Women and Gender Studies Department

Women & Gender Studies

Women and Gender Studies puts women, gender, and sexuality at the center of academic investigation. The major promotes inquiry into the intersections of gender with other identity categories; the workings of power in society; and the means of advancing social justice and equality. Through research, teaching and learning, and collaboration, the department fosters feminist and interdisciplinary analysis across social, historical, cultural and global contexts, products and practices.

Women and Gender Studies has a B.A., and B.S., as well as a minor and an emphasis.

Departmental Honors

Women and Gender Studies majors, minors, or emphasis students who plan to pursue departmental honors must be members of the Honors College and should contact the chair of the WGST to register for WGST 31003 (junior honors seminar) or WGST 41003 (senior honors seminar).

Programs

WGSA - Women and Gender Studies
WGST - Women and Gender Studies
WGST-BA - Women and Gender Studies

Catalog Description
Accounting is the global language of business and a cornerstone of organizational success. The BBA in Accounting is designed to build strong competencies in financial reporting, taxation, managerial decision-making, audit and other professional services. In financial reporting, students learn about how accounting estimates and methodologies impact entities' financial performance. In audit, students learn how to assess financial statement integrity, evaluate internal controls, and apply auditing standards to safeguard the public interest. In taxation, they acquire the skills to analyze complex tax codes, develop compliance strategies, and provide forward-looking tax planning advice to individuals and organizations. Together, these skills prepare graduates to add value in public accounting firms, industry, or government service.

A major objective of the BBA program is to provide a rigorous foundation in accounting and business concepts while fostering the professional competencies essential for career advancement. Students completing the BBA program in accounting fulfil the educational requirements to sit for the Uniform CPA Examination in Texas.

Accounting, BBA

The accounting major requires 31.5 - 33 semester hours (including associated requirements)

Specific Course Requirements (24 semester hours)

ACCT30153	Financial Reporting I	3
ACCT30163	Cost Analysis and Control	3
ACCT30253	Financial Reporting II	3
ACCT30303	Principles of Taxation	3
ACCT30273	Audit and Assurance	3
ACCT40223	Accounting Information Systems	3
ACCT40253	Financial Reporting III	3
ACCT30450/ACCT55450	Moral Reasoning	1.5
ACCT30460/ACCT55460	Ethics for Accounting Professionals	1.5

Associated Requirements

Students choose 6.0 hours from the following:

ACCT55153	Financial Statement Analysis	3
ACCT55303	Taxation of Business Entities	3
ACCT55253	Business Combinations & Advanced Topics	3

Students choose 1.5 to 3.0 hours from the following:

FINA40623	International Finance	3
BUSI30383	Global Business Perspectives	3
ACCT55260	Global Perspectives in Accounting	1.5

Free electives: Students should consult their academic advisor in the Neeley Academic Advising Center to determine the number of elective hours needed to reach 120 total hours.

Catalog Description

Artist Diploma (Post-Baccalaureate) in Piano

The Artist Diploma in piano is a program for the most advanced and gifted performers. By their performance and credentials, these performers demonstrate potential to become successful professional artists. The program is designed to provide intensive study and performance opportunities under the guidance of master teachers in preparation for a concert career. In particular, the longer length of the program allows students to prepare for entry into international piano competitions.

An audition for the appropriate applied studio faculty is required. Admission to the program is allowed only upon the recommendation of the appropriate applied studio faculty and the approval of the School of Music director.

Application Deadlines

For full consideration, applicants seeking admission to the Artist Diploma program should complete their application by February 15 to be considered for fall matriculation.

Program Requirements

The Artist Diploma in piano and strings is a 30 credit hour program, typically completed in 5 semesters. A minimum cumulative GPA of 3.0 is required to maintain satisfactory academic progress in this program.

Catalog Description

Aviation Studies Minor

The Aviation Studies minor provides students with a broad introduction to the field of aviation, including exposure to aviation operations, management, safety, and/or workforce opportunities. This minor is designed to complement a variety of majors by equipping students with foundational knowledge of the aviation industry and its global impact. However, students pursuing the B.S. in Professional Aviation may not also pursue the Aviation Studies minor.

While the minor offers valuable preparation for careers connected to aviation, it does not in itself qualify a student for professional pilot certification or licensure. Students pursuing the minor must maintain a cumulative GPA of 2.0 and earn a grade of C– or better in all coursework applied toward the minor. Completion of the minor requires a total of 18 credit hours of coursework. Two courses are required:

Course	Course Name	Credit Hours
AVIA 37333	Air Carrier Industry: An Introduction	3
AVIA 34333	Historical Significance of Aviation	3

Students must additionally select 12 additional credit hours from courses carrying the AVIA prefix, choosing courses that align with their individual interests in the aviation field for which they meet course prerequisites.

Catalog Description

BS in Professional Aviation

The BS in Professional Aviation prepares individuals for careers in the aviation industry through two distinct concentrations. Students may choose the Professional Pilot concentration, which provides structured flight training aligned to Federal Aviation Administration (FAA) certification standards, or the Aviation Administration concentration, which emphasizes leadership and management roles across the aviation sector.

Professional Pilot Concentration

The Professional Pilot concentration provides students with a strong foundation in aeronautical knowledge, flight operations, aviation safety, and regulatory compliance. Structured flight training is integrated with academic coursework and aligned to FAA certification pathways, preparing students to obtain pilot ratings and qualifications necessary for employment as commercial pilots. Students pursuing this concentration must apply and be admitted to the Professional Pilot pathway in alignment with FAA requirements.

Aviation Administration Concentration

The Aviation Administration concentration prepares students to serve as leaders and managers in diverse aviation industry settings. Coursework emphasizes aviation operations, safety management, regulatory frameworks, finance, human resources, and organizational leadership. Graduates are prepared for careers with airlines, airports, government agencies,

and aviation service providers, with the knowledge and skills to address the complex operational challenges of the modern aviation industry.

BS in Professional Aviation Core: 33 hours

AVIA25113 Unmanned Aerial Systems	Unmanned Aerial Systems	3
AVIA31333 Human Factors in Aviation	Human Factors in Aviation	3
AVIA34333 Historical Sig of Aviation	Historical Significance of Aviation	3
AVIA35333 Ethics in Aviation	Ethics in Aviation	3
AVIA36333 AVIA Legislation/Regulation	Aviation Legislation and Regulation	3
AVIA37333 Air Carrier Industry: Intro	Air Carrier Industry: An Introduction	3
AVIA44333 Aviation Safety	Aviation Safety	3
AVIA45333 Aviation Labor Relations	Aviation Labor Relations	3
AVIA46333 AVIA Security & Risk Assess	Aviation Security and Risk Assessment	3
AVIA47333 Intl Aerospace Issues	International Aerospace Issues	3
AVIA48333 Aviation Leadership	Aviation Leadership	3

In addition to the completion of the aviation core above, students pursuing the BS in Professional Aviation complete coursework required to satisfy either the Professional Pilot concentration -or- the Aviation Administration concentration.

Professional Pilot Concentration Coursework: 42 hours

Private Pilot Certificate Coursework

Catalog Description
Ballet, BFA Major Requirements (83 credits)

Ballet majors (BALT-BFA, BALT) must earn a minimum of 2.5 credit hours at the highest level of ballet technique for graduation. A daily technique class is required every semester, all four years.

Ballet Technique (19 hours as advised)

DANC 20100	Classical Ballet Technique Level I	1-2.5
DANC 30100	Classical Ballet Technique Level II	1-2.5
DANC 40100	Classical Ballet Technique Level III	1-2.5
DANC 40150	Classical Ballet Technique Level IV	2-2.5

Additional Ballet Performance Courses (5 hours as advised)

DANC 30111	Pointe	1
DANC 30161	Ballet Repertoire	1
DANC 30181	Ballet Partnering	1

Modern Dance Technique (4 hours as advised)

DANC 20200	Modern Dance Technique Level I	1-2.5
DANC 30200	Modern Dance Technique Level II	1-2.5
DANC 40200	Modern Dance Technique Level III	1-2.5

Performance Courses (3 credits total over 6 semesters)

3 semesters of DANC 20300, and a min. 3 semesters of DANC 40300.

DANC 20300	DanceTCU I	0.5
DANC 40300	DanceTCU II	0.5

1.5 hours as cast for DANC 20300, and 1.5 hours as cast for 40300. .5 credit must be earned in the first two semesters.

Anatomy-Somatics-Conditioning Courses (7 hours)

DANC 10211	Pilates I	1
DANC 10221	Pilates II	1
DANC 20211	Pilates III	1
DANC 10341	The Working Body	1
DANC 20303	Functional Anatomy	3

Choreography Courses (9 hours)

DANC 10312	CHOR I: Improvisation	2
DANC 20322	Choreography II: Elements of Dance Composition	2
DANC 30332	Choreography III: Intermediate Dance Composition	2
DANC 40343	Choreography IV: Advanced Dance Composition	3

Production Courses (9 hours)

DANC 10300	Dance Production Practicum I (0.5 each semester)	1.5 total

DANC 30300 Dance Production Practicum II (0.5 each semester) 1.5 total

Dance Studies Courses (9 hours)

DANC 40293 Historical Studies in Dance I 3

BIS Minor - BIS Minor

Overview

Program Code
BIS Minor

Department(s)
Information Systems and Supply Chain Management

Career
Undergraduate

Degree Designation
B - Bachelor's Degree

Catalog Description
Students majoring in a Neeley degree may pursue a BIS minor. This minor is offered in recognition of the prevalent use of technology in all aspects of business. The minor provides a secondary area of technical expertise. By combining an existing major with a minor in BIS, students will be able to better contribute in their future role. The BIS minor requires 18 semester hours of coursework, completing the same classes as a major with the exception of INSC 40813, the capstone course.

Career
Undergraduate

Degree Designation
BBA - Bachelor of Business Administration awarded by TCU

CIP Code
11.0501

Catalog Description
The effective management of technology has become a critical strategic competency for organizations across all industries. The Business Information Systems (BIS) curriculum prepares students to contribute meaningfully to and ultimately lead technology-enabled initiatives that engage customers, enhance products, streamline business processes, and deliver new services. Students develop the ability to analyze organizational needs, interpret data, and design and implement technology solutions. Knowledge gained in foundational coursework such as business process analysis, development, and cybersecurity fundamentals is integrated and applied through a comprehensive, real-world project in the program's capstone course. Graduates of the BIS program apply these skills as they begin their careers in consulting firms, technology companies, and organizational technology departments. The BIS major is designated as a STEM program.

The BIS major requires 21 semester hours as follows:

INSC 30723 Business Process Analysis (from the digital transformation track)

INSC 30823 Data Mgmt - Bus Info Systems (from the generative development track)

INSC 30853 Fundamentals of Cybersecurity (from the cybersecurity certificate track)

INSC 30263 Digital Assets and Payment Technologies OR INSC 30283 Deep Learning Technologies (from the fintech certificate track)

INSC 30833 Bus Info Systems Development

INSC 40843 Business Intelligence & Analytics OR INSC 30273 Introduction to Machine Learning

INSC 40813 Business Information Capstone

Requirements

Cultural Awareness in Healthcare Minor

Minor Requirements

The program of study requires a minimum of 19 hours with courses to be taken from at least three different academic units, as follows:

Required Courses (7 hours)

Choose 1 (3 hours) from the CULTURE and SOCIETY Group

SOCI 20213 Introductory Sociology 3

ANTH 20623 Introduction to Cultural Anthropology 3

Choose 1 (3 hours) from the SOCIAL MEDICINE Group

ANTH 30373 Medical Anthropology 3

SOCI 40523 Health, Illness and Medicine 3

SCIE 30603 Religion and Healthcare 3

Capstone Seminar (1 hour)

SCIE 30601 Cultural Awareness in Healthcare Capstone 1

Electives Courses (12 hours)

ANTH 20623 Introduction to Cultural Anthropology 3

ANTH 30653 Sex, Gender and Culture 3

ANTH 30373 Medical Anthropology 3

BIOL 40001 Honors Seminar 1

BIOL 40110 Topics in Medicine 0.5

BIOL 40183 Examining Eugenics, Race, and Modern Biology 3

BIOL 40703 Global Perspective in Healthcare 3

BIOL 50910 Biology Seminar 1 3

CHDV 25053 Global Advocacy 3

CRES 10103 Engaging Community in Culture 3

CRES 20103 Intro to Black Studies 3

CRES 20203 Introduction to Ethnic Studies 3

CRES 20503 Disability & Intersectionality 3

CRES 30003 Community Based Research 3

ECON 30503 Health Economics 3

ENGL 20713 Literature and Medicine 3

HLTH 30213 Health Aspects of Human Sexuality 3

NURS 10403 Introduction to Health Disparities in African Americans 3

NURS 20403 Health Disparities in African Americans 3

PHIL 10433 Freshman Seminar in Philosophy 3

PHIL 20303 Moral Problems 3

PHIL 20313 Death 3

PHIL 20323 Bioethics 3

PHIL 30303 Ethical Theory 3

PSYC 30363 Abnormal Psychology 3

PHIL 30463 Mind, Body, Ecology 3

RELI 30723 Religion and Science 3

SCIE 20613 Visual Culture and Medicine 3

SCIE 30603 Religion and Healthcare 3

SOCI 20213 Introductory Sociology 3

SOCI 20223 Social Problems 3

SOCI 30483 Death and Dying: Sociological Viewpoints 3

SOCI 30693 Aging & the Life Course 3

SOCI 30743 Gender and Society 3

SOCI 30783 Sociology of the Body 3

SOCI 40523 Health, Illness and Medicine 3

SOWO 10833 Introduction to Social Work 3

SOWO 30573 Child Welfare 3

SOWO 30863 Social Welfare Policy 3

SOWO 40583 Developmental Disabilities 3

SOWO 40883 Diversity and Social Justice 3

WGST 20003 Introduction to Women and Gender Studies 3

WGST 30313 Reproductive Justice 3

WGST 30303 Feminisms of Color 3

WGST 30403 Transnational Gender & Sexuality 3

WGST 30413 Sex, the Body and US Borders 3

Note that for BIOL40001, BIOL50910, PHIL10433 only some topics count toward the minor.

CALMMIN - CALM

Overview

Program Code
CALMMIN

Department(s)
Religion

Career
Undergraduate

Degree Designation
BA - Bachelor of Arts awarded by TCU

Catalog Description
The CALM Studies minor weaves research-informed contemplative practices such as mindfulness and meditation along with reflective learning and interdisciplinary perspectives on the art and science of human flourishing into academic achievement and co-curricular life. The minor helps students develop self-awareness, emotional resilience, insight, belonging, and a deeper sense of meaning and purpose in daily life to live well and succeed.

Minor Requirements

The CALM Studies minor requires 18 hours of coursework distributed as follows, with at least 9 hours taken at the 30000-level or above.

1) 9 hours from among the following (students complete three of the following four courses):

ADRN 20203: Mindfulness and Modern Life

PHIL 10103: Mind, Meaning, and Morality

PHIL/RELI 20203: The Art and Science of Flourishing

RELI 10023 (This course counts only for certain topics: Mindfulness, Meditation, and Spirituality in Asian Religions & World Religions)

Note: RELI 10023 is the Religion Department's introductory course designation and may only be taken once for credit. For the minor it can only count for certain pre-approved topics.

2) 9 hours of upper-division electives chosen from among the following:

ANTH 30743: Animals, Religion & Culture

ANTH 30783: Anthropological Approaches to Nature & the Sacred

ANTH 30823: Native American Religions & Ecology

PHIL 30373: Existential Philosophy

PHIL 30463: Mind, Body, Ecology

RELI 30523: East Asian Religious Perspectives

RELI 30533: Buddhism: Thought and Practice

Catalog Description
Students wishing to major in cinema and media studies must complete the following requirements for graduation:

- A minimum of 120 semester hours overall, including at least 42 hours earned at the 30000 level or above
- TCU Core Curriculum requirements
- A minimum of 31 semester hours in the FTDM major courses, including at least 12 hours at the 30000 level or above
- A minor of at least 18 hours; all requirements of the minor department must be followed
- A grade of "C" or better in all courses taken in the FTDM department
- FTDM10143 Art of Film and TV; FTDM10153 Media Milestones (Film and TV); **FTDM30103 Media Analysis** Media Analysis; **FTDM49003 Capstone Project** Capstone Project; **FTDM40901 Senior Seminar In FTDM** Senior Seminar.
- **Students pursuing the BA degree must demonstrate competency in a foreign language equivalent to completion of one of the following:**

ARAB20063 Intermediate Arabic II	Intermediate Arabic II	3
CHIN20063 Intermediate Chinese II	Intermediate Chinese II	3
FREN20063 Fourth Sem College Fren	Fourth Semester College French	3
GRMN20063 Intermediate German	Intermediate German	3
GREE20063 Fourth Sem Coll Greek	Fourth Semester College Greek (Hellenistic)	3
ITAL20063 Fourth Sem Coll Italian	Fourth Semester College Italian	3
JAPN20063 Fourth Sem Col Japanese	Fourth Semester College Japanese	3
SPAN20203 Intermediate Spanish 2	Intermediate Spanish 2	3
SPAN20213 Intensive Intermediate Span 2	Intensive Intermediate Spanish 2	3

This requirement can be met either by satisfactory completion of coursework taken at or transferred to TCU or by presenting satisfactory scores on recognized standardized tests (AP, CLEP or SAT II). Required scores on standardized tests are in the Credit by Exam booklet available from the Office of Admission. For languages not taught at TCU, 6 semester hours at the sophomore level, transferred to TCU from another accredited institution, will satisfy this requirement. Students may also provide evidence of competency in the non-English language by successfully completing one academic year in a secondary or post-secondary institution in which the language of instruction is other than English, for which the student will receive 12 credit hours.

It is strongly recommended that Cinema and Media Studies majors complete their course requirements in this order:

Step One: Departmental Core Requirements (6 hours)

FTDM 10143	Art of Film and TV	3
FTDM 10153	Media Milestones (Film and TV)	3

Step Two: Additional Foundational Course (3 hours)

FTDM30103 Media Analysis	Media Analysis	3

Step Three: Complete seven critical studies courses (21 hours)

Cinema and Media Studies majors must complete 18 hours selected from the following courses.

FTDM30410 Film and Television Genres	Film and Television Genres	3
FTDM30433 American Cinema	American Cinema	3
FTDM30453 Crime Films & Society	Crime Films and Society	3
FTDM30463 Media Decades	Media Decades	3
FTDM30473 History in the Movies	History in the Movies	3
FTDM30483 Media Authorship	Media Authorship	3
FTDM30593 Television, Culture & Society	Television, Culture and Society	3
FTDM30643 Brit Cinema & Europn Cul	British Cinema and European Culture	3
FTDM30983 Women in TV & Film	Women in Television and Film	3
FTDM40440 Topics In Film	Topics in Film	3
FTDM40570 Topics In Television	Topics in Television	1-3
FTDM40623 World Cinema	World Cinema	3
FTDM40643 Media & Popular Culture	Media and Popular Culture	3
FTDM40653 Popular Music & Record Ind	Popular Music and the Recording Industry	3
FTDM40663 Contemporary Media	Contemporary Media	3
FTDM40683 Film Theory & Criticism	Film Theory and Criticism	3

Step Four: Additional Requirements (1 hour)

FTDM40901 Senior Seminar In FTDM	Senior Seminar in Film, Television, and Digital Media	1

(to be taken in the last semester of the senior year).

Responsibility for knowing course prerequisites lies with the student. Students who wish to apply for "permission of instructor" or "permission of department" to take a class must submit a written request prior to registration. The department does not guarantee that all who wish to enroll in these classes will be accepted.

Catalog Description

Computer Information Technology, BS

Requirements

The program of study requires of 45 hours, on a 120-hour degree, consisting of:

Core Courses

COSC10403 Intro To Programming	Introduction to Programming	3
COSC20203 Techniques In Programmng	Techniques in Programming	3
COSC20803 Data Structures	Data Structures	3
COSC30003 Computer Networks	Introduction to Computer Networks	3
COSC30603 Database Systems	Database Systems	3
COSC40053 Introduction to Cybersecurity	Intro to Cybersecurity	3
CITE30103 Unix/ Linux System Admin	Unix/Linux System Administration	3
COSC30503	Systems Programming	3
COSC40233 Cloud Computing	Cloud Computing	3
CITE30363 Web Technologies	Web Technologies	3
COSC40943 Software Engineering	Software Engineering	3
COSC40993 Senior Design Project	Senior Design Project	3
	And 9 hours from CITE or COSC courses at the 30000 level or above	9

Additional requirements include:

MATH10043 Elementary Statistics	Elementary Statistics	3
	OR	
INSC20153 Statistical Analysis	Statistical Analysis	3
MATH20123 Discrete Mathematics I	Discrete Mathematics I	3
MATH10283 Applied Calculus	Applied Calculus	3
	OR	
MATH10524 Calculus I	Calculus I	4

A computer information technology major must have a minimum 2.2 GPA in combined computer science and computer information technology coursework to graduate.

Catalog Description
Commercial Dance Minor (Audition Required)

Admission to the Commercial Dance Minor requires an audition and faculty approval.

The Commercial Dance Minor provides students with comprehensive training in contemporary commercial dance styles designed for careers in the entertainment industry. Emphasizing versatility, performance readiness, and professional practice, the program integrates technical training, artistic development, and industry-focused standards.

Students study a range of commercial dance forms, which may include jazz, hip-hop, contemporary, musical theatre, and international dance forms, while developing strength, musicality, performance quality, and collaborative skills. Coursework also introduces students to audition techniques, dance for camera, improvisation, and current trends in commercial performance environments such as stage, film, television, and digital media.

Catalog Description
The Doctor of Philosophy (Ph.D.) in Computer Science at Texas Christian University prepares students for advanced careers as independent researchers, educators, and innovators in academia, industry, and government. The program provides a rigorous foundation in the theoretical and practical aspects of computing while fostering deep expertise in a chosen area of specialization.

Students complete advanced coursework across core areas such as software engineering, algorithms, systems, and machine learning, followed by a sequence of milestone examinations and doctoral research. Progress toward the degree includes a Preliminary Examination to assess foundational competence, a Research Readiness Assessment to evaluate preparedness for independent inquiry, a Qualifying Examination focused on the dissertation proposal, and a Final Dissertation Defense assessing the originality and significance of the candidate's research.

Graduates are prepared to conduct and communicate original research, publish in leading venues, and contribute to technological and societal advancement through innovation, scholarship, and education. Admission requires a bachelor's or master's degree in computer science or a closely related field. The program is designed to be completed within five years.

Graduate - Non Degree

Degree Designation
CRT - Certification Program

Catalog Description
The graduate certificate in Developmental Trauma & Trust-Based Relational Intervention (TBRI) is designed to educate students about the scientific and applied aspects of complex developmental trauma and Trust-Based Relational Intervention (TBRI). The goal is to prepare students for advanced academic study and/or professional practice. Students take 9 hours (3 courses) of graduate coursework to earn the certificate. The courses taken for the certificate can be applied to the MS in Developmental Trauma if the student is accepted into the MS program during or after certificate completion.

In accordance with University Policy, a GPA of at least 2.75 must be maintained with no more than two passing grades of “C+” or lower being utilized in satisfying the certificate requirement.

Required Courses (6 hours):

CHDV 50433 Trauma & Relationships

CHDV 50443 Trauma & Behavior

3 Hours of Elective Courses to be approved by advisor:

PSYC 50403 Advanced Neuroscience

OR

PSYC 60753 Theories of Development

Catalog Description

In addition to the academic credit distribution, students must meet the following requirements:

1. Must have a "C" or better in COSD and College of Education courses.

2. Prior to serving as junior clinicians in a clinical setting, students must present satisfactory evidence of acceptable results from a criminal background check arranged by the Davies School of Communication Sciences & Disorders. Background checks must be completed within the 30 days prior to the start of that academic semester.

3. Complete 75 hours of clinical practice, at least two semesters of **COSD40340 Clinical Lab 1** and one semester of **COSD40350 Clin Prac:Teachng DHH II**.

4. TCU cumulative GPA of at least 2.75 and a 2.75 GPA in COSD courses before enrolling in **COSD40340 Clinical Lab 1**.

◦ Students must be recommended for enrollment in **COSD40350 Clin Prac:Teachng DHH II** by COSD faculty. Recommendation is based on fulfillment of expectations specified in the clinic handbook and on:

◦ Performance in COSD coursework;

◦ Previous clinical experience and performance; and

◦ Fluency in sign language as judged by course instructor.

5. Transfer credit will only be allowed for COSD 10343, COSD 20303, COSD 20333 and COSD 20503 after a review of the syllabus for the course indicating it is an equivalent to the TCU course. An additional 3 hours of credit may be given in one of the following courses after meeting with the professor for a proficiency exam: COSD 20343 Intermediate Sign or COSD 30383 ASL 1.

Degree Designation
MS - Master of Science awarded by TCU

CIP Code
30.1901

Catalog Description
The MS in dietetics provides the opportunity to complete the necessary coursework and supervised practice hours after completing the TCU Bachelor of Science in Dietetics. Curriculum is based on educational standards mandated by the Accreditation Council for Education in Nutrition and Dietetics (ACEND). The Combined BS/MS in Dietetics offers the unique opportunity to acquire the required didactic instruction (lecture and laboratory courses) and supervised practice experience hours necessary to meet the Core Knowledge and Competencies for the Registered Dietitian Nutritionist as mandated by ACEND. Graduates receive verification and establish eligibility to write the Registration Examination for Dietitians.

Admission to TCU is required for all programs; however, admission to the University does not guarantee admission to the Combined BS/MS in Dietetics. Eligibility for admission to the Combined BS/MS in Dietetics is based on successful completion of at least 60 semester hours with a GPA of at least 3.0 for required Nutrition (NTDT) classes and an Associated Requirements GPA of 2.75, no more than three grades below a B- in the Associated Requirements, 45 semester hours of required prerequisites and major courses, 200 hours of documented food or nutrition practical experience, and an application packet.

Application packets for the Combined BS/MS in Dietetics must be received by Feb. 1 (typically of the sophomore undergraduate year), and applicants are

notified of provisional acceptance by April 15 of the same year. Students who are provisionally accepted begin the program in August of the following academic year (typically the junior year). Final acceptance/ enrollment in the Combined BS/MS in Dietetics depends on successful completion of required prerequisite courses and summer requirements. The GRE is not required for this degree.

Students must apply for graduate school admission during the last fall semester before graduating with the BS in Dietetics (typically the senior fall). Current graduate application fees apply. Students must comply with all university and college requirements for graduate students to gain admission. Conditional admission to the MS program in Dietetics is granted to applicants who have completed all admission formalities, have a superior undergraduate record but who have not completed undergraduate requirements. Conditional admission will be changed to unconditional admission when the necessary prerequisites and/or admission formalities are fulfilled. Students must abide by all program policies and procedures in order to continue in the MS in Dietetics program.

A student's continuation in the Combined BS/MS in Dietetics is contingent upon attainment of a strong academic record and successful completion of the program sequence.

In order to earn the BS in Dietetics degree, the student must attain a minimum GPA of 3.0 in required NTDT courses, earn a grade of "C-" or better in all required NTDT courses and Associated Requirements, earn no more than 3 grades below a "B-" in the Associated Requirements, complete a minimum of 123 hours, and meet all of the requirements of the university and college. Students who do not meet all of these requirements for graduation with the BS in Dietetics or the requirements for admission in the graduate program may change their major to Nutrition or another major in order to graduate with a bachelor's degree, but cannot continue in the Combined BS/MS in Dietetics. Students who do not meet all of these requirements to continue in the Combined BS/MS in Dietetics have the option to pursue verification from the TCU Didactic Program in Dietetics in order to be eligible to pursue a Dietetic Internship upon graduate and/or graduate with a BS in either Nutrition or Dietetics.

Students enrolled in the MS in Dietetics who do not meet all of the requirements to graduate with an MS in Dietetics have the option to pursue verification from the TCU Didactic Program in Dietetics (DPD) in order to be eligible to pursue a dietetic Internship if they have earned a BS in Dietetics from TCU. Students must formally apply to the DPD and satisfy all DPD requirements for verification. Acceptance into the DPD is not guaranteed. Students are required to abide by all DPD policies and procedures.

Students can graduate with a BS in Dietetics and begin the graduate program, but they will not earn verification to take the Registration Examination for Dietitians if they are unable to complete the graduate degree requirements and do not earn the MS in Dietetics degree. In order to earn the MS in Dietetics degree, the student must attain a minimum graduate NTDT GPA of 3.0 and earn a “C“ or better in all NTDT graduate courses. All final 50000- and 60000-level course grades will be included in the computation of the graduate GPA, but no more than two grades of “C+” or lower may be utilized in satisfying the degree requirements.

Students complete 12 hours of dual undergraduate/ graduate credit during the fourth year of undergraduate study. At the end of the fourth year, assuming that all other undergraduate graduation requirements are met, the student earns the BS degree in Dietetics. Beginning with summer session following graduation in May the student completes the remaining 19 graduate credit hours (9 hours of coursework, 10 credit hours of supervised practice), toward the MS in Dietetics degree. Students pursuing the thesis option will take an additional 6 credit hours. Students intending to pursue the Combined BS/MS in Dietetics must earn a BS in dietetics from TCU. In addition, all 30000, 40000, 50000 and 60000 NTDT courses must be taken from TCU, with the exception of **NTDT30123 Nutrition Thru Life Cyc** Nutrition

Throughout the Life Cycle and **NTDT30331 Medical Terminology** Medical Terminology.
Students may also choose to complete a thesis in the MS in Dietetics. In order to complete the thesis option, students must complete 3 hours of **NTDT70980 Thesis** and three hours of **NTDT70990 Thesis**. Thesis students are required to complete all other coursework necessary for the MS in Dietetics.

Information about costs for tuition and University fees is available through the TCU Office of Admission or Financial Services. More detailed costs for students are outlined in the Combined BS/MS in Dietetics Student Handbook and include approximately $1,000-$1,500 per year for travel to supervised practice sites, vaccinations, lab fees, photocopying, school and office supplies, textbooks, lab coats, malpractice insurance and professional dues.

The TCU Combined BS/MS in Dietetics program is accredited by the Accreditation Council for Education in Nutrition and Dietetics, 120 S. Riverside Plaza, Suite 2190, Chicago, Ill. 60606-6995, (312) 899-0040, ext. 5400, www.eatright.org/ACEND.

Program Code
EDELMIN

Department(s)
College of Education, Education
Non-Department Programs

Career
Undergraduate

CIP Code
13.1202

EDES - Education of Exceptional Children

Overview

Program Code
EDES

Department(s)
College of Education, Education
Non-Department Programs

Career
Undergraduate

CIP Code
13.1004

EDES-BS - Exceptional Student

Overview

Program Code
EDES-BS

Department(s)
College of Education, Education
Non-Department Programs

Career
Undergraduate

CIP Code
13.1004

EDES-BSE - Education of Exceptional Children

Overview

Program Code
EDES-BSE

Department(s)
College of Education, Education
Non-Department Programs

Career
Undergraduate

Degree Designation
BSE - Bachelor of Science in Education awarded by TCU

CIP Code
13.1004

EDES-MED - Education of Exceptional Students

Overview

Program Code
EDES-MED

Department(s)
College of Education, Education
Non-Department Programs

Career
Graduate

Degree Designation
MED - Master of Education awarded by TCU

CIP Code
13.1004

EDESMIN - Education - Exceptional Student Minor

Overview

Program Code
EDESMIN

Department(s)
College of Education, Education
Non-Department Programs

Career
Undergraduate

CIP Code
13.1004

EDFD - Educational Foundations

Overview

Program Code
EDFD

Department(s)
College of Education, Education
Non-Department Programs

Career
Graduate

CIP Code
13.0901

EDFD-MED - Educational Foundations

Overview

Program Code
EDFD-MED

Department(s)
College of Education, Education
Non-Department Programs

Career
Graduate

Degree Designation
MED - Master of Education awarded by TCU

CIP Code
13.0901

EDGC-GCE - Graduate Education Certificate

Overview

Program Code
EDGC-GCE

Department(s)
College of Education, Education
Non-Department Programs

Career
Graduate - Non Degree

Degree Designation
CRT - Certification Program

CIP Code
13.1101

EDGC-MED - Guidance Counseling-Child Life Emphasis

Overview

Program Code
EDGC-MED

Department(s)
College of Education, Education
Non-Department Programs

Career
Graduate

Degree Designation
MED - Master of Education awarded by TCU

CIP Code
13.1101

EDGE - General Education

Overview

Program Code
EDGE

Department(s)
College of Education, Education
Non-Department Programs

Career
Undergraduate

CIP Code
13.9999

EDGE-BS - General Education

Overview

Program Code
EDGE-BS

Department(s)
College of Education, Education
Non-Department Programs

Career
Undergraduate

Degree Designation
BS - Bachelor of Science awarded by TCU

CIP Code
13.9999

EDGE-BSE - Education General

Overview

Program Code
EDGE-BSE

Department(s)
College of Education, Education
Non-Department Programs

Career
Undergraduate

Degree Designation
BSE - Bachelor of Science in Education awarded by TCU

CIP Code
13.9999

EDGE-MED - General Education

Overview

Program Code
EDGE-MED

Department(s)
College of Education, Education
Non-Department Programs

Career
Graduate

Degree Designation
MED - Master of Education awarded by TCU

CIP Code
13.9999

EDGE-MS - Education General

Overview

Program Code
EDGE-MS

Department(s)
College of Education, Education
Non-Department Programs

Career
Graduate

Degree Designation
MS - Master of Science awarded by TCU

CIP Code
13.9999

EDGN-GTR - Education Graduate Non-Degree

Overview

Program Code
EDGN-GTR

Department(s)
College of Education, Education
Non-Department Programs

Career
Graduate - Non Degree

Degree Designation
ND - Non Degree

CIP Code
13.9999

EDGU-MED - School Counseling

Overview

Program Code
EDGU-MED

Department(s)
Counseling, Societal Change, and Inquiry, College of Education

Career
Graduate

Degree Designation
MED - Master of Education awarded by TCU

CIP Code
13.1101

EDGU-PHD - Counseling and Counselor Education

Overview

Program Code
EDGU-PHD

Department(s)
College of Education, EDCO

Career
Graduate

Degree Designation
PHD - Doctor of Philosophy awarded by TCU

CIP Code
13.1101

EDHE-EDD - Higher Education Leadership

Overview

Program Code
EDHE-EDD

Department(s)
College of Education, Education Leadership and Higher Education

Career
Graduate

Degree Designation
EDD - Doctor of Education awarded by TCU

CIP Code
13.0406

EDHE-MED - Higher Education Administration Emphasis

Overview

Program Code
EDHE-MED

Department(s)
College of Education, Education Leadership and Higher Education

Career
Graduate

Degree Designation
MED - Master of Education awarded by TCU

CIP Code
13.0401

EDHS-MED - Human Services

Overview

Program Code
EDHS-MED

Department(s)
Counseling, Societal Change, and Inquiry, College of Education

Career
Graduate

Degree Designation
MED - Master of Education awarded by TCU

CIP Code
13.1101

EDLE-CRT - Educational Leadership Certificate

Overview

Program Code
EDLE-CRT

Department(s)
College of Education, Education Leadership and Higher Education

Career
Graduate - Non Degree

Degree Designation
CRT - Certification Program

CIP Code
13.0401

EDLE-DED - Educational Leadership

Overview

Program Code
EDLE-DED

Department(s)
College of Education, Education Non-Department Programs

Career
Graduate

Degree Designation
DED - Doctor of Education awarded by TCU

CIP Code
13.0401

EDLE-EDD - Educational Leadership

Overview

Program Code
EDLE-EDD

Department(s)
College of Education, Education Leadership and Higher Education

Career
Graduate

Degree Designation
EDD - Doctor of Education awarded by TCU

CIP Code
13.0401

EDLE-MBA - Educational Leadership

Overview

Program Code
EDLE-MBA

Department(s)
Neeley School of Business, Neeley School Business Non-Departmental Programs, College of Education

Career
Graduate

Degree Designation
MBA - Master of Business Administration awarded by TCU

CIP Code
13.0401

EDLE-MED - Educational Leadership-PK-12 Emphasis

Overview

Program Code
EDLE-MED

Department(s)
College of Education, Education Leadership and Higher Education

Career
Graduate

Degree Designation
MED - Master of Education awarded by TCU

CIP Code
13.0401

EDLE-PHD - Educational Leadership

Overview

Program Code
EDLE-PHD

Department(s)
College of Education, Education Leadership and Higher Education

Career
Graduate

Degree Designation
PHD - Doctor of Philosophy awarded by TCU

CIP Code
13.0401

EDLP-MBA - Educational Leadership

Overview

Program Code
EDLP-MBA

Department(s)
Neeley School of Business, Neeley School Business Non-Departmental Programs, College of Education

Career
Graduate

Degree Designation
MBA - Master of Business Administration awarded by TCU

CIP Code
13.0401

EDLS - Language Studies

Overview

Program Code
EDLS

Department(s)
College of Education, Education
Non-Department Programs

Career
Undergraduate

CIP Code
13.1306

EDLS-BS - Language Studies

Overview

Program Code
EDLS-BS

Department(s)
College of Education, Education
Non-Department Programs

Career
Undergraduate

Degree Designation
BS - Bachelor of Science awarded by TCU

CIP Code
13.1306

EDLS-BSE - Language Studies

Overview

Program Code
EDLS-BSE

Department(s)
College of Education, Education
Non-Department Programs

Career
Undergraduate

Degree Designation
BSE - Bachelor of Science in Education awarded by TCU

CIP Code
13.1306

EDLSMIN - Education - Language Studies

Overview

Program Code

Catalog Description
English, Ph.D.

Course Requirements

Students must complete for credit a minimum of 54 semester hours of graduate courses, exclusive of 12 credit hours for the dissertation. Postgraduate hours completed more than seven years prior to a student's admission into TCU's English graduate program may not count toward requirements; the graduate advisor will determine applicable credit on a case-by-case basis.

Of the 54 hours, at least 36 must be taken at TCU. Of these courses, students must take 6 hours in Pedagogy and remaining hours in electives, as outlined below. The course in Teaching College Composition may be satisfied through transfer/waiver.

	Pedagogy (6 hours)	
ENGL 60513	Teaching College Composition	3
	ONE of the following:	
ENGL 50973	Directed Study in English	3
ENGL 60803	Literature Pedagogy	3
	AND	
	Electives (30 hours)	

Students should select their additional coursework in consultation with their English advisor(s) and the Director of Graduate Studies, focused not only on intended area(s) of specialization but in preparation for qualifying examinations.

Examinations

A student takes qualifying comprehensive examinations, consisting of a minimum of two exams in two different areas, when they have completed for credit 48-54 hours of graduate courses, of which 36 must be from TCU; and completed requisite coursework. These examinations are based on the student's areas of concentration. The student and their advisory committee will determine the areas to be covered by the exams. A student who fails one or more areas of the examinations may retake the failed area(s) again, but a second failure on any area of the examination bars the student from candidacy.

Dissertation

Doctoral students must complete a dissertation that demonstrates their ability to do independent and original research, and to synthesize their findings and existing knowledge into a unified document. A candidate must present a dissertation prospectus to their advisory committee for discussion, suggestions and approval before proceeding with the project. The candidate's oral defense of the dissertation is a public lecture based upon their findings, presented to the Department of English graduate faculty, graduate students and other interested persons within the academic community.

Academic Advising

Students are advised in consultation with their English advisor(s) and the Director of Graduate Studies.

Degree Designation
BBA - Bachelor of Business Administration awarded by TCU

CIP Code
52.0801

Catalog Description
A finance major concentrates on the management of financial resources for the firm or the investment portfolio. The field of finance integrates concepts from economics, accounting and a number of other areas. The central focus of finance is the relationship of risk and return.

Financial managers attempt to achieve wealth maximization through daily activities such as credit and inventory management and longer-term decisions related to raising funds and allocating capital. Investment specialists evaluate and select securities, manage investment portfolios and raise capital to finance business, government and private needs.

TCU students may apply for a position on the Educational Investment Fund and, if selected, gain valuable investment experience working with approximately 18 fellow students to manage a $1 million stock and bond portfolio.

The trend toward the securitization of financial assets and real estate, international financial transactions and derivative products; such as options and futures, continues to generate job opportunities in finance. Finance careers include corporate financial management, commercial banking, investment brokerage, portfolio management, investment banking and insurance.

Requirements

Requirements
The finance major requires 24 semester hours

FINA 30203	Money and Banking	3
FINA 30213	Investments I	3
FINA 30233	Investments II	3
FINA 40153	Advanced Financial Management	3
ACCT 30153	Financial Reporting I	3
ACCT 30253	Financial Reporting II	3

FINA 30203 and FINA 30213 have a Writing Emphasis.

In addition, the student must complete *6* semester hours from the following:

FINA 30223	Financial Modeling	3
FINA 30303	Insurance	3
FINA 30313	Real Estate Principles	3
FINA 30623	Real Estate Valuation	3
FINA 40183	Educational Investment Fund	3
FINA 40193	Educational Investment Fund	3
FINA 40313	Management of Financial Institutions	3
FINA 40533	Topics in Applied Financial Analysis	3
FINA 40603	Real Estate Law	3
FINA 40613	Real Estate Finance and Investment Analysis	3
FINA 40623	International Finance	3
FINA 40703	International Finance Study Abroad	3
ACCT 30303	Principles of Taxation	3

Free electives: Students should consult their academic adviser in the Neeley Academic Advising Center to determine the number of elective hours needed to reach 120 total hours.

FINAMIN - Finance Minor

Overview

Program Code
FINAMIN

Department(s)
Neeley School of Business, Finance

Career
Undergraduate

CIP Code
52.0801

Catalog Description
Finance Minor Students majoring in business or economics may pursue a finance minor. The goal of the minor is to provide a secondary area of expertise for students majoring in accounting, business information systems, economics, entrepreneurship and innovation, management and leadership, marketing, or supply and value chain management. By combining one of these majors with a minor in finance, the student is prepared for a greater number of career opportunities and gains more flexibility. In addition, students majoring in other area of business sometimes take electives in finance. The designation of a finance minor provides such students with additional evidence of subject matter expertise. The minor in finance requires 18 semester hours of coursework. Once a student matriculates at TCU, all coursework in the finance minor must be completed at TCU.

Only students majoring in another business major or economics can pursue a finance minor.

Required 12 hours:

- FINA 30153 Financial Management
- FINA 30203 Money and Banking
- FINA 30213 Investments I
- ACCT 30153 Financial Reporting I

Six semester hours chosen from the following:

- FINA 30223 Financial Modeling
- FINA 30233 Investments II

- FINA 40153 Advanced Financial Management
- FINA 40183 Educational Investment Fund
- FINA 40193 Educational Investment Fund
- FINA 40533 Topics in Applied Financial Analysis
- FINA 40623 International Finance

Degree Designation
B - Bachelor's Degree

Catalog Description
Students majoring in a Neeley degree may pursue a Fintech Scholar certificate. This certificate is an extension of and replaces the fintech certificate, offering in-depth study of advanced fintech topics, such autonomous AI agentic payments, regulatory-compliant private payment rails, and programmable money. The fintech scholar certificate requires 15 semester hours, including the three fintech courses required for the fintech certificate: INSC 30263, INSC 30273, INSC 30283, and two additional classes: advanced fintech INSC 30293 and fintech practicum INSC 40293. Enrollment in INSC 30293 and INSC 40293 require department permission.

