Study of dance as one of the first art forms, from the primitive to its present state. Dance will also be studied sociologically as well as historically. Students will be exposed to the development of dance through history as it has been influenced by various economic and political forces. Students will be provided with information concerning outstanding contributions to dance and its authorities in the 20th century. Hopefully, the student will develop an appreciation of dance in contemporary society.

DANC1100 - Ballet I - 1 - Credits

Course Overview

Course Prefix
DANC

Course Number
1100

Department
Theatre Arts

Course Title
Ballet I

Grade Mode
Standard Letter

Repeat Status
RP

Course Description
Basic ballet course for men and women to condition the body, develop an appreciation for ballet through its specific exercise forms and acquire the basic skill of ballet technique. Class is open to anyone. A text is used and grading is done by two written tests, attendance, and a performance final. The Frenc-Bouronville as well as the Russian techniques are taught. Video is used to expose students to the professional performance as well as dance history. Students also begin learning the importance of understanding anatomy, exercise physiology, kinesiology, music theory, theater practices and techniques, and physics as it relates to ballet and dance in general.

Course Overview

Course Prefix
DANC

Course Number
1200

Department
Theatre Arts

Course Title
Modern Dance I

Grade Mode
Standard Letter

Repeat Status
RP

Course Description
Designed for the dancer who has not been exposed to basic modern dance techniques. Class is open to anyone. Goal is to communicate through movement. Many different modern dance styles will be explored including Graham, Denis/ Shawn and Cunningham. Video will be used as well as a text. Movement experiences will range from the classroom situation to large open space activities including out of doors. Students will learn to analyze others' movement patterns and how people communicate through movement. This is an important aspect in dance therapy. Music, as well as music theory, will be explored. Grading will be on movement projects, tests, and a final movement project.

Course Overview

Course Prefix
DANC

Course Number
1210

Department
Theatre Arts

Course Title
Ballet II

Grade Mode
Standard Letter

Repeat Status
RP

Course Description
Continuation of basic ballet technique for men and women who wish to become more proficient in the art and form of classical ballet. A text is used and grading is done based on attendance, two written examinations and a performance final. There is a continuation of the French/Bourenville as well as Russian techniques. Video is used for exposure to dance performance as well as technique. Dance history and ballet tradition is continued. Students continue the study of anatomy exercise physiology, kinesiology, music, theater and performance techniques as well as physics. Based on proficiency, some of these student may become eligible to audition for Ballet Repertory Ensemble, DE 2310.

Course Overview

Course Prefix
DANC

Course Number
1220

Department
Theatre Arts

Course Title
Beginning Pointe

Grade Mode
Standard Letter

Repeat Status
RP

Course Description
Designed for female ballet students with at least 2 years of Ballet training and who are observed to be ready for pointe work. Students must be physiologically mature and have the proper alignment and strength to dance on Pointe. A text is used and at least two written examinations are given plus a performance final. Each student progresses at her own rate and is graded accordingly as all are different. The rule of thumb is a child should be at least 11-12 before Pointe is allowed.

Course Overview

Course Prefix
DANC

Course Number
1240

Department
Theatre Arts

Course Title
Musical Theatre Movement

Grade Mode
Standard Letter

Repeat Status
RP

Course Description
Involves a study of the fundamental types of movement used in the theater including mime, improvisation and basic musical theater dance forms. Class is open to any student that has had some experience or training in ballet, modern, or jazz dance and is interested in musical theater. Class is performance based. Students learn aspects of movement on stage in the areas of dance for musical theater and are also exposed to mime and other non-verbal forms of communication. Final project involves each student choreographing a 1 to 1.5 minute piece that would fit a period and style of a broadway show. Students are also required to research, use video and critique a broadway show.

Course Learning Objectives

Course Learning Outcomes

Students successfully completing this course will be able to:

1. Define and identify the main characteristics of relational databases
2. Determine appropriate relationships among entities and attributes
3. Create logical database designs using entity relationship diagrams
4. Evaluate entities against Normal Forms 1 – BCNF
5. Implement a physical design of the database using SQL Server
6. Write SQL queries including select, subqueries, joins aggregate functions, group by, order by, insert, update, delete, truncate, views, random numbers, case expressions, UNION, UNION ALL, statistics, date functions, and injection attacks

7. Write SQL queries using Google Sheets (Google QL)
8. Learn about data cleaning, temp tables, and data wrangling

Course Description
Computational finance is an interdisciplinary pillar of modern FinTech, at the intersection of data science, computer science, and economics. In this course students apply tools from computational science and statistics to identify and exploit arbitrage opportunities for entrepreneurial financial innovation. Additional coursework is required for those enrolled in the graduate-level course.

DMV1050 - Application and Ethics of Visualization - 2 - Credits

Course Overview

Course Prefix
DMV

Course Number
1050

Department
Landscape Architecture & Environmental Planning

Course Title
Application and Ethics of Visualization

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course introduces the theories, practices, and application of visualizations and the relevant ethical considerations of their use. This knowledge will be the foundation for future visualization efforts and increase technical capacity in the use of visualization.

No Requirements

Course Learning Objectives

Course Learning Outcomes
1. In this course, students will acquire knowledge and skills that can be applied during their academic and professional careers.
2. This course will help students understand the history of visualization and what constitutes the modern practice of visualization. Students will learn about the use of visualization in a variety of different industries and how visualization is being used to shape our world, both physically and digitally. We will examine important technological advancements in the field and discuss the future outlook of digital visualization.
3. In this course students will learn about the ethical considerations involved in the visualization process. Visualization is meant to be a representation tool used to depict a built environment before it is built, however there can often be pressure to misrepresent a project through a visualization in order to secure funding or suggest outcomes inconsistent with the project. Understanding the ethical

implications of the use of visualization is critical to maintaining transparency and integrity in the process.
4. As part of this course students will analyze different approaches to visualization and the techniques used. As part of this, students will learn to weigh the implications of different methods and consider the suitability of each depending on multiple factors.

DMV3100 - Unreal Engine 1 - 4 - Credits

Course Overview

Course Prefix
DMV

Course Number
3100

Department
Landscape Architecture & Environmental Planning

Course Title
Unreal Engine 1

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This studio course is focused on the use of Unreal Engine to create visualizations. Developed to support the video game industry, Unreal Engine is increasingly being used in design and visualization to create realistic representations of proposed architecture and landscapes.

Course Learning Objectives

Course Learning Outcomes

1. Students will acquire knowledge and skills that can be applied during an academic and professional career.
2. This course will introduce students to the use of Unreal engine as a design and modeling tool. Video game engines are an increasingly important visualization tool and understanding how to appropriately use it in the design process will be critical for digital modelers.
3. The goal of this course is to help students prepare for a future career. The use of video engine is becoming increasingly prevalent amongst design firms that work in the built environment and so it is critical that students master this tool. Developing both a video game engine skill set and portfolio of projects built using a video game engine will make you more attractive to future employers.
4. As a result of taking this course students will have a better ability to design and express your ideas through the use of a video engine.

DSAI2275 - Linear Algebra for Data Science - 4 - Credits

Course Overview

Course Prefix
DSAI

Course Number
2275

Department
Mathematics & Statistics

Course Title
Linear Algebra for Data Science

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course introduces linear algebra topics including matrix operations, vector spaces, norms, inner products, projections, eigendecomposition, and the singular value decomposition with a focus on applications in data science and machine learning.

Other Enrollment Recommendations
Some experience in programming, preferably Python, is required for success in this course

Simple Requisites

Prerequisite

Type
Prerequisite

Required

Earn a minimum grade of C- in the following:
- MATH1210 - Calculus I (QL)

Prerequisite fulfilled by Exam

AP Exam Options
- AP Calculus BC exam score of 3 or higher
- AP Calculus AB exam score of 4 or higher

Course Learning Objectives

Course Learning Outcomes
1. Gain familiarity with important concepts in linear algebra including matrices and analytic geometry, as well as their applications in fields such as machine learning and data science.

2. Understand how to use modern computing software to solve linear systems and construct models that rely on those systems.

DSAI5060 - Python for Data Science - 3 - Credits

Required

Complete ALL of the following Courses:
- MATH1220 - Calculus II (QL)
- MATH5710 - Introduction to Probability
  OR STAT3000 - Statistics for Scientists (QI)

(MATH 5710 preferred)

Required

Complete one of the following option. Option 3 is preferred.

Fulfill ANY of the following requirements:

Option 1

Complete ALL of the following Courses:

- MATH2210 - Multivariable Calculus (QI)
  AND MATH2270 - Linear Algebra (QI)

OR

Option 2

Complete ALL of the following Courses:

- MATH2210 - Multivariable Calculus (QI)
  AND DSAI2275 - Linear Algebra for Data Science

OR

Option 3

Complete ANY of the following Courses:

- MATH5645 - Mathematical Methods for Data Science
  OR STAT5645 - Mathematical Methods for Data Science

(Preferred option)

Course Learning Objectives

Course Learning Outcomes

1. Gain knowledge of and familiarity with selected classical and advanced machine learning techniques and principles that will be useful in both the university and industry settings.
2. Learn to apply the selected techniques to solve problems with real data.
3. Learn selected general principles (e.g. optimization, the kernel trick) for understanding machine learning methods not covered in the course.

Course Overview

Course Prefix
ECE

Course Number
1410

Department
Electrical & Computer Engineering

Course Title
Computer Programming for Electrical and Computer Engineers II

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course is a continued introduction to computer programming from an engineering perspective. Concepts of Object Oriented programming and basic data structures are covered. Students learn to develop concise, well-documented, well-designed, maintainable code in the C and C++ programming languages.

Prerequisite

Required

Earn a minimum grade of C- in the following:

- ECE1410 - Computer Programming for Electrical and Computer Engineers II

Course Learning Objectives

Course Learning Outcomes

1. Analyze a complex computing problem using data structures and to apply principles of computing and other relevant disciplines to identify solutions.

2. Evaluate strategies for the design and evaluation of algorithms, including recursion, sorting algorithms, graphs, trees, binary search trees, hash tables, priority queues, splay trees, merging priority queues, and disjoint set classes.
3. Describe dynamic programming and greedy algorithms.
4. Design, implement, and evaluate a computing-based solution to meet a given set of computing requirements.
5. Apply theory and software development fundamentals to produce computing-based solutions

ECE2700 - Digital Circuits - 4 - Credits

Course Overview

Course Prefix
ECE

Course Number
2700

Department
Electrical & Computer Engineering

Course Title
Digital Circuits

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course introduces boolean logic, finite state machines, basic datapath components, register-transfer level (RTL) design, simulations, and timing analysis. It covers design of combinational and sequential logic circuits and digital systems using programmable logic devices. It includes lectures and labs.

  OR CS1410 - Introduction to Computer Science--CS 2 (QI)

Course Learning Objectives

Course Learning Outcomes

Students will be able to:

1. Explain key machine learning paradigms and problem formulations.
2. Implement supervised and unsupervised learning algorithms.
3. Analyze bias, variance, and generalization tradeoffs.
4. Apply optimization methods for model training.
5. Evaluate model performance using appropriate metrics.

ECE3610 - Continuous and Discrete-Time Systems and Signals - 4 - Credits

Course Overview

Course Prefix
ECE

Course Number
3610

Department
Electrical & Computer Engineering

Course Title

Continuous and Discrete-Time Systems and Signals

Grade Mode
Standard Letter

Repeat Status
NR

Course Description

Students learn analysis of continuous and discrete systems, including impulse response, convolution, and sampling. They study z-transform analysis of discrete systems and signals. They also study frequency domain analysis and response using Fourier transform methods, and filter design.

  OR ENGR2210 - Fundamental Electronics for Engineers

Required

Complete ANY of the following Courses:

- MATH2250 - Linear Algebra and Differential Equations (QI)
  OR MATH2280 - Ordinary Differential Equations (QI)

Course Learning Objectives

Course Learning Outcomes

1. Demonstrate understanding of system concepts such as linearity, time-invariance, stability, etc.

2. Demonstrate understanding of basic signals used for analysis such as unit impulse, unit step, complex exponential, etc.

3. Be able to determine system response using convolution in both continuous and discrete time.

4. Be able to explain the relationship between continuous-time signals and sampled discrete-time signals in the time and frequency domains.

5. Understand the concept of a frequency domain representation of a signal and basic concepts of bandwidth.

6. Demonstrate understanding of properties of Laplace and Z-transforms and their use in solving systems problems and analyzing signals.

7. Demonstrate ability to synthesize systems from transfer functions using basic op amp building blocks or difference equations.

8. Demonstrate understanding of transfer functions, including frequency response and effect of pole/zero placement.

9. Design and apply filters to continuous and discrete-time signals.

ECE3620 - Continuous - Time Systems and Signals - 3 - Credits

Course Overview

Course Prefix
ECE

Course Number
3620

Department
Electrical & Computer Engineering

Course Title
Continuous - Time Systems and Signals

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students learn time domain analysis of higher-order systems, including impulse response and convolution, and Laplace transform analysis of circuits and systems. They study frequency domain analysis, discrete Fourier series, Fourier transforms, and analog filter design. Some computer programming is required.

  OR ECE1410 - Computer Programming for Electrical and Computer Engineers II

Course Learning Objectives

Course Learning Outcomes

Students will be able to:

1. Apply Bayesian reasoning to model uncertainty and belief updating.
2. Construct probabilistic models using prior, likelihood, and posterior distributions.
3. Implement MCMC algorithms such as Metropolis–Hastings and Gibbs sampling.
4. Diagnose convergence and sampling quality in probabilistic inference.
5. Interpret probabilistic results for decision making and modeling.

Electrical & Computer Engineering

Dual-Listed Courses
ECE6120 - Introduction to Power Electronics

Course Title
Introduction to Power Electronics

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students study power electronics including steady-state modeling, conduction and switching losses, semiconductor power switches, converter transfer functions, topologies and dynamics, negative feedback, closed-loop transfer functions, controller stability and phase margin, regulator design, and basic magnetics theory and inductor design procedures.

- ECE3870 - Electromagnetics I

Course Learning Objectives

Course Learning Outcomes

1. Gain the ability to operate many optical instruments and perform optical alignment.
2. Be able to characterize the transmission and reflection of waveguides that range from metallic microwave waveguides on a chip to dielectric optical waveguides on a chip.
3. Gain an understanding basic wave optics, including polarization, interference, resonance, and coupling.
4. Be able to characterize photon sources, photon detectors, and the quantum states of entangled photons.

ECE5310 - Control Systems - 4 - Credits

Course Overview

Course Prefix
ECE

Course Number
5310

Department
Electrical & Computer Engineering

Course Title
Control Systems

Grade Mode
Standard Letter

Repeat Status
NR

Course Description

Students learn mathematical modeling of systems, including transfer function and state space representations. They study transient and steady-state responses, feedback and stability theory, and analysis and design methods of feedback controllers for single-input single output linear systems. Laboratory work required.

Course Learning Objectives

Course Learning Outcomes
Students will be able to:

1. Design AI system architectures under real-world constraints.
2. Apply optimization techniques such as quantization and distillation.
3. Implement retrieval-augmented AI systems.
4. Evaluate architectural tradeoffs and failures.

ECE5600 - Introduction to Computer Networks - 3 - Credits

Course Overview

Course Prefix
ECE

Course Number
5600

Department
Electrical & Computer Engineering

Course Title
Introduction to Computer Networks

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course includes an introduction to computer network terminology, network applications, network technologies, and internetworking. Students are introduced to protocol stacks and each layer is studied. Particular attention is paid to the TCP/IP protocol stack.

Electrical & Computer Engineering

Dual-Listed Courses
ECE6730 - Reconfigurable Computing

Course Title
Reconfigurable Computing

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This is a course in digital design using Field-Programmable Gate Arrays (FPGAs) and it provides an introduction to VHDL. Students explore FPGAs, design tools, advanced state machines, data management, I/O interfaces, and FPGA design practices. A practical design project is included. Additional coursework is required for those enrolled in the graduate-level course.

Dual-Listed Courses
ECE6795 - Reasoning About Computing Systems: Foundations

Course Title
Reasoning About Computing Systems: Foundations

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students learn to formally reason about computing systems, including first-order logic, deductive verification, and inductive proofs. Using the verification-aware language, Dafny, students formally reason about sequential programs, concurrency, and hardware design. Additional coursework is required for those enrolled in the graduate-level course.

Complete ALL of the following Courses:

- MATH3310 - Discrete Mathematics
- ECE2420 - Algorithms and Data Structures
  OR CS2420 - Algorithms and Data Structures--CS 3 (QI)

Course Learning Objectives

Course Learning Outcomes
Students will be able to:

1. Apply formal logic to specify program/computer hardware behavior: Students will use first-order logic to write precise specifications for programs, including preconditions, postconditions, and invariants.
2. Construct formal correctness proofs: Students will develop deductive proofs to verify that sequential programs, concurrent systems, and hardware designs meet their specifications.
3. Design and verify loop invariants: Students will identify appropriate loop invariants and prove program correctness using inductive reasoning techniques.
4. Reason about concurrent systems: Students will formally analyze programs with shared state and concurrency, identifying and preventing race conditions and ensuring thread safety.
5. Use verification tools effectively: Students will employ Dafny to mechanically verify program correctness and interpret verification feedback to debug both code and specifications.

Course Learning Objectives

Course Learning Outcomes

1. Students will have a basic understanding of the space environment and its effects on space systems.

2. Students will understand the time and coordinate systems used in space systems engineering.

3. Students will gain a working knowledge of orbital mechanics through orbital simulation software and will be able to design orbits for various Earth orbiting satellite missions and extract information needed in the design of spacecraft systems.

4. Students will have a conceptual understanding of spacecraft propulsion, launch systems, attitude determination & control systems and thermal control systems.

5. Students will have a conceptual understanding and can formulate a conceptual design for a spacecraft solar battery power system.

6. Students will have an understanding and can formulate a conceptual design for a spacecraft communication, telemetry and command and data handling systems.

7. Students will be able to develop reasonable systems engineering trades based on a broad understanding of the various systems that compromise a spacecraft and how they relate to the spacecraft's mission.

8. Students will become proficient in the use of Excel spreadsheets as a tool for conceptual system design.

9. Students will have an advanced knowledge of orbital simulation software and system modeling software.

10. Students will become familiar with the historical application of space systems engineering for several major mission.

ECE6235 - Space System Design - 3 - Credits

- ECE5230 - Spacecraft Systems Engineering
- ECE6230 - Spacecraft Systems Engineering
- MAE5520 - Elements of Space Flight

Course Learning Objectives

Course Learning Outcomes

1. An understanding of the NASA systems engineering process for space mission formulation from concept to end of life including requirements definition, decomposition, and verification strategy.

2. Understand the need for developing mission and system architecture options and conducting trade studies to support engineering decisions.

3. Produce a conceptual spacecraft design demonstrating mass, power, data, orbit, and environmental feasibility.

4. Integrate subsystem analyses into a unified system-level mission design.

5. Understand the NASA project life cycle and the role of structured technical reviews (e.g., SRR/SDR-level design reviews).

6. Understand professional documentation practices typical of NASA or DoD engineering environments.

7. Recognize the ethical, safety, export-control, and scientific-impact considerations associated with space missions.

8. Students will have an advance understanding of the NASA and the DOD engineering process.

9. Students will understand the complexity of leading an multidiscipline team to conduct trade studies and reports of a space mission1. Students will have an advance understanding of the NASA and the DOD engineering process.

2. Analyze and Design

1. Operational amplifier circuits in open-loop and in feedback configuration.
2. Transistor-level amplifier circuits using MOSFETs.
3. Transistor-level CMOS logic circuits using static CMOS, transmission gates, and cross-

   bar topologies.
4. Transistor-level memory circuits including SRAM and DRAM cells, address decoders, sense-amplifiers, and read/write operations.

   3. Find, interpret, and contextualize research literature and news media on a chosen topic within microelectronics.

ECE6460 - VLSI Design Automation - 3 - Credits

Course Overview

Course Prefix
ECE

Course Number
6460

Department
Electrical & Computer Engineering

Dual-Listed Courses
ECE5460 - VLSI Design Automation

Course Title
VLSI Design Automation

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course includes an introduction to basic algorithms and methodologies for automating the design of modern VLSI circuits. The course emphasizes physical design problems and CAD design problems using simulated annealing, dynamic programming, and mathematical programming. Additional coursework may be required for graduate students.

Course Number
6480

Department
Electrical & Computer Engineering

Dual-Listed Courses
ECE5480 - VLSI Testing and Security

Course Title
VLSI Testing and Security

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students learn the theory and practice of testing VLSI systems. The topics cover fault modeling, fault simulation, test generation, secure hardware testing, scan design, and design for testability (DFT). Students get experience with commercial testing and DFT tools. Additional coursework is required for those enrolled in the graduate-level course.

Complete ALL of the following Courses:

- ECE3640 - Discrete - Time Systems and Signals

Course Learning Objectives

Course Learning Outcomes

1. Students will be able to explain the extension of 1D digital signal processing concepts such as systems and signals, transforms, sampling and reconstruction into two dimensions (images).

2. Students will be able to interpret the Discrete-time Fourier Transform (DTFT) and the Discrete Fourier Transform (DFT) and their uses in the analysis of discrete-time systems and signals.

3. Students will be able to design both FIR and IIR digital filters.

4. Students will be able to describe common Fast Fourier Transform (FFT) algorithms.

5. Students will be able to describe multi-rate processing concepts such as bandpass sampling, decimation and interpolation for sample rate conversion and oversampling converters.

6. Students will be able to describe image perception, including color perception.

7. Students will be able to implement image point-processing and spatial operation methods, including histogram modification/equalization and median filtering.

Complete ALL of the following Courses:

- ECE3640 - Discrete - Time Systems and Signals
- MATH5710 - Introduction to Probability

Course Learning Objectives

Course Learning Outcomes

1. Describe signal space representations and commonly used signal constellations.
2. Describe valuation of system performance (probability of error and bandwidth).
3. Describe phase tracking and phase-locked loops.
4. Describe symbol timing estimation and tracking.
5. Describe principles of Viterbi algorithms and channel equalization techniques.
6. Create implementation of the Viterbi algorithm and its application to convolutional decoding.
7. Create implementation of methods of channel equalization.

Dual-Listed Courses
ECE5795 - Reasoning About Computing Systems: Foundations

Course Title
Reasoning About Computing Systems: Foundations

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students learn to formally reason about computing systems, including first-order logic, deductive verification, and inductive proofs. Using the verification-aware language, Dafny, students formally reason about sequential programs, concurrency, and hardware design. Additional coursework is required for those enrolled in the graduate-level course.

Prerequisite

Required

Complete ALL of the following Courses:

- MATH3310 - Discrete Mathematics
- ECE2420 - Algorithms and Data Structures
  OR CS2420 - Algorithms and Data Structures--CS 3 (QI)

Course Learning Objectives

Course Learning Outcomes
Students will be able to:

1. Apply formal logic to specify program/computer hardware behavior: Students will use first-order logic to write precise specifications for programs, including preconditions, postconditions, and invariants.
2. Construct formal correctness proofs: Students will develop deductive proofs to verify that sequential programs, concurrent systems, and hardware designs meet their specifications.
3. Design and verify loop invariants: Students will identify appropriate loop invariants and prove program correctness using inductive reasoning techniques.
4. Reason about concurrent systems: Students will formally analyze programs with shared state and concurrency, identifying and preventing race conditions and ensuring thread safety.
5. Use verification tools effectively: Students will employ Dafny to mechanically verify program correctness and interpret verification feedback to debug both code and specifications.

Course Title
Optimal Control

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students learn advanced methods of control system analysis and design. These include operator approaches to optimal control, such as LQR, LQG, and L1 optimization techniques.

MAE7560 - Optimal Estimation for Aerospace Systems

Course Title
Optimal Estimation for Aerospace Systems

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course covers probability theory, stochastic system models, optimal estimation for linear systems, optimal smoothing, and optimal estimation for nonlinear systems. Applications of these concepts include orbit determination, real-time position, velocity, and attitude determination for rockets, aircraft, and spacecraft.

ECE7630 - Advanced Digital Signal and Image Processing - 3 - Credits

Course Overview

Course Prefix
ECE

Course Number
7630

Department
Electrical & Computer Engineering

Course Title
Advanced Digital Signal and Image Processing

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students learn advanced digital signal and image processing theory and methods. Topics are selected from optimal filter design, adaptive filtering, spectral estimation, beamforming, tomography, data compression, restoration/ superresolution, machine vision, etc.

Course Overview

Course Prefix
ECE

Course Number
7750

Department
Electrical & Computer Engineering

Cross-Listed Courses
MAE7750 - Distributed Control

Course Title
Distributed Control

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students learn analysis and synthesis of distributed controllers for multi-agent systems with different levels of complexity and objectives. Topics include graph theory, output regulation, and synchronization problems spanning consensus/ formation of single integrators to cooperative output regulation of uncertain dynamics.

Simple Requisites

Prerequisite

Type
Prerequisite

Required

Complete ALL of the following Courses:

- ECE6320 - Linear Multivariable Control
  OR MAE6320 - Linear Multivariable Control

Course Learning Objectives

Course Learning Outcomes
1. Students shall understand the classification of multi-agent systems and control schemes, the fundamentals of graph theory, how to model information exchange between agents by undirected and directed graphs, and the relationship between the algebraic connectivity of graphs and consensus-like global objectives of single integrator agents and the convergence rate.
2. Students should be able to conduct mathematical analysis for consensus, forced consensus, and formation with single integrator agents and demonstrate the theory with simulations. They shall develop the ability to analyze the stabilizability and detectability of the networked systems and to apply graph theory, linear systems theory, linear algebra, LQR, and the Kronecker product to the analysis and synthesis of distributed controllers enabling the synchronization of networks of high-order LTI systems.
3. Students shall understand the (robust) linear output regulation theory, including the Sylvester and regulator equations, the solvability of the output regulation problems, and the feedforward and p-copy internal model approaches for state and output feedback controllers. They shall develop the skills to recognize, formulate, and solve output regulation problems by feedforward and internal model approach-based controllers. In the simulations, they should be able to tune the control parameters by utilizing modern control techniques, such as eigenvalue assignment and LQR, to meet the given performance requirements of the physical systems.
4. Students shall understand the cooperative output regulation of heterogeneous multi-agent systems. They shall develop the ability to apply graph theory and linear output regulation theory to the analysis and synthesis of distributed controllers
5. Students shall develop the skills to conduct rigorous mathematical analysis for given linear systems, distributed control laws, and the problem. They shall develop the background needed to study, understand, and evaluate recent research articles in distributed control.

ECE7860 - Computational Electromagnetics A - 3 - Credits

Course Overview

Course Prefix
ECE

Course Number
7860

Department
Electrical & Computer Engineering

Course Title
Computational Electromagnetics A

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
In this course, students learn the Finite Difference Time Domain (FDTD) and Finite Element Method (FEM) approaches for solving electromagnetics problems, including waveguides, scattering problems, and electromagnetic wave propagation in different media.

Earn a minimum grade of C- in the following:

- MATH1050 - College Algebra (QL)

OR

ACT Math of 25 (or equivalent SAT Math score) or AP Calc AB score of 3 or better

Course Learning Objectives

Course Learning Outcomes

Course Learning Outcomes:
1. Introduce students to mathematical and statistical methods used in microeconomics and macroeconomics.
2. Help students develop intuition with regard to quantitative aspects of economics.
3. Prepare students for upper-division courses with quantitative components.
4. Mathematical topics include: functions and graphs, limits, continuity, derivatives, techniques of differentiation, applied problems in business and economics, exponential and logarithmic functions, functions of two variables, partial derivatives, and applications.
5. Statistical topics include: hypothesis tests on economic issues such as stochastic variables, probability theory, discrete and continuous probability distributions, expected values, random samples, sampling distributions, point estimates, confidence intervals, and hypothesis testing.

