SPED2910 - Early Field Experience in Special Education - 3 - Credits

Course Overview

Course Prefix
SPED

Course Number
2910

Department
Special Education & Rehab Counseling

Course Title
Early Field Experience in Special Education

Grade Mode
Standard Letter

Repeat Status
RP

Course Description
This course provides early field experience to implement effective instruction and behavior management strategies in special education school or clinic settings. Coursework also explores the field of special education.

Course Learning Objectives

Course Learning Outcomes

1. Gain professional experience working with students with disabilities in school and clinic settings.
2. Provide exposure to the field of special education.
3. Experience the day to day reality of teaching in special education.
4. Acquire basic principles of effective instruction and behavior managment.
5. Provide exposure to students with disabilities in the early years of the college experience.

6. Explore the field of special education (e.g. disability characteristics, special education law, etc.).

SPED4000 - Education of Students with Disabilities - 3 - Credits

Course Overview

Course Prefix
SPED

Course Number
4000

Department
Special Education & Rehab Counseling

Course Title
Education of Students with Disabilities

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course teaches the characteristics of all types of exceptional children with emphasis on the educational and psychological implications of these conditions to the development of the child.

Simple Requisites

Prerequisite

Type
Prerequisite

Required

Prerequisite may be fulfilled with one of the following options:

Fulfill ANY of the following requirements:

Option 1

Earn a minimum grade of B- in the following:

- SHS3200 - Child Language Development

OR

Option 2

Admission to Teacher Education Program

Course Learning Objectives

Course Learning Outcomes

1. Demonstrate a working understanding of the history of special education, current laws (IDEA, Section 504, ADA), and the impact of curriculum standards on students with disabilities.
2. Define and explain the special education service categories outlined in IDEA, including possible causes and prevalence rates of various disability categories.
3. Describe characteristics, needs, and evidence-based interventions, accommodations, and instructional methods for students served in each disability category.
4. Identify and utilize family, school, and community roles and resources for serving exceptional students.
5. Recognize and apply key components of behavior management plans and strategies to support positive student behavior.
6. Apply knowledge of IDEA processes—including evaluation, IEP development, and transition planning—to ensure that students with disabilities receive services that uphold their individual rights.
7. Reflect on and evaluate how personal experiences, beliefs, and assumptions influence professional relationships with students with disabilities and their families.
8. Compare and contrast legal protections under Section 504 and IDEA, and apply this understanding to support students effectively in classroom and therapy settings.
9. Identify problem behaviors, determine potential causes, and develop realistic solutions to address and reduce these behaviors.
10. Select and implement appropriate strategies, accommodations, resources, and materials to differentiate instruction for individuals and groups of learners.
11. Integrate knowledge of legal, instructional, and behavioral frameworks to create

SPED4300 - What is Normal?: Introduction to Disability Studies - 3 - Credits

Course Overview

Course Prefix
SPED

Course Number
4300

Department
Special Education & Rehab Counseling

Course Title

What is Normal?: Introduction to Disability Studies

Grade Mode
Standard Letter

Repeat Status
NR

Course Description

This course provides an introduction to the field of disability studies. Students investigate the way history, popular culture, and media inform our attitudes toward and understanding of disability.

Credit Hours

Credit Hours Min:
3

Contact Hours

Contact Hours Min:
3

No Requirements

Course Learning Objectives

Course Learning Outcomes

1. Analyze how the concepts of ""normalcy"" and ""disability"" are socially constructed rather than just biologically determined, utilizing foundational theories (such as the Social Model vs. the Medical Model) to deconstruct societal standards of beauty, competence, and citizenship.
2. Evaluate the historical, political, and economic forces—ranging from the eugenics movement to the disability rights movement—that have shaped Western society's current policies, laws, and attitudes toward people with disabilities.
3. Critique the representation of disability in literature, film, advertising, and art to identify how popular culture perpetuates stereotypes or provides opportunities for resistance and empowerment.

4. Examine the intersectionality of disability with race, class, gender, and sexuality, articulating how these overlapping identities influence an individual's lived experience of privilege, power, and oppression.
5. Assess how the social and built environment (architecture, technology, social attitudes) contributes to the phenomenon of "disablement,"" distinguishing between individual impairment and systemic barriers.
6. Formulate personal and professional strategies to challenge ableism and replace stereotypes with respectful, informed actions that promote the rights and dignity of people with disabilities.

Admission to Teacher Education and Special Education program

Course Learning Objectives

Course Learning Outcomes
1. Students will analyze and apply federal education laws, historical legal cases, and key principles shaping special education by evaluating their impact on equitable access, inclusion, and appropriate services for students with disabilities.
2. Students will accurately explain the processes for Child Find, referral, and eligibility determination under IDEA, eligibility criteria for the 13 disability categories, and correctly complete the USBE referral and consent for assessment forms.
3. Students will describe practices for supporting caregiver involvement and rights in the IEP process.
4. Students will apply best practices for writing Present Levels of Academic Achievement and Functional Performance (PLAAFP) statements and assess the quality of statements by identifying key components, necessary records, and stakeholder contributions
5. Students will demonstrate the procedures for writing goals aligned with the PLAAFP statements and develop a data collection procedure that aligns with the goals.
6. Students will describe the process and considerations when determining IEP services, accommodations, and LRE within a multidisciplinary team and describe strategies for conducting team meetings.
7. Students will explain the discipline procedures for students with disabilities, including key differences from those for students without disabilities, the manifestation determination process, and due process complaint procedures.
8. Students will locate and analyze their district's discipline policies and identify current due process hearings in their state to understand legal protections and procedural safeguards for students with disabilities.

SPED5016 - Technology and Collaboration for Teaching Exceptional Learners - 3 - Credits

Course Overview

Course Prefix
SPED

Course Number
5016

Department
Special Education & Rehab Counseling

Course Title
Technology and Collaboration for Teaching Exceptional Learners

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course explores existing technology (IT and AT), technology legislation, resources to fund technology in classrooms, methods for evaluating AT needs of individuals with disabilities, and strategies for collaborating with families and service providers to assess, select, and implement technology.

Admission to Teacher Education and Special Education program

Course Learning Objectives

Course Learning Outcomes

1. Upon completion of the course, you will be able to:
   Explain past and current transition trends in special education and disability culture.
2. Identify societal factors that influence outcomes for youth and adults with disabilities across diverse identity characteristics (e.g., culture, linguistic, family structure).
3. Apply effective and respectful communication strategies in the context of interagency collaboration, parent collaboration, and person-centered planning.
4. Describe how to gather data from a variety of sources (e.g., IEP) and people (e.g., general education teachers, service providers, students) to design a unit of instruction and family resource guide to provide in-school experiences.
5. Describe the role of the family in the transition planning process.
6. Identify family expectations and the potential influence of those expectations in the transition planning process.
7. Define self-determination.
8. Describe and practice strategies that will enhance self-determination for children and youth with disabilities.
9. Considering student and family needs, identify disability-specific and non-disability-specific agencies to support student and family-identified needs.
10. Compare secondary transition evidence and research-based strategies to design instruction for students of different ages, types of disabilities, levels of support needs, and culturally or linguistically diverse backgrounds.
11. Use materials or lessons that counteract stereotypes and acknowledges the contributions of individuals with diverse identity markers (e.g., culture, language).
12. Describe the policies governing services for children with disabilities ages 14 and older.
13. Describe postsecondary educational, employment, and independent living opportunities for youth and young adults with disabilities.
14. List and describe steps for effective planning for postsecondary transition.

Course Learning Objectives

Course Learning Outcomes

1. Define and understand the purpose of assessment.
2. Identify the steps involved in the assessment process in special education.
3. Recognize the importance of norm-referenced tests, standardization, and concerns surrounding standardized testing.
4. Describe the various informal measures of assessment.
5. Identify issues surrounding testing considerations and describe the limitations of various kinds of testing.
6. Recognize and use basic statistical terminology including scales of measurement, measures of central tendency, frequency, and range.
7. Identify the importance of the normal curve and how it can be used in the assessment process for decision making.

8. Distinguish among the different types of correlations and understand the meanings of correlation coefficients.
9. Apply the steps involved in the calculation of age for students during the assessment process.
10. Identify the importance of scaled scores and standard scores and how they are used in reporting information during the assessment process.
11. Recognize the importance of terminology used in reporting scores in assessment, including percentiles, stanines, T-scores, z-scores, age equivalents, and grade equivalents.
12. Recognize the rights of parents in the educational decision making of their children and identify how to provide written notice to parents for special needs assessment and to obtain parental consent.
13. Identify the procedures for initiating an evaluation for a child with a suspected disability and describe six IDEIA standards to comply with federal guidelines for special education evaluations.
14. Defend ethical practices that enhance the integrity of test results.
15. Define culture and recognize cultural and linguistic diversity among learners.
16. Describe the significance of cultural competence when working with children with special needs and their parents.
17. Identify techniques and actions educators use to prepare for a multicultural assessment.
18. Describe factors that influence assessment of students from culturally and linguistically diverse backgrounds.
19. Identify the purpose of screening assessments and describe the process for using them.
20. Discuss the purpose of an initial evaluation, determine the procedures for getting one underway, and identify who might participate in an initial evaluation.
21. Explain the purpose of a triennial evaluation and who participates in this evaluation.
22. Explain how a formal referral may be made for an evaluation and possible special education services for a child with a suspected disability and describe what happens next.
23. Describe the purpose of the Multidisciplinary Team and the membership of it.
24. Distinguish among the various assessment options of the Multidisciplinary Team.
25. Identify important principles of parental participation in the assessment process, including the important points of parent intakes and confidentiality.
26. Recognize the importance of eligibility requirements under the federal law and why special educators need to know them.
27. Identify the definitions and understand the meanings of each of the IDEIA classifications for high-prevalence disabilities and discuss the steps involved in eligibility criteria.
28. Identify the definitions and understand the meanings of each of the IDEIA classifications for low-prevalence disabilities and discuss the steps involved in eligibility criteria.
29. Identify practical guidelines important to use when writing a comprehensive educational report in special education.
30. Describe and elaborate on the sections that should be included in a comprehensive educational report for special education.
31. Explain how each element in a model comprehensive educational report informs the recommendations for the school, teachers, and parents/guardians of a child who has been identified as qualifying for special education.
32. Describe the process for preparing and presenting test results to the Child Study Team, parents, and the Eligibility Committee.
33. Identify the purpose for and the process for an Annual Review.
34. Explain the triennial review process including parent notifications and the required materials.
35. Identify important information that the Eligibility Committee must have prior to meetings and the rationale for why everything is needed.
36. Compare contrast and describe the purposes of various tests and the skills they measure.

Course Learning Objectives

Course Learning Outcomes
1. Explore attitudes and beliefs related to visual impairment and blindness and better understand how they impact the psychosocial functioning of VI students.
2. Identify and better understand theories of psychosocial development.
3. Explore the psychosocial implications of visual impairment.
4. Identify and better understand factors which influence adjustment to vision loss.
5. Explore issues of self-concept and self-esteem and better understand how they impact psychosocial functioning in VI children.
6. Explore strategies for enhancing self-esteem in VI children.
7. Explore the role of the family in the psychosocial functioning of VI children.
8. Explore issues related to adolescence and visual impairment.

9. Better understand factors associated with the psychosocially struggling VI child.
10. Explore, from the teacher or counselor perspective, psychological issues related to VI children.

Course Learning Outcomes
1. Understand the anatomy of the human eye and the correct terms for the anatomical parts of the eye.
2. Understand the physiology of the human eye and the means by which light rays are transformed into visual images.
3. Participate in a dissection of a cow's eye with application of the acquired knowledge of anatomy and physiology.
4. Understand how an eye examination is conducted by an ophthalmologist to assess the health of the human eye.
5. Observe examination techniques.
6. Understand disease and pathologic processes of the human eye and how vision is affected. This will include such topics as cataracts, glaucoma, and macular and peripheral retinal problems.

7. Understand how treatment is provided for the processes mentioned above.
8. Understand hereditary diseases of the eye.
9. Be able to understand an ophthalmologist's written visual reports and how they should be applied by a teacher of the visually challenged in teaching individual students.

Course Learning Objectives

Course Learning Outcomes
1. Students will become aware of some of the functional implications and educational considerations of many of the major eye diseases and disorders.
2. Students will learn of some of the psychosocial implications of having "low vision" and of using low vision devices.
3. Students will be introduced to some functional vision assessments and vision training tools and techniques that they can use with their students.
4. Students will be familiarized with various low vision devices that may help visually impaired persons in a variety of tasks. Students will also be instructed in the proper use of these devices, and their proper care and maintenance.
5. Students will be encouraged to assist their students with low vision to obtain a clinical low vision evaluation and to obtain and use appropriate low vision devices.
6. Students will be instructed regarding materials, resources, and techniques in

assisting students with visual skills, with doing near vision tasks, distance vision tasks, and for using optical devices.
7. Students will explore some of the environmental modifications that can be made with materials, the workspace, and with the larger environment to benefit the low vision person.
8. Finally, students will become familiar with various resources available to persons with a vision loss, and the value of support groups.

Course Learning Outcomes

1. Ability to apply the rules of usage of the UEB and EBAE (uncontracted and contracted) literary braille codes.
2. Ability to read literary braille (uncontracted and contracted) by sight.
3. Ability to write literary braille (uncontracted and contracted) using a slate and stylus and a Perkins braillewriter.
4. Ability to transcribe extensive print passages into literary braille, using correct formatting techniques for a variety of print features (e.g., tables, textbooks, worksheets, etc.)
5. Ability to produce literary braille using technology.
6. An awareness of other braille codes: computer, music, foreign language.
7. Ability to assess students for literary braille usage.
8. Ability to develop and implement appropriate IEP goals and objectives for students using braille, including lesson plan development in the following areas: (a) development of tactile perception, (b) beginning reading and writing, (c)

intermediate reading and writing, (d) use of basic braille technologies, and (e) modification of instructional methods and materials for students who read in center based and inclusive settings.
9. Ability to identify international, national, state, and local organizations and agencies serving individuals who use braille.