Catalog Description
The FinTech Certificate is offered in recognition of the growing convergence of technology and finance and the profound changes this intersection has brought to how individuals and organizations store, transfer, and manage value. The program introduces students to the underlying technical concepts that support modern financial decision-making and operations, including machine learning and deep learning, as well as emerging asset classes such as digital assets. The certificate is open to all Neeley School of Business majors. The fintech certificate requires the completion of three classes:

- INSC 30263 Digital Asset and Payment Technologies
- INSC 30273 Introduction to Machine Learning
- INSC 30283 Deep Learning Technologies

Catalog Description
The minor in Media and Popular Culture requires 18 hours. Students must achieve the following minimum academic requirements as a prerequisite to enroll in FTDM courses: A grade of “C” or better in all courses taken in the department.

Required courses
Both classes, for a total of six hours, are required for the degree.

- FTDM 10143 The Art of Film and TV
- FTDM 30103 Media Analysis

Additional courses
The remaining 12 hours must be taken from the following list. At least six hours must be 30000 or 40000 level. Students are responsible for meeting all prerequisites.

- FTDM 10053 Survey of Film
- FTDM 10073 Media Adaptations
- FTDM 30410 Film and Television Genres
- FTDM 30433 American Cinema
- FTDM 30453 Crime Films and Society
- FTDM 30463 Media Decades
- FTDM 30473 History in the Movies
- FTDM 30483 Media Authorship
- FTDM 30593 Television, Culture, and Society

- FTDM 30643 British Cinema and European Culture
- FTDM 30663 Film in a Global Society

Program Code
FTSB-BA

Department(s)
Film,Television&Digital Media

Career
Undergraduate

Degree Designation
BA - Bachelor of Arts awarded by TCU

CIP Code
09.0799

Catalog Description
The Department of Film, Television and Digital Media offers a major in sports broadcasting. Admission to the major is by competitive application and is not guaranteed.

Each year more students apply to the sports broadcasting program than can be accommodated by existing faculty and facilities. In order to provide a personal and quality educational experience, the department must limit undergraduate admission through competitive application.

Applications are accepted each spring (only) for admission to the major the following fall. Students interested in applying for admission into the sports broadcasting major should contact the Department of Film, Television and Digital Media for additional information and to obtain application instructions. Admission to the major is separate from admission to the University; admission to the University does not guarantee admission to the major.

All sports broadcasting majors must complete for graduation:

- A minimum of 120 semester hours overall, including at least 42 hours at the 30000 level or above
- TCU Core Curriculum requirements

- A minimum of 37 semester hours in sports broadcasting, including at least 12 hours at the 30000 level or above
- A grade of "C" or better in all courses taken in the department
- FTDM 10153 Media Milestones (Film and TV); **FTDM20213 Basic Video Production** Video Production for Sports; **FTDM20523 Business Of Media** Business of Media; **FTDM21113 Sports Broadcasting** Sports Broadcasting; **FTDM21713 Intro Remote Sports** Introduction to Remote Sports Production; **FTDM40901 Senior Seminar In FTDM** Senior Seminar
- A minor of at least 18 hours; all requirements of the minor department must be followed

Students pursuing the BA degree also must demonstrate competency in a foreign language equivalent to completion of one of the following:

ARAB20063 Intermediate Arabic II	Intermediate Arabic II	3
CHIN20063 Intermediate Chinese II	Intermediate Chinese II	3
FREN20063 Fourth Sem College Fren	Fourth Semester College French	3
GRMN20063 Intermediate German	Intermediate German	3
GREE20063 Fourth Sem Coll Greek	Fourth Semester College Greek (Hellenistic)	3
ITAL20063 Fourth Sem Coll Italian	Fourth Semester College Italian	3
JAPN20063 Fourth Sem Col Japanese	Fourth Semester College Japanese	3
SPAN20203 Intermediate Spanish 2	Intermediate Spanish 2	3
SPAN20213 Intensive Intermediate Span 2	Intensive Intermediate Spanish 2	3

This requirement can be met either by satisfactory completion of coursework taken at or transferred to TCU or by presenting satisfactory scores on recognized standardized tests (AP, CLEP or SAT II). Required scores on standardized tests are in the Credit by Exam booklet available from the Office of Admission. For languages not taught at TCU, 6 semester hours at the sophomore level, transferred from another accredited institution, will satisfy this requirement. Students also may prove evidence of competency in the non-English language by successfully completing one academic year in a secondary or post-secondary institution in which the language of instruction is other than English, for which the student will receive 12 credit hours.

It is strongly recommended that sports broadcasting majors complete their course requirements in the following order:

Step One: Sports Broadcasting Prerequisites

FTDM 10153	Media Milestones (Film and TV)	3
FTDM21113 Sports Broadcasting	Sports Broadcasting	3
FTDM21713 Intro Remote Sports	Introduction to Remote Sports Production	3

Step Two: Sports Broadcasting Core Requirements

FTDM21213 Video Production for Sports	Video Production for Sports	3
FTDM20523 Business Of Media	Business of Media	3

Step Three: Sports Broadcasting Production Courses

Complete **four** of the following:

FTDM21513 Sports Radio	Sports Radio	3
FTDM31713 Remote Sports Production	Remote Sports Production	3
FTDM31723 Producing the Live Sports Evnt	Producing and Directing Live Sports	3
FTDM31733 Audio for Sports TV & Radio	Audio Production for Sports: Television and Radio	3
FTDM41113 Sports Play-by-Play	Sports Play-by-Play	3
FTDM41333 Sports Post-Production	Post-Production for Sports	3
FTDM41383 Sports Documentary Production	Sports Documentary Production	3

Step Four: Sports Broadcasting Industry and Analysis Courses

Complete **two** of the following:

FTDM30573 TV Programming	TV Programming	3
FTDM30613 Franchises	Media Franchising and Branding	3
FTDM30823 Digital Distribution	Digital Distribution	3
FTDM40223 Entertainment Law	Entertainment Law and Finance	3
FTDM40503 Media Industry Law	Media Industry Law and Regulation	3
FTDM40523 Mgt:Broadcst,Cable,Film	Management for Broadcast, Cable, and Film	3
FTDM41580 Topics in Sports Media	Topics in Sports Media	3
FTDM41713 Global Sports Media	Global Sports Media	3

Step Five: Additional Requirements

Students must complete both of the following courses:

FTDM30860 Internship in FTDM	Internship in Film, Television, and Digital Media	1.00-3.00
FTDM40901 Senior Seminar In FTDM	Senior Seminar in Film, Television, and Digital Media	1

FTDM30860 Internship in FTDM *requires a minimum of 3 hours.*

FTDM40901 Senior Seminar In FTDM *to be taken in the last semester of senior year.*

Responsibility for knowing course prerequisites lies with the student. Students who wish to apply for "permission of instructor" or "permission of department" to take a class must submit a written request prior to registration. The department does not guarantee that all who wish to enroll in these classes will be accepted.

Electives: 6 hours of science electives, selected with respect to the interest of the student and approved by the department.

Students planning to pursue technical jobs or qualify for graduate work in geology are strongly advised to satisfy the requirements for the BS degree. Some geology courses required for the BS degree require off-road field trips, particularly GEOL40516 Summer Field Course/Geol, which requires a high degree of physical fitness and mobility.

Students planning to attend graduate school are strongly advised to take MATH20524 Calculus II & PHYS10164 General Physics II with Lab.

Catalog Description

Graduate Quantitative Psychology Minor

The minor in quantitative psychology provides graduate students advanced training in the application of psychometric, methodological and state-of-the-art statistical procedures. It equips graduate students with quantitative methods that will improve the quality of research in their substantive areas while providing the statistical credentials that facilitate favorable placements in academic and non-academic positions upon graduation. The Graduate Quantitative Psychology minor (GQPM) is only open to graduate students in the department of psychology. Students in pursuit of the minor are required to complete two core and three elective courses with a grade of "B-" or higher.

Requirements

Required Courses (6 semester hours)

PSYC 50523	Analysis of Variance	3
PSYC 60623	Regression Analysis	3

Electives (9 hours)

PSYC 50213	Interactive Data Analysis	3
PSYC 60633	Generalized Linear Models	3
PSYC 60643	Structural Equation Models	3
PSYC 60653	Multilevel/Hierarchical Models	3
PSYC 60673	Advanced Structural Equation Modeling	3
PSYC 60743	Longitudinal Data Analysis	3

Admission Requirements

A psychology graduate student seeking a masters or doctoral degree may declare the GQPM. For students who have taken comparable courses elsewhere, the minor requirements can be modified at the discretion of the psychology faculty.

The courses required for the GQPM are intended to supplement, rather than compete with, students' training in substantive areas of research. Therefore, the GQPM requires only 15 credits of statistics coursework. 6 credits are earned by successful completion of the two required courses in the quantitative psychology sequence (**PSYC 50523**/60623), which graduate students in the Department of Psychology usually complete within the initial two years in the program. Students must successfully complete three additional courses (9 credits) beyond the two required for the graduate program, which may also count as departmental electives.

Graduation Requirements

Completion of the GQPM requires a minimum of 15 credit hours with no grade below a "B-". A course with a grade below a "B-" can be retaken only once. If a student makes two grades of less than "B-", either in the same or two different courses, the student will be automatically dismissed from pursuing the minor.

B - Bachelor's Degree

Catalog Description
The Geospatial Data Analytics minor equips students with practical skills in geographic information systems (GIS), spatial data science, and geospatial technologies. Students learn to collect, manage, analyze, and visualize geographic data using industry-standard tools and emerging technologies including AI and machine learning. The minor is open to students of any major and provides a technology-focused complement to disciplines across the university. Coursework emphasizes hands-on application, critical spatial thinking, and ethical use of geospatial data.

The minor requires 18 semester hours. No grade lower than "C-" can be applied to the minor.

Required courses (12 hours): GEOG 10003 World Regional Geography or GEOG 10023 An Urban World (3 hrs); GEOG 10013 Physical Geography (3 hrs); GEOG 30313 Introduction to Geographic Information Systems or GEOG 30333 Introduction to GIS for Real Estate Professionals (3 hrs); GEOG 30323 Data Analysis and Visualization (3 hrs).

Upper-level Geospatial Technology Electives (6 hours from the following, or a course pre-approved by departmental advisor): GEOG 40303 Topics in Geospatial Technology; GEOG 40313 Advanced Geographic Information Systems; GEOG 40323 Urban and Business Applications of GIS; GEOG 40333 Digital Cartography; or any 40000-level GEOG Technology course.

Catalog Description
The interdisciplinary certificate in Human-Centered AI equips students with both practical AI skills and the critical perspective to apply them responsibly. By combining technical training with liberal arts inquiry, it prepares graduates to meet workforce demands with marketable competencies while also fostering ethical, cultural, and social awareness. The program develops professionals who can use AI effectively and guide its implementation in ways aligned with human-centered, ethically informed leadership.

Catalog Description
To be admitted to study in the Ph.D. program, an applicant must have an MA in history (any applicant lacking these qualifications may be admitted conditionally, but must take such preparatory work as may be prescribed by the Graduate History Committee.) Students must also present a strong academic record and provide evidence of an ability to do scholarly research and writing. Even though he/she may have earned an MA degree at TCU, the student must reapply to AddRan College before being admitted to work toward the Ph.D. degree. A statement of purpose, writing sample, and three letters of recommendation are required.

The doctorate is offered in the areas of the U.S. and Latin America history. Students are normally expected to earn the MA degree before continuing toward the Ph.D.

Degree Requirements

1. A suitable number and variety of graduate courses to prepare the student for the qualifying examination and for the writing of the dissertation. In addition to the major area of specialization, the student also completes coursework in two minor areas, usually 9 hours in each. With approval of the student's graduate committee, as many as 12 hours may be taken outside the department. The doctoral program comprises no fewer than 54 hours of graduate courses for credit exclusive of credit hours for the thesis or dissertation.

2. In consultation with their advisor, students will either demonstrate reading knowledge of one foreign language or proficiency in one equivalent tool skill. All students whose major field is Latin American history and students whose research will require knowledge of a foreign language must pass an examination in the requisite language. Language exams will be administered by the department at the beginning of each semester. Ordinarily, exams will require students to accurately translate several pages of text. Exams administered by the department must be graded by two faculty members with appropriate language skills. A student may use a dictionary in exams administered by the department. Students whose research does not require a foreign language may complete a tool skill, such as GIS or Digital, Oral, or Public History. Ordinarily, students will demonstrate proficiency in this tool skill by completing a graduate level course in the subject. Students who have taken such courses at other institutions may petition the graduate committee for a waiver. The language or tool skill requirement must be met before scheduling the comprehensive examination.

3. There are two required courses, HIST 50963 (Historiography) and HIST 800083 (History as a Profession). Students who have taken similar courses at other institutions may petition the graduate committee for a waiver and will need to take other courses in lieu of these hours. Students are also required to take a minimum of two research seminars as a part of their overall coursework.

4. A comprehensive portfolio consisting of written materials and an oral examination covering two minor fields and the major area of specialization. The student must pass the written portions of the portfolio before taking the oral exam. In the event that the student fails the oral exam, the student's committee has the option to allow one more opportunity to pass. Upon completion of the comprehensive portfolio and a successful oral exam, the student is admitted to candidacy.

For specifics regarding this examination, see the Department of History Guide to Graduate Study.

5. A doctoral dissertation constituting an original contribution to scholarship or a new synthesis of existing knowledge. The candidate defends the dissertation in a final oral examination.

Page 591, from 2025-2025 catalog (Department of Design)

Department of Design

The Department of Design administers the Bachelor of Fine Arts degrees in Graphic Design and Architectural Interior Design. The Bachelor of Science degree in Design Studies, a minor in Architectural Lighting Design.

A minimum of 81 semester hours is required for the BFA in graphic design; a minimum of 48 semester hours is required for the BS in design studies, a minimum of 74 semester hours is required for the BFA in architectural interior design; and a minimum of 18 semester hours is required for the architectural lighting design minor. The degree plans are outlined below.

- BFA degree GRDE
- BS degree DEST
- BFA degree in INDE
- Minor in ARLD

Minimum Grade Requirement

All courses taken in the major or minor sequences must be passed with a "C" or better to fulfill graduation requirements. The Department of Design requires a minimum cumulative GPA of 2.0 at all times.

Departmental Requirements

A minimum 2.5 cumulative GPA in the major is a prerequisite to upper-division departmental courses. After entrance into upper-division courses, a minimum 2.5 GPA must be maintained to advance.

All students planning to pursue a major in this department start as either graphic design pre-majors (GDPM) or interior design pre-majors (IDPM). This status may only be changed to the major following the qualifying examination.

Incoming students (including transfer students) must have declared the pre-major before orientation. It will not be available at orientation.

The optional admission portfolio is strongly recommended for Graphic Design Pre-Majors. Instructions can be found online at: https://finearts.tcu.edu/design/admission/.

The Qualifying Examination is conducted during the first-year sequence as outlined under each degree plan for the BFA in graphic design, the BS in design studies and the BFA in architectural interior design. Following qualification, the student will be invited to declare the major for which they qualified based upon the results of the Qualifying Examination and the Department's resources.

This Qualifying Examination is a holistic assessment of the individual student's aptitude for success in the department's rigorous academic programs and in preparation for very competitive career paths. While every effort is made to be fair, above-average course grades do not necessarily predict success in the Qualifying Examination.

Page 638, from 2025-2025 catalog (Interior Design Requirements)

Architectural Interior Design Requirements

Qualifying Examination Policy

While all interested students may declare the Interior Design pre-major at the first-year level, a mandatory competitive Qualifying Examination occurs at the end of the fall semester of the 1st year. A limited number of students will be invited to declare the Architectural Interior Design major and to continue in the program based on the student's Qualifying Examination scores and the program's resources. Non-qualifying students will be denied continuation and required to drop the pre-major.

Laptop Policy

After successful passage of the Qualifying Examination, Interior Design majors will be required to purchase a PC laptop and the required software. Details and specifications for the laptop will be provided.

Transfer Policy

Transfer students wishing to declare the interior design major may submit a comprehensive portfolio to the attention of the Architectural Interior Design Program coordinator after they have been accepted to the University. Detailed portfolio requirements, deadlines, and procedures are available from the Department of Design main office. All portfolio decisions are final. It is the transfer student's responsibility to be aware of and comply with departmental procedure.

Interior Design Pre-major Policy

Students intending to major in Architectural Interior Design must declare "Interior Design Pre-Major (IDPM)" until passing the Qualifying Examination, immediately following the completion of the three fall design foundation courses. Students must receive a six out of ten or higher to qualify for the Architectural Interior Design major. If the number of students who score above a six exceeds the capacity of the program, then the students with the highest scores will be accepted. Any tie will be broken by the cumulative GPA within the foundation courses.

Senior Thesis Exhibition Policy

All interior design majors are required to participate in a group exhibition of student work during their senior year. One exhibition will take place each spring semester. Students expecting to graduate in May will participate during their final semester. Students whose graduation is expected to be delayed until the following December will participate during the preceding May exhibition.

Retention of Student Work Policy

The Department of Design reserves the right to photograph, display and exhibit student work in order that a continuing body of work will be available. This policy applies during the completion of a student's undergraduate degree program and for two years following graduation.

Page 635, from 2025-2025 catalog (Architectural Interior Design, BFA)

Architectural Interior Design, BFA (74 hours)

The architectural interior design major prepares the student for a career as a professional interior designer. It educates the student in creativity, design process, technical skills, and theory in order to successfully enter the profession. The CIDA-accredited program prepares students for the opportunity to complete the necessary steps to obtain NCIDQ certification and state licensing. This degree does not require a minor. To earn the BFA with a major in architectural interior design, in addition to the 9-hour **Design Foundation,** students must complete the requirements outlined below.

Major Requirements

Design Foundation (9 hours; required for all interior design pre-majors)

Design Foundation (9 hours; required for all interior design pre-majors)

DSGN 10103	Introduction to Creative Practice (FAR)	3
INDE 10413	Design Fundamentals I	3
INDE 10433	Drawing for Design I	3

Qualifying Examination

A mandatory competitive Qualifying Examination occurs at the end of the fall semester of the 1st year. A limited number of students will be invited to declare the Architectural Interior Design major and to continue in the program based on the students' Qualifying Examination scores and the program's resources.

Design History (9 hours)

BNSF Neeley Leadership Program

The BNSF Neeley Leadership Program is a three-year leadership development experience for Neeley School undergraduates. Its focus is on leadership development specifically within the business school major.

Innovative courses, coaching, community service projects and co-curricular activities provide students a range of opportunities to learn about themselves and develop their leadership skills. The mission of the program is to prepare Neeley students to become tomorrow's leaders in the business world.

The BNSF Neeley Leadership Program consists of five leadership courses (15 credit hours) that help students learn more about leadership and themselves as leaders. The first class, Foundations of Leadership, focuses on leading oneself. It is grounded in a principle-centered model of leadership and underscores the impact that character has on the ability to earn followers. The second course, Interpersonal Leadership Skills, focuses on critical leadership capabilities and teaches skills that are foundational for success in formal and informal leadership positions. The third course, Team Leadership Skills, focuses on specific skill sets that help increase effectiveness when working collaboratively. The fourth course, The Leadership Challenge, focuses

on the application of leadership knowledge and competency in leading change. The fifth course, Leading in a Complex World, prepares students to transition from school to the workplace by developing an understanding of the complexity of business and societal contexts in which leadership occurs. In the final semester of the program, students refine and hone their skills through weekly developmental labs.

Students enrolled in the BNSF Neeley Leadership Program (NLP) will complete a Leadership Emphasis by taking the five required NLP courses (15 semester hours):

BUSI30833 Foundations of Leadership	Foundations of Leadership	3
BUSI30843 Interpersonal Leadershp Skills	Interpersonal Leadership Skills	3
BUSI 40213	Leading Dynamic Teams	3
BUSI40843 The Leadership Challenge	The Leadership Challenge	3

Catalog Description

Leadership Minor

Students majoring in business may pursue the leadership minor. The leadership minor develops students' leadership knowledge and competencies to prepare them to lead people and organizations to meet the needs of an ever-changing, complex world.

The leadership minor requires 18 semester hours of coursework. Once a student matriculates at TCU, all coursework in the finance minor must be completed at TCU with a grade of "C" or better. No more than 6 credit hours may double count toward the leadership minor, a student's major(s) or minor(s), and/or certificate program.

Required courses (15 semester hours):

MANA 30833	Essentials of Leading and Following	3
MANA 30843	Communicating and Influencing for Impact	3
MANA 40213	Developing High-Performing Teams	3
MANA 40343	Leveraging Culture for Success	3
MANA 40853	Building Adaptability	3

In addition to required courses, the leadership minor requires completion of one elective course (3 semester hours). The elective course options are:

INSC30863 Global Digital Innovation	Global Digital Innovation	3
MANA40633 Principles of Negotiation	Principles of Negotiation	3
MANA40343 Leveraging Culture for Success	Leveraging Culture for Success*	3
MANA40223 International Management	International Management	3
ENTR40243 Raising Capital	Raising Entrepreneurial Capital	3
ENTR40333 Corporate Entrepreneurship	Corporate Entrepreneurship	3
ENTR40313 Social Entrepreneurship	Social Entrepreneurship	3
MARK40263 Foundations of Selling	Foundations of Selling	3
ADRN20900 Ideas of Leadership	Ideas of Leadership	3
ECON40123 Game Theory	Game Theory	3
POSC39023 Game Theory in Int'l Relations	Game Theory in International Relations	3
HCOL41023 Empathy	Empathy	3
PHIL20203 Art&ScienceHumanFlourishing	The Art and Science of Human Flourishing	3
	OR	
RELI20203 Art&ScienceHumanFlourishing	The Art and Science of Human Flourishing	3

*MANA 40343, Leveraging Culture for Success, is an elective course option only for the NLP Pathway (details below) since this course is required for all other students taking the leadership minor.

NLP Pathway: Students enrolled in the BNSF Neeley Leadership Program (NLP) (click here for program details) may pursue the leadership minor by taking the five required NLP courses (15 semester hours):

BUSI30833 Foundations of Leadership	Foundations of Leadership	3
BUSI30843 Interpersonal Leadershp Skills	Interpersonal Leadership Skills	3
BUSI 40213	Leading Dynamic Teams	3
BUSI40843 The Leadership Challenge	The Leadership Challenge	3
BUSI40853 Leading in a Complex World	Leading in a Complex World	3

Note: The five required NLP courses are taught in designated course sections for NLP students only. BUSI 40843, The Leadership Challenge, substitutes for MANA 40343, Leveraging Culture for Success, for students on the NLP pathway to the leadership minor due to The Leadership Challenge being a “challenge project” course unique to NLP.

Students on the NLP pathway to the leadership minor must also complete one elective course (3 semester hours) from among the elective options for the leadership minor.

Catalog Description
Modern Dance, BFA Major Requirements (83 credits)

Modern Dance (MODA) majors must earn a minimum of 2.5 credit hours at the highest level of modern dance technique for graduation. A daily technique class is required every semester, all four years.

Modern Dance Technique (19 hours as advised)

DANC20200	Modern Dance Technique Level I	1-2.5
DANC30200	Modern Dance Technique Level II	1-2.5
DANC40200	Modern Dance Technique Level III	1-2.5

Additional Modern Dance Performance Courses (5 hours)

DANC20262	Contact Improvisation	2
DANC40272	Advanced Performance Practicum	2
DANC30271	Topics in Modern Dance Performance	1

Ballet Technique (4 hours as advised)

DANC20100	Classical Ballet Technique Level I	1-2.5
DANC30100	Classical Ballet Technique Level II	1-2.5
DANC40100	Classical Ballet Technique Level III	1-2.5
DANC40150	Classical Ballet Technique Level IV	2-2.5

Performance Courses (3 credits total over 6 semesters)

3 semesters of **DANC20300**, and a min. 3 semesters of **DANC40300**

DANC20300	DanceTCU I	0.5
DANC40300	DanceTCU II	0.5

1.5 hours as cast for **DANC20300**, and 1.5 hours as cast for 40300. .5 credit must be earned in the first two semesters.

Anatomy-Somatics-Conditioning Courses (7 hours)

DANC10211	Pilates I	1
DANC10221	Pilates II	1
DANC20211	Pilates III	1
DANC10341	The Working Body	1
DANC20303	Functional Anatomy	3

Choreography Courses (9 hours)

DANC10312	CHOR I: Improvisation	2
DANC20322	Choreography II: Elements of Dance Composition	2
DANC30332	Choreography III: Intermediate Dance Composition	2
DANC40343	Choreography IV: Advanced Dance Composition	3

Production Courses (9 hours)

DANC10300	Dance Production Practicum I (0.5 each semester)	1.5 total
DANC30300	Dance Production Practicum II (0.5 each semester)	1.5 total
DANC20333	Dance Production	3
DANC30333	Lighting Design for Dance	3

Dance Studies Courses (9 hours)

DANC40373	Historical Studies in Dance I	3
DANC40383	Historical Studies in Dance II	3
DANC40293	Critical Studies in Dance	3

Teaching Courses (4 hours)

DANC30233	Teaching Methods - Modern Dance	3
DANC30330	Creative Movement	1
	OR	
DANC30391	Special Topics in Dance Pedagogies	1

Additional Courses (11 hours)

DANC10302	Music for Dancers	2
DANC10311	Career Preparation I	1
DANC10331	International Dance Forms	1
DANC30311	Career Preparation II	1
	Approved dance related electives	6

BFA Capstone Course (3 hours)

DANC40393	BFA Capstone	3

Suggested Courses for First-year

Fall (9.5 hours)

DANC10211	Pilates I	1
DANC10300	Dance Production Practicum I	0.5
	OR	
DANC20300	DanceTCU I	0.5
DANC10311	Career Preparation I	1
DANC20100	Classical Ballet Technique Level I	2
DANC20200	Modern Dance Technique Level I	2
DANC20333	Dance Production	3

TCU Core Curriculum (6 hours)

Spring (10.5 hours)

DANC10221	Pilates II	1	
DANC10300	Dance Production Practicum I	0.5	
	OR		
DANC20300	DanceTCU I	0.5	
DANC10302	Music for Dancers	2	
DANC10312	CHOR I: Improvisation	2	
DANC10341	The Working Body	1	
DANC20100	Classical Ballet Technique Level I	2

Catalog Description

Master of Science in Business (MSB)

The Master of Science in Business (MSB) is designed to prepare students from diverse undergraduate backgrounds for professional careers in business or related fields. The MSB complements students' undergraduate foundations with graduate study that includes both foundational courses in business and specialized training in designated areas. The MSB is designed for students without prior professional experience, and can be completed in nine months. Students with prior professional experience should consider one of Neeley's Master of Business Administration programs – Full-Time MBA, Professional MBA, or Executive MBA.

There are two options for entering the MSB program and completing the degree requirements:

- Traditional MSB
- Accelerated MSB

Traditional MSB

The Traditional MSB is designed for students who have earned a bachelor's degree from an accredited college or university prior to enrollment in the MSB. Such students would typically apply to the MSB during their final year of undergraduate study, with subsequent enrollment contingent upon successful completion of the bachelor's degree.

The Traditional MSB applies a holistic approach to the admissions process. Applicants must demonstrate academic proficiency as well as the ability to perform in

a highly interactive, team-based environment. Academic records, relevant test scores, motivation, maturity, and demonstrated leadership are all considered in admissions decisions. Interested students should apply to the MSB using the TCU Neeley Graduate Programs Application.

Admission Application Checklist

An application to the Traditional MSB will not be considered by the Admissions Committee until all of the following materials are received:

1. Completed application form and essays
2. An official transcript from each college or university previously attended
3. Contact information for two professional references
4. Application fee of $100 (unless waived)
5. Official GMAT scores (unless waived)
6. Official TOEFL scores (non-native English speakers only)
7. Personal interview (by invitation only)

Accelerated MSB

The Accelerated MSB is designed for undergraduate students enrolled at TCU who plan to complete up to six hours of their MSB degree while completing their bachelor's degree. After completing a minimum of 75 hours toward their bachelor degree, a TCU student who has been accepted to the Accelerated MSB may enroll in select 55000-level MSB courses as a component of or in addition to their undergraduate degree requirements. Following their undergraduate graduation, students matriculate into the MSB degree plan and complete the remaining graduate credit hours toward the MSB degree. Students intending to pursue the Accelerated MSB should inform their Academic Advisor as early as possible.

The Accelerated MSB applies a holistic approach to the admissions process. Applicants must demonstrate academic proficiency as well as the ability to perform in a highly interactive, team-based environment. Academic records, relevant test scores, motivation, maturity, and demonstrated leadership are all considered in admissions decisions. Interested students should apply to the Accelerated MSB during the semester in which they will have completed a minimum of 75 total credit hours. Interested students should apply to the MSB using the TCU Neeley Graduate Programs Application.

An application to the Accelerated MSB will not be considered by the Admissions Committee until all relevant application materials are received. The required materials are identical to those required for the Traditional MSB, as listed under Admission Application Checklist above.

MSB Degree Requirements

The MSB degree requires successful completion of 30 hours of graduate-level courses. The degree requirements are identical for the Traditional MSB and Accelerated MSB. Students must complete 12 hours of required courses and 18 hours of elective courses. Students completing a minimum of 10.5 hours of elective courses in a designated area will earn a Specialization in that area, which will be included on their official TCU transcript. In completing the MSB, no more than 15 hours of coursework below the 60000 level may be applied toward the degree.

The MSB Curriculum

Required (core) courses:		
ACCT 60010	Financial Reporting	1.5
ENTR 60250	Innovation & Entrepreneurship	1.5
FINA 60010	Financial Management I	1.5
INSC 60600	Concepts in Supply Chain Management	1.5
MARK 60010	Marketing Management	1.5
BUSI 66100	Career Management and Professional Development	1.5
INSC 60010	Statistical Models	1.5
MANA 60330	Engaging People	1.5
	Elective Hours	18.0
	Total Credit Hours	30

MSB Specializations and General Electives

The MSB degree includes 18 hours of electives. A student completing a minimum of 10.5 elective hours in a designated area will earn a Specialization, which will be included on their official TCU transcript. For the 7.5 hours beyond the 10.5 minimum required for a Specialization, a student may take additional hours in their area of Specialization, hours from other MSB Specializations, or MSB General electives. Requirements for MSB Specializations and the courses available as MSB General electives are indicated below. To enroll in courses, students must meet course prerequisites or corequisites unless waived by the relevant academic department chair.

Entrepreneurship MSB Specialization

Choose a minimum of 10.5 hours from this list, or other courses approved by Graduate Programs' academic leadership team and the Program Faculty Director.		
ENTR 60113	NIL Entrepreneurship	3
ENTR 60313	Social Venturing	3
ENTR 60280	Entrepreneurial AI Foundations I	1.5
ENTR 60290	Entrepreneurial AI Foundations II	1.5
ENTR 70523	New Venture Planning	3
ENTR 70513	Venture Ideas	3
ENTR 70533	Funding Entrepreneurial Ventures	3
	Total Hours Available	18

Financial Management MSB Specialization

Choose a minimum of 10.5 hours from this list, or other courses approved by Graduate Programs' academic leadership team and the Program Faculty Director.		
ACCT 60153	Financial Reporting I	3
ACCT 60163	Accounting for Decision Making & Control	3
ACCT 60303	Principles of Taxation	3
ACCT 70153	Financial Statement Analysis	3
FINA 70010	Financial Management II	1.5
FINA 70420	Options and Futures Markets	1.5
FINA 70520	Risk Management and Financial Engineering	1.5
FINA 70543	Advanced Financial Management	3
	Total Hours Available	19.5

Management MSB Specialization

Choose a minimum of 10.5 hours from this list, or other courses approved by Graduate Programs' academic leadership team and the Program Faculty Director.		
MANA 60323	Organizational Analysis and Problem-Solving	3
MANA 60203	Managing People and Human Resources	3
MANA 60223	International Management	3
MANA 60340	Leading Teams and Organizations	1.5
MANA 60460	Business Ethics	1.5
MANA 70610	Essential of Negotiations	1.5
MANA 70760	Transformational Leadership	1.5
MANA 70870	Practice of Consulting	1.5
	Total Hours Available	16.5

Marketing MSB Specialization

Choose a minimum of 10.5 hours from this list, or other courses approved by Graduate Programs' academic leadership team and the Program Faculty Director.		
MARK 60213	International Marketing	3
MARK 60223	Exceptional Service Experiences	3
MARK 70110	Marketing Analytics	1.5
MARK 70120	Customer Insights	1.5
MARK 70210	Analytics for Innovation	1.5
MARK 70233	Multimedia Marketing Campaigns	3
MARK 70243	Product Innovation and Brand Management	3
MARK 70303	Field Project in Managing Products and Brands	3
MARK 70770	Marketing Research	1.5
	Total Hours Available	21

Supply Chain Management MSB Specialization

Choose a minimum of 10.5 hours from this list, or other courses approved by Graduate Programs' academic leadership team and the Program Faculty Director.		
INSC 60513	Sustainable Supply Chain Management	3
INSC 70430	Supply Chain Operations Management	1.5
INSC 70630	Demand Forecasting Management	1.5
INSC 70650	Strategic Sourcing and Procurement	1.5
INSC 71003	Project Management	3
INSC 71050	Leading Supply Chains	1.5
INSC 70610	Logistics and Transportation	1.5
INSC 70640	Global Supply Chain Management	1.5
MANA 70610	Essentials of Negotiations	1.5
MANA 70760	Transformational Leadership	1.5
	Total Hours Available	18

MSB General Electives

The following courses count toward the MSB's 30 required hours, but not for a Specialization. Other graduate courses may also be available on a limited basis with permission of Graduate Programs' academic leadership team and the Program Faculty Director. Such courses may be offered on a Special Problems basis, as indicated by a 50970, 55970, 60970, or 70970 course number.		
BUSI 60383	Global Business with an Ethical Lens	3
BUSI 60733	Alternative & Renewable Energy	3
INSC 60040	Managing Information Technology	1.5
INSC 60050	Business Analytics	1.5
INSC 60523	Managing for Sustainable Business	3
INSC 70440	Cybersecurity	1.5
INSC 71020	Six Sigma Green Belt for Managers	1.5
INSC 71030	Managing Risk & Uncertainty	1.5

Degree Designation
M - Master's Degree

Catalog Description

The Master of Science in Creative Leadership & Design is an 18 to 24-month or accelerated (12-month, 4+1 program) graduate program for early to mid-career design professionals seeking education to advance their careers in creative direction and design management or gain knowledge to pursue entrepreneurial opportunities in the fields of graphic, advertising, UX, digital, product, lighting, interior, fashion, and other design.

Students planning to apply for this program should seek advising as soon as possible, preferably at the end of their sophomore or beginning of their junior year of study. Students may apply for admission into the accelerated master's after earning 60 hours of undergraduate coursework. During the semester prior to graduation from their program of study, students should seek advising from the director of graduate studies to plan for the final two semesters of graduate coursework.

For admission consideration, students must submit a graduate program application packet. The application process is selective; only students with an outstanding record and strong recommendations will be considered.

Admission to the (12 Month) Accelerated Master of Science in Creative Leadership and Design with a Certificate in Entrepreneurship and Innovation

Students must have completed 60 hours of undergraduate credit toward a bachelor's degree in an area associated with design or creativity. If admitted, students will complete a 30-hour graduate degree plan. Students will complete up to 9 hours of graduate coursework (three graduate courses) during the last

year of undergraduate study. Those 9 hours may also fulfill requirements for the BFA in Graphic Design, the BS in Design Studies, or as general electives toward a bachelor's degree in an area associated with design or creativity. Candidates must work with the graduate adviser to determine how the courses will apply to the MS degree. At the end of a student's fourth year, assuming all other graduation requirements are met, the student earns the baccalaureate degree (in Graphic Design or Design Studies. During the fifth year, students must take an additional 21 hours to complete the Accelerated MS in Creative Leadership degree including 6 hours in Design Project.

Admission to the (18 to 24 Month) Master of Science in Creative Leadership with a Certificate in Entrepreneurship and Innovation

Applicants must have earned a bachelor's degree in an area associated with design or creativity with a GPA of 3.0 or better. If admitted, students will complete a 30-hour graduate degree plan over 18 to 24 months

Catalog Description
MUSIC MINOR OVERVIEW

There are two tracks in the music minor:

- The General Track is the most flexible, allowing students to tailor their coursework to their musical interests. No previous music experience is required.
- The Performance Track is designed for students who are interested in developing their skills via instrumental/vocal performance. Previous music experience is required.

Music minors are required to take the Music Theory Placement Exam for all music theory and aural skills classes *except* MUSI 10043 Music Theory for Non-Majors. The exam is typically offered once prior to the first day of classes in the Fall semester. Exam dates will be posted on the School of Music website.

Music minors may enroll in applied lessons pending faculty consultation and studio availability.

The minor requires a minimum of 18 credits, including 6 credits of upper-division coursework. Students must earn a grade of "C" or better in all courses applied toward the minor.

Music Minor: General Track

Music Requirements

Academics (9 hours)

Music Theory (3 hours – based on Music Theory Placement Exam results, as applicable)

- MUSI 10043 Music Theory for Non-Majors
- MUSI 10003 Fundamentals of Music Literacy
- MUSI 10203 Elementary Theory I
- MUSI 10213 Elementary Theory II
- MUSI 20203 Advanced Theory I
- MUSI 20213 Advanced Theory II

Music History (6 hours – choose two of the following)

- MUSI 10033 Survey of Jazz
- MUSI 10053 Survey of Western Art Music
- MUSI 10083 Survey of Film Music
- MUSI 10073 Survey of Rock
- MUSI 10063 Survey of World Music

Electives (9 hours)

Other elective options may be approved by the Director of the School of Music.

Music History

- MUSI 10033 Survey of Jazz
- MUSI 10053 Survey of Western Art Music
- MUSI 10083 Survey of Film Music
- MUSI 10073 Survey of Rock
- MUSI 10063 Survey of World Music

Music Theory

- MUSI 10203 Elementary Theory I
- MUSI 10213 Elementary Theory II
- MUSI 20203 Advanced Theory I
- MUSI 20213 Advanced Theory II

Ensembles (0.5 credits each)

Non-Auditioned

- MUSI 10110 Marching Band
- MUSI 10130 Vox Resonare

- MUSI 10140 Frog Corps
- MUSI 10250 Mariachi Ensemble

Other Ensemble

- MUSN 30060 Upper Division Ensemble

Applied Lessons (1.0 credit each)

- MUSN 10110 Applied Lessons for Non-Majors –Lower Division Voice
- MUSN 10310 Applied Lessons for Non-Majors –Lower Division Strings
- MUSN 10410 Applied Lessons for Non-Majors –Lower Division Woodwinds
- MUSN 10510 Applied Lessons for Non-Majors –Lower Division Brass
- MUSN 10610 Applied Lessons for Non-Majors –Lower Division Percussion

Applied Classes (1.0 credit each)

- MUSN 11021 Intro Piano for Non-Musician
- MUSN 11030 Piano for the Non-Musician
- MUSI 20051 Class Voice

Other (1-3 credits)

- MUSI 10091 Yoga for Musicians (may not be repeated for credit)
- MUSI 30352 Fundamentals of Digital Recording
- MUSI 30343 Fundamentals of Electro-Acoustic
- MUSN 30512 Intro to Conducting for Non-Majors

Music Minor: Performance Track

Requirements

Academics (8 credits)

Music Theory (3 credits, based on Music Theory Placement Exam results)

- MUSI 10003 Fundamentals of Music Literacy
- MUSI 10203 Elementary Theory I
- MUSI 10213 Elementary Theory II
- MUSI 20203 Advanced Theory I
- MUSI 20213 Advanced Theory II

Aural Skills (2 credits, based on Music Theory Placement Exam results)

- MUSI 10201 Elementary Ear Training I
- MUSI 10211 Elementary Ear Training II
- MUSI 20201 Advanced Ear Training I
- MUSI 20211 Advanced Ear Training II

Music History (3 credits)

- MUSI 10033 Survey of Jazz
- MUSI 10053 Survey of Western Art Music
- MUSI 10083 Survey of Film Music
- MUSI 10073 Survey of Rock
- MUSI 10063 Survey of World Music
- MUSI 20613 History of Western Music

Applied Lessons & Ensembles (6 credits)

Applied Lessons (4 credits, 1-2 whole credits each)

- MUSN 10110 Applied Lessons for Non-Majors –Lower Division Voice
- MUSN 10310 Applied Lessons for Non-Majors –Lower Division Strings
- MUSN 10410 Applied Lessons for Non-Majors –Lower Division Woodwinds
- MUSN 10510 Applied Lessons for Non-Majors –Lower Division Brass
- MUSN 10610 Applied Lessons for Non-Majors –Lower Division Percussion
- MUSN 30110 Applied Lessons for Non-Majors –Upper Division Voice
- MUSN 30310 Applied Lessons for Non-Majors –Upper Division Strings
- MUSN 30410 Applied Lessons for Non-Majors –Upper Division Woodwinds
- MUSN 30510 Applied Lessons for Non-Majors –Upper Division Brass
- MUSN 30610 Applied Lessons for Non-Majors –Upper Division Percussion

Ensembles (2 credits, 0.5 credit each)

Auditioned

- MUSI 10010 Wind Symphony
- MUSI 10020 Percussion Ensemble
- MUSI 10040 Concert Chorale
- MUSI 10050 Steel Band I
- MUSI 10070 Vocal Jazz Ensemble
- MUSI 10080 Chamber Music
- MUSI 10090 Woodwind Ensemble
- MUSI 10120 Symphony Orchestra
- MUSI 10150 New Music Ensemble
- MUSI 10160 Brass Ensemble
- MUSI 10180 Collegium Musicum
- MUSI 10190 Jazz Ensemble
- MUSI 10210 Symphonic Band
- MUSI 10240 Steel Band II
- MUSI 10320 Percussion Ensemble II
- MUSI 10350 TCU Cello Ensemble
- MUSI 10360 TCU Harp Ensemble
- MUSI 10420 Symphony Orchestra - Strings
- MUSI 10060 University Singers
- MUSI 10100 Opera Studio

Non-Auditioned

- MUSI 10110 Marching Band
- MUSI 10130 Vox Resonare
- MUSI 10140 Frog Corps
- MUSI 10250 Mariachi Ensemble

Other Ensemble

- MUSN 30060 Upper Division Ensemble

Electives (4 credits)

Other elective options may be approved by the Director of the School of Music.