Course Description
Provides a rigorous introduction to graduate-level microeconomic theory. While the specific focus is on the theoretical construct of graduate-level microeconomic models, the broad objective of the class is to lay the foundation for empirical applications in microeconomics. To meet this broad objective, the course covers theory of the firm, consumer theory, market structure, theory of public goods and externalities, and welfare economics. A.

NR

Course Description
Lays a foundation of advanced macroeconomic analysis, integrating theory, data, and computational methods. Special attention given to real-world issues, with an emphasis on how economists use macro models and data to improve business and public policy decisions. Topics covered include neoclassical and endogenous growth theories, real business cycle and new Keynesian theories of economic fluctuations, monetary theory, macroeconomic policy, and open-economy macroeconomics.

Course Overview

Course Prefix
ECON

Course Number
7240

Department
Economics and Finance

Course Title
Macroeconomic Theory II

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Extends the foundations of ECN 7230 with a more in-depth look at the theory and computational aspects of various models of economic growth and business cycles.

Course Overview

Course Prefix
EDDT

Course Number
1010

Department
Technology, Design & Technical Ed

Course Title
Technical Drafting

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Introductory mechanical drafting course emphasizing industry fundamentals. Students learn drafting instruments, lettering, geometric construction, orthographic, sectional, and auxiliary views, dimensioning standards, geometric dimensioning, developments, threads, and fasteners, applying skills to create accurate working and assembly drawings for industrial use.

NR

Course Description
Applied introduction to quantitative and qualitative research methodologies and designs used in educational, social and health sciences. Coverage of research ethics, literature searches and critiques, components of research studies, reliability and validity, APA format, and communication of research results.

Course Title
Applied Statistical Analysis

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Applied introduction to statistical methods commonly used in educational, social, and health sciences. Coverage of data types, data base creation, data exploration and visualization; use of statistical software to compute descriptive and inferential statistics, including correlation, regression, group comparisons (t-tests, ANOVA), and categorical methods.

Simple Requisites

Prerequisite

Type
Prerequisite

Required

Fulfill ALL of the following requirements:

Required

Complete the following pre-test:

A pretest score of 70% or higher is required. Please visit https://cehs.usu.edu/research/courses/educ-psy-6600 to complete the pretest for EDUC6600 STATISTICAL FOUNDATIONS.

AND

Required

Any of these courses can also be taken concurrently with EDUC6600 STATISTICAL FOUNDATIONS.

Complete at least 1 of the following courses:

- EDUC6040 - Applied Research Methods
- EDUC6570 - Introduction to Educational and Psychological Research
- HDFS6031 - Research Methodology
- HDFS6380 - Applying Scholarly Research and Systemic Family Treatment
- ITLS7015 - Introduction to Theories and Methods of Instructional Technology and Learning Sciences II
- KIN6810 - Research Methods in Kinesiology
- LING6010 - Research in Second Language Learning
- PSY6560 - Introduction to Educational and Psychological Research
- SPED6700 - Introduction to Behavioral Research in Education
- SHS6230 - Introduction to Research in Communicative Disorders

EDUC6770 - Qualitative Research Methods - 3 - Credits

Course Overview

Course Prefix
EDUC

Course Number
6770

Department
College of Education and Human Services

Course Title
Qualitative Research Methods

Grade Mode
Standard Letter

Repeat Status
NR

Course Description

This is an introduction to qualitative research including foundations, research designs and strategies of inquiry (case studies, ethnography, phenomenology, grounded theory, biographical, historical, participative inquiry), sampling, fieldwork and data collection, and analysis.

Course Learning Objectives

Course Learning Outcomes

1. Understanding disciplinary expectations in academic writing.
2. Understanding the importance of developing a scholarly voice.
3. Applying fundamental elements of grammar and style.
4. Managing the writing process including planning, drafting, revising, and editing.
5. Understanding the peer editing process by applying instructor and peer feedback.
6. Reading and understanding scholarly literature.
7. Demonstrating skills in synthesizing, summarizing, paraphrasing, and critiquing scholarly sources.
8. Framing an argument/discussion.
9. Examining ethical considerations in academic writing.

Course Number
3050

Department
School of Teacher Education & Leadership

Course Title
PE and Health in the Elementary Classroom

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course develops the knowledge, skills, and dispositions necessary to teach healthy lifestyles and physical education to elementary-aged children. This course enables prospective teachers to plan, implement, and evaluate lessons for elementary students.

Credit Hours

Credit Hours Min:

Admission to Elementary Education or Early Childhood Education program.

Course Learning Objectives

Course Learning Outcomes

Course Learning Outcomes:

1. Students demonstrate an understanding of common and specialized content, and scientific and theoretical foundations for the delivery of an effective elementary physical education program and an effective health education program.

2. Students understand physical literacy and provide demonstrations of skillful performance in physical education content areas and health-enhancing levels of fitness, including nutrition and hydration.

3. Students apply content and foundational knowledge to plan and implement developmentally appropriate learning experiences aligned with local, state, and/or national standards (e.g., SHAPE America's National Standards) through the effective use of resources, accommodations and/or modifications, technology, and metacognitive strategies to address the diverse needs of all students.

4. Students demonstrate ways to engage elementary students in meaningful learning experiences through effective use of pedagogical skills, such as communication, feedback, technology, and instructional and managerial skills to enhance student learning. Students select and implement appropriate assessments to monitor students' progress and guide decision making related to instruction and learning.

5. Students demonstrate behaviors essential to becoming effective professionals. They exhibit professional ethics and culturally competent practices, seek opportunities for continued professional development, and demonstrate knowledge of promotion/advocacy strategies for physical education and expanded physical activity opportunities that support the development of health literate and physically literate individuals.

ELED3100 - Classroom Reading Instruction - 3 - Credits

Course Overview

Course Prefix
ELED

Course Number
3100

Department
School of Teacher Education & Leadership

Course Title
Classroom Reading Instruction

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course introduces students to teaching and learning processes of reading instruction in elementary schools, emphasizing competencies for teaching phonological awareness, phonics, fluency, vocabulary, and comprehension while focusing on instructional techniques, methods, and materials for whole-class reading instruction.

- ELED4042 - Reading Assessment and Intervention Practicum

Course Learning Objectives

Course Learning Outcomes

1. Demonstrate knowledge of principles and evidence-based instructional practices for developing language and emergent literacy skills, including phonological and phonemic awareness, concepts of print, and the alphabetic principle.
2. Demonstrate knowledge of principles and evidence-based instructional practices for developing beginning reading skills, including phonics, high-frequency words, and spelling.
3. Demonstrate knowledge of principles and evidence-based instructional practices for developing word analysis skills and strategies, including syllabication, structural or morphemic analysis, and orthographic skills.
4. Demonstrate knowledge of principles and evidence-based instructional practices for developing reading fluency at all stages of reading development.
5. Demonstrate knowledge of principles and evidence-based instructional practices for promoting academic language development, including vocabulary development.
6. Demonstrate knowledge of principles and evidence-based instructional practices for promoting comprehension and analysis of literary texts.
7. Demonstrate knowledge of principles and evidence-based instructional practices for promoting comprehension and analysis of informational texts.
8. Apply knowledge of principles and evidence-based best practices for assessing reading development.
9. Apply knowledge of principles and evidence-based best practices of reading instruction.

ELED4061 - Teaching Elementary School Mathematics I: Rational Numbers, Operations, and Proportional Reasoning - 3 - Credits

Course Learning Objectives

Course Learning Outcomes
1. Demonstrate a working knowledge of safety practices and procedures.
2. Maintain, calibrate, and repair power transmission systems.
3. Maintain, calibrate, analyze, and repair mechanical drives (v-belt, chain, gear drive).
4. Use and apply vibration and alignment measurement instrumentation and techniques.
5. Use preventative maintenance tools and meters.
6. Troubleshoot mechanical drive components and systems.

Course Learning Objectives

Course Learning Outcomes

1. Identify and articulate durable skills developed through the English major, such as critical thinking, writing, research, communication, creativity, and cultural competency.
2. Connect coursework to a range of career pathways, recognizing how skills obtained through the English major apply across industries and professions.
3. Engage with faculty, advisors, and alumni to explore professional pathways, build academic networks, and plan for completion of the degree.
4. Discover and evaluate enrichment opportunities, including internships, study abroad programs, scholarships, research fellowships and grants, and opportunities to present and publish undergraduate research.
5. Reflect on personal academic goals and begin to craft a professional narrative that integrates English studies with future career goals.
6. Develop strategies for career readiness, including resume building, job searching, and marketing English major skills in job searches.

Course Learning Objectives

Course Learning Outcomes

Students taking Utah Stories will complete four interrelated units:

1. *Regional History and Context:* Focuses on settlement history, demographics, biodiversity, folklore and traditions, geography and ecology, recreation, and industry.
2. *Connections to Place:* Allows students to explore their personal and familial connections to place while examining the complex concepts of home, place, space, and migration.
3. *Contemporary Issues:* Students survey their communities/regions to identify relevant issues for further study. They conduct research and make connections between these issues and their gained knowledge of the history and life of their region.
4. *Community Conversation:* Students design a presentation targeting specific audiences—such as schools or businesses or peers—to share their knowledge with their wider community.

Course Learning Objectives

Course Learning Outcomes
1. Isolate and analyze literary elements particular to the genre(s) studied.
2. Identify and analyze the connections between the literary texts.
3. Articulate emotional/intellectual responses to works of literature in class discussions.
4. Understand and articulate the ways in which the texts are situated within cultural/historical context(s).
5. Demonstrate a critical understanding of and appreciation for literature by creating reasonable written interpretations supported by textual evidence.
6. Gaining a broader understanding and appreciation of intellectual/cultural activity (music, science, literature, etc.).
7. Developing skill in expressing myself orally and in writing.
8. Learning to analyze and critically evaluate ideas, arguments, and points of view.

ENGL3160 - AI and Writing Across Disciplines (CI) - 3 - Credits

Course Overview

Course Prefix
ENGL

Course Number
3160

Department
English

Course Title
AI and Writing Across Disciplines (CI)

General Education Attribute
CI

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course teaches students how generative artificial intelligence tools and systems are approached, utilized, and navigated in multiple disciplines. Students investigate AI ethics; how AI facilitates or complicates communication and research; and AI's complex relationship to real-world problems and solutions.

Simple Requisites

Prerequisite

Type
Prerequisite

Required

Complete ALL of the following Course Sets:

- Communications Literacy (CL2) Course

(may be fulfilled through coursework or examination)

Course Learning Objectives

Course Learning Outcomes
1. Develop an ability to write with purpose in consideration of various audiences and in accordance with genre and disciplinary conventions.

2. Develop oral communication with purpose in consideration of various audiences and in accordance with genre and disciplinary conventions.

3. Engage in the iterative process of improving communication based on feedback from an informed audience.

4. Identify critical issues involved in the use of Generative AI across contexts and navigate opposing viewpoints and synthesize different sources.

5. Apply concepts (e.g., algorithm accountability) to analyze social debates around Generative AI and writing.

6. Read academic publications that present a wide range of epistemological foundations and research methods.

7. Present your ideas through academic genres and publicly-engaging multimodal works, in which language is crafted intentionally to achieve the rhetorical purpose.

ENGL3170 - Legal Writing (CI) - 3 - Credits

Course Overview

Course Prefix
ENGL

Course Number
3170

Department
English

Course Title
Legal Writing (CI)

General Education Attribute
CI

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course introduces contexts, conventions, and ethical considerations of legal writing. Students research, analyze, and interpret common legal documents; write clearly, concisely, and effectively on legal issues; and utilize legal genres to inform, persuade, and advocate for multiple audiences.

Course Learning Objectives

Course Learning Outcomes

1. Thoughtfully discuss and respond to recent romance novels, both orally and in writing.
2. Evaluate and compare and contrast the use of different literary tropes in romance novels.
3. Evaluate the ways in which tropes create meaning.
4. Evaluate and compare the representation of themes in romance novels, including but not limited to:
   - Gender, sexuality, and desire
   - Race
   - Class
   - Embodiment
   - Affect and emotion

5. Write well-crafted, well-supported argumentative, literary analytical papers.
6. Craft arguments based on close reading as well as broader thematic analysis.
7. Give oral presentations on major tropes in the romance genre.
8. Develop a body of writing reflecting on romance novels and the questions they raise, and how these relate to their own lives.

ENGL3230 - Young Adult Literature (DHA) - 3 - Credits

Course Overview

Course Prefix
ENGL

Course Number
3230

Department
English

Course Title
Young Adult Literature (DHA)

General Education Attribute
DHA

Grade Mode
Standard Letter

Course Learning Objectives

Course Learning Outcomes
Writing & Reflection

1. Compose thoughtful literary analyses supported by textual evidence.
2. Reflect on personal experiences in relation to characters and themes in YA texts.
3. Develop clear, persuasive writing through essays, reading responses, and creative projects.

Genre Knowledge

1. Demonstrate familiarity with major classic and contemporary YA authors and works.
2. Understand the evolution of the YA genre and its role in shaping youth identity and culture.

Communication & Engagement

1. Participate in meaningful discussions about literature and its relevance to adolescent experiences.
2. Present ideas clearly in both written and verbal formats, using literary terminology effectively.
3. Collaborate with peers to explore diverse perspectives and interpretations of YA.

Cultural Awareness & Empathy

1. Explore diverse perspectives and experiences represented in YA literature, including race, gender, class, and sexuality.
2. Reflect on how literature can foster empathy and understanding across generational and cultural divides.

Interdisciplinary Thinking

1. Connect YA literature to broader disciplines such as history, psychology, sociology, and media studies.
2. Evaluate how literature reflects and influences youth identity, activism, and cultural expression over time.

ENGL3240 - Writing Family Stories (DHA) - 3 - Credits

Course Overview

Course Prefix
ENGL

Course Number
3240

Department
English

Course Title
Writing Family Stories (DHA)

General Education Attribute
DHA

Grade Mode
Standard Letter

Repeat Status
NR

Course Description

This course explores the family storytelling by studying written and oral examples and learning to write family stories in a range of forms. Students examine how family stories shape memory and identity and the cultural contexts that shape family experiences.

Course Learning Objectives

Course Learning Outcomes
1. Describe the different types of writing systems and where they are found in both ancient and modern times.

2. Identify different modern writing systems given samples of the script and basic transliterations.

3. Correlate non-linguistic technological and sociological developments with changes and developments in writing systems over time.

4. Articulate how language evolved and diversified in the human species and the role of agriculture in the origin of writing.

5. Demonstrate how modern technology has adapted to a wide range of writing systems through Unicode and Roman transliteration.

Course Learning Objectives

Course Learning Outcomes

1. Critically analyze key theories and research in second language and multilingual writing, with attention to historical developments, major debates, and current trends in the field.
2. Evaluate instructional approaches to teaching writing to second language/multilingual writers, considering sociocultural, linguistic, and institutional factors.
3. Design and adapt writing assignments, feedback practices, and assessment tools that are responsive to the needs and strengths of diverse multilingual learners.
4. Apply principles of multilingual writing research to examine issues such as language ideologies, identity, voice, and the role of digital and multimodal tools in writing instruction.
5. Reflect on their own positionality and experiences as writers, teachers, and/or researchers in relation to the multilingual writing contexts they study or teach in.

Course Overview

Course Prefix
ENGR

Course Number
1000

Department
College of Engineering

Course Title
Introduction to Engineering Design

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Introduction to engineering design, problem solving, and computer application skills. Orients students to college programs, academic advising, student services, professional societies, ethics, and engineering careers. A background in trigonometry is strongly recommended.

ENGR1005 - Introduction to Engineering Laboratory - 1 - Credits

Course Overview

Course Prefix
ENGR

Course Number
1005

Department
College of Engineering

Course Title
Introduction to Engineering Laboratory

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
For students concurrently enrolled in ENGR 1000. Laboratory builds skills in using the HP48G/GX calculator to solve engineering problems; the use of word processors for report writing; spreadsheets to solve engineering problems; MathCAD for engineering problem solving; an introduction to Pro Engineer for engineering design; an introduction to Access for data base management; and power point for engineering presentations. Mainly hands-on, team learning is emphasized as well as team writing and presentation skills. Students should gain an appreciation for the skills needed to solve engineering problems and prepare engineering communications.

ENGR1400 - Computer Programming for Engineers - 4 - Credits

Course Overview

Course Prefix
ENGR

Course Number
1400

Department
College of Engineering

Course Title
Computer Programming for Engineers

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course introduces fundamental computer programming and computational problem-solving for engineers using Python, MATLAB, Excel, and Arduino. Students explore programming logic, data analysis, and visualization through engineering applications, including an introduction to neural networks and machine learning.

Complete ALL of the following Courses:

- MATH1050 - College Algebra (QL)

May be taken concurrently

Course Learning Objectives

Course Learning Outcomes

1. Describe how computers operate and differentiate between compiled and interpreted programming languages.
2. Develop and debug Python programs that demonstrate the use of variables, control structures, functions, and data structures.
3. Apply Python libraries (e.g., NumPy, Matplotlib, SymPy) to analyze, compute, and visualize engineering data.
4. Construct MATLAB scripts to perform mathematical operations, analyze data, and generate plots for engineering applications.
5. Utilize Excel to organize, calculate, graph, and summarize data using formulas and pivot tables.
6. Implement Arduino-based experiments to interface sensors and collect data from real-world systems.
7. Test and document programs using integrated development environments (IDEs) and evaluate program functionality through debugging and code organization.
8. Explain the fundamental structure and purpose of neural networks and create a simple example using PyTorch.
9. Integrate multiple computational tools to model, analyze, and communicate solutions to introductory engineering problems.

ENGR1500 - Research Experience for Undergraduate Students - 1 - Credits

Course Overview

Course Prefix
ENGR

Course Number
1500

Department
College of Engineering

Course Title
Research Experience for Undergraduate Students

Grade Mode
Standard Letter

Repeat Status
RP

Course Description
Students work as undergraduate research assistants under a faculty mentor. Through the course, students will learn and apply data collection, analysis, synthesis, and presentation skills specific to the research project.

- Communications Literacy (CL1) Course

Course Learning Objectives

Course Learning Outcomes
Students will develop analytical, interpretive, and written/oral communication skills by:

1. Comparing technological advancements and failures across historical periods.
2. Using critical thinking skills to construct written and analytical arguments on the complex intersection of technology, ethics, and human behavior.
3. Examining questions and issues from cultural perspectives by analyzing in human interaction with complex systems.
4. Evaluating interpretations and arguments regarding the human relationship with technology and drawing conclusions from students' own experience and relationship.
5. Recognizing that technological failures are shaped by human decisions, values, and interpretations.
6. Understanding societal responsibility in supporting technologies that strengthen social connections, support human interaction, and build community.
7. Articulating positions on the societal balance of technological innovation and sustainability challenges.

Course Learning Objectives

Course Learning Outcomes
The goal of this course is to engage engineering students and provide an overview of concepts, tasks, and excitement of pursuing careers in innovation and/or startup ventures. Topics covered will include understanding and pursuing innovation startup culture, and commercialization challenges such as seeking capitol, business practices, and legal, intellectual, and financial issues. The course will be mostly taught through real world engineering problem identification and solution strategies. This course will also connect the customer's need for products or services with engineering problem solving. The expected outcome of this course will be to prepare tomorrow's graduates to pursue their own entrepreneurial interests or be involved in other similar opportunities.

ANTH3320 -
Archaeology of Climate Change (DSS)

Course Title
Archaeology of Climate Change (DSS)

General Education Attribute
DSS

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course explores human-environment relationships during the past 40,000-plus years, from small-scale societies to ancient civilizations. In this problem-oriented, topical course, emphasis is placed on small group projects, discussion, writing, and oral presentation.

ENVS3400 - Fundamentals of Tourism - 3 - Credits

Course Overview

Course Prefix
ENVS

Course Number
3400

Department
Environment & Society

Course Title
Fundamentals of Tourism

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Examines foundational concepts of the tourism and hospitality industry, emphasizing the significance, contexts, benefits, costs and other considerations related to tourism in Utah and the Intermountain West. Applies theory and research in planning, marketing, management, entrepreneurship and sustainable tourism development.

Course Learning Objectives

Course Learning Outcomes

1. Understand and communicate in writing fundamental wildlife ecology concepts, laws, and processes, particularly as related to how humans impact and are impacted by wildlife across different contexts.
2. Use an understanding of science as a process and of the fundamentals mentioned above to investigate wildlife ecology questions and interpret and evaluate information related to wildlife ecology issues.
3. Examine, reflect on, and develop informed perspectives about real-world wildlife issues using a social-ecological systems lens that considers ethical and historical factors, different voices, context-specific conditions, ecological consequences, and social constraints and controversies.
4. Propose viable strategies for coexisting sustainably with wildlife.

ENVS4000 - Human Dimensions of Natural Resource Management (DSS) - 3 - Credits

Course Learning Objectives

Course Learning Outcomes
1. Understand the human dimensions of natural resource management through application of social science concepts and methods and indigenous knowledge and contemporary news media.
2. Identify relevant groups, their alignment and misalignment around natural resource experiences and decisions, and best practices for facilitating collaboration and managing conflict.
3. Understand how values, attitudes, behaviors, and community dynamics relate to natural resources.
4. Synthesize information and summarize succinctly through written expression to clearly communicate ideas and their practical application.

5. Interpret basic qualitative and quantitative information related to the human dimensions of natural resources. 6. Understand social science research methods that can support managing natural resources.

ENVS4020 - Foundations of Environmental Thought (DHA/CI) - 3 - Credits

Course Overview

Course Prefix
ENVS

Course Number
4020

Department
Environment & Society

Course Title
Foundations of Environmental Thought (DHA/CI)

General Education Attribute
CI, DHA

Grade Mode
Standard Letter

Repeat Status
NR

Course Description

This course reviews the beginnings of environmental thought from Rousseau to Rachel Carson. It then examines the ways that environmental change happened in the past 8000 years and how these changes can help confront modern environmental change.

Required

Complete ALL of the following Courses:

- ENGL2010 - Research and Argument Across Perspectives (CL2)

Course Learning Objectives

Course Learning Outcomes

By the end of this course, students will be able to:

1. Analyze how historical, cultural, and ecological perspectives shape contemporary environmental challenges

2. Evaluate differing environmental worldviews—including scientific and ethical perspectives—to compare how societies understand and manage natural resources.
3. Apply ecological and systems-based frameworks (e.g., trophic dynamics, Lotka–Volterra models) to interpret human–environment interactions across space and through time.
4. Synthesize historical and scientific evidence to develop explanations for how past societies responded to environmental change and assess implications for modern environmental management.
5. Communicate environmental insights clearly and professionally through written, oral, and visual formats, culminating in a scientific poster that integrates course concepts to address a contemporary issue using lessons from the past.

ENVS4030 - Building Community Environmental Resilience - 3 - Credits

Course Overview

Course Prefix
ENVS

Course Number
4030

Department
Environment & Society

Course Title
Building Community Environmental Resilience

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course introduces students to principles and practices of resilience theories as applied to community and environmental systems. Students work with community partners to identify and design approaches for enhancing community resilience. Some travel within Utah is required. Additional coursework is required for those enrolled in the graduate-level course.

Complete ALL of the following Courses:

- ENGL2010 - Research and Argument Across Perspectives (CL2)
- ENVS3300 - Fundamentals of Natural Resource Recreation Management

Course Learning Objectives

Course Learning Outcomes

1. Analyze contemporary trends and emerging issues (e.g., climate change, equity, over-tourism) to determine their implications for recreation resource management.

2. Evaluate existing recreation management plans and strategies used by federal, state, and local agencies, identifying strengths, weaknesses, and areas for improvement.
3. Apply advanced tools and frameworks (e.g., VERP, LAC, budgeting models) to assess visitor use, site capacity, and management trade-offs.
4. Critique facility and site design proposals for sustainability, accessibility, and effectiveness in balancing visitor experience with resource protection.
5. Design innovative recreation management solutions (e.g., facility layouts, visitor use policies, staffing strategies) that address budgetary and environmental constraints.
6. Integrate principles of equity and access into recreation planning and decision-making for diverse user groups.
7. Create a comprehensive management proposal for a recreation site that synthesizes monitoring data, budget analysis, and stakeholder perspectives.
8. Defend management recommendations through evidence-based reasoning and professional communication suitable for agency or stakeholder contexts.

ENVS4550 - Recreation Use Monitoring and Assessment (QI) - 3 - Credits

Other Enrollment Recommendations
Junior or senior standing is recommended, as well as at least basic quantitative and computer skills.

Course Learning Objectives

Course Learning Outcomes
By the end of this course, students will be able to:

1. Apply principles of agent-based modeling to represent human–environment interactions, including translating conceptual frameworks into pseudocode and implementable model structures.
2. Evaluate how assumptions, parameter choices, and data inputs influence model behavior, uncertainty, and interpretability, using the principles of parsimony to guide model design.
3. Analyze the strengths and limitations of alternative modeling approaches—including equation-based models, spatial/GIS-integrated models, and theory-driven frameworks—to justify appropriate modeling choices for human–environment systems.
4. Construct a complete agent-based model in NetLogo that adheres to the ODD (Overview–Design concepts–Details) protocol, and use simulation experiments to draw meaningful inferences about a social–ecological system.
5. Communicate model design decisions, results, and limitations effectively to technical and non-technical audiences, demonstrating the ability to defend modeling choices and respond constructively to critique.

Course Learning Objectives

Course Learning Outcomes

1. Describe the evolution and current challenges of public land management in the Western United States, including the roles of values, governance, and science.
2. Analyze competing land-use priorities and their ecological, cultural, and economic tradeoffs.
3. Evaluate environmental decision-making as both a technical and moral process, shaped by human values, perspectives, and behaviors.
4. Assess large-scale environmental change and disturbance in Western ecosystems and apply concepts of resilience and adaptive management.
5. Apply systems thinking to topics including food systems, natural capital, and economic incentives.
6. Demonstrate reflective learning, dialogue skills, and civic engagement through field journaling, discussions, and participation in conservation field work.

Course Learning Objectives

Course Learning Outcomes
By the end of this course, students will be able to

1. Apply principles of agent-based modeling to represent human–environment interactions, including translating conceptual frameworks into pseudocode and implementable model structures.
2. Evaluate how assumptions, parameter choices, and data inputs influence model behavior, uncertainty, and interpretability, using the principles of parsimony to guide model design.
3. Analyze the strengths and limitations of alternative modeling approaches—including equation-based models, spatial/GIS-integrated models, and theory-driven frameworks—to justify appropriate modeling choices for human–environment systems.

4. Construct a complete agent-based model in NetLogo that adheres to the ODD (Overview–Design concepts–Details) protocol, and use simulation experiments to draw meaningful inferences about a social–ecological system.
5. Communicate model design decisions, results, and limitations effectively to technical and non-technical audiences, demonstrating the ability to defend modeling choices and respond constructively to critique.

Course Learning Outcomes

By the end of this course, students will be able to:

1. Analyze the strengths, limitations, and underlying assumptions of qualitative, quantitative, and mixed-methods approaches in the social sciences.
2. Evaluate how different methodological choices align with specific research questions and theoretical goals, selecting appropriate methods for a given analytical context.

3. Apply core qualitative techniques—including ethnographic observation, critical reading, and interpretive analysis—to generate and assess empirical claims.
4. Apply foundational quantitative and computational methods—including basic network analysis, topic modeling, and introductory agent-based modeling—to analyze social phenomena and interpret model outputs.
5. Construct a coherent and discipline-appropriate methods section that justifies methodological choices, demonstrates methodological literacy, and connects research design to broader theoretical contributions.

1. Describe at least three current ecological research frameworks outside their own graduate research focus.
2. Appreciate the content and presentation strategies that increase the effectiveness of oral communication

ENVS6889 - Environmental Risks and Decision Making - 1 - Credits

Course Overview

Course Prefix
ENVS

Course Number
6889

Department
Environment & Society

Course Title
Environmental Risks and Decision Making

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course focuses on how people make decisions in the context of environmental risks, how decisions affect the vulnerability of ecosystems and society to environmental change, and strategies for improving decision-making in these contexts.

