With the towering figures of Peter Paul Rubens and Rembrandt van Rijn as bookends, this course examines art of the Netherlandish Baroque within its cultural and social contexts, with close attention to themes of religion, social morality, and humor. We will consider the significance of major artists, including Rubens, Rembrandt, Vermeer, Frans Hals, and others, in addition to important contributions by Northern Baroque artists to the development of portraiture, landscape, still life, and genre painting.

ARH3404 - British Art: Hogarth to Hirst

General

Course Description
This course will provide an introduction to the art and architecture of Britain from the eighteenth century to the present day. The focus will be on developing an understanding of paintings, sculpture, and architecture in their historical contexts. We will examine portraiture, landscape painting, history painting, paintings of modern life, photography and contemporary art, with additional material on architecture and decorative arts. Themes to be developed throughout the course will include: the distinctive character of British art, patronage and collecting by individuals and museums, art as propaganda, the development of portraiture as an expression of identity, the importance of landscape painting, decoration and articulation of taste, and the contemporary art scene in Britain.

ARH3453 - Post War Art: 1940-1980

General

Course Description
This course focuses on the production of art within the late modern and early post-modern periods. Special attention will be paid to the ways in which race, gender, sexuality, and cultural difference are constructed within visual arts of the post-war era. Investigating the role of art critics, galleries and art periodicals, the class will also examine the different institutions through which art has been promoted and filtered in the decades following World War II.

ARH3621 - American Art I: 1492 to 1876

General

Course Description
American Art I surveys the visual arts of the United States from 1492 to 1876. Throughout the course we will look at the ways in which American artists sought to develop an American fine arts tradition. This course also examines how art was used to shape a strong national identity and to negotiate the tensions of race, politics, gender, class, and ethnicity.

ARH3883 - The Apocalypse in Medieval and Early Modern Art

General

Course Description
The idea of the Apocalypse, the end of the world described in Revelations by St. John the Divine, profoundly influenced the subject matter of Christian art during the Middle Ages and early modern period and continues to be an important reference point in western art and culture. This course surveys the range and development of apocalyptic imagery from the Whore of Babylon to the Mark of the Beast in medieval, Renaissance, and contemporary art, with special attention paid to themes of millenarianism, the year 1000, and the Protestant Reformation.

ART3332C - Figure Drawing II

General
Course Description
Prerequisite: ART 2330C
This studio course is designed to further develop the visual, verbal and technical skills necessary to represent the figure though direct observation of the nude model. Students work in a variety of media. The course focuses on using the figure as an element in composition and reinforces the skills used in Figure Drawing I. Students are expected to develop the ability to draw the figure perceptually, expressively and with an awareness of some of the conceptual issues associated with the figure. Historic and contemporary references will broaden the students understanding of the figure as part of the visual language. With regular critiques, students will begin to make critical decisions about their work.

ART3464C - Kitchen as a Studio

General
Course Description
This online class teaches students how to make prints in a low-tech, sustainable, and non-toxic rudimentary studio. Students will examine less common adaptations of conventional printmaking techniques and how to problem-solve and adjust the methods to their creative needs. Students will further develop strategies and approaches for each specific purpose. Video demonstrations and voice-over presentations are available weekly, paired with asynchronized lectures on how to create hands-on printmaking projects.This course introduces critical thinking and problem-solving in a low-tech environment, helping students understand how to use non-traditional and alternative materials to create prints with unique and unusual characteristics. This class is open to non-art majors, no pre-requisites.

ART3530C - Painting II

General

Course Description
Prerequisite: ART 2500C
Description: Students in this class will continue to investigate painting methods, mediums and techniques, with an emphasis on the development of personal vision. Students will continue to develop knowledge of composition, scale, and spatial perception and the theoretical and practical aspects of color and its application to painting mediums. Through these processes, students will become more independent and self-directed in developing ideas and concepts, processes, and the critical structure for their paintings.

ART3560C - Figurative Painting

General

Course Description
Prerequisites: ART 2330C and ART 2500CDescription: Figurative Painting will explore the figure in painting as a subject of contemporary society. Topics will include both learning traditional techniques involving mixing flesh-tones, exploring human anatomy, mastering proportion, learning to replicate flesh texture with paint, while also focusing on how figurative painting can express the nuanced condition of today's social identity. Conceptual aspects within figurative painting explore: narrative, identity, social and psychological expression, and trends in contemporary and historic figurative painting.Repeatability: May be repeated for a maximum of 9 hours.Course Fees: $15

ART3569C - Portrait Painting

General
Course Description
Prerequisite: ART 2501C
Description: This course is designed to guide the student forward with a direct and fundamental approach to the practice of portrait painting. The course is primarily concerned with working from the live model and developing a contextual framework for the finished portrait by serving to strengthen the students ability to capture form and character.

ART3830 - Curatorial Practices

General
Course Description
This course is a praxis course between contemporary issues in curatorial studies and logistics within exhibition development and production. Students will engage with cultural organizers and organizations within the field, learn how to install and deinstall exhibitions, discuss curatorial and contemporary art theory, and develop a shared vernacular around concerns within cultural production/exhibitions. This

course will examine a history of curation; different curatorial styles; presentation of art within commercial, institutional, educational, nonprofit, and digital platforms; outreach and community for exhibitions; showcase multi-perspectival approaches within contemporary art.

ART4736C - Sculpture: Enlivened Spaces

General

Course Description
Prerequisite: ART 3707C.
The studio-based course provides the basic foundations for sculptural studies through a series of projects and creative inquiries. The projects foster a relationship between concept to process, and intention to outcomes. Basic sculptural languages will be explored, such as metaphor, narrative, metonymy, space, materiality, form, mass and scale. The interdisciplinary nature of contemporary sculptural practice is emphasized through projects which include but are not limited to collaboration, performance art, site-specific art, sound art, light art, and time-based art as well as exploratory application of traditional forms and methodologies. Some local travel will be involved to produce artwork on location.

ART4805 - Painting and Drawing Research

General
Course Description
Prerequisite: ART3530C
Description: Painting/Drawing Research is a seminar course designed to accommodate students interested in advanced painting and drawing in solving aesthetic, political, conceptual, philosophical, and theoretical problems in this discipline that are relevant to our contemporary society. Discussions about how such trends in contemporary painting and drawing define today's painting practice will influence the students' own work. The content of this course will involve: readings, videos, discussions, writing, and critiquing. Course lectures will cover the history and ideas of modern to contemporary painting and drawing.

ASH3200 - (FC) - Ancient Near East

General

Course Description
This course provides an introduction to the history and cultures of the ancient Near East. Starting with the origins of civilization in Mesopotamia and Egypt, it traces the spread of cities, writing and literature, the arts, religion and thought throughout the Fertile Crescent, to the rise of Islam. The interactions of the peoples of the Near East - the Sumerians, Babylonians, Assyrians, Hittites, Egyptians, and Hebrews - and the continuity of cultural traditions in the region will be stressed

ASH3201 - (FC) Ancient Israel

General

Course Description
Description: This course will explore the historical traditions of the Israelites, from their origins and settlement in the land of Israel to their absorption by the Roman Empire, their revolts, and finally their Diaspora throughout the Mediterranean and Near East. The course will place the Israelites in the context of the ancient Near Eastern and Mediterranean worlds, and will critically evaluate the Biblical accounts of Israel in comparison with documents from the other societies of the region, as well as the archaeological evidence from the Biblical lands. The aim will be to understand the historical reality of the people of Israel and its society, culture and religion, and to appreciate their enormous influence on later historical developments and religious thought.

ASH3401 - Contemporary China

General
Course Description
This course is designed to introduce students to major themes in contemporary Chinese history from the death of Mao Zedong in 1976 to the present. The course is designed chronologically and thematically to enhance students' grasp of factual material, and to provide greater insight into social, cultural and intellectual currents. Through a series of readings, images and films students investigate the dramatic cultural, economic, social and intellectual upheavals the People's Republic of China has experienced in recent decades.

ASH3402 - Traditional China

General

Course Description
Traditional China evokes a vision of a virtuous emperor in the center, who, with the help of a cumbersome bureaucracy, broadcasts to the empire timeless Confucian ethical principles such as loyalty and filial piety, so as better to govern a stable and compliant agrarian society. Fortunately, this apparently rigid mold proves, more often than not, to be plastic. Broken up by periods of chaos and upheaval, traditional China features a flamboyant pageant of characters- megalomaniacal emperors, devious palace women, sycophantic poets, wandering scholars, calculating merchants, scheming ministers, daoist mystics, and rebel peasants claiming appointments from heaven-who collectively flaunted, challenged, and reshaped its structure.

ASH3404 - Modern China

General
Course Description
In 1750, Qing China was populous, vibrant, and strong. By 1911, gutted by savage civil wars, foreign imperial powers, and corruption, the last of the Chinese dynasties collapsed. The pillars that had for more than two millennia upheld the edifice of traditional China-the imperial monarchy and the Confucian bureaucracy-were no more. This course follows the painstaking transition from tradition to modernity in China, as the Chinese culture transformed gradually into a Chinese nation. Themes include: imperialism, westernization, nationalism, tensions between traditional and modern ideas, student activism and political change, and democracy and communism.

ASH4234 - Seminar: Ottoman History

General

Course Description
Prerequisite: HIS3051 with a C or better
Description: The Ottoman dynasty ruled over one of history's largest, longest-lasting empires. From the thirteenth to the twentieth century, the Ottoman Empire governed a huge and diverse population stretching from the Middle East and North Africa to central Europe. What allowed the Ottomans to expand so rapidly and to rule effectively for so long? How did the Empire adapt to the changes brought by industrialization and capitalism? And what caused it to fall? In this seminar, students will explore these and other themes in Ottoman history that have changed the way historians understand governance, war, identity, religion, nature, and even history itself.

ASH4641 - Seminar: War and Migration in the Middle East

General
Course Description
Prerequisite: HIS3051 with a C or better.
Description: This course examines the history of migrants in the Middle East and North Africa from the late Ottoman Empire to the current conflicts in Syria and Iraq. While migrants are often overlooked by historians, their very existence defies boundaries and singular identities. This seminar seeks to show why migrants are crucial to understanding how war, peace, states, and borders have been made in the Middle East and its neighboring regions from the early twentieth century to today.

ASH5445 - Japan Before 1868

General
Course Description
This course covers the period from the ancient creation of the Imperial system through the rise of the military class. Readings will reveal the Japan of gods and goddesses, samurai, the great Buddhist academies and the classical arts of the tea ceremony, gardening, sculpture, literature and martial skills.

ASH5642 - War and Migration in the Middle East

General
Course Description
Prerequisite: Enrolled in the History graduate program or special permission of the instructor.
Description: This course examines the history of migrants in the Middle East and North Africa from the late Ottoman Empire to the current conflicts in Syria and Iraq. While migrants are often overlooked by historians, their very existence defies boundaries and singular identities. This seminar seeks to show why migrants are crucial to understanding how war, peace, states, and borders have been made in the Middle East and its neighboring regions from the early twentieth century to today.

ASL2140 - American Sign Language I

General
Course Description
This course in American Sign Language is designed to teach basic conversational skills in ASL and an awareness of various aspects of deafness. This course will present the student with the structure, some conversational vocabulary and grammatical principles of American Sign Language. Students will learn the historical, cultural, and social aspects of deafness.

ASL2150 - American Sign Language II

General
Course Description
Prerequisite: ASL 2140
ASL II is designed to continue development of conversational skills in American Sign Language. Students will use the vocabulary and skills that they learned in ASL I as support for new vocabulary and skills that they will learn in ASL II. The course will focus on grammar and syntax, vocabulary, and culture of the Deaf.

ASL3226 - Advanced ASL Proficiency

General
Course Description
Prerequisite: ASL 4211
Description: This course is designed to refine expressive and receptive ASL skills with complex and dense message content. Students will develop increased linguistic fluency and application of cultural knowledge in spontaneous discussions, formal debates on current topics, and rehearsed presentations. Emphasis is placed upon natural language use in dialogues and monologues, concept clarity, accurate visual description, advanced vocabulary development, argument cohesion, and language construction that incorporates appropriate transitions and conversation markers.

ASL4205 - Methods of Teaching ASL-English Bilingual Deaf and Hard of Hearing Students

General

Course Description
Prerequiste: ASL4131
Description: ASL4205 Methods of Teaching ASL-Bilingual DHH Students is designed to continue development of skills in American Sign Language. Students will use the vocabulary and the skills that they learned in ASL courses as a foundation while they further explore the linguistic structure of ASL. This course is also a preparatory course for internship. The content of the course will focus on linguistic competence and metalinguistic awareness of both ASL and English. Students will develop their own knowledge of ASL and English, while also learning instructional strategies used to develop student knowledge of ASL and English. During the class, time will be devoted to both skill and strategy development and an understanding of current research and literature concerning sign language in education.

ASL4603 - First and Second Language Acquisition

General

Course Description
Prerequisite: ASL 2140, ASL 2150, ASL4131, ASL 4211, ASL 3301, ASL 3514 and ASL 3435
Description: This course introduces students to the acquisition of a native language and the acquisition of a second language after childhood. The primary focus of this course is the acquisition of natural sign languages. The first part of the course covers typical development and important milestones in phonology, morphology, the lexicon, syntax and pragmatics. The second part of the course covers the acquisition of sign language as a second language and relevant frameworks. The course also covers issues surrounding positionality of second language singers and language ownership. Application of concepts from lectures and reading is encouraged through the collection and analysis of L1 and L2 data.

General

Course Description
Prerequisite: ASL 2140, ASL 2150, ASL 4131, ASL4211, ASL 3301, ASL 3435, AND ASL 3514
Description: This course is an introduction to the American Sign Language literature. Students will study the various genres of ASL Literature to include narratives, poetry and storytelling methodology. The differences between genres of ASL Literature are examined. This course will include various levels and situations of simple to complex ASL stories. Diverse ASL storytellers will be explored and discussed on the impacts it has on ASL Literature and the Deaf community. This course is taught in ASL only.

ASN3106 - (FC) Women and Gender in East Asia

General

Course Description
Description: There is a common perception that Asian cultures traditionally were and still are wholly patriarchal, societies where “men are venerated and women are denigrated” (as a Chinese saying goes). It turns out that such a simple paradigm is inadequate to capture the complexity of gender dynamics in either traditional or modern Asia. In traditional times, women sometimes broke free of the domestic, inner sphere and became warriors, nuns, or poets—several even ascended to the pinnacle of political power and became rulers. We explore several themes: normative gender roles, challenges to and defiance of these normative roles, the homosexual tradition, and changes in gender roles and expectations in modern and contemporary Asia.

General
Course Description
Prerequisite: ATR 5126C and ATR 5105C
Description: A study of current theory and operation of therapeutic modalities as they relate to the healing process and are used in the treatment of injuries in a physically active population. This course includes basic physics, physiological effects, indications, and contraindications for therapeutic modalities commonly utilized in the Athletic Training-sports medicine setting. This course includes 2 credit hours for lecture and 1 credit hour for lab.

ATR5307C - Therapeutic Interventions II

General
Course Description
Prerequisite: ATR 5306C
Description: This course examines the theory and application of various contemporary methods of therapeutic exercise in the rehabilitation of injuries to the physically active population.
The student is introduced to manual therapy techniques and other primary components of comprehensive rehabilitation designs. This course includes 2 credit hours for lecture and 1 credit hour for lab.

ATR5406C - Clinical Medicine

General
Course Description
Prerequisite: ATR 5126C
Description: This course provides an overview of the knowledge and skills that an athletic trainer must possess to recognize, treat, and refer when appropriate, general medical conditions and disabilities of athletes and others involved in physical activity. Pharmacology is included as it relates to general medical conditions and disabilities of physically active individuals. This course includes 2 credit hours for lecture and 1 credit hour for lab.

ATR5815C - Clinical Integration I

General
Course Description
Prerequisite: ATR 5126C and ATR 5105C
Description: An introductory experience in an Athletic Training-sports medicine setting with follow-up seminars. Students will develop competence in foundational Athletic Training skills while providing care to physically active individuals under the direct supervision of a Certified Athletic Trainer. Additional clinical education experiences may be provided under the direct supervision of other licensed health care providers. This course includes 1 credit hour for lecture and 2 credit hours for lab.

ATR6308C - Therapeutic Interventions III

General

Course Description
Prerequisites: ATR 5306C and ATR 5307C
Description: This course examines the implementation, functional progressions, and outcomes in the process of treating and rehabilitating injuries in a physically active population. The course focuses on the rehabilitation goals and objectives as well as return to participation criteria. This course includes 2 credit hours for lecture and 1 credit hour for lab.

BCN4709 - Construction Project Management Capstone

General

Course Description
Co-requisite: BCN 4612Prerequisite: BCN3611C, BCN4720, BCN3782, BCN2405 and BCN4708 and senior standing. Description: This course is a senior capstone experience, providing an opportunity for students to control and coordinate construction projects and personnel in a service-learning environment. Students will apply their knowledge and skills in strategic bidding and estimating, ethical conduct, project delivery methods, value engineering, design/build, and customer relations and communication.

BCN4711 - Construction Labor Resources

General

Course Description
This course covers the fundamentals of construction labor markets, focusing on the methods of sourcing labor in general contracting firms and evaluating the way trade partnerships are forged externally with subcontractors, suppliers, and professional consultants. Students will research and report on current labor trends. The principles of negotiation will be emphasized.

BCN4730 - Construction Safety

General
Course Description
Prerequisites: BCN1210C, BCN1251, and BCN2405
Description: This course will examine topics in construction safety and human factors in construction. Topics covered will include: current construction safety issues and concerns, safety requirements and procedures, accident causation theories, ethics in safety, workers compensation law, accident reporting, handling stress in the workplace, preventing violence in the workplace, safety programs and policies and promoting and enforcing safety on the jobsite. Additional topics will include: ethics in management, human behavior in the workplace, leadership, management of jobsite personnel, stress management on the jobsite and preventing violence in the workforce and diversity in the workplace. The OSHA course for 30 hour construction training will also be included in this course.

BCN4753 - Construction Finance and Cost Controls

General
Course Description
Prerequisite: BCN1251, CGS1100, and ACG2071
Description: Students in this course examine the financial environment of a contracting company. They study the financial impact of decisions made at all levels in the contracting firm including comparative cost analysis. Students also analyze the process, practice, and theory of cost controls. Students compare financial and cost control management techniques and the effect of these practices on the firm in relation to profit, profit margin, cash flow, bidding, capital equipment, procurement practices and budgeting. The course also covers the nature of construction costs, funding sources and arrangements, and capital requirements.

BCN4870C - Heavy Civil Construction

General
Course Description
Prerequisites: BCN 3223, BCN 3611C
This is the first course in a two-course elective track for students preparing for careers in heavy civil construction. Students learn a broad perspective of the technical knowledge and skill or methods related to heavy civil construction projects, including bridges, highways, tunnels, pump stations, dams and underground utilities. This course prepares students to apply the latest heavy civil construction technologies.

BCN4956 - Study Abroad in Construction Management

General

Course Description
Prerequisite: Permission of the instructor Students will study a country's construction practices, with a particular emphasis on the specific interest of the class. During this course, the student will: understand the culture, geography, history, and politics of the country; travel to the country; study the difference between construction in the U.S. and construction in that country; and learn about the current issues facing that nation and the state of the construction industry. The course will have three phases: pre-trip preparation and orientation, foreign travel, and post-trip work. May be repeated up to 9 credits.

BCN6595 - Environmental Issues in Land Development and Construction

General
Course Description
This course provides an introduction to the natural, economic, political, and legal issues related to the environment that may affect land development and construction management. Topics include: issues related to sustainable development, environmental impact of land development and construction, the historical context for land use planning and environmental regulation, specific regulations affecting developers and construction managers, the process and

players involved in the environmental review of developments, and practical and modern methods for construction managers to prevent or minimize the negative impacts of construction and land development.

BME4211 - Mechanics of the Human Body

General

Course Description
Prerequisites: EGN3331, EGN3321, and EGN3203
Description: This course introduces students to the field of biomechanical engineering. Students will be expected to learn the anatomy of the human body, how to apply statics and dynamics to the analysis of events involving the human body, and how to design safe/ergonomic work tasks. The concepts of injury mechanisms, injury tolerance thresholds/criteria, and injury prevention will be introduced. The course will conclude with advanced topics regarding the mechanical analysis of biological tissues, such as viscoelasticity, asymmetric/ composite beam theory, hertzian contact, and beam-on-elastic-foundation theory.

BME4745C - Modeling in Biomechanics

General

Course Description
Prerequisite: EML3535C
Description: This course introduces students to specialized software designed for converting Computed Tomography (CT) data into detailed 3D anatomical models. Students will refine these models for enhanced visualization, analysis, and medical decision-making. The course also covers Finite Element Modeling (FEM) applications, force modeling techniques, and reverse engineering techniques. The course will have a significant focus on project-based learning. Skills gained can be applied in biomechanics and broader applications in mechanical engineering.

BSC1005L - Principles of Biology Lab

General
Course Description
Co-requisite: BSC 1005
Description: The laboratory component of this course provides students with an overview of the major topics within biology. It is designed to evoke interest, curiosity, and enthusiasm for biology. During this course students will learn to use the scientific method and common lab procedures in order to perform biological investigations. Laboratory assignments and quizzes will be used to evaluate students' understanding of biological processes, laboratory techniques, and concepts presented within the laboratory.

BSC1010C - General Biology I

General
Course Description
Description: In this course, students will apply the scientific method to critically examine and explain the natural world. This course will cover molecular biology, cellular biology, genetics, metabolism, and replication.
Fees: A laboratory fee of $51.93 will be assessed.

BSC1011C - General Biology II

General
Course Description
Prerequisite: BSC 1010C or equivalent. This course examines the evidence for evolution by common descent, the mechanisms of biological change, and the diversity, phylogenetic classification, anatomy, and physiology of organisms from microbes to plants. There will be three hours or lecture and one hours of laboratory in this course.(A laboratory fee of $51.93 will be assessed.)

BSC1934 - Introduction to Majors in the Biological Sciences

General
Course Description
This course is intended for first year biology majors at UNF and for students who are considering majoring in biology. You will learn about the biology department and the programs and resources we offer. This course will outline what it will take to be successful in one of the most demanding majors on campus. This course will introduce relevant university and department policies and explain how they relate to student success. You will learn about the professors in our department, the research they conduct, and the courses they teach. Lastly, you will obtain advice on your choices for coursework and plans for the future including research, internship, graduate-school planning and career opportunities.

BSC2012C - General Biology III

General
Course Description
Prerequisites: BSC1010C, BSC1011C, CHM2046 and CHM2046L
This course is designed to introduce students to the diversity and evolution of fungi and animals and the anatomy and physiology of representative taxa. During this course we will look at the tremendous biodiversity that results from the basic building blocks described in General Biology I and II. We will conduct an overview of the major groups of fungi and animals, focusing on unique adaptations and evolutionary origin. We will then examine the development of organs and organ systems in representative groups to provide a comparative view of animal anatomy and physiology. The laboratory involves experimentation with living animals and/or dissection of preserved animals. (A laboratory fee of $51.93 will be assessed.)

BSC2085C - Human Anatomy and Physiology I

General
Course Description
Prerequisite: BSC 1010C.
Description: This course is the first part of a two-semester sequence in which students examine human anatomy and physiology through a systems approach based on the interaction between form and function, from the microscopic components of cells and tissues to the organismal level. Emphasis is placed on histology and the integumentary, skeletal, muscular, and nervous systems.
Fees: A course fee of $51.93 will be assessed.

BSC2932 - Pre-Medical Preparation Seminar

General

Course Description
Description: Pre-Med Seminar is a one unit course that provides an introduction to the biomedical professions by incorporating a range of experiences, including research presentations, guidance in developing effective study habits and time management, discussions with local physicians and other biomedical professionals, information on volunteer experiences, introduction to university clubs and activities. In addition, students will read selected books, short stories, and case studies relevant to the medical field and participate in class discussions focused on the assignments.
Repeatability: This course may be repeated for a maximum of four credits.
Availability: Every semester

BSC3057 - Introduction to Environmental Studies

General

Course Description
This course represents the core foundation course for the interdisciplinary Environmental Studies minor. Topics cover a broad range of environmental issues in order to lay the foundation for the understanding of complex environmental issues and the interactions between human behavior, technology, and the natural environment. Course content provides an introduction to issues of biodiversity, appreciating human impact, principles of sustainability, biotechnology, resource conservation, legal and policy issues, ethics, and ecopsychology. (This course cannot be used by biology majors to satisfy degree requirements.)

BSC3263 - Marine Biology

General

Course Description
Prerequisites: BSC 1010C, BSC 1011C, BSC 2012C. This course will offer an introduction to living in a marine environment, and will focus on the delivery and special adaptations of marine fauna. The various marine ecosystems will also be discussed, and human impacts on marine systems will also be covered. This course is aimed at the biology majors who wish to learn more about organismal diversity and adaptation.

BSC3842 - Writing and Analytical Skills in Biology

General

Course Description
Co-requisite: BSC 2012C
Description: This course is designed to prepare students to take Senior Seminar Practicum by having them explore potential topics of independent research (field, laboratory or library based). Students will learn how to conduct extensive literature reviews and be trained in various modes of written and oral scientific communication. Professional development training in the form of development of a curriculum vitae and discussion of application to graduate and professional schools will also be included.

BSC3845 - Scientific Illustration

General

Course Description
Prerequisite: BSC2012CDescription: This course is designed to introduce science students to the field of scientific illustration. As scientists it is important to convey information to other scientists and the public in a way that is concise and clear. Imagery is a helpful tool to convey complex information. In this class we will examine the history of natural science illustration and its current use in various fields of science. Students will learn how to apply techniques of artists and graphic designers to produce their own figures to accompany scientific presentations and publications.

BSC4022 - Biology of Aging

General

Course Description
Prerequisite: PCB3023C OR PBC4713C
Description: This course will offer students an understanding of why aging occurs and the mechanisms by which aging occurs. A combination of lecture and discussion of primary papers will be used. Students will be introduced to studies using simple experimental models to approach the underlying cellular bases for age-related deterioration. In particular, the roles of mitochondria, chromosomes, nutrient signaling, and reproduction will be explored.

BSC4434C - Introduction to Bioinformatics

General

Course Description
Prerequisite: PCB3023CDescription: Bioinformatics is an interdisciplinary science that uses computational tools to solve biological problems. High throughput “omics” technologies have generated large volumes of biological data, making computational tools indispensable for data analysis and use in biomedical and biotechnological fields. These tools are designed and used by cross-disciplinary teams of computational scientists and domain experts in biological topics. We will emphasize these teams during the laboratory sessions by distributing CIS and BSC students across coding teams, depending on the distribution of students enrolled from the multiple disciplines. Because it can be difficult or uncomfortable to learn aspects of an entirely new field, pre-requisites ensure that students enter the class with a strong academic performance in their respective major fields.

BSC4870 - Biological Basis of Pharmacology

General
Course Description
Prerequisites: PCB 4713C or BSC 2086C
This course focuses on the biological mechanisms of drug absorption, distribution, metabolism, excretion, and mechanisms of action with an emphasis on cellular responses to drugs. Students will learn the basic mathematical principles of pharmacokinetics and receptor binding as well as the relationship between drug concentration and effects. The mechanisms of action and side effects of the major classes of drugs will be covered as well as background information on the pathological conditions they treat.

BUL6138 - Management in the Legal Environment

General

Course Description
Description: This course introduces graduate students with little or no legal background to the legal environment of business. Topics covered include dispute resolution, administrative law, and business organizations. The basic elements of contracts and their function in business coupled with the relationship of principals and agents are discussed. Responsibilities of businesses to their employees, including hiring practices and discrimination are taught. The international environment of business will also be addressed. Regulation of business and environmental regulations are covered.

CAI4105 - Machine Learning

General

Course Description
Prerequisites: COP 3530, MAS 3105, and CAP 3784
Description: This course covers fundamental algorithms and programming techniques in machine learning that enable software systems to improve their performance on certain tasks by learning from data. Topics include various learning models used in different machine learning settings, such as supervised learning and unsupervised learning. These models include classification models such as decision trees and artificial neural networks, regression models such as linear regression and logistic regression, clustering models such as k-means and agglomerative nesting. The course is both theoretical and practical, involving developing learning systems using state-of-the-art machine learning tools.

CAI5005 - AI for All

General

Course Description
This graduate-level course is designed for students from diverse backgrounds to leverage Artificial Intelligence (AI) in their respective fields. The course provides a comprehensive overview of AI concepts, technologies, and applications without delving into complex programming or mathematical theories. Students will explore how AI is transforming various industries and gain practical knowledge on how to integrate AI solutions into their professional domains. Through case studies, discussions, and hands-on projects using user-friendly AI tools, students will develop a solid foundation in AI literacy and its real-world implications.

CAI6706 - AI and Machine Learning in Finance

General

Course Description
This course examines the ways in which emerging technologies—such as artificial intelligence (AI), deep learning, blockchain technology, open APIs, etc. - are upending the financial services sector and causing significant changes to business practices, goods, programs, and user interfaces. Applications of these technologies in fields including payments, credit, trading, and risk management will be covered in the course. On the job market, having a solid understanding of machine learning is becoming increasingly important. Students who successfully complete this course will be able to explain in detail how artificial intelligence and machine learning are used in the finance industry.

CAP3784 - Introduction to Data Analytics

General
Course Description
Prerequisite: COP3503 and (STA3032 or STA2023 or STA4321)
Description: This course gives a broad overview of the various aspects of data analytics and visualizations. Students will learn ways of accessing data from various sources such as web APIs and repositories, techniques of cleaning data and organizing data for analysis, using analytical methods to solve real-world problems, and create visualizations to aid the interpretation of analysis results. Students will have hands on training using relevant programming languages, as well as analytics and visualization tools. Over the course of the semester, students will apply lessons learned and use tools trained to work on exploratory and descriptive data science projects.

CAP4767 - Text Mining and Information Retrieval

General

Course Description
Prerequisites: COP 3530 AND CAP 3784Description: Text mining (TM) and information retrieval (IR) is the process of finding and deriving valuable insights and knowledge from unstructured text data. In this course, students will be introduced to text mining and information retrieval and study why it is important in today's world. Students will learn and apply state-of-the-art techniques for text mining and information retrieval tasks such as text classification, triage, information extraction, relation extraction, and semantic analysis. They will apply these techniques to solve real-life problems and learn how to build effective information Retrieval systems. Several popular natural language processing and machine learning libraries are introduced that enable efficient processing and pattern recognition from textual data. Students will gain in-demand skills that better enable them to work in one of the primary areas of data science.

CAP6610 - Machine Learning

General
Course Description
The course studies fundamental techniques and algorithms in machine learning. Introduces techniques like regression, classification, and clustering and describes the differences among them. The course also studies a variety of supervised and unsupervised learning algorithms including SVM, KNN, ANN, Q-Learning among others. The course also introduces the students to deep learning strategies. Evaluation techniques for any learning strategy are also discussed.

CAP6768 - Data Analytics

General
Course Description
Description: The aggressive rate of data growth has outpaced our ability to manually understand what data represents. Data is typically stored in database and files, and represented in different formats (structured, semi-structured, or no structure). Data analytics is the science of applying quantitative techniques to analyze data with the objective of discovering hidden knowledge and identifying interesting patterns. This course surveys a number of data preprocessing and sampling methods, data distributions and uncertainty, statistics, regression, time-series analysis, predictions and clustering. It introduces the characteristics and analytic challenges on dealing with clinical data from electronic health records. The course also covers emerging trends in Data Analytics and the applications of information technology in the healthcare. Statistical analyses and data mining techniques will be discussed along with methods for deploying these techniques using the open source tools.

CCJ3023 - Introduction to Criminal Justice

General
Course Description
Prerequisites: CCJ 2002
This course explores the historical, philosophical, legal, and contemporary operation of the American criminal justice system. Particular emphasis is placed on research examining the primary institutions and actors of the criminal justice system in policing, courts, and corrections. The course also explores crime measurements, a profile of crime rates and victims, and an examination of offender and inmate populations.

CCJ5692 - Women and Crime

General
Course Description
Prerequisite: CJL 4310
This course focuses on an analysis of the roles and experiences of women as victims, criminal offenders, prisoners, and professional in relationship to the

criminal justice system. Particular emphasis is placed on the gendered nature of crime and social control. Questions regarding the validity of criminological theory to explaining women's involvement in crime are also discussed

CCJ5743 - Graduate Supervised Research Experience in Criminal Justice

General
Course Description
Prerequisite: Permission of the Department
Under the direction of faculty students will explore all elements of criminal justice research, including initial planning and preparation, the literature review, data collection, analysis, interpretation of the findings, and report writing. Students will also learn, first hand, the procedures for developing scholarly research for publication. May be repeated once for a maximum of 6 credit hours.

CCJ6050 - Criminal Justice Systems

General

Course Description
Prerequisite: Admission to the program.
This course examines the philosophical, legal, and contemporary operation of the criminal justice system in the American Democracy. Particular emphasis is placed on the tension between Due Process and Crime Control; the differences between policy and practice; and the interaction between the actors of the system and the community. The course also explores the effectiveness of the American Criminal Justice System and profiles inmate populations.

CCJ6457 - Administration of Justice

General

Course Description
Description: This course covers contemporary concepts, principles and theories of organization and administration as they relate to criminal justice agencies. The historical development and modern practices of policy administration are also considered. Significant attention will be placed on understanding the theories of administration. The emphasis of this course will be the application of administrative theory to criminal justice organizations and contexts. Areas of theoretical discourse covered will include classical/neo- classical, principles of administration, human resources, systems, cultural reform, and sense-making. Additional readings will provide examples of the application of administrative theories to criminal justice organizations and contexts.
Availability: One semester per year.

CCJ6639 - Issues in Social and Criminal Justice

General

Course Description
Description: This graduate seminar explores sources of inequality in the application of criminal law, including concerns about disparities in the social class, race, and gender status both in prosecution of crimes and ultimately incarceration. How multiple and overlapping sources of inequality ("intersections") operate simultaneously against particular groupings of citizens is explored. Sources of power, social control and inequality are examined in relation to the broader application of criminal law, punishment, and victimization.

CEG3011C - Geotechnical Engineering

General
Course Description
Prerequisite: CWR3201 and (CES3104 or EGN3331)
Description: This course is an introduction to use of soil as a construction material and analysis techniques for geotechnical applications. Topics include soil formations, mass-volume relationships, soil classification, effective stress, compaction, seepage, soil deformation, state of stress, consolidation, strength, and failure. This course also includes a laboratory component where experiments will be conducted to obtain soil properties for use in geotechnical engineering design. Experiments include grain size distribution and soil classification, Atterberg Limits, compaction, permeability, consolidation, shear strength, and unconfined compressive strength.

CEN4083 - Introduction to Cloud Computing

General
Course Description
Prerequisite: CNT 4504
Description: The adoption of cloud computing services continues to grow across a variety of organizations and in many domains. Students will be exposed to the current practices in cloud computing. Topics may include cloud service models such as Infrastructure as a Service (IaaS), Platform as a Service (PaaS), Software as a Service (SaaS), virtualization, cloud architectures, motivating factors, benefits and challenges of the cloud, cloud storage, performance and systems issues, disaster recovery, federated clouds, hypervisor CPU and memory management, data centers, and cloud security. Course work may include homework assignments, presentations, and projects that will provide exposure to major cloud services such as Amazon Web Services (AWS) and/or Google Compute Engine (GCE).

CEN6036 - Software Architecture

General

Course Description
Description: This course addresses issues associated with large-scale Web application development including architectural design and documentation, and service-oriented computing technologies. In this course, students will gain an understanding of the concepts behind software architectures for large-scale Web-based systems as well as design, recognize, evaluate and document software architectures. The course would deepen students' understanding of service-oriented architecture. In particular, the course will focus on principles behind service-oriented software engineering, and approaches and methods for efficient service production in service ecosystems.

CEN6086 - Cloud Computing

General

Course Description
Prerequisite: CNT 5505
Description: This graduate-level elective course investigates cloud computing models, techniques, and architectures. Cloud computing has evolved as a very important computing model, which enables information, software, and other shared resources to be provisioned over the network as services in an on-demand manner. Students will be exposed to the current practices in cloud computing. Topics may include distributed computing models and technologies, Infrastructure-as-a-Service (IaaS), Platform-as-a-Service (PaaS), Software-as-a-Service (SaaS), virtualization, security and privacy issues, performance and systems issues, capacity planning, challenges in implementing clouds, data centers, hypervisor CPU and memory management, Cloud OS, federated clouds, cloud hosted applications, and other advanced and research topics in cloud computing.

CEN6940 - Computing Practicum

General

Course Description
Prerequisites: CAP 6768 and ISM 6021 or CEN 6017
Description: This practicum course allows students to gain valuable hands-on experience in the computing industry while earning credit towards their degree. This is a stand-alone, single-semester based course, which includes practical computing work under industrial supervision or instructor-guided exploration of a topic relevant to the industrial application of specific computing technology. Both instructor approval of a plan for the proposed work as well as a successful end-of-term presentation are required. Enrollment in more than one semester is allowed, but earned credit is applied in accordance with degree requirements.

CES3100 - Analysis of Structures

General

Course Description
Prerequisite: CES 3104 or EGN 3331
Description: This course will investigate types of loads on structures, truss analysis, shear and bending moment diagrams, influence lines, and design envelopes. In addition, deformation of beams, frames, and trusses is covered. The course also includes an introduction to the analysis of indeterminate structures using consistent deformation, slope deflection, and moment distribution methods. Computer and matrix methods are briefly introduced and discussed.

CES3605 - Design Of Steel Structures

General

Course Description
Prerequisite: CES 3100
Description: Concepts of structural design are introduced. The topics cover: philosophies of design and the LRFD method, structural steel systems, structural design loads, design of tension members, design of bolted and welded connection, design of columns, design of beams, and finally design of beam columns. The AISC steel design manual is used in all design problems. Computer aided design is included utilizing commercially available packages.

CES4702C - Design of Reinforced Concrete

General

Course Description
Prerequisite: CES 3100 and CGN 3501C
Description: Structural concrete and its behavior are introduced. Current ACI Code provisions for structural design are utilized in learning how to design reinforced concrete structural members. The failure theories for beams, columns, slabs are introduced. Topics include the design of rectangular and T beams, design of columns and utilizing interaction diagrams, design of one-way slabs, and finally the design of spread and combined footings. Hands-on laboratory exercises are also included to investigate concrete structural components.

CES4711 - Prestressed Concrete

General
Course Description
Prerequisite: CES 4702C
Co-requisite: CES 4702C
Description: This course covers prestressed concrete behavior and design for applications in building and bridge design. Topics covered will include the design of pre and post tensioned girders, floors, roofs, and walls.

CES4844 - Repair of Structures

General
Course Description
Prerequisite: CES3104 or EGN3331
Description: This course provides repair methods and repair materials used in the practice of the structural engineering and repair industry. This course also covers inspection and assessment of damaged structures. It is designed to enable the student to determine the conditions and severity of the damage, the repair methods and materials, the use of FRP in strengthening of structures.

CES6144 - Matrix Structural Analysis

General
Course Description
Prerequisite: CES 3100
Description: This course covers the theory and application of traditional structural analysis for trusses, beams, frames, cables, and arches as either determinate or indeterminate systems. Topics covered will include matrix methods including the direct stiffness method, and flexibility and stiffness method with introduction to computer-based techniques.

CGN3322C - Civil Engineering Geomatics

General
Course Description
Prerequisite: MAC2311
Description: This course introduces the use of modern surveying instruments and methods commonly employed by Civil Engineers. Topics covered include: distance measurement, angle measurement, traverse and topographic surveys, route surveying, construction surveying, land surveys, mapping, Global Positioning Systems (GPS), and preparation and submittal of survey documents. In addition, this course exposes students to the state of art computer aided design (CAD) tools used in civil engineering practice. The applications of Geographical Information Systems (GIS) in Civil Engineering will also be covered in this course.

CGN3501C - Civil Engineering Materials

General
Course Description
Prerequisite: EGN 3311
Description: This course is an introduction to the behaviors, properties, and testing of commonly used civil engineering materials such as aggregates, Portland cement, concrete, asphalt cement concrete, masonry, steel, and timber. The laboratory portion of the course will focus on characterization of materials for Portland cement concrete mix design, and testing of both fresh and hardened concrete.

CGN4151 - Engineering Management

General
Course Description
Description: This course provides an overview of project organization, team formations, and operations involving matrix teams (as well as other formulations) and an overview of the project life cycle. Project planning, scheduling, and control are also discussed as well as economic decisions involving projects such as capital budgeting, risk analysis, and replacement decisions. Students make oral and written presentations. Permission of the instructor is required in order to enroll in this course.

CGN4803 - Senior Capstone Design I

General

Course Description
Prerequisite: ENC 3246, CEG 3011C, and CES 4702CCo-requisite: CWR 4202C and TTE 4004Description: This course is the first part of a two-semester design project. Students are introduced to professional practice issues such as: procurement of work; bidding versus quality based selection processes; how design and construction professionals interact to construct a project; the importance of professional licensure and continuing education; and other professional practice issues. Students work in multi-disciplinary teams to develop a proposal and preliminary design for a selected Civil Engineering project.

CGN4931 - Special Topics in Civil Engineering

General
Course Description
Prerequisites: Senior standing and consent of instructor or department. This course provides topics of special interest in Civil Engineering, which may vary each time the course is offered. Course content may be engineering science, engineering design, or a combination of both. The special interest topic, when offered, will be stated in the schedule booklet. The course is variable in credit hours and may be repeated once with different content. (A material fee of $30 will be assessed.)

CGN4955 - Civil Engineering Study Abroad

General

Course Description
Description: In this course students will study civil engineering related practices in a foreign country. During the course, the student will: understand the culture, geography, history, and politics of the country; travel to the country; study the difference between engineering in the U.S. and that country; and learn about current issues facing that nation. The course will have three phases: pre-trip preparation and orientation, foreign travel, and post-trip work.

CGN5010 - Math Methods for Engineers

General

Course Description
Prerequisite: MAP2302
Description: This course will focus on mathematical methods for applications to engineering problems at a graduate level. It will include: mathematical concepts, geometry of patterns and their quantification, Eigenfunctions, probabilities, statistics of extremes, multidimensional spectral forms, mathematics of waves, stable and unstable systems, Monte Carlo methods, an introduction to new methods for understanding physical systems, and propagation problems in discrete systems.

CHM1020 - Discovering Chemistry

General
Course Description
Description: This course provides students with an introduction to chemical principles and applications for the non-science major. students will engage in problem solving and critical thinking while applying chemical concepts. topics will include the scientific method of problem solving, classification of matter, atomic theory, the periodic table, gases, chemical reactions, energy, and chemical bonds. This course is designed as a course for students that wish to fulfill the general education natural science requirement with chemistry and who will take no further chemistry courses. This course is not a preparatory course for CHM 2045.

CHM2045 - General Chemistry I

General

Course Description
Prerequisite: CHM 1025 or qualifying score on chemistry placement assessment and MAC 1105.
Co-requisite: CHM 2045L
Description: This course is designed for students pursuing careers in the sciences or who need a more rigorous presentation of chemical concepts than is offered in an introductory course. Students will engage in problem solving and critical thinking while applying chemical concepts. topics will include the principles of chemistry including atomic theory, electronic and molecular structure, measurement, stoichiometry, bonding, periodicity, thermochemistry, nomenclature, solutions, and the properties of gases.

CHM2045L - General Chemistry I Laboratory

General

Course Description
Prerequisite: CHM 1025, CHM 1025L or high school chemistry with a B or better, MAC 1105Co-requisite: CHM 2045Description: The course includes experiments that demonstrate the concepts of stoichiometry, atomic structure, chemical bonding, acids and bases, solutions and their properties, reaction rates and equilibrium and descriptive chemistry of selected elements. Fees: A course fee of $59 will be assessed.

CHM3260 - Advanced Organic Chemistry

General

Course Description
Prerequisite: CHM 2211
The course covers structural/mechanistic and synthetic aspects of organic chemistry, focusing on both fundamental/classical concepts and contemporary topics. Classical topics include bonding and molecular structure, stereochemical and conformational aspects, structure-reactivity relationships, kinetic isotope effect, substitution, addition-elimination, reactive intermediates, aromaticity and aromatic chemistry. Contemporary topics include modern synthetic methods and reagents, concerted reactions, ligand-coupling reactions, retrosynthetic analysis, and targeted synthesis.

CHM3610L - Inorganic Chemistry Laboratory

General
Course Description
Prerequisite: CHM 3610
The Inorganic Chemistry Laboratory course provides an experimental basis for content covered in the prerequisite foundation course, Inorganic Chemistry. The laboratory course provides an emphasis on the synthesis of inorganic and organometallic compounds with subsequent characterization using modern analytical and physical measurements. Significant focus is placed on the complete process of both synthesis and characterization of inorganic compounds. Development of scientific communication skills is emphasized through use of a bound laboratory notebook and preparation of coherent laboratory reports written with a conventional scientific structure. (A laboratory fee of $59 will be assessed.)