Course Learning Objectives

Course Learning Outcomes
1. By the completion of this course, the learner will demonstrate knowledge of the basic functions of a variety of assistive technologies for students who are blind or visually impaired, including those with additional disabilities, in the following ways (prepares students in the knowledge and skills of assistive technology instruction that meet CEC Standards 1 & 4):
2. Name the categories of different types of assistive technologies and decide which technologies are appropriate for specific learning modalities.
3. Know the commands to complete basic reading and writing tasks using a variety of assistive technology devices.
4. Adapt educational materials for students who are visually impaired using a variety of assistive technology devices.
5. Evaluate the advantages and disadvantages of common assistive technology devices for individuals with visual impairments across a variety of tasks and

environments.
6. The learner will identify strategies and sources for obtaining cost effective and appropriate assistive technologies for individuals with visual impairments, including those with additional disabilities, in the following ways:
7. List major organizations that produce, lend, sell, and provide training in the use of assistive technologies for individuals with visual impairments.
8. Obtain and analyze assessment data in order to determine appropriate adaptations involving assistive technologies.
9. Develop understanding of the Student Need, Environmental Considerations, Tasks Curriculum, Tools Assessment (S.E.T.T.) used to evaluate technology needs of students who are blind or visually impaired.
10. Develop goals and objectives for students with visual impairments that involve the use of assistive technology.

1. Have knowledge of the various definitions of deafblindness, the history of the field of deafblindness, and the prevalence of deafblindness.
2. Be able to identify the most prevalent causative factors of deafblindness.
3. Understand essential information about distance sensory impairments and how these impairments can impact all areas of development in students who are deafblind.
4. Be able to identify resources that are available to assist with the education of students who are deafblind.
5. Understand educational service needs and educational service provision for students who are deafblind, including the importance of a team approach.
6. Have an understanding of how to develop effective partnerships with families of individuals who are deafblind and assist them to develop and maintain personal future's planning for their child who is deafblind.
7 Understand the vital interrelationship of communication, concept development, and movement for students who are deafblind.
8. Understand the importance of an ecological approach in the education of students who are deafblind.
9. Students will be exposed to alternative mobility devices (AMD) and basic handling procedures for the standard long white cane, to include proper grip, tip position, movement options, safety techniques, stair travel, and travel with a sighted guide.
10. Understand how communication development can be affected by deafblindness and how to encourage communication development.
11. Have knowledge of communication modes, systems, and devices for use with students who are deafblind, including how to select and design these modes, systems, and devices appropriately.
12. Understand important concepts in assessing communication and learning skills of students who are deafblind.
13. Understand basic instructional strategies to help children and youth who are deafblind develop concepts and communication skills.
14. Demonstrate knowledge about how to conduct a functional behavioral assessment of a child or youth who is deafblind.

Course Learning Objectives

Course Learning Outcomes
1. Explain the impact that a visual impairment has on a child's/youth's cognitive, language, communication, motor, social-emotional, and autonomous development.
2. Explain the impact that additional disabilities have on a learner with a visual impairment and identify appropriate educational adaptations.
3. Describe vision screening and assessment procedures and terminology.
4. Describe the prevalence and incidence of visual impairment, educational and legal classifications, and service delivery options.
5. Analyze how the historical foundations shape the current issues and trends in the education of students who are visually impaired.
6. Locate sources of specialized materials, service networks, consumer organizations, and professional associations and publications.

Course Learning Objectives

Course Learning Outcomes
1. Students will review and understand the historical perspectives and terminology of the field of orientation and mobility, including early intervention programs.

2. Students will describe legal classifications of visual impairment, educational incidence, and prevalence as related to orientation and mobility services. Students will be made aware of specific eye conditions and the related need for orientation and mobility instruction.

3. Students will review and identify appropriate orientation and mobility assessment tools and practices / strategies for teaching non-cane skills for infants, preschoolers, and school-aged children

4. Students will understand the role of the Orientation and Mobility Specialist in

the collaborative team and with the Teacher of Students with Visual Impairments or Vision Consultant.

5. Students will demonstrate and teach non-cane skills, including orientation, purposeful movement in the environment, protective techniques, trailing techniques, sighted guide, and listening skills.

6. Students will be exposed to alternative mobility devices (AMD) and basic handling procedures for the standard long white cane, to include proper grip, tip position, movement options, safety techniques, stair travel, and travel with a sighted guide.

7. Students will discuss issues relating to concept development, orientation and mobility technologies, representational models, tactual maps, and tactual graphics, and produce a tactual model.

8. Students will synthesize assessment information and IFSP/IEP goals and develop intervention/lesson plans including evaluation procedures, activities/materials and where appropriate, environmental adaptations and non-visual sensory development. The intervention/lesson plans will 9. also reflect strategies for infusing objectives into the student's daily routine, across environments. Lesson plans should include opportunities for life enriching activities, appropriate peer inclusion and social skills development.

10. Students will describe federal entitlements for specialized equipment and materials.

11. Students will identify consumer and professional organizations, journals, resources serving professionals at the local / state / national, individuals with visual impairment and their families.

12. Students will describe the continuum of service delivery options (early intervention through adult rehabilitation services) and the professional roles related to each.

13. Students will discuss and understand safety issues, liability issues, parent involvement and cultural sensitivity as they relate to orientation and mobility.

14. Students will generate a list of activities that they can do to support the Orientation and Mobility Specialist.

Course Learning Objectives

Course Learning Outcomes
1. Students will review and understand (a) historical foundations of education for children with visual impairments, (b) educational definitions and identification criteria, (c) issues and trends in the field of visual impairment, (d) the Utah State Special Education Regulations as they relate to early intervention/preschool children with visual impairments and to students who have visual impairments in the public schools.
2. Students will identify the effects of visual impairment on development, learning, and sensory input, including the impact of additional exceptionalities.
3. Students will discuss a variety of assessments used with students who have visual impairments, select appropriate assessments, including a Functional Vision

Assessment, Learning Media Assessment, developmental assessments, expanded core curriculum assessments, alternative assessment techniques, and other educational assessments, as part of a transdisciplinary team.
4. Students will analyze and interpret assessment results, prioritize needs, design and implement early intervention strategies (home setting), including use of intervention techniques, instructional strategies, and selection and use of resource materials.
5. Students will analyze and interpret assessment results, prioritize needs, design educational strategies including the use of adaptive techniques, instructional strategies, selection and use of resource materials for students in educational settings, and options for data collection.
6. Students will understand the IFSP/IEP process and will select appropriate outcomes, goals and objectives for individual students including: students will complete the early intervention outcome plan and K-12 instructional plans, addressing IFSP and IEP goals, behavioral objectives, evaluation procedures, and activities/materials/environ-mental modifications. The intervention/instructional plans will also reflect strategies for infusing objectives into the infant's daily routine and student's daily class schedule. Students will also address team issues including the roles of paraeducators, development of appropriate educational setting, use of role models, and development of early literacy activities for users of both large print and braille
7. Students will identify appropriate techniques linking instructional plans to the Utah State Core Curriculum, Utah Braille Core Standards for English Language Arts and Math, and the National Core Curriculum for Students with Visual Impairments. Instructional plans should reflect concrete (hands-on) learning, development of all senses, problem-solving, adaptive skills (handwriting, listening, keyboarding, technology, visual efficiency, organization skills, etc.), self- help skills, appropriate socialization skills, and self-advocacy skills. Additionally, instructional plans will include specific modifications and adaptations needed (including environmental needs) to promote success and independence for the student who has a visual impairment.
8. Student instructional plans will include data driven practices and will (a) be empirically validated and include specific student outcomes or behaviors, (b) identify any needed supports, prompts, modifications, adaptations, accommodations, aids, technology, etc., (c) identify the criterion for changing supports, prompts, modifications, etc. as appropriate, (d) promote efficient acquisition of the skill(s), (e) include strategies for teaming with classroom teachers, paraeducators, and/or families, (f) promote generalization of the skill across environments and/or contexts. Additionally, plans will include (a) performance data collection strategies that indicates specific student outcomes or behaviors, and (b) allow the teacher to carry out error analysis and identify potential modifications in instructional procedures and/or needed changes in accommodations, adaptations, and/or aids as appropriate.
9. Students will develop plans for students who need structured behavioral and communication interventions
10. Students will understand the transitioning process and design a transition plan for a child transitioning from preschool to kindergarten and from high school to post high school settings.
11. Students will identify the contact agency and processes for accessing federal entitlements for specialized equipment and materials. Students will identify international, national, state, and local organizations and agencies serving children with visual impairments and their families.

Course Learning Objectives

Course Learning Outcomes
1. Describe how language and concept development are critical for early literacy development.
2. Utilize methods and tools in assessing early literacy development in young children who are blind or visually impaired (BVI).
3. Access literacy materials in braille and make simple adaptations in braille.
4. Provide early instruction in braille readiness for the children who need it.
5. Design activities to assist children in developing the fine motor, tactile, visual and auditory skills needed for reading down the road.
6. Provide meaningful reading, storytelling and early writing experiences for young children who are BVI.
7. Incorporate literacy activities in daily routines both at home and in the preschool.

8. Access a variety of early literacy experiences in the community.
9. Address and adapt for literacy needs of young children with Cerebral/Cortical Visual Impairment (CVI).

Course Learning Outcomes

1. Students will design and justify a structured special education classroom environment—including physical layout, routines, and systems—that supports engagement, safety, and independence for students with complex support needs.
2. Students will design and deliver explicit instruction lessons that include goals, review, modeling, guided practice, independent practice, maintenance and generalization.
3. Students will plan and implement instructional lessons that incorporate evidence-based practices (including story-based instruction, adapted materials, and emergent literacy strategies) to meet the diverse backgrounds, strengths, and needs of learners.

4. Students will develop, adapt, and deliver Language Arts lessons (e.g., sight word instruction, emergent reading/writing, language comprehension) that build on pupils' prior knowledge and experiences and provide multiple pathways for demonstrating learning.

SPED5512 - Effective Instruction and Curriculum for Students with Severe Disabilities II - 3 - Credits

Course Overview

Course Prefix
SPED

Course Number
5512

Department
Special Education & Rehab Counseling

Course Title
Effective Instruction and Curriculum for Students with Severe Disabilities II

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course covers adapting and implementing additional commercially available curricular materials and functional academics using explicit instruction for persons with severe disabilities.

Course Learning Objectives

Course Learning Outcomes

1. Upon completion of this course, each student will be able to:
   Plan instruction that addresses individual differences for students with CSN
2. Apply Universal Design for Learning (UDL) within lesson planning
3. Develop strategies to overcome barriers to learning for individual students
4. Collaborate with general educators, related service providers, and families to create accessible learning environments that are meaningful for students

5. Demonstrate effective communication strategies to support student learning
6. Integrate technology to enhance content accessibility
7. Plan lessons with general educators using UDL principles
8. Coordinate with related service providers and families to fully engage students in learning
9. Demonstrate content knowledge and instructional methods to provide access to literacy, mathematics, science, and social studies for elementary and secondary students with CSN
10. Align and adapt state academic content standards to plan instruction for students with CSN
11. Apply evidence-based and research-based instructional strategies in lesson planning
12. Design and create adapted materials that augment general curriculum content
13. Implement assessment and instructional strategies to promote academic and functional progress for students with CSN
14. Plan and deliver academic and functional lessons for a student with CSN
    Use data to evaluate instructional effectiveness and inform instructional decision-making

Course Learning Objectives

Course Learning Outcomes
1. Students will use effective communication, collaboration, and problem-solving processes to engage families, general educators, related service providers, paraprofessionals, and other professionals in planning, implementing, and evaluating supports for students with disabilities.
2. Students will accurately model and apply the AT consideration, referral, and assessment process.
3. Students will develop AT plans aligned with IEP goals, including selecting tools, defining implementation procedures, determining progress-monitoring methods, and specifying the responsibilities of team members.
4. Students will implement AT tools in simulated or real classroom settings and

evaluate their impact on student access, engagement, participation, communication, or academic outcomes. Students will adjust tools, supports, or environments based on data and student responsiveness.

Course Learning Objectives

Course Learning Outcomes
As a result of active participation and successful completion of course requirements, students will:

1. Understand theories of typical and atypical early childhood development, and recognize that infants and young children develop and learn at varying rates.
2. Describe the historical, philosophical foundations and legal basis of services for infants and young children both with and without exceptional needs
3. Discuss trends and issues in early childhood education, early childhood special education, and early intervention
4. Describe models and strategies of consultation and collaboration
5. Discuss biological and environmental factors that affect pre-, peri-, and postnatal development and learning
6. Describe the impact of child's abilities, needs, and characteristics on development and learning
7. Describe specific disabilities, including the etiology, characteristics, and classification of common disabilities in infants and young children, and specific implications for development and learning in the first years of life
8. Implement family-oriented services based on the family's identified resources, priorities, and concerns
9. Discuss the impact of medical conditions and related care on development and learning and on family concerns, resources, and priorities
10. Identify the factors that affect the mental health and social-emotional development of infants and young children
11. Recognize signs of emotional distress, neglect, and abuse, and follow reporting procedures
12. Learn evidence-based and DEC recommended practices to apply with infants and young children, including those from diverse backgrounds
13. Identify culturally-responsive factors that promote effective communication and collaboration with individuals with exceptionalities, families, school personnel, and community members

Course Learning Objectives

Course Learning Outcomes

As a result of active participation and successful completion of course requirements, students will:

1. Describe the due process procedures of a family of a child with a disability or at risk of a disability under Part C of IDEA, including evaluation, eligibility, assessment, IFSP, and transition.
2. Complete a family-directed assessment (Routines-Based Interview) with high fidelity (80%), focusing on the young child's participation, independence, and interactions within naturally occurring routines.
3. In collaboration with caregivers, produce functional outcomes based on assessment information that are non-biased and culturally responsive and can be implemented within natural routines.

4. Implement effective coaching practices using adult learning principles when working with families.
5. Describe effective coaching and adult learning procedures for working with teachers, peers, and other professionals.
6. Describe the benefits and limitations of various early intervention models (multi-disciplinary, trans-disciplinary, primary service provider.)
7. Communicate with professionals and families regarding assessment, IFSP outcomes, scheduling, and service coordination, using technology to enhance communication effectiveness while responding non-biasedly to individual family needs and priorities.
8. Identify local formal and informal resources available to support families with an identified challenge.

Course Learning Objectives

Course Learning Outcomes

1. Develop an understanding of international culture, customs, and values, with a specific focus on how these factors influence attitudes and practices related to special education.
2. Demonstrate cultural competence by interacting respectfully with individuals with disabilities, their families, educators, and community members in countries outside of the United States of America.
3. Gain practical experience in international educational systems, including teaching, training, observing, and participating in adapting/modifying instructional materials and methods to meet the diverse needs of people with disabilities in international schools and communities.
4. Collaborate with international educators, families, and community members to develop and implement inclusive education initiatives or projects that promote the inclusion of people with disabilities.

SPED7020 - Teaching in Disability Disciplines - 3 - Credits

Course Overview

Course Prefix
SPED

Course Number
7020

Department
Special Education & Rehab Counseling

Course Title
Teaching in Disability Disciplines

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course provides scholars with up-to-date, empirically-validated instructional practices, along with peer-focused collaboration and learning to develop and refine their specialized areas of expertise. Course instruction and assignments are applied to prepare students for future teaching and professional development responsibilities.

