fixtures, water fountains, slop sinks, hot water heaters, and installation procedures for specialty fixtures.

13. Testing, inspecting of plumbing systems, and principles of rough and finish plumbing.

Explain the proper layout of plumbing systems.

Select the proper size of building drains and vents using Michigan and local code requirements.

Discuss and demonstrate techniques for renovating plumbing systems.

Demonstrate the proper techniques for testing backflow preventers.

Discuss and describe the proper procedures for doing material take-offs from blueprints.
Demonstrate the use of isometric diagrams.
Solve practical shop exercises in the proper layout and design of sewer, soil, waste and vent systems.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement All students will be required to complete a comprehensive final examination that assesses the learning of all course objectives. This exam must be weighted in a manner so that this exam score is worth a minimum of fifteen percent of the final course grade. TAPP120 - Heating Systems

Overview

Subject Skilled Trade & Apprenticeship	Academic Department Skilled Trade and Apprentice Education	School Business, Entrepreneurship, PD
Course Description Introduces the principles of steam and hydronic heating systems. Covers proper sizing and selection of converters, traps, and boilers.		
Credit Hours 2		

Contact Hours
2

Course Fee 40	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Core Course Topics - Principles of heat flow in a building and use and application of heat charts and formulas. - Heat loss calculations. - Planning a heating systems. - Steam heating systems, one-pipe, two-pipe and vacuum systems, and steam traps. - Steam heating system design and placement of pipe and specific connections. - Class project-steam heating design. - Hot water heating systems, direct-return, reverse-return, and air control and vents. - Radiant panel heating panels, hot water boilers, and controls. - Boiler fitting, valves, steam gauges, injectors, and relief valves. - Design of a radiant heat system. - Series loop and one zone system. - One pipe system. - Two pipe reverse return system.
--

Describe and discuss the principles of heat loss in a structure.
Identify the difference between steam and hot water systems.
Identify the procedures for laying out functioning heating systems.
Identify when to choose one type of system over another.
Review the different types of systems according to their pipe arrangements.
Identify and discuss the required safety equipment on boilers and furnaces.
Design and layout steam and hydronic systems.
Identify the proper safety procedures for working around boilers and furnaces.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement All students will be required to complete a comprehensive final examination that assesses the learning of all course objectives. This exam must be weighted in a manner so that this exam score is worth a minimum of 15 percent of the final course grade. This exam is to be a common exam administered to all sections of TAPP120 Heating Systems .	
Texts Texts, handouts, and/or workbooks will be determined by the TAE Department.

TAPP250 - Plumbing Code

Overview

Subject Skilled Trade & Apprenticeship	Academic Department Skilled Trade and Apprentice Education	School Business, Entrepreneurship, PD
Course Description Introduces the use and application of the Michigan Mechanical Plumbing Code. Covers how to review each article of the code for content and application, and how to interpret plans and drawings as related to plumbing and pipefitting.		
Course Pre-requisite(s) TAPP100 Fund of Plumbing & Pipefitting or TAE Apprentice Coordinator/Instructor Permission		
Credit Hours 2		

Contact Hours
2

Course Fee 30	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Core Course Topics - Review of code regulations and terms. - Principles of plan review. - Quality and weights of selected materials. - Joints and connections. - Drainage systems. - Strom drains. - Vents and venting. - Traps, interceptors, and backflow preventers. - Plumbing fixtures. - Water supply. - Plumbing layouts. - Drainage layouts. - Venting designs. - Inspection, tests, and maintenance.
--

Interpret building plumbing and pipefitting diagrams using accepted conventions.
Identify which article applies to a given situation.
Select the correct material for a plumbing or pipe-fitting job.
Cite articles and sub-articles from the code that apply to a given situation.
Layout and size a plumbing system according to the code.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement All students will be required to complete a comprehensive final examination that assesses the learning of all course objectives. This exam must be weighted in a manner so that this exam score is worth a minimum of fifteen percent of the final course grade. TAPT100 - Introduc to Process Technology Practices

Overview

Subject Skilled Trade & Apprenticeship	Academic Department Skilled Trade and Apprentice Education	School Business, Entrepreneurship, PD
Course Description Provides an overview of process-based manufacturing industries with a focus on process technology operations using a systems perspective. Includes concepts of safety, process instruments, environmental standards, and continuous process improvement.		
Course Pre-requisite(s) <u>TAPT100 Intro to Process Tech Practice</u> or TAE Apprentice Coordinator/Instructor Permission		
Credit Hours 3		
Contact Hours 3		
Course Fee 100	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

- Core Course Topics
- Course overview
 - History of the process industries
 - Your career as a process technician
 - Working on teams
 - Basic physics
 - Basic chemistry
 - Safety, health, and the environment
 - Principles of quality
 - Piping and valves
 - Tanks, drums, and vessels
 - Pumps
 - Compressors
 - Stream turbines
 - Electricity and motors
 - Heat exchangers
 - Cooling towers and fin fans
 - Furnaces
 - Boilers
 - Distillation
 - Process instrumentation control
 - Process utilities
 - Process auxiliaries
 - Process print reading

Explain the growth and development of the process industry.
Report the impact of the process industry on American society.
Identify industry responses to current issues and trends.
Explain and describe the responsibility of the various regulatory agencies as they relate to the process industry.
Describe the roles, responsibilities, and expectations of the process technician.
Describe the differences between work groups and teams.
Describe the different types of teams encountered in the process industry.
Define the application of physics in the process industry.
Define the application of chemistry in the process industry.
Discuss the safety, health, and environmental hazards found in the process industries.
Identify responses in the process industry to quality issues.
Describe the purpose and function of piping and valves in the process industries.

Describe the purpose or function of tanks, drums, and vessels in the process industries.
Describe the purpose or function of pumps, compressors, and steam turbines in the process industries.
Explain the difference between AC and DC current.
Describe the purpose or function of heat exchangers, furnaces, boilers, cooling towers, and distillation towers in the process industries.
Describe the purpose or function of process control instrumentation in the process industries.
Discuss the different types of process utilities and their applications.
Describe the purpose or function of the different process auxiliary systems and their applications.
Describe the purpose or function of process systems drawings.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Students will be required to complete Chapter Reviews as assigned. Each Chapter Review will have an assigned point value. Students will be administered four online Module Exams. Module Exams will cover specific course material as assigned. Students will be required to participate in a minimum of four online discussions of select topics using an online Discussion Board. Students will be administered an online comprehensive Final Exam. Students will be required to maintain a student spreadsheet - recording attendance, Chapter Review scores, Discussion Board scores, Module Exam scores, and Final Exam score. Completed spreadsheet will be turned in and will be used as part of the calculation of the final grade. The scores of the scheduled Chapter Reviews, Module Exams, Discussion Boards, Final Exam, and Student Spreadsheet will be used to calculate the semester grade.	
Texts Texts, handouts, and/or workbooks will be determined by the TAE Department.

TAPT110 - Process Technology Equipment

Overview

Subject Skilled Trade & Apprenticeship	Academic Department Skilled Trade and Apprentice Education	School Business, Entrepreneurship, PD
Course Description Introduces students to the purpose, components, operation, and troubleshooting of the equipment used within the process industry.		
Course Pre-requisite(s) <u>TAPT100 Intro to Process Tech Practice</u>		
Credit Hours 3		
Contact Hours 3		
Course Fee 100	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) Yes		Acceptable Prior Learning Credit Departmental Exam, Portfolio Review, Licensure/certifications, Other

Credit for Prior College Level Learning (CPCLL) Details
This course is identified as a departmental course for which a learner can receive college credit for prior college-level learning and/or skills acquired outside the traditional classroom. Terms of the HFC Credit for Prior College-Level Learning Policy may be met by review of the appropriate documentation, skill, certifications, and/or knowledge acquired by the learner and submitted for evaluation by the appropriate departmental faculty. As required, one or more of the following may be considered in the evaluation process:

- Field experience
- Licenses held
- Completing course exams
- Performance sequences
- Competing a portfolio
- Assessment of private trade school or other extensive college level industry training and learning by a departmental faculty member.

Goals, Topics, and Objectives

- Core Course Topics
- Introduction to equipment tools and process drawings
 - Piping, tubing, hoses, and fittings
 - Valves
 - Pumps
 - Compressors
 - Turbines
 - Motors and engines
 - Power transmission and lubrication

9. Heat exchangers
10. Furnaces and boilers
11. Cooling towers
12. Filters and dryers
13. Extruders
14. Vessels
Describe the equipment and equipment operations common to the processing industry.
Describe safety and environmental concerns associated with the industry.
Describe and analyze the importance of plant equipment maintenance and predictive/preventive maintenance procedures in the industry.
Describe and evaluate the process technician's role in performing maintenance tasks.
Describe the purpose and components of piping, tubing, hoses, and fittings in the process industry.
Explain the purpose and components of common valves used in process technology.
Describe the purpose of pumps in the refining and petrochemical industries.
Describe the purpose of compressors in the refining and petrochemical industries.
Identify the common types/applications of compressors, turbines, heat exchangers, furnaces and boilers, cooling towers, filters and dryers, extruders, and vessels used in the process industry.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
1. Tests will be given throughout the semester.
2. Laboratory activities and performance exercises will be done where students will demonstrate an understanding of practical applications.
3. Written final exam
Texts
Texts, handouts, and/or workbooks will be determined by the TAE Department.
Satisfies Honors Requirement
No
Satisfies Wellness Requirement
No

TAPT120 - Introduction to Process Instrumentation

Overview

Subject	Academic Department	School
Skilled Trade & Apprenticeship	Skilled Trade and Apprentice Education	Business, Entrepreneurshp, PD
Course Description	Studies physical and chemical variables and the various instruments used to sense, measure, transmit, and control these variables. Introduces control loops and their components including controllers, regulators, sensors, and final control elements. Also discusses how to create instrumentation drawings and diagrams when developing and analyzing control loops.	
Credit Hours	3	
Contact Hours	3	
Course Fee	Miscellaneous Department Fee	
100	0	
Academic Level	Acceptable Prior Learning Credit	
Undergraduate	Portfolio Review	
Eligible for Credit for Prior College Level Learning (CPCLL)	Credit for Prior College Level Learning (CPCLL) Details	
Yes	Portfolio must contain evidence that illustrates competency in all course learning objectives. Department faculty will evaluate submitted portfolios based on the evaluation rubric. Evaluation rubric and student checklist located in the Industrial Technology office.	