Course Learning Objectives

Course Learning Outcomes

Plan A (Thesis) students will be able to:

1. Analyze and synthesize existing scientific knowledge on a defined research topic in the field of environmental studies, environmental science, recreation resource management and/or geography.
   Formulate a research question that builds on existing knowledge in a related topical area, and that can be answered within the scope of a master's thesis project.
2. Design and implement data collection and analysis strategies appropriate to the research question to generate new knowledge (can include case study application of current theory).
3. Formulate findings and communicate them effectively to an academic audience through both a written thesis and an oral defense.
4. Respond successfully to follow-up questions from an academic audience.
5.

Plan B (Project) students will be able to:

1. Analyze, synthesize, and/or apply existing scientific knowledge on a defined research topic in the field of environmental studies, environmental science, recreation resource management and/or geography, as appropriate to a Plan B master's project.
2. Communicate effectively to a specified audience through both a written project report and an oral defense.

Course Learning Objectives

Course Learning Outcomes

By the end of this course, students will be able to:

1. Analyze the strengths, limitations, and underlying assumptions of qualitative, quantitative, and mixed-methods approaches in the social sciences.
2. Evaluate how different methodological choices align with specific research questions and theoretical goals, selecting appropriate methods for a given analytical context.

3. Apply core qualitative techniques—including ethnographic observation, critical reading, and interpretive analysis—to generate and assess empirical claims.
   Apply foundational quantitative and computational methods—including basic network analysis, topic modeling, and introductory agent-based modeling—to analyze social phenomena and interpret model outputs.
4. Construct a coherent and discipline-appropriate methods section that justifies methodological choices, demonstrates methodological literacy, and connects research design to broader theoretical contributions.

Course Learning Objectives

Course Learning Outcomes
1. Understand and apply mechanics principles to analyze motion, forces, energy, and work in technological systems.
2. Examine and apply fluid dynamics concepts relevant to engineering technology and aviation technologies.
3. Demonstrate knowledge of thermodynamics and its implications in engineering technology processes.
4. Analyze basic principles of electromagnetism and their applications in modern technological devices.
5. Explore wave behavior and sound as it relates to technological systems and aviation.
6. Integrate practical experiments to reinforce theoretical concepts and demonstrate their use in solving technical problems.
7. Understand and apply principles of aerodynamics to analyze and solve flight-related challenges in aviation technology.
8. Develop problem-solving skills by applying physics principles to real-world engineering and aviation challenges.
9. Apply scientific methods to conduct experiments and interpret results accurately, including understanding error, precision, and uncertainty.
10. Evaluate the historical and societal context of physics developments and their influence on modern technology and society.
11. Assess the credibility of scientific sources and use visual/written communication to present findings clearly.

ETEC2020 - Introduction to Automation - 3 - Credits

Course Overview

Course Prefix
ETEC

Course Number
2020

Department

Course Learning Objectives

Course Learning Outcomes

Course Learning Outcomes:

1. Describe the fundamental principles and applications of automation.
2. Demonstrate proficiency in using sensors, actuators, PLCs, and HMIs.
3. Apply industrial communication protocols for efficient automation.
4. Design and implement basic automation systems.
5. Troubleshoot and debug automation processes.
6. Analyze the integration of automation technologies in various industries.
7. Interpret complex engineering drawings accurately.
8. Recognize and understand symbols, notations, and dimensions on blueprints.
9. Apply GD&T principles to communicate design tolerances effectively.
10. Utilize GD&T symbols to specify geometric features on engineering drawings.
11. Create and interpret engineering change orders (ECOs).
12. Develop and analyze Bills of Materials (BOMs) for manufacturing processes.
13. Generate clear assembly and fabrication instructions.
14. Demonstrate proficiency in technical writing for engineering documents.
15. Present engineering information effectively through written and verbal communications.
16. Develop skills that are directly applicable to careers in design, manufacturing, and related engineering fields.
17. Prepare for professional success through enhanced communication and documentation abilities.

  OR PHYS2210 - Physics for Scientists and Engineers I (QI/BPS)

Course Learning Objectives

Course Learning Outcomes

Course Learning Outcomes:

1. Identify and describe the fundamental properties of materials such as mechanical, thermal, electrical, magnetic, and optical properties.
2. Explain the relationship between material structure and properties at different scales (atomic, microscopic, and macroscopic).
3. Classify materials into categories such as metals, ceramics, polymers, composites, and semiconductors.
4. Evaluate materials for specific applications based on their properties and performance requirements.
5. Utilize different methods for material characterization including microscopy, spectroscopy, and mechanical testing.
6. Interpret data from material characterization techniques to assess material properties and quality.
7. Understand stress-strain relationships and the concepts of elasticity, plasticity, and fracture mechanics.
8. Analyze the mechanical behavior of materials under different loading conditions such as tension, compression, and shear.

ETEC3020 - Energy Systems - 3 - Credits

Course Overview

Course Prefix
ETEC

Course Number
3020

Department
Technology, Design & Technical Ed

Course Title
Energy Systems

Grade Mode
Standard Letter

Repeat Status
NR

Course Description

This course covers fluid mechanics, thermal-fluid systems, and fluid machinery in energy applications. Students learn to analyze, design, and optimize fluid-based energy systems, focusing on efficiency, sustainability, and practical skills through hands-on experiments and computational tools.

  OR PHYS1800 - Physics of Technology (BPS)
  OR PHYS2210 - Physics for Scientists and Engineers I (QI/BPS)

Course Learning Objectives

Course Learning Outcomes

Course Learning Outcomes:

1. Explain the fundamental principles of fluid mechanics including fluid statics, dynamics, and kinematics.

2. Describe the properties of fluids such as density, viscosity, and surface tension.

3. Analyze fluid flow in various systems including pipes, ducts, and open channels.

4. Apply Bernoulli's equation and conservation laws (mass, momentum, and energy) to solve fluid flow problems.

5. Understand the principles of heat transfer in fluid systems, including conduction, convection, and radiation.

6. Evaluate the performance of heat exchangers, boilers, and condensers in energy systems.

7. Describe the components and operation of hydraulic and pneumatic systems used in energy applications.

8. Analyze the performance of pumps, turbines, and compressors in fluid systems.

Course Number
3130

Department
Technology, Design & Technical Ed

Course Title

Manufacturing and Quality Systems

Grade Mode
Standard Letter

Repeat Status
NR

Course Description

This course covers manufacturing processes, quality control, lean manufacturing, Six Sigma, and advanced technologies. Students learn to design, analyze, and improve manufacturing systems, emphasizing efficiency, sustainability, compliance, and practical skills.

Credit Hours

Credit Hours Min:
3

Contact Hours

Registration Restrictions

Admission to the Technology, Design and Technical Education (TDTE) department

Simple Requisites

Prerequisite

Type
Prerequisite

Required

Earn a minimum grade of C- in the following:

- TESY1030 - Material Processing Systems

Course Learning Objectives

Course Learning Outcomes

Course Learning Outcomes:

1. Understand the principles of quality control and assurance in manufacturing.
2. Apply statistical process control (SPC) techniques to monitor and improve manufacturing processes.
3. Explain the concepts of lean manufacturing and Six Sigma and their applications in improving efficiency and reducing waste.
4. Implement lean and Six Sigma methodologies to enhance manufacturing processes and quality.
5. Design manufacturing systems considering factors such as layout, workflow, and automation.
6. Evaluate the performance of manufacturing systems using key performance indicators (KPIs).

ETEC3850 - Statics and Strengths of Materials - 3 - Credits

Course Overview

Course Prefix
ETEC

Course Number
3850

Department
Technology, Design & Technical Ed

Course Title

Statics and Strengths of Materials

Grade Mode
Standard Letter

Repeat Status
NR

Course Description

This course covers fundamental principles of statics and material strength, including force analysis, stress and strain, torsion, bending, and stability. Students learn to design safe structures, perform experiments, and apply theoretical concepts to real-world problems.

Credit Hours

Credit Hours Min:
3

Contact Hours

Contact Hours Min:

Admission to the Technology, Design and Technical Education (TDTE) department

Simple Requisites

Prerequisite

Type
Prerequisite

Required

Earn a minimum grade of C- in the following:

- MATH1210 - Calculus I (QL)
- PHYS1200 - Introduction to Physics by Hands-on Exploration (BPS)
  OR PHYS1800 - Physics of Technology (BPS)
  OR PHYS2210 - Physics for Scientists and Engineers I (QI/BPS)

Course Learning Objectives

Course Learning Outcomes

Course Learning Outcomes:

1. Explain fundamental principles of statics, including force vectors, equilibrium, and free-body diagrams.
2. Describe the mechanical properties of materials such as stress, strain, and elasticity.
3. Analyze force systems including concurrent, coplanar, and parallel forces.
4. Apply equilibrium conditions to determine unknown forces and moments in structures.
5. Determine support reactions for beams, trusses, and frames.
6. Analyze the internal forces within structures, including axial forces, shear forces, and bending moments.
7. Calculate normal and shear stress in structural elements.
8. Understand and apply Hooke's Law to determine material deformation.
9. Analyze axial load problems and determine the resulting stress and deformation.
10. Understand the principles of torsion and calculate the stress and deformation in shafts.
11. Analyze bending stress and deflection in beams.

ETEC4200 - Professional Communication and Documentation for Engineering Technology - 3 - Credits

Course Overview

Course Prefix
ETEC

Course Number
4200

Department
Technology, Design & Technical Ed

Course Title

Professional Communication and Documentation for Engineering Technology

Grade Mode
Standard Letter

Repeat Status
NR

Course Description

This course emphasizes technical writing, presentation, and teamwork skills essential for engineering technology professionals. Students develop proficiency in creating clear, effective documents and presentations tailored to engineering contexts, enhancing career readiness in the field.

Credit Hours

Credit Hours
Min:
3

Type
Prerequisite

Required

Earn a minimum grade of C- in the following:

- ETEC2200 - Engineering Technology Communications
- ETEC3130 - Manufacturing and Quality Systems

Course Learning Objectives

Course Learning Outcomes

Course Learning Outcomes:

1. Develop effective written communication skills for technical documents, reports, and proposals.
2. Enhance oral communication skills for presentations, meetings, and technical discussions.
3. Use visual aids and multimedia effectively to enhance technical presentations.
4. Collaborate effectively in teams to produce cohesive technical documents and presentations.
5. Conduct research and cite sources appropriately in technical writing.
6. Utilize feedback to improve communication skills throughout the course.

ETEC4900 - Senior Capstone I - 3 - Credits

Course Overview

Course Prefix
ETEC

Course Number
4900

Department
Technology, Design & Technical Ed

Course Title
Senior Capstone I

Grade Mode
Standard Letter

Repeat Status
NR

Course Description

This is the first course in the senior capstone sequence. Topics include design process, prototyping, documentation, teamwork, project management, and technical presentations.

Complete ALL of the following Courses:

- ETEC3130 - Manufacturing and Quality Systems
- ETEC3010 - Materials Sciences for Engineering Technology
- ETEC3850 - Statics and Strengths of Materials
- TESY3270 - Advanced Computer-Aided Drafting

Course Learning Objectives

Course Learning Outcomes

Course Learning Outcomes:

1. Describe and apply the design process in engineering projects, from concept development to final design.
2. Demonstrate proficiency in prototyping methods and techniques relevant to project goals.
3. Create comprehensive project documentation including technical reports, drawings, and specifications.
4. Collaborate effectively in multidisciplinary teams to achieve project objectives.
5. Apply project management principles to plan, execute, and monitor project milestones and deliverables.
6. Develop and deliver effective technical presentations to communicate project progress and outcomes.

ETEC4910 - Senior Capstone II - 3 - Credits

Course Overview

Course Prefix
ETEC

Course Number
4910

Department
Technology, Design & Technical Ed

Course Title
Senior Capstone II

Grade Mode
Standard Letter

Repeat Status
NR

Course Description

This is the second course in the senior capstone sequence. Topics include design reviews, final project manufacturing, documentation, project management, and final project presentation.

GEO1010 - Introduction to Geology (BPS) - 3 - Credits

Course Overview

Course Prefix
GEO

Course Number
1010

Department
Geosciences

Course Title
Introduction to Geology (BPS)

General Education Attribute
BPS

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course provides an introduction to geoscience for non-science majors. It covers earth's origin, plate tectonics, earth materials, the geologic record, hydrologic processes and water resources, geological hazards, the climate system, and mineral and energy resources.

Course Learning Objectives

Course Learning Outcomes
1. Understand Earth as a system of interrelated processes, cycles, and feedback cycles
2. Learn how Earth formed, its age, and interior structure
3. Recognize and understand the formation of major mineral and rock types
4. Understand the principles of geologic time, numerical dating, and reconstructing geologic history
5. Know the principles of Plate Tectonics, including faults and earthquakes, and associated land forms
6. Understand the pathways, major processes, and land forms associated with surface water and groundwater resources
7. Understand basic principles of Earth's climate system, past climate changes, and

GEO1060 - Introduction to Environmental Geoscience (BPS) - 3 - Credits

Enroll in the following Courses:
- GEO1115 - Physical Geology Laboratory

Course Learning Objectives

Course Learning Outcomes
1. Recognize Earth as a system of interrelated processes, cycles, and feedbacks
2. Learn how Earth formed, its age, and interior structure
3. Investigate the formation of major mineral and rock types and their association to plate tectonic setting
4. Define the principles of geologic time, numerical dating, and reconstructing geologic history

5. Know the principles of Plate Tectonics, including faults and earthquakes, and associated landforms
6. Recognize the pathways, major processes, and landforms associated with surface water and groundwater resources
7. Relate basic principles of Earth's climate system to past and ongoing climate changes
8. Learn the geologic context of mineral and energy resources
9. Explore geoscientist's role in society and geoscience careers

GEO1115 - Physical Geology Laboratory - 1 - Credits

Course Overview

Course Prefix
GEO

Course Number
1115

Department
Geosciences

Course Title
Physical Geology Laboratory

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Laboratory course designed to complement introductory earth science courses. Students will study minerals, rocks, topographic and geologic maps, and aerial photographs.

Required

All prerequisites listed below may be taken concurrently with GEO1115 PHYSICAL GEOLOGY LAB.

Complete ANY of the following Courses:

- GEO1010 - Introduction to Geology (BPS)
- GEO1060 - Introduction to Environmental Geoscience (BPS)
- GEO1360 - Planet Earth (BPS)

Course Learning Objectives

Course Learning Outcomes

1. Identify common minerals, igneous–sedimentary–metamorphic rocks, and basic geologic materials using diagnostic physical properties, textures, and classification schemes.
2. Interpret topographic maps, geologic maps, and cross-sections to determine elevation changes, map-unit relationships, geologic structures, and past geologic environments.
3. Apply stratigraphic and geologic principles—including superposition, original horizontality, cross-cutting relationships, facies changes, and relative dating—to reconstruct geologic histories.
4. Collect, record, and analyze field observations of rocks, landforms, and geologic processes during two local field exercises, demonstrating accurate note-taking, sketching, and spatial interpretation.
5. Use geoscience methods to evaluate Earth processes and environmental issues, including stream channel patterns, groundwater flow, global climate, glacial landforms, and natural hazards, and explain how these processes affect landscapes and society.

Course Learning Objectives

Course Learning Outcomes
1 Students will be able to apply the scientific method to questions about Earth systems, including forming hypotheses, analyzing evidence, and interpreting results.
2 Students will demonstrate a fundamental understanding of the physical principles that govern Earth's structure, motion, and energy systems.
3 Students will interpret and evaluate quantitative data from graphs, tables, or maps related to Earth science phenomena such as climate trends, seismic activity, or atmospheric composition.
4 Students will explain the physical and chemical processes that shape the Earth's surface and interior, including plate tectonics, erosion, and mineral formation.
5 Students will analyze the role of the Sun, Moon, and Earth's internal heat in driving natural systems such as weather, ocean currents, and the water cycle.
6 Students will evaluate the credibility and reliability of scientific sources related to current issues affecting Earth, such as climate change, biodiversity loss, and resource depletion.
7 Students will use written and/or visual formats to communicate scientific ideas clearly, with a focus on Earth science topics relevant to human society.
8 Students will explore the interdependence of Earth's biosphere, atmosphere, hydrosphere, and geosphere, and assess how changes in one system affect the others.
9 Students will examine the evolutionary history of life on Earth and explain the scientific theories of life's origin and development through its history.
10 Students will assess the impact of human activity on Earth's systems and become scientifically informed in regard to actions in support sustainability for future generations.

GEO1650 - Fossil Preparation - 2 - Credits

Course Overview

Course Prefix
GEO

Course Number
1650

Department
Geosciences

Course Title
Fossil Preparation

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Designed to familiarize students with a paleontological laboratory and teach them basic techniques of fossil preservation. Covers procedures, vocabulary, and includes hands-on experience. Students are introduced to fossil care, identification, preservation techniques, molding and casting, basic osteology, and collection laws.

GEO2200 - The Earth Through Time - 3 - Credits

Course Overview

Course Prefix
GEO

Course Number
2200

Department
Geosciences

Course Title
The Earth Through Time

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course investigates the dynamic nature of Earth's physical and biological processes, and how they have shaped Earth's 4.5 billion-year history. It emphasizes the interpretation of the geologic record (rocks and landforms) and Earth's sequential physical and biological changes.

Credit Hours

Complete ANY of the following Courses:

- GEO1010 - Introduction to Geology (BPS)
- GEO1110 - Physical Geology (BPS)

Course Learning Objectives

Course Learning Outcomes
1. Explain the importance of Geologic Time, how the Geologic Time Scale was originally constructed and continues to change, and how rocks are dated
2. Describe geologic laws and concepts and interpret geologic events from the physical and chemical rock record
3. Apply Chamberlin's concept of multiple-working hypotheses in the context of important geologic events through Earth's history using knowledge of current data sets
4. Recognize the concept of 'deep time' and how the fossil record and planetary rock records inform our understanding of Earth history through its 4.56 billion journey
5. Revisit and deepen the understanding of mineral- and rock-forming processes, internal Earth processes, and solar system relationships.
6. Gain the ability to interpret and create basic illustrations/graphs/writings explaining stratigraphic, metamorphic, and igneous Earth records and processes including plate tectonics, biologic evolution, and climate change
7. Prepare students for advanced geology and other physical science courses

GEO2205 - Earth Through Time Laboratory - 1 - Credits

Course Overview

Course Prefix
GEO

Course Number
2205

Department
Geosciences

Course Title
Earth Through Time Laboratory

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This laboratory course is designed to complement GEO 2200. It examines the sequential physical and biological changes throughout Earth's 4.5-billion year history, and emphasizes the interpretation of the geologic record from rocks and fossils.

Enroll in the following Courses:

- GEO2200 - The Earth Through Time

Course Learning Objectives

Course Learning Outcomes
1. Apply GEO2200 lecture content to in-lab exercises using quantitative and qualitative methods (e.g. Time scale; stratigraphic laws; mineral, rock, and fossil identification, plate tectonics, climate change, geologic maps)
2. Re-enforcing and building upon basic geologic lab skills learned in GEO1115 through mineral/rock/fossil identification and interpretation using hand lens and higher magnification binocular and petrographic microscopes
3. Employ introductory field skills including observation, note-taking, sketches, measuring stratigraphic section, and the concept of scale
4. Analyze, interpret, and present geologic data in the context of Earth history through writing and graphics
5. Learn to read, critique, and interpret geologic maps integrated with physical geologic samples
6. Recognize field safety protocol and land-use ethics

GEO2500 - Geology Field Excursions - 1 - Credits

Course Overview

Course Prefix
GEO

Course Number
2500

- GEO1060 - Introduction to Environmental Geoscience (BPS)
- GEO1110 - Physical Geology (BPS)
- GEO1360 - Planet Earth (BPS)

Course Learning Objectives

Course Learning Outcomes

1. Engage with geologic processes and features during a multi-day field experience
2. Gain awareness of the amazing geology within a relatively short distance of USU Logan campus

GEO2800 - Minerals and Rocks - 4 - Credits

Course Overview

Course Prefix
GEO

Course Number
2800

Department
Geosciences

Course Title
Minerals and Rocks

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course introduces minerals and the principles of crystallography, focusing on rock-forming and ore minerals. It surveys petrology and introduces igneous, sedimentary, and metamorphic rocks, including X-ray and optical identification techniques. It includes three lectures and one three-hour lab per week.

Enroll in the following Courses:
- CHEM1210 - Principles of Chemistry I

Course Learning Objectives

Course Learning Outcomes

1. Recognize the chemical and physical basis of mineralogy, including crystallography
2. Relate the structure and composition of minerals to mineral properties and occurrence
3. Learn to identify common minerals in hand sample and thin section and relate observations to mineral origin
4. Investigate mineral analytical techniques and their applications
5. Interpret geologic history and rock origin using mineralogy
6. Learn the geologic context of mineral resources
7. Explore geoscientist's role in society and geoscience careers

GEO3000 - Epic Earth - Geoscience of National Parks (DSC) - 3 - Credits

Course Overview

Course Prefix
GEO

Course Number
3000

Department
Geosciences

Course Title
Epic Earth - Geoscience of National Parks (DSC)

General Education Attribute
DSC

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Intended for non-science and science majors, this course delves into both the internal and external processes responsible for the unique geology of National Parks, focusing on the western US, Alaska and Hawaii, emphasizing landscape interpretation and process understanding.

Prerequisite

Required

Complete at least 1 course in the following course sets:

- Breadth Physical Sciences (BPS) Course

Course Learning Objectives

Course Learning Outcomes
1. Explain fundamental geoscience concepts—including rock types, geologic time, plate tectonics, volcanism, structural deformation, weathering, and glacial processes—and apply them to real landscapes.
2. Describe how major geologic processes shape U.S. National Parks, and identify the key landforms, rock units, and geologic histories associated with parks representing themes such as hot-spot volcanism, stratigraphy, structural geology, desert landscapes, caves, and glaciers.
3. Interpret geologic features and landscapes using maps, photographs, cross-sections, and geologic narratives to reconstruct the geologic evolution of selected National Parks.
4. Compare and contrast different tectonic and geomorphic settings—such as hotspot provinces (Hawaii, Yellowstone), layered sedimentary provinces (Grand Canyon, Zion, Bryce), and active tectonic regions (Yosemite, Grand Teton, Death Valley)—and evaluate how these settings produce distinctive landscapes.
5. Connect geologic processes to modern environmental issues and geohazards within National Parks, including volcanic activity, earthquakes, landslides, cave formation, coastal change, and glacial retreat, and explain how Earth processes continue to shape park landscapes today.

GEO3100 - Natural Disasters (DSC) - 3 - Credits

Course Overview

Course Prefix
GEO

Course Number
3100

Department
Geosciences

Course Title
Natural Disasters (DSC)

General Education Attribute
DSC

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Hazardous geologic processes affecting humans. Cause, prediction, avoidance, and frequency of natural disasters, including earthquakes, volcanic eruptions, tsunamis, landslides, floods, subsidence, meteorite impacts, and global changes. Topics discussed in the context of earth systems and cycles. Three lectures per week.

Complete at least 1 course in the following course sets:

- Breadth Physical Sciences (BPS) Course
- Breadth Life Sciences (BLS) Course

Course Learning Objectives

Course Learning Outcomes

1. Students will describe the fossilization process, including the geologic conditions that favor fossil preservation, and assess the scientific practices involved in the collection, preparation, and curation of dinosaur fossils.
2. Students will interpret the geological and temporal context of dinosaurs by applying principles of relative and absolute dating, and by reconstructing the paleogeography, climates, and continental positions of the Mesozoic Era.
3. Students will construct and evaluate phylogenetic trees using cladistic methods, and differentiate between homologous and analogous traits in the evolutionary history of dinosaurs.
4. Students will identify and describe key anatomical features of dinosaurs, including skeletal traits that define major clades such as Saurischia and Ornithischia, and explain how those traits relate to function and behavior.
5. Students will explain the origin, diversification, and evolutionary adaptations of major dinosaur groups (particularly theropods, sauropodomorphs, and ornithischians) with emphasis on locomotion, feeding, and social behavior.
6. Students will assess the evolutionary link between birds and non-avian theropod dinosaurs by analyzing shared anatomical features, feather morphology, and theories on the origin of flight.
7. Students will evaluate physiological and metabolic characteristics of dinosaurs, including respiratory systems, thermoregulation, growth rates, and bone histology, to determine whether some groups may have been endothermic.
8. Students will interpret the paleoecological roles and biogeographic distribution of dinosaurs using fossil evidence, and analyze their co-evolution with plants and other Mesozoic organisms.
9. Students will critique the historical development of dinosaur paleontology, from early discoveries and the “Bone Wars” to modern scientific revolutions in phylogenetics, imaging, and biomolecular techniques.
10. Students will synthesize the evidence for the Cretaceous-Paleogene mass extinction, evaluate competing hypotheses, and explain why some groups survived while dinosaurs (except birds) became extinct.

GEO3300 - Geology of the World's Oceans (DSC) - 3 - Credits

Course Overview

Course Prefix
GEO

Course Number
3300

Department
Geosciences

Course Title
Geology of the World's Oceans (DSC)

General Education Attribute
DSC

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Geologic evidence for the development of ocean basins and continental margins through plate tectonic processes. Also, the interaction of the geo- and biospheres and their effect on the evolution of the oceans and atmosphere. Discussion of shoreline and marine environments, the organisms inhabiting them, and the physical and chemical processes in operation therein. Three lectures per week.

Complete at least 1 course in the following course sets:

- Breadth Physical Sciences (BPS) Course

Course Learning Objectives

Course Learning Outcomes
1. Explain the formation and structure of the world's oceans, including plate tectonics, ocean basins, and seafloor features.
2. Describe the processes that shape continental margins, mid-ocean ridges, trenches, and seamounts.
3. Identify key physical properties of seawater (temperature, salinity, density) and how these influence ocean circulation.
4. Summarize the major components of ocean–atmosphere interactions and their role in global climate.
5. Evaluate the dynamics of waves, tides, and coastal processes and their implications for coastal environments (estuaries, deltas, rocky shores, barrier islands).
6. Compare marine ecosystems, including planktonic, benthic, and deep-sea communities.
7. Describe the role of plankton in global primary production and the carbon cycle.
8. Explain physiological and behavioral adaptations that allow marine organisms to survive in specific environments (deep sea, intertidal zones).
9. Distinguish between major marine ecosystems such as coral reefs, kelp forests, mangroves, seagrass meadows, and hydrothermal vent communities.
10. Evaluate human impacts on marine environments, including pollution, overfishing, habitat destruction, and ocean warming

GEO3400 - Communicating Geoscience (CI/DSC) - 3 - Credits

Course Learning Outcomes
1. Develop and utilize an understanding of diverse Earth materials as recorders of geologic processes through a working knowledge of their composition and origin
2. Place important planet-forming and geologic-change events in a temporal framework, while comprehending the evolution of tectonic, climatic and biotic systems on Earth
3. Demonstrate an understanding of Earth surface processes, sedimentary systems, and geologic hazards as deciphered through deposits and landforms and focused on our region
4. Demonstrate an understanding of changing Earth surface environments over geologic and present time, as well as human impacts on Earth systems

GEO3600 - Geomorphology - 4 - Credits

Course Overview

Course Prefix
GEO

Course Number
3600

Department
Geosciences

Course Title
Geomorphology

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students learn about geomorphic processes, origin of landforms and surficial deposits. The course emphasizes fluvial and hillslope landscape elements, and surficial geologic mapping. Both lectures and labs are included.