Applied Lessons (1-2 whole credits each)

- MUSN 10110 Applied Lessons for Non-Majors –Lower Division Voice
- MUSN 10310 Applied Lessons for Non-Majors –Lower Division Strings
- MUSN 10410 Applied Lessons for Non-Majors –Lower Division Woodwinds

Catalog Description

Nutrition MS, without DPD Verification

Requirements

Program of Study

The Master of Science program in Nutritional Sciences provides students with a course of study in advanced nutrition topics related to disease prevention and management, health optimization, and food and nutrition sustainability. The program prepares graduates for positions in advanced clinical, community, and management careers as well as careers in various industry settings. Students are able to tailor the degree with additional course options within, and outside of, Nutritional Sciences. This degree requires a minimum of 30 semester hours beyond a Bachelor's degree. Students may or may not choose to complete a thesis. In order to complete a thesis, students must complete 3 hours of **NTDT70980 Thesis** and 3 hours of **NTDT70990 Thesis**. Students must have a 3.0 GPA in prerequisite courses consisting of: General Chemistry I, General Chemistry II with lab, Organic Chemistry, Physiology with lab, and Nutrition. No GRE is required.

Students also have the option to pursue post-baccalaureate Didactic Program in Dietetics (DPD) **Nutrition MS, with DPD Verification**. The MS NUTR DPD track is specifically designed for students who hold a Bachelor's degree in a related or unrelated field, and want to pursue Accreditation Council for Education in Nutrition and Dietetics (ACEND) accredited supervised practice upon program completion, in order to become a Registered Dietitian/ Nutritionist (RD/RDN).

Graduate First Year (Courses are listed by number, title, and credit hour for each semester)

NTDT50973 Nutritional Sciences Seminar	Nutritional Sciences Seminar	3
NTDT60443 Integ Funct Nutr and Genomics	Integrative Functional Nutrition and Nutritional Genomics	3
NTDT60453 Nutr Ecology Food Sustainablty	Nutrition Ecology, Food, and Sustainability	3
NTDT50343 Aspects of Human Nutrition	Biochemical, Physiological, and Molecular Aspects of Human Nutrition	3
	Electives	6

Graduate Second Year (Courses listed by number, title, and credit hour for each semester)

NTDT70980 Thesis	Thesis	3
	Elective	3
	OR	
Non-thesis	Electives	6
NTDT70990 Thesis	Thesis	3
	Elective	3
	OR	
Non-thesis	Electives	6

Elective Course Options

NTDT60973 Nutritional Sciences Grad Sem	Nutritional Sciences Graduate Seminar	3
NTDT50323 Gut Microbiota and Health	Gut Microbiota and Health	3
NTDT50363 Community Nutr and Public Hlth	Community Nutrition and Public Health	3

Non-Nutrition Graduate Course Options

CHDV50433 Trauma & Relationships	Trauma & Relationships	3
CHDV50533 Case Studies in Child Dev	Case Studies in Child Development	3
COSD50323 Interact Skills Health Prof	Interaction Skills for Health Professionals	3
EDUC50003 Diversity In Amer Educ	Diversity in American Education	3
EDUC60043 Action Research	Action Research	3
EDGU60383 Counseling Theories & Techniq	Counseling Theories and Techniques	3
EDGU60133 Addictions Counseling	Addictions Counseling	3
EDGU60323 Assessment in Counseling	Assessment in Counseling	3
INSC72470 Healthcare Improvement Science	Healthcare Improvement Science	1.5
SOWO61823 Diversity & Social Justice	Diversity and Social Justice	3
SOWO61843 Human Behavior 1	Human Behavior and the Social Environment 1	3
SOWO61853 Human Behavior 2	Human Behavior and the Social Environment 2	3
MANA72410 Health Care in the U.S.	Health Care in the U.S.	1.5
MANA72423 U.S. Health Care Policy	U.S. Health Care Policy	3
MANA72480 Healthcare Leadership	Challenges in Healthcare Leadership	1.5

ACCT60010 Financial Reporting	Financial Reporting	1.5

*Students can take up to 15 hours of 50000 level credit towards the MS degree.

Catalog Description

Musical Arts, DMA

The objective of the TCU Doctor of Musical Arts (DMA) degree in performance, piano pedagogy, composition or conducting is to develop the musician-scholar—one who displays a high level of mastery in a professional medium and is equipped with scholarly research skills. The program leading to the degree is designed to prepare musician-scholars for careers as creative artists and teachers at institutions of higher learning. Enrollment in the doctoral program is carefully monitored toward the goal of remaining highly selective and relatively small. Prospective DMA students must demonstrate the potential for both artistry and scholarship on the highest levels.

DMA Admission Requirements

To be admitted for study leading to the Doctor of Musical Arts, applicants must hold a master's degree in music or music education (or the equivalent) of at least 30 graduate credit hours from an accredited college, university, or comparable institution, and present a GPA of at least 3.0 for all previous graduate-level work (A = 4.0). Appropriate preparation for doctoral study will vary according to the major/degree plan chosen; therefore, prospective applicants should consult with faculty in their intended major area for specific requirements and expectations.

Applicants are required to submit the following:

1. Completed online application to TCU Graduate Studies and the School of Music
2. Two official transcripts of all college work. Translations must be provided for all international transcripts
3. Non-refundable application fees will be charged for both the TCU application and the School of Music application
4. Three current letters of reference from persons qualified to comment on the applicant's academic and/or musical achievement, teaching and/or professional experience, and potential for success in the degree program
5. A double-spaced typed paper of five pages or more that illustrates the applicant's writing and research skills. A term paper completed as part of master's level work is sufficient, or the student may submit a research paper, a critical analysis, or an article suitable for publication
6. A curriculum vitae is required. This should include a list of concert performances, compositions, publications, and other musical accomplishments
7. Test scores must be sent to TCU from the testing agency: GRE (composition only) and TOEFL or IELTS (international students)
8. Applicants must complete the requirements for the major field of study as described below:

Performance

Applicants must submit a video recording of a live performance and include a program (PDF preferred). These required materials are uploaded through the School of Music website.

Composition

Applicants must submit five scores of recent works with recordings, as available. These materials should be mailed directly to the School of Music. Complete directions are available at the School of Music website.

Conducting

Applicants must submit a video recording of a recent ensemble performance and rehearsal conducted by the applicant and a repertoire list of significant works conducted, as well as those prepared for conducting. These required materials are uploaded through the School of Music website.

Piano Pedagogy

Applicants must submit a video recording of their teaching. The teaching excerpt should include a private lesson and may include a group lesson. International students should submit a video demonstrating their ability to teach using the English language.

Audition

Based on the results of pre-screening, an invitation may be extended to perform an on-campus audition and/or interview in the principal applied music area before a faculty committee. Applicants should not select an audition day until they have received an official invitation to do so. If invited, the audition/recital/interview should be arranged in coordination with the faculty in the major area and the School of Music. Consult the faculty in the major area for instructions concerning the audition requirements, materials to bring, etc. The School of Music will send faculty contact information after application materials are received. Audition dates are posted on the School of Music website.

Language Requirement

Applicants to the DMA in Voice and Composition must demonstrate a reading knowledge of one language in addition to English.

Applicants may meet the language requirement by having earned at least a "B" average in the undergraduate sophomore year (both semesters) of the language, by earning a "B" in a graduate-level course in the language, or by achieving an appropriate score on a language exam such as the College Level Examination Program (CLEP). Curricular DMA credit is not given for language courses; in addition, no graduate financial aid is available for these courses.

Entrance Examination

The academic and musical abilities of all applicants are assessed by means of an entrance examination. This exam is given during the audition/interview visit. The exam serves as a diagnostic tool to determine whether or not a student is prepared for doctoral study, the results of the exam are reported to the School of Music and added to the student's file.

Students whose master's degree program did not include a course in bibliographic research will be required to take **MUSI60103 Bibliography&Resh Techni** Bibliography and Research Techniques; this course must be counted as an elective.

Further information about the entrance exam and suggestions for preparation are available at the School of Music website.

English Requirements for International Applicants

In order to be considered for admission to the TCU DMA Program, all international students must complete the Test of English as a Foreign Language and achieve a score of 100 on the iBT, TOEFL, 7.5 on the IELTS, or 120 on Duolingo. Official scores must be sent to TCU from the testing agency.

This requirement applies to prospective international students.

Students who have earned a degree (in music) at an English-language university may be exempted from taking the TOEFL, at the discretion of the School of Music.

The on-campus interview and submitted writing samples will also be used to evaluate each applicant's English language proficiency. International students may be asked to interview via teleconference to ascertain listening and speaking ability in English.

GRE

The GRE is required of DMA applicants in Composition. Be sure to take the exam early enough that scores are available during the admissions decision process.

Application Deadlines

For full consideration, applicants seeking admission to the DMA Program should complete their application by December 1 to be considered for fall matriculation.

Graduate Assistantships

Graduate assistantships are available in various areas; these assistantships provide a tuition waiver, a stipend or both, and require up to 10 hours of work per week. Graduate assistants must be full-time resident students. The application must be received in the graduate office by December 1 for full consideration for the fall semester.

Generally, assistantships are for a complete academic year and are not available starting in the spring semester. Students are notified by April 15 if they have been granted an assistantship for the next academic year.

TCU adheres to the following Code of Ethics of the National Association of Schools of Music: "The acceptance of financial aid or the signing of a declaration of intent to enter a given institution to begin a specific degree or program of study shall not be binding if signed before April 15 of the calendar year of matriculation. In accepting this offer of financial aid from TCU, the student understands that there is a mutual commitment on the part of the student and the institution. The student agrees that after April 15 of the calendar year of matriculation, the student will not consider any other offer of financial aid from an institutional member of the National Association of Schools of Music or any other institution for the purpose of enrolling in a music major program for the academic year except with the express written consent of the music executive of TCU. Institutions shall allow students to choose without penalty among offers of admission and financial aid until April 15 of the calendar year of matriculation. Written declarations of intent become binding on these dates.

Doctoral students may hold an assistantship for a maximum of four years; yearly renewal is dependent upon the recommendation of the faculty. In order to have an assistantship renewed, the student must make

excellent progress in all aspects of his/her degree plan, display professional and collegial conduct, and fulfill all assistantship duties.

The University assumes that the student's primary obligation is toward graduate study. The Director of the School of Music and the Associate Dean of the College of Fine Arts reserve the right to review any outside employment and require that the student modify the commitment to the outside employment or relinquish the financial aid appointment. Beginning with the first semester of study, all master's, doctoral, and artist diploma students are encouraged to seek additional teaching and performing experience beyond those duties associated with a graduate assistantship. Students should work with their applied faculty member to seek out such opportunities.

DMA Keyboard Proficiency

Certain areas of study require keyboard proficiency. These standards are as follows:

Composition: Keyboard sight reading for composition majors consists of simple four-part, open choral score reading and a demonstrated ability to sight-read multiple lines at a time from a full orchestral or band score at pitch and in common transpositions (F, E-flat, B-flat, A) and tenor or alto clefs. The selected excerpts, which require moderate piano technical skills, must be transposed to the proper key and sounding octave.

Choral Conducting: Sight reading for choral conducting majors consists of four-part, open choral score reading.

Wind Instrument Conducting: Sight read lines from a full orchestral or band score in common transpositions (F, E-flat, B-flat, A) and tenor or alto clefs. The selected excerpts, which require moderate piano technical skills, must be transposed to the proper key and sounding octave.

Orchestral Conducting: Two excerpts will be given to the student 24 hours prior to the exam, including four-part strings and four to five woodwinds and/or brass, including at least two transpositions. Two additional excerpts will be given at the exam, including a single line in alto or tenor clef, and a single line in B-flat, F, or A transposition.

The student's keyboard proficiency will be ascertained by means of an audition; the required skills must be acquired be for candidacy.

DMA Program Specifics

Cognate Requirements

DMA programs in Performance, Composition, and Conducting require a cognate, or minor area, in addition to the major program. The cognate allows students to focus upon a secondary area and strengthen their overall musicianship, building upon the foundations of the major. Each cognate requires a total of 6 credits beyond the 54-credit requirement of the major, resulting in a total of 60 credits. A list of cognates and required coursework can be found below the individual DMA degree requirements.

The DMA in Piano Pedagogy requires 60 credit hours on its own; therefore, it is not allowed to have a cognate.

Major and Professor

At the time of admission, each student is assigned a faculty member—typically the student's professor in the major area—who serves as adviser and mentor throughout the program. The Major Professor advises the student on all matters pertaining to the program of study.

The Major Professor typically serves as the chair of the students Doctoral Committee, guiding the preparation of recitals and research for the Document or Dissertation. The chair of the committee chairs the oral portion of the general exam as well as the final oral defense.

Co-Major Professor

If the Major Professor does not have an earned doctorate, a Co-Major Professor from the same area with an earned doctorate will be appointed. In this case, the Co-Major Professor will be the chair of the student's doctoral committee and mentor for the DMA Document/Dissertation. He/she will also lead the oral

exam and defense. The Major Professor and Co-Major Professor must work cooperatively to ensure the student's success in all aspects of the program.

Doctoral Committee

Each student is counseled by a Doctoral Committee which is selected jointly by the student and the Major Professor. The student contacts members of the faculty to secure their willingness to serve on the committee and obtains the signature of each member on the Appointment of Doctoral Committee Form.

The Doctoral Committee will normally consist of five members:

1. The Major Professor
2. Another professor from the major area
3. A faculty member from Theory/Composition
4. A faculty member from Musicology
5. A professor from outside the School of Music, or possibly from outside TCU.

The chair of the committee will be the Major Professor, or Co-Major Professor, following the guidelines above.

The committee conducts the oral portion of the comprehensive examination, supervises the preparation of the Document/Dissertation, and administers the final oral defense. At the Document/ Dissertation stage, the Doctoral Committee may be reconstituted to provide additional expertise appropriate to the project. Any changes in membership of the Doctoral Committee must receive approval by the Coordinator of Graduate Studies.

Doctoral Committee Report

The Doctoral Committee Report affords the opportunity for a thorough review of the student's degree progress. It is normally prepared jointly by the Major Professor and student when the student has earned at least 20, but not more than 30 doctoral credits, using the Doctoral Committee Report form. It is then circulated to all Doctoral Committee members for approval.

The report specifies the requirements for the completion of the degree and thus constitutes an agreement between the student, Doctoral Committee, and the School of Music. It must be submitted to and accepted by the College of Fine Arts Graduate Office prior to attempting the general examination.

Residency Requirements

The student must be in residence as a full-time student for two consecutive regular semesters (fall/spring or spring/fall). A minimum of nine hours of approved coursework and/or approved research must be completed each semester of the year of residence. Depending on the area of study, summer study/ coursework may or may not be available. Summer coursework does not count toward residency requirements. Any exceptions to this policy must be approved by the Director of the School of Music and the College of Fine Arts Associate Dean for Academic Affairs.

Transfer Credit

All TCU DMA programs include 60 semester hours of credit. A master's degree of at least 30 hours is a prerequisite for DMA study at TCU.

1. Students whose master’s degree program included more than 30 hours may be eligible to transfer up to 6 hours of master’s degree work.

2. Up to 6 additional credits may be transferred from any graduate level work done beyond the first master’s degree.

3. Up to 12 semester hours of transfer credit earned beyond the master’s level may be applied to doctoral degree requirements in accordance with the following rules:

a) The credit hours transferred must represent valid graduate credit from an institution accredited to offer the DMA or equivalent degree.

b) The credit is applicable to the degree program and is approved by the Major Professor and the College of Fine Arts Associate Dean for Academic Affairs.

c) Credit hours in the candidate’s major area of concentration may not be transferred.

d) Credit hours transferred must carry a grade of “A” or “B”

e) Credit hours transferred normally cannot be more than five years old at the time of admission or readmission to the degree program.

DMA Public Performance Requirements

The program content for DMA recitals must be approved by the Major Professor. In the case of a lecture recital, an outline of the lecture must accompany the program. The first recital should be presented before the general examination is taken, and at least one recital should be performed after the general examination has been passed. Once formed, the Doctoral Committee should be notified of the time, date, and location of each recital by the candidate at least two weeks prior to the performance. The Committee must also be furnished with the recital program two weeks in advance.
Normally, all doctoral recitals are given on campus. However, with permission of the Major Professor, a student may present a recital off campus. When a recital is given off campus, the Major Professor must be in attendance.
The recital will be evaluated and graded by the Major Professor, who may consult with committee members or other faculty in attendance. The student should send a web link to the recorded performance to all members of his/her doctoral committee.

Performance: A minimum of three public performances is required. At least two performances must be full-length solo recitals. The remaining performance may be either a lecture recital or chamber music recital. A student who has an opportunity to perform a concerto with orchestra or appear in a major operatic role may apply for evaluation of such performances as a portion of the recital requirements. Concerto or operatic performances may not be substituted for more than one full-length recital. Such substitution must be approved in advance by the student's Doctoral Committee. Memorization requirements are determined by the faculty in the major area. A recording may be required by some programs/areas.

Piano Pedagogy: A student emphasizing piano pedagogy must demonstrate competence both as a performer and as a teacher. To this end, three public performances are required:

1. A full-length solo recital;
2. A second full-length solo recital, a lecture recital (which may be pedagogical in nature), or a chamber music recital in which the piano plays an important musical role; and
3. A public workshop for piano teachers concentrating on teaching techniques and materials. The public workshop must be at least five hours in length. It may be presented off campus, provided the Major Professor is in attendance and the workshop is recorded.

Composition: A student in composition must demonstrate competence as a practitioner of the musical art by presenting two recitals. One recital is a program of original music. The second recital requirement may be satisfied through the presentation of a single recital of original music or the equivalent realized through several performances of original compositions presented during regular School of Music concerts or recital programs. As appropriate, the student may appear as a soloist, member of a chamber ensemble or as conductor. A student who has the opportunity for a significant off-campus performance of original music may apply for evaluation of that performance as a portion of the second recital requirement. This must be approved by the Major Professor and the Doctoral Committee.

Conducting: Three public performances are required. Two of these may be performed by TCU School of Music ensembles; at least one recital must be performed by a group recruited by the student. At least two performances must be full-length concerts. The remaining performance may be a lecture recital related to the document topic. Concert literature should comprise a variety of national and historical styles, and should make use of large as well as small ensembles. Choice of repertoire and media is made after consultation with and approval of the Major Professor

and the Doctoral Committee. Detailed and specific requirements are available from the conducting area faculty.

Recital Recording

Recitals performed on the TCU campus will be recorded by School of Music staff. The student must arrange for a recording to be made of any recitals given outside of the School of Music or off campus. Recordings made by the School of Music are archived by the library.

DMA Comprehensive Examination

The comprehensive examination is designed to evaluate the student's ability to integrate knowledge, apply theoretical concepts, demonstrate skills and draw conclusions. It covers coursework completed for the doctoral degree as well as general musical knowledge acquired through prior study and professional experience. Topics include music theory, music history, the major area and cognate area.

Before taking the examination, the student should have completed nearly all of their coursework in music history and theory, and a majority of the major field coursework. The student must receive the approval of his or her Doctoral Committee to take the examination using the Approval for Taking the DMA Comprehensive Exam form. This form must be signed by all members and returned to the School of Music. The student must be enrolled in at least one graduate credit hour during the semester in which the comprehensive examination is taken.

The Comprehensive Examination is both written and oral. The written portion of the examination has four parts: music theory, music history, the cognate area, and the major area. The exam is offered once per semester, scheduled as needed. All four parts are taken during a two-day period.

Once a student has passed all parts of the written exam, the oral portion may be scheduled; this will be 2 to 4 weeks after the written exam. All members of the Doctoral Committee, including the outside member, must be present when the oral portion of the examination is administered. The oral exam is essentially a “follow up” on the written exam. The candidate will have an opportunity to clarify or expand on any issues not adequately covered in writing.

After the oral portion of the comprehensive examination, the committee will determine if the student has passed. The result will be conveyed by the Report of DMA Comprehensive Examination form. The Major Professor should bring this form to the oral exam. All members of the committee must sign the form and it is then returned to the Coordinator of Graduate Studies in the School of Music. If the student fails, the student may, with the permission of the committee, attempt the examination one more time during the following semester or later. A third attempt is not permitted.

DMA Written Document/Dissertation

A 6-credit hour written Document is required for the DMA in Performance, Piano Pedagogy and Conducting. The Document is normally more limited in scope than a Dissertation, but demonstrates high standards of scholarship and contributes to existing knowledge. It is hoped that the final project is suitable for publication.

Composition students produce a full 12-hour dissertation of one or more compositions suitable for publication.

Students should begin thinking about a topic early during the coursework so they may be ready to present the topic proposal as soon as possible during their degree program.

Choosing a Topic

Performance, Conducting, and Piano Pedagogy: The document is normally concerned with such areas as music history, repertoire, performance practices, analysis of major works, human physiology, acoustics, psychology, aesthetics, teaching methods and materials, and the editing of lesser-known compositions.

Composition: The Dissertation comprises one or more major works.

Proposal

Once a potential topic is identified, a written proposal is prepared under the guidance of the Major Professor and possibly other members of the Doctoral Committee. The proposal normally includes an introduction, a discourse on the nature and importance of the topic, the state of current knowledge relevant to the topic, a chapter-by-chapter outline, and a bibliography. Sample chapters may also be required. Expectations for the proposal will vary considerably from one major area to another. The Major Professor will ultimately determine the style and scope of the proposal, which will be shaped by the expectations in that particular discipline.
Once the proposal is written, it is submitted to all committee members for comments and suggestions. Following further revision (if needed), the proposal is considered at a meeting of the entire Doctoral Committee. Approval of the proposal is indicated on the Approval of DMA Document/Dissertation Proposal form.

Document or Dissertation Hours Enrollment

The student should enroll in *MUSI 90960*/**MUSI90970 DMA Document** (DMA Document) or **MUSI90980 DMA Composition Dissertation**/**MUSI90990 DMA Composition Dissertation** (DMA Composition Dissertation) during any enrollment period in which work on the project or proposal is undertaken. Following the initial enrollment in Document or Dissertation hours, a student should maintain continuous enrollment during each regular semester in at least one hour of Document or Dissertation until the degree is completed. The 6 or 12 Document/ Dissertation credit hours should be divided as evenly as possible over the semesters in which the work is unfolding; normally this will begin in the fifth semester of study. DMA candidates must be enrolled in at least 1 credit until graduation to remain active in the program.

Document/Dissertation Writing

During the research and writing of the project, the candidate is advised to consult regularly with the Major Professor and, from time to time, with the other members of the Doctoral Committee. The Major Professor bears the primary responsibility for guiding the research efforts of the doctoral candidate and should possess expertise in the topic area as well as skills of scholarship necessary to guide the project to successful completion. When the topic extends beyond the expertise of this faculty member, a Co-Major Professor may serve the best interests of the student. In addition, if the student's Major Professor does not have an earned doctorate, the Co-Major Professor, appointed at the outset of doctoral study, will mentor the project. (See above, Co-Major Professor.) The major or Co-Major Professor supervises the project to ensure exhaustive research of the topic, a thorough and complete report of the findings, a logical organization of the paper, correct grammar, proper spelling, scholarly writing style, and appropriate format. Before other members of the Doctoral Committee receive the paper for review (either in part or whole), the paper should be at a stage of progress and level of scholarship suitable for critical examination.

Each committee member brings his/her own area of expertise to bear on the paper and carefully scrutinizes it for weaknesses in research, content, organization and general scholarship. In the case of disagreement between the committee members, the Major Professor (chair of the Doctoral Committee) will have final authority over the project.

A style guide and instructions for the Document/ Dissertation may be found on the CFA grad studies website. This guide includes samples for the title and signature page. Since all TCU theses, Documents, and Dissertations are electronically archived, previous successful DMA projects may be downloaded from the TCU library repository. The student should examine these works. URL links to the repository are provided in the style guide.

Completing and Defending the Document/ Dissertation

The following timeline assumes that the student has worked for several semesters on the project and that the Major Professor and committee members have provided sufficient input and guidance. The candidate must enroll in at least one graduate hour during the

semester in which the project is completed and the Final Oral Defense is taken. Deadlines will vary somewhat from year to year, but will be essentially as follows:

Week 2: The candidate must file an Intent to Graduate Form through the College of Fine Arts website. A non-refundable fee is charged when the Intent is filed. Candidates should not file the Intent without reviewing the following deadlines and obtaining permission from the Major Professor.

Week 6: The completed Document/Dissertation must be available for the committee by this time. Minor revisions may take place during the weeks following this date. If the committee, led by the Major Professor, approves the Document/Dissertation the final oral defense may be scheduled.

Week 11: Date of Final Oral defense should be agreed upon and set by this time. In order to allow adequate time for preparation of questions, the candidate will provide a PDF of the finished Document/Dissertation to each member of the committee two weeks before the defense.

Week 15: The Final Oral Defense must be completed by this date. The defense is a discussion of the Document/Dissertation. At least four members of the committee, including the Major Professor, must be present to conduct the defense. Following a decision on the candidate's defense, those committee members present will grade and sign the Report on the Final Oral Defense Form. The form should be emailed to the Coordinator of Graduate Studies.

Week 16: The candidate will submit a PDF of the final Document/Dissertation following the instructions posted on the TCU library website and the CFA Graduate website. Copyright may be obtained; the candidate must pay the fee for this optional service. The School of Music also requires a bound copy of the Document/Dissertation for its archives. Electronic submission of the final version of the project, including any changes suggested at the Oral Defense, must be completed by the Monday before graduation. The Major Professor must turn in a course grade for the Document/Dissertation by the Wednesday before graduation. This grade will replace all previous Incomplete grades for Document or Dissertation hours.

Time Limit

The DMA degree must be completed within 10 years of matriculation into the DMA program. Extension of the time limit must be applied for in writing to the Director of the School of Music, who will then make a recommendation to the Associate Dean for Academic Affairs. The letter should explain why the candidate did not complete the degree within the time limit and should present a schedule for completion of the degree.

DMA Music Degree Program Requirements

Composition

MUSI70630 Doctoral Composition	Doctoral Composition	1-3
MUSP80971 DMA Recital I	DMA Recital I	1
MUSP80981 DMA Recital II	DMA Recital II	1
MUSI60801 Composition Seminar	Composition Seminar	1

Piano Pedagogy Courses are chosen from **MUSI60203 Grad Piano Pedagogy&Pract I, **MUSI60213 Grad Piano Pedagogy&Pract II**, **MUSI60223 Current Trends And Res**, **MUSI60233 Teaching Interm-Adv Piano**, **MUSI60243 Piano Ensemble Teach/Perf Lit**, **MUSI60913 Psychology Of Music**, **MUSI60923 Philosophy Of Music Educ**, *MUSI 61230*, **MUSI60400 Spec Topics in Piano Pedagogy**

Cognates

For DMA degrees in Composition, Performance, and Conducting, the student must choose a cognate area from the options below. The DMA in Piano Pedagogy is not allowed to have a cognate.

The cognates as shown below indicate the total number of credits that must be taken to earn the cognate; ***however, all cognates require only 6 additional credits beyond the 54 credits indicated for the respective majors.***

The total credits needed to complete any DMA degree is 60.

Music Theory

(Not available to DMA Composition Students)

MUSI	Theory Courses (MUSI 50000 and above)	15

* Music Theory credits (9), earned in fulfillment of the degree plans, may be applied to the 15 – credit Cognate in Music Theory requirement.

Music History

MUSI	History Courses (MUSI 50000 and above)	15

*Music History credits (9), earned in fulfillment of the degree plans, may be applied to the 15 – credit Cognate in Music History requirement.

Performance

(Admission to the performance cognate is by audition and must be approved by the appropriate applied music faculty)

MUSP60110 Voice-**MUSP60610 Percussion**	Applied Lessons	6
60010-30360	Ensembles*	1
MUSP	Performance Electives**	2

* Ensemble credit (1) earned in fulfillment of the cognate may be applied to the ensemble credit requirements of the degree plans above.

** Performance elective credit (2) earned in fulfillment of the cognate may be applied to elective credit requirements of the degree plans above.

Composition

(Not available to DMA Composition Students)

(Admission to the composition cognate must be approved by the composition faculty)

MUSI60630 Composition	Composition	6
MUSI60801 Composition Seminar	Composition Seminar*	1
MUSI	Composition Electives**	2

* Composition Seminar credit (1) earned in fulfillment of the cognate may be applied to the elective credit requirements of the degree plans above.

** Composition elective credit (2) earned in fulfillment of the cognate may be applied to elective credit requirements of the degree plans above.

Vocal Pedagogy

(The cognate in vocal pedagogy is available to DMA Vocal Performance students only.)

MUSI50053 Intro To Voice Pedagogy	Intro to Voice Pedagogy*	3
MUSI 60053	Voice Repertoire Management**	3
MUSI60041 Voice Pedagogy Practicum	Voice Pedagogy Practicum**	1
MUSI60073 Technology in Voice Teaching	Technology in Voice Teaching**	3
	AND	
MUSI60063 Adv Seminar in Voice Pedagogy	Advanced Vocal Pedagogy Seminar**	3
	OR	
COSD60390 Sem on Communica Disordr	Vocal Faults**	3

*Musi 50053 in this cognate counts as the "Pedagogy elective" in DMA Voice degree plan

Musi 60041 and either ***MUSI 60053*, **MUSI60063 Adv Seminar in Voice Pedagogy** or **MUSI60073 Technology in Voice Teaching** may be applied to elective credit requirement of the DMA Vocal Performance degree plan.

Piano Pedagogy

(The cognate in piano pedagogy is available to DMA Piano Performance students only.)

MUSI60203 Grad Piano Pedagogy&Pract I	Graduate Piano Pedagogy and Practicum I	3
MUSI60213 Grad Piano Pedagogy&Pract II	Graduate Piano Pedagogy and Practicum II	3
	AND*	
MUSI60223 Current Trends And Res	Current Trends and Research in Piano Pedagogy	3
MUSI60233 Teaching Interm-Adv Piano	Teaching Intermediate and Advanced Piano Students	3
MUSI60243 Piano Ensemble Teach/Perf Lit	Piano Ensemble Teaching and Performance Literature	3
MUSI60913 Psychology Of Music	Psychology of Music	3
MUSI60923 Philosophy Of Music Educ	Philosophy of Music Education	3
MUSI60400 Spec Topics in Piano Pedagogy	Special Studies in Piano Pedagogy	1

* 5-6 credits from among the classes listed

Collaborative Piano

(Admission to the Collaborative Piano cognate must be approved by the Piano Faculty.)

MUSP 60312	Applied Collaborative Piano	2
MUSP 60141	Collaborative Piano Practicum	2
MUSP 60483	Instrumental Collaborative Piano Literature	3
MUSP 60191	Vocal Coaching for Pianists	1

Up to two (2) credits earned in fulfillment of the Collaborative Piano cognate may be applied to the elective credit requirement of any degree plan.

Catalog Description
SOWO 40823: Practicum Seminar I

Prerequisites: SOWO 10833, 30833, 30843, 30853, 30863, 30883, 40863, 40883. Minimum TCU GPA of 2.25 and minimum 2.5 GPA in social work; approval through the Practicum Education admissions process; concurrent enrollment in SOWO 40813 and 40843.

Practicum Seminar I provides an opportunity to apply the knowledge, values, and skills learned in the classroom to social work practice in your internship. This course marks your entry into social work practice and the path to becoming a professional social worker.

SOWO 40843: Practicum Education I

Prerequisites: SOWO 10833, 30833, 30843, 30853, 30863, 30883, 40863, 40883. Minimum TCU GPA of 2.25 and minimum 2.5 GPA in social work; approval through the Practicum Education admission process; concurrent enrollment in SOWO 40813 and 40823.

Enrollment in this course requires a supervised practicum placement within a generalist social work agency. Students will have the opportunity to apply social work knowledge, values, and skills in a hands-on setting and are responsible for completing 200 hours (approximately 13.5 hours per week for 15 weeks) at their placement. Additional fees apply to this course.

SOWO 40833: Practicum Seminar II

Prerequisites: SOWO 40823 with a grade of C or better; minimum TCU GPA of 2.25 and minimum 2.5 GPA in social work; faculty approval; concurrent enrollment in SOWO 40893.

Practicum Seminar II builds upon the foundation established in Practicum Seminar I, allowing students to further integrate and apply social work knowledge, values, and skills in their ongoing internship experience. This course supports continued professional growth and the development of competence in social work practice.

SOWO 40893: Practicum Education II

Prerequisites: SOWO 40843 with a grade of C or better; minimum TCU GPA of 2.25 and minimum 2.5 GPA in social work; faculty approval; concurrent enrollment in SOWO 40833.

Practicum Education II continues the practicum placement, providing students with the opportunity to further develop and deepen their practice knowledge, values, and skills with clients within a generalist social work agency. The student will complete 200 hours (approximately 13.5 hours per week for 15 weeks) at their placement. Additional fees apply to this course.

Course descriptions to update in the catalog: pages 2492-2501.

Overview

Program Code
SPEN-SPE

Department(s)
College of Education, Special Education

Career
Undergraduate

Degree Designation
SPE - Education - Spec - Early Child awarded by TCU

CIP Code
13.1001

SPEPMIN - Sport and Exercise Psychology Minor

Overview

Program Code
SPEPMIN

Department(s)
Harris College of Nursing & Health Sciences, Kinesiology

Career
Undergraduate

CIP Code
31.0508

SPHPMIN - Spanish for Health Professions Minor

Overview

Program Code
SPHPMIN

Department(s)
AddRan College of Liberal Arts, Spanish and Hispanic Studies

Career
Undergraduate

CIP Code
16.0905

SPHI-SPH - Special Education History Certification

Overview

Program Code
SPHI-SPH

Department(s)
College of Education, Special Education

Career
Undergraduate

Degree Designation
SPH - Education - Spec. - Health awarded by TCU

CIP Code
13.1001

SPJOCERT - Sports Journalism CRT

Overview

Program Code
SPJOCERT

Department(s)
Bob Schieffer College of Communication, Journalism

Career
Undergraduate

Degree Designation
CRT - Certification Program

CIP Code
09.0402

SPMA-SPM - Special Education Math Certificate

Overview

Program Code
SPMA-SPM

Department(s)
College of Education, Special Education

Career
Undergraduate

Degree Designation
SPM - Education - Spec. - Math awarded by TCU

CIP Code
13.1001

SPPA - Speech-Language Pathology

Overview

Program Code
SPPA

Department(s)
Davies School of Communication Science & Disorders

Career
Undergraduate

Catalog Description
The **Bachelor of Fine Arts in Stage, Event, and Production Management** is a professional, practice-based degree that prepares students to lead the planning, coordination, and execution of live performances and events across theatrical, entertainment, and experiential industries. The program integrates artistic collaboration with technical expertise, organizational leadership, and real-world production workflows.

Students develop comprehensive skills in stage management, event logistics, production planning, scheduling, budgeting, and team coordination. Coursework emphasizes communication, problem-solving, and decision-making in fast-paced, high-stakes environments. Through hands-on production assignments, labs, and supervised practicum experiences, students work directly with directors, designers, performers, technicians, and clients to bring complex productions from concept to execution.

Graduates of the program are prepared for careers in stage management, production management, event coordination, company management, and related leadership roles in theater, live entertainment, corporate events, festivals, and experiential productions. The BFA curriculum emphasizes professionalism, adaptability, and collaboration, equipping students with the tools to manage creative teams and productions in an evolving global industry.

CRES10103 Engaging Community and Culture

AAAS20103 - Introduction to Black Studies

Department(s)
Comparative Race and Ethnic Studies

Long Description (Catalog Description)
Introduction to Black Studies surveys global Black life and culture. Grounded in formative histories uniting Black people across the world - namely the Trans-Atlantic Slave trade, colonialism, contemporary migrations and cultural developments - this course is guided by these questions - How is blackness both a dynamic concept and one that has been constituted across time through various political events, rebellions, forced and voluntary migrations, and cultural forms? How has Black studies evolved in the academy and what are its futures? Through their engagement with various texts, writing, research and presentations, students will explore such questions and more.

ACCT20353 - Fundamentals of Accounting

Department(s)
Accounting

Long Description (Catalog Description)
3 hours. Prerequisite: ECON 10223 and must be a business major or a student for whom the course is required by their major, minor, or concentration. An introduction to business through the lenses of financial accounting: an information processing system that communicates relevant data regarding business entities to external decision makers. Emphasizes the basic concepts, principles, and techniques used to measure, record, and report financial information according to generally accepted accounting principles. Students may not receive credit for both ACCT 20353 and ACCT 20653. The course may not be retaken for credit if the student has completed ACCT 30153.

Course Typically Offered
Fall and Spring

Career

ADRN20203 - Mindfulness and Modern Life

Department(s)
AddRan Non-Departmental Programs

Long Description (Catalog Description)
Much attention has been given to the stress college students are under today. To address this, the course considers what it means to live a 'mindful' life today. What kind(s) of thinking and practice does such a life entail? How would it fit into a busy college student's life? This course will address these questions through both theory and practice. It will range from traditional Buddhist ideas to modern science, from classic liberal arts reflection to contemporary mindfulness exercises. We will consider how practice and reflection influence one another, and how we engage in personal relationships, society, and the natural world. After beginning most classes with a 10-minute meditation, we will discuss the day¿s assignment. We will then generally do another practice and end with a circle of discussion.

AEST10001 - Leadership Lab

Department(s)
Aerospace Studies

Long Description (Catalog Description)
Leadership Lab (LLab) is the hands-on leadership training portion of the Air Force ROTC program. The Leadership Lab (LLab) also includes studying the environment of an Air Force officer and learning about areas of opportunity available to commissioned officers. The AS3000 and AS4000 LLabs consist of activities classified as leadership and management experiences. They involve the planning and controlling of military activities of the cadet corps; and the preparation and presentation of briefings and other oral and written communications. LLabs also include interviews, guidance, and information which will increase the understanding, motivation, and performance of other cadets. (This course is only offered as P/NC.)

AEST20211 - Team and Leadership Fundamentals

Department(s)
Aerospace Studies

Long Description (Catalog Description)
Team and Leadership Fundamentals (AEST 20211 in the fall and 2022 in the spring): A survey course designed to provide a basic understanding of both leadership and team building fundamentals. In this course, students will apply learned leadership perspectives while completing team building activities and discussing various leadership topics (i.e., conflict management, motivation, ethical decision-making, etc.). Additionally, students will be introduced to, and practice, basic verbal and written communication skills to develop effective thinking, writing, and speaking proficiencies. Students are taught from the beginning that there are many layers to leadership, including aspects that are not typically associated with these topics. Such aspects include listening, self-assessment/ self-reflection, being a good follower, and problem solving efficiently. As a whole, this course provides the student with a knowledge level understanding of the general elements of leader development and effective teamwork. Furthermore, students will continue to discuss the importance of the Air Force Core Values with the use of operational examples and historical Air Force leaders. Leadership Laboratory I000I complements this course by providing cadets with followership experiences.

ANTH30313 - Food and Culture

Department(s)
Sociology and Anthropology

Long Description (Catalog Description)
Food and Culture explores food production, distribution, and consumption for practical and symbolic objectives. The course focuses on the symbolism as an expression of ethics that shape people's individual and collective identities. Toward this end, the course addresses heritage foods and identities at risk due to a change from regional, cottage production to mass production for worldwide distribution. The course also looks at identity in relation to politics and gender. Students learn qualitative research skills, which they apply to a semester-long project in a food-related venue, discovering the ethical moorings of a food micro-culture. Students learn skills for understanding culture through food, applicable to careers and travel in domestic and foreign settings.

ANTH30763 - Archaeology of the Biblical World: Syria-Palestine and TransJordan, 1550-332 BCE

Department(s)
Sociology and Anthropology

Long Description (Catalog Description)
Prerequisites: Either one RELI or one ANTH course, or permission of instructor. This course studies the cultures of Syria-Palestine and TransJordan from approximately 1550-332 BCE by identifying and interpreting the relevant archaeological data and anthropological findings. It will explore various aspects of these ancient cultures, including the region's economic, political, environmental, and social relations, as well as its religious expressions and ethnic identities. Additionally, students will consider the significance of archaeological material and anthropological models for reconstructing and interpreting these cultures and for understanding the Hebrew Bible as a cultural and historical document.

ARGD40223 - Design, Creativity, and Innovation

Department(s)
Design

Long Description (Catalog Description)
The course focuses on improving behavior, habits, and routines associated with integrating imagination and creative thinking into daily life. Design, creativity, and innovation are three interdependent capabilities essential to our own well-being, as well as to the well-being of society. Students study the internal and external factors that relate to one¿s own ability to design, create, and innovate as well as factors that impact a group's ability to act creatively, to innovate, and to produce practical and appealing designs. Students learn and apply principles of design thinking and other creative processes to identify problems, generate multiple solutions, and execute innovative ideas. The class will consist of research and self-reflection in combination with experiential classroom activities including affective, skill-building, and awareness-building exercises. The course will result in the design and execution of a comprehensive course project.

Course Typically Offered
Fall and Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

ARGD40233 - Design Entrepreneurship

Department(s)
Design

Long Description (Catalog Description)
Prerequisites: Permission of Instructor. This course focuses on the utilization of design thinking to research, develop, and create an entrepreneurial design project from research to concept to execution. Students may not receive credit for both ARGD 40233 and ARGD 55233.

Career
Undergraduate

Grading Basis

ARLE30303 - Audiences, Community, Programs and Marketing in Arts Organizations

Department(s)
Fine Arts Interdisciplinary

Long Description (Catalog Description)
Prerequisites: ARLE 20103. Arts organizations are increasing their focus on the public dimension of their operations to establish and maintain relevancy. This public service mandate means building and serving multiple audiences and moving towards civic engagement through addressing relevant needs, building partnerships and collaborations and becoming social entrepreneurs. Successful arts organizations understand audience learning, rights, and social needs, and they deliver exemplary customer service,. They utilize interpretive tools, narratives and story, and multiple perspectives as they develop, manage, and evaluate a menu of program offerings and events. The marketing and public relations section of the course covers marketing fundamentals (product, price, promotion, place), consumer behavior, marketing segmentation, branding, effective messaging and communication, and building relationships with media, businesses, government, and community.

ARLE30403 - The Creative Economy

Department(s)
Fine Arts Interdisciplinary

Long Description (Catalog Description)
Prerequisites: ARLE 20103. What opportunities are available to work in the Creative Economy? What knowledge and skills are required to thrive in a creative economy organization or create and successfully manage your own creative business? This course explores the economic, political, and social environment for the arts and the creative economy. More specifically, the course covers what entrepreneurship means in arts organizations, including the production and presentation of art, utilizing creative thinking and innovation practices to solve many types of problems, and the importance and potential of technology in the creative process. The course also explores entrepreneurship fundamentals and best practices, design thinking and group dynamics approaches, and the steps involved in creating an arts or creative venture.