CHM3932 - Junior Seminar in Chemistry

General
Course Description
Prerequisite: CHM 2210
Description: This course is designed to prepare students to be a major within the Department of Chemistry and Biochemistry by having them explore topics relevant to research, coursework, and future careers. Students will learn how to conduct extensive literature reviews and be trained in various modes of written and oral scientific communication. Professional development training in the form of development of a curriculum vitae and discussion of application to graduate and professional schools will also be included. Students should take this course before beginning coursework in their concentration, ideally at the end of Sophomore year or start of Junior Year. Students are encouraged to complete this course prior to Senior Seminar.

CHM4273 - Drug Discovery

General

Course Description
Prerequisite: BCH4033
Description: This course will provide an in-depth overview of the approaches utilized by medicinal chemists to design novel, pharmacologically active molecules to treat human diseases. Topics covered in the course include the methods for the identification, design, synthesis, and evaluation of drug candidates from the perspective of medicinal chemistry. The course also examines the interaction between drug candidates with their respective biological target molecules such as proteins, DNA, and RNA. The topics of pharmacokinetics (adsorption, distribution, metabolism, and elimination) will also be covered.

CHM4800 - Chemical Informatics

General

Course Description
Prerequisite: CHM 3120
Description: This course covers the application of data science principles and practice to curation, organization, analysis and visualization of large (typically aggregated) datasets of chemical data. The goal of this course is to give each student an appreciation of how chemists use websites/databases/software to forward the progress of science, with a focus on curating, organizing, and finding chemical information. Students will learn about information and its metadata, markup languages, databases, how to collect and organize scientific information, how to identify quality information, and referencing information in research.

CIS3526 - IT Project Management

General
Course Description
Prerequisite: COP2220Description: This course introduces today's best practices in information technology project management. Students are challenged to incrementally create mock project plans and change requests to demonstrate comprehension of scope, time, cost, quality, human resources, communications, risk, procurement and stakeholder management techniques to successfully execute projects. Projects are a group assignment so students leverage their combined interests and knowledge in computer science, information science, information systems, and information technology to imagineer their projects. Formation of project change requests will require creative and analytical thinking to resolve challenges unique to the design, implementation, configuration and maintenance of IT infrastructures and/or software programs. Students who pass this course are eligible to pursue the Associate of Project Management certification (CAPM), an internationally recognized credential in the project management field.

CIS4365 - Computer Security Policies and Disaster Preparedness

General

Course Description
Prerequisites: CIS 4360
This course will cover material about computer security policies. Included with these policies will be specific plans about disaster preparedness in computing. These policies and plans will determine how computer professionals should react to security breaches or destructive acts of nature. Students will study existing policies and will use and develop software for creating and tracking these policies and plans. Computer security policy analysis will be completed by examining user needs and applying best practices in all course projects.

Course Description
Prerequisites: CIS 4360
Description: Topics in this course will include computer system data recovery with a particular emphasis on computer evidence handling and computer crime detection. The students will use and develop computer software tools to reboot suspect computers, detect evidence of computer crime, and preserve that evidence for later use. Students will be trained to recover data from simulated crime environments.

CIS6371 - Applied Cryptography

General

Course Description
Description: This course is about constructing practical cryptosystems for which we can argue security under plausible assumptions. The course covers many constructions for different tasks in cryptography. For each task, we define a precise security goal that we aim to achieve and then present constructions that achieve the required goal. A unified framework will be developed to analyze those constructions.

CIS6372 - Information Assurance

General

Course Description
Description: An overview of techniques for ensuring and managing information security. Topics include administrative and technical security controls to prevent, detect, respond to, and recover from cyber-attacks; risk and vulnerability analysis to select security controls; security planning; security architecture; security evaluation and assessment; and legal, ethical, and privacy aspects of information assurance. The course also covers information security fundamentals, such as cryptography, authentication, and access control techniques, and their use in network, operating system, database, and application layers. Security issues of current importance are stressed.

CIS6913 - Research Methods in Computing

General

Course Description
Description: Students completing this course will be prepared to conduct research in the disciplines of computing and become better interpreters of research outcomes produced by others. The issues, concepts, methods, and techniques associated with scientific inquiry in general are covered, including qualitative and quantitative methods. An emphasis is placed on communication skills, creative thinking, problem-solving, and integration of knowledge. Students will select a research problem with the approval of the instructor, review the relevant literature, produce a pertinent prospectus draft, present the proposed work in an oral and/or poster presentation format, and review presentations of peers.

CJC5135 - Prisons and Jails

General

Course Description
Description: The purpose of this course is to expose students to a variety of perspectives about the functions of the largest and most expensive component of the United States criminal justice system – prisons and jails. This course will examine the philosophical, technological, and managerial influences on contemporary criminal justice institutions. This course will also address the growth in the number of inmates and number of institutions, the expense of operating a correctional system, challenges faced by correctional staff, and the incarceration experience of inmates.

CJC5425 - Methods of Offender Treatment

General

Course Description
Description: This course examines “what works” and what “doesn’t work” in treating offenders. Special attention is given to the principles of effective intervention, offender assessment, theory, and evidence-based practices. Institutional and community-based treatment, programs appropriate for use with special populations, and the importance of rehabilitation to the correctional system and to society will be discussed.

CJL4315 - Criminal Trials Seminar

General
Course Description
Prerequisite:CJL 4310 Criminal Law and Procedures I
This course offers students who have completed Criminal Law and Procedures I practical observation and study of the criminal trial process, through lecture, readings, and direct observation of criminal trials. In the courtroom setting, students will observe all aspects of the criminal justice process, from arrest through conviction and sentencing. Lecture material will supplement understanding of related aspects of the justice process, such as the law making process, bail and pretrial incarceration, prosecutorial discretion and plea bargaining, and sanctions.

CLP4134 - Childhood Psychopathology

General
Course Description
Prerequisite: CLP 4143 or permission of the instructor
Description: This course provides an in-depth survey of common psychological disorders in childhood and adolescence. The characteristics, risk and protective factors, developmental course, and epidemiology of these disorders will be discussed. The course will also provide an overview of diagnostic and classification schemes, and research-based overview treatment and prevention strategies. Disorders discussed will include ADHD, learning disabilities, pervasive developmental disorders, anxiety, and depression.

CLP4313 - Health Psychology

General

Course Description
Description: This course introduces students to the mind-body relationship and the contribution of psychology in understanding health promotion, health care, and the etiology and treatment of physical illness. Representative topics covered in this course include changing health habits, stress and coping, health care utilization, patient-provider relations, and managing chronic illness such as heart disease, AIDS, diabetes, and cancer.

CNT4406 - Network Security and Management

General

Course Description
Prerequisites: CNT 4504
Description: In this course, students will identify and analyze user needs and take them into account in the selection, creation, integration, evaluation, and administration of secure computer systems. The course would focus on issues related to the management and security of various network topologies. The use of cryptographic algorithms in the design and implementation of network security protocols will be covered. Various forms of security attacks will be detected, analyzed, and mitigated.

CNT4504 - Computer Networks

General

Course Description
Prerequisite: COP 3503
Description: In this course, students will study architectures, protocols, and layers in computer networks and develop client-server applications. Topics include the OSI and TCP/IP models, transmission fundamentals, flow and error control, switching and routing, network and transport layer protocols, local and wide-area networks, wireless networks, client-server models, and network security. Students will extend course topics via programming assignments, library assignments and other requirements.

CNT6130 - Software Defined Networking

General
Course Description
Description: The aim of this course is to give the students a deep understanding of two important, emerging network technologies: Software Defined Networking (SDN) and Network Functions Virtualization (NFV). SDN and NFV are at the core of the dramatic transformation of today's networks. SDN makes it possible to quickly deploy exciting and highly relevant new protocols, without requiring extensive hardware changes. NFV aims to decrease the costs for network operators. NFV utilizes open source software running on commodity, off-the-shelf hardware rather than highly specialized, vertically integrated solutions produced by a small number of vendors. The combination of SDN and NFV makes it possible to quickly deploy new services for large numbers of users in both wired and wireless networks.

CNT6167 - Internet of Things

General
Course Description
Description: This course introduces the underlying network protocols for IoT communications, including rules regarding network architecture and design at the medium access and network layers. Short range wireless (e.g. Bluetooth, BLE, RFID, NFC, WiFi, LiFi), medium range wireless (e.g. IEEE 802.11ah HaLow), as well as, wired technologies (e.g. smart grid) are discussed. App development aspects of relevant technologies and their applications will be covered, as well.

CNT6407 - Internet Security

General
Course Description
Description: This course provides an in-depth study of various techniques for network attacks and methods to defend against them. A number of threats and vulnerabilities of the Internet will be covered, including various vulnerabilities of TCP/IP protocols, denial of service (DOS), attacks on routing, attacks on DNS servers, TCP session hijacking, and so on. This course will also cover defense mechanisms, including intrusion detection, firewalls, tracing the source of attacks, anonymous communication, IPsec, virtual private network, and PKI.

CNT6519 - Wireless Network Security

General

Course Description
Description: Wireless connectivity to servers and storage is becoming increasingly common these days. However, due to power, size and bandwidth limitations, the network and security management of wireless nodes have become fragile. As a starting point, wireless networks have adopted many security mechanisms from the wired world. But due to the inherent limitations, they are more vulnerable to attacks than the wired network. Threats like intercepting and unauthorized access to wireless traffic are real. More mature solutions to the security problems demand the need for understanding the current technologies and security flaws. (need to be changed to be consistent with other catalog course descriptions)

COM3003 - Principles of Communication Studies

General
Course Description
Prerequisites: SPC 2608 or SPC 4064
Description: This course will examine the historical and theoretical traditions in the discipline of communication studies. Topics covered in this course will include interpersonal, language, nonverbal, group, intercultural, organizational, mass, and public communication. Students will read and discuss research as well as participate in individual and group learning activities that examine theories of human communication.

COM3332 - Mediated Communication

General
Course Description
Prerequisite: SPC 2608 or SPC 4604 and COM 3003
Description: Mediated Communication presents an introductory-level survey and overview of various new communication technologies and social media platforms. Through a discussion of their utility, functions, and roles within our society, their uses and implications across interpersonal, professional, cultural, and global contexts are assessed. This course looks at current trends in the rapidly evolving culture of mediated communication through the lenses of human communication. The impact of the evolution of the web, mobile technology, social media, and other types of digital communication are explored.

COM3440 - Small Group Communication

General
Course Description
Prerequisites: SPC 2608 or SPC 4064Description: This course will introduce theories regarding the interaction of individuals in groups, and techniques of discussion applied to goal-oriented small group situations. Assignments and activities will increase understanding of communication in groups encountered in both personal and professional contexts. Topics considered include systems theory, decision-making, problem-solving, leadership, power and status, parliamentary procedure, and group development. This course includes consideration of research methods, leadership, and conflict resolution applied to active community based learning as well as classroom learning activities.

COM3752 - Listening

General
Course Description
Description: Listening is a valuable and necessary skill that is useful to just about any discipline. Some disciplines that would especially benefit from listening skill building include, but are not limited to: Communication, Psychology/Counseling, Criminal Justice, Political Science, Health Professions and Business. This course is interactive and designed to build listening skills such as: short-term and long-term memory, listening with interruptions, note-taking skills, comprehension and relational listening.

COM4022 - Theory and Research Methods in Health Communication

General
Course Description
Prerequisite: COM 3042 or by Permission of Instructor
This course will focus on theory and research methods in interpersonal, small group, and organizational communication in health contexts. Students will become familiar with theory relating to health communication; examine various research methods used in health communication research; and will demonstrate proficiency with theory by analyzing various health communication studies.

COM4044 - Lying and Deception

General

Course Description
Description: This course will cover a number of issues surrounding lies, truth, deception, nonverbal and verbal deception leakage cues, and ethical perspectives surrounding lying and deception. This course examines lying and deception from many angles such as: lying and deception in the media, politics, the internet, hoaxes and scams, interpersonal relationships, children as liars and targets of lies, teenage lying and deception, self-deception, the validity of lie detectors, how to read subtle deception cues, what is truth, and a host of other contexts where lying, truth telling and deception come into play. This is a research-based course and studies many videos and articles to support every lecture and assignment.

COM4301 - Communication Theory and Research Methods

General
Course Description
Prerequisite: SPC 2608 or SPC 4064
Description: Students will survey major theoretical approaches to and research methods in communication studies. Methods examined and used include content analysis, naturalistic inquiry, narrative analysis, interaction analysis, and triangulation approaches. Students will focus on conceptualizing, designing, interpreting, and reporting research. Differences between quantitative and qualitative research methods and the conceptual and practical knowledge of the communication research process form important areas of the course experience.

COM4373 - Consequences of Cyberculture

General
Course Description
Description:
Consequences of Cyberculture presents an advanced, comprehensive, and critical examination of interpersonal, organizational, and social implications created by the Internet. The Internet and associated digital communication technologies have changed the way that humans around the globe interact, and have created a dynamic cultural shift in human communication behavior. This course will explore how the social web and emerging communication technologies facilitate, influence, and effect globalization, human relationships, social interaction, civic engagement, social discourse, privacy, and ethics. The processes of relationship formation and maintenance, information dissemination, mobile communication, and the transmission of messages instantaneously, virally, and cross-culturally are also examined.

COM4411 - Communication and Popular Culture

General
Course Description
Prerequisite: MMC 3614 or Permission of Instructor
This course studies media, whether TV, advertising, film sports, music, fiction, or some other means by which a culture is formed. Students could investigate popular icons, rituals, myth, archetypes, formulae, or heroes/heroines as elements in collective experience that reflect and contribute to the formation of a culture's beliefs, mores, customs, attitudes, or laws. How pop culture is constructed, deconstructed, and maintained and how gender, ethnicity, or class are factors in cult reception as media, through its various elements, create apparent needs in a mass society. The class will apply theories, such as semiotics, genre theory, and ideology to internet media events as means for communicating and forming/reforming culture. A guiding quest is: What do particular popular cultural

artifacts communicate and how do they function in the life of culture? Another is: What is gained, damaged, or lost as media participate in virtually every aspect of a culture?

COM4430 - International Communication

General

Course Description
This course examines the influence and roles of international communication in our increasingly globalized world. The course treats history, theories, and selected current issues and problems of international communication. It will explore issues in organizations, national sovereignty, international news media, global conflict and cooperation, human rights, diffusion of communication technologies, global medial culture, and international media regulation. Therefore, the course will be informed by interdisciplinary theoretical frameworks and methodological approaches. Students will take part in a simulation of the United Nations in which they act as delegates of various nations and/or UN officials seeking multilateral solutions to complex and often vexing international communication problems.

COM4561 - Strategic Social Media

General

Course Description
Description: Strategic social media prepares students with industry-standard skills and techniques to utilize a variety of new and social media platforms for organizational purposes. Exploring professional uses of social media across a variety of industries, students examine the strategy and outcomes associated with digital content management, campaign planning, consumer engagement and interaction, social listening, online brand and reputation management, ethics and governance. Using historical milestones, case studies, emerging theories, and best practices, students come to recognize and understand the innovative and ever-evolving nature of the contemporary new media landscape in applied, pragmatic, and theoretical contexts.

COM5126 - Organizational Communication

General

Course Description
Description: This course examines the characteristics of, and dynamic relationships among, individual, interpersonal and group behavior as related to complex media-related organizations. Stress is placed on successful managerial strategies for minimizing workplace turbulence arising from employee behavior in the context of technological, structural, cultural and environmental factors. Management

practices are viewed as metaphorical processes allowing the managers to understand the genetics of the organization with diversity and key competencies allowing for a new paradigm of management.

COP3045 - Introduction to Python Programming

General

Course Description
Prerequisite: IDC2000 or COP2220
Description: Students will be expected to have basic programming knowledge before taking this course. The course will cover an overview of Python programming fundamentals, including data types, variables, conditional statements, logical operators, iterations, and functions. The course will also cover popular programming libraries that are used for analyzing data as well as performing advanced tasks. The concepts covered in the course will be reinforced using programming projects throughout the term.

COP3503 - Programming II

General
Course Description
Prerequisite: COP 2220
Description: This course serves as a continuation to the Programming I course. Students are shown additional fundamental concepts of problem solving using the object-oriented paradigm and data structures. The topics in this course include classes, interfaces, objects, class types, events, exceptions, control structures, polymorphism, inheritance, linked lists, arrays, stacks, queues, and deques. Students are expected to apply these concepts through the construction of numerous small software systems using both integrated development environments and command-line- driven tools that support editing, testing, and debugging.

COP3703 - Introduction to Databases

General
Course Description
Prerequisite: COP 3503
Description: This course covers database modeling with emphasis on the relational data model. Principles of relational database design, normal forms, constraints, and SQL programming will be discussed extensively. Additionally, topics related to indexing, views, transactions, XML and No-SQL databases will also be discussed. The course will cover aspects of information security and assurance as they relate to data management. Concepts covered in the course will be reinforced through the use of open source and/or commercial database management systems.

COP3813 - Internet Programming

General

Course Description
Prerequisite: COP3503
Description: In this course students will use current technologies to develop Internet and web-based applications. The topics to be covered include client and server-side components for the WWW to facilitate client-server communication, web services, and an introduction to source control tools. Students will extend course topics via programming assignments, library assignments and other assigned activities.

COP3855 - Web Systems Development

General

Course Description
Prerequisite: COP 3503
Description: Students learn about the influence of local and global transaction processing, Internet, Web design and development, and Electronic Data Interchange on information systems. This course discusses the concepts and skills required to design and implement Web application systems using Model–view–controller (MVC) architecture. Students learn about how Web applications are developed using client-side and server-side scripting to implement internal and external business processes. After an introduction to the basic concepts of relational database systems and Object Relational Mapping (ORM) students will practice for storing and accessing data in the database.

COP4620 - Construction of Language Translators

General

Course Description
Prerequisite: COP 3530 and COT 3210
Description: This course introduces students to the theoretical foundations and practical issues of designing language translators. Students will learn how to use compiler construction tools such as generators of scanners and parsers. Grammars, parsing, lexical analysis, syntax analysis, code generation, and optimization will also be discussed.

COP6284 - Programming for Data Science

General

Course Description
Description: This course gives a broad overview of programming concepts for the data science field as well as a broad overview of the various aspects of data science process, methods, and techniques Students will gain an understanding on the data science lifecycle processes, and techniques and methods used for carrying out lifecycle activities. Students will learn how to manage and extract data from relational databases using SQL, how to write in programs in Python to conduct

data science, and how to analyze data using R. This course provides a programming primer for working with and analyzing data. Students will be familiarized with essential programming tools used by practicing data scientists.

COT3100 - Computational Structures

General

Course Description
Prerequisite: MAC 1101, MAC 1105 or MAC 1147
Description: This course will cover the mathematical and logical fundamentals required in computer science, information systems, information science, and information technology. The course develops concepts in discrete mathematical structures as applied to computing in general through the topics of sets; logic; proof techniques; Boolean algebra; algorithms and problem solving; number systems; number theory; counting and discrete probability; and relations and graphs.

COT4461 - Computational Biology

General

Course Description
Prerequisite: COP 3530; STA 4321 or STA 2023
Description: This course is an introduction to the study of Algorithmic and Computational problems in molecular biology. Computer science concepts are emphasized, such as the improvement in asymptotic running time with better algorithms, the contrast between heuristics and an algorithm with guarantees, and the difficulty posed by NP-Complete problems. Algorithms for sequence comparison, alignment, and assembly are covered, as well as problems in evolutionary trees and genome rearrangements. Combinatorial methods will be the primary focus.

COT6416 - Computational Complexity

General

Course Description
Prerequisites:COT 3210, COT 4400 or COT 5405
This is a course in structural complexity theory. The focus is on the models of computation and the structure and relationship among the important classes of computational problems such as P, BPP, NP, co-NP, and PSPACE. Results on the hardness of approximating optimization problems which follow from the PCP Theorem and the theory interactive proofs will be presented.

CPO3213 - Politics and Society in Subsaharan Africa

General
Course Description
This course is concerned with the government, politics, and society of sub-Saharan Africa. These political systems will be traced back to their roots in traditional Africa, to colonial Africa, and to particular patterns of administration and politics based on the systems imposed by former European colonial powers. The course will also show how many customary laws and practices found expression in the political and legal structures of the new polities. Since post-independence years, politics in sub-Sahara Africa is still characterized by ethnic conflicts, military interventions, and social disequilibria, as well as by democratic governments.

CPO3402 - Politics of Pakistan and Afghanistan

General
Course Description
Description: This course provides an introduction to contemporary political issues and trends in the South Asian states of Pakistan and Afghanistan. The course examines the complex interrelationship between various ideologies, institutions, personalities, and social movements in the two countries. The course has been designed to help students gain a thorough understanding of domestic, regional, and structural causes and consequences of the two countries' revolutions and conflicts before and after the partition of the subcontinent in 1947. Other important issues such as nuclear and conventional security; state malfunction, civil war and terrorism; poverty and development; regional integration; and human security and gender discrimination are also examined in this course.

CPO5535 - Politics of South Asia

General

Course Description
Description: Surrounded on the south by the Indian Ocean and on land by West, Central and Southeast Asia, the region of South Asia is composed of eight developing countries of which at least four are of great strategic importance to the international political community. It's growing economic and political influence along with nuclear proliferation, rise of Islamic militancy, terrorism and wars make South Asia a focal point of growing international attention and concern. This course will provide students with a detailed overview to the political study of the eight nations of South Asia. It will be organized to facilitate cross-national comparison, with course sections on each nation addressing topics such as political culture, government structure and institutions, political parties and leaders, and social conflict and resolution.

CPO6206 - Politics of Africa

General

Course Description
This course is concerned with the government, politics, and society of countries in Africa. These topics will be explored by examining their transition from traditional Africa to colonial Africa to independent states. In addition, the course will demonstrate how systems imposed by former European colonial powers influenced the design and implementation of African institutions. Special emphasis will be placed on politics above and below the state, including local governance, non-governmental organizations, and civil society. The preceding will help frame contemporary politics in Africa, which features ethnic conflicts, military interventions, social disequilibria, and unique forms of democratic governance.

CRW2000 - (GW) Introduction to Creative Writing

General

Course Description
Prerequisites: ENC 1101 and LIT 2000 or ENG 2012
In this course, students will read works from a variety of literary genres, produce samples of work in each genre, develop productive critiques of one another's work within a workshop setting, and revise at least one of their samples. This course is for students who want to develop basic skills in more than one genre of creative writing. Gordon Rule English credit.

CRW2100 - (GW) Introduction to Fiction Writing

General

Course Description
Prerequisite: ENC 1101 and LIT 2000 or ENG 2012
In this course, students will study the basic techniques used by both canonical and contemporary fiction writers to build convincing and compelling worlds, characters, and plots. Students will then work to apply those techniques to their own fiction. They will develop the skills and techniques necessary for both a productive critique of their own and one another's fiction, and for the in-depth work of successful revision. Gordon Rule English credit.

CRW2201 - (GW) Introduction to Creative Nonfiction

General

Course Description
Prerequisite: ENC 1101 and LIT 2000 or ENG 2012
In this course we will examine the narrative possibilities of creative nonfiction. We will explore structure, technique and authorial presence in representative works of established sub-genres, including literary journalism, travel writing, memoir, and the personal essay, as well as more experimental forms like the lyric essay and collage. Students will develop skills and techniques necessary for the productive critique of their own and one another's writing and for the in-depth work of successful revision. Gordon Rule English credit.

CRW2300 - (GW) Introduction to Poetry Writing

General

Course Description
Prerequisites: ENC 1101 and LIT 2000 or ENG 2012
This workshop allows students to explore together the fundamentals of the craft of poetry. Students will learn the difference between poetry and prose, as well as the ability to identify the attributes that make poetry a unique and expressive art form. Students will learn basic terminology and close reading skills in order to write analyses that demonstrate precision and sensitivity to the nuances of poetic language. Students will read and memorize poems by master poets, whose work will be the focus of our analysis. Learning to explicate great poetry will provide students with skills they can apply to their own poetry, which will be the ultimate focus of this course. Gordon Rule English credit.

CRW2400 - (GW) Introduction to Playwriting

General

Course Description
Prerequisites: ENC 1101 and LIT 2000 or ENG 2012
This course introduces students to the art and craft of playwriting. Students will read plays and analyze their basic elements—including dramatic action, characterization, dialogue, and the shape and pacing of scenes. In order to understand the nature of drama from the perspectives of actor, director, and audience as well as playwright, students will write scenes and perform them, a process that will involve staging and directing those scenes. Gordon Rule English credit.

CRW3015 - Reading Like A Writer

General

Course Description
This course trains students in methods of how to approach literature through the lens of a creative writer. By surveying how certain literary techniques and strategies are employed in texts, the course content focuses on the elements of verse and/or prose construction and as such demonstrates how discrete choices with language contribute to the formation of varied types of aesthetic experiences. Students not only will learn how to identify literary devices but also will apply them to a final project of substantial length.

CRW3113 - Writing Genre Fiction

General

Course Description
Fiction's subgenres include fantasy, historical fiction, mystery, romance, science fiction, and others. The Genre Fiction Workshop will help students develop an understanding of a selected genre. Students will read in-genre selections for form and style and will apply what they learn in their own writing. They will consider approaches to prewriting, revising, and editing. Students will produce a final portfolio with two finished stories and a critical analysis. This course may be taken up to three times.

CRW4924 - Advanced Creative Writing Workshop

General

Course Description
Prerequisite: At least 6 hours of 3000-level CRW courses and instructor permission Description: Students will continue to develop their skills in reading, writing, and critiquing, while also becoming familiar with the submission and publication process. Projects that students will engage in may include the following: development of submission portfolios; research on journals, magazines, and online publication outlets; completion of submissions by sending out work for publication; and public readings of student work. Repeatability: This course may be repeated up to 9 credit hours.

CRW4940 - Creative Writing Practicum

General

Course Description
Prerequisite: Permission of instructor.
Description: Practica are supervised co-curricular or pre-professional training experiences that offer students the opportunity to deepen and complement learned knowledge within their major. Students may either shadow and assist a faculty member through the teaching of a course for the purposes of intensive experience and education in pedagogy, course administration, and teaching; or participate in a professional, creative project for the purpose of intensive experience and education in project development or community writing. The student's work is monitored, guided, and evaluated by a faculty member. Repeatability: May be repeated for a total of 12 credits under different topics.

CRW5935 - Special Topics in Creative Writing

General

Course Description
This course will help students become more successful creative writers by concentrating on special studies or a project not otherwise offered. Students will show proficient understanding of the fundamentals of a specific literary type and how it's put together. Through intensive practice of creative writing and study of the creative process, students will plan and compose original work that best reflects their artistic character.

CRW5944 - Creative Writing Internship

General

Course Description
Pre-requisites: CRW5935 OR CRW6925Description: This course will allow students in the M.A. program in English to apply for work positions that offer them experience in skills directly related to the program's course offerings in creative writing. These opportunities may include working in the publishing industry, book publishing, book marketing and publicity, interviewing, and book reviewing. Students may assist in the publication of a literary magazine or apply their writing to other creative industries. This course may only be taken once. Students must take CRW 5935 Special Topics in Creative Writing or CRW 6925 Graduate Creative Writing Workshop (3 Credits) as a prerequisite. Instructor and graduate coordinator permission required.

CRW6925 - Graduate Creative Writing Workshop

General
Course Description
Prerequisite: graduate standing.
Repeatability: This course is repeatable 3 times.
Description: The graduate creative writing workshop can help students become more successful creative writers. Students will learn to master the fundamentals of what a story or poem is and how it's put together. They will consider various approaches to prewriting, revising, editing and publication so as to identify and apply methods that best reflect their own artistic character. Students will prepare a final portfolio of 25-30 pages of prose or 15-20 pages of poetry.

CRW6942 - Practicum: Teaching Creative Writing

General
Course Description
Pre-requisites: CRW5935 OR CRW6925 OR CRW5944 OR CRW6905Description: This course offers English graduate students one semester of supervised teaching in an introductory creative writing class. Student practitioners will learn various styles and skills of classroom teaching and management, including course planning, development of assignments, and evaluation of student work. Students must complete two of the four CRW courses at the graduate level as a prerequisite: CRW 5935: Special Topics in Creative Writing; CRW 6925 CR Creative Writing Workshop; CRW 5xxx Creative Writing Internship; CRW 6905 Creative Writing Independent Study. Permission of instructor and graduate coordinator required.

CWR3201 - Fluid Mechanics

General

Course Description
Prerequisite: EGN 3311. Corequisite: EGN 3321. The purpose of this course is to introduce the fundamental principles of fluid mechanics, including fluid statics, fluid kinematics, and the dynamic equations for fluid mass, momentum and energy conservation. Also, the fundamental principles of fluid mechanics are used to solve basic engineering problems involving incompressible flow.

CWR3561 - Numerical Methods and Computing in Civil and Coastal Engineering

General

Course Description
Prerequisite: MAP 2302
Description: The students will be introduced to a suite of scientific computing environments, tools and methods upon which civil and coastal engineering practice and research relies on. The following foundational knowledge will be covered in the course: data operations and other built-in functionality; data input and output, including data formatting per different data types; symbolic manipulation, including algebra and calculus; and visualization of data. As a synthesis of the foundational knowledge gained in the course, students will develop their own code to read in data, process and analyze the input and visualize the output. Problems investigated in the course will be examples in civil and coastal engineering where higher level computing is needed.

CWR4001 - Introduction to Coastal and Port Engineering

General

Course Description
Prerequisites: PHY 2048C, PHY 2049, and MAC 2312
Description: This course provides an introduction to the coastal environment with a focus on engineering and science applications. The course also introduces concepts important to port operations and design as related to the waterside engineering aspects. Designed for upper-level undergraduate students, the course introduces important topics and physical processes necessary to understand and work in the coastal environment. The course provides the foundation for more advanced study of water wave mechanics, coastal processes, and coastal and port engineering design.

CWR4006 - Coastal Processes

General

Course Description
Prerequisite: CWR4001
Description: The lectures feature background theory, discussion and a detailed examination of important coastal processes with engineering applications. Course subjects cover a wide range of topics to provide a breadth of knowledge for subjects related to coastal study. Topics include coastal zone features, water wave mechanics, field measurement techniques, longshore and cross-shore sediment transport analysis, beach nourishment theory, coastal structures, tidal inlets, and coastal management. The course presents material at a level necessary to understand many intermediate and advanced processes and relationships.

CWR4009 - Oceanography/ Meteorology

General
Course Description
Description: In this course, students will examine physical characteristics, processes and dynamics of the global ocean to understand circulation patterns and how they relate to ocean biology, chemistry, and climate change. Students will learn about total energy balance, role of eddy fluxes, inference of mean meridional circulation, diagnosis of time-mean flow, climate and its variability, theories of wind-driven circulation, frictional and inertial boundary regimes and thermohaline circulation.

CWR4010 - Field Methods

General
Course Description
Prerequisite: CWR4001
Description: This course will expose the student to the conception, design, logistics, and execution of field experiments and data gathering exercises in the coastal environment. Topics will include: beach profile surveying, sand sampling and analysis, wave gauge deployment, riverine and tidal current measurements, and surf zone wave and current measurements. Note that some courses will be taught off campus, in the surrounding waterways.

CWR4121 - Groundwater Flow and Containment Transport

General

Course Description
Prerequisite: CWR 4202C
Description: This course addresses the study and evaluation of groundwater flow within aquifers. The course includes a general overview of groundwater geology, groundwater hydraulics, the hydrologic cycle, well hydraulics, aquifer testing, salt-water/freshwater interface, and fate and transport of contaminants. Each student will be required to develop a final course project.

CWR4600 - Major River Systems of Florida

General

Course Description
Prerequisite: PHY 2048, PHY 2049 and MAC 2312
Description: Due to the unique geology and ecology of Florida, its river systems are vitally important to the co-existence of man and nature. The course will provide an in-depth look at current and future issues of the major river systems (St.Johns, Kissimmee, Apalachicola, etc. in Florida). It will focus on the issues that a civil engineer will come in contact within his/her career. This course will integrate the student's perspective of the human impact on the river, the legal framework and issues of water quality management, and the biotic perspective of a healthy ecosystem. Reading material will include online state river reports. A significant research paper will be required of students which examines one aspect of a major river system whether it be human induced changes, physical or biotic processes, the impact of some physiographic feature, or an aspect ecosystem.

CWR6236 - River Engineering and Sediment Transport

General

Course Description
Prerequisites: CWR 4202C, MAP 2302
Description: This course examines river flow hydrology, the processes of sediment entrainment, transport, and deposition, and the interaction of flow and transport in shaping river channels. Course topics include boundary layer flow; physical properties of sediment; incipient, bed-load and suspended-load motion; bed forms; hydraulic roughness, velocity and stress fields in open channels, scour and deposition of bed material; and bank erosion. The course culminates in the application of principles and analytic tools to engineering interference (diversion, dams, dredging); river training works; and hydraulic model studies of rivers.

CWR6531 - Numerical Modeling of Coastal Systems

General
Course Description
Prerequisite: Engineering student graduate status or instructor permission. Description: This course covers fundamentals of numerical methods and development of programming techniques to solve problems in coastal, civil and environmental engineering. This course requires substantial computer use via numerical codes in languages such as Matlab and FORTRAN. Standard topics, including Taylor series, solving systems of equations with direct and indirect methods, interpolation, root finding, numerical differentiation, finite difference approximations, time stepping methods and numerical integration, are treated in a context-based approach involving applications drawn from coastal, civil and environmental engineering. This course will provide the requisite material for courses and research in numerical modeling, field observation, and engineering and design of coasts and ports.

DIE6941 - Clinical Practice in Nutrition and Dietetics II

General

Course Description
This course provides the advanced student with supervision and consultation regarding their current internship rotation. Experiences in these settings provide the student with an opportunity to apply the knowledge and skills acquired throughout the academic portion of the curriculum to any management, community, or clinical setting. Under the direct supervision of a preceptor, the student will begin transitioning from a novice dietetics practitioner to entry-level performance according to the standards set forth by Academy's Code of Ethics and Standards of Practice. The actual procedures and sequence of experiences will be determined by the nature of each setting contracted by the program but designed to provide the core competencies assigned to the rotation. The student will have the opportunity to self-assess professional performance in addition to the preceptor evaluation at midterm and the end of the semester.

DIG4152 - Digital Editing and Digital Archives

General

Course Description
Prerequisite: Sophomore standing or permission of the instructor.
Description: This workshop-style course engages students in Digital Humanities research through hands-on work in the transcription and TEI-XML markup of manuscript or rare print texts. Participants will also examine theoretical and practical aspects of building digital archives to gather and contextualize digital editions and other types of materials. Course activities will involve collaboration with the Thomas G. Carpenter Library and/or other repositories. Students will have the opportunity to publish their work online through the North Florida Editorial Workshop (nfew.org) or other projects. Students will be graded on their participation in course sessions, on the timeliness and quality of their editorial work, and on oral presentations and reflective writing assignments in which they will synthesize their learning.

EDA6061 - Introduction to Educational Leadership

General
Course Description
The course includes an investigation of educational leadership as a profession and the role of education in American culture. This course will prepare students to serve as leaders who can demonstrate effective leadership for all students, including students of all differences, students who are linguistically diverse, students with disabilities, and students from low-income families. Introduction to Educational Leadership also examines the contexts within which educational leaders function as well as their designed tasks and responsibilities. Topics of study, analysis, and discussion include administrative theory, organizational structure and culture, leadership, motivation, decision-making, communication, organizational change, school finance, school law, curriculum development and teaching, human resources administration, and the federal, state, and local framework for education

EDA6232 - Law and Ethics in Ed Leadership (Operational Leadership III)

General

Course Description
Prerequisite: EDA 6061
Description: This course involves the study of study of constitutional, statutory, and case law. These three areas of law are examined in the course, especially as they relate to the organization and operation of public education in the United States in general and Florida in particular. The course is also a study of rules and regulations formulated by federal, state, and local agencies. Emphasis is placed on the legal process, legal reasoning, as well as legal rights, duties, obligations and responsibilities of educators, especially school leaders who work in the state of Florida. Students are given practical experience through structured activities as the course emphasizes the knowledge, analysis, and application that explores a range of leadership competencies including organizational sensitivity, problem-solving, decision-making, case scenarios, and leading small and large group meetings such as 504, ESE, ESOL, and others.

EDA6242 - School Finance (Instructional Leadership III)

General

Course Description
Prerequisite: EDA 6061
Description: This is a general course focused on addressing the financing of public elementary and secondary education in the United States. The course examines current economic theories, sources of revenues, and trends in the fiscal structure and operations of public education. This course will present the implications of education finance policies as a public good for society. Upon the completion of the course students will be able to manage the public school organization, operations, and resources to promote safe, efficient, and effective learning environments. Throughout this course students will discuss the investment of public funds to society.

EDA6423 - Data Driven Decision-Making in Educational Leadership

General

Course Description
This course includes an in-depth study of current issues, trends, and research related to school curricula at the primary, elementary, middle and secondary school levels within regular and exceptional programs. The goal of the course is to provide students with an understanding of policies, practices, and procedures related to the development of the K-12 school curriculum through the use of school accountability measures, school-wide assessment and data-driven decision making from a leadership perspective. Federal and state department of education and information reporting requirements will be studied along with the review of developing and using data collection procedures through the use of technology. Students will study how to effectively use assessment information, data, to drive school improvement and to effectively use data-driven decision-making from a leadership perspective.

EDA7190 - Leadership for the Evolving Leader

General

Course Description
Description: The course explores the history of organizational leadership across cultural and political boundaries while examining the continuing influence of classical and modern organization. Using leadership theory and practice the course studies contemporary policies and practices of educational leadership. History, theory, research, and practice are utilized to frame the evolving images of leaders and organizations.

EDA7400 - Research in Education: Quantitative Method

General

Course Description
Description: This course is a close examination of the major approaches to quantitative research in education and critical analysis of their appropriateness and strengths in studying research questions in applied contexts. Enrollment is limited to students admitted to the doctoral program. This course provides an introduction to basic research design as well as quantitative methods for analyzing and interpreting results of correlational and experimental studies in education and related disciplines. Emphasis will be placed on relations between various statistical procedures as well as on the application of statistical software in conducting and interpreting analyses. Students will be expected to run the various statistical procedures in programs like Microsoft Excel and IBM SPSS given relevant data sets and write up summaries of the results.

EDA7410 - Research in Education: Qualitative Method

General
Course Description
Description: The purpose of this course is to introduce students to the theories and practices of qualitative inquiry and includes a close examination of major approaches to qualitative research related to educational leadership. Qualitative researchers are interested in constructing in-depth descriptions of educational phenomena by spending time in the field and eliciting the meanings individuals give to different educational contexts, issues, and problems. From this course students will develop the skills both to critically read qualitative studies of education and design their own research studies. This course is structured to provide students with opportunities to understand the nature of qualitative inquiry, the kinds of questions addressed, and the various types of research designs used to answer them. Students will also be introduced to core qualitative data collection and analysis methods. Enrollment is limited to students admitted to the doctoral program.

EDA7420 - Foundations of Research in Education

General
Course Description
Co-requisites: EDF 7545
Description: This course will focus on preparing the educational leader to become an informed consumer and a novice producer of educational research within diverse communities and educational organizations. The course focuses on understanding a variety of approaches to problem identification and problem solving in education. This includes a survey of research in educational leadership including understanding various issues relative to effective design and interpretation of research studies in educational leadership. Emphasis will be on quantitative, qualitative, and mixed method approaches. Course activities will include lectures and discussions on topics relative to the understanding of educational research, individual and group activities focused on research issues, and individual projects and presentations focused on critical review of extant research studies. EDA7421 - Research Design Seminar 2: Proposal Development

General
Course Description
rerequisite: EDA 7400, EDA 7410, EDA 7420, and EDA 7979
Description: The purpose of this course is to assist doctoral students prepare their dissertation proposals. The aim will be to work through the key stages of effective

proposal writing process in a seminar/workshop format. Topics addressed include defining research questions, developing a theoretical/conceptual framework, synthesizing relevant literature, finalizing IRB protocols, utilizing the peer-review process, and other theoretical and methodological topics that are relevant to the task of proposal writing. Please note that some knowledge about framing problems of practice, synthesizing literature, and methods for collecting, coding, analyzing and interpreting data is presumed.

EDA7426 - Academic Writing in Education: Framing Problems of Practice

General

Course Description
Prerequisite: EDA 7420
Description: This course introduces students to the elements of academic writing and how it differs from other types of writing. Students will learn how to develop a research question that addresses a research problem of practice, critically synthesize existing literature in light of an appropriate theoretical framework, and construct an academic argument. The course provides students with a basic introduction to broad categories of research methods.

EDA7979 - Research Design Seminar 1: Advanced Methods

General

Course Description
Prerequisite: EDA 7400, EDA 7420 and EDA 7410
Description: This course includes advanced experiences in designing, conducting, reporting and critiquing quantitative and qualitative research. The aim is to work through the stages of designing a research study using a seminar/workshop format. The particular focus of this course will be on the design, utilization, and reporting of commonly used quantitative and qualitative techniques and methods in education. Specific multivariate quantitative techniques (e.g., multiple linear and logistic regression analysis, and factor analysis) and qualitative data collection and analysis methods (i.e., participant observation, interviews, document analysis, constant comparative method, etc.) relevant to students developing pilot research projects will be discussed.
Repeatability: This course may be repeated up to 12 credits.

EDE4936 - Capstone: Classroom Inquiry for Student Teaching/Internship

General

Course Description
Co-requisite: EDE4943
Description: This capstone course is designed to support student teaching interns as they develop an inquiry stance toward their role as teachers. Teacher candidates participate in regular seminars focused on inquiry. They document ways in which they are engaging in inquiry during their student teaching internship. All degree coursework with the exception of EDE 4943: Student Teaching Internship must be successfully completed prior to registering for this course. Department permission required.

EDF1005 - Introduction to the Teaching Profession

General

Course Description
Description: This is a survey course including historical, sociological and philosophical foundations of education, governance and finance of education, educational policies, legal, moral and ethical issues and the professionalism of teaching. Students will be provided information on the Florida Educator Accomplished Practices, Sunshine State Standards, and the Professional Educator Competencies. Students are required to complete a minimum of 18 hours of field-based experiences with children and youth in schools or similar settings. The experiences should not be conducted via virtual modes of film or Internet. It is highly recommended that this course not be taken concurrently with EDF2085 Diversity for Educators.

EDF2085 - Introduction to Diversity for Educators

General

Course Description
Description: Designed for the prospective educator, this course provides the opportunity to explore issues of diversity, including an understanding of the influence of exceptionalities, culture, family, gender, sexual orientation, socioeconomic status, religion, language of origin, ethnicity, and age upon the educational experience. Students will explore personal attitudes toward diversity and exceptionalities. Students will be provided information on the Florida Educator Accomplished Practices, Sunshine State Standards, and the Professional Educator Competencies. A minimum of 18 hours of field-based experiences working with diverse populations of children and youth in schools or similar settings is required. The experiences should not be conducted via virtual modes of film or Internet. It is highly recommended that this course not be taken concurrently with EDF1005 Introduction to the Teaching Profession.

EDF6237 - Principles of Learning and Introduction to Classroom Assessment

General

Course Description
Description: The purpose of the course is to provide pre-service teachers with an overview of theories of learning and assessment, practices inside and outside the classroom. This course covers major theories of learning (Behaviorism, Social Cognitive Theory, Cognitive Constructivism, Social Constructivism, Socioculturalism, and Information Processing Theory), as well as motivation and development of learners. These theories will be contextualized to classroom and educational applications. This course also includes both formal and informal assessment processes that are intended to help teachers develop a framework of assessment for their classroom and understand the broader framework of state mandated assessment. Assessment processes that promote fairness toward members of cultural minorities, students whose first language is not English, and learners with exceptionalities are included.

EDF7545 - Philosophy of Education

General
Course Description
Co-requisite: EDA 7420
Description: This course is an investigation into the basic assumptions and ideas of education, human nature, and human society, with emphases upon the epistemological, ethical, and value dimensions of education to address questions in and about pedagogy, education policy, and curriculum, as well as the processes of learning, teaching, and leadership. Students will engage in thoughtful analysis of relevant theoretical and empirical literatures regarding personal and formal philosophies and apply that literature to (1) issues of professional practice within their current and/or future professional settings, and (2) their own proposed empirical work (e.g., the doctoral dissertation). This course is a co-requisite with EDA 7420 Foundations of Research in Educational Leadership.

EDG4442 - Elementary Field Experience III

General
Course Description
Prerequisite: EDG3322Co-requisite: SCE4310Description: This penultimate supervised field experience (semester immediately preceding internship/student teaching) provides teacher candidates with the opportunity to design and implement instruction in elementary classrooms under the direction of a mentor teacher and university supervisor. Individual coaching and seminars focus on standards-aligned instructional practices that support diverse learners. The knowledge, skills, and dispositions important for reflective practitioners as described in the Florida Educator Accomplished Practices are emphasized. Department Permission required.

