Course Learning Objectives

Course Learning Outcomes
1. Students will interpret basic blueprint symbols, line types, and views.
2. Students will analyze title blocks and apply the data found there to the inspection process.
3. Students will be able to describe the basic Geometric Dimensioning and Tolerance (GD&T) Symbols.
4. Students will demonstrate the proper use of micrometers, calipers, and other gaging tools.

MACH1130 - Mill Concepts - 3 - Credits

Course Overview

Course Prefix
MACH

Course Number
1130

Department
Technology, Design & Technical Ed

Course Title
Mill Concepts

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
In this course students are introduced to material cutting concepts by operating a manual milling machine. Topics include principles of clamping work pieces, selection of cutting tools, milling speeds and feeds application of cutting depth, width, and direction.

Course Learning Objectives

Course Learning Outcomes

1. Students will demonstrate the safe operation of a milling machine.
2. Students will demonstrate proper machine maintenance and workstation cleanup.
3. Students will demonstrate proper work holding device selection and setup.
4. Students will demonstrate efficient speeds and feeds for mill tooling.
5. Students will perform accurate milling of pockets and windows & slots.
6. Students will perform accurate hole-forming mill operations for size and location.
7. Students will perform accurate angle milling.
8. Students will create and evaluate milled surface finishes.

MACH1140 - Engine Machining Theory - 2 - Credits

Course Overview

Course Prefix
MACH

Course Number
1140

Department
Technology, Design & Technical Ed

Course Title
Engine Machining Theory

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Instructs students on the techniques of drilling, honing, boring, grinding, etc., using the machines, measuring tools and gauges associated with MACH 1160 . Casting inspection and guidelines for re-use is also explained.

Course Learning Outcomes

1. Students will demonstrate how tolerancing concepts and rules apply.
2. Students will demonstrate how datums work.
3. Students will demonstrate how feature frames work.
4. Students will identify all symbols on a print.

MACH1160 - Engine Machining Lab - 2 - Credits

Course Overview

Course Prefix
MACH

Course Number
1160

Department
Technology, Design & Technical Ed

Course Title
Engine Machining Lab

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Provides hands-on experience using specialized equipment to machine automotive and diesel engine castings during overhaul. Students recondition rods, heads, valves, blocks, and bores while applying precision measuring tools and gauges to ensure accuracy and quality.

Course Learning Objectives

Course Learning Outcomes

1. Students will demonstrate proper work holding for CNC machining.
2. Students will demonstrate basic CNC machine setup.
3. Students will demonstrate setting program zero for CNC machines.
4. Students will perform manual mode operation, edit mode, MDI (manual data input) and program operation mode.
5. Students will be able to apply recognition of program codes to CNC machine operation.
6. Students will be able to apply knowledge of motion commands of rapid positioning, linear interpolation, and circular interpolation.
7. Students will be able to apply proper feeds, speeds, and chip load to quality part production.
8. Students will be able to apply CSS (Constant surface speed) and constant RPM (Revolutions Per Minute).
9. Students will perform necessary operations to load a program, set tool offsets, and set cutter or nose radius compensations.

MACH1190 - Computer Numerical Control (CNC) Lathe Programming - 3 - Credits

Course Overview

Course Prefix
MACH

Course Number
1190

Department
Technology, Design & Technical Ed

Course Title
Computer Numerical Control (CNC) Lathe Programming

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
In this course students learn the fundamentals of Computer Aided Drafting/ Computer Aided Manufacturing (CAD/CAM) systems. Topics include software operating systems, drawing commands, editing commands, tool-path generation, and posting.

Course Learning Outcomes

1. Students will create advanced 2D geometry construction.
2. Students will create 2-1/2 D geometry construction.
3. Students will perform advanced modification of existing geometry.
4. Students will demonstrate advanced 2D toolpath editing.
5. Students will generate process and toolpath planning.
6. Students will create part geometry for CNC lathes.
7. Students will inspect and document finish dimensions using various metrology.
8. Students will generate toolpaths for CNC lathes.

MACH1200 - Introduction to Computer-Numeric Control Machining - 3 - Credits

Course Overview

Course Prefix
MACH

Course Number
1200

Department
Technology, Design & Technical Ed

Course Title
Introduction to Computer-Numeric Control Machining

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course introduces students to entry-level Computer-Numeric Control (CNC) Machining. Topics include CNC terminology, operation, and performing part production and inspection. Students are expected to operate in a safe and clean environment as they program G and M code.

Course Learning Objectives

Course Learning Outcomes

1. Explain essential elements of G and M code.
2. Demonstrate best safety practices and techniques for a machine shop.
3. Properly perform the basic start-up of a CNC machine.
4. Correctly load a part into the CNC machine.
5. Run basic programs on a CNC machine.
6. Explain the various functions of the CNC control keypad and screen.
7. Select the correct tooling for operations.
8. Demonstrate appropriate preventative maintenance of a CNC machine.

MACH1240 - Lathe Concepts - 3 - Credits

Course Overview

Course Prefix
MACH

Course Number
1240

Department
Technology, Design & Technical Ed

Course Title
Lathe Concepts

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
In this course students are introduced to material cutting concepts by operating a manual turning machine. Topics include principles of locating work pieces, selection of cutting tools/holders, turning speeds and feeds, and application of cutting depth, width, and direction.

2. Demonstrate proper machine maintenance and workstation cleanup.
3. Demonstrate proper tool selection and application.
4. Demonstrate proper work-holding device selection and setup.
5. Demonstrate efficient speeds and feeds for lathe tooling.
6. Perform accurate facing operations.
7. Perform accurate turning operations.
8. Perform accurate chamfer/taper turning operations.
9. Perform accurate hole-forming operations for size and location.
10. Perform accurate threading operations.
11. Perform accurate knurling operations.
12. Perform calculations needed to operate the precision machine.
13. Inspect and document finish dimensions using various metrology.

Prerequisite

Type
Prerequisite

Required

Complete ALL of the following Courses:

- ENGR2140 - Mechanics of Materials
- MAE2160 - Material Science

Course Learning Objectives

Course Learning Outcomes
1. Adhesion mechanisms.
2. Surface science, analysis, and bond surface treatments.
3. Pertinent chemistry and polymer science to understand adhesives.
4. Adhesive behavior in fluid, gelled and vitrified states.
5. Testing of adhesives and bondlines (including viscoelasticity and fracture mechanics).
6. Adhesive selection and bonded joint design.

MAE5050 - Material Science of Composites - 3 - Credits

Course Overview

Course Prefix
MAE

Course Number
5050

Department
Mechanical & Aerospace Engineering

Course Title
Material Science of Composites

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course provides fundamental understanding of polymeric composites and structure-property relationships, necessary to design and manufacture composites for engineering applications.

MAE5060 - Mechanics of Composite Materials I - 3 - Credits

Course Overview

Course Prefix
MAE

Course Number
5060

Department
Mechanical & Aerospace Engineering

Cross-Listed Courses
CEE5060 - Mechanics of Composite Materials

Course Title
Mechanics of Composite Materials I

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students study stress-strain relations for nonisotropic composites (such as fiber-reinforced plastic laminates), properties of composite materials and their uses, strength and life determination, and methods for design using composite materials.

Course Overview

Course Prefix
MAE

Course Number
5310

Department
Mechanical & Aerospace Engineering

Course Title
Control Systems

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students learn mathematical modeling of systems, including transfer function and state space representations. They study transient and steady-state responses, feedback and stability theory, and analysis and design methods of feedback controllers for single-input single output linear systems. Laboratory work required.

Course Overview

Course Prefix
MAE

Course Number
5370

Department
Mechanical & Aerospace Engineering

Course Title
Optimization for Engineers

Grade Mode
Standard Letter

Repeat Status
NR

Course Description

Students learn the mathematical theory of optimization and computational techniques for solving problems. Topics include unconstrained optimization, linear programming, integer linear programming, convex programming, and nonlinear programming. The emphasis is to develop fundamentals and capabilities for solving real-world problems.

MAE

Course Number
6060

Department
Mechanical & Aerospace Engineering

Course Title
Micro-Mechanics of Deformation

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This graduate elective covers the overlap between material science and solid mechanics. Topics include deformation of single crystals, slip in poly-crystals, dislocation motion, strengthening mechanisms, and deformation at high temperature.

Course Overview

Course Prefix
MAE

Course Number
6200

Department
Mechanical & Aerospace Engineering

Course Title
Mathematical Methods in Aerospace Engineering

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course covers linear algebra (including vector spaces, eigenvalues/vectors, and set theory), differential equations (ODEs and PDEs with integral method analysis), and probability and statistics (including fundamentals of experiment design) framed in an analytical and numerical engineering context.

Course Learning Objectives

Course Learning Outcomes
The goal of this course is for students to review and engage more deeply with the mathematics used in graduate-level engineering courses.

Upon successful completion of this course, students will be able to analytically and/or numerically solve engineering problems involving:

1. First- and Second-Order Linear Ordinary Differential Equations
2. Fourier Analysis – Including Solving Partial Differential Equations
3. Probability and Statistics – Including Design of Experiments

MAE6320 - Linear Multivariable Control - 3 - Credits

Course Overview

Course Prefix
MAE

Course Number
6320

Department
Mechanical & Aerospace Engineering

Cross-Listed Courses
ECE6320 - Linear Multivariable Control

Course Title
Linear Multivariable Control

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Modeling, analysis, and design of multi-input, multi-output control systems, including both state space and transfer matrix approaches, with an emphasis on stability.

Prerequisite

Required

Complete ALL of the following Courses:

- ECE6320 - Linear Multivariable Control
  OR MAE6320 - Linear Multivariable Control

Course Learning Objectives

Course Learning Outcomes

1. Students will be prepared to recognize the uncertainty of the mathematical model, identify the system uncertainty source, utilize computer-aided methods to analyze the robustness, synthesize robust controllers for commonly-seen dynamical systems.
2. The students will be ready for future research on dynamical systems and industrial jobs dealing with the uncertain systems.

MAE6340 - Spacecraft Attitude Control Theory - 3 - Credits

MAE

Course Number
6430

Department
Mechanical & Aerospace Engineering

Course Title
Boundary Layer Theory and Convection Heat Transfer

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Derivation of the boundary layer equations. Exact, approximate, and numerical solution techniques. Boundary layers in compressible flow. Separation. Unsteady boundary layers. Stability and transition. Turbulent boundary layers. Integral, differential, and numerical methods for solving problems associated with transfer of heat in a viscous fluid.

NR

Course Description
Students learn the analysis and synthesis of distributed controllers for multi-agent systems with different levels of complexity and objectives. Topics include graph theory, output regulation, and synchronization problems spanning consensus/ formation of single integrators to cooperative output regulation of uncertain dynamics.

Prerequisite

Required

Complete ALL of the following Courses:

- ECE6320 - Linear Multivariable Control
  OR MAE6320 - Linear Multivariable Control

Course Learning Objectives

Course Learning Outcomes

1. Students shall understand the classification of multi-agent systems and control schemes, the fundamentals of graph theory, how to model information exchange between agents by undirected and directed graphs, and the relationship between the algebraic connectivity of graphs and consensus-like global objectives of single integrator agents and the convergence rate.
2. Students should be able to conduct mathematical analysis for consensus, forced consensus, and formation with single integrator agents and demonstrate the theory with simulations. They shall develop the ability to analyze the stabilizability and detectability of the networked systems and to apply graph theory, linear systems theory, linear algebra, LQR, and the Kronecker product to the analysis and synthesis of distributed controllers enabling the synchronization of networks of high-order LTI systems.
3. Students shall understand the (robust) linear output regulation theory, including the Sylvester and regulator equations, the solvability of the output regulation problems, and the feedforward and p-copy internal model approaches for state and output feedback controllers. They shall develop the skills to recognize, formulate, and solve output regulation problems by feedforward and internal model approach-based controllers. In the simulations, they should be able to tune the control parameters by utilizing modern control techniques, such as eigenvalue assignment and LQR, to meet the given performance requirements of the physical systems.
4. Students shall understand the cooperative output regulation of heterogeneous multi-agent systems. They shall develop the ability to apply graph theory and linear output regulation theory to the analysis and synthesis of distributed controllers.
5. Students shall develop the skills to conduct rigorous mathematical analysis for given linear systems, distributed control laws, and the problem. They shall develop the background needed to study, understand, and evaluate recent research articles in distributed control.

MAE7930 - Special Problems - 1 - 3 Credits

- ACT Math score of at least 25 or equivalent SAT Math Score
- Satisfactory score on the ALEKS Math Placement Exam
- Sufficient score on AP Exam equivalent to MATH1050 COLLEGE ALGEBRA (QL) or higher

Course Learning Objectives

Course Learning Outcomes

1. Apply functions and other pre-calculus mathematics proficiently.
2. Construct and analyze discrete-time and continuous-time models.
3. Use computational tools (such as R, spreadsheets, Colab, and Netlogo) to simulate, visualize, and approximate solutions.
4. Explain and use concepts of limits, derivatives, and integrals.
5. Analyze equilibrium, stability, and bifurcations.

MATH3010 - Pedagogical Foundations of Algebra - 3 - Credits

Course Overview

Course Prefix
MATH

Course Number
3010

Department
Mathematics & Statistics

Course Title
Pedagogical Foundations of Algebra

Grade Mode
Standard Letter

Repeat Status
NR

Course Description

The historical and epistemological foundations of math as traditionally taught in schools are contrasted with that of authentic mathematics. The differential effects of these approaches on teaching and learning are analyzed by examining the interplay among classical algebra, analytical geometry, and modern algebra.

Course Number
3150

Department
Mathematics & Statistics

Cross-Listed Courses
BIOL3150 - Quantitative Modeling of Life

Course Title
Quantitative Modeling of Life

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course introduces students to complex systems and mathematical modeling approaches that can be used across disciplines to address social and environmental issues. Students engage in the modeling process to address specific issues in sociology, ecology, public health, and conservation.

Exam

Prerequisite fulfilled by Exam

- Any AP Calculus exam with a score of 3 or higher

Course Learning Objectives

Course Learning Outcomes

1. Our learning goals for students are to strengthen and develop their mathematical creativity, communication skills, and appreciation for mathematical modeling.

2. Choose and apply mathematics to analyze particular situations.

3. Simplify complex situations, and pose new questions.

4. Write clear explanations of models identifying variables, explaining relationships, and justifying assumptions.

5. Use data visualizations and mathematical calculations in reports of model results.

6. Compare and contrast various mathematical models identifying strengths and limitations.

7. Interpret model implications and make recommendations based on analysis.

8. Reflect on the process of mathematical modeling.

9. Gain appreciation of mathematical modeling in the life sciences and be inspired to learn more.

NR

Course Description
Introduces fundamental concepts of financial mathematics, focusing on applications to non-life insurance. Topics include interest theory, cash flows and yield rates, annuities, portfolio insurance, and derivatives. Also includes discussion of probability models for underlying assets.

MATH6070 - Mathematical Modeling for Educators - 3 - Credits

Course Overview

Course Prefix
MATH

Course Number
6070

Department
Mathematics & Statistics

Course Title
Mathematical Modeling for Educators

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
In this course, educators learn how to use mathematical modeling to solve real-world problems. Specifically, educators learn how to build and analyze mathematical models to represent real-world phenomena, with applications to biology, ecology, epidemiology, socio-critical, social-justice, and environmental issues.

Other Enrollment Recommendations
An undergraduate course in college algebra (e.g. MATH 1050)

Course Learning Objectives

Course Learning Outcomes
1. Explain classical models across applied mathematics such as, population models, epidemiology, and predator-prey models.

2. Use mathematics to analyze, interpret, validate, and predict situations across various mathematical contexts (e.g., number and operation, ratio and proportion, data reasoning, geometry, algebra, and calculus), and various real-world contexts (e.g., use mathematics to address socio-critical, social-justice, and environmental issues).

3. Use technology to analyze and communicate the models developed.

Course Title
Practicum in Mathematics/Statistics Instruction for Graduates Pursuing Secondary Licensure

Grade Mode
Pass/Fail

Repeat Status
NR

Course Description
A practicum which provides graduate students pursing a Secondary Mathematics Teaching License with supervised experiences working with secondary students and teachers. To justify graduate credit, students must integrate the extra period required by MATH 6500 with this clinical experience. Students who have credit for a similar practicum at the under graduate level may not apply credit for this experience toward a graduate degree. Should be taken concurrently with MATH 6500.

Prerequisite

Required

Earn a minimum grade of C- in the following:

- MATH5340 - Theory of Linear Algebra

Course Learning Objectives

Course Learning Outcomes
1. An understanding of how various subfields of multilinear algebra and representation theory interact.

2. The ability to apply tools from multilinear algebra and representation theory to problems in other areas of mathematics, including algebra, topology, and combinatorics.

3. An understanding of key theorems, constructions, and calculations in research-level multilinear algebra and representation theory.

MLT2280 - Immunohematology - 5 - Credits

Course Overview

Course Prefix
MLT

Course Number
2280

Department
Technology, Design & Technical Ed

Course Title
Immunohematology

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course's lecture and laboratory focus on introducing the immunological aspect of the circulation system, including the theory behind patient compatibility. This includes, but is not limited to, blood grouping, Rh typing, compatibility testing, donor screening, and quality assurance issues.

Course Learning Objectives

Course Learning Outcomes

1. Identify how the American profession of arms developed from a “dual military tradition” reflecting the often-ambiguous relationship between American ideals and interests.

2. Evaluate military leadership at the tactical, operational, and strategic levels of war.

3. Identify how the (extended) Industrial Revolution transformed the ways in which the United States and other societies organized armed violence to pursue their interests.

Course Learning Outcomes
1. Identify how the American profession of arms developed from a "dual military tradition" reflecting the often ambiguous relationship between American ideals and interests.

2. Evaluate military leadership at the tactical, operational, and strategic levels of war.

3. Identify how the (extended) Industrial Revolution transformed the ways in which the United States and other societies organized armed violence to pursue their interests.

4. Integrate basic knowledge of military history into your education as a future officer.

5. Recognize the enduring tension between the Army's professional conception of itself as a warfighting organization and its routine deployment for the expansion of American frontiers, ideals, and institutions.

MSLE1800 - Leadership and Human Flourishing - 3 - Credits

Course Overview

Course Prefix
MSLE

Course Number
1800

Department
Marketing and Strategy

Cross-Listed Courses
CMST1800 - Leadership and Human Flourishing, ASTE1800 - Leadership and Human Flourishing

Course Title
Leadership and Human Flourishing

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course delves into the pivotal connection between leadership and human flourishing. Students learn leadership theories, practical skills, communication strategies, and the art of positive influence, all aimed at increasing personal and interpersonal excellence to improve global communities.

Course Learning Objectives

Course Learning Outcomes

1. To help students understand the growing epidemics of despair and incivility in our country and how these are impacting satisfaction, attendance, turnover, conflicts, productivity, and increased medical costs for organizations.
2. To help students explore and discover their implicit biases and judgements of others (with the Harvard Implicit Association Tests) and how these can impact their interpersonal relationships, teamwork, and performance in their careers.
3. To give students a set of research based tools to increase their personal happiness, improve their relationships, and enhance their civil behavior in teams, organizations, and communities.
4. To help students understand that success in life does not guarantee happiness: rather, enhancing personal happiness is a key driver of success in life, relationships, and careers.