Course Learning Objectives

Course Learning Outcomes

Students will address the following:

1. Develop their teaching self-efficacy,
2. Design a course,
3. Deliver course instruction, and
4. Reflect and make data-based changes on instruction.

SPED7030 - Advanced Functional Assessment - 3 - Credits

Course Overview

Course Prefix
SPED

Course Number
7030

Department
Special Education & Rehab Counseling

Course Title
Advanced Functional Assessment

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course provides advanced knowledge in functional assessment, examining functional analysis, direct, and indirect assessments. Students study procedures, history, strengths, and limitations, then address interpretation, intervention strategies, and ethics through readings and discussions.

Credit Hours

Credit Hours Min:
3

Contact Hours

Course Learning Objectives

Course Learning Outcomes

1. Describe the historical development of the field of functional assessment.
2. Discuss the process of experimental functional analysis, including methodology, logic, and the potential operant functions of behavior. Describe key procedural variations of experimental functional analysis methods, including their strengths and limitations.
3. Describe the methods, variations, strengths, and limitations of direct assessment.
4. Describe the methods, variations, strengths, and limitations of indirect assessment.
5. Provide solutions to common limitations of each functional assessment method that may be context specific.
6. Discuss various intervention strategies for each potential behavior function.
7. Describe the ethical issues associated with functional assessment and ways to mitigate ethical concerns when conducting functional assessment.

Prerequisite

Prerequisite

Complete one of the following options below. One of which must have been taken within the last two years or six consecutive semesters, including summers.

Fulfill ANY of the following requirements:

Option 1

Complete any of the following with a C- or better or a passing grade of P is also acceptable.

Complete ANY of the following Courses:

- MATH0995 - College Mathematics Preparation
- MATH1050 - College Algebra (QL)

- MATH1100 - Calculus Techniques (QL)

OR

Option 2

Exam must be completed within the last two years or six consecutive semesters (including summers):

Exam Option

- ACT Math score of at least 19 or equivalent SAT Math score
- Sufficient score on AP Exam equivalent to MATH1050 COLLEGE ALGEBRA (QL) or higher
- Satisfactory score on the ALEKS Math Placement Exam

Department
Mathematics & Statistics

Course Title
Statistical Methods (QI)

General Education Attribute
QI

Grade Mode
Standard Letter

Repeat Status
NR

Course Description

This course is an introduction to statistical concepts, graphical techniques, probability, distributions, estimation, one and two sample testing, chi-square tests, and simple linear regression, one-way ANOVA.

Simple Requisites

Prerequisite

Type
Prerequisite

Required

Prerequisite may be fulfilled with either coursework or one of the followings exams or test scores within the last two years or six consecutive semesters (including summers).

Fulfill ANY of the following requirements:

Coursework

Earn a minimum grade of C- in the following:

- MATH1050 - College Algebra (QL)
  OR MATH1100 - Calculus Techniques (QL)
  OR MATH1210 - Calculus I (QL)
  OR STAT1080 - Foundations of Data Science (QL)

OR

Exams or Test Scores

Exams or Test Score Options

- ACT Math score of 25 or equivalent SAT Math score
- Sufficient score on AP Exam equivalent to MATH1050 COLLEGE ALGEBRA (QL) or higher
- Satisfactory score on the ALEKS Math Placement Exam

STAT2250 - Internship and Cooperative Studies - 1 - 6 Credits

Course Overview

Course Prefix
STAT

Course Number
2250

Department
Mathematics & Statistics

Course Title
Internship and Cooperative Studies

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Lower-division internship/cooperative work experience in statistics.

Other Enrollment Recommendations
Previous programming experience in R, preferably through STAT1080 FOUNDATIONS OF DATA SCI (QL) OR STAT5050 INTRODUCTION TO R.

Course Learning Objectives

Course Learning Outcomes
1. Use computer programming to manipulate and visualize large quantities of data.
2. Understand how to join information from multiple data tables.
3. Understand the computational limitations of data wrangling as well as the best practices for writing computationally efficient data manipulations.

STAT5060 - Python for Data Science - 3 - Credits

5060

Department
Mathematics & Statistics

Cross-Listed Courses
DSAI5060 - Python for Data Science

Dual-Listed Courses
STAT6060 - Python for Data Science

Course Title
Python for Data Science

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students are introduced to Python with a focus on data science. Topics include Python basics and data structures, object oriented programming, NumPy, pandas, data cleaning and wrangling, plotting and visualization, data aggregation, time series analysis, and modeling libraries. Additional coursework is required for those enrolled in the graduate-level course.

Lecture Hours

Lecture Hours
Min:
3

Other Enrollment Recommendations
Basic programming experience with any language is recommended. Exposure to linear algebra is also helpful as much of data analysis involves matrices.

Course Learning Objectives

Course Learning Outcomes
1. Gain knowledge of and familiarity with the Python programming language and related tools.

2. Learn to use Python to solve data science problems at a basic level.

3. Learn selected general principles in the data science process.

STAT5080 - Data Technologies - 2 - Credits

Dual-Listed Courses
STAT6655 - Machine Learning

Course Title
Machine Learning

Grade Mode
Standard Letter

Repeat Status
NR

Course Description

This course provides a practical and mathematical introduction to machine learning techniques and principles in supervised and unsupervised settings. Students learn to understand machine learning research papers and gain the practical experience to implement machine learning approaches on real data. Additional coursework is required for those enrolled in the graduate-level course.

Other Enrollment Recommendations

Experience programming in Python, R, or Matlab is essential for success in the course.

Simple Requisites

Prerequisite

Type
Prerequisite

Required

Complete ALL of the following Courses:

- MATH1220 - Calculus II (QL)
- MATH5710 - Introduction to Probability
  OR STAT3000 - Statistics for Scientists (QI)

(MATH 5710 preferred)

Required

Complete one of the following options. Option 3 is preferred.

Fulfill ANY of the following requirements:

Option 1

Complete ALL of the following Courses:

- MATH2210 - Multivariable Calculus (QI)
  AND MATH2270 - Linear Algebra (QI)

OR

Option 2

Complete ALL of the following Courses:

- MATH2210 - Multivariable Calculus (QI)
  AND DSAI2275 - Linear Algebra for Data Science

OR

Option 3

Complete ALL of the following Courses:

- MATH5645 - Mathematical Methods for Data Science
  OR STAT5645 - Mathematical Methods for Data Science

(Preferred option)

Course Learning Objectives

Course Learning Outcomes

1. Gain knowledge of and familiarity with selected classical and advanced machine learning techniques and principles that will be useful in both the university and industry settings.
2. Learn to apply the selected techniques to solve problems with real data.
3. Learn selected general principles (e.g. optimization, the kernel trick) for understanding machine learning methods not covered in the course.

STAT5685 - Deep Learning Theory and Applications - 3 - Credits

STAT6685 - Deep Learning Theory and Applications

Course Title

Deep Learning Theory and Applications

Grade Mode
Standard Letter

Repeat Status
NR

Course Description

This course takes a principled and hands-on approach to deep learning with neural networks, covering machine learning basics, backpropagation, stochastic gradient descent, regularization, and universality. Topics include CNNs, GANs, RNNs, GCNs, autoencoders, transformers, and other modern architectures and training techniques. Additional coursework is required for those enrolled in the graduate-level course.

STAT6060 - Python for Data Science - 3 - Credits

Course Overview

Course Prefix
STAT

Course Number
6060

Department
Mathematics & Statistics

Cross-Listed Courses
DSAI6060 - Python for Data Science

Dual-Listed Courses
STAT5060 - Python for Data Science

Course Title
Python for Data Science

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students are introduced to Python with a focus on data science. Topics include Python basics and data structures, object oriented programming, NumPy, pandas, data cleaning and wrangling, plotting and visualization, data aggregation, time series analysis, and modeling libraries. Additional coursework is required for those enrolled in the graduate-level course.

Other Enrollment Recommendations
Basic programming experience with any language is recommended. Exposure to linear algebra is also helpful as much of data analysis involves matrices.

Course Learning Objectives

Course Learning Outcomes
1. Gain knowledge of and familiarity with the Python programming language and related tools.

2. Learn to use Python to solve data science problems at a basic level.

3. Learn selected general principles in the data science process.

STAT6110 - Theory of Linear Models - 1 - Credits

Course Overview

Course Prefix
STAT

Course Number
6110

Department
Mathematics & Statistics

Course Title
Theory of Linear Models

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students learn mathematical development of linear models theory for estimation, hypothesis testing, and confidence regions in multiple linear regression; least squares estimation; the Gauss-Markov Theorem; distribution theory for quadratic forms in normal variables; derivation of the F-test; and confidence procedures.

STAT6280 - Optimal Design of Experiments - 2 - Credits

Course Overview

Course Prefix
STAT

Course Number
6280

Department
Mathematics & Statistics

Course Title
Optimal Design of Experiments

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course introduces modern experimental design from an optimization perspective. Topics covered include: deriving probability model information matrices, formulating the optimal design problem, learning different optimality criterion, and exploring computational algorithms to generate optimal designs.

Complete ALL of the following Courses:

- MATH5410 - Methods of Applied Mathematics
- MATH5420 - Partial Differential Equations
- STAT5100 - Modern Regression Methods (CI/QI)
- STAT5200 - Analysis of Designed Experiments

Course Learning Objectives

Course Learning Outcomes

1. Write the full linear or non-linear probability and statistical model which defines an experiment.

2. Derive the estimating equations for the written models

3. Understand and define design optimality objectives

4. Generate candidate optimal designs for the model/objective via several algorithms.

5. Analyze post-hoc competing candidate designs from several perspectives and learn how to select from the candidates the design which best suits the practitioners needs.

STAT6300 - Bayesian Statistical Methods and Data Analysis - 3 - Credits

Course Overview

Course Prefix
STAT

Course Number
6300

Department
Mathematics & Statistics

Course Title
Bayesian Statistical Methods and Data Analysis

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course introduces the ideas of Bayesian theory and inference. Students are prepared to engage in research in Bayesian modeling and applications in this course that presents mathematical and programming concepts.

STAT5100 MODERN REGRESSION METH(CI)(QI)

Simple Requisites

Prerequisite

Type
Prerequisite

Required

Complete ALL of the following Courses:

- MATH2270 - Linear Algebra (QI)
  OR DSAI2275 - Linear Algebra for Data Science
- MATH5710 - Introduction to Probability

Course Learning Objectives

Course Learning Outcomes

1. Understand and explain how statistical inference differs between the classical (Frequentist) and Bayesian perspectives.
2. For a specified analysis task and data structure: select appropriate Bayesian modeling frameworks, specify appropriate prior distributions, construct likelihood functions, and derive the corresponding posterior distributions.
3. Conduct Bayesian inference and report it via graphical and numerical summaries of posterior distributions.
4. Understand Markov Chain Monte Carlo algorithms (integration and sampling) and implement direct sampling, Gibbs sampling, and the Metropolis-Hastings algorithm.
5. Be able to approach and use common computational tools supporting implementation of Bayesian data analysis: e.g. R, STAN, Bugs.
6. Be able to read and understand Bayesian data analysis as presented in the scientific literature.

Dual-Listed Courses
STAT5650 - Applied Machine Learning and Multivariate Statistics

Course Title
Applied Machine Learning and Multivariate Statistics

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This broadly accessible course introduces students to several machine learning and multivariate statistics topics with a focus on real data applications. Topics include a range of approaches for classification, regression, dimensionality reduction, and cluster analysis. Additional coursework is required for those enrolled in the graduate-level course.

Department
Mathematics & Statistics

Cross-Listed Courses
DSAI6655 - Machine Learning

Dual-Listed Courses
STAT5655 - Machine Learning

Course Title
Machine Learning

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course provides a practical and mathematical introduction to machine learning techniques and principles in supervised and unsupervised settings. Students learn to understand machine learning research papers and gain the practical experience to implement machine learning approaches on real data. Additional coursework is required for those enrolled in the graduate-level course.

Other Enrollment Recommendations
Experience programming in Python, R, or Matlab is essential for success in the course. Some previous, formal exposure to the concepts of linear algebra, probability, and calculus.

STAT6680 - Statistical Thinking for Big Data - 2 - Credits

Course Overview

Course Prefix
STAT

Course Number
6680

Department
Mathematics & Statistics

Course Title

Statistical Thinking for Big Data

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students learn what Big Data is and how to visualize it. Topics include MapReduce, estimation and the bag of little bootstraps, and hypothesis testing, linear regression, classification, clustering, and nonlinear regression for Big Data.

Dual-Listed Courses
STAT5685 - Deep Learning Theory and Applications

Course Title
Deep Learning Theory and Applications

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course takes a principled and hands-on approach to deep learning with neural networks, covering machine learning basics, backpropagation, stochastic gradient descent, regularization, and universality. Topics include CNNs, GANs, RNNs, GCNs, autoencoders, transformers, and other modern architectures and training techniques. Additional coursework is required for those enrolled in the graduate-level course.

Course Learning Objectives

Course Learning Outcomes
Students will learn to

1. Appropriately delegate and assign tasks necessary to complete a research project.
2. Provide constructive feedback to mentees.
3. Foster a supportive environment for mentees, while still providing sufficient latitude for independent work.
4. Effectively revise and edit draft research materials, in preparation for oral, poster, and written presentations.

SURG

Course Number
1050

Department
Technology, Design & Technical Ed

Course Title
Surgical Technology III

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course introduces students to otorhinolaryngology (ENT), orthopedic, oral/maxillofacial, plastics, and reconstructive surgical procedures. Students gain knowledge and understanding of each surgical procedure illustrated and techniques necessary to function as a surgical technologist in the operating room.

Course Learning Objectives

Course Learning Outcomes

1. Students will be able to identify key techniques and interventions used in Emotionally Focused Therapy and apply these methods to help clients understand and manage their emotional responses and relational patterns.

2. Students will develop the skills to analyze and assess the emotional dynamics and attachment patterns within couples, individuals, and families, allowing them to recognize and address underlying issues that impact relationship satisfaction and stability.

3. Students will gain experience in navigating advanced therapeutic challenges, including infidelity and attachment injuries, highly escalated couples, therapist encounters in individual therapy, addressing family dynamics, sexual cycle, anger, shame, trauma, ambivalence, and shaping effective couple enactments. They will also enhance their ability to engage with live emotions in a non-pathologizing, humanistic manner, fostering a supportive therapeutic environment for nuanced and sensitive cases.