Career

ARLE40103 - Arts Leadership and Entrepreneurship Experience

Department(s)
Fine Arts Interdisciplinary

Long Description (Catalog Description)
Prerequisites: This course is the CAPSTONE course for the ARLE minor. Students should have completed the full sequence of their ARLE courses before taking this course. In this capstone course, students apply their cumulative knowledge and skills in arts leadership and entrepreneurship to a real arts organization project on the TCU campus or in a local arts organization, for example, a strategic plan, business plan, showcase, or thesis. Students interested in creative entrepreneurship would create a new venture or apply best practices to revitalizing an existing arts organization, on campus or in the community. Students learn to set goals and objectives, work effectively in teams, design project work to respond to client needs, manage budgets and resources, and meet competing deadlines in a fast-paced environment mirroring real life work as an arts entrepreneur or arts leader. They also utilize best practices in project evaluation as they assess the results of their course project(s) and their team processes.

Career
Undergraduate

Grading Basis
OPT - Student Option

ARLE40903 - Internship in Arts Leadership and Entrepreneurship

Department(s)
Fine Arts Interdisciplinary

Long Description (Catalog Description)
Students complete an internship in an arts organization on campus or in the local community, 10-12 hours per week for 15 weeks, totaling 150 hours. Students will also meet monthly with the ARLE program director.

ARST30233 - Exploring Animal Imagery

Department(s)
School of Art

Long Description (Catalog Description)
This course gives students the opportunity to better understand animals and our relationships with them by producing hands-on animal imagery using a variety of media and artistic techniques, including drawing, ceramics, and sculpture.

Career
Undergraduate

Grading Basis
OPT - Student Option

ARST30240 - Advanced Sculpture

Department(s)
School of Art

Long Description (Catalog Description)
Prerequisites: ARST 10133 and 20243. Sculptural concepts, technical processes and translation of ideas into three dimensional situations. (More than 3 hours per class requires permission of instructor. May be repeated up to 21 hours.)

Course Typically Offered
Fall and Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

ARST30303 - Into the Small: Little Animals in Art, Culture, and Museums

Department(s)
School of Art

Long Description (Catalog Description)
Why do many people love butterflies, but fear bats? In 'into the Small' we will explore questions like these using multiple senses and cross-cultural perspectives, and then produce artworks in the contexts of galleries and museum exhibits to share what we find out.

Career
Undergraduate

Grading Basis
OPT - Student Option

ARST30510 - 3D Modeling and 3D Printing: Advanced New Media

Department(s)
School of Art

Long Description (Catalog Description)
Prerequisites: ARST 20503 or permission of instructor. An advanced exploration of the concepts, tools and techniques of new media. This course will explore the creation of digital sculptures, virtual worlds, and experimental studies with fabrication technology.

Course Typically Offered
Fall and Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

ARST30610 - Interactive Robotics and Kinetic Sculpture: Advanced New Media

Department(s)
School of Art

Long Description (Catalog Description)
Prerequisites: ARST 20503. An advanced exploration of the concepts, tools and techniques of new media. This course will explore the Arduino microcontroller and its ability to control our physical world. Students will learn how to control motors, read environmental sensors, and utilize fabrication technologies such as laser engraving and 3D printing.

Course Typically Offered
Fall and Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

ARST30710 - Color Photography

Department(s)
School of Art

Long Description (Catalog Description)
Prerequisite: ARST 20743, or JOUR 30233, or permission of instructor. Color photographic principles, theory, processes and practice. (More than 3 hours per class requires permission of instructor. May be repeated up to 21 hours.)

Course Typically Offered
Fall and Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

ARST30720 - Landscape Photography

Department(s)
School of Art

Long Description (Catalog Description)
Prerequisite: ARST 20743 or permission of instructor. Techniques, methods for producing photographs under outdoor and field conditions. Emphasis on history and practice of landscape photography, its role in the history of the American West and its position in contemporary American Art Photography. (More than 3 hours per classes requires permission of instructor. May be repeated up to 21 hours.)

Course Typically Offered
Summer

Career
Undergraduate

Grading Basis
OPT - Student Option

ARST30743 - The Photographic Portrait

Department(s)
School of Art

Long Description (Catalog Description)
Prerequisite: ARST 20743 or permission of instructor. Portrait photography fundamentals including lighting, equipment, social and psychological aspects of human representation, and business aspects of professional photography.

Course Typically Offered
Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

ARST30760 - Alternative, Non-Silver Photo Processes

Department(s)
School of Art

Long Description (Catalog Description)
Prerequisites: ARST 20743. This course will investigate an extensive range of non-silver, alternative, and post print manipulative processes. (More than 3 hours per class requires permission of instructor. May be repeated.)

Course Typically Offered
Every other fall

Career
Undergraduate

Grading Basis
OPT - Student Option

ARST30770 - Documentary Photography

Department(s)
School of Art

Long Description (Catalog Description)
Prerequisites: ARST 20743 and ARST 30710 or permission of instructor. An exploration of the concepts, tools, and techniques of documentary photography. (More than 3 hours per class requires permission of instructor. May be repeated up to 21 hours.)

Course Typically Offered
Rarely

Career
Undergraduate

Grading Basis
OPT - Student Option

ARST30780 - Stages, Fabricated and Directed Studio Photography

Department(s)
School of Art

Long Description (Catalog Description)
Prerequisites: ARST 20743 or permission of instructor. An exploration of the concepts, tools, and techniques of studio art photography. All photographs for this class will be staged, fabricated and directed. (More than 3 hours per class requires permission of instructor. May be repeated with permission of instructor up to 21 hours.)

Career
Undergraduate

ARST30903 - Seminar in Art Professions

Department(s)
School of Art

Long Description (Catalog Description)
Prerequisite: Junior standing in Art. The seminar will address specific professional issues such as photography of fine art, compiling slide portfolios, resume formats, exhibition preparation, exhibition venues, the role of museums and galleries, financial concerns and graduate school.

Course Typically Offered
Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

ARST30913 - Seminar in Art Criticism and Theory

Department(s)
School of Art

Long Description (Catalog Description)
Prerequisites: Junior standing in Art or instructor permission and successful completion of ENGL 10803 and 20803. An exploration of major approaches to art criticism and theory with emphasis on developments since 1900.

Career
Undergraduate

Grading Basis
OPT - Student Option

ARST30933 - Feminist Concepts and Strategies in Studio Art

Department(s)
School of Art

Long Description (Catalog Description)
This is a hybrid course that combines theory and practice in the study of feminism and visual art making. This course investigates the distinctive ways feminist ideas can be expressed through multiple visual art media. Through readings, class discussions, and hands-on art projects, students will study examples of feminist art, feminist theory and criticism, and art production. Experimentation with visual media is informed by a feminist perspective and critique.

ARST40553 - Zoo Animal Enrichment

Department(s)
School of Art

Long Description (Catalog Description)
Prerequisites: Junior standing. This is a team-taught course between Environmental Science and Studio Art. In this course students will explore the ecology and behavior of wild animals to provide insights into the types of stimuli they naturally encounter. These insights will then be used to develop and build objects and structures that will engage and enrich the lives of animals at the Fort Worth Zoo. Students will work in teams to study a specific species currently residing at the zoo and create objects and structures that will enhance their lives in captivity. (Crosslisted as ARST 40553)

ASST30013 - Asian Cultures, Politics, and Societies through Media

Department(s)
AddRan Non-Departmental Programs

Long Description (Catalog Description)
This course explores the representations of culture, politics, society, and identity in a variety of films and other visual culture media (such as television, social media, literature, and music) from Asia. During the semester students will engage a breadth of media representations pertaining to Asia to study the development of different Asian civilizations in a historical and transnational context on some of the key issues facing these countries today.

Career
Undergraduate

Grading Basis
OPT - Student Option

ASST30123 - Special Topics

Department(s)
AddRan Non-Departmental Programs

Long Description (Catalog Description)
This course explores special themes in Asian Studies, including, but not limited to, literary, cinematic, social, political, economic, cultural, and international relations topics. Students analyze the course's theme on Asia in transnational contexts through class readings, presentations, discussions, and class assignments. Students will conduct research and write a final paper and/or create a final project on an approved Asian Studies topic, following the guidelines established by the instructor. This class is taught by regular or visiting faculty. Topics change each term. May be repeated for credit as topic changes.

AVIA10003 - Theory of Primary Flight I

Department(s)
Counseling, Societal Change, and Inquiry

Long Description (Catalog Description)
Prerequisites: PHYS 10154 or PHYS 10324 or concurrent enrollment, and Admission to the B.S. in Professional Aviation's Professional Pilot program. Basic pilot ground school for the Federal Aviation Administration (FAA) Private Pilot Certificate. Course provides students with aeronautical knowledge and skills required for certification as a private pilot. Course content emphasizes basic instruction in the areas of aerodynamics, aircraft performance, aircraft systems, radio procedures, navigation, aviation weather, flight safety, and FAA regulations. Preparation for the FAA private pilot knowledge exam.

Career
Undergraduate

Grading Basis
OPT - Student Option

AVIA11112 - Primary Flight Training I

Department(s)
Education Non-Department Programs

Long Description (Catalog Description)
Prerequisites: Admission to the B.S. in Professional Aviation's Professional Pilot concentration. Flight training for beginning pilots. Course prepares students for the completion of the FAA private pilot certification process, including dual and solo flight in the areas of maneuvers and cross-country navigation. Flight training conducted under the 14 CFR Part 141 certification process.

Career
Undergraduate

Grading Basis
OPT - Student Option

AVIA12223 - Theory of Primary Flight II

Department(s)
Education Non-Department Programs

Long Description (Catalog Description)
Prerequisites: Admission to the B.S. in Professional Aviation's Professional Pilot concentration and AVIA 10003. This course builds upon the content in AVIA 10003 Theory of Primary Flight I to prepare for the Federal Aviation Administration (FAA) Private Pilot Certificate. Course provides students with aeronautical knowledge and skills required for certification as a private pilot. Course content emphasizes instruction in the areas of aircraft construction and flight controls, aircraft systems, instruments, human factors, airport operations and airspace, weather fundamentals, navigation, cross country operations, and FAA regulations. Preparation for the FAA check ride exam.

Career
Undergraduate

Grading Basis
OPT - Student Option

AVIA13332 - Primary Flight Training II

Department(s)
Education Non-Department Programs

Long Description (Catalog Description)
Prerequisites: AVIA 11112 and Admission to the B.S. in Professional Aviation's Professional Pilot program. Second flight training for beginning pilots. Course provides dual flight instruction and solo flight instruction in preparation for earning the private pilot certification. Flight training conducted under the 14 CFR Part 141 certification process. Private pilot certification must be completed during this flight training course.

Career
Undergraduate

Grading Basis
OPT - Student Option

AVIA20003 - Theory of Instrument Flight

Department(s)
Education Non-Department Programs

Long Description (Catalog Description)
Prerequisites: Admission to the B.S. in Professional Aviation's Professional Pilot concentration and AVIA 12223. Course provides students with a detailed study of navigation systems and instruments, forecasting weather trends, FAA regulations, and terminal and enroute procedures necessary for operating Instrument Flight Rules (IFR) in the national airspace system. Preparation for the FAA Instrument Rating exam.

Career
Undergraduate

Grading Basis
OPT - Student Option

AVIA21113 - Instrument Flight Training I

Department(s)
Education Non-Department Programs

Long Description (Catalog Description)
Prerequisites: AVIA 11112 and AVIA 12223 and Admission to the B.S. in Professional Aviation's Professional Pilot concentration. Flight training course designed to prepare students for completion of the FAA Instrument Pilot Rating with mastery of all instrument procedures. Course provides dual flight instruction and solo flight instruction conducted under FAR Part 141.

Career
Undergraduate

Grading Basis
OPT - Student Option

AVIA21122 - Instrument Flight Training II

Department(s)
Education Non-Department Programs

Long Description (Catalog Description)
Prerequisites: AVIA 21113 and Admission to the B.S. in Professional Aviation's Professional Pilot program. Flight training course designed to prepare students for completion of the FAA Instrument Pilot Rating Course emphasizes IFR cross-country operations. dual flight instruction and solo flight instruction conducted under FAR Part 141.

Career
Undergraduate

Grading Basis
OPT - Student Option

AVIA22113 - Theory of Commercial Flight

Department(s)
Education Non-Department Programs

Long Description (Catalog Description)
Prerequisites: Admission to the B.S. in Professional Aviation's Professional
Pilot concentration. Course is designed to prepare the student for the FAA commercial pilot practical exam. Course content includes aircraft performance, advanced aircraft systems, airspace navigation, aircraft weight and balance, multiengine aerodynamics, and FAA regulations relating to commercial pilot maneuvers.

Career
Undergraduate

Grading Basis
OPT - Student Option

AVIA23112 - Commercial Flight Training

Department(s)
Education Non-Department Programs

Long Description (Catalog Description)
Prerequisites: AVIA 21122 and Admission to the B.S. in Professional Aviation's Professional Pilot program. Flight training course designed to develop a higher degree of coordination and judgment through additional flight experience, as well as review the principles of flight, advanced aircraft systems, FAA regulations, and airspace navigation. Course focuses on more advanced flight maneuvers and cross-country flying to prepare the student for the FAA Commercial Pilot Certificate. Course provides dual flight instruction and solo flight instruction. Flight training conducted under the 14 CFR Part 141 certification process.

Career
Undergraduate

Grading Basis
OPT - Student Option

AVIA25113 - Unmanned Aerial Systems

Department(s)
Education Non-Department Programs

Long Description (Catalog Description)
This course will survey unmanned aerial systems (UAS) and cover UAS history, growth and future applications as well as provide a solid understanding of unmanned aerial systems' design, development, and deployment. Students will be introduced to UAS platforms and sensors, UAS system designs, flight dynamics, communication, navigation, and electronic and mechanical components. The course will also include evolving other issues in unmanned aircraft operations: the aviation regulatory system airspace integration, safety and human factors, ethical and legal issues, and the future of unmanned aircraft systems.

OPT - Student Option

AVIA30001 - Theory of Multi-Engine Flight

Department(s)
Education Non-Department Programs

Long Description (Catalog Description)
Prerequisites: Admission to the B.S. in Professional Aviation¿s Professional Pilot concentration and AVIA 20003. Course is designed to develop the knowledge and piloting skills necessary to safely and proficiently exercise the responsibilities of a commercial pilot with a multi-engine rating. Course emphasizes advanced knowledge of aerodynamics, aeronautical decision making of multi-engine aircraft systems, aircraft performance, abnormal/emergency procedures, and FAA regulations.

Career
Undergraduate

Grading Basis
OPT - Student Option

AVIA31333 - Human Factors in Aviation

Department(s)
Education Non-Department Programs

Long Description (Catalog Description)
Introduces the student to issues influencing human performance in the complex operational aviation environment. Emphasis on theory and practical applications of cognitive processing, aeronautical decision-making, interpersonal interaction and communication, and design elements intended to optimize man-machine interaction.

Career
Undergraduate

Grading Basis
OPT - Student Option

AVIA31443 - Aviation Marketing and Strategic Planning

Department(s)
Education Non-Department Programs

Long Description (Catalog Description)
This course covers a comprehensive range of topics from foundational marketing concepts to specific strategic challenges within the aviation sector, emphasizing strategic frameworks, market analysis (PESTE and SWOT), market segmentation, targeting, and positioning (STP), the 4 Ps/7 Ps marketing mix, pricing strategies, branding, loyalty programs, digital marketing, airline alliances, and sustainability, all applied to the aviation industry context.

Career
Undergraduate

Grading Basis
OPT - Student Option

AVIA32221 - Multi-Engine Flight Training

Department(s)
Education Non-Department Programs

Long Description (Catalog Description)
Prerequisites: Admission to the B.S. in Professional Aviation's Professional Pilot program, private pilot certificate, and completion of or concurrent enrollment in AVIA 30001. Flight training course emphasizes multi-engine operations and prepares the student for commercial certification with multi-engine rating. Course provides dual flight instruction and solo flight instruction in a multi-engine aircraft and conducted under FAR Part 141. Flight training conducted under the 14 CFR Part 141 certification process.

Undergraduate

Grading Basis
OPT - Student Option

AVIA32333 - Aircraft Systems

Department(s)
Education Non-Department Programs

Long Description (Catalog Description)
Prerequisites: Admission to the B.S. in Professional Aviation's Professional Pilot concentration. Provides an in-depth study of complex aircraft systems. Emphasis on electronic flight instruments, aircraft monitoring systems, high altitude aerodynamics, pressurization systems, turbine systems, weight and balance, hydraulic, fuel, ignition, and fire protection systems.

Career
Undergraduate

Grading Basis
OPT - Student Option

AVIA32443 - Aviation Finance

Department(s)
Education Non-Department Programs

Long Description (Catalog Description)
This course covers airline business fundamentals, financial statement analysis, different aircraft acquisition and leasing structures, capital sources (debt, equity, and leasing), risk management (fuel hedging), and airline finance. Key topics include understanding the costs and revenues of airlines, evaluating asset values (residual values for aircraft), and analyzing financial performance indicators to support decision-making in the industry.

Career
Undergraduate

Grading Basis
OPT - Student Option

AVIA34333 - Historical Significance of Aviation

Department(s)
Education Non-Department Programs

Long Description (Catalog Description)
This course covers historical attempts at flight, the development of early aircraft, key pioneers like the Wright brothers, the Golden Age of flight, the impact of World Wars on aviation technology, the Jet Age, the rise of commercial aviation, modern technological advancements, globalization, and the future of flight. Course content will include cultural, social, economic, and political contexts, as well as military and space exploration aspects.

Career
Undergraduate

Grading Basis
OPT - Student Option

AVIA34443 - Aviation Supply Chain Management

Department(s)
Education Non-Department Programs

Long Description (Catalog Description)
This course will focus on management of aviation/aerospace supply chain processes and performance. A broad instructional approach will encompass the processes associated with the production of goods and services, including the movement of raw materials, inventory, and finished products. Students will be introduced to a variety of industry examples and cases related to aviation/aerospace domestic and global demand-driven supply chains to understand and evaluate the vital role of effective and efficient supply chain management.

Career
Undergraduate

Grading Basis
OPT - Student Option

AVIA35333 - Ethics in Aviation

Department(s)
Education Non-Department Programs

Long Description (Catalog Description)
This course examines the ethical landscape of the aviation industry, exploring the complex interaction between safety, business practices, environmental concerns, social responsibility, and individual actions within the aviation environment.

Career
Undergraduate

Grading Basis
OPT - Student Option

AVIA36333 - Aviation Legislation and Regulation

Department(s)
Education Non-Department Programs

Long Description (Catalog Description)
History and evolution of aviation governmental regulatory agencies in the US and internationally, including FAA, ICAO, and homeland security. Agency organization and operation, and legislative acts and treaties related to enforcement of aviation standards.

Career
Undergraduate

Grading Basis
OPT - Student Option

AVIA37333 - Air Carrier Industry: An Introduction

Department(s)
Education Non-Department Programs

Long Description (Catalog Description)
This course provides a broad understanding of the air transportation industry and an in-depth knowledge of the organizational structures, managerial functions and operational aspects of major and regional air carriers and all-cargo operations. Historical advancements, economic characteristics, regulatory frameworks, and safety and security will be examined.

Career
Undergraduate

Grading Basis
OPT - Student Option

AVIA37433 - Air Cargo Operations

Department(s)
Education Non-Department Programs

Long Description (Catalog Description)
The course covers the entire process of moving cargo by air, from booking and documentation to handling, security, and delivery. Includes aircraft and ground equipment, Unit Load Devices (ULDs), special cargo handling, air cargo documentation, rating and pricing, carrier liability, regulatory requirements, air cargo sales and marketing, and information on the latest technologies and industry best practices.

Career
Undergraduate

Grading Basis
OPT - Student Option

AVIA38333 - Principles of Aviation Administration

Department(s)
Education Non-Department Programs

Long Description (Catalog Description)
This course covers fundamental business concepts within the aviation industry, including airline and airport operations, aviation law, financial and economic principles, safety management systems, human resources, revenue management, marketing, sustainability, and regulatory environments. Managing the major elements of the aviation industry, including aircraft manufacturing and air transportation system.

Career
Undergraduate

Grading Basis
OPT - Student Option

AVIA38433 - Aviation Project Administration

Department(s)
Education Non-Department Programs

Long Description (Catalog Description)
The course focuses on the fundamentals of project administration and management with emphasis on the human, organizational, and technical dimensions of leading projects within the aviation industry. Students will learn core methodologies and processes, and apply them to real-world aviation projects, including airports, aircraft systems, and operational improvements.

Career
Undergraduate

Grading Basis
OPT - Student Option

AVIA39333 - Airport Operations and Administration

Department(s)
Education Non-Department Programs

Long Description (Catalog Description)
This course covers a wide range of topics including airside and landside operations, aviation safety and security, air traffic management, airport planning and design, airline and cargo logistics, customer service, aviation law and regulations, and financial and economics management. Includes specialized areas like ground handling, crisis management, airport master planning, and airport-airline relations, preparing students to manage the complex, day-to-day functions of an airport.

Career
Undergraduate

Grading Basis
OPT - Student Option

AVIA40003 - Fundamentals of Flight Instruction

Department(s)
Education Non-Department Programs

Long Description (Catalog Description)
Prerequisites: Admission to the B.S. in Professional Aviation's Professional Pilot concentration, plus instrument and commercial flight ratings. Course provides the student with a detailed study of the responsibilities and teaching concerns of a certified flight instructor (CFI), providing the fundamentals of teaching and learning, including strategic teaching methods, process of learning, effective evaluations, and flight instructor responsibilities. Course emphasizes knowledge of pedagogy for teaching aeronautical knowledge and skills and prepares the student for the CFI Initial Practical Test. The course culminates with the student successfully completing the Federal Aviation Administration (FAA) Fundamentals of Instructing Knowledge Exam.

Career
Undergraduate

Grading Basis
OPT - Student Option

AVIA41112 - Certified Flight Instructor Flight Training

Department(s)
Education Non-Department Programs

Long Description (Catalog Description)
Prerequisites: Admission to the B.S. in Professional Aviation's Professional Pilot concentration and AVIA 23112. Flight training course required for the student to qualify for the FAA Certified Flight Instructor - Airplane Certificate. Course provides dual flight instruction and solo flight instruction conducted under FAR Part 141. Flight training conducted under the 14 CFR Part 141 certification process.

Career
Undergraduate

OPT - Student Option

AVIA41313 - Aviation Strategic Management

Department(s)
Education Non-Department Programs

Long Description (Catalog Description)
This course provides a comprehensive understanding of the strategic management process as applied to the aviation industry, including airlines, airports, and related service providers. Students will analyze the complex and competitive aviation environment, learn to formulate and implement business strategies, and evaluate an organization's performance. The curriculum integrates traditional strategic management theories with specific aviation-related issues such as technological innovation, sustainability, and regulatory landscapes.

Career
Undergraduate

Grading Basis
OPT - Student Option

AVIA41333 - Aviation Weather

Department(s)
Education Non-Department Programs

Long Description (Catalog Description)
Prerequisites: Admission to the B.S. in Professional Aviation's Professional Pilot concentration and ENSC 30113. Understanding and application of weather theory in relation to flight operations. Problem-based learning situations on the adverse effects of weather to increase hazardous weather awareness for pilots. Course includes meteorology, characteristics of the atmosphere, weather observations and forecasts, and weather phenomena affecting flight safety.

Career
Undergraduate

Grading Basis
OPT - Student Option

AVIA41443 - Business Aviation and General Aviation Administration

Department(s)
Education Non-Department Programs

Long Description (Catalog Description)
This course provides a comprehensive overview of the operational and managerial aspects of the business and general aviation sector. Students will explore the functions of Fixed-Base Operators (FBOs), the management of corporate and private flight departments, and the regulatory framework that governs non-commercial aviation. Topics will include business models, safety management, market analysis, financial considerations, and ground support services for general aviation and business aircraft.

Career
Undergraduate

Grading Basis
OPT - Student Option

AVIA42333 - Aviation Law

Department(s)
Education Non-Department Programs

Long Description (Catalog Description)
This course provides a comprehensive overview of the domestic and international laws and regulations affecting the civil aviation industry. Students will examine key legal instruments, regulatory bodies, and case law that govern various aspects of aviation, including safety, security, liability, and economic issues.

Career
Undergraduate

Grading Basis
OPT - Student Option

AVIA42443 - Capstone in Aviation Administration

Department(s)
Education Non-Department Programs

Long Description (Catalog Description)
Prerequisites: Admission to the B.S. in Professional Aviation's Aviation Administration concentration. Permit required; designed as the capstone course. This capstone, project-based course integrates and applies knowledge and skills from across the Aviation Administration curriculum to real-world industry challenges. Students engage in case studies, applied individual projects, group analysis, and a comprehensive exam to demonstrate mastery of strategic management, regulatory compliance, safety, and operational decision-making. Assignments emphasize analyzing complex problems, applying industry frameworks, proposing solutions, and communicating findings through professional reports and presentations.

Career
Undergraduate

Grading Basis
OPT - Student Option

AVIA43333 - Crew Resource Management

Department(s)
Education Non-Department Programs

Long Description (Catalog Description)
Prerequisites: Admission to the B.S. in Professional Aviation's Professional Pilot concentration. Introduces crew resource management (CRM) as a cornerstone of modern aviation safety. Provides a thorough understanding of crew communications, team building, leadership, decision-making, situational awareness, and use of automation.

Career
Undergraduate

Grading Basis
OPT - Student Option

AVIA43443 - Air Transportation Economics

Department(s)
Education Non-Department Programs

Long Description (Catalog Description)
This course covers the fundamentals of aviation and airline economics, including market structure, pricing, and revenue management, alongside financial analysis, demand forecasting, and the economic impacts of regulations and alliances. Key topics include supply and demand dynamics in air transport, cost structures, different airline business models, the role of airports, and emerging market trends. The course will also address cargo transportation, technological advancements, and the broader economic and environmental effects of the aviation industry.

Career
Undergraduate

Grading Basis
OPT - Student Option

AVIA44333 - Aviation Safety

Department(s)
Education Non-Department Programs

Long Description (Catalog Description)
This course introduces the principles, practices, and regulatory framework of aviation safety. Students will explore key aspects of safety management and risk assessment, with attention to pilot psychology, physiology, and human factors. Emphasis is placed on developing critical thinking skills to evaluate safety challenges and make informed decisions that support safe aviation operations.

Career
Undergraduate

Grading Basis
OPT - Student Option

AVIA44433 - Advanced Aircraft Operations

Department(s)
Education Non-Department Programs

Long Description (Catalog Description)
Prerequisites: Admission to the B.S. in Professional Aviation's Professional Pilot concentration and AVIA 32333. This course serves as the technical capstone for the professional aviation major seeking pilot training and will prepare students for the transition to 14 CFR 121 operations. The theory, operation, and maintenance of modern aircraft subsystems including engines, electrical, hydraulic, pneumatic, flight controls, high-speed and high-altitude aerodynamics, performance management and environmental systems, as well as avionics like autopilots and navigation will be covered.

Career
Undergraduate

Grading Basis
OPT - Student Option

AVIA44443 - Aviation Human Resource Management

Department(s)
Education Non-Department Programs

Long Description (Catalog Description)
This course covers foundational human resource management (HRM) principles and their application to the unique aviation context, including human resource planning, recruitment and selection for aviation-specific roles, training and development, performance management, compensation and benefits, employee relations, and talent and succession planning. Key aviation-specific elements include adherence to civil aviation law, safety management systems, and emergency response planning.

Career

OPT - Student Option

AVIA45333 - Aviation Labor Relations

Department(s)
Education Non-Department Programs

Long Description (Catalog Description)
This course examines labor relations in the U.S. air transportation industry within the framework of the Railway Labor Act and the National Labor Relations Act. Students will explore the Constitutional foundations of labor law and analyze how these laws shape aviation regulations under 14 CFR, including flight crew workload, staffing requirements, flight deck operations, flight safety, and operations in the National Airspace System.

Career
Undergraduate

Grading Basis
OPT - Student Option

AVIA46333 - Aviation Security and Risk Assessment

Department(s)
Education Non-Department Programs

Long Description (Catalog Description)
This course provides a comprehensive overview of aviation security principles, regulatory frameworks, and risk assessment methodologies. Students will develop the knowledge and skills needed to identify threats, assess vulnerabilities, and implement effective security countermeasures for airports, aircraft, and passengers.

Career
Undergraduate

Grading Basis
OPT - Student Option

AVIA47333 - International Aerospace Issues

Department(s)
Education Non-Department Programs

Long Description (Catalog Description)
An examination of the regulatory, political, economic impact and structural organization of international aviation. Contemporary issues in the national and international environment will be discussed. Global issues surrounding advances in international Air Traffic Management (ATM) will be discussed, as well as the international Civil Aviation Organization (ICAO) and its practices.

Career
Undergraduate

Grading Basis
OPT - Student Option

AVIA48333 - Aviation Leadership

Department(s)
Education Non-Department Programs

Long Description (Catalog Description)
The course covers essential leadership skills, ethics, communication, and team dynamics within the context of the aviation industry, including topics such as foundational leadership concepts and styles, strategic management, financial forecasting, organizational behavior, aviation regulations, safety management systems, and the importance of professional ethics and a positive safety culture. Examine the role that airline leaders play in shaping aviation companies and how evolving companies shape airline leaders.

Career
Undergraduate

Grading Basis
OPT - Student Option

AVIA49333 - AVIA Accident Investigate

Department(s)
Education Non-Department Programs

Long Description (Catalog Description)
This course will cover the entire investigation process, from scene management and evidence collection to human factors analysis and report writing, focusing on regulatory requirements and practical skills such as witness interviewing, field techniques, wreckage and evidence analysis, and crashworthiness principles. Key topics include structural and mechanical failures, weather impacts, fire investigation, site documentation, and the use of investigative equipment, often reinforced with real-world case studies and practical exercises.

BIOL10503 - The Unity of Life: Molecules to Cells

Department(s)
Biology

Long Description (Catalog Description)
Prerequisite: A senior high school course in Biology or Chemistry. This course is an introduction to the inner workings of cells, with the theme of examining the common biomolecular foundation of all living things. Topics include the basic principles of evolution, the molecular organization, structure, and function of cells, the cell cycle (including mitosis and meiosis), gene expression, metabolism, and Mendelian and molecular genetics. This course is designed for science majors.

Course Typically Offered
Fall

Career
Undergraduate

BIOL30603 - Cellular, Molecular, and Developmental Biology

Department(s)
Biology

Long Description (Catalog Description)
Prerequisites: BIOL 10503 completed at TCU, BIOL 10513, and CHEM 10113 or instructor permission. Three hours lecture per week. Basic structure and function of plant and animal cells; molecular genetics of cells and organisms; mechanisms governing cell reproduction and differentiation.

Course Typically Offered
Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

BIOL30613 - Natural History

Department(s)
Biology

Long Description (Catalog Description)
Two hours lecture and one two-hour laboratory per week. This course details the history of life on Earth. Emphasis is placed on the major biomes of the Earth and the unique conditions that influence life in each biome. Students investigate evolutionary processes and historical classifications of lifeforms, and analyze the impact humans have had on life on Earth. There are outdoor labs and field trip opportunities to study local plants and animals. This course is suitable for both Biology majors and non-Biology majors who have broad interests in the outdoors and nature.

Course Typically Offered
Fall and Spring

Career
Undergraduate

Grading Basis

Department(s)
Biology

Long Description (Catalog Description)
Prerequisites: C- or better in BIOL 30603, or permission of instructor. Three hours lecture and one laboratory period per week. The immune system; characteristics of antigens; antibodies and their reactions; cellular and humoral aspects of immunity; immune disorders.

Course Typically Offered
Fall and Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

BIOL40263 - Immunobiology of Disease

Department(s)
Biology

Long Description (Catalog Description)
Prerequisite: BIOL 30304 or BIOL 40254. This lecture-based course features current research in Immunology that focuses on how manipulations of the innate or adaptive immune system can modulate disease states. This includes how microbes overcome immune defenses, failures in immune system function and
how the immune system can be therapeutically modified to treat disease.

Career
Undergraduate

Grading Basis
OPT - Student Option

BIOL40273 - Genomics

Department(s)
Biology

Long Description (Catalog Description)
Prerequisite: BIOL 40123. This class will consist of two hours of lecture and one laboratory per week. The course focuses on the ways in which information at the genome level has become integral to Biology. The labs are designed to give students hands on experience analyzing genomic data to ask and answer specific questions. Contemporary primary literature will be discussed.

Career
Undergraduate

Grading Basis
OPT - Student Option

BIOL40303 - Medical Microbiology

Department(s)
Biology

Long Description (Catalog Description)
Prerequisite: Permission of the instructor. This course focuses on advanced topics in medical microbiology including disease mechanisms of major human pathogens, the host response, and antibiotic development and resistance. Scientific approaches used to investigate these topics are emphasized through reading and discussion of the primary literature.

Course Typically Offered
Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

BIOL40313 - Biogeography

Department(s)
Biology

Long Description (Catalog Description)
Prerequisite: BIOL 30403 or permission of instructor. Three hours lecture per week. An ecological approach to the study of the distribution of plant and animal communities.

Course Typically Offered
Every other spring

Career
Undergraduate

Grading Basis
OPT - Student Option

BIOL40353 - Wildlife Ecology and Management

Department(s)
Biology

Long Description (Catalog Description)
Prerequisite: Six semester hours in Biology. Two hour lectures and a three hour laboratory each week. This discussion-oriented course introduces advanced undergraduate students to the general principles of wildlife ecology and how those principles can be applied to wildlife management and conservation. The objectives of this course are 1) to provide an introduction to the major concepts of Wildlife Ecology and Management and 2) to allow you to learn the application of the scientific method to ecological problems. Laboratory exercises are required. (Crosslisted as BIOL/ENSC 40353)

Career
Undergraduate

Grading Basis
OPT - Student Option

BIOL40403 - Human Physiology

Department(s)
Biology

Long Description (Catalog Description)
Prerequisites: BIOL 30603 with a C or better or permission of instructor. Basic functions of the major human body systems will be studied in terms of physical and chemical principles and system interactions.

Course Typically Offered
Fall

Career
Undergraduate

Grading Basis
OPT - Student Option

BIOL40453 - Principles of Toxicology

Department(s)
Biology

Long Description (Catalog Description)
Prerequisites: BIOL 40403. This course focuses on the underlying principles of toxicology including dose-response curves, routes of contaminant exposure, contaminant fate in the environment and in organisms, and xenobiotic metabolism. Discussions of both historical and contemporary primary literature will be used to explore the specific effects of contaminants on various physiological systems.

Career
Undergraduate

Grading Basis
OPT - Student Option

BIOL40473 - Vertebrate Endocrinology

Department(s)
Biology

Long Description (Catalog Description)
Prerequisite: BIOL 40403. Two hours of lecture and one laboratory period per week. The course will focus on the structure and function of hormone signaling systems in vertebrate organisms. Contemporary primary literature will be discussed and the laboratory will expose students to the experimental design and methods utilized in modern endocrinology research.

Course Typically Offered
Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

BIOL40513 - Fundamentals of Biochemistry

Department(s)
Biology

Long Description (Catalog Description)
Prerequisites: CHEM 30123 and C- or better in BIOL 30603, or permission of instructor. Three hours of lecture per week. The structures, properties, and functions of biological molecules (proteins, nucleic acids, lipids, and carbohydrates), with emphasis on analysis techniques and relation to physiology.

Career
Undergraduate

Grading Basis
OPT - Student Option

BIOL40523 - Structural Biology of Drug Design

Department(s)
Biology

Long Description (Catalog Description)
Prerequisites: BIOL 40513 or BIOL/CHEM 50133 or equivalent course. Two hours of lecture and two hours of laboratory per week. Students will learn structural biology techniques important for designing pharmaceuticals and design a drug to their favorite protein target. Crosslisted as BIOL/CHEM 40523.

Career
Undergraduate

Grading Basis
OPT - Student Option

Cross Listed Courses
CHEM40523 Structural Bio of Drug Design

BIOL40603 - Virology

Department(s)
Biology

Long Description (Catalog Description)
Prerequisites: BIOL 30603 or permission of instructor. Three hours lecture per week. Survey of viruses, molecular biology of virus life cycles, viral pathogenesis and gene therapy using viral vectors.

Course Typically Offered
Fall

Career
Undergraduate

Grading Basis
OPT - Student Option

BIOL40701 - Professional Development in Biology

Department(s)
Biology

Long Description (Catalog Description)
Prerequisite: BIOL 40101. This course will build the professional skills necessary for undergraduate students to pursue and succeed in future graduate work and professional endeavors. Students will reflect on how their work, activities and life experiences have prepared them for a career in biological research and develop written and verbal communication skills necessary to apply to graduate school and/or research-focused career opportunities. Credit may not be applied to a Biology degree program or the Biology minor for both BIOL 40701 and SCIE 30613.

Course Typically Offered
Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

BIOL40703 - Global Perspectives in Health

Department(s)
Biology

Long Description (Catalog Description)
Prerequisites: 6 credit hours of Biology or equivalent. The course examines selected cultures in an international setting. Social and scientific factors are related to health beliefs and practices and health care delivery systems of the country visited and examined. Critical analysis of selected topics will be accomplished. Usually taught in summer abroad program. (Cross-listed as BIOL 40703/NURS 30063/ ENSC 40203)

BIOL40730 - Special Topics in Biology Laboratory

Department(s)
Biology

Long Description (Catalog Description)
Prerequisites: BIOL 30403 or BIOL 30603, or permission of the instructor. This one or two credit lab course will deal with a specific topic in Biology that is appropriate for Biology majors. This course can be repeated.

Career
Undergraduate

Grading Basis
OPT - Student Option

BIOL40820 - Teaching of Introductory-Level Biology

Department(s)
Biology

Long Description (Catalog Description)
Prerequisite: Written permission of the instructor of the course in which the student plans to serve. Students serve as laboratory instructors of one section per week in introductory-level biology courses. Students receive 1 credit for serving as laboratory instructors for one section per week and one additional credit for each three hours of additional duties per week including laboratory staff meetings. May be repeated once.

Course Typically Offered
Fall and Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

BIOL40830 - Teaching of Advanced Biology

Department(s)
Biology

Long Description (Catalog Description)
Prerequisite: Written permission of the instructor of the course in which the student plans to serve. Students receive one credit hour for serving as laboratory instructors of one section per week and one additional credit hour for each three hours of additional duties per week including laboratory staff meetings. This course is intended only for undergraduate Teaching Assistants in courses above the freshman level. Not to exceed six hours credit on the major and eight hours credit total.

Career

BIOL40900 - Intro Independent Res in Biology

Department(s)
Biology

Long Description (Catalog Description)
Field and laboratory problems for advanced students. Three clock hours per week of laboratory and/or field work are required for each credit hour, for up to three semester hours credit in a given semester. This course may be taken only once, regardless of the number of credit hours completed, and counts as one upper-level laboratory course towards the Biology BA, Biology BS, or Biomedical Sciences BS degree.

Course Typically Offered
Fall and Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

BIOL40903 - Biological Research and Writing

Department(s)
Biology

Long Description (Catalog Description)
Field and laboratory research experiences for advanced students. An average of nine clock hours per week are required for a total 135 hours per semester. Upon completion of an independent research project, the results will be written in a format suitable for publication in the scientific literature. A student may receive credit for this course only one time. Credit will not be given for both BIOL 40903 and BIOL 40933 for the same project.

Career
Undergraduate

Grading Basis
OPT - Student Option

BIOL40910 - Advanced Independent Research in Biology

Department(s)
Biology

Long Description (Catalog Description)
Prerequisite: BIOL 40900 or instructor permission. Field and laboratory problems for advanced students. Three clock hours per week of laboratory and/or field work are required for each semester hour of credit, for up to three semester hours credit in any given semester. This course can be repeated.

Course Typically Offered
Fall and Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

BIOL40911 - Discussions in Biological Research

Department(s)
Biology

Long Description (Catalog Description)
Prerequisites: Instructor permission. This course focuses on current scientific research in biology including discussions of primary literature and presentations of active research projects. This course may be repeated. May only be taken P/NC. This course cannot be applied toward the course requirements for the biology major or minor.

Career
Undergraduate

Grading Basis
PNC - Pass / No Credit

BIOL40933 - Senior Honors Research in Biology

Department(s)
Biology

Long Description (Catalog Description)
This course is only for students in the Honors College. Field and laboratory research experiences for advanced students. An average of nine clock hours per week are required for a total of 135 hours. The results will be written in the form of a senior honors research thesis to be presented to the Honors College. A student may receive credit for this course only one time. Credit will not be given for both 40933 and 40903 for the same project.

Course Typically Offered
Fall and Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

BIOL41000 - Senior Assessment

Department(s)
Biology

Long Description (Catalog Description)
Prerequisites: Senior standing as a biology major with an Intent to Graduate on file in the Dean's Office. One class session. Graduating seniors enrolled in this course will complete the exit exam required of biology majors. May only be taken P/NC.

Career
Undergraduate

Grading Basis
PNC - Pass / No Credit

BIOL50103 - Terrestrial Ecosystems

Department(s)
Biology

Long Description (Catalog Description)
Three hours lecture per week. Prerequisite: BIOL 30403 or permission of instructor. Concepts, principles, and mechanisms of the function of terrestrial ecosystems, including ecophysiology of component species, nutrient cycling, energy flow, ecosystem stability and global ecology.

Course Typically Offered
Every other fall

Career
Undergraduate

Grading Basis
OPT - Student Option

BIOL50123 - Biostatistics

Department(s)
Biology

Long Description (Catalog Description)
Prerequisites: BIOL 30403 or 30603, graduate standing or permission of instructor. Two hours lecture and two hours of computer lab per week. Students will gain knowledge and understanding of how statistical methods are applied to biological research. The course will emphasize hypothesis testing, study design, and the concepts, application, and interpretation of statistical results. Basic probability theory, parametric statistics, correlation, regression, analysis of variance, and non-parametric statistics will be introduced. Credit will not be provided for both BIOL 50123 and BIOL 55123.

Course Typically Offered
Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

BIOL50133 - Biochemistry I

Department(s)
Biology

Long Description (Catalog Description)
Prerequisite: CHEM 30133 and 40123 or permission of instructor. Three hours lecture per week. A general survey of structure and function of biologically important compounds with methods of analysis. (Crosslisted as BIOL/CHEM 50133.)

Course Typically Offered
Fall

Long Description (Catalog Description)
Prerequisite: BIOL10503 and BIOL10513 with grades of C or better in each, graduate student standing in a BIOL degree program, or instructor permission. Three hours lecture per week. Concepts and principles of organic evolution. Topics include natural selection, adaptation, quantitative genetics, sexual selection, kin selection, life history characters, speciation, and phylogeny.

Course Typically Offered
Every other fall

Career
Undergraduate

Grading Basis
OPT - Student Option

BIOL50401 - Neurobiology of Aging

Department(s)
Biology

Long Description (Catalog Description)
Prerequisites: permission of instructor. The current literature associated with the neurobiology of aging, modern research techniques and recent developments in neuroscience and aging research are discussed. This is a participation course in which advanced undergraduate and graduate students will present manuscripts, explain research hypotheses and methodologies and explain results. Open discussion of these papers will include faculty from Biology and Psychology. Topics presented will differ by semester. The course may be repeated three times (taken a maximum of four semesters in all.) (Crosslisted as BIOL/PSYC 50401.)