EDG6067 - Introduction to Teacher Inquiry

General

Course Description
Description: This course provides the foundational tools of teacher inquiry for graduate studies in education and prepares graduate students for further action research in which the educator engages in a reflective examination of their own practice. Students will compare models of teacher inquiry, discussing the theoretical frameworks from historical and contemporary perspectives. They will also engage in teacher inquiry in their professional contexts.

EDG6348 - Coaching and Mentoring for Effective Teaching and Instruction

General
Course Description
Description: This course is designed as an introduction to instructional coaching, a form of job-embedded professional learning focused on improving instructional practice in order to improve student learning. It is intended for educators who want to collaborate with a colleague in peer coaching structures and for teacher leaders who want to understand the power of job-embedded coaching. Participants in this course will apply the coaching cycle in an embedded practicum.

EDG6407 - Managing Effective Learning Environments

General
Course Description
This course is structured around four key components: (1) a broad-based theoretical understanding of the attributes of positive effective learning environments; (2) pedagogical and professional knowledge regarding the needs of students as they relate to positive student social maturation and cognitive growth; (3) a systematic and focused continuum of effective strategies for obtaining desired goals that are appropriate to the students, learning context, the specific instructional intents, the teacher's beliefs, existent skills, and knowledge; (4) a philosophical foundation that supports the development and application of the

dispositions appropriate to the profession in all stages of preparation. The course is designed to provide both theoretical knowledge for future cognitive growth, but also to develop management strategies and plans for immediate implementation.

EDG6415 - Principles of Instruction and Classroom Management

General

Course Description
Description: This course provides a foundation for pedagogical and professional knowledge based upon research, thoughtful discussion, reflection and inquiry. As a culturally responsive classroom management course, there is an emphasis on the development of knowledge about the cultural backgrounds of students and families, congruent and nonverbal communication practices, culturally appropriate management strategies, examining one's own assumptions, and the creation of caring, respectful classroom communities that ensure the physically and emotionally safety of all. Specifically, this course addresses the challenges and opportunities in creating effective learning communities in the increasingly diverse classrooms in U.S. public secondary schools.

EDG6427 - Teacher Inquiry for Internship

General

Course Description
Description: The focus of this course is on the development of a systematic form of inquiry that is collective, collaborative, self-reflective, critical, and undertaken by graduate students. The course provides the opportunity for pre-service teachers to acquire skills in question development, data collection, data analysis, and the interpretation and presentation of results. Emphasis is on the classroom as a context for conducting teacher research to: a) increase understanding, b) solve classroom problems, and c) contribute to the body of knowledge about teaching and learning. Students also examine applications of action research in educational decision-making and policy development.

EDG6625 - Curriculum and Assessment Leadership

General

Course Description
Description: This course includes an in-depth study of current issues, trends, and research related to school curricula at the primary, elementary, middle and secondary school levels within regular and exceptional programs. The goal of the course is to provide students an understanding of policies, practices, and procedures related to the development of the K12 school curriculum through the use of school accountability measures and school-wide assessment. Federal and state department of education and information reporting requirements will be studied along with the review of developing and using data collection procedures through the use of technology. Students will study how to effectively use assessment information to drive school improvement.

EDH6031 - Leadership of Student Affairs

General
Course Description
Description: This course is an exploration of leadership on college campuses. As such, it begins by examining conceptual and theoretical concepts and constructs of leadership as well as how student affairs personnel, higher education administrators, and students have developed and enacted notions of leadership. Thus, students will have opportunities to apply what they are learning within authentic leadership contexts. Leadership is viewed through multiple lenses: as an art (especially a performing art), a philosophy, a social science, a lifestyle, and a social contract. Emphasis is given to manifestations of leadership in the higher education setting, which by nature will draw on business, political, sociological, and psychological constructs and approaches. The course is focused in scope on institutional-level leadership within university and college systems.

EDH6635 - Organization and Leadership in Higher Education

General

Course Description
Description: This course explores issues of organization, governance, and leadership practice in two and four-year colleges and universities. The diverse types of American institutions of higher learning are examined in the context of mission and purpose, programs and services, and the needs of both external and internal constituents. The roles of specific leaders are examined, giving attention to the current issues and challenges that each functional unit in an institution must face. This micro-view of leadership roles is framed by examination of the broader issues of mission, administration, governance, and responsiveness to social change

that influence the evolving concept of higher education in American culture.

EDH6648 - Outcomes Assessment in Higher Education

General
Course Description
Prerequiste: EDF 6480
Description: This course provides basic knowledge and the opportunity to develop fundamental skills in the evaluation of higher education and student affairs programs. Greater calls for higher education accountability have placed renewed focus on successful demonstration of program effectiveness. Thus, the focus of the course is on the evaluator's responsibility for designing and implementing a program evaluation, conducting data analysis, and reporting evaluation results. Emphasis is on performing high quality and effective program implementation, outcomes assessment and impact. This course also examines applications for higher education practice and policy development.

EDS6050 - Instructional Leadership (Instructional Leadership IV)

General

Course Description
Description:This course introduces students to the professional knowledge, theories, skills, and dispositions necessary to function as an instructional leader, with emphasis on the supervisory role. The course examines the roles and responsibilities of instructional leaders in the processes of leading effective teaching and learning. Special emphasis is given in this course to the development of knowledge and skills needed for school-based leader's effective assessment of instructional practices, instructional systems, and promoting professional development. Special attention is given to the process of mentoring, coaching, serving as a lead instructor, conducting meetings, and using a clinical development model. The course will include the review of evaluation documents for teachers and school leaders from a variety of levels and sources.

EDS6130 - Human Resource Development in Education (Operational Leadership I)

General

Course Description
Description: This course is a study of the theories, practices, processes and procedures which comprise personnel and supervisory functions within educational organizations. Emphasis is placed on strategic planning, recruitment, selection, induction, assessment and performance appraisal, professional development and collective bargaining. The course will include a review of the use of data-based and shared decision-making strategies to enhance human resource processes with an emphasis on leading professional development and job-embedded professional learning.

EEC3266 - Program Planning: Infants, Toddlers, and Young Children

General

Course Description
Description: This course uses a relationship-based model as a framework for understanding how infants and toddlers grow and learn with the support of their families and teachers. The first section of the course sets the stage by focusing on early experiences, family relationships, theoretical perspectives, and why and how to observe and document children's interests, development, and behavior. The second section describes the remarkable development of children in the prenatal period and in the emotional, social, cognitive, language, and motor domains. The important concept of attachment is described including theories and emotional development. The third section of the course covers day-to-day responsive program planning, guidance, including children with special needs, and professionalism.

EEC3408 - Forming Family, School and Community Partnerships

General

Course Description
The course will focus on the acquisition of knowledge and skills needed for forming effective partnerships with diverse families and community stakeholders. Family systems and their impact on children's development and learning will be

explored. Candidates will identify and implement effective practices to foster family involvement on a number of levels. Candidates will learn effective communication strategies as well as current state and federal initiatives for serving children and families.

EEC4054 - Leadership and Service in Early Childhood Settings

General

Course Description
This course is designed as an introduction to the knowledge, skills, and competencies for responsible service and leadership in diverse early childhood settings and provides preparation for students to be engaged, responsible, and actively involved in community involvement and leadership in the early childhood community. This course will provide the student with early childhood-related community experiences that will foster a realization of the importance of civic engagement to ameliorate the negative impact of social injustice, including the impacts of low socioeconomic status, on young children, families, ethnic minorities, and marginalized populations of our society.

EEC4207 - Measurement, Evaluation, and Planning for Young Children

General
Course Description
Prerequisite or co-requisite: LAE 3210
Description: Students will learn formal and informal strategies related to assessment, analysis, planning and differentiating instruction. Students will select and implement tools and procedures and interpret and apply findings through lesson planning and implementation. This course meets requirements for students in the prek-primary concentration.

EEC4213 - Teaching Literacy in Early Childhood through Grade 3

General
Course Description
Prerequisite: LAE 3210 and EEC 4260
Description: This course is an integrated methods course for Language Arts, Reading and Literature for students in the Early Childhood Major with a focus in prek-primary licensure or a focus in early childhood development. This course provides students with a basic foundation for teaching and assessing beginning reading, writing, and aural or verbal skills through an integrated curriculum format. Students will gain an understanding of the importance of fiction and informational literature, as well as implementing developmentally and culturally appropriate practices.

EEC4245 - Social Studies in Early Childhood through grade 3

General
Course Description
Prerequisite: EEC 4260Description: This course provides an overview of social studies content and ways to effectively integrate the content across the curriculum. The course will include updated research and theory on the developmental practices and principles of teaching young children (through grade 3). Methods of developing students' critical and creative thinking through a focus on social justice, advocacy and democratic principles will be explored. The course includes a 10-hour field experience.

EEC4260 - The Whole Child and Play

General
Course Description
This community-based transformational learning course is designed to enhance the knowledge of young children, increase engagement in the early childhood community, and provide opportunities for professional growth. Topics include developmentally appropriate practices related to play and learning; an overview of the benefits of play in childhood (birth to 18); an overview of play theories; and the

influence of environments on stages, types, and elements of play across the lifespan as well as curriculum, policies, and program development related to play and trauma-informed practice using current state and national standards

EEC4410 - Global Community Engagement

General

Course Description
In concert with the College of Education and Human Service's mission to collaborate with local, regional, national, and international stakeholders to promote transformational learning experiences for our students, this course will provide teacher candidates and students an opportunity to put into practice their knowledge of leadership and principles of service learning in a variety of real-world educational settings. As part of this experience, teacher candidates and students will gain an understanding of the educational setting and factors that impact education, including the political, historical, cultural, and social issues.

EEC4940 - Childhood Practicum

General
Course Description
This course provides students with the opportunity to work in early childhood settings. Students are expected to demonstrate competencies in teaching, assessment, and meeting the needs of all children and families with the guidance of a cooperating master teacher, coach, program area leader or the college internship supervisor. Students may complete the practicum in their work setting with the approval of advising and program area leaders. All students must complete the required background clearance process prior to any work with children. EDF 3945 and/or EDF 3946 may be substituted with advisor approval. Department Permission Required.

EEC4942 - EC Student Internship

General
Course Description
This internship allows candidates to demonstrate the knowledge, skills, and dispositions of effective and reflective practitioners. Candidates will demonstrate their ability to effectively teach and assess all children. The course includes seminars and structured field experiences in public school settings. Candidates will demonstrate proficiency with the Florida Educator Accomplished Practices and integrate the knowledge, skills, and dispositions addressed in other program courses. They will demonstrate the knowledge and skills to design, teach, and assess effective lessons in diverse learning communities. They will demonstrate an appreciation and understanding of the multicultural composition of our population and those students for whom English may be a second language. Department Permission Required.

EEC6261 - Program Planning for Infants, Toddlers, and Young Children

General

Course Description
Description: This course provides students with an understanding of culturally, linguistically, and developmentally appropriate programs in community settings providing services to infants, toddlers, young children, and their families. It emphasizes the importance of understanding the nature of infants, toddlers, and young children, and how they learn, with a focus on understanding the developmental domains. Special emphasis is put on the necessity of understanding the infant, toddler, and young child in the context of his or her family and community.

EEC6756 - Social-Emotional Learning and the Young Child

General

Course Description
Examine the importance of social-emotional learning and the young child (ages 0-8). The scope of the course will include: defining emotions, exploring how children develop socially and emotionally, defining an emotion-centered curriculum, exploring the connections between social development and other domains of development: cognition, language, and adaptive. We will pay particular attention to the role that parent-child and teacher-child interactions play in the normative development of children's social competence.

EEE4290C - Biomedical Engineering Research Methods

General

Course Description
Prerequisite: EEL3111
Description: This course is an introduction to methodology applied to research involving human subjects. Students will understand ethical issues related to biomedical, behavioral and clinical research. Historic and current information on regulatory and ethical issues will be reviewed, including the role of federal agencies such as the FDA. Basic information about human subject protection, regulations and Institutional Review Boards (IRBs), including the role, authority, and composition of the IRB will be provided. Students will be introduced to the approval process for commercialization of new medical devices. Students will design, collect and analyze data as part of a human subject research project.

General
Course Description
Prerequisite: EEL 3111
Description: This course introduces the physical characteristics of wireless transmission systems and their practical applications (including topics such as 3G, 4G and 5G mobile wireless technologies, Wi-Fi, Wi-Max, LTE, mobile ad-hoc networks and satellite networks). This course will build a basic understanding of designing and analysis of wireless and mobile communication systems.

EEL4610 - State-Space Control Systems

General
Course Description
Prerequisites: EEL 3135 or EML4312.
Description: This course uses the state-space method to design and analyze feedback control systems. Topics include the review of linear algebra, state-space modeling of control systems using differential equations and their solutions, stability, controllability, shaping of dynamic responses, observability, state estimation, and advanced topics selected from optimal control, optimal estimation and their associated computational methods. Computer-aided control system design software is used extensively in the course.

EEL4657 - Linear Control Systems

General
Course Description
Prerequisite: EEL 3135 and STA 4321
Description: This course covers the design and analysis of control systems using transfer function-based methods. Topics include modeling of physical systems as transfer functions, stability analysis, design specifications, design of controllers by root locus method, frequency response techniques, computer-aided analysis and design.

EEL4712 - Digital Design

General

Course Description
Prerequisite: EEL 3701 and EEL 3701L
Description: This course covers the analysis, design, simulation, and implementation of advanced combinational logic circuits and synchronous / asynchronous state machines using modern programmable logic devices. Electrical and timing characteristics of physical devices are covered. CAD-based design and development using hardware description languages are used throughout the course.

EEL4914 - Senior Capstone Design I

General

Course Description
Prerequisite: ENC 3246, EEL 4744C, EEE 4309, and EEE 4309LDescription: This course is the first part of a two-semester team design project. Teams are responsible for preparing a project proposal including a problem statement and need identification, concept generation and down selection and a project design. Teams are further required to develop and demonstrate a proof of concept or prototype. Additional topics covered include ethics, safety, and intellectual property such as copyrights, trademarks and patents. A final project proposal oral presentation is required.Course Fees: $75

EEL4955 - Electrical Engineering Study Abroad

General

Course Description
Description: In this course students will study electrical engineering related practices in a foreign country. During the course, the student will: understand the culture, geography, history, and politics of the country; travel to the country; study the difference between engineering in the U.S. and that country; and learn about current issues facing that nation. The course will have three phases: pre-trip preparation and orientation, foreign travel, and post-trip work.

EEX3250 - Reading Methods for Learners with Exceptionalities

General

Course Description
Prerequisite or Co-requisite: EEX 3202 and EEX 4101
Description: This reading methods course focuses on the principles of scientifically-based reading research as the foundation of comprehensive reading instruction. The assessment and development of the major components of phonemic awareness, phonics, fluency, vocabulary, and comprehension are discussed. Included in this course is the development of standards-based lessons and strategies for differentiating instruction to accommodate diverse learners. The purpose of the course is to prepare pre-service teachers to teach reading to students with a wide range of abilities, including those who are also English Language Learners. Field experience is required.

EEX3843 - Clinical: Community and Participation

General

Course Description
This course provides a clinical experience in a setting related to disability community and participation. The course focuses on the knowledge, skills, and dispositions that lead to the development of effective and reflective practitioners in disability community agencies, and assisting individuals with disabilities in accessing, participating and living meaningfully in the community. This clinical course focuses on the many roles of the disability services professional. It is a supervised, structured field experience in select professional organizations designed to assist individuals with disabilities in individualized independent living outcomes. The course provides disability services candidates with the opportunity to link theory and practice through inquiry, seminars and structured field experiences in disability community agencies.This is a required course for disability services majors.

EEX3844 - Clinical: Family and Social Capital

General

Course Description
This course offers a clinical experience in a family and social capital setting for individuals with disabilities. It focuses on the knowledge, skills, and dispositions that lead to the development of effective and reflective practitioners in collaboration with families of persons with disabilities, and assisting individuals in developing meaningful social relationships and outcomes. This clinical course focuses on the many roles of the disability services professional. It is a supervised, structured field experience in selected professional organizations designed to assist in supporting family members and providing social experiences for persons with disabilities. The course provides disability services candidates with the opportunity to link theory and practice trough inquiry, seminars and structured field experiences in community settings.

This is a required course for disability services concentration majors.

EEX4257 - Literacy Assessment for All Learners

General

Course Description
Co-requisite: EDF3947
Description: In this course, students learn how to assess the six components of reading (i.e., comprehension, oral language, phonological awareness, phonics, fluency, and vocabulary) and writing for all learners, including those with exceptionalities such as dyslexia and autism.

EEX4270 - High-Leverage Practices for Exceptional Learners 1

General

Course Description
Description: The purpose of this course is to provide teacher candidates with: a) knowledge about curriculum and instruction for students with disabilities; b) understanding and developing Individualized Education Plans; and (c) opportunities for experience and application of instructional strategies across a variety of classroom contexts and settings; Teacher candidates will explore strategies through reading literature, writing, reflecting, experimenting, and sharing their work in a collaborative setting. Teacher candidates will come to understand the importance of using individualized, evidence-based instructional practices for teaching students with disabilities.

EEX4275 - Instructional Strategies for Teaching Exceptional Learners in General Education Settings

General
Course Description
This course provides students with background knowledge related to special education laws and regulations, terminology, disability categories, characteristics of students with disabilities, and collaboration among educators and parents. Additionally, this course focuses on identifying evidence-based instructional and behavior strategies for teaching students with disabilities in general education settings.

EEX4345 - Introduction to Inquiry and Assessment

General

Course Description
Description: The purpose of this course is to provide teacher candidates with: a) knowledge about teacher inquiry and assessment; b) opportunities for experience using inquiry skills and assessment practices; and c) a foundation for implementing reflective, systematic, and thoughtful inquiry into classroom practice. Teacher candidates will explore relevant classroom practice issues through writing, reflections, experimenting with teacher inquiry strategies, and sharing their work in a collaborative setting. Through the critical reading of teacher inquiry studies and experimentation with teacher inquiry strategies, teacher candidates come to recognize the value of inquiry and assessment as a way to make more informed decisions about practice.

EEX4604 - Classroom and Behavior Management

General
Course Description
In this course, students are being prepared to impact the lives of children by the acquisition of knowledge and skills in behavior and classroom management and applying such knowledge and skills to learners with exceptionalities. This course provides teacher candidates with an opportunity to: (1) design, manage and maintain safe school and classroom environments conducive to learning; (2) implement teaching and intervention strategies derived from theory and best practice specifically designed to improve appropriate desirable behaviors and reduce behaviors that detract from the learning process; (3) analyze the relationship between behavior and environmental antecedents and consequences; (4) examine and apply how manipulations in environmental variables can increase appropriate behavior and decrease inappropriate behavior; and (5) explore legal and ethical issues related to managing student behavior.

EEX4616 - Classroom Management of Learners with Exceptionalities

General
Course Description
Prerequisites: EEX 3202 and EEX 4604.
This course is designed to help students in developing a personal philosophy of classroom management. This course explores several theories of classroom management and emphasizes strategies that are designed to meet the needs of children with exceptionalities. Students will learn how to (a) design, manage, and maintain safe school and classroom environment conductive to learning, (b) implement teaching strategies derived from theory and best practices, and (c) complete a classroom management plan and philosophy of education.

EEX4753 - Cooperative Consultation in Special Education

General
Course Description
The focus of this course is on implementing collaboration practices to build effective relationships and create a better understanding of the characteristics and educational needs of students with disabilities. This course focuses on the acquisition of knowledge and skills in communication, collaboration, and consultation and application of such knowledge and skills to interactions special educators have with general educators, administrators, parents, agency personnel and other stakeholders in the lives of individuals with disabilities. Students will examine specific techniques, related media, and experiences designed to equip special education teachers and related service providers with skills to collaborate with school and community professionals, disability service providers and families, to provide a necessary range of services to students.

EEX5619 - ABA in Dev Disabilities and Autism

General

Course Description
Prerequisites: EEX 5612, EEX 5617
The course is designed to familiarize students with the behavior-analytic research on the treatment of individuals with developmental disabilities, including autism. The course will provide an overview of common developmental disabilities and the characteristics of autism. The primary focus of the course will be on assessment and intervention procedures and specific behavior analytic teaching methods for use with individuals with developmental disabilities. Students will encounter conceptual readings, manuals, handouts, and research articles evaluating the utility of various methods being discussed. Students are expected to participate fully in class discussions, drawing from the assigned weekly readings and relevant social and professional experiences.

EEX6615 - Implementation of Evidence Based Behavioral Intervention

General

Course Description
Prerequisite: EEX6636
Description: Behavior analysts are research practitioners, meaning that they engage in research-informed practice and use measurement and single case research methods to evaluate the effects of intervention on client behavior. A fundamental skill for behavior analysts is the implementation and evaluation of evidence-based behavioral interventions using methods based in single case research design. In this course, students will implement an intervention plan and monitor the effects of the intervention on client behavior. Students will engage in data-based decision making, measurement of social validity, and measurement of fidelity of implementation.

EEX6617 - Comprehensive Behavioral Intervention for Skill Acquisition

General

Course Description
Prerequisite: EEX5308
Description: Applied behavior analysis is the application of behavioral principles to change socially significant behavior. A major area of focus in research and practice related to applied behavior analysis is in intervention to teach new skills and maintain established skills. In this class, students will learn theory and practice related to the development and implementation of comprehensive behavioral intervention that targets skill acquisition. Specific content includes: best practice in comprehensive assessment, instructional design, behavioral strategies to develop and maintain target skills and behaviors.

EEX6635 - Positive Behavioral Interventions and Supports

General
Course Description
Challenging behavior represents a major area of concern for individuals, their families, and the professionals who work with them. In this class, students will learn the theory and practice to support the implementation of positive behavioral supports and interventions to prevent and address challenging behavior. Specific content includes tiered systems of support, functional behavior assessment, behavior intervention planning, contextual behavioral assessment and intervention, and working within systems to prevent and address challenging behavior at the individual level.

EEX6636 - Research-Based Design for Behavioral Intervention

General
Course Description
Prerequisite: EEX5308 and EEX6853
Description: Behavior analysts are research practitioners, meaning that they engage in research informed practice and use measurement and single case research methods to evaluate the effects of intervention on client behavior. A fundamental skill for behavior analysts is the ability to identify, interpret, and apply research to inform intervention development. In this course, students will use existing literature to design an intervention and a plan to collect data on that intervention to evaluate progress.

EEX6664 - Advanced Practices in Applied Behavior Analysis

General
Course Description
Prerequisites: EEX5308 and EEX6635
Description: Behavior analysts must address complex behaviors in diverse settings. This course will build upon basic behavioral concepts, principles, and practices to prepare students to meet the diverse, and often complex, needs of their clients. Content covered in this course will include behavioral theory, verbal behavior, functional analysis, and contemporary issues of behavioral theory and practice.

EEX6668 - Behaviorism

General

Course Description
Prerequisite: EEX 5612
Description: The course will engage the students in an examination of the underlying concepts, theories and philosophies of behavior analysis. Specifically, the course will cover a review of the history and scientific underpinnings of behavior analysis. Additionally, students will discuss types of behaviorism, such as Radical Behaviorism. Finally, students will engage in discussions of application of behaviorism to various domains of behavior, such as perception, emotion, language, etc. EEX 5612 Principles of Applied Behavior Analysis I is a prerequisite. This course will address content specific to the Behavior Analyst Certification Board (BACB) or Association for Behavior Analysis (ABAI) Task List.

EEX6669 - Organizational Behavior Management

General

Course Description
Prerequisite: EEX5612
Description: The course will engage the students in the application of the science of behavior analysis within organizations. Specifically, the course will cover performance management, including supervision, performance monitoring, and performance diagnostics. Additionally, students will be introduced to behavioral systems analysis, behavioral leadership, and behavior-based safety. EEX 5612 Principles of ABA I is a prerequisite.
This course will address content specific to the Behavior Analyst Certification Board (BACB) or Association for Behavior Analysis International (ABAI) Task List

EEX6747 - Ethics and Professionalism in Applied Behavior Analysis and Exceptional Student Education

General

Course Description
Prerequisite: EEX6627
Description: Ethical and professional behavior are essential to practice as a behavior analyst. In this class, students will become acquainted with the Ethics Code for Behavior Analysts© and will relate the Ethics Code to ethical guidelines in related educational fields. Students will engage in ethical decision making, using core principles that behavior analysts should (a) benefit others, (b) treat others with compassion, dignity, and respect, (c) behave with integrity, and (d) ensure their own competence.

EEX6849 - Practicum in Exceptional Student Education: Professional

General
Course Description
In consonance with the conceptual framework, this course is focused on the acquisition of the knowledge, skills, instructional and cognitive strategies, and dispositions relevant to key aspects of conceptual teaching and learning. It embraces the vision of the College of Education and Human Services that enables candidates to be active leaders and responsive partners in the study of teaching and learning within diverse learning communities. This course encourages candidates to be reflective, analytic practitioners who are well grounded in content and pedagogy.

EHD4013 - Deafness and Diversity

General
Course Description
Description: This course is designed to prepare teacher candidates to work students who are deaf and diverse: deaf with disabilities (DWD; e.g., autism, intellectual disabilities) and/or students who are deaf or hard of hearing multilingual learners (DML). Students who are DML come from homes where their caregivers speak a language other than English, nor do they use American Sign Language. This course will address the complex issues and practices that are embedded in the working with families and service providers, identifying resources

needed to best meet the needs of the learner, and understanding identification, placement, assessment, and intervention strategies for students who are Deaf and Diverse. Field experience required.

EHD4245 - Language and Literacy Assessment & Instruction for DHH Students

General

Course Description
Prerequisites: ASL4131.
Description: This course is focused on methods of language development assessment and instruction with deaf or hard of hearing (DHH) children. Students will develop an understanding of typical language development and the effects of hearing loss on the development of language. They will learn about informal and formal assessments of both through-the-air (signed or spoken) and written language and analyze language samples. They will then learn how to use assessments to plan and provide instruction aimed at facilitating the language acquisition and development of DHH students.

EHD4263 - Methods of Teaching Listening and Spoken Language to DHH Students

General

Course Description
Prerequisite: ASL 4131
Description: The purpose of this course is to provide learners with the knowledge base to understand instructional methods of teaching deaf and hard of hearing students who use listening and spoken language. The areas to be covered include the anatomy and physiology of speech mechanisms, practical orthographic representations of speech, introductory phonetics and phonology, functional descriptions of speech sound production, and basic speech acoustics. Learners will also be trained in the assessment of speech, teaching sequence of speech skills, and specific strategies for the elicitation, development, transfer and maintenance.

EHD4290 - Differentiating Literacy Instruction for Deaf and Hard of Hearing Students

General
Course Description
Prerequisite: EHD 4245, LAE 3210 and LEA 3211
Description: This is the fourth language & literacy course in the deaf education program. It follows courses in the foundations of language and literacy development including methods, resources, strategies, and assessments for language and literacy teaching and learning. The pre-requisites include EHD 4245 Language and Literacy Assessment and Instruction, LAE 3210 Foundations of Literacy, and LAE 3211 Literacy Instruction & Assessment. This course focuses on differentiating reading and writing instruction for deaf and hard of hearing (DHH) students and requires the application of skills in a field component with DHH students. It will enable teacher of the deaf candidates to assess DHH students using a wide variety of literacy assessments, to identify strengths and opportunities for growth, and to provide targeted instruction and intervention aimed at individual objectives.

EHD4291 - Content Area Curriculum & Instruction for DHH Students

General
Course Description
Prerequisite: EHD 4311 and ASL 4131
Description: This course is designed to give learners the opportunity to learn about pedagogy and curriculum as related to educating students who are Deaf or hard of hearing. Learners completing this course satisfactorily will be able to plan yearly, monthly, weekly, and daily lessons using a variety of formats. Learners will be introduced to instructional skills in the areas of assessment, planning, implementation, and evaluation. In addition, learners will be able to practice many of the technical skills needed to prepare instructional materials for the classroom. The learner will also be introduced to the development and adaptation of curriculum materials and instructional procedures in reading, mathematics, science, and social studies to fit the unique educational needs of students who are deaf or hard of hearing.

EHD4293 - Reading Instruction and Assessment for Students who are Deaf or Hard of Hearing

General

Course Description
Prerequisite: EHD 4245
Co-requisite: EHD 4940
Description: he course will provide learners with both a theoretical foundation of teaching reading to students with hearing loss and practice experiences. The reading, discussions, and guest lectures will provide learners with practical strategies. Learners will engage in reading instruction with K-12 students to practice skills learned in the university classroom. In this course learners will be able to describe the foundations of reading (i.e., cognition and language development) and implement assessments, including reading inventories. The learners will be able to describe current reading theories and models of reading, describe literacy development of students with hearing loss and plan and implement a literacy program for deaf students.

EHD6361 - Math/Science/Social Studies Instruction for the Deaf

General

Course Description
Prerequisite: EHD 5341. In this course, students will learn about curriculum trends, teaching techniques, and appropriate media for teaching math, science, social studies to students who are deaf or hard of hearing. Students will learn about current curricula in use with these students. Field experience required.

EIN3003 - Fundamentals of Industrial Engineering

General

Course Description
Prerequisite: STA3032 and EGN1001C
Description: This course aims to expose the students at an introductory level to the basic concepts of a range of topics in industrial engineering and to demonstrate how and why the application of such concepts is effective. Accordingly, it introduces fundamental knowledge in supply chain management and logistics with specific attention to the interplay between manufacturing systems, process planning, and the flow of resources. Among the topics are classification and design of production systems, production planning, inventory management techniques, and demand forecasting problems.

EIN3304 - Thermofluids for Manufacturing

General

Course Description
Prerequisite: EGN3321 and CHM2045
Description: This course introduces the areas of thermodynamics, fluid dynamics, and heat and mass transfer as applicable to manufacturing settings. The topics of this course include introductory thermodynamics, thermodynamic cycles and cycle analysis, fluid statics and dynamics, mechanisms of heat transfer, and applications of heating and cooling to manufacturing systems and hardware.

EIN3390 - Materials Processing

General

Course Description
Prerequisite: EMA3010
Description: This course introduces the methods by which raw and precursor materials are created and by which end use products are fabricated. Students will develop an understanding of how the structure-processing –property relationship of given materials informs manufacturing process selection and product design.

EIN3621 - Computer Aided Manufacturing

General
Course Description
Prerequisite : STA3032, EEL3111, and EML3535C
Description: This course provides an introduction to modern computing hardware and software in manufacturing, covering topics such as computer-aided design (CAD), computer-aided manufacturing (CAM), and product data management (PDM). The course also covers the mathematical principles and tools for optimizing tool path design in additive and subtractive manufacturing processes. Students will learn to use CAD and CAM software and simulation tools to design and manufacture a part that meets technical requirements and constraints. Additionally, the course will cover the development and programming of microcontroller-based systems (e.g., Arduino) for simulating control and automation of manufacturing processes.

EIN3800 - Subtractive Manufacturing

General
Course Description
Prerequisite: EML4320C and EIN3390
Description: Building on the fundamentals of machining and metal cutting, this course furthers the theoretical and applied knowledge of subtractive manufacturing techniques such as: milling, turning, grinding, electric discharge machining, plasma cutting, water-jet cutting, and surface modification. Further, this course reviews the interplay between material selection, engineering design, subtractive manufacturing methods, tooling, machinery, and machining economics.

EIN3801 - Additive and Netshape Manufacturing

General

Course Description
Prerequisites: EML4320C and EIN3390
Description: Building on the fundamentals of additive and net shape manufacturing, this course expands on the theoretical and applied principles of techniques such as casting, molding, extrusion, rolling, forging, 3D printing, metallization, and additive surface treatments. Further, this course reviews the interplay between material selection, engineering design, additive manufacturing method, machinery, and production economics.

EIN4519 - Manufacturing Systems Integration

General

Course Description
Prerequisites: EML4320C and STA3032
Description: This course introduces enterprise level analysis of the planning, evaluation, deployment, and integration of manufacturing theory and methods in production settings. It emphasizes the plant-level interrelationships between manufacturing methods, human factors, and process monitoring and control. Further, this course surveys current and emerging technologies, techniques, and strategies that can increase a manufacturing enterprise's responsiveness to volatile markets and enhance the use of internal engineering and business to increase profitability. Topics include engineering product design for manufacturability, production planning and control, lean manufacturing, mass customization, reconfigurable manufacturing systems, and supply chain resource management.

EIN4602C - Control of Machinery for Manufacturing

General

Course Description
Prerequisites: EGN3321 and EIN3621
Description: This course introduces the theory and application of feedback control in automated manufacturing systems. The topics of the course include: (1) modeling and analysis of modern manufacturing hardware such as robots, machining centers, sensors, and actuators, (2) the theory and application of feedback control algorithms such as on/off, PID, lead/lag compensation, and state control in manufacturing systems, and (3) the implementation of control logic on programmable logic controller (PLC) systems.

EME1000 - Introduction to Learning Design and Technology

General

Course Description
This course provides students with a foundational overview of learning design theory and trends. Students will explore key concepts in design thinking, instructional design and learning trends which support learners in education and workplace settings. Course concepts will be explored through project development resulting in a foundational e-Portfolio to demonstrate core competencies in learning design and technology.

EME2040 - Introduction to Educational Technology for Learning Professionals

General

Course Description
Description: Students will learn the application of instructional design principles for the use of technology to enhance the quality of teaching and learning in the classroom. The course includes hands-on experience with educational media, emerging technologies, and hardware, software, and peripherals for the personal computer as well as data-driven decision-making processes. Students also learn the identification of appropriate software for classroom applications, classroom procedures for integrating technologies with emphasis on legal and ethical use, and effective instructional strategies for teachers and students in regard to research, analysis, and demonstration of technology. Students will be provided an overview of the Florida Educator Accomplished Practices, Sunshine State Standards, the Professional Educator Competencies, and the National Educational Technology Standards.

EME3045 - Technology Tools and Skills for Effective Communication

General

Course Description
Description: This course provides learners with strategies and applications for communication tools which support learning design systems, including organizational practice for eLearning communication. Course content focuses on a variety of methods in which many organizations integrate communication tools as a way of sharing information. This course requires students to use and apply technology tools for training and development purposes, including (but not limited to) cloud-based sharing, learning management systems, social media and beyond. Writing design elements will also be highlighted to demonstrate best writing practices and strategies for accessibility and effective communication.

General

Course Description
Description: This course provides learners with strategies and applications for designing learning to organize, structure, create and present effective and engaging presentations for training and education. Course content focuses on a variety of methods in which many organizations integrate presentation tools as a way of sharing information. This course requires students to develop effective and persuasive uses of presentation software in the teaching/training environment, including (but not limited to) PowerPoint, Keynote, Google Presentation, Prezi, Knovio, and beyond. Design elements will be highlighted to demonstrate best strategies for designing presentations for accessibility and design value.

EME3342 - Data Analysis and Visualization Design for Instruction

General

Course Description
Prerequisite: STA2014
Description: This course is an overview of central concepts for collecting, analyzing, and creating engaging, informative and accessible graphics for data visualizations. This is an introductory course in the use of data application and is designed to provide a working knowledge of data collection, spreadsheet use, formula creation and use, statistics application, and data display. Effective visual storytelling through information graphics will be developed through analytical skills, design principles and accessibility practices. Students will create portfolio

artifacts from data collected from various formats and collections. Artifacts will be based on authentic design needs with potential use in presentations, reports and learning experiences.

EME4223 - Gamification of Learning

General

Course Description
This course provides an overview of gamification and the application of game thinking and mechanics to teaching and learning in various contexts. A few theories will be explored, from flow to self-determination theory. Along with theory, students will apply strategies to design challenges. Additionally, projects will focus on what (gamification) is to how it can be leveraged for learning design.

Use of game elements for non-game contexts will be highlighted (badging, leaderboards, quests, avatars, etc.), and gamifying learning experiences in the workplace for training purposes will be addressed.

EME5403 - Technology in Education

General

Course Description
Description: The content in this survey course for teachers and administrators emphasizes technology as a personal and professional productivity tool. Students will use technology for communicating, solving problems, and participating in activities that encourage lifelong learning. Students are prepared as educators to use technology to support and enhance teaching and learning. The course content includes equitable, ethical, and legal issues in educational technology.

EME6046 - Technology and Literacy

General

Course Description
Description: This course is designed to introduce all teachers and future teachers to the concepts of how literacy (reading and writing) can be supported and developed with technology, incorporating computer technology beyond simple word processing in the teaching of writing. During this class you will have the opportunity to investigate, experiment with and use the following: eBooks, presentation software, the Internet, educational software, multimedia programs, and more. Course topics include the digital scaffolding tools, technology for accommodations, digital reading options, and electronic books in many forms.

EME6055 - Trends and Issues in Technology, Education, and Training

General

Course Description
Description: This course is a special topics course that provides an overview of current issues and trends. Course topics may include theoretical and practical approaches to identifying technology's impact on culture, learning systems, identity, organizations, and industries. Through critical inquiry, students will explore connections between community, culture and technology based in current literature. Students will analyze these issues in context through a technology leadership lens to identify past, present and future implications for learning.

EME6061 - Educational Technology Portfolio

General
Course Description
Description: Graduate students seeking a master's of Educational Leadership with a concentration in Educational Technology must develop an Educational Technology Portfolio to document mastery of all the major International Society for Technology in Education (ISTE) competency areas for educational technology leadership as part of the requirements for graduation. This portfolio should demonstrate the students' conscious reflection upon their learning, to help guide and expand their understanding. While the portfolio is an ongoing assignment throughout the program, during this course the educational leadership technology portfolio is to be submitted to the educational technology faculty advisor. This course is to be taken during the last semester of the program, when the student is planning on graduating.

EME6226 - Gamification of Learning

General
Course Description
This course provides an overview of gamification strategies used to increase learner engagement. In this course, students will apply these strategies rooted in game thinking and mechanics to teaching and learning in various contexts, including training. A number of theories will be explored, from flow theory to self-determination and embedding these practices in design challenges and projects. The course will explore how the use of game elements for non-game contexts can be applied (badging, leaderboards, rewards, celebrations, etc.), as well as explore online tools that can further gamify learning experiences.

EME6344 - Lifelong Learning and Professional Development

General
Course Description
Description: This seminar is designed for those who plan to work with adults in various learning contexts including academic and career preparation, professional development, inservice training, and continuing education. Students will explore the psychological, sociological, and economic dimensions of adult learning in the American experience. Emphasis will be given to the application of theory to contemporary practice in the formal provision of educational activities for adults.

EME6346 - Needs Analysis, Assessment & Data Visualization

General

Course Description
This course is an overview of central concepts and emerging trends for collecting, analyzing, and creating engaging, informative and accessible graphics for data visualizations. This course in the collection of information, inquiry and use of data applied to provide a working knowledge of data use and display. Effective visual storytelling through visuals will be developed through analytical skills, design principles and accessibility practices. Students will create authentic artifacts from data collected from various sources and collections.

EME6405 - Educational Web Design

General
Course Description
Prerequisite: EME 5403 or EDA 6271, or permission of the course instructor
Description: Students in this course develop competencies in evaluating web pages for educational use, and in designing and producing effective web pages for school and classroom. Students will be prepared educators to create online content and tools for learning. Students develop their understanding of web design principles, multimedia, HTML, needs assessment, instructional design web publishing and usability testing.

EME6409 - Interactive Distance Education

General
Course Description
Prerequisite: EME 5403 or EDA 6271, or permission of course instructor
Description: This course explores forms of synchronous and asynchronous interactive distance education from perspectives of theory and practice. Designed for K-12 and higher education instructors and administrators, as well as trainers and instructional designers from other professional settings, the course focuses on the interpretation and application of theory, research, and standards-based effective practices to the design, development, and evaluation of distance education experiences. Skills and knowledge acquired in the course will contribute to distance and classroom teaching capabilities.

EME6442 - Curriculum and Instruction for Adult Learning

General

Course Description
Prerequisites: This is an advanced course that presents the principles of adult learning and instruction. Attention is given to those situations, factors, and methods that may influence how adults learn in a variety of traditional, non-traditional, and multimedia/telecommunication settings. An analysis of several teaching models and instructional approaches for creating learning environments for adults appropriate for community colleges, continuing education, and training and development will be focal element of the course. This will be achieved through study, development, and application of different models of instructional designs for adult learners as well as identifying and evaluating variables related to these models.

EME6609 - Universal Design for Learning (UDL): Diversity and Inclusion Practices for Training and Development

General

Course Description
Description: Students in this course will have the opportunity to explore concepts and practice as they relates to the Universal Design for Learning as a framework for removing barriers to learning for all students. This course focuses on a mindset, analysis and practice approach to exploring Universal Design for Learning (UDL) in

various contexts. This course includes diverse learning activities such as discussions, reflections and problem-based learning activities to support students' development and understanding of Universal Design for Learning. Students will apply Universal Design for Learning principles to the design of accessible instructional materials including but not limited to technology-based strategies and beyond.

EME6678 - Effective Training Design and Development

General

Course Description
Description: Training and development can be described as "an educational process which involves the sharpening of skills, concepts, changing of attitude and gaining more knowledge to enhance the performance of employees". The field of adult education is characterized by a huge array of programs, agencies, and personnel working to assist adults in their learning. The nature of adults as learners and the distinguishing characteristics of the adult learning process differentiate adult education from other types of education. In concurrence with the Association of Training and Development's (ATD) conceptual framework, this course provides a rigorous study of the functions and roles of individual employee and team training and development to ensure effective performance. This course examines the role of training from a strategic perspective including planning and assessment, design and delivery, evaluation of training and integration of training with performance management.

EME6956 - Graduate Capstone: Applied Research & Field Experience

General

Course Description
This course is designed to provide students with direct field experiences for applied practice opportunities. Students will demonstrate mastery of the program's outcomes including skills and strategies developed during the academic program. Students will apply their knowledge in field as well as through eLearning development that incorporates principles and practice acquired. Students will work with field experiences to identify a proposed area of research to be completed upon graduation and entry into the field.

EML3015 - Fluids

General
Course Description
Prerequisite: EGN 3311 and EML 3100
Co-requisite: EGN 3321
Description: The purpose of the course is to introduce the fundamental principles of fluid mechanics, including fluid statics, fluid kinematics, and the dynamic equations for fluid mass, momentum and energy conservation. Also, the fundamental principles of fluid mechanics are used to solve basic engineering problems involving incompressible flow.

EML4301C - Control of Machinery

General

Course Description
Prerequisite: EML 4312
Description: This course covers the theory and design of linear systems control techniques applied to control of machinery. The study of design and implementation of control systems using conventional automatic controllers for linear systems, compensation techniques, and discrete-time control systems for machine control is covered. One or more advanced topics in modern control theory including adaptive control, optimal control, control of nonlinear systems are introduced. Simulation and/or hardware of modern control systems is covered.

EML4312 - Modeling and Analysis of Dynamic Systems

General

Course Description
Prerequisite: EEL 3111, EGN 3203, and EGN 3321.
Description: This course subject is dynamic modeling and analysis of physical systems with emphasis on mechanical systems engineering. The course makes use of systems modeling techniques to model mechanical systems as well as mixed-up energy systems including mechanical translation, mechanical rotation, electrical, and fluid subsystems. Computer analysis tools are included and projects are augmented with laboratory equipment. Introduction to linear systems with feedback control is also presented.

EML4328C - Applied Programmable Logic Controllers for ME

General
Course Description
Prerequisite: EEL3111
Description: This course introduces students to the hardware and programming utilized to control processes in modern manufacturing settings. The course begins with a survey of the operating principles of hardware including programmable logic controllers (PLCS), sensors, motion control, temperature control, pressure control, and others. The course introduces the fundamentals and application of two-position and PID control. The course then transitions to hands-on laboratories utilizing modern PLC hardware and software to perform specific tasks pertinent to manufacturing processes.

EML4541 - Design Against Mechanical Failure

General
Course Description
Prerequisites: EMA3010, EGN3331, and EML3535C
Description: This course builds on the fundamentals covered in solid mechanics and material science by providing perspective on the most dominant mechanical failures in the real world. These failures include applications of failure theories to multiaxial stress states for various types of materials, fracture mechanics, fatigue, wear, fretting, and instability. The course is taught from practical perspective where the student learns how to analyze and design against failure modes using commercial engineering software used in industry, including ANSYS, nCode, and CAD.

EML4950C - Formula Race Car

General

Course Description
With the approval of the instructor, students select team partners and choose a Formula SAE race car project from a set supplied by the instructor. Teams are responsible for preparing several oral presentations (technical specifications, project proposal, and a final design project). In addition, teams are required to complete a written design report. Teams are further required to develop and demonstrate a proof of concept or prototype. In addition, a broad introduction to achieving the fastest times for a Formula SAE race car through automotive engineering is covered.