SW6905 - I-System Model and Mind-Body Bridging - Foundation - 3 - Credits

Course Overview

Course Prefix
SW

Course Number
6905

Department
Social Work

Course Title
I-System Model and Mind-Body Bridging - Foundation

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students learn basic I-System Model and Mind-Body Bridging (MBB) principles and techniques with their Micro, Meso, and Macro applications to Social Work practice. The MBB evidence-based transdiagnostic intervention alleviates psychological distress for a range of mental health issues.

TCR

Course Number
7220

Department
Communication & Media

Dual-Listed Courses
TCR6220 - User Experience Design

Course Title
User Experience Design

Grade Mode
Standard Letter

Repeat Status
RP

Course Description
Students are introduced to academic and industry research on user experience design. Students also learn how to plan, conduct, and report on data collected from user experience research, applying theories of inclusive design to solve complex communication/design problems.

TEAC1010 - Introduction to Air Conditioning, Heating, and Refrigeration - 3 - Credits

Course Overview

Course Prefix
TEAC

Course Number
1010

Department
Technology, Design & Technical Ed

Course Title
Introduction to Air Conditioning, Heating, and Refrigeration

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course explains Heating, Air Conditioning, and Refrigeration (HVACR). Elementary electrical concepts, electrical heating systems, and hydronic heating systems are introduced. Guiding principles for service and installing technicians, hand tools, energy conservation, certifications, codes, and permits are introduced.

Credit Hours

Credit Hours Min:

No Requirements

Course Learning Objectives

Course Learning Outcomes
1. Explain the basic principles of air conditioning, heating, refrigeration, and ventilation.
2. Explain the basic refrigeration cycle and its four major components.
3. Describe the fundamental principles of electricity and basic circuits.
4. Identify common hand tools, their use, and care.
5. Identify career paths in the air conditioning, heating, and refrigeration trade.

TEAC1100 - Heating, Ventilation, Air Conditioning, Refrigeration (HVACR) Electrical Essentials - 3 - Credits

Course Learning Objectives

Course Learning Outcomes

1. Explain the fundamentals of heating, heat transfer, and combustion.
2. Explain the sequence of operation for residential forced-air furnaces.
3. Troubleshoot a variety of electrical and mechanical furnace problems.
4. Demonstrate mastery of RMGA Certification knowledge by passing the RMGA exam or its equivalent.

TEAC1140 - Basic Refrigeration Systems - 3 - Credits

Course Overview

Course Prefix
TEAC

Course Number
1140

Department
Technology, Design & Technical Ed

Course Title
Basic Refrigeration Systems

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course is an introductory course covering the physical and chemical laws governing the principles of refrigeration. It provides a more in-depth study of the refrigeration cycle; system components, refrigerants, and refrigerant controls are covered.

Course Learning Objectives

Course Learning Outcomes

1. Describe the fundamental refrigeration cycle including heat, states of substances, heat transfer, and pressure/temperature relationships.
2. Identify common refrigerants and understand their differences and develop an understanding of proper refrigerant handling techniques and the application of EPA Section 608 rules.
3. Identify and describe the function of the major refrigerant system components including compressor types and operational characteristics.
4. Identify and describe the function of common refrigeration accessories and controls.
5. Demonstrate the proper use of refrigerant manifold gauges to evaluate, service, and diagnose refrigerant systems including refrigerant recovery, system evacuation, and refrigerant charging procedures.

TEAC1160 - Basic Installation Skills - 3 - Credits

Course Overview

Course Prefix
TEAC

Course Number
1160

Department
Technology, Design & Technical Ed

Course Title
Basic Installation Skills

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course instructs students in copper tubing and pipe joinery. The proper use of tools and equipment is demonstrated while emphasizing safety. Installation-related devices, wiring, tubing installation, and sheet metal methods are also covered.

Course Learning Objectives

Course Learning Outcomes

1. Identify and demonstrate several types of piping, fittings, and joining methods.
2. Demonstrate how to safely start-up, operate and shut-down an oxy-acetylene torch set.
3. Demonstrate electrical installation skills for both line voltage wiring and low voltage control systems.
4. Describe lineset sizing and installation means and methods.
5. Design and fabricate a basic sheet metal fitting/transition.

TEAC1280 - Rocky Mountain Gas Association Gas Technician Certification - 2 - Credits

Course Overview

Course Prefix
TEAC

Course Number
1280

Department
Technology, Design & Technical Ed

Course Title
Rocky Mountain Gas Association Gas Technician Certification

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course prepares students for the necessary certification for working with gas-fired appliances, such as stoves, furnaces, boilers, and water heaters. This course prepares students for the certification examination with minimal hands-on lab work.

Course Learning Objectives

Course Learning Outcomes

1. Describe the combustion process and its potential hazards.
2. Properly size a gas piping system.
3. Calculate the correct size for a combustion air supply.
4. Determine a gas-fired appliance's deration requirements.
5. Size vent systems for Category 1 and Category 4 appliances.

TEAC1500 - Carbon Steel Piping Practices and Refrigerant Certification - 3 - Credits

Course Overview

Course Prefix
TEAC

Course Number
1500

Department
Technology, Design & Technical Ed

Course Title
Carbon Steel Piping Practices and Refrigerant Certification

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course introduces the tools and equipment used to fabricate carbon steel piping systems and their proper use. Additionally, a deeper study of handling refrigerants occurs as students prepare to take the Environmental Protection Agency Section 608 Refrigerant Handling Certification.

Course Learning Objectives

Course Learning Outcomes
1. Using current research-based instructional coaching practices. [e.g., primary literature will be used from the University of Kansas Center for Research on Learning, Uncommon Schools, Utah State Board of Education's documentation on instructional coaching and mentoring.]

2. To support educators in creating and accomplishing goals aligned with the vision and expectations of their organization.

3. To improve learner outcomes through building the capacity of the educators to use best practices to meet student needs.

4. To build trusting relationships through clear support and communication.

5. To demonstrate an ability to listen and communicate through asking probing and reflective questions.

6. To help educators gather, analyze, and use data to shift instructional decision making and practices.

7. To understand how to differentiate coaching for educators who work in a variety of educational settings.

TEAL7549 - Autoethnography as Research MethodologyMethodology - 3 - Credits

Course Overview

Course Prefix
TEAL

Course Number
7549

Department
School of Teacher Education & Leadership

Course Title

Autoethnography as Research MethodologyMethodology

Grade Mode
Standard Letter

Repeat Status
NR

Course Description

This doctoral course is an in-depth exploration of autoethnography. Students examine examples of analytical, critical, and evocative autoethnography and practice writing their own autoethnographies over the semester.

Credit Hours

Credit Hours Min:
3

Contact Hours

Other Enrollment Recommendations

This is an advanced qualitative research course, so students must have taken the introductory qualitative research class (EDUC6770 QUALITATIVE RESEARCH METHODS) prior. All other research courses are beneficial.

Simple Requisites

Prerequisite

Type
Prerequisite

Required

Complete ALL of the following Courses:

- EDUC6770 - Qualitative Research Methods

Course Learning Objectives

Course Learning Outcomes

1. As a result of taking this course, student will have a strong understanding of the purpose of autoethnography in research, various ways to use it as a holist or partial approach to research methodology, and how to contextualize it within research and methodology literature.
2. Students will gain a strong understanding of different approaches to autoethnography including analytical, critical, and evocative autoethnography, and be able to evaluate the quality of the autoethnographies they read in the future.
3. Students also will gain confidence in crafting their own autoethnographies as part of their research goals.

Course Learning Objectives

Course Learning Outcomes
1. Students will gain and demonstrate knowledge of the historical and theoretical foundations research of reading comprehension and reading engagement.Students will evidence understanding of research-based theories and perspectives on vocabulary, comprehension, and reading motivation.

2. Students will recognize personal, cognitive, social, textual, instructional, and cultural contexts that influence reading comprehension.

3. Students will demonstrate familiarity with research-based instructional frameworks for promoting comprehension, metacognition, and reading motivation.

2. Students will plan a research proposal that addresses instructional activities for promoting comprehension, vocabulary, and/or metacognitive strategies.

4. Students will explore ways to assess reading comprehension and to monitor reading engagement in the research proposal.

Course Learning Objectives

Course Learning Outcomes

1. Analyze, critique and expand the research literature concerning discourse analysis.

2. Define, discuss and apply theoretical concepts and approaches to the study of interactional discourse in the context of specific communities, cases, and everyday educational experiences.

3. Explore a range of disciplinary perspectives in order to develop an expanded understanding of the range and dimensions of discourse interactions.

4. Examine the implications of the above for shaping your own data collection and analysis and for impacting educational practice and policy.

Electrical Systems

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course teaches students to troubleshoot electrical circuits they encounter every day. Students gain relevant working knowledge in both AC and DC electrical systems. Competencies include basic electrical circuit design, analysis, instrumentation, schematic and component identification, physics, and applicable math.

Course Learning Objectives

Course Learning Outcomes

1. Demonstrate a working knowledge of safety practices and procedures of basic electrical systems.
2. Operate, install, maintain electrical systems, tools, and devices.
3. Read, utilize, and design electrical systems schematics.
4. Apply principles and applications of electrical AC and DC systems.
5. Apply systems diagnostics and troubleshooting of electrical circuits.

TEAM1060 - Motor Controls - 3 - Credits

Course Overview

Course Prefix
TEAM

Course Number
1060

Department
Technology, Design & Technical Ed

Course Title
Motor Controls

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course prepares students with knowledge and understanding of real-world motor control operations. Students are able to proficiently set up and design motor control circuits utilizing schematics. Students identify components and utilize instrumentation to troubleshoot and maintain systems.

Course Learning Objectives

Course Learning Outcomes

1. Demonstrate a working knowledge of safety practices and procedures.
2. Operate, install, maintain, and design motor control circuits.
3. Demonstrate a working knowledge of commonly used components, devices, and tools.
4. Demonstrate a working knowledge of various control systems.
5. Apply systems diagnostics and troubleshooting of motor control circuits.

TEAM1070 - Programmable Logic Controllers - 4 - Credits

Course Overview

Course Prefix
TEAM

Course Number
1070

Department
Technology, Design & Technical Ed

Course Title
Programmable Logic Controllers

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course teaches students to interface with programmable logic controllers (PLCs). In this course, students develop a working knowledge and skill set in the following competencies: ladder logic, programming standards, hardware selection, various inputs/outputs, communication, troubleshooting, setup, and installation.

3. Complete standard technician documentation.
4. Use troubleshooting instrumentation within multiple systems.

TEAM1100 - Electric Motors and Drives - 1 - Credits

Course Overview

Course Prefix
TEAM

Course Number
1100

Department
Technology, Design & Technical Ed

Course Title
Electric Motors and Drives

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Teaches students to identify motor types, understand AC and DC motor operation, test windings with a megohmmeter, and install and program motor drives for speed control. Students also learn three-phase AC generation and reinforce concepts through hands-on lab work.

Credit Hours

Credit Hours Min:

Course Learning Objectives

Course Learning Outcomes

- Recognize various types of electric motors.
- Use the nameplate information on a motor for troubleshooting.
- Wire single and three phase motors.
- Identify the operating characteristics, nameplate information, and troubleshooting procedures for singlephase motors, generators, AC/DC motors, control transformers, distribution systems, and Delta and Wye transformer configurations.
- Identify the operating characteristics, nameplate information, and troubleshooting procedures for threephase motors – Delta or Wye connected 9 or 12 lead motors.
- Install and troubleshoot electric motor drives.
- Perform a complete motor control panel build and wiring exercise from a schematic.
- Use schematic drawings and test equipment to isolate problems in basic electric motor circuits.
- Follow a step-by-step troubleshooting process to solve problems within an integrated system.

TEAM1110 - Introduction to Industrial Robotics - 2 - Credits

Course Overview

Course Prefix
TEAM

Course Number
1110

Department
Technology, Design & Technical Ed

Course Title
Introduction to Industrial Robotics

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course introduces industrial robot architecture, programming, arithmetic, and simulation. Students complete project-based labs using industry-recognized simulation software and practice simple robot programming and execution. Hands-on experience with real industrial robots reinforces skills through practical laboratory activities.

Credit Hours

Credit Hours Min:
2

Course Learning Objectives

Course Learning Outcomes
- Determine the working specifications and architecture of a robot arm.
- Calculate necessary arithmetic, geometry, and trigonometry relative to robot arms.
- Program a robot arm through industry specific simulation software.
- Test and execute robot arm programs in industry recognized simulators.
- Test and execute a robot arm program with industrial robots.
- Identify what types of robots are available for Industrial and servicing applications.

TEAM1300 - Building Control Panels - 3 - Credits

Course Overview

Course Prefix
TEAM

Course Number
1300

Department
Technology, Design & Technical Ed

Course Title
Building Control Panels

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
In this course, students learn about control panel assembly, standards, skills, and practice. Industrial Control Panel standards are utilized, and special panel building tools are taught.

Course Learning Objectives

Course Learning Outcomes
- Demonstrate knowledge of common control panel safety practices and procedures.
- Create a plan for a panel build project including electrical conduit capacity calculations, enclosure size, wire number and size, component placement.
- Demonstrate ability to correctly read and mark wiring prints.
- Demonstrate proper component layout and organization.
- Modify panel enclosures.
- Demonstrate proper wiring standards in regards to size, type, and color.
- Layout, mount, and wire a complete Control Panel while implementing UL508A standards.

TEAM1500 - Instrumentation Process Control - 3 - Credits

Course Overview

Course Prefix
TEAM

Course Number
1500

Department
Technology, Design & Technical Ed

Course Title
Instrumentation Process Control

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course introduces instrumentation and process control concepts using hands-on activities. Students learn terminology and techniques used in refineries, water treatment, HVAC, refrigeration, and other systems involving temperature, pressure, flow, level, analysis, communication, and automatic control.

Course Learning Objectives

Course Learning Outcomes

- Demonstrate knowledge of safety practices and procedures.
- Demonstrate the ability to set up multiple process control sensors.
- Demonstrate ability to manually and automatically adjust valves.
- Wire and actuate a valve positioner and solenoid valve.
- Setup common components such as control valves, regulators, dampers, actuators, positioners, solenoid valves, and variable frequency drives within a standard system.
- Calibrate and install temperature, pressure, level, and flow instruments.
- Use troubleshooting instrumentation competently within multiple systems.

TEAM2000 - Programmable Logic Controllers II - 3 - Credits

Course Overview

Course Prefix
TEAM

Course Number
2000

Department
Technology, Design & Technical Ed

Course Title
Programmable Logic Controllers II

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course teaches advanced PLC programming, including process control, data acquisition, computer-controlled systems, variable speed drives, and networking. Students use additional software not covered in the introductory course and complete hands-on labs tailored to industry and employer needs.