MSLE6741 - Leadership Development - 3 - Credits

Course Overview

Course Prefix
MSLE

Course Number
6741

Department
Marketing and Strategy

Course Title
Leadership Development

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course bridges the practice of leadership with the moral philosophy of leadership. Students learn the long history of leadership theory and the latest research, but they also experience both a hypothetical (case-based) application and real-world application of those ideas.

Course Overview

Course Prefix
MSLE

Course Number
6892

Department
Marketing and Strategy

Course Title
Systems Thinking and Advanced Tactics II

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course builds upon the concepts taught in MSLE 6891 and is a deep-dive, strategic management course designed as an experiential exercise for students to use the accumulated knowledge from all MBA courses. Students will be working directly with executives in a comprehensive quasi-consulting arrangement. Along with some additional concepts and techniques developed at the beginning of the course, each student will be required to advise the company on which way it should proceed AND then advise them on how this can be implemented in the organization.

Course Learning Objectives

Course Learning Outcomes

Upon successful completion of this course, students will be able to:

1. Perform in a Large Instrumental Ensemble: Effectively contribute to a large ensemble, demonstrating the ability to blend, balance, and follow a conductor in a live performance setting.
2. Develop Musical Literacy and Technique: Improve their sight-reading, rhythm, and instrumental technique through the study and performance of diverse orchestral repertoire.
3. Engage in Collaborative Performance: Cultivate strong collaborative skills, including active listening, expressive interpretation, and non-verbal communication, essential for successful group performance.
4. Contribute to the University's Land-Grant Mission: Connect the university to the broader community by providing an accessible, high-quality ensemble experience for instrumental music, helping fulfill USU's commitment to education and engagement throughout the state.

Complete ALL of the following Courses:

- NDFS3050 - Education and Counseling Methods in Dietetics I (CI)

NDFS3065 - Education and Counseling Lab - 1 - Credits

Course Overview

Course Prefix
NDFS

Course Number
3065

Department
Nutrition, Dietetics & Food Sciences

Course Title
Education and Counseling Lab

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students gain practical experience through completing at least 45 hours of approved activities applying NDFS 3060 content. Students serve the campus and community, delivering nutrition education and counseling under instructor (or qualified preceptor) supervision to enhance skills in real-world settings.

Complete ALL of the following Courses:

- NDFS3050 - Education and Counseling Methods in Dietetics I (CI)

Course Learning Objectives

Course Learning Outcomes

1. Students will utilize motivational interviewing skills in conducting one on one nutrition consultations.
2. Students will complete at least 45 hours of approved experiences that apply the content discussed in NDFS 3060: Education and Counseling II.
3. Students will provide service at various locations on campus and in the community by providing education and counseling while being overseen by the course instructor or qualified preceptor.

NDFS3070 - Science of Food Preparation - 4 - Credits

Course Overview

Course Prefix
NDFS

Course Number
3070

Department
Nutrition, Dietetics & Food Sciences

Course Title
Science of Food Preparation

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course covers science principles underlying modern food theory and practice. It also covers the relation of physical and chemical properties of food components and their systems to food preparation.

- CHEM1120 - General Chemistry II (BPS)
  OR CHEM2300 - Principles of Organic Chemistry
  OR CHEM2310 - Organic Chemistry I

CHEM1120 GENERAL CHEMISTRY II (BPS) may be taken concurrently

Course Learning Objectives

Course Learning Outcomes

1. Identify important biomolecules (e.g. sugars, carbohydrates, lipids, and proteins) based on structural characteristics, and explain their function(s) in foods.
2. Describe conditions that affect different biomolecules in the storage and preparation of foods.
3. Predict the effect of altering an ingredient and/or preparation method on the quality of the final project.
4. Formulate a hypothesis relating to a specific food ingredient and/or preparation method, design and conduct appropriate experiments, and interpret results in relation to the original hypothesis.

NDFS3080 - Community Nutrition - 3 - Credits

Course Overview

Course Prefix
NDFS

Course Number
3080

Department
Nutrition, Dietetics & Food Sciences

Course Title
Community Nutrition

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course provides an introduction to public health nutrition, food programs, and national nutrition monitoring.

Complete ALL of the following Courses:

- NDFS1020 - Science and Application of Human Nutrition (BLS)

Course Learning Objectives

Course Learning Outcomes

1. Demonstrate foundational knowledge of public health nutrition, including key food programs and national nutrition monitoring systems.
2. Effectively communicate public health nutrition concepts through oral presentations and written assignments.
3. Critically evaluate public health nutrition policies and programs, considering diverse perspectives and evidence-based arguments.

NDFS3110 - Food, Technology, Sustainability and Health (DSC) - 3 - Credits

Course Overview

Course Prefix
NDFS

Course Number
3110

Department
Nutrition, Dietetics & Food Sciences

Course Title
Food, Technology, Sustainability and Health (DSC)

General Education Attribute
DSC

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
In this class, students learn about food technology, production, distribution, and consumption, with a focus on sustainability, safety and human health outcomes. The course connects scientific principles with real-world applications through hands-on activities and discussion.

Course Learning Objectives

Course Learning Outcomes

1. Students will be able to:

   Describe physiological changes in pregnancy

   Explain the changing nutrition needs during pregnancy and lactation

   Identify special cases in pregnancy and lactation and discuss management

   Explain nutritional needs and feeding approaches during different stages of growth and development

   Describe nutritional interventions for certain medical complications during growth and development.

2. Students will be able to:

   Critically analyze and apply course lectures and assigned readings.

KRDN 2.9: Defend a position on issues impacting the nutrition and dietetics profession

Course Learning Outcomes

1. Students will gain knowledge of the terminology used in meat animal production and processing.
2. Students will understand the complexities involved in the conversion of live tissue into consumable meat.
3. Students will learn the classifications of animals, muscles, muscle microstructure, and meat types.
4. Students will understand the key factors affecting meat quality development, allowing them to judge its quality.
5. Students will identify common challenges in meat production and apply scientific methods to improve efficiency and product quality.
6. Students will gain knowledge regarding various meat defects and the strategies to avert their occurrence.
7. Students will understand how meat science fits into the animal and food industries.
8. Students will become aware of how the conversion of muscle to meat affects quality.
9. Students will learn how to better select and utilize meat products.

Corequisite

Type
Corequisite

Required

Enroll in the following Courses:
- NDFS5030 - Dairy Technology and Processing

Course Learning Objectives

Course Learning Outcomes
Cleaning

1. Learn the methods for cleaning dairy processing equipment.
2. Understand the components of a CIP cleaning system
3. Understand how a HTST pasteurizer is cleaned using CIP.

Cottage Cheeses

4. Learn how to make cottage cheese using direct acidification.
5. Learn about acid coagulation of milk
6. Learn the ingredients used to make cheddar cheese.
7. Learn about rennet coagulation of milk
8. Know how to make Cheddar and Mozzarella cheese.

Milk Pasteurization

9. Learn the components of a cream separator
10. Learn the components of an HTST pasteurizer
11. Understand how to measure the holding time of an HTST pasteurizer
12. Understand the influence of heat treatment on milk flavor.
13. Ultra-High Temperature Milk
14. Know the difference between UHT and ultra-pasteurization of milk.
15. Learn how to UHT process milk
16. Know the difference between direct and indirect heating.
17. Learn how storage time and temperature influences UHT milk quality

Fluid Milk

18. Know the components and requirements for batch pasteurizing milk.
19. Know the common time and temperature treatments for fluid milk.
20. Learn how to manufacture chocolate milk
21. Understand the influence of ingredients on chocolate milk.
22. Learn how to operate a 2-stage homogenizer

Ice Cream

23. Learn how to manufacture an ice cream mix
24. Know the common ingredients used for manufacture of ice cream.
25. Know how to calculate a mix formulation
26. Learn the processing steps used when making ice cream.
27. Understand how ice cream can be made using batch and continuous freezing
28. Be able to calculate ice cream overrun.
29. Learn how a homogenizer works.

Yogurt

30. Understand the differences in manufacture of set and stirred yogurt.
31. Know how to make yogurt.
32. Understand the acidification of milk using fermentation.
33. Concentration and Fractionation of Milk
34. Understand how a spiral wound membrane is used
35. Understand the components of a membrane filtration system.

36. Learn how milk components are fractionated using ultrafiltration.
37. Understand how membrane systems are cleaned.

Process Cheese

38. Learn how to make pasteurized process cheese products.
39. Know the ingredients that are used to make process cheese products."

Admission to the Applied Practice in Dietetics - Post-Bachelor's Certificate

Course Learning Objectives

Course Learning Outcomes

1. Conduct nutrition focused physical exams.
2. Perform routine health screening assessments including measuring blood pressure, conducting waived point-of-care laboratory testing (such as blood glucose or cholesterol), recommending and/or initiating nutrition-related pharmacotherapy plans (such as modifications to bowel regimens, carbohydrate to insulin ratio, B12 or iron supplementation).
3. Provide instruction to clients/patients for self-monitoring blood glucose considering diabetes medication and medical nutrition therapy plan.
4. Explain the steps involved and observe the placement of nasogastric or nasoenteric feeding tubes, if available, assist in the process of placing nasogastric or nasoenteric feeding tubes.
5. Conduct a swallow screen and refer to the appropriate health care professional for full swallow evaluation when needed.
6. Demonstrate effective communication and documentation skills for clinical and client services in a variety of formats and settings, which include telehealth and

other information technologies and digital media.
7. Engage in the process for coding and billing for nutrition and dietetics services to obtain reimbursement from public or private payers, fee-for-service and value-based payment systems.

- NDFS4020 - Advanced Nutrition
- STAT1040 - Introduction to Statistics (QL)
  OR STAT1045 - Introduction to Statistics with Elements with Algebra (QL)

or higher STAT course

Course Learning Objectives

Course Learning Outcomes

1. Describe the evidence supporting public health recommendations regarding diet and nutrition.
2. Describe the role of nutrition in wide range of chronic diseases among various demographic groups.
3. Discuss how evolution biology has shaped genetic adaptation among a wide range of dietary patterns.
4. Develop skills in reviewing, analyzing, critiquing, and peer reviewing public health nutrition research.
5. Develop skills in critical thinking and research writing.

NDFS5230 - Communication of Current Topics in Nutrition (CI) - 3 - Credits

Course Overview

Course Prefix
NDFS

Course Number
5230

Department
Nutrition, Dietetics & Food Sciences

Course Title
Communication of Current Topics in Nutrition (CI)

General Education Attribute
CI

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students learn best practices for effective scientific communication using a variety of methods. Students demonstrate communication skills by completing several assignments based on a current nutrition topic of their choice. Additional coursework is required for those enrolled in the graduate-level course.

Complete ALL of the following Courses:

- NDFS1020 - Science and Application of Human Nutrition (BLS)

Course Learning Objectives

Course Learning Outcomes

1. Locate relevant and timely scientific evidence on a given topic.
2. Develop a working knowledge of communication and behavior change theories.
3. Develop learning goals and objectives and evaluation strategies for a targeted communication event that is selected to meet the needs of the audience.
4. Demonstrate skills in the appropriate use of professional citations and referencing in a variety of communication methods and styles.
5. Review, critique, and synthesize scientific evidence on a given topic.
6. Demonstrate skills in effectively communicating information to a variety of audiences (professional peers, lay public, media) using a variety of communication channels (written reports, web-based tools, oral presentations, etc).
7. Review and critique communication programs and distinguish effective from ineffective communication techniques.
8. Demonstrates critical thinking and problem-solving skills when communicating with others.
9. Demonstrate a skillful ability to write, using visual communication as appropriate, by accomplishing an intentional purpose, engaging with texts or source material, and adapting the written work to different audiences the discipline may need to address.

NDFS5250 - Occupational Experiences in Nutrition and Food Sciences - 1 - 3 Credits

Department
Nutrition, Dietetics & Food Sciences

Dual-Listed Courses
NDFS6410 - Nutrient Gene Interactions

Course Title
Nutrient Gene Interactions (CI)

General Education Attribute
CI

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Focuses on molecular interactions between nutrients and mechanisms of gene expression, including transcriptional regulation, post-transcriptional regulation, and epigenetics. Emphasizes nutrient/gene interactions involved in the etiology or prevention of chronic disease, such as cancer, cardiovascular disease, and metabolic syndrome.

Credit Hours

Credit Hours Min:

Prerequisite

Required

Complete ALL of the following Courses:

- CHEM3700 - Introductory Biochemistry

Course Learning Objectives

Course Learning Outcomes

1. Describe the structure of genes and explain the key steps of gene transcription and post-transcriptional regulation, including chromatin dynamics and mRNA processing.
2. Explain how major nutrient classes (carbohydrates, proteins, lipids) influence gene expression through transcription factors, signaling pathways, and metabolic regulators.
3. Evaluate the molecular mechanisms by which vitamins and minerals (such as vitamin A, selenium, iron, zinc, biotin, vitamin B6, and vitamin C) modulate gene expression and contribute to the etiology or prevention of chronic disease.
4. Analyze how nutrient–gene interactions contribute to metabolic disorders, including obesity, metabolic syndrome, and appetite regulation.
5. Describe how nutrition influences epigenetic mechanisms such as DNA methylation and one-carbon metabolism, and explain their relevance to disease risk and development.
6. Explain how dietary compounds such as polyphenols and phytochemicals regulate gene expression and modulate inflammation, cancer risk, and cellular signaling pathways.
7. Interpret the role of the gut microbiome in nutrient–gene interactions, including effects of diet on microbial metabolism and host gene regulation.
8. Critically evaluate primary research on nutrient–gene interactions and synthesize information from peer-reviewed sources to write a scientific research paper.
9. Communicate scientific findings effectively through oral presentations that summarize complex molecular interactions clearly and accurately.
10. Apply molecular nutrition concepts to chronic disease etiology, including cancer, cardiovascular disease, and metabolic disorders, integrating mechanistic knowledge with current research literature.

Course Learning Objectives

Course Learning Outcomes

1. Discuss the need for nutrition education and identify factors affecting the provision of effective nutrition education and counseling.
2. Plan, implement, and deliver oral and PowerPoint presentations using appropriate educational principles and strategies, behavioral theories/objectives, teaching methods/technology, and evaluation techniques.
3. Describe effective communications with individuals and groups while considering physiological, psychological, social, cultural, and economic factors.
4. Determine how and when to implement and utilize different teaching and delivery methods, communication skills, and visual aids.

5. Explain the benefits, considerations, and science behind Intuitive Eating and the Health-at-Every-Size® approach.
6. KRDN 2.1 Demonstrate effective and professional oral and written communication and documentation.
7. KRDN 3.2 Develop an educational session or program/educational strategy for a target population.

Other Enrollment Recommendations
The student is recommended to have had a life science and a physical science breadth course. No other prerequisites are necessary. Some chemistry and biochemistry is presented in the course, especially the biological polymers, but the student should be able to understand the concepts presented without any previous biochemical background other than the Life Science Breadth course.

Course Learning Objectives

Course Learning Outcomes
Students will gain an understanding of the scientific principles behind cereal grains, technologies, manufacturing, and food safety.

Students will apply knowledge to scenarios regarding quality of grains, technical trouble shooting, and food safety scenarios.

Students will develop key and critical understanding and application of quality and food safety methods used for the analytical evaluation of cereal grains and cereal based products needed by professionals in the field.

Students will be required to research and document findings through technical writing and an evaluation of a hypothesis through the scientific method.

NDFS6010 - Hunger Issues and Solutions - 3 - Credits

Course Overview

Course Prefix
NDFS

Course Number
6010

Department
Nutrition, Dietetics & Food Sciences

Dual-Listed Courses
NDFS5010 - Hunger Issues and Solutions

Course Title
Hunger Issues and Solutions

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course examines domestic and global hunger issues and solutions. The course focuses on advancing knowledge and skills in advocacy, leadership, and critical thinking, all of which are essential for professionals working towards eradicating hunger.

Course Learning Objectives

Course Learning Outcomes

1. Describe and understand the chemical and microbiological aspects of milk.
2. Understand the various processes involved in converting milk into a variety of high quality dairy foods.
3. Understand and describe the technology and the factors that allows control of dairy foods manufacturing processes."

NDFS6040 - Dairy Foods Processing Laboratory - 1 - Credits

Course Overview

Course Prefix
NDFS

Course Number
6040

Department
Nutrition, Dietetics & Food Sciences

Dual-Listed Courses
NDFS5040 - Dairy Foods Processing Laboratory

Course Title
Dairy Foods Processing Laboratory

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students obtain hands-on experience in the manufacture of various dairy foods and learn about processes such as cream separation, homogenization, pasteurization, sterilization, ultrafiltration, and fermentation of milk. Additional coursework is required for those enrolled in the graduate-level course.

Simple Requisites

Corequisite

Type
Corequisite

Required

Enroll in the following Courses:
- NDFS6030 - Dairy Technology and Processing

Course Learning Objectives

Course Learning Outcomes
Cleaning

1. Learn the methods for cleaning dairy processing equipment.
2. Understand the components of a CIP cleaning system
3. Understand how a HTST pasteurizer is cleaned using CIP.

Cottage Cheeses

4. Learn how to make cottage cheese using direct acidification.
5. Learn about acid coagulation of milk
6. Learn the ingredients used to make cheddar cheese.
7. Learn about rennet coagulation of milk
8. Know how to make Cheddar and Mozzarella cheese.

Milk Pasteurization

9. Learn the components of a cream separator
10. Learn the components of an HTST pasteurizer
11. Understand how to measure the holding time of an HTST pasteurizer
12. Understand the influence of heat treatment on milk flavor.
13. Ultra-High Temperature Milk
14. Know the difference between UHT and ultra-pasteurization of milk.
15. Learn how to UHT process milk
16. Know the difference between direct and indirect heating.
17. Learn how storage time and temperature influences UHT milk quality

Fluid Milk

18. Know the components and requirements for batch pasteurizing milk.
19. Know the common time and temperature treatments for fluid milk.
20. Learn how to manufacture chocolate milk
21. Understand the influence of ingredients on chocolate milk.
22. Learn how to operate a 2-stage homogenizer

Ice Cream

23. Learn how to manufacture an ice cream mix
24. Know the common ingredients used for manufacture of ice cream.
25. Know how to calculate a mix formulation
26. Learn the processing steps used when making ice cream.
27. Understand how ice cream can be made using batch and continuous freezing
28. Be able to calculate ice cream overrun.
29. Learn how a homogenizer works.

Yogurt

30. Understand the differences in manufacture of set and stirred yogurt.
31. Know how to make yogurt.
32. Understand the acidification of milk using fermentation.
33. Concentration and Fractionation of Milk
34. Understand how a spiral wound membrane is used
35. Understand the components of a membrane filtration system.

36. Learn how milk components are fractionated using ultrafiltration.
37. Understand how membrane systems are cleaned.

    Process Cheese
38. Learn how to make pasteurized process cheese products.
39. Know the ingredients that are used to make process cheese products."