EML5808 - Robotics Engineering II

General

Course Description
Prerequisite: EML 4313 or equivalent, EML 4806 or equivalent
Description: This course provides an introduction to control techniques associated with spatial serial and parallel manipulator systems. Velocity and force/torque relations and resolved motion rate control for serial and parallel manipulators are covered. State-space equations of robots, controller design based on linearization, nonlinearity cancellation, optimal control, adaptive control and other methods are studied.

EML6311 - Modern Control Engineering

General

Course Description
Prerequisite: EML 4313
Description: This course covers the analysis and design of dynamic mechanical engineering control systems. Model reference control, state-space control system design, stability, transient response, frequency response with implementation considerations are covered. Advanced topics in intelligent control including optimal control, adaptive control, and fuzzy systems, neural networks and their implementation are also included.

EML6508 - Finite Element Modeling and Analysis

General

Course Description
Prerequisite: Mechanical Engineering graduate standing or permission by instructor.
Description: Students will be exposed to the theoretical background and real life applications of finite element modeling and analysis. Topics will include modeling and analysis of mechanical systems, including stiffness matrices, load and boundary conditions, degrees of freedom, and mesh techniques. In-house modeling and analysis software will be used.

ENC3375 - Introduction to Fandom Studies

General
Course Description
Description: This course introduces students to the rhetorical and writing practices of fandom and other participatory cultures. Students will use traditional formats (essays, response papers, proposals) and emergent writing formats (blogs, social media) to examine how this particular community of consumers and producers use, re-use, and distribute creative and critical works. The course's topic may vary by semester and can include examination of a general concept such as fandom and social media, a particular textual fandom such as Harry Potter or other popular texts, or another specified area determined by faculty expertise.
Repeatability: This course may be repeated for up to six credit hours.

ENC4415 - Rhetoric in the Digital Humanities

General

Course Description
Description: Rhetoric in the Digital Humanities traces the change from "literacy" to what some scholars have called "electracy." As a result, the course is primarily concerned with the corresponding rhetorical issues involved in this change, such as a greater emphasis on the rhetorical canon of "delivery." Students completing this course will not only be able to understand the philosophical underpinnings of new media technologies, but also to utilize new media technologies in the service of literary and cultural analysis. Repeatability: Course may be repeated for up to six credit hoursAvailability: One semester per year

ENC5226 - Technical Writing

General

Course Description
Description: This course is one of the courses in the Rhetoric and Composition concentration within the M.A. in English. This course is a graduate course that prepares students for the types of writing found in professional and research settings. Rather than mere information transfer, technical writing translates and mediates highly complex details, often for far less expert audiences.

ENG3613 - Disability Culture and Representation

General

Course Description
The course will focus on the nature, meaning, and consequences of what it is to be defined as disabled and explore the historical and cultural dynamics of disability. It will primarily address the stereotypes associated with and the experiential aspects of disability as these are deployed in literature, film, television, the arts, and other cultural media. It will address disability rights, legal issues, and public policy as secondary issues. Course may be repeated for a total of 6 credits with different topics.

ENG3816 - Digital Methods in Literary Studies

General

Course Description
Description: This course will consider the transformation of literary reading and research in the digital age. The course will primarily focus on theories and debates within the digital humanities, and will secondarily train students to apply basic tools and techniques, such as computer-assisted textual analysis, text encoding, or web-based archive construction.
Repeatability: Course may be repeated for up to six credit hours.
Availability: One semester per year

ENL5290 - Slavery and the Enlightenment

General
Course Description
Scholars traditionally have associated it with the rise of notions of liberty and human rights, and yet the voices initially articulating these ideas also explicitly denied that certain groups of people should have access to these same rights and liberties. This course will explore this aspect of the Enlightenment, examining its literature as well as the lived experience of enslaved peoples of the African diaspora as they document it in their life writing. Readings will primarily concern the plantation economy of the British pan-Atlantic, focusing on not only the Caribbean, but also Britain itself. This class will explore the literature and history of British slavery, not American slavery.

ENT3173 - Franchising

General
Course Description
This course is an overview that focuses on franchising as a form of entrepreneurship in the U.S. and international economies. Franchising has developed into a powerful force in business, representing one third of retail domestic product in the U.S. and a multi-trillion dollar market worldwide (Babson, 2019). The class includes a variety of topics including: the history of franchising; success factors for franchisors and franchisees; advantages and disadvantages of

franchising for both franchisors and franchisees; the process of franchising a business idea; the process of selecting and working with a franchisor; and legal issues and concerns in franchising.

ENT3204 - New Venture Growth

General
Course Description
This course will expose students to the varying strategies that growing businesses have available to them along with the operational realities of undertaking such strategies. By the end of this course, students should be able to identify and solve key challenges faced by growing firms. Students will rigorously analyze and evaluate both qualitative and quantitative data across multiple business disciplines and integrate multiple stakeholder needs into creative, compelling and implementable business decisions. Case studies will be used to supplement the course text.

ENT3503 - Social Entrepreneurship

General
Course Description
The purpose of this course is to provide students with an introduction to the major opportunities and challenges facing social entrepreneurs and their ventures. Social entrepreneurship's rapid emergence over the past decade has coincided with the rise of information technology. Students will examine how they can make a positive, lasting contribution to society. Students will discuss major local and global social issues, analyze current efforts to address these problems, and think critically and creatively to generate new ideas.

ENT6248 - Corporate Entrepreneurship

General

Course Description
The course examines how to promote the development, diffusion, and integration of innovation and change programs and portfolios in established organizations.The course covers core concepts and theories of corporate entrepreneurship in the context of established organizations (which may include publicly listed organizations, family businesses, and other (e.g., not-for-profit) organizations). Thereby, it aims to provide insights into how to drive entrepreneurial initiative taking, support diversification, balance incremental and more radical (exploratory) innovation in different organizations.This course shall also provide insights into the organizational changes has to make to ensure innovation and change initiatives are realized and lasting, for integrating and scaling up innovation or new lines of business.

ESC2000L - Discovering Earth Science Lab

General
Course Description
Description: This course provides students with the hands-on experience required to achieve a greater understanding of the major topics in the Earth Sciences. These include the study of rocks and minerals, plate tectonics, earthquakes, volcanoes, geologic time, paleontology, oceanography, and meteorology. All of these topics will be addressed, some to a greater degree than others, in an effort (1) to stimulate the student's appreciation of their natural surroundings and (2) to help develop critical thinking skills through familiarization with the scientific method.

ETS4543C - Applied Programmable Logic Controllers

General
Course Description
Prerequisite: EEL3111
Description: This course introduces students to the hardware and programming utilized to control processes in modern manufacturing settings. The course begins with a survey of the operating principles of hardware including programmable logic controllers (PLCS), sensors, motion control, temperature control, pressure control, and others. The course introduces the fundamentals and application of two-position and PID control. The course then transitions to hands-on laboratories utilizing modern PLC hardware and software to perform specific tasks pertinent to manufacturing processes.

EUH3466 - (FC) Germany Today

General
Course Description
An examination of social, political, and cultural trends in Germany since World War II. Emphasis is on German democracy, the economic rebuilding, the burden of the Nazi past, national identity, the role of intellectuals, and Germany's relationship to Europe and America. Special attention is given to developments since the 1990 unification.

EUH4103 - From Homer to Herodotus: Greece in the Archaic Age

General
Course Description
Prerequisite: HIS 3051 Craft of the Historian or permission of instructor.
The archaic Age of Greece (8th to 5th centuries BCE) began with the epic poetry of Homer and ended with the first work of Greek history, by Herodotus. This course will explore the forces that shaped Greek society: the formation of the polis, the introduction of the alphabet, the spread of Greek settlements along the shores of the Mediterranean and Black Seas, the development of Greek art, architecture, poetry and philosophy, and the rise of democracy in Athens. It will investigate the intellectual climate that gave birth to the discipline of history in Greece as a way of understanding the past and the present.

EUH4171 - Seminar: Medieval Heresy

General
Course Description
Prerequisite: HIS3051 with a C or better.
Description: This seminar introduces students to marginalized and heretical groups in the medieval West. Topics will include: tolerance and persecution of non-Christians in Western Christendom, the “discovery” and classification of heresy, and responses to deviance and non-conformity. Special attention will be paid to recent historiographical trends, supplemented by primary source readings.

EUH4408 - Alexander the Great

General

Course Description
Prerequisites: HIS 3051 or permission of instructor
Alexander III, king of Macedon (336-323 BCE), led an army of Macedonians and Greeks on a campaign to conquer the Persian Empire. By the time he died of disease and exhaustion, he had brought much of the known world under his control. This course will trace the life of Alexander, starting with the career of his father Philip, a powerful king and conqueror of the Greek city-states. We will study the impact of Alexander's conquests on the world and examine the ancient sources that preserve the record of his achievements. We will attempt to understand the man himself and to place him against the background of the social and political forces which transformed the ancient world.

EUH5125 - The Crusades

General

Course Description
The crusades to the Holy Land lasted from 1095 until 1291, but the crusading movement came to encompass a much wider array of military expeditions - against Jews, Spanish Muslims, European heretics, Baltic pagans, and eventually Native Americans. We will study the deep roots of the crusading movement in Western Christian Society, the ways in which the crusades brought three world cultures (The West, Byzantium, Islam) into contact and confrontation, the type of cultural interactions that took place, and the continued vitality of the crusading idea in the expansion of Western Europe.

EXP3104 - Human Sensory Perception

General

Course Description
Prerequisite: PSY 2012
Description: This course surveys sensory systems and perceptual processes, primarily in humans. Content includes anatomical structures, behavioral observations, and theoretical models. The interaction of biological systems and cognitive processes is emphasized. One system (e.g., vision) may be studied in considerable detail as a model of perception and perception research, with selected examples from other sensory systems to examine modality-specific mechanisms and underlying principles of all perceptual systems.

EXP3461C - Human Learning and Performance

General

Course Description
Prerequisite: EXP 3412, PSY 3213, and PSY 3213LDescription: This course provides hands-on experience in conducting experiments in human learning and performance. The theoretical focus is on basic mechanisms of human learning from infancy to adulthood, with special emphasis on motor performance. The practical focus is on design of experiments, analysis of data, presentation of graphs, and on public as well as written presentation of research results. Topics for research projects may include computerized experiments on motor skills in aiming at targets, interception of moving targets, and visual guidance of motor skills.

FIL3006 - Analyzing Films

General
Course Description
This course introduces students to key terms and concepts for analyzing film critically. Students will learn how to inventory the elements of a film, analyze scenes, explain the relation between cinematic forms and meaning, and write analytic film essays. This course provides a foundation for more specialized courses in the film studies minor. It will also benefit anyone who wants to better understand how movies affect us and who wants to learn how to write critical film analyses.

FIL4075 - American Film in Context: 1950s--1960s

General
Course Description
Description: This course outlines the Hollywood "transitional" years by analyzing its rich generic output—late noir, Cold War science fiction, conceptual western, melodrama, realism, spectacle, and exploitation—within its rich historical and cultural context—Cold War paranoia, Korean and Vietnam Wars, television, drive-ins, teenagers, motorcycle gangs, the Civil Rights Movement, the Sexual Revolution, conspicuous consumption, and poverty.

FIL4361 - Audio Documentary and Podcasting

General
Course Description
Description: In this course, students capture documentary material through audio—interviews, soundscapes, sound effects, environmental immersion, scripted voice-over, archive, diaries, and music—in order to craft complex, creative podcasts. They learn recording technique and equipment; research skills; narrative and scripted organization; documentary experimentation; interview styles and techniques; and audio editing.

FIL4379 - Advanced Documentary Production

General

Course Description
Description: Advanced students work in teams to produce a digitally-filmed/ recorded documentary. Studying documentary styles informs students in the decisions they will make in the planning, scripting, shooting, recording, editing, and exhibition of their (often community-based) documentary. Documentary is understood through its cinematic, artistic, and political contexts (as distinct from television and news broadcast). Repeatability: This course may be repeated for up to 12 credit hours.

FIL4822 - French Cinema

General

Course Description
Description: This course examines narrative and thematic structure in recent French cinema. This course will also examine several main genres and/or approaches in French cinema, including the heritage genre, La Nouvelle Vague, the "cinema du look", feminist cinema, and colonial/postcolonial themes. The critical readings for each film and the essay assignments will encourage students to develop their own critical and analytical skills in writing about film.

FIL4848 - World Cinema and the Cross-Cultural Encounter

General

Course Description
Description: Based on a set of films that focus on the situation of the cross-cultural encounter--including tourism, immigration, and transnational romance—this course will provide students with the analytical tools to address three central questions: What does it mean to be “abroad”? What are the pleasures, privileges, and perils of being “lost in translation”? And how does the cinema both reflect and participate in globalization? The principle analytical tools will be drawn from the diverse interdisciplinary fields of cinema and media studies, cultural studies, postcolonial studies, and cultural anthropology.

FIN3124 - Financial Planning

General
Course Description
Co-requisite: FIN3403
Description: This course provides a comprehensive examination of the general principles of financial planning, professional conduct and regulation, and education planning. The course introduces students to the financial planning process and teaches them how to work with clients to set goals and assess risk tolerance. Students learn how to process and analyze information, construct personal financial statements, develop debt management plans, recommend financing strategies, and understand the basic components of a written comprehensive financial plan. The course also covers the regulatory environment, time value of money, and economic concepts.

FIN4453 - Financial Modeling

General
Course Description
Description: This course will teach the user intense Microsoft Excel-based financial modeling. While we start with some basic functions, the course involves very advanced finance from other finance courses. Therefore, an understanding of basic corporate finance, investment, and derivatives theories is assumed and not the focus of this course. Rather, the focus in this course is on teaching the user how to model a particular financial theorem in Microsoft Excel. For example, you will learn how to estimate betas and the security market line in Microsoft Excel, but an understanding of the topic is assumed.

FIN6455 - Financial Modeling

General

Course Description
Description: This course will teach the user intense excel-based financial modeling. While we start with some basic functions, the course involves very advanced finance from other finance courses. Therefore, an understanding of basic corporate finance, investment, and derivatives theories is assumed and not the focus of this course. Rather, the focus in this course is on teaching the user how to model a particular financial theorem in excel. For example, you will learn how to estimate betas and the security market line in excel, but an understanding of the topic is assumed. Permission of instructor only.

FIN6535 - Derivative Securities

General

Course Description
Prerequisite: FIN 6406
Description: This course introduces students to the theoretical and practical aspects of derivative securities, such as financial futures, options, futures, swaps and other financially engineered securities. The course will describe the market for these securities, derive the models to price derivatives and demonstrate effective usage of derivatives in managing financial risk.

FIN6565 - Student Managed Investment Fund I

General
Course Description
Prerequisite: FIN 6406
Description: This is the first in a sequence of two courses in which students perform the activities of managing a real portfolio of securities. The course is designed to operate like a typical professionally managed fund. In this course, analyst teams are formed and officer positions are assigned. Students establish the criteria for selecting securities, research the prospective investments, generate reports, and make decisions to buy or sell securities. Students accepted into this course must continue to Student Managed Investment Fund II during the next semester. Enrollment in this course is limited by application.
Availability: This course is only offered in the fall.

FIN6566 - Student Managed Investment Fund II

General
Course Description
Prerequisite: FIN 6565
Description: This is the second course in the Student Managed Investment Fund sequence and continues where Student Managed Investment Fund I left off. In this course students will continue to evaluate securities and manage the portfolio; however, more attention is directed at beginning to position the fund for the idle summer months by identifying core holdings. The final project is the preparation of the Annual Report summarizing the performance of the fund during the fall and spring semesters.
Availability: This course is offered only in the spring.

FIN6605 - International Finance

General
Course Description
Prerequisite: FIN 6406
Description: This course involves a comprehensive survey of international finance. The course provides a basic understanding of the forces that affect the relative values of currencies, the financial problems associated with international trade, international capital markets and international institutions. Case studies will be used to illustrate specific situations.
Availability: This course is usually offered in the fall and spring.

FIN6957 - Study Abroad in Finance

General

Course Description
Prerequisite: FIN 5405 or equivalent and permission of the instructor.
Description: In this course students will conduct advanced study of a country's business practices, with a particular emphasis on finance. During this course, students will: understand the culture, geography, history, and politics of the country; travel to the country; study the differences between business in the U.S. and business in that country; and learn about the current issues facing that nation. The course will have three phases: pre-trip preparation and orientation, foreign travel, and post-trip assignments.

FOT3000 - Career Pathways in Language and Culture Study

General

Course Description
This course explores professional strategies for students studying language and culture, focusing on Spanish and French. It prepares students for careers that leverage bilingual skills, including translation, interpretation, teaching, international relations, tourism, and global business. Through guest speakers, case studies, and career research projects, students will develop cross-cultural communication skills, professional networking abilities, and a comprehensive understanding of how language proficiency impacts various professional sectors. Students will complete professional badging and create a professional portfolio, including résumés, cover letters, and interview preparation.

FOT3500 - (FC) Peoples and Cultures of Spain

General

Course Description
Description: This course examines the history, people, and cultures of different regions of Spain comparatively through archival materials, architecture, art, literature and film. This course focuses on specific themes and ideas, e.g., the fundamental importance of the 711-1492 CE period of coexistence between Iberian Muslim, Christian, and Jewish cultures, in contrast with revisionist assertions of national culture in Francoist Spain (1939-1975). Students will investigate how such themes and ideas have constituted major factors in the configuration of Spanish cultural identity. The appreciation of multicultural heritage throughout the centuries and a better understanding of the challenges of modern/contemporary Spanish society and culture are further goals of FOT 3500. There are no prerequisites for this course, which is conducted in English.

GEB3154 - Entrepreneurial Marketing

General

Course Description
Description: This course focuses on the practical application of key marketing concepts and methods specifically relevant to entrepreneurial ventures. Students will study and discuss cases focusing on the marketing survival strategies of successful entrepreneurs and learn about the marketing challenges of entrepreneurial ventures from assigned readings, class discussions, and guest speakers. Each class session will cover components of the marketing plan for an entrepreneurial venture, making comparisons on how the strategies differ from traditional marketing in corporate America. A major project required in the course

is the development of marketing inventions for actual entrepreneurial ventures. Students will also review books and publications covering current entrepreneurial strategies and present key issues to the class.

GEB4940 - Coggin Semester Exchange Program

General
Course Description
Description: This course is required for all students participating in a Coggin fall or spring semester exchange program or Coggin internship abroad program. The goal is to ensure students complete requirements for studying and/or interning abroad with a Coggin program, i.e., necessary paperwork, meetings, orientations, etc. This course provides two orientation sessions: pre-departure and re-entry. During these sessions - and in accordance with international education best practices - students explore cultural adaptation as a group; gain the tools necessary to have a successful, transformational experience abroad; reflect on their experience in an intentional, guided workshop; and learn to translate what they have learned into the workforce via the professional development portion of re-entry.

GRA2190C - Graphic Design: Principles

General
Course Description
Prerequisites: ART 1201C, ART 1300C, and ART 1600
Description: This course introduces the formal elements and principles of visual language. It provides a vocabulary for describing visual form and analyzing its role in a variety of applied contexts, and teaches techniques for creating form. Projects emphasize formal and conceptual experimentation across a range of analog and digital media. Students study historical and contemporary design to recognize the principles at work in effective graphic solutions, examine the significance of trends and develop their own design sensibilities.

GRA2203C - Prepress Production

General
Course Description
Prerequisites: GRA 2190C
Description: The course examines and demonstrates software and techniques used in digital page design for printed media. Basic typography and production processes will be explored. Design problems will be used to explain how to effectively prepare a job from concept through the printing process. Projects will be used to explore traditional and digital printing technology and techniques used in producing a job for press.

GRA2208C - Type Visualization

General

Course Description
Prerequisite: ART1201C, ART1300C and ART1600C
Description: This course introduces students to typographic form and function. It focuses on type anatomy and classification, presents principles of effective typography, and considers type design in historical contexts as well as contemporary practice. Students examine typographic construction through hand-drawn studies and practice composition using digital manipulation, beginning with the interrelationship of letters and expanding to the spatial organization of a page. Projects emphasize both practical applications and expressive explorations of type.

GRA3118C - Publication Design

General

Course Description
Prerequisites: GRA 3183C, GRA 2203C
Description: This course focuses on creative problem solving for publication design. Emphasis is placed on the importance of content as the foundation for concept development, creation of flexible grid systems, typographic detail and composition. Topics include but are not limited to magazine, annual report, newspaper, catalog and book design.

GRA3139C - Time-Based Media

General

Course Description
Prerequisite: Acceptance into Graphic Design or departmental permission.
Description: This course examines the potential of sequence and motion in creating compelling visual narratives. It explores the fundamentals of visual storytelling and presents strategies for planning time-based design solutions that communicate with an intended audience. It introduces technologies and techniques for creating and editing content, including audio, video, typography, still imagery and sound. Projects range from practical to experimental and challenge students to consider how time-based media can shape the user experience.

GRA3155C - Graphic Symbols and Semiotics

General

Course Description
Prerequisite: Acceptance into Graphic Design or departmental permission.
Description: This course introduces the study of signs and symbolism within the framework of visual communication, with a focus on enhancing visual literacy. It examines how meaning is created and how messages are interpreted and perceived depending on cultural, societal and temporal contexts. Course projects explore methods for visually communicating objects and ideas through representation and abstraction; stylization of form, including color, typography and imagery; and the use of rhetorical devices in graphic design.

GRA3174C - Poster Design

General

Course Description
Prerequisite: GRA 2190C
Description: This course will focus on where design and message come together to communicate an idea to the public. Emphasis will be placed on the aesthetic and meaning behind delivering an effective message to an intended audience. The student will also consider the relevance and role the poster plays in society today. Class projects will focus on concept and process and will be explored visually using various design techniques. There will be a research and writing component to each of the projects.

General

Course Description
Prerequisites: GRA 2190C.
The principles of typography will be explored through exercises and projects. Projects will emphasize the typographic form and type-and-image in visual communication. Emphasis will be placed on terminology, historical origins, form and compositional elements used while designing with type. Problem solving skills, process and research will be stressed. Graphic design principles will be reinforced with projects concentrating on typographic detail.

GRA3192C - Type Communication

General

Course Description
Description: This course explores the function and potential of typography in expanded design contexts. Students solve increasingly complex typographic problems using innovative design solutions that consider contemporary visual environments. They develop the necessary skills to design engaging reading

experiences, from applying conventions of traditional typographic etiquette to experimenting with expressive typography and unconventional compositions. The course emphasizes the use of grids, information hierarchy, and comprehensive typographic systems to create effective layouts that enhance the communication of the message to the intended audience.

GRA3512C - Visual Identity

General
Course Description
Prerequisites: GRA3155C
Description: This course examines the role of design in defining and enhancing the brand experience of companies, organizations, products, and people. It provides an overview of important historical works and explores visual identity in contemporary branding strategies. Students study formal elements and component parts, as well as applications, classifications, and touchpoints. They utilize research methodologies to produce visual identities, ranging from static wordmarks to adaptive integrated systems, with a focus on creative, consistent solutions. They also examine visual brand strategy through the analysis and development of design standards and guidelines.

GRA3523C - User Interface and Interaction Design

General
Course Description
Prerequisites: Acceptance into Graphic Design or Departmental Permission.
Description: This course introduces students to the key methodologies in designing modern interactive experiences. Analog and digital tools are utilized to plan, design and prototype human-centered design solutions for screens and emerging technologies. Students explore the limitations and the potential of interactive screen-based design, while effectively applying fundamental design elements including typography, color, imagery, layout, and animation. The course also addresses user research, user experience, design thinking, problem definition, information hierarchy, navigation, usability, accessibility, and production.

GRA3955 - Design on Site

General
Course Description
This course is designed to accommodate off campus experiences relevant to the study of design. Cultural sites, museums, galleries, archives, and other art and design institutions will provide venues for the exploration and analysis of design. Students may engage with design history and/or contemporary practice through lectures, tours, workshops, artist talks, and studio visits. Projects and assignments will respond to the particulars of place: Students may engage in design practice on site as well as create design work inspired by their locations of study. Students may repeat this course up to three times, earning a total of 9 credits under different topics.

GRA4119C - Package Design

General
Course Description
Prerequisites: GRA 2190C, GRA 3512C
Description: This course introduces the principles of graphic design and three dimensional design as they apply to packaging design. This course will cover principles of branding and how they apply to the process of designing packaging. Students will explore conceptual development and problem solving in three dimensional graphic design systems. In addition, they will work with functional and

formal aspects of packaging. Students will also improve their creativity skills while working individually and in teams. They will interface with equipment, software and a variety of packaging materials, forms and containers.

GRA4137C - Advanced Web Design

General
Course Description
Prerequisite: GRA 3523C
Description: This studio course builds on the principles taught in introduction to web design. Students are challenged to solve advanced communication problems while addressing technical issues relating to web design and the user experience. An emphasis is placed on web standards, advanced HTML and CSS. Students work with industry standard tools to produce assignments that simulate real world projects. Additional topics to be discussed will include: User Testing, Project Panning, Ste Evaluation and Collaboration.

HIS3402 - Urban Environmental History and Sustainability

General

Course Description
Description: This course examines the historical relationship between cities and nature, from the early 1800s to the present time. Focusing on Europe and North America over the last two hundred years, we study: (1) how industrial era cities changed their surroundings, leading to smoky skies, polluted canals, unsanitary housing, and shortages of water; (2) how different social and political groups have thought about and tried to improve the urban environment, building water and sewer systems, establishing park space, planting sustainable gardens, and creating sustainable energy, water, waste, and transportation systems; and 3), the ways that different groups have experienced pollution and urban blight, depending upon issues of race, class, and gender. We will explore these themes through lectures, discussions, readings, films, written assignments and field trips.

HIS5067 - Public History

General

Course Description
This course will enhance student knowledge of public history by providing them with both the current literature in this more recent field of the history profession. In addition, students will be required to practice this area of history by creating their own projects to contribute to the knowledge of history, particularly local history, beyond the traditional academic arena of the classroom. Students will interact with a variety of individuals who are active in fields of public history. Other primary goals of the class are to impart extensive information about historic preservation and give students a greater understanding of the role of history professionals in this increasingly significant field of public history.

HSA6342 - Healthcare Human Resources

General
Course Description
This course focuses on the management of people in healthcare organizations. The course will provide a comprehensive set of managerial tasks and activities designed to develop human resources management (HRM) skills applicable to health services. Aspects of the external environment that affect how people are managed in the healthcare workplace will also be examined.

HSA7091 - Scientific Writing for the Healthcare Professional

General
Course Description
This course guides students in the writing of scientific manuscripts for publication in an area related to health administration. The goal of the course is to facilitate more effective writing of evidence-based articles using practical examples and peer feedback. Topics include: principles of good writing; tips for writing more efficiently; journal selection; co-author selection, and the anatomy of a manuscript. Students begin the course with a research question (purpose of study) and a summary of quantitative or qualitative (or mixed methods) data they would like to present in a scientific manuscript. This typically takes the form of summary tables. Students end the course with a research topic and at least two sections (e.g., methods and results) of a completed manuscript.

HSA7146 - Strategic Vision and Planning in Healthcare

General
Course Description
This course will review the critical nature of creating an organization's mission and vision, as well as implementing a strategic planning process. Successful healthcare strategic planning not only needs to measure how well a hospital or health system is currently performing but also must anticipate what lies ahead. Students will gain insight into the modern healthcare system and explore trends in mergers and acquisitions, system growth, and changes in reimbursements. Innovations such as the use of big data in healthcare, block chain technology; genomics; and artificial intelligence will be introduced and discussed.

HSA7197 - Planning for Health Information Systems

General
Course Description
This course provides a senior-level view of the issues surrounding the adoption and use of information technology in support of healthcare innovation. Students gain insight into national initiatives that further the development, expansion, and deployment of health care information systems (including clinical applications such as electronic health records, e-prescribing, provider order entry, disease management, data security, artificial intelligence). Issues surrounding the management of health information resources at the institutional level are also explored including topics such as system selection and implementation; IT security, IT governance and management; IT budgeting, and assessing and achieving value in healthcare information systems.

HSA7348 - Managing Change and Negotiation

General
Course Description
This course focuses on the leadership and management of change in an organizational setting. Specifically, the course seeks to help students understand the dynamic relationship between external demands for change and internal objectives to meet stakeholder expectations. Resistance to change will be addressed with strategies to overcome the barriers. The course will focus on organizational development strategies as well as individual negotiation skills to facilitate organizational change and innovation in healthcare.

HSA7357 - Organizational Behavior

General
Course Description
This course is designed to guide students in the development of a structured framework for comprehending the intricate landscape of healthcare organizations. With a specific focus on health services organizations and management research, the course delves deep into the realms of organizational theory and organizational behavior. Organization theory is explored as the sociological study of organizational structures and operations, encompassing the critical examination of organizational productivity, performance, as well as the behaviors exhibited by

employees and groups within these organizations. Students will have ample opportunities to enhance their comprehension of crucial organizational behavior topics such as motivation, leadership, group dynamics, and team dynamics through engaging case analyses and readings.

HSA7367 - Evidence-Based Decision Making

General
Course Description
This course will define evidence-based decision making and reinforces an approach that involves using objective and reliable evidence to inform and guide the decision-making process. It will demonstrate the value in relying on data and research to identify potential solutions, evaluate the effectiveness of alternative options, and ultimately make informed decisions. Using evidence-based decision making can be particularly useful in situations with multiple possible solutions or where decisions have significant and long-lasting impacts. By relying on evidence and analysis, leaders can help ensure that decisions are made fairly, objectively, and effectively and that they are more likely to achieve their desired outcomes.

HSA7388 - Advances in Leadership

General

Course Description
This class serves as the cumulative leadership course in the DHA Program. Students will apply the knowledge and skills acquired through academic literature, research and lectures as they participate in online class discussions and exercises. Critical analysis will be used to apply theoretical strategic concepts to actual cases in today's dynamic and challenging healthcare environment. The course will address the critical role of strategic thinking associated with paradigm shifts, risk management, and innovation. This course will synthesize all the portions of the program and your experiences in your careers leading to potential changes and personal growth.

HSA7911 - Doctoral Project I

General

Course Description
Prerequisite: Completion of all required coursework or permission from Program Director.
Description: In this course the doctoral student will identify, with advisor approval, a problem or question that requires a change in healthcare or educational services, administrative practices and/or policies that might be addressed in a particular leadership role. This problem should have relevance to current and emerging health care or educational issues. The result of the project will be a scholarly work, written at a doctoral level of complexity, dealing with the results of the evidence-based analysis of the service, practice or policy examined. Focus is on dissemination of evaluative outcomes and implications for healthcare administration.

HSC4134 - Mental & Emotional Health Promotion

General
Course Description
This course examines educational planning and program implementation involved in developing and maintaining mental and emotional health throughout the lifespan. Priority mental health issues will be addressed with a focus on early identification, intervention, and referral strategies. Students will explore a variety of skills and resources to improve mental health of individuals and communities including communication skills, resiliency, advocacy, and access to care.

HSC4150 - Substance Abuse and Violence Prevention

General
Course Description
Corequisites: 9 semester hours of 3-4000 level HSC courses. This course is a study of issues related to the prevention continuum, including primary, secondary, and tertiary prevention. Substance use, misuse, abuse, and dependency, as well as violence are addressed. The focus of the course is the application of substance abuse/dependence and violence prevention programs in a variety of settings. A field experience is required.

HSC4238 - Promoting Physical Activity & Healthy Eating

General

Course Description
This course explores physical activity and eating behaviors that lead to priority health issues and the underlying determinants for diverse individuals and populations. Students will review national guidelines and explore cultural and developmental influences on physical activity and eating behaviors. Students will learn strategies to educate populations about these behaviors, identify evidence-based programs and policies, and utilize data and professional resources to advocate for improved physical activity and health eating.

HSC4602 - Animal Assisted Services for Health and Wellness

General

Course Description
Students will examine the historical and theoretical foundation for the inclusion of animals as a treatment alternative or adjunct to traditional practices in health, wellness and education settings. Students will learn about training and practice standards, techniques, ethics and animal welfare issues that impact the practice of Animal Assisted Services (AAS), Animal Assisted Treatment (AATx), Animal Assisted Education (AAE) and Animal Assisted Support Programs (AASP). Students will explore their relationships with animals and nature and examine health related careers or disciplines that best suits them in human service professions. Students will review the evidence-based practice of AAS relative to their chosen field and complete a final reflection paper demonstrating learning and integration for their personal and professional lives.

HSC6596 - Advanced Clinical Integrative Practices II

General
Course Description
Prerequisite: HSC6116
Description: This course focuses on the process of client intake through diagnosis. The integration of spirituality, creativity, animals, and nature along with the introduction of exercise and nutrition as interventions, will serve as key strategies for establishing a holistic wellness treatment plan for behavioral health care management. Theories in human development, family systems and trauma-informed care will be expanded to guide theory application into practice. To address student self-care needs as a mental health professional, the student will conduct a self-assessment need resulting from the impact of a personal history of trauma and cultural influences that can impact the provider/client relationship.

HUN2201 - Basic Principles of Human Nutrition

General

Course Description
Description: HUN 2201, Basic Principles of Nutrition, is an introductory course in food and nutrition science relative to the health and well-being of the individual and the community. The functions and chemical composition of the essential nutrients, and how they are processed and utilized in the body are discussed.

Dietary habits, nutrient requirements, food choices, healthy eating practices, menu planning, shopping for food and food preparation are studied. Myths and misinformation about nutrition are identified and evaluated based on the scientific evidence.

HUN3230 - Metabolism of Macronutrients

General

Course Description
Prerequisites: HUN 2201 , CHM 2045, CHM 2045L, BSC2085C, BSC2086C, BCH3023, and BCH3023L Co-requisites: FSS 1202 AND FSS 1202LDescription: This course covers the advanced study of macronutrients (carbohydrates proteins and lipids) fiber and energy as well as their function in relation to human requirements. Advanced concepts of macronutrients and fiber digestion, absorption and metabolism, as well as energy metabolism, food sources, human requirements and biochemical markers of nutrient deficiency/excess will be discussed. The concepts of energy balance, regulation of food intake, overnutrition, disordered eating, chronic disease (diabetes, hypoglycemia, obesity and cardiovascular diseases), physical activity and its implications for human health will be covered.

HUN3231 - Metabolism of Micronutrients

General

Course Description
Prerequisite: HUN 3230This course covers the advanced study of micronutrients (vitamins, pseudovitamins, minerals, trace and ultratrace elements) and their function in the body systems in relation to human requirements. Micronutrients digestion, absorption, metabolism, food sources, human requirements and biochemical markers of nutrient deficiency/excess will be discussed. Advanced concepts in acid-base and fluid-electrolyte balance, water and its role in blood pressure and volume regulation will be covered. The role of micronutrients in bone health, immunity, energy metabolism will be discussed. The role of phytochemicals and antioxidants in the prevention of chronic diseases (cancer and cardiovascular diseases among others) will be covered.

HUN3800 - Nutrition Science Research and Ethics

General
Course Description
Prerequisites: STA 2014, HUN 2201
Description: This course is designed to develop basic skills related to finding, reading and applying research findings in the field of nutrition & dietetics. Students will conduct a literature search and develop a literature review. The course also provides an overview of the ethical considerations involved in human research and the concept of evidence-based dietetic practice.

HUN3900 - Research Experience in Nutrition

General
Course Description
Description: This course is an elective course that will meet the needs of nutrition students who want to be involved in research. Students will obtain hands-on experience by working on different aspects of the scientific method, including: formulating hypotheses, designing experiments, interacting with research

participants, conducting laboratory experiments, interpreting results, preparing scientific presentations, reports or any other research-related documents. This course is repeatable for up to 3 credits.

HUN7808 - Qualitative Methods in Nutrition Research

General

Course Description
Description: In this course, we will explore what it means to utilize qualitative methods in nutrition research. We will do this by: (a) interrogating various readings, (b) interacting with qualitative researchers, (c) practicing qualitative techniques, (d) collecting data (or acquiring existing data), (e) analyzing those data, (f) beginning to write like qualitative researchers, and (g) engaging in rich discussions throughout the semester. This course will provide participants with basic understandings about qualitative research (what it is, and why it is used), its philosophical underpinnings and associated assumptions, and different types of research methods and analytic techniques that fall under the qualitative umbrella.

IDC2000 - The Beauty and Joy of Computing

General

Course Description
Description: The course focuses on teaching students some of the Big Ideas of Computing such as abstraction, design, recursion, concurrency, simulations, and the limits of computation. The course also provides a historic perspective of Computing and where it is heading. Throughout the course, we will emphasis the relevance of Computing to the students, their future studies, their careers, and society. In this course students will learn Python as the programming language to deliver the concepts. Given that data is pervasive and the need to analyze data is in almost every discipline, learning Python that early will enable students to conduct data analysis which will be helpful for their studies at UNF and in their careers.

IDH1923 - Honors First Year Colloquium

General
Course Description
Description: There are two distinct but connected parts of this course. First, the course introduces students to college through activities, mentoring, and assignments that develop skills for academic success and personal well-being. Second, the course introduces students to interdisciplinary perspectives on questions relevant to a wide range of disciplines, offering high-impact experiential learning opportunities in diverse fields, including undergraduate research, service-learning, and targeted internships, while developing leadership, collaboration, and professional abilities that prepare students for success in their majors.Course Fees: $40

General

Course Description
Prerequisite: Admission to the Honors Program. During this colloquium, students will experience service through various service or educational organizations. All students will participate in service at an assigned site three hours per week. Students will choose in the beginning of the semester where they wish to participate in service and will have the opportunity to look at various issues related to the environment. Serving weekly, students will learn first-hand the challenges facing environmental organizations and or awareness education and see how they can directly impact and make a difference. This alone does not constitute service learning; it is how one integrates this experience into themselves and their thinking.
Gordon Rule Additional Writing credit.

IDH3924 - Hicks Honors Pre-Capstone Symposium

General

Course Description
Description: This course is a required introduction to the upper-division Hicks Honors College program, and focuses especially on the Capstone. The course also develops the Honors community, acquaints students with the requirements of the upper-division Hicks Honors program, provides a complete overview of the resources provided through the program, guides students in mapping out their specific curricular and co-curricular paths, and introduces them to the expectations of the e-portfolio and Capstone requirements. It may also focus on different academic themes. Participation in Honors-sponsored events outside of class time is expected. The course should be taken the semester in which students begin the upper-division Hicks Honors program.

IDH4937 - Honors Capstone Seminar

General

Course Description
Prerequisite: Current Honors students; IDH 1923 and IDH 3936
Description: The Honors Capstone should provide students with the occasion to think holistically about their university education, their Honors experience, the

goals of Honors, and their future ambitions. The Honors Capstone will typically be a credit-bearing activity pursued in the context of advanced coursework, or an internship, or a research project, or perhaps study abroad, in conjunction with a student's major. For that reason, every capstone project requires a discipline-based mentor who must attest to the appropriateness of the learning outcomes of the proposed project and to the satisfactory attainment of those outcomes (in the post-capstone report phase). In addition, each Honors student will work with an one of three Honors mentors who will review the anticipated relevance of the proposed project to the goals of Honors and the actual resonance between the completed project and the goals of Honors.

IDS3053 - Introduction to Interdisciplinary Inquiry

General

Course Description
Description: This course provides an introduction to Interdisciplinary Studies, and to the IDS major at UNF. Students will explore the history of interdisciplinary studies, and will examine the theoretical perspectives and methodological approaches that different disciplines bring to bear on a line of inquiry. The course also helps to prepare students for the research, writing, and oral communication tasks found in advanced coursework in the major. In addition, this course involves a variety of individual and group advising components to help students plan their academic work within the major, develop their programs of study, and investigate their capstone options. Students should take this course as early as possible in their career. This course is required for the theme-based interdisciplinary studies major.

IDS3951 - Venture Studies Threshold Project

General

Course Description
The Threshold Project, the third part of the Venture Studies Program, is an opportunity for students to demonstrate their facility with Reflective Judgment, the mode of intellectual engagement that underwrites the Program. Threshold Project courses will explore a significant and complex question raised within the student's Venture Studies course work or within the student's General Education experience. The project will demonstrate that the student understands the multidimensional nature of any significant question, and will point toward future study necessary to more fully understand the complexity of the question. The project is not intended to answer the question, but to explore the dimensions and implications of the question from the perspective of at least two disciplines. Students positioned at this threshold between Venture Studies and

more specialized work within a major will make explicit their recognition that any seemingly complete answer to a question is always situated within the terms and limits of a discipline or a particular world view, and they are bidden to be both expert within their chosen field's terms and aware of their limits.

IDS4890 - Interdisciplinary Studies Capstone

General

Course Description
Prerequisite: IDS 3053, for Interdisciplinary Studies Majors only, consent of instructor required, and students should have senior standing .Description: Registration in this zero to one credit course records an Interdisciplinary Studies major's completion of the required capstone project. All students majoring in Interdisciplinary Studies must enroll in this course during the semester in which they complete their capstone project (see the Program of Study for more information). Students choosing capstone projects 1 or 2 that involve significant reflective and summative components should register for the zero credit option. Students choosing option 3, or another option without significant reflective and summative components, should register for one credit and during the course will construct a portfolio based on their major theme.

INR3153 - American Foreign Policy in the Middle East

General

Course Description
Description: This course will examine the formulation and implementation of American policies towards the Middle East, with special emphasis on the period following World War II. It includes the study of the various American actors, organizations and government agencies involved in influencing the formulation of American policies towards the region. Students will analyze various instances in which the US has intervened in the region: diplomatically, economically, and militarily. The successes and/or failures of these interventions will be assessed against the backdrop of stated American goals.

INR4102 - Real World Policy

General

Course Description
The course is designed to provide an in-depth study of today's foreign policy challenges and the American policy-making process. The course will cover: how government works, with a focus on the National Security Council; an overview of today's foreign policy debate; how to write a paper and a memo to the president; and how to write an op-ed. Topics will include: hot issues (Ukraine, cybersecurity, Iran, current affairs as they develop), nonproliferation (nuclear issues, Iran, North Korea), Big emerging powers, MINTS/BRICS (China, Russia, India, Turkey, Brazil, South Africa), Africa's other key countries (the Sudan, Congo, Nigeria, others), Environment (climate, water, food crisis), Trade, the Middle East, Africa, and Latin

America. Mid-semester, the class will decide on a specific issue on which to push for a US policy change and develop an in-depth paper on it to present to officials in Washington, DC.

INR4334 - American National Security and Defense Policy

General

Course Description
Foreign policy decision-makers face a world in a seemingly constant state of crisis. Our globalized and interconnected society forces policy-makers to understand and rapidly respond to events in a way that furthers national interests. This course provides students with the tools necessary to identify and understand the actors involved in security and defense policy, the international and domestic contexts they operate in, the constraints under which they act, and the instruments they wield. It explores the national security and defense decision making process in the United States, including the role of national security policy makers, the instruments of national power, and the key models and policy debates surrounding foreign policy.

INR4344 - European Security in a Globalized Society

General

Course Description
For centuries Europe has been a key driver of global civilization, security, commerce and culture, and in myriad ways has shaped the United States and our world: the nation-state, capitalism, industrialization, democracy, the arts, technology, and science. In the modern era of globalization, when so many other issues have come to the fore, from China to terrorism to climate change, understanding Europe remains central to understanding international affairs, ourselves, and our future. This course focuses on Europe's security as the lens through which to understand its history and role in the world, and its relationship with the United States. Topics addressed include European history, from Westphalia through the Cold War; and contemporary issues in European security, including Russia, immigration, NATO, and the European Union.

INR6330 - Contemporary American Foreign and Security Policy

General
Course Description
Description: Students in this course will first examine the principles that are the basis of contemporary American foreign and security policy. This examination will then lead to an analysis of recent successes and failures in the application of these policies. From this point, students will apply lessons learned to the articulation of American interests and goals in its relations with other countries, international organizations and actors on today's global scene. Students will identify important challenges that America faces as it works to achieve its political and economic goals, and the threats against America and its allies that require attention.

INS3003 - Introduction to International Studies

General

Course Description
Description:This course provides an introduction to the International Studies major at UNF. Students will explore the history of International Studies, and will examine the theoretical perspectives and methodological approaches that different disciplines bring to this field. This course also prepares students for the advanced research, writing and oral communication tasks they will undertake in their coursework in this major, and in particular, in INS4930 International Studies Senior Research Seminar. In addition, this course involves a variety of individual and group advising components to help students plan their academic work within the major, develop plans for completing the foreign language and international educational experience requirements, as well as investigate internship possibilities, graduate programs and professional career paths. Students are required to take this course during their first semester in the International Studies Program.

INS3950 - International Educational Experience

General

Course Description
Prerequisites: For International Studies majors only. Consent of instructor required. Registration in this zero credit, pass/fail course records an International Studies major's completion of the required study abroad or other international educational experience. All students majoring in International Studies, including all concentrations within the major, must enroll in this zero credit course during the semester in which they complete their international educational experience. Enrollment in this course is in addition to any other study-abroad related course for which they may also register.