BRST40003 - Senior Seminar: British Colonial/Post-Colonial Study

Department(s)
AddRan Non-Departmental Programs

Long Description (Catalog Description)
This is a capstone course for the minor, and includes readings in British and colonial/postcolonial studies and an independent project. The independent project is pursued in consultation with the program director, and aims to reflect on the student's work in the minor, to synthesize the skills developed through the student's coursework, and to consider how they might be applied after graduation. Projects may include: an original creative performance; a scientific investigation; a portfolio of critical writing; or a U.S.-based internship with an employer with substantial interests in Britain or the former colonies. All projects also require a journal documenting and reflecting on the student's progress.

BUSI20151 - Careers in Business

Department(s)
Accounting

Long Description (Catalog Description)
Prerequisites: The class is open to all students admitted to the Neeley School of Business. Students in their First Year enroll in their second semester on campus, or a subsequent semester; transfer students admitted to Neeley may enroll in their first semester on campus, or a subsequent semester. This course provides students seeking a business major with direction and guidance regarding: 1) the major and career selection and exploration process; 2) organizing their internship search; and 3) developing a professional portfolio that will equip them with skills and resources to discover and explore professional opportunities that align with their interests, values, and skills. Students will engage with recruiters, alumni, and Neeley students across a variety of industries and majors to learn about career paths, recruiting timelines, and industry trends. Students will familiarize themselves with Neeley's resources and determine a personalized plan for career exploration and development.

Department(s)
Management & Leadership

Long Description (Catalog Description)
Prerequisites: Must be a declared Business major or Finance or Accounting minor, and permission of instructor. Students gain practical exposure to business through participation in an internship in a business or community organization. Emphasis is placed on the development of applied skills in one or more of the business disciplines. Students learn about organizational realities and work demands.
1 credit hour. Course may be repeated 3 times to receive a maximum of 3 credit hours.

BUSI40213 - Leading Dynamic Teams

Department(s)
Management & Leadership

Long Description (Catalog Description)
Prerequisites: BUSI 30843 with a grade of at least C and must be in the Neeley Leadership Program (NLP). This course and MANA 40213 cannot both be taken for credit. Organizations rely on team-based structures to increase flexibility and responsiveness in their increasingly dynamic and unpredictable environments. Additionally, given the rapid changes of an Internet-paced global economy, organizations now rely more on teams, versus individuals, to quickly gather complex information, analyze it, and produce sound, timely decisions. As a result, modern organizational work frequently takes place within the boundaries of face-to-face or virtual teams, and knowing how teams function and how best to manage them has become vitally important for successful leadership. The purpose of this course is to expose students to and provide opportunities for them to apply practical knowledge of team dynamics.

BUSI40301 - Business Honors Seminar

Department(s)
Management & Leadership

Long Description (Catalog Description)
Prerequisites: Must be a declared business major. This one-credit course will provide direction and instructional tools for students to complete a departmental honors project in their major department. The goal of the course is to develop a project statement (introduction, literature review, research questions/hypothesis, methodology), and prepare for data collection if applicable.

Course Typically Offered
Fall

Career
Undergraduate

Grading Basis
GRD - Graded

BUSI40351 - Personal Financial Literacy

Department(s)
Finance

Long Description (Catalog Description)
Prerequisites: Must be a Junior or a Senior standing. An introduction to basic financial literacy. This course will prepare students for lifelong financial success after college by providing them with a foundational knowledge in a number of key topics including: how to create a budget, to buy or lease a car, creating an emergency fund, investment fundamentals, importance of credit scores and much more.

BUSI40703 - Energy Marketing,Trading & Hedging

Department(s)
Finance

Long Description (Catalog Description)
The course will cover, physical and financial trading of energy commodities ("cash" market, NYMEX contracts, swaps, options, and hedging), technical analysis and, risk control. Addresses the following resource/product groups oil, natural gas, gasoline, heating oil, LNG, electricity and, time permitting, emissions credits. While focused on the North American energy landscape, discussions of international oil and gas markets will be incorporated where appropriate. Students will also actively trade a financial energy derivatives "book" utilizing an online trading simulator.

BUSI40723 - Electric Power Industry

Department(s)
Finance

Long Description (Catalog Description)
A semi-technical study of the electric utility industry, which focuses on traditional and alternative/ renewable sources, industry organization, logistics & value chain, power demand management, conservation, and energy efficiency. Demand response methods and programs as well as, smart grids will also be covered.

Career
Undergraduate

Grading Basis
GRD - Graded

BUSI40733 - Alternative & Renewable Energy

Department(s)
Finance

Long Description (Catalog Description)
Principles and practices of doing business in the renewable energy and alternative fuels sectors. Investigates the feasibility and economics of competing energy sources and technologies and considers their contribution to a total system approach to energy business. Includes concepts of innovation, relevant business models, the use of government incentives, tax credits, regulatory mandates, as well as financing, distribution, and infrastructure challenges and evolving markets and consumer demand.

BUSI40843 - The Leadership Challenge

Department(s)
Management & Leadership

Long Description (Catalog Description)
3 hours. Prerequisites: Enrolled in the BNSF Neeley Leadership Program, and MANA 40213 with at least a grade of C. This course is designed to help students learn what it takes to successfully lead change efforts and plan and implement projects that promote the common good. As such, it will cover topics such as overcoming complacency, creating and communicating new direction, developing support for initiatives, communicating effectively about an initiative, and dealing with resistance, among others. Students in this course are expected to use what they've learned in prior leadership courses to lead a field-based project to a successful completion. Class sessions will help students relate their field experience to topic coverage in this course as well as to other courses in the Neeley Leadership Program.

BUSI50843 The Leadership Challenge

BUSI40853 - Leading in a Complex World

Department(s)
Management & Leadership

Long Description (Catalog Description)
Prerequisite: BUSI 40843 with a grade of at least C for students in the BNSF Neeley Leadership Program. For others, any two of the following with a grade of at least C, BUSI 30833, BUSI 30843, MANA 40213, MANA 40343. This course is designed to help students understand the complexity of the contexts in which leadership occurs. Students will gain a better understanding of: 1) the nature of complexity in business and social systems, 2) the implications of complexity for how organizations must think differently about leadership and followership (e.g., regarding organization structure, culture, power and communication), and 3) how each student personally needs to lead and follow in organizational contexts to be successful as they transition into and advance in their careers.

CHDV40263 - Child Development Internship

Department(s)
Psychology

Long Description (Catalog Description)
Prerequisites: PSYC/CHDV 50433 and PSYC/CHDV 50443. This experiential course provides advanced opportunities to work with children through internship positions. Service environments will provide experiential learning through which the student will utilize their knowledge of child development. Students can obtain their own positions (e.g., women shelter volunteer; child life specialist practicum) or can take part in internships facilitated by the instructor. Students complete 100 hours at the internship site. Students also attend a weekly one-hour seminar during the semester to discuss their experiences with peers and faculty and learn about working in helping professions. Course may be repeated up to 6 hours. Only 3 hours qualify for credit toward the major.

Course Typically Offered

Department(s)
Chemistry and Biochemistry

Long Description (Catalog Description)
A project in chemical research carried out under the direction of a member of the chemistry faculty. The student must have permission from the supervising faculty member prior to registration. (1-3 semester hours).

Course Typically Offered
All Sessions

Career
Undergraduate

Grading Basis
OPT - Student Option

CHEM40523 - Structural Biology of Drug Design

Department(s)
Chemistry and Biochemistry

Long Description (Catalog Description)
Prerequisites: BIOL 40513 or BIOL/CHEM 50133 or equivalent course. Two hours of lecture and two hours of laboratory per week. Students will learn structural biology techniques important for designing pharmaceuticals and design a drug to their favorite protein target. Crosslisted as BIOL/CHEM 40523.

Career
Undergraduate

Grading Basis
OPT - Student Option

Cross Listed Courses
BIOL40523 Structural Bio of Drug Design

CHEM50001 - Laboratory Safety, Ethics & Professional Skills

Department(s)
Chemistry and Biochemistry

Long Description (Catalog Description)
This course deals with the safe handling of chemicals, the inventory and safe disposal of chemicals, safe handling of radioactive materials and lasers as well as details of federal, state and city regulations that apply to safety in academic and industrial laboratories. Ethics in the chemistry and the use of databases and industry-specific software will also be discussed. (This course is only offered P/NC.)

Course Typically Offered
Fall

Career
Undergraduate

Grading Basis
PNC - Pass / No Credit

CHEM50111 - Laboratory Glassblowing

Department(s)
Chemistry and Biochemistry

Long Description (Catalog Description)
One 4-hour laboratory period per week. An introduction to the preparation of laboratory research equipment constructed of sodium and borosilicate glass.

Course Typically Offered
Contact Department For Details

Career
Undergraduate

Grading Basis
OPT - Student Option

CHEM50120 - Teaching of Chemistry

Department(s)
Chemistry and Biochemistry

Long Description (Catalog Description)
Prerequisite: Permission of instructor. Members of this class act as Chemistry laboratory assistants. Techniques of laboratory instruction are illustrated and the importance of laboratory safety is stressed. 0.5-3 semester hours.

Course Typically Offered
Fall and Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

CHEM50133 - Biochemistry I

Department(s)
Chemistry and Biochemistry

Long Description (Catalog Description)
Prerequisite: CHEM 30133 and 40123 or permission of instructor. Three hours lecture per week. A general survey of structure and function of biologically important compounds with methods of analysis. (Crosslisted as BIOL/CHEM 50133.)

Course Typically Offered
Fall

BIOL50143 Biochemistry II

CHEM50153 - Medicinal Chemistry

Department(s)
Chemistry and Biochemistry

Long Description (Catalog Description)
Three hours lecture per week. Prerequisites: BIOL/CHEM 50143, or permission of instructor. Molecular mechanism of drug actions, and methods of drug design, discovery and development. (Crosslisted as BIOL/CHEM 50153.)

Course Typically Offered
Fall

Career
Undergraduate

Grading Basis
OPT - Student Option

Cross Listed Courses
BIOL50153 Medicinal Chemistry

CHEM50162 - Advanced Inorganic Chemistry Laboratory

Department(s)
Chemistry and Biochemistry

Long Description (Catalog Description)
One hour lecture and one 4-hour laboratory per week. Prerequisite: CHEM 50163 or concurrent registration. The laboratory emphasizes the synthesis, characterization and transformations of inorganic species.

Course Typically Offered
Fall

Career
Undergraduate

Grading Basis
OPT - Student Option

CHEM50163 - Advanced Inorganic Chemistry

Department(s)
Chemistry and Biochemistry

Long Description (Catalog Description)
Three hours lecture per week. Prerequisite: CHEM 40123 or permission of instructor. A survey of topics in modern inorganic chemistry with emphasis on synthesis, bonding and the mechanisms of reactions.

Course Typically Offered
Fall

Career
Undergraduate

Grading Basis
OPT - Student Option

CHEM50182 - Biophysical Chemistry Laboratory

Department(s)
Chemistry and Biochemistry

Long Description (Catalog Description)
Two 4-hour laboratory periods per week. Prerequisite: Prior or concurrent registration in CHEM 50183. Physical chemical principles applied to biochemical systems.

Course Typically Offered
Contact Department For Details

Career
Undergraduate

Grading Basis
OPT - Student Option

CHEM50183 - Biophysical Chemistry

Department(s)
Chemistry and Biochemistry

Long Description (Catalog Description)
Prerequisite: CHEM 40123, prior or concurrent registration in CHEM 50133 or permission of instructor. Biological systems are discussed from the viewpoint of physical chemical theories and methods.

Course Typically Offered
Contact Department For Details

Career
Undergraduate

Grading Basis
OPT - Student Option

CHEM50223 - Advanced Organic Chemistry

Department(s)
Chemistry and Biochemistry

Long Description (Catalog Description)
Three hours lecture per week. Prerequisite: CHEM 30143, 30133 or permission of instructor. A detailed study of stereochemistry, important organic reactions and mechanisms, organic syntheses and fundamentals of synthetic design.

Course Typically Offered
Fall

Career
Undergraduate

Grading Basis
OPT - Student Option

CHEM50230 - Special Problems in Chemistry

Department(s)
Chemistry and Biochemistry

Long Description (Catalog Description)
Advanced work in biochemistry, inorganic, organic and physical chemistry to be determined by the previous preparation and interests of the individual student.

Course Typically Offered
All Sessions

Career
Undergraduate

Grading Basis
OPT - Student Option

CHEM50242 - How Chemists Win Wars

Department(s)
Chemistry and Biochemistry

Long Description (Catalog Description)
Prerequisites: CHEM 30123. This course will focus on the role that chemistry has played in historical times of conflict. The scientists who made the decisions and the personal and professional conflicts they faced will be presented. Student presentations and daily class discussions will be a significant component of the course grade.

Career
Undergraduate

Grading Basis
GRD - Graded

CHEM50263 - Physical-Organic Chemistry

Department(s)
Chemistry and Biochemistry

Long Description (Catalog Description)
Three hours lecture per week. Prerequisite: CHEM 30133 and prior or concurrent registration in CHEM 40123. An introduction to modern structural theory and reaction mechanism. Includes a discussion of physical methods.

Course Typically Offered
Contact Department For Details

Career
Undergraduate

Grading Basis
OPT - Student Option

CHEM50273 - Inorganic Reactions

Department(s)
Chemistry and Biochemistry

Long Description (Catalog Description)
Three hours lecture per week. Prerequisite: CHEM 50163 or permission of the instructor. An advanced study of the preparative and derivative chemistry of important classes of transition metal and main group element compounds.

Course Typically Offered
Contact Department For Details

Career
Undergraduate

Grading Basis
OPT - Student Option

CHEM50282 - Advanced Physical Chemistry

Department(s)
Chemistry and Biochemistry

Long Description (Catalog Description)
Prerequisites: CHEM 40133. An introduction to Statistical Thermodynamics, Transport Phenomena and Physical Chemistry of Surfaces. Continuation of Chemistry 40123-40133.

Course Typically Offered
Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

CHEM50290 - Chemical Thermodynamics

Department(s)
Chemistry and Biochemistry

Long Description (Catalog Description)
Prerequisite: CHEM 40133 or permission of instructor. Application of thermodynamics to the study of chemical reactions and phase transitions.

Course Typically Offered
Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

CHEM50502 - Biochemistry Laboratory

Department(s)
Chemistry and Biochemistry

Long Description (Catalog Description)
Two four-hour laboratory periods per week. Prerequisite: CHEM 50143 or concurrent registration. (Crosslisted as BIOL/CHEM 50502)

Course Typically Offered
Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

Cross Listed Courses
BIOL50502 Biochemistry Lab

CHEM50763 - Experimental Methods in Biochemistry and Biophysics

Department(s)
Chemistry and Biochemistry

Long Description (Catalog Description)
Prerequisite: Permission of instructor. This course will introduce students to experimental techniques developed and used to investigate biological systems. It will discuss modern techniques used in the biomedical sciences, drug discovery and other biophysical and biochemical fields. The course includes lectures, demonstrations, and hands-on exercises in the TCU Biophysics Laboratory and on instrumentation at the Center for Commercialization of Fluorescence Technologies (CCFT) at the UNT Health Sciences Center campus. (Crosslisted as CHEM/PHYS 50763.)

Course Typically Offered
Spring

CHIN10033 - Business Chinese

Department(s)
Modern Languages

Long Description (Catalog Description)
Prerequisite: This course is designed for students with little or no previous knowledge of the Chinese language. It cultivates student cultural knowledge and language skills while communicating in Chinese business environments, tailoring all language training and cultural topics to that end. The language training helps students cultivate basic language skills to interact with the Chinese people. Cultural topics provide a framework for Western learners to develop and Eastern perspective, guiding learners to behave in a culturally appropriate manner when they communicate within Chinese business environments.

Course Typically Offered
Spring

Undergraduate

Grading Basis
OPT - Student Option

CHIN10043 - Chinese Calligraphy

Department(s)
Modern Languages

Long Description (Catalog Description)
Chinese Calligraphy is designed for students who are interested in Chinese culture, philosophy, and art. Students will practice and acquire basic calligraphy strokes, radicals and characters by using traditional Chinese calligraphy brushes. Students will also learn the meaning and philosophy behind each Chinese character. Prior knowledge in Chinese language and culture is not required.

Course Typically Offered
Fall and Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

CHIN10153 - Beginning Chinese I

Department(s)
Modern Languages

Long Description (Catalog Description)
This is an introductory Chinese course for students with no or little prior experience in standard Mandarin. It provides students a solid training in all four skills -- listening, speaking, reading and writing, with emphasis on practicing pronunciations and building vocabulary, as well as acquiring fundamental grammatical structures. In addition, Chinese cultures will be briefly taught throughout the class. No prerequisite.

Course Typically Offered
Fall

Career
Undergraduate

Grading Basis
OPT - Student Option

CHIN10163 - Beginning Chinese II

Department(s)
Modern Languages

Long Description (Catalog Description)
Prerequisite: CHIN 10153 with a C- or better. This course continually covers basic Mandarin Chinese to students who have already taken a semester in Chinese. It continues strengthening integrated training in all four skills -- listening, speaking, reading and writing, but more efforts will be given to spoken and reading practicing. In addition, Chinese cultures will be briefly noted throughout the class.

CHIN20053 - Intermediate Chinese I

Department(s)
Modern Languages

Long Description (Catalog Description)
Prerequisite: CHIN 10163 with a C- or above, or approval of instructor. CHIN 20053 will develop listening, speaking, reading, and writing skills at the intermediate level. Working with familiar topics, students will learn to comprehend short paragraph-level utterances; interact effectively in a variety of straightforward, concrete conversational situations; and read short paragraphs and write short, well-focused descriptive or narrative works.

Course Typically Offered
Fall

Career
Undergraduate

Grading Basis
OPT - Student Option

CHIN20063 - Intermediate Chinese II

Department(s)
Modern Languages

Long Description (Catalog Description)
Prerequisite: CHIN 20053 with a grade of C- or better, or approval of the instructor. CHIN 20063 will develop speaking, listening, reading, and writing skills at the intermediate-mid level. Students will learn to understand paragraph-level utterances on familiar topics; speak with confidence in everyday interactions; read paragraphs (in characters) on learned or familiar topics; handle practical writing tasks (in characters) as short letters and memos that relate to personal and learned topics.

COMM30133 - Group Communication

Department(s)
Communication Studies

Long Description (Catalog Description)
Prerequisites: COMM majors/minors only, or permission of department; COMM 20113. Participation in decision-making groups to develop skills related to effective group communication. Factors affecting group interactions are considered.

Course Typically Offered
Fall and Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

COMM30143 - Mediation

Department(s)
Communication Studies

Long Description (Catalog Description)
Prerequisite: COMM majors/minors only, or permission of department. Students will develop knowledge and skills necessary to facilitate conflict conversations in interpersonal and organizational settings.

Course Typically Offered
Summer

Career
Undergraduate

Grading Basis
OPT - Student Option

COMM30153 - Interviewing

Department(s)
Communication Studies

Long Description (Catalog Description)
Prerequisite: COMM majors/minors only, or permission of department. COMM 10123 or 10163. Applies dyadic communication principles to specialized interviewing situations. Skills development is stressed.

Course Typically Offered
Fall and Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

COMM30163 - Organizational Communication

Department(s)
Communication Studies

Long Description (Catalog Description)
Prerequisite: COMM majors/minors only, or permission of department; COMM 20113 with a C- or better; COMM 20223 with a C- or better. Communication channels and networks in organizations; analysis of barriers to effective communication; solving practical communication problems; communication and dynamics in work groups.

Course Typically Offered
All Sessions

Career
Undergraduate

Grading Basis
OPT - Student Option

COMM30173 - Messaging as a Content Creator

Department(s)
Communication Studies

Long Description (Catalog Description)
Prerequisite: COMM majors/minors only, or permission of department; COMM 10123 or 10133 or permission of instructor.Training in message and content development for public presentations in a variety of contexts. Students will develop strategic messaging and visual production skills. Theory and practical experience related to the formulation, presentation, and evaluation of public presentations.

Course Typically Offered
Fall and Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

COMM30183 - Issues in Organizational Communication

Department(s)
Communication Studies

Long Description (Catalog Description)
Prerequisites: COMM majors/minors only, or permission of department; COMM 20223 and COMM 30163. Explores organizational communication within special contexts. Included theoretical concepts applicable to conflict, culture, media, etc. Repeatable for maximum of 6 hours.

Course Typically Offered
Rarely

Computer Science

Long Description (Catalog Description)
Prerequisites: COSC 30203 or CITE 30103; all with a C- or better. This course will cover the fundamental principles, architectures, and standards of modern wireless communications systems, as well as specific applications and uses of these systems.

Course Typically Offered
Fall

Career
Undergraduate

Grading Basis
OPT - Student Option

COSC40043 - Mobile App Development

Department(s)
Computer Science

Long Description (Catalog Description)
Prerequisites: COSC 30403 with a C- or better. The course introduces Android app development using Kotlin. This is a project-based course with the focus on developing simple to moderately complex Android apps. Along the way, students will learn the important concepts of Kotlin programming as well as how to implement key Android features.

Career
Undergraduate

Grading Basis
OPT - Student Option

COSC40053 - Introduction to Cybersecurity

Department(s)
Computer Science

Long Description (Catalog Description)
Prerequisites: MATH 20123, and COSC 30203 or CITE 30103; all with a C- or better. This course will cover the fundamental principles and techniques in computer systems and network security. Key topics include cryptographic systems, security standards, protocols, tools and applications.

Course Typically Offered
Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

COSC40103 - Graphics

Department(s)
Computer Science

Long Description (Catalog Description)
Prerequisites: COSC 30253 and a knowledge of linear algebra MATH 30224. A basic course in graphics systems. Considers the equations of lines, planes, and surfaces; hidden line algorithms; rotations, scaling, and cutaway transformations; 3-D images and the use of shading and perspective; animation; and color graphics.

Course Typically Offered
Contact Department For Details

Career
Undergraduate

Grading Basis
OPT - Student Option

COSC40203 - Operating Systems

Department(s)
Computer Science

Long Description (Catalog Description)
Prerequisites: COSC 30203 with a C- or better, COSC 30253 with a C- or better. Introduction to operating systems concepts, principles, and design. Topics include: processes and threads, CPU scheduling, mutual exclusion and synchronization, deadlock, memory management, file systems, security and protection, networking, and distributed systems. Selected existing operating systems are discussed, compared, and contrasted.

Course Typically Offered
Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

COSC40233 - Cloud Computing

Department(s)
Computer Science

Long Description (Catalog Description)
Prerequisites: CITE 30103 with a C- or better and completed at least 18 hours in Major. An introductory course on Cloud Computing, with special emphasis on AWS Cloud Foundations curriculum. The course will provide a detailed overview and help students get an overall understanding of cloud computing concepts. More specifically, students will get hands-on exposure to the AWS cloud, including but not limited to the AWS core services, security, architecture, pricing, and support.

Career
Undergraduate

Grading Basis
OPT - Student Option

COSC40253 - Microprocessor Systems

Department(s)
Computer Science

Long Description (Catalog Description)
Prerequisite: COSC 30253. Introduction to the design of microprocessor based digital systems including the study of processor control signals, address decoding and memory interfacing, interfacing to serial and parallel ports, A/D conversion, and interrupt processing. Features of state-of-the-art microprocessors will be discussed. Both hardware and software assignments will be required. (Crosslisted as COSC 30353/ENGR 30583.)

Course Typically Offered
Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

Cross Listed Courses
ENGR30583 Microprocessor Systems

COSC40303 - Image Processing Fundamentals

Department(s)
Computer Science

Long Description (Catalog Description)
Prerequisites: MATH 10524 and COSC 10403 or 10503, and either COSC 20803 or ENGR 40574. The study and practice of the principles, the algorithms and the techniques of image processing such as editing, analysis, segmentation, recognition and classification. Students will use Java to implement and test various image processing algorithms.

OPT - Student Option

COSC40403 - Analysis of Algorithms

Department(s)
Computer Science

Long Description (Catalog Description)
Prerequisite: COSC 20803, Corequisite MATH 30123; all with C- or better, and a knowledge of probability and statistics. This course covers basic approaches for designing and analyzing for a variety of problems. Algorithm design techniques such as divide-and-conquer, greedy, dynamic programming will be covered. Other topics include worst, best, and average case analysis, graph algorithms, string matching, and complexity.

Contact Department For Details

Career
Undergraduate

Grading Basis
OPT - Student Option

COSC40453 - Object-Oriented Programming and Design Patterns

Department(s)
Computer Science

Long Description (Catalog Description)
Prerequisites: COSC 30403 with C- or better. This course teaches how to write code of high quality by providing an in-depth coverage of object-oriented programming principles and techniques. Topics include but not limited to fundamental object-oriented programming concepts, software design principles (SOLID), Gang of Four (GoF) design patterns, coding standards, refactoring. Each topic will be explained by using diagrammatic notations Unified Modeling Language (UML) and numerous real-world code demos.

Career
Undergraduate

Grading Basis
OPT - Student Option

COSC40503 - Artificial Intelligence

Department(s)
Computer Science

Long Description (Catalog Description)
Prerequisite: COSC 40403 and MATH 20123, all with grade C- or above. Introduction to knowledge representation and methods for intelligent search, planning, and learning. Fundamental topics include uninformed and informed search, adversarial search, constraint satisfaction problems, logical agents, knowledge representation, reinforcement learning, expert systems, and a bit of machine learning.

Course Typically Offered
Contact Department For Details

Career
Undergraduate

Grading Basis
OPT - Student Option

COSC40523 - Deep Learning

Department(s)
Computer Science

Long Description (Catalog Description)
Prerequisites: COSC/MATH 30103, MATH 30224, either MATH 10043 or 30853 or concurrent. All prerequisites need to be C- or better. Introduces fundamental knowledge of deep learning algorithms, practical skills to build, train and tune a deep artificial neural network with applications such as computer vision, natural language processing, and business analytics. Topics include but not limited to fully connected neural networks, convolutional networks, recurrent networks, generative adversarial networks.

Career
Undergraduate

Grading Basis
OPT - Student Option

COSC40603 - Compiler Theory

Department(s)
Computer Science

Long Description (Catalog Description)
Prerequisites: COSC 30203, COSC 30403, and MATH 30123. Formal description of algorithmic languages, such as Pascal, and the techniques used in writing compilers for such. Topics include syntax, semantics, storage allocation, code generation, error handling and diagnostics, code optimization, etc. Includes the definition and writing of a compiler for a simple programming language.

Course Typically Offered
Fall

Career
Undergraduate

Grading Basis
OPT - Student Option

COSC40703 - Parallel Computing

Department(s)
Computer Science

Long Description (Catalog Description)
Prerequisites: COSC 40203. An introduction to hardware and software topics in high performance and parallel computing. Students will be introduced to a variety of high performance and parallel computing paradigms including message passing, threading models, and shared-memory programming techniques. Topics include motivation and history, parallel architectures, parallel algorithm design, and parallel performance analysis.

Course Typically Offered
Fall

Career
Undergraduate

Grading Basis
OPT - Student Option

COSC40803 - Advanced Topics in Computer Hardware

Department(s)
Computer Science

Long Description (Catalog Description)
Prerequisite: Permission of instructor. Advanced topics of current interest in computer hardware, such as computer design, computer networks, advanced computer graphics. Students will study current literature. May be repeated for credit when topic changes.

Course Typically Offered
Contact Department For Details

Career
Undergraduate

Grading Basis
OPT - Student Option

COSC40903 - Advanced Topics in Computer Software

Department(s)
Computer Science

Long Description (Catalog Description)
Prerequisite: Permission of instructor. Advanced topics of current interest in computer software, such as natural language programming, advanced operating systems, advanced compiler design, file structures, advanced database. Students will study current literature. May be repeated for credit when topic changes.

Course Typically Offered
Contact Department For Details

Career

OPT - Student Option

COSC40943 - Software Engineering

Department(s)
Computer Science

Long Description (Catalog Description)
Prerequisite: COSC 30603 or concurrent, senior standing in COSC or CITE or DASC (24 hours in the major.) All prerequisites need to be C- or better. Stages of the software development life cycle (requirements analysis, specification, design, implementation, testing), evolution, and quality assurance are covered. Classical and alternative process models are described. Project management issues, professional responsibilities, and ethics of the profession are discussed. This course includes team projects.

Course Typically Offered
Fall

Career
Undergraduate

Grading Basis
OPT - Student Option

COSC40993 - Senior Design Project

Department(s)
Computer Science

Long Description (Catalog Description)
Prerequisite: COSC 40943 with a C- or better. Senior computer science majors are required to demonstrate their mastery of several computer science topics and their ability to communicate the results of their efforts to others. They are required to identify and analyze a computer science problem, develop and implement a workable solution to the problem, and then document the results of their efforts.

Course Typically Offered
Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

COSC50253 - Parallel Computing

Department(s)
Computer Science

Long Description (Catalog Description)
Prerequisites: COSC 40203 - Operating Systems with C- or better, or permission, or graduate standing. An introduction to hardware and software topics in high performance and parallel computing.Students will be introduced to a variety of high performance and parallel computing paradigms including message passing, threading models, and shared-memory programming techniques. Topics include motivation and history, parallel architectures, parallel algorithm design, and parallel performance analysis.

Course Typically Offered
Spring

Career
Undergraduate

Grading Basis
GRD - Graded

COSC50303 - Data Mining

Department(s)
Computer Science

Long Description (Catalog Description)
Prerequisites: COSC 20803 and MATH 20123 with a C- or better in both, or graduate standing. This course presents, in detail, the following advanced foundational concepts of data mining: similarity and dissimilarity measures, data preprocessing, classification and cluster analysis, frequent pattern mining, anomaly detection, time series mining, and spatial/ spatio-temporal data mining. The lectures will provide students with a sufficient foundation to carry out their own projects that explore the challenges of mining unconventional data (e.g., image, time-series, or spatio-temporal data) from publicly available data repositories.

Course Typically Offered
Fall

Career
Undergraduate

Grading Basis
OPT - Student Option

COSC50513 - Machine Learning

Department(s)
Computer Science

Long Description (Catalog Description)
Prerequisites: COSC/MATH 30103 and MATH 30224; MATH 10043 or MATH 30853 (co-requisite); all with a C- or better, or graduate standing. Open to both undergraduate and graduate students. Students will study the principles and practices of machine learning. Specifically, regression and classification will be studied to obtain and analyze patterns in datasets. To facilitate exploratory data analysis, students will also study data preprocessing techniques and data visualization practices.

Course Typically Offered
Spring

Career
Undergraduate

Grading Basis
GRP - Graded - Letter grade only

COSC50523 - Deep Learning

Department(s)
Computer Science

Long Description (Catalog Description)
Prerequisites: COSC/MATH 30103 and MATH 30224; MATH 10043 or MATH 30853 (may be taken concurrently); all with a C- or better, or graduate standing. Open to both undergraduate and graduate students. This course introduces fundamental knowledge of deep learning algorithms, practical skills to build, train and tune a deep artificial neural network with applications such as computer vision, and natural language processing. Topics include but not limited to fully connected neural networks, convolutional networks, recurrent networks, attention-based and transformer-based networks, generative adversarial networks, and multimodal learning.

Course Typically Offered
Fall

Career

COSD10200 - COSD Generic Transfer Work

Department(s)
Davies School of Communication Science & Disorders

Long Description (Catalog Description)
Transfer work.

Course Typically Offered
Administrative Use Only

Career
Undergraduate

Grading Basis
TRN - Transfer Grading Basis

COSD10303 - Survey of Communication Disorders

Department(s)
Davies School of Communication Science & Disorders

Long Description (Catalog Description)
Survey of disorders of articulation, language, stuttering, voice and hearing.

Course Typically Offered
Fall and Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

COSD10343 - Basic Sign Language

Department(s)
Davies School of Communication Science & Disorders

Long Description (Catalog Description)
An introductory course in signing expressively and understanding basic sign language, receptively. Included is basic information on hearing loss and its effects on children and adults. Recommended for students majoring in special education and service-oriented fields as well as those who are interested in learning sign language.

Course Typically Offered
Fall and Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

COSD20303 - Speech and Hearing Science

Department(s)
Davies School of Communication Science & Disorders

Long Description (Catalog Description)
An introduction to acoustic and physiological aspects of the speech and hearing mechanisms.

Course Typically Offered
Fall

Career
Undergraduate

Grading Basis
OPT - Student Option

COSD20333 - Phonetics

Department(s)
Davies School of Communication Science & Disorders

Long Description (Catalog Description)
Required of all majors and elective to others. Emphasis on speech perception and sound discrimination. Intensive work in transcription using the International Phonetic Alphabet.

Course Typically Offered
Fall

Career
Undergraduate

Grading Basis
OPT - Student Option

COSD20343 - Intermediate Sign Language

Department(s)
Davies School of Communication Science & Disorders

Long Description (Catalog Description)
Prerequisite: COSD 10343 with a grade of C or higher or permission of instructor. Further development and refinement of receptive and expressive skills in Signed English and American Sign Language. Emphasis on vocabulary development for classroom use, ability to sign fluently, and the psycho-social aspects of deafness, including the sociolinguistics of sign language and Deaf Culture.

Course Typically Offered
Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

COSD20363 - Evidence-Based Practice in Communication Sciences and Disorders

Department(s)
Davies School of Communication Science & Disorders

Long Description (Catalog Description)
Prerequisite: COSD 10303 with a grade of C or better. This course will focus on identifying the fundamental concepts related to scientific inquiry in communication sciences and disorders to allow students to become critical readers of peer-reviewed journal articles. The course will consider identification of research literature relevant to a specific topic or disorder, basic concepts involved in the formulation of research questions and methodology, and levels of research evidence available to audiologists and speech language pathologists.

Course Typically Offered
Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

COSD20503 - Anatomy and Physiology of the Speech and Hearing Mechanisms

Department(s)
Davies School of Communication Science & Disorders

Long Description (Catalog Description)
Prerequisite: SPPA or DHHS major or minor, or permission of instructor. Structure and function of the normal mechanisms required for speech and hearing.

Course Typically Offered
Fall and Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

COSD30003 - Junior Honors Seminar

Department(s)
Davies School of Communication Science & Disorders

Long Description (Catalog Description)
Prerequisite: Junior standing and membership in the Honors Program. Under the guidance and supervision of a faculty member, current issues in communication sciences and disorders are explored.

Course Typically Offered
Fall and Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

COSD30203 - Language Development for Non Majors

Department(s)
Davies School of Communication Science & Disorders

Long Description (Catalog Description)
An overview of normal acquisition and development of language in children from infancy through adolescence for non majors.

Career
Undergraduate

Grading Basis
OPT - Student Option

COSD30324 - Speech Sound Disorders

Department(s)
Davies School of Communication Science & Disorders

Long Description (Catalog Description)
Prerequisites: SPPA major, COSD 10303 and 20333, with a grade of C or higher in all COSD coursework, cumulative GPA of at least 3.00, and a cumulative 3.00 GPA in COSD courses or permission of instructor. Basic principles of diagnosis and treatment for individuals with developmental or functional speech sound disorders of articulation.

Course Typically Offered
Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

COSD30334 - Language Development in Children

Department(s)
Davies School of Communication Science & Disorders

Long Description (Catalog Description)
Prerequisite: SPPA or DHHS major or permission of instructor. Normal acquisition and development of language in children from infancy through adolescence.

Course Typically Offered
Fall and Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

COSD30343 - Aural Rehabilitation

Department(s)
Davies School of Communication Science & Disorders

Long Description (Catalog Description)
Prerequisite: COSD 30363 with a grade of C or higher in all COSD coursework, cumulative GPA of at least 3.00, and a cumulative 3.00 GPA in COSD courses. Overview of management and rehabilitation of persons with hearing loss. Focus on amplification, cochlear implants, assistive devices, speech training, speech reading, auditory training and language development.

Course Typically Offered
Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

COSD30353 - Teaching Elementary School Subjects to DHH Children

Department(s)
Davies School of Communication Science & Disorders

Long Description (Catalog Description)
Prerequisite: Permission of instructor. Curriculum materials and teaching methods for meeting specialized needs of DHH children, in the learning of reading and developing concepts and relationships in arithmetic and science.

Course Typically Offered
Fall

Career
Undergraduate

Grading Basis
OPT - Student Option

COSD30363 - Audiology

Department(s)
Davies School of Communication Science & Disorders

Long Description (Catalog Description)
Prerequisite: COSD 20503 with a grade of C or higher. Basic audiometric techniques and interpretation of audiograms as related to problems of communication of persons with hearing loss.

Course Typically Offered
Fall

Career
Undergraduate

Grading Basis
OPT - Student Option

COSD30373 - Language Disorders in Children

Department(s)
Davies School of Communication Science & Disorders

Long Description (Catalog Description)
Prerequisite: SPPA major or permission of instructor. COSD 30334 with a grade of C or higher in all COSD coursework, cumulative GPA of a least 3.00, and a cumulative 3.00 GPA in COSD courses. Introduction to the causes, characteristics, assessment and treatment of children with language disorders.

Course Typically Offered
Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

COSD30383 - American Sign Language III

Department(s)
Davies School of Communication Science & Disorders

Long Description (Catalog Description)
Prerequisite: Basic Sign Language and Intermediate Sign Language or permission of the instructor to complete a proficiency assessment to determine sign language skills.
In this course, students will strengthen their expressive fluency and comprehension of American Sign Language (ASL) including advanced study of grammatical structure and signing technique. Students will deepen their knowledge of Deaf culture and increase their ability to support Deaf and Hard of Hearing individuals in society.

Course Typically Offered
Fall

Career
Undergraduate

Grading Basis
OPT - Student Option

COSD30393 - Language Development of DHH

Department(s)
Davies School of Communication Science & Disorders

Long Description (Catalog Description)
Prerequisite: COSD 30334 with a grade of C or higher, or permission of instructor. This is the first of two courses devoted to the study of language development of Deaf/Hard of Hearing (DHH) students. It will address the early intervention needs of young DHH infants and their parents as well as DDH students in lower primary grades.

Course Typically Offered
Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

COSD30524 - Clinical Methods in Speech-Language Pathology

Department(s)
Davies School of Communication Science & Disorders

Long Description (Catalog Description)
Prerequisite: COSD 10303, 20333, and 30334, with a grade of C or higher in all COSD coursework, cumulative GPA of at least 3.00, and a cumulative 3.00 GPA in COSD courses or permission of instructor. Principles and procedures in the assessment and treatment of communication disorders.

Course Typically Offered
Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

COSD30970 - Independent Study

Department(s)
Davies School of Communication Science & Disorders

Long Description (Catalog Description)
Prerequisite: Permission of instructor. Independent study of specially designed topics not addressed in regular course offerings. 1-6 hours, 3 hours maximum per semester.

Course Typically Offered
Fall and Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

COSD30990 - International Residential Study

Department(s)
Davies School of Communication Science & Disorders

Long Description (Catalog Description)
This course represents credit earned through a semester study abroad experience with an institution or program with which Texas Christian University has an official agreement to accept credit. The site and specific content will be identified on the official transcript. Courses appearing on a student's official transcript have been included in the student's grade point average.

Course Typically Offered
Study Abroad Course

Career
Undergraduate

Grading Basis
OPT - Student Option

COSD40003 - Senior Honors Research Project

Department(s)
Davies School of Communication Science & Disorders

Long Description (Catalog Description)
Prerequisite: COSD 30003, with a grade of C or higher, senior standing, and membership in the Honors Program. The completion of a research project related to a current issue in normal and/or disordered communication.

Course Typically Offered
Fall and Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

COSD40300 - Clinical Practicum in Speech-Language Pathology I

Department(s)
Davies School of Communication Science & Disorders

Long Description (Catalog Description)
Prerequisite: SPPA major. COSD 30524, 30324, 30373, all with a grade of C or higher, senior standing, a cumulative TCU GPA of 3.0 or higher, and a cumulative 3.00 or higher GPA in COSD courses, MATH 10043, one physical science course, one social/behavioral science course and biological sciences, and permission of instructor. One semester is required. Supervised clinical experiences in the management of speech and language disorders.

Course Typically Offered
All Sessions

Career
Undergraduate

Grading Basis
OPT - Student Option

COSD40303 - Cultural Responsiveness and Social Justice in Communication Sciences and Disorders

Department(s)
Davies School of Communication Science & Disorders

Long Description (Catalog Description)
Prerequisite: ENGL 10803, ENGL 20803 and SPPA or DHHS major with Junior or
Senior standing. This course explores critical perspectives in social justice in Communication Sciences and Disorders and multicultural considerations for children and adults with communication disorders

Career
Undergraduate

Grading Basis
OPT - Student Option

COSD40323 - Advanced Language Development for DHH

Department(s)
Davies School of Communication Science & Disorders

Long Description (Catalog Description)
Prerequisite: COSD 60233 with a grade of C or higher, or permission of instructor. Advanced study of language principles and language usage for intermediate and advanced levels with the deaf and hard of hearing.

Course Typically Offered
Fall

Career
Undergraduate

Grading Basis
OPT - Student Option

Cross Listed Courses
COSD60263 Adv Language Dev for DHH

COSD40333 - Teaching Spoken Language to Persons with Hearing Loss

Department(s)
Davies School of Communication Science & Disorders

Long Description (Catalog Description)
Prerequisite: COSD 30363 with a grade of C or higher or permission of instructor. Development of spoken languages, including articulation, prosody, and voice production for children and adults with hearing loss.

Course Typically Offered
Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

COSD40340 - Clinical Lab in Teaching DHH Students I

Department(s)
Davies School of Communication Science & Disorders

Long Description (Catalog Description)
Prerequisite: COSD 30393 with a grade of C or higher in all COSD coursework, a cumulative TCU GPA of at least 2.75 or higher, cumulative COSD GPA of 2.75 or higher, and permission of instructor. A minimum of two semesters are required. Observation and supervised clinical teaching of DHH children and adults.

Course Typically Offered
Fall and Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

COSD40350 - Clinical Practicum in Teaching DHH Students II

Department(s)
Davies School of Communication Science & Disorders

Long Description (Catalog Description)
Prerequisite: COSD 40340 with a grade of C or higher in all COSD courses, a cumulative COSD GPA of 2.75 or higher and TCU cumulative GPA of 2.75 or higher. Students must be recommended for enrollment by COSD faculty. Observation and teaching of DHH students in a public school setting.

Course Typically Offered
Fall and Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

COSD40353 - Neurological Substrates of Communication and Swallowing

Department(s)
Davies School of Communication Science & Disorders

Long Description (Catalog Description)
Prerequisite: COSD 20503 with a grade of C or higher, SPPA or DHHS major or permission of instructor. This course will focus on the structure and function of the central and peripheral nervous systems in relation to normal and disordered communication and swallowing. Nervous system anatomy and physiology will be studied within the context of how structures, pathways, and systems support speech, language, cognition, hearing and swallowing.