Prerequisite

Required

Complete ANY of the following Courses:

- MATH1060 - Trigonometry
- MATH1100 - Calculus Techniques (QL)
- MATH1210 - Calculus I (QL)

OR Calculus AB score of 3 or higher

Course Learning Objectives

Course Learning Outcomes
1. Explain the major processes that shape Earth's surface—including weathering, fluvial, glacial, coastal, aeolian, and tectonic controls on landscape evolution.
2. Interpret landforms and geomorphic histories using field observations, topographic maps, DEMs, and aerial/satellite imagery.
3. Apply quantitative methods to analyze geomorphic systems, including erosion rates, sediment transport, stream power, and slope stability. Points 2 and 3 are enveloped in our field and classroom laboratory exercises worth 25% of the course grade.
4. Conduct and communicate field-based geomorphic investigations, collecting data, developing interpretations, and presenting results through clear maps, sketches, and written reports. We complete a 3-day field experience in Grand Teton National Park that culminates in a Field Report worth 15% of the course grade.
5. Evaluate the influence of climate, tectonics, and human activity on geomorphic processes and geologic hazards, and relate these controls to real-world landscape change.

GEO3700 - Structural Geology - 4 - Credits

Course Overview

Course Prefix
GEO

Course Number
3700

Department
Geosciences

Course Title
Structural Geology

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students examine the geometries, mechanisms, and mechanics of rock deformation including stress and strain relationships as well as fault and fold classification and description. Labs present techniques to interpret deformed rocks in map, cross-section, and three-dimensional views.

- PHYS2210 - Physics for Scientists and Engineers I (QI/BPS)
- PHYS2215 - Physics for Scientists and Engineers Lab I

(PHYS 2210 and PHYS 2215 may be taken concurrently with GEO 3700)

Course Learning Objectives

Course Learning Outcomes
1. Visualize and interpret structural geometries and their kinematic evolution during progressive deformation
2. Apply the principles of rock mechanics to quantitatively relate stress to strain under brittle and ductile conditions
3. Interpret the geological history of an area based on geologic maps, digital elevation models, cross-sections, and borehole data
4. Use observations of structures in 2d geometry from surface exposure or limited depth data to predict 3d geometry in the subsurface

- GEO4500 - Igneous and Metamorphic Petrology
- GEO3900 - Geologic Field Methods (CI)

Course Learning Objectives

Course Learning Outcomes

1. Recognize and characterize secondary ore and gangue (non-economic) minerals in waste rock (tailings) from the Copper Blossom Mine
2. Create a sampling and analysis plan for tailings and surrounding area to

characterize geology and identify and document environmental contamination
3. Integrate field observations and analyses to compile a report of the ore mineralization and environmental impact of mine waste, including recommendations for future work.
4. Reinforce science communication skills (field notes, sketches, maps, and geologic report)

GEO5360 - Volcanology - 3 - Credits

Course Overview

Course Prefix
GEO

Course Number
5360

Department
Geosciences

Dual-Listed Courses
GEO6360 - Volcanology

Course Title
Volcanology

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Provides students with a basic understanding of volcanic processes. Students gain an understanding of the range and scope of volcanoes and volcanic eruptions. Prehistoric volcanic eruptions reconstructed from their deposits. To receive graduate credit, student must write student grant proposal to do research in some area of volcanology relevant to hazards assessment.

Course Learning Objectives

Course Learning Outcomes

1. Describe how plate tectonic theory explains the global distribution and characteristics of volcanoes.
2. Explain how fundamental magma properties, including composition and viscosity, control eruption style and volcanic hazards.
3. Relate volcano types to morphology, eruption style, magma characteristics, and plate tectonic setting.
4. Recognize the association between igneous rock textures and mineralogy and volcanic processes, including emplacement and cooling history.
5. Discuss volcanic risk assessment and management and the role of scientists in communicating risks to the public
6. Evaluate the influence of volcanic activity on Earth systems, including the atmosphere and the biosphere.

GEO5390 - Sedimentary Petrology - 3 - Credits

Course Overview

Course Prefix
GEO

Course Number
5390

Department
Geosciences

Dual-Listed Courses
GEO6390 - Sedimentary Petrology

Course Title
Sedimentary Petrology

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students collect sedimentary rocks, make thin sections, use polarizing microscopes to identify common sedimentary minerals and characterize rock properties, classify siliclastic and carbonate rocks, propose a research project, and write and present the results of the project to peers.

Simple Requisites

Prerequisite

Type
Prerequisite

Required

Complete ALL of the following Courses:

- GEO2800 - Minerals and Rocks

Course Learning Objectives

Course Learning Outcomes
1 Students will competently operate a polarizing microscope and apply petrographic techniques to identify common sedimentary minerals and textures in thin section.
2 Students will classify siliciclastic and carbonate sedimentary rocks using compositional and textural criteria observed in hand samples and thin sections.
3 Students will interpret the diagenetic history of sedimentary rocks by recognizing features such as cementation, compaction, dissolution, dolomitization, and recrystallization.
4 Students will relate petrographic observations to depositional environments, using mineralogy, grain characteristics, and sedimentary structures to infer sediment provenance and basin history.
5 Students will collect and document field samples that address a specific sedimentary research question, demonstrating best practices in sample selection, stratigraphic context, and data recording.
6 Students will prepare thin sections from hand samples and describe mineralogical and textural features using standard petrographic terminology.
7 Students will analyze and interpret thin section data quantitatively, employing visual estimation methods, point counting, and data presentation tools such as spreadsheets or classification diagrams.
8 Students will compare and contrast the petrology and depositional processes of siliciclastic, carbonate, evaporitic, phosphatic, and siliceous sedimentary rocks.
9 Students will evaluate the petrologic characteristics of economically significant sedimentary deposits; including coal, petroleum reservoirs, banded iron formations, and cherts; and interpret their origins.
10 Students will design, write, and present an original sedimentary petrology research project that integrates field observations, laboratory data, and thin section analysis within a scientific framework.

GEO5410 - Advanced Stratigraphy - 3 - Credits

Course Overview

Complete ALL of the following Courses:

- GEO3550 - Sedimentation and Stratigraphy

Course Learning Objectives

Course Learning Outcomes
1 Students will integrate and analyze stratigraphic data from multiple sources; including outcrops, well logs, seismic profiles, and cores, to reconstruct depositional environments and correlate sedimentary units.
2 Students will interpret sedimentary successions in terms of depositional processes, base-level changes, and accommodation space, and reconstruct the evolution of sedimentary basins through time.
3 Students will apply principles of sequence stratigraphy to identify stratigraphic surfaces, system tracts, and sequences in clastic and carbonate settings, and relate them to tectonic and eustatic controls.
4 Students will evaluate the use of biostratigraphy, magnetostratigraphy, and chemostratigraphy as chronostratigraphic tools to build and refine temporal frameworks in the rock record.
5 Students will perform facies analysis to interpret depositional settings, recognize facies associations, and construct depositional models in both marine and non-marine systems.
6 Students will use seismic and well log data to interpret stratigraphic architecture, delineate stratigraphic traps, and assess subsurface resource potential.
7 Students will assess the relationship between tectonic regimes and sedimentary systems, with emphasis on foreland basins, sequence stacking patterns, and sediment routing.
8 Students will analyze shoreline trajectories, stratigraphic surfaces, and sedimentary architectures to infer past shoreline migration and sea-level changes.
9 Students will synthesize lithologic, stratigraphic, and geophysical data to make predictions about hydrocarbon-bearing intervals and stratigraphic traps in Utah's sedimentary basins.
10 Students will evaluate the hierarchical organization of stratigraphic sequences and recognize their significance in interpreting basin history, resource distribution, and global geologic events.

GEO5420 - Ore Deposits - 3 - Credits

Course Prefix
GEO

Course Number
5420

Department
Geosciences

Dual-Listed Courses
GEO6420 - Ore Deposits

Course Title
Ore Deposits

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course is designed as an introduction to ore deposits and ore-forming processes. The chief objectives are (1) a basic understanding of how ore deposits form, (2) to learn how ore deposits are classified, and (3) to understand the origins of different types of ore deposits. The primary focus is on metallic mineral deposits, but some of the more important non-metallic deposits will also be covered, excluding hydrocarbons. Graduate students will write an additional research proposal.

Complete ALL of the following Courses:

- GEO2200 - The Earth Through Time

Course Learning Objectives

Course Learning Outcomes
1 Students will describe the processes that control fossil preservation and evaluate the completeness and biases of the fossil record across different environments and taxa.
2 Students will identify and describe fossil specimens using standard paleontological terminology, including morphology, ontogenetic variation, and taphonomic features.
3 Students will apply the principles of biological taxonomy and the rules of zoological and botanical nomenclature to recognize, name, and classify fossil species.
4 Students will construct and interpret phylogenetic trees using morphological character data, and explain how cladistic methods reveal evolutionary relationships among fossil organisms.
5 Students will use invertebrate fossils as biostratigraphic and paleoenvironmental indicators to determine the relative age of rock units and reconstruct ancient marine and terrestrial settings.
6 Students will compare major groups of fossil invertebrates; including sponges, cnidarians, bryozoans, brachiopods, mollusks, echinoderms, graptolites, and arthropods; describing their anatomy, evolutionary significance, and ecological roles.
7 Students will interpret trace fossils (ichnology) as evidence of organismal behavior, sediment interaction, and depositional environments.
8 Students will summarize the fossil record of major plant groups; including algae, bryophytes, lycopods, horsetails, ferns, gymnosperms, and angiosperms and explain key evolutionary transitions such as the colonization of land and the origin of seeds and flowers.
9 Students will analyze how fossil plants are used to reconstruct paleoclimates and paleoenvironments, with examples from important formations such as the Green River Formation.
10 Students will synthesize the relationships between major evolutionary events; such as the diversification of angiosperms, mass extinctions, and the rise of modern ecosystems; to explain how the fossil record informs our understanding of life's history on Earth.

Course Learning Objectives

Course Learning Outcomes

1 Students will be able to describe and analyze the evolutionary origin of chordates and vertebrates using embryological, anatomical, and fossil evidence.
2 Students will evaluate and interpret the fossilization process, taphonomic pathways, and the geological contexts that favor vertebrate fossil preservation.
3 Students will use cladistics and phylogenetic systematics to construct and interpret evolutionary relationships among vertebrate taxa.
4 Students will identify major groups of extinct and extant jawless and jawed vertebrates, and explain the anatomical innovations that characterize each group through time.
5 Students will analyze the evolutionary transition from aquatic to terrestrial vertebrates, including key adaptations in morphology, physiology, and behavior.
6 Students will compare the skeletal and dental features of major vertebrate lineages, with emphasis on amniotes, synapsids, and diapsids, and assess their evolutionary significance.
7 Students will evaluate the diversity and evolutionary trends in Mesozoic vertebrates, including dinosaurs, pterosaurs, and marine reptiles, and interpret their adaptations and extinction patterns.
8 Students will trace the evolutionary origin of flight in vertebrates, focusing on birds and their Mesozoic precursors, and explain the anatomical changes involved.
9 Students will examine the evolutionary history of mammals, including key transitional fossils, and differentiate between major clades such as monotremes, marsupials, and placentals.
10 Students will assess the fossil evidence for primate and human evolution, and synthesize how anatomical and behavioral changes reflect broader evolutionary trends through the Cenozoic.

Course Learning Objectives

Course Learning Outcomes

1. Analyze and explain published research papers and book chapters on Deep Time topics, including the super continent cycle and plate tectonics, the evolution of the atmosphere, biologic evolution, the sedimentary record, and the Geologic Time Scale.
2. Review a spectrum of geologic methods, including cutting-edge techniques use to interrogate the early Earth (e.g., geochronology, geochemical proxies, astrochronology).
3. Observe, collect, measure, describe and interpret a variety of rock types, geologic relationships and features in the field, and interpret their significance in Earth's evolution.
4. Document and synthesize the geologic history of Antelope Island, UT, High Creek, UT and Death Valley, CA with an emphasis on Archean through Ordovician Earth systems behaviors.
5. Present professional-level oral and written reports on describing and interpreting the rock record from field observation and data collection, and synthesizing the literature (may include undergraduate and graduate research projects already in progress).
6. Construct a profound knowledge base of the early Earth while improving field and communication skills.

GEO5470 - Chemical Sedimentary Rocks - 3 - Credits

Course Overview

Course Prefix
GEO

Course Number
5470

Department
Geosciences

Dual-Listed Courses
GEO6470 - Chemical Sedimentary Rocks

Course Title
Chemical Sedimentary Rocks

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course covers the application of field observations, hand-sample, thin-section, and X-ray diffraction analyses to the interpretation of chemical sedimentary rocks. It emphasizes determination of depositional environment and evaluation of diagenetic changes. It includes three lectures and one lab per week. Additional coursework is required for those enrolled in the graduate-level course.

- GEO2800 - Minerals and Rocks
- GEO3550 - Sedimentation and Stratigraphy

Course Learning Objectives

Course Learning Outcomes

1. Explain the basic chemistry of the carbonate system and the factors affecting carbonate precipitation, solubility, and mineralogy.
2. Understand the characteristics of the “Carbonate Factory” and environmental factors that control sedimentation within it.
3. Identify the main components (grain types, matrix, cements, spar) of carbonate rocks and explain their origin in the carbonate system
4. Classify carbonate rocks based on the grain vs. matrix content and depositional texture using the Folk and Dunham classification schemes, respectively.
5. Summarize the development and importance of carbonate porosity and diagenesis.
6. Compare the depositional environments, sedimentary facies, and sequences (cycles) on carbonate platforms, shelves, and ramps.
7. Apply this knowledge to the description and interpretation of local carbonate strata.

Prerequisite

Required

Complete ALL of the following Courses:

- GEO2800 - Minerals and Rocks
- GEO3550 - Sedimentation and Stratigraphy

Course Learning Objectives

Course Learning Outcomes

1. Explain the interconnectedness of depositional and structural processes to first create, then fill, and finally preserve and/or destroy sedimentary basins.
2. Summarize criteria for classifying sedimentary basins.
3. Compare the tools geoscientists use to study the tectonics of sedimentary basins.
4. Understand major structural, tectonic, and geodynamic mechanisms that produce basins and the major sedimentologic and stratigraphic processes that fill them.
5. Examine characteristics of sedimentary basins in divergent, convergent, transform, and intraplate tectonic settings.
6. Compare diagnostic features of sedimentary basins with different tectonic origins.
7. Synthesize various datasets to interpret the tectonic origin of a sedimentary basin.
8. Debate basin interpretations from the scientific literature, critique the strength of their arguments given the available geologic data, and rank their validity.

GEO5490 - Facies Analysis of Sedimentary Rocks - 3 - Credits

Course Overview

Course Prefix
GEO

Course Number
5490

Department
Geosciences

Dual-Listed Courses
GEO6490 - Facies Analysis of Sedimentary Rocks

Course Title
Facies Analysis of Sedimentary Rocks

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course will cover topics including sedimentary processes and results, contacts, facies analysis, sequence stratigraphy, and implications of sedimentologic studies. Lectures, field trips, literature review, and geologic writing will be emphasized, with 6000 level credit earned through student presentations and a semester project.

Complete ALL of the following Courses:

- GEO3550 - Sedimentation and Stratigraphy

Course Learning Objectives

Course Learning Outcomes
1. Gain experience identifying and interpreting a wide range of sedimentary structures from field examples and the literature including discussions of controversial interpretations
2. Employ advanced field methods in sedimentology and stratigraphy including quantitatively measuring sedimentary structures, recognizing and mapping unconformities, and exploring the cyclic nature of strata.
3. Differentiate between depositional models versus facies models through field examples and the literature.
4. Present professional-level oral and written reports on describing and interpreting the sedimentary record from field observation and data collection and synthesizing the literature (may include undergraduate and graduate research topics already in progress).

GEO5500 - Advanced Igneous Petrology - 4 - Credits

Course Overview

Course Prefix
GEO

Course Number
5500

Department
Geosciences

Dual-Listed Courses
GEO6500 - Advanced Igneous Petrology

Course Title
Advanced Igneous Petrology

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Advanced concepts in the origin and evolution of magmatic systems, effects of different tectono thermal regimes on magma genesis, magma dynamics, and phase equilibria in magmatic systems. Concepts illustrated by rock suites from classic locations. Three lectures and three laboratory hours each week.

- GEO4500 - Igneous and Metamorphic Petrology

Course Learning Objectives

Course Learning Outcomes
1. Combine field, analytical, and modeling data to develop and test hypotheses on the petrogenesis of igneous and metamorphic rocks.
2. Describe the mineralogy, textures, and structures of igneous and metamorphic rocks using a petrographic microscope and interpret equilibrium and disequilibrium conditions during rock formation.
3. Explain magma differentiation and metamorphic reactions graphically using phase diagrams.
4. Understand and utilize modern geochemical tools, including major and trace element analysis, to constrain petrogenetic processes.
5. Constrain igneous and metamorphic processes using geochemical data and petrogenetic modeling tools.
6. Critically evaluate and present current scientific literature on igneous and metamorphic petrology.
7. Design and conduct independent research on a suite of igneous or metamorphic rocks from initial field sampling and geochemical analysis, to final interpretation and presentation of results.

GEO5510 - Groundwater Geology (QI) - 3 - Credits

Course Overview

Course Prefix
GEO

Course Number
5510

Department
Geosciences

Course Title
Groundwater Geology (QI)

General Education Attribute
QI

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Provides graduate students and senior undergraduates with understanding of fundamental principles of groundwater geology and hydrology, and helps prepare them for careers in hydrogeology or environmental geology. Three lectures per week.

Complete ALL of the following Courses:

- GEO1110 - Physical Geology (BPS)

AND

Required

Complete ANY of the following Courses:

- MATH1100 - Calculus Techniques (QL)
  OR MATH1210 - Calculus I (QL)

Course Learning Objectives

Course Learning Outcomes

1. Know where groundwater fits into the hydrologic cycle, and be able to calculate baseflow recession
2. Understand fundamental hydrogeologic concepts and know the definitions of key terms
3. Know how to quantify the abilities of geologic materials to store and transmit groundwater
4. Understand hydraulic head and fluid potential, and be able to construct both qualitative and quantitative groundwater flow nets
5. Become familiar with flow system analysis, including both the analytical and numerical approaches, as well as local, intermediate and regional groundwater flow systems
6. Know how to use pumping test data to calculate transmissivity and storativity
7. Understand basic groundwater chemistry, and be able to present hydrochemical data using several graphical techniques
8. Understand the basic principles of groundwater contaminant transport, including transport through homogeneous, heterogeneous and fractured media, as well as retardation
9. Become familiar with the fundamental concepts associated with groundwater development and management

GEO5520 - Techniques of Groundwater Investigations (CI) - 3 - Credits

Course Overview

Course Prefix
GEO

Course Number
5520

Department
Geosciences

Dual-Listed Courses
GEO6520 - Techniques of Groundwater Investigations

Course Title
Techniques of Groundwater Investigations (CI)

General Education Attribute
CI

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Survey of techniques used in groundwater investigations for collecting physical and chemical data. Includes well drilling and construction; water level, flow rate, and discharge measurements; hydraulic and tracer tests; and groundwater sampling.

Complete ALL of the following Courses:

- GEO5510 - Groundwater Geology (QI)

Course Learning Objectives

Course Learning Outcomes

1. Understand the differences between piezometers, monitor wells and water-supply wells
2. Understand the differences between the five main drilling techniques; namely, cable tool, mud rotary, air rotary, air percussion and reverse-circulation rotary
3. Know how to drill and complete a water-supply well, including installation of the casing, well screen, filter pack, seal(s) and pump, as well as well development and rehabilitation
4. Know how to drill and complete piezometers and monitor wells
5. Understand which hydraulic parameters can be measured in a laboratory, and which techniques are available to measure them
6. Know how to conduct, and calculate hydraulic parameters using, step-drawdown, specific-capacity and slug tests, as well as other single-well and multiple-well hydraulic tests
7. Know how to measure water levels in wells
8. Know how to measure the discharge from a pipe and of a stream
9. Know how to collect water samples from wells
10. Become familiar with groundwater tracer tests, including both single-well and multiple-well tests, as well as various types of tracers

GEO5540 - Quantitative Methods in Geology (QI) - 3 - Credits

Course Overview

Course Prefix

AND

Required

Complete ANY of the following Courses:

- MATH1060 - Trigonometry
  OR MATH1210 - Calculus I (QL)

Course Learning Objectives

Course Learning Outcomes

1. Describe soils and determine their physical characteristics, such as grain size, water content and void ratio
2. Classify soils
3. Determine compaction of soils
4. Understand the importance of soil investigations and be able to plan a soil investigation
5. Understand the concept of effective stress
6. Determine total and effective stresses and pore water pressures
7. Determine soil permeability
8. Determine how surface stresses are distributed within a soil mass
9. Specify, conduct and interpret soil tests to characterize soils
10. Determine soil strength and deformation parameters from soil tests; for example, Young's modulus, friction angle and undrained shear strength
11. Discriminate between "drained" and "undrained" conditions
12. Understand the effects of seepage on the stability of structures
13. Estimate the bearing capacity and settlement of structures founded on soils
14. Analyze and design simple foundations
15. Determine the stability of earth structures; for example, retaining walls and slopes

- PHYS2220 - Physics for Scientists and Engineers II (BPS/QI)

Course Learning Objectives

Course Learning Outcomes

1. Cursory knowledge of the most widely-used tools for imaging structure of the Earth's shallow interior
2. A basic understanding of how we estimate in situ material properties such as mass density, seismic velocity and electrical conductivity
3. An understanding of how we infer desirable properties such as rock lithology and pore fluid content from geophysical properties
4. Hone core geoscience skills in:
   • Describing and interpreting structures & properties of Earth's interior
   • Understanding how science works via inquiry, observation, verification, teamwork, and critical thinking
   • Understanding and creating maps, working with subsurface data, field and laboratory methods, and data reduction and analysis
   • Application of principles of mathematics, chemistry, and physics, as well as computational tools, to the analysis of geologic data and solution of problems

Course Learning Objectives

Course Learning Outcomes
Course objectives are to develop a quantitative understanding of dynamical processes in the solid Earth, including:

1. Processes and properties of heat transport
2. Chemistry and rheology of the Earth, and how they define plate tectonics and geologic hazards
3. Transport of volatiles in the Earth's interior and the outsize role volatiles play in dynamical processes
4. Fundamental properties underpinning concepts of Earth's lithosphere and asthenosphere
5. Hone core geoscience skills including:
   - Earth as a Complex System
   - Earth Materials
   - Earth Structure
   - Applying Strong Quantitative Skills

GEO5900 - Topics for Teachers - 1 - 4 Credits

Course Overview

Course Prefix
GEO

Course Number
5900

Department
Geosciences

Course Title
Topics for Teachers

Grade Mode
Standard Letter

Repeat Status

Complete ALL of the following Courses:

- CHEM1220 - Principles of Chemistry II (BPS)
- GEO2800 - Minerals and Rocks
- MATH1210 - Calculus I (QL)

Course Learning Objectives

Course Learning Outcomes
1. Apply thermodynamic and kinetic principles to understand the types and rates of geochemical processes that control the chemistry of surface and ground waters;
2. Strengthen data interpretation and presentation techniques including basic geochemical modeling using industry standard software (e.g., PHREEQC);
3. Learn how to approach and solve problems concerning water quality, contaminant transport, and water-rock interaction; and
4. Learn water sample collection and laboratory analysis techniques.

Complete ALL of the following Courses:

- MATH1210 - Calculus I (QL)
- PHYS2210 - Physics for Scientists and Engineers I (QI/BPS)

Course Learning Objectives

Course Learning Outcomes
1. Analyze the mechanics of brittle deformation, including rock fracture, friction, and failure using theoretical models and experimental data.
2. Evaluate the role of stress, strain, and rheology in controlling deformation across scales, from laboratory samples to tectonic plates.
3. Apply principles of fracture mechanics and frictional sliding to interpret earthquake processes and associated hazards, incorporating a combination of numerical modeling, field observations, or laboratory experiments.
4. Integrate concepts of rock deformation into applied contexts such as glacial sliding, petroleum reservoir stability, and geothermal energy systems.

GEO6280 - Stable Isotope Geochemistry - 2 - Credits

Course Overview

Course Prefix
GEO

Course Number
6280

Department
Geosciences

Dual-Listed Courses
GEO7280 - Stable Isotope Geochemistry

Course Title
Stable Isotope Geochemistry

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course covers Stable Isotope Geochemistry through lecture, seminar, and laboratory activities utilizing the stable isotope lab. Students study the fundamentals of stable isotope geochemistry as applied to geosciences and Earth system processes, focusing on light stable isotopes (H, O, C, N, S).

Course Learning Objectives

Course Learning Outcomes
1. Describe how plate tectonic theory explains the global distribution and characteristics of volcanoes.
2. Explain how fundamental magma properties, including composition and viscosity, control eruption style and volcanic hazards.
3. Relate volcano types to morphology, eruption style, magma characteristics, and plate tectonic setting.
4. Recognize the association between igneous rock textures and mineralogy and volcanic processes, including emplacement and cooling history.
5. Discuss volcanic risk assessment and management and the role of scientists in communicating risks to the public
6. Evaluate the influence of volcanic activity on Earth systems, including the atmosphere and the biosphere.

GEO6390 - Sedimentary Petrology - 3 - Credits

Course Learning Objectives

Course Learning Outcomes
1 Students will competently operate a polarizing microscope and apply petrographic techniques to identify common sedimentary minerals and textures in thin section.
2 Students will classify siliciclastic and carbonate sedimentary rocks using compositional and textural criteria observed in hand samples and thin sections.
3 Students will interpret the diagenetic history of sedimentary rocks by recognizing features such as cementation, compaction, dissolution, dolomitization, and recrystallization.
4 Students will relate petrographic observations to depositional environments, using mineralogy, grain characteristics, and sedimentary structures to infer sediment provenance and basin history.
5 Students will collect and document field samples that address a specific sedimentary research question, demonstrating best practices in sample selection, stratigraphic context, and data recording.
6 Students will prepare thin sections from hand samples and describe mineralogical and textural features using standard petrographic terminology.
7 Students will analyze and interpret thin section data quantitatively, employing visual estimation methods, point counting, and data presentation tools such as spreadsheets or classification diagrams.
8 Students will compare and contrast the petrology and depositional processes of siliciclastic, carbonate, evaporitic, phosphatic, and siliceous sedimentary rocks.
9 Students will evaluate the petrologic characteristics of economically significant sedimentary deposits; including coal, petroleum reservoirs, banded iron formations, and cherts; and interpret their origins.
10 Students will design, write, and present an original sedimentary petrology research project that integrates field observations, laboratory data, and thin section analysis within a scientific framework.

GEO

Course Number
6410

Department
Geosciences

Dual-Listed Courses
GEO5410 - Advanced Stratigraphy

Course Title
Advanced Stratigraphy

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students study correlation of clastic and carbonate rocks, and depositional and erosional systems in marine and continental sedimentary basins, learning sequence stratigraphy, chemostratigraphy, paleomagnetism and biostratigraphy, sedimentary responses to changes in base level, and influences of tectonic and climatic forces. Additional coursework may be required for graduate students.

Course Learning Objectives

Course Learning Outcomes
1 Students will integrate and analyze stratigraphic data from multiple sources; including outcrops, well logs, seismic profiles, and cores, to reconstruct depositional environments and correlate sedimentary units.
2 Students will interpret sedimentary successions in terms of depositional processes, base-level changes, and accommodation space, and reconstruct the evolution of sedimentary basins through time.
3 Students will apply principles of sequence stratigraphy to identify stratigraphic surfaces, system tracts, and sequences in clastic and carbonate settings, and relate them to tectonic and eustatic controls.
4 Students will evaluate the use of biostratigraphy, magnetostratigraphy, and chemostratigraphy as chronostratigraphic tools to build and refine temporal frameworks in the rock record.
5 Students will perform facies analysis to interpret depositional settings, recognize facies associations, and construct depositional models in both marine and non-marine systems.
6 Students will use seismic and well log data to interpret stratigraphic architecture, delineate stratigraphic traps, and assess subsurface resource potential.
7 Students will assess the relationship between tectonic regimes and sedimentary systems, with emphasis on foreland basins, sequence stacking patterns, and sediment routing.
8 Students will analyze shoreline trajectories, stratigraphic surfaces, and sedimentary architectures to infer past shoreline migration and sea-level changes.
9 Students will synthesize lithologic, stratigraphic, and geophysical data to make predictions about hydrocarbon-bearing intervals and stratigraphic traps in Utah's sedimentary basins.
10 Students will evaluate the hierarchical organization of stratigraphic sequences and recognize their significance in interpreting basin history, resource distribution, and global geologic events.