Course Learning Objectives

Course Learning Outcomes

1. Integrate foundational concepts, values, and historical developments of public health to explain how they shape contemporary approaches to disease prevention, health promotion, and population health improvement.
2. Understand the interplay of biological, environmental, behavioral, political, and social determinants of health to identify sources of health disparities.
3. Describe key sources of public health data and explain how data are used to identify population health trends, inform policy decisions, and guide evidence-based interventions.

4. Understand how systems and ecological perspectives, including One Health, can assess how globalization, environmental change, and animal, human, and environmental connections influence population health outcomes.

NDFS6150 - Principles of Food Sanitation - 3 - Credits

Course Overview

Course Prefix
NDFS

Course Number
6150

Department
Nutrition, Dietetics & Food Sciences

Course Title
Principles of Food Sanitation

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This independent course addresses sanitation and hygiene principles and their impact on food safety. It includes information on soils, cleaning compounds, sanitizers, cleaning equipment and regulations.

Course Learning Objectives

Course Learning Outcomes

1. Identify and evaluate common and emerging foodborne toxins (chemical, microbial, and allergenic) in real-world food production and processing environments.
2. Apply toxicological principles (dose-response, hazard characterization) to food safety decisions in HACCP, GMPs, SSOPs, and Preventive Controls.
3. Interpret regulatory frameworks and industry guidance on food toxins, residues, and allowable limits (FDA, USDA, GFSI Schemes).
4. Analyze real cases of contamination, recalls, or foodborne illness outbreaks involving toxins or allergens and propose preventive strategies.

5. Critically assess food additives, processing aids, and novel ingredients for toxicological risk in the context of product development and consumer safety.

Course Learning Objectives

Course Learning Outcomes

1. Apply leadership and management theories to analyze and address organizational challenges in public health practice, demonstrating ethical decision-making and strategic thinking.
2. Develop and apply negotiation, mediation, and communication skills to manage conflict and build consensus in diverse, multidisciplinary public health teams.
3. Design strategies to engage stakeholders and build effective coalitions and partnerships that influence policy, promote collaboration, and advance equitable public health outcomes.
4. Strengthen professional development and career readiness by refining professional materials and networking skills essential for success in public health leadership roles.

NDFS6300 - Advanced Micronutrient Nutrition - 3 - Credits

Course Overview

Course Prefix
NDFS

Course Number
6300

Department
Nutrition, Dietetics & Food Sciences

Dual-Listed Courses
NDFS5300 - Advanced Micronutrient Nutrition

Course Title
Advanced Micronutrient Nutrition

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Explores the function, interaction, and practical significance of micronutrients in human metabolism and the ability of the diet to meet these needs. Relates nutrient biochemical functions to specific deficiency symptoms.

Corequisite

Required

Enroll in the following Courses:

- NDFS6351 - Advanced Food Service Management

Course Learning Objectives

Course Learning Outcomes

1. Apply food service management knowledge and skills in a school food service setting.
2. Function as a contributing member of the school food service team.
3. Identify and use appropriate resources to solve food service/ management questions and problems.
4. Demonstrate at least entry-level proficiency of ACEND competencies outlined in this course.
5. Demonstrate and apply knowledge related to principles of foodservice management.
6. Analyze and critically evaluate management ideas, arguments, and points of view.

3. Analyze and critically evaluate management ideas, arguments, and points of view.
4. Demonstrate at least entry-level proficiency of ACEND competencies outlined course.

NDFS6410 - Nutrient Gene Interactions - 3 - Credits

Course Overview

Course Prefix
NDFS

Course Number
6410

Department
Nutrition, Dietetics & Food Sciences

Dual-Listed Courses
NDFS5410 - Nutrient Gene Interactions (CI)

Course Title
Nutrient Gene Interactions

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Focuses on molecular interactions between nutrients and mechanisms of gene expression, including transcriptional regulation, post-transcriptional regulation, and epigenetics. Emphasizes nutrient/gene interactions involved in the etiology or prevention of chronic disease, such as cancer, cardiovascular disease, and metabolic syndrome.

Credit Hours

Credit Hours Min:

Simple Requisites

Prerequisite

Type
Prerequisite

Required

Complete ALL of the following Courses:

- CHEM3700 - Introductory Biochemistry

Course Learning Objectives

Course Learning Outcomes

1. Describe the structure of genes and explain the key steps of gene transcription and post-transcriptional regulation, including chromatin dynamics and mRNA processing.
2. Explain how major nutrient classes (carbohydrates, proteins, lipids) influence gene expression through transcription factors, signaling pathways, and metabolic regulators.
3. Evaluate the molecular mechanisms by which vitamins and minerals (such as vitamin A, selenium, iron, zinc, biotin, vitamin B6, and vitamin C) modulate gene expression and contribute to the etiology or prevention of chronic disease.
4. Analyze how nutrient–gene interactions contribute to metabolic disorders, including obesity, metabolic syndrome, and appetite regulation.
5. Describe how nutrition influences epigenetic mechanisms such as DNA methylation and one-carbon metabolism, and explain their relevance to disease risk and development.
6. Explain how dietary compounds such as polyphenols and phytochemicals regulate gene expression and modulate inflammation, cancer risk, and cellular signaling pathways.
7. Interpret the role of the gut microbiome in nutrient–gene interactions, including effects of diet on microbial metabolism and host gene regulation.
8. Critically evaluate primary research on nutrient–gene interactions and synthesize information from peer-reviewed sources to write a scientific research paper.
9. Communicate scientific findings effectively through oral presentations that summarize complex molecular interactions clearly and accurately.
10. Apply molecular nutrition concepts to chronic disease etiology, including cancer, cardiovascular disease, and metabolic disorders, integrating mechanistic knowledge with current research literature.

NDFS6440 - Food Composition and Analysis - 3 - Credits

Course Overview

Course Prefix
NDFS

Course Number
6440

Department
Nutrition, Dietetics & Food Sciences

Course Title
Food Composition and Analysis

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
As part of the Master in Food Safety and Quality program (MFSQ), this course provides students with the tools to understand the principles behind the major food components and the most relevant techniques for their analysis.

Complete ALL of the following Courses:

- NDFS3040 - Nutrition Assessment
- NDFS4560 - Medical Nutrition Therapy (CI)

Course Learning Objectives

Course Learning Outcomes

1. Incorporate critical-thinking skills in overall practice.

2. Practice in compliance with current federal regulations and state statutes and rules, as applicable, and in accordance with accreditation standards and the Scope of Practice for the Registered Dietitian Nutritionist, Standards of Professional Performance, and Code of Ethics for the Profession of Nutrition and Dietetics.
3. Demonstrate professional writing skills in preparing professional communications.
4. Function as a member of interprofessional teams and work collaboratively with support personnel in other disciplines.
5. Show cultural humility in interactions with colleagues, staff, clients, patients, and the public.
6. Use effective education and counseling skills to facilitate behavior change.
7. Prepare a plan for professional development according to Commission on Dietetic Registration Guidelines.
8. Evaluate research and apply evidence-based guidelines, systematic reviews and scientific literature in nutrition and dietetics practice.

NDFS6470 - Global Public Health - 3 - Credits

Course Overview

Course Prefix
NDFS

Course Number
6470

Department
Nutrition, Dietetics & Food Sciences

Course Title
Global Public Health

Grade Mode
Standard Letter

Repeat Status

Registration Restrictions
Admission to the MPH Nutrition and Veterinary Public Health program and students from other graduate programs with permission from the instructor.

Other Enrollment Recommendations
Previous exposure to elementary algebra and introductory statistics is helpful, as is familiarity with Microsoft Excel

No Requirements

Course Learning Objectives

Course Learning Outcomes

1. Differentiate between approaches of data collection and study design and understand how the strength of evidence varies among these approaches.
2. Differentiate among common statistical methods, and describe what statistical methods are appropriate based on study design, type of data collected, types of variables, and specific research.
3. Apply statistical concepts to actual data related to particular health fields and generate descriptive and inferential statistics using statistical software.
4. Develop tables and figures to present results from analyses, and explain their results in the context of the data set.
5. Draw conclusions from statistical analyses, place them into the appropriate public health context, and effectively communicate the process (methods, results, and conclusions of a project) orally and in writing.

NDFS6550 - Public Health Policy and Advocacy - 3 - Credits

Course Overview

Course Prefix
NDFS

Course Number
6550

Department
Nutrition, Dietetics & Food Sciences

Course Title
Public Health Policy and Advocacy

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course provides an overview of the role of advocacy and policy to advance programs, regulations, and laws that protect the health of the public. Students explore the policymaking process and current issues in public health advocacy and policy.

Credit Hours

Course Learning Objectives

Course Learning Outcomes

1. Critically differentiate between categories and characteristics of healthcare and public health systems across countries.
2. Describe the policymaking process of a specific public health topic.
3. Demonstrate an awareness of ethical dilemmas, conflicts of interest, fairness principles, and potential impacts of policymaking process on stakeholders
4. Identify where evidences such as data, research findings, or expert opinions and ethical considerations might influence policy decisions at different stages.
5. Clearly communicates the key elements of a chosen public health issue, showcasing the ability to capture attention, convey urgency, articulate a call to action, and motivate stakeholders to support the proposed changes.
6. Demonstrate proficiency in incorporating evidence-based information, research findings, and showcase their expert opinions in making recommendations for public health policy changes.

Complete ALL of the following Courses:

- NDFS3070 - Science of Food Preparation

OR

Option 2

Complete ALL of the following Courses:

- CHEM3700 - Introductory Biochemistry
- CHEM3710 - Introductory Biochemistry Laboratory

Course Learning Objectives

Course Learning Outcomes

1. Analyze how water, carbohydrates, lipids, and proteins interact to determine texture, color, flavor, and stability
2. Apply food-chemistry principles to predict and control key reactions
3. Communicate technical findings clearly in writing and orally, using correct chemical terminology, defensible visuals, and audience-appropriate framing for both scientific and lay audiences.

NDFS6570 - Communication Techniques in Dietetics - 3 - Credits

Course Overview

Course Prefix
NDFS

Course Number
6570

Department
Nutrition, Dietetics & Food Sciences

Course Title
Communication Techniques in Dietetics

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course covers theory and application of effective communication for dietetics professionals. Students learn translation of research for a variety of audiences, effective public speaking, impactful social and print media creation along with business communication for food and nutrition organizations.

Lecture Hours

Lecture Hours Min:
3

Other Enrollment Recommendations
The student is recommended to have had a life science and a physical science breadth course. No other prerequisites are necessary. Some chemistry and biochemistry is presented in the course, especially the biological polymers, but the student should be able to understand the concepts presented without any previous biochemical background other than the life science breadth course.

Course Learning Objectives

Course Learning Outcomes
Students will gain an understanding of the scientific principles behind cereal grains, technologies, manufacturing, and food safety.

Students will apply knowledge to scenarios regarding quality of grains, technical trouble shooting, and food safety scenarios.

Students will develop key and critical understanding and application of quality and food safety methods used for the analytical evaluation of cereal grains and cereal based products needed by professionals in the field.

Students will be required to research and document findings through technical writing and an evaluation of a hypothesis through the scientific method.

Prerequisite

Required

Complete ALL of the following Courses:

- NDFS6770 - Dietetics Leadership and Management I

Course Learning Objectives

Course Learning Outcomes

1. Apply concepts learned in class to the workplace in analyzing documents and practices, self-evaluation of skills, and case studies.
2. Apply leadership principles within a team, ensuring that ideas, goals, and expectations are clearly articulated and understood.
3. Develop and apply leadership and management principles to effectively lead teams in various areas within dietetics.
4. Develop skills in recognizing biases, assessing consequences, and choosing actions that align with ethical principles.

NDFS6790 - Current Issues in Dietetics - 3 - Credits

Course Overview

Course Prefix
NDFS

Course Number
6790

Department
Nutrition, Dietetics & Food Sciences

Course Title
Current Issues in Dietetics

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course explores topics that are new or emerging in areas of dietetics practice and management. Focus includes current topics in ethics, research and policy development and applying these to dietetics management and practice.

Course Learning Objectives

Course Learning Outcomes

1. Articulate the skills, knowledge and professional attitudes gained from their internship experiences orally, as well as in written or poster format.
2. Communicate in writing for resumes and other job application materials their internship responsibilities and achievements.
3. Formulate new goals for professional development and networking.

NR6430 - Natural Resource and Environmental Policy Cornerstone Seminar - 3 - Credits

Course Overview

Course Prefix
NR

Course Number
6430

Department
College of Agriculture & Natural Resources

Course Title
Natural Resource and Environmental Policy Cornerstone Seminar

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Interdisciplinary, team-taught cornerstone course for the Natural Resource and Environmental Policy Graduate Certificate Program. Introduces different disciplinary perspectives for analyzing natural resource and environmental policies and decision-making processes. Helps students understand the role of science in policy-making and how to integrate information from contentious perspectives.

NR6450 - Natural Resource and Environmental Policy Presentation - 1 - Credits

Course Overview

Course Prefix
NR

Course Number
6450

Department
College of Agriculture & Natural Resources

Course Title
Natural Resource and Environmental Policy Presentation

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
In their last year of graduate school, certificate candidates make a presentation on policy dimensions of thesis or dissertation, as part of this student seminar series. Students receive one semester credit for this presentation. For availability, check with the College of Natural Resources Dean's Office.

NR6500 - Wildlife Ecology and Management for Natural Resource Professionals - 3 - Credits

Course Overview

Course Prefix
NR

Course Number
6500

Department
College of Agriculture & Natural Resources

Course Title
Wildlife Ecology and Management for Natural Resource Professionals

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students integrate wildlife ecology with population and habitat management practices exploring linkages between management and ecological concepts. Science-based management practices demonstrate the importance of incorporating human dimensions, partnerships, and adaptive management into wildlife and habitat conservation practices.

Course Learning Objectives

Course Learning Outcomes
1. Relate modern management techniques for wildlife populations and habitats to the ecological principles on which those techniques are based.
2. Integrate relationship between ecology and management to assist in bridging the gap between research and practice.
3. Incorporate human dimensions, authentic tribal co-management, and partnerships in wildlife management.
4. Integrate adaptive management principles in developing, implementing, and evaluating conservation actions.

NR6510 - Biophysical and Human Dimensions of Ecosystems - 4 - Credits

Course Overview

Course Prefix
NR

Course Number
6510

Department
College of Agriculture & Natural Resources

Course Title
Biophysical and Human Dimensions of Ecosystems

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Intensive two-week course introducing key biophysical and socio-economic concepts through exploration of important concepts central to ecosystem management. Examines how ecosystem management differs from traditional approaches to the management of natural resources.

Course Learning Objectives

Course Learning Outcomes
1. Explain the importance of literature synthesis in the context of natural resource management.
2. Critically evaluate the credibility and relevance of different sources and identify potential biases and limitations in existing literature.
3. Integrate findings from various diverse studies to form a cohesive narrative that identifies patterns, trends, and gaps in the literature.
4. Structure a literature review in a clear and logical manner using appropriate citation styles and adhere to academic standards.
5. Apply literature synthesis techniques to address specific real-world issues in natural resource management to assist in developing evidence-based recommendations for policy and practice.
6. Demonstrate effective communication by synthesizing information in a clear and engaging manner and tailoring communication strategies to different audiences, including policymakers, stakeholders, and the general public

NR6600 - Natural Resources Integrative Experience - 1 - 6 Credits

Course Overview

NR6805 - Introduction to Geospatial Artificial Intelligence: The Remote Sensing and GeoAI Frontier - 3 - Credits

Course Overview

Course Prefix
NR

Course Number
6805

Department
College of Agriculture & Natural Resources

Cross-Listed Courses
GEOG6805 - Introduction to Geospatial Artificial Intelligence: The Remote Sensing and GeoAI Frontier

Course Title
Introduction to Geospatial Artificial Intelligence: The Remote Sensing and GeoAI Frontier

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course introduces the fundamental concepts of remote sensing and machine learning, providing students with hands-on experience in Python programming. Students learn to automate remote sensing data processing and train traditional machine learning models for practical geospatial artificial intelligence applications.

Credit Hours

Credit Hours Min:
3

Contact Hours

Contact Hours Min:

Other Enrollment Recommendations
GIS and Python experience is strongly recommended.

Course Learning Objectives

Course Learning Outcomes

1. Understanding GeoAI Fundamentals: Define and explain the fundamental concepts of GeoAI, including geospatial data, spatial analysis, and artificial intelligence.
2. Geospatial Data Processing with Python: Utilize Python for geospatial data manipulation and analysis.

3. Apply Python libraries for tasks such as data loading, transformation, and visualization.
4. Integration of Geospatial and AI Technologies: Explore the integration of geospatial technologies with artificial intelligence (GIS, remote sensing, and machine learning).
5. Machine Learning for Geospatial Data: Explore machine learning algorithms applicable to geospatial data. Apply supervised and unsupervised machine learning algorithms to analyze and interpret spatial patterns in geospatial datasets, with a focus on classification techniques.
6. Hands-on Programming Skills:Develop practical programming skills using relevant programming languages and libraries for implementing GeoAI algorithms.

Course Learning Objectives

Course Learning Outcomes

1. Demonstrate the ability to select and apply appropriate remote sensing methods, such as image processing, classification, or change detection, to analyze geospatial data.
2. Demonstrate project management skills by creating a detailed plan, setting milestones, and managing resources effectively.
3. Successfully collect, organize, and preprocess remote sensing data, considering factors such as sensor characteristics, spatial resolution, and data quality.
4. Apply spatial analysis techniques to extract meaningful information from remote sensing data and interpret the findings to address the project's goals.
5. Demonstrate the ability to integrate diverse data types to enhance the comprehensiveness and accuracy of the remote sensing analysis.
6. Exhibit proficiency in using industry-standard remote sensing software and tools for tasks such as image processing, spatial analysis, and visualization.
7. Apply critical thinking skills to identify and overcome obstacles, adapting the analysis as needed to achieve meaningful results.
8. Develop clear and concise project documentation, reports, and presentations that effectively convey the purpose, methods, and results of the remote sensing analysis.
9. Demonstrate awareness of ethical considerations in remote sensing, ensuring responsible and respectful use of geospatial data.
10. Recognize the importance of staying informed about advancements in remote sensing technologies and methodologies, and exhibit adaptability in response to changing project requirements.

Course Title
Python Programming for GIS

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course teaches students the basics of the Python programming language and its use with ArcGIS to automate workflows and customize models. Emphasis is placed on scripting for spatial analysis, data management, and natural resource applications.

Course Learning Objectives

Course Learning Outcomes

1. Apply evidence, critical thinking, and sound judgment in determining the effective use of common medications and integrative therapies.
2. Incorporate holistic principles in providing pharmacological therapies.
3. Identify safety issues in administering commonly used medications.
4. Use communication effectively in reporting medication risks.
5. Describe the legal and ethical principles related to medication administration.
6. Be an advocate for the promotion of patient values and preferences in the provision of pharmacological therapies.
7. Identify a need for health risk education related to medication and form a

teaching plan to reduce risk.
8. Serve as a caring and respectful advocate for patients in the provision of pharmacological therapies.