INS3951 - Study Abroad Reflection and Synthesis

General

Course Description
Description: Students in this course will reflect critically upon their study abroad experiences and synthesize their learning. In doing so, they will employ tools that may include journals, blogs, social media, photography, video and essays, as agreed upon by the student, the director of the International Studies Program, and, as appropriate, the faculty study abroad leader. Student work must complement or expand upon, not duplicate, assignments otherwise required as part of any study abroad course. The student will register for this course during the semester of their experience abroad. This course has no prerequisite, but a student must request permission from the director of the International Studies Program, after demonstrating acceptance into a study abroad experience approved by the UNF International Center. Registration is restricted to students majoring or minoring in International Studies.

INS4930 - International Studies Senior Research Seminar

General

Course Description
Prerequisites: Senior standing and satisfactory completion of INS3999 Introduction to International Studies and the program's core courses: ANT 3212, ECO 3701, GEO 3553, CPO 4014 or INR 4603, and ANT 4083 or ANT 4497 or HIS 3051 or POS 3733 or GIS3043.
Description: As the culminating course in the International Studies major, the senior research seminar is designed to help students synthesize their experiences in the program, as well as refine the high–level critical thinking, research, and communication skills needed for success in professional fields. Students in this course will consider a semester theme from a variety of disciplinary perspectives, and will conduct an in-depth research project of their own related to this theme.

INT1000 - Introduction to Interpreting

General

Course Description
Description: In this course, students are introduced to historical foundations of interpreting, models for interpreter role and function, ethics and professional conduct, applicable state and federal legislation, interpreter credentialing, and business practices. The course provides an overview of the diverse settings in which interpreters work and the array of consumers who utilize interpreting services. American Sign Language fluency is not required as a prerequisite for this knowledge-based introduction to the field of ASL/English interpreting.

INT2010 - Discourse Analysis

General

Course Description
Prerequisite: INT 1000, ASL 3514, INT 3011, and ASL 4131
Co-requisite: INT 2113
Description: This course introduces discourse analysis to deepen student awareness of and appreciation for various discourse norms and strategies used in English and American Sign Language (ASL). Students will study general discourse types, including conversations, presentations, and narratives specific to ASL and English. Students will study speech act theory and pragmatics in order to identify features of cohesion, coherence, politeness, and powerful/powerless language in oral, written, and signed texts. Students will learn how to identify the function of intent, discourse markers, rhythm, prosody, and space. Discourse structures and genres, gender differences, and framing will also be addressed. The course emphasizes relevance to meaning-based cross cultural communication.

INT2113 - English and ASL Translation

General

Course Description
Prerequisite: INT 1000, ASL 3514, ASL 4131 and INT 3011
Co-requisite: INT 2010
Description: This interactive and practical course introduces sight translation for signed language interpreters as a foundational skill for conveying meaning-based, cross-cultural access to frozen texts. Students will work between American Sign Language (ASL) and English to apply such translation features as cohesion, discourse markers, spatial mapping, involvement strategies, and framing to meaning transfer of source texts. Students will develop self-analysis and peer-analysis techniques for evaluating message equivalence of sight translations. This course emphasizes cultural and linguistic literacy and ethical constraints associated with the translation process.

INT2204 - Interpreting in Community Settings

General

Course Description
Prerequisite: ASL 4211, INT 2010, INT 2113, INT 3011, ASL 3514 and INT 2303Description: This course provides an introduction to a range of settings where interpreters work and teaches students to determine appropriate use of consecutive and simultaneous interpreting. Students learn terminology, register, and protocols for interpreting in specialty areas, including vocational rehabilitation, healthcare, social service, employment, and education. This course provides a foundation for using the Demand-Control Schema during communication assessment and evaluation of consumer needs, with respect for linguistic and cultural diversity and requires 20 hours of field-based experience.

INT2303 - Interpreting Field Experience

General

Course Description
Prerequisite: ASL 4131 and INT 1000Description: This course will introduce students to a variety of environments where interpreting services might be provided. Through observation of American Sign Language/English interpreters, shadowing working interpreters, and D/deaf/DeafBlind community involvement, students will observe the human dynamics and linguistic variations in a wide scope of settings that include meetings, classrooms, in-service trainings, one-on-one interactions, and public forums. Students will apply current codes of professional conduct to shape discussions of context-specific dynamics and decisions. The course emphasizes respect for linguistic variation and requires 60 hours of field-based experience under the supervision of a faculty advisor.

INT3011 - Linguistics for Interpreters

General

Course Description
Prerequisites: ASL 2150
Description: This course provides a comprehensive introduction to the linguistic structures of English and American Sign Language (ASL). The course focuses on language at the discourse level, while examining phonology, morphology, syntax, semantics, pragmatics, and sociolinguistics associated with English and ASL. Application of these linguistic topics to the field of interpreting will be addressed throughout the course.

INT3134 - Applied Ethics in Interpreting

General

Course Description
Description: This course examines professional ethics and codes of conduct and how they contribute to the process of ethical decision-making. Students will examine the National Association of the Deaf-Registry of Interpreters for the Deaf, Code of Professional Conduct and apply its tenets to authentic interpreting scenarios through interactive discussions and activities. Through case studies and cooperative learning, students will solidify their ability to make ethical decisions as signed language interpreters and base ethical decisions on the National Association of the Deaf-Registry of Interpreters for the Deaf, Code of Professional Conduct.

INT3270 - Advanced ASL Classifiers for Interpreting

General
Course Description
Description: This course (Advanced ASL Classifiers for Interpreters) provides skill development in topic-specific classifier use for interpreters. Utilizing descriptors common to community, medical, and educational settings, students will demonstrate the ability to successfully convey major concepts in ASL, incorporating various classifiers types, locatives, and nonmanual markers. Students will increase their ability to comprehend classifiers used by deaf individuals in these settings through the use of visual gestural communication techniques, visual discrimination, and visual memory exercises.

INT3290 - Interpreting Skill Development I

General

Course Description
Co-requisite: INT3205
Description: As the first of a four-course sequence, this course introduces students to peer and self-assessment as key components of feedback literacy and interpreting skill development. Students will learn strategies for (a) creating non-evaluative assessments for themselves and others and (b) transforming assessments into feasible goal plans. Foundations of reflective practice are reinforced in this course and across the course series.

INT3950 - Introduction to Service Learning in Interpreter Education

General
Course Description
Description: This course is one of two service learning courses designed to strengthen the student's ability to acculturate to the rich linguistic and cultural heritage of the Deaf community through civic engagement. The course introduces Experiential Learning Theory and the community engagement approach to situating the Deaf community within interpreter education and promoting professional alliances. Students apply critical thinking skills to their own biases and assumptions, constructing an asset map of the community, and identifying goals that offer potential for practitioner-entity partnerships. Students learn the basics of building teams, establishing responsible boundaries, working toward mutual goals that are defined by the Deaf community, and applying the foundations of service learning to their future as interpreters.

INT4272 - Interpreting Simultaneous Dialogue

General
Course Description
Prerequisite: INT 3271
Description: This course focuses on the development of ASL/English simultaneous dialogue interpreting skills and the student's ability to self-monitor for quality and fidelity. Students learn to provide constructive peer feedback, and incorporate spoken and signed language research into their ongoing skill development. Abilities such as critical listening, producing messages with appropriate illocutionary force, and applying the Demand-Control Schema are refined in this course.

INT4410 - Interpreting for Persons who are Deaf-Blind

General

Course Description
Prerequisite: INT 3271
Description: This course introduces students to the unique factors of interpreting for persons who are DeafBlind and the conditional impact on communication, mobility, employment, socialization, and daily living. The course emphasizes practicing the various modes of communication (e.g., tactile, restricted field of vision) that interpreters and Support Service Providers use when working with persons who are DeafBlind. Students become familiar with human guide techniques, touch signals, and orienting persons who are DeafBlind to the environment. The course utilizes reflective discussion and writing, and students have authentic practice with DeafBlind community members.

INT4931 - Issues and Trends in Educational Interpreting

General

Course Description
Prerequisite: INT4409
Description: This course focuses on current issues, trends, and topics that impact the work of educational interpreters in K-12 settings as they provide services and interventions to deaf, deafblind, and hard-of-hearing students. The issues and

challenges addressed in this course will be derived from up-to-date knowledge from research and effective practice as well as current issues and trends in the field. Topics covered may include educational policies and legislation, work of Deaf and hearing interpreting teams, language deprivation among deaf, deafblind, and hard-of-hearing children, credentialing and licensure issues, advanced language development, and interdisciplinary teamwork in K-12 settings.

INT5800 - Legacies and Leadership in Interpreter Education

General

Course Description
Description: This course introduces students to the history of spoken and signed language translator and interpreter education from the 18th century, including key theories and people in the field as well as the social, political and legal perspectives that have influenced the development of interpreter education. Students will assess the current state of interpreter education in the U.S., identify current issues, and vision together some strategies to move the field forward. Students will learn the responsibilities of educators as leaders in the profession at regional, state, and national levels. This course introduces the social, political, and economic context in which post-secondary interpreter education operates.

INT6105 - Foundations of Interpreting Studies

General

Course Description
In this course, students will be introduced to foundational principles in the academic discipline of Interpreting Studies. Students will study interpreting through three primary lenses that have informed inquiry into interpreting: 1) linguistics and translation, 2) socio-cultural approaches, and 3) cognitive science and psychology. The course draws upon research and theoretical frameworks relevant to both unimodal and bimodal interpreting, as well as seminal work in Translation Studies. Students will learn to discuss key concepts in Interpreting Studies, as well as apply these concepts in their interpreting work.

INT6274 - Advanced ASL Concepts for Interpreters

General
Course Description
Description: In this course, students will have an opportunity to improve their ASL skills, both expressive and receptive, in order to communicate more effectively in personal and professional interactions. Students will review the salient features of ASL and rules or usage. They will demonstrate the ability to incorporate those features in consecutive and simultaneous interpreting. The course allows students to develop skills for assessing their own ASL fluency while interpreting texts of dense content and complex cultural features.

INT6276 - Teaching Cognitive Processing

General
Course Description
Prerequisite: INT 5275
Description: This course presents interpreting and translating process from the perspective of interpretation pedagogy and introduces students to the key concepts of comprehension and working memory, self-assessment of fidelity, cognitive capacity, language availability, and effort models. The course prepares students to integrate interpreting theory into interpreter education through personal skill acquisition and curriculum development.

INT6405 - Interpreting Academic Subjects

General

Course Description
This course addresses the specialized discourse and language of educational subjects and settings and assessing language needs for students who are deaf/ DeafBlind/hard of hearing. Students will examine the ethics, role, and function of interpreters in academic settings. Practical skills preparation and assessment of interpreting simultaneously in elementary and secondary school settings. Includes specialized vocabulary for STEM, geography, social studies, literary arts, vocational education and other specialized locations.

INT6415 - DeafBlind Interpreting

General
Course Description
Description: This course provides an academic foundation for interpreting students to work with people who are DeafBlind and who require skilled interpreters for a variety of access modes. Students will learn how to interpret within a restricted field of vision at various distances and use Tactile American Sign Language and haptic systems for providing comprehensive environmental access. The course prioritizes the unique thought worlds and cultural perspectives of DeafBlind individuals over their medical conditions, and students study the relationship of diverse communication techniques that impact a person's life quality to employment, socialization, mobility, leisure, and autonomy. Students study complementary skills needed by professional DeafBlind interpreters, such as guiding, environmental orientation, and visual description during the interpreting process.

INT6416 - Deaf Perspectives on Interpreting

General
Course Description
This course examines the ASL-/English interpreting process, profession, and field from the perspective of Deaf/DeafBlind people. Students will explore the perspectives of Deaf/DeafBlind people from diverse backgrounds and their experiences surrounding the provision of interpreting services in various settings. Strategies to maximize access by Deaf people and to facilitate trust between interpreters and Deaf/DeafBlind consumers will be learned and applied.

INT6425 - Legal Interpreting

General
Course Description
Description: In this course, students will develop a knowledge base regarding the American legal system, sources of legal rights, and key pieces of legislation. They will research best practices and the wide range of legal settings, and consider how to provide meaning-based interpretation of legal texts in five of these settings. Students will then apply this foundation to the production of equivalent linguistic and cultural translations and interpretations in specific legal texts/settings.

INT6802 - Methods for Teaching Interpreting

General

Course Description
Description: This course addresses various strategies for teaching consecutive and simultaneous interpreting skills to novice interpreting students. The three areas of concentration are (1) interpreting consecutive dialogue, (2) interpreting simultaneous dialogue, and (3) interpreting simultaneous monologue from English to ASL and from ASL to spoken English. Students learn how to scaffold skill sets when developing interpreting methods courses so their students will achieve the program's exit competencies and be prepared for workforce entry. The course requires students to apply interpreting models and philosophies to instruction and reinforcement of interpreting skill acquisition.

INT6807 - Teaching Translation

General

Course Description
Description: This course introduces key concepts in translation and teaching translation for signed language interpreters. Daniel Gile's Effort Models form a framework for applying theory to practice as translators and teachers of translation. Students will translate passages of varying levels of difficulty between ASL and English. They will apply translation strategies such as preparation, text analysis, message transfer, reformulation, and testing the translation. Students will be guided in developing and refining techniques associated with discussing translations, creating and analyzing translations, and developing lesson plans for teaching translation.

INT6810 - Curriculum Development and Revision

General
Course Description
Description: This course is designed to introduce interpreting students to the multi-dimensional process of curriculum design, its interface to instruction and the critical nature of review and revision. The central learning experience includes the creation of a model interpreter education curriculum using the “backwards design” development approach. Students will learn how to integrate valid and reliable assessment into curriculum development. An emphasis is placed on the examination of curriculum through a global perspective that is intended to prepare students to meet the expectations of the Commission on Collegiate Interpreter Education (CCIE) standards as well as equip them to compete in a competitive market.

INT6811 - Performance Assessment

General
Course Description
Description: This course addresses the assessment of interpreting student performance in a variety of tasks, including interactive interpreting performance, application of ethics to interpreting decision-making, and utilizing the Demand-Control Schema to self-assess one's interpreted product. Students learn how to teach self-analysis techniques that identify and remedy aspects of the interpreting process, including nonmanual markers, spatial relationships, utterance boundaries, and grammatical accuracy. Emphasis in this course is on the use of non-evaluative language when evaluating the dispositions and work of novice interpreting students and assessing the product and cognitive process used by the interpreting student.

INT6911 - Applied Research in Interpretation

General

Course Description
Description: This course introduces students to current research in the field of spoken and signed language interpretation and directs students in conceptualizing research projects. Students are instructed about research ethics involved in social science research and they will become certified to conduct research with human subjects. Informed Consent and other requirements of the Institutional Review Board (IRB) process for research approval are covered. Students are mentored through topic investigation, problem identification, research design, and literature review. The goal of the course is for students to become critical consumers and practitioners of research applicable to the interpreting profession. This course measures mastery of written English competency, academic use of ASL, logical concept development, critical analysis of the literature, and cohesion in writing and presentations.

INT6930 - Special Topics in Interpreter Education

General

Course Description
Description: This course focuses future interpreter educators on current topics that impact the development, maintenance, and accreditation of interpreter education programs as they strive to meet the needs of a growing profession. Current issues and challenges addressed in this course include preparation of students to work as remote interpreters, formation of teams with Deaf interpreters, accreditation, international awareness of access initiatives, and admission testing. The course provides an open forum for overcoming challenges such as recruitment and retention of diverse student populations, providing mentorships for program graduates, and ensuring programs provide access and opportunity to aspiring Deaf interpreters.

INT6932 - Issues and Trends in Educational Interpreting

General
Course Description
This course focuses on current issues, trends, and topics that impact the work of educational interpreters in K-12 settings as they provide services and interventions to Deaf and hard-of-hearing students. The issues and challenges addressed in this course will be derived from up-to-date knowledge from research and effective practice as well as current issues and trends in the field. Topics covered may include educational policies and legislation, work of Deaf and hearing interpreting teams, language deprivation among Deaf and hard-of-hearing children, credentialing and licensure issues, advanced language development, and interdisciplinary teamwork in K-12 settings.

ISM6404 - Applications of Business Analytics

General

Course Description
Description: This overview course explores the broad topic of business analytics by focusing on the tools important to better identify and communicate valuable insights and to facilitate the flow of analytics information within an organization. Through hands-on projects and interactive classes, students will learn the foundations of analytics, including preparing, managing, exploring, and analyzing data and communicating results to executives using effective language and visualizations. This course is less about building models (e.g. optimization or predictive models) and more about practical business analysis and communication of results. Those successfully completing the course should feel comfortable identifying meaningful patterns and communicating clear results to facilitate decision making across many areas of business.

LAE3210 - Foundations of Literacy

General

Course Description
Prerequisite: EDF1005
Description: This course focuses on the theories and instructional practice of early literacy instruction, including early childhood language development, the foundational role of oral language, early literacy assessments for phonological and phonemic awareness, concepts of print, and alphabetic knowledge. The primary focus of the course is on developing a deep understanding of the reading acquisition skills and related instruction at the primary level, Kindergarten through second grade, in addition to reading assessments that provide formative information on reading development. Instructional strategies in this course include literacy centers, guided reading, read alouds, shared reading, reading conferences and interactive and shared reading. Attention will be given to the role student engagement plays in student learning and how instruction can be differentiated by individual differences including English language ability. EDF 1005 is the prerequisite for this course.

LAE4312 - Differentiating Instruction in Literacy

General

Course Description
Prerequisite: LAE 3210 and LAE 3211
Co-requisite: EDG4442
Description: This is the third literacy course in the elementary program. It follows courses in the foundations of literacy development including methods, resources and assessments for literacy teaching/learning. It will enable preservice teachers to understand the scope and place of diagnosis and subsequent literacy instruction in the literacy development program; the roles played by the classroom teacher and other specialized personnel in the school; the wise use of a variety of diagnostic tools (tests and other measurement techniques) to measure literacy ability, and based on such measurement, evaluate the student's literacy abilities; the planning and differentiating instruction based on such an evaluation.

LAH3424 - (FC) Aztecs/Incas/Mayas

General

Course Description
This course is an introduction to the history of Mesoamerica and the Andes prior to 1492. Special attention will be given to the historical development of the Maya, Aztec and Inca civilizations; however, the course will also emphasize the importance of other peoples and cultures such as the Olmecs, Toltecs, Mochica, Chimu and Muisca. Through a careful examination of archaeological and historical evidence, this course will examine major political, religious, and economic changes in the Americas before the arrival of Europeans.

LAS3050 - (FC) Latin American Digital Humanities

General

Course Description
This course explores intersections between technology and culture in the study of Latin America today. We analyze digital projects based throughout the region that examine the conflicts, tensions, and transformations that have defined Latin America from 1492 to the present. Students analyze ways that scholars are using digital tools and methodologies to recover and repatriate cultural heritage, access new voices, construct communities, and address injustice. The projects studied employ a variety of methods, including mapping and spatial analysis, oral history, the online publication of archival materials, and the construction of digital archives.

In studying these projects, we consider ways that digital scholarship in and about Latin America reflects particular characteristics that are informed by the cultures and history of the region. The language of instruction is English.

LAS3102 - (FC) Pirates on the Spanish Seas

General

Course Description
This course examines cultures of the Hispanic world through the framework of maritime piracy. We consider the political, religious, and social background in Early Modern Spain and its overseas colonies against which piracy takes place, and the ways that pirates are represented in Spanish and Spanish American cultural production of the sixteenth through eighteenth centuries. We study the transformation of the pirate into a Romantic hero in the nineteenth century, and the use of piracy as a literary tool for nation-building in the newly independent Spanish American republics. We also analyze the continuing role of piracy in Hispanic culture from the twentieth century to the present, looking in particular at maritime predation as a metaphor for outsider status, personal freedom, and troubled love. The language of instruction is English.

LAS3132 - (FC) Women and Violence in Latin American Literature and Film

General

Course Description
Description: This course is an invitation to think critically about the phenomenon of violence in Latin America and how it has affected women in particular. We will consider different types of violence, including political, social, domestic, and the violence of migration. We will examine the roles that society, religion, and the state have played in fomenting or perpetuating this violence. In order to approach this topic, we will take a historical, literary and cinematographic journey through various countries such as Chile, Dominican Republic, Colombia, México, and the United States, among others.

LDR2220 - Community Organizing for Educators and Activists

General

Course Description
Description: This course is built on exploration of the history of social and political community change efforts and movements; the methods and tools used in these efforts; and the possibilities for us to reimagine these approaches to organize in our own communities. This exploration will include the voices of local activists and organizers and is both theoretical and experiential, situated around touchstone questions: What concepts, theories, and assumptions drive methods for political and social change? How can community organizers show fidelity to these concepts, theories, and assumptions? How can we work together to identify and marshal individual and shared gifts for just and equitable communities? To explore these questions, we will use engaging pedagogies, including circles, the arts, and learning exchanges to honor our differences including race, class, gender, sexuality, by openly examining the relative privilege and power inherent in them.

LDR3240 - Intergroup Dialogue Among Diverse Populations

General

Course Description
Intergroup Dialogue Among Diverse Populations is designed to provide foundational skills in knowledge needed to participate in and facilitate multicultural group interactions. This course assumes that the most effective facilitators of multicultural group interactions possess a level of awareness, skill, knowledge, and passion. The topics of this course include social identity development; prejudice and stereotyping and their effects on groups; difference and dominance and the nature of social oppression; basic group facilitation skills

and their applications in multicultural settings. The course addresses these and other topical areas through readings, videos, facilitated in-class dialogues, activities, simulations, role-plays, and reflective journal and writing assignments.

LDR3320 - Collaborative Leadership

General

Course Description
Prerequisite: LDR 3003Description: The focus of this course is on leadership within the context of small work groups and self-directed project teams and their role and functions within organizations. The purpose of this course is to teach students how to collaborate effectively in dynamic environments. Leaders who are able to work collaboratively and lead across cultures and disciplines from business to educational environments are essential to high performing organizations. Collaborative leadership knowledge and skills have become a necessity to enable emerging leaders to transcend differences to build organizations and teams of committed workers.

LDR3367 - Facilitation

General

Course Description
Description: This elective class is for students who have been selected as facilitators for the Honors First Year Colloquium class. The class has been designed to teach students some theoretical material about leadership and facilitation and apply that material in weekly breakout sessions. The first hour of class will prepare facilitators for each breakout session on a weekly basis tailored specifically to the materials and assignments that will be relevant to that week's lessons. The second hour will explore leadership more generally, including relevant leadership theory, principles of facilitating discussion, and communication and conflict resolution skills. LDR4368 - Senior Facilitation

General

Course Description
Description: This elective class builds on the skills gained from Facilitation class. It prepares students on a weekly basis for each week's breakout session. Senior facilitators will take a leadership role in the discussion of the theoretical material. They will mentor new facilitators in techniques of facilitating discussion. They will deliberately apply the communication and conflict resolution techniques. They undertake an independent senior facilitation project that will add something to the Colloquium class or the community of facilitators. The first hour of class will prepare facilitators for each breakout session on a weekly basis tailored specifically to the materials and assignments that will be relevant to that week's lessons. Leadership theory, principles of facilitating discussion, and communication and conflict resolution skills will be addressed. Each senior facilitator will meet one-on-one with the instructor to discuss his or her senior facilitation project.Availability: One semester per year

LIT3333 - Young Adult Literature

General
Course Description
Description: This course examines texts created for young readers. Students will read classic and contemporary literature considered suitable for middle school students, as well as read literary criticism focusing on Young Adult literature. The course considers what characteristics place a text within the field, as well as characteristic themes and concerns of the texts.

LIT4042 - Dramatic Literature

General
Course Description
Description: This course offers students an opportunity to examine dramatic literature in different contexts. The course may focus on a period of dramatic literature, a genre, a theme or topic, or explore connections between drama and other modes of performance. Selected works may explore such topics as the representation of suffering on stage, the representation of women in tragic theater, the suicidal impulse in/of Modernism, the conflict between presentation and representation, or the enduring presence of tragedy. This course will provide instruction in methods for analyzing dramatic literature.

MAC1101C - (GM) Intensive College Algebra with Recitation

General

Course Description
Prerequisite: Qualifying score on math placement OR C or better in MAT1033 or equivalent.
Description: Topics include a substantial review of Intermediate Algebra concepts, linear and quadratic functions, systems of equations and inequalities, polynomials, exponentials, logarithms, and applications. Students attend four hours of lecture and one hour of recitation per week. Students may only earn credit for one of the following: MAC1105, MAC1105C, or MAC1101C. Meets the General Education requirement in Mathematics. Meets the Gordon Rule requirement.

MAC1105 - (GM) College Algebra

General

Course Description
Prerequisite: Qualifying score on math placement OR C or better in MAT1033 or equivalent
Description: In this course, students will develop problem solving skills, critical thinking, computational proficiency, and contextual fluency through the study of equations, functions, and their graphs. Emphasis will be placed on quadratic, exponential, and logarithmic functions. topics will include solving equations and inequalities, definition and properties of a function, domain and range, transformations of graphs, operations on functions, composite and inverse functions, basic polynomial and rational functions, exponential and logarithmic functions, and applications.
Students may only earn credit for one of the following: MAC1105, MAC1105C. Meets the Gordon Rule requirement.

MAC2313 - (GM) Calculus III

General

Course Description
Prerequisite: MAC 2312.
This is the third course in calculus designed to cover calculus of functions of several variables. The course covers analytical geometry and vectors in two and three dimensions. The course covers calculus of parametric and vector-valued functions. This course introduces students to functions of several variables and then those functions are analyzed and applied using partial derivatives, differentials, directional derivatives, gradients and optimization. Additionally, the course presents a study of multiple integrals in rectangular, polar, cylindrical and spherical coordinates.

MAN3504 - Operations Management

General

Course Description
Prerequisite: STA 2023
Description: This course provides an overview of methods and tools for planning and controlling the production and distribution of goods and services. Topics include: forecasting, production planning, inventory management, and other functions necessary to properly allocate, evaluate and manage resources in the supply chain processes. Managers in both manufacturing and service inter-organizational systems need to understand these topics in order to increase firm value by reducing costs and required assets while at the same time maintaining or increasing output, quality and customer service.

MAN4029 - Service Operations Management

General

Course Description
Prerequisite: MAN 3504
Description: The services sector of our economy continues to grow, and by some estimates, it currently makes up about 70% to 80% of the nation's GDP and employs about the same percentage of workforce. This class is focused on important operations management issues faced in services in various industries. Major topics include 1] service design considerations for quality, customers and employees etc. and 2] issues related to delivery of service such as waiting line studies, managing service expectations, yield management etc. We would consider various industries such as hospitality, restaurants, retail, healthcare etc. in public, private and the not-for-profit sectors of the economy. The various quantitative and qualitative frameworks would strive towards achieving high-quality, customer focused profitable services.

MAN4143 - Practical Leadership

General
Course Description
Prerequisite: MAN 3025; Student must have a 2.5 GPA or higher.Description: This course gives students a practical foundation for working with and leading others. It develops students' expertise in effective leadership while exposing them to supporting academic research. All students can learn and apply the practices, no matter their levels of experience or comfort. Moreover, the competencies are critical to successfully running teams, directing groups, managing organizations, and engaging stakeholders. Students are introduced to a range of concepts including credibility, trust, vision, change, empowerment, and esprit de corps. In parallel with instructor presentations and mentoring, students gain experience working in teams and assembling an activities-based portfolio of usable resources and knowledge.

MAN4702 - Emergency and Disaster Management

General

Course Description
Description: In this course we will learn how operations management can help populations affected by disasters, both locally (disaster management) and internationally (humanitarian operations). Disaster management aims to prepare for and respond to disasters. Florida is recognized nationwide for the expertise of its disaster management organizations and institutions. In the second part of the course we take an international approach. Governments and local communities in many developing countries do not have the resources needed to handle the consequences of disasters. They rely on the help from international humanitarian organizations who bring food, medicines and shelters to victims of disasters. This course will provide students with the basic skills and understanding needed to work in disaster management or international humanitarian operations.

MAP3170 - Financial Mathematics for Actuarial Science

General

Course Description
Prerequisite: MAC 2312
This course covers the content of the joint Society of Actuaries/Casualty Actuarial Society Exam FM/2 on mathematical interest theory. Topics include amount functions, interest rates and yields, force of interest, special annuity types, bonds, yield curves, interest rate sensitivity, and an introduction to the mathematics of financial derivatives.

MAP4314 - Dynamical Systems

General

Course Description
Prerequisite: MAC 2313, MAP 2302, and MAS 3105
Description: This course covers the fundamentals of dynamical systems in (continuous time) nonlinear ODEs and in (discrete time) nonlinear maps. Topics include phase portraits, periodic points, trajectories, sources/sinks/saddles, stability, bifurcations, chaotic attractor, iteration, fixed points, and Lyapunov exponents. Applications will be drawn from biology, physics, or engineering.

MAP6195 - Analysis of Large Data Sets

General

Course Description
This course covers analysis of large data sets using applied data engineering which includes the decision-making processes, domain-specific expertise as well as the applied data engineering life cycle including data mining and data literacy through practical case studies for real-world applications. The course also covers an overview of practical data visualization, ethical considerations, and governance.

MAP6246 - Linear Programming

General

Course Description
This course integrates linear programming principles with data science tools and methodologies to address complex real-world optimization challenges. Topics include the simplex and interior-point methods; parametric programming and post-optimality analysis; duality matrix games, linear systems solvability theory and

linear systems duality theory; polyhedral sets and cones, including their convexity and separation properties and dual representations; equilibrium prices, Lagrange multipliers, sub-gradients and sensitivity analysis.

MAR3702 - Principles of Digital Transformation in Business

General

Course Description
Description: Today, every professional job has a digital component to it. Digitization impacts all industries and all business processes. This course inspires students to embrace today's profound transformation of business and organizational activities, processes, competencies and models to leverage the opportunities of a mix of digital technologies and their accelerating impact across society in a strategic and prioritized way, with present and future shifts in mind. It provides students with first-hand understanding of the elements driving digital transformation (like the Internet of Things, Drones, Artificial Intelligence, Big Data, Data Analytics, Social Media & Digital Marketing, Virtual and Augmented Reality, Telemedicine, Robotics)

MAR4104 - Social and Ethical Issues in Marketing

General

Course Description
Prerequisite: MAR 3023
Description: The focus of this course is upon social and economic issues confronting marketing decision-makers in a dynamic, pluralistic society. Marketing managers are responsible for accomplishing organizational financial objectives while simultaneously protecting and advancing societal interests. This dual responsibility presents an inherent conflict, or tension, for marketing decision-makers who are responsible for short-term economic performance and long-term social welfare. Through lecture, case analyses, and debates, students are exposed

to a variety of marketing situations where potential conflicts, or tensions, arise between organizational and social objectives.

MAR4206 - Marketing Channels: Strategy, Structure, and Management

General
Course Description
Prerequisite: MAR 3023
Description: This course investigates the nature and role of marketing channels and intermediaries. It focuses upon the design of distribution systems consonant with chosen positioning strategies in order to effectively and efficiently move offerings from origination to points of consumption. It addresses the major normative questions pertaining to channel design and functioning, including consideration of integration strategies, channel member motivation, coordination, and control, and legal constraints on channel functioning. It addresses the impact of alternative forms on channel performance.

MAR4325 - Social Media Marketing Strategy

General

Course Description
Prerequisite: MAR 3023
Description: Social media has become an emerging and essential marketing communication channel for firms. Due to its fast-growing, innovative, and ever-evolving nature, social media has not been well understood from a strategic marketing perspective. Therefore, this course will focus on understanding social media and will examine the strategic use of social media for developing and implementing effective marketing strategies.

MAR4333 - Integrated Marketing Communications Management

General

Course Description
Prerequisite: MAR 3023
Description: Integrated marketing communications involves the development of marketing strategies and creative campaigns that weave together multiple forms of communication media (advertising, public relations, promotion, social media, etc.) to suit the particular messaging goals for a brand. The course exposes students to how both traditional and nontraditional tools of promotion are integrated to effectively communicate brand messages to both customers and stakeholders. It emphasizes the principles of branding and communications theory, the role of different tools in the promotional mix, their benefits in contributing to an integrated communications plan, the formulation of an integrated marketing communications plan, and the identification of ethical, social, and legal implications of integrated brand messages to customers and stakeholders.

MAR4615 - Introduction to Marketing Analytics

General

Course Description
Prerequisite: MAR 3023 and STA 2023
Description: Analytics is defined as finding meaningful patterns in data. This overview course explores the very broad topic of analytics by focusing on the aspects most important to marketing managers in firms seeking to better discover data patterns and incorporate them into decisions. Students will learn the foundations of analytics, including preparing and managing modest-sized data sets, exploring and analyzing data with appropriate statistical tests, and communicating results to managers using effective language and visualizations. This course focuses on practical analysis and communication of results to managers to use in the decision-making process. Those successfully completing the course should feel

comfortable approaching marketing data to discover meaningful patterns and communicate clear, understandable results that will facilitate decision making in all areas of marketing.

MAR6726 - Digital Marketing Analytics

General

Course Description
Prerequisite: MAR 6805 or permission of the instructor and ECO 6415
Description: This course encompasses the formulation and implementation of a digital strategy and related strategic marketing plan for a product/service offering on the Internet including the use of analytics to create and improve digital marketing strategy. (3 credit hours)

MAR6735 - Consumer Analytics

General

Course Description
Prerequisite: MAR 6805 or instructor permission and ECO 6415
Description: This overview course explores the broad topic of analytics by focusing on the aspects important to marketing managers such as segmentation, targeting, positioning, product innovation, promotion strategy, and customer lifetime value. Through interactive classes students will learn the foundations of marketing analytics including preparing, managing, exploring, and analyzing marketing data with appropriate statistical tests, and communicating results to executives using effective language and visualizations. This course is less about building models and more about practical analysis and communication of results. Those successfully completing the course should feel comfortable approaching marketing data to discover meaningful patterns and communicate results that will facilitate decision making in all areas of marketing. MAR6805 - Marketing Strategy

General
Course Description
Prerequisite: MAN 5036 or MAR 3023
Description: This course includes a study of the development and implementation of marketing strategy to provide for superior customer, value, satisfaction, and loyalty. Topics include: mission/vision development, environmental scanning, SWOT analysis, marketing goals and objectives, and segmentation, targeting, differentiation, positioning and growth strategies. Emphasis is placed on relationship building, globalization, internal marketing, quality management, and entrepreneurship. Case studies will be emphasized .

MAT1033 - Intermediate Algebra

General

Course Description
This course is designed for students who require additional skills in algebra prior to College Algebra. The major topics include sets and real numbers, linear equations and inequalities with applications, polynomials and factoring, algebraic fractions, exponents, roots and radicals, quadratic equations, graphs, and systems of linear equations with applications. Students may not use this course to substitute for any of the College Algebra type courses: MAC1101C Intensive College Algebra with Recitation, MAC1105 College Algebra, or MAC1105C College Algebra with Recitation. This course cannot be used towards satisfying the General Education requirement in mathematics.

MHS6205 - Clinical Assessment and Diagnosis

General

Course Description
Description: The purpose of this course is to familiarize students with the criteria for categorizing mental disorders using the current Diagnostic and Statistical Manual of Mental Disorders(DSM) and the International Statistical Classification of Diseases and Related Health Problems(ICD). Theories of abnormal and maladaptive behaviors will also be covered, prioritizing the biopsychosocial model. Students will be presented with assessment and evaluation concepts, terminology, and methodology, including the psychometric statistics underlying commonly used tests and assessments. The course will emphasize how testing and assessment informs the diagnostic and treatment planning processes as well as the implications of diagnosis and testing for diverse cultural communities.

MHS6401 - Clinical Mental Health Counseling in Community Settings

General

Course Description
Description: This course addresses current issues in the provision of counseling services in community and agency settings. Students will become familiar with mental health services across the continuum of care including inpatient, outpatient, partial treatment and aftercare. Current controversies regarding managed care and accountability, and public mental health policy will be explored. Practical applications include the development of methods for assessing community needs for counseling services, managing mental health services and programs, engaging in case conceptualization, treatment planning and documentation, practicing consultation, and providing clinical supervision.

MHS6404 - Theories in Clinical Mental Health Counseling

General
Course Description
The purpose of the course is to provide an overview of theories of counseling and psychotherapy, with an emphasis on mental health and clinical application of these theories. The course will focus on counseling theory, both in general and within the field of mental health counseling. Through readings, discussions, and observations students will gain a better understanding of human behavior and the issues confronted daily by those involved in clinical settings. Major counseling theories will be examined, applied, and translated to practice.

MHS6780 - Legal, Ethical, and Professional Issues in School Counseling

General

Course Description
Description: Students in this course will survey ethical, legal, and professional issues facing the school counselor. School counselors function in an environment regulated by state and federal laws, court decisions, certification, cultural diversity issues and school board rules. Using case studies, students will explore and demystify some of the legal complexities through an exploration of American Counseling Association Code of Ethics and Standard of Practice, federal law, case law, state statutes, multi-cultural community standards and school board rules. Students will learn how these assist in the protection of students, parents and the school counselor. Students will host a conference and present their research projects from EDF 6480 at this conference.

MMC4732 - Social Media Management

General
Course Description
Description: Students will learn web analytics, social media analytics, and search engine optimization skills by many hands-on skill-based projects. Students will also learn theoretical and critical perspectives on social media phenomena: principles of social influence, virality, and online privacy. Most importantly, students will be required to write original, professional quality pieces to publish in at least three social media outlets every week. By integrating creatives and analytics, student will be able to learn the power of writing and the dynamics of social media management firsthand.

MMC4975 - Internship Senior Project

General

Course Description
Prerequisite: MMC1004, MMC3200, MMC3105, MMC3942 and MMC4302Description: This course is the capstone for the Communication Major. An internship enhances knowledge and skills acquired from coursework through a semester-long period of supervised field experience, extensive research, or both. A minimum of 210 hours of work at the internship site are required in addition to weekly progress reports, midterm and final evaluations from the professional supervising the intern, and a portfolio in which students detail and provide self-assessment of their experiences and relate the internship experience to knowledge of theory and its application gained from the major curriculum.

MMC6426 - Qualitative Research Methods in Mass Communication

General

Course Description
Description: The course examines a wide range of qualitative research methods used in mass communication in general, communication management in particular. It provides a comprehensive overview of research design, data collection, data analysis, and research report writing associated with qualitative research. The methods covered in the course include, but are not limited to, in-depth interviews, focus groups, case studies, textual/discourse analysis, historical analysis, field observation, and ethnography. The course also addresses mixed method designs. Ultimately, the course will help communication managers and others use valid and appropriate qualitative research methods in their professional communication practice and decision-making.

MSL1001 - Leadership and Personal Development

General
Course Description
Co-requisite: MSL 1001LThis course introduces Cadets to the personal challenges and competencies that are critical for effective leadership. Cadets learn how the personal development of life skills such as critical thinking, goal setting, time management, physical fitness, and stress management relate to leadership, officership, and the Army profession. Lessons are designed to maximize participation, inspire intellectual curiosity, stimulate self-study and encourage team building through military/life skills. Each student must also register for and attend a two-hour weekly leadership laboratory (MSL 1490L). Students not on scholarship who enroll in this basic course do not incur any service obligation to the US Army.

MSL1002 - Introduction to Tactical Leadership

General
Course Description
Co-requisite: MSL 1002LThis course covers leadership fundamentals such as setting direction, problem solving, listening, presenting briefs, providing feedback, and using effective writing skills. Cadets explore dimensions of leadership values, attributes, and competencies in the context of practical, hands-on, and interactive exercises. Cadre role models and the building of stronger relationships among the Cadets through common experience and practical interaction are critical aspects of the MSL 1020 experience. Students must register for and attend a two-hour, weekly leadership laboratory (MSL 1492L). Students not on scholarship who enroll in this basic course do not incur any service obligation to the US Army.

MSL2101 - Individual Leadership Studies

General

Course Description
Co-requisite: MSL 2101LThis course explores the dimensions of creative and innovative tactical leadership strategies and styles by examining team dynamics and two historical leadership theories that form the basis of the Army Leadership Requirements Model (trait and behavior theories). Cadets practice aspects of personal motivation and team building in the context of planning, executing, and assessing team exercises and participating in leadership labs. Focus is on continued development of the knowledge of leadership values and attributes through an understanding of Army rank, structure, and duties, and basic aspects of land navigation and squad tactics. Case studies provide tangible context for learning the Soldier?s Creed and Warrior Ethos as they apply in the Contemporary Operating Environment (COE). Students must register for and attend a two-hour, weekly leadership laboratory. Students not on scholarship who enroll in this basic course do not incur any service obligation to the US Army.

MSL2102 - Foundations of Tactical Leadership

General

Course Description
Co-requisite: MSL 2102LThis course examines the challenges of leading tactical teams in the complex COE. The course highlights dimensions of terrain analysis, patrolling, and operation orders. Further study of the theoretical basis of the Army Leadership Requirements Model explores the dynamics of adaptive leadership in the context of military operations. This course provides a smooth transition into MSL 3201. Cadets develop greater self-awareness as they assess their own leadership styles and practice communication and team-building skills. COE case studies give insight into the importance and practice of teamwork and tactics in real-world scenarios. Students must register for and attend a two-hour, weekly leadership laboratory. Students not on scholarship who enroll in this basic course do not incur any service obligation to the US Army.

MSL3202 - Leadership in Changing Environments

General

Course Description
Co-requisite: MSL 3202LMSL 3202 uses increasingly intense situational leadership challenges to build cadet awareness and skills in leading tactical operations. Having learned squad-level tactics in MSL 3201, cadets now learn to lead up to platoon level. Cadets review aspects of combat, stability, and support operations. They also conduct military briefings and develop proficiency in garrison operation orders. The focus is on exploring, evaluating, and developing skills in decision making, persuading, and motivating team members in the COE. MSL 3202 cadets are evaluated on what they know and do as leaders as they prepare to attend LDAC.

MSL4301 - Adaptive Leadership

General

Course Description
Prerequisite: Requires completion of MSL 3201, MSL 3202 or professor of Military Science permission Co-requisite: MSL 4301LThis course provides practical exercise in planning, executing, and assessing complex operations, functioning as a member of a staff, and providing leadership-performance feedback to subordinates. Cadets are given situational opportunities to assess risk, make sound ethical decisions, and provide coaching and mentoring to fellow ROTC Cadets. MSL IV Cadets are measured by their ability to give and receive systematic and specific feedback on leadership abilities using the Socratic model of reflective learning. Cadets at the MSL IV level analyze and evaluate the leadership values, attributes, skills, and actions of MSL III Cadets while simultaneously considering their own leadership skills. Attention is given to preparation for success at BOLC II and III, and the development of leadership abilities.

MSL4302 - Leadership in a Complex World

General

Course Description
Prerequisite: MSL 4301 Co-requisite: MSL 4302LThis course explores the dynamics of leading in the complex situations of current military operations in the COE. Cadets examine differences in customs and courtesies, military law, principles of war, and rules of engagement in the face of international terrorism. They also explore aspects of interacting with nongovernmental organizations, civilians on the battlefield, and host nation support. The course places significant emphasis on preparing cadets for their first unit of assignment. It uses case studies, scenarios, and ?What Now, Lieutenant?? exercises to prepare cadets to face the complex ethical and practical demands of leading as commissioned officers in the United States Army.

MSL4941 - Advanced Leader Training

General

Course Description
Leadership development and assessment course is the army's 5-week leader internship conducted at Fort Lewis, Washington from June through August. The instructor places each cadet in a variety of leadership positions, many of which simulate stressful combat situations. Cadets are evaluated by platoon tactical officers and NCOs. Training is organized into separate committees in a tiered structure, including basic military skills, leadership development, tactical training, basic rifle marksmanship and situational training exercises. Although this course is not conducted on campus grading will be conducted by university faculty.

MUC3620 - Jazz Composition

General

Course Description
Prerequisite: MUT 1362
Description: This course is a study of jazz composition techniques and processes employed by various successful jazz composers. Special emphasis will be placed on the analysis of works by small group composers such as Horace Silver, Herbie Hancock, Wayne Shorter, and Joe Henderson. Students will compose and perform their own original compositions throughout the semester. This course can be taken as a free elective in the B.M. Jazz Studies program of study.

MUE3392 - Managing Music Classrooms and Program Administration

General

Course Description
Prerequisite: MUE 2040
Description: This course focuses on developing skills to manage music classrooms, as well as professionalism, ethics, and the law. Students will develop teaching and classroom management skills through discussion, peer-teaching simulations, and observations. Students will discuss the assumptions they have about students, school, and learning and compare these to existing educational practices and research findings, and then read about and discuss a variety of philosophies, behavior and self-concept theories, and discipline/classroom management programs. Students develop a plan for managing a variety of music classroom types. The course ends with an examination of situations of interest to participants which include, among other issues, student safety, legal rights and responsibilities of teachers, meeting the varying needs of students as a result of student differences, and incorporation of teacher's beliefs and values.