GEO6420 - Ore Deposits - 3 - Credits

Course Overview

Course Prefix
GEO

Course Number
6420

Department
Geosciences

Dual-Listed Courses
GEO5420 - Ore Deposits

Course Title
Ore Deposits

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course is designed as an introduction to ore deposits and ore-forming processes. The chief objectives are (1) a basic understanding of how ore deposits form, (2) to learn how ore deposits are classified, and (3) to understand the origins of different types of ore deposits. The primary focus is on metallic mineral deposits, but some of the more important non-metallic deposits will also be covered, excluding hydrocarbons. Graduate students will write an additional research proposal.

Required

Complete ALL of the following Courses:

- GEO2800 - Minerals and Rocks

Course Learning Objectives

Course Learning Outcomes
1. Recognize and characterize secondary ore and gangue (non-economic) minerals in waste rock (tailings) from the Copper Blossom Mine tailings
2. Create a sampling and analysis plan for tailings and surrounding area to characterize mineralogy, and identify and document environmental contamination
3. Integrate field observations and analyses to compile a report of the ore mineralization and environmental impact of mine waste, including recommendations for either additional ore processing or environmental remediation
4. Reinforce science communication skills (field notes, sketches, maps, and report)

GEO6430 - Invertebrate Paleontology and Paleobotany - 3 - Credits

Course Overview

Course Prefix
GEO

Course Number
6430

Department
Geosciences

Dual-Listed Courses
GEO5430 - Invertebrate Paleontology and Paleobotany

Course Title
Invertebrate Paleontology and Paleobotany

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course surveys prominent invertebrate groups, including their diagnostic morphologic features, stratigraphic ranges, and environmental tolerances. It equips students with the necessary information and techniques to enable them to recognize and utilize fossils in stratigraphic and paleoenvironmental interpretation. Additional coursework is required for those enrolled in the graduate-level course.

Credit Hours

Credit Hours Min:
3

Contact Hours

Contact Hours Min:

Lecture Hours

Lecture Hours Min:
3

No Requirements

Course Learning Objectives

Course Learning Outcomes
1 Students will describe the processes that control fossil preservation and evaluate the completeness and biases of the fossil record across different environments and taxa.
2 Students will identify and describe fossil specimens using standard paleontological terminology, including morphology, ontogenetic variation, and taphonomic features.
3 Students will apply the principles of biological taxonomy and the rules of zoological and botanical nomenclature to recognize, name, and classify fossil species.
4 Students will construct and interpret phylogenetic trees using morphological character data, and explain how cladistic methods reveal evolutionary relationships among fossil organisms.
5 Students will use invertebrate fossils as biostratigraphic and paleoenvironmental indicators to determine the relative age of rock units and reconstruct ancient marine and terrestrial settings.
6 Students will compare major groups of fossil invertebrates; including sponges, cnidarians, bryozoans, brachiopods, mollusks, echinoderms, graptolites, and arthropods; describing their anatomy, evolutionary significance, and ecological roles.
7 Students will interpret trace fossils (ichnology) as evidence of organismal behavior, sediment interaction, and depositional environments.
8 Students will summarize the fossil record of major plant groups; including algae, bryophytes, lycopods, horsetails, ferns, gymnosperms, and angiosperms and explain key evolutionary transitions such as the colonization of land and the origin of seeds and flowers.
9 Students will analyze how fossil plants are used to reconstruct paleoclimates and paleoenvironments, with examples from important formations such as the Green River Formation.
10 Students will synthesize the relationships between major evolutionary events; such as the diversification of angiosperms, mass extinctions, and the rise of modern ecosystems; to explain how the fossil record informs our understanding of life's history on Earth.

GEO6440 - Vertebrate Paleontology - 3 - Credits

Course Overview

Course Prefix
GEO

Course Learning Objectives

Course Learning Outcomes
1 Students will be able to describe and analyze the evolutionary origin of chordates and vertebrates using embryological, anatomical, and fossil evidence.
2 Students will evaluate and interpret the fossilization process, taphonomic pathways, and the geological contexts that favor vertebrate fossil preservation.
3 Students will use cladistics and phylogenetic systematics to construct and interpret evolutionary relationships among vertebrate taxa.
4 Students will identify major groups of extinct and extant jawless and jawed vertebrates, and explain the anatomical innovations that characterize each group through time.
5 Students will analyze the evolutionary transition from aquatic to terrestrial vertebrates, including key adaptations in morphology, physiology, and behavior.
6 Students will compare the skeletal and dental features of major vertebrate lineages, with emphasis on amniotes, synapsids, and diapsids, and assess their evolutionary significance.
7 Students will evaluate the diversity and evolutionary trends in Mesozoic vertebrates, including dinosaurs, pterosaurs, and marine reptiles, and interpret their adaptations and extinction patterns.
8 Students will trace the evolutionary origin of flight in vertebrates, focusing on birds and their Mesozoic precursors, and explain the anatomical changes involved.
9 Students will examine the evolutionary history of mammals, including key transitional fossils, and differentiate between major clades such as monotremes, marsupials, and placentals.
10 Students will assess the fossil evidence for primate and human evolution, and synthesize how anatomical and behavioral changes reflect broader evolutionary trends through the Cenozoic.

Complete ALL of the following Courses:

- GEO2800 - Minerals and Rocks
- GEO3550 - Sedimentation and Stratigraphy

Course Learning Objectives

Course Learning Outcomes

1. Explain the basic chemistry of the carbonate system and the factors affecting carbonate precipitation, solubility, and mineralogy.
2. Understand the characteristics of the “Carbonate Factory” and environmental factors that control sedimentation within it.
3. Identify the main components (grain types, matrix, cements, spar) of carbonate rocks and explain their origin in the carbonate system.
4. Classify carbonate rocks based on the grain vs. matrix content and depositional texture using the Folk and Dunham classification schemes, respectively.
5. Summarize the development and importance of carbonate porosity and diagenesis.
6. Compare the depositional environments, sedimentary facies, and sequences (cycles) on carbonate platforms, shelves, and ramps.
7. Apply this knowledge to the description and interpretation of local carbonate strata.

GEO6480 - Tectonics of Sedimentary Basins - 3 - Credits

Complete ALL of the following Courses:

- GEO2800 - Minerals and Rocks
- GEO3550 - Sedimentation and Stratigraphy

Course Learning Objectives

Course Learning Outcomes

1. Explain the interconnectedness of depositional and structural processes to first create, then fill, and finally preserve and/or destroy sedimentary basins.
2. Summarize criteria for classifying sedimentary basins.
3. Compare the tools geoscientists use to study the tectonics of sedimentary basins.
4. Understand major structural, tectonic, and geodynamic mechanisms that produce basins and the major sedimentologic and stratigraphic processes that fill them.
5. Examine characteristics of sedimentary basins in divergent, convergent, transform, and intraplate tectonic settings.
6. Compare diagnostic features of sedimentary basins with different tectonic origins.
7. Synthesize various datasets to interpret the tectonic origin of a sedimentary basin.
8. Debate basin interpretations from the scientific literature, critique the strength of their arguments given the available geologic data, and rank their validity.

GEO6490 - Facies Analysis of Sedimentary Rocks - 3 - Credits

1. Understand the differences between piezometers, monitor wells and water-supply wells
2. Understand the differences between the five main drilling techniques; namely, cable tool, mud rotary, air rotary, air percussion and reverse-circulation rotary
3. Know how to drill and complete a water-supply well, including installation of the casing, well screen, filter pack, seal(s) and pump, as well as well development and rehabilitation
4. Know how to drill and complete piezometers and monitor wells
5. Understand which hydraulic parameters can be measured in a laboratory, and which techniques are available to measure them
6. Know how to conduct, and calculate hydraulic parameters using, step-drawdown, specific-capacity and slug tests, as well as other single-well and multiple-well hydraulic tests
7. Know how to measure water levels in wells
8. Know how to measure the discharge from a pipe and of a stream
9. Know how to collect water samples from wells
10. Become familiar with groundwater tracer tests, including both single-well and multiple-well tests, as well as various types of tracers

GEO6540 - Quantitative Methods in Geology - 3 - Credits

Course Overview

Course Prefix
GEO

Course Number
6540

Department
Geosciences

Dual-Listed Courses
GEO5540 - Quantitative Methods in Geology (QI)

Course Title
Quantitative Methods in Geology

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course (which includes three lecture hours per week) covers the application of quantitative, computer-based methodologies to geologic problems, with emphasis on developing coding skills to leverage computational power. Previous experience with programming languages (R/MATLAB) is helpful but not required. Additional coursework is required for those enrolled in the graduate-level course, including student presentation on thesis research methodology.

Simple Requisites

Prerequisite

Type
Prerequisite

Required

Fulfill ALL of the following requirements:

Required

Complete ALL of the following Courses:

- MATH1210 - Calculus I (QL)

AND

Required

Complete ANY of the following Courses:

- GEO3550 - Sedimentation and Stratigraphy
  OR GEO3600 - Geomorphology

Course Learning Objectives

Course Learning Outcomes

1. Gain a basic proficiency in computer coding using the programming language MATLAB
2. Apply MATLAB skills to solve quantitative problems specific to Earth Science
3. Design, write, and execute a MATLAB script to perform operations or solve problems specific to each student's research or interests.

GEO6580 - Thermochronometry - 3 - Credits

Course Overview

Course Prefix
GEO

Course Number
6580

Department
Geosciences

Dual-Listed Courses
GEO7580 - Thermochronometry

Course Title
Thermochronometry

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Constraining the timing and tempo of geological processes is fundamental to geologic research. This course provides an overview of geochronology and thermochronology. Lectures will focus on principles and assumptions of techniques and seminar-style discussions centered on papers applying these methods.

Complete ALL of the following Courses:

- MATH1210 - Calculus I (QL)
- PHYS2210 - Physics for Scientists and Engineers I (QI/BPS)
- PHYS2220 - Physics for Scientists and Engineers II (BPS/QI)

Course Learning Objectives

Course Learning Outcomes

1. Cursory knowledge of the most widely-used tools for imaging structure of the Earth's shallow interior
2. A basic understanding of how we estimate in situ material properties such as mass density, seismic velocity and electrical conductivity
3. An understanding of how we infer desirable properties such as rock lithology and pore fluid content from geophysical properties
4. Hone core geoscience skills in:
   • Describing and interpreting structures & properties of Earth's interior
   • Understanding how science works via inquiry, observation, verification, teamwork, and critical thinking
   • Understanding and creating maps, working with subsurface data, field and laboratory methods, and data reduction and analysis
   • Application of principles of mathematics, chemistry, and physics, as well as computational tools, to the analysis of geologic data and solution of problems

GEO6670 - Inverse Theory - 3 - Credits

Option 1

Complete ALL of the following Courses:

- MATH1210 - Calculus I (QL)
  AND MATH1220 - Calculus II (QL)

OR

Option 2

Complete ALL of the following Courses:

- STAT3000 - Statistics for Scientists (QI)

Course Learning Objectives

Course Learning Outcomes

1. Understand the principals of linear algebra and statistics that underpin all geophysical model parameterization
2. Hone geoscience tools for determining properties of Earth's interior, including:
   • how the enterprise of science works via inquiry, observation, verification, teamwork, and critical thinking
   • skills for the study and interpretation of geological materials, history, and features, such as understanding and creating maps, working with subsurface data, and data reduction and analysis
   • Apply principles of mathematics and physics, as well as computational tools, to the analysis and solution of geoscience data and problems

GEO6680 - Paleoclimatology - 3 - Credits

Course Overview

Course Prefix
GEO

Course Number
6680

Department
Geosciences

Cross-Listed Courses
PSC6680 - Paleoclimatology, WATS6680 - Paleoclimatology

Dual-Listed Courses
GEO5680 - Paleoclimatology

Course Title
Paleoclimatology

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Covers climate through the past four billion years of geologic time. Explores driving forces behind climate changes. Examines data and methods used in paleoclimate research. Includes discussion of literature and stresses local paleoclimate records. Three lectures per week, along with field trips.

GEO7580 - Thermochronometry - 3 - Credits

Course Overview

Course Prefix
GEO

Course Number
7580

Department
Geosciences

Dual-Listed Courses
GEO6580 - Thermochronometry

Course Title

Thermochronometry

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Constraining the timing and tempo of geological processes is fundamental to geologic research. This course provides an overview of geochronology and thermochronology. Lectures will focus on principles and assumptions of techniques and seminar-style discussions centered on papers applying these methods.

GEO7650 - Quaternary Geochronology - 3 - Credits

Course Overview

Course Prefix
GEO

Course Number
7650

Department
Geosciences

Dual-Listed Courses

GEO6650 - Quaternary Geochronology

Course Title

Quaternary Geochronology

Grade Mode
Standard Letter

Repeat Status
NR

Course Description

This course examines the principles behind the most widely used numerical dating techniques for the Quaternary period (last 2 million years). Discussion will focus on the strengths and weaknesses of each technique and provide examples of their successful applications to a range of geological and geoarchaeological materials and problems.

No Requirements

Course Learning Objectives

Course Learning Outcomes

1. Students will describe the concepts, terminology, and classifications about the processes that make up the Earth's natural systems
2. Students will differentiate the main factors that influence the spatial distribution of weather and climate
3. Students will interpret the spatial distribution of physical landscapes including the ecosystems and the processes that influence their main characteristics
4. Students will illustrate how core physical geography concepts can be applied to different scenarios.

GEOG1005 - Physical Geography Lab - 1 - Credits

Course Overview

Course Prefix
GEOG

Course Number
1005

Department
Environment & Society

Course Title
Physical Geography Lab

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Laboratory exercises in natural physical geography. Provides initial field and laboratory experiences in the earth system. Required for all geography majors.

Complete ALL of the following Courses:

- GEOG1000 - Physical Geography (BPS)

may be taken concurrently

Course Learning Objectives

Course Learning Outcomes

1. Gain a basic understanding of physical geography (e.g., factual knowledge, methods, principles, generalizations, and theories).
2. Learn to apply course material to improve thinking, problem-solving, and decision.
3. Develop specific skills, competencies, and points of view needed by professionals

in this field.
More specifically, students will:
1. Gain a comprehensive understanding of physical geography's fundamental concepts, methods, and principles, including the Earth's systems, landforms, climate, and ecosystems.
2. Learn how physical geography can be used to understand and address real-world environmental issues such as climate change, natural disasters, food production, and resource management.
3. Enhance critical thinking skills and adopt professional viewpoints by analyzing and evaluating physical geography theories and models, enabling you to understand complex environmental systems and make informed decisions as a physical geographer and citizen.
4. Apply your knowledge of physical geography to analyze and address real-world environmental issues.

GEOG1300 - World Geography: Human and Environmental Dynamics (BSS) - 3 - Credits

Course Overview

Course Prefix
GEOG

Course Number
1300

Department
Environment & Society

Course Title
World Geography: Human and Environmental Dynamics (BSS)

General Education Attribute
BSS

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Survey of world cultural regions, with an analysis of political, economic, and resource patterns in their physical setting.

Course Learning Objectives

Course Learning Outcomes
By the end of this course, students will be able to:

1. Recognize diverse realities of different human populations and their economies and environments around the world.
2. Interpret correctly data about the world presented in a variety of forms, including in maps, graphs, and tables.
3. Describe the human impact on the global environment and compare the relationships between societies and their environments at various scales.
4. Apply the concept of globalization to understand key aspects of social and environmental change and identify how places around the world are linked through different kinds of exchange.

5. Analyze patterns of unevenness in socioeconomic development, demographic change, and indicators of human wellbeing.

Course Learning Objectives

Course Learning Outcomes
1. Explain how humans and the environment influence each other in different social and ecological contexts
2. Summarize how historical shifts in environment and natural resource management reflect changing social, political, and ecological priorities.
3. Anticipate how different segments of society might respond to changes in environmental management, policies, or conditions
4. Critically analyze the underlying drivers of key environmental challenges in the U.S., including ongoing actions to address them.

GEOG2800 - Introduction to Geographic Information Sciences - 4 - Credits

Course Overview

Course Prefix
GEOG

Course Number
2800

Department
Environment & Society

Course Title
Introduction to Geographic Information Sciences

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course introduces students to the background and theory behind geographic information systems and spatial analysis. Students learn to integrate and analyze spatial information from different geographic sources.

- ENGL2010 - Research and Argument Across Perspectives (CL2)

Course Learning Objectives

Course Learning Outcomes
By the end of this course, students will be able to:

1. Describe and compare a variety of approaches geographers take to researching and understanding human-environment relationships around the world.

2. Apply concepts of human-environment geography to analyze human-environment interactions and related social interactions in current and past human societies.
3. Conduct secondary research on a topic of human-environment geography of personal or professional interest.
4. Communicate more effectively in both written and oral forms.

GEOG3200 - Principles of Remote Sensing - 3 - Credits

Course Overview

Course Prefix
GEOG

Course Number
3200

Department
Environment & Society

Course Title
Principles of Remote Sensing

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course introduces remote sensing, an interdisciplinary field involving data acquisition and analysis of the Earth using airborne and satellite sensor technologies. Students explore fundamental concepts and gain hands-on experience through weekly lab exercises and a final project.

Course Learning Objectives

Course Learning Outcomes

By the end of this course, you will be able to:
1. Automate geospatial tasks in ArcGIS using Python
2. Create custom toolboxes and add-ins for ArcGIS
3. Make simple maps using Python
4. Be ready to use Python beyond ArcGIS

GEOG3800 - Geospatial Data Visualization - 3 - Credits

Course Overview

Course Prefix
GEOG

Course Number
3800

Department
Environment & Society

Course Title
Geospatial Data Visualization

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students explore how effective graphics illuminate data trends and patterns and make big data digestible. Students learn to consume data visualizations intelligently and produce powerful data graphics through application of fundamental visual strategies and tools. Basic statistical knowledge is recommended.

Course Learning Objectives

Course Learning Outcomes

1. Analyze and select appropriate visualization methods by interpreting data patterns, trends, and outliers across different data types and analytical contexts.
2. Create a diverse set of static and interactive data visualizations including charts, maps, and using industry-standard tools such as Tableau and ArcGIS Pro.
3. Apply and evaluate visual design principles (e.g., color theory, layout, and perceptual effectiveness) to produce clear, accurate, and aesthetically effective visualizations.
4. Synthesize and critique data-driven narratives by combining multiple visualizations into cohesive stories while identifying and addressing bias, misleading practices, and ethical concerns

GEOG4210 - Geography of Utah - 3 - Credits

Course Overview

Course Prefix
GEOG

Course Number
4210

Department
Environment & Society

Course Title
Geography of Utah

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Applies principles and methods of physical, cultural, and human-environment geography to the study of Utah's people, places, and environments. Includes opportunities to build skills in GIS mapping, field studies of biophysical and social phenomena, and other forms of geographic inquiry.

Prerequisite

Required

Complete ALL of the following Courses:

- GEOG5500 - Advanced Geographic Information Sciences (GIS)
- GEOG2800 - Introduction to Geographic Information Sciences
  OR WILD2800 - Introduction to Geographic Information Sciences
  OR WATS2800 - Introduction to Geographic Information Sciences

***GEOG5500 ADVANCED GIS** may be taken concurrently*

Course Learning Objectives

Course Learning Outcomes

1. Showcase your abilities in a concise and powerful digital portfolio designed to communicate quickly and effectively the variety of skills you bring to the table.
2. Students will construct a website to create and house a digital portfolio of their skills and work experience.
3. Students will synthesize their skillsets to create a visually dynamic website that showcases the range of their geospatial skills.
4. Students will present a portfolio demonstration that will stimulate conditions in a career fair expo/conference networking.

GEOG4920 - GIS Internship - 1 - 6 Credits

Course Overview

Course Prefix
GEOG

Course Number
4920

Department
Environment & Society

Course Title
GIS Internship

Grade Mode
Pass/Fail

Repeat Status
RP

Course Description

GIS internships give students work experience applying classroom skills to real-world problem solving while meeting the geospatial demands of their communities. Students find and apply for internship positions, working with a faculty sponsor to establish learning objectives and time commitment.

Course Learning Objectives

Course Learning Outcomes

1. Demonstrate the ability to select and apply appropriate remote sensing methods, such as image processing, classification, or change detection, to analyze geospatial data.
2. Demonstrate project management skills by creating a detailed plan, setting milestones, and managing resources effectively.
3. Successfully collect, organize, and preprocess remote sensing data, considering factors such as sensor characteristics, spatial resolution, and data quality.
4. Apply spatial analysis techniques to extract meaningful information from remote sensing data and interpret the findings to address the project's goals.
5. Demonstrate the ability to integrate diverse data types to enhance the comprehensiveness and accuracy of the remote sensing analysis.
6. Exhibit proficiency in using industry-standard remote sensing software and tools for tasks such as image processing, spatial analysis, and visualization.
7. Apply critical thinking skills to identify and overcome obstacles, adapting the analysis as needed to achieve meaningful results.
8. Develop clear and concise project documentation, reports, and presentations that effectively convey the purpose, methods, and results of the remote sensing analysis.
9. Demonstrate awareness of ethical considerations in remote sensing, ensuring responsible and respectful use of geospatial data.
10. Recognize the importance of staying informed about advancements in remote sensing technologies and methodologies, and exhibit adaptability in response to changing project requirements.

Proficiency in ArcGIS Pro

Course Learning Objectives

Course Learning Outcomes
1. Interpret and Analyze Data: Students will analyze various data types to identify patterns, trends, and outliers, and will evaluate the most suitable data representation methods for different scenarios.
2. Create Data Visualizations: Students will apply their knowledge of data visualization tools to create a wide range of visualizations using Flourish, an open-source tool, and ArcGIS Pro, an industry-standard geospatial platform.
3. Understand Design Principles: Students will demonstrate a deep understanding of design principles for data visualization, including color theory, typography, and layout design, and will create aesthetically pleasing and informative visualizations that adhere to best practices.
4. Craft Data Narratives: Students will synthesize multiple visualizations to craft compelling narratives that effectively communicate insights and key messages to a target audience.
5. Evaluate Ethical Considerations: Students will critically evaluate data visualizations for bias and misleading practices, and address ethical concerns in both visualizations and data-driven narratives.

Course Learning Objectives

Course Learning Outcomes

1. Ethical Issues: Bias and Fairness, Social Justice, Informed Consent, Ownership and Control.
2. Security Issues: Data Breaches, Location-based Attacks, Infrastructure Vulnerabilities, geospatial metadata exploitation.
3. Privacy Issues: Location privacy, De-anonymization risks, Smart City Surveillance, Community Privacy Concerns.

GEOG6835 - Geovisualization for Remote Sensing Applications - 1 - Credits

Course Overview

Course Prefix
GEOG

Course Number
6835

Department
Environment & Society

Cross-Listed Courses
NR6835 - Geovisualization for Remote Sensing Applications

Course Title
Geovisualization for Remote Sensing Applications

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course provides students with a comprehensive understanding of visualization techniques unique to remote sensing.

Credit Hours

Other Enrollment Recommendations
Coursework or applied experience in remote sensing

No Requirements

Course Learning Objectives

Course Learning Outcomes

1. Importance of remote sensing visualizations in various fields.
2. Understanding the role of visualization in interpreting remote sensing data.
3. Introduction to visualization principles and techniques.
4. Image Enhancement Techniques.
5. Basic image enhancement techniques for improving the visual quality of remote sensing data.
6. Contrast stretching, histogram equalization, and other enhancement methods.
7. Color Mapping and False Color Composites.
8. Principles of color mapping in remote sensing.
9. Creating false color composites and their applications.
10. Multispectral and Hyperspectral Visualization.
11. Visualization techniques for multispectral and hyperspectral remote sensing data.
12. Exploring the spectral characteristics of different materials.
13. LiDAR data visualization and terrain modeling.
14. Time-series Visualization.
15. Thermal Infrared Visualization.

GEOG6855 - Advanced Geospatial Artificial Intelligence - 3 - Credits

Course Overview

Course Prefix
GEOG

Course Number
6855

Department
Environment & Society

Cross-Listed Courses
NR6855 - Advanced Geospatial Artificial Intelligence

Course Title
Advanced Geospatial Artificial Intelligence

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course delves into the deep learning aspect of geospatial artificial intelligence (GeoAI), with strong emphasis on geospatial computer vision. Students gain hands-on experience with PyTorch in order to apply GeoAI principles for extracting valuable information from geospatial data.

Credit Hours

Credit Hours Min:
3

Contact Hours

Contact Hours Min:
3

Billing Hours

Billing Hours Min:

Lecture Hours

Lecture Hours Min:
3

Other Enrollment Recommendations
GIS and Python experience is strongly recommended.

Course Learning Objectives

Course Learning Outcomes
1. Introduction to Geospatial Deep Learning: Understand the principles and applications of deep learning in the context of geospatial data, including convolutional neural networks (CNNs) for image analysis.
2. Integration of Remote Sensing and GeoAI: Integrate remote sensing data with machine learning algorithms for geospatial analysis.
3. Develop models for land cover classification, change detection, and other applications.
4. Case Studies and Real-world Applications: Discuss real-world applications of GeoAI through case studies, exploring how these technologies are employed in fields such as environmental monitoring, urban planning, and disaster response.
5. Analyze and interpret real-world case studies applying GeoAI to address geospatial challenges.
6. Propose innovative solutions for new applications or problem domains.
7. Gain hands-on experience with industry-standard tools for remote sensing and GeoAI.
8. Develop practical skills relevant to employment in research or industry.
9. Emerging Trends in Remote Sensing and GeoAI: Stay informed about current and emerging trends in remote sensing and GeoAI.
10. Discuss potential future developments and their impact on research and industry.

GEOG6880 - Advanced Remote Sensing & GeoAI Internship - 2 - 3 Credits

Course Overview

Course Number
6880

Department
Environment & Society

Cross-Listed Courses
NR6880 - Advanced Remote Sensing & GeoAI Internship

Course Title
Advanced Remote Sensing & GeoAI Internship

Grade Mode
Standard Letter

Repeat Status
RP

Course Description
Internships in remote sensing and geospatial artificial intelligence (GeoAI) provide graduate students with work experience applying classroom skills to real-world problem-solving. Students secure the internship opportunity and work with a faculty supervisor to establish student-specific learning objectives.

Course Learning Objectives

Course Learning Outcomes
1. Demonstrate the ability to select and apply appropriate remote sensing methods, such as image processing, classification, or change detection, to analyze geospatial data.
2. Demonstrate project management skills by creating a detailed plan, setting milestones, and managing resources effectively.
3. Successfully collect, organize, and preprocess remote sensing data, considering factors such as sensor characteristics, spatial resolution, and data quality.
4. Apply spatial analysis techniques to extract meaningful information from remote sensing data and interpret the findings to address the project's goals.
5. Demonstrate the ability to integrate diverse data types to enhance the comprehensiveness and accuracy of the remote sensing analysis.
6. Exhibit proficiency in using industry-standard remote sensing software and tools for tasks such as image processing, spatial analysis, and visualization.
7. Apply critical thinking skills to identify and overcome obstacles, adapting the analysis as needed to achieve meaningful results.
8. Develop clear and concise project documentation, reports, and presentations that effectively convey the purpose, methods, and results of the remote sensing analysis.
9. Demonstrate awareness of ethical considerations in remote sensing, ensuring responsible and respectful use of geospatial data.
10. Recognize the importance of staying informed about advancements in remote sensing technologies and methodologies, and exhibit adaptability in response to changing project requirements.

Course Learning Objectives

Course Learning Outcomes

1. Students compare and contrast cultural similarities and differences between German-speaking cultures, and their own cultures.

2. Students describe and critically analyze historical, political, social factors related to German fairy tales and Germanic mythology.