Goals, Topics, and Objectives

Core Course Topics
1. Introduction to Instrumentation
2. Process Variables, Elements and Instruments; Pressure, Temperature, Level, and Flow
3. Miscellaneous Process Variables, Elements, and
4. Instruments: Analytical, Vibration, and Speed Based

5. Control Loops: An Introduction
6. Control Loops: Primary Sensors, Transmitters, Transducers, Controllers, and Final Control Elements
7. Diagrams, Symbols, and Sketches
8. Instrumentation Troubleshooting
Discuss the evolution and importance of process instrumentation to the chemical and refining industry.
Describe the major process variables controlled in the process industry.
Define terms associated with instrumentation.
Explain the relationship between common process variables.
Identify the most common pressure-sensing and pressure-measuring devices used in the process industry and how they operate.
Identify some of the most common temperature-sensing and temperature-measuring devices used in the process industry and how they operate.
Identify some of the most common level-sensing and level-measuring devices used in the process industry and how they operate.
Identify some of the most common flow-sensing and flow-measuring devices used in the process industry and how they operate.
Identify process instrumentation used to analyze process fluids and products in industrial processes, and describe two additional process variables -- speed and vibration -- as well as the instruments used to measure these variables.
Demonstrate an understanding of control loops and their elements along with the various signals that can be transmitted through different types of control.
Describe the control loop elements that sense, measure, convert, and transmit process variable information.
Identify five of the different types of controllers used in the process industry (local, remote, split range, cascade/remote setpoint, and ratio); describe their components and function.
Describe major components of a control valve and how the valve operates.
Identify symbols in process diagrams that represent equipment, instrumentation, and lines.
Demonstrate an understanding of instrumentation troubleshooting, including communication, calibration, proper tool use, safety, and environmental guidelines.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Methods for measuring achievement of objectives:
Tests will be given throughout the semester.
1. Tests scores represent 50% of the course grade.
2. Laboratory activities and performance exercises will be done where students will demonstrate an understanding of practical applications. These will make up 25% of the course grade.
3. A written final exam will be given which will represent 25% of the course grade.
Texts
Texts, handouts, and/or workbooks will be determined by the TAE Department.

TAPT125 - Process Technology Instrumentation II

Overview

Subject	Academic Department	School
Skilled Trade & Apprenticeship	Skilled Trade and Apprentice Education	Business, Entrepreneurshp, PD
Course Description	Provides a review of microprocessor control components and control systems, power supplies, emergency shutdown procedures, and malfunctions. Examines switches, relays, and annunciator systems. Also covers covers signal conversion and transmission; controllers; and control schemes that maintain environmental regulations, energy efficiency, and quality of the process.	
Course Pre-requisite(s)	TAPT120 Intro Process Instrumentation or TAE Apprentice Coordinator/Instructor Permission

Goals, Topics, and Objectives

Core Course Topics

1. Regulators, Switches, Relays, and Annunciators
2. Signal Transmission and Conversion
3. Controller and Control Modes
4. Advance Control Schemes
5. Control and Maintaining Process Quality, System Efficiency, and Environmental Standards
6. Microprocessor Control Systems and Components, Programmable Logic Controllers (PLC), and Distributed Control Systems (DCS)
7. Instrumentation Power Supply
8. Emergency Shutdown (ESD), Interlocks, and Protective Devices
9. Instrument Malfunctions and Troubleshooting

Compare the function and operation of regulators, switches, relays, and annunciators.
Calculate signal transduction and conversion.
Describe controllers, including their use in advanced control schemes.
Contrast microprocessor controls, such as Programmable Logic Controls (PLC) and Distributed Control Systems (DCS).
Discuss instrumentation power supplies.
Formulate emergency shutdown procedures (ESD), incorporating interlocks and protective devices.
Troubleshoot instrument malfunctions.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

Methods for measuring achievement of objectives:

Tests will be given throughout the semester.

1. Test scores represent 50% of the course grade.
2. Laboratory activities and performance exercises will demonstrate student understanding of practical applications. These will make up 25% of the course grade.
3. A written final exam will be given, which will represent 25% of the course grade.

TAPT130 - Process Technology Systems

Overview

Subject
Skilled Trade & Apprenticeship

Academic Department
Skilled Trade and Apprentice Education

School
Business, Entrepreneurshp, PD

Course Description

Studies the interrelation of process equipment and process systems. Examines how to arrange process equipment into basic systems; describes the purpose and function of specific process systems; explains how factors affecting process systems are controlled under normal conditions; introduces the concept of system and plant economics; and explores how to recognize abnormal process conditions.

Course Pre-requisite(s)
[TAPT100 Intro to Process Tech Practice](#) or TAE Apprentice Coordinator/Instructor Permission

Credit Hours

Goals, Topics, and Objectives

Core Course Topics

1. Process Systems
2. Systems Overview, Potable and Fire Water Systems, Service/Utility and Waste Water Systems, and Cooling Water Systems
3. Instrument/Utility/Breathing Air Systems, and Nitrogen/Natural Gas/Fuel Gas Systems
4. Relief and Flare/Electrical Power Generation and Distribution Systems
5. Material Storage
6. Blending Systems
7. Refrigeration Systems
8. Steam Generation and Distribution Systems
9. Reaction Systems

Describe the purpose of a system.
Identify the basic equipment components found in a system.
Explain the purpose of equipment components found in a system.
Define terms associated with the system.
Explain the system theory of operation.
Analyze variables that must be controlled to ensure proper operation of the system.
Describe factors that affect normal system operation.
Identify system instrumentation.
Trace flows through a system on a process flow diagram.
Discuss the specific safety, health, and environmental concerns associated with the system.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

Students will be required to complete Chapter Reviews as assigned. Each Chapter Review will have an assigned point value. Students will be administered four online Module Exams. Module Exams will cover specific course material as assigned. Students will be required to participate in a minimum of four online discussions of select topics using an online Discussion Board. Students will be administered an online comprehensive Final Exam.

Students will be required to maintain a student spreadsheet - recording attendance, Chapter Review scores, Discussion Board scores, Module Exam scores, and Final Exam score. Completed spreadsheet will be turned in and will be used as part of the calculation of the final grade. The scores of the scheduled Chapter Reviews, Module Exams, Discussion Boards, Final Exam, and Student Spreadsheet will be used to calculate the semester grade.

Goals, Topics, and Objectives

Core Course Topics

- 1. Introduction to quality assurance.
- 2. Quality assurance tools and techniques.
- 3. Operating consistency principles and elements.
- 4. Statistical process control.
- 5. Cost elements of quality.
- 6. Principles of Lean Manufacturing and team-centered production.

Describe common quality practices of process-based manufacturing.
Explain operational consistency from a quality systems evaluation perspective.
Describe common continuous improvement and elements of process-based manufacturing.
Analyze operational cost factors as they relate to process industry cost models.
Design a SPC (Statistical Process Control) chart for a specific process element.
Evaluate the team skills demonstrated by a work team.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

- 1. Chapter Reviews: Each Chapter Review will have an assigned point value.
- 2. Four online Module Exams: Module Exams will cover specific course material as assigned.
- 3. A minimum of four online discussions of select topics using an online Discussion Board.
- 4. An online comprehensive Final Exam.
- 5. Student spreadsheet: students will record attendance, Chapter Review scores, Discussion Board scores, Module Exam scores, and Final Exam score. Completed spreadsheet will be turned in and will be used as part of the calculation of the final grade.
- 6. The scores of the scheduled Chapter Reviews, Module Exams, Discussion Boards, Final Exam, and Student Spreadsheet will be used to calculate the semester grade.

TASM100 - Basic Sheet Metal Layout & Fabrication

Overview

Subject	Academic Department	School
Skilled Trade & Apprenticeship	Skilled Trade and Apprentice Education	Business, Entrepreneurship, PD
Course Description	Covers layout, forming, and fabrication of basic sheet metal ductwork fittings and use of hand/power tools and equipment needed to accomplish various tasks. Explains how to fabricate square/round sheet metal ductwork, tapers, transitions, offsets, and how to fasten ductwork together.	
Course Pre-requisite(s)	TASM100 Basic Sheet Metal & Fabricat or TAE Apprentice Coordinator/Instructor Permission	
Credit Hours	3	

Contact Hours

Course Fee	Miscellaneous Department Fee
40	0
Academic Level	
Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL)	
No	

Goals, Topics, and Objectives

Core Course Topics

- 1. Patterns of Pittsburgh seam and "s" or drive cleat.
 - 2. Fittings.
 - 3. End caps, plenum, filter box, flexible connections, roof curbs, hood, louvers, access doors, screen frames, drain pans, and drawbands.
 - 4. Blank sizing, heavy metal, fire dampers, and role of the computer.
 - 5. Duct system blueprint or drawing, abbreviations, types of systems, air requirements, and duct sizing.
 - 6. Toolbox.
- | |
|---|
| Demonstrate allowances for "s", drive clips, and Pittsburgh lock. |
| Demonstrate the process to make an "s" or drive clips. |
| Demonstrate how to layout sheet metal patterns. |

Explain the proper and safe use of all tools and equipment to layout, form, and fabricate ductwork.
Demonstrate the proper use of foot/power shear, leaf brake, beading, and crimping machines.
Demonstrate how to make and use standing and grooved seams and safety hems.
Explain how to attach sheet metal fittings together through the use of "s"/drive clips, Pittsburgh lock, hammer lock, dove tail and dove tail/ beading.
Demonstrate how to make sheet metal gages, rough sketches of fittings and obtain the maximum use of sheet metal with proper layout practices.
Demonstrate how to square a piece of sheet metal.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
All students will be required to complete a comprehensive final examination that assesses the learning of all course objectives. This exam must be weighted in a manner so that this exam score is worth a minimum of 15 percent of the final course grade. This exam is to be a common exam administered to all sections of <u>TASM100 Basic Sheet Metal & Fabricat</u> .