NURS3200 - Psychiatric Mental Health Nursing - 3 - Credits

Course Overview

Course Prefix
NURS

Course Number
3200

Department
Nursing

Course Title
Psychiatric Mental Health Nursing

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course focuses on conducting psychiatric assessments for specific disorders. Students develop competence in differentiating normal and abnormal mental health findings through therapeutic techniques and evidence-based interventions. Having knowledge of psychiatric mental health benefits every nurse.

Course Learning Objectives

Course Learning Outcomes

1. Apply academic knowledge and professional skills in a real-world work environment.
2. Demonstrate effective communication and problem-solving abilities.
3. Reflect critically on their experiential learning.
4. Articulate how their internship/co-op experience contributes to their career goals and personal development.

NURS4300 - Issues and Trends in Health Care - 2 - Credits

Course Overview

Course Prefix
NURS

Course Number
4300

Department
Nursing

Course Title
Issues and Trends in Health Care

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students learn the role of the professional nurse in today's evolving health care environment and examine the following: nursing history; nursing values, ethics, and standards; professional organizations; issues and influences in professional practice; and the impact of lifelong learning on career development.

Admission to the Nursing: RN to BSN - BS (Online Program) (online program)

Simple Requisites

Prerequisite

Type
Prerequisite

Required

Complete ALL of the following Courses:

- NURS3000 - Professional Nursing Practice
- NURS3230 - Evidence-Based Health Care (QI)

NURS3230 EVID-BASED HLTH CARE (QI) may be taken concurrently

Course Learning Objectives

Course Learning Outcomes

1. Appraise and critique points of view in agreement or disagreement with current health care issues.
2. Explain the significance of a holistic approach to health care and professional nursing practice.
3. Compare and contrast current issues and trends in health care that may enhance or hinder professional nurse responsibilities in maintaining safe nursing practice.
4. Demonstrate oral presentation skills and written strategies to justify opinions on issues.
5. Analyze legal and ethical issues related to current trends in health care and nursing.
6. Reflect on personal learning from the course by identifying strengths and limitations, and construct a plan for moving forward.
7. Incorporate principles and concepts of education, health promotion, and disease prevention as one lens with which to view current issues and trends in health care.
8. Value caring, respect, dignity, hope, and the human spirit in the provision of professional nursing care.

OPDD1000 - Product Concept Sketching - 3 - Credits

Course Overview

Course Prefix
OPDD

Course Number
1000

Department
Technology, Design & Technical Ed

Course Title
Product Concept Sketching

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students are introduced to the approach of communicating, presenting, and ideating through sketching. The students are exposed to various sketching methods, media, and formats, including both analog and digital.

Course Learning Objectives

Course Learning Outcomes

1. Utilize technologies and tools associated with multi-dimensional design representation, development, dissemination, and application, including color, finishes, texture, and patterns that contribute to the aesthetic, illusionistic, and practical functions of three-dimensional forms at an advanced level of proficiency.
2. Demonstrate the ability to effectively communicate concepts and specifications using verbal, written, and multiple media, including creating detailed, multi-dimensional, functional, and visual representations of sustainable product designs.
3. Express product concepts as 3D forms with 2D media
4. Rapidly communicate 3D ideas and solutions to design problems
5. Represent various product geometries, qualities, and contexts

OPDD1010 - Introduction to Digital Visualization - 3 - Credits

Course Overview

Course Prefix
OPDD

Course Number
1010

Department
Technology, Design & Technical Ed

Course Title
Introduction to Digital Visualization

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course introduces students to the fundamentals of digital visualization in product design. It covers digital tools and software in visual communication and form development and/or product specification. It prepares students for future coursework and professional projects.

Course Learning Objectives

Course Learning Outcomes
1. To trace the development of the industry in relation to changing social, economic, technological, and political factors, and understand the connections between them.
2. To identify how historic designs and products have had a direct influence on modern products.
3. To gain a working knowledge of historic products as reference for use in professional or practical applications (design, retail merchandising and marketing, etc).
4. To develop a personal philosophy of change related to outdoor products.
5. To demonstrate critical thinking, along with visual and written communication skills.

Evaluate and synthesize the historical and cultural influences on design/ development while analyzing their impact on current design principles and practices.

OPDD2000 - From Insight to Innovation: Design Research Foundations - 3 - Credits

Course Overview

Course Prefix
OPDD

Course Number
2000

Department
Technology, Design & Technical Ed

Course Title
From Insight to Innovation: Design Research Foundations

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course involves planning, conducting, and synthesizing design research to inform product and service creation decisions. Students learn how to formulate actionable insights and communicate evidence persuasively to stakeholders. Emphasis is placed on contextual awareness and research methodologies.

Credit Hours

Credit Hours Min:

Course Learning Objectives

Course Learning Outcomes
Learning Outcomes (by the end of the term, students can…)

1. **Frame** researchable questions and scope studies that align to business, user, and technical constraints.
2. **Select & execute** appropriate methods (secondary research, observation/contextual inquiry, interviews, short surveys, diary probes, usability/concept tests).
3. **Practice research ethics** including consent, privacy, data security, and bias mitigation; produce IRB-lite documentation for class projects.
4. **Synthesize** raw data into **patterns**, **models**, and **insights**.
5. **Translate insights** into opportunity areas, value propositions, and evidence-based design criteria/briefs.

6. **Communicate** findings clearly with well-structured decks, one-page briefs, and visualizations tailored to stakeholders.
7. **Manage projects** with realistic timelines, recruiting plans, and risk mitigation.

Program competencies supported: user-centered methods; critical thinking; communication; professional ethics; collaboration.

Admission to the Design or Development or Product Line Management emphasis of the Outdoor Product Design and Development - BS program

Course Learning Objectives

Course Learning Outcomes

1. Demonstrate proficiency in applying design and development knowledge and skills through practical experiences in or beyond the classroom, including but not limited to field research and experience, internships, collaborative programs with professional and industry groups, or international experiences to create sustainable products and systems.
2. Evaluate the social impact of supply chain management practices in the outdoor industry and identify strategies for addressing potential ethical and social issues and opportunities for improvement, using critical thinking and problem-solving skills.

3. Apply advanced research methods and evaluate user experience, human factors, applied ergonomics, contextual inquiry, user preference studies, and usability assessments to circular design/ development practices.
4. Demonstrate the ability to effectively communicate concepts and specifications using verbal, written, and multiple media, including creating detailed, multi-dimensional, functional, and visual representations of sustainable product designs.
5. Collaborate effectively with members of interdisciplinary or multidisciplinary teams by applying problem-solving skills, critical thinking, and effective communication strategies. This includes the ability to actively listen to and incorporate feedback from team members and the ability to adapt to different communication styles and cultural perspectives.

Course Learning Objectives

Course Learning Outcomes
Objective 1a: Apply critical thinking skills

Apply critical thinking skills to analyze business practices and their relationship to sustainable product design and development, including ethical considerations, labor issues, and decisions related to ecological and social responsibility and environmental sustainability.

Objective 1b: Demonstrate proficiency

Demonstrate proficiency in applying design and development knowledge and skills through practical experiences in or beyond the classroom, including but not limited to field research and experience, internships, collaborative programs with professional and industry groups, or international experiences to create sustainable products and systems.

Objective 2d: Utilize technologies and tools

Utilize technologies and tools associated with multi-dimensional design representation, development, dissemination, and application, including color, finishes, texture, and patterns that contribute to the aesthetic, illusionistic, and practical functions of three-dimensional forms at an advanced level of proficiency.

Objective 4j: Demonstrate the ability to effectively communicate

Demonstrate the ability to effectively communicate concepts and specifications using verbal, written, and multiple media, including creating detailed, multi-dimensional, functional, and visual representations of sustainable product designs.

Course Learning Outcomes

1. Evaluate and synthesize the historical and cultural influences on design/development while analyzing their impact on current design principles and practices.

OPDD4040 - Outdoor Product Testing & Research - 3 - Credits

Course Overview

Course Prefix
OPDD

Course Number
4040

Department
Technology, Design & Technical Ed

Course Title
Outdoor Product Testing & Research

Grade Mode
Standard Letter

Repeat Status
RP

Course Description
Field-based, hands-on learning offers students real-world experiences with products and their evaluation. These activities range from first-person testing by students, to crowd-sourced public feedback, to understanding the perceptions of industry professionals and user groups.

Course Learning Objectives

Course Learning Outcomes

1. Demonstrate proficiency in applying design and development knowledge and skills through practical experiences in or beyond the classroom, including but not limited to field research and experience, internships, collaborative programs with professional and industry groups, or international experiences to create sustainable products and systems.
2. Demonstrate the ability to effectively communicate
3. Demonstrate the ability to effectively communicate concepts and specifications using verbal, written, and multiple media, including creating detailed, multi-dimensional, functional, and visual representations of sustainable product designs.
4. Demonstrate proficiency in applying design and development knowledge and skills through practical experiences in or beyond the classroom, including but not limited to field research and experience, internships, collaborative programs with professional and industry groups, or international experiences to create sustainable products and systems.
5. Demonstrate the ability to effectively communicate concepts and specifications using verbal, written, and multiple media, including creating detailed, multi-dimensional, functional, and visual representations of sustainable product designs.

OPDD4440 - Aesthetics and Brand Identity - 3 - Credits

Course Overview

Course Prefix
OPDD

Course Number
4440

Department
Technology, Design & Technical Ed

Course Title
Aesthetics and Brand Identity

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students investigate applications between various aesthetics theories and their relationship with brand identity. They appraise sustainable aesthetics and brand strategies that influence design. Students develop detailed user and brand profiles.

Course Learning Outcomes

1. Demonstrate proficiency in applying design and development knowledge and skills through practical experiences in or beyond the classroom, including but not limited to field research and experience, internships, collaborative programs with professional and industry groups, or international experiences to create sustainable products and systems.
2. Utilize technologies and tools associated with multi-dimensional design representation, development, dissemination, and application, including color, finishes, texture, and patterns that contribute to the aesthetic, illusionistic, and practical functions of three-dimensional forms at an advanced level of proficiency.
3. Evaluate the social impact of supply chain management practices in the outdoor industry and identify strategies for addressing potential ethical and social issues and opportunities for improvement, using critical thinking and problem-solving skills.
4. Collaborate effectively with members of interdisciplinary or multidisciplinary teams by applying problem-solving skills, critical thinking, and effective communication strategies. This includes the ability to actively listen to and incorporate feedback from team members and the ability to adapt to different communication styles and cultural perspectives.
5. Gain awareness of how, why, and when product testing and research takes place in industry
6. Analyze existing product performance characteristics
7. Engage in simulated and/or field testing of prototypes
8. Analyze and report prototype test findings and communicate recommendations for improvement

OPDD4510 - Footwear Concepts - 3 - Credits

Course Overview

Course Prefix
OPDD

Course Number
4510

Department
Technology, Design & Technical Ed

Course Title
Footwear Concepts

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This is an advanced design course discussing construction, manufacture, sales, and design of footwear within the outdoor industry. It includes industry partner contributions to the curriculum.

Course Learning Objectives

Course Learning Outcomes

1. Graduates will demonstrate the ability to analyze and apply sustainable production principles, including non-polluting processes, energy and resource conservation, economic viability, safety and health for workers and consumers, and social and creative rewards in personal and professional situations.
2. Graduates will prove mastery in researching, analyzing, and creatively solving problems within the outdoor industry.
Demonstrate proficiency in applying design and development knowledge and skills through practical experiences in or beyond the classroom, including but not limited to field research and experience, internships, collaborative programs with professional and industry groups, or international experiences to create sustainable products and systems.
3. Graduates will be able to effectively communicate design concepts and specifications using various media in a collaborative, interdisciplinary setting.
Apply advanced research methods and evaluate user experience, human factors, applied ergonomics, contextual inquiry, user preference studies, and usability assessments to circular design/development practices.
Develop and communicate complex solutions to problems and requirements, using critical thinking skills such as synthesis and evaluation while considering variables such as value, aesthetics, safety, and environmental sustainability, applying circular design principles such as cradle-to-cradle and closed-loop models.
Demonstrate the ability to effectively communicate concepts and specifications using verbal, written, and multiple media, including creating detailed, multi-dimensional, functional, and visual representations of sustainable product designs.

Course Learning Objectives

Course Learning Outcomes

1. Demonstrate proper alignment in a variety of yoga poses to improve flexibility, strength, and muscle tone.
2. Apply breathing and relaxation techniques to enhance mental focus and reduce stress.
3. Perform sequences of yoga exercises that increase range of motion and physical endurance.
4. Explain the principles of proper posture and alignment in yoga practice.
5. Develop self-awareness through mindful movement and breathing exercises.

PE1058 - Yoga II - 1 - Credits

Course Overview

Course Prefix
PE

Course Number
1058

Department
Kinesiology and Health Science

Course Title
Yoga II

Grade Mode
Standard Letter

Repeat Status
RP

Course Description
Provides an opportunity for students to learn and practice basic and intermediate Hatha Yoga skills. May be elective credit depending on major. These courses will focus on warmups, posture, and floor exercise. Skills learned in this course will assist in the development of strength, muscle tone and weight regulation. Students will also increase endurance, flexibility, and peace of mind, while providing for a means of eliminating stress. Class includes lectured lab.

Course Learning Objectives

Course Learning Outcomes

1. Understand the terminology, communication and skills required to lead climb.
2. Demonstrate competency building anchors at the top of a climb.
3. Demonstrate competency lead climbing and lead belaying.
4. Explain how to assess risk when arriving at a new climbing area.
5. Utilize climbing topos to identify routes, climbing grades and climbing areas.

PE1530 - Bouldering - 1 - Credits

Course Overview

Course Prefix
PE

Course Number
1530

Department
Kinesiology and Health Science

Course Title
Bouldering

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Introduces students to the sport of Bouldering and to learn the skills necessary to make Bouldering safe and fun. Safety and environmental considerations will be emphasized. Students need to be in good physical condition - this can't be emphasized enough. Students who are incapable of doing the basics on the climbing wall will not be allowed to continue in the class. This is for the student's own safety.

3. Perform basic bicycle maintenance and troubleshooting to ensure safe and efficient operation.

4. Plan and execute a safe cycling route considering terrain, traffic, and environmental factors.

PE1580 - Canyoneering I - 1 - Credits

Course Overview

Course Prefix
PE

Course Number
1580

Department
Kinesiology and Health Science

Course Title
Canyoneering I

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Canyoneering is a term used to describe an adventure sport that combines hiking, wading, swimming, boulder hopping, rock climbing, and rappelling. Introduces students to the sport of canyoneering. Students will learn the skills necessary to make canyoneering safe and enjoyable. Safety and environmental considerations will be emphasized. Outings will include training at the Spring Canyon Climbing Area and outings to the world famous canyons of the San Rafael Swell. Students need to be in good physical condition. Safety protocols will be learned and adherence to those policies is mandatory. Course involves lecture, lab and field trips. A lab fee is required.

Course Learning Objectives

Course Learning Outcomes
1. Understand the historical origins of contemporary movement practices, particularly sport, and why challenging questions arise.
2. Explain the main philosophical and ethical frameworks of sport.
3. Apply historical and philosophical knowledge to current issues like performance-enhancing technology use in professional sport.
4. Engage critically with historical, philosophical, and journalistic texts to analyze and evaluate complex ideas.
5. Reflect thoughtfully on class discussions and materials, integrating personal perspectives and connecting them to broader conversations about human movement and sport.
6. Collaborate effectively in group activities and discussions to develop and apply critical analysis, argumentation, communication, and problem-solving skills.
7. Craft persuasive and well-structured written and spoken arguments adapted to specific purposes, genres, and audiences, using feedback to refine their effectiveness.

PHIL6530 - Ethics and Biotechnology - 3 - Credits

Course Overview

Course Prefix
PHIL

Course Number
6530

Department
History, Cultures & Ideas

Dual-Listed Courses
PHIL4530 - Ethics and Biotechnology (DSC)

Course Title
Ethics and Biotechnology

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Interdisciplinary examination of key issues such as: cloning, human genetic screening and therapy, and transgenic animals and food. To receive graduate credit, extra readings and a 25-30 page paper will be required.

Course Overview

Course Prefix
PHIL

Course Number
6890

Department
History, Cultures & Ideas

Course Title
Philosophy of Science

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course includes the study of different views of the nature of science: the classical traditions of Hempel and Popper, Kuhn's subjectivism, and Feyerabend's anarchism. Topics include confirmation, induction, scientific realism, reductionism, and the growth of scientific knowledge.

Course Description
An algebra based physics course on the study of electricity, magnetism and light. Covers forces between point charges, the ideas of electric potentials, the relationship between potential, charge and energy. Other E-M material covered will include basic AC and DC circuits, forces on currents in magnetic fields, and the relationship between electricity and light. Light topics covered will include geometric optics, lenses and mirrors and the wave nature of light, diffraction and interference. Taught using lectures, demonstrations, videos, and group problem solving. Students will be required to explain their homework solutions on the board to the entire class. Can be used by science majors to complete the Physical Science General Education requirement.

Course Learning Objectives

Course Learning Outcomes
1. Gain the ability to operate many optical instruments and perform optical alignment.

2. Be able to characterize the transmission and reflection of waveguides that range from metallic microwave waveguides on a chip to dielectric optical waveguides on a chip.

3. Gain an understanding basic wave optics, including polarization, interference, resonance, and coupling.

4. Be able to characterize photon sources, photon detectors, and the quantum states of entangled photons.

POLS1010 - Introduction to Political Science (BSS) - 3 - Credits

Course Overview

Course Prefix
POLS

Course Number
1010

Department
School of Social Sciences

Course Title
Introduction to Political Science (BSS)

General Education Attribute
BSS

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Presents an overview of the five major subdivisions of political science: American institutions, theory, public policy, comparative politics, and international relations. To successfully complete the course, students should demonstrate a basic understanding of the development of democratic theory, how American institutions function, how policy is created and implemented, how other nations function, and the causes of conflict and cooperation in the international arena. Instructional methods will include lecture, slides, videos and class discussion. Course requires short-answer and multiple choice quizzes, a mid-term and a final examination. Intended for political science and pre-law majors.

Course Overview

Course Prefix
POLS

Course Number
2110

Department
School of Social Sciences

Course Title
Contemporary Indian Affairs

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Designed to acquaint students with a basic historical knowledge of 19th and 20th century diplomatics, a geopolitical basis from which to better understand global politics, and a basic knowledge of the theories and approaches to international relations currently employed at the research level. However, the course is not intended to instruct students in the mechanics of empirical research, nor is it intended to be either a history or geography course. Rather, the goal is to relate specific international actions to the aforementioned theories and approaches, thus, allowing the student to better understand the complexity and interdependent nature of international relations.

Course Learning Objectives

Course Learning Outcomes

1. Gaining a better understanding of politics as a form of human experience, complementing textbook perspectives that emphasize formal processes and legal structures.
2. Realizing more fully how human talents, human emotions, and human failings shape political events.
3. Appreciating how motion pictures, and popular culture more generally, can distort perceptions of politics, oversimplifying and often depicting politics as a realm of obvious moral choices.