3. Students develop insights into concepts and contexts related to culturally specific narratives, products, and practices.

4. Students demonstrate advanced understanding of the cultural texts' origin, developments, and variants.

Course Learning Objectives

Course Learning Outcomes
By the end of this course, students will be able to:

1. Integrate theory and practice by applying motivational and evidence-based psychosocial interventions to diverse mental health and addiction contexts.
2. Demonstrate competency in core skills of Motivational Interviewing, CBT, and Solution-Focused Brief Therapy through applied exercises and case analysis.
3. Critically evaluate treatment approaches for ethical, cultural, and developmental appropriateness within family and systemic contexts.
4. Explain the role of psychopharmacology in supporting psychosocial interventions and articulate strategies for interdisciplinary collaboration.
5. Develop comprehensive treatment plans that incorporate biopsychosocial-spiritual perspectives and promote recovery across the lifespan.

HDFS7010 - Family Research and Application - 3 - Credits

Course Overview

Course Prefix
HDFS

Course Number
7010

Department
Human Development and Family Studies

Dual-Listed Courses
HDFS6010 - Family Research and Application

Course Title
Family Research and Application

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course is an overview and critique of substantive areas of research in marriage and the family. Additional coursework is required for those enrolled in the graduate-level course.

HDFS7032 - Multivariate and Dyadic Data Analysis in Human Development and Family Studies - 3 - Credits

Course Overview

Course Prefix
HDFS

Course Number
7032

Department
Human Development and Family Studies

Course Title
Multivariate and Dyadic Data Analysis in Human Development and Family Studies

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course provides an introduction to common multivariate statistical analyses, including dyadic methods and approaches, and the statistical software used to conduct them, with an emphasis on applications of these approaches in family and developmental sciences.

Prerequisite

Required

Complete at least 1 of the following courses:

- EDUC7610 - Regression Analysis
  OR PSY7610 - Regression Analysis

HDFS7033 - Dyadic and Longitudinal Data - 3 - Credits

Course Overview

Course Prefix
HDFS

Course Number
7033

Department
Human Development and Family Studies

Course Title
Dyadic and Longitudinal Data

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Understand the concepts related to Structural Equation Modeling (SEM), and Hierarchical Linear Modeling (HLM). There will be a specific emphasis on understanding and applying methods of working with dyadic and longitudinal data. Students will specify their own models and analyze the data using related software.

Course Learning Objectives

Course Learning Outcomes
1. Understand important theories regarding the brain and relationships including the Triune Brain, Polyvagal, and Attachment theories.

2. Demonstrate how these theories can be integrated with and applied to students' current areas of emphasis/fields of study.

3. Understand more about the Mind-Body connection and its' relevance to relationships.

4. Enhance critical thinking skills regarding research questions, hypotheses, methods and analysis, interpretation of results, and dissemination.

5. Develop and complete a research project based on relevant theory(ies) that advances academic theory, clinical practice, and/or social policy.

Course Learning Objectives

Course Learning Outcomes

1. Analyze global health professional roles and healthcare systems through observational learning.
2. Evaluate the impact of cultural, social, and economic factors on healthcare delivery in Nepal.
3. Compare international and U.S. health professions education, policies, and public health approaches.
4. Engage in discussions with healthcare professionals to understand global health challenges.
5. Reflect on personal and professional growth through structured debriefing and coursework.

HEP1200 - Community and Public Health Careers - 3 - Credits

Course Overview

Course Prefix
HEP

Course Number
1200

Department
Kinesiology and Health Science

Course Title
Community and Public Health Careers

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course introduces students to community and public health careers while fostering career-ready skills. Students explore health systems, analyze social and environmental influences on health, and apply evidence-based strategies through research, communication, and applied projects to prepare for professional pathways.

No Requirements

Course Learning Objectives

Course Learning Outcomes

1. Discuss the burden of disease in various regions of the world and the variations in disease incidence and prevalence both within and across countries and how the disease burden can be addressed in effective ways.
2. Discuss the multi-directional links between health and social and economic factors.
3. Identify and contrast the impact of political, socio-cultural, educational, economic, and environmental systems in both developed and developing nations in relation to health status.

4. Critically discuss the influence of poverty, educational attainment, cultural traditions, and the status of women on the health of diverse populations.
5. Describe how globalization has changed the patterns of the spread of disease and the methods needed to control disease.
6. Identify and critically discuss issues in the organization and delivery of public health and health care services and methods to address global health disparities and issues based on course concepts. Consider cost, efficacy, and sustainability of solutions.
7. Outline the determinants of health and risk factors for conditions of importance to global health.

Course Learning Objectives

Course Learning Outcomes
1. Understand the history and relevance of community and public health.
2. Identify the structure and function of public and community health-related organizations
3. Identify a philosophy of community and public health.
4. Apply demographic and epidemiological skills in the investigation, prevention and control of communicable and non-communicable diseases.
5. Identify how health is affected by air, water, food and the communities where people live.
6. Describe how community and public health efforts help to manage environmental pollutants, hazards and wastes.
7. Identify how health promotion planning and implementation is applied in communities.
8. Describe what a well-designed school health program looks like and does.

9. Distinguish between the different needs of specific populations and identify different ways of addressing those needs.
10. Identify and describe some of the health disparities that exist between race and ethnic groups and how they can be addressed.
11. Identify issues related to mental health & Alcohol, Tobacco and Other Drugs (ATOD).
12. Describe the organization and characteristics of the U.S. healthcare system(s) and how that differs from that of other countries.

HEP3700 - Introduction to Epidemiology for Health Educators - 3 - Credits

Course Overview

Course Prefix
HEP

Course Number
3700

Department
Kinesiology and Health Science

Course Title
Introduction to Epidemiology for Health Educators

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This class is an introductory epidemiology for students in health education. The primary goal for this class is to discuss fundamental knowledge and understandings of epidemiology as a health educator or health professional in the field.

Course Learning Objectives

Course Learning Outcomes
1. Describe the core concepts, principles, and uses of epidemiology in public health practice.
2. Analyze population health trends using demographic transition concepts and key U.S. data.
3. Evaluate the validity, reliability, and quality of epidemiologic data, including morbidity and mortality measures.

4. Apply descriptive epidemiology to characterize disease patterns by person, place, and time.
5. Differentiate major epidemiologic study designs and identify when each is appropriately used.
6. Interpret public health data to inform evidence-based decisions in health education and population health.

HEP3800 - Health Care Systems and Administration - 3 - Credits

Course Overview

Course Prefix
HEP

Course Number
3800

Department
Kinesiology and Health Science

Course Title
Health Care Systems and Administration

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course explores the history, structure, and delivery of U.S. health care systems and examines the administrative functions of health services organizations. Topics include health policy, population health, access and quality, financing, workforce, legal and ethical issues, and organizational management.

2.Identify and explain your personal leadership values, strengths, and weaknesses

3. Articulate your personal leadership style and a leadership development plan
4. Develop qualities, skills, and competencies to enhance your ability to lead yourself and others
5.Understand the importance of policy and advocacy related to health outcomes and disparities at multiple levels
6. Identify policy-level interventions that are effective in promoting healthy behaviors and social conditions
7. Understand how to advocate for programs, policy, and resources
8. Develop skills around communication, advocacy and leadership needed to be successful professionally.

HEP4600 - Health Science Internship - 1 - 3 Credits

Course Overview

Course Prefix
HEP

Course Number
4600

Department
Kinesiology and Health Science

Course Title
Health Science Internship

Grade Mode
Temporary Standard Letter

Repeat Status
RP

Course Description
This course provides supervised field experience in health science. Students apply classroom knowledge in professional settings, develop career-relevant skills, and engage in projects that advance health, wellness, and community well-being through practical, real-world practice.

Required

Complete ALL of the following Courses:

- HEP3600 - Functions of Community & Public Health (CI)
- HEP4100 - Professional Development in Health Promotion
- HEP4200 - Community-Based Program Planning, Implementation, and Evaluation

Course Learning Objectives

Course Learning Outcomes

1. Apply academic knowledge and skills in a supervised professional setting.
2. Demonstrate effective communication, professionalism, and collaboration in the workplace.
3. Reflect on their performance and experiences to identify strengths and areas for growth.
4. Evaluate the structure, function, and impact of the host organization in its field or community.

HEP4700 - Senior Thesis - 1 - 6 Credits

Course Overview

Course Prefix
HEP

Course Number
4700

Department
Kinesiology and Health Science

Course Title
Senior Thesis

Grade Mode
Standard Letter

Repeat Status
NR

Course Description

Thesis requirements include a literature review, primary data collection (e.g., interviews, surveys), and regular meetings with a faculty mentor for guidance and development.

Course Learning Objectives

Course Learning Outcomes

1. Design and carry out an independent, in-depth project in their area of academic or professional interest.
2. Engage with scholarly or professional literature to inform and support their work.
3. Produce a well-organized, original thesis or project that demonstrates critical

thinking, creativity, and academic rigor.
4. Present their work clearly and effectively to academic or professional audiences, both in writing and orally.

HEP4800 - Human Diseases - 3 - Credits

Course Overview

Course Prefix
HEP

Course Number
4800

Department
Kinesiology and Health Science

Course Title
Human Diseases

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course explores the body systems and common diseases that afflict them. Risk factors are identified with a focus on risk reduction and the implementation of health promotion strategies in order to prevent or intervene in the disease process.

No Requirements

Course Learning Objectives

Course Learning Outcomes
1. Understand the mechanisms of disease development and defense and their effect on health.
2. Become familiar with diseases associated with each body system
3. Understand the burden of disease on individuals and communities
4. Gain an applied understanding of the relationship between modifiable risk factors and disease
5. Explore a variety of diseases associated with non-modifiable risk factors and their effect on individual and community health
6. Apply knowledge of human diseases to principles of prevention.

HEP5000 - Health Trends Across Communities (CI) - 3 - Credits

Course Overview

Course Prefix
HEP

Course Number
5000

Department
Kinesiology and Health Science

Course Title
Health Trends Across Communities (CI)

General Education Attribute
CI

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course examines public health patterns across communities, exploring how history, location, education, income, and resources affect health outcomes. Students analyze differences in health trends, real-world influences on well-being, and efforts to improve results through education, outreach, and practical solutions.

Type
Prerequisite

Required

Complete ALL of the following Courses:
- ENGL2010 - Research and Argument Across Perspectives (CL2)
- HEP2500 - Health and Wellness

- HEP4100 - Professional Development in Health Promotion

Course Learning Objectives

Course Learning Outcomes

1. List and describe health equity frameworks and theories.
2. Identify and understand key terms related to health equity, apply these terms to health equity discussions.
3. Explore the magnitude, source, and prevention of health disparities for a variety of demographic groups.
4. Convey the impact of health disparities in the areas of mental/behavioral health, obesity, and chronic disease.
5. Apply evidence based strategies to advocate for political, social, or economic policies that will improve health equity in diverse populations.

Course Learning Objectives

Course Learning Outcomes

1. Explain foundational concepts in global health and their connection to international development.
2. Analyze global health challenges within the context of community needs and cultural environments.
3. Apply project management, communication, research, or planning skills to real-world global health initiatives.
4. Evaluate models and levels of service learning and their role in addressing societal needs.
5. Critically reflect on experiential learning activities to assess personal, academic, and professional growth.

HEP5400 - Prevention Strategies for Obesity and Disordered Eating - 3 - Credits

Course Overview

Course Prefix
HEP

Course Number
5400

Department
Kinesiology and Health Science

Course Title
Prevention Strategies for Obesity and Disordered Eating

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Promoting healthy behaviors using a "Health at Every Size" approach is the primary goal of the course. Evidence-based programs for obesity and disordered eating prevention is discussed. AdditIonally, students discuss on issues related to obesity and disordered eating (e.g., weight stigma, media literacy, bullying).

Course Learning Objectives

Course Learning Outcomes

1. Apply behavior theory concepts/constructs to the design or implementation of health promotion programs or interventions

HEP6850 - Capstone in Public Health - 3 - Credits

Course Overview

Course Prefix
HEP

Course Number
6850

Department
Kinesiology and Health Science

Course Title
Capstone in Public Health

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course provides a culminating, integrative curricular experience for students enrolled in USU's Master of Public Health program during their last semester prior to graduation.

Course Learning Objectives

Course Learning Outcomes

1. Develop a clear and feasible research question, hypothesis, or project objective addressing a priority public health issue.
2. Produce a professional capstone report or manuscript that demonstrates scholarly rigor and public health relevance.
3. Analyze and interpret data to generate evidence-informed conclusions and recommendations.
4. Integrate knowledge from the five core areas of public health — epidemiology, biostatistics, social and behavioral sciences, environmental health, and health policy and management — to address a complex public health issue.

HEP6900 - Independent Study - 1 - 3 Credits

Course Overview

Course Prefix
HEP

Course Number
6900

Department
Kinesiology and Health Science

Course Title
Independent Study

Grade Mode
Standard Letter

Repeat Status
RP

Course Description
Students conduct independent projects under the direction of one or more professors. This course provides students with the opportunity for individualized study.

Course Learning Objectives

Course Learning Outcomes
1. Collaborate with a faculty mentor to define the scope and objectives of an independent inquiry or project.
2. Pursue self-directed learning or project work using relevant methods and resources.
3. Create a final product demonstrating understanding and application of the chosen topic or skill.
4. Reflect on their learning experience and engage in meaningful discussion with their mentor.

HEP6950 - Independent Research - 1 - 3 Credits

Course Overview

Course Prefix
HEP

Course Number
6950

Department
Kinesiology and Health Science

Course Title
Independent Research

Grade Mode
Standard Letter

Repeat Status
RP

Course Description
This course allows graduate students to pursue personal research interests by formalizing an independent project under the guidance of a graduate professor.

Course Learning Objectives

Course Learning Outcomes

1. Recognize that knowledge of the past, even seemingly simple facts such as what constitutes water, or who discovered oxygen, are in fact the product of widely accepted arguments by historians.
2. Situate scientific activity, personae, and theories in historical context and place current developments in science in historical perspective.
3. Make historical claims based on provided primary sources, formulate an argument about competing accounts of the “same” historical event and make judgments about the use of evidence and argument.
4. Coherently and convincingly communicate how and why science changes, as well as analyze the variety of places and practices through which scientific activity takes place at any given time.

Course Learning Objectives

Course Learning Outcomes

1. Describe your understanding of the categories of religion and science, and the roles they play within your nation, state, community and personal life.

2. Recognize the historical construction of the categories of religion and science with the United States and Europe, keeping in mind the contingency, or non-inevitability, of events as they unfolded.

3. Analyze and describe the way religion has been conceptualized in the last five-hundred years, how this categorization of human activity affects the present, and the implications of it being projected backwards into the past.

4. Analyze and describe the ways science has been described in history, and how this historic representation is changing based on reappraisals of historical fact, understanding as to how events occurred, and the implications for our understanding of history.

Course Learning Objectives

Course Learning Outcomes
1. Establishing basic historical knowledge concerning the history of the Americas, from the pre-colonial era to the present, using food as an historical lens.

2. Introducing historical thinking by emphasizing the uniqueness and difference of the past, the complexity of past experience, and why food culture changed over time and how these changes affected society and economies. The course also introduces students to the problematic nature of the historical record, and how this leads to debates among historians about the meaning of food culture.

3. Improving the development of critical thinking and reading, especially through the examination of primary sources, and introducing research skills, such as finding scholarly information in the library and marshaling evidence from primary sources. The course expects students to improve their abilities to make historical arguments, both in the numerous papers and class discussion. The course will introduce students to working in historical archives.

Course Learning Objectives

Course Learning Outcomes
1. Be conversant on the history of commerce and business-building in Native American communities in the past and the present.

2. Understand how the events of the past centuries have shaped Native Americans' economic situation today.

3. Improve their written and oral communication and critical analysis skills.

4. Develop their skills in using the formats and conventions for writing in the history field.

HIST3930 - The Great American Road Trip - 3 - Credits

Course Overview

Course Prefix
HIST

Course Number
3930

Department
History, Cultures & Ideas

Course Title
The Great American Road Trip

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course examines the symbolic relevance of the “road trip” in American culture through investigating America’s highway infrastructure. The course explores American ideals (freedom, democracy, happiness), historical consequences (environmental, political, and cultural), and current infrastructure debates.

HIST3950 - Environmental History (DHA/CI) - 3 - Credits

Course Overview

Course Prefix
HIST

Course Number
3950

Department
History, Cultures & Ideas

Course Title
Environmental History (DHA/CI)

General Education Attribute
CI, DHA

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Surveys writings from a relatively new genre of historical scholarship that attempts to explain the relationship between human society and the natural world. Readings focus on North America, but students also have opportunity to survey materials from the non-Western world. Course is reading and writing intensive, and requires students to conduct a research project in which they construct the history of a particular landscape.

Other Enrollment Recommendations
It would pair well with HIST3095 TECHNOLOGY AND SOCIETY.

Course Learning Objectives

Course Learning Outcomes

1. Demonstrate an understanding how technology and work influence men, women, children, people with disabilities, and racial and ethnic minorities.
2. Examine who benefitted, who was harmed, and what broader economic, cultural, or social purposes these technologies were designed to serve.
3. Recognize how and why certain kinds of work are made invisible, discuss how the promise of new technology can function as a political salve, and consider the social implications of novel forms of labor.
4. Understand how work within the “tech” industry itself, examining how the industry created a powerful vision of itself populated by particular kinds of work and workers.

5. Draw on historical case studies to critically participate contemporary debates about technology and work.

Course Learning Objectives

Course Learning Outcomes

· Think critically and reflectively about associate degree coursework by collecting and framing best academic work.

· Develop skill in communicating ideas clearly, effectively, and respectfully while collaborating with a faculty mentor.

· Create an electronic portfolio of best academic work, including all honors courses, experiential learning, and reflective writing.

· Write a meta-reflection on the personal and professional value of the honors student experience in an associate degree program.

HONR3010 - Special Topics: Life and Physical Sciences (DSC/QI/CI) - 3 - Credits

Course Overview

Course Prefix
HONR

Course Number
3010

Department
Honors

Course Title
Special Topics: Life and Physical Sciences (DSC/QI/CI)

General Education Attribute
CI, DSC, QI

Grade Mode
Standard Letter

Repeat Status
RP

Course Description
Focuses on basic scientific concepts and methods of inquiry used by scientists. Considers science from a broad perspective, showing how various disciplines are related. Typically, only two or three approved depth designations are offered in each term.

IS

Course Number
6810

Department
Data Analytics & Information Systems

Dual-Listed Courses
IS5810 - Introduction to Cybersecurity

Course Title
Introduction to Cybersecurity

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course introduces students to the field of information security, with hands-on exercises in information, network, and physical security and real-world demonstrations of hardening and exploiting systems. Additional coursework is required for those enrolled in the graduate-level course.

Department
Data Analytics & Information Systems

Dual-Listed Courses
IS5820 - Cybersecurity Detection, Response, and Intelligence

Course Title
Cybersecurity Detection, Response, and Intelligence

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students use tools and techniques to secure and analyze large networks. Class sessions focus on hands-on labs to write intrusion detection rules (IDS), perform forensic investigation of hard drives, learn advanced packet analysis and learn techniques for penetration testing. Additional coursework is required for those enrolled in the graduate-level course.

Required

Complete ALL of the following Courses:

- IS6810 - Introduction to Cybersecurity
  OR IS5810 - Introduction to Cybersecurity

Course Learning Objectives

Course Learning Outcomes

Upon successful completion of this course, students will be able to:

1. Apply cybersecurity concepts and tools to engage in and **complete hands-on security challenges**.
2. **Collaborate effectively in team-based settings** to support shared problem-solving and task completion.
3. **Communicate technical information clearly** and professionally appropriate to cybersecurity contexts.

Course Overview

Course Prefix
ITDS

Course Number
4900

Department
College of Arts & Sciences

Course Title
Senior Thesis/Project

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students majoring in Interdisciplinary Studies are required to complete a 3-credit thesis or project as part of the major. The thesis or project must be either a research paper or a creative activity appropriate to the theme of the Interdisciplinary Studies major. Each student works with his or her faculty advisor to determine an appropriate topic of study or a project. The student and advisor outline the protocol and parameters of the thesis or project.

Course Learning Objectives

Course Learning Outcomes

1. Differentiate between traditional AI and generative AI and explain how they work.
2. Apply prompt engineering techniques to generate text, image, audio, and video.
3. Analyze generative AI outputs to assess quality, bias, relevance, and creativity.
4. Create human-centered design solutions using generative AI tools.
5. Design automated workflows by integrating multiple AI tools using no-code platforms.
6. Evaluate ethical, societal, and UX implications of AI-enhanced design.
7. Reflect on their evolving understanding of AI in design through self-assessment.

Course Learning Objectives

Course Learning Outcomes

1. Gaining a basic understanding of the subject (e.g., factual knowledge, methods, principles, generalizations, theories)
2. Learning to analyze and critically evaluate ideas, arguments, and points of view.
3. Learning appropriate methods for collecting, analyzing, and interpreting numerical information
4. Developing specific skills, competencies, and points of view needed by professionals in the field most closely related to this course

ITLS5230 - Graphic Design and Production I

Course Title
Graphic Design and Production I

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course covers fundamental practices of using the computer to design and produce a wide variety of instructional graphics. Additional coursework is required for those enrolled in the graduate-level course.

Course Learning Objectives

Course Learning Outcomes

1. Students will start connecting with their cohort.

2. Students will be able to identify academic resources available to them in the ITLS doctoral program.

3. Students will learn about the expectations and requirements of the ITLS doctoral program.

4. Students will be able to identify a research topic of interest and find research articles via USU library.

5. Students will be able to summarize the research of ITLS faculty and provide examples of their work.

6. Students will be able to describe the components of a research talk and provide examples from the course.

ITLS6320 - Writing for Design - 3 - Credits

Course Overview

Course Prefix
ITLS

Course Number
6320

Department
Instructional Technology & Learning Sciences

Dual-Listed Courses

ITLS5320 - Writing for Design (CI)

Course Title

Writing for Design

Grade Mode
Standard Letter

Repeat Status
NR

Course Description

Students learn about user experience writing by developing a how-to guide for a software of their choice. Using human centered design, students create a how-to guide, and justify their design to the client in a paper and presentation. Additional coursework is required for those enrolled in the graduate-level course.

Course Learning Objectives

Course Learning Outcomes

1. Using current research-based instructional coaching practices. [e.g., primary literature will be used from the University of Kansas Center for Research on Learning, Uncommon Schools, Utah State Board of Education's documentation on instructional coaching and mentoring.]

2. To support educators in creating and accomplishing goals aligned with the vision and expectations of their organization.

3. To improve learner outcomes through building the capacity of the educators to use best practices to meet student needs.

4. To build trusting relationships through clear support and communication.

5. To demonstrate an ability to listen and communicate through asking probing and reflective questions.

6. To help educators gather, analyze, and use data to shift instructional decision making and practices.

7. To understand how to differentiate coaching for educators who work in a variety of educational settings.

Course Learning Objectives

Course Learning Outcomes

1. Students will be able to describe and distinguish different prominent theories of learning and the key characteristics of each theory, its processes and mechanisms, including how it frames learning.

2. Students will be able to compare and contrast key characteristics of different theories of learning, including the behaviorist, cognitivist, and sociocultural paradigms of learning.

3. Students will be able to interpret how a theory of learning's key characteristics influences/shapes designs for learning.

4. Students will be able to interpret how a theory of learning's key characteristics influences how researchers study it (what methods they use).

5. Students will be able to describe how these theories relate to their own experiences as a learner and educator.

Course Learning Objectives

Course Learning Outcomes

1. Understand the epistemological stances from which DBR and DBIR emerge and how these perspectives play out in methodological choices.

2. Draw lessons from other DBR and DBIR projects and related scholarship that arose from these projects, to apply to one’s own research.

3. Workshop different methodological approaches and strategies that have been developed in the field.

4. Develop one’s own research proposal that utilizes DBR or DBIR as a core approach.

Course Learning Objectives

Course Learning Outcomes

1. Through a variety of speaking activities, students will understand how to improve their oral proficiency in Japanese and apply these skills to work towards achieving an intermediate level of proficiency.
2. Students will develop the ability to take charge of their learning by setting personal goals, creating methods to achieve them, and evaluating their progress to become autonomous learners.
3. Through virtual exchanges with students from Japanese elementary and high schools, as well as with students studying Japanese at other universities in the U.S., students will develop communication skills in Japanese that differ from those gained through face-to-face classroom conversations.

Prerequisite

Required

Complete ALL of the following Courses:

- JAPN1020 - Japanese First Year II

Course Learning Objectives

Course Learning Outcomes

1. Students will analyze and evaluate Japanese culture, history, and societal norms, comparing and contrasting these aspects with their own culture to foster a greater appreciation for cultural diversity.
2. Students will create and deliver engaging mini-lessons/workshops on Japan-related topics, applying skills in lesson planning, public speaking, and classroom management tailored to different K-12 age groups.
3. Students will engage with K-12 institutions and reflect on their teaching experiences, understanding the impact of their lessons on both the students and themselves.

2977

Department
Communication & Media

Course Title
Cooperative Education

Grade Mode
Standard Letter

Repeat Status
RP

Course Description
Provides supervised on-the-job training and experience in communication areas. Students establish learning objectives, hours to be worked, and a credit agreement with the faculty/coordinator at the beginning of the semester. Students then meet periodically with the faculty/coordinator to review progress.

JCOM3030 - Corporate Communication - 3 - Credits

Course Overview

Course Prefix
JCOM

Course Number
3030

Department
Communication & Media

Course Title
Corporate Communication

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Communications and public relations professionals must have solid interpersonal, small group, public speaking and organizational communications skills to be effective in whatever organizational structure they find themselves in. They must also know how to lead, coach, and train their internal and external clients to be better communicators within their own organizations. This class was developed to give students an opportunity to learn and apply basic skills in those areas.

Course Learning Objectives

Course Learning Outcomes
1. Students will learn how to create and manage social media campaigns that engage sports fans, promote teams, athletes, and events, and build brand loyalty across platforms like Instagram, X, and TikTok.

2. Students will explore the principles of sports advertising, learning to design targeted digital ads and communication strategies that align with brand objectives and maximize fan engagement.

3. Students will learn to use data analytics tools to track fan engagement, evaluate the success of digital campaigns, and make data-driven decisions that optimize marketing and communication strategies.

4. Students will explore how sports organizations use digital platforms to raise funds, focusing on crowdfunding, online sponsorships, and community-driven fundraising efforts while creating strategies for effective campaigns.

5. Through hands-on projects, students will design and produce multimedia content—such as video, graphics, and written content—tailored for websites, apps, and social media to promote sports brands, events, and athletes.

Course Learning Objectives

Course Learning Outcomes
1. Understand the Economic and Cultural Impact of Sports: Students will analyze the global economic value of sports, its role as a $500 billion industry, and how sports shape and reflect cultural values across various societies.

2. Develop Critical Media Literacy in Sports: Students will learn to critically assess how sports are represented in TV, social media, and digital platforms, understanding the influence of media narratives, sponsorships, and fan engagement.

3. Enhance Communication Skills in Sports Contexts- Students will develop skills in writing and speaking about sports, whether through reporting, analysis, or content creation and will learn how to convey complex sports concepts to a broad audience.

4. Foster Personal and Professional Growth through Sports Values: Students will reflect on how sports values like teamwork, leadership, and perseverance apply to both personal development and professional roles in the sports industry.

5. Investigate Global Trends in Sports: Students will examine emerging trends such as sports technology, globalization of sports leagues, and the growing importance of eSports, as well as how these trends are reshaping the sports landscape.

6. Explore the Intersection of Sports and Society: Students will examine how sports intersect with social issues such as race, gender, and politics and how these factors influence participation, representation, and public perception.

7. Evaluate Ethical Issues in Sports: Students will explore ethical dilemmas related to sportsmanship, doping, commercialization, and media integrity, learning to make informed and ethical decisions.