TASM120 - Sheet Metal Layout: Radial & Triangular

Overview

Subject	Academic Department	School
Skilled Trade & Apprenticeship	Skilled Trade and Apprentice Education	Business, Entrepreneurship, PD
Course Description	Covers the development of geometrical elements of structures, their intersections by the radial line, triangulation methods of sheet metal layout, the drawing of development layouts, and the forming of cardboard or sheet metal models.	
Course Pre-requisite(s)	TASM100 Basic Sheet Metal & Fabricat or TAE Apprentice Coordinator/Instructor Permission	
Credit Hours	2	
Contact Hours	2	
Course Fee	Miscellaneous Department Fee	
15	0	
Academic Level	Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL)	No	

Goals, Topics, and Objectives

Core Course Topics

- 1. Layout problem for pipe and flange pipe.
 - 2. Stretchouts for sections of the joint.
 - 3. Stretchouts for sections of elbows.
 - 4. Stretchouts with 3/8" lap seam.
 - 5. Stretchouts with 1/2" lap seam.
 - 6. Stretchout of cap including location of support legs.
 - 7. Layout plan and elevation.
 - 8. Drop cheek elbow and reverse elbow.
 - 9. Ogee offset.
- | |
|--|
| Demonstrate radial line development through the use of a variety of problems utilizing geometric elements of structures. |
| Demonstrate the process to make a simple lap seam to fabricate cardboard or sheet metal models. |
| Apply shop problems to layout flanges and collars. |
| Explain the method of development through the use of a variety of problems including square to square, square to rectangle, round to round, square to round, square to oval, round to oval, etc. |

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement		
All students will be required to complete a comprehensive final examination that assesses the learning of all course objectives. Goals, Topics, and Objectives

Core Course Topics
1. Layout elevation.
2. Plane views.
3. Layout profiles.
4. Triangulation.
5. Triangulation and triangulation simplified.
Demonstrate applied triangulation development through the use of a variety of problems utilizing geometric elements of structures.
Explain the triangulation method of development shortcuts through the use of a variety of transition problems including square to square, square to rectangle, round to round, square to round, square to oval, round to oval, etc.
Apply shop problems to develop geometric elements of structures.
Demonstrate how to size layout full and half pattern stretchouts.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement		
All students will be required to complete a comprehensive final examination that assesses the learning of all course objectives. Other Exam	
Michigan Transfer Agreement (MTA) Category	
Category 5: Humanities and Fine Arts - Applied Degrees, Category 5: Humanities and Fine Arts - Transfer Degrees	
Acceptable Prior Learning Credit	
Other Exam, Other	

Goals, Topics, and Objectives

Course Goals
To introduce and develop media literacy in students, by studying the history and major critical issues of the electronic and print media of today, especially in regard to the "consumption" of news but also entertainment as provided by the media monopolies and how it all affects our everyday lives and our relationships to our society and our world.
Core Course Topics
1. Mass Communication and Media Literacy
2. Convergence
3. Books
4. Newspapers
5. Magazines
6. Film
7. Radio and Recordings
8. Television, Cable, and Mobile Video
9. Video Games
10. Internet and World Wide Web
11. Public Relations and Advertising
12. Theories and Effects
13. Media Freedom, Regulation, and Ethics
14. Global Media

Define mass communication and relate how media literacy is critical and necessary in all aspects of it.
Explain the role of converging media in changing political and cultural dynamics on the local, national and global stage.
Illustrate the history of how print communication technologies originated and developed into what they are today (i.e. books, newspapers and magazines).
Illustrate the history of how electronic and digital communication technologies originated and developed into what they are today (i.e. film, radio, recordings, TV, cable and mobile video, social media, video games, Internet and world wide web). Identify the behind-the-scenes operations and decision-making processes of all major telecommunication industries.
Compare and contrast a variety of relationships between the media and their audiences, and analyze what the role of PR and Advertising has evolved into in the changing times.
Justify the general theory that media content provides insight into ourselves and our culture, and explain the value and importance in media effects research.
Know of the ongoing government regulation of the U.S. media, as well as the constitutional and principles that guide it.
Analyze the ethical and philosophical issues that arise in media culture, and contrast the range of viewpoints regarding each issue.
Develop and assess a realistic world view based on an appropriate plan for media use, and compare and differentiate global media with that of U.S. media.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement		
Tests on key historical events, persons, laws, and theories. Evaluation of critical writing assignments.		
Satisfies Honors Requirement	Satisfies Wellness Requirement

Credit for Prior College Level Learning (CPCLL) Details

Skilled Demonstration Details

Skilled demonstration, given in department by department faculty. Faculty will assess demonstration based on evaluation rubric. Evaluation rubric and student checklist located in The School of Liberal Arts office.

Portfolio Review Details

Portfolio must contain evidence that illustrates competency in all course learning objectives not already measured through the skilled demonstration. Department faculty will evaluate submitted portfolios based on the evaluation rubric. Evaluation rubric and student checklist located in The School of Liberal Arts office.

Goals, Topics, and Objectives

Core Course Topics

1. The nature, magic and verisimilitude of the film experience.
2. The early inventors and their inventions that led to the motion picture.
3. The early films and their filmmakers, 1890–1915.
4. Genre and the three stages of film production.
5. Stages of filmmaking: Production, Distribution and Exhibition.
6. Continuity, D.W. Griffith, and the Hollywood System, 1915-1930.
7. Mise en scene, German Expressionism, and the introduction of "talkies" 1915-1930.
8. Montage, Editing and Russia in the 1920's.
9. The Hays Code, MPAA and ratings/censorship in film.
10. Hollywood's Golden Era, 1930- 1950.
11. Italian Neo-Realism and the French New Wave, 1945-1965
12. Hollywood, the Rise of Independents and Foreign Films, 1950- 1970.
13. The New Hollywood and American Independent Films, 1970-present.

Describe the medium of film in general and explain how verisimilitude critically affects one's perception of the experience.
Classify and outline the people and inventions that led to the creation and development of motion pictures.
Define and recognize the three major production techniques: Mise en scene, Montage, and Continuity. Interpret the role and impact of rating systems in both historical and present-day film world.
Describe the elements of the three stages of film production: Pre-Production, Production, and Post-Production.
Summarize and illustrate the three stages of filmmaking: Production, Distribution, and Exhibition.
Compare and contrast the two major production contexts: Hollywood and Independent. Summarizing and analyzing a feature film in writing.
Debate and defend a position on a film relative to social impact, overall filmic quality, and/or bankability.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

- Quizzes over different areas of history, theory, and techniques
- Comprehensive exams over the above topics, as needed
- Critical Essays: Personal Film Experience, Feature Film Analysis, Style of a Director
- Short Viewing Reports on historic films

Satisfies Honors Requirement

TCM151 - Digital Audio Editing

Overview

Subject Media Communication Arts	Academic Department Media Communication Arts	School Liberal Arts
Course Description TCM (Telecommunication) is now MCA (Media Communication Arts). Please search for MCA-151 to register for this course. Introduces digital audio editing using an industry standard software editing program on computers in the Telecommunication audio production labs. Covers both hardware and software issues, and explores how to perform short editing exercises.		
Course Pre-requisite(s) Eligible to take ENG courses at HFC. As this is a computer-based course, some basic knowledge of computer operations is highly recommended.		
Credit Hours 1		

Contact Hours

1

Course Fee 10	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) Yes	Acceptable Prior Learning Credit Other
Credit for Prior College Level Learning (CPCLL) Details Other	

Goals, Topics, and Objectives

Course Goals

The goal of this course is to be a successful tutorial introduction to a professional digital audio production software program, one that has intermediate to advanced features for multitrack recording, signal processing, mixing, and output. The same software program taught in this course is the key tool of production projects required in [TCM251 Audio Production](#): Audio Production, which is why it will be a co-requisite for students enrolling in [TCM251 Audio Production](#). This course can also be enrolled in by anyone in a non-251-linked section.

Core Course Topics

1. Overview of editing: definition, goals, major historical approaches.
2. The hardware needed for digital audio editing
3. The software platform in use: major function and features.
4. Industry standards and ethics in editing.

Explain the basic definition of Editing: Its purpose, goals and historical approaches.
Describe the necessary hardware and software minimally needed to accomplish professional quality digital audio editing.
Define and demonstrate the major functional procedure of the computer operating system in use.
Identify and give examples of the major features of the software program in use.
Demonstrate a knowledge of the major editing capabilities of the software program in use: such as levels and digitizing, editing voices, working with music, sound effects, processing, editing audio for video, and multi-track mixing.
Interpret a working knowledge of industry standards and ethics and justify what is needed for an audio project to be brought to that level.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

1. Tests, over cognitive areas of hardware, software, and techniques.
2. Digital audio editing exercises: recording, cut & paste/trimming, processing, mixdown, and outputting to various digital formats.