Course Learning Objectives

Course Learning Outcomes
1. Produce and present in oral and written form a cogent reading of a Luso-Afro-Brazilian cultural product by or about women in translation, localized for an American context.

2. Discuss literal and symbolic effects of translation on an international comprehension of gendered, sexual, and national identity.

3. Assess and explain the roles of languages in mediating and reproducing notions of womanhood and gender identity.

4. Compare and contrast Luso-Afro-Brazilian and European-American perspectives on gender, sexuality, and national identity to estimate their effects on each other in an increasingly globalized and translated world, as well as to state and defend one (or more) of those perspectives with well-informed, complex arguments.

5. Interpret various formats of Luso-Afro-Brazilian cultural products to identify and describe their underlying perspectives on gender, sexuality, and national identity.

Course Learning Objectives

Course Learning Outcomes

1. Explain the fundamental physical processes of the atmosphere, including energy transfer, radiation, condensation, and precipitation.
2. Analyze and interpret weather systems and atmospheric data to understand patterns such as pressure systems, fronts, and storms.
3. Evaluate the causes and impacts of extreme weather events and their connections to broader climate systems and human activities.
4. Apply scientific reasoning and quantitative methods to investigate atmospheric phenomena and communicate findings effectively.

PSC2010 - Soils, Waters, and the Environment (BPS) - 3 - Credits

Course Overview

Course Prefix
PSC

Course Number
2010

Department
Plants, Soils and Climate

Course Title
Soils, Waters, and the Environment (BPS)

General Education Attribute
BPS

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Introduction to principles of physical and biological science. Discussion of current environmental topics, focusing on soil and the waters that contact the soil. Topics include water quality, global climate change, deforestation, soil conservation, and agricultural sustainability.

Credit Hours

Credit Hours Min:
3

Contact Hours

Lecture Hours Min:
3

No Requirements

Course Learning Objectives

Course Learning Outcomes
1. Describe soil morphology and landscape features, and name horizons according to National Cooperative Soil Survey standards.
2. Identify the environmental factors (climate, organisms, parent material, relief, time) that influence soil development in a landscape context.
3. Apply concepts of physical, chemical, and biological processes to explain soil formation and behavior.
4. Interpret key soil properties that influence vegetation communities, suitability for land use, ecosystem services, etc.
5. Classify soils using Soil Taxonomy and infer soil properties from the taxonomic name.
6. Access and use soil survey information available on the web, understanding its potential and limitation.

PSC2030 - Basic Flower Arranging - 2 - Credits

Course Overview

Course Prefix
PSC

Course Number
2030

Department
Plants, Soils and Climate

Course Title
Basic Flower Arranging

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course covers principles of basic flower design using fresh, dried, and artificial flowers. Proper care of cut flowers and foliages is covered. Basic plant physiology behind such principles is also included. A lab fee is required.

Course Learning Objectives

Course Learning Outcomes
1. Most importantly, to preclude you being a weather-related flight statistic.
2. To create a personal level of meteorological knowledge to the extent that you feel comfortable answering aviation students' questions on weather and weather products.
3. To give you the confidence, as a ground school instructor, to teach meteorology rather than just showing a video.
4. To prepare you for the meteorology questions that are contained in the FAA (or other countries' aviation authorities) certification exams (many are included in the database of questions used for quizzes and examinations).

PSC2200 - Pesticide Certification - 2 - Credits

Course Overview

Course Prefix
PSC

Course Number
2200

Department
Plants, Soils and Climate

Course Title
Pesticide Certification

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Overview of pest control considerations towards commercial pesticide licensing. This integrated pest management, organic and chemical pest control, environmental considerations, safety, and life cycles of pests.

Credit Hours

Credit Hours
Min:
2

Contact Hours

No Requirements

Course Learning Objectives

Course Learning Outcomes
1. Recognize major categories of pests (insects, weeds, pathogens, vertebrates) relevant to agricultural and urban systems.
2. Summarize key regulatory concepts related to pesticide registration, labeling, and legal responsibilities.
3. Recognize the difference between General Use and Restricted Use Pesticides and why the classification exists.
4. Describe the biological, ecological, and economic principles that form the foundation of integrated pest management (IPM).
5. Understand the appropriate actions in all steps of pesticide use: selection, mixing and loading, application, clean up, PPE, storage and disposal.
6. Understand toxicity + exposure = hazard and learn how to limit it.
7. Identify the major pest management methods, including cultural, mechanical, biological, genetic, and chemical controls.
8. Understand how to protect the environment and non-target organisms in pesticide use.

PSC2250 - Occupational Experience in Agronomy and Horticulture - 1 - 4 Credits

Course Overview

Course Prefix
PSC

Course Number
2250

Department
Plants, Soils and Climate

Course Title
Occupational Experience in Agronomy and Horticulture

Grade Mode

Course Learning Objectives

Course Learning Outcomes

1. Students will be able to visually identify approximately 170 herbaceous annuals and perennials that are commonly used in residential and commercial landscapes.
2. Students will integrate information about cold hardiness, typical size, light exposure preferences, and soil moisture preferences to select appropriate lines, cultivars and species for landscape usage.
3. Students will be able to use cultural information and aesthetic characteristics to design and maintain pleasing displays of herbaceous plant materials.

PSC2620 - Woody Plant Materials: Trees and Shrubs for the Landscape - 3 - Credits

Course Overview

Course Prefix
PSC

Course Number
2620

Department
Plants, Soils and Climate

Course Title
Woody Plant Materials: Trees and Shrubs for the Landscape

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Identification, culture, and utilization of woody ornamental plants in the landscape, including shade trees, flowering trees and shrubs, hedge plants, and vines. Review of native plants commonly used in the landscape.

Course Learning Objectives

Course Learning Outcomes

1. Identify and describe the key morphological features (e.g., leaf shape, bark texture, bud arrangement, flower structure) used to distinguish woody plant species
2. Demonstrate knowledge of botanical nomenclature and taxonomy as it applies to the classification and naming of woody plants
3. Accurately identify over 150 woody plants (trees, shrubs, vines, etc.) common in landscapes and native habitats
4. Be familiar with common woody plant disorders and treatments
5. Evaluate plant selection based on site conditions, ecological function, and landscape value
6. Prepare a collection of individual study and present observations with the class
7. Observations will be prepared in a way that can be physically presented in a display

PSC2650 - Native Plants - 2 - Credits

Course Overview

Course Prefix
PSC

Course Number
2650

Department
Plants, Soils and Climate

Course Title
Native Plants

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course covers native plants in the natural and designed landscape, identification of native plants throughout Utah's distinct ecoregions, and the benefits of using native plants in landscaping. It also covers native plant propagation issues, sourcing, and growing requirements.

Credit Hours

Course Learning Objectives

Course Learning Outcomes

1. Be familiar with the propagation and care for native plants in various settings.
2. Understand the use of native plants in sustainable landscape design.
3. Understand the ecological benefits of native plants.
4. Identify common native plants of Utah.

PSC2700 - Climate Change Impacts (BPS) - 3 - Credits

Course Overview

Course Prefix
PSC

Course Number
2700

Department
Plants, Soils and Climate

Course Title
Climate Change Impacts (BPS)

General Education Attribute
BPS

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
The Climate Change Impacts course surveys past climate variability and how extremes in climate variability have influenced and/or destabilized both long past and modern societies, as well as addressing how climate change is projected to further affect civilization within the U.S. and elsewhere.

Credit Hours

Credit Hours Min:

Course Learning Objectives

Course Learning Outcomes
1. Identify and explain the major natural and anthropogenic causes of climate change and their observable impacts on human health, biodiversity, and the environment.
2. Analyze and interpret scientific data, maps, and research to evaluate the social, economic, and political consequences of climate change across diverse communities.
3. Apply knowledge of climate change impacts to develop evidence-based discussions and propose practical adaptation or mitigation strategies that promote sustainability and resilience.
4. Communicate effectively about climate change using clear, evidence-supported arguments tailored to different audiences and perspectives.

PSC2710 - General Meteorology - 3 - Credits

Course Overview

Course Prefix
PSC

Course Number
2710

Department
Plants, Soils and Climate

Course Title
General Meteorology

Grade Mode
Standard Letter

Repeat Status
RP

Course Description
This course offers a more in depth, quantitative expansion of meteorological topics such as jet streams and the life cycle of low-pressure storm systems. Emphasis is placed on a deeper understanding of basic principles of the weather and climate systems.

- CHEM1110 - General Chemistry I (BPS)
- MATH1050 - College Algebra (QL)

or higher CHEM course

or higher MATH course, or AP Calculus AB with a score of 3 or higher

Course Learning Objectives

Course Learning Outcomes

Following the completion of this course we should be able to:

1. Discuss, define, and identify physical, chemical, and biological properties of soils in different settings based on experience gained during lab sessions, class discussions, and homework assignments.
2. Interpret the significance of various soil properties to soil conservation, management, and formation, including connections between properties and soil profiles, using lessons learned in lecture and lab sessions.
3. Apply standardized methodologies to evaluate soil properties in a field and laboratory setting to develop novice, baseline soil assessments.
4. Value the importance and functionality of soil to our natural world by exploring applications of soil science through lecture discussions, homework questions, and lab activities.

PSC3100 - Soils and Civilization (DSC) - 3 - Credits

Course Overview

Course Prefix
PSC

Course Number
3100

Department
Plants, Soils and Climate

Course Title
Soils and Civilization (DSC)

General Education Attribute
DSC

Grade Mode
Standard Letter

Repeat Status
NR

Course Description

Lectures, readings, and discussions to explore effects of soil physical, chemical, and biological properties on civilization throughout history. Influence of soils on settlement patterns, land use/management, and civilization decline. Case studies focus on current soil and land use issues in western North America.

Required

Complete ALL of the following Courses:

- LAEP1200 - Introduction to Graphics and Illustration

Course Learning Objectives

Course Learning Outcomes

1. The objective of this course is to familiarize the student at an introductory level with the landscape design process as it applies to the development of a residential planting plan.
2. This course will teach students to think logically, critically, and creatively so they may address a wide range of landscape and environmental issues.
3. Students will learn how to create a functional and beautiful residential landscape design plan that meets the needs of the client.

PSC3400 - Arboriculture - 3 - Credits

Course Overview

Course Prefix
PSC

Course Number
3400

Department
Plants, Soils and Climate

Course Title
Arboriculture

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course covers principles and practices of arboriculture, including planting site analysis and modification, tree selection, pruning, soil nutrient and irrigation management, introduction to tree pest management, tree appraisals and sustainability.

- PSC2620 - Woody Plant Materials: Trees and Shrubs for the Landscape

Course Learning Objectives

Course Learning Outcomes
1. Describe the fundamental principles of tree biology, including structure, growth, development, and responses to environmental conditions.
2. Identify common arboricultural practices and explain the basic methods used in tree selection, planting, pruning, support systems, and maintenance.
3. Describe the impact of soil, water, nutrition, and stressors on tree mortality
4. Summarize the foundational theories and decision-making principles used in modern arboriculture, including risk assessment, site evaluation, and species selection.
5. Use arboricultural methods and diagnostic frameworks to assess tree risk and make informed decisions that balance safety, tree health, and site objectives.
6. Participate in correctly planting a tree.
7. Participate in updating campus tree inventory.
8. Observe and present to class on 3 different species of woody plant's growth and development through the semester.

PSC3430 - Construction Methods for Residential Landscape Installation - 2 - Credits

Course Overview

Course Prefix
PSC

Course Number
3430

Department
Plants, Soils and Climate

Course Title
Construction Methods for Residential Landscape Installation

Grade Mode
Standard Letter

Repeat Status

Course Learning Objectives

Course Learning Outcomes
1. Describe the principles and practices of sexual and asexual plant propagation
2. Define common plant propagation methods, including seed propagation, cuttings, layering, division, grafting, and micropropagation.
3. Identify the environmental factors (light, temperature, humidity, substrates) that influence successful propagation.
4. Research chosen species propagation requirements and successfully propagate 25 commerically viable propagules from cuttings. Present to class about technique used, success rate, lessons learned.
5. Successfully propagate by seed
6. Successfully propagate by cuttings, hardwood, semi-hardwood, and softwood. Experiment with use of rooting hormone to increase success rate.
7. Successfully perform budding and grafting techniques

PSC3800 - Fundamentals of Organic Agriculture - 3 - Credits

Course Overview

Course Prefix
PSC

Course Number
3800

Department
Plants, Soils and Climate

Course Title
Fundamentals of Organic Agriculture

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Organic agriculture uses a holistic systems approach for maintaining plant, animal, and soil health. In this course, animal and crop production approaches and disease, as well as insect and weed management strategies, are scientifically assessed, critically compared, and used in decision making and problem solving exercises.

Other Enrollment Recommendations

1. Students will be able to monitor and control greenhouse temperature, humidity and lighting systems in order to maintain optimal growing conditions, while considering energy inputs.
2. Students will be able to manage rooting substrates, watering systems, fertilization, light, temperature and plant growth regulators to produce high quality greenhouse crops.
3. Students will integrate principles of pest and disease management with an understanding of the post-harvest market system to ensure optimal shelf/vase life for greenhouse crops.

Course Learning Objectives

Course Learning Outcomes

1. Explain the fundamental principles of greenhouse design and construction including materials, structural components, and their impact on plant growth and environmental control.
2. Describe key environmental factors such as temperature, light, humidity, and ventilation, and their role in optimizing plant growth within a greenhouse setting.
3. Identify and summarize common greenhouse management practices including

irrigation methods, pest and disease control strategies, and sustainable resource utilization techniques.
4. Demonstrate proficiency in managing greenhouse climate control systems, including heating, cooling, and ventilation equipment, to maintain optimal growing conditions for various crops.
5. Apply integrated pest management (IPM) techniques to effectively monitor, identify, and manage pests and diseases in a greenhouse environment.
6. Develop and implement crop production schedules that incorporate propagation, planting, and fertilization practices to maximize yield and resource efficiency.
7. Research and Present on the commercial production of a greenhouse crop.

Course Learning Objectives

Course Learning Outcomes

1. Understand global crop diversity and classification: Students will be able to explain the taxonomy, origin, and classification of major world food crops.
2. Analyze cultivation practices: Students will evaluate how different crops adapt to environments and identify key methods of improvement and utilization.
3. Apply knowledge through research and presentation: Students will conduct independent research on a food crop not covered in class and deliver a structured 15–20 minute presentation.
4. Demonstrate mastery through assessment: Students will integrate knowledge from lectures, readings, and projects to successfully complete exams and written assignments.

PSC4301 - Computer Aided Residential Landscape Design - 3 - Credits

Course Overview

Course Prefix
PSC

Course Number
4301

Department
Plants, Soils and Climate

Course Title
Computer Aided Residential Landscape Design

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students learn to use modern CAD software used in residential landscape design. This includes acquiring basic skills to digitally create landscape designs, generate plant and supply lists for bidding, and generate presentation and marketing materials.

Complete ALL of the following Courses:

- PSC3300 - Residential Landscapes

Course Learning Objectives

Course Learning Outcomes

Students learn to use and apply state of the art CAD software to the residential landscape design process. Areas of focus include the following:

1. Learning basic skills and techniques required to create computer generated landscape plans, construction details, and plant schedules that communicate landscape design solutions in a clear and effective manner.
2. Using a digital plant database to generate photos and provide information about growing and maintaining plants used in the design.
3. Using CAD applications for professional presentation and marketing.

PSC4302 - Advanced Residential Landscape Design - 3 - Credits

Course Overview

Course Prefix
PSC

Course Number
4302

Department
Plants, Soils and Climate

Course Title
Advanced Residential Landscape Design

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Advanced course in residential landscape design. Uses industry-standard and computer-aided design software for small-scale designs.

- PSC3300 - Residential Landscapes
- PSC4301 - Computer Aided Residential Landscape Design

Course Learning Objectives

Course Learning Outcomes

1. A primary objective of this course is for students to learn creative problem solving and communication skills in preparation for a career in the green industry upon graduation.
2. This advanced landscape design course will teach students how to express and communicate their ideas effectively by using a variety of media and technologies, including written, computer graphics, and oral presentations.
3. Prepare students for professional presentations & marketing by creating a landscape master plan, 3D model and a plant care guide.

PSC4320 - Forage Production and Pasture Management - 3 - Credits

Course Overview

Course Prefix
PSC

Course Number
4320

Department
Plants, Soils and Climate

Course Title
Forage Production and Pasture Management

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students learn about the cultivation and management of legumes and grasses used throughout the Intermountain region of the U.S. and the world for grazing, stored feed, soil improvement, and conservation. Forage plant growth and development, nutrient and water utilization, and responses to environmental stress.

Integrated Science or comparable breadth course

Course Learning Objectives

Course Learning Outcomes

1. Identify important forage species commonly used in the U.S. and primarily grown under irrigation in Utah, and understand their adaptation and management.
2. Understand the tradeoffs between forage yield and forage quality
3. Understand how forage crops affect the production and health of different classes of livestock
4. Understand how forage crops can be used to enhance soil, water, wildlife habitat, and other natural resources
5. Understand the basics of forage crop establishment, fertility management, pest control, and irrigation
6. Understand how pastures can be managed and used most efficiently
7. Understand how hay is managed and used
8. Understand how silage (fermented forage) is made, managed and used

PSC4350 - Applied Entomology - 3 - Credits

Course Overview

Course Prefix
PSC

Course Number
4350

Department
Plants, Soils and Climate

Course Title
Applied Entomology

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course examines various insect orders and the fundamentals of insect physiology, ecology and development. Topics include practical applications of entomology such as insect pest management, insect identification, pollinator protection and invasive pest exclusion.

2. Learning to Apply Course Material (to improve thinking, problem solving, and decisions).
3. Developing specific skills, competencies, and points of view needed by professionals in the field most closely related to this course.

PSC4400 - Modern Vegetable Production - 3 - Credits

Course Overview

Course Prefix
PSC

Course Number
4400

Department
Plants, Soils and Climate

Course Title
Modern Vegetable Production

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Principles and practices underlying scientific vegetable culture. Discussion of production of important vegetables, focusing on the physiological processes influencing their culture. Explores crop performance in research and commercial applications.

  OR BIOL1610 - Biology I

Course Learning Objectives

Course Learning Outcomes

1. Students will be able to identify the major components of vegetable production systems and explain management practices that enhance crop productivity.
2. Students will accurately classify vegetable crops by plant family and describe production practices that maximize yield and quality.
3. Students will describe fundamental principles of plant growth and development and explain how plant physiological processes influence production outcomes across different vegetable families.
4. Students will apply course concepts to develop practical management strategies for real-world contexts, demonstrating the ability to translate classroom learning into effective practices for home gardens or commercial vegetable farms.

PSC4450 - Plant Diseases - 3 - Credits

Course Overview

Course Prefix
PSC

Course Number
4450

Department
Plants, Soils and Climate

Course Title
Plant Diseases

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course examines plant disease biology, etiology, identification, prevention and management. An academic and applied approach is taken in exploring these topics.