JCOM4410 - Gender and the Mass Media - 3 - Credits

Course Overview

Course Prefix
JCOM

Course Number
4410

Department
Communication & Media

Course Title
Gender and the Mass Media

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course examines the nature of gender-based images in a variety of mass media, from advertising to magazines, television, and film. It examines the analysis of gender stereotypes and portrayals in news and entertainment media, along with resulting social impacts. Additional coursework is required for those enrolled in the graduate-level course.

Course Learning Objectives

Course Learning Outcomes

1. By the end of this course, students will be able to:
2. Research complex scientific topics using primary sources, data, and expert interviews.
3. Translate scientific evidence into accurate, engaging stories for public audiences.
4. Conduct and ethically document interviews with scientists, stakeholders, and affected communities.
5. Evaluate the credibility, limitations, and uncertainty of scientific claims and data.
6. Apply principles of clarity, narrative structure, and audience awareness to science communication.
7. Revise and edit work through iterative feedback to improve accuracy, coherence, and impact.
8. Demonstrate professional standards of verification, transparency, and attribution in published work.

Course Learning Objectives

Course Learning Outcomes

By the end of this course, students will be able to:

1. Identify and describe a range of professional opportunities within kinesiology, health science, and recreation administration, and explain how each field contributes to individual and community well-being.
2. Apply life design and career development principles to articulate how personal interests, values, and strengths align with potential academic majors and career paths.
3. Demonstrate an emerging sense of professional identity by reflecting on the roles, expectations, and ethical foundations of practitioners in health, fitness, and recreation-related careers.
4. Create an individualized plan that connects coursework, experiential learning, and campus resources to long-term educational and career goal.

Course Learning Objectives

Course Learning Outcomes

Course Objectives: Upon completion of this course, the student will be able to:

1. Define the basic concepts of anatomy and physiology.

2. Demonstrate understanding of cell structure and function.

3. Identify basic characteristics of each body system and how they work together as a whole

4. Differentiate between the following organ systems of the body and their various functions

• Integumentary

• Skeletal

- Muscular
- Lymphatic
- Respiratory
- Urinary
- Nervous
- Endocrine
- Circulatory
- Digestive
- Reproductive (male & female)
- Pregnancy and Human Development

KIN2000 - Introduction to Kinesiology - 2 - Credits

Course Overview

Course Prefix
KIN

Course Number
2000

Department
Kinesiology and Health Science

Course Title
Introduction to Kinesiology

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course acquaints kinesiology students with four areas of kinesiology: the department, with respect to the University and the College of Education and Human Services; the history of kinesiology; the effects of sociology on kinesiology; and future employment opportunities in the fields of kinesiology.

3100

Department
Kinesiology and Health Science

Course Title
Athletic Injuries

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Care and prevention of common athletic injuries and standard taping techniques. Emphasizes recognition, first aid, and referral for these injuries. Taping techniques taught in a lab setting.

Course Learning Objectives

Course Learning Outcomes

1. Identify and describe common athletic injuries and their causes.
2. Apply strategies for injury prevention to reduce risk in athletic settings.
3. Recognize injuries and provide appropriate first aid, including knowing when to refer to healthcare professionals.
4. Demonstrate standard taping techniques in a laboratory setting to support injury management.

KIN3200 - Motor Control and Learning (CI) - 3 - Credits

Course Overview

Course Prefix
KIN

Course Number
3200

Department
Kinesiology and Health Science

Course Title
Motor Control and Learning (CI)

General Education Attribute
CI

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course explores materials, methods, and mechanisms of learning, practicing, and performing motor skills. Various sport skills are taught where students give and receive feedback. Students teach and analyze sport skills with a presentation using computer technology with video and slides.

Credit Hours

Credit Hours Min:
3

Registration Restrictions
Admission to one of the following programs:

- Kinesiology
- Elementary Education
- Pre-Elementary Education

No Requirements

Course Learning Objectives

Course Learning Outcomes

1. Demonstrate foundational knowledge of motor control and learning
Students will describe and explain key theories, concepts, and mechanisms underlying how people control and learn motor skills, including physiological, psychological, and behavioral perspectives.
2. Apply motor control and learning principles to real-world contexts
Students will use theoretical and empirical concepts to analyze and address practical problems in movement, performance, and skill acquisition across sport, rehabilitation, and everyday activities.
3. Communicate effectively about motor control and learning
Students will articulate concepts clearly and professionally through written reflections, discussions, and presentations, demonstrating the ability to connect course material to personal and professional experiences.

KIN3250 - Anatomical Kinesiology - 3 - Credits

Course Overview

Course Prefix
KIN

Course Number
3250

Department
Kinesiology and Health Science

Course Title
Anatomical Kinesiology

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Study of the anatomical bases of human movement. Laboratory provides application of principles.

Prerequisite

Required

Complete ALL of the following Courses:

- BIOL2320 - Human Anatomy

Course Learning Objectives

Course Learning Outcomes

1. Explain and apply fundamental concepts and principles of anatomical kinesiology to describe human movement.
2. Describe and illustrate basic neuromuscular concepts, including motor unit recruitment, proprioception, and neuromuscular control.
3. Apply and analyze fundamental biomechanical principles (e.g., levers, torque, force production) as they relate to joint and muscle function.
4. Identify and label the major bones, joints, and skeletal muscles of the human body using anatomical terminology.
5. Explain the functional roles of anatomical structures (bones, joints, and muscles) in producing and controlling movement.
6. Compare and differentiate how the structural characteristics of skeletal muscles influence their function and action at major synovial joints.
7. Analyze and evaluate human movement and resistance training exercises to determine the primary muscles involved and their roles during movement.
8. Interpret, critically evaluate, and discuss current research findings in anatomical and functional kinesiology.

Course Learning Objectives

Course Learning Outcomes
1. By the end of the course, students will be able to describe the range of congenital and acquired disabilities they might encounter in a physical education context. They should be able to differentiate between different types of disabilities and understand how each can affect a student's ability to participate in physical activities.
2. Students will be able to design, implement, and evaluate a physical education curriculum that effectively integrates students with special needs. They should understand how to modify activities to ensure they are accessible and beneficial to all students, regardless of their physical capabilities.
3. Students will learn to develop a behavior treatment plan using principles of behavioral analysis. They will learn how to collect, analyze, and evaluate data to assess the effectiveness of an Individualized Education Program (IEP).
4. Students will be able to identify and implement techniques for providing competitive sport experiences tailored to the needs, interests, and abilities of students with disabilities. They should be capable of organizing and facilitating inclusive competitive events.
5. Students will demonstrate competency in understanding the process, protocol, and timeline for requesting and obtaining "prior formal consent to test" under the IEP framework. They should be capable of ensuring compliance with legal and procedural requirements for special needs education.
6. Students will learn strategies for promoting a respectful and inclusive physical education environment for students with special needs. They should understand how to cultivate a classroom culture that values diversity and inclusion.

KIN3700 - Meditation and Mindfulness: History and Practice - 3 - Credits

Course Overview

Course Prefix
KIN

Course Number
3700

Department
Kinesiology and Health Science

Course Title
Meditation and Mindfulness: History and Practice

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course explores the rich history and practical application of meditation and mindfulness practices. Students explore meditation techniques and mindfulness methods while cultivating a deeper understanding of these ancient practices.

Credit Hours

No Requirements

Course Learning Objectives

Course Learning Outcomes

1. Identify and describe the historical and cultural origins of meditation and mindfulness across multiple spiritual, philosophical, and secular traditions.
2. Explain key concepts, texts, and figures that have shaped the global development of meditation practices from ancient to modern contexts.
3. Compare and contrast diverse meditative traditions—including Buddhist, Hindu, Christian, Sufi, Taoist, and Indigenous approaches—and their shared aims of cultivating awareness, compassion, and insight.
4. Analyze the relationship between traditional contemplative practices and contemporary scientific, psychological, and medical understandings of mindfulness.
5. Demonstrate familiarity with a variety of meditation and mindfulness techniques through guided and self-directed practice.
6. Reflect critically on personal experiences of meditation, recognizing patterns of thought, emotion, and behavior with curiosity and compassion.
7. Integrate meditative principles into daily life to support well-being, ethical awareness, and emotional regulation.
8. Synthesize historical knowledge and lived experience into a personal philosophy of mindfulness that honors both ancient wisdom and modern relevance.

KIN3830 - The History of Yoga - 3 - Credits

Course Overview

Course Prefix
KIN

Course Number
3830

Department
Kinesiology and Health Science

Cross-Listed Courses
ENGL3830 - The History of Yoga, HIST3830 - The History of Yoga, RELS3830 - The History of Yoga

Course Title
The History of Yoga

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course explores the history of yoga from its origins in Indian prehistory to the variety of philosophies and practices that have evolved throughout the world. Students study ancient and modern texts on yoga and broader philosophy and theory.

No Requirements

Course Learning Objectives

Course Learning Outcomes
1. Identify and describe major historical periods, texts, and philosophical traditions that have shaped the evolution of yoga from its ancient Indian roots to its modern global expressions.
2. Explain key concepts and terminology from foundational yoga scriptures, including the Upanishads, Bhagavad Gītā, Yoga Sūtras of Patanjali, and Ha◈ha Yoga Pradīpikā.
3. Analyze the cultural, religious, and philosophical contexts that have influenced yoga's development and its transmission to the West.
4. Evaluate contemporary questions related to authenticity, ownership, and cultural appropriation in the global practice of yoga.
5. Demonstrate introductory knowledge of Sanskrit terms and pronunciation as they relate to yoga philosophy and practice.
6. Compare and contrast diverse yoga traditions and lineages, identifying continuities and innovations across time and geography.
7. Synthesize historical and philosophical understanding into a personal reflection on the meaning, relevance, and ethical dimensions of yoga practice today.

KIN3900 - Fitness Administration - 3 - Credits

Course Overview

Course Prefix
KIN

Course Number
3900

Department
Kinesiology and Health Science

Course Title
Fitness Administration

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
A study of organizational and management principles for fitness and wellness professionals. Emphasizes marketing, legal, facilities, and administrative challenges and best practices in the health-fitness industry.

Credit Hours

Course Learning Objectives

Course Learning Outcomes

1. Create an organizational chart and define administrative and staff roles within a health/fitness facility.
2. Develop policies and procedures for hiring, training, and retaining personnel.
3. Explain the fiduciary responsibilities of a health/fitness owner/administrator and develop a budget that addresses equipment, maintenance, staffing, and facility usage.
4. Create a mission statement for your program, define your target population, and develop communication and marketing strategies to attract and retain members/clients.
5. Design the layout for a fitness and/or wellness facility based on professional standards and guidelines.
6. Use best practices to develop an equipment maintenance/repair plan to reduce injury risk in the facility.
7. Develop an emergency action plan and explain the health/fitness professional's role, responsibilities, limitations, and legal implications of carrying out and documenting safety procedures.

Course Learning Objectives

Course Learning Outcomes
1. Explain the foundational principles of Ayurveda, including the five elements (pancha mahabhuta) and three doshas (Vata, Pitta, Kapha), and their relationship to yoga philosophy and practice.
2. Identify and analyze patterns of balance and imbalance within the body and environment through the lens of Ayurvedic theory.
3. Demonstrate an understanding of how yoga practices—such as asana, pranayama, and meditation—can be applied to support individual constitution and seasonal harmony.
4. Observe and reflect on the interdependence of natural systems, recognizing parallels between ecological principles and human health.
5. Apply Ayurvedic and yogic principles to cultivate awareness of personal lifestyle habits and their connection to environmental well-being.
6. Integrate insights from field experiences and interdisciplinary learning (e.g., ecology, art, herbalism) to deepen understanding of holistic wellness.
7. Synthesize knowledge of yoga and Ayurveda into a personalized framework for mind-body balance, ethical awareness, and connection to the natural world.

KIN4100 - Exercise Physiology - 4 - Credits

Course Overview

Course Prefix
KIN

Course Number
4100

Department
Kinesiology and Health Science

Course Title
Exercise Physiology

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Designed to expose students to theory and application of exercise physiology and principles of training and conditioning. Laboratory experience provides hands-on practicum for concepts taught in the classroom.

Fulfill ALL of the following requirements:

Required

Complete ALL of the following Courses:

- BIOL2320 - Human Anatomy
- BIOL2420 - Human Physiology

AND

Required

Complete at least 1 of the following courses:

- KIN2000 - Introduction to Kinesiology

OR KIN2020 - Introduction to Physical Therapy

AND

Required

Complete one of the courses or exams to fulfill prerequisite.

Complete at least 1 of the following courses:

- MATH1050 - College Algebra (QL)
- STAT1040 - Introduction to Statistics (QL)
- STAT1045 - Introduction to Statistics with Elements with Algebra (QL)
- STAT1080 - Foundations of Data Science (QL)

OR

ACT Math score of 25 or higher or equivalent SAT Math score
AP Calculus AB score of 3 or higher

Course Learning Objectives

Course Learning Outcomes

1. Explain the acute physiologic responses to a single bout of exercise and the chronic adaptations resulting from regular training.
2. Describe the mechanisms of energy metabolism within muscle fibers and explain how the respiratory, cardiovascular, nervous, endocrine, and muscular systems interact during exercise.
3. Apply physiological principles to develop or evaluate fitness, wellness, weight-management, and training programs.
4. Interpret physiological test data and effectively communicate findings through written reports and a research-article presentation.

KIN4200 - Biomechanics (QI) - 4 - Credits

Course Overview

Course Prefix
KIN

Course Number
4200

Department
Kinesiology and Health Science

Course Title
Biomechanics (QI)

General Education Attribute
QI

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Understanding and application of human anatomical kinesiology and biomechanical principles fundamental to efficient human movement. In required concurrent one-hour lab, students obtain hands-on application of principles of anatomical kinesiology and biomechanics.

2. Tailor coaching strategies to promote physical, psychological, and social development in athletes.
3. Apply psychological techniques to enhance athlete motivation, goal-setting, and self-regulation.
4. Demonstrate competence in addressing psychosocial challenges and promoting athlete well-being through coaching interventions.

KIN5100 - Fitness Assessment and Exercise Programs - 4 - Credits

Course Overview

Course Prefix
KIN

Course Number
5100

Department
Kinesiology and Health Science

Course Title
Fitness Assessment and Exercise Programs

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Application of physiologic principles, assessment techniques, and exercise prescription for developing quality fitness programs that impact health. Students gain experience in a personal fitness program and in the use and interpretation of fitness tests.

Prerequisite

Type
Prerequisite

Required

Complete ALL of the following Courses:

- KIN4100 - Exercise Physiology

Course Learning Objectives

Course Learning Outcomes

1. Recognize the importance of physical activity in the prevention of hypokinetic diseases.
2. Develop knowledge of the principles of physical fitness assessment, interpretation of results, and exercise prescription.
3. Have the opportunity for practical experiences using field and laboratory tests for the appraisal of physical fitness status and the design of individualized exercise programs in the following areas: Health Screening/Risk Assessment; Cardiorespiratory Fitness; Agility and Speed; Power; Body Composition; Flexibility; Balance; Muscular Strength and Endurance
4.Become familiar with various exercise and conditioning programs for development of each physical fitness component and weight management.

KIN5200 - Human Motivation in Physical Activity Contexts - 3 - Credits

Course Overview

Course Prefix
KIN

Course Number
5200

Department
Kinesiology and Health Science

Course Title
Human Motivation in Physical Activity Contexts

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course introduces students to the science of human motivation and its role in promoting physical activity in non-competitive settings. The course focuses on intrinsic and extrinsic factors that shape behavior and the outcomes of various forms of motivation.

Course Learning Objectives

Course Learning Outcomes

1. Understand the historical origins of contemporary movement practices, particularly sport, and why challenging issues arise.
2. Explain the philosophical and ethical frameworks that shed light on challenging issues in sport.
3. Apply historical and philosophical knowledge to current issues like performance-enhancing technology use in professional sport.
4. Engage critically with historical, philosophical, and journalistic texts to analyze and evaluate complex ideas.
5. Reflect thoughtfully on class discussions and materials, integrating personal perspectives and connecting them to broader conversations about human

movement and sport.
6. Craft persuasive and well-structured written and spoken arguments adapted to specific purposes, genres, and audiences, using feedback to refine their effectiveness.
7. Collaborate effectively in class activities and discussions to develop and apply critical analysis, argumentation, communication, and problem-solving skills.

Course Learning Objectives

Course Learning Outcomes

1. Demonstrate foundational knowledge of graduate study in kinesiology
Students will describe the structure, expectations, and degree requirements of the kinesiology graduate program, including timelines, committee formation, and research planning.
2. Locate and utilize key academic and professional resources
Students will identify and apply appropriate tools, databases, and campus resources (e.g., Zotero, literature review modules, faculty expertise) to support their academic progress and problem-solving as graduate students.
3. Engage professionally in the graduate learning community
Students will actively participate in seminar discussions, faculty interactions, and peer presentations to develop effective communication, collaboration, and professional engagement skills within the field of kinesiology.

KIN6410 - Bioenergetics and Exercise Metabolism - 2 - Credits

Course Overview

Course Prefix
KIN

Course Number
6410

Department
Kinesiology and Health Science

Course Title
Bioenergetics and Exercise Metabolism

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
An advanced study of bioenergetics and exercise metabolism. Emphasis on the role and regulation of metabolic pathways during exercise, fuel utilization during exercise, lactate production and utilization, and training-induced metabolic adaptations. A laboratory component provides independent investigation and data collection using indirect calorimetry for measuring human energy expenditure.

Course Learning Objectives

Course Learning Outcomes

1. Explain the transfer of energy in biological systems.
2. Explain the principles and apply the techniques of indirect calorimetry for measuring human energy expenditure in the laboratory.
3. Explain the role of lactate in exercise metabolism.
4. Analyze physical activities in terms of the primary energy pathway involved in ATP synthesis, the substrate utilized during the activity, and how the response is regulated.
5. Describe how metabolic responses are altered by exercise training.
6. Presentation: lead a class discussion on a recent bioenergetics and exercise

KIN6425 - Exercise in Extreme Environments - 2 - Credits

Course Overview

Course Prefix
KIN

Course Number
6425

Department
Kinesiology and Health Science

Course Title
Exercise in Extreme Environments

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course provides an advanced study of the human physiological responses and adaptations that occur with exposure to exercise in heat, cold, hyperbaric (underwater), hypobaric (high altitude), microgravity, and polluted environments.

Credit Hours

Course Learning Objectives

Course Learning Outcomes

1. Explain the fundamentals of temperature regulation in hot and cold environments.
2. Identify the signs and symptoms of heat and cold injuries and develop preventive strategies to minimize the risk when exercising in these extreme environments.
3. Explain the phenomenon of Cache Valley inversions, the effects of major air pollutants on human physiology, and develop strategies to minimize one's risk.
4. Explain how and why hyperbaric environments pose a danger to human physiology; describe the risks and the practices that must be followed to minimize these risks.
5. Explain the physiological responses and adaptations that occur with training at moderate altitude, and the rationale for various altitude training strategies that have been developed to enhance aerobic performance.
6. Discuss the limitations and dangers of exercising at extreme altitude as well as acclimatization strategies and treatments for high altitude illnesses.
7. Identify the problems that must be overcome for humans to live in a microgravity environment, and explain the physiological responses to this environmental stressor.

KIN6440 - Body Composition - 2 - Credits

Course Overview

Course Prefix
KIN

Course Number
6440

Department
Kinesiology and Health Science

Course Title
Body Composition

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Advanced study of human body composition. Theoretical and applied aspects of body composition assessment in research, clinical, and health/fitness settings. Limitations and usefulness of various assessment techniques reviewed. Laboratory allows for independent investigation and skill development of assessment techniques.

Credit Hours

Credit Hours Min:

Course Learning Objectives

Course Learning Outcomes
1. Explain the theoretical models and assumptions underlying body composition assessment.
2. Explain the importance of body composition for health and fitness.
3. Assess the strengths and limitations of and critically evaluate laboratory and field methods used to measure body composition in research and clinical settings.
4. Explain the effects of age, ethnicity, sex, physical activity level, body fatness, and various diseases on body composition.
5. Select appropriate reference and field methods for assessing body composition.
6. Accurately measure body composition using the following methods: hydrostatic weighing, air displacement plethysmography, 3D body imaging, ultrasound, bioelectrical impedance, bioimpedance spectroscopy, skinfolds, and anthropometry.
7. Lead a class discussions summarizing published body composition research.
8. Conduct a group project that involves measuring human body composition.

KIN6460 - Exercise Electrocardiogram Interpretation - 2 - Credits

Course Overview

Course Prefix
KIN

Course Number
6460

Department
Kinesiology and Health Science

Dual-Listed Courses
KIN4460 - Exercise Electrocardiogram Interpretation

Course Title
Exercise Electrocardiogram Interpretation

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course provides an understanding of the theory and practice of ECG interpretation in response to exercise. Review standard 12-lead diagnostic ECG and identification of atrial and ventricular enlargement, dysrhythms, ischaemia, and myocardial infarction at rest and during exercise. Additional coursework is required for those enrolled in the graduate-level course.

Course Learning Objectives

Course Learning Outcomes
1. Analyze ECG waveforms, intervals, and lead configurations using advanced measurement principles and clinical standards.
2. Critically evaluate the cardiac conduction system and diagnose complex conduction disturbances and arrhythmias using evidence-based interpretive criteria.
3. Synthesize knowledge of coronary circulation to identify, differentiate, and appraise ischemic changes, infarction patterns, and other abnormalities in myocardial blood supply as reflected in ECG recordings.
4. Interpret and defend electrocardiographic findings by integrating advanced concepts in cardiac electrophysiology, pathophysiology, and contemporary ECG analysis methodologies.

KIN6480 - Advanced Neuromuscular Exercise Physiology - 2 - Credits

Course Overview

Course Prefix
KIN

Course Number
6480

Department
Kinesiology and Health Science

Course Title
Advanced Neuromuscular Exercise Physiology

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Provides an understanding of the structural basis for muscular contraction, central and peripheral factors involved in neuromuscular fatigue, and adaptations of the neuromuscular system resulting from aerobic and strength training.

Course Learning Objectives

Course Learning Outcomes

1. Explain key neuromuscular physiology concepts, including motor unit function, muscle architecture, force transmission, and adaptations to training, aging, and fatigue.
2. Critically analyze and synthesize research literature on neuromuscular topics, applying scientific rigor to evaluate findings and interpret implications for performance and health.
3. Apply neuromuscular principles to practical movement scenarios, demonstrating the ability to connect physiological mechanisms to exercise programming and functional outcomes.
4. Communicate scientific understanding effectively through written reports that integrate evidence-based conclusions and adhere to professional standards of scientific writing.

KIN6490 - Advanced Cardiovascular Exercise Physiology - 2 - Credits

Course Overview

Course Prefix
KIN

Course Number
6490

Department
Kinesiology and Health Science

Course Title
Advanced Cardiovascular Exercise Physiology

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Provides an understanding of the structural and electrophysiological basis of cardiac function and the peripheral circulatory system during exercise. Influence of dynamic and static exercise on the circulatory response including the chronic adaptations of the circulatory system to aerobic and resistance training.

Course Learning Objectives

Course Learning Outcomes

1. Critically analyze and evaluate current research literature related to cardiovascular physiology, cardiac electrophysiology, and vascular function, and effectively communicate scholarly critiques in written and oral formats.
2. Explain and integrate the structural basis of cardiac muscle contraction, including molecular and cellular mechanisms that underlie excitation–contraction coupling and electrophysiological signaling.
3. Interpret and synthesize the electrical activity of the heart as represented on electrocardiograms (ECGs), including advanced recognition of arrhythmias, conduction disturbances, and pathophysiologic patterns.
4. Assess and compare the structure and function of the peripheral vascular system, including mechanisms regulating blood flow, vascular resistance, and

endothelial function.
5. Evaluate and predict cardiovascular adaptations to aerobic and resistance training using contemporary theoretical models and empirical evidence.

KIN6500 - Practicum in Corporate Wellness - 1 - 10 Credits

Course Overview

Course Prefix
KIN

Course Number
6500

Department
Kinesiology and Health Science

Course Title
Practicum in Corporate Wellness

Grade Mode
Standard Letter

Repeat Status
RP

Course Description
Experiences designed for the practical implementation of coursework in a corporate wellness, fitness industry, cardiac rehabilitation, or other related setting.

Course Learning Objectives

Course Learning Outcomes

1. Understand various disabilities and how they affect participation in physical education.2. Analyze and assess motor skills, document assessment outcomes for qualification, and provide feedback to students, teachers, and parents.
3. Provide adaptations in equipment, environment, and activities for inclusive participation in activities and sports.
4. Demonstrate knowledge of professional practices, policies, laws, and procedures relevant to adapted physical education.
5. Understand the Individualized Education Program (IEP) process and how it drives goals and learning for students with disabilities.
6. Demonstrate understanding of Behavior Intervention Plans (BIP) and how to implement them in physical education settings.

KIN6540 - Neuromuscular Adaptations - 3 - Credits

Course Overview

Course Prefix
KIN

Course Number
6540

Department
Kinesiology and Health Science

Course Title
Neuromuscular Adaptations

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Interaction of neuromuscular systems with mechanical properties of the human body and environment. Emphasizes mechanisms influencing human flexibility, strength, and adaptive responses to overload.

Course Learning Objectives

Course Learning Outcomes

1. Discuss and explain the current literature regarding flexibility and its influence on injury prevention and sport performance.
2. Discuss neuromuscular adaptations to stretching.
3. Discuss relevant neuroanatomy and biochemistry of neuromuscular activations.
4. Peek into the neuromuscular system using methods of electromyography: Assess select reflexes (i.e., Hoffmann's reflex).
5. Devise a flexibility program based on the literature.
6. Discuss resistance training techniques and the neuromuscular adaptations to resistance training.
7. Compute the relative mix of muscle fiber composition using Thorstensson's test.
8. Describe and explain the different weight training equipment designs and their biomechanical advantages/disadvantages.

KIN6610 - Topics in Biomechanics - 2 - Credits

Course Overview

Course Prefix
KIN

Course Number
6610

Department
Kinesiology and Health Science

Course Title
Topics in Biomechanics

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
The course will review kinematic and kinetic principles and discuss their application to sport and rehabilitation. Current research published in the biomechanics discipline will form the outline for lectures and drive discussions.

Course Learning Objectives

Course Learning Outcomes

1. Apply advanced biomechanical research methods, technologies, and analytical procedures to quantify and interpret human movement.
2. Critically analyze and synthesize current literature addressing the complexity of agile movement in sport and clinical biomechanics.
3. Design and conduct biomechanical analyses using motion capture, force measurement, and computational modeling tools.
4. Evaluate and integrate contemporary biomechanical theories to explain adaptations in coordination, stability, and performance across different populations.
5. Locate, appraise, and synthesize peer-reviewed biomechanics research to develop and deliver an evidence-based oral presentation on a selected topic.

KIN6620 - Methods in Biomechanics - 1 - Credits

Course Overview

Course Prefix
KIN

Course Number
6620

Department
Kinesiology and Health Science

Course Title
Methods in Biomechanics

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course is designed to allow students to develop skills in using instrumentation in biomechanics for the purpose of collecting, analyzing, interpreting and presenting biomechanical data. Course content is intended to reinforce understanding of forces and motions involved in human movement.

Course Learning Objectives

Course Learning Outcomes

1. Understand general concepts that are related to collection and analysis of some biomechanical data. Some of these concepts include: Analog to digital conversion, sampling rate, signal noise, and filters.
2. Understand the basics of collecting video data, to allow for independent data collection using motion analysis systems.
3. Understand how to use instruments that can measure external force (force platform and load cell), and use external force data to compute basic kinetic measures.
4. Understand how to collect and analyze electromyographic data to better understand muscular activity during human motion.
5. Understand which instruments should be used in research to collect kinematic and kinetic data.