Career
Undergraduate

Grading Basis
OPT - Student Option

COSD40363 - Evidence-Based Practice in Communication Sciences and Disorders

Department(s)
Davies School of Communication Science & Disorders

Long Description (Catalog Description)
Prerequisite: COSD 10303 with a grade of C or better. This course will focus on identifying the fundamental concepts related to scientific inquiry in communication sciences and disorders to allow students to become critical readers of peer-reviewed journal articles. The course will consider identification of research literature relevant to a specific topic or disorder, basic concepts involved in the formulation of research questions and methodology, and levels of research evidence available to audiologists and speech language pathologists.

OPT - Student Option

COSD40383 - American Sign Language II

Department(s)
Davies School of Communication Science & Disorders

Long Description (Catalog Description)
Prerequisite: COSD 30383 with a grade of C or higher, or permission of the instructor. This course is a continuation of the ASL I COSD 30383 with emphasis on deaf cultural aspects and the grammatical structure of ASL. This course utilizes extensive sign productions. Recommended for students in special education and service-related fields of study.

Course Typically Offered
Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

COSD50300 - Clinical Practicum in Speech-Language Pathology II

Department(s)
Davies School of Communication Science & Disorders

Long Description (Catalog Description)
Prerequisite: COSD 40300 with a grade of C or higher, senior standing, and a cumulative TCU GPA of 3.0 or higher, and a cumulative 3.00 GPA or higher in COSD course, MATH 10043, one physical science course, one social/behavioral science course and biological sciences. Student must be recommended for enrollment by COSD faculty. A minimum of one semester required for undergraduate students. Supervised clinical experience in management of the most common speech and language disorders.

Course Typically Offered
Fall and Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

COSD50323 - Interaction Skills for Health Professionals

Department(s)
Davies School of Communication Science & Disorders

Long Description (Catalog Description)
Prerequisite: Senior or graduate standing. A combination of critical thinking, counseling, and leadership skills designed to prepare students to effectively communicate and work with clinical populations and their families. Appropriate strategies and techniques are explored with practical application experiences included.

Course Typically Offered
Summer

Career
Undergraduate

Grading Basis
OPT - Student Option

COSD50342 - Advanced Aural Rehabilitation

Department(s)
Davies School of Communication Science & Disorders

Long Description (Catalog Description)
Prerequisite: Senior standing and COSD 30343 and 30363, both with a grade of C or higher, or graduate standing, or permission of instructor. Theories of assessment and intervention in identification and aural rehabilitation of hearing-impaired and deaf children and adults. Includes methods of evaluation and training in the areas of audition, amplification, speech, language, speech-reading, assistive listening devices, cochlear implants, and communication modes and strategies.

Course Typically Offered
Fall

Career
Undergraduate

Grading Basis
OPT - Student Option

COSD50350 - Clinical Practicum in Audiology

Department(s)
Davies School of Communication Science & Disorders

Long Description (Catalog Description)
Prerequisites: COSD 30343 and COSD 30363, all with a grade of C or higher, junior standing, a cumulative TCU GPA of 3.0 or higher, and a cumulative 3.0 or higher GPA in COSD courses, MATH 10043, and one physical science course, one social/behavioral science course and biological sciences, and permission of instructor. Supervised clinical experiences in basic audiological testing techniques involving assessments and evaluation of the hearing function. 1-3 semester hours.

Course Typically Offered
Fall and Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

COSD50363 - Seminar on Stuttering

Department(s)
Davies School of Communication Science & Disorders

Long Description (Catalog Description)
Prerequisite: Senior (with permission of instructor) or graduate standing. A study of fluency development and breakdown in children and adults. Descriptions and development of speech fluency, onset and development of stuttering, characteristics of stuttering and people who stutter and theories of stuttering are reviewed.

Course Typically Offered
Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

COSD50382 - Voice and Resonance

Department(s)
Davies School of Communication Science & Disorders

Long Description (Catalog Description)
Prerequisite: Graduate standing. A study of theories, classification systems and etiologies, with emphasis on respiration, phonation, resonance and articulation factors as they relate to disorders of voice, resonance and compensatory articulation.

Course Typically Offered
Fall

Career
Undergraduate

Grading Basis
OPT - Student Option

COSD50413 - Advanced Speech Sound Disorders

Department(s)
Davies School of Communication Science & Disorders

Long Description (Catalog Description)
Prerequisite: Graduate standing. A study of theories, diagnostic materials, etiologies, and intervention models with emphasis on the phonological productions of children with highly unintelligible speech, childhood apraxia or speech, and mild-moderate articulation errors.

Course Typically Offered
Fall

Career
Undergraduate

Grading Basis
OPT - Student Option

COSD50840 - Study Abroad:South America

Department(s)
Davies School of Communication Science & Disorders

Long Description (Catalog Description)
Prerequisites: Permission of instructor(s) and meeting criteria established by the TCU Center for International Studies. This course is an international interprofessional education experience focused on communication, culture, and healthcare. Graduate and undergraduate students will experience the language and culture of South America while developing familiarity with the role of health professionals in medical and educational settings serving individuals across the lifespan. Students will engage in a number of classroom-based and hands-on learning activities related to health care, visit academic universities training health professionals, and experience practice sites serving the local and regional populations.

COSD50850 - China: Global Perspectives on Communication Health

Department(s)
Davies School of Communication Science & Disorders

Long Description (Catalog Description)
Prerequisite: COSD 10303. This course will enhance students' global perspectives about communication health in a culture strikingly different from the US. Specifically, students will increase their understanding of the nature and treatment of communication disorders in China. Students will be exposed to the unique delivery of speech language pathology services in a country where there are very few established degree granting programs in a country of 1.33 billion people (Liu, 2014).

CRES20003 - Critical Race Theory

Department(s)
Comparative Race and Ethnic Studies

Long Description (Catalog Description)
Prerequisites: CRES 10103 Engaging Difference and Diversity in America (recommended) OR any one (1) approved CRES-attribute course. This course will provide an intermediate survey of Comparative Race and Ethnic Studies, focusing on Critical Race Theory. Students will explore race as a social structure, a historical process, a mode of power, and a lived experience. While the idea of race as socially constructed has become common sense in the twenty-first century, we will go further by using Critical Race Theory to examine how scholars, artists, and activists have applied these methods across and beyond the university. Themed units will focus on intersectionality, whiteness, indigeneity, racial capitalism, and mass incarceration.

CRES20103 - Introduction to Black Studies

Department(s)
Comparative Race and Ethnic Studies

Long Description (Catalog Description)
Introduction to Black Studies surveys global Black life and culture. Grounded in formative histories uniting Black people across the world - namely the Trans-Atlantic Slave trade, colonialism, contemporary migrations and cultural developments - this course is guided by these questions - How is blackness both a dynamic concept and one that has been constituted across time through various political events, rebellions, forced and voluntary migrations, and cultural forms? How has Black studies evolved in the academy and what are its futures? Through their engagement with various texts, writing, research and presentations, students will explore such questions and more.

CRES30203 - Social Justice Organizing & Activism

Department(s)
Comparative Race and Ethnic Studies

Long Description (Catalog Description)
Prerequisites: WGST 20003 or CRES 10103. This interdisciplinary course examines mass movements from an intersectional perspective, emphasizing how intersecting social identities (e.g. race, gender, sexuality, class, ability, citizenship status, etc.) influence how systemic oppressions are experienced and, thus, should shape the social economic, and political interventions employed in the name of social justice. The course incorporates empirically grounded and theoretical scholarship from multiple disciplines to consider diverse methods of mass movement organizing and mobilization on the local and/or global levels to shift power and privilege dynamics. Students will examine the philosophical, relational and logistical barriers to undertaking social justice organizing and activism, develop technical skills for building consensus across difference, and design their own organizing campaigns.

CRES30263 - Environmental Justice

Department(s)
Comparative Race and Ethnic Studies

Long Description (Catalog Description)
Prerequisites: SOCI 20213 OR CRES 20003 OR CRES 20103 OR LTNX 20003 OR ANTH 20623. Black, Indigenous, other people of color, working class, immigrant, women, and other marginalized groups bear the brunt of environmental problems in the United States and across the world, facing disproportionate impacts from things like air and water pollution, toxic chemicals, climate change, industrialization, and biodiversity loss. Why are certain groups systematically exposed to greater environmental burdens and fewer environmental amenities while other groups have access to clean air and water? What effect does this have on people's health and well-being? Who benefits from these inequalities and who makes decisions about environmental policies? This course draws on the work of interdisciplinary scholars from the social sciences, biophysical sciences, public health, and humanities, to examine how social, political, and economic systems create environmental injustices and health disparities across intersections of race, ethnicity, class, and gender. In turn, we explore how people work to remedy environmental problems. These lessons are applied to understanding, researching, and addressing contemporary environmental justice issues.

CRES30303 - Feminisms of Color

Department(s)
Comparative Race and Ethnic Studies

Long Description (Catalog Description)
Prerequisites: Any WGST-prefix or attribute course OR any CRES-prefix or primary attribute course. An interdisciplinary course exploring the feminist theories, traditions, activisms, discourses, and praxes of women of color in a US context. Using an intersectional approach, the course examines how race, class, gender, sexuality, citizenship status, ability, religion, and other markers of identity create complex systems of marginalization in the lives of women of color in the United States. Students will analyze the contributions US women of color have made to contemporary feminist thought and how these theories have influenced their activism.

DCDA30833 - Creative Coding in the Humanities

Department(s)
Digital Culture & Data Analysis

Long Description (Catalog Description)
Prerequisites: Students must have completed at least one of the following courses before enrolling DCDA 30833: GEOG 30323, CRWT 30363, WRIT 20833, DCDA 20833, or COSC 10603. DCDA 30833 introduces creative coding as a method for artistic, literary, and critical expression within digital culture. Moving beyond functional software development, students explore code as an expressive medium capable of dramatizing complex states of thought and feeling. Through a series of "labs" (technical exercises) and ¿projects¿ (creative syntheses), students will build generative visual art, interactive poetry, sonified systems, and data-driven narratives.

DCDA40273 - Digital Culture & Data Analytics Internship

Department(s)
AddRan Non-Departmental Programs

Long Description (Catalog Description)
Prerequisites: 60 credit hours; major GPA of 3.0 or Cum GPA of 2.8 minimum; approval of the department. Students place themselves with companies, agencies, or non-profit organizations for workplace experience. Duties -- varied to fit the needs and opportunities associated with the participating entity -- generally include students utilizing their proficiencies in digital content creation and/or data analysis. Course may be repeated once for credit.

OPT - Student Option

DCDA40343 - AI Concepts and Large Language Model Applications

Department(s)
AddRan Non-Departmental Programs

Long Description (Catalog Description)
This course provides an in-depth exploration of Artificial Intelligence (AI) with a focus on large language models (LLMs) and their applications in Geography. Students will gain foundational knowledge in AI and deep learning, develop skills in prompt engineering, and apply AI tools to solve real-world problems, particularly in geographic analysis and spatial data interpretation. The course emphasizes hands-on experience, ethical considerations, and culminates in a final project where students integrate AI concepts to design their own applications with a geographic focus.

Grading Basis
OPT - Student Option

ECON30763 - Economic Geography

Department(s)
Economics

Long Description (Catalog Description)
Prerequisite: A C- or better in ECON 10223 or ECON 10233. Economic Geography is the study of how elements within the economy are spatially arranged, as well as the ways that space, place and spatial scales shape economic activities in different parts of the world. Through a series of readings, discussions, and research assignments, this course examines the distribution economic activities on the earth's surface; market resource and transportation factors in location theory, and the role of state, market and civil society's agents in management of the economy. Students are further introduced to Geographic Information Systems (GIS) through content-focused lab assignments, though no previous experience with GIS is required for this course.

ECON40123 - Game Theory

Department(s)
Economics

Long Description (Catalog Description)
Prerequisites: ECON 10223 or ECON 10233, INSC 20153 or MATH 10043.
Game theory, also known as multi-person decision theory, analyzes situations in which payoffs to players depend on the behavior of other players as well as the player herself. The purpose of this course is to introduce the basics of game theory to undergraduate students in various disciplines. It focuses on fundamentals of game theory including basic concepts and techniques, various ways of describing and solving games, and various applications in economics, political sciences, and business. It will help students sharpen their understanding of strategic behavior in different situations involving many individuals. The students will learn how to recognize and model strategic situations, to predict when and how their action will have an influence on others, and to exploit strategic situations for the benefit of their own.

EDEC20013 - Science for Elementary Teachers

Department(s)
DTLS

Long Description (Catalog Description)
This course is designed to build the content knowledge and skills needed by Pre-Kindergarten through sixth grade teachers. The science content emphasized in this course aligns with the Next Generation Science Standards (NGSS) as well as the content mandated by the State of Texas. The course will model inquiry teaching, engage students in constructivist science inquiry, and provide students with the materials needed to successfully teach science. It will build student understanding of science concepts through active learning experiences. This course is required for acceptance into the EC-6 program in the college of Education.

Long Description (Catalog Description)
Prerequisites: Admission to the Teacher Education Program, EDMS 30123, EDMS 30113, EDMS 30603, EDMS 40213, and Content Area Methods course(s), and co-requisite EDMS 41151. This course provides students with a foundation for understanding the basic concepts and procedures of educational assessment and evaluation as they pertain to teaching in the middle/secondary classroom and informing instruction. Both formal and informal methods of gathering educational information and monitoring learners' progress will be integral parts of this course. Students will learn how to develop appropriate assessments; interpret assessment information for educational program planning; provide timely, high-quality feedback; respond flexibly to promote learning for all learners, including second language learners and students with disabilities; and communicate assessment information to parents and other professionals. (Offered as EDMS or EDUC credit.)

EDSE50443 - Methods for Teaching Secondary School Mathematics I

Department(s)
DTLS

Long Description (Catalog Description)
Prerequisites: Admission to the Teacher Education Program; Corequisite: EDSE 41151 or EDUC 60980. Using the guidelines set forth by the national Council of Teachers of mathematics and the State of Texas for mathematics instruction, the students will develop pedagogical content knowledge for teaching secondary mathematics. The content (number and operations, algebra) will be explored from an inquiry perspective to build a conceptual understanding of the mathematics. Students will also be exposed to best practices which promote the process standards (problem solving, reasoning and proof, communication, connections, and representations) through class investigations and discussions, readings, and field placements. The process of developing units and lessons as well as assessment techniques for evaluating students' progress and teacher practice will be integrated into the coursework.

EDUC30333 - The University: From Scotland to Fort Worth

Department(s)
Counseling, Societal Change, and Inquiry

Long Description (Catalog Description)
The Scottish Enlightenment was an extraordinary outburst of intellectual activity that took place in Scotland in the eighteenth century. Daiches (1996) notes that liveliness of mind was an essential condition for the progress envisioned by the enlightened Scots concerned to put their new knowledge to work for the benefit of Man. At the heart of this great period in Scottish history were the great universities which not only nurtured this unprecedented outbreak of scholarship, but also formed many of the Scots teachers in American colonies. While the founders of TCU were not Scottish (their ancestors were Irish, though, so still Gaelic), in many ways they embody the same enlightenment spirit. This course will investigate the university in the Scottish Enlightenment and in TCU on the American frontier.

ENGL20813 - Introduction to the Digital Humanities

Department(s)
English

Long Description (Catalog Description)
This class provides an overview of the different types of digital methodologies available to the humanities student and scholar and introduces students to how humanities questions may be addressed using digital methods. Though there are many ways to approach the digital humanities, this class will focus on three specific areas of digital scholarship: archives and editions, text analysis, and digital map making. No previous experience in technology or programming is required.

Department(s)
English

Long Description (Catalog Description)
Prerequisites: ENGL 10803, ENGL 20803, and at least one 10000- or 20000-level ENGL/WRIT/CRWT course. An intensive study of the pleasures and difficulties of long novels, which represent a unique genre of literature. Each semester focuses on three or four novels generally regarded as works of tremendous influence, but which may be too involved for study in survey courses. The novels will be selected from different periods, cultures, and languages.

ENGL40831 - Senior Seminar

Department(s)
English

Long Description (Catalog Description)
Prerequisites: English majors or Writing majors only; students must have senior standing and must have completed 21 hours in English courses beyond 10803/10833 and 20803/20833. This seminar is intended as a capstone course for all English majors. Students will discuss and examine the practical and professional aspects of the English major while attempting to synthesize and integrate their various learning experiences in literature and writing. Students will also attend special workshops and seminars intended to inform them about various areas of professional activity (and as well meet professionals active in these areas.) Students will prepare and submit a final writing portfolio, representing their work as an English major.

ENGL50233 - Studies in Creative Writing

Department(s)
English

Long Description (Catalog Description)
Prerequisites: CRWT 10203, CRWT 20103, or CRWT 20133. Prior to enrollment, students are also strongly encouraged to take an upper-division creative writing course. Studies in Creative Writing is an intensive creative writing workshop open to students (graduate and advanced undergraduates) who have a strong background in literature and imaginative writing. Depending on the semester and the selected genre, this course will pay special attention to invention, point-of-view, voice, form, and genre-appropriate theory. Student cannot receive credit for CRWT 55143 and ENGL 50233.

ENGL50253 - Classical Rhetoric

Department(s)
English

Long Description (Catalog Description)
Prerequisite: Junior or senior standing, permission of instructor. This course examines the emergence of rhetoric in Antiquity and traces the impact of classical rhetoric up to the Middle Ages. A substantial amount of the course is devoted to learning about the relationship between oral and written discourse, the impact of literacy, and the adaptability of systems of communication to technology and society. The implications of such phenomena are examined in different periods in an effort to develop an historical perspective about the relationship between cognition and expression within cultural conditions. Student cannot receive credit for WRIT 55273 and ENGL 50253.

ENGL55533 - Literature of Latinx Diaspora

Department(s)
English

Long Description (Catalog Description)
Examination of significant works of literature in multiple genres by U.S. Latinx authors. Particular emphasis will be put on a comparative approach, exploring the literature of Puerto Rican, Cuban, Chicana/o, Mexican, Dominican, and/or Nicaraguan Americans. Texts vary by semester. Student cannot receive credit for ENGL 55533 and ENGL 80533.

ENGL55583 - Seminar in Contemporary African-American Literature

Department(s)
English

Long Description (Catalog Description)
This seminar provides graduate students with the opportunity to research and present theoretical approaches to representative contemporary fiction by African-Americans. Continuities will be established between theories shaped by the Black Arts Movement of the sixties and those shaped by post-modernist thinking. Representative writers may include Alice Walker, Toni Cade Bambara, Charles Johnson, Toni Morrison and Ernest Gaines. Student cannot receive credit for ENGL 55583 and ENGL 80583.

ENGL55593 - The Long Novel

Department(s)
English

Long Description (Catalog Description)
Prerequisites: ENGL 10803, 20803, and at least one 10000- or 20000-level ENGL/WRIT/CRWT course. An intensive study of the pleasures and difficulties of long novels, which represent a unique genre of literature. Each semester focuses on three or four novels generally regarded as works of tremendous influence, but which may be too involved for study in survey courses. The novels will be selected from different periods, cultures, and languages. Student cannot receive credit for ENGL 55593 and ENGL 40743.

ENGL55633 - Love, Sex, and Power in Renaissance England

Department(s)
English

Long Description (Catalog Description)
Prerequisites: ENGL 10803, ENGL 20803, and at least one additional 10000- or 20000-level ENGL/WRIT/CRWT course. An advanced course on the subject of romantic love, gender relations, and sexuality in literature of the English Renaissance. This course examines the political, cultural, and aesthetic contexts of love and sex that shaped representations of desire in some of the Renaissance's most enduring works, including drama and poetry by Shakespeare and others. Student cannot receive credit for ENGL 55633 and ENGL 40633.

Engineering

Long Description (Catalog Description)
Prerequisite: ENGR 30003. A supervised research experience culminating in the writing of a research paper based on the subject matter studied in ENGR 3003 Honors Tutorial. The course is offered on a directed study basis and must be arranged prior to the semester enrolled.

Course Typically Offered
Fall and Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

ENGR40103 - Technical Entrepreneurship

Department(s)
Engineering

Long Description (Catalog Description)
Prerequisites: Junior or senior standing. Begins with a focus on creativity and innovation, then turns to the lean startup methodology as a conceptual framework for creating, testing, and growing a new technology startup. Students will learn to develop and explore new, unique ideas and to translate these ideas into scalable businesses that can grow quickly to address a large market opportunity. The course culminates in a practice investment pitch for funding to launch the startup.

Career
Undergraduate

Grading Basis
OPT - Student Option

ENGR40113 - Introduction to Engineer Consulting

Department(s)
Engineering

Long Description (Catalog Description)
Prerequisites: Senior standing or instructor permission. Consulting engineering process from project conception to completion, including client engagement, project management, design coordination, and regulatory compliance. Roles, responsibilities, and professional practices of consulting engineers. Professional codes and standards.

Course Typically Offered
Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

ENGR40203 - Engineering Economic Analysis

Department(s)
Engineering

Long Description (Catalog Description)
Prerequisites: MATH 10524 or MATH 10283. Development and use of time value of money interest relationships. Comparison alternatives including present worth, annual worth, rate of return and payout period methods. Decision making among independent, dependent, capital-constrained, and unequal-lived projects. Replacement, break-even, and minimum cost analyses. Depreciation and depletion methods and their effect on corporate income taxes, leading t after-tax cash flow analysis.

Course Typically Offered
Fall

Career
Undergraduate

Grading Basis
OPT - Student Option

ENGR40213 - Sustainable Energy

Department(s)
Engineering

Long Description (Catalog Description)
Prerequisites: PHYS 20484, MATH 30524 or 30613, and ENGR 30704. This course introduces concepts that are needed to understand a range of diverse energy initiatives, and discusses resources available to supply energy to both developed and developing nations. Energy sources of interest include geothermal, fossil fuels (coal, oil, gas), nuclear, wind, solar, hydropower, biofuels, conservation, hybrid energy systems, etc. The broad perspective helps the student develop an expanded knowledge base, and become a steward of the earth's natural resources.

Course Typically Offered
Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

ENGR40223 - Petroleum Reservoir Management

Department(s)
Engineering

Long Description (Catalog Description)
Prerequisites: PHYS 20484 and MATH 30524 or 30853 or 30613. Modern petroleum reservoir management relies on teams of people from a variety of scientific and engineering disciplines. This course will introduce concepts and terminology for topics that are often encountered by members of petroleum reservoir management teams. Topics from geology, geophysics, petrophysics, and petroleum engineering are discussed. A case study is used to integrate the material in the course.

Course Typically Offered
Fall

Career
Undergraduate

Grading Basis
OPT - Student Option

ENGR40233 - Applied Reservoir Simulation

Department(s)
Engineering

Long Description (Catalog Description)
Prerequisites: ENGR 40223 or GEOL 40423. Oil and gas are essential sources of energy in the modern world. They are found in subsurface reservoirs in many challenging environments. Modern reservoir simulators are computer programs that are designed to model fluid flow in reservoirs. Applied reservoir simulation is the use of computer programs to help understand and forecast the performance of oil and gas problems. (Crosslisted as ENGR 40223/GEOL 40443.)

Course Typically Offered
Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

Cross Listed Courses
GEOL40443 Applied Reservoir Simulation

ENGR40303 - Petroleum Industry Overview

Department(s)
Engineering

Long Description (Catalog Description)
Prerequisites: ECON 10223, ENGR 40203, MATH 10524 or MATH 10283, or permission of instructor. This course will cover the upstream side of the petroleum industry. It will start with geology, the formation of oil and gas, and the geophysical characteristics which characterize the location of oil and gas. Next, the drilling process for both exploration and production will be considered. Finally, the actual production of oil and gas from the reservoir will be developed. Economic considerations will be developed throughout the process.

ENGR40433 - Introduction to Microelectromechanical System (MEMS)

Department(s)
Engineering

Long Description (Catalog Description)
Prerequisites: ENGR 20404 and ENGR 20603. Micro Electro Mechanical Systems (MEMS) are miniature devices that are widely used in industrial and consumer products such as accelerometers, used in cars to activate the airbags and in smart phones to flip images and play video games. This course will cover the fundamentals of MEMS including the design and modeling, fabrication, actuation and sensing, packaging, testing and characterization as well as reliability. The applications and challenges of existing MEMS devices will be discussed.

Course Typically Offered
Every other fall

Career
Undergraduate

Grading Basis
OPT - Student Option

ENGR40444 - Mechatronics

Department(s)
Engineering

Long Description (Catalog Description)
Corequisites: ENGR30444. Fundamentals of microcontroller-based mechatronics systems, as well as control and characterization of a variety of transducers. An Arduino microcontroller platform is used. Design, prototype,and characterization of various mechatronic systems conducted in lab.

Career
Undergraduate

Grading Basis
OPT - Student Option

ENGR40454 - Semiconductor Device Electronics

Department(s)
Engineering

Long Description (Catalog Description)
Prerequisite: ENGR 30454. Semiconductor materials and solid-state physics principles. Charge carrier transport phenomena. PN-junction analysis. Bipolar junction transistor physics.
Metal-oxide-semiconductor MOS physics. MOS transistor principles. Computer-aided analysis and design tools will be used. Individual research laboratory project.

Course Typically Offered
Fall

Career
Undergraduate

Grading Basis
OPT - Student Option

ENGR40464 - Theory and Fabrication of Microelectronic Devices

Department(s)
Engineering

Long Description (Catalog Description)
Prerequisites: ENGR 30444. This course provides a theoretical background and a practical laboratory experience in modern microelectronic device fabrication technologies and processes. The students will learn the theory of the nested set of microelectronic processing techniques used to manufacture microelectronic devices. Each student will actively participate in a laboratory whose focus is to fabricate and test the performance of silicon-based microelectronic devices, including: metalized and diffused resistors, pn-junction diodes, metal-oxide-semiconductor (MOS) capacitors, and MOS field-effect transistors (MOSFETs).

Course Typically Offered
Rarely

Career
Undergraduate

Grading Basis
OPT - Student Option

ENGR40484 - Electromechanics

Department(s)
Engineering

Long Description (Catalog Description)
Prerequisites: ENGR 20404, and PHYS 20483/20481 or PHYS 20284. Electromechanical energy conversion principles. Magnetic circuits. Balanced three-phase system analysis. Development and applications of the circuit models for transformers, induction machines, synchronous machines, and DC machines. Laboratory exercises emphasize measurement of machine model parameters and comparison of predicted and observed steady-state performance.

Course Typically Offered
Fall

Career
Undergraduate

Grading Basis
OPT - Student Option

ENGR40493 - Power Systems Analysis

Department(s)
Engineering

Long Description (Catalog Description)
Prerequisites: ENGR 20404, and corequisite: ENGR 40484. Phasors, three phase power, power transmission-line parameters, transformer modeling, power flow analysis, short circuit analysis, basic concepts of generation, transmission, distribution, smart grids and renewable energy in power systems will be covered.

Course Typically Offered
Rarely

Career
Undergraduate

Grading Basis
OPT - Student Option

ENGR40514 - Communication Systems

Department(s)
Engineering

Long Description (Catalog Description)
Prerequisite: ENGR 30503. Introduction to analog and digital communication systems and concepts. Sampling theorem. Amplitude modulation. Frequency modulation. Pulse-code modulation. Time-division and frequency-division multiplexing. Analog and digital noise analysis.

Course Typically Offered
Rarely

Career
Undergraduate

Grading Basis
OPT - Student Option

ENGR40544 - Optical Fiber Communications

Department(s)
Engineering

Long Description (Catalog Description)
Prerequisite: ENGR 30543 or PHYS 40653. Waveguiding and signal transmission properties of optical fibers. Optical sources. Power launching and coupling. Photodetectors. Optical receivers. Optical fiber transmission systems. Laboratory exercises emphasize the measurement of waveguiding characteristics.

Course Typically Offered
Rarely

Career
Undergraduate

Grading Basis
OPT - Student Option

ENGR40554 - Introduction to Digital Design

Department(s)
Engineering

Long Description (Catalog Description)
Prerequisites: ENGR 30444. Introduction to digital electronics and digital design principles. Topics include: Boolean algebra; combinational logic; sequential logic; finite state machines; transistor-level implementations; and computer arithmetic. A hardware description language (HDL) will be used to construct digital circuits using a field-programmable gate array (FPGA). Building finite state machines in hardware, and hands-on learning and design will be emphasized.

Career
Undergraduate

Grading Basis
OPT - Student Option

ENGR40574 - Digital Signal Processing

Department(s)
Engineering

Long Description (Catalog Description)
Prerequisite: ENGR 30503. Sampling and quantization effects. Digital filter design. Structures for realizing discrete time systems. Discrete Fourier transform and fast Fourier transform. Laboratory exercises emphasize digital signal processing techniques to applications in audio signal processing and telecommunications.

Course Typically Offered
Rarely

Career
Undergraduate

Grading Basis
OPT - Student Option

ENGR40613 - Machine Component Design

Department(s)
Engineering

Long Description (Catalog Description)
Prerequisites: ENGR 20613, 20623. The design and selection of mechanical components. Lubrication. Antifriction and journal bearings. The design of screws, fasteners, and joints. Mechanical springs. Gears and gearing systems. Clutches, brakes and couplings. Flexible mechanical elements. Flywheels and power units. Miscellaneous topics.

Course Typically Offered
Rarely

ENSC10113 - Introduction to Planetary Science: Earth and the Extraterrestrial

Department(s)
Environmental Science & Sustainability

Long Description (Catalog Description)
From impact craters and volcanoes to shifting tectonic plates and flowing rivers, the same processes that shape Earth have transformed other worlds across our Solar System. In this course, you'll investigate how planetary scientists study the surfaces, interiors, atmospheres, and histories of planets, moons, asteroids, and comets. Hands-on labs, including work with real meteorites, will give you the tools and experience to think like a planetary scientist while uncovering the dynamic story of our Solar System.

Course Typically Offered
Every other spring

Career
Undergraduate

Grading Basis
OPT - Student Option

ENSC10143 - Contemporary Environmental Issues

Department(s)
Environmental Science & Sustainability

Long Description (Catalog Description)
Two hours lecture and two hours of laboratory per week. This course introduces students to the major environmental/resource problems that confront humanity in the 21st century. The course seeks to both develop a fundamental scientific knowledge and understanding of the concepts and principles that underlie current environmental problems, as well as to engage in critical and reflective thinking about our resources, the environment and our place within it. Field trip required.

ENSC10243 - Environmental Disasters

Department(s)
Environmental Science & Sustainability

Long Description (Catalog Description)
This course provides an introduction to environmental disasters of the 20th and 21st centuries, including industrial accidents that released hazardous and toxic substances resulting in severe environmental impairments and human injuries and deaths. The course explores the impact of environmental disasters on human and
environmental health by focusing on the types of pollutants released and their effects on various populations as well as terrestrial and aquatic ecosystems. The course also considers the role of local, state, national, and international agencies in responding to and preventing these disasters. Students will examine numerous environmental disasters from an environmental science perspective and consider their cultural, social, and economic impacts. The class combines lecture and
laboratory to provide the most complete experience for students.

Course Typically Offered
Spring

ENSC20003 - Astrobiology: Hunting for Habitable Worlds

Department(s)
Environmental Science & Sustainability

Long Description (Catalog Description)
Prerequisites: Permission of the Instructor. This course will introduce students to some of the big topics and questions in Astrobiology. This course will explore what makes Earth so habitable, how life might originate on other planetary bodies, and how we are actively looking for life on other planetary bodies in our Solar System and beyond. Finally, students will be asked to examine what it means to be an intelligent life-form and what responsibilities, if any, might come wit that intelligence.

ENSC30493 - The Water Planet

Department(s)
Environmental Science & Sustainability

Long Description (Catalog Description)
Prerequisites: ENSC 10143 or GEOL 10113 or Junior standing. Two hours of lecture and two hours of laboratory per week. This course provides students with a comprehensive understanding of the multi-faceted dimensions of water on Earth. Course topics include the basics of water at a micro-scale (e.g., properties, form, and behavior), local and regional-scale water issues (e.g., water distribution, supply-demand, pollution, and management), and global-scale processes (e.g., hydrological cycle). Course topics are presented within an interdisciplinary framework through an examination of several water-related case studies from around the world. In this course, students will learn important terminologies, key concepts, and issues in water science.

Long Description (Catalog Description)
Prerequisites: six semester hours in Biology. Two hour lectures and two hours of laboratory per week. This course introduces advanced undergraduate students to mammals. Lectures will examine the major topics of mammalian biology, including the evolutionary history, classification, adaptations, ecology, and natural history of mammals. Field techniques for the study of mammalian biodiversity and abundance will also be covered in this course. Field trips will be required. (Crosslisted as BIOL/ENSC 40173.)

ENSC40193 - Environmental Stewardship Seminar

Department(s)
Environmental Science & Sustainability

Long Description (Catalog Description)
Three hours lecture per week. This course examines the case environmental stewardship, defined as the need to make informed and responsible decisions with regard to the planet. Students meet in a seminar-type format and cover broad, integrating themes that then serve as a foundation for topics that address more specific environmental problems, such as global warming, deforestation, sustainable development, and energy depletion. The course exposes students to the foundations necessary to enable them to develop their own environmental ethic.

ENSC40343 - Service Learning in Environmental Science and Sustainability

Department(s)
Environmental Science & Sustainability

Long Description (Catalog Description)
Prerequisites: Junior standing and instructor permission. This course engages students in hands-on, community-based projects in the environmental and sustainability sciences. Students will collaborate with a community group to design, implement, and assess sustainable solutions to environmental challenges, fostering an understanding of environmental principles and community engagement. Through real-world applications, students will cultivate essential skills and knowledge to become proactive stewards of our planet.

ENSC40353 - Wildlife Ecology and Management

Department(s)
Environmental Science & Sustainability

Long Description (Catalog Description)
Prerequisites: Six semester hours in Biology. Two hour lectures and a three hour laboratory each week. This discussion-oriented course introduces advanced undergraduate students to the general principles of wildlife ecology and how those principles can be applied to wildlife management and conservation. The objectives of this course are 1) to provide an introduction to the major concepts of Wildlife Ecology and Management, and 2) to allow you to learn the application of the scientific method to ecological problems. Laboratory exercises are required. (Crosslisted as BIOL/ENSC 40353)

Course Typically Offered

ENSC40503 - Environmental Methods and Statistics

Department(s)
Environmental Science & Sustainability

Long Description (Catalog Description)
Environmental Methods and Statistics is a laboratory- and field-based course that presents essential general science and specific environmental methods, techniques, and theory. Students are exposed to the basic tools of environmental science - observation and notation, data gathering, using statistics, sampling, lab and field techniques, surveying, and safety. Specific environmental methodologies relating to soil, water, and ecological systems are explained. The course presents a wide cross-disciplinary range of techniques and information with a unique environmental perspective.

ENSC40553 - Zoo Animal Enrichment

Department(s)
Environmental Science & Sustainability

Long Description (Catalog Description)
Prerequisites: Junior standing. This is a team-taught course between Environmental Science and Studio Art. In this course students will explore the ecology and behavior of wild animals to provide insights into the types of stimuli they naturally encounter. These insights will then be used to develop and build objects and structures that will engage and enrich the lives of animals at the Fort Worth Zoo. Students will work in teams to study a specific species currently residing at the zoo and create objects and structures that will enhance their lives in captivity. (Crosslisted as ARST 40553)

ENTR20263 - Entrepreneurship and Innovation

Department(s)
Entrepreneurship and Innovation

Long Description (Catalog Description)
Prerequisite: Must be a business major. This course explores the dynamic world of entrepreneurship and innovation, emphasizing the multifaceted societal role of entrepreneurs as problem solvers, innovators, and leaders. Through engaging lectures, lively discussions, and analysis of real-world case studies, participants will gain valuable insights into the crucial interplay between entrepreneurship and innovation. The curriculum is designed to equip students with the skills and knowledge necessary to navigate diverse environments and industries effectively. By exploring how to identify opportunities and cultivate innovative thinking, students will be prepared to chart their own path toward entrepreneurial success across any field, leveraging their newfound abilities to make significant contributions to society and the economy.

ENTR30543 - Entrepreneurial Innovation & Creativity

Department(s)
Entrepreneurship and Innovation

Long Description (Catalog Description)
Prerequisites: ENTR 30533, must be a declared business major or ENTR minor. The field of entrepreneurship involves the study of sources of opportunities; the processes of discovery, evaluation, and exploitation of opportunities; and the set of individuals who discover, evaluate, and exploit them. As such, being creative is about solving problems or approaching opportunities in new and valuable ways. Creativity and innovation is of vital importance to entrepreneurship, so this course is designed to help students harness their creative confidence and focus on the discovery, evaluation and exploitation of entrepreneurial opportunities. This course focused on creativity as the driver of organizational innovation--from nonprofits and social enterprises, to start ups to family businesses to existing corporations. Using a variety of theories, frameworks and models, students will learn how to apply them to create, refine and test new ideas within entrepreneurial domains.

ENTR40333 - Corporate Entrepreneurship

Department(s)
Entrepreneurship and Innovation

Long Description (Catalog Description)
Prerequisites: ENTR 30533 with a grade of at least C-, and must be a declared business major or ENTR minor. Corporate entrepreneurship refers to entrepreneurship within existing for-profit or not-for-profit organizations. It is the practice of seeking innovative uses, markets, or owners of the organization's existing products, services, and technologies. It draws the creativity of the organization's personnel to new business possibilities that go beyond the current business model of the organization. It engages the entrepreneurial spirit in spawning a new vision from within the organization. By imparting proven, useful, and effective techniques for managing innovation and entrepreneurship within corporations, this course will position students to participate in the economic renewal of their companies, and potentially, their cities, states, and nations. Students will further learn to recognize organizational challenges; create innovative, value oriented solutions; and sell those solutions to management.

Course Typically Offered
Spring

FINA20203 - Introduction to Valuation and Investment Banking: TIP Board

Department(s)
Finance

Long Description (Catalog Description)
Prerequisites: Admission to the TIP Board Program required. Permission number needed. This course is designed to increase student knowledge of transactional investments within corporations who specialize in investment banking, investment management, and private equity. In doing so, the course provides students direction and guidance as they make career decisions. A large portion of the course focuses on getting students prepared for recruiting in these specified areas of finance. During the course, students will be paired with two alumni mentors as part of the TIP Board Program.

FNRT20203 - Dance and Music: Living Art, Living Culture

Department(s)
Fine Arts Interdisciplinary

Long Description (Catalog Description)
Students in this course will travel to Budapest, Prague and Vienna and gain information from direct experiences in the artistic disciplines of dance and music, through a lens of history and culture. This study abroad experience will introduce students to performance, creation, observation, and the development of the critical language of dance and music as they explore a range of perspectives that define the cultural and historical forces that impact the development of national identity. With this ability to integrate, they will situate themselves inside of these societies: living art, living culture.

GEOG30813 - Environment and Society

Department(s)
Geography

Long Description (Catalog Description)
This course examines relationships between people and the environment from multiple perspectives, providing a context for thinking about the causes and consequences of environmental change and their spatial patterns around the world. Of particular interest are the cultural, ethical, economic, technological, and population considerations that make humans want to use, protect, destroy, or adapt to environmental systems and their components. This course will also address the function of specific environmental systems themselves, including how they influence and respond to human actions.

GEOG30823 - Nuclear Geographies

Department(s)
Geography

Long Description (Catalog Description)
In this course, we will examine the spatial dimensions of highly contentious issues surrounding nuclear technologies, including power generation, weapons, and medicine. We will approach each of these issues through the perspectives offered by several subdisciplines within Geography, especially Environmental, Economic, Political, and Cultural Geography.

Career
Undergraduate

Grading Basis
OPT - Student Option

GEOG30903 - Urban Economic Development

Department(s)
Geography

Long Description (Catalog Description)
This course introduces students to urban economic development (UED) policy and strategy in the United States. In particular, students are encouraged to respectfully and thoughtfully address the assumptions and biases embedded in urban economic development policy. For example, final papers will examine the presence or lack thereof of equity and sustainability aims in economic development initiatives, and analyze UED projects that respond to the specific challenges of rising inequality and climate change that threaten UED activity in the US and worldwide.

GEOG40003 - Senior Honors in Geography

Department(s)
Geography

Long Description (Catalog Description)
Prerequisites: GEOG 30003 or permission of instructor. A senior Honors Thesis research paper or equivalent creative project, under faculty direction, in a selected area of geography.

Course Typically Offered
Contact Department For Details

Career
Undergraduate

Grading Basis
OPT - Student Option

GEOG40010 - Field Studies in Geography

Department(s)
Geography

Long Description (Catalog Description)
An intensive field study in the regional and systematic geography of a selected area. Examples include France, Central America, and the American West. May be repeated for credit provided the selected area changes.

Course Typically Offered
Rarely

Career
Undergraduate

Grading Basis
OPT - Student Option

GEOG40020 - Geography Internship

Department(s)
Geography

Long Description (Catalog Description)
Prerequisites: GEOG 30313 or equivalent training with instructor's approval.
This course is only open to Geography majors. The purpose of this course is to supplement the internship experience of geography majors through written reflection, periodic conversation with a supervising professor, and exploration of connections between concepts in GIS and practices of GIS in different disciplines. Students may take this course a maximum of two times to earn up to 6 total credit hours. A maximum of 3 credit hours can be applied towards the Geography major. The remaining credit hours can be applied to the student's overall degree as general elective credits.

OPT - Student Option

GEOG40313 - Advanced Geographic Information Systems

Department(s)
Geography

Long Description (Catalog Description)
Prerequisites: GEOG 30313, or instructor consent. In this course, students gain experience with advanced applications of Geographic Information Systems (GIS) software. Topics covered include GIS modeling; web GIS applications and distributed GIS services; open-source GIS; developing geoprocessing scripts using the Python programming language; and the current state of the GIS profession. Students will also complete a semester-long course project in which they apply GIS techniques to a topic of their interest.

Course Typically Offered
Every other spring

GEOG40323 - Urban and Business Applications of Geographic Information Systems

Department(s)
Geography

Long Description (Catalog Description)
Prerequisites: GEOG 30313; another introductory GIS course; or instructor consent. This advanced GIS course gives students experience applying GIS to solve real-world urban and business problems. Topics covered include demographic analysis; remote sensing of urban areas; network analysis; 3D urban modeling; spatial statistics; time and GIS; geodemographic classification; market area analysis; and web GIS services. Students will also complete a semester-long group project that applies GIS to assist an organization or business in the Fort Worth area.

GEOG40333 - Digital Cartography

Department(s)
Geography

Long Description (Catalog Description)
Prerequisites: GEOG 30313 or with instructor permission. Cartography refers to the art and science of map-making. Contemporary cartography is primarily accomplished using digital technologies including Geographic Information
Systems (GIS). Mapping is crucial to exploring and understanding distributions of
geographic phenomena. It is also an important phase of many database-intensive analyses, because a map is often the best way to visualize results and show them to others. Our emphases in this course will be on designing and producing both thematic and reference maps at multiple scales using symbols and visual hierarchies that allow the content of the maps to be effectively communicated and presented in aesthetically-pleasing and/or engaging ways. Topics covered include: significant eras in cartographic design, key historical and contemporary cartographers, map projections, symbolizing quantitative data, use of space, layout, compilation, verbal content, and the use of computer technology
in the design and production of maps.