TCM157 - Digital Video Editing

Overview

Subject Media Communication Arts	Academic Department Media Communication Arts	School Liberal Arts
Course Description TCM (Telecommunication) is now MCA (Media Communication Arts). Please search for MCA-157 to register for this course. An intensive introduction to digital video editing, using an industry standard software editing program in the Telecommunication computer video lab. Covers both hardware and software issues, and explores how to complete short editing exercises.		
Course Pre-requisite(s) Eligible to take ENG courses at HFC. As this is a computer-based course, some basic knowledge of computer operations is highly recommended.

Goals, Topics, and Objectives

Core Course Topics
1. Overview of editing: definition, goals, major historical approaches. 2. The hardware needed for digital video editing. 3. The computer operating system and software platform in use: major function and features. 4. The software program in use: major functions and features. 5. The three major types of editing: Mise en scene, Continuity, and Montage. 6. Industry standards and ethics of video editing.
Explain the basic definition of Editing: Its purpose, goals and historical approaches.
Describe the necessary hardware and software minimally needed to accomplish professional quality digital video editing.
Explain and demonstrate the major functional procedure of the computer operating system in use.
Describe and give examples of the major features of the software program in use.
Demonstrate the knowledge of the major editing capabilities of the software program in use: such as capturing, cut and paste, trimming, transitions, titling, special effects, audio sweetening, and output options such as digital file, DVD and uploading to the Internet.
Compare and contrast the three major types of editing: Mise en scene, Continuity, and Montage. Interpret a working knowledge of industry standards and ethics, and evaluate what is needed for a video project to be brought to that level.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
• Tests, over cognitive areas of hardware, software, and techniques. • Digital video editing exercises: capturing, cut & paste/trimming, titling/transitions/special effects, audio sweetening, and outputting to various media formats. • Verbal defense and debate of projects and how they relate to industry standards.

Goals, Topics, and Objectives

Core Course Topics

- Mechanics of Media Writing
- Radio Commercials
- Television Commercials
- Radio & TV Public Service Announcements and their Campaigns
- TV Story Concepts
- Dramatic Film Story Concept
- TV Treatment
- Adaptations
- Dramatic Film Script: Treatment and First Act

Distinguish between the several major formats of radio, film & TV copy, and script writing.
Compose industry-standard radio and television commercials.
Justify specific radio and television public service campaigns and announcements.
Develop specific radio and television public service campaigns and announcements.
Break down the traditional dramatic elements and structure of story for both television and film.
Explain the traditional dramatic elements and structure of story for both television and film.
Execute professional mechanics and style of a television and/or feature film treatment.
Construct an adaptation from a work of written text.
Compose and defend components of Act 1 of a film script or TV pilot.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

- Graded written radio and TV spot scripts, written IDs, public service announcements, and creative script creation.
- Graded small group classroom presentation of collaborative commercial campaign layouts.
- Measurement of verbal participation and description of creative campaigns from real-world analysis and debate.
- Measurement of verbal participation and description of TV and film examples from real-world analysis and debate.
- Review of portfolio of critical original work produced.

Department faculty will evaluate submitted portfolios based on the evaluation rubric. Evaluation rubric and student checklist located in The School of Liberal Arts office.		

Goals, Topics, and Objectives

Core Course Topics		
1. What is "News"?		

2. Print and online sources and areas of research for broadcast news
3. Mechanics of Radio and Television News Writing
4. Radio news story and show production for WHFR Radio
5. Newsroom tasks and the role of the News Director
6. Media Laws and Ethics for newswriting
7. Actualities: recording, editing and proper layout
8. Interviewing
9. Television news packages
10. News through social media
Analyze and debate the topic of what constitutes "news" in a media literate society.
Develop and integrate the research and rewrite of print and other sources required for broadcast news stories.
Interpret and evaluate the standard mechanical form and style of broadcast new stories.
Write, revise and produce by deadline standard broadcast news stories per weekly class news show to fit the mission of WHFR's format.
Explain and demonstrate the job of News Director for at least one class news broadcast.
Evaluate a minimum of 5 class news broadcasts for legal and ethical consequences and industry standards.
Record and edit actualities, incorporated into news stories, submitted by deadline, over the class broadcast period.
Conduct, record, and edit if necessary one 3-5 minute radio interview for potential airing on WHFR.
Create a television news package script to reflect at minimum industry standards.
Discuss and debate ongoing how social media is affecting the knowledge base of our news interpretation as a society.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement		
• Tests on the pertinent theoretical and critical knowledge.		
• Critique and grading of "newsworthiness and airability" of story choices and mechanics each week.		
• Review of portfolio of final draft of all scripts produced, including sound bites and TV package if applicable.

TCM294 - Telecommunication Internship

Overview

Subject Media Communication Arts	Academic Department Media Communication Arts	School Liberal Arts
Course Description TCM (Telecommunication) is now MCA (Media Communication Arts). Please search for MCA-294 to register for this course. Offers on-the-job experience with a telecommunication business, such as a radio or TV station, a cable TV studio, or advertising or public relations office. Minimum requirement of 150 hours of work (volunteer or paid as established by selected company). Positions vary from semester to semester. Student should contact the instructor for counseling and permission at least one month before the semester begins.		
Course Pre-requisite(s) To be taken towards end of student's TCM degree completion. Pre-approval from Instructor is required before enrolling.		
Credit Hours 3		
Contact Hours 3		
Course Fee 0	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals To obtain on-the-job experience with a telecommunication business or organization for the purpose of exploring how a real-world facility functions, day to day operations, rules and regulations, and examining and contributing to key tasks associated within the business or organization.
Core Course Topics - The workings of a real-world telecommunication facility to showcase basic telecommunication knowledge learned and gain advanced knowledge of that specific field. - Project log and maintainece system for completed skills used in resume or portfolio support. - Successful integration into a working media environment. - Industry and specific facility evaluation as it relates to coursework, future career trends, and networking opportunities. - The impact of specific media outlet, its role in society and ethical standards.

Evaluate and apply completed coursework learned in a real-world telecommunication environment.
Illustrate and defend when asked about project log and maintenance system for personal resume or portfolio.
Successfully integrate in student's chosen field with working professionals and contribute to the success of the specific facility in an ongoing way.
Synthesize behind-the-scenes knowledge of the inside workings of a specific media outlet and ongoing examples of what it takes to be successful.
Create a first impression as a contributor to the specific media outlet for possible future employment or resume reference.
Generate valuable networking contacts through association as a contributor to the specific media outlet for possible future employment or resume reference.

Outline and define the overall impact of the media outlet, its critical role in society locally, globally and ethically, and how the student's input made a difference through an agreed-upon written log, project or critical essay at the semester's end.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
- Evaluation log to be completed and graded at semester's end of student's contribution to specific media outlet. - Final evaluation by media supervisor of facility student was placed in. - Final graded student presentation, written and/or verbal, expressing evaluation of student's analysis of media entity and its impact on our local society.

TCM295 - Directed Study

Overview

Subject Media Communication Arts	Academic Department Media Communication Arts	School Liberal Arts
Course Description TCM (Telecommunication) is now MCA (Media Communication Arts). Please search for MCA-295 to register for this course. Instructor-guided work on a student-initiated project in the Telecommunication field. Project must be approved by instructor and can be either scholarly or creative in nature, or both.		
Course Pre-requisite(s) Instructor Permission Only		
Credit Hours 3		
Contact Hours 3		
Course Fee 10	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals To explore a topic in the Telecommunication field in a scholarly and/or creative way so as to gain a deeper understanding or appreciation for the topic.
Core Course Topics - Discussion and submission of a specific project proposal which, after acceptance by instructor, becomes the class project. - The use of critical thinking to relate aspects of this project to support and enhance the importance of a media-literate society. - Project work and completion, with guidance from the instructor at critical stages. - Creation of a measurement plan which, after acceptance by instructor, becomes the class contract.

Propose a project based on some aspect of Telecommunication with instructor approval.
Organize a measurement plan to allow for assessment with instructor approval.
Successfully structure and produce a significant project in a Telecommunication area, either scholarly, creative or both.
Present and defend overall decision for importance of topic choice and final project as it relates to supporting a media literate society.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Instructor will judge the quantity and quality of the work. A general guideline for satisfactory scholarly work: a 20+ page critical research paper; for creative work: a project evidencing 120-150 hours of effort.	
Satisfies Honors Requirement	Satisfies Wellness Requirement
No	No

Skilled Demonstration Details

Students will demonstrate successful use of all class related hands-on tools selected at the discretion of faculty. The class hand tool evaluation rubric will be used. Students must complete one or more of the Standardized Pre-employment course tests successfully as selected by faculty.

Portfolio Review Details

Students must provide writing samples related to the topic of the, "Self-directed student".

Interview Details

Students will be interviewed by faculty to determine their level of understanding of: advanced technological occupations, careers, success factors and self-directed learning strategies (if not assigned in a writing assignment).

Goals, Topics, and Objectives

Course Goals
To provide experiences that will allow students to better understand the opportunities and skills essential for successful careers in advance technology occupations.

Core Course Topics

- Occupation and Career Research in trades and technology
- Working individually and as part of a team in a diverse industrial environment.
- Critical thinking and problem solving in the industrial workplace.
- Preparation for Industry Technical Standardized Testing
- Hand Tool Use in Manufacturing
- Industrial Safety

Identify and implement the techniques used to prepare for working individually and as a team member in an industrial environment.
Research and analyze manufacturing work, culture, and industrial occupational topics.
Compose journals, logs, and other forms of reflective writing used in an industrial environment.
Define OSHA rules and regulations. Identify the types of technical standardized testing graduates in industry may be required to complete for employment.
Define the process to prepare for Industry Certification Exams.
Identify and define the common hand tools found in the manufacturing environment.
Demonstrate safe use of hand tools.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

The following will be used to assess student's academic achievement:

- Quizzes
- Labs
- Written Reports
- Presentations
- Tests

This course is designed to foster an awareness of the theatrical components extant in major world cultures.