KIN6650 - Advanced Practicum in Sport Management - 1 - 6 Credits

Course Overview

Course Prefix
KIN

Course Number
6650

Department
Kinesiology and Health Science

Course Title
Advanced Practicum in Sport Management

Grade Mode

1. Critically evaluate scientific literature in Kinesiology by identifying research questions, methodologies, and interpreting findings within the context of evidence-based practice.
2. Design a scientifically sound research proposal, including problem formulation, literature review, methodological planning, and ethical considerations for human subjects research.
3. Apply appropriate statistical analyses to examine descriptive data, group differences, and relationships among variables, and interpret results presented in tables and summaries.
4. Differentiate and implement research designs (analytical, descriptive, experimental, and quasi-experimental) and explain measurement concepts such as validity and reliability.

KIN6840 - Fundamentals of Motor Behavior - 2 - Credits

Course Overview

Course Prefix
KIN

Course Number
6840

Department
Kinesiology and Health Science

Course Title
Fundamentals of Motor Behavior

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course offers advanced understanding of principles underlying motor control and learning. Topics such as movement variability and expertise will be explored. Discussion of research articles and class topics will focus on the practical applications of understanding motor control.

Course Learning Objectives

Course Learning Outcomes

1. Demonstrate foundational knowledge of motor behavior
Students will describe and explain core theories and principles that underlie motor control and motor learning, including sensory, perceptual, cognitive, and physiological mechanisms that support skilled movement.
2. Apply motor learning and control principles to movement performance
Students will use theoretical and empirical concepts to interpret how practice conditions, feedback, and attention influence skill acquisition, performance, and retention in applied settings such as sport, rehabilitation, and human movement.
3. Analyze and discuss empirical research in motor behavior
Students will critically interpret research articles and laboratory data to connect theoretical perspectives to experimental findings and practical implications for teaching and training motor skills.

KIN6850 - Neural Aspects of Rehabilitation - 2 - Credits

Course Overview

Course Prefix
KIN

Course Number
6850

Department
Kinesiology and Health Science

Course Title
Neural Aspects of Rehabilitation

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
A review of the human nervous system's control of movement, including the role of the basal ganglia, motor cortex and spinal chord. The impact of pathology on gait, posture and voluntary hand movements and how various rehabilitation approaches addresses these pathologies.

Course Learning Objectives

Course Learning Outcomes
1. Learn fundamental principles and generalizations of neuroanatomy, neurophysiology, and neuroscience that govern the control of movement.
2. Learn how to apply these principles to understand problems commonly associated with neurological or peripheral damage, and how to approach clinically-relevant solutions to these problems.
3. Develop skills in critical thinking.
4. Developing skill in expression both orally and in writing to communicate science.

KIN6860 - Motor Development - 2 - Credits

Course Overview

Course Prefix
KIN

Course Number
6860

Department
Kinesiology and Health Science

Course Title
Motor Development

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
A study of the progressive change in movement behavior from infancy through older adulthood. Emphasis upon developing the ability to identify the stages in a variety of motor skills, physical growth patterns and biological maturity and the relationship of each to motor performance.

Course Learning Objectives

Course Learning Outcomes
1. Demonstrate foundational knowledge of motor development across the lifespan
Students will describe and explain major theories, principles, and stages of motor development, emphasizing how biological, environmental, and psychosocial factors shape movement behavior from infancy through adulthood.
2. Critically evaluate research in motor development
Students will examine and interpret empirical studies on motor development, evaluating research design, methodology, and findings to understand how developmental processes are studied and applied in kinesiology and related fields.
3. Apply developmental frameworks to practice and communication
Students will apply theories and research evidence to real-world issues in movement education, sport, and rehabilitation, and communicate developmental concepts effectively through written and oral formats.

2. Apply appropriate research methods and procedures for data collection, recording, and management in alignment with ethical and professional standards.
3. Conduct preliminary data analysis using techniques suitable to the research design and objectives.
4. Demonstrate effective collaboration and communication within a research team, including interaction with faculty mentors and other investigators.
5. Critically reflect on the research process to identify challenges, limitations, and strategies for improvement in future independent work.
6. Summarize and interpret research findings in a written report that clearly articulates the project's purpose, methods, results, and implications for Pathokinesiology research and practice.

KIN7070 - Grant Writing for Pathokinesiology - 1 - Credits

Course Overview

Course Prefix
KIN

Course Number
7070

Department
Kinesiology and Health Science

Course Title
Grant Writing for Pathokinesiology

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Guided experience in preparation of grant proposals.

Course Learning Objectives

Course Learning Outcomes

1. Analyze funding opportunities and priorities by interpreting Requests for Proposals (RFPs) or Notices of Funding Opportunity (NOFOs) relevant to Pathokinesiology research and practice.
2. Develop a compelling grant concept that aligns research or program objectives with the mission and requirements of a selected funding agency.
3. Compose clear and persuasive sections of a grant proposal, including the statement of need, project goals, methods, evaluation plan, and dissemination strategies.
4. Construct a realistic and justified project budget and supporting materials (e.g., budget narrative, biosketches, logic model, timeline) consistent with funder expectations.
5. Collaborate effectively within a grant writing team, demonstrating professional communication, project organization, and responsiveness to feedback.
6. Critically evaluate and refine a grant proposal for clarity, coherence, and competitiveness based on reviewer criteria and best practices in grant writing.

Course Learning Objectives

Course Learning Outcomes

1. Conceptualize and develop a publishable scholarly manuscript that addresses a significant theoretical or empirical question in Pathokinesiology.
2. Integrate and interpret relevant literature to establish a clear rationale, theoretical framework, and contribution to the field.
3. Apply appropriate research methods and analytical approaches to ensure rigor, validity, and coherence in the presentation of findings.
4. Compose and revise a manuscript that meets disciplinary conventions for structure, style, and clarity in academic writing.
5. Navigate the peer-review and submission process, including journal selection, adherence to author guidelines, and professional communication with editors and reviewers.
6. Demonstrate scholarly independence and ethical integrity in authorship, data use, and representation of contributions.

Course Learning Objectives

Course Learning Outcomes

1. Gaining a basic understanding of the subject (e.g., factual knowledge, methods, principles, generalizations, theories)
2. Gain factual knowledge about the discipline of Landscape Architecture by exploring the origins and history of human interaction with the landscape
3. Gaining a broader understanding and appreciation of intellectual/ cultural activities of Landscape Architecture by:
4. Examining central ideas and activities of the profession of Landscape Architecture
5. Developing a sense of landscape appreciation and ethics

6. Developing creative capacities (inventing, designing, writing, performing in art, music, drama, etc.) by completing a number of hands-on design-related projects that build on one another and incorporate the course materials.
7. Learn fundamental principles of Landscape Architecture by developing an understanding of the planning and design processes utilized by landscape architects through hands-on design projects
8. Developing knowledge and understanding of diverse perspectives, global awareness, and other cultures by exploring how different communities interact with landscapes across geographic, cultural, and time contexts

may be taken concurrently

Course Learning Objectives

Course Learning Outcomes

By the end of the course, students will be able to:

1. Use basic elements of design and explain their relationship to landscape architecture.

2. Develop two- and three-dimensional design models to explore form and spatial relationships.
3. Apply design theory to materials of landform, vegetation, water, and architecture.
4. Describe and use the four actions of the design process—Looking, Thinking, Doing, and Reflecting—in their own work.
5. Build and use a basic design vocabulary drawn from lectures, readings, and visual examples.
6. Translate abstract design concepts into concrete design exercises and projects.
7. Use a design journal/sketchbook to document process, test ideas, and reflect on their own design thinking.

LAEP1360 - Fundamentals of Design - 4 - Credits

Course Overview

Course Prefix
LAEP

Course Number
1360

Department
Landscape Architecture & Environmental Planning

Course Title
Fundamentals of Design

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course introduces students to the basic steps in the design process and the foundational principles and elements commonly used by designers to create the built environment and the objects that surround us.

Course Learning Objectives

Course Learning Outcomes
Gaining a basic understanding of the subject (e.g., factual knowledge, methods, principles, generalizations, theories)

1. Students will identify the role that design plays in the everyday objects and environments that influence our lives.
2. Students will utilize the design process within weekly design activities and demonstrate their process through recording and reflecting on their design processes in weekly reflection activities

Learning to Apply Course Material (to improve thinking, problem solving, and decisions)

1. Students will be able to define and identify the principles and elements of design through studies of historic and contemporary design projects and through experiencing design projects local to the students as demonstrated through diagrammatic sketches, field notes, case studies and critiquing

2. Students will be able to generate multiple conceptual alternatives to a design challenge through engaged participation in weekly design activities and a final design project.

Learning to analyze and critically evaluate ideas, arguments, and points of view

1. Students will be able to use the critique process to judge the merits of their own work and others, and provide, receive, and respond to effective feedback

Course Learning Objectives

Course Learning Outcomes

1. Demonstrate integration of LAEP classroom learning (e.g., planning methods, design principles, environmental analysis) into professional tasks.
2. Apply theoretical concepts from landscape architecture and environmental planning in real workplace assignments.
3. Gain experience with professional tools, software, and methods common to landscape architecture and planning workplaces.
4. Improve skills such as project coordination, technical drawing, communication with clients/stakeholders, fieldwork techniques, or GIS/data analysis—depending on the host site.
5. Demonstrate professional conduct, including communication, collaboration, time management, and adherence to workplace expectations.

LAEP2300 - History of Landscape Architecture (BHU) - 3 - Credits

Course Overview

Course Prefix
LAEP

Course Number
2300

Department
Landscape Architecture & Environmental Planning

Course Title
History of Landscape Architecture (BHU)

General Education Attribute
BHU

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students examine landscape change in the context of its history from ancient to present times, with a primary emphasis on the visual qualities of designed landscapes. The course consists of three one-hour lectures per week

Credit Hours

Course Learning Objectives

Course Learning Outcomes

1. Students will study significant landscapes, designers, and movements to understand the evolution of landscape ideas, forms, and functions over time.
2. Emphasis is placed on developing the ability to critically analyze historical precedents and connect them to contemporary practice through lectures, readings, and visual site visits.
3. Students will build a strong foundation for understanding the historical context of the profession and its relevance to current and future design challenges.

LAEP2400 - 3D Representation - 3 - Credits

Course Overview

Course Prefix
LAEP

Course Number
2400

Department
Landscape Architecture & Environmental Planning

Course Title
3D Representation

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students learn how to represent landscapes through the use of digital 3D software. This course covers necessary software, principles of composition, and production techniques to provide students with a foundation upon which they can continue to build in subsequent courses.

Prerequisite

Required

Complete ALL of the following Courses:

- LAEP1300 - Digital Drafting, Illustration, and Modeling

Course Learning Objectives

Course Learning Outcomes

1. Acquire 3D modeling, rendering, and visualization skills using multiple graphic software.
2. Express their design ideas and details through the creation of 3D representations.
3. Develop methods of self-learning that enable them to make independent

contributions to and thrive in a professional setting.
4. Demonstrate thoughtful reflection on the future of design representation, particularly as it relates to emerging technology.

LAEP2450 - Artificial Intelligence Generative Design - 3 - Credits

Course Overview

Course Prefix
LAEP

Course Number
2450

Department
Landscape Architecture & Environmental Planning

Course Title
Artificial Intelligence Generative Design

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course is an introduction to the field of unsupervised machine learning for generative modeling. Students develop a computational toolkit enabling them to leverage state-of-the-art techniques for visual representation, text-to-image synthesis, and more.

Course Learning Objectives

Course Learning Outcomes
Course Learning Outcomes:

1. This course will help students develop a digital skill set that will enable them to leverage state of the art techniques for visual representation.

2. The goal of this course is not just to provide a reservoir of information - rather, it is to help students prepare for future careers in a rapidly advancing discipline. While mastering the ability to create 3D digital representations is part of the larger set of skills that students are developing while in school, it is critical to their ability to convey ideas and knowledge.

3. As a result of taking this course students should have a better ability to express design ideas and knowledge through the creation of advanced 3D representations. While the creation of visualization is a highly technical activity, it is also an expression of artistry that should convey more than simply a visual image.

LAEP2500 - Construction Materials and Detailing - 4 - Credits

Course Overview

Course Prefix
LAEP

Course Number
2500

Department
Landscape Architecture & Environmental Planning

Course Title
Construction Materials and Detailing

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course provides an introduction to construction materials used in landscape design, including paving, walls, street furnishings, landscape lighting, decking, etc.

- LAEP1200 - Introduction to Graphics and Illustration

may be taken concurrently

Course Learning Objectives

Course Learning Outcomes

1. Acquire knowledge and skill in the principles and graphic conventions of grading, and demonstrate knowledge and skill in practical exercises of grading plan preparation;
2. Acquire knowledge and skill in the computation of earthwork volumes and demonstrate their
proficiency by successfully completing practical earthwork computation exercises, while demonstrating proficiency recording calculations on a computer spreadsheet students design for that purpose;
3. Acquire basic knowledge in hydraulics, hydrology, drainage design, and the analysis of surface hydraulics and demonstrate that knowledge by successfully completing studio exercises in drainage design and analysis;
4. Acquire understanding of the principles and applications of the current low-impact development and green infrastructure design strategies in regard to stormwater management practices.
5. Acquire basic knowledge in horizontal and vertical pedestrian and vehicular infrastructure alignment and demonstrate knowledge in practical exercise of circulation alignment plan preparation

LAEP2700 - Analysis Design I - 5 - Credits

Course Overview

Course Prefix
LAEP

Course Number
2700

Department
Landscape Architecture & Environmental Planning

Course Title
Analysis Design I

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course covers site survey, analysis, and design synthesis, focusing on human behavior and natural resources as design considerations for future land use planning. It introduces foundational site analysis methods and tools, and integrates Geospacial Information Systems (GIS) training for data interpretation.

Course Learning Objectives

Course Learning Outcomes
1. Understand the use of studio culture as a tool to learn the creative design process.
2. Understand the process of site inventory, site analysis, program development, and synthesis in relation to the design process.
3. Understand the effects of behavioral actions on the design process
4. Understand the effects of landscape processes on the design process
5. Identify the information required to perform a site analysis
6. Collect field data, synthesize, and produce thematic maps.
7. Analyze site data (both environmental and behavioral) to understand site relationships and processes with respect to the design
program and criteria
8. Competently utilize standard site analysis tools and techniques.
9. Effectively communicate and work in teams to produce and present professional-quality results.

LAEP2720 - Analysis and Design 2 - 5 - Credits

Course Overview

Course Prefix
LAEP

Course Number
2720

Department
Landscape Architecture & Environmental Planning

Course Title
Analysis and Design 2

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course serves as a lower-division capstone, synthesizing lower-division landscape architecture coursework and applying that knowledge to site scale design projects. It includes units on design methodology, site planning and circulation, and creative problem solving. It includes three three-hour studios per week.

Complete ALL of the following Courses:

- LAEP1350 - Theory of Design
- LAEP2700 - Analysis Design I

***LAEP1350 THEORY OF DESIGN* may be taken concurrently**

Course Learning Objectives

Course Learning Outcomes

1. Build familiarity with the tools associated with landscape architectural graphics.
2. Learn the foundational graphic conventions of landscape architectural graphics.
3. Assemble graphic conventions to produce professional quality plans, sections, elevations & perspectives.
4. Produce portfolio worthy graphic and design work.
5. Cultivate a rapid & reliable personal graphic style.
6. Build an understanding of the role of graphics within the landscape architectural design process.

LAEP2900 - VR Design and Thematics Studio - 3 - Credits

Course Overview

Course Prefix
LAEP

Course Number
2900

Department
Landscape Architecture & Environmental Planning

Course Title
VR Design and Thematics Studio

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course trains students in the use of virtual reality (VR) in the design process using the subject of thematic design. Students design a series of thematic spaces with a focus on user experience, spatial, and theming factors.

Credit Hours

Course Learning Objectives

Course Learning Outcomes

The design studio:

1. Explores the use of virtual reality (VR) as a tool for immersive spatial design through the application of thematic design principles.
2. Students will learn how narrative, theming, and user experience shape designed environments.
3. Students will use VR to develop and refine their work from a first-person point-of-view, including technical aspects and design workflows. Emphasis is placed on the creation of evocative, story-driven landscapes to engage site user's both emotionally and experientially.

LAEP3200 - Graphic Design for Landscape Architects and Environmental Planners - 3 - Credits

Course Overview

Course Prefix
LAEP

Course Number
3200

Department
Landscape Architecture & Environmental Planning

Course Title
Graphic Design for Landscape Architects and Environmental Planners

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students who complete this course possess a stronger understanding of the field of Graphic Design with the ability to integrate those principles into the Landscape Architecture discipline. Students also obtain a foundational understanding of Adobe Creative Cloud software.

Course Learning Objectives

Course Learning Outcomes

The international travel course immerses students in the study of landscape architecture, urban design, and a foreign culture through the exploration of a diversity of dynamic urban and rural environments.

1. Students will investigate both historic and contemporary parks, plazas, residences, streets, and public spaces to examine how physical, cultural, and socio-political contexts shape the landscape and the built environment.
2. The course emphasizes first-hand observation of the built environment through site visits, sketching, reflection, and visits to professional design offices.

Course Learning Objectives

Course Learning Outcomes

By the end of this course, students will be able to:

1. **Integrate interdisciplinary knowledge** to analyze how ecological systems, animal welfare science, and human experience inform the spatial and environmental design of zoos and wildlife exhibits.
2. **Critically evaluate historical and contemporary models** of zoo design in relation to shifting cultural values, conservation ethics, and educational goals.
3. **Apply principles of habitat design** to develop conceptual and schematic designs that support animal enrichment, species-specific needs, and ecosystem representation.
4. **Design visitor experiences** that balance accessibility, interpretation, and emotional engagement while promoting conservation literacy and ethical reflection.
5. **Collaborate effectively with professionals** from fields such as animal care, interpretation, and architecture to synthesize diverse perspectives into cohesive design strategies.
6. **Demonstrate technical competence** in spatial planning, circulation design, and environmental systems integration within the specialized context of zoological landscapes.
7. **Communicate design intent** through visual, written, and oral presentations that reflect both scientific understanding and creative expression.
8. **Reflect critically on the designer's role** in mediating between human and non-human needs, and in shaping public understanding of biodiversity and environmental stewardship.

LAEP5380 - Planning Methods - 3 - Credits

Course Overview

Course Prefix
LAEP

Course Number
5380

Department
Landscape Architecture & Environmental Planning

Course Title
Planning Methods

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course introduces theoretical and methodological techniques of community and regional planning analysis, with the tools, software, and applications of these techniques. The course covers five significant areas of planning application: population, land, transportation, financial analysis, and infrastructure needs.

LAEP6100 - Regional Landscape Analysis and Planning - 5 - Credits

Course Overview

Course Prefix
LAEP

Course Number
6100

Department
Landscape Architecture & Environmental Planning

Course Title
Regional Landscape Analysis and Planning

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course focuses on the challenges and opportunities inherent in conducting landscape planning and analysis on a broad scale. Students integrate a variety of landscape planning project scales through literature review, selected case studies, and a major applied studio project.

Course Learning Objectives

Course Learning Outcomes

1. Conduct Hydrology and Topography Analysis
Understand and apply techniques for analyzing landform and water flow patterns to inform site planning and ecological design.
2. Perform Climate and Environmental Assessments
Analyze sun path, wind direction, and air quality data to guide environmentally responsive landscape planning and design decisions.
3. Integrate Scholarly Literature into Planning Practice
Critically interpret relevant academic and professional literature to inform evidence-based landscape planning strategies.
4. Develop Visual Communication Skills
Create effective diagrams and renderings that communicate spatial relationships, design intent, and planning concepts.
5. Translate Design Concepts into Planning Frameworks
Progress from initial design ideas to bubble diagrams and zoning layouts, demonstrating a clear understanding of spatial organization and land use planning.
6. Complete a Comprehensive Planning and Design Cycle
Execute a full planning and design process—from site analysis through conceptual development to final graphic representation—demonstrating integration of analytical, creative, and technical skills.

LAEP6110 - Landscape Ecology for Planning - 3 - Credits

Course Overview

Course Prefix
LAEP

Course Number
6110

Department
Landscape Architecture & Environmental Planning

Course Title
Landscape Ecology for Planning

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course explores the definition and contexts of landscape ecology. It includes the study of conservation biology and its role in preserving intact ecosystems and enhancing or rehabilitating sites previously disturbed by human activities.

6200

Department
Landscape Architecture & Environmental Planning

Dual-Listed Courses
LAEP5200 - Bioregional Analysis and Planning

Course Title
Bioregional Analysis and Planning

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course covers the compilation and analysis of data for assessing biophysical and socio-economic features of landscapes, and for evaluating impacts of land-use policies across landscapes and time. It provides real-world learning experience in working with stakeholders and agency decision-makers. Additional coursework is required for those enrolled in the graduate-level course.

Course Learning Objectives

Course Learning Outcomes
By the end of this course, you will:
1. Have a foundational knowledge about Bioregional planning and be able to:
Communicate the history of the field, examples and major players;
Learn how to research, analyze and summarize biophysical and cultural components;
Implement a planning process.
2. Synthesize how one or more specific biophysical and/or cultural components plays a role in the planning process and potential
outcomes, including:
Communicating the potential pitfalls and limitations of how these components are characterized;
Understand the dynamics of these systems pre-human settlement, during the Anthropocene and looking far into the future;
Characterizing these components in the context of different vocabularies used and understood by various (potential)
stakeholders in the planning process.
3. Develop geospatial models to support scenario development and impact assessments.

Course Learning Objectives

Course Learning Outcomes
Students will:
1. Develop a rigorous analytical understanding of regional systems—ecological, infrastructural, economic, and social—and how they intersect in the RiverLINE Corridor.
2. Engage with theories of regionalism and mapping to frame design as a tool for both critique and invention.
3. Experiment with futuring and design fiction as methodologies for imagining alternate regional trajectories.
4. Explore how designers might influence discourse and identity formation beyond traditional client-based frameworks.

Course Learning Objectives

Course Learning Outcomes

Students should learn the fundamental content and methods of the following subject areas:
1. Understand the use of studio culture as a tool to learn the creative design process.
2. Understand the process of site inventory, site analysis, program development, and synthesis in relation to the design process.
3. Understand the effects of behavioral actions on the design process
4. Understand the effects of landscape processes on the design process
5. Identify the information required to perform a site analysis
6. Collect field data, synthesize, and produce thematic maps.
7. Analyze site data (both environmental and behavioral) to understand site relationships and processes with respect to the design program and criteria
8. Competently utilize standard site analysis tools and techniques.
9. Effectively communicate and work in teams to produce and present professional-quality results.

3. Understand the effects of behavioral actions on the design process.
4. Understand the effects of landscape processes on the design process.
5. Identify the information required to perform a site analysis.
6. Collect field data, synthesize, and produce thematic maps.
7. Analyze site data (both environmental and behavioral) to understand site relationships and processes with respect to the design program and criteria.
8. Competently utilize standard site analysis tools and techniques.
9. Effectivvely communicate and work in teams to produce and present professional-quality results.
10. Graduate students are required to go deeper into the studio exercises, to help coordinate design reviews, and to create a graduatestudio culture in the spirit of 'further/deeper investigation".

LAEP6730 - Theory of Landscape Architecture - 3 - Credits

Course Overview

Course Prefix
LAEP

Course Number
6730

Department
Landscape Architecture & Environmental Planning

Course Title
Theory of Landscape Architecture

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Explores theoretical underpinnings of landscape theory, from the rational model to contemporary alternatives. Leads to discussions of issues of sprawl, sustainability, and transportation, including their effects on the built environment, agricultural lands, and open-space systems.

Credit Hours

Credit Hours

Course Learning Objectives

Course Learning Outcomes

1. Gain a working knowledge of the theoretical issues, terminology, processes, and issues inherent in the design and management of landscapes across temporal and cultural contexts.
2. Demonstrate understanding of complex human/environment issues across contexts and/or scales.
3. Identify and understand how different value systems, experiences, and perspectives impact planning, design and management decisions on the landscape.
4. Critically analyze different arguments to understand their strengths, weaknesses, and inherent tradeoffs.
5. Use of appropriate written, oral, and graphic communication to communicate ideas and craft arguments.

LAEP6740 - Planning Theory and Implementation Issues - 3 - Credits

Course Overview

LAEP6750 - Implementation and Regulatory Techniques in Planning - 3 - Credits

Course Overview

Course Prefix
LAEP

Course Number
6750

Department
Landscape Architecture & Environmental Planning

Course Title
Implementation and Regulatory Techniques in Planning

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Review and analysis of the legal basis and techniques for land use and resource planning, including historic and visual resources at the federal, state, and local levels. Relies on readings in case law and specific case studies, as well as research focused on the evaluation of planning processes and strategies.

No Requirements

Course Learning Objectives

Course Learning Outcomes

1. Provide students with an overview of the planning profession; government requirements;
and land use laws, regulations, and practices.
2. Develop a vocabulary for dealing with other planners/designers, developers, and government officials and their staff. This vocabulary will provide a basis for communication, understanding approval processes, and a basic understanding of local
codes and regulations.
3. Understand how regulations can constrain designers, and how to seek relief from
constraints that are improper or poorly conceived.
4. Apply the knowledge gained about planning and regulatory processes to the design

process to show how real-world scenarios develop.
5. Provide a basic understanding of land use regulations, including how to find applicable
regulations and utilize them as part of the design or planning process.
6. Understand basic community planning principles and the various plan types that jurisdictions utilize to guide their future.

Course Learning Objectives

Course Learning Outcomes
1. Explore Theoretical Frameworks
Examine key theories that inform the relationship between landscape planning, urban form, and environmental outcomes, drawing from disciplines such as urban planning, ecology, sociology, and geography.
2. Analyze Mediating and Moderating Factors
Assess how contextual variables—such as cultural norms, demographic characteristics, and spatial configurations—affect the outcomes of planning and design decisions.
3. Critically Engage with Scholarly Literature
Develop skills in reading, interpreting, and evaluating academic articles, with attention to research questions, methodologies, findings, and implications.
4. Compare Research Design Types
Understand and critique different research methodologies used in landscape and environmental planning, including qualitative, quantitative, and mixed-method

approaches.
5. Practice Scientific Writing
Build proficiency in academic writing, including structuring arguments, citing sources, and communicating research findings effectively for scholarly audiences.

Course Learning Objectives

Course Learning Outcomes

1. Become acquainted with core responsibilities of faculty members, including research, scholarship and teaching.
2. Understand activities, products and standards associated with tenure-track positions, including promotion processes and career stages.
3. Examine the culture, structure and expectations for faculty associated with various types of positions.
4. Dissect faculty hiring processes, including position announcements, applications, candidate selection, interviews, and negotiation of salary and start-up funds.
5. Initiate a career planning process to define the professional areas of expertise they intend to develop, using that definition to identify activities at USU to support their career goals.
6. Create job application materials to become familiar with communications expectations common to faculty position searches.

7. Learn about peer disciplines' academic tracks and faculty models.
8. Gain a greater familiarity with one's own doctoral program, and how to capitalize on graduate opportunities to improve success in faculty hiring processes.
9. Understand how to leverage professional networking
10. Learn about the mid- and upper-level administrative leadership at universities, and their relation to faculty.

Course Learning Objectives

Course Learning Outcomes
1. Articulate similarities and differences between products, practices, and perspectives across cultures of the globe, apply these comparisons to contemporary social issues and individual concerns.

2. Identify clearly not only key differences between the cultures presented but also common issues that cut across human history and culture.

3. Develop interpretations directly based upon and tested against textual evidence.

4. Synthesize the course material through writing, presenting clear main theses and developing coherent arguments.

5. Students display academic research skills by showing in their writing that they

evaluate sources, gather relevant information and use electronic library databases and the Internet for information gathering.

6. Students display academic writing skills by showing in their writing a clear focus and overall organization typical of various academic genres, information that has been paraphrased/summarized from multiple sources, acknowledgement of others' ideas through in-text citations and reference lists and use of language (syntax, grammar, vocabulary) that does not interfere with comprehensibility.