MUG6205 - Advanced Choral Conducting

General

Course Description
Prerequisite: MUT 1112 and MUG 3104
Description: This course provides advanced study in choral conducting. This course will engage in an intensive study of the art of conducting, score preparation/ analysis, and rehearsal pedagogy. Students will study conducting with emphasis on going beyond the pattern, gesture-to-sound relationship, and demonstrate knowledge of a wide range of musical forms and concepts through conducting. Additional topics may include technical studies, sight-reading and selections from masterworks. Material will be assigned based on student ability and will be chosen from a broad selection of traditional and non-traditional choral and orchestral repertoire. Permission of the instructor is required.

MUH3024 - Evolution of Jazz II

General
Course Description
Prerequisites: Successful completion of MUH 2018 Evolution of Jazz for Non-Music Majors
Music Majors - no prerequisite
This course presents an advanced study of America's "classical" music: Jazz. It is designed as a continuation of MUH 2018. In addition to presenting a detailed comparative analysis of jazz artists and literature, the course focuses on the social impact involved in the development of jazz from 1890 to the present. Unique audio and video concert footage and interviews enable an in-depth study.

MUH3215 - Western Music History and Popular Cultures I

General

Course Description
Prerequiste: MUT 2117
Description: This course presents an overview of significant concepts from pre-19th-century Western music and compares them with similar concepts from popular music of the US and world cultures. Through this course, students will acquire familiarity with stylistic developments and major figures from the Medieval, Renaissance, Baroque, and Classical periods as well as features and performers of jazz, rock, folk, and other popular styles. The goal of this course is to think broadly and critically about music. Therefore, it will focus not only on knowledge of composers and dates, but also on concepts such as the role of the performer in society, the cultural functions of music and music performance, the development of music notation, and the idea of art music.

Description: This course will examine and evaluate solo, ensemble, and orchestral woodwind literature, including music from all available styles and periods. Emphasis will be placed on the students' primary instrument of performance. A component of this study will include knowledge of available reference books which evaluate or list solos by difficulty level, texts, and information sources. The course activities provide a comprehensive knowledge of woodwind literature, and improve the students ability to identify the quality and value of compositions for study and performance.

MUM1620 - Audio and Acoustics

General
Course Description
Description: The course introduces practical approaches to the principles of audio and acoustics. It explores the physical properties of sound and its interaction in various environments and introduces techniques for controlling and manipulating those properties. Operating principles of digital and analog audio are presented, including transduction, time- and frequency-domain analysis, and sampling theory. Upon registering for this course, the student must be enrolled in an Applied Music course and a large ensemble.

MUN3116 - UNF Drumline

General

Course Description
Description: The UNF Drumline is a performing ensemble that is part of the School of Music. Maintaining a visible performance schedule on and off campus, the drumline gives live performances at events including sporting events, commencement, TV appearances, recruitment tours, and performances in conjunction with the percussion studio. This ensemble is open to students from across the university, including both music majors and non-music majors who

desire to continue performing throughout college. Weekly rehearsals and regular performances that occur throughout the semester are required. Acceptance and placement in the drumline is determined by audition each semester. Instruments and materials needed are provided. Departmental and instructor permission are required.

MUN3233 - Opera Pit Orchestra

General

Course Description
The Opera Pit Orchestra affords student instrumentalists the opportunity to perform in a mainstage opera production alongside their vocal peers. This course offers a production-based curriculum, which requires participation in weekly rehearsals and the performance of a full opera production presented by the UNF Opera Ensemble. Learning will be assessed each week through musical performance of assigned operatic repertoire. Each semester will culminate with a final performance of a complete opera production, or selected concert repertoire, and will be graded by the supervising faculty.

MUN6007 - Graduate Chorale

General

Course Description
Description: Membership in Chorale provides students with a choral singing background the opportunity to experience a vast array of musical styles, to work diligently and enthusiastically to achieve excellence in performance, and to perform alongside others who share an interest in choral music. Chorale performs up to four required concerts per semester. In addition to the mandatory activities during rehearsal time, Chorale offers opportunities in student leadership, such as fundraising, social events, and volunteering to assist before and after concerts with set-up, recruitment, or receptions. A positive/respectful demeanor, enthusiasm, accountability, and punctuality are elements for successful participation in this ensemble. Permission of the instructor is required. This course is repeatable for up to 4 credits. A materials fee of $35 will be assessed.

MUN6345 - Graduate Chamber Singers

General

Course Description
Description: The primary goal of Chamber Singers is to prepare and train UNF's top musicians for a professional career in music. This ensemble provides opportunities to perform vocal music at the highest level possible, to learn and experience a variety of styles, to work with peers to meet exemplary performance goals, and to achieve a professional level as a performer. The Chamber Singers are a primary recruiting ensemble for the department, with off-campus performances and recordings done locally, nationally, and internationally. The time commitment includes up to seven mandatory performances per semester, spring recruiting days in local schools, 2-8 voluntary solo and small ensemble performance opportunities, and an international performance tour every few years in early May. Permission of the instructor is required. This course is repeatable for up to 4 credits. A materials fee of $35 will be assessed.

MUN6445 - Graduate Percussion Ensemble

General

Course Description
Co-requisite: MVP6451
Description: This course is an ensemble for graduate student percussion majors in the School of Music. The objective of this course is to collaborate musically, through rehearsal and performance, on chamber percussion ensemble works. With a focus on chamber music performance techniques, students in this ensemble will develop advanced musical skills which include non-verbal communication, musical expression, and non-standard/extended techniques on a variety of percussion instruments. In addition, it encourages critical thinking, analytical score study, and communication skills in collaborative musical context. Music performed will include significant works by a diverse list of composers within the percussion field, in addition to performances with faculty. The Graduate Percussion Ensemble involves multiple performances per semester, including collaboration with other ensembles within the UNF School of Music.

MUN6515 - Piano Accompanying

General

Course Description
Description: This course will ask students to accompany a single student recital, including the pre-concert jury, dress rehearsal, performance, their lessons with the soloist's teacher, and practice times mutually agreeable to soloist and accompanist or accompany private lessons in studios as assigned for a total of 4 hours per week. On occasion this course may require weekend rehearsals and performances. This course will satisfy one option for graduate piano students to meet the requirement for large ensemble credit. It can be taken, with instructor permission, in place of Choral Ensemble, Orchestra, or Wind Symphony.
Repeatability: This course may be repeated for a maximum of 4 credits.

MUS1020 - Performance, Practice, and Critique

General

Course Description
This course is designed and required for first-year School of Music students in their first semester at UNF who are members of the Music Living Learning Community. The course meets once per week. Each session features group interaction and discussion as students present performances, oral presentations, audition preparation, technology simulations, and other academic projects as they begin to explore their career opportunities as music majors. Some class sessions may include a guest speaker from the music industry, in which case students are expected to prepare any materials handed out in advance.

MUS4752 - Music Study Abroad Experience

General

Course Description
Studying music within the context of another culture provides students with a unique opportunity to expand their understanding of musical concepts through firsthand cultural experiences. This study abroad course allows students to merge their academic studies with the rich musical traditions, history, and social customs of the host country. By engaging with music in its cultural setting, students will gain a deeper and more global perspective on the role of music in society. This course may be repeated for up to 3 credits.

MUS5661 - Philosophy of Music

General
Course Description
Description: This course introduces students to the variety of philosophical perspectives that have enhanced our understanding of the phenomenon of music. The identity of "music" is explored in light of different cultural, social, and aesthetic contexts. We focus on the linguistic character of music as a symbol form, the source and nature of emotional experiences through music, the cultural and social contexts of music production and reception, and the normative question of how to evaluate musical products and performances. The course offers original insights into music, while teaching basic theoretical insights of linguistic, social-psychological, and cultural philosophy.

MUT3631 - Tonal Improvisation

General
Course Description
Description: This courses is geared toward developing musicianship through improvisation within the context of tonal musical idioms, with focus on classical and folk music genres. This course is designed for non-jazz music majors who may

have limited experience improvising as classically trained instrumentalists. Seeking to incite spontaneous musical expression, analogous with conversation in spoken language, this course encourages creative and meaningful music-making by developing a comprehensive understanding of melody, harmony, and rhythm within a tonal music context by connecting aural skills with instrumental techniques. Curriculum includes an approach to improvisation through a seven-step process. Students will perform individually and together in class, and will create several musical arrangements written with music notation software. This course is restricted to students in the School of Music. This is an elective course. Permission of the instructor is required.

MUT3651 - Classical Harmony

General
Course Description
Description: This course explores the harmonic principles of the Classical or "galant" style of 18th-century Western music, as well as their continued influence on musical styles of the 19th and 20th centuries. Through exercises in composition and analysis, students will learn about the generative role of harmony in the creation of original music. This course may be taken by non-music majors who have some background in music theory and would like to develop their understanding of the subject further, as well as by music majors who would like to develop their music theory knowledge beyond their required music theory coursework. Permission of the instructor is required to register for this course.

MUT4366 - Jazz Arranging II

General

Course Description
Prerequisite: MUT 4365. This course emphasizes writing and composing for a full jazz band of 17 or more musicians. It's main focus is section writing techniques such as unison, block, drop-two, and pad voicing. Also included is analysis of works by major jazz writers. The term will conclude with a performance of each student's complete big-band arrangement with score and parts.

MVJ1016 - Applied Jazz Saxophone I

General
Course Description
Prerequisite: Consent of instructor and admission to Music department. Description: This course teaches jazz improvisation via the saxophone. Concepts such as mental practice are stressed. Also the inherent multicultural aspect of jazz comes to the foreground. Students are taught to examine all cultures for fresh musical devices, understanding that old material can be used in new settings and that knowledge is ageless. The basic tools of jazz improvisation and harmony are taught and are built upon in the successive levels of this course. Repeatability: This course is repeatable one time for a total of 4 credit hours.

MVJ3436 - Applied Jazz Saxophone III

General

Course Description
Prerequisite: Successful completion of MVJ 2326 or consent of instructor.Description: This course teaches jazz improvisation via the saxophone. Additionally, it stresses the team player concept, the idea that the soloist interacts with a rhythm section and must learn to be confident in that environment. Compositions in the Bebop style are studied and compared to more melodic songs, the former for jazz lines and the latter for its melodic content. Piano chord voicings are studied to gain greater harmonic awareness. Repeatability: This course is repeatable one time for a total of 4 credit hours.

MVJ4348 - Applied Jazz Bass IV

General

Course Description
Prerequisite: Successful completion of two semesters of MVJ 3338 or instructor consent.
Description: This course teaches the fourth and final level of jazz bass performance. For this course, advanced concepts for the bass are introduced, including the revolutionary teachings of Jaco Pastorius and Victor Wooten. Also, the compositions of advanced jazz composers such as Herbie Hancock and Wayne Shorter are studied and analyzed. This allows the student to experience a broad palette of styles and content designed to enhance the creative process.

MVJ6456 - Applied Jazz Saxophone

General
Course Description
Description: Four semesters of this course are required for jazz saxophone majors seeking the Master of Music (M.M.) jazz performance degree. Students will study more advanced techniques of saxophone performance including but not limited to; altissimo, multiphonics and false fingerings. Harmonic and rhythmic concepts established by players such as John Coltrane, Joe Henderson, Sonny Rollins, Michael Brecker, Joe Lovano, Lee Konitz and others will be covered in depth. Students will be exposed to various approaches to practicing improvisation that will help them expand their harmonic and rhythmic vocabulary. Students at this level will also prepare for a culminating Senior Recital which will showcase their playing, composing, arranging and organizational skills. Permission of the instructor is required.

MVK3631 - Elementary Piano Pedagogy

General

Course Description
Description: This course includes a basic study of concepts necessary for successful private teaching at the elementary level and the principles of learning as applied to piano teaching. Various techniques for teaching pre-schoolers, older pre-college level students and adult beginning students will be examined and critiqued. Current method books with a variety of reading approaches will be considered. The emphasis will be on the specifics of teaching rhythm, note reading, keyboard technique, and the common problems associated with students in the first two years of study. This course may incorporate observing and/or assisting in the instruction of elementary piano lessons.

MVK3632 - Intermediate Piano Pedagogy

General

Course Description
Prerequisite: MVK 3631
Description: This course is designed to prepare pedagogy students for teaching intermediate-level piano students through a study of technical concepts, teaching materials and methods, and appropriate literature from the historical style periods. The discussion of theory-based instruction and musicianship classes will be continued. Instruction includes an analytical study of the problems associated with transfer students: the appropriate techniques for confronting areas of deficiency with an emphasis upon solo literature as well as ensemble music for one, two or multiple pianos, and an examination of music instruction software, including accompanying compact discs, MIDI discs, theory computer programs, and music instruction videos. Alternative literature, including both solo and ensemble works by contemporary composers in the jazz/rock or Romantic styles will be examined. This course may incorporate observing and/or assisting in the instruction of intermediate-level piano lessons.

MVK4603 - Pedagogy of Group Piano

General
Course Description
Description: This course encompasses the methodology of group piano teaching and a survey of materials for beginning through intermediate study in group keyboard teaching. Class projects include an evaluation of texts suitable for young beginners, adult classes and college courses in group piano instruction. The focus will be on issues of pacing in classroom teaching, curriculum building, need for supplementary material, and technical aspects such as rhythm drills, keyboard theory activities, and the use of exercises and etudes. Attendance on selected class days of UNF Class Piano I and III or Group Piano for Non-Majors will be required, and will lead to practice teaching of group lesson content.

MVK6451 - Applied Piano

General
Course Description
Description: Four semesters of Applied Piano are required for piano majors seeking the Master of Music (M.M) performance degree. This course consists of an hour of one-on-one instruction per week. Learning will be assessed each week through musical performance of assigned repertoire. Each semester will culminate with a final jury examination performed for a faculty panel. Permission of the instructor is required.
Repeatability: This course may be repeated for a maximum of 12 credits.

MVK6650 - Seminar in Piano Pedagogy

General
Course Description
Description: This course presents the skills needed for teaching students other than traditional beginning piano students. The course will present a variety of special topics related to learning theory, non-traditional students, and the integration of technology into the piano studio. It will also include an examination of current issues, policies, and trends in the field.

MVK6755 - Piano Studio Class

General

Course Description
Co-requisite: MVK6451 (Applied Piano)
Description: This weekly performance class provides participants with an opportunity to sharpen their performance skills and to practice performing in front of an audience of their peers and applied piano instructors. Students will observe and analyze performances, and will make suggestions to help improve subsequent performances. The course will also include, as time permits, an examination of famous and historic pianists, presentations related to career development, and masterclasses by visiting artists.

MVO6451 - Graduate Recital

General

Course Description
Description: The Graduate Recital is presented as the culmination of four semesters of Applied lessons. The repertoire will be chosen by both the applied professor and the student. Selections will demonstrate a mastery of both technical skill and musical sophistication. The emphasis will be on the solo performer, though some additional musicians may be utilized. Program notes are required as a part of this final presentation and must be submitted and approved by the applied teacher prior to the final program publication. Permission of the instructor is required.
Repeatability: This course may be repeated for a maximum of 6 credits.

MVO6452 - Graduate Chamber Recital

General

Course Description
Description: The Graduate Chamber Recital will be presented prior to the culmination of four semesters of Applied lessons. The recital will be of a collaborative nature involving other musicians. The concert will be a performance of representative chamber music literature that will be coached and rehearsed with the applied teacher. The repertoire performed will demonstrate developed technique and be of a high artistic value.
Repeatability: This course may be repeated for a maximum of 4 credits.

MVW4640 - Woodwind Pedagogy

General

Course Description
Description: This course is designed to provide students with an advanced understanding of teaching and performance techniques for woodwind instruments. Students will be provided with pedagogical knowledge of private woodwind instrument teaching including student motivation, tone production, technique, articulations, transpositions, and a survey of literature. Topics include the historical development of woodwind instruments, repertory and pedagogy, the study of pedagogical literature, and the proper performance practices for each historical period and genre studied.

NGR5057 - Health Assessment and Pharmacology

General

Course Description
Description: This course combines basic knowledge regarding pharmacotherapeutics and Health Assessment. Throughout the course, the student will review commonly prescribed drugs including pharmacokinetics, actions, uses, side effects, contraindications, dosage and routes. In addition, the student will develop proficiency in the skills of comprehensive health assessment of culturally diverse persons across the life span. Basic laboratory tests will be reviewed as they relate to medications or findings from the physical exam.

NGR5226 - Quality of Life and Chronic Medical Conditions

General

Course Description
Description: This online graduate-level course explores the relationship between quality of life (QOL) and chronic medical conditions/illnesses. Course learning content draws on background knowledge related to anatomy, pathophysiology, evidence-based practice, psychology and social sciences to bring about a deeper understanding of the impact a given medical condition may have on an individual's state of health and well-being. Students will explore and synthesize research related to treatment approaches affecting QOL for specific populations with chronic medical conditions.

NGR5957 - Nursing Study Abroad

General

Course Description
This study abroad course will offer a rich and multifaceted experience that combines healthcare education with cultural immersion. This experiential learning opportunity aims to increase graduate students' knowledge and understanding of historical aspects of medicine and nursing as well as broaden students' perspectives on global health issues and healthcare. Topics and regions will vary based on abroad experience. Students should refer to the International Center website or the department for further information.

NGR6192 - Promoting Innovation in Nursing Practice

General

Course Description
This course is designed to empower MSN-level nurses to create innovative solutions to local, national, or global healthcare problems.Students are challenged to think critically about the evolving field of healthcare in relation to developing socially responsible and ethically based solutions for healthcare providers and patients. Students will investigate emerging technologies, care models, and the role technology plays in those models. Existing healthcare applications will be examined along with emerging trends and forecast future needs.

NGR6530 - Neuropathophysiology of Mental Illness for PMHNP

General

Course Description
This course focuses on the neuroanatomy and pathophysiology of brain function in mental illness. Concepts from neuroanatomy, genetics, neurophysiology, and neuropsychiatry are examined to provide foundational knowledge to advanced practice nurses. The course addresses neuroanatomy applications to clinical practice including psychopathology and prescribing psychotropic medications. The course includes a survey of the theoretical models of learning, memory, and maladaptive behavior in psychiatric treatment.

NGR6531C - Psychotherapeutic Modalities & Nursing Theory for the PMHNP

General

Course Description
This course will explore psychotherapeutic theories, modalities and psychotherapy skills guided by psychiatric mental health nurse practitioner faculty. Advance practice nursing students will apply and build predominant nursing theoretical frameworks while developing psychotherapy skills using therapeutic communication. Students apply fundamental psychotherapy skills in the domains of cognitive and didactic therapeutic frameworks including individual, family, and group modalities. Theoretical and conceptual models for assessing and treating dysfunctional mental health patterns in individuals across the lifespan within families and groups will be emphasized, to restore and maintain healthy interpersonal dynamics. This course incorporates intervention, maintenance, and mental health promotion.

NGR6532 - Advanced Practice in Mental Health Nursing I: Psychiatric Assessment across the Lifespan

General

Course Description
Prerequisites: NGR6530, NGR6538, and NGR6531
Co-requisite: NGR6532L
Description: This course provides the psychiatric mental health nurse practitioner the foundation for mental health assessment of patients across the lifespan. Emphasis is on development of a holistic and culturally sensitive comprehensive evidence-based assessment process with the Diagnostic and Statistical Manual of Mental Disorders (DSM) criteria providing guidance for the diagnostic process

along with other authoritative resources. The mental status exam, bio-psycho-social history-taking, laboratory data, genetic diagnostics, and screening tools are used to identify mental health problems.

NGR6533L - Advanced Practice in Mental Health Nursing Clinical Experience II: Adults

General

Course Description
Prerequisite: NGR6532
Description: This clinical course provides the psychiatric mental health nurse practitioner clinical experiences that serve as a foundation for mental health adult patients. Emphasis is on clinical experiences that assist in development of a holistic and culturally sensitive comprehensive evidence-based assessment process with the Diagnostic and Statistical Manual of Mental Disorders (DSM) criteria providing guidance for the diagnostic process along with other authoritative resources. Documented utilization of the mental status exam, bio-psycho-social history-taking, laboratory data assessment, genetic diagnostics, and screening tools are used to identify mental health problems during the clinical experience.

NGR6534 - Advanced Practice in Mental Health Nursing III: Diagnostic Reasoning and Management in Pediatrics

General
Course Description
Prerequisite: NGR6533
Co-requisite: NGR6534L
Description: This course focuses on diagnostic reasoning, therapeutic, and psychopharmacological treatment of patients with complex mental health disorders across the lifespan. Focus is placed upon those diagnoses classified as severe mental illness (SMI) including psychotic disorders, dissociative disorders, traumatic disorders, and disorders of personality. This course also includes pharmacogenomics and the impact of political, legal, economic, social, and technological forces on individuals and families treated for severe mental illness. Additional focus is placed on holistically focused care with bio-psycho-social and environmental considerations for best client/treatment outcomes.

NGR6535 - Advanced Practice in Mental Health Nursing IV: Simulation

General
Course Description
Prerequisite: NGR6534
Co-requisite: NGR6535L
Description: This clinical course provides the psychiatric mental health nurse practitioner virtual simulated clinical experiences in mental health assessment and treatment of patients across the lifespan. Emphasis is on simulated experiences that assist in development of a holistic and culturally sensitive comprehensive evidence-based assessment process with the Diagnostic and Statistical Manual of Mental Disorders (DSM) criteria providing guidance for the diagnostic process along with other authoritative resources for the lifespan including severe mental illness, and acute or at-risk presentations. Documented utilization of the mental status exam, bio-psycho-social history-taking, laboratory data assessment, genetic diagnostics, and screening tools are used to identify mental health problems during the clinical experience.

NGR6536 - Advanced Practice in Mental Health Nursing V: Practicum

General

Course Description
Prerequisite: NGR6534
Co-requisite: NGR6536
Description: This practicum course is designed to operationalize theoretical principles within the graduate's specialty area of advanced practice nursing. The role practicum focuses on the synthesis and integration of advanced concepts learned throughout the advanced practice educational experience. Content regarding professional role development, advanced practice roles and relationships, and regulatory requirements for advanced practice are included. Effective participation in interdisciplinary, partnership, and team relationships is an expected outcome. Professional advocacy, assertiveness and leadership in the psychiatric mental health nurse practitioner role are emphasized.

NGR6538 - Psychopharmacology

General

Course Description
Description: This course will focus on current evidence-based pharmacological treatments for psychiatric diagnoses across the lifespan. Current molecular, developmental and environmental perspectives are examined, including inherited and acquired vulnerabilities to mental illness. An in-depth review of neurological anatomy and receptors is presented. Emphasis is placed on the responsibilities of the PMHNP in the psychopharmacologic treatment of all mental health diagnoses that focuses on optimal outcomes.

NGR6602C - Health Promotion of Children, Men and Women in Primary Care

General

Course Description
Prerequisite: NGR 5601C
Description: This advanced practice nursing course focuses on preventative care, health promotion, and health maintenance activities for culturally diverse men, women, and children. Emphasis is on knowledge and skills essential for implementation of therapeutic plans. The clinical practicum enables the student to apply acquired knowledge and advanced practice nursing skills in a variety of outpatient and community settings.

NGR6673 - Principles of Epidemiology for Advanced Practice

General
Course Description
Description: This course will examine the frequency, distribution and determinants of health-related states in varying populations. The course will cover the historical origins of epidemiology, core epidemiological concepts, statistical interpretation and study design. The course is geared to the beginning practitioner in the field and will examine a wide range of epidemiological topics. The course will be taught from an epidemiological perspective incorporating the use of the scientific literature with the objective of augmenting student knowledge in epidemiology and study design.

NGR6702C - Quality and Safety in Healthcare: An Interdisciplinary Perspective

General
Course Description
This course will examine current issues related to quality, safety, and outcomes in healthcare through an interdisciplinary lens. The quality improvement process will be explored through evidence-based practice solutions. In this course the student will complete clinical hours with a preceptor of their choice to identify an area of current practice in which quality improvement is warranted.

NGR6710 - Teaching Nursing: Implementing an Innovative Learning Environment

General
Course Description
Description: The focus of this course is the development of knowledge and skills for innovative and evidence-based teaching-learning in nursing. This course provides an opportunity for the learner to explore selected educational theories and philosophies pertinent to nursing, and to investigate role development in a variety of settings. Planning, organizing, presenting, and evaluating learning experiences for the adult learner are emphasized.

NGR6712 - Curriculum and Instruction

General

Course Description
This course will focus on curriculum development and student instruction. Topics will focus on curriculum design, forces influencing curriculum, such as mission, vision, goals, and threads of influence in the organization. In addition, the course will discuss teaching strategies, such as theoretical concepts, simulation, online learning, role play, and in service education. The content will encompass different learner needs, such as generational differences, learning disabilities and types of learning styles. The student will develop a teaching plan, course outline, and assessment strategies. This course will address teaching strategies and plan development for both academic, community, and clinical settings.

NGR6721C - Human Resource Management and Development

General

Course Description
This course will assist students in effectively managing and developing the human component of leadership. Methods to mitigate work-life balance, staff development, retention, conflict resolution and management will be explored from a holistic perspective. The student will also explore strategies for disaster management and emergency preparedness in the post-pandemic workforce. During this course students will work with a preceptor of their choice to identify a current workplace issue related to human resource management.

NGR6726 - Quality Management for Advanced Nursing Practice

General

Course Description
Prerequisites: Admission to DNP or MSN Program or Permission of Instructor
The process of quality management in health care as it pertains to chief nurse administrators is analyzed in this course. The focus is continuous quality improvement with emphasis on implementation and evaluation. Differences between quality assurance and quality management will be discussed. Accreditation guidelines will be examined in relation to their impact on health care systems. Evidence-based practices will be reviewed as means for continuous quality management experience.

Course Description
Prerequisite: Admission to the DNP program or permission of the instructor.
In this course the doctoral student will identify, with advisor approval, a problem or question that requires a change in health care or educational services, clinical practices and/or policies that might be addressed in a particular leadership role. This problem should have relevance to current and emerging health care or educational issues. The result of the project will be a scholarly work, written at a doctoral level of complexity, dealing with the results of the evidence based analysis of the service, practice or policy examined. The analysis will be framed against national benchmarks to determine variances in practice outcomes and population trends. Focus is on dissemination of evaluative outcomes and implications for clinical practice to improve practice or patient outcomes.

NSP3196 - Core Concepts in End of Life Nursing Care

General

Course Description
Description: This nursing elective is designed in connection with the End of Life Nursing Education Consortium (ELNEC) and was developed to train students on fundamental palliative care skills. This course provides students with the knowledge and skills required to offer this specialized care while positively impacting the lives of patients and families facing serious illness and of the end of life.

NUR1010 - Introduction to Nursing

General

Course Description
This course includes the information required to understand the multi-faceted nature of the nursing profession. The focus is on the various roles and requirements of the contemporary registered nurse, with emphasis placed on historical development of the profession, job functions, working conditions, professional development, and specialty opportunities. Students are encouraged to use professional, personal, and community resources to develop their understanding of and interest in professional nursing practice. During this course, the student demonstrates achievement of program objectives while working in partnership with faculty and peers.

NUR3028 - Foundations of Nursing Practice

General

Course Description
This course provides the foundations of nursing practice, establishing essential concepts such as safe and effective caregiving, health promotion and maintenance, and psychosocial and physiological integrity. This course introduces clinical judgment as a framework to build clinical reasoning and judgment when caring for diverse patient populations. Students learn to provide evidence-based, compassionate, and culturally sensitive care.

NUR3028L - Foundations of Nursing Practice Lab

General

Course Description
This laboratory course is designed to provide undergraduate nursing students with hands-on experience in the foundational skills essential for safe and effective nursing practice. The lab complements theoretical learning by offering practical training in a controlled, supportive environment, allowing students to develop proficiency in basic nursing procedures and techniques. Students will engage in a variety of laboratory experiences that cover essential skills such as hygiene and personal care, mobility assistance, wound care, medication administration, and infection control. Emphasis is placed on developing strong clinical reasoning, effective communication, and ethical decision-making skills. Through guided practice, students will learn to use standard medical equipment, document patient care accurately, and adhere to best practices in patient safety and infection prevention.

NUR3065 - Health Assessment, Wellness, and Health Promotion Across the Lifespan

General

Course Description
This course provides comprehensive instruction in health assessment across the lifespan, emphasizing collaborative partnerships with individuals. There is a focus on wellness and health promotion and the differentiation between anticipated and unexpected findings for patients and populations. Students will develop the requisite knowledge and skills for analyzing health assessment data effectively.

NUR3082 - Perspectives in Chronicity

General
Course Description
Prerequisite: NUR 3065L, NUR 3166, NUR 3619
Description: This course includes information on the concept of chronicity from the lived perspective of individuals and families experiencing a chronic condition. Emphasis is on factors that affect the optimal health and well-being of vulnerable populations, individuals and families. Special emphasis on evidence-based models of care and implications for collaborative nursing practice will also be included.

NUR3118L - Foundations of Nursing Practice Clinical

General

Course Description
This clinical course provides undergraduate nursing students with practical, hands-on experience in delivering foundational nursing care. Building on theoretical knowledge and skills learned in classroom and lab settings, this clinical experience focuses on applying basic nursing principles in real-world healthcare environments. Students will work under the supervision of experienced clinical instructors, gaining exposure to a variety of patient care situations across different settings. Key learning areas include patient assessment, vital signs monitoring, basic hygiene and personal care, mobility assistance, wound care, and medication administration. Students will also practice infection control measures and effective communication with patients, families, and healthcare team members. Emphasis is placed on developing critical thinking and clinical decision-making skills, as well as understanding the ethical and cultural considerations in patient care.

NUR3172 - Foundations of Therapeutic Touch

General
Course Description
Description: This course introduces the learner to the essential knowledge and skills regarding the theory and evidence-based practice of TT. Therapeutic Touch students learn to connect with healing partners at an energetic level, establish a helping relationship, and attain consent from the healing partner to participate in TT. Learners examine how essential elements of the TT practice assist individuals who are experiencing a variety of health challenges. Teaching approaches include lecture, videos, demonstration of TT by the instructor, and return demonstration by the student, journaling, documentation of results utilizing TT specialty notes, and dialogue with instructor and students.

General

Course Description
Prerequisites: NUR3065, NUR3065L, NUR3028, NUR3028L, NUR3755, NUR3816, NUR3684 AND NUR3090LDescription: Pathopharmacology I offers a comprehensive introduction to the core principles and fundamental concepts of pathophysiology and pharmacology. This course serves as a cornerstone for understanding the interplay between disease processes and medication interventions. Students will explore the basic principles of pharmacology, including drug classifications, mechanisms of action, and pharmacokinetics. Additionally, they will delve into the underlying mechanisms of disease states and their manifestations in human physiology. Through case studies and practical examples, students will develop a solid understanding of how medications interact with the human body in various disease contexts, laying a strong foundation for further study and application in healthcare practice.

NUR4093 - Perioperative Nursing Core Course

General
Course Description
Prerequisites: NUR 3229 and NUR 3219C
Description: This course is focused on providing education to Registered Nurses who are either new graduates, have been previously employed in non-OR nursing positions or nursing students who have finished their second semester of nursing school. This program will provide all students with basic knowledge and clinical skills necessary to function independently in an entry level perioperative nursing position.The course consists class, lab skill practice and observational experiences in an operating room. Clinical experiences (which will be developed on an individual basis) are designed to familiarize the student with the various surgical specialties and to develop the relevant clinical skills to apply the nursing process to the care of a patient undergoing elective or emergency surgical intervention.

NUR4954 - Culture and Health in Thailand

General

Course Description
Description: The purpose of this course is to advance students' understanding of nursing and health care from a global perspective. An ecological perspective is used to explore multiple determinants of health in Thailand, emphasizing Thai culture as it relates to Traditional and Western style health practices. Students participate in a 12-day trip, including a course at the Chiang Mai University Faculty of Nursing where they learn about nursing education and faculty research in the community. Associated field experiences involve interacting with Thai faculty, students and community workers as they visit community hospitals and clinics, village centers and local homes.

OCB3108L - Field Studies in Marine Science

General

Course Description
Prerequisite: BSC 1010C, BSC 1011C, CHM 2045, and CHM 2045L
Description: This is a 5-week, field intensive course designed to expand student knowledge of the biodiversity, geochemistry, and human impact of Florida's coastal and offshore ecosystems through a round-robin trip around Florida to explore marine eco-systems. This course will take students from the reefs of the Florida Keys to the open Gulf of Mexico aboard state-of-the-art research vessels, as well as the shallow tropical estuaries of the western Everglades and the temperate Estuarine and Coastal environments of Northeast Florida. Field and laboratory work will allow students to utilize current marine research methods while learning about marine environments and their organisms. Some field activities will be physically strenuous.

PAD6173 - Global Civil Society

General

Course Description
Description: There are no prerequisites for this course. There has been a substantial upsurge of privately organized, voluntary actions around the globe in recent times. This upsurge was due to an overall dissatisfaction with the operations of both the market and the state. A broad range of institutions that occupy the social space between the market and the state tackle most of our social, political and economic concerns these days. Known as “civil society”, “nonprofit sector” or the “third sector”, institutions within this sector combine private structures with public purposes to serve citizens. Due to their flexibility and potential to tap in extensive private support for public purposes they have become a powerful force that perform a number of critical functions, often in partnership with the state and the market. This course therefore explores the scope, structure, financing and the role of civil society globally and seeks evaluate its impact on global politics and policy making processes.

General
Course Description
Description: This course is an introduction to financial management techniques for nonprofit organizations. Major topics include sustainability, fiscal management and budgets; fund raising; fee for service; legal requirements; grant and contract management; and private ventures.

Credit Hours
Credit Hours:
3

PAD6227 - Government Budgeting and Finance

General
Course Description
Exploration of the influence of interest groups on budget decisions, with special attention to the formation of the executive budget, congressional budgeting, and various political reactions to fiscal insufficiency.

PAD6239 - e-Governance

General
Course Description
Description: This course focuses on the intellectual concept of governance and its connection to transparency and accountability. Students will explore key policies in support of transparency as well as critically evaluate e-governance practices to identify some of the limitations and dangers involved with the rapidly changing role of information and information technology in today's society. Topics include current issues in e-governance, e-governance management and theories, and improving government accountability through technology. Permission of the department is required.

PAD6335 - Strategic Planning for Public and Nonprofit Organizations

General
Course Description
This course will consider any in-depth study of two forms of organizational planning in common use by nonprofit organizations: strategic planning and project planning. For strategic planning, several common approaches will be considered and students will be required to produce a strategic plan for an organization. Students will investigate various tools used in project planning that are appropriate for task management.

PAD6417 - Human Resources for Public and Nonprofit Management

General
Course Description
This course examines the processes and procedures of modern human resource management in public and nonprofit organizations. The course emphasizes the important role of public interest values as it examines various models of human resource management. Appropriate strategies for effective organizational use and development of human resources are presented.

PCB4067 - Molecular Basis of Inheritance

General

Course Description
Prerequisite:PCB 3063C
This course will detail the molecular basis of inheritance in both prokaryotes and eukaryotes. Topics will include the structure and organization of DNA, plus DNA replication, repair, and recombination. Transcription, translation, and processing of gene products will be covered. A major emphasis will be the regulation of these molecular processes.

PCB4540 - Genomics

General
Course Description
Prerequisite: BSC 2012C
Description: Genomics is one of the newest and most exciting fields in biology. Discoveries made in this field have far reaching implications for important topics such as the evolution of life on our planet and the genetic causes of human diseases. This course will focus on the history of genomics, the technology used to sequence and analyze genomes, and the discoveries made from investigations of genomes. This course will address questions such as what genomic comparisons reveal about the relationship between disparate animal lineages; how the genome controls the production of the phenotype; the relationship between genome complexity and phenotype complexity; the evolutionary mechanisms that control genome architecture; and the genomic underpinnings of human disease.

PCB4674 - Evolution

General
Course Description
Prerequisite: PCB 3043C or PCB 3063C
Description: Evolution is the unifying theory of biology, linking fields as diverse as biochemistry and ecology, genetics and anatomy. In this course we will investigate

both the wealth of evidence for evolution by common descent and the genetic and ecological mechanisms by which evolution occurs in natural populations. In addition we will cover the history of evolutionary biology from pre-Darwinism views to present day controversies, and the key events that have lead to our current understanding of the subject.

PET3080 - Physical Activity Epidemiology

General
Course Description
This course examines the current state of physical activity and public health with a particular focus on chronic diseases. This course will review the positive associations regular physical activity, exercise, and fitness purvey on overall health as well as examining the associations with various common, chronic conditions e.g. type 2 diabetes, heart disease. This course will be taught from an epidemiological perspective incorporating the use of the scientific literature with the objective of augmenting student knowledge in epidemiology and study design.

PET3324C - Gross Anatomy for Health Care Professionals

General
Course Description
Prerequisites: BSC 2085C, BSC 2086C
Study designed to expose students in health care professions to the macroscopic aspects of human morphology with emphasis on the musculoskeletal and neuromuscular systems. Human cadaveric specimens will be utilized along with other clinical and surgical information provided in part by qualified local medical professionals. A laboratory fee of $50.00 will be assessed.

PET3325 - Functional Anatomy/Kinesiology

General
Course Description
Prerequisites: BSC 2085C and BSC 2086C with "B" grade or better
The course focuses on analyzing, evaluating, and understanding exercise and sport skills. Early emphasis is on filming with video cameras to help; 1) identify and analyze the movement phases of various exercises and sport skills, and 2) generate illustrated scientific reports. Next, functional anatomy is learned in great detail to better understand the joint motions and muscles involved during exercise and sport. Last, the relevance of functional anatomy to injury prevention is addressed.

PET3493 - Issues in Sport

General
Course Description
Description: This course includes a study of the major social and ethical issues relating to sport. The course revolves around in-depth discussions among athletes, academics, coaches, administrators, doctors, lawyers, and business people concerning issues in sport. Students will encounter unique descriptive accounts which depict how sports actually affect individuals, organizations, institutions, and society. Philosophical, socio-cultural, and technological issues are also a part of the learning agenda in the course.

PET4476 - Sport Law

General
Course Description
Description: This course is designed to be an overview of the legal issues most often encountered in sport and physical activity. The course content will include an emphasis on tort, contract, and selected areas of constitutional, statutory, contract, labor, and commercial law. Students will become aware of the rights of participants, athletes, coaches, managers, teachers, referees and others engaged in amateur and professional sport. Legal issues related to sport clubs, schools and organizations in which the principal events involve physical activity will also be addressed. Precedent-setting court decisions will be explained and will serve as a guide for students in creating risk management systems.

PHC4468 - Health Disparities through Data Analytics

General
Course Description
This course explores public health professionals' role in improving the public's understanding of the causes and strategies to eliminate health disparities. Emphasis will include various ways social, economic, environmental, cultural context, and lifestyle factors contribute to differences in morbidity and mortality for diverse populations. Students will gain knowledge and develop skills in data retrieval and management, descriptive analysis and visualization, bivariate statistical inference, and geospatial imaging to investigate health disparities and inequalities.

PHC6003 - Chronic Disease Epidemiology

General

Course Description
Prerequisite: HSC 6505 or APK 6336
Description: This advanced epidemiology course is intended to be a survey of the major chronic diseases and related risk factors with emphasis on recent epidemiology research and findings. Lectures will introduce the burden of chronic illnesses and will lead into specific diseases that are prevalent in western societies. Each chronic disease will include a discussion on the epidemiologic features including demographics, risk factors, prevention, treatment, early detection, and control of the disease. The specific chronic diseases that will be discussed are: cardiovascular disease, cancer, chronic lung disease, diabetes, arthritis and musculoskeletal diseases, and chronic neurologic disorders. The specific related risk factors that will be discussed are tobacco use, alcohol use, physical inactivity, diet and nutrition, high blood pressure, and cholesterol.

PHC6011 - Epidemiology II

General

Course Description
Description: This course will build upon the knowledge learned in Epidemiology I to further develop understanding of epidemiological concepts and methods and how to apply them. The practical epidemiological skills learned in this course will prepare students to effectively address challenges that arise in public health research and practice.
Availability: One semester per year

PHC6050 - Public Health Biostatistics I

General
Course Description
Prerequisite: Undergraduate statistics course or equivalent
Description: This course focuses on the principles and methods of reasoning that underlie modern biostatistics, providing the basis for further study in epidemiology and biostatistics. The course will provide information concerning specific descriptive and inferential techniques commonly used in public health research.

PHH3104 - Socrates and the Sophists

General

Course Description
This course introduces students to Socratic thought on a focused, intensive level. Students will read the central dialogues of Plato that present Socrates arguing against the most influential teachers of ancient Athens, the Sophists. In the process of reading these works, students will analyze Socrates's arguments that virtue consists in wisdom and that the life of continuous self-examination and striving for virtue is superior to the life of political power based on rhetorical prowess. Students will also determine for their own lives whether they prefer the life of a philosopher, and the values on which it is founded, or the life of the Sophist and master of rhetoric.

PHH3201 - Jewish and Islamic Philosophy in the Classical Tradition

General
Course Description
Description: Often medieval philosophy is presented in its Christian guise alone, giving the impression that the medieval philosophical tradition, influenced by the great thinkers of Greek antiquity, is exclusively a Latin tradition, with no substantive contribution by those who wrote in Arabic and Hebrew. We shall revise this view. Our focus will be a select group of philosophers who lived between the 10th-12th centuries, a roughly three hundred-year period that is a high point in medieval Jewish and Islamic philosophy—a time before Greek philosophy was rediscovered in Christian Europe. Philosophers to be studied in some detail are Saadya Gaon, Al-Farabi, Ibn Rushd, and Maimonides, and in addressing topics in the philosophy of language, metaphysics, epistemology,
cosmology, philosophical psychology, and especially in philosophy of law, ethics, and political
philosophy.

PHH3230 - Islamic Philosophy

General
Course Description
Description: This course provides an introduction to the historical birth of Islam and some of the philosophical issues it addresses, both in its history and in contemporary times. This course covers the revealing of the Qur'an and the development of sources of authority within the tradition as well as the way those resources are used to answer questions in Islamic law, theology, philosophy, and mysticism. Through thinkers such as Ibn al-Arabi, al-Ghazali, and Ibn Rushd (Averroes), we will cover problems that remain pertinent into the medieval period and beyond: How does determinism influence ethical blame? How do universal laws and particular cases relate? What is the proper relationship between reason, knowledge, and revelation?

PHH3811 - The Philosophy of Zen Buddhism

General
Course Description
Zen is the meditation school of traditional Buddhism. This course is a critical examination of the literary, philosophical and historical roots and teachings of Zen. We will begin with a general introduction to Buddhism, then read some Chinese and Japanese Zen texts, in an effort to understand them as expressions of Asian culture, as responses to philosophical problems, as exercises testing the limits of reason, and as expedient means to awaken "the true self of compassionate wisdom".

PHH3840 - (FC) Philosophies of India

General

Course Description
Description: This course will follow the development of Indian Philosophies from the early Vedic culture of the Indus Valley civilization through the Upanishadic and epic traditions, heterodox traditions of materialism, Jainism, and Buddhism, and orthodox responses of Vaishesika, Nyaya, Samkhya, Yoga, Mimamsa, and Vedanta. We will pay particularly close attention to philosophical developments in Buddhism and to the practices of Yoga and Advaita Vendanta. Among the questions this course will consider are the following: What is the self? What is the relationship between the self, the personality, and the mind? What really exists and how can I know about it? What is the goal, purpose, and meaning of human life? What is the role of philosophy in the Indian intellectual and religious tradition?

PHH3860 - (FC) Japanese Philosophy

General

Course Description
Description: This course is an introduction to Japanese philosophy through key elements of Japanese culture. We will explore Shinto, the indigenous world-view and practices of Japan; Japanese Buddhism, including Zen, Pure Land, and Nichiren; bushido, or the samurai spirit; distinctive contributions of Japanese thinkers to neo-Confucianism; and Japanese aesthetics. As we do so, we will explore the differences between orientalism and responsible approaches to non-western cultures and philosophies. We will also discuss Japanese responses to the Buddhist problem of original enlightenment, think through the role of ritualized activities in Japanese culture, and learn what the hierarchical nature of Japanese language can tell us about life in Japan.

PHH4601 - Contemporary European Philosophy

General

Course Description
Description: This course offers an examination of major issues and figures in 20th and 21st century European philosophy. It considers topics such as the alterity or difference of others, the relation of language to thought, the nature of human experience and perception, the nature of power, as well as contemporary perspectives on justice, ethics, and politics. The course draws on the works of influential theorists such as Sartre, Merleau-Ponty, Beauvoir, Heidegger, Adorno, Deleuze, Derrida, and Foucault in order to gain insight into some of the main philosophical movements of the 20th century: phenomenology, existentialism, structuralism, post-structuralism, and deconstruction.