Course Learning Objectives

Course Learning Outcomes

1. Discuss the operational principles of reciprocating engines, propellers, exhaust systems, ignition systems, and fuel systems.
2. Maintain, repair, and overhaul aircraft powerplant components to ensure optimal performance and safety.
3. Apply theoretical knowledge to practical situations through laboratory applications, simulating real-world troubleshooting and repair scenarios.

TEAV2110 - Aircraft Reciprocating Powerplants and Accessories Lab - 3 - Credits

Course Learning Objectives

Course Learning Outcomes
1. Maintain, repair, and overhaul reciprocating engines, propellers, exhaust systems, ignition systems, and fuel systems.
2. Perform practical application with aircraft components in a lab setting, simulating real-world challenges.
3. Diagnose, disassemble, repair, and reassemble various powerplant system components effectively.

TEAV2140 - Aircraft Turbine Powerplants Maintenance Operations - 3 - Credits

Course Overview

Course Prefix
TEAV

Course Number
2140

Department
Technology, Design & Technical Ed

Course Title
Aircraft Turbine Powerplants Maintenance Operations

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course provides an in-depth exploration of turbine power plants, focusing on the operation of turbine engines and their components. Students learn about hot section inspections, servicing techniques, and the maintenance of propellers and engine exhaust systems.

Course Learning Objectives

Course Learning Outcomes
1. Explain the theory and practical operation of turbine engines and their components.
2. Conduct hot section inspections and service turbine powerplants, including detailed procedures and safety precautions.
3. Maintain and operate propellers and engine exhaust systems to ensure optimal performance and compliance with safety standards.
4. Identify components and explain the function of engine fire protection systems, emphasizing their critical role in aircraft safety.
5. Conducting 100-hour inspections and routine maintenance of aircraft engines focusing on adherence to regulatory standards and documentation procedures.

TEAV2150 - Aircraft Turbine Powerplant Maintenance Operations Lab - 3 - Credits

Course Overview

Course Prefix
TEAV

Course Number
2150

Department
Technology, Design & Technical Ed

Course Title
Aircraft Turbine Powerplant Maintenance Operations Lab

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Application of theory for turbine powerplants, including turbine engine and components operation, hot section inspection, servicing, propellers, and fire protection systems. Aircraft engine 100-hour inspections and maintenance, with laboratory applications of principles and components in aircraft turbine powerplant maintenance operations.

Course Learning Objectives

Course Learning Outcomes

1. Operate and maintain turbine engine components during practical lab exercises.
2. Perform detailed inspections and servicing of turbine engine hot sections, identify issues, and apply corrective actions.
3. Maintain and repair propellers and engine exhaust systems, emphasizing safety and efficiency.
4. Inspect, maintain, and troubleshoot engine fire protection systems, ensuring functionality and compliance with safety standards.
5. Practice conducting thorough 100-hour inspections and routine maintenance of aircraft engines using tools and techniques critical for aviation safety.

TEAV2170 - Aircraft Systems - 3 - Credits

Course Overview

Course Prefix
TEAV

Course Number
2170

Department
Technology, Design & Technical Ed

Course Title
Aircraft Systems

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course covers the theory and operation of aerospace environmental systems, communication, navigation and guidance systems, fuel and propellant systems, fire detection, and warning.

Course Learning Objectives

Course Learning Outcomes

1. Discuss environmental control, oxygen, fuel, and de-icing systems essential for providing a safe and comfortable environment in aircraft.
2. Operate, inspect, and maintain key systems, including oxygen and pressurization systems, flight instruments, and fuel systems, to ensure aircraft readiness and safety.
3. Diagnose and troubleshoot problems in various aircraft systems during malfunctions, enhancing reliability and performance during flights.
4. Remove, bench test, reinstall, and repair system components to develop practical skills that are adaptable to different aircraft types.

TEAV2180 - Aircraft Hydraulic and Pneumatic Systems - 3 - Credits

Course Overview

Course Prefix
TEAV

Course Number
2180

Department
Technology, Design & Technical Ed

Course Title
Aircraft Hydraulic and Pneumatic Systems

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course covers aircraft hydraulic and pneumatic systems, focusing on landing gear and brakes. Students gain hands-on experience in a lab, learning to operate, design, and troubleshoot these systems, preparing them for careers in aviation and aerospace.

Course Learning Outcomes
Course Learning Outcomes:

1. Describe basic network configuration.

2. Use basic networking hardware, software, and tools.

3. Describe common networking communications protocols.

4. Use Power over Ethernet (PoE) in a network application.

5. Build and test Ethernet cables.

6. Configure a wireless access point.

7. Discover and assign Internet Protocol (IP) addresses for various industrial control components.

8. Set up a complete Industrial Ethernet network.

TECE1050 - Vision System Basics - 1 - Credits

Course Overview

Course Prefix
TECE

Course Number
1050

Department
Technology, Design & Technical Ed

Course Title
Vision System Basics

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
The course covers Cognex Insight Easy Builder and Spreadsheet interface, emphasizing lighting, lenses, and filters. It teaches setting up vision applications using spreadsheet programming best practices, covering advanced tools and recent additions. Students gain proficiency in basic vision systems.

2. Convert pixels to common measurements using calibration tools.

3. Setup software interface and acquire first images.

4. Identify parts using pattern matching and Logic.

5. Identify presence or absence of feature using histogram tools.

6. Identify part edges using edge tools.

7. Identify irregular shapes using blob tools and image filters.

8. Configure input and output signals then demonstrate their use.

9. Send process results to external devices.

10. Create custom interface for pass/fail results.

11. Deploy application using simple interface and advanced interface.

12. Demonstrate use of multiple lighting principles and techniques.

TECE1100 - Programmable Logic Controllers 2 - 3 - Credits

Course Overview

Course Prefix
TECE

Course Number
1100

Department
Technology, Design & Technical Ed

Course Title
Programmable Logic Controllers 2

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
The course covers Studio 5000 Logix Designer and CompactLogix PLC, emphasizing ladder logic programming. It includes wiring, troubleshooting, and programming for industrial applications, with a final project to program a complete process. Students develop expertise in advanced logic and controller applications.

Course Learning Outcomes

Course Learning Outcomes:

1. Connect to and configure a Programmable Logic Controller (PLC) using PLC programming software.

2. Use tags, subroutines, data types, arrays, and sequencer code structure in programmable controller programming.

3. Use input and output instructions, timers, counters, math instructions, and compare instructions in programmable logic controller programming.

4. Connect and configure input and output (I/O) expansion cards, both local and remote.

5. Demonstrate proper PLC wiring.

6. Program a complete process from scratch.

TECE1150 - Human Machine Interface (HMI) Programming - 2 - Credits

Course Overview

Course Prefix
TECE

Course Number
1150

Department
Technology, Design & Technical Ed

Course Title
Human Machine Interface (HMI) Programming

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
The course covers HMIs, enabling streamlined operator functions and PLC operations monitoring. Topics include converting PLC programs to graphic HMIs, editing applications, communication, data logging, alarms, diagnostics, and information messages. Students gain skills in HMI programming for PLC data monitoring.

Course Learning Objectives

Course Learning Outcomes

Course Learning Outcomes:

1. Describe the use and need for Human Machine Interface (HMI) in an automation environment.

2. Interface an HMI with a Programmable Logic Controller (PLC) to simulate a virtualized system.

3. Create graphic displays.

4. Build and animate an interactive graphic display.

5. Configure HMI tag-based alarms.

6. Create and configure a historical trend.

7. Create and view a data log model.

8. Use a graphic HMI panel to control a process on an actual machine.

TECE1200 - Industrial Networking Lab - 2 - Credits

Course Overview

Course Prefix
TECE

Course Number
1200

Department
Technology, Design & Technical Ed

Course Title
Industrial Networking Lab

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students network PLCs, remote I/O blocks, sensor systems, servo drives, and robots so they are able to consistently pass information between devices. This is done through configuring network communication between PLCs and I/O blocks, sensor systems, servos, and robots.

Course Learning Outcomes:

1. Apply Industrial Networking concepts to devices used in industry.

2. Set up industrial grade networking hardware.

3. Configure network communication between Programmable Logic Controllers (PLCs), input and output (I/O) blocks, sensor systems, servos, and robots.

4. Use standard PLC sequencer logic to control a process.

5. Wire I/O and PLC network connections.

6. Set up a remote connection to a PLC.

TECE1250 - Servo Motors and Drives - 1 - Credits

Course Overview

Course Prefix
TECE

Course Number
1250

Department
Technology, Design & Technical Ed

Course Title
Servo Motors and Drives

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course covers servomechanisms and motion control applications. It teaches programming of servo drives and motors for basic motion commands, wiring and programming of electric motor drives, and PLC programming for multi-axis motion control.

Course Learning Objectives

Course Learning Outcomes
Course Learning Outcomes:

1. Write a Programmable Logic Controller (PLC) program that uses the PID (Proportional Integral Derivative) method to control a process.

2. Program a safety PLC using regular and safety I/O.

3. Use an external safety relay in a PLC application.

4. Perform a risk assessment.

5. Use function block and structured text in basic PLC projects.

6. Use Add-On Instructions (AOI) to enhance a PLC program.

7. Program a PLC using a structured method.

TECE1320 - Vision Systems Advanced - 1 - Credits

Course Overview

Course Prefix
TECE

Course Number
1320

Department
Technology, Design & Technical Ed

Course Title
Vision Systems Advanced

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course delves into vision systems, exploring deep learning for inspections, character recognition, advanced lighting, and custom scripting. Graduates can expertly manipulate and utilize vision systems in advanced scenarios.

1. Setup extended axis and add 2nd & 3rd motion group, then create machines for the 7th axis and motion groups

2. Add a second robot to the workcell.

3. Create an AVI of the workcell.

4. Create a program to pick and place random parts.

5. Use Task Profiler to analyze program run.

6. Run the programs.

7. Create a program using Draw Features on Part.

8. Create a robot program.

9. Add a place fixture to the workcell.

10. Add a pick fixture to the workcell.

11. Add End-of-arm Tooling to the robot

12. Add a part and objects to the workcell.

13. Edit the robot properties.

14. Create a new workcell.

TECE1620 - Robot Vision and Safety - 1 - Credits

Course Overview

Course Prefix
TECE

Course Number
1620

Department
Technology, Design & Technical Ed

Course Title
Robot Vision and Safety

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course teaches setup, testing, and modification of iRVision applications and FANUC DCS software. Students learn to install vision hardware, program the robot, handle errors, and follow safety practices for advanced robot vision systems.

Course Learning Objectives

Course Learning Outcomes
1. Demonstrate positive workplace behaviors and communication skills to promote a successful construction team.
2. Use whole numbers, fractions, and decimals in mathematical equations as they pertain to job site tasks.
3. Describe various types of construction drawings.
4. Demonstrate proper equipment and hazardous material handling.
5. Demonstrate proper use of hand and power tools.
6. Demonstrate proper workplace and job site safety.

TECO1020 - Carpentry Concepts - 4 - Credits

Course Overview

Course Prefix
TECO

Course Number
1020

Department
Technology, Design & Technical Ed

Course Title
Carpentry Concepts

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course teaches the uses of various fasteners, proper use of carpentry tools, interpretation of blueprints, material take-offs, and basic carpentry concepts.

Course Learning Objectives

Course Learning Outcomes

1. Describe building materials used in construction work.
2. Identify hand tools and power tools operations, with care and maintenance.
3. Define techniques for reading and using construction drawings and specifications.
4. Demonstrate procedures for framing and layout of a residential building.
5. Define the concept of the building envelope and its components.

TECO1030 - Construction Print Reading - 3 - Credits

Course Overview

Course Prefix
TECO

Course Number
1030

Department
Technology, Design & Technical Ed

Course Title
Construction Print Reading

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course familiarizes students with construction prints, design, symbols, specifications, and measurements, as well as the importance of plot plan, foundation plan, floor plan, elevations, and section views.

Course Learning Objectives

Course Learning Outcomes

1. Demonstrate knowledge of current blueprint application in residential construction.
2. Identify the different types of lines on blueprints.
3. Identify the different parts of a blueprint.
4. Identify the different symbols used on blueprints.
5. Explain abbreviations used on blueprints.
6. Use the proper sequence in reading blueprints.
7. Extract pertinent construction information from blueprints.

TECO1040 - Advanced Carpentry Concepts - 4 - Credits

Course Overview

Course Prefix
TECO

Course Number
1040

Department
Technology, Design & Technical Ed

Course Title
Advanced Carpentry Concepts

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course teaches layout of the construction site for the excavation for footings and foundation. Training is offered in cement work, floor units, walls, windows and door openings, construction roof systems, and stair layout according to building plans.

Course Learning Objectives

Course Learning Outcomes

- Explain and demonstrate the differences between cleaning, disinfecting, and sterilizing salon tools, implements, and equipment.
- Demonstrate shampooing, draping, and scalp treatments.
- Demonstrate different types of hairstyling techniques, including wet and thermal styling.
- Demonstrate the basics of haircutting.

- Demonstrate and explain other theory, practical application, and procedures associated with Cosmetology/Master
- Hair design/Master barbering basics.
- Demonstrate and learn practical applications while working on course-related content.
- Explain and demonstrate blood exposure procedures.
- Explain and show how to use EPA registration and Safety Data Sheets

TECS1010 - Cosmetology, Barbering, and Hair Design Basics - 4 - Credits

Course Overview

Course Prefix
TECS

Course Number
1010

Department
Technology, Design & Technical Ed

Course Title
Cosmetology, Barbering, and Hair Design Basics

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course presents basic cosmetology practices, demonstrates technical procedures, and practical application of cosmetology skills. Students learn the basics of infection control, safety, sanitation, and properties of the hair and scalp. Students will be introduced to the basics of cosmetology.

1. Explain the history of barbering including modern tools and implements used by barbers today.
2. Demonstrate proper safety and sanitation procedures.
3. Perform barbering skills related to facial hair design, haircutting and styling for short hair, and straight razor shaving services.
4. Demonstrate proper use of clippers, scissors, straight blade razors, and other barbering implements.
5. Demonstrate and learn practical applications while working on course-related content.
6. Demonstrate and explain other theory, practical application, and procedures associated with barbering basics.

TECS1030 - Cosmetology and Hair Design Chemical Services Basics - 3 - Credits

Course Overview

Course Prefix
TECS

Course Number
1030

Department
Technology, Design & Technical Ed

Course Title
Cosmetology and Hair Design Chemical Services Basics

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course teaches the basics of chemical services, such as chemical relaxers, color, perming, and related techniques. Students receive instruction, perform demonstrations, and practical applications for each of these basic chemical services. Students demonstrate competency through practical application, assignments, and testing.