Core Course Topics

- Origins and Development of Theatre
Compare and contrast the major structural and developmental components involved in the origins and development of theatre, including Western and non-Western examples.
- Play Structure.
Identify the major structural components of a play.
- Play Production.
Identify the difference between "play" as script and "play" as production.
Describe the basic requirements for acting and directing, and their basic relationship to each other.
Write critical reviews of theatrical productions.
Write analytical papers about theatrical subjects.
- Play Design.
Describe the capabilities of scene design, lighting, acting, directing, and costuming.

Compare and contrast the major structural and developmental components involved in the origins and development of theatre, including Western and non-Western examples.
Identify the major structural components of a play.

THEA132 - Acting I

Overview

Subject Theater	Academic Department Fine & Performing Arts	School Liberal Arts
Course Description Introduces basic acting techniques, theories of acting, and rehearsal procedures. Emphasizes modern and contemporary comedies, and dramas. Students perform scenes from contemporary plays.		
Course Pre-requisite(s) Eligible to take ENG courses at HFC.		
Credit Hours 3		

Contact Hours

3

Course Fee 15	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Course Goals This course is designed to foster an awareness of the theatrical performance components extant in Western Culture.	
Core Course Topics	
1. Memorization Techniques	Demonstrate ease of memorization techniques during various scenes.
2. Scene Analysis Techniques	Analyze a scene according to contemporary acting theories. Critique and analyze the performances of others.
3. Stage Areas and Movement	Move on the stage in a focused, theatrically appropriate manner.
4. Vocal Techniques	Employ vocal techniques in order to speak on the stage with appropriate clarity.
5. Relaxation Techniques	Demonstrate how to relax using appropriate techniques.
6. Concentration Techniques	Demonstrate proper concentration techniques.
7. Warm-Up Techniques	Demonstrate proper warm-up techniques.
Demonstrate ease of memorization techniques during various scenes.	
Analyze a scene according to contemporary acting theories.	
Critique and analyze the performances of others.	
Move on the stage in a focused, theatrically appropriate manner.	
Employ vocal techniques in order to speak on the stage with appropriate clarity.	
Demonstrate how to relax using appropriate techniques.	
Demonstrate proper concentration techniques.	
Demonstrate proper warm-up techniques.	

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement		
1. Written Scene Analysis Essays		
2. 3-4 Memorized and rehearsed scenes and/or monologues presented in class		
3. Demonstrated understanding of blocking and stage terminology as needed for an actor		
4. Demonstrated ability to "slate" and adhere to industry audition standards		
Satisfies Honors Requirement	Satisfies Wellness Requirement	
No	No

THEA135 - Introduction to Stage Makeup

Overview

Subject Theater	Academic Department Fine & Performing Arts	School Liberal Arts
Course Description Provides an analysis of the basic functions of stage makeup and demonstrates the art of makeup application and design, including such potential topics as age, animal, corrective, contouring, fantasy/horror, cosplay, high fashion, and foam latex prosthetic makeup techniques. Students design and apply their own makeup as well as design and apply makeup for classmates and/or actors in HFC mainstage productions.		
Course Pre-requisite(s) ENG-093 and/or ENG-081 eligible		
Credit Hours 3		
Contact Hours 3		
Course Fee 30	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category Humanities and Fine Arts		Michigan Transfer Agreement (MTA) Category Category 5: Humanities and Fine Arts - Applied Degrees, Category 5: Humanities and Fine Arts - Transfer Degrees
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals
Students will learn the basic techniques of corrective makeup, highlight and shadow techniques, two-dimensional aging, eyebags, nasolabial folds, 3-D effects, stippling, wounds, stylized makeup, and introductory additive techniques (ex, crepe hair, appliance/prosthetics, etc.).

Core Course Topics	
1. Straight Makeup	Apply straight stage makeup.
2. Character Makeup	Apply character stage makeup.
3. Apply "additive" makeup	Potential techniques include: 1. crepe beards/hair 2. appliances, including wounds, horns, ears, foreign objects, etc 3. facial prosthetics, including noses, brows, chins, etc.
Apply straight stage makeup.	
Apply character stage makeup.	
Apply "additive" makeup. Potential techniques include crepe beards/hair appliances, including wounds, horns, ears, foreign objects, etc. facial prosthetics, including noses, brows, chins, etc.	

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement		
1. Objective tests.		
2. Projects.		
3. Analysis/reports of professional makeup.

THEA138 - Stage Costuming

Overview

Subject Theater	Academic Department Fine & Performing Arts	School Liberal Arts
Course Description Introduces contemporary aesthetic and creative design principles for theatrical costuming, with an emphasis on line, form, meeting production requirements, budgeting, and thematic unity.		
Course Pre-requisite(s) Eligible to take ENG courses at HFC		
Credit Hours 3		
Contact Hours 3		
Course Fee 30	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
General Education Category Humanities and Fine Arts	Michigan Transfer Agreement (MTA) Category Category 5: Humanities and Fine Arts - Applied Degrees, Category 5: Humanities and Fine Arts - Transfer Degrees	
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics	
1. Script Analysis for Costume Design	Analyze scripts to determine aesthetic, historical, and practical design needs.
2. Research and Interpret Historical and Contemporary styles of clothing	Identify historical changes in the use and prevalence of colors, silhouettes, textures, and accouterments based on changes in fashion, social priorities, and practical usage. Identify the impact of financial status, social class, labor requirements, and individual personality on a character's costume.
3. Costume Renderings and Costume Plots	Develop a costume rendering following industry standards to effectively communicate design intentions using traditional, collage, multi-media, and/or digital methods. Develop a multi-character costume plot following industry standards to effectively communicate design intentions using traditional, collage, multi-media, and/or digital methods.
Analyze scripts to determine aesthetic, historical, and practical design needs.	
Research and Interpret Historical and Contemporary styles of clothing Identify historical changes in the use and prevalence of colors, silhouettes, textures, and accouterments based on changes in fashion, social priorities, and practical usage.	
Identify the impact of financial status, social class, labor requirements, and individual personality on a character's costume.	
Develop a costume rendering following industry standards to effectively communicate design intentions using traditional, collage, multi-media, and/or digital methods.	

Develop a multi-character costume plot following industry standards to effectively communicate design intentions using traditional, collage, multi-media, and/or digital methods.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

- 1. Midterm exam or project
- 2. Final exam or project
- 3. A written costume analysis of a play
- 4. Detailed costume renderings for at least two characters
- 5. An ensemble costume plot

Eligible for Credit for Prior College Level Learning (CPCLL)
No

Goals, Topics, and Objectives

Core Course Topics

- 1. Auditions
Apply research practices to auditions appropriate for children's play production.
- 2. Production Meetings
Participate in pre-production and production meetings, or a production geared for elementary, junior high, and family audiences.
- 3. Casting
Participate in casting for a production geared for elementary, junior high, and family audiences.
- 4. Schedules
Incorporate scheduling for a production geared for elementary, junior high, and family audiences.
- 5. Director's Concept
Develop a concept for a production geared for elementary, junior high, and family audiences.
- 6. Acting
Demonstrate acting techniques appropriate for children's play production.
- 7. Detailing Technical Elements
Apply advanced technical theatre skills appropriate for a one-act play production.

Apply research practices to auditions appropriate for children's play production.
Participate in pre-production and production meetings, or a production geared for elementary, junior high, and family audiences.
Participate in casting for a production geared for elementary, junior high, and family audiences.
Incorporate scheduling for a production geared for elementary, junior high, and family audiences.
Develop a concept for a production geared for elementary, junior high, and family audiences.
Demonstrate acting techniques appropriate for children's play production.
Apply advanced technical theatre skills appropriate for a one-act play production.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement

A rubric that evaluates a student's:

- 1. ability to meet deadlines.
- 2. ability to work well with others.
- 3. effectiveness of communication with instructors and fellow students.
- 4. ability to work independently as well as in small groups.
- 5. knowledge and understanding of playscript in relationship to director's and designer's concepts.
- 6. knowledge and understanding of playscript in relationship to rehearsal/technical rehearsal/performance process.
- 7. quality of procedural process participation: meetings, notes, work calls, lectures, technical rehearsals, performances, and strike.

THEA1901 - Theatre Experience I

Overview

Subject Theater	Academic Department Fine & Performing Arts	School Liberal Arts
Course Description Provides students with the opportunity to earn credit while actively participating in multiple areas of theatre production. This is the first of three experience-based one-credit courses where students work onstage, backstage, or in front-of-house operations for theatre productions during the semester. The course includes instructor presentation of specific elements of application though lecture, lecture/demonstration and/or laboratory experience.		
The production work for Theatre Experience I is suitable for a student's initial exposure to theatre production work. Theatre Experience II, III, IV, V and VI builds on the production work completed in Theatre Experience I. These courses will enable students to be engaged in up to six (6) public performances.		
Credit Hours 1		
Contact Hours 1		
Course Fee 0	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Course Goals
1. To provide a skills-based immersion in the process of theatrical production.
2. To provide students with an opportunity to focus on a particular aspect of the theatrical production process. Application of Core Course Topics and Objectives is dependent on the student's specialization for the semester.

Core Course Topics

1. Auditions	Demonstrate audition technique appropriate for the play being produced.
2. Production Meetings	Apply cooperative behavior techniques to group meetings.
3. Casting	Employ casting policies and procedures appropriate for the play being produced.
4. Schedules	Analyze production schedules of various departments for optimum synergy.
5. Director's Concept	Interpret the director's concept for the appropriate production area.
6. Character Analysis	Apply appropriate tools to character analysis for the style at hand.
7. Blocking	Create appropriate movement patterns for the character portrayed.
8. Prompt Book	Formulate a prompt book that reflects the practical needs of the play under production.
9. Make Up	Design make up appropriate for the character portrayed.
10. Scenic Concepts	Transform scenic concepts into practical stage utilities.
11. Technical Elements	Adapt technical elements to the requirements of the production.
12. Dress Rehearsals	Execute dress rehearsals with full production elements.
13. Strike	Design an effective strike strategy for the semester's production.