PHH4821 - Confucianism

General

Course Description
Description: This course will explore the thought and influence of one of the most influential people of all time, Confucius. Much of what we see today as distinctive contributions of East Asia to world culture comes from a Confucian approach to the world. We will begin in ancient China with the great Confucian classics, and then proceed historically through movements and developments in Confucian thought, from the Analects and the Mengzi to Dong Zhongshu, Zhu Xi, and New-Confucianism as it exists today. We will examine questions of how to categorize Confucianism: philosophy, religion, both, neither? We will also explore the Asian Values controversy and discuss the rise of Confucianism in contemporary China, including various Confucian responses to problems such as human rights, environmental ethics, and bioethics.

PHI2100 - (GW) Critical Thinking: The Art of Reasoning

General

Course Description
Description: This course is an introduction to the art of thinking and reasoning well. Thinking and reasoning well are of paramount importance for not only philosophy, science, history, politics, business, medicine, or engineering, but for any human endeavor that seeks to give rational support for its assertions. Throughout the course we will seek to refine the habits, patterns, and activities of thinking so as to become more careful, more critical, and more competent thinkers. We will do this by first cultivating the skills of identifying and evaluating arguments; we will

then learn to identify patterns of bad reasoning and how to improve an argument. At various points in the course we will turn our critical thinking skills toward selected contemporary issues for analysis. By the time the course is finished, successful students will be more confident in analyzing the arguments of others, constructing their own arguments, and discoursing civily with others about complex and contentious issues.

PHI2101 - Introduction to Logic

General

Course Description
Description: This course will introduce students to symbolic logic. In logic we study the principles of correct reasoning as revealed through language. In this course, students will study both how and why good reasoning works. Our focus will be on the principles of deductive reasoning (in contrast to inductive reasoning). In symbolic logic we use artificial, formal languages to study deductive inferences. In this course students will be introduced to and come to understand two such formal languages (sentential logic and predicate logic) in order to assess and construct good deductive arguments and test for other logical properties. This course satisfies a core requirement for the major in Philosophy.

PHI2630 - (GW) Critical Thinking: Ethical Issues

General

Course Description
Description: This course is an introduction to thinking critically about a range of ethical issues. As such, we will examine the differences between opinions and positions, debates and arguments, and stereotypes and assumptions. We will learn to identify, analyze, and respond to arguments using ethical standards and logical criteria. Because ethical issues are often heated and emotionally charged, we will spend time focusing on how to listen to one another, building our community around intellectually safe inquiries. In order to engage these questions together, we will develop a basic theoretical framework from which to begin, and then drawing on significant philosophical theories of ethics, we will focus our attention on selected issues, which may include but are not limited to issues such as abortion, euthanasia, informed consent, research ethics, food justice, friendship, sex, cheating, and parenting.

PHI2885 - Philosophy through Fiction

General

Course Description
Description: This course explores the ways in which philosophy and literature inform one another. We will consider how philosophical positions, arguments, and problems are illustrated in works of fiction, and whether fiction itself can be a form of philosophy. Students should gain an understanding of several philosophical issues and positions, develop an appreciation of the importance of fictional narrative to the reflective understanding of life and how it may also inform philosophical theory, as well as the value of philosophy to literary criticism.

PHI3084 - Philosophical Methods

General

Course Description
Description: This course is an investigation of various central methods in philosophical inquiry. The course covers analytic, continental European, comparative (non-Western/Western), and historical perspectives. Attention is paid to developing students' abilities to interpret philosophical material, construct and evaluate arguments, and write philosophical essays. Specific topics will vary by instructor. This course is required for the philosophy major and minor, and is a prerequisite for all 4000 level courses.

PHI3300 - Introduction to Epistemology

General

Course Description
Description: Epistemology is the study of knowledge and justified belief. In this course, we will critically examine numerous accounts of the nature and sources of knowledge and justified belief. In addition, we will look at epistemological puzzles concerning skepticism, the problem of induction, epistemic relativism, and the epistemic significance of disagreement. The philosophical questions to be discussed include: What is knowledge? Can we know anything worthwhile? Given that we do know things, how do we know them? Under what conditions is a belief rational? Is it rational to believe controversial propositions? Is there more than one standard of rationality?

PHI3463 - Science and Objectivity

General
Course Description
This course is an examination of the metaphysical and theoretical assumptions that frame the activity of the scientific community. The texts covered in this class include the historical importance of key experiments in the history of science, as well as the role of objectivity, subjectivity, and the ideal scientist's identity. A deeper understanding of what it means to be "scientific," of how science generates knowledge, and of the ways scientific method effects the standards of good thought will come from our explorations into identity, objectivity, and methodology.

PHI3500 - Introduction to Metaphysics

General
Course Description
Description: This course will be a topical introduction to central themes in metaphysics, a branch of philosophy that tries to answer the fundamental questions about the nature of reality. In the course we will carefully consider accounts of causation, the relation of freedom and determinism, laws of nature, personal identity, mental states, time, material objects, and properties. The philosophical questions to be discussed include: What makes it the case that one event causes another event? Is free will compatible with determinism? What are material objects? Given that material objects exist, do such things as properties exist? What makes it the case that a person may exist at two different times?

PHI3601 - Ethics

General

Course Description
Ethics considers questions such as "How should I live?" and "How do I decide the right thing to do and why should I do it?" This course deals with those questions in the areas of moral metaphysics, meta-ethics and normative theories of moral conduct which come from the history of philosophy back to the time of Plato and Aristotle. Other theorists to be discussed include Immanuel Kant and John Stuart Mill, and may include figures such as Thomas Hobbes, David Hume and John Dewey, as well as contemporary theorists.

PHI3633 - Bioethics

General

Course Description
This course employs tools of ethical theory to examine a number of moral issues arising in health care. Issues to be considered include the physician-patient relationship, informed consent, advance directives, euthanasia and physician-assisted suicide, experimentation on human subjects, and access to health care. Throughout this course we will examine assumptions about rights, persons, and ethical principles at play in the medical arena. Readings will include discussions of ethical principles in medical contexts, legal decisions, and case studies, providing students with the opportunity to sharpen their analytic skills and develop a deeper understanding of some of the major bioethical issues currently being debated.

Course Description
This course will cover intrinsic and instrumental value approaches to environmental ethics, alternative environmental ethical approaches, and special environmental ethical issues. The goal of the course is to familiarize students with all the major approaches to environmental ethics and with a few particularly philosophically interesting environmental ethical issues. Students will appreciate and understand the complexity and intricacy of the arguments involved in adopting one approach or position over another.

PHI3664 - Ethics East and West

General
Course Description
This course explores ethical theory and some contemporary ethical problems from the perspective of comparative philosophy. The focus will be on Asian approaches to ethics, and how differing views of nature and human nature alter the quest for what is good and for the good life. We will discuss the Hindu, Confucian, Taoist and Buddhist traditions, as well as contemporary Japanese theory.

PHI3669 - Leadership and Public Philosophy

General
Course Description
This course aims to help students develop the skills of doing philosophy and facilitating philosophical conversations outside of the context of a university classroom. We will work through leading conversations on complex ethical issues, doing philosophy with children, and engaging in philosophical discussion in non-traditional formats (e.g. YouTube videos, podcasts, editorials, fiction-writing, and more). Topics will vary by instructor. Students are encouraged to take PHI 3940 Philosophical Methods prior to this course.

PHI3670 - Relativism and Disagreement

General

Course Description
Description: Disagreement concerning how we should live and what we should believe is widespread and persistent. A prevalent response to such disagreement is some kind of relativism – some claim that both parties to the disagreement are correct. In this course we will look at the case for and against ethical relativism (relativism about what we should do) and epistemic relativism (relativism about what we should believe). We will also look in a more direct way at the epistemic significance of disagreement itself. Can reasonable people come to different conclusions even when they have the same evidence? How should we modify our beliefs (if at all) when we encounter another who disagrees with us? And when (if ever) can beliefs be rationally maintained in the face of disagreement?

PHI3674 - Lies and Self Deception

General

Course Description
Description: Self deception is a common phenomenon. In fact, most people seem to have a friend or family member who they think is self-deceived (e.g., about the faithfulness of his or her lover, about his or her beliefs concerning a particular religion or political party, etc.) This apparent ability to lie to oneself in the face of the evidence seems to be a rather contemptuous vice. However, recent psychological studies seem to suggest that at least some forms of self deception are life-enhancing. Thus, it might seem that self deception can be a virtue. In this course, we examine the nature of self deception, evaluate its ambiguous ethical status, and reflect on how these insights should affect the way that we live.

PHI3700 - Philosophy of Religion

General

Course Description
Description: This course approaches religion as a phenomenon common to human experience. Religion is examined from the perspective of reason rather than revelation. Philosophy of religion is concerned with philosophical conceptions of deity, the truth claims of differing religions, of revelation, faith, and the problem of verification.

PHI3800 - Aesthetics

General

Course Description
This course will examine questions such as What is art? What is beauty? What is the nature of aesthetic experience? What is an aesthetic object? What is the role of creativity in making and judging art? Can a work of art have more than one meaning? What is the role of the art critic? and Can art be immoral? We will examine the theories of philosophers and members of the art community from the time of Plato to the present day.

PHI3931 - East and West: Selected Topics

General

Course Description
This course in comparative philosophy examines a specific problem from both Western and Asian perspectives. One topic for each semester will be chosen; topics include freedom, action, the body, the self, and God. Contrasts discovered in different philosophical traditions will be used to identify unquestioned assumptions and formulate creative alternatives to problems.

PHI4220 - Philosophy of Language

General

Course Description
Description: The course explores the lasting significance of the linguistic turn in philosophy, including its different philosophical perspectives in analytic philosophy, speech act theory, semiotics and poststructuralism, and philosophical hermeneutics. Central questions include: What is the role of language for human consciousness and experience? How is linguistic meaning constituted, and what are its essential components? What is the basic structure of language, and how does it affect our access to reality? What is the relation between language and truth? What is the role of language and linguistic meaning for the constitution of culture, society, and politics? The course clarifies concepts like consciousness, meaning, reflexivity, truth, reference, normativity, and social practices through the philosophy of language.

PHI4881 - Philosophy of Music

General

Course Description
Description: This course introduces students to the variety of philosophical perspectives that have enhanced our understanding of the phenomenon of music. The identity of "music" is explored in light of different cultural, social, and aesthetic contexts. We focus on the linguistic character of music as a symbol form, the source and nature of emotional experiences through music, the cultural and social contexts of music production and reception, and the normative question of how to evaluate musical products and performances. The course offers original insights into music, while teaching basic theoretical insights of linguistic, social-psychological, and cultural philosophy.

PHI5675 - Moral Conflict

General

Course Description
Prerequisite: Admission to the MA in practical philosophy and applied ethics or admission to the grad certif. in applied ethics or permission of the philosophy grad coordinator
This course will examine both the philosophical and practical issues raised by (apparent) fact that values can come into conflict. We will examine potential tensions both within morality (between liberty and equality for instance) and between morality and other evaluative concerns (such as self-interest). Question to be considered include: do moral values necessarily harmonize with one another? Might the idea of all good things co-existing be conceptually incoherent? If one comes to think that moral values are inevitably in tension with one another, what philosophical and practical upshot should this have? How much, if at all, can moral theory help in resolving moral dilemmas? Does liberalism, as some have argued, embody the best form of socio-political response to the plural and conflicting nature of value?

PHM3050 - Ethical Issues in Death and Dying

General

Course Description
In this course, we take a philosophical approach to death and dying in order to understand and analyze some of the ethical, medical, psychological, and legal issues surrounding death and dying. Topics to be covered include whether life is always preferable to death, deciding how much control we should have over our own deaths, how much control (if any) advance directives should have in directing end-of-life treatments plans, how much money should be spent on expensive treatments which provide little benefit, the right of hospitals to decide when life prolonging treatment is futile, the moral obligation of doctors to tell their patients their prognosis, differential criteria for determining death, and whether one is allowed to bring about or assist in the death of another.

PHM3128 - Philosophy of Race and Racism

General

Course Description
Description: This course investigates race and racism from a philosophical perspective. As such it focuses on the metaphysics of race, critical analysis of core concepts pertaining to race and racism, and ethical evaluation of racism and race-related injustices. Central considerations include what race is; its social construction; the relationship between concepts of race and racism; the impact of race and racism on social, political theories and ideals; different kinds of ethical wrongs related to race and how best to address them; and racism and personal character.

PHM3362 - Global Justice

General

Course Description
This course examines the phenomenon of globalization from a moral and ethical perspective. Questions include the following: What are universal human rights and how are they compatible with the diversity of cultural practices and traditions worldwide? What duties do we have to the global environment? What obligations, if any, do members of affluent countries have to address world hunger and poverty? What are the forms of governance appropriate to a globalized world? Is humanitarian military intervention in the internal affair of another country justifiable? Should we understand ourselves first and foremost as citizens of the world or as members of bounded communities?

PHM4100 - Social Philosophy

General

Course Description
Description: This course is an advanced introduction to social philosophy. While most of philosophy focuses on ontological, transcendental, or otherwise universal categories, inhering either in being or the subject, social philosophers analyze the extent to which basic conditions and structures of experience are socially constituted or shaped. This involves a rethinking of rationality, agency, and freedom—even truth and meaning—as grounded in social structures or processes. The relation between social reality and normative issues like autonomy, rationality, and truth distinguishes social philosophy from sociology, while grounding normative issues in social processes differentiates social philosophy from other domains in philosophy. The course covers classic roots in Marx, Durkheim, and Weber, as well contemporary philosophers like Michel Foucault, Pierre Bourdieu, Jürgen Habermas, Anthony Giddens, and Judith Butler.

PHT5806 - Clinical Practicum

General

Course Description
Prerequisites: Successful completion in previous courses in the DPT curriculum
This course is designed to facilitate the integration of clinical skills taught in the academic setting, to allow students to observe and practice those skills in a clinical environment, and to assist students in developing a better understanding of the roles and responsibilities of the physical therapist in clinical settings.

PHT6070 - Imaging in Rehabilitation

General

Course Description
Description: The purpose of this medical imaging course is to provide the physical therapy clinical doctoral student with the tools needed to interpret and apply specialized medical imaging information for the rehabilitation patient. Musculoskeletal imaging is emphasized. This course strengthens physical therapist clinical expertise in comprehensive patient evaluation, diagnosis, treatment planning, and physician interaction.

PHT6110C - Gross Anatomy for Physical Therapists

General

Course Description
Prerequisite: Admission to the Physical Therapy Program
This course will be a detailed study of the human body through lecture, laboratory presentations, and cadaver dissection using a regional approach. The primary focus of this course will be on gross anatomy and the relationships between the musculoskeletal, neurological, and vascular systems of the human body. The anatomy of the head and neck, viscera and pelvic floor will also be emphasized. In addition, the course will introduce the student to surface anatomy and normal radiological anatomy.
Course fees: $315

PHT6126C - Kinesiology

General

Course Description
Prerequisite: Admission to the Physical Therapy Program
This course will be an introduction of the understanding and examination human motion. The concepts and terminology from biomechanics and kinesiology will be used to explain human motion with an emphasis on the neuromuscular control of joint motion and muscle function. A regional approach to the body will explore extremity and trunk movements of functional activities such as walking, squatting, and reaching. Kinesiological and biomechanical concepts presented will be the foundation for physical therapy examination and intervention. (A laboratory fee of $25 will be assessed.)

PHT6153C - Human Physiology

General

Course Description
Prerequisite: Successful completion of previous courses in the DPT curriculum
This foundational science course will present normal physiology of all the major body systems with emphasis on topics directly related to physical therapy. Basic molecular, genetic and biochemical principles will also be discussed when relevant to the practice of physical therapy. (A laboratory fee of $25 will be assessed.)

PHT6161C - Clinical Neuroanatomy and Physiology

General

Course Description
Prerequisite: Successful completion of previous courses in the DPT curriculum.
This course provides and integrative, but concise study of the normal structure and function of the human central and peripheral nervous systems, as well as the pathophysiological mechanisms underlying nervous system dysfunction presented as clinical correlations. This study will provide students with a basis for physical therapy examination, evaluation, and intervention for patients with neurological involvement. Didactic presentations will be supplemented by laboratory sessions to increase understanding of the three dimensional anatomy of the central nervous system.

PHT6191C - Motor Control

General
Course Description
Prerequisite: Successful completion of previous courses in the DPT curriculum Basic neurophysiological and neuropsychological constructs regarding the function of the nervous system are explored. An in-depth review of the cellular level functions are provided. Analyses of normal systems are contrasted with abnormal systems. In depth review of theories and constructs of motor control and motor learning are provided. Particular emphasis is placed on the systems and mechanisms involved in human motor control, function and learning, assessment of the same, and the basis for diagnosis and treatment selection by physical therapists.

PHT6218C - Therapeutic Modalities

General
Course Description
Prerequisite: Successful completion of previous courses in the DPT curriculum. This course is designed to instruct physical therapy students in the underlying principles and clinical applications of thermal, electrical, and mechanical modalities. An emphasis will be placed on problem-solving skills and patient education using these modalities. The focus of laboratory sessions is to demonstrate safe and appropriate clinical application of thermal, electrical, and mechanical modalities. Use of these modalities to address the treatment of clinical symptoms including inflammation, muscle re-education, pain, and other dysfunctions will be discussed. A presentation with an emphasis on evidenced-based practice on a chosen modality will be required. Competencies for each modality must be successfully completed prior to both the written and practical examinations.(A laboratory fee of $15 assessed.)

PHT6267C - Examination and Intervention

General
Course Description
Prerequisite: Successful completion of previous courses in the DPT curriculum This course is a study of basic physical therapy clinical skills related to recognition, examination, and intervention of disorders and injuries of the neuromusculoskeletal system. Foundational concepts and basic skills essential in the physical therapy management of clients will be introduced and applied consistent with the ICF and the Guide to Physical Therapy Practice. Emphasis of the course will be on Examination and Intervention with attention to additional components of patient management: Evaluation, Diagnosis, Prognosis and Outcomes. (A laboratory fee of $25 will be assessed.)

PHT6306 - Pathology-Pharmacology

General

Course Description
Description: This course will examine specific pathological conditions common to the practice of physical therapy, and will present current knowledge related to the pharmacokinetics and pharmacodynamics of common drugs related to the physical therapy patient management. Emphasis will be placed upon the determinants of how a specific dose of a drug will eventually reach target tissues and exert a response. Additionally, the course will explore influence of exercise, application of physical agents, and massage on normal pharmacokinetics. Underlying physiological alterations and the physical consequences of such alterations will be reviewed. Treatment rationale, in terms of medical management and physical therapy management, will also be discussed. Conditions covered in this course will cross the lifespan from infancy to advanced age. Although not the focus of this course, differential diagnosis will be an important topic.

PHT6318C - Orthopedic Physical Therapy I: Extremities

General

Course Description
Prerequisite: Successful completion of previous courses in the DPT curriculum.
Description: This course is an in-depth study in the recognition, examination, and intervention of disorders and injuries of the musculoskeletal system through the life span, with emphasis on the upper and lower extremities. A problem solving approach is followed with application of the disablement model and evidence-based practice in the management of impairments of the extremities and inclusion of the following elements of patient/client management: examination, evaluation, diagnosis, prognosis, and intervention. Lab sessions focus on specialized examination and intervention skills, including the performance of joint-specific special tests, joint mobilization techniques, orthotics, and impairment-specific therapeutic exercises.

PHT6554C - Physical Therapy Resid: Applied Principles Clinical Pract II

General
Course Description
Prerequisite: Enrollment into the Masters in Health -(Track: Orthopedic Physical Therapy) Program
This course is an advanced study into the roles of a physical therapist as a clinician, a professional, a manager, a researcher, and an educator. Study of clinical skills will focus on models of clinical reasoning including evidence-based practice. Principles of professionalism and management will be applied in and professional environments. The role of clinical inquiry will be explored with application of principles of patient care. Educational theory will be studied with application to various teaching-learning settings.

PHT6606C - Foundations of Evidence-Based Practice

General
Course Description
Prerequisite: Successful completion of previous courses in the DPT curriculum
This course presents an introduction to principles of clinical inquiry, specifically related to the development of clinically related questions and the process of answering the developed questions. Students are encouraged to compose questions in the context of contemporary health care and physical therapy. Topics covered include critical thinking, the process of reviewing scientific literature, an introduction to information searching, discussion of reliability and validity and the processes of scientific documentation. An introduction to research designs, research methods, and basic data analysis will be explored as well as an overview of experimental and non-experimental research designs. Critique of the scientific literature with application of the literature in evidence-based practice will be an element of all future clinical management courses.

PHT6940C - Advanced Clinical Residency

General

Course Description
Prerequisite: PHT 6553C
This course is an internship experience in a specialized area of physical therapy. Experience in clinical settings will provide the student with an opportunity to apply the knowledge and skills acquired in the classroom to patients encountered in the clinic. Procedures and sequence of experiences will vary from student to student and will be determined by the nature of the patients available and the type of clinical setting. Under the direct supervision of a clinical instructor, students will advance their hands-on clinical skills and further develop their critical thinking abilities. Students will practice in accordance with the practice act of the state in which they are practicing and according to the policies and procedures of the individual facility where they are assigned.

PHT6941C - DPT 2A Clinical

General

Course Description
Prerequisite: PHT 5806
Description: This course targets a variety of clinical experiences based upon facility availability. Student assignments are individualized and based on the students: areas of clinical interest, academic performance, and prior clinical education experiences and clinical performance. Patients with orthopedic, musculoskeletal, neurological, and/or cardiopulmonary diagnosis may be encountered. Experiences in these settings will provide the student with an opportunity to apply the knowledge and skills acquired in the classroom to any patient referred to physical therapy. Under the direct supervision of a clinical instructor, the student will begin to advance their hands-on clinical skills and further develop their critical thinking abilities. Students will practice physical therapy in accordance with the practice act of the state in which they are practicing and according to the policies and procedures of the individual facility where they are assigned.

PHT6942C - DPT 2B Clinical

General

Course Description
Prerequisite: Successful completion of all previous DPT coursework
Description: This course targets a variety of clinical experiences based upon facility placement and patient population. Student assignments are individualized and based on the students' areas of clinical interest, academic performance, and prior clinical education experiences. Students may be placed in inpatient hospital or rehabilitation settings, outpatient clinics, skilled nursing facilities, school or home care settings and/or other specialty practices. Experiences in these settings will provide the student with an opportunity to apply the knowledge and skills acquired throughout the curriculum. Under the direct supervision of a clinical instructor, the student will begin to advance their hands-on clinical skills and further their critical thinking abilities. Students will practice in accordance with the American Physical Therapy Association Code of Guide to Physical Therapist Practice.

PHT7009C - Differential Diagnosis

General

Course Description
Prerequisite: Successful completion of previous courses in the DPT curriculum.
Description: This course focuses on differential diagnosis and advanced clinical reasoning in physical therapy practice. Emphasis is on recognition of real and potential patient problems as a basis for screening and appropriate treatment and referral. Content includes systems review using case presentations of differential findings in relation to musculoskeletal pathologies. Other major topics include wound care, women's health, pharmacology, and psychology of pain. This is a capstone course, preparing students for practice in direct access environments.

PHT7114 - Pelvic Health

General

Course Description
Prerequisite: Successful complete of all previous DPT courses.
Description: Students will obtain foundational and practical knowledge and skills in the treatment of patients with pelvic floor dysfunction. Instruction in pelvic floor muscle anatomy, physiology, normal and abnormal function form the foundation of this course. We will also use case studies to discuss the examination, evaluation, diagnosis and treatment of common pelvic floor diagnoses such as urinary incontinence, pelvic organ prolapse, and pelvic girdle pain. Psychomotor skills associated with the examination of a patient with pelvic floor dysfunction will also be performed. Students will engage in active learning strategies to facilitate necessary critically thinking and self-reflection skills necessary to succeed in physical therapy clinical practice.

PHT7183C - Orthopedic Physical Therapy II: Spine and Occupational Health

General

Course Description
Prerequisite: Successful completion of previous courses in the DPT curriculum. This course is an in-depth study related to examination and intervention of disorders and injuries of the musculoskeletal system with emphasis on the axial skeleton including temporomandibular joints. Course includes concepts of functional spinal units, interrelationship of group lesions on normal and dysfunctional biomechanics, therapeutic intervention outcomes, and current theories of spinal mechanics. Lab sessions focus on specialized examination and intervention skills, including spinal joint mobilization techniques. Students will gain skills related to the responsibilities and roles of physical therapists in addressing health-related issues within the community, particularly occupational health. Consultation with local industry with completion of an ergonomic analysis is a component of this course.(A laboratory fee of $25 assessed.)

PHT7315C - Neurology II: Advanced Examination and Intervention

General

Course Description
Prerequisite: Successful completion of previous courses in the DPT curriculum This course includes current motor control and motor learning principles as applied to individuals with neurological disorders. Facilitation of improved motor function is a primary goal of this course. Students will learn the theories, philosophies of a variety of treatment strategies and be able to discuss and integrate the appropriate use of each strategy. This course will require the student to utilize information learned from previous and current course material to apply to clinical patient simulated scenarios. The application of critical thinking skills will be emphasized.

PHT7328C - Lifespan: Pediatrics

General

Course Description
Description: This course is designed to provide the DPT student with an entry--level understanding of normal development and then expanded to the identification of abnormal development. The role of the PT in the patient--client management model in the pediatric practice settings will be explored to include: examination, evaluation, diagnosis, prognosis and plan of care for common pediatric conditions across different practice settings including neonatal intensive care units, rehabilitation programs, early intervention programs, and the educational system. Pediatric physical therapy tests and measures and procedural interventions will be explored in depth using the best available evidence from medical, developmental and behavioral science sources. Other topics of discussion reflect contemporary issues in the physical therapy management of children. Case studies will be utilized to emphasize problem solving, clinical decision--making, and evidence based practice in client management.

PHT7374C - Lifespan Geriatrics

General
Course Description
Description: In this course a comprehensive view of the geriatric physical therapy patient will be presented. To that end this course has two basic components: a psychosocial component and a physical therapy practice component. The psychosocial component will provide an in depth discussion of the demographics of the elderly in the United States, theories of aging, transition to old age, dementia, sexuality, and falls. It will also address the perceptions clinicians and society have on aging and the elderly. Ageism will be also be addressed in some depth. The physical therapy practice component of the course will address those medical conditions commonly found in the elderly that require physical therapy intervention. At the conclusion of the course, the student will be expected to be able to discuss the necessary current practice management strategies for geriatric physical therapy patients, taking into account the psychosocial and physical aspects of his/her geriatric patient.

PHT7608C - Research Application for EBP

General

Course Description
Prerequisite: PHT 6606C
Description: This course is designed to develop the skills for evidence-based practice for an entry-level DPT graduate. The goal of this course is to provide the entry-level DPT student with resources to independently obtain, analyze, synthesize and integrate trustworthy evidence into practice as educated consumers. The emphasis in this course is towards teaching the principles associated with the application of research using a series of class discussions and case analyses. Core curricular pillars of clinical reasoning with an emphasis on the ICF model, professionalism, and lifespan will be reinforced in this course.

PHT7741C - Spinal Cord Injuries and Prosthetics

General
Course Description
Prerequisite: Successful completion of previous courses in the DPT curriculum
Description: This course will have two units. Unit one will focus on the neuropathology, examination, evaluation, physical therapy diagnosis, prognosis and intervention of spinal cord injured persons. Medical/pharmacological management of the spinal cord injured person will be discussed. Laboratory sessions will focus on clinical treatment skills and techniques. A home evaluation assignment will be required. Group assignments will emphasize current literature. Unit two will focus on the pathology, examination, evaluation, physical therapy diagnosis, prognosis and intervention of patients with upper and lower limb amputations. Functional mobility training of patients with an amputation both with and without a prosthesis will be emphasized. A review of lower extremity biomechanics and gait training will also be part of this course.

PHT7777 - Constructivism in Orthopaedic Physical Therapy

General

Course Description
Description: Students will participate in a collaborative learning experience from each other as well as content experts in the field of orthopaedic physical therapy. Curriculum will consist of comprehensive case based learning opportunities for the spine, upper and lower extremities. Students will engage in active learning strategies to critically think through problems presented in the case guided by content experts. They will be provided opportunities to progress in manual therapy skill acquisition. The student will also benefit from immersion in a collaborative learning experience similar to the clinical setting.

PHT7845 - Assistive Technology for Accessibility

General

Course Description
Description: This course is an experiential, service-learning course. DPT students will experience the unique opportunity of interacting with engineering students enrolled in EEL 4930/ EML 4930 learning to integrate engineering methods with rehabilitation principles to explore the design and development of adaptive and assistive devices that benefit people with developmental disabilities. Students will have real-world opportunities to work at the interface of people and technology, exposing them to challenging questions requiring complex interdisciplinary solutions. This course includes seminars where students will develop communication skills and a strong interaction with professionals in the community as well as pediatric clients and their families. Students will complete team-based projects that address problems faced by users of assistive technology in the community.
Repeatablity: Students may earn a maximum of 3 credit hours for this course.

PHT7936 - Advanced Seminar

General

Course Description
Description: This course will explore topics of interest within physical therapy specialty areas. Particular attention is given to topics related to applications in teaching, consultation, research, practice, and administration of physical therapy.

PHT7943C - DPT 3A Clinical

General

Course Description
Prerequisite: PHT 6942C
Description: This course targets a variety of clinical experiences based upon facility placement and patient population. Student assignments are individualized and based on the students' areas of clinical interest, academic performance, and prior clinical education experiences and clinical performance. Students may be placed in inpatient hospital or rehabilitation settings, outpatient clinics, skilled nursing facilities, school or home care settings and/or other specialty practices. Experiences in these settings will provide the student with an opportunity to apply the knowledge and skills acquired throughout the curriculum to any patient referred to physical therapy. Under the direct supervision of a clinical instructor, the student will begin to advance their hands-on clinical skills and further develop

their critical thinking abilities. Students will practice in accordance with the American Physical Therapy Association Code of Ethics and Guide to Physical Therapist Practice.

PHT7944C - DPT 3B Clinical

General
Course Description
Prerequisite: Successful completion of all previous DPT coursework
Description: This final clinical experience provides students with the opportunity to meet entry-level requirements to practice as a physical therapist.
Students continue to practice examination, evaluation, intervention, documentation, consultation and administrative skills under the supervision and guidance of a licensed physical therapist, but are
expected to function at the level of a new graduate by it's completion.
Student assignments are individualized and based on the students' areas of clinical interest, academic performance, prior clinical education experiences, and clinical performance. Students may be placed in inpatient hospital, rehabilitation settings, outpatient clinics, skilled nursing facilities, schools, home care settings and/or other specialty practices. Patients with orthopedic, musculoskeletal, neurological, and/or cardiopulmonary diagnosis may be encountered.

PHY1020 - Discovering How Things Work

General
Course Description
Description: This course offers a comprehensive survey of physics, covering a wide range of topics including motion, newton's laws, energy, sound, heat, electricity, magnetism, and optics. Emphasizing a conceptual understanding of physics, the course integrates critical thinking skills and real-world applications. This course is not intended for students planning to major in science or engineering.

PHY1020L - Discovering How Things Work Laboratory

General
Course Description
Co-requisite: PHY 1020
Description: This laboratory will explore fundamental concepts in physics and how these concepts can be used to understand the world around us. It is to be taken with PHY1020 as a co-requisite. Topics covered include force, energy, electricity, magnetism, and the structure of matter. The laboratory will emphasize conceptual understanding rather than mathematical problem solving. This laboratory is not intended for students planning to major in science or engineering.
Availability: This course is normally available Fall and Spring terms only.

PHY1024 - Exploring Majoring in Physics

General

Course Description
Description: This course will introduce students to the exciting field of physics, especially current topics of interest in physics research at UNF and beyond. Students will be mentored on how to succeed in physics and the many opportunities available to physics majors before and after their graduation with a degree in physics.
Availability: This course is normally available Fall term only.

PHY1028 - Introduction to Physics

General

Course Description
Description: The lecture is to prepare STEM majors for the lower-level physics course sequences in both calculus-based and algebra-based physics. This course is an introduction to classical physics involving a study of motion, fundamental forces, conservation laws of energy and momentum, light waves, electricity and magnetism. An exposure to the philosophy of science and the scientific method forms an essential component of this course. This course cannot be used by natural sciences majors to satisfy degree requirements.

PHY1028L - Introduction to Physics Laboratory

General

Course Description
Co-requisite: PHY1028Description: This course explores the topics covered in the lecture course in a laboratory setting. This course focuses on student-driven experimental design and scientific thinking. This course is designed to allow students to explore physical phenomena and test relationships in part by self-inquiry. The skills acquired in this course can be applied in scientific and non-scientific industries. The laboratory exercises will involve topics such as kinematics of free fall and projectile motion, forces, laws of conservation of energy, optical laws of reflection and refraction, the behavior of lenses, and wave phenomena.

PHY2042 - Physics for Engineers II

General

Course Description
Prerequisite: PHY 1041 and MAC 2311
Co-requisite: MAC 2312
Description: This course is only for Civil, Mechanical and Electrical Engineering declared majors. This course will enroll declared Civil, Mechanical and Electrical Engineering majors only. The course surveys fundamental laws and phenomena of electricity, DC and AC electronic circuits, magnetism and selected topics in optics. Emphasis will be placed on the mathematical analysis of physical problems using calculus. The problems will involve physics applications to engineering when possible.

PHY2048C - Calculus-based Physics I

General

Course Description
Prerequisite: MAC2311 and PHY1028 (prior to Spring 2021 PHY1020 is acceptable)
Co-requisite: MAC 2312
Description: This calculus-based course serves as the first in a two-part series, covering topics like kinematics, dynamics, energy, momentum, rotational motion, fluid dynamics, oscillatory motion, and waves. Designed for science and engineering majors, the course integrates critical thinking, analytical skills, and real-world applications.

PHY2464C - The Physics of Music

General

Course Description
Prerequisites:MAC1105 or MAC1101 or MAC1101C or MAC1105C AND MAC1114 or MAC1147
Description: This is a science course, that includes an integrated laboratory, designed for music majors. The course will cover the fundamental principles governing the physics of sounds, musical instruments, the human voice, the acoustics of rooms, electroacoustics, and electronic music technology. The lab component of the course will allow students to explore the subjects presented in the lecture through hands-on experiments. The course will often employ some elementary mathematics, including algebra and some simple trigonometry.

PHY4610 - Applications of Quantum Mechanics

General
Course Description
Prerequisite: PHY 3604
Description: This course focuses on applications of quantum mechanics to topics of modern physics. Tools and concepts developed within PHY 3604 will be used in this course. Specific topics covered include, multi-particle systems, time-independent perturbation theory and its application to the fine-structure and hyperfine structure of atoms, scattering, time-dependent perturbation theory and its application to the absorption and emission of light, lasers, quantum entanglement and ideas of quantum computing. Computational tools will also be used to gain insights into the behavior of quantum systems.

POS2041 - Introduction to American Government

General
Course Description
In this course, students will investigate how the national government is structured and how the American constitutional republic operates. it covers the philosophical and historical foundations of American government, including but not limited to the Declaration of Independence, the United States Constitution and all its amendments, and the Federalist Papers. The course examines the branches of government and the government's laws, policies, and programs. It also examines the ways in which citizens participate in their government and ways their government responds to citizens.

POS3142 - Politics and Policy in Urban Government

General

Course Description
This course examines urban governments from the perspective of policy outcomes as a result of the form of political organization. Various distributions of power have been theorized at the municipal level-elitism, pluralism, and regime theory to name a few. Each of these forms of political organization may result in particular outcomes in terms of policy formulation, resource allocation, and service delivery, each with significant consequences for public officials, citizens, and other stakeholders.

POS3683 - Law and Cinema

General

Course Description
The course in law and the cinema is intended to deepen and enrich the students' understanding of both law and the cinema and the many ways in which they influence each other. This course focuses on legal history, practice and ethical issues, and how the cinematic portrayal of the legal system influences the way law is actually practiced. How law and the legal system is portrayed in the motion picture industry, in particular, creates images and perceptions that may vary, to some degree, from the reality of the life of the law.

POS3733 - Research Design for Political Scientists

General
Course Description
Description: This is the first course in our two-course research sequence and is required for all Political Science majors. This course will introduce students to the basic principles of research design and scientific research, from the development of an idea or research question, creation of hypotheses, writing of a literature review and writing a research proposal. We will explore a wide range of methods, including experiments, natural experiments, quasi-experiments, measurement using empirical data, and qualitative case studies. The readings combine textbook explanations of the methods with examples of how they are put into practice. Through a set of assignments, students will be asked to begin the process of conducting their own independent research concluding in the submission of a research proposal that will be the foundation for the second course in this research sequence.

POS3734 - Research Analysis for Political Scientists

General
Course Description
Prerequisite: POS 3733Description: This course introduces students to research methods in political science using empirical data. The course will emphasize basic statistical techniques used in empirical data analysis to include measures of central tendency and dispersion, cross-tabulations, mean comparison, analysis of variance, correlation, and linear regression. By the end of the course students will be required to use the knowledge obtained in from both research methods courses in this sequence to develop an original research paper, including original data analyses, which may be presented at an undergraduate conference.

POS4038 - Climate Change Policy and Environmental Security

General
Course Description
The world is changing. Since the dawn of the Industrial Age in the 18th Century, history has advanced at an accelerated pace and human development has been linked to rapid increases in energy use and technology development. This course explores the environmental, public policy, and national security consequences of climate change. It guides students through key developments, beginning with a historical review of energy since the dawn of the Industrial Age, to the complex choices that face societies and policymakers today. Conflict, natural disasters, migration flows, humanitarian crises, agricultural disruption, new weather patterns – all present challenges to this generation and those that will follow.

PSY6214 - Research Design and Analysis I

General

Course Description
Prerequisite: PSY 3213 and STA 2014 or STA 2023
Description: The course involves the study of the research design and statistical analysis in psychology.
Emphasis is placed on issues concerning the choice of basic to intermediate research designs and the appropriate use and interpretation of basic to intermediate statistical analyses. Nonparametric tests, basic to intermediate parametric tests, analyses addressing measurement of psychological constructs, and complex graphical display of data are explored. The course includes learning the effective use of computerized statistical packages.

PSY6607 - Current and Future Directions in Psychology

General

Course Description
This course will provide students a foundational understanding of the history of systems and structures related to the work of psychological scientists. Specifically, we will look at issues related to generalizability, representation of people within the psychological sciences, dissemination of research, and the ethics surrounding these issues. This seminar will help students critically analyze theories and apply theories to their own work in the field.

PUP3603 - Medical Politics and Policy

General

Course Description
Prerequisite: POS 2041The course will provide an understanding of the structure of the political process in medical policy making. It will focus upon the US but will provide comparisons with other countries. The political roles of the legislature, executive and judicial branches of government in medical policy will be examined as well as the political roles that health professional assume in the community. Major actors in medical policy are identified within the context of the forces and institutions that they react to in shaping medical policy. The course will examine why the practice of medicine has been "criminalized" in the pursuit of fraud, abuse and drug diversion.

RED4844 - Supervised Literacy Practicum

General

Course Description
Prerequisite: LAE 4312 Co-requisite: EDE 4943Description: This practicum course is designed to support teaching interns as they develop an inquiry stance in literacy toward their role as teachers. Teacher candidates participate in regular seminars focused on inquiry and knowledge of the components of reading, as well as literacy assessments and data analysis to implement a comprehensive research-based reading plan of instruction for all students. Teacher candidates will engage in the systematic problem-solving process and document the ways in which they are engaging in inquiry during their student teaching internship. All degree coursework, with the exception of EDE 4943: Student Teaching Internship, must be successfully completed prior to registering for this course.

RED6345 - Motivation and Engagement in Literacy Learning

General
Course Description
This course focuses on understanding research that focuses on the importance of motivation and engagement during students' literacy learning. Students will learn about motivation constructs such as autonomy, relatedness, and self-efficacy, and how they relate to one another, as well as the effects of extrinsic and intrinsic motivation on students' literacy learning. Further, students will learn about evidence-based practices that support motivation and engagement when reading texts during school, after school, and during the summer months. The course will provide information about the role of children and young adult literature and digital literacies on students' motivation and engagement. As a culminating assignment, students will demonstrate how they will implement practices that support motivation and engagement in their own classrooms.

RED6657 - Evidence-Based Literacy Instruction

General

Course Description
Students in this course will demonstrate the ability to use scientifically based reading instruction to support student development in oral language, phonological awareness, decoding, and fluency skills. Students will learn about early language acquisition, the linguistic characteristics of language structures, and the relationship between receptive oral and expressive oral language and early decoding skills. This course will also focus on the role of vocabulary and comprehension in reading acquisition. Students will demonstrate the ability to use explicit, systematic, and sequential approaches in reading instruction which includes multisensory intervention strategies. Students will apply evidence-based practices for identifying students with reading difficulties based on data, including students with characteristics of dyslexia and English learners, and responding with instructional strategies that are based on individual student needs.

RED6698 - Teaching Critical Literacy

General

Course Description
Description: With a focus on empowering both teachers and students to better understand a more media-rich, textually diverse literacy climate, this course will explore the theory and the rationale for teaching critical literacy in modern classrooms. Along with learning the theory and rationale for why critical literacy

pedagogy is critical in a more media-rich, textually diverse literacy climate, this course will also address how teachers can begin to implement critical literacy theory in their own classrooms.

REL3101 - Religion and Popular Culture

General
Course Description
If modern society is, indeed, becoming more secular, what does this mean for the continuing influence or religion? Institutional religion seems to be less and less significant in the lives of individuals, yet the "religiousness" of those individuals persists. This course will explore the presence of themes and functions traditionally associated with religion as they are found in less clearly "religious" aspects of popular culture. This focus will raise questions about the definition of religion and point to the power dynamics implicit in the act of defining.

REL3102 - Religion as Culture

General
Course Description
This course will introduce students to one of the primary approaches to Religious Studies: the Social Scientific Study of religion as culture (other, complementary, approaches being History of Religions/Comparative Religions and Philosophy of Religion). We will begin with a unit examining classical theorists (Durkhiem and Weber), current theoretical developments and exploring some key methodological issues. In Units Two and Three we will draw on case studies illustrating religious diversity to refine/apply our understanding of theory and method.

REL3111 - Religion and Film

General

Course Description
Description: The course explores the politics of representing religion at key moments in both film and religious history. The films, regions, and eras will vary according to the instructor. Issues might include representations of religious belief, practice, individuals, and institutions and constructions of nation, race, gender, and sexuality. The course will consider what the processes of movie production and the cultural experience of movie going can disclose about modern religious life.

REL3120 - Religion in America

General

Course Description
This course will give students an overview of the variety of religious expressions found in the United States. We will begin with a unit designed to provide historical context, and then move to a unit that explores the development of social and political conflict around religion and religious issues, and conclude with a unit that provides a sampling of current movements and trends in religion. In each unit, we will pay attention to the practice of religion (as opposed to merely emphasizing belief systems) as well as to the relationship between religion and culture. Through readings, lectures, class discussions and a group project, the course explores the growth and diversity in American religion and the conflict produced by that diversity.

REL3127 - Religion and the Courts

General

Course Description
Religion in America is profoundly shaped by a "religious free market" rooted in the separation of church and state and the first amendment religion clauses. Yet, when the first amendment religious clauses were written, they limited only the federal government (Congress). This course will explore the evolution of the first amendment religion clauses from the Bill of Rights, through the fourteenth amendment applying the religion clauses to the states, culminating in a discussion of important religion cases currently before the courts. Special attention will be paid to the role of specific religious traditions in the development of religious freedom, the significance of this legal status of religion for the religious character of American culture broadly and for the distinctive cultures of American religious traditions.

REL3148 - Religion and Violence

General

Course Description
This course will explore the relationship between religion and violence by looking at studies of several different groups (Muslims, Jewish, Christian, and Buddhist) that claim religious justifications for violence. We will then explore some theoretical perspectives aimed at explaining what many see as this paradoxical relationship. Finally, we will look at American cultural religion (sometimes called American Civil Religion) to explore the ways in which Americans have sacralized and memorialized recent acts of ritual violence. There are no prerequisites for this three credit hour course. Instructional methods include readings, lecture, discussions and a group project.

REL3405 - Jewish and Islamic Thought

General

Course Description
Description: Often medieval philosophy is presented in its Christian guise alone, giving the impression that the medieval philosophical tradition, influenced by the great thinkers of Greek antiquity, is exclusively a Latin tradition, with no substantive contribution by those who wrote in Arabic and Hebrew. We shall revise this view. Our focus will be a select group of philosophers who lived between the 10th-12th centuries, a roughly three hundred-year period that is a high point in medieval Jewish and Islamic philosophy—a time before Greek philosophy was rediscovered in Christian Europe. Philosophers to be studied in some detail are Saadya Gaon, Al-Farabi, Ibn Rushd, and Maimonides, and in addressing topics in the philosophy of language, metaphysics, epistemology,
cosmology, philosophical psychology, and especially in philosophy of law, ethics, and political
philosophy.