Course Learning Outcomes:

1. Define the law of color, complementary colors, the color wheel, color levels, color tones, and neutralizing tones.

2. Demonstrate proper mixing and application of different hair coloring and hair lightening services.

3. Demonstrate chemical relaxer techniques.

4. Demonstrate the different methods of permanent waving and wrapping.

5. Explain the proper procedures in the application of chemicals associated with permanent waving and chemical relaxers.

6. Demonstrate and learn practical applications while working on course-related content.

7. Demonstrate and explain other theory, practical application, and procedures associated with chemical services.

TECS1040 - Esthetics and Nail Basics - 2 - Credits

Course Overview

Course Prefix
TECS

Course Number
1040

Department
Technology, Design & Technical Ed

Course Title
Esthetics and Nail Basics

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course presents basic esthetic and nail service practices through demonstrations of technical procedures and practical application of esthetic skills. Students learn hair removal, facials, and makeup procedures. Students perform manicures, pedicures, gel polishes, nail care, and enhancements.

Course Learning Outcomes

1. Analyze skin including recognizing and describing various contraindications for facial and hair removal services.
2. Explain facial treatments including galvanic, heat lamps, high frequency, facial packs, facial masks, limited aroma therapy, limited exfoliation.
3. Demonstrate proper facial services and how to apply facial treatments.
4. Describe limited exfoliation applications and techniques to include re-exfoliation, post-exfoliation consultation considerations, and chemical reactions.
5. Demonstrate massage techniques for the face and neck and basic facial services.
6. Demonstrate temporary hair removal techniques typically used in the salon.

7. Perform or explain the procedures for artificial eyelash applications, arching of the eyebrows, and tinting of the eyelashes and eyebrows.
8. Explain and demonstrate correct sanitation procedures for hand and foot nail care.
9. Demonstrate proper manicure and pedicure procedures.
10. Perform proper UV gel procedures.
11. Describe the procedure for applying acrylic nail enhancements.
12. Demonstrate and learn practical applications while working on course-related content.
13. Demonstrate and explain other theory, practical application, and procedures associated with esthetics and nail basics.

Students need to go through the Cosmetology application and interview process to be accepted.

No Requirements

Course Learning Objectives

Course Learning Outcomes

1. Demonstrate advanced competencies necessary to progress into a salon setting. Students will be exhibiting essential skill improvement, including timing and technical ability.
2. Demonstrate training with trending nail art applications, training on electric filing, and showcase advanced knowledge of basic manicures and pedicure

techniques.
3. Show skills with eyelash application and express introductory information to advanced lash applications.
4. Perform basic facial techniques and show improvement with advanced facial techniques and manipulations.
5. Perform and improve timing on skills in preparation for Utah State Board testing.

TECS2320 - Progressive Training and Skills III - 3 - Credits

Course Overview

Course Prefix
TECS

Course Number
2320

Department
Technology, Design & Technical Ed

Course Title
Progressive Training and Skills III

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This advanced barbering course builds skills in expert haircutting, shaving, and client care, exploring modern and traditional styles, facial designs, scalp health, and safety. It boosts students' timing, precision, and confidence, which prepares them for real clients and state exams.

Technology, Design & Technical Ed

Course Title
Illustration and Animation Fundamentals

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course includes history, production, design, storyboarding, and character animation. It emphasizes creating movement and expression utilizing traditional or electronically generated image sequences. Students learn animation techniques to design 2D and 3D animation sequences.

Course Learning Objectives

Course Learning Outcomes
Course Learning Outcomes:

1. Identify the 12 principles of animation.

2. Calculate and apply appropriate timing and sound effects.

3. Create accurate and aesthetically appealing basic animation.

4. Describe the characteristics of well-designed and executed animation.

5. Relate some knowledge of the history of animation to a project.

6. Assess and critique past and current animation trends.

7. Demonstrate progress in basic illustration and animation skills.

8. Critically analyze personal creative work and the work of others.

TEDG1420 - Web Essentials - 3 - Credits

Course Overview

Course Prefix
TEDG

Course Number
1420

Department
Technology, Design & Technical Ed

Course Title
Web Essentials

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course provides the fundamentals necessary to plan, design, develop, deploy, and critique a website that includes images, sound, video, forms, and separates content from presentation. Focuses on the fundamentals of web programming languages.

Course Learning Objectives

Course Learning Outcomes
Course Learning Outcomes:

1. Examine various ways to build an accessible web page.

2. Demonstrate knowledge of color wheel concepts and effective use of color on a website.

3. Compare functional and usable design principles, and explain how usability can affect a website's success.

4. Explain and apply the primary steps of the website planning process.

5. Compare website creation using an online site builder, an offline site builder and a content management system (CMS).

TEDG1430 - UX Design - 4 - Credits

Course Overview

Course Prefix
TEDG

Course Number
1430

Department
Technology, Design & Technical Ed

Course Title
UX Design

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course teaches principles of interface design for the Web. Includes discussion of usability and information architecture to solve client needs. Includes learning HTML tags and CSS styling, image preparation for the Web, and industry software to create web-ready files.

Course Learning Objectives

Course Learning Outcomes

1. Demonstrate a safety-oriented mindset and always ensure a safe working environment.
2. Demonstrate the proper use of the tools and equipment needed to work in the diesel industry.
3. Demonstrate the ability to measure, identify, and repair fasteners and hoses related to the diesel industry.

TEDT1100 - Electrical I - 4 - Credits

Course Overview

Course Prefix
TEDT

Course Number
1100

Department
Technology, Design & Technical Ed

Course Title
Electrical I

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course provides theory and hands-on instruction on the principles of electricity, essential components, sensors, circuits, wiring schematics, and multi-meters.

Credit Hours

TEDT1100 ELECTRICAL I

No Requirements

Course Learning Objectives

Course Learning Outcomes
1. Identify electrical systems associated with diesel vehicles.
2. Explain basic electrical circuits and how they work.
3. Discuss battery, starting circuits, and charging systems and their proper function.
4. Diagnose electrical systems associated with diesel vehicles.
5. Interpret electrical schematics and apply them to the diesel industry.
6. Demonstrate basic use of computer-guided electrical diagnostics as it pertains to engine chassis and braking systems.

TEDT1200 - Steering and Suspension - 4 - Credits

Course Overview

Course Prefix
TEDT

Course Number
1200

Department
Technology, Design & Technical Ed

Course Title
Steering and Suspension

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course provides theory and hands-on instruction on the maintenance and repair of front axles, alignment, truck frames, steering and suspension systems, and coupling devices.

Course Learning Objectives

Course Learning Outcomes
1. Safely work on and around steering and suspension systems.
2. Identify the significant steering and suspension components related to Class 6,7, and 8 trucks.
3. Diagnose, adjust, and repair steering and suspension systems related to Class 6, 7, and 8 trucks.

TEDT1300 - Brakes - 4 - Credits

Course Overview

Course Prefix
TEDT

Course Number
1300

Department
Technology, Design & Technical Ed

Course Title
Brakes

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course provides theory and hands-on instruction on heavy-duty braking systems. Students learn maintenance and repair of wheels and tires, hubs and wheel bearings, air brake systems, drum and rotor brakes, anti-lock braking systems (ABS), and hydraulic braking systems.

Course Learning Outcomes

1. Identify the major components of the drivetrain system.
2. Explain the function of the drivetrain systems.
3. Repair, replace, and diagnose drivetrain system components related to the transportation industry.

TEDT1500 - Preventative Maintenance I - 1 - Credits

Course Overview

Course Prefix
TEDT

Course Number
1500

Department
Technology, Design & Technical Ed

Course Title
Preventative Maintenance I

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course introduces students to the services and practices found within the diesel service industry. Instruction includes inspection and maintenance of truck and trailer systems, engine systems, electrical systems, frame, and steering components.

No Requirements

Course Learning Objectives

Course Learning Outcomes

1. Discuss preventative maintenance and why it is so important for the safety and productivity of the diesel industry.
2. Inspect all truck systems and determine vehicles meet safe working standards.
3. Demonstrate the service and maintenance of commercial truck systems.

TEDT1600 - Engines I - 4 - Credits

Course Overview

Course Prefix
TEDT

Course Number
1600

Department
Technology, Design & Technical Ed

Course Title
Engines I

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course provides theory and hands-on instruction in basic operation, parts, and overhaul procedures of diesel engines. Students learn the removal, service, and repair of engine blocks, crankshafts, pistons, rings, connecting rods, camshafts, valve trains, injection pumps, and accessories.

TEDT1600 ENGINES I

No Requirements

Course Learning Objectives

Course Learning Outcomes

1. Identify the type of diesel fuel system and explain its operation.
2. Identify the components of modern diesel engine emission systems.
3. Explain how modern diesel emission system components function to meet current EPA standards.
4. Service, diagnose, and repair internal combustion engines, fuel, and emission after-treatment systems.

TEDT1700 - Hydraulics - 2 - Credits

Course Overview

Course Prefix
TEDT

Course Number
1700

Department
Technology, Design & Technical Ed

Course Title
Hydraulics

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course provides theory and hands-on instruction for fluid power as used in modern mobile equipment. Topics include the operation and repair of hydraulic/ pneumatic components and systems. This course emphasizes testing, troubleshooting, design, and use of hydraulic schematics.

Course Overview

Course Prefix
TEE

Course Number
1040

Department
Applied Sciences, Technology and Education

Course Title
Construction and Estimating

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Overview of construction industry and its practices. Reviews four major parts of construction industry, including: (1) Inputs: materials; (2) Process: design and building of structures; (3) Outputs: sites, buildings, etc.; and (4) Feedback: effects of building systems. Provides prospective technology education teachers with opportunity to study and perform activities related to the field of construction and estimating. At completion of course, students should be able to demonstrate knowledge and skills required to implement a construction technology program.

Simple Requisites

Prerequisite

Type
Prerequisite

Required

Complete ALL of the following Courses:
- TEE2030 - Wood-Based Manufacturing Systems

Course Learning Objectives

Course Learning Outcomes
Course Learning Outcomes:

1. Materials Mastery: Gain an in-depth understanding of advanced wood and composite materials, including their properties, classifications, and applications. Explore the latest developments and innovations in the field, staying abreast of emerging materials and technologies.
2. Advanced Fabrication Techniques: Learn advanced techniques in the fabrication of wood and composite structures, including precision machining, molding, and 3D printing. Understand the principles of sustainable fabrication practices and their application in the industry.
3. Structural Design and Analysis: Develop skills in designing complex structures using wood and composite materials. Perform structural analysis and simulations to ensure safety, durability, and optimal performance of advanced wood and composite applications.
4. Composite Manufacturing Processes: Explore the intricacies of composite manufacturing processes, such as layup, infusion molding, and autoclave curing. Gain hands-on experience in the production of high-performance composite components.
5.Innovations in Wood Technology: Investigate recent advancements in wood technology, including modified woods, engineered wood products, and nanocellulose applications. Analyze the environmental impact and sustainability considerations associated with novel wood technologies.
6. Real-world Applications and Case Studies: Examine real-world applications of advanced wood and composite materials in industries such as outdoor products, aerospace, automotive, construction, and furniture. Analyze case studies to understand successful implementations, challenges faced, and lessons learned.
7. Safety and Compliance: Prioritize safety in the handling, fabrication, and application of advanced wood and composite materials. Understand and adhere to industry standards and regulations governing the use of these materials.

TEE7040 - Dynamic and Network Engineering Processes for Technology Education - 3 - Credits

Course Overview

Course Prefix
TEE

Course Number
7040

Department
Applied Sciences, Technology and Education

Course Title
Dynamic and Network Engineering Processes for Technology Education

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Examines dynamic and network processes in engineering through the use of simulation software. Students use these techniques to develop standards-based engineering curricular modules for use in grades 6 through 12.

TEE7400 - Occupational Analysis and Curriculum Development - 3 - Credits

Course Overview

Course Prefix
TEE

Course Number
7400

Department
Applied Sciences, Technology and Education

Cross-Listed Courses
ASTE7400 - Occupational Analysis and Curriculum Development

Course Title
Occupational Analysis and Curriculum Development

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students learn techniques for conducting an occupational analysis (both job and task analysis) and for developing performance-based or competency-based curriculum. Explores industrial and educational applications for this style of curriculum development. This course is taught alternating years. Check with department for information about when course will be taught.

TEEL1110 - Electrician Apprentice IA - 3 - Credits

Course Overview

Course Prefix
TEEL

Course Number
1110

Department
Technology, Design & Technical Ed

Course Title
Electrician Apprentice IA

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course establishes a solid foundation in electrical fundamentals and the study of basic electrical theory. Students use the National Electrical Code (NEC) to apply code requirements to electrical systems. Students will practice in the basics of conduit bending.

Credit Hours

Credit Hours Min:
3

Contact Hours

Course Learning Objectives

Course Learning Outcomes
1. Demonstrate a proficiency in general math skills with an emphasis on how they relate to the electrical field.
2. Identify electrical and jobsite hazards.
3. Explain workplace safety.
4. Apply Mathematical Principles to Conduit Bending.
5. Demonstrate a practical application of conduit bending.
6. Explain the Fundamentals of Electrical Theory.
7. Explain the Fundamentals of Electrical Circuitry.
8. Demonstrate the application of the National Electrical Code (NEC) Articles 090-240.
9. Demonstrate how to navigate the National Electrical Code (NEC) Articles 090-240.

TEEL1120 - Electrician Apprenticeship IB - 3 - Credits

Course Overview

Course Prefix
TEEL

Course Number
1120

Department
Technology, Design & Technical Ed

Course Title
Electrician Apprenticeship IB

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course discusses single-phase and three-phase alternating current (AC) power systems, inductance, capacitance, reactance, power factor, and power correction. Students begin a more comprehensive analysis of National Electrical Code (NEC) requirements, calculations, wiring methods, safety, and installations.

Course Learning Objectives

Course Learning Outcomes

Course Learning Outcomes:

1. Apply fundamental knowledge of the anatomy and function of all human systems to the practice of EMS.

2. Use foundational anatomical and medical terms and abbriciations in written and oral communication with colleagues and other health care professionals.

3. Apply fundamental knowledge of the pathophysiology of respiration and perfusion to patient assessment and management.

4. Apply fundamental knowledge of lifespan development to patient assessment and management.

5. Properly administer or assist in administering medications to a patient during an emergency.

6. Utilize fundamental knowledge of the EMS system, safety/well-being of the EMT, and medical/legal and ethical issues to the provision of emergency care.