Course Learning Objectives

Course Learning Outcomes

1. Research Design and Execution: Students will be able to design and carry out independent, original research projects in plant, soil, and/or climate science using appropriate methodologies.
2. Literature Analysis and Integration: Students will be able to critically evaluate and synthesize scientific literature to frame, justify, and contextualize their thesis and/or dissertation research.
3. Scholarly Communication: Students will be able to produce a well structured thesis or dissertation and effectively present their research findings to both scientific and non specialist audiences.
4. Disciplinary Mastery: Students will be able to demonstrate advanced knowledge of plant, soil, and/or climate science concepts, theories, and applications through scholarly work that contributes meaningfully to the field.

Course Learning Objectives

Course Learning Outcomes

1. Explain the principles of sustainable, low-water landscaping and their importance in arid and semi-arid environments.
2. Analyze soil, climate, and ecological factors to inform plant selection, irrigation strategies, and overall site design.
3. Identify and select appropriate native and adapted plant species for low-water landscapes using hydrozoning principles.
4. Design functional, visually appealing landscapes that balance ecological health, aesthetic value, and water efficiency.
5. Estimate irrigation needs and apply efficient irrigation methods based on plant water demand and environmental conditions.
6. Implement appropriate landscape maintenance and material use to sustain

long-term landscape health and water efficiency.
7. Recognize the role of green infrastructure—including rainwater harvesting and permeable systems—in sustainable landscape design.

PSC5100 - Professional Turf and Urban Landscape Water Management - 3 - Credits

Other Enrollment Recommendations

Understanding of fundamental soil science; PSC3000 FUND OF SOIL SCIENCE recommended

Course Learning Objectives

Course Learning Outcomes

1. Describe soil morphology and landscape features, and name horizons according to National Cooperative Soil Survey standards.
2. Identify the environmental factors (climate, organisms, parent material, relief, time) that influence soil development in a landscape context.
3. Apply concepts of physical, chemical, and biological processes to explain soil formation and behavior.
4. Interpret key soil properties that influence vegetation communities, suitability for land use, ecosystem services, etc.
5. Classify soils using Soil Taxonomy and infer soil properties from the taxonomic

name.
6. Access and use soil survey information available on the web, understanding its potential and limitation.

Course Learning Objectives

Course Learning Outcomes
1. Describe the foundations of bioinformatics & computational biology, and explain their roles in agriculture, big data science, precision biology, and functional genomics. Explain the structure, function, and use of major biological databases.
2. Understand the principles of diverse OMICS data types (RNA-seq, single cell RNA-seq, SNP-seq, ChIP-seq, GBS-seq, Methyl-seq, miRNA-seq, Metagenomics, Genome assembly, etc.), and sequence analysis in systems biology.
3. Data Science & Big Data Competencies: To gain hands-on experience in Linux OS and High-Performance Computing in parsing and workflow automation for biological data processing. Briefly explain the applications of Machine Learning in modern biology.
4. Analyze big OMICS datasets: Pick one topic from diverse OMICS data types (RNA-Seq); and train the students in developing a reproducible computational workflow. Quality control, read mapping, quantification, differential expression, annotation.

5. Interpret and Communicate biological insights: Draw biologically meaningful conclusions from complex multidimensional datasets, e.g. explain how to interpret differential expression, clustering, annotation, enrichment, and pathway analyses. Applications in agriculture, health, and biological sciences.

PSC5201 - Hydroponics - 3 - Credits

- BIOL1010 - Biology and the Citizen (BLS)

OR BIOL1610 - Biology I

Course Learning Objectives

Course Learning Outcomes

1. To understand the optimal nutrient compositions and concentrations in hydroponic fertilizer solutions.
2. To use knowledge of optimal environmental setpoints to maximize yield and manage plant stresses.
3. To choose the proper hydroponic system and management practice based on location and growing situation.

PSC5222 - Temperate Zone Fruit Production - 3 - Credits

Course Overview

Course Prefix
PSC

Course Number
5222

Department
Plants, Soils and Climate

Dual-Listed Courses

PSC6222 - Temperate Zone Fruit Production

Course Title

Temperate Zone Fruit Production

Grade Mode
Standard Letter

Repeat Status
NR

Course Description

Explores principles and practices underlying scientific fruit production. Focuses on physiological principles undergirding production practices. Topics include: plant growth and development, fruit anatomy, site selection, fertilizers, harvest, post-harvest physiology, and storage. Includes discussion of the production of important temperate fruit crops. Additional coursework is required for those enrolled in the graduate-level course.

Complete ALL of the following Courses:

- BIOL1010 - Biology and the Citizen (BLS)
  OR BIOL1610 - Biology I

Course Learning Objectives

Course Learning Outcomes

1. Know the basic botanical and horticultural principles related to temperate fruit crops.
2. Understand how plant growth and development and plant physiology influence fruit crop management practices.
3. Learn how to transfer key findings related to fruit growth and development to a broad range of situations and develop skills in communicating findings to diverse audiences.

PSC5270 - Environmental Plant Physiology - 2 - Credits

Course Overview

Course Prefix
PSC

Course Number
5270

Department
Plants, Soils and Climate

Dual-Listed Courses

PSC6270 - Environmental Plant Physiology

Course Title

Environmental Plant Physiology

Grade Mode
Standard Letter

Repeat Status
NR

Course Description

Quantitatively analyzes the relationship between physiological processes and growth of whole plants. Energy balance and water use efficiency. Light interception and canopy geometry. Canopy photosynthesis and respiration. Carbon partitioning and source/sink relationships.

Other Enrollment Recommendations
BIOL4400 PLANT PHYSIOLOGY (QI) is recommended, or similar plant physiology course

Course Learning Objectives

Course Learning Outcomes

1. The overall objective of this course is to introduce students to the physiological and molecular responses of plants to biotic (e.g., pathogens) and abiotic stresses (e.g., drought, salinity).
2. Gaining a basic understanding of the subject.
3. Developing specific skills, competencies, and perspectives necessary for professionals in the field of plant stress physiology.
4. Learning how to find, evaluate, and use resources to explore a topic in depth.

5. Developing skills in expressing oneself orally and in writing.

PSC5310 - Soil Microbiology - 3 - Credits

Complete ALL of the following Courses:

- BIOL1610 - Biology I

Course Learning Objectives

Course Learning Outcomes

- Describe the major types of plant-microbe interactions (beneficial and pathogenic).
- Analyze the molecular signaling pathways involved in plant-microbe interaction (e.g., plant Innate immunity (PTI, ETI), nodulation, mycorrhizae).
- Explain the role of the rhizosphere in microbial colonization and plant health, and evaluate the mechanisms by which PGPR enhance nutrient uptake and stress tolerance.
- Isolation of plant growth-promoting bacteria from the rhizosphere
- Apply bioinformatics tools to analyze plant-associated microbial communities.
- Adaptations of plant-pathogenic interactions to develop scientific tools
- Discuss the role of microbiomes in sustainable agriculture and climate resilience.
- Communicate scientific findings through written reports and presentations.

Prerequisite

Required

Complete ALL of the following Courses:

- CHEM1110 - General Chemistry I (BPS)
- PSC3000 - Fundamentals of Soil Science

and one additional upper-division Soils course

Course Learning Objectives

Course Learning Outcomes

1. To gain a working understanding of plant-soil interactions and working with soils data. By the end of the course you will be able to visit a new site and know what measurements will be needed to understand how water and nutrients move through the soil, how this effects plant growth, and how different management approaches are likely to affect the soils and plants of that system.
2. This course will give you the tools to answer such questions as how much will fertilizer increase plant growth / how will anthropogenic nitrogen deposition affect plant growth and composition? Are there drainage problems at my site? Are my plants water stressed? Is my site fixing carbon? Are soil organisms increasing or decreasing diversity or productivity at my site? How will climate change affect water and nutrient cycling at my site?

PSC5410 - Hydroclimate - 3 - Credits

Type
Prerequisite

Required

Complete ALL of the following Courses:

- PSC3000 - Fundamentals of Soil Science
- CHEM1110 - General Chemistry I (BPS)
  OR CHEM1210 - Principles of Chemistry I

Course Learning Objectives

Course Learning Outcomes

1. Students will gain understanding of the concepts of soil health and fertility and of how to manage soils to maintain and improve soil quality, health and fertility.
2. Students will learn the nutrient elements required for plant growth and be familiar with the visual symptoms and diagnostic methods to identify nutrient deficiencies.
3. Students will understand the mechanisms by which essential nutrients are supplied to plants from the soil: mass flow, diffusion and root interception and how these interact with water availability.
4. Students will be able to describe the major physical and chemical forms of the essential nutrient elements in soils and the factors affecting their availability to plant roots.
5. Students will be able to solve quantitative problems concerning the use of chemical fertilizers and organic materials to improve nutrient supply to plants and use these in case study problems.
6. Students will use technical writing skills to find, understand and interpret primary source materials on a variety of topics related to soils as the medium for plant growth and soil health.

NR

Course Description
Course offers in-depth description of atmospheric circulation and how environmental phenomena interact in a single, unified system. This integrated approach unites all the key features of the climate system to explain the structure and behavior of climate over time. Additional coursework is required for those enrolled in the graduate-level course.

Prerequisite

Required

Complete ALL of the following Courses:

- MATH2210 - Multivariable Calculus (QI)
- PHYS2210 - Physics for Scientists and Engineers I (QI/BPS)
- PSC2000 - The Atmosphere and Weather (BPS)

Course Learning Objectives

Course Learning Outcomes
1. Gaining physical understanding of the Earth's climate system.
2. Learning a physical overview of Earth's climate system and energy budget, large-scale circulation, key physical processes, and climate sensitivity of the atmosphere, ocean, land surface, and cryosphere and how the climate system responds to various forcing factors.
3. Learning to apply physical laws to understand how the global climate system functions.

PSC5860 - Atmospheric Thermodynamics - 3 - Credits

Course Overview

Course Prefix
PSC

Course Number
5860

Department
Plants, Soils and Climate

Dual-Listed Courses
PSC6860 - Atmospheric Thermodynamics

Course Title
Atmospheric Thermodynamics

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course covers thermodynamic principles and their applications to atmospheric science. Students learn the laws of thermodynamics, intensive and extensive properties, heat capacity, atmospheric lapse rates and stability, hydrostatic and hypsometric equations, and energy exchange in climate systems. Additional coursework is required for those enrolled in the graduate-level course.

- PHYS2210 - Physics for Scientists and Engineers I (QI/BPS)
- MATH2250 - Linear Algebra and Differential Equations (QI)

Course Learning Objectives

Course Learning Outcomes

1. Define key terms used in atmospheric thermodynamics.
2. Explain the basic thermodynamic principles that govern the atmosphere.
3. Apply these principles to describe temperature, moisture, and stability in the atmosphere.
4. Analyze simple atmospheric profiles and thermodynamic diagrams.

PSC5875 - Synoptic Meteorology - 4 - Credits

Course Overview

PSC

Course Number
5875

Department
Plants, Soils and Climate

Dual-Listed Courses
PSC6875 - Synoptic Meteorology

Course Title
Synoptic Meteorology

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
In this course, students apply the theory behind dynamic meteorology concepts governing the large-scale motions of the mid-latitude atmosphere. Theoretical concepts are paired with real-world weather map analysis lessons to introduce forecasting and interpretation techniques while reinforcing numerical concepts. Additional coursework is required for those enrolled in the graduate-level course.

- MATH1220 - Calculus II (QL)

Course Learning Objectives

Course Learning Outcomes

1. Describe the basic concepts that form the foundation of Earth system science.
2. Classify major Earth system components and the processes that shape them.
3. Explain key physical mechanisms within each component of the Earth system.
4. Identify how different components interact and influence one another.
5. Outline the basic structure and purpose of global climate models.

PSC5999 - Precision Agriculture Practicum - 3 - Credits

Course Overview

Course Prefix
PSC

Course Number
5999

Department
Plants, Soils and Climate

Cross-Listed Courses
ASTE5999 - Precision Agriculture Practicum, CEE5999 - Precision Agriculture Practicum

Course Title
Precision Agriculture Practicum

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students set up, collect, and analyze multiple types of real-time sensor data on their "farm." As a final project, students utilize the data they have collected and create a prescription map for the next cropping cycle.

Course Learning Objectives

Course Learning Outcomes

1. Explain the principles of sustainable, low-water landscaping and their importance in arid and semi-arid environments.
2. Analyze soil, climate, and ecological factors to inform plant selection, irrigation strategies, and overall site design.
3. Identify and select appropriate native and adapted plant species for low-water landscapes using hydrozoning principles.
4. Design functional, visually appealing landscapes that balance ecological health, aesthetic value, and water efficiency.
5. Estimate irrigation needs and apply efficient irrigation methods based on plant water demand and environmental conditions.
6. Implement appropriate landscape maintenance and material use to sustain long-term landscape health and water efficiency.
7. Recognize the role of green infrastructure—including rainwater harvesting and permeable systems—in sustainable landscape design.

PSC6100 - Professional Turf and Urban Landscape Water Management - 3 - Credits

Course Overview

Course Prefix
PSC

Course Number
6100

Department
Plants, Soils and Climate

Dual-Listed Courses
PSC5100 - Professional Turf and Urban Landscape Water Management

Course Title
Professional Turf and Urban Landscape Water Management

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students study intensively used turfgrass areas as well as irrigation management and applied water relations of urban landscapes in the arid west. This course also involves the complex interactions with people who use and expect much of these environments. Additional coursework is required for those enrolled in the graduate-level course.

Other Enrollment Recommendations

Understand the fundamentals of soil science; PSC3000 FUND OF SOIL SCIENCE recommended

No Requirements

Course Learning Objectives

Course Learning Outcomes

1. Describe soil morphology and landscape features, and name horizons according to National Cooperative Soil Survey standards.
2. Identify the environmental factors (climate, organisms, parent material, relief, time) that influence soil development in a landscape context.
3. Apply concepts of physical, chemical, and biological processes to explain soil formation and behavior.
4. Interpret key soil properties that influence vegetation communities, suitability

for land use, ecosystem services, etc.
5. Classify soils using Soil Taxonomy and infer soil properties from the taxonomic name.
6. Access and use soil survey information available on the web, understanding its potential and limitation.

PSC6140 - Unsaturated Flow and Transport - 3 - Credits

Course Overview

Course Prefix
PSC

Course Number
6140

Department
Plants, Soils and Climate

Course Title
Unsaturated Flow and Transport

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Simulation and measurement of transport processes (e.g., water, solutes, CO2, heat) in partially-saturated soils. Includes influence of chemical reactions, plant root, and microbial respiration on CO2 soil fluxes, and plant root distribution and uptake on transpiration processes. Applies to problems related to agricultural, environmental, ecological, and hydrological applications.

Credit Hours

Credit Hours Min:
3

Contact Hours

Contact Hours Min:
3

Billing Hours

Billing Hours Min:
3

Lecture Hours

Lecture Hours Min:
3

No Requirements

Course Learning Objectives

Course Learning Outcomes

1. Analyze Soil Transport Processes: Investigate and explain the dynamics of soil transport processes (e.g., water, solutes, gases, heat, etc.) in partially saturated soils leading to implications for soil health and functionality.
2. Employ Hydrus 1D Software to Simulate Soil Dynamics: Numerically model the effects of chemical reactions, plant root extractions, or microbial responses to assess how variations, for example, in plant root distribution or water stress influence soil processes such as evapotranspiration.
3. Apply Simulations to Address Real-World Challenges: Integrate theoretical concepts with numerical modeling to formulate solutions for complex issues in agricultural practice, environmental sustainability, ecological conservation, and hydrological management with an aim of supporting graduate research objectives.

PSC6150 - Bioinformatics and Big Data Mining - 3 - Credits

Course Overview

Course Prefix
PSC

Course Number
6150

Department
Plants, Soils and Climate

Dual-Listed Courses
PSC5150 - Bioinformatics and Big Data Mining

Course Title
Bioinformatics and Big Data Mining

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course covers an introduction to the discipline of bioinformatics and computational biology. It also covers techniques for biological big data mining. Additional coursework is required for those enrolled in the graduate-level course.

Credit Hours

Credit Hours Min:
3

Contact Hours

Contact Hours Min:
3

Billing Hours

Billing Hours Min:

Lecture Hours Min:
3

Course Learning Objectives

Course Learning Outcomes
1. Describe the foundations of bioinformatics & computational biology, and explain their roles in agriculture, big data science, precision biology, and functional genomics. Explain the structure, function, and use of major biological databases.
2. Understand the principles of diverse OMICS data types (RNA-seq, single cell RNA-seq, SNP-seq, ChIP-seq, GBS-seq, Methyl-seq, miRNA-seq, Metagenomics, Genome assembly, etc.), and sequence analysis in systems biology.
3. Data Science & Big Data Competencies: To gain hands-on experience in Linux OS and High-Performance Computing in parsing and workflow automation for biological data processing. Briefly explain the applications of Machine Learning in modern biology.
4. Analyze big OMICS datasets: Pick one topic from diverse OMICS data types (RNA-Seq); and train the students in developing a reproducible computational workflow. Quality control, read mapping, quantification, differential expression, annotation.
5. Interpret and Communicate biological insights: Draw biologically meaningful conclusions from complex multidimensional datasets, e.g. explain how to interpret differential expression, clustering, annotation, enrichment, and pathway analyses. Applications in agriculture, health, and biological sciences.

PSC6201 - Hydroponics - 3 - Credits

Other Enrollment Recommendations
Students should have a good understanding of high school level biology and chemistry in addition to meeting the prerequisites. Students without a basic understanding of general chemistry can still enroll in the course, but they may experience a higher learning curve than their peers with more of a chemistry background.

Simple Requisites

Prerequisite

Type
Completion Requirement

Required

Complete ANY of the following Courses:
- BIOL1010 - Biology and the Citizen (BLS)

OR BIOL1610 - Biology I

Course Learning Objectives

Course Learning Outcomes
1. To understand the optimal nutrient compositions and concentrations in hydroponic fertilizer solutions.
2. To use knowledge of optimal environmental setpoints to maximize yield and manage plant stresses.
3. To choose the proper hydroponic system and management practice based on location and growing situation.

PSC6222 - Temperate Zone Fruit Production - 3 - Credits

Course Overview

Course Prefix
PSC

Course Number
6222

Department
Plants, Soils and Climate

Course Title
Temperate Zone Fruit Production

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Explores principles and practices underlying scientific fruit production. Focuses on physiological principles undergirding production practices. Topics include: plant growth and development, fruit anatomy, site selection, fertilizers, harvest, post-harvest physiology, and storage. Includes discussion of the production of important temperate fruit crops. Additional coursework is required for those enrolled in the graduate-level course.

- BIOL1610 - Biology I
- CHEM1120 - General Chemistry II (BPS)
  OR CHEM1210 - Principles of Chemistry I
- PSC3000 - Fundamentals of Soil Science

Course Learning Objectives

Course Learning Outcomes

1. After the completion of this course students will know the major types of organisms found in soils and be familiar with their classification based on physiological and taxonomic criteria.
2. They will understand the basis for physiological and molecular methods used to examine the microbial diversity of soil environments.
3. They will be familiar with the role of pH, water availability and redox status for the control microbial activity in the soil environment.
4. They will be able to describe plant-microbe interactions especially rhizosphere, mycorrhizae and nitrogen fixation and understand the role of microbes in the transformations of soil carbon, nitrogen, sulfur and phosphorus.
5. The students will be able to find, understand and interpret primary source materials on a variety of topics related to microbial communities and soil processes.