REL3456 - Japanese Philosophy and Religion

General

Course Description
Description: This course will explore Shinto, the indigenous world-view and practices of Japan; Japanese Buddhism, including Zen, Pure Land, and Nichiren; bushido, or the samurai spirit; distinctive contributions of Japanese thinkers to neo-Confucianism; and Japanese aesthetics. As we do so, we will explore the differences between orientalism and responsible approaches to non-western cultures and philosophies. We will also discuss Japanese responses to the Buddhist problem of original enlightenment, think through the role of ritualized activities in Japanese culture, and learn what the hierarchical nature of Japanese language can tell us about life in Japan.

REL3630 - American Judaism

General

Course Description
Description: Jews have contributed to the United States' religious diversity for over 350 years, starting off as small pockets of communities on the eastern seaboard. By the 1950s, the US became home to the largest, most prosperous, and most secure Jewish community in modern history. This course surveys the history of American Jews from the 18th century to the 21st century. We will explore the following questions: Why did millions of Jews come to the United States? How has life in a liberal political and capitalist economic order shaped the Jewish experience in America? In turn, how have Jews influenced American culture, politics, and society? Topics will include politics, Southern Judaism, Jewish culture, inter-ethnic group relations, gender and sexuality, popular culture, and identity.

REL4353 - Confucianism

General

Course Description
Description: This course will explore the thought and influence of one of the most influential people of all time, Confucius. Much of what we see today as distinctive contributions of East Asia to world culture comes from a Confucian approach to the world. We will begin in ancient China with the great Confucian classics, and then proceed historically through movements and developments in Confucian thought, from the Analects and the Mengzi to Dong Zhongshu, Zhu Xi, and New-Confucianism as it exists today. We will examine questions of how to categorize Confucianism: philosophy, religion, both, neither? We will also explore the Asian Values controversy and discuss the rise of Confucianism in contemporary China, including various Confucian responses to problems such as human rights, environmental ethics, and bioethics.

REL4404 - Comparative Muslim Cultures

General

Course Description
Description: This course concerns popular or local "Islams" throughout the world. This course will take an anthropological perspective and will use Muslim examples to explore the theoretical and methodological issues involved in the study of religion. We will also employ a variety of approaches to the study of religion to help the student understand a variety of social and cultural phenomena including religious education, the construction of gender identities, revitalization movements, fundamentalism, and religion and politics. The anthropological approach to Islam is clearly distinct from a theological or philological one. In other words, we will concentrate more on the culture and practice of contemporary Muslims than on Islam's sacred texts. We are particularly interested in the cross-currents that are found in otherwise diverse societies.

REL4900 - Directed Independent Study Religious Studies

General
Course Description
Prerequisite: consent of instructor, program coordinator, and department chairperson. May be repeated for up to 6 credit hours, check enrollment restriction.This course will allow students to design a religious studies course to fit their own needs and interests. Broadly speaking it will examine the phenomenon known as religion in an impartial, academic manner. The course might compare aspects of the variety of the world's religions, ask philosophical questions about the nature of religion, and/or explore the relationship between religions and the larger cultural context in which religions are found.

REL4910 - Senior Seminar Capstone

General
Course Description
Prerequisite: REL 2300 and REL 3102 and REL 3040Description: This course should bring together the theoretical and methodological skills developed in the major and apply them to a specific area of data that could vary by instructor and/or by student interest. This is as an undergraduate thesis course. Students will learn how to put together their own research project within a supportive setting. Students will select their own topic and spend most of their time working on it. Class sessions will be oriented towards identifying research methods and then strategies for honing a research project and getting it to its final product. The skills developed and, at the culmination of the course, demonstrated, will be those skills the Religious Studies Major is designed to foster: clear writing, thinking, the ability to engage systematically with theoretical models and the ability it see the world through the eyes of someone else.

General

Course Description
Description: The content of this course will vary depending on the faculty member offering it but it will be an advanced study on some aspect(s) of the Christian Tradition. It will exemplify the academic approach to the study of religion which, as an interdisciplinary field of inquiry, explores varied meaning-making systems in all their complexity including beliefs, practices, texts, history and social-cultural functions. Rather than approaching religions from the standpoint of a believer seeking "Spiritual Truth," this course and other in the Religious Studies major will help students gain an understanding of the origins of particular traditions, how they function, and what purposes they serve. In this advanced level course, students will build on the skills acquired in their lower level courses.

SCM4155 - Supply Chain Management

General

Course Description
Prerequisite: TRA 4202 or TRA 4210 and TRA 3035
Description: This course examines how and why successful supply chain management requires cross-functional integration of key business processes within the firm and across the network of firms that comprise the supply chain. The distinction between logistics and supply chain management is identified and a framework for supply chain management is presented. Each of eight supply chain processes will be discussed, as well as topics such as: the management components of supply chain management; internet-driven supply chains; electronically linking the supply chain; integrating supply chain strategy to corporate strategy; supply chain mapping; supply chain metrics; developing and implementing partnership in the supply chain; and implementing supply chain management.

SDS6000 - School and Family: Managing Student Behavior

General
Course Description
Prerequisite: Admission to the SOAR program or permission of the instructor
Description: This course is designed to enhance the relationship between families/ care givers and the school for the purpose of optimizing student behavior for classroom learning. It will give the students tools to use when working with families. In addition, students will learn effective ways to include family members as active contributors in their child's education and overall well being. Students will learn how to create collaborative teams that will include school personnel, families and other community agencies to promote student learning. The school counselor's role will be explored in managing classroom behavior when conducting classroom guidance and in helping teachers with strategies for managing students from various cultural backgrounds. The classroom environment and instructional activities that promote cognitive growth will be examined. This course will look at profiles and characteristics of students presenting potential and active behavior problems. Strategies for preventing and handling on-going behavioral problems are examined.

SDS6466 - Crisis/Disaster Management

General
Course Description
Description: This course is designed to explore student behavior that results in violent and aggressive actions. The development of violent tendencies is examined, including the medical/biological, psychological and social theories of aggression and violence. Candidates explore the current approaches to intervention with at-risk students, and discuss prevention strategies that can be implemented in regular, special education and inclusion classes in order to minimize the risk of violence. The legal issues involved are presented to help candidates understand the role of school personnel in minimizing risk to students and staff, and also intervening with those students in regular, special education and inclusion classes who are at-risk for violent and aggressive behavior. As part of the curriculum, each participant will develop a Crisis Intervention and Prevention Plan as a potential model that can be implemented within a school district/building.

SLS1106 - First Year Seminar

General

Course Description
Description: First Year Seminar is intended to provide students with the tools necessary to be successful at the University of North Florida and ensure a smooth, thoughtful transition to college. Through interdisciplinary engagement and an introduction to a variety resources available at UNF, students will create their own college success plan detailing their major selection process, campus involvement and leadership opportunities, and additional academic and co-curricular endeavors to prepare them for achievement of career goals and success after graduation.
This course aims to foster a sense of community on campus, promote engagement in the academic and social life of the university, articulate expectations of faculty, and help students develop and hone sound learning strategies that will serve as the foundation for collegiate success and beyond. This course will be taught by faculty across the university and is not repeatable.

SLS1930 - Community Engagement - UNF Cares: Special Topics

General

Course Description
Description: This special topics Community-Based Transformational Learning course is intentionally designed for and offered to First Time In College (FTIC) students. Students are introduced to selected interdisciplinary topics and issues through activities in community settings that are designed to meet community needs. Students explore their individual strengths while considering how their assets can have a positive impact in the world. While many University courses develop students' skills, knowledge, and expertise to pursue a career, this course provides a time for students to explore their purpose and place in this world. During the semester, students will connect with new people, new ideas, new places, and new challenges. Through this experience students may gain a clearer sense of purpose or begin to consider new directions. This is a student's opportunity to explore possibilities and use their strengths in real-world settings.

SLS2004 - CCEC and You

General

Course Description
This course provides information and experience that aids students in their successful transition to the college of Computing, Engineering and Construction at UNF. The objective of this course is to provide students with information that will enhance their academic experience, connect them to campus resources and engage with industry professionals. In addition, this course will allow students to

learn more about themselves, their major, and others in the campus community. It will help students develop skills that are needed to be a successful CCEC student. Required for all CCEC students within first 30 UNF credits.

SLS3408 - Employability Skills and Career Success

General

Course Description
Description: This course helps students utilize a variety of job search strategies that will give them a competitive edge and make a successful transition from academics to the world of work. This course focuses on instructional methods, materials and curricula to introduce students to the fundamentals of planning, organizing and implementing a comprehensive job search campaign. Emphasis is placed on identification of individual career goals, assessments of skills and abilities, exploration of career options, analysis of the job market, and effective use of employment search tools (e.g. resumes, cover letters, interviewing, networking, and management of career pathways and resources.) Course includes presentations by Career Services Professionals, Recruiters and Employer Representatives, and Graduate School Admissions Representatives.

SMT4664 - Problem-Based Instruction Math-Science

General

Course Description
Prerequisite: EDG3323
Description: This course focuses on exploring authentic, important, and meaningful questions and developing problem-based science/mathematics curriculum for Grades 6 - 12 students. Prospective teachers will gain an understanding of how they can facilitate students' application of the processes and technologies that scientists, mathematicians, and engineers use. Problem-solving approaches will emphasize the use of data representation, analysis, modeling, and content contextualization. This course contains a (minimum) 30-hour field component in a secondary school setting. Non-education majors will complete alternative assignments in lieu of the field component.

SMT6315 - Problem-Based Instruction in Math-Science

General

Course Description
The purpose of this course is to provide prospective STEM teachers with the opportunity to examine the interactions between content, pedagogy, curriculum, and the classroom context. These interactions can empower secondary students to develop a deep understanding of mathematics and science ideas. Prospective teachers will develop the skills, techniques, and dispositions to productively facilitate these interactions within and across science, technology, engineering, and mathematical (STEM) subject areas. They will engage in strategies necessary to become reflective and effective STEM educators in grades 6-12. This course contains a (minimum) 60-hour field component in a secondary school setting.

SOP3515 - Fundamentals of Conflict Transformation

General
Course Description
Description: This course explores the nature of conflict that is borne by individual, relational, cultural, and structural differences and inequalities. This course will teach undergraduate students the skills to engage in change efforts. Transforming conflict intrapersonally and pursuing peace building interpersonally, students are empowered to recognize and transform conflict in relationships, institutions, and organizations. The course is designed to facilitate a perspective that is insightful and competent in creating change for people whose culture, philosophy, racial identity, gender, sexual orientation, abilities, age, religious orientation, and socio-economic status are a damaging source of conflict.

SOW3620 - Social Work with Marginalized Groups

General

Course Description
This foundational social work course introduces you to cultural competence and social justice in the context of social work practice with diverse marginalized groups. Course content is grounded in the National Association of Social Workers (NASW) Standards and Indicators for Cultural Competence in Social Work Practice which equips social workers to engage in effective cross-cultural practices at the micro, mezzo, and macro levels. You will explore your cultural identities and the socio-cultural identities of individuals from historically oppressed groups within the U.S. You will also critically apply your awareness and knowledge to identify culturally sensitive social work approaches with individuals, within institutions, and in the broader society. Mastery of the course content will be demonstrated by your enhanced self and social awareness, increased cross-cultural knowledge, and developed cultural competence and humility relating to social work practice with marginalized groups.

SOW4122 - Inside the Asylum

General

Course Description
Description: Inside the Asylum engages students in a critical examination of the history of American psychiatry. Students have an opportunity to explore the evolution of existing theories of the etiology of mental illness, the sociopolitical economy of psychiatry, the rationalization of involuntary hospitalization and treatment, and the development and utilization of common treatment modalities. Students also have an opportunity to learn about the consumer/survivor and deinstitutionalization movements as well as contemporary psychiatry's growing reliance on psychopharmacological interventions. Particular emphasis is placed upon understanding the human rights abuses endured by individuals labeled as mentally ill and the social, political, and economic forces that negatively impact this disenfranchised group. This course will be of most interest and relevance to students who wish to work in mental health or human services.

SOW4522 - Field Seminar I

General

Course Description
Co-requisite: SOW 4511
Description: Throughout the Field Seminar I, students will engage in a process of self-assessment, examining personal values and biases as they impact interactions with clients and co-workers. Students will apply critical thinking and problem solving skills to experiences and ethical dilemmas encountered in the practice setting. The fieldwork experience allows students to apply the generalist knowledge and skills acquired through academic courses to work with diverse client populations to bring about planned change. Tools for addressing burnout and compassion fatigue will be examined. Students will also engage in strategies to mitigate the emotional turmoil that often accompanies beginning social work with micro and mezzo client systems through the use of professional supervision and self-reflection exercises.

SOW4602 - Social Work in Health Care

General

Course Description
Description: This course prepares students with knowledge for practice within a broad array of health care settings. The content of the course will include an overview of the history of health care in the United States as well as current and emerging theory, practice, and research specific to social work practice in health care settings as they effect diverse client populations. Students will be expected to consider their roles as transdisciplinary team members and facilitators of health and well-being with individuals, families, groups, communities and organizations. The biopsychosocial-spiritual model, strengths perspective, and an emphasis on diversity and cultural competence will be infused throughout the course as students explore practice with clients experiencing challenges related to adapting to illness while navigating the ever-changing landscape of the healthcare system in the United States.

SOW5470 - Principles of Social Work Research and Theory: Academic Immersion

General

Course Description
Description: This course is designed to prepare students to become effective consumers and producers of research, and to evaluate their own practice using a sound foundation of research and theoretical principles. Students will learn to critically evaluate the research of others, and to select interventions that are based on evidence and theoretical underpinnings. Within this process, the following will be covered: writing for social work research and practice of the scientific method for building knowledge for social work practice, ethical standards for scientific inquiry, qualitative and quantitative research methodology, and the review and utilization of research findings. This course also emphasizes theories and strategies for advanced generalist practice such as ethical frameworks, person-in-environment/ecological approaches, problem-solving approaches, systems and developmental theories and their application to research and multicultural/ anti-oppressive practice in the community.

SOW5625 - Difference, Discrimination and Oppression

General

Course Description
Description: This course examines social work's historical and current commitment to social justice as it relates to oppressed groups in a multicultural society. This course will seek to enhance student understanding of and appreciation for diversity in self and others. Course content will address issues of power, inequality, privilege, discrimination and the resulting oppression. Special emphasis will be given to the experience of oppressed groups in order to understand their strengths, needs, and responses. Course material will use a social justice perspective for the study of and practice with oppressed groups at all system levels, including those distinguished by race, ethnicity, gender, age, sexual orientation, disability, immigration status, religion and social class. This course will consider the ethical dilemmas faced by social workers in their empowerment and advocacy roles.

SOW5931 - Generalist Practice I

General

Course Description
Description: This course provides a foundation in generalist social work knowledge and skills for practice at the micro-level with individuals and families with special emphasis given to oppressed and at-risk populations. Students will develop interpersonal communication, assessment, and service planning skills and learn to identify macro policy issues for consideration of advocacy. Students will engage in a process of self-assessment in order to recognize and mitigate the influence of personal values and biases as they relate to ethical social work practice. Strategies for the resolution of ethical dilemmas and culturally competent practice will be introduced and reinforced. Tools for addressing burnout and compassion fatigue will be examined.

SOW5940 - Field Education I

General

Course Description
Description: Field education, the signature pedagogy of the social work profession, is integral to the education and professional socialization of social work students. Through field education, graduate students are provided a structured and supervised environment in a human service organization in which they apply theoretical knowledge, test and refine practice skills, and adopt professional behaviors. Field Education I, the first of two consecutive courses in the foundation year, introduces and allows students to apply the generalist knowledge and skills acquired through academic courses to social work practice with a specific client system.

SOW6125 - Psychopathology

General

Course Description
Description: In this course students will learn to apply a biopsychosocial model to the assessment and diagnosis of mental, emotional, and behavioral disorders classified in the most current edition of the Diagnostic and Statistical Manual (DSM). In addition to learning how to use the DSM in social work practice, students will engage in critical analyses of the DSM, exploring the impact of oppression and bias on the classification, diagnosis, and treatment of disorders as well as the social construction of “mental illness.”

SOW6126 - Advanced Interpersonal Practice with Children/Adolescents & Families

General

Course Description
Description: A primary goal for this course is to explore the spectrum of mental disorders that appear across the developmental span from childhood to adolescence. The disorders will be examined within the contexts of current knowledge and research and other factors that function as risks or protective factors that impact the mental health of children and adolescents. Through the lens of labeling and stigmatization, conceptualizations of mental disorders childhood and adolescence will be explored. In addition, the predominant classification system of disorders of childhood and adolescence, the Diagnostic and Statistical Manual of Mental Disorders will be presented. Indications for individual, group, and family treatment modalities will be defined.

SOW6605 - Social Work in Health Care Settings

General

Course Description
Description: The primary focus of this course is the development of knowledge and understanding of social work practice methods in health care settings. The course is presented in three segments: 1) conducting biopsychosocial-spiritual assessments; 2) engaging in comprehensive and coordinated patient and family centered care strategies via the medical home model; and 3) understanding the implications for social work as a result of changes in federal health care policies. Throughout the course, students will discuss ethical issues, management of interdisciplinary challenges, diversity issues, and issues related to specific health conditions and disabilities.

SOW6945 - Field Education III with Integrated Seminar

General

Course Description
Description: Field education, the signature pedagogy of the social work profession, is integral to the education and professional socialization of social work students, providing a structured and supervised environment in which students will apply and begin to demonstrate mastery of theoretical knowledge, test and refine practice skills, and adopt professional behaviors. This course provides students with an opportunity to expand social work practice to include advanced generalist interventions with clients in a human service organization. Advanced generalist practice emphasizes both clinical and administrative elements of social work practice, preparing students to assume a variety of roles. Students will utilize the seminar component of this course to address appropriate boundary setting and self-care associated with sound practice skills in clinical and administrative contexts.

SPM4703 - Sport Business Analytics

General

Course Description
Prerequisite:STA 2023Description: This course is designed to help students develop and apply analytical skills that are useful in a general business environment, applied specifically to sports. Students will learn how to apply methods and principles in a wide range of applications: evaluating performance and decision making, hypothesis testing, interpreting market-based evidence, identifying directions of causation, and quantifying the magnitude of various effects. The course focuses on applications in the sport context and uses approaches that are rapidly becoming important in the business of sports analytics. This course provides hands-on experience in data visualization and introduces students to design principles for creating meaningful displays of quantitative and qualitative data to facilitate decision-making. The principles we aim to impart on students, taught through the lens of sports, will be useful in addressing many business-related issues, even outside of sports.

SPM6106 - Sport Facility and Risk Management

General

Course Description
Description: This course provides students a comprehensive knowledge base of sport facility and human resource management. Students will develop an understanding of proper facility planning, construction and utilization, risk management, event administration, house and grounds management, systems management, marketing, finance and personnel issues related to sport facility management. Contemporary issues in sport facility management will be examined as well as the growing responsibilities and risks assumed by those working in sport management. Case study analysis and sport facility visits will be important teaching methodologies for this course.

SPN1032 - Introduction to Spanish for Healthcare

General

Course Description
This course offers students an opportunity to start or review what they have learned in Elementary Spanish. Students will acquire new structures and health-related vocabulary, as well as examine some of the cultural factors that affect interactions between Spanish-speaking patients and healthcare providers. Emphasis will be placed on practicing the specific vocabulary and phrases needed to communicate with non-English speaking patients.

SPN1134 - (FC) Accelerated Beginning Spanish

General

Course Description
This course covers, in one course, similar listening, reading, speaking, writing, and intercultural competences to those presented in SPN1120 Beginning Spanish I (4 credit hours) and SPN1121 Beginning Spanish II (4 credit hours); it can be taken in lieu of SPN1120 and/or SPN1121. Accelerated Beginning Spanish reinforces novice-low-to-novice-high Spanish proficiency through instruction and practice in basic grammar, reading, writing, listening, and conversation, framed within the study of different cultures of the Spanish-speaking world. Upon successful completion of this course, students will be prepared to continue in Spanish at the intermediate level and will be eligible to take Intermediate Spanish I or its equivalent.

SPN3350 - Spanish for Heritage Speakers

General
Course Description
Prerequisite: This course has no prerequisites, but is open only to native/heritage speakers of Spanish. Native speakers are understood to be those who were raised in a Spanish-speaking country. Heritage speakers are those who grew up in the United States or elsewhere outside of the Hispanic world and potentially have had no formal training in Spanish, but who have had regular contact with the language, usually at home.Description: This course is designed for native and heritage speakers who have had limited or no formal training in the language. The course places strong emphasis on grammar, as well as reading, writing and vocabulary building. The course features a cultural component which challenges students to reflect upon their own experiences as members of bilingual and bicultural families and communities, and to think critically about their place in the cultural context of the larger Spanish-speaking world.

SPN3351 - Communication and Communities for Heritage Speakers

General
Course Description
Prerequisite: This course has no prerequisites, but is open only to native/heritage speakers of Spanish. Native speakers are understood to be those who were raised in a Spanish-speaking country. Heritage speakers are those who grew up in the United States or elsewhere outside of the Hispanic world and potentially have had no formal training in Spanish, but who have had regular contact with the language, usually at home.Description: This course emphasizes the development of techniques for conversation and public speaking in Spanish. Students will examine the implications of bilingual and bicultural identities and will study regional variations of Spanish. A variety of materials will be used as starting points for discussions, including articles, short stories, film and music. The course incorporates service learning components, which will allow students the opportunity to conduct projects with local Spanish-speaking communities and organizations.

SPN3503 - U.S. Hispanic Cultures

General

Course Description
Prerequisite: SPN3300 OR SPN3242 OR SPN3350 OR SPN3351Description: This course proposes a panoramic view of U.S. Hispanic cultures in the context of historical realities and cultural politics. It is organized around two main themes: (1) the historicity of the presence of Spanish-speaking cultures in the United States—not in terms of ethnic subcategories or demographic change but as a constitutive and foundational part of U.S. culture and society—and (2) cultural theory based on important texts produced by representative writers. For such purposes we will interact with a variety of short texts in Spanish; view video, film, art; listen to music; and access digital archival resources.

SPW4192 - Food in Latin American Literature and Culture

General

Course Description
Prerequisite: SPW 3030 or, for those with prior experience with literary studies in Spanish, to have received the permission of the instructor. Description: This course focuses on the subject of food as it is represented in Latin American literature and culture. We will examine texts that engage with the topic of food in the production of authors from various Spanish-speaking Latin American nations, who express themselves in a range of genres that include short story, essay, poetry, and film, from Colonial to contemporary times. Students will learn that food does not only play a fundamental role in survival, but that it also provides an expressive matrix for the articulation of cultural, ethnic, and gender issues.

SPW4373 - Technology and the Latin American Short Story

General

Course Description
Prerequisite: SPW 3030 and SPW 3383, or by permission of the instructor. Description: This course focuses on connections between the development of technologies in Latin America and the development of the 20th and 21st C. Latin American short story as an experimental genre. Technology, and the role of technocracy in Latin American societies, has been a recurrent theme in the Latin American short story. It has also defined the parameters of the genre, from the newspaper-focused writing of pioneers like Horacio Quiroga to new short story forms produced in digital and visual formats. As we read, we will discuss various technology-related social realities and changes over the course of the 20th and 21st centuries in Latin America.

SPW4523 - Women's Literature in Latin America

General
Course Description
Prerequisite: SPW 3030 or, for those with prior experience with literary studies in Spanish, to have received the permission of the instructor. Description: Women's Literature in Latin America is a course that focuses on the role of women in Latin American cultural and literary production. Through the study of texts in prose, poetry, drama and film, students will learn about the social construction of gender, the evolution of feminist thought, and the problems faced by Latin American women today. In addition, they will be able to connect the relationship between language, the creation of texts and the sociopolitical realities represented in them, and they will gain a deep understanding of the challenges and successes of women of diverse origins: racial, ethnic and class. The course is taught in Spanish.

SPW4600 - Don Quixote: Hero or Fool

General
Course Description
Prerequisite: SPW 3030 or, for those with prior experience with literary studies in Spanish, to have received the permission of the instructor. Description: Why do we read Don Quixote today? In this course, students will read and analyze Don Quixote from its relationship with different literary and cultural traditions, its innovative narrative structure, and the transformation of the figure of don Quixote into a modern myth and a ubiquitous visual icon in popular culture. Different theoretical approaches ("close reading', "distant reading", cultural studies) will be used to explore these issues.

SSE3313 - Social Studies Methods for Elementary Teachers

General
Course Description
Prerequisites: LAE3210 and TSL3080Description: This course examines standards, issues, and methods related to the teaching and learning of social studies in the elementary school. It includes and an emphasis on culture and the arts the integration of social studies content in English/Language Arts as ways of knowing and learning about civics, economics, geography, and history.

SSE4384 - Special Methods: Social Studies

General
Course Description
Prerequisite: EDG 3323Description: An examination of the instructional methods, materials, and curriculum for teaching secondary level social studies. This course requires a (minimum) 30-hour field component in a secondary school setting for education majors. Non-education majors will complete alternative assignments in lieu of the field component.

STA3032 - (GM) Probability and Statistics for Engineers

General

Course Description
Prerequisite: MAC 2312. This course is a survey of the basic concepts in probability and statistics with applications in electrical, mechanical, and civil engineering. Topics include probability, common discrete and continuous probability distributions, estimation and hypothesis testing, and simple regression. (Cannot be used to satisfy degree requirements by mathematics and statistics majors).

STA3163 - (GM) Statistical Methods I

General

Course Description
Prerequisite: MAC 1105 or MAC 1147
This is the first in a two-term sequence in applied statistical methods. This course focuses on descriptive and inferential statistics for means and proportions in one and two groups, simple linear regression with its diagnostics, and the one-way analysis of variance. The course incorporates technology and uses SAS for analysis of statistical data.

STA4853 - Statistical Techniques for Time Series and Forecasts

General

Course Description
Prerequisite: STA 3163 or ECO 3411
Description: This course is an introduction to the analysis of time series data using time-domain techniques. It begins with simple graphical and weighted moving average analyses that yield commonly-used decompositions and forecasts. More complex autoregressive integrated moving average (ARIMA) statistical models will be developed for stationary and non-stationary series, and for regression with time-series errors. These techniques will be applied to examples in a variety of disciplines, ranging from meteorology to economics. This course is recommended for students interested in an actuarial career.

STA6106 - Computer-Intensive Methods in Statistics

General
Course Description
Prerequisite: STA 4321. This course will cover a variety of statistical methods which are dependent on the availability of massive computational power. The course will include but is not limited to topics such as simulation techniques, randomization tests, Monte Carlo techniques, bootstrap methods, and numerical optimization methods. The course will involve extensive computer programming on the part of the students.

STA6166 - Statistical Methods I

General
Course Description
Prerequisite: MAS 3105 and STA 4321. This is the first in a two-term sequence in statistical methods. This course is a blend of the theory and applications of regression analysis and of the design and analysis of data. It focuses on linear regression with one predictor variable, inferences involving regression coefficients and correlation analysis, diagnostics and remedial measures, multiple linear regressions and its diagnostics, and an introduction to the analysis of variance. Emphasis is placed on the application of these techniques to data and interpretation of the results. The course uses the statistical analysis software (SAS) for data analysis.

SYA4654 - Sociological Approaches to Program Evaluation

General
Course Description
Prerequisite: SYA 3300 or SOW 3404Description: Program Evaluations are often required by government and private agencies to assess program processes and outcomes and used in decisions concerning whether programs should be continued, improved, expanded, or eliminated. In this class, we will explore the history of the program evaluation "movement" and the intersection of Evaluation Research and Applied Social Science. The course provides a framework through which the skill set developed in the basic research methods classes can be used to evaluate social programs in a variety of agencies, institutions and settings. Students will become familiar with a number of techniques and theoretical foundations utilized in Evaluation/Applied Sociology and provide hands-on experience working on an Evaluation/Applied Sociology project.

SYA4943 - Sociology Internship

General

Course Description
Prerequisite: SYA 3300Description: The Sociology internship is designed to give students a supervised pre-professional experience applying sociological knowledge and research methods in a community based organizational setting. Students will have the opportunity to identify projects and assess needs with the on-site supervisor, apply sociological skills of critical analysis and problem solving to organizational challenges, and develop their competencies navigating within a bureaucratic workplace setting. The internship experience will also assist students in identifying career paths, improving career skills, and developing a network of career professionals and mentors.

SYD3410 - Urban Sociology

General

Course Description
This course reveals how sociologists understand urban development and the impact of urbanization on social life. Specific topics include the role of power in urban growth, cities as sites of inequality, the provision of public services, and social control in the urban context. Students will also examine contemporary urban social problems.

SYD3700 - Sociology of Race & Ethnicity

General

Course Description
This is an upper-level survey course that analyzes race and ethnicity through a sociological lens with attention to historical, political, and social contexts of racial issues. The course examines the formation and transformation of racial systems throughout US history, with a particular focus on colonialism, slavery, and segregation. Students will examine relevant sociological theories of race and ethnicity, including the social construction of race as well as the significance of structural racism across contemporary social institutions. The dynamics of race and ethnicity are also explored in relation to other social identities such as class, gender, and nationality.

SYD3800 - Gender and Society

General

Course Description
This course is designed to explore the social meanings and political implications of gender in society. It will focus on gender as a taken-for-granted but problematic component of our lives, whether we are female or male. Sociologists now recognize that gender is a "social construction" which is open to re-definition and which has profound social implications. The course will explore topics such as: gender and sex role socialization; gender relationships; cross-cultural gender comparisons; and the effects of "the sex-gender system" on areas such as health, family life, religion, employment, crime, education, politics, and social change.

SYD4237 - Sociology of Immigration

General

Course Description
This course focuses on a sociological understanding of historical and contemporary immigration to the United States along with modern global trends. Students will explore sociological theories that explain the causes and consequences of immigration, with an emphasis on the process of incorporation as shaped by social class, race/ethnicity, gender, and documentation status. Special attention is paid to current issues, including nativism through anti-immigrant policies, social inequalities faced by immigrants, and the social, cultural, and political impact of immigration.

SYD4510 - Environment and Society

General

Course Description
This course provides a sociological approach to environmental problems. Specifically, the course examines four central issues surrounding environmental problems: (i) the nature, scope, and social consequences of environmental problems; (ii) the human causes of environmental problems; (iii) the human responses to environmental problems; and (iv) an alternative way of thinking about and responding to environmental problems.

SYD4702 - Race, Place and Inequality

General
Course Description
Description: This course will examine place as a dimension of stratification in the United States. Increasingly, the places where we live shape our life chances: they determine the quality of schools we will attend, our access to economic opportunity, and even the cleanliness of the air we breathe. While all U.S. citizens are ostensibly free to choose their place of residence, we find that in actuality access to place is highly segregated both economically and racially, and that these two facets of stratification intertwine. Understanding the processes that lead to place stratification, and the means by which places produce or reproduce different life chances, is central to understanding inequality in the U.S.

SYG2013 - Sex, Race and Social Class: A Sociological Examination of Culture and Diversity

General
Course Description
This class is designed to introduce students to the Sociological study of the issues of Race, Sex, and Social Class. In this class, we will examine a number of issues facing American society today and how these issues are inter-related. Special emphasis will be placed on discussing how those problems are (or are not) dealt with in our society.

SYO3110 - Sociology of Sexualities

General
Course Description
Description: This course explores the relationship between sexualities and society. This includes how sexualities influence our lives, as well as how they are reflected in social norms, attitudes and beliefs. Sexualities will be analyzed as social and historical constructions, differing across time and space. Questions asked will include: Is there one sexuality or are there multiple sexualities? What are the theoretical approaches to sexuality/sexualities? What do sexuality/sexualities have to do with race, gender and social class? How are sexual identities constructed? Finally, the course will examine how the social construction of sexuality/sexualities influences our relationships, whether or not those relationships are primarily sexual.

SYP4013 - Sociology of the Body and Movement

General

Course Description
This course will examine embodiment, bodies, and movement from a sociological perspective, using various sociological theories and concepts. We will discuss how our bodies are shaped by social expectations and, in turn, shape how we view ourselves. Our bodies are not just vehicles for us to drive around. Our bodies affect our lived experiences and our mental health. Throughout the semester we will discuss and experience how movement impacts our bodies. As a class, we will experience movement and fitness in nature each week as it connects to the readings. Some of the movement-based activities will include but are not limited to walking the nature trails on campus, practicing yoga, and kayaking.

SYP4713 - Sociology of Childhood and Youth

General

Course Description
This course provides a theoretical and empirical understanding of the lives of children, adolescents, and young adults. It examines the socially constructed nature of childhood, as well as the social forces that impact the development of young people in our society. The curriculum considers variations in "childhood" across place, time, and social location, and examines how childhood experiences and socialization differ based on sex, race, and social class. Further, we will examine not just socialization at home, but also the socialization processes that take place as students interact with major social institutions, like schools and the media.

TPP2100 - Acting I

General

Course Description
This is a beginning course in the fundamentals of acting. Students learn a working vocabulary and acquire basic skills of the acting process. Through formal and improvisational techniques for developing vocal, physical, and analytical skills associated with behavior-based acting, students explore the imagination as the actor's primary resource for building a character. Emphasis is on relaxation, trust, and mental agility. Some monologue and/or scene work may be required.

TPP3103 - Acting II

General

Course Description
Prerequisite: TPP 2100 or permission of instructor
This is an advanced course in acting that builds on skills learned in Acting I. Students gain a working knowledge of the analysis, rehearsal, and performance techniques associated with particular acting methods or styles. Different semesters focus on different styles depending on the semester's production schedule. Acting methods and styles include techniques associated with works in Realism and the American "Method" as practiced by Adler, Meisner, and Hagen; techniques associated with analysis and performance of the classical verse drama of Shakespeare and Moliere; techniques associated with Commedia, Expressionism, and Brechtian theater; techniques associated with more physically based systems such as Alexander and Suzuki. Students will read dramatic texts and theory. A commitment to substantial scene rehearsal is required. May be repeated for up to 6 credits.

TRA4956 - Study Abroad in Logistics

General

Course Description
The same course was removed off the catalog due to not offering it for 5 years. However, we are starting to offer the course in Spring 2025.This course allows students to study a country's business practices, with a particular emphasis on logistics. During this course, the student will understand the culture, geography, history, and politics of the country; travel to the country; study the differences between business in the U.S. and business in that country; and learn about the current issues facing that nation. The course will have three phases: pre-trip preparation and orientation, foreign travel, and post-trip work.

TSL3080 - ESOL Foundations: Culture and Language

General
Course Description
Description: This course examines English for Speakers of Other Languages (ESOL) issues that are relevant to teaching English language learners (ELLs) in K-12 settings. The course covers basics to understanding four main sections: (1) culture as a factor in ELLs' learning; (2) language as a system to support ELLs' acquisition of English in order to learn and to read, write, and communicate orally in English; (3) language acquisition and development to support ELLs' learning; and (4) second language literacy development to support ELLs' learning.

TSL4240 - Applied Linguistics and Grammar in TESOL

General
Course Description
Description: The focus is on understanding modern Standard English usage in teaching English to speakers of other languages (TESOL). This class covers the major concepts in linguistics that relate to how languages work and how they can be described in TESOL. Students gain knowledge of the various components that make up the system of any language, but investigate the English language in depth. Topics covered include phonetics, phonology, morphology, syntax, semantics, etc. These concepts and concerns are studied with an eye toward their practical application to TESOL. This course also examines elements of English grammar, concentrating on parts of speech and sentence structure. A descriptive rather than a prescriptive approach is taken.

TSL4441 - Assessment in ESOL Settings

General

Course Description
Description: In this course and in agreement with the conceptual framework, candidates will be prepared to impact English Language Learners (ELLs) by learning and developing various second language assessment practices. The course will examine the fundamental principles and various practices of second language assessment. It will also provide an overview of assessment techniques and instruments for four language skills (listening, speaking, reading, and writing) and opportunities to explore and develop creative assessment instruments. Assessment issues involving placement, diagnosis evaluation, use of traditional assessment instruments and procedures, and use of alternative assessment methods will also be explored.

TSL4520 - ESOL Cross-Cultural Communication

General

Course Description
Description: The overall objective of this course is to prepare teachers to understand the background of ESOL students, to increase their success in content areas, and to create a positive learning environment for all students in the classroom. Participants will study culture and learn about their own culture to better understand their students' culture. Emphasis will be placed on the effect of culture on communication and learning. Participants will develop lessons and activities that will enhance cross-cultural communication among all peoples. This class will cover the standards for the domain of culture recommended by TESOL Cultural sensitivity. Culture will be discussed in a way that may appear to convey criticism or praise. However, all cultures have their strengths and weaknesses. No culture is in any way superior or inferior to any other, except as an adaptation to a specific environment.

TSL6325 - TESOL Methods: Content Instruction

General

Course Description
Description: This course focuses on helping emergent bi-/multi-linguals construct meaning in classroom literacy and content-instruction activities in content areas in all grade-levels and beyond. In this course, candidates examine language teaching methods and models, and effective, integrative instructional practices in the teaching of content area subjects to the emergent bi-/multi-linguals. This course also explores curriculum standards, methods and practice of assessment for English language learners, including the in-depth discussion of language proficiency assessment, classroom-based assessment, and identification of English language learners; ESOL and special education; instructional design and classroom management appropriate for content specific classrooms in which emergent bi-/multi-linguals are participants. This course is required for all TESOL candidates. A minimum of 15 hours' fieldwork and community service activities in ESOL/bi-/multi-lingual settings is required.

TSL6940 - TESOL Practicum

General
Course Description
Description: This course requires teaching experience in the field with English Language Learners. Peer and instructor class observations and coaching sessions will be given during weekly seminar-style meetings and in the field. Practicum students' structured experiences in classroom observations, lesson planning, and assisting/facilitating lessons for ELLs, will be based on current research and practices in TESOL (Teachers of English to Speakers of Other Languages). Candidates and the practicum instructor collaborate with various ESOL programs in the community to facilitate the practicum for the candidates.

TSL6945 - Professional Internship in TESOL

General

Course Description
Prerequisite: TSL6940
Description: This course provides teacher candidates with an opportunity to draw upon and integrate the knowledge, skills, and dispositions from coursework into a supervised teaching intership. The course is designed to offer knowledge that informs curricular and instructional decisions in order to plan supportive environments for English Language Learners (ELLs). Through this internship experience, candidates will be given the opportunity to examine the influences of the (a) curriculum and subject matters, (b) teachers, (c) ELLs, (d) parents, and (e) external influences on teacher decision-making. This course is recommended for students who want advanced, practical teaching experiences with ELLs beyond the TSL 6940 TESOL practicum. Department permission is required to take this class.

TTE6272 - Intelligent Transportation Systems

General
Course Description
Description: This course is intended to increase student's understanding of the application of advanced computer and communications technologies (Intelligent Transportation Engineering - ITS) to address improvements in transportation and in the areas of safety, productivity, and general mobility. The student will learn the application of these technologies in the multimodal surface transportation infrastructure of highways and streets, as well as passenger cars, trucks, and trains.

TTE6315 - Highway Safety Analysis

General
Course Description
Description: This course provides a detailed coverage of safety analysis using methodologies of the Highway Safety Manual developed by the American Association of State Highway and Transportation Officials (AASHTO). Topics covers include; crash modification factors, safety performance functions, principles and techniques used in identification and evaluation of high crash locations, and corrective measures to enhance highway safety.

TTE6607 - Transportation Demand Analysis

General

Course Description
This course presents the core topics in travel demand modeling with a focus on aggregate four-step models. It provides information about travelers' decision behavior in the context of daily travel choices in transportation networks. It also covers discussions on the impact of some of the current transportation planning policies.

WOH1012 - (GW) World History I

General
Course Description
This course will provide a survey of world history from earliest human prehistory to the later middle ages. It will introduce students to the major civilizations and societies of Europe, Asia, Africa and the Americas. It will trace key developments in political organization, religion, culture and society in the different regions of the world, and will compare those developments in order to provide insight into the fundamental dynamics of human history. The course will also explore the interactions between the different regions, in order to assess the role of intercultural contacts in promoting change in human societies. Gordon Rule additional writing credit.

ZOO3713C - Comparative Vertebrate Anatomy

General
Course Description
Prerequisites: BSC 1010C, BSC 1011C, and BSC 2012C. This course will compare the evolutionary morphology of the Chordata. The lecture will be supplemented with the laboratory dissection of representatives including the shark, mudpuppy, and cat. Three hours lecture, four hours laboratory. (A laboratory fee of $51.93 will be assessed.)

ZOO3733C - Human Structure and Function

General
Course Description
Prerequisite: BSC 2012C
Description: A systematic approach will be used to study the structural and functional anatomy of the human body. Tissues, organs, and internal processes of systems (i.e. circulatory, excretory, and reproductive) will be examined in a three hour lecture. Normal and abnormal functioning of body processes and associated disorders and diseases will be discussed. Case studies will provide opportunity for integration of studied material. A corresponding four hour laboratory will accompany the lecture to provide visual anatomical identification, including dissections and microscopic slides. This course includes dissection of preserved animals. NOTE: Students who have completed BSC2085C and BSC 2086C may not complete this course for upper-level credit towards a B.S. in Biology or B.S. in Biomedical Sciences degree.
Course Fees: A laboratory fee of $51.93 will be assessed

ZOO4454C - Ichthyology

General
Course Description
Prerequisites: BSC 1011C, BSC 2012C
Ichthyology is the study of fishes. Topics covered during this course include anatomy, physiology, taxonomic diversity, life history, and ecology of fishes. Different techniques for the study of fishes will be introduced during the laboratory. The laboratory involves experimentation with living animals and/or dissection of preserved animals. (A laboratory fee of $51.93 will be assessed.)

ZOO4485 - Biology of Marine Mammals

General

Course Description
Prerequisites: BSC 2012C and PCB 3043C
This course focuses on the biology and ecology of marine mammals, with an emphasis on understanding how marine mammals are adapted to their environment. Selected topics would include taxonomy, zoogeography, anatomy, physiology, behavior, conservation and management of marine mammals.

ZOO4513 - Animal Behavior

General

Course Description
Prerequisite: BSC 2012C
Description: This course emphasizes understanding animal behavior from an evolutionary and ecological perspective. Using a comparative approach, we will explore the basic questions of how and why animals behave in certain ways to survive, obtain resources and reproduce. Case studies, from both field and laboratory research, will be integrated throughout this course and examples will be drawn from a variety of animal groups to illustrate major concepts. Through this course learners will develop the conceptual framework to understand and appreciate the diversity and complexity of animal behavior.

ZOO4513L - Animal Behavior Laboratory

General

Course Description
Prerequisite: BSC 2012CCo-requisite: ZOO 4513Description: his inquiry-based laboratory course in animal behavior will build upon the complementary lecture course. Laboratory sessions will incorporate two main components. First, skill development will be achieved through pre-designed exercises in both lab and field settings. Second, the primary component of the course will be the design and implementation of a semester-long original research project. Throughout the course, students will work collaboratively in small groups to design and implement an original observational research study on an animal and question of their choice. This research project will enable students to actively apply the scientific method from hypothesis generation through data interpretation and communication of findings.

ZOO4551C - Dolphin Behavioral Ecology

General

Course Description
Prerequisite: BSC 2012CDescription: This course is a combined field- and seminar-based course that focuses on the behavior and ecology of dolphins. In addition to participating in a weekly series of seminars (lectures), students will receive hands-on experience performing boat-based field research via weekly participation in the UNF Dolphin Biology Program, which is focused on estuarine dolphins in northeast Florida waters.

ZOO5206C - Advanced Entomology

General

Course Description
Description: Insects represent one of the most diverse groups of organisms on the planet. In this course we will investigate the evolution, taxonomy, anatomy, physiology and ecology of the major evolutionary branches of the insects. We will consider the interactions between insects and other groups of organisms with a special emphasis on their relationship to humans. This course has a required lab component where students create an insect collection from the wild. This process includes collecting, killing and preserving insects.

ZOO5463C - Advanced Herpetology

General
Course Description
Prerequisites: BSC 2020C, ZOO 3713C or permission of the instructor.
In this course we will study the biology of two vertebrate classes, the Amphibia and Reptilia. We will consider some critical evolutionary adaptations emphasizing anatomy and physiology of each of these groups, and then survey important members of various families. The first half of the course is devoted to amphibians, and the second half to reptiles. Students will read about a topic, plan a study, collect data, and write a term paper in the field of Herpetology. This course includes dissection and experimentation on live and/or preserved animals.
(A laboratory fee of $51.93 will be assessed.)

ZOO5754L - Advanced Histological Techniques Lab

General

Course Description
Co-requisite: ZOO 5754
Description: This course focuses on the structure and function of cells comprising healthy tissues and organs. Lecture topics will be integrated into the laboratory through histological diagnostics at the light microscope-level. Students will analyze prepared microscope slides of tissues and organs. The laboratory also involves resection of murine tissues, comparative processing and preparation of microscope slides, immunohistochemistry, epifluorescent microscopy and digital photography and processing of final images. Graduate standing and instructor permission required.