7. Apply knowledge (fundamental depth, foundational breadth) of anatomy and physiology to patient assessment and management to assure a patent airway, adequate mechanical ventilation, and respiration for patients of all ages.

8. Interpret scene information and patient assessment findings (scene size-up, primary and secondary assessment, patient history, reassessment) to guide emergency management.

9. Provide basic emergency care and transportation based on assessment findings for an acutely ill patient.

10. Apply a fundamental knowledge of the causes, pathophysiology, and management of shock, respiratory failure or arrest, cardiac failure or arrest, and post-resuscitation management.

11. Provide basic emergency care and transportation based on assessment findings for an acutely injured patient.

12. Utilize principles of growth, development, aging and assessment findings to provide basic emergency care and transportation for a patient with special needs.

13. Perform in accordance with operational roles and responsibilities to ensure patient, public, and personnel safety when responding to an emergency.

Enroll in the following Courses:

- TEIT1200 - A+ Core 1

Course Learning Objectives

Course Learning Outcomes

1. Install and configure Windows, Mac and Linux.
2. Identify best practices for safety, environmental impacts, communication and professionalism.
3. Troubleshoot common operating system, malware and security issues.
4. Identify basic vulnerabilities and protect against threats.
5. Install, configure, and maintain software in computers and mobile devices.

TEIT1300 - Linux Foundations - 2 - Credits

Course Overview

Course Prefix
TEIT

Course Number
1300

Department
Technology, Design & Technical Ed

Course Title
Linux Foundations

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Linux Foundations focuses on the installation, configuration, and process management of a Linux workstation. Students explore shell programming, file system management, user accounts, access and permissions, and managing multiple concurrent processes to achieve higher utilization.

Course Learning Outcomes

1. Install and maintain a Linux workstation.
2. Configure Linux from the GUI and command line.
3. Configure file and access permissions.
4. Perform maintenance tasks including user management, backup and restore, shut down and reboot.

TEIT1310 - Website Design - 3 - Credits

Course Overview

Course Prefix
TEIT

Course Number
1310

Department
Technology, Design & Technical Ed

Course Title
Website Design

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course focuses on design and construction of Web pages using HTML, Cascading Style Sheets, and JavaScript. Students have hands-on experience creating and publishing Web pages. This course also focuses on basics of hosting, publishing, promoting, and maintaining websites.

Course Learning Outcomes
Course Learning Outcomes:

1. Understand web hosting and critique website designs.

2. Demonstrate use of HTML5 and Cascading Style Sheets (CSS) in developing web pages.

3. Develop web pages using images, multimedia, tables and forms.

4. Apply basic JavaScripting to web Pages.

5. Publish, Promote, and Maintain a website.

6. Evaluate and use Website Builders or Content Management Systems (CMS).

TEIT1340 - Digital Video Production - 3 - Credits

Course Overview

Course Prefix
TEIT

Course Number
1340

Department
Technology, Design & Technical Ed

Course Title
Digital Video Production

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course covers fundamentals of digital video production, including recording, editing, and uploading of video using current video-editing programs and techniques. Students have hands-on experience with projects to help them apply current digital video production concepts.

Course Learning Objectives

Course Learning Outcomes

Course Learning Outcomes:

1. Understand how professional audio-visual production is directed and managed to create useful multimedia materials.

2. Understand basic video production techniques that make a quality recording and production.

3. Create video/audio resources from concept inception through storyboarding, scripting, recording, editing and media conversion

4. Create digital video productions more effectively using graphics, titling, and/or channel masks in the video-editing process.

5. Create audio and video effects and animation

6. Prepare video for use in HTML pages, YouTube, or other multimedia storage locations

TEIT1400 - Introduction to Cloud - 2 - Credits

Course Overview

Course Prefix
TEIT

Course Number
1400

Department
Technology, Design & Technical Ed

Course Title
Introduction to Cloud

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Introduction to Cloud provides instruction on core cloud computing concepts, services, and solutions as well as foundational knowledge from a business value perspective of the benefits and considerations for cloud computing implementation. Included is an overview of popular cloud platforms.

Course Learning Objectives

Course Learning Outcomes
Course Learning Outcomes:

1. Define the value proposition of cloud computing.

2. Identify core cloud concepts, services, solutions, and management tools.

3. Demonstrate an understanding of cloud security considerations, features, and best practices.

4. Describe cloud identity, governance, privacy, and compliance concepts and features.

5. Compare and contrast cloud pricing models and identify cost management solutions.

6. Define cloud deployment models, methods, and operations.

TEIT1500 - Introduction to Scripting - 1 - Credits

Course Overview

Course Prefix
TEIT

Course Number
1500

Department
Technology, Design & Technical Ed

Course Title
Introduction to Scripting

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Introduction to Scripting provides instruction on basic scripting concepts. Students are introduced to scripting fundamentals to automate tasks that would otherwise be performed manually. Students explore the practical use and management of scripts to perform system administration functions.

Course Overview

Course Prefix
TEMA

Course Number
1060

Department
Technology, Design & Technical Ed

Course Title
Clinical Procedures

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Introduction to working in ambulatory outpatient clinic settings, understanding the role of medical assistants and patient care. Focuses on infection control, medical asepsis, taking patient histories, performing patient assessments, including vital signs, and preparing for and assisting providers with examinations.

Registration Restrictions

Admission into the Medical Assistant - Technical Certificate Program

Other Enrollment Recommendations

Medical Assisting application must be completed and approved. See advisor for details.

Simple Requisites

Prerequisite

Type
Prerequisite

Required

Complete ALL of the following Courses:

- TEMA1010 - Introduction to Medical Assisting

Course Learning Objectives

Course Learning Outcomes

- Identify how infectious and communicable diseases and transmissions relate to the healthcare setting per federal, state, and local health laws, regulations, and recommendations
- Explain the purpose of obtaining patient's health information and how to elicit different aspects of the chief medical complaint
- Accurately identify, measure, and record vital signs
- Define the normal ranges and values for each vital sign
- Interpret the medical assistant's role in preparing and assisting in the physical exam

TEMA1080 - Medical Terminology - 2 - Credits

Course Overview

Course Prefix
TEMA

Course Number
1080

Department
Technology, Design & Technical Ed

Course Title
Medical Terminology

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course teaches students to interpret and understand the language of medicine. Instruction covers word structure, including prefixes, suffixes, roots, plural forms, abbreviations, and symbols, with emphasis on accurate spelling, definitions, application, and pronunciation for effective healthcare communication.

Lecture Hours
Min:
2

Course Learning Objectives

Course Learning Outcomes

• Identify the four types of word parts in forming medical terms.

• Demonstrate construction of medical terms by correctly spelling, pronouncing, defining, and identifying selected terms.

• Identify and apply acceptable medical abbreviations.

• Use knowledge of word parts to define unfamiliar medical terms.

TEMA1095 - Emergency First Response - 3 - Credits

Course Overview

Course Prefix
TEMA

Course Number
1095

Department
Technology, Design & Technical Ed

Course Title
Emergency First Response

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course is designed to help the student master the skills and concepts necessary to become an Emergency Medical Responder. An EMR performs basic lifesaving and first aid.

Credit Hours

Course Learning Objectives

Course Learning Outcomes

• Explain the basic components of the EMS system and the function of the EMR within EMS.

• Lift, move, and position patients safely and effectively.

• Recognize potential life threats based on a systematic patient assessment.

• Demonstrate the ability to assess patients, including appropriate physical exams, histories, baseline vital, and reassessments, and give a thorough patient report.

TEMA1450 - Preparation for Workforce Entry - 1 - Credits

Course Overview

Course Prefix
TEMA

Course Number
1450

Department
Technology, Design & Technical Ed

Course Title
Preparation for Workforce Entry

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Prepares students to navigate obtaining employment as entry-level medical assistants. Students prepare resumes that can be used as they prepare to apply for employment opportunities. Job interview techniques, proper dress, and applying to “Aggie Handshake” job board is taught.

Course Learning Objectives

Course Learning Outcomes

1. Identify safe practices in a machine shop.
2. Identify appropriate PPE.
3. Demonstrate environmental awareness.
4. Identify correct clean-up procedures.
5. Interpret a Safety Data sheet (SDS).
6. Perform basic measurements with calipers and micrometers.
7. Perform basic layout procedures.
8. Identify basic hand tools and their usage.
9. Perform basic mathematical calculations.

TEMT1005 - Machining for Manufacturing Trades - 3 - Credits

Course Overview

Course Prefix
TEMT

Course Number
1005

Department
Technology, Design & Technical Ed

Course Title
Machining for Manufacturing Trades

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course supports machining in manufacturing programs. It teaches students the basics of industrial machine shop practices, including operating lathes and mills, blueprint reading, using hand tools, machining techniques, and part inspection.

Credit Hours

Credit Hours Min:

Course Learning Outcomes

1. Identify safe practices in a machine shop.
2. Identify correct clean up procedures.
3. Demonstrate basic layout procedures.
4.Reading and interpreting blueprints.
5. Safely set up and operate a band saw.
6. Safely operate a bench grinder and hand tools.
7. Accurately use and read steel rules, micrometers, and calipers.
8. Perform safe and effective use of lathes and milling machines.
9. Perform basic programming and use controls of a CNC machine.

TEMT1100 - Mill Concepts - 3 - Credits

Course Overview

Course Prefix
TEMT

Course Number
1100

Department
Technology, Design & Technical Ed

Course Title
Mill Concepts

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course introduces students to essential material-cutting concepts using a milling machine. Topics include clamping and locating workpieces, selecting cutting tools and holders, milling speeds and feeds, cutting depth, width, and direction, part production, and inspection.

Credit Hours

Course Learning Objectives

Course Learning Outcomes

1. Demonstrate safe operation of a milling machine.
2. Demonstrate the use of indicators relating to aligning, work holding, and figuring.
3. Demonstrate proper machine maintenance and workstation cleanup.
4. Demonstrate proper work-holding device selection and setup.
5. Demonstrate efficient speeds and feeds for mill tooling.
6. Perform accurate milling of pockets, windows, and slots.
7. Perform accurate hole-forming, mill operations for size and location.
8. Perform accurate angle milling.
9. Create and evaluate milled surface finishes.
10. Perform calculations needed to operate precision machines.
11.Inspect and document finish dimensions using various metrology.

TEMT1150 - Computer-Numeric Control (CNC) Mill Concepts - 3 - Credits

Course Overview

Course Prefix
TEMT

Course Number
1150

Department
Technology, Design & Technical Ed

Course Title
Computer-Numeric Control (CNC) Mill Concepts

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course introduces students to Computer-Numeric Control (CNC) milling. Topics include safety, CNC terminology, preparing a CNC program, setup and operation of CNC milling machines, part production, and inspection.

Course Learning Objectives

Course Learning Outcomes

1. Demonstrate proper work holding for CNC machining.
2. Demonstrate basic CNC machine setup.
3. Demonstrate setting program zero for CNC machines.
4. Perform manual mode operation, edit mode, MDI (manual data input), and program operation mode.
5. Perform calculations needed to operate the machine.
6. Apply recognition of program codes to CNC machine operation.
7. Apply knowledge of motion commands of rapid positioning, linear interpolation, and circular interpolation.
8. Apply proper feeds, speeds, and chip load to quality part production.
9. Apply CSS (Constant Surface Speed) and constant RPM (Revolutions Per Minute).
10. Perform necessary operations to load a program, set tool offsets, and set cutter or nose radius compensations.
11.Demonstrate the use of indicators relating to aligning work holding and figuring.

TEMT1200 - Lathe Concepts - 3 - Credits

Course Overview

Course Prefix
TEMT

Course Number
1200

Department
Technology, Design & Technical Ed

Course Title
Lathe Concepts

Grade Mode
Standard Letter

Repeat Status

Completion of first semester of Machining is recommended (TEMT1000 MANUFACTURING FUNDAMENTALS, TEMT1200 LATHE CONCEPTS, TEMT1100 MILL CONCEPTS, TEMT1565 ADVANCED PRINT READING).

Course Learning Objectives

Course Learning Outcomes
1. Identify the correct nomenclature of the machine.
2. Create wireframe and solid models.
3. Create additional planes for tool pathing.
4. Perform 2D, 3D, 3+2, and full 5th axis tool pathing.
5. Demonstrate solid model modification.
6. Perform calculations needed to operate machines.
7. Perform part setup and fixturing operations.
8. Perform tool setup and set tool offsets.
9. Demonstrate proving out a program safely.

TENA1100 - Nursing Assistant - 3 - Credits

Course Overview

Course Prefix
TENA

Course Number
1100

Department
Technology, Design & Technical Ed

Course Title
Nursing Assistant

Grade Mode

Course Learning Outcomes

1. Identify laboratory, OSHA, hazardous material, blood borne pathogen exposures, warning symbols, infection control, and patient safety rules.
2. Identify and use laboratory equipment and computer systems.
3. Demonstrate use of basic terminology for the healthcare setting, understand and utilize correct order of draw, and explain the basics of human anatomy and physiology related to venipuncture.
4. Correctly and safely draw blood from a patient by properly using any equipment and supplies necessary while identifying and adjusting for any challenges associated with the venipuncture.

2. Apply mathematics for plumbers and pipefitters.
3. Use International Fuel Gas Code for gas pipe installation and sizing.
4. Define traps and commercial applications.
5. Explain storm drainage and commercial/industrial applications.
6. Identify boilers, water heaters, and pressure vessels.
7. Perform applied trade formulas using different equations.
8. Calculate heat loss vs. radiator size.
9. Determine radiation sizing for total heat loss of a room.
10. Use Journeyman skills such as takeoff lists, leadership skills, communication, and basic business skills.
11. Fabricate several piping projects in a lab situation.

TEPT1010 - Introduction to Pharmacy - 3 - Credits

Course Overview

Course Prefix
TEPT

Course Number
1010

Department
Technology, Design & Technical Ed

Course Title
Introduction to Pharmacy

Grade Mode
Standard Letter

Repeat Status
NR

Course Description

This course is an introduction to the pharmacy technician profession, roles, and the different types of pharmacies within the healthcare delivery system. Students are introduced to state and federal pharmacy practice laws, patient care process, concepts of pharmacology, medications and calculations.

MATH ACT score of 19 or Aleks placement score of 30 or higher; ENGLISH ACT score of 17 or Accuplacer with the following components: Writeplacer 5-8, Nextgen Reading 250+, Nextgen Writing 250+. Students must have a GPA of 3.0

Course Learning Objectives

Course Learning Outcomes

1. Compare and contrast the pharmacy technician's role, pharmacist's role, and other occupations in the healthcare environment.
2. Describe and apply state and federal laws pertaining to the pharmacy practice.
3. Recognize and apply the pharmacists' patient care process.
4. Relate the basic history of pharmacy to today's pharmacy practice.
5. Demonstrate the technicians' role in the medication use process.