Career
Undergraduate

Grading Basis
OPT - Student Option

GEOG40343 - AI Concepts and Large Language Model Applications

Department(s)
Geography

Long Description (Catalog Description)
This course provides an in-depth exploration of Artificial Intelligence (AI) with a focus on large language models (LLMs) and their applications in Geography. Students will gain foundational knowledge in AI and deep learning, develop skills in prompt engineering, and apply AI tools to solve real-world problems, particularly in geographic analysis and spatial data interpretation. The course emphasizes hands-on experience, ethical considerations, and culminates in a final project where students integrate AI concepts to design their own applications with a geographic focus.

GEOL40970 - Special Problems

Department(s)
Geological Sciences

Long Description (Catalog Description)
Prerequisite: permission of instructor. Field and laboratory problems for advanced undergraduate students. Fifty clock hours of laboratory and field work for each semester hour credit. 1-6 semester hours.

Course Typically Offered
All Sessions

Career
Undergraduate

Grading Basis
OPT - Student Option

Cross Listed Courses
ENSC40970 Special Problems

GEOL50213 - Environmental Geology

Department(s)
Geological Sciences

Long Description (Catalog Description)
Prerequisite: Permission of instructor. Two hours per week of lecture, and three hours per week of laboratory work. Geologic processes, earth resources and engineering properties of crustal materials in the activities of society. (Crosslisted as ENSC/GEOL 50213)

Course Typically Offered
Rarely

Career
Undergraduate

Grading Basis
OPT - Student Option

Cross Listed Courses
ENSC50213 Environmental Geology

GEOL50233 - Optical Mineralogy and Petrography

Department(s)
Geological Sciences

Long Description (Catalog Description)
Prerequisite: Permission of instructor. Two hours lecture and one three hour laboratory period per week. Analysis of the behavior of light in crystalline substances, complete treatment of crystal optics and the identification of non-opaque, rock-forming minerals using immersion media and thin section techniques. Intensive use of the microscope required.

Course Typically Offered
Every other fall

Career
Undergraduate

Grading Basis
OPT - Student Option

GEOL50251 - Scanning Electron Microscopy

Department(s)
Geological Sciences

Long Description (Catalog Description)
Prerequisite: Permission of instructor. Use of the S.E.M. in geological applications.

Course Typically Offered
Rarely

Career
Undergraduate

Grading Basis
OPT - Student Option

GEOL50341 - Interpreting Seismic Data

Department(s)
Geological Sciences

Long Description (Catalog Description)
Prerequisite: GEOL 30243. Three hours laboratory per week for five weeks. A practicum in interpreting seismic data. Prerequisites: GEOL 50331 or equivalent.

Course Typically Offered
Rarely

Career
Undergraduate

Grading Basis
OPT - Student Option

GEOL50413 - Global Tectonics and Basin Analysis

Department(s)
Geological Sciences

Long Description (Catalog Description)
Prerequisite: Permission of instructor. Three hours lecture per week. Explores the relationship between plate motion and the evolution of sedimentary basins.

Course Typically Offered
Every other fall

Career
Undergraduate

Grading Basis
OPT - Student Option

GEOL50423 - Petroleum Geology

Department(s)
Geological Sciences

Long Description (Catalog Description)
Prerequisite: Permission of instructor. Origin, migration and entrapment of hydrocarbons, exploration and production techniques used in the petroleum industry.

Course Typically Offered
Every other spring

Career
Undergraduate

Grading Basis
OPT - Student Option

GEOL50443 - Natural Hazards and Disasters

Department(s)
Geological Sciences

Long Description (Catalog Description)
Prerequisites: permission of the instructor. This course offers an in-depth exploration of natural hazards and disasters, including earthquakes, tsunamis, volcanic eruptions, floods, landslides, hurricanes, tornadoes, and wildfires. Students will examine the dynamic Earth system processes, including atmospheric, surface, and subsurface processes, that drive these phenomena while critically analyzing how human activities contribute to their frequency and severity. Through an interdisciplinary and global perspective, the course investigates how interconnected systems, such as climate change, tectonic activity, socio-economic factors, and anthropogenic influences, shape disaster occurrence, response, and long-term recovery. Emphasis is placed on global variations in risk perception, preparedness, response, and mitigation efforts, highlighting how various factors influence resilience and vulnerability across different regions. Lab exercises incorporate geospatial technology tools to assess risk, model disaster scenarios, and analyze the cascading effects of hazards on populations, infrastructure, and ecosystems.

Undergraduate

Grading Basis
OPT - Student Option

GEOL50493 - Physical Hydrology

Department(s)
Geological Sciences

Long Description (Catalog Description)
Prerequisite GEOL 10113 and permission of instructor. Two hours lecture and two hours of laboratory per week. A study of the occurrence, movement, and exploitation of water in the hydrologic cycle including surface-atmosphere, groundwater, and surface water processes. (Crosslisted as ENSC/GEOL 50493)

Course Typically Offered
Every other spring

Career
Undergraduate

Grading Basis
OPT - Student Option

Cross Listed Courses
ENSC50493 Physical Hydrology

GEOL50523 - Introduction to Geographic Information Systems

Department(s)
Geological Sciences

Long Description (Catalog Description)
Prerequisites: GEOL/ENSC 30363. Basic introduction to Geographic Information Systems using ESRI-ArcGIS. Elements of spatial data, mapping, data representation, and geodatabases. Training in use of a GIS system to infer relationships among spatial features. (Crosslisted as ENSC/GEOL 50523.)

Course Typically Offered
Fall

Career
Undergraduate

Grading Basis
OPT - Student Option

Cross Listed Courses
ENSC50523 Geographic Info Systems

GEOL50543 - Sedimentary Environments and Facies

Department(s)
Geological Sciences

Long Description (Catalog Description)
Prerequisite: Permission of instructor. Three hours lecture per week. Facies analysis and facies models applied to the problem of interpreting stratigraphic sequences and reconstructing paleogeography.

Course Typically Offered
Every other spring

Career
Undergraduate

Grading Basis
OPT - Student Option

GEOL50553 - Integrating and Interpreting Subsurface Geological Data

Department(s)
Geological Sciences

Long Description (Catalog Description)
Prerequisites: GEOL 50331 and 50361, or permission of instructor. A workstation-based practicum on managing and integrating geologic data. Students will become familiar with one or more widely-used software packages for handling multiple data sets used in oil and gas exploration and field development.

Course Typically Offered
Every other spring

Career
Undergraduate

Grading Basis
OPT - Student Option

GEOL50563 - Energy and Natural Resources

Department(s)
Geological Sciences

Long Description (Catalog Description)
Prerequisite: GEOL 10113 or equivalent. A broad overview of the natural resources utilized for energy, and the geologic, engineering and business sides of the energy industry. The course will acquaint students with all the steps in the production of oil and gas from developing a prospect to delivering a product, including how geologists decide where to drill, the study of drilling and completion operations, the technology required to produce oil and gas, and carbon sequestration. Students will also be acquainted with the natural resources and environmental issues associated with the generation of electricity, including coal, geothermal, biomass, uranium, tidal, hydroelectricity, and the rare earth elements required for renewable energy.

Course Typically Offered
Fall

Career
Undergraduate

Grading Basis
OPT - Student Option

GEOL50573 - Geology of Texas

Department(s)
Geological Sciences

Long Description (Catalog Description)
Prerequisites: GEOL 30243. This course is an overview of the stratigraphy and petroleum geology of Texas and the adjacent Gulf of Mexico. The course will focus on the relationship between plate tectonics, eustacy, basin formation, and stratigraphy, and how the interplay between them generated some of the largest accumulations of hydrocarbons on the planet. The course will also use Texas examples to discuss concepts of petroleum geology.

Career
Undergraduate

Grading Basis
OPT - Student Option

GEOL50593 - Environmental Modeling

Department(s)
Geological Sciences

Long Description (Catalog Description)
Prerequisite: Permission of instructor. This course will cover physical and empirical models and their applications in areas such as hydrology, wildlife, ecology, and human health. Class consists of 2 hours lecture, and 2 hours hands-on computer modeling laboratory. (Crosslisted as ENSC/GEOL 50593)

Course Typically Offered
Every other fall

Career
Undergraduate

Grading Basis
OPT - Student Option

Cross Listed Courses

GEOL50603 - Introduction to Geochemistry

Department(s)
Geological Sciences

Long Description (Catalog Description)
Prerequisite: CHEM 10114 and 10124 or permission of instructor. Three hours lecture per week. Application of basic chemical principles to understanding the origin, distribution and migration of chemical elements in the earth's lithosphere, hydrosphere, atmosphere and biosphere.

Course Typically Offered
Every other spring

Career
Undergraduate

Grading Basis
OPT - Student Option

GEOL50613 - Igneous and Metamorphic Petrology

Department(s)
Geological Sciences

Long Description (Catalog Description)
Prerequisite: GEOL 50233, or permission of instructor. Two hours lecture and one three hour laboratory period per week. Petrogenesis of igneous and metamorphic rocks based on field, petrographic, chemical and isotopic data. Inferences on the evolution and dynamics of the crust and mantle. Involves use of microscope.

Course Typically Offered
Every other spring

Career
Undergraduate

Grading Basis
OPT - Student Option

GEOL50623 - Volcanology

Department(s)
Geological Sciences

Long Description (Catalog Description)
Prerequisite: GEOL 50233, or permission of instructor. Two hours lecture and one three hour laboratory period per week. Types and processes of volcanic eruptions; characteristics of modern volcanic products; recognition and significance of ancient volcanic deposits in the stratigraphic record. Involves use of microscope. Field trip required.

Course Typically Offered
Every other fall

Career
Undergraduate

Grading Basis
OPT - Student Option

GEOL50633 - Geochemical Analysis

Department(s)
Geological Sciences

Long Description (Catalog Description)
Prerequisite: CHEM 10113 or equivalent. Project-based, integrated laboratory course covering instrumentation, data acquisition, data analysis and data presentation techniques used in the chemical investigations of geological and related systems including rocks, aquifers, streams and soils. (Crosslisted as ENSC/GEOL 50633)

Career
Undergraduate

Grading Basis
OPT - Student Option

Cross Listed Courses

GEOL50731 - Remote Sensing Technology

Department(s)
Geological Sciences

Long Description (Catalog Description)
Prerequisite: Permission of instructor. Three hours lecture per week for five weeks. An introduction to the technology used in remote sensing, including MSS, TM and SPOT, thermal scanners and radar imaging.

Course Typically Offered
Rarely

Career
Undergraduate

Grading Basis
OPT - Student Option

GEOL50741 - Image Processing

Department(s)
Geological Sciences

Long Description (Catalog Description)
Prerequisite: Permission of instructor. Three hours lecture per week for five weeks. An introduction to processing techniques used to enhance the display of remote sensing images with emphasis on those techniques useful in resource mapping.

Course Typically Offered
Rarely

Career
Undergraduate

Grading Basis
OPT - Student Option

GEOL50751 - Image Interpretation

Department(s)
Geological Sciences

Long Description (Catalog Description)
Prerequisite: Permission of instructor. Three hours lecture per week for five weeks. Geologic and resource mapping and environmental monitoring using satellite images.

Course Typically Offered
Rarely

Career
Undergraduate

Grading Basis
OPT - Student Option

GEOL50763 - Groundwater Hydrology

Department(s)
Geological Sciences

Long Description (Catalog Description)
Prerequisites: GEOL 30443 and major field of study within the College of Science & Engineering with 60 earned hours, or graduate enrollment, or permission of instructor. This course is designed to teach the basics of groundwater hydrogeology including hydrologic cycle, aquifers, groundwater flow, groundwater recharge, water chemistry and groundwater contamination. At the end of this course, students will be able to understand the relationship between surface water and groundwater, groundwater protection, field methods, and groundwater development. (Crosslisted as ENSC/GEOL 50763.)

Career
Undergraduate

Grading Basis
OPT - Student Option

Cross Listed Courses
ENSC50763 Groundwater Hydrology

GEOL50773 - Introduction to Environmental Law

Department(s)
Geological Sciences

Long Description (Catalog Description)
Prerequisites: Major field of study within the College of Science & Engineering with 60 earned hours; or graduate enrollment. Students will be introduced to and will analyze selected federal statutes governing environmental remediation, discharge of pollution, and management of wastes, including the Comprehensive Environmental Response Compensation and Liability Act, the Resource Conservation and Recovery Act, the Clean Water Act, the Clean Air Act, the Endangered Species Act, and others, including the common law (nuisance, trespass, negligence.) Students will be introduced to the American legal system and the role of experts in lawsuits. Students will read and discuss in class statutes, case law, and related materials. (Crosslisted as ENSC/GEOL 50773.)

Course Typically Offered
Fall

Career
Undergraduate

Grading Basis

PHYS50813 Meteorites, Asteroids, Planets

GEOL50863 - Spatial Analysis

Department(s)
Geological Sciences

Long Description (Catalog Description)
Prerequisites: MATH 10043 or equivalent, ENSC/GEOL 30363, and ENSC/GEOL 50523, or permission of instructor. Further development of GIS skills to include 3D data modeling, image analysis using Remote Sensing data, advanced GPS mapping, geoprocessing to infer relationships between spatial features, spatial statistics, model building and good cartographic design. (Crosslisted as ENSC/GEOL 50863.)

Course Typically Offered
Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

Cross Listed Courses
ENSC50863 Spatial Analysis

GEOL50873 - Environmental Remote Sensing

Department(s)
Geological Sciences

Long Description (Catalog Description)
Prerequisites: Seniors and graduate students who have taken any of the following courses: GEOL(ENSC) 30363, GEOL 50731, 50523, 50863, 50883, 50713 or permission of instructor. This course introduces students to fundamental principles and concepts of remote sensing and explores the applications of remote sensing datasets and techniques in geological and environmental sciences. Hands-on exercises on the applications of remote sensing techniques in geological and environmental sciences are key components of the course. The hands-on exercises are mainly based on data from local or international case studies or collected by students in the field (e.g. using Unmanned Aerial Systems (UAS)). Digital image processing techniques/software including ENVI as well as Synthetic Aperture Radar (SAR) processing software such as SNAP will be used for data analysis and interpretation. Crosslisted as GEOL/ENSC 50873.

Career
Undergraduate

Grading Basis
OPT - Student Option

Cross Listed Courses
ENSC50873 Environmental Remote Sensing

GEOL50883 - Applied GIS

Department(s)
Geological Sciences

Long Description (Catalog Description)
Prerequisites: ENSC/GEOL 50523 and ENSC/GEOL 50863, or permission of instructor. Independent work in specially designed projects not covered by regular course offerings for students to continue to advance their basic GIS skills. The student is required to do independent research on a GIS problem, submit a paper with associated maps and give an oral presentation of the findings. A GIS faculty supervisor will be appointed for each research problem. (Crosslisted as ENSC/GEOL 50883.)

Course Typically Offered
Fall and Spring

Career

GRMN40163 - Advanced Studies in Language and Culture

Department(s)
Modern Languages

Long Description (Catalog Description)
Prerequisites: GRMN 30053 and GRMN 30063, both with a grade of C- or better. This is an advanced proficiency course that builds on the reading, listening, speaking and writing skills acquired its two prerequisites, GRMN 30053 and GRMN 30063. As a means of showcasing these competencies, the course includes a research project on an area of personal interest. The aim is to refine and elevate students' linguistic ability and cultural knowledge. This course is conducted entirely in German.

HARE30403 - Perspectives on Human-Animal Relationships

Department(s)
Sociology and Anthropology

Long Description (Catalog Description)
This course examines topics and perspectives on human-animal relationships (HARE) from multiple disciplines within the humanities, social sciences, and natural sciences. We will explore the complex relationships between humans and other animals, past and present, including the socially constructed meanings of animals that shape animal/human interactions and relations within institutions and social, cultural, geographic and interactional contexts. We will consider many types of relationships between human and nonhuman animals, both beneficial and detrimental, as well as the trends that are impacting the future of animal/human relations on the planet.

HCHS20003 - Global Healthcare Systems

Department(s)
Health And Human Science General

Long Description (Catalog Description)
This course provides an overview of the healthcare delivery system in the United States in comparison to different systems of countries around the globe. The course explores the drivers of change over time that shape the organization and delivery of healthcare services and opportunities for innovation and improvements in the cost, quality, and access dimensions of healthcare services in these different systems. The course considers the settings in which healthcare services are delivered and the relationships between the different providers of those services and the payers (i.e., insurance companies) of those services. Discussion and learning activities will also focus on the expense of the U.S. healthcare system compared to single-payer and other systems of care and how those expenses translate to outcomes in association with access, equity, and quality of services

HCHS30333 - Global Health Abroad

Department(s)
Health And Human Science General

Long Description (Catalog Description)
This course provides an overview of the health care delivery system in the United States in comparison to different systems of countries around the globe. The healthcare system will be the focus, with an emphasis on the country in which the course is being delivered. This course will explore the drivers of change over time that shape the organization and delivery of healthcare services in different systems. It will explore how services are delivered and the relationships between the different providers and payers (i.e., insurance companies, national health care). The program will have visits to various facilities in the country to allow for an overview of the facility, its services and the funding sources. Social and scientific factors related to health beliefs and practices will also be examined and discussed.

HCOL41573 - Mediated Apologies and the Power Structures of Forgiveness

Department(s)
John V. Roach Honors College

Long Description (Catalog Description)
Prerequisites: Must be in Honors College. In this course, we will explore the nature of public apologies and the work that they do, while interrogating what actually constitutes an expression of remorse and repair in our hyper-mediated environment. We will explore the modern mediated ritual of apology and forgiveness, asking in particular who gets to apologize, who is asked to forgive, and what the difference is between these two processes. In particular, we will interrogate: WHO gets to apologize? WHO is asked to forgive? WHEN do apologies happen? HOW do apologies work? What¿s the difference between apologies and expressions of remorse? Who has the POWER in the apology dynamic? What role does MEDIA play in communicating and negotiating apologies? Who is asked to `turn the other cheek?¿ What role does RELIGION play in the narrative of forgiveness?

HIST10113 - World History since 1500

Department(s)
History

Long Description (Catalog Description)
This is a lower-division, lecture course covering global development from around 1500 CE to the 21st century. It covers the main political, social, and cultural trends in a variety of societies while at the same time stressing the global perspective. Thus, the first goal is learning the specific histories and cultures within a comparative global context. The rise and fall of civilizations, empires, and
states will be studied within the conceptual frameworks including modernity, nation states, imperialism, and colonialism. A second goal of the course is to develop the critical and analytical skills of students. In addition to learning historical content, students will also be engaged in the analysis of writing history through discussing a wide range of primary sources including museum objects and archival documents.

HIST30383 - Experiences and Encounters: Paris and Madrid, 1880-1940

Department(s)
History

Long Description (Catalog Description)
This study-abroad course has as its focus the historical trajectories of Paris and Madrid in the late nineteenth and early twentieth centuries, and is taught in conjunction with ENGL 40553, Studies in Nineteenth-Century American Literature: American Writers in Paris and Madrid. The two courses together will explore the experience of travel to Europe for Americans in this period, the narratives they wrote about their travel, and the historical context of these experiences. With the cities of Paris and Madrid as a kind of traveling classroom to showcase the factual and physical context of these narratives, students in HIST 30383 will gain a familiarity with the principal historical developments surrounding Paris and Madrid in the nineteenth and twentieth centuries, the perceived and real differences between the two cities, and how this historical context shaped the experiences of the writers featured in the English course. This course will use historical sources alongside the literary texts of the English course as catalysts for studying the history and culture of their two cities. (EU)

HIST30623 - History of Science: Scientific Revolutions

Department(s)
History

Long Description (Catalog Description)
This course examines the emergence of science as a way of knowing about the natural world and the human body in the period between 1450 and 1750, often referred to as the ¿Scientific Revolution.¿ We will analyze key figures and critical events in the evolution of physics, chemistry, astronomy, biology, and medicine by situating these figures and events within their social and cultural context. Students will confront popular myths about the relationship between science and religion in history to understand how science as a way of knowing has become synonymous with authority, truth, objectivity, and reason in contemporary society.

HIST30653 - The Life and Times of Benjamin Disraeli

Department(s)
History

Long Description (Catalog Description)
Explores Britain's nineteenth century through the career of Benjamin Disraeli, by turns novelist, dandy, romantic poet, Tory democrat, statesman, and twice prime minister. The story of how this middle-class, Jewish outsider became the ultimate political insider reveals the role of class, religion, and race in British society. Particular attention will be given Disraeli's role in the development of the British empire, the promotion of a modern monarchy, and democratization of the political system. (EU)

HIST30673 - History of Museums and Collecting

Department(s)
History

Long Description (Catalog Description)
This undergraduate seminar examines the ways in which societies from the ancient world to the present acquire, order, and assign value to material artifacts. From ethnographic remains to natural specimens, and from works of art to antiquities, people have plundered, collected, and displayed objects across time and space. Special attention to circulation will help students analyze the processes by which objects were detached from their natural context and reinserted into thematic sets based on aesthetic, religious, political or scientific priorities that gave rise to the modern museum. Topics include the culture of learning at the Library of Alexandria, relics and devotional practices in medieval Europe, collecting exotica during Renaissance, sensory museums of the Enlightenment, and black market trade of antiquities in the present. Class includes fieldtrips to local museums, libraries, and private collections.

HIST30683 - History of Queer America

Department(s)
History

Long Description (Catalog Description)
People who identify as queer have been integral to the history of the United States. We will examine the history of the US with attention to the experience of queer people. Queer people have always existed, more openly at some times than at others. We will trace the shifts in the ways that queer people have interacted with the public sphere and how American attitudes toward queerness have changed over centuries. We will examine primary sources--the actual words of the time. From those sources, the student makes an unfiltered connection to the people of the past.

HIST30693 - Technologies of History from Cuneiform to Coding

Department(s)
History

Long Description (Catalog Description)
This course will ask how the ways that humans communicate¿via inscription, graffito, letter, or Tweet¿have the power to affect society and make history. We will explore the history of communications technologies from the invention of writing to the printing press to social media, and each week, we will pair these topics with analysis of a cutting-edge digital archive or project. Students will then learn how to use the ¿digital tools¿ reflected in these projects, building the skills necessary to produce their own works of digital historical scholarship.

HIST41903 - History of Cuba

Department(s)
History

Long Description (Catalog Description)
This class will examine Cuban history, from pre-Hispanic times to the present. Major themes will include the evolution of Spanish colonial rule, sugar and the rise of African slavery, the wars of independence, and the role of U.S. interventionism. Special emphasis will be placed on the Cuban Revolution and the causes and results of this historical process. How did Fidel Castro manage to take power, and what have been the most significant effects of his regime? A second major goal of HIST 41903 is to improve students' writing and critical thinking skills. Students will be required to develop theses and to defend their positions using evidence from their readings, lectures, and their own research. Analysis and argument will be the central elements of the course. (LA)

Cross Listed Courses
ENGL50133 Seminar in Literature&History

HIST50833 - Selling Sex in the City: A Global History of Prostitution

Department(s)
History

Long Description (Catalog Description)
This seminar explores the history of prostitution and contemporary debates regarding sex work in a global context. It examines topics including pre-modern forms of prostitution, the history of red-light districts, political economy of sex industries and sex tourism, legal structures of regulating and abolishing commercial sex, state violence against sex-works, and legal and human rights anti-trafficking discourses. We situate sex-workers as complex, multidimensional actors engaging with societal and state institutions and with political and feminist debates concerning health and public orders, as opposed to the image of static and demoralized victims.

OPT - Student Option

HNRS20813 - Philosophy and Science of Social Justice

Department(s)
John V. Roach Honors College

Long Description (Catalog Description)
Prerequisite: Acceptance into the Honors College. Discussions of justice in the 21st century focus increasingly on issues like sexism, racism, transphobia, and ableism. But what are things like race, gender, and disability? Are they biological differences, or are they socially constructed? Is there such a thing as implicit prejudice? Can equal treatment sometimes be unjust? In this course we will examine discussions from the humanities and the sciences on topics such as structural and psychological oppression, microaggressions, implicit bias, and other topics. Students will examine how these theoretical perspectives can be informed by scientific methods, as well as how theories of social justice can be used to criticize and inform our scientific practices.

HNRS20933 - Rhetoric of Gratitude

Department(s)
John V. Roach Honors College

Long Description (Catalog Description)
Prerequisites: Acceptance into the Honors College. This course uses rhetoric as the primary lens of inquiry around gratitude. It combines the theoretical exploration with practical application, providing students with a foundation for understanding and engaging with both acts and expressions of gratitude in diverse contexts. Grounded in classical and contemporary rhetorical theories, this course explores the multi-faceted nature of gratitude as both a personal disposition and a social practice.

Department(s)
Information Systems and Supply Chain Management

Long Description (Catalog Description)
3 hours. Prerequisites: INSC 20153 or equivalent and junior standing, or consent of the instructor, and must be a declared Business major. Develops concepts and analytical skill to address the issues related to the creation and distribution of goods and services. Emphasizes the role of operations function as a competitive weapon and examines how operations strategy can be integrated with the corporate strategy and other functional strategies. Discusses the increasingly important role of global competition, technology, and total quality. Other topics include process design, capacity, planning, technology choice, planning and inventory control, and just-in-time systems. Technology is emphasized.

INSC30263 - Digital Asset and Payment Technologies

Department(s)
Information Systems and Supply Chain Management

Long Description (Catalog Description)
Prerequisites: INSC 20263 with a C or better or concurrent enrollment in INSC 20263. This course is an introduction to the technology supporting the creation and use of digital assets (e.g., blockchain), supporting technologies (e.g., defi, payment rails, and decentralized IDs), and the business case for and application of these technologies. Students completing the three classes INSC 30263, INSC 30273, and INSC 30283 with at least a C earn a fintech certificate designation.

INSC30273 - Introduction to Machine Learning

Department(s)
Information Systems and Supply Chain Management

Long Description (Catalog Description)
Prerequisites: INSC 30283 with a C or better, must be admitted to the Neeley School of Business. This course is an introduction to machine learning programming through which students will learn data engineering, feature engineering, and model development. This class serves as a substitute for INSC 40843, Business Intelligence and Analytics for the BIS major. Both classes can be taken for credit. Students completing the three classes INSC 30263, 30273, and 30283 with at least a C earn a fintech certificate designation

INSC30453 - Fellows Business Analytics

Department(s)
Information Systems and Supply Chain Management

Long Description (Catalog Description)
Prerequisites: At least a C grade in INSC 20153 and must be in the Neeley Fellows program. This course is an introduction to business analytics, which uses data and methodologies to help managers gain the insight needed to make better, data-driven decisions. This course takes a managerial approach to analytics and will allow students to understand how to utilize analytics in both a tactical and strategic role. Large corporations, small businesses, government, and not-for-profit agencies use analytics in their operations to support decision-making.

INSC30513 - Sustainable Supply Chain Management

Department(s)
Information Systems and Supply Chain Management

Long Description (Catalog Description)
Prerequisites: Junior or senior standing; enrollment in the Certificate in Sustainable Business program or permission by the department. This undergraduate course in Sustainable Supply Chain Management provides students with a comprehensive understanding of the principles, practices, and challenges associated with creating and managing sustainable supply chains. The course explores the integration of environmental, social, and economic sustainability into supply chain operations and strategies. Through case studies, readings, guest lectures, and hands-on projects, students will develop the knowledge and skills necessary to address the growing importance of sustainability in modern supply chain management. The course is open to both business and non-business students.

INSC30523 - Managing for Sustainable Business

Department(s)
Information Systems and Supply Chain Management

Long Description (Catalog Description)
Prerequisites: Junior or senior standing; enrollment in the Certificate in Sustainable Business program or permission of the department. This course focuses on sustainability in business, building and understanding of this evolving field, the institutions that shape it, and the role of business. Topics include the evolution of sustainability's role in business, stakeholders-modes of influence and roles, metrics, models and management systems, regulatory and reporting environment, liability and risk, and strategic considerations of companies. The course is designed to provide students with understanding, frameworks, and tools to make good decisions about how to develop strategy around sustainability, how to respond and contribute to sustainability standards and demands from stakeholders, and how to evaluate the costs and benefits of sustainability choices and initiatives. The course is open to both business and non-business students.

INSC30823 - Data Management for Business Information Systems

Department(s)
Information Systems and Supply Chain Management

Long Description (Catalog Description)
INSC 20263 with a grade of C or better. This course introduces the principles and practices of managing business data in modern digital environments. Students learn how data are structured, stored, and accessed to support business operations and analytics. Topics include relational data modeling, data quality and governance, data warehousing concepts, and an introduction to non-relational (NoSQL) databases. Emphasis is placed on understanding how cloud-based systems enable real-time data access and integration across applications. Class activities and assignments use contemporary cloud tools to connect, retrieve, and interpret live business data. Through these exercises, students see how effective data management enables timely analysis, improves business decisions, and supports digital transformation.

INSC30853 - Fundamentals of Cybersecurity

Department(s)
Information Systems and Supply Chain Management

Long Description (Catalog Description)
Prerequisites: INSC 20263 with a grade of C or higher. The rapid development of networking and data storage technology has, in many cases made data the most important asset for many corporations. This course provides a management level understanding of cybersecurity. The focus is to view the issues and practical solutions for securing information systems. Topics include such areas as the threat environment, security policy and planning, secure networks, access control, firewalls, application security and data protection. Because computer networks are such a vital part of all information systems today, this topic is addressed at a level to provide managers with an understanding of the fundamentals of cybersecurity in order to help prevent data breaches. Students who complete INSC 30853, INSC 30873, and INSC 40393 will receive a cybersecurity certificate.

INSC30873 - Cybersecurity Risk Management

Department(s)
Information Systems and Supply Chain Management

Long Description (Catalog Description)
Prerequisites: INSC 30853 with a grade of C or better. This course introduces the principles, frameworks, and practices of managing cybersecurity risk in modern organizations. Students learn how to identify, assess, and prioritize risks associated with information systems and digital assets. The course covers governance and compliance requirements, and strategic approaches to mitigating cyber threats. It addresses risk across information systems, including data, people, processes, and technology. Emphasis is placed on applying risk management methodologies, developing cybersecurity policies and plans and aligning security strategies with organizational objectives. Case studies, simulations, exercises, and labs illustrate real-world applications of risk assessment and governance tools such as the NIST 2.0 Cybersecurity Framework. Students completing INSC 30853, 30873 and INSC 40393 will be awarded a Cyber Security Certification.

INSC40303 - Predictive Analytics and Demand Planning

Department(s)
Information Systems and Supply Chain Management

Long Description (Catalog Description)
3 credit hours. Prerequisites: Must be a declared Business major or by permission of department chair; grade of C or better in INSC 30313; concurrent enrollment in INSC 30313 is permitted. This course explores the critical role of predictive analytics in modern demand planning and management. Students will learn to develop and apply forecasting models that anticipate customer needs, align production and procurement decisions, and optimize supply chain performance. Topics include demand forecasting techniques, causal and time series modeling, inventory management, and translating insights into actionable plans.

The course emphasizes the integration of predictive analytics with demand planning processes to enhance inventory visibility, reduce variability, and improve responsiveness across the supply chain. Key conceptual areas include demand forecasting and management, synchronization of supply and demand, inventory planning and positioning, sales and operations planning (S&OP), and strategic order fulfillment.

Through hands-on exercises, students will gain the skills necessary to leverage analytics tools, interpret forecast accuracy, and drive data-informed decisions that improve supply chain agility and customer satisfaction.

INSC40313 - Logistics and Transportation Networks

Department(s)
Information Systems and Supply Chain Management

Long Description (Catalog Description)
3 credit hours. Prerequisites: Must be a declared Business major or by permission of department chair; grade of C or better in INSC 30313; concurrent enrollment in INSC 30313 is permitted. This course provides a comprehensive introduction to logistics and transportation as critical components of modern supply chain management. Students will explore how goods, services, and information move efficiently and effectively from suppliers to end customers. Key topics include transportation modes and strategies, inventory management, order fulfillment, warehousing, logistics, and the role of technology in coordinating these activities. The course emphasizes both the operational and strategic aspects of logistics, highlighting how companies use logistics to gain competitive advantage, improve customer satisfaction, and respond to a rapidly changing global marketplace. Real-world examples, case studies, and analytical tools will be used to connect theory with practice.

INSC40343 - Supply Chain Capstone Experience

Department(s)
Information Systems and Supply Chain Management

Long Description (Catalog Description)
3 credit hours. Prerequisites: Must be a declared Business major; a grade of 'C' or better in INSC 40313 and INSC 40323. This course serves as the capstone course for a major in supply and value chain management. It provides an in-depth study of the practice of supply chain management in manufacturing and service industries. Supply chain management is the integration of the activities associated with the flow and transformation of goods from the raw materials stage through to the end user, to achieve a sustainable competitive advantage. This course leverages the conceptual foundations of supply chain planning and coordination introduced in previous courses and provides a hands-on, integrative project experience relating strategic concepts and tools to meeting the challenges in the management of supply chains. Topics include management of operations and logistics networks, material flows and the role of information systems technology.

INSC40353 - Designing and Managing Global Supply Chains

Department(s)
Information Systems and Supply Chain Management

Long Description (Catalog Description)
Prerequisites: Must be a declared Business major; INSC 30313 with a grade of C or better or concurrent enrollment in INSC 30313 is permitted. This course explores the strategies and complexities of managing supply chains in a global context. Students will examine how companies design, coordinate, and optimize supply networks that span multiple countries and regions. Topics include international sourcing, cross-border logistics, global transportation infrastructure, trade regulations, cultural considerations, and risk management in uncertain geopolitical and economic environments. Emphasis is placed on how global supply chains create value, adapt to disruptions, and support competitive advantage in an interconnected world. Through real-world case studies, simulations and analytical frameworks, students will develop the skills needed to navigate the challenges and opportunities of global supply chains.

INSC40843 - Business Intelligence and Analytics

Department(s)
Information Systems and Supply Chain Management

Long Description (Catalog Description)
Prerequisites: INSC 20263 with a grade of 'C' or better and must be a declared business major. This course is an introduction to the fundamentals of business intelligence (BI) and analytics. Business intelligence and analytics allow for the transformation of raw data into information and knowledge that can be used by managers for the purpose of decision-making. The domain of BI is in the gathering and storage of data. Analytics is considered the task of analyzing and modeling the data to provide competitive information to planners and decision makers. Through the use of the BI and analytics, organizations have potential to build competitive strategies around data-driven insights that yield superior business performance. Examples of analytics in action include the analysis of profitable customers, supply chain optimization, market basket analysis for online sales, recruitment and retention of human resources, among other potential examples. Real-world case studies will show students the ways organizations are using BI and analytics to support both tactical and strategic decision-making. To fulfill the BIS major requirements, either INSC 40843 OR 30273 must be taken for credit. Both classes can be taken for credit. Only INSC 30273 counts as credit towards the Fintech Certificate.

INSC55050 - Business Analytics

Department(s)
Information Systems and Supply Chain Management

Long Description (Catalog Description)
Prerequisites: Enrollment in MSBA 4+1 program or departmental permission. This course is an introduction to the fundamentals of business analytics. Business analytics are enabled by business intelligence (BI) tools for the purpose of analytic decision making. BI systems combine gathering data, storing it, and analyzing it to present complicated company and competitive information to planners and decision makers. By providing wider visibility to plans and supporting data, analytical tools increase the return on existing organizational planning applications because they help companies understand where and how they deviate from their plan objectives. In addition, they provide shared data availability that encourages a global perspective on business performance.
Real-world case studies will show students the ways organizations are using analytics to support both tactical and strategic decision-making.

The Technology Skills for Emerging Professionals course equips students with essential digital skills for personal and professional success. Topics include operating systems, communication technologies, productivity tools, digital media creation, artificial intelligence, and immersive technologies. Students learn skills in professional communication, collaboration, digital security, AI productivity, and educational media. Hands-on activities build proficiency with a variety of tools and platforms. By mastering these technologies, participants are prepared to navigate and leverage digital tools effectively in today's professional and personal environments.

ITAL30063 - Italian Culture as Reflected in Italian Cinema

Department(s)
Modern Languages

Long Description (Catalog Description)
Prerequisites: ITAL 20063 with a grade of C- or better, or instructor's permission. This course is a study of Italian culture as reflected in Italian cinema. The course, conducted in Italian, has as a primary goal the improvement of students' knowledge of both contemporary and historical Italy. Spoken and written Italian skills are developed through authentic readings, class discussions and individual presentations. Italian cinema from the 1940's to the present will be covered, emphasizing major directors, such as Visconti, De Sica, Fellini, Tornatore, and Benigni. Topics to be addressed include: the unification of Italy, the North-South divide, fascism, the realities of La Dolce Vita or sweet life, regional identify, racism, gender relations, the mafia and immigration.

ITAL30083 - La Novella Italiana: Topics in the Italian Short Story

Department(s)
Modern Languages

Long Description (Catalog Description)
Prerequisites: ITAL 30053. This course examines the genre of the novella, the Italian short story. In this course, we will explore the development of the genre within a specific time period (for example: Medieval-Renaissance, Baroque-early 19th Century, or mid-19th Century-present) and socio-cultural backdrop of the Italian literary scene of that period. This course fulfills the (WEM) writing emphasis core requirement, as well as the (LT) literary traditions core requirement; thus, requirements include several short papers and a longer research paper in the field of Italian literature. This course counts toward the minor in Italian. This course is taught entirely in Italian.

ITAL30153 - Dante's Inferno

Department(s)
Modern Languages

Long Description (Catalog Description)
This course will examine Dante Alighieri's Inferno, the first canticle of his epic poem known as The Divine Comedy. Dante's Comedy, produced during a period of rapid transition, is one of the great works of World literature and a foundational text for Medieval culture, both pagan and Christian. In this course, we will study Dante's epic poem in its historical context and how it relates to our own world, given that The Divine Comedy is ultimately about an individual's search for meaning. We will see how Dante's allegorical and mystical journey to God unfolds through a series of precise descriptions of characters, settings, and concrete episodes that comprise the vast world of the great narrative poem. Students will gain a critical understanding of this literary masterpiece as well as the cultural context in which it was produced. The course is taught entirely in English; all readings are in English.

MANA40213 - Developing High-Performance Teams

Department(s)
Management & Leadership

Long Description (Catalog Description)
Prerequisites: Must be a Business major with Junior standing and have completed MANA 30153 or MANA 30250 and MANA 40250 with a grade of at least C or have permission from the Department. Leadership Minors must have completed MANA 30833 and MANA 30843 with a grade of at least C or have permission from the Department. Modern organizational work frequently takes place within the boundaries of teams of various types (face-to-face, virtual, or hybrid teams). Understanding how teams function and how best to empower them has become vitally important for successful leadership/followership. The purpose of this course is to build and apply practical knowledge of team dynamics through experiential activities. Emphasis is placed on how to create a team environment and manage a team to promote creativity, psychological safety, cohesion, permission to fail and learn, and inclusivity. Students in this class will also utilize frameworks and skills in a team environment to understand and solve problems.

MARK40263 - Foundations of Selling

Department(s)
Marketing

Long Description (Catalog Description)
Prerequisites: A grade of C- or higher in MARK 30153 or 30653. Must be a declared business major or admitted to the consultative selling certificate program. There are several learning objectives for students in Foundations of Selling. Primary to the course is the student's mastery of communication and presentation skills in the interpersonal and formal speaking environments. One part of the course covers the text materials providing the student with a background in the fundamental aspects of persuasive communications, overcoming objections, and presentation planning. Once these topics are mastered, the student then executes a persuasive and formal sales presentation, which is videotaped and critiqued. Also, this course is designed to provide an understanding of the sales process and its role in business (and non-business) organizations and society. The student is expected to acquire a working knowledge of sales concepts and terminology pertinent to the field. You will explore the nature of the sales process and its functions, including presentation strategy, informative delivery, closing techniques, and an exploration of the various opportunities in sales as a career. We will also cover areas such as personal attire, speaking skills, and interpersonal transactions. Your most important assignment in this class is to sell yourself- and to do that you must believe in the product.

MATH20063 - Mathematics for Middle School Teachers II

Department(s)
Mathematics

Long Description (Catalog Description)
Prerequisite: Completion of the Core Curriculum Mathematical Reasoning requirement. A mathematics content course for Middle School Mathematics Majors. Topics will be selected from: an introduction to the geometry of polygons, circles, polyhedra and spheres, transformations, similarity, constructions, measurement, coordinate geometry, networks, logic. Note: may not be counted toward a major or minor in mathematics. This course does not satisfy the core mathematical reasoning requirement.

Course Typically Offered
Every other spring

Career
Undergraduate

Grading Basis
OPT - Student Option

MATH20123 - Discrete Mathematics I

Department(s)
Mathematics

Long Description (Catalog Description)
Prerequisite: MATH 10054 or 10273 or 10283 or MATH 10524 with a grade of C- or better; or a score of at least 600 on the SAT Math exam; or a score of at least 24 on the ACT Math exam. An introduction to discrete methods used in mathematics and computer science. Topics covered include formal logic, sets, the principle of inclusion-exclusion, functions, proof techniques including mathematical induction, number theory, and algorithms. Students are expected to have mathematical background equivalent to college or high school precalculus.

Course Typically Offered
Fall and Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

MATH20524 - Calculus II

Department(s)
Mathematics

Long Description (Catalog Description)
Prerequisite: MATH 10524 with a C- or better. Techniques of integration and applications. Infinite series. Differential equations as time permits.

Course Typically Offered
Fall and Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

MATH20970 - Special Topics

MATH30053 - Introduction to Mathematical Proof

Department(s)
Mathematics

Long Description (Catalog Description)
Prerequisites: Math 20123 and 20524, both with a C- or
better. Mathematical proof in the context of algebra and analysis.

Course Typically Offered
Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

MATH30103 - Introduction to Data Science

Department(s)
Mathematics

Long Description (Catalog Description)
Prerequisites: COSC 20803 and MATH 20123 with a C- or better in both. Essential elements of the data science lifecycle from theory to practice. Introduces fundamental skills to prepare for advanced study in data science. Methodologies and several open source tools used in solving data science problems are studied. (Cross-listed as COSC/MATH 30103.)

MILS10001 - Leadership Lab

Department(s)
Military Science

Long Description (Catalog Description)
Fall/Spring. One class per week. This course facilitates the development of leadership skills while giving practical experience in military skills. Areas of emphasis include drill and ceremonies, squad level tactics, first aid and land navigation. Advanced Course cadets conduct the training and lead the cadet battalion under cadre supervision. A weekend field training exercise and weekly physical fitness training are included in the course.

Career
Undergraduate

Grading Basis
OPT - Student Option

MILS10041 - Introduction to Leadership I

Department(s)
Military Science

Long Description (Catalog Description)
Fall. One class per week. A progressive overview of the U.S. Army to include its history, its organization, its customs and courtesies, its strategic mission, dynamic structure, and methods of tactical deployment. Included is a field trip, where students are exposed to on- and off-duty Army life and have the opportunity to observe new combat arms lieutenants in action.