PSC6333 - Plant-Microbe Interactions - 3 - Credits

Course Overview

Course Learning Objectives

Course Learning Outcomes

- Describe the major types of plant-microbe interactions (beneficial and pathogenic).
- Analyze the molecular signaling pathways involved in plant-microbe interaction (e.g., plant Innate immunity (PTI, ETI), nodulation, mycorrhizae).
- Explain the role of the rhizosphere in microbial colonization and plant health, and evaluate the mechanisms by which PGPR enhance nutrient uptake and stress tolerance.
- Isolation of plant growth-promoting bacteria from the rhizosphere
- Apply bioinformatics tools to analyze plant-associated microbial communities.
- Adaptations of plant-pathogenic interactions to develop scientific tools
- Discuss the role of microbiomes in sustainable agriculture and climate resilience.
- Communicate scientific findings through written reports and presentations.

Simple Requisites

Prerequisite

Type
Prerequisite

Required

Complete ALL of the following Courses:

- CHEM1110 - General Chemistry I (BPS)
- PSC3000 - Fundamentals of Soil Science

and one additional upper-division Soils course

Course Learning Objectives

Course Learning Outcomes

1. To gain a working understanding of plant-soil interactions and working with soils data. By the end of the course you will be able to visit a new site and know what measurements will be needed to understand how water and nutrients move through the soil, how this effects plant growth, and how different management approaches are likely to affect the soils and plants of that system.
2. This course will give you the tools to answer such questions as how much will fertilizer increase plant growth / how will anthropogenic nitrogen deposition affect plant growth and composition? Are there drainage problems at my site? Are my plants water stressed? Is my site fixing carbon? Are soil organisms increasing or decreasing diversity or productivity at my site? How will climate change affect water and nutrient cycling at my site?

PSC6410 - Hydroclimate - 3 - Credits

Course Overview

Course Prefix
PSC

Course Number
6410

Department
Plants, Soils and Climate

Dual-Listed Courses
PSC5410 - Hydroclimate

Course Title
Hydroclimate

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course introduces important processes and phenomena related to hydroclimatology from local to global scales. Students are introduced to foundations related to high-impact precipitation processes, atmosphere-land interactions, and floods/droughts. Additional coursework is required for those enrolled in the graduate-level course.

Course Learning Objectives

Course Learning Outcomes

1. Comprehend both qualitatively and quantitatively the key soil, plant and atmospheric processes that determine exchanges of heat, water and CO2 between vegetation surfaces and the air.
2. Approaches to measure and model interactions in soil-plant-atmosphere, especially evapotranspiration. Exposure to key instruments and measurements
3. Understanding microclimates at various scales and locations, and their causes.

PSC6530 - Soil Health and Fertility - 3 - Credits

Course Overview

Course Prefix
PSC

Course Number
6530

Department
Plants, Soils and Climate

Dual-Listed Courses
PSC5530 - Soil Health and Fertility (QI)

Course Title

Soil Health and Fertility

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Description of forms, transformations, and movement of plant nutrients in soils. Discussion of factors affecting nutrient supply, both qualitatively and quantitatively, for nutrient elements essential for plant growth.

Prerequisite

Type
Prerequisite

Required

Complete ALL of the following Courses:

- PSC3000 - Fundamentals of Soil Science
- CHEM1110 - General Chemistry I (BPS)
  OR CHEM1210 - Principles of Chemistry I

Course Learning Objectives

Course Learning Outcomes

1. Students will gain understanding of the concepts of soil health and fertility and of how to manage soils to maintain and improve soil quality, health and fertility.
2. Students will learn the nutrient elements required for plant growth and be familiar with the visual symptoms and diagnostic methods to identify nutrient deficiencies.
3. Students will understand the mechanisms by which essential nutrients are supplied to plants from the soil: mass flow, diffusion and root interception and how these interact with water availability.
4. Students will be able to describe the major physical and chemical forms of the essential nutrient elements in soils and the factors affecting their availability to plant roots.
5. Students will be able to solve quantitative problems concerning the use of chemical fertilizers and organic materials to improve nutrient supply to plants and use these in case study problems.
6. Students will use technical writing skills to find, understand and interpret primary source materials on a variety of topics related to soils as the medium for plant growth and soil health.

PSC6550 - Fundamentals of Integrated Weed Management - 4 - Credits

Course Overview

Course Prefix
PSC

Course Number
6550

Department
Plants, Soils and Climate

Dual-Listed Courses
PSC5550 - Fundamentals of Integrated Weed Management

Course Title
Fundamentals of Integrated Weed Management

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course helps students gain a deeper understanding about weeds – not just how to identify and kill them, but why they occur where they do and what that means for long-term, sustainable weed management.

Fulfill ANY of the following requirements:

Option 1

Complete ALL of the following Courses:

- PSC6050 - Principles of Environmental Soil Chemistry
  OR PSC5050 - Principles of Environmental Soil Chemistry

OR

Option 2

Complete ALL of the following Courses:

- PSC6530 - Soil Health and Fertility
  OR ADVS5530 - Nutrient Metabolization & Utilization

may be taken concurrently

Course Learning Objectives

Course Learning Outcomes

1. Students will gain an understanding of the analysis of soils for the essential plant nutrients and for soil health characterization.
2. The students will learn the importance of experimental variability and reproducibility, the use of standard curves for the calculation of analyte concentrations and the principles of atomic adsorption analysis. Computer spread-sheets will be used for data calculations and graphing of experimental results. Writing skills for technical reports based on experimental data will be improved.

PSC6670 - Environmental Soil Physics - 4 - Credits

Course Learning Outcomes

1. Research Design and Execution: Students will be able to design and carry out independent, original research projects in plant, soil, and/or climate science using appropriate methodologies.
2. Literature Analysis and Integration: Students will be able to critically evaluate and synthesize scientific literature to frame, justify, and contextualize their thesis and/or dissertation research.
3. Scholarly Communication: Students will be able to produce a well structured thesis or dissertation and effectively present their research findings to both scientific and non specialist audiences.
4. Disciplinary Mastery: Students will be able to demonstrate advanced knowledge of plant, soil, and/or climate science concepts, theories, and applications through scholarly work that contributes meaningfully to the field.

Course Learning Outcomes

By the end of this course, students will:
1. Present Research Effectively: Develop and deliver a 15-minute research presentation accompanied by a concise abstract (100 words), demonstrating the ability to communicate complex ideas clearly and professionally.
2. Engage with Guest Speakers: Learn from invited guest speakers to gain insights into various research fields, career paths, and current industry trends.
3. Enhance Professional Skills: Participate in a professional development series to improve essential skills, including writing a strong CV, managing committee relationships, establishing writing habits, and giving and receiving constructive feedback.
4. Apply Feedback: Practice receiving and applying constructive feedback on their work and providing feedback to peers in a supportive and professional manner.

5. Participate in Peer Learning: Engage with peers through discussions and activities to foster a collaborative academic environment and support each other's growth and success.

Prerequisite

Required

Complete ALL of the following Courses:

- PSY1010 - General Psychology (BSS)
- PSY1400 - Analysis of Behavior: Basic Principles

Course Learning Objectives

Course Learning Outcomes

1. Learn to think critically about correlational and experimental data that inform the field of positive psychology.

2. Learn how the evolutionary heritage of our species affects our happiness, our

values, and our needs.

3. Learn how a range of variables can impact human happiness and wellbeing (e.g., wealth, health, status, and social relations).

4. Acquire skills to improve your attention, your social relationships, and your relationship with your own thoughts.

5. Become aware of “happiness traps” that humans routinely fall into but can be avoided.

6. Learn how form new habits that can positively impact your wellbeing.

7. Conduct a multi-week experiment, with your own wellbeing serving as the dependent variable.

PSY7070 - Advanced Measurement Theories and Practice - 3 - Credits

Course Overview

Course Prefix
PSY

Course Number
7070

Department
Psychology

Course Title
Advanced Measurement Theories and Practice

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course covers classical test theory (CTT), latent state-trait theory (LSTT), and item-response theory (IRT). Students learn how to estimate, evaluate, and interpret measurement models of CTT, LSTT, and IRT in the software Mplus. We also discuss advanced topics in the test validity and test validation literature.

Course Learning Objectives

Course Learning Outcomes
1. Gain factual knowledge (facts, terms, methods, trends) about major aspects of environmental health ranging from different exposures associated with waste, air, water, workplace, and infectious diseases.
2. Learn basic principles, generalizations, and theories about environmental health exposures and how to control and prevent acute and chronic human exposures, as well as to reduce/limit environmental contaminants.
3. Develop skills, competencies, regulatory understanding, and views valuable for careers in public health and environmental health.

Course Learning Objectives

Course Learning Outcomes

1. Demonstrate Professional Competence

Apply workplace communication, leadership, and organizational skills within a recreation, parks, events, sports, or outdoor leadership setting.

2. Connect Academic Learning to Practice

Integrate theoretical concepts from recreation administration coursework into applied professional experiences.

3. Engage in Reflective Learning and Growth

Use structured reflection and supervisor feedback to assess performance, identify strengths, and set goals for continued development.

4. Explore Career Pathways in Recreation Administration

Gain exposure to the breadth of the recreation industry, including public, nonprofit, and private-sector roles.

5. Model Ethical and Responsible Practice

Demonstrate integrity, accountability, and professionalism consistent with the values of the recreation and parks profession.

RAM2300 - Fundamentals of Sport Management - 3 - Credits

Course Overview

Course Prefix
RAM

Course Number
2300

Department
Kinesiology and Health Science

Course Title
Fundamentals of Sport Management

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course explores the unique nature of the sport industry. Students are introduced to the various sport industry segments and investigate the academic areas comprising sport management discipline. Students focus on professional development and best practices to obtain employment in the field.

No Requirements

Course Learning Objectives

Course Learning Outcomes

1. Appraise the significance of sport in today's society.

2. Examine the size and scope of the sport industry and its many segments.

3. Assess the various governance structures within the sport industry.

4. Analyze the general philosophical principles influencing the management of sport organizations.

5. Critically evaluate the theoretical foundations relevant to the organization and delivery of sport services.

6. Demonstrate how knowledge of basic management skills are critical to the

success of a sport organization.

7. Compare and contrast opposing viewpoints regarding current issues and common ethical dilemmas in sport management.

8. Develop strategies for enhancing professional skills and gaining employment within the field.

RAM2380 - Facility Management - 2 - Credits

Course Overview

Course Prefix
RAM

Course Number
2380

Department
Kinesiology and Health Science

Course Title
Facility Management

Grade Mode
Standard Letter

Repeat Status
RP

Course Description
Teaches the student how to properly maintain an athletic field. Students will learn to care for the playing surface and also the grounds around the playing surface. This is a “hands-on” course. Students will meet for a short description on what is to be accomplished each day, and the reminder of class time will be spent working on actual projects.

Course Learning Objectives

Course Learning Outcomes

1. Interpret Foundational Theories and Philosophies of Outdoor Recreation

Analyze the social, cultural, and ethical meanings of outdoor recreation and their influence on leadership and management practices.

2. Examine Contemporary Management Issues in Outdoor Recreation

Evaluate how policy, land ethics, and public perception affect decision-making in outdoor recreation and leadership contexts.

3. Apply Outdoor Adventure Leadership (OAL) Principles in Practice

Demonstrate how the four OAL principles: Challenge Yourself, Inspire Others, Lead Boldly, and Cultivate Connection, guide responsible leadership and community engagement.

4. Integrate Environmental Ethics and Sustainability Frameworks

Compare and contrast Leave No Trace and Wilding principles to develop a balanced, relational approach to land stewardship.

5. Develop and Articulate a Personal Outdoor Recreation Philosophy

Synthesize readings, experiences, and reflective practices into a coherent philosophy that expresses one's values, leadership style, and vision for the role of outdoor recreation in society.

RAM2600 - Sport Tourism - 3 - Credits

Course Overview

Course Prefix
RAM

Course Number
2600

Department
Kinesiology and Health Science

Course Title
Sport Tourism

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Examines impact of sport tourism on economies, cultures, and communities. This course covers the role of attracting sport tourists to events by studying their motivations, experiences, and behaviors as part of the revenue-generating process. Trends and future directions are investigated.

REH6700 - Internship in Counseling I - 2 - Credits

Course Overview

Course Prefix
REH

Course Number
6700

Department
Special Education & Rehab Counseling

Course Title
Internship in Counseling I

Grade Mode
Pass/Fail

Repeat Status
NR

Course Description
While supervised by site supervisors and the internship coordinator, students provide counseling services to individuals with disabilities in Clinical Mental Health Counseling settings (e.g., rehabilitation agency, clinical mental health, community rehabilitation program, Veterans' Administration). Must be a minimum of 300 hours.

Credit Hours

Credit Hours Min:

Course Learning Objectives

Course Learning Outcomes
By the end of the Clinical Rehabilitation Counseling Internship students will have developed and strengthened:

1. The ability to establish and maintain effective counseling relationships. At least 240 hours of the internship time (600 total hours required) needs to be spent engaged in direct client service. For internship students, this may include limited time observing other professionals working with clients but should primarily spent providing direct services to clients with disabilities. See Internship Manual for additional clarification and examples of direct client contact activities.
2. The ability to conceptualize and integrate a client's personal, social, vocational, medical, and environmental situation.
3. Formulate sound and realistic rehabilitation plans, make optimum use of available rehabilitation services, and evaluate the progress of clients in their rehabilitation plan.
4. Plan and organize work, write reports, and maintain adequate records.
5. Form effective relationships with rehabilitation clients, staff, supervisors, and external agency professionals.
6. The ability to assess and draw accurate inferences about clients from observing their behavior both inside and outside of the counseling situation.
7. The capability to interpret vocational tests and other information to clients and other professionals.
8. Perform rehabilitation counseling tasks with a minimal level of supervision.
9. Maintain professional and ethical standards in work responsibilities and relationships.

Course Learning Objectives

Course Learning Outcomes

1. Describe the broad history and contemporary manifestation of horse cultures' religious traditions, as well as the details of at least one community's.

2. Explain different ways in which horse-keeping communities' religious identities shape and respond to larger worldviews and to factors such as colonialism, racialism, nationalism, and economies.

3. Articulate the variety of socio-religious responses to biologically required, and thus broadly shared, necessities of horse-keeping and range of horse usage.

4. Closely read and critically analyze primary texts and scholarly writings.

Other Enrollment Recommendations
Recommended for students who have already completed the Breadth Humanities (BHU) requirement or its replacement.

Course Learning Objectives

Course Learning Outcomes
1. Covers the central doctrines and practices of Christians – a term not attested until seventy or more years after the death of Jesus. But Christological doctrine, as mentioned above, has largely remained settled for more than 1,500 years. Conceptualizations of Jesus have varied immensely, often to great impact, but they simply cannot receive due attention in a course that must also substantively cover religious authority; church-state relations; martyrdom; soteriology; eschatology; the constitution of sacraments; missions; the role of images; saints; scholasticism; mysticism; etc. The foundational Christology officially promulgated at the Council of Nicaea (325) is widely shared across the expanse of Christianity.
2. The shared Christology has paradoxically allowed for an endless array of conceptualizations of Jesus, united in little beyond a vital agreement about his importance. Cultural representations of Jesus, and political deployments of the figure, are but two arenas abounding in concrete examples of this phenomenon.

Complete ALL of the following Courses:

- RUSS2030 - Accelerated Russian Second Year

Course Learning Objectives

Course Learning Outcomes

Students will be able to:

1. Analyze and discuss Russian and Russian-speaking cultures' artworks, and art more generally, using appropriate vocabulary and grammar in both oral and written Russian.

2. Interpret cultural and historical contexts of major Russian and Russian-speaking cultures' artistic movements and styles.

3. Apply intermediate-level Russian language skills to describe visual elements and express aesthetic judgments.

4. Conduct short research presentations on artists or art movements at a local art museum.

5. Demonstrate improved fluency and confidence in engaging with authentic Russian language texts and multimedia related to art.

Course Overview

Course Prefix
SHS

Course Number
3100

Department
Speech and Hearing Sciences

Course Title
Speech Science

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course examines the anatomy, physiology, acoustics, and basic neurology associated with speech, language, and swallowing. It addresses systems involved in respiration, phonation, resonation, articulation, and ingestion. Lab exercises may be required.

Credit Hours

Credit Hours Min:
3

3

Course Learning Objectives

Course Learning Outcomes

1. Identify the structural and functional components of respiration, phonation, resonation, articulation, and the nervous system.
2. Become familiar with software analysis of voice and speech sound acoustics.
3. Understand normal speech production and a variety of disorder speech impairments.

SHS3200 - Child Language Development - 3 - Credits

Course Overview

Course Prefix
SHS

Course Number
3200

Department
Speech and Hearing Sciences

Course Title
Child Language Development

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course addresses the typical development of semantics, syntax, and pragmatics from infancy to adolescence. It includes prelinguistic communication, cognitive correlates, discourse, metalinguistics, bilingual acquisition, and the effects of sociocultural context on acquisition. Students are introduced to language sample analysis.

Prerequisite

Requried

Earn a minimum grade of C in the following:

- SHS2600 - Introduction to Communication Disorders

(may be taken concurrently)

Course Learning Objectives

Course Learning Outcomes

1. Explain language, its component domains, and how it relates to speech and communication.
2. Explain developmental of prelinguistic communication.
3. Explain developmental sequence for phonology, semantics, syntax, and pragmatics.
4. Describe the effects of linguistic, cultural, and social differences on language acquisition.
5. Conduct a language sample analysis on a typically developing young child.

SHS3400 - Hearing Science - 3 - Credits

Course Overview

Course Prefix
SHS

Course Number
3400

Department
Speech and Hearing Sciences

Course Title
Hearing Science

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course examines anatomy and physiology of the human auditory and balance systems. It addresses acoustics, mechanisms, and perception of sound transmission for human hearing.

Enroll in the following Courses:

- SHS4450 - Developmental Communication Disorders

Course Learning Objectives

Course Learning Outcomes

1. Recognize methods of assessment and intervention in broad areas of communication disorders.
2. Write treatment goals, plans, progress reports, case histories, and other types of clinical planning and documentation.

3. Demonstrate knowledge and application of ASHA Code of Ethics , client confidentiality, and universal safety precautions
4. Demonstrate emerging written and oral communication skills appropriate for clinical and professional interaction with graduate clinicians, clients/patients and relevant others.

SHS4450 - Developmental Communication Disorders - 3 - Credits

Course Overview

Course Prefix
SHS

Course Number
4450

Department
Speech and Hearing Sciences

Course Title
Developmental Communication Disorders

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students examine childhood speech-language disorders including phonological disorder, stuttering, primary language disorder, autism, intellectual disability, and learning disability; and consider the effects of organic and social factors on identification and management. Assessment and treatment principles for developmental disorders are introduced.