Demonstrate audition technique appropriate for the play being produced.
Apply cooperative behavior techniques to group meetings.
Analyze production schedules of various departments for optimum synergy.
Interpret the director's concept for the appropriate production area.
Apply appropriate tools to character analysis for the style at hand.
Create appropriate movement patterns for the character portrayed.
Formulate a prompt book that reflects the practical needs of the play under production.
Design make up appropriate for the character portrayed.
Transform scenic concepts into practical stage utilities.
Adapt technical elements to the requirements of the production.
Execute dress rehearsals with full production elements.
Design an effective strike strategy for the semester's production.
Evaluate dramatic literature for full-length play production.
Apply research practices to auditions, casting, rehearsals, and performances appropriate for full-length play production.
Demonstrate advanced acting techniques appropriate for full-length play production.
Employ advanced management skills appropriate for full-length play production.
Apply advanced technical theatre skills appropriate for full-length play production.
Practice advanced run crew skills appropriate for full-length play production.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement may include, but not be limited to, individual projects, vocabulary, theatre participation and tests. Learning activities are assessed using a rubric focusing on:
1. Meeting deadlines.
2. Working well with others.
3. Communicating with instructors and fellow students.
4. Working independently as well as in small groups.
5. Interpretation, knowledge, and demonstration of understanding of playscript in relationship to director's and designer's concepts.
6. Interpretation, knowledge, and demonstration of understanding of playscript in relationship to rehearsal/technical rehearsal/performance process.
7. Active participation in procedures and processes related to meetings, work calls, lectures, technical rehearsals, performances, and strike.

Texts
Course materials and textbooks will be communicated by class instructor and varies depending on the semester's production.

Overview

Subject Theater	Academic Department Fine & Performing Arts	School Liberal Arts
Course Description	This is the second of three experience-based one-credit courses where students work onstage, backstage, or in front-of-house operations for theatre productions during the semester. The course includes instructor presentation of specific elements of application through lecture, lecture/demonstration and/or laboratory experience. The production work for Theatre Experience II builds on the production work completed in Theatre Experience I. In this course, the student will practice and refine techniques learned in the previous Theatre Experience course in addition to learning new parts, backstage practices, etc.	
Course Pre-requisite(s)	THEA1902 Theatre Experience II or instructor permission	
Credit Hours	1	
Contact Hours	1	
Course Fee	0	
	Miscellaneous Department Fee	
	0	
Academic Level	Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL)	No	

Goals, Topics, and Objectives

Course Goals
1. To provide a skills-based immersion in the process of theatrical production.
2. To provide students with an opportunity to focus on a particular aspect of the theatrical production process. Application of Core Course Topics and Objectives is dependent on the student's specialization for the semester.
Core Course Topics
1. Auditions
▫ Demonstrate audition technique appropriate for the play being produced.
2. Production Meetings
▫ Apply cooperative behavior techniques to group meetings.
3. Casting
▫ Employ casting policies and procedures appropriate for the play being produced.
4. Schedules
▫ Analyze production schedules of various departments for optimum synergy.
5. Director's Concept
▫ Interpret the director's concept for the appropriate production area.
6. Character Analysis
▫ Apply appropriate tools to character analysis for the style at hand.
7. Blocking
▫ Create appropriate movement patterns for the character portrayed.
8. Make Up
▫ Design make up appropriate for the character portrayed.
9. Scenic Concepts
▫ Transform scenic concepts into practical stage utilities.
10. Technical Elements
▫ Adapt technical elements to the requirements of the production.
11. Strike
▫ Design an effective strike strategy for the semester's production.
12. Prompt Book
▫ Formulate a prompt book that reflects the practical needs of the play under production.
13. Dress Rehearsals
▫ Execute dress rehearsals with full production elements.

Demonstrate audition technique appropriate for the play being produced.
Apply cooperative behavior techniques to group meetings.

Employ casting policies and procedures appropriate for the play being produced.
Analyze production schedules of various departments for optimum synergy.
Interpret the director's concept for the appropriate production area.
Apply appropriate tools to character analysis for the style at hand.
Create appropriate movement patterns for the character portrayed.
Design make up appropriate for the character portrayed.
Transform scenic concepts into practical stage utilities.
Adapt technical elements to the requirements of the production.
Design an effective strike strategy for the semester's production.
Formulate a prompt book that reflects the practical needs of the play under production.
Execute dress rehearsals with full production elements.
Evaluate dramatic literature for full-length play production.
Apply research practices to auditions, casting, rehearsals, and performances appropriate for full-length play production.
Demonstrate advanced acting techniques appropriate for full-length play production.
Employ advanced management skills appropriate for full-length play production.
Apply advanced technical Theatre skills appropriate for full-length play production.
Practice advanced run crew skills appropriate for full-length play production.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Assessment of academic achievement may include, but not be limited to, individual projects, vocabulary, theatre participation and tests. Learning activities are assessed using a rubric focusing on:
1. Meeting deadlines.
2. Working well with others.
3. Communicating with instructors and fellow students.
4. Working independently as well as in small groups.
5. Interpretation, knowledge, and demonstration of understanding of playscript in relationship to director's and designer's concepts.
6. Interpretation, knowledge, and demonstration of understanding of playscript in relationship to rehearsal/technical rehearsal/ performance process.
7. Active participation in procedures and processes related to meetings, work calls, lectures, technical rehearsals, performances, and strike.

Texts
Course materials and textbooks will be communicated by class instructor and varies depending on the semester's production.
Satisfies Honors Requirement
No
Satisfies Wellness Requirement

THEA2901 - Directed Study

Overview

Subject
Theater
Academic Department
Fine & Performing Arts
School
Liberal Arts
Course Description
Allows individualized, advanced study under faculty direction in various subfields of theatre content. A Directed Study may be used to delve further into a subject than offered within the program, to individually explore a topic not otherwise accessible to a student, or to pursue an individual "practice-as-research" project. Students must obtain permission from a full-time theatre faculty member and have an instructor who has agreed to serve as mentor before the directed study will be approved. May be taken twice for credit, six hours maximum, and course subject must be different each time.

WELD100 - Weld Joint Design and Preparation

Overview

Subject
Industrial Technology
Academic Department
Advanced Manufacturing
School
Business, Entrepreneurship, PD
Course Description
Covers safety rules for the welding lab and health issues such as dealing with ultraviolet rays, burns, fumes, and electrical hazards. Introduces the print symbols and terminology used in fabricating and welding basic joints that are commonly seen on mechanical prints. Introduces welding codes and standards, identification of welding flaws, and the tools used to measure aspects of the weld. Emphasizes safety protocols and proper usage of hand tools in a welding lab. Explores the set-up and use of the Oxy/Fuel cutting torch, the Oxy/Fuel line cutter, Plasma Arc cutting, safety protocols, and proper use of power tools in the welding lab. Also explores how to assemble various weld joints. Laboratory activities.

Goals, Topics, and Objectives

Core Course Topics
1. Safety protocols.
2. Welding blueprint symbols.
3. Welding terminology.
4. Welding positions.
5. Welded joints.
6. Welding code.
7. Weld measurement.
8. Hand tools.
9. Weld flaw identification.
10. Hand tool safety.
11. Manual oxy/fuel cutting.
12. Plasma arc cutting.
13. Power tool safety and use.
14. Fabrication.
15. Oxy/fuel line cutter.

Demonstrate proper welding safety in the lab environment.
Interpret an industrial drawing with welding symbols.
Identify welding joints and welding positions.
Interpret welding terms.
Identify the correct welding code for a given weldment.
Demonstrate satisfactory knowledge of measuring tools used on weld and weldments.
Demonstrate satisfactory knowledge of hand tool safety.
Use hand tools properly.
Identify welding flaws.
Demonstrate proper set-up and use of an Oxy/Fuel cutting outfit.
Demonstrate proper set-up and use of an Oxy/Fuel line cutter.
Demonstrate proper set-up and use of a Plasma Arc Cutter.
Demonstrate proper safety and use of power tools.
Demonstrate fillet and groove joint assembly.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Quizzes and grading rubric using the American Welding Society criteria for Visual Inspection.

Goals, Topics, and Objectives

Core Course Topics

1. Safety protocols.
2. SMAW welding machine.
3. Filler metals.
4. Flat position welding.
5. Horizontal position welding.
6. Vertical welding position.
7. Overhead Welding Position

Use Welding Lab Safety protocols.
Demonstrate proper set-up of SMAW welding machine.
Describe various filler metals.
Utilize flat position welding.
Utilize horizontal position welding.
Utilize vertical position welding.
Utilize overhead position welding.
Perform multiple welds using proper welding technique for a given weldment.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Quizzes and grading rubric using the American Welding Society criteria for visual inspection.

Goals, Topics, and Objectives

Core Course Topics

1. Safety
2. GTAW welding machine
3. Filler metals
4. Flat weld position on steel
5. Flat weld position on stainless steel
6. Horizontal weld position on steel
7. Horizontal weld position on stainless steel
8. Vertical welding position on steel.
9. Vertical welding position on stainless steel.
10. Flat welding on aluminum
11. Horizontal welding on aluminum
12. Vertical welding on aluminum

Demonstrate proper safety practices for the Gas Tungsten Arc Welding process.
Prepare the Gas Tungsten Arc Welding machine for a given metal type and thickness.
Select the proper filler metal for a given weldment using the Gas Tungsten Arc Welding process.
Demonstrate the proper welding technique in flat position with steel, stainless steel and aluminum.
Demonstrate the proper welding technique in horizontal position with steel, stainless steel and aluminum.
Demonstrate the proper welding technique in vertical position with steel, stainless steel and aluminum.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Quizzes and grading rubric using the American Welding Society criteria for visual inspection.