Career
Undergraduate

MOLA20003 - Cosmopolitanism: Thinking from a Global Perspective

Department(s)
Modern Languages

Long Description (Catalog Description)
In this class, students seek to understand definitions of the term cosmopolitanism in its various inflections. Students will interrogate those inflections and discuss them in association with concepts such as nationalism, humanism, globalization, global ethics, and identity. Analyzing cultural products from around the world, students will ask questions such as the following: What does it mean to be a global citizen? What role does language play in how we envision global citizenship? What does it mean to think of someone as "the other" and how is that related to one's own "otherness"? How do/can we accommodate national identities and global citizenship?

NTDT30993 - Global Perspective in Food Insecurity

Department(s)
Nutritional Sciences

Long Description (Catalog Description)
A Global Perspective of Food Insecurity provides students with opportunities to actively engage in critical thinking and problem-solving regarding various food and nutrition issues that affect the global community. With a focus on a study abroad experience in Seville, Spain, students will explore the incidence of food insecurity on a local level (Fort Worth, TX) and the global stage (Seville, Spain), utilizing comparisons and contrasts to make informed judgments. Hands-on service-learning and community engagement will take place at non-profit social service agencies. Lectures, assigned readings, field trips, guest speakers, threaded discussions, cultural events are included to expand the global awareness and to develop global responsibility of students. The course is open to all majors. Fluency in Spanish is NOT required.

NTDT55103 - Clinical Applications of AI

Department(s)
Nutritional Sciences

Long Description (Catalog Description)
Prerequisites: Junior or above undergraduate standing or graduate standing. This course provides a comprehensive overview of the current and emerging applications of artificial intelligence (AI) in healthcare. Students will learn about AI-powered tools and technologies used in hospitals, clinics, and research settings, including AI-driven diagnostic systems, robotic surgery, predictive analytics for disease diagnosis and management, and AI-assisted drug discovery. The course will emphasize practical applications and case studies, allowing students to gain a deeper understanding of how AI is transforming healthcare delivery and patient outcomes. Ethical implications and challenges related to AI adoption in healthcare will also be addressed. This course is designed for students with an interest in the practical implementation of AI in medicine.

NURS40592 - Nursing Care of Neonate

Department(s)
Nursing

Long Description (Catalog Description)
Prerequisites: Only nursing students in the senior II status may take this course. This course is designed to be a two hour lecture once a week with a preceptor led clinical observation component (comprised of 12 hours). This is an elective for senior II students. In the class meetings we examine the most common health conditions of neonates in the neonatal intensive care unit. The students will learn the principles and knowledge of care of a neonate. Students will have the opportunity to observe care in the neonatal intensive care setting that will reinforce the application of principles and knowledge necessary for interdisciplinary care of neonates and their families.

PHIL20203 - The Art and Science of Human Flourishing

Department(s)
Philosophy

Long Description (Catalog Description)
What is the purpose of your education? How does it relate to creating a flourishing life, one filled with deep satisfaction, well-being, resilience, and accomplishment? What can we learn from the humanities and sciences about the varieties of human flourishing and its key ingredients, and how can you develop your own personal vision of that life? What skills and knowledge would you need to realize that vision? This course aims to assist you in finding your own answers to these questions so as to lay the foundation for flourishing during your undergraduate years, while also preparing you for a life of flourishing in personal, civic, and professional contexts. We will explore perspectives from both the humanities and sciences in ways that are directly relevant to university life, and we will engage in practices, such as mindfulness and meditation, which will help you develop the intellectual and emotional dispositions¿resilience, compassion, gratitude, and others¿that research shows are central to human flourishing.

Philosophy

Long Description (Catalog Description)
In this course, students will be introduced to the philosophical investigation of the socially and politically fraught ways people can use language. Topics may include bad words, e.g. swears, slurs, dogwhistles, and dehumanizing terms, as well as bad discourse, e.g. subordinating expression, epistemic injustice, epistemic isolation, and gaslighting. Topics may also include some of the ways that language can be used to counteract such bad uses, through e.g. linguistic reclamation and counter-expression. Through the exploration of these topics, students will gain familiarity with several central topics in the philosophy of language, social epistemology, and feminist philosophy, and the philosophy of race. Previous familiarity with these areas will not be presupposed.

PHIL20303 - Moral Problems

Department(s)
Philosophy

Long Description (Catalog Description)
An examination of contemporary moral issues. Typical topics include abortion, euthanasia, discrimination, preferential hiring, the enforcement of community standards, the morality of war, punishment, the rights of distant peoples and future generations, and environmental ethics.

Course Typically Offered
Fall

Career
Undergraduate

Grading Basis
OPT - Student Option

PHIL20313 - Death

Department(s)
Philosophy

Long Description (Catalog Description)
In this class we will explore some of the classic metaphysical and moral problems that surround the topic of death. Some of the questions the class may discuss include: What is death? Do we have a soul? Is death a harm? Is life a benefit? Is euthanasia morally permissible? Is abortion morally permissible? Is it morally permissible to kill animals so that we may eat them? May we sacrifice the lives of some in order to save the lives of others?

Undergraduate

Grading Basis
OPT - Student Option

PHIL20333 - Environmental Philosophy

Department(s)
Philosophy

Long Description (Catalog Description)
This course surveys several contemporary approaches for understanding our moral obligation to the environment, including intuitionism, utilitarianism, deontology and feminism. By applying these approaches to concrete environmental issues, the course illustrates how efforts to preserve the environment raise special difficulties for traditional moral categories, such as intrinsic and instrumental value. The course also explores the peculiarly aesthetic dimension of environmental ethics, including claims about the value of natural beauty and unspoiled wilderness.

OPT - Student Option

PHIL20343 - Mind, Consciousness, Self

Department(s)
Philosophy

Long Description (Catalog Description)
This course explores several conceptions of mind, consciousness, and self within both the Western and Eastern traditions. These conceptions are similar in their rejection of the view that cognition and consciousness reside exclusively (or in any way) within a thinking substance or ego, or are somehow uniquely enskulled or brainbound. Topics we will consider include attention and awareness, extended cognition and mind, embodiment, situatedness, self-consciousness, interpersonal neurobiology, animal minds, neurotechnology, personal identity, boundaries of self, not-self or selflessness, the evolutionary self, and the ecological self.

Career
Undergraduate

Grading Basis
OPT - Student Option

PHIL20353 - Philosophy of Music

Department(s)
Philosophy

Long Description (Catalog Description)
An introduction to some basic issues in the philosophy of music. What is the difference between music and noise? What is a work of music? Are works of different traditions fundamentally different kinds of entities? What is a musical performance, and what is it for a performance to be accurate or authentic? What are the relevant social, cultural, economic, and ethical considerations when playing or otherwise engaging with certain kinds of music? Readings will be a mix of classic and contemporary papers by leading philosophers of music.

PHIL30203 - Metaphysics

Department(s)
Philosophy

Long Description (Catalog Description)
Prerequisites: Any 10000-level or 20000-level PHIL course. A systematic examination of the central issues in metaphysics. Topics include the nature of possibility and necessity, persistence through time and change, material constitution and composition, and criteria of ontological commitment. A portion of the course will also focus on methodological issues pertaining to the nature of metaphysical questions and claims. Readings will be a mix of classic and contemporary papers by leading metaphysicians.

PHIL30343 - Sex, Society, and Ethics

Department(s)
Philosophy

Long Description (Catalog Description)
This course introduces students to the myriad ways in which sexual desire and sexual activity are structured by social relations and to the ways that sexuality, sexual practices, and sexual identities vary in time and space. We will also consider how those social relations and sexual identities influence ethical judgment regarding various sexual practices and attitudes. Social science and philosophical theories of sexuality will be considered and cross-cultural and historical accounts of sexual practices will be reviewed. (Offered as PHIL 30343 or SOCI 30773 credit)

OPT - Student Option

PHIL40363 - Moral Psychology

Department(s)
Philosophy

Long Description (Catalog Description)
Prerequisites: Two prior PHIL courses (any level), or permission of instructor. Moral psychology is precisely what it sounds like - the intersection of the study of morality (typically the domain of philosophy) and the study of our mental processes (typically the domain of psychology). It is an area in which we ask fundamental questions about the moral nature of human beings, and purse the answers to these questions via a constant exchange between philosophical theory and empirical data.

Physics

Long Description (Catalog Description)
Prerequisites: PHYS 20474, MATH 20524, which may be taken concurrently, or permission of instructor. Three hours of lectures and one 2-hour laboratory per week selected to reinforce the concepts discussed in lecture. The second of a two-semester sequence recommended for students of physical sciences or engineering. Electric charge, current and field; magnetism, time varying electromagnetic fields; physical and geometric optics. Credit will not be granted for this course and any of the following: PHYS 10164. 20485.

Course Typically Offered
Spring

Career

PHYS30003 - Junior Honors Research in Physics or Astronomy

Department(s)
Physics

Long Description (Catalog Description)
Prerequisites: Admission to Honors Program in Physics and junior standing in Physics. The first of two courses required for Honors in Physics in which the candidate will carry out a program of research under the direction of a faculty member. The results of this research must be satisfactorily communicated to the department in an oral presentation and/or a written report.

Course Typically Offered
Fall and Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

PHYS30014 - Materials Science

Department(s)
Physics

Long Description (Catalog Description)
Prerequisite: CHEM 10013 or 10113. Introduction to the physical, chemical, mechanical, electrical, and optical properties of metals, semiconductors, ceramics, and polymers. Emphasis on the relationship between these properties and how performance is influenced by microstructure and processing. Atomic bonding. Crystal structure. Phase equilibria. Deformation and fracture. Composite materials. Electronic, magnetic, dielectric and optical properties. Laboratory methods for characterizing materials emphasized. (Crosslisted as ENGR/PHYS 30014.)

Course Typically Offered
Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

Cross Listed Courses
ENGR30014 Materials Science

PHYS30113 - Intermediate Astronomy

Department(s)
Physics

Long Description (Catalog Description)
Prerequisites: PHYS 10263 and 10273, 10154 or 20474 or 20475 or permission of instructor. Observed properties and evolution of stars, exoplanets, clusters, and galaxies, including kinematics, chemistry, and spectral energy distributions. Qualitative and quantitative discussion of the Milky way and various types of galaxies (ellipticals, spirals, dwarf, starburst), including groups and clusters of galaxies, active galaxies, and galaxy evolution.

Course Typically Offered
Fall

Career
Undergraduate

Grading Basis
OPT - Student Option

PHYS30123 - Observational Astronomy

Department(s)
Physics

Long Description (Catalog Description)
Prerequisites: PHYS 10263 and 10273. Two hours of lectures and two hours of lab per week. Topics covered include telescopes, astronomical measurement techniques, modern detectors and instrumentation, the effect of the Earth's atmosphere on light. Selected experiments in telescope properties and resolution, photometry, spectroscopy, geometrical and physical optics, atomic physics, and studies of astronomical survey data.

Career
Undergraduate

Grading Basis
OPT - Student Option

PHYS30163 - Evolution and Exploration of the Solar System

Department(s)
Physics

Long Description (Catalog Description)
Prerequisites: GEOL 10113, or any one of PHYS 10164/10263/10273, or permission of instructor. Three hours of lectures per week. This course will launch you into space with past and present spacecraft missions and bring you back to Earth with meteorite research. Throughout the semester, this course will examine the geology and geologic processes occurring on and within planetary bodies throughout the Solar System. This course is intended for science and non-science majors. (Crosslisted as GEOL/PHYS 30163.)

Course Typically Offered
Fall

Career
Undergraduate

Grading Basis
OPT - Student Option

Cross Listed Courses
GEOL30163 Explore the Solar System

PHYS30313 - Theoretical Methods in Physics

Department(s)
Physics

Long Description (Catalog Description)
Prerequisites: PHYS 20484 or 20485, PHYS 20323 and MATH 20524 and permission of instructor. Survey of mathematical and computational methods used in the junior and senior level physics courses. Students will develop analytic problem-solving skills and numerical problem-solving skills using Python programming.

Career
Undergraduate

Grading Basis
OPT - Student Option

PHYS30474 - How the Human Body Works

Department(s)
Physics

Long Description (Catalog Description)
Prerequisites: pre-calculus, PHYS 10164 or PHYS 20484 or 20485 or permission of instructor. Three hours of lecture and one two-hour lab per week. This course will explore the fundamental lows and natural processes related to the mechanics, biophysics, and biochemistry of the human body. It is designed for pre-health, kinesiology, biology nursing and physics students who want to understand the foundations and biophysical principles that govern human life. The course will focus on the science of physiological processes from simple mechanical motion, breathing, blood flow and oxygen exchange to vision, neuronal processes and the basics of genetics and proteomics. The biophysical elements of human function and human development in the context of environmental influences and live adaptation will be discussed. The evolution of approaches to understanding physiological functions as it has been governed by modern scientific developments will be briefly discusses. The course will also provide a simple understanding of recent technologies that have been applied to the study of physiological processes like muscle contraction, blood transport, cell function, neuronal processing, and DNA replication.

OPT - Student Option

PHYS30483 - Physics III Laboratory

Department(s)
Physics

Long Description (Catalog Description)
Prerequisite: PHYS 30493, which may be taken concurrently. The course introduces students to modern experimental research techniques through a variety of experiments that might include spectroscopy, imaging, ultrasound, digital electronics, circuits, and magnetic resonance. One hour of lecture and four hours of laboratory per week.

Course Typically Offered
Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

PHYS30493 - Physics III Modern Physics

Department(s)
Physics

Long Description (Catalog Description)
Prerequisites: PHYS 20484, or 20485, or 10164; and MATH 20524. Relativity, introduction to quantum mechanics, atomic structure, nuclear physics, and the standard model.

Course Typically Offered
Fall

Career
Undergraduate

Grading Basis
OPT - Student Option

PHYS30553 - Mechanics

Department(s)
Physics

Long Description (Catalog Description)
Prerequisites: PHYS 30313, 30493 and MATH 30524 all with a C- or better, or permission of instructor. Particle motion in one and three dimensions including oscillatory motion and motion under a central force. Dynamics of many particle systems. Lagrange's and Hamilton's equations.

Course Typically Offered
Every other fall

Career
Undergraduate

Grading Basis
OPT - Student Option

PHYS30603 - Thermal Physics

Department(s)
Physics

Long Description (Catalog Description)
Prerequisites: PHYS 20323,30313, 30493 and MATH 30524 all with a C- or better, or permission of instructor. This course explores the bulk behavior of large collections of particles, including how systems of particles behave when they have different properties, when they interact with different environments, and when they undergo different processes. This course connects concepts associated with classical quantum, and statistical mechanics.

Career
Undergraduate

Grading Basis
OPT - Student Option

PHYS30843 - Biomedical Imaging

Department(s)
Physics

Long Description (Catalog Description)
Prerequisites: PHYS 20484 or 20485 or 10164. An introduction to image formation for molecular and medical applications. This course covers the fundamentals of optic, x-ray and MRI, image creation, detectors, basics of image processing, quantitative analysis and a variety of applications in biophysics and in medicine. Includes off-campus lab work. (Crosslisted as BIOL/PHYS 30843.)

OPT - Student Option

PHYS40653 - Electromagnetic Fields

Department(s)
Physics

Long Description (Catalog Description)
Prerequisites: PHYS 20484 or 20485 and MATH 30524 or permission of instructor. Development of Maxwell's equations; electrostatics; potential; magnetostatics; electric and magnetic fields in matter; electromagnetic waves.

Course Typically Offered
Every other fall

Career
Undergraduate

Grading Basis
OPT - Student Option

PHYS40663 - Electromagnetic Radiation and Optics

Department(s)
Physics

Long Description (Catalog Description)
Prerequisite: PHYS 40653 or permission of instructor. Electromagnetic radiation in free space and in materials; geometrical optics; interference and diffraction; Fourier optics; introduction to nonlinear optics.

Course Typically Offered
Every other spring

Career
Undergraduate

Grading Basis
OPT - Student Option

PHYS40703 - Nonlinear Dynamics

Department(s)
Physics

Long Description (Catalog Description)
Prerequisites: PHYS 20323, and 30313, and 30493, and MATH 30524 and all with a C- or better, or permission of instructor. Techniques for analyzing nonlinear and pattern-forming systems. Topics covered may include maps, bifurcations, strange attractors, fractals, linear stability methods, amplitude equations, defects, instabilities and traveling waves, Lyapunov spectra and correlation functions. Students will learn to build models of biological systems and to use analytical tools to develop intuition and make quantitative predictions about the system's behavior.

Career
Undergraduate

Grading Basis
OPT - Student Option

PHYS40723 - Introduction to Solid State Physics

Department(s)
Physics

Long Description (Catalog Description)
Prerequisites: PHYS 30493 and MATH 30524. Crystal structure, lattice dynamics,free electron theory, band theory, optical, electric and magnetic properties of solids.

Career
Undergraduate

Grading Basis
OPT - Student Option

PHYS50030 - Seminar in Contemporary Physics & Astronomy

Department(s)
Physics

Long Description (Catalog Description)
Prerequisite: Permission of instructor. Students enrolled will be expected to participate in, prepare, and lead discussions on selected topics in physics and astronomy as suggested by the current journal literature. (1-4 hours)

Career
Undergraduate

Grading Basis
OPT - Student Option

PHYS50713 - Contemporary Topics in Physics & Astronomy

Department(s)
Physics

Long Description (Catalog Description)
Prerequisite: Permission of department chair. Three hours of lecture in an area of physics & astronomy of current interest.

Course Typically Offered
Every other spring

Career
Undergraduate

Grading Basis
OPT - Student Option

PHYS50733 - Computational Physics

Department(s)
Physics

Long Description (Catalog Description)
Prerequisites: PHYS 30313, PHYS 30493 and MATH 30524 all with a C- or better, or graduate standing and PHYS 60323, or permission of instructor. Computational methods used in physics, systems of linear equations, eigenvalues problems, numerical solution of differential equations using Python.

Course Typically Offered
Every other spring

Career
Undergraduate

Grading Basis
OPT - Student Option

PHYS50743 - Stellar Astrophysics

Department(s)
Physics

Long Description (Catalog Description)
Prerequisites: PHYS 30313, PHYS 30493 and MATH 30524 all with a C- or better, or graduate standing and PHYS 60323, or permission of instructor. This course explores how stars emit light and how astronomers interpret observations of them, including the processes that affect the spectral energy distribution of the light as it travels from the cores of stars, through the atmosphere of stars, and through the intervening medium. This course includes topics on radiative transfer, stellar interiors, stellar atmospheres, and stellar evolution.

Course Typically Offered
Every other spring

Career

POSC31533 - American Identity Politics

Department(s)
Political Science

Long Description (Catalog Description)
This course is about identity politics in the United States, which is a complex interdisciplinary topic that covers issues of race, gender, class, religion, age, and myriad of other identities that are core to human self-concept. As such, the course is divided into three sections. First, we will cover the central theories of identity in sociology and social psychology that have been used by political scientists to understand political phenomenon. The second section of the course will critically examine specific identities - those that have received disproportionate attention in political science literature - in light of the identity theories. The final section of the course will reflect on proposed strategies for best handling the oft-contentious nature of identity politics in a diverse democratic society.

POSC31633 - Architecture of Democracy

Department(s)
Political Science

Long Description (Catalog Description)
Architecture of democracy is about storytelling. In this class we will explore the politics, meaning, and behavioral impact of public architecture, both in terms of stories told by the built environment, and also by telling the stories of places and their meaning. Storytelling is important to the study, science and practice of politics. Data inform; stories persuade. The built environment has for millennia served, alongside the oral tradition, as humanity's most durable medium for storytelling, persuasion and the modification of human behavior.

POSC40001 - Research Tutorial

Department(s)
Political Science

Long Description (Catalog Description)
Prerequisites: POSC 20093. This course is designed to prepare students to conduct original research generally and to complete an undergraduate thesis specifically. The course lays the groundwork for the formulation, design and completion of an original research project. Through seminars and project assignments, students work through the identification of a research question to the preparation of a specific research design to complete the project, with appropriate training in the techniques and strategies at each stage. Student work culminates in the completion of a research proposal that is presented for approval by a faculty committee, which then leads to the completion of the thesis during the subsequent semester.

PSYC30443 - Psychology of Personality

Department(s)
Psychology

Long Description (Catalog Description)
Prerequisite: PSYC 10213, or 10514, or 10524. The factual and theoretical status of the development, structure, and dynamic functioning of the adult personality.

Course Typically Offered
Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

PSYC30453 - Cognitive Psychology

Department(s)
Psychology

Long Description (Catalog Description)
Prerequisite: PSYC 30503. An overview of major issues and topics in modern cognitive psychology with particular emphasis on interpreting basic research in memory and cognitive processes. Credit cannot be earned for both PSYC 30453 and PSYC 30523.

Course Typically Offered
Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

PSYC30463 - Introductory Neuroscience

Department(s)
Psychology

Long Description (Catalog Description)
Prerequisite: PSYC 10213, or 10514, or 10524 or approval of instructor. Study of the nervous system, action systems, and sensory systems to provide background for examining the physiological bases of discrimination, motivation, emotions, and learning. (Crosslisted as BIOL/PSYC 30463.)

Course Typically Offered
All Sessions

Career
Undergraduate

Grading Basis
OPT - Student Option

PSYC30473 - Comparative Psychology

Department(s)
Psychology

Long Description (Catalog Description)
Prerequisites: PSYC 30503. Provides knowledge of animal behavior as a field of research based on mechanistic and evolutionary approaches. Provides a basic vocabulary and a conceptual framework which enables the student to appreciate the importance and scope of animal behavior as an interdisciplinary field and to identify areas of interest for further study.

Course Typically Offered
Spring and Summer

Undergraduate

Grading Basis
OPT - Student Option

PSYC30483 - Human Neuropsychology

Department(s)
Psychology

Long Description (Catalog Description)
Prerequisites: PSYC 10213, or 10514, or 10524, or approval of instructor. Presents an approach to the study of human brain function by examining the behavioral syndromes resulting from neurological disease and brain damage. Topics will include an overview of the nervous system; neuropsychological assessment; cortical dysfunction; language disorders; developmental neuropsychology; and recovery of function following brain trauma.

Course Typically Offered
Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

PSYC30503 - Research Methods in Psychology

Department(s)
Psychology

Long Description (Catalog Description)
Prerequisite: PSYC 10213, or 10514, or 10524, plus MATH 10043. Basic elements of research methods used in psychological science including research-planning, execution, analysis, and interpretation. This course introduces the selection of research questions, measurement of physiological, behavioral, and psychological constructs, development of research procedures, and experimental and non-experimental designs as well as the basic statistical methods and concepts needed in psychological science.

Course Typically Offered
All Sessions

Career
Undergraduate

Grading Basis
OPT - Student Option

PSYC30513 - Fundamentals of Learning

Department(s)
Psychology

Long Description (Catalog Description)
Prerequisite: PSYC 30503. This course is concerned with the discipline of learning psychology and its application to the study of behavior in human and non-human animals. We will not, however, be directly concerned with methods and issues in Educational or Applied branches of Psychology. IN this course, learning is the informal process by which we learn to adapt our behaviour through experience. Students will become familiar with concepts and theory related to how this type of learning is achieved. This course will include empirical research on topics such as reflexes, orienting mechanisms, associative conditioning (Pavlovian and instrumental), memory processes, stimulus control, and choice behavior.

Career
Undergraduate

Grading Basis
OPT - Student Option

PSYC30524 - Experimental Psychology: Cognition

Department(s)
Psychology

Long Description (Catalog Description)
Prerequisites: PSYC 30503, Psychology or Neuroscience major, and junior standing and higher. This class will meet for three hours of lecture and two hours of laboratory per week. Topics for this course include gaining an appreciation for experimental cognitive psychology - the study of how knowledge is acquired, represented, and maintained. Major findings and current thinking about a broad range of topics in experimental cognitive psychology will be discussed in the areas of attention, memory, language, decision-making, and reasoning among others. Credit cannot be given for both PSYC 30524 and PSYC 30453.

Course Typically Offered
Spring

Career
Undergraduate

Grading Basis
OPT - Student Option

PSYC30533 - Animal Cognition

Department(s)
Psychology

Long Description (Catalog Description)
Prerequisites: PSYC 30414 or 30433 or 30453 or 30473 or 30513. This course will evaluate current issues of animal cognition, including memory, tool use, numerical sense, theory of mind, navigation, and language. This course aims to provide an appreciation of the interplay between theory and empirical research. This course will begin with a discussion of empirical research on reflexes, orienting mechanisms, and associative conditioning (Pavlovian and instrumental) to provide a framework for applying knowledge of basic learning processes to claims of higher-order cognition.

Career
Undergraduate

Grading Basis
OPT - Student Option

PSYC30553 - Statistical Methods in Psychology

Department(s)
Psychology

Long Description (Catalog Description)
Prerequisites: MATH 10043. Introduction to the process of evaluating data from psychological research using descriptive and inferential statistics as tools. The primary focus is on connecting psychological theory, research design, and basic statistical techniques. An emphasis will be placed on practical data skills, data visualization, use of statistical software, and the interpretation and communication of findings.

Career
Undergraduate

Grading Basis
OPT - Student Option

PSYC30563 - Positive Psychology

Department(s)
Psychology

Long Description (Catalog Description)
Prerequisites: Junior standing or instructor approval. The course is an introduction to research findings, theory, and application of Positive Psychology in a cross-cultural environment. From a positive psychology perspective, students will identify and employ individual character strengths, analyze decision -making processes that allow individuals and communities from different cultures to thrive, and evaluate the impact of service learning.

PSYC40553 - Communicating Psychological Science: From Research to the Real World Communicating

Department(s)
Psychology

Long Description (Catalog Description)
Prerequisite: Psychology or Neuroscience major, junior standing and higher, PSYC30503. This course teaches students how to communicate psychological science effectively to both professional and public audiences. Students will learn to write and speak with clarity, accuracy, and engagement across a variety of formats, including journal articles, posters, TED-style talks, op-eds, podcasts, and social media. The course also explores the ethical and strategic use of AI tools for drafting, editing, and optimizing science communication. Emphasis will be placed on understanding your audience, telling compelling stories with data, and communicating complex ideas simply. A key focus of the course is iterative improvement: all major assignments will be submitted as drafts, receive feedback, and be revised for final grading.

RELI20203 - The Art and Science of Human Flourishing

Department(s)
Religion

Long Description (Catalog Description)
What is the purpose of your education? How does it relate to creating a flourishing life, one filled with deep satisfaction, well-being, resilience, and accomplishment? What can we learn from the humanities and sciences about the varieties of human flourishing and its key ingredients, and how can you develop your own personal vision of that life? What skills and knowledge would you need to realize that vision? This course aims to assist you in finding your own answers to these questions so as to lay the foundation for flourishing during your undergraduate years, while also preparing you for a life of flourishing in personal, civic, and professional contexts. We will explore perspectives from both the humanities and sciences in ways that are directly relevant to university life, and we will engage in practices, such as mindfulness and meditation, which will help you develop the intellectual and emotional dispositions¿resilience, compassion, gratitude, and others¿that research shows are central to human flourishing.

RELI20523 - Sophomore Seminar: Finding the Founders: Lives of Confucius, the Buddha, and Jesus

Department(s)
Religion

Long Description (Catalog Description)
Prerequisite: Religion major or permission of instructor. Must have completed introductory Religion course. This course considers the founders of three important religious traditions, both in their own right and as examples of what happens during the creation of a religious tradition. After considering the question what is religion? we turn to reports of the lives of Confucius, the Buddha, and Jesus Christ. We will inquire into how their cultural context shapes them, and how our cultural upbringing shapes the way we look at them.

RELI20573 - Defining the Nation: China and India in Crisis

Department(s)
Religion

Long Description (Catalog Description)
This course examines two key events from the religious and cultural histories of China and India: the sixteenth-century Confucian debate over the legitimate successor to the Ming Dynasty's Wanli Emperor, and the division, or Partition, of the Indian subcontinent in 1947 into India and Pakistan. Both events represented a crisis in governance in which debate of the nation's future was informed by religious teachings. To investigate these two events, the course will use games from Reacting to the Past (RTTP), an interdisciplinary and highly engaging method of inquiry that requires students to study a variety of sources, debate, write, and work as a part of a group pursuing a set of shared goals.

RELI30143 - Unlocking the Mysteries of the Dead Sea Scrolls

Department(s)
Religion

Long Description (Catalog Description)
Prerequisites: RELI 10033, or permission of the instructor. The course explores the rich and diverse world of the ancient Jewish texts discovered in the caves near Khirbet Qumran. Known also as the Dead Sea scrolls, these texts shed light on almost every aspect of what came to be know as the Second Temple period. Yet, they proved to be particularly important for understanding the complex religious and social matrix out of which emerged nascent Christianity and Rabbinic Judaism. The course takes a closer look at this matrix by means of reading a variety of texts from Qumran.

RELI30433 - Women Influencers Asian Religions

Department(s)
Religion

Long Description (Catalog Description)
Prerequisites: RELI 10023, 10033, 10043 or permission of instructor. Applying the 'influencer' concept to the study of Asian religions, this course explores how religion, like social media, provides a potent platform for religious
women to influence how cultures think about gender norms and opportunities for
women's greater freedom. It examines women's authority in Asian religions
through multiple perspectives with a focus on 'charisma' and 'spiritual genius.'
Furthermore, it stresses ethnographic approaches that elevate women's roles and
other cultural variables to understand how charisma motivates women's
experiences of spiritual genius, and orients their relationship to power and
leadership, tradition and innovation, religion and modernity in Asian cultures.

RELI30593 - Catholicism Across The Globe

Department(s)
Religion

Long Description (Catalog Description)
This survey course will introduce students to historical developments, key figures and institutions within the history of Catholic Christianity from the High Middle Ages (ca. 1250) to the present. The course will begin by examining the roots of high medieval Catholic expansion into East Asia and its subsequent expansion into other continents during the Late Middle Ages. It will then examine the development of Catholicism in those geographic areas outside the USA, Western Europe, Australia and Russia. This course is an opportunity for students to take a pilgrimage into Catholic Christian identity across time and across the globe, primarily in those areas colonized by European kingdoms and nations. Topics such as colonialism, missions, enslavement, religious movements, enculteration, spiritual practices, indigenous clergy and local religious life will be examined in their historical context. The overall aim of the course is to deepen students' capacities for historical reflection on Catholic culture, beliefs, practices and institutions across the globe. Participants, whatever their religious identity (or lack thereof), will learn more of what it has meant historically to think, pray and live as Catholic Christians in the Majority World so that they can apply these insights to their own work in today's pluralistic context.

Long Description (Catalog Description)
This course provides an overview of the major trends, developments, and issues in modern Islamic thought and the global Muslim world. This course begins in the nineteenth century with the transformations caused by the rise of European power, European colonialism, modern science and technology, the printing press, mass education, and the nation state. Muslims around the world responded to these transformations through several strategies including modernism, fundamentalism, secularism, and neo-traditionalism. We will examine these and other trends, as well as Muslim perspectives on a range of pressing contemporary global issues such as politics, violence, gender, economics, science, technology, and the environment. The course concludes with a look at possible futures of the global Muslim world.

RELI30693 - Native Americans, Religion, and Contemporary Issues

Department(s)
Religion

Long Description (Catalog Description)
Prerequisites: Successful completion of either RELI 10023, 10033, or 10043, or consent of instructor. This course explores Native American perspectives on religion (spirituality) and contemporary issues, and compares them with Western-Christian perspectives. Students will read, discuss, and evaluate ideas put forth by important Native American authors, compare traditional Native American ways of knowing (epistemology) with Western-Christian ways, identify and critique stereotypes related to Native American perspectives, and apply these ideas to contemporary issues. Topics will vary by semester. Additionally, students will be in dialog with Native American community leaders on these topics.

SCIE20403 - Science Policy: Impacts & Opportunities

Department(s)
Science & Engineering Non-Departmental Programs

Long Description (Catalog Description)
The advancements of science and technology have accelerated over the past century, leading to corresponding societal advances and impacts on different communities. While much of the public thinks these advances are natural, many are, in fact, the result of sustained commitment by the nation to support science and technology through a deliberate set of policies. Federal policies affect science and technology on small and large scales, from undergraduate training grants to National Laboratories to State Department. Issues such as global climate change, energy sustainability, terrorism, nuclear proliferation, human genomics, and exponentially evolving technologies are among the most challenging and complex facing contemporary society and their impacts on local and native communities. This course will highlight the important role of national science policy in how science is used to affect large scale national and international policy decisions and how these decisions have or may impact minority and disadvantaged communities.

SCIE40611 - Introduction to Narrative Medicine

Department(s)
Science & Engineering Non-Departmental Programs

Long Description (Catalog Description)
Prerequisites: Completion of SCIE 20907, a minimum of 48 credit hours, and with instructor's approval. This seminar explores the intersection of storytelling and healthcare, emphasizing the importance of narrative competence/humility in medical practice. In this seminar, students will engage with literature, film, and personal narratives to develop a deeper understanding of patients' experiences and the role of empathy and compassion in healthcare. Through critical analysis and reflective writing, students will learn to appreciate the complexities of illness, enhance their listening skills, and cultivate the ability to acknowledge, interpret, and respond to patients' stories. This seminar is suited for pre-health students-ideally on the pre-medical and pre-PA track-who are seeking to integrate compassionate, patient-centered care into their future clinical practice

OPT - Student Option

SOCI30263 - Environmental Justice

Department(s)
Sociology and Anthropology

Long Description (Catalog Description)
Prerequisites: SOCI 20213 or 20223 or ANTH 20623 or CRES 10103 or 20003. Black, Indigenous, other people of color, working class, immigrant, women, and other marginalized groups bear the brunt of environmental problems in the United States and across the world, facing disproportionate impacts from things like air and water pollution, toxic chemicals, climate change, industrialization, and biodiversity loss. Why are certain groups systematically exposed to greater environmental burdens and fewer environmental amenities while other groups have access to clean air and water? What effect does this have on people's health and well-being? Who benefits from these inequalities and who makes decisions about environmental policies? This course draws on the work of sociologists and interdisciplinary scholars to examine how social, political, and economic systems create environmental injustices and health disparities across intersections of race, ethnicity, class, and gender. In turn, we explore how people work to remedy environmental problems. These lessons are applied to understanding, researching, and addressing contemporary environmental justice issues.

SOCI30473 - Sport, Culture, & Politics

Department(s)
Sociology and Anthropology

Long Description (Catalog Description)
Monday Night Football, Game 7, Buzzer Beater, Stoppage Time, and Underdog stories are all part of society's sports vernacular. But what do they mean for the individuals who prepare, participate, and spectate sport? These are just several of the key questions this course aims to explore. Sociology is the study of the social world and how society is constructed, reconstructed, and maintained through patterns of social relationships and social interactions in everyday life. This course is built on the idea that sport is a reflection of society and provides an excellent window and platform to investigate how such processes happen. This course takes a cross-cultural, historical, and transnational perspective to the study of the intertwining of sport, culture, and politics to provide a well-rounded understanding and introduction to the sociology of sport. Several themes this course explores are the different social and cultural meanings attached to sport, varying patterns in sport participation, the global sports economy, and labor in the sport industry.

SOCI36743 - Conformity and Rebellion

Department(s)
Sociology and Anthropology

Long Description (Catalog Description)
This course examines, from a social psychological perspective, the complex and dialectical relationship between meeting expectations (conformity) and defying expectations (rebellion) in regard to decisive activity. A social psychological perspective emphasizes the decisions people make in provocative settings, or contexts that involve moments of truth. In this vein, conformity appears in opposition to rebellion . However, conformity can, and often does, imply some form of rebellion just as rebellion implies some form of conformity. Both conformity and rebellion can become problematic, or linked to existential decisions to either act against habit, judgement, and moral standpoints. Rebellion can be seen as an unwanted occurrence that threatens our preferred styles of life, requiring resolution through conformity; conformity can become seen as an impediment to a free society which, in order to salvage a sense of free choice, requires some form of rebellion. Examination of the complex relationship between conformity and rebellion can sharpen our focus when considering, specifically, in what kind of society we wish to live.

SOCI40713 - Sociology of Sex and Sexualities

Department(s)
Sociology and Anthropology

Long Description (Catalog Description)
Prerequisites: SOCI 20213, SOCI 20223, or WGST 20003. Human sexuality is often thought of as a realm of experience outside of or unmarked by society. In contrast, this course introduces students to the myriad ways in which sexual desire and sexual activity are structured by social relations, and to the ways that sexuality, sexual practices, and sexual identities vary in time and space. Social science, feminist, and queer theories of sexuality will be considered, and cross-cultural and historical accounts of sexual practices will be reviewed. Topics include the historical emergence and elaboration of forms of sexual desire ("sexualities" and categories of sexual orientation), sexual identities, sexual subcultures and communities, sexual scripts, sex panics and the political manipulation of sexuality, the institutional nature of heterosexuality, and the ways in which sexuality as social institution and identity intersects with other major hierarchies of power, privilege, and inequality: race, socio-economic status, and gender.

SOWO40483 - Social Work and Social Justice through Sport, Recreation, and Play

Department(s)
Social Work

Long Description (Catalog Description)
Prerequisites: SOWO 10833. Social work in sport is an emerging specialization within the greater field of social work. There are many issues relevant to social workers that are distinctly related to sports and athletes both nationally and globally. Topics of interest to social workers and other disciplines alike include public concern for player welfare and conduct, mental health among athletes, coaching and organizational neglect (i.e., issues internal to U.S. gymnastics, Penn State, etc.), equal pay, and advocacy for ownership and representation among exploited athletes. This course aims to provide a foundation for professionals interested in social work and social justice through sport, recreation, and play settings to assist clients, programs, and organization in their efforts to support equity, global health, and psychological well-being for individuals and athletes.

WGST20003 - Introduction to Women and Gender Studies

Department(s)
Women and Gender Studies

Long Description (Catalog Description)
This course will serve as an interdisciplinary introduction to Women and Gender Studies, focusing on major issues and theories, for which gender and sexuality provide the unifying themes. The interactive curriculum emphasizes threshold concepts in the field of women's, gender, and sexuality studies: the social construction of gender, sex, and sexuality; privilege and oppression; intersectionality; and feminist praxis. Readings, service learning projects, and assignments facilitate discussion and understanding of differences in gender, race, ethnicity, age, class, sexuality, ability, and additional social identities.

WGST30104 - The Queer Art of Drag

Department(s)
Women and Gender Studies

Long Description (Catalog Description)
Prerequisites: WGST 20003 or permission of instructor. Drag is an art form with a rich history of challenging dominant norms and systems of oppression;building queer community; and cultivating experiences of queer joy in a hostile world; but drag has alsobeen deployed in service of violent ideologies and can sometimes participate in harmful normativelogics. Critical drag explores drag performance as an outlet for social critique, pedagogy, and queerworld making. In this class, we will explore critical histories of the queer art of drag; meet with dragperformers and experts; and craft our own drag personas to debut at TCU¿s annual Night of Drag.

WGST30203 - Social Justice Organizing & Activism

Department(s)
Women and Gender Studies

Long Description (Catalog Description)
Prerequisites: WGST 20003 or CRES 10103. This interdisciplinary course examines mass movements from an intersectional perspective, emphasizing how intersecting social identities (e.g. race, gender, sexuality, class, ability, citizenship status, etc.) influence how systemic oppressions are experienced and, thus, should shape the social economic, and political interventions employed in the name of social justice. The course incorporates empirically grounded and theoretical scholarship from multiple disciplines to consider diverse methods of mass movement organizing and mobilization on the local and/or global levels to shift power and privilege dynamics. Students will examine the philosophical, relational and logistical barriers to undertaking social justice organizing and activism, develop technical skills for building consensus across difference, and design their own organizing campaigns.

WGST30303 - Feminisms of Color

Department(s)
Women and Gender Studies

Long Description (Catalog Description)
Prerequisites: Any WGST-prefix or attribute course OR any CRES-prefix or primary attribute course. An interdisciplinary course exploring the feminist theories, traditions, activisms, discourses, and praxes of women of color in a US context. Using an intersectional approach, the course examines how race, class, gender, sexuality, citizenship status, ability, religion, and other markers of identity create complex systems of marginalization in the lives of women of color in the United States. Students will analyze the contributions US women of color have made to contemporary feminist thought and how these theories have influenced their activism.

WGST30413 - Sex, the Body, & U.S. Borders

Department(s)
Women and Gender Studies

Long Description (Catalog Description)
Since the late 19th century, sexuality, morality, and race have been the dominant frames through which the U.S. government has attempted to contain and categorize migrant bodies. This class examines how border regimes produce and discipline sexuality and the body through medical examinations, quarantine, policing, and law. Starting with late 19th century policies of exclusion and restriction, we will examine how the policing of sexualities at the border persisted through more liberal periods of migration, ending with discussions of migrant policy today.

WRIT55613 - Women's Rhetorics

Department(s)
English

Long Description (Catalog Description)
This course examines the histories, theories, and practices of women's rhetorics from the classical era through the present. Students will examine primary texts of women rhetors - essays, ordinary writing such as letters and autobiographies, and speeches, to name only a few - as well as secondary sources of those texts, paying particular attention to the ways gender, race, class, religion, place, sexual orientation, and politics shape sense of audiences, methods of invention, arrangement, choices of style, form, tone, and genre. Student cannot receive credit for WRIT 55613 and ENGL 80613.

YAES30213 - Policy Studies in Education and Youth Advocacy

Department(s)
College of Education

Long Description (Catalog Description)
Prerequisites: Successful completion of EDUC 30133 and upper-division standing, or instructor permission. The course is open to students from all majors. This course is designed to enable students contemplating or engaged in careers in the education sector or other sectors related to youth programming, services, and/or advocacy to explore concepts, theories, and perspectives in policy formation, making, and implementation. This course will explore various aspects of local, state, and federal policymaking as it pertains to K-20 education and related fields. Students will gain practical and theoretical understanding of the policy process from identifying political actors and stakeholders through agenda setting, policy implementation, and analysis, and will explore avenues for engagement in the policy process.

YAES30223 - Positive Youth Development and Advocacy

Department(s)
College of Education

Long Description (Catalog Description)
Prerequisites: Students must be Education pre-majors, majors or minors who are working towards a degree in Youth Advocacy and Educational Studies. Students working towards related degrees (e.g., social work, All-levels certification in Music Education, Middle and Secondary education, etc.) may enroll in the course with instructor permission. The focus of this course is on positive youth development (PYD) theory and advocacy strategies. Positive youth development is a theoretical perspective and tool of practice that focuses on the strengths and assets of youth in order to support them and advocate for them on their paths to well-being and contribution in their communities. This course also includes an introduction to critical positive youth development theory and youth participatory action research (YPAR), both of which aim to lift up youth power and voice as tools to create their own thriving and support the health of their communities. This course is designed for Youth Advocacy and Educational Studies majors, especially, but will be of interest to anyone who wants to support youth on their path to thriving.