- SHS3500 - Phonetics and Phonological Development

Course Learning Objectives

Course Learning Outcomes

1. Explain and differentiate types of speech-language disorders that appear in the developmental period.

2. Identify how cognitive, social, and literacy factors are involved in developmental communicative disorders.
3. Demonstrate introductory knowledge of principles of assessment and treatment of speech-language disorders.
4. Describe cultural and contextual considerations in the diagnostic and treatment process.

SHS4500 - Acquired Communication Disorders - 3 - Credits

Course Overview

Course Prefix
SHS

Course Number
4500

Department
Speech and Hearing Sciences

Course Title
Acquired Communication Disorders

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students examine neurogenic and other communication disorders in adults, focusing on etiology and characteristics of disorders including stroke, traumatic brain injury, degenerative disorders, dysarthria, apraxia of speech, aphasia, voice, and dysphagia. Assessment and treatment principles for acquired disorders are introduced.

Complete one of the following:

Earn a minimum grade of C in the following:

- SHS3100 - Speech Science
  OR SHS3800 - Anatomy and Physiology of Speech and Hearing

Course Learning Objectives

Course Learning Outcomes

1. Discuss the role of the speech-language pathologist in working with select acquired adult and pediatric communication and swallowing disorders
2. Demonstrate an understanding of common causes of communication and swallowing disorders and their impact on the individual patient
3. Acquire a basic understanding of assessment and treatment for acquired communication and swallowing disorders

SHS4700 - Basic Audiology - 3 - Credits

Course Overview

Course Prefix
SHS

Course Number
4700

Department
Speech and Hearing Sciences

Course Title
Basic Audiology

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students study the evaluation of hearing for adults and children, including pure tone audiometry, clinical masking, speech audiometry, clinical immittance measures, and screening procedures. Disorders of the outer, middle, and inner ear that affect hearing and balance are addressed.

Credit Hours

Credit Hours Min:

Earn a minimum grade of C in the following:

- SHS3400 - Hearing Science
  OR SHS3800 - Anatomy and Physiology of Speech and Hearing

Course Learning Objectives

Course Learning Outcomes

1. Describe the profession of audiology, including work settings and tasks.
2. Describe and conduct basic audiologic procedures including otoscopy, pure tone and speech audiometry, immittance measures, and hearing screenings.
3. Interpret pure tone audiograms to determine type, degree, and configuration of hearing loss.
4. Define physiological tests of the auditory system including acoustic reflex, otoacoustic emission and auditory brainstem responses.
5. Identify common disorders of the outer, middle, and inner ear, as well as retrocochlear pathologies.

SHS5070 - Acoustics of Speech and Hearing - 3 - Credits

Course Overview

Course Prefix
SHS

Course Number
5070

Department
Speech and Hearing Sciences

Course Title
Acoustics of Speech and Hearing

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This speech and hearing science course examines properties of sound waves, processes of speech production, resonance, filtering, and sound transmission in the auditory system. Students learn psychological aspects of sound perception and clinical applications of sound measurement.

Course Title
Dysphagia

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course considers the neurological substrates of normal deglutition and clinical manifestation of dysphagia across the lifespan and addresses diagnostic methods and management of these disorders using evidence-based practice.

Course Learning Objectives

Course Learning Outcomes

1. Identify normal and abnormal anatomy and physiology of the swallow mechanism across the lifespan.
2. Describe and demonstrate assessment techniques for pediatric and adult dysphagia.
3. Collect, analyze, and interpret assessment and progress data to plan and evaluate interventions for individuals with dysphagia across the lifespan.
4. Describe and apply knowledge about ethical considerations and professional issues affecting assessment and treatment of individuals with dysphagia.

SHS6150 - Phonological Assessments and Intervention - 3 - Credits

Course Overview

Course Prefix
SHS

Course Number
6150

Department
Speech and Hearing Sciences

Course Title
Phonological Assessments and Intervention

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course is a graduate study of theoretical and clinical issues related to the assessment and intervention of articulation and phonological disorders in children.

Simple Requisites

Prerequisite

Type
Prerequisite

Required

Complete ALL of the following Courses:

- PSY3010 - Psychological Statistics (QI)

Course Learning Objectives

Course Learning Outcomes

1. Explain the scientific method, designs, and procedures.
2. Identify ethical issues and their management in human subjects research.

3. Explain basic types and uses of descriptive and inferential statistics.
4. Locate, summarize, and evaluate research sources.
5. Demonstrate evidence-based practice clinical decision-making.

SHS6250 - Birth to Five Language Intervention - 3 - Credits

Course Overview

Course Prefix
SHS

Course Number
6250

Department
Speech and Hearing Sciences

Course Title
Birth to Five Language Intervention

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students learn assessment and treatment principles and procedures for language and social communication of young children and infants. Topics include clinical management, family-centered services, early intervention teams, and early literacy enhancement, as well as pediatric feeding and swallowing.

Credit Hours

Credit Hours Min:

SHS6560 - Speech and Language Assessment and Intervention for Children Who are Deaf or Hard of Hearing - 3 - Credits

Course Overview

Course Prefix
SHS

Course Number
6560

Department
Speech and Hearing Sciences

Course Title
Speech and Language Assessment and Intervention for Children Who are Deaf or Hard of Hearing

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students explore foundations of assessment in young children who are deaf/hard of hearing, including standardized, non-standardized, curriculum-based, checklists, language samples, and so forth. Students discuss application of assessment findings to listening and spoken language service delivery implementation.

Course Learning Objectives

Course Learning Outcomes

1. Describe principles of research and evidence-based practice relevant to clinical decision-making in audiology.
2. Engage in professional discussion of emerging literature, clinical practices, and disciplinary trends.
3. Identify strategies that strengthen hearing health services across patient, provider, clinic, and system levels.
4. Demonstrate effective collaboration and communication across clinical, supervisory, and interdisciplinary contexts.
5. Discuss foundational concepts related to clinical supervision, hearing conservation, and contemporary issues in audiology.

SHS7050 - Introduction to the Field of Audiology - 1 - Credits

Course Overview

Course Prefix
SHS

Course Number
7050

Department
Speech and Hearing Sciences

Course Title
Introduction to the Field of Audiology

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course provides current Audiology students with information on a variety of professional issues important to clinical practice and graduate coursework in audiology.

Credit Hours

Credit Hours
Min:
1

Contact Hours

Registration Restrictions
Admission to the Audiology - AuD program.

Course Learning Objectives

Course Learning Outcomes

1. Describe legal, ethical, and regulatory frameworks governing audiology practice.
2. Explain credentialing, licensure, and certification requirements.
3. Apply professional standards to common practice-management and ethical scenarios.

SHS7100 - Acoustics - 1 - Credits

Course Overview

Course Prefix
SHS

Course Number
7100

Department
Speech and Hearing Sciences

Course Title
Acoustics

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
The purpose of this course is two-fold: 1) to provide students with the theories underlying basic principles of acoustics, and 2) to develop basic science and problem-solving skills.

Credit Hours

Credit Hours Min:
1

Contact Hours

Contact Hours Min:

Registration Restrictions
Admission Audiology - AuD program.

Course Learning Objectives

Course Learning Outcomes
1. Describe the generation and propagation of sound and perform basic analyses of sound waves.
2. Develop skills and confidence in the mathematics necessary for audiological evaluation and the critical consumption of research.
3. Understand acoustic properties related to hearing.
4. Relate basic acoustic principles to the practice of Audiology.
5. Develop problem-solving skills necessary for the fields of clinical practice and science.

SHS7200 - Introduction to Clinical Practice - 1 - 4 Credits

Course Overview

Course Prefix
SHS

Course Number
7200

Department
Speech and Hearing Sciences

Course Title
Introduction to Clinical Practice

Grade Mode
Standard Letter

Repeat Status
RP

Course Description
This course is a supervised diagnostic practicum for first-year students in the Audiology Program.

Registration Restrictions
Admission to the Audiology - AuD program.

Course Learning Objectives

Course Learning Outcomes
1. Perform core audiologic assessment procedures with appropriate supervision.

2. Document findings and impressions using professional clinical language.
3. Demonstrate professional communication with patients, families, and clinic staff.

SHS7240 - Anatomy and Physiology - 3 - Credits

Course Overview

Course Prefix
SHS

Course Number
7240

Department
Speech and Hearing Sciences

Course Title
Anatomy and Physiology

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course reviews the anatomy and physiology of the peripheral and central hearing and balance system focusing on healthy function. This course also covers basic genetics and an overview of the hearing system's embryology and development.

Credit Hours

Credit Hours Min:
3

Contact Hours

Contact Hours Min:

Admission to the Audiology - AuD program.

Course Learning Objectives

Course Learning Outcomes

1. Identify the microscopic and gross anatomy of the peripheral and central auditory and vestibular systems.
2. Demonstrate an understanding of macroscopic and microscopic function of the auditory and vestibular systems.
3. Describe basic principles of genetics.
4. Demonstrate a basic understanding of embryology and the development of the auditory and vestibular systems

SHS7250 - Pediatric Audiology Practicum for the Listening and Spoken Language Emphasis - 1 - 9 Credits

Course Overview

Course Prefix
SHS

Course Number
7250

Department
Speech and Hearing Sciences

Course Title
Pediatric Audiology Practicum for the Listening and Spoken Language Emphasis

Grade Mode
Standard Letter

Repeat Status
RP

Course Description
Pediatric audiology practicum for students participating in the Listening and Spoken Language (LSL) emphasis.

Registration Restrictions

Admission to the Audiology - AuD program.

Course Learning Objectives

Course Learning Outcomes

1. Describe consequences of hearing loss, evidence-based amplification tests, and factors influencing hearing aid services.
2. Synthesize information to guide hearing-aid selection, assessment, and treatment.
3. Apply course material when performing pre-fitting tests, electroacoustic measures, and earmold impressions.
4. Develop applied clinical skills in hearing aid evaluation and management.

SHS7340 - Pediatric Audiology - 2 - 3 Credits

Course Overview

Course Prefix
SHS

Course Number
7340

Department
Speech and Hearing Sciences

Course Title
Pediatric Audiology

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course provides students with understanding of normal auditory development and theoretical, clinical, and practical issues involved in screening, assessment, and management of children with hearing loss.

Credit Hours

Credit Hours Min:
2

Credit Hours Max:
3

Credit Hours Operator:

Registration Restrictions
Admission to the Audiology - AuD program.

Course Learning Objectives

Course Learning Outcomes

1. Gain an understanding of the key components of hearing loss identification, comprehensive assessment, verification, and monitoring in children.
2. Describe and identify developmental characteristics and landmarks across children with hearing loss and typical hearing
3. Collaboratively support the child and their family—as well as transdisciplinary professionals—when educating, counseling, and advocating around issues that arise throughout childhood due to diagnosed hearing disorders.

SHS7360 - Pediatric Amplification - 1 - 3 Credits

Course Overview

Course Prefix
SHS

Course Number
7360

Department
Speech and Hearing Sciences

Course Title
Pediatric Amplification

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course provides a comprehensive exploration of pediatric amplification, focusing on the foundational principles and advanced clinical applications essential for audiology professionals working with children. Students learn the considerations in selecting, fitting, and managing amplification systems for pediatric populations.

Credit Hours

Credit Hours Min:
1

Credit Hours Max:

Registration Restrictions
Admission to the Audiology - AuD program.

Course Learning Objectives

Course Learning Outcomes
1. Identify and describe evidenced-based practice for amplification selection, verification, orientation, and validation for the pediatric population, considering patient characteristics, developmental behavior, laws, regulations and policies.

2. Identify perspectives of other disciplines and incorporate knowledge of those views to enhance collaboration and improve communications.

SHS7380 - Advanced Audiology - 3 - Credits

Course Overview

Course Prefix
SHS

Course Number
7380

Department
Speech and Hearing Sciences

Course Title
Advanced Audiology

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course covers special auditory testing for site of lesion in the conductive, sensory, and neural/central auditory systems with special emphasis on the comprehensive behavioral audiologic test battery.

Course Learning Objectives

Course Learning Outcomes

1. Describe specialized behavioral and physiologic procedures used in site-of-lesion assessment.

2. Select appropriate special tests based on diagnostic questions.
3. Interpret results from special auditory tests within the broader diagnostic battery.

SHS7410 - Noise and Hearing Conservation - 1 - 3 Credits

Course Overview

Course Prefix
SHS

Course Number
7410

Department
Speech and Hearing Sciences

Course Title
Noise and Hearing Conservation

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students learn principles of noise hazard evaluation, effects of noise on the auditory mechanism, and development and maintenance of an effective hearing conservation program.

Admission to the Audiology - AuD Program.

No Requirements

Course Learning Objectives

Course Learning Outcomes

1. Evaluate noise exposure using recognized measurement standards.
2. Describe effects of noise on auditory and systemic health.
3. Identify and explain components of an evidence-based hearing conservation program.

SHS7420 - Amplification II - 3 - Credits

Course Overview

Course Prefix
SHS

Course Number
7420

Department
Speech and Hearing Sciences

Course Title
Amplification II

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course provides applications of advanced hearing aid circuitry. Hearing aid troubleshooting, modifications, and repairs are addressed. Pediatric amplification is also covered.

Registration Restrictions
Admission to the Audiology - AuD program.

Course Learning Objectives

Course Learning Outcomes

1. Critically analyze and discuss practice implications for advanced topics.
2. Synthesize information to formulate decisions for hearing aid selection, assessment, and treatment for the pediatric population.
3. Research topics and orally present complex information in a meaningful way that is understandable and supports learning.

SHS7430 - Electrophysiology - 3 - Credits

Course Overview

Course Prefix
SHS

Course Number
7430

Department
Speech and Hearing Sciences

Course Title
Electrophysiology

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course provides students with extensive working knowledge of early, middle, and late evoked potentials. Assessment of the sensory function of the auditory system with otoacoustic emissions also included.

Course Learning Objectives

Course Learning Outcomes

1. Describe physiologic foundations of auditory evoked potentials and otoacoustic emissions.
2. Select appropriate test protocols for clinical indications.
3. Record, analyze, and interpret evoked potential and OAE results.

SHS7450 - Counseling for Audiological Care - 3 - Credits

Course Overview

Course Prefix
SHS

Course Number
7450

Department
Speech and Hearing Sciences

Course Title
Counseling for Audiological Care

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students gain foundational theoretical background knowledge necessary for effective implementation of evidence-based counseling approaches when providing diagnostic, treatment, and educational services for individuals with hearing and balance disorders and their families.

Credit Hours

Credit Hours

Registration Restrictions
Admission to the Audiology - AuD program.

Course Learning Objectives

Course Learning Outcomes

1. Gain an understanding of counseling and how learn to apply said techniques when providing hearing healthcare.
2. Develop specific counseling skills, competencies, and points of view needed by clinicians practicing audiology.
3. Bolster their abilities to collectively determine the counseling needs of individuals who are affected by hearing loss.
4. Collaboratively work with the patient and/or their family to address the issues affecting them as a result of diagnosed hearing disorders.

SHS7460 - Aural Rehabilitation Across the Lifespan - 3 - Credits

Course Overview

Course Prefix
SHS

Course Number
7460

Department
Speech and Hearing Sciences

Course Title
Aural Rehabilitation Across the Lifespan

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students learn to help individuals with hearing loss apply their impaired auditory sense in language communication. It includes models of aural rehabilitation, cultural issues, federal/state mandates, early identification, intervention, amplification, vocational placement, quality of life, and implementing aural rehabilitation.

Credit Hours

Credit Hours

Course Learning Objectives

Course Learning Outcomes

1. Prepare and execute person-/family-centered aural (re)habilitation plans rooted in the biopsychosocial approach of the International Classification of Functioning, Disability and Health framework.
2. Identify and understand the effects of hearing and communication difficulties on various aspects of daily living across the lifespan (e.g., schooling, social relationships, vocation, marital dyads, family dynamics)
3. Demonstrate an understanding of laws and regulations impacting individuals with hearing loss across the lifespan to effectively educate and advocate for them as a clinical audiologist.

SHS7490 - Medical Aspects of Audiology - 3 - Credits

Course Overview

Course Prefix
SHS

Course Number
7490

Department
Speech and Hearing Sciences

Course Title
Medical Aspects of Audiology

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students study the etiology, symptomatology, audiological manifestations, and medical treatment of various pathological conditions of the auditory system.

Course Learning Outcomes

1. Critically identify and evaluate research literature to inform evidence-based clinical decision-making and strengthen professional practice in audiology.
2. Design and carry out a mentored research project or paper to address a theoretically and/or clinically relevant question in audiology.
3. Analyze, interpret, and clearly communicate research findings to professional and lay audiences

SHS7880 - Research Methods in Audiology - 3 - Credits

Course Overview

Course Prefix
SHS

Course Number
7880

Department
Speech and Hearing Sciences

Course Title
Research Methods in Audiology

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This graduate-level course builds foundational research methodology in audiology for evidence-based diagnostic, treatment, and educational services, while strengthening students' ability to locate, analyze, and critically discuss research articles relevant to hearing and balance disorders.

Course Overview

Course Prefix
SHS

Course Number
7890

Department
Speech and Hearing Sciences

Course Title
Journal Reading - Audiology

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Under faculty direction, students read and discuss published research. Students learn to critique empirical and theoretical papers as well as current research findings in important areas of Audiology.

SLSC1010 - New Student Orientation - 1 - Credits

Course Overview

Course Prefix
SLSC

Course Number
1010

Department
Technology, Design & Technical Ed

Course Title
New Student Orientation

Grade Mode
Pass/Fail

Repeat Status
NR

Course Description

Designed to provide incoming students with a working knowledge of the opportunities and services available to them at USU Eastern. This two-phase course will assist in the student's transition to college and successful completion of his/her academic goals. During Phase I of orientation, instruction includes an overview of academic regulations, graduation requirements, USU Eastern policies and procedures, the advising process, and course registration. Students are familiarized with USU Eastern resources, personnel, and functions of academic and student support services. During Phase II, students have the opportunity to interact in a social setting with student leaders, student service personnel, faculty advisors, and fellow students, as we seek to establish a connection between the student and campus community.

SOC5900 - Directed Study: Gender and Sexuality Studies - 1 - 3 Credits

Course Overview

Course Prefix
SOC

Course Number
5900

Department
School of Social Sciences

Course Title
Directed Study: Gender and Sexuality Studies

Grade Mode
Standard Letter

Repeat Status
RP

Course Description
Students pursue directed research, writing or reading on a topic related to gender and sexuality studies.

Course Overview

Course Prefix
SOC

Course Number
5920

Department
School of Social Sciences

Course Title
Research Methods in Gender & Sexuality Studies

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This interdisciplinary course explores intersectionality as an analytic framework for conducting research. Students learn to apply feminist epistemologies and related research methods to the interdisciplinary study of gender and sexuality within the sciences and humanities.

SOC7660 - Public Sociology: Ecological Justice and Community Action - 3 - Credits

Course Overview

Course Prefix
SOC

Course Number
7660

Department
School of Social Sciences

Course Title
Public Sociology: Ecological Justice and Community Action

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This class applies Public Sociology to ecological justice and community action. Public Sociology takes sociological knowledge beyond the "ivory tower" into communities. It stresses raising awareness of social issues, and the importance of civic engagement to a functional democratic society.