Goals, Topics, and Objectives

Core Course Topics

- 1. Ferrous metals
- 2. Crystal Structure
- 3. Iron/Carbon Phase Diagram
- 4. Heat Treating

Describe different types of ferrous metal.
Describe the crystal structure of carbon steels.
Describe the effects of heat treating on carbon steel.
Explain the effects of heating and cooling of steel using the Iron/Carbon phase diagram.
Explores the effects of alloying of steel.
Explores the effects of annealing and tempering of steel.

WELD210 - Pipe Welding

Overview

Subject Industrial Technology	Academic Department Adv Manufacturing/Fabrication	School Business, Entrepreneurshp, PD
Course Description This course introduces safety protocols and the proper preparation used to weld pipe. This course explores the welding technique for pipe welding in 2G, 5G and 6G welding positions along with sockets and flanges.		
Credit Hours 3		
Contact Hours 3		
Course Fee 90	Miscellaneous Department Fee 0	
Academic Level Undergraduate		
Eligible for Credit for Prior College Level Learning (CPCLL) No		

Goals, Topics, and Objectives

Core Course Topics - Safety protocols. - Pipe preparation and alignment. - Open root pass. 2G welding position. 5G welding position. 6G welding position. - Socket and flange joints.
Demonstrate proper safety practices for pipe welding.

Identify and explain the 2G, 5G and 6G pipe welding positions.
Demonstrate the proper alignment techniques for welded pipe joints.
Demonstrate proper welding technique for an open root pass on plate.
Perform a weld using the proper techniques for the 2G, 5G and 6G positions using the preferred welding process.
Perform a weld using the proper techniques for socket and flange using the preferred welding process.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement	
Quizzes and grading rubric using the American Welding Society criteria for visual inspection.

WELD220 - Tool & Die Welding

Overview

Subject Industrial Technology	Academic Department Adv Manufacturing/Fabrication	School Business, Entrepreneurshp, PD
Course Description This course covers safety protocols, preparation, and the proper welding techniques used to weld tool steel used in tools and dies.		
Credit Hours 2		

Contact Hours

Course Fee 90	Miscellaneous Department Fee 0
Academic Level Undergraduate	
Eligible for Credit for Prior College Level Learning (CPCLL) No	

Goals, Topics, and Objectives

Core Course Topics - Safety. - Tool steels. - Filler metals. - Preparation procedures. - Weld procedures. - GTAW and SMAW pad build-up. - GTAW and SMAW line build-up. - GTAW and SMAW knife edge.
Demonstrate proper safety practices for tool and die welding.
Identify and explain tool steels.
Identify the proper filler metals used in the repair of tools and dies.
Explain the proper preparation techniques for the repair of a tool or a die.
Explain the proper welding procedures for the repair of a tool or die.

Perform a weld using the proper techniques for the repair of a tool or die using the Gas Tungsten Arc Welding process.
Perform a weld using the proper techniques for the repair of a tool or die using the Shielded Metal Arc Welding process.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Quizzes and grading rubric using the American Welding Society criteria for visual inspection.

- Grading Scale
- 98-100 = A+

Goals, Topics, and Objectives

- Core Course Topics
- Bend testing
 - Break testing
 - Macroetch
 - Ultrasonic testing
 - X-Ray testing
 - Magnaflux testing
 - Heat affected zone

Identify and explain bend and break tests as destructive weld tests.
Identify and explain various non destructive weld tests.
Demonstrate destructive weld test procedures.
Demonstrate non destructive weld test procedures.
Evaluate destructive and non destructive weld test results.
Explain the heat affected zone in a welded joint.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Quizzes and grading rubric using the American Welding Society criteria for visual inspection and destructive testing of weld coupons.

- Grading Scale

Goals, Topics, and Objectives

Core Course Topics

1. Conceptualize
2. Design
3. Planning
4. Materials and costs
5. Cutting
6. Machining
7. Welding
8. Components
9. Quality control
10. Final assembly

Devise a product to be produced in the welding lab.
Design the product to be made.
Formulate a plan to be used to move this product to the fabrication stage.
Determine materials used and material costs for the project.
Prepare materials for the project.
Perform the needed joining methods for the project.
Examine and assess any flaws that need to be addressed before final assembly.
Construct the fabricated parts and components to produce a final product.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Grading rubric using the American Welding Society criteria for visual inspection.

Grading Scale

- 98-100 = A+
- 94-97 = A
- 90-93 = A-
- 87-89 = B+
- 84-86 = B
- 77-79 = C+
- 74-76 = C
- 70-73 = C-
- 67-69 = D+
- 64-66 = D
- 60-63 = D-
- <60%= E

WR130 - Introduction to Study of World Religions

Overview

Subject	Academic Department	School
Religious Studies	Humanities	Liberal Arts

Course Description

WR-130 is an introduction to the academic study of religion. In this context, "academic" refers both to an objective approach to course material and to the emphasis on scholars whose writings have helped shape the field of religious studies. Through the works of Kant, Otto, Feuerbach, Marx and others, students examine various ways that "religion," as a category of academic inquiry, has been defined. In addition, through the lens of critical theory, they explore the thought of contemporary scholars as it pertains to definitions of religion and the role of religion in promoting or reducing the power of given social groups.

Course Pre-requisite(s)

Goals, Topics, and Objectives

Core Course Topics

1. Differences Between Theology and Religious Studies
 1. Describe the primary characteristics of religious studies and theology.
 2. Differentiate between religious studies and theology.
2. The Enlightenment
 1. Identify the main intellectual themes associated with The Enlightenment.
 2. Examine challenges presented to traditional religion by various Enlightenment thinkers.
3. Immanuel Kant and the Separation of Phenomena and Noumena
 1. Describe Kant's epistemological emphasis on reason.
 2. Compare Kant's definitions of phenomena and noumena.
 3. Discuss his justification for claiming that religious knowledge is uncertain.
4. Rudolf Otto and Religion as The Numinous
 1. Discuss Otto's definition of religion as "feeling".
 2. Describe Otto's idea of The Numinous (The Holy).
 3. Appraise the meanings Otto intended for the terms used in the phrase "mysterium tremendum et fascians".
5. Ludwig Feuerbach and Religion as Illusion
 1. Explain Feuerbach's resistance to Hegelian idealism.
 2. Describe Feuerbach's definition of religion.
 3. Discuss what Feuerbach means by the phrase "theology is anthropology".
6. Karl Marx and Religion as Deception
 1. Describe relationships between the definitions of religion offered by Feuerbach and Marx.
 2. Discuss the four types of alienation identified by Marx.
 3. Critique the proposal that Marx was opposed to religion.
7. Introduction to Critical Theory
 1. Identify primary ways that Marx's ideas serve as the foundation for Critical Theory.
 2. Describe why critical theorists focus on studies of culture.
 3. Compare the concepts "ideology" and "hegemony" as proposed by Antonio Gramsci.
8. Postcolonialism and Religion
 1. Define what Edward Said is referring to through his use of the term "Orientalism".
 2. Discuss how Christian perspectives of Islam as a threat served as a precursor to "Orientalism".
 3. Describe ways that ideology and hegemony function within Orientalist discourse.
9. Religion in America
 1. Identify several ways that Protestant Christianity in particular has shaped widely-held American values.
 2. Critique the claim that sexism in America is founded in and supported by Biblical scriptures.
 3. Describe how racism in America might be connected, at least in part, to traditional Christian ideas of supremacy over other religions and their related cultures.
10. Feminism and Religion
 1. Investigate the idea that what feminists refer to as patriarchy is rooted in Biblical concepts of relationships between men and women.
 2. Explain what bell hooks means when she says that feminism is for everybody.
11. Race and Religion
 1. Discuss what scholar Charles Long means when he says that the way most scholars think about religion in America is biased.
 2. Describe how, according to Long, colonists first arriving in what came to be called America viewed and treated the religious beliefs and practices of non-European people that they met.
 3. Explain how, according to Long, colonists' use of Enlightenment categories such as "civilized" were not innocent, but rather served as ideological expressions that served hegemonic interests.

Describe the primary characteristics of religious studies and theology.
Differentiate between religious studies and theology.
Identify the main intellectual themes associated with The Enlightenment.
Examine challenges presented to traditional religion by various Enlightenment thinkers.
Describe Kant's epistemological emphasis on reason.
Discuss his justification for claiming that religious knowledge is uncertain.
Discuss Otto's definition of religion as "feeling".

Describe Otto's idea of The Numinous (The Holy).
Appraise the meanings Otto intended for the terms used in the phrase "mysterium tremendum et fascinans".
Explain Feuerbach's resistance to Hegelian idealism.
Describe Feuerbach's definition of religion.
Discuss what Feuerbach means by the phrase "theology is anthropology".
Describe relationships between the definitions of religion offered by Feuerbach and Marx.
Discuss the four types of alienation identified by Marx.
Critique the proposal that Marx was opposed to religion.
Identify primary ways that Marx's ideas serve as the foundation for Critical Theory.
Describe why critical theorists focus on studies of culture.
Compare the concepts "ideology" and "hegemony" as proposed by Antonio Gramsci.
Define what Edward Said is referring to through his use of the term "Orientalism".

WR131 - Religious Traditions in the World

Overview

Subject	Academic Department	School
Religious Studies	Humanities	Liberal Arts

Course Description
Introduces the beliefs, practices, and experiences of the major world religious traditions. In addition to examining the particulars of each faith, this course emphasizes current perspectives in religious studies that serve to clarify the nature and functions of religion as a force shaping, and being shaped by, the increasingly pluralistic contemporary world. Religion will be treated seriously as an important part of people's identity and a crucial prerequisite for understanding and appreciating others and selves.

Course Pre-requisite(s)
Eligible to take ENG courses at HFC.

Goals, Topics, and Objectives

Course Goals
To promote religious literacy, civil discourse, mutual respect and critical thinking.

- Core Course Topics
- Understanding Religion
 - The academic approach to Religious Studies
 - Indigenous Religions
 - Hinduism
 - Buddhism
 - Chinese Religions
 - Judaism
 - Christianity
 - Islam
 - Contemporary challenges to the future of religion

Explain the nature of religion and its key characteristics.
Identify and analyze the most important events, personalities, places, and stories/texts of the world's major religious traditions.
Describe the basic beliefs, practices, and histories of the world's major religious traditions.
Demonstrate the powerful interaction between religions and their wider cultural contexts and explain how the mingling of the two often leads to popular misunderstandings of religion.
Critically analyze some major tensions existing between certain religious traditions, for example rival truth claims.
Critically analyze how ongoing developments in science, technology, and the converging global society impact religious traditions.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement
Each instructor will identify and implement appropriate methods to assess the achievement of the learning objectives for the course. Such methods could include objective style tests, essays, research papers, journals, projects, etc.

Goals, Topics, and Objectives

Course Goals This course explores the development of Christianity and its influence on the Roman pagan world as it moved from a small Jewish cult into a world religion.
Core Course Topics 1. The political and religious conflicts faced by Jews living in a Greco-Roman world. 2. The Jewish longing for a messianic deliverer, and how this is reflected in the teachings of Jesus. 3. The impact of the destruction of the Second Temple in Jerusalem on Judaism and early Jesus followers. 4. The message and meaning of The Synoptic Gospels. 5. The influence of Paul and early pagan believers. 6. The theological conflicts between Peter and Paul. 7. The evolution of basic Christian theology. 8. The early Christian theologies that thrived, died, or survived. 9. How did paganism influence Christianity? 10. The final adoption of Christianity as the state religion. 11. The growing rift between the Latin West and Greek East. 12. The final break between Eastern Orthodoxy and the Western Latin Church.
Evaluate the religious conflicts facing Jews, and early Jesus followers.
Compare and contrast the differing ideals held by Jews and Christians concerning a messianic deliverer.
Evaluate the impact of the destruction of the Jewish Temple.
Compare and contrast the similarities and differences in the Synoptic Gospels of Matthew, Mark and Luke.
Describe the influence of Paul on the development of early Christianity.
Summarize the conflicts between Peter and Paul.
Compare and contrast early Christianities.
Explain the reasons for adoption of Christianity by the Roman Empire as the state religion.
Analyze pagan influences on Christianity.
Explain the reasons for the break between the Eastern Orthodox church and the Western Latin church.

Goals, Topics, and Objectives

Core Course Topics
1. The origin and basic history of Islam
▫ Summarize the general character of religion in pre-Islamic Arabia
▫ Identify the relationship between Abraham's experiences and the development of monotheism

- Analyze the life and times of Muhammad
 - Discuss the spread of Islam from Muhammad's day to modern times
2. Central beliefs of Islam
- Identify and discuss the central beliefs of Islam. Those may include, but are not limited to beliefs concerning:
 - God
 - Humans
 - Prophets and messengers
 - Angels and jinn
 - The Day of Judgment
3. Muslim rituals and practices
- Analyze and discuss The Five Pillars of Islam
 - Explain other rituals as appropriate to a given instructor's syllabus. Such rituals may include, but are not limited to:
 - Prayer at the mosque
 - Halal foods
 - Circumcision
 - Marriage ceremonies
 - Practices related to death
 - Eid al-Adha
 - Eid al-Fitr
4. Major texts of Islam
- Explain aspects of the Qur'an. Connect this information, as it fits specific course syllabi, with current events.
 - Discuss aspects of hadith. Connect this information, as it fits specific course syllabi, with current events.
 - Analyze additional literature, as appropriate to a given instructor's syllabus. Such literature may include, but is not necessarily limited to:
 - Tawrat
 - Zabur
 - Injil
5. The two main branches of Islam
- Summarize the conflict that erupted over choosing a successor to Muhammad and how that resulted in the emergence of today's two major branches of Islam: Sunni and Shia
 - Analyze similarities between Shia and Sunni
 - Analyze differences between Shia and Sunni
 - Identify, geographically, where major population of Shia and Sunni, respectively, are located worldwide
6. Sufism: Islamic Mysticism
- Discuss the term "mysticism"
 - Explain that mystical approaches to religious understanding exist in various extant religions
 - Summarize the rise, main personalities, primary ideas, and spread of Sufism
 - Analyze Sufi texts, be these prose or poetry, introducing students to the religious content and meaning of Sufi writings
7. Muslims in North America
- Describe the arrival of Muslims in North America into the early 1900s
 - Discuss the origin and primary personalities of the Black Muslims.
 - Recognize differences between Nation of Islam and the American Muslim Mission
 - Compare and contrast religious and cultural diversity among Muslims in North American today
8. Islamic Revivalism
- Identify and discuss Muslim responses to the spread of Euro-American ("Western") religious and cultural ideals. Subjects selected by the instructor for discussion may include, but are not limited to:
 - Wahabism
 - Qutbism
 - Salafism
 - Fatwas and contemporary jihad

Summarize the general character of religion in pre-Islamic Arabia.
Identify the relationship between Abraham's experiences and the development of monotheism.
Analyze the life and times of Muhammad.
Discuss the spread of Islam from Muhammad's day to modern times.
Identify and discuss the central beliefs of Islam. Those may include, but are not limited to beliefs concerning God, Humans, Prophets and messengers, Angels and jinn.
Analyze and discuss The Five Pillars of Islam.
Explain other rituals as appropriate to a given instructor's syllabus. Such rituals may include but are not limited to: Prayer at the mosque, Halal foods, Circumcision, Marriage. ceremonies, and Practices related to death.
Explain aspects of the Qur'an. Connect this information, as it fits specific course syllabi, with current events.
Discuss aspects of hadith. Connect this information, as it fits specific course syllabi, with current events.

Analyze additional literature, as appropriate to a given instructor's syllabus. Such literature may include, but is not necessarily limited to: Tawrat, Zabur, Injil.
Summarize the conflict that erupted over choosing a successor to Muhammad and how that resulted in the emergence of today's two major branches of Islam: Sunni and Shia.
Analyze similarities between Shia and Sunni.
Analyze differences between Shia and Sunni.
Identify, geographically, where major population of Shia and Sunni, respectively, are located worldwide.
Discuss the term "mysticism".
Explain that mystical approaches to religious understanding exist in various extant religions.
Summarize the rise, main personalities, primary ideas, and spread of Sufism.
Analyze Sufi texts, be these prose or poetry, introducing students to the religious content and meaning of Sufi writings.
Describe the arrival of Muslims in North America into the early 1900s.
Discuss the origin and primary personalities of the Black Muslims.
Recognize differences between Nation of Islam and the American Muslim Mission.
Compare and contrast religious and cultural diversity among Muslims in North American today.
Identify and discuss Muslim responses to the spread of Euro-American ("Western") religious and cultural ideals.

Assessment, Requirements, and Outcomes

Assessment of Academic Achievement Each instructor will identify and implement appropriate methods to assess the achievement of the learning objectives of the course. These methods can include, but are not necessarily limited to multiple-choice, matching, and essay examinations, as well as out-of-class papers, Internet assignments, audio and/or video conferences, and projects.		
Texts Texts will be selected by instructors.		
Satisfies Honors Requirement No		Satisfies Wellness Requirement No

WR280 - Topics in Religious Studies

Overview

Subject Religious Studies	Academic Department Humanities	School Liberal Arts
Course Description Special topics course offerings are available in Religious Studies. Topics may vary. Additional course details may be obtained from the current semester's class schedule or through the School of Liberal Arts office. Religious Studies topics courses may be taken up to two times for credit, six credit hour hours maximum, but the topics for each course must be different.		
Course Pre-requisite(s) Eligible to take ENG courses at HFC.		
Credit Hours 3		
Contact Hours 3		
Course Fee 10		Miscellaneous Department Fee 0
Academic Level Undergraduate		
General Education Category Humanities and Fine Arts		Michigan Transfer Agreement (MTA) Category Category 5: Humanities and Fine Arts - Applied Degrees, Category 5: Humanities and Fine Arts - Transfer Degrees
Eligible for Credit for Prior College Level Learning (CPCLL) Yes		Acceptable Prior Learning Credit Portfolio Review
Credit for Prior College Level Learning (CPCLL) Details Portfolio Review		

Goals, Topics, and Objectives

Core Course Topics

1. Methodology

1. Apply the methodology or methodologies of the discipline to a given issue. See individual syllabus for details.
2. Content-specific issue

1. Identify and give the significance of the issue of the specific course.

2. Develop and evaluate solutions to a problem or problems relevant to the specific issue if applicable.

3. See individual syllabus for details of content.

Apply the methodology or methodologies of the discipline to a given issue.

Identify and give the significance of the issue of the specific course.

Course Sets

CAT3 - Quant Lit - Gen Ed Transfer - 2025

- MATH222 Math for Elem Teachers II
- MATH122 Math for Elem Teachers I
- MATH131 Math for the Modern World

CAT5 - Gen Ed Transfer - 2020

- ART229 Survey of Contemporary Art
- ASL232 Intermediate ASL II
- ASL231 Intermediate ASL I
- ASL135 Fingerspelling and Numbering