Course Description
This course introduces imaging modalities in radiology and provides a foundation in cross-sectional anatomy. Taught by specialized imaging professionals, students explore career options, gain modality-specific insights, and learn to identify anatomical structures in cross-sectional views for advanced diagnostic understanding.

Course Overview

Course Prefix
TERT

Course Number
2070

Department
Technology, Design & Technical Ed

Course Title
Radiography Clinicals III

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course provides students with real-world clinical experience, applying classroom and lab knowledge in healthcare settings. Under supervision, students position patients, practice radiation safety, perform x-rays, and assist with fluoroscopy, surgical C-arm exams, and DEXA scans, gaining comprehensive technologist skills.

Course Learning Objectives

Course Learning Outcomes
Course Learning Outcomes:

1. This class introduces students to foundational concepts in technology systems preparing them to design, implement, and manage basic technology solutions. Students will engage with industry professionals through guest lectures and case studies to explore how these systems operate in real-world scenarios.
2. Students will be equipped to address foundational technological challenges by applying data-driven decision-making and innovative thinking. This class will feature practical assignments and collaborative projects with industry input, enabling students to practice solving problems relevant to contemporary workplace needs.
3. This class will prepare students to understand the relationship between technology systems and business strategies. Through industry partnerships, students will gain exposure to how technology drives organizational success. Classroom discussions, group activities, and guest speakers will help students begin building the communication, collaboration, and leadership skills necessary for cross-functional teamwork.
4. This class helps students develop essential skills for working within diverse teams. Collaborative assignments will focus on teamwork and project management, with opportunities to engage with industry representatives to understand how team dynamics influence the success of technology-driven projects.

TESY1020 - Energy, Power, Transportation Systems Control Technology - 3 - Credits

Course Overview

Course Prefix
TESY

Course Number
1020

Department
Technology, Design & Technical Ed

Course Title
Energy, Power, Transportation Systems Control Technology

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course explores the concepts and processes relating to the control and automation (both hard and programmable) of technical systems in the areas of energy and power, transportation, and agricultural and related biotechnologies.

Course Learning Objectives

Course Learning Outcomes

1. Identify and explain the sources of various exhaustible, renewable, and inexhaustible energies.
2. Explain the different forms of energy.
3. Define potential and kinetic energy.
4. Measure the power and energy in various systems.
5. Describe the various relationships between energy/power and the environment.
6. Explain, measure, and control the transmission of power in mechanical, fluid, and electrical systems.
7. Utilize automated control systems.
8. Explain the principles and characteristics of various transportation systems.
9. Explain the principles and characteristics of external and internal combustion engines.
10. Explain the principles and characteristics of different energy and power systems.

TESY1030 - Material Processing Systems - 3 - Credits

Course Overview

Course Prefix
TESY

Course Number
1030

Department
Technology, Design & Technical Ed

Course Title
Material Processing Systems

Grade Mode
Standard Letter

Repeat Status
NR

Course Description

This course provides an introduction to properties of industrial materials (metallic, polymeric, ceramic, and composite), processes used to produce standard stock and finished products, and the use of precision measuring instruments in manufacturing. Course may include a separate lab component.

Admission to the following declared majors only:

Aircraft Maintenance Technician - Airframe & Powerplant - AAS

Aviation Technology - Maintenance Management - BS

General Technology: Design and Creative Arts - AAS

General Technology: Technology Systems - AAS

Outdoor Product Design and Development - BS

Technology Systems: Cybersecurity Emphasis - BS

Technology Systems: Information and Computer Technology Emphasis - BS

Technology Systems: Product Development Emphasis - BS

Technology Systems: Quality and Reliability Emphasis - BS

Technology Systems: Robotics, Automation, and Controls Emphasis - BS

Technology Systems: Technical Management Emphasis - BS

Technology and Engineering Education - BS

Engineering Technology - AAS

Engineering Technology - BAS

Course Learning Objectives

Course Learning Outcomes

1. Describe the fundamental principles of materials science and their applications in manufacturing processes.
2. Identify the properties, characteristics, and behavior of different classes of materials.
3. Apply knowledge of materials to make informed decisions in the selection of appropriate materials for specific applications.
4. Demonstrate proficiency in common manufacturing processes and techniques used in various industries.
5. Interpret engineering drawings and specifications to create functional components.
6. Perform quality control procedures in a laboratory setting.
7. Identify and address sustainability considerations in materials selection and manufacturing practices.

TESY1200 - Computer-Aided Drafting and Design - 3 - Credits

Course Overview

Course Prefix
TESY

Course Number
1200

Department
Technology, Design & Technical Ed

Course Title
Computer-Aided Drafting and Design

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course provides students with the ability to accurately produce basic engineering, 2-D, and pictorial drawings using traditional and computer-aided drafting techniques. It introduces drafting fundamentals and equipment associated with the drafting industry, including drawings, reproductions, and computer-aided techniques.

Credit Hours

Course Learning Objectives

Course Learning Outcomes

1. Develop an understanding of objects as they are represented in the physical world (real objects), virtual world (3D computer models), and in 2D orthographic drawings (engineering drawings). Students will also begin to develop skills in modifying, designing, and improving objects throughout the three mediums.
2. Develop and apply understandings of engineering graphics and standards.
3. Develop the ability to create 3D CAD models and assemblies.
4. Reverse engineer a physical object via computer modeling and apply the design process to improve the object or create a physical compatible accessory
5. Take the CSWA exam to become Solidworks certified

TESY2200 - Intermediate CAD - 3 - Credits

Course Overview

Course Prefix
TESY

Course Number
2200

Department
Technology, Design & Technical Ed

Course Title
Intermediate CAD

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course is designed to explore advanced tools to create working drawings. Additionally students explore content required for the Certified SOLIDWORKS Professional (CSWP), and CSWP Sheet Metal certification exams.

- TESY1200 - Computer-Aided Drafting and Design
  OR MAE1200 - Engineering Graphics
  OR BENG1200 - SolidWorks for Biological Engineers
  OR EDDT1200 - 3D Modeling

Course Learning Objectives

Course Learning Outcomes

1. Demonstrate skill using advanced part design methods to create 3D models
2. Utilize advanced assembly tools to create complex working assemblies.
3. Demonstrate and understanding of geometric dimensioning and tolerancing

(GD&T) by producing drawings.
4. Create sheet metal parts and drawings.
5. Identify and explore industry certifications.

TESY2250 - Occupational Experience in General Technology - 1 - 6 Credits

Course Overview

Course Prefix
TESY

Course Number
2250

Department
Technology, Design & Technical Ed

Course Title
Occupational Experience in General Technology

Grade Mode

Lecture Hours

Lecture Hours Min:
3

Course Learning Objectives

Course Learning Outcomes

1. Identify and Classify Workplace Hazards
• Demonstrate an understanding of and identify various physical and health hazards across different operational areas, including:
o Common Safety Hazards: Electrical safety, fall protection, fire prevention, slips/trips/falls, and safe tool use.
o Equipment Hazards: Forklift safety, machine guarding, welding, and materials handling.
o Health and Environmental Hazards: Confined space entry, hazard communication, respiratory protection, and bloodborne pathogens.
2. Evaluate and Apply Risk Management Models
• Evaluate identified hazards by applying the risk model (likelihood vs. severity) to effectively rate the risk level associated with workplace dangers.
• Analyze the four domains of safety (which typically include people, equipment, environment, and process/policy) and explain their interconnected roles in maintaining a safe work environment.

3. Recommend and Implement Control Measures
• Formulate and recommend appropriate control measures (following the hierarchy of controls: elimination, substitution, engineering controls, administrative controls, and PPE) to eliminate or minimize identified risks.
• Apply safety best practices and proper personal protective equipment (PPE) standards, including head, eye, foot, and hand protection.
• Explain and demonstrate safe operational procedures for specific high-risk tasks, such as Lockout/Tagout (LOTO) and proper lifting/ergonomics.
4. Understand and Comply with Safety Regulations
• Summarize the key purpose and requirements of OSHA (Occupational Safety and Health Administration) regulations that all employers and employees must comply with.
• Develop an awareness of broader workplace safety issues, including emergency response, workplace security, and addressing violence in the workplace.

  OR BENG1200 - SolidWorks for Biological Engineers

Course Learning Objectives

Course Learning Outcomes

1. Identify the attributes, uses, advantages, and disadvantages of the components used in manufacturing automation.
2. Program a servo robot to perform various pick and place procedures.
3. Design and implement solutions to problems encountered in computer-integrated manufacturing systems.
4. Write programs to control CNC mills, servo robots, and automated control systems.
5. Utilize parametric modeling (CAD), CAD/CAM, and CNC post processor software packages to generate CNC machine code.
6. Modify and 3D print a design solution.
7. Understand the ethics related to the use of automation in the manufacturing workplace.

TESY3040 - Design for Additive Manufacturing - 3 - Credits

Course Overview

Course Prefix
TESY

Course Number
3040

Department
Technology, Design & Technical Ed

Course Title
Design for Additive Manufacturing

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course is designed to introduce students to 3D modeling design concepts and constraints when using additive manufacturing in product creation. Students design and create models specifically for additive manufacturing.

- BENG1200 - SolidWorks for Biological Engineers
  OR EDDT1200 - 3D Modeling
  OR MAE1200 - Engineering Graphics
  OR TESY1200 - Computer-Aided Drafting and Design

Course Learning Objectives

Course Learning Outcomes

1. Utilize 3D printing to prototype parts drawn with CAD.
2. Create parts utilizing a CO2 laser and/or a water jet cutter.
3. Demonstrate proper safety procedures when in the laboratory.
4. Explain various procedures for creating composite parts.
5. Demonstrate proper layup procedures for creating parts from composite materials (e.g., fiberglass, carbon fiber, Kevlar).
6. Explain the terms related to creating composite structures, including balance, symmetry, long yarn, selv edge, fill, tow, and warp.
7. Describe various thread weaves and how they affect composite performance.

Complete ALL of the following Courses:

- TESY1200 - Computer-Aided Drafting and Design
  OR MAE1200 - Engineering Graphics
  OR BENG1200 - SolidWorks for Biological Engineers
  OR EDDT1200 - 3D Modeling

Course Learning Objectives

Course Learning Outcomes

Upon successful completion of this course, students will be able to:
1. Differentiate and Analyze the three primary types of intellectual property protection—utility patents, design patents, and trademarks—specifically as they apply to physical product development.
2. Execute Preliminary Searches for existing trademarks and patents to assess the novelty of a product idea and identify potential infringement risks.
3. Describe the Requirements for and the strategic differences between obtaining utility patents (covering function) and design patents (covering appearance).
4. Evaluate and Apply the process of filing priority patent applications (such as provisional applications) to secure an early effective filing date for an invention.
5. Develop and Interpret the purpose and key clauses of Non-Disclosure Agreements (NDAs) to protect confidential product information during collaboration.
6. Analyze and Understand the structure and legal implications of various licensing agreements involving intellectual property rights for product commercialization.

TESY4330 - Product Innovation Processes, Tools, and Strategies - 3 - Credits

Course Overview

Course Prefix
TESY

Course Number
4330

Department
Technology, Design & Technical Ed

Course Title

Product Innovation Processes, Tools, and Strategies

Grade Mode
Standard Letter

Repeat Status
NR

Course Description

In this course, students experience the processes, tools, and strategies used by new product developers in industry. The course encompasses strategies for production, development, innovation, and management.

Course Learning Objectives

Course Learning Outcomes

1. Design and justify a detailed proposal for an independent project that addresses a relevant problem or innovation area in technology systems (e.g., automation, manufacturing, electronics, information systems, management, or quality and reliability).
2. Apply advanced technical and analytical skills to complete an independent or applied project demonstrating integration of technology systems principles, tools, and processes.
3. Communicate and evaluate project outcomes through a professional report and/or presentation that demonstrates technical competence, reflective analysis, and relevance to professional or career goals.

TESY4410 - Industrial Automation and Networking - 3 - Credits

Course Overview

Course Prefix
TESY

Course Number
4410

Department
Technology, Design & Technical Ed

Course Title
Industrial Automation and Networking

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Content for this course includes networking protocols and systems most commonly used in industry and manufacturing. Activities include setting up, programming, and utilizing various networking communication equipment. Students learn to network PLCs, remote I/O blocks, sensor systems, and robots.

Course Overview

Course Prefix
TESY

Course Number
4420

Department
Technology, Design & Technical Ed

Course Title
Industrial Robotics

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course covers the tasks that an operator, technician, engineer, or programmer needs to set up and program industrial robots. Students practice hands-on pendant labs with industrial-grade manipulators and controllers.

TESY4430 - Advanced Programmable Logic Controllers - 3 - Credits

Course Overview

Course Prefix
TESY

Course Number
4430

Department
Technology, Design & Technical Ed

Course Title
Advanced Programmable Logic Controllers

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course is designed to expand students' skills with various PLC systems. The operation and application of safety PLCs are covered. Activities include wiring, programming, and troubleshooting various systems. Students also interface PLCs with other industrial equipment.

Course Learning Objectives

Course Learning Outcomes

1. Gain factual knowledge of Quality Systems Root Cause Analysis (RCA) Tools and Methods. RCA Tools include: 5-Why, Ishikawa (fishbone), Is/Is-Not, Fault
2. Tree Analysis, Failure Modes and Effects Analysis, and related statistical tools.
3. Readily identify RCA Tools when used and correctly apply techniques in everyday and real-world production scenarios.
4. Gain factual knowledge, ability to critically analyze, and correctly prepare a hypothesis statement to guide root cause analysis efforts.
5. Gain fundamental awareness of measurement systems, fundamental statistical techniques for Quality Systems, and data-analysis practices for real-world use and consideration.
6. Gain experience in presenting and defending individual and team-centered work.
7. Given a real-world circumstance of your choice analyze, correctly apply RCA Tools, propose determined causal factors, and propose viable solutions and monitoring strategies within a Business-Quality Term Paper Report.

TESY4520 - Statistical Quality Control w/SPC - 3 - Credits

Course Overview

Course Prefix
TESY

Course Number
4520

Department
Technology, Design & Technical Ed

Course Title
Statistical Quality Control w/SPC

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course provides an understanding of process capability and its use in predicting the potential failure rate from a process. Students learn the statistical techniques used to predict the complete output of a process.

Course Learning Objectives

Course Learning Outcomes

1. To provide a clear and simple understanding of Lean Production: its components, how they fit together, and the culture that drives them.
2. Provide real-world examples of Lean principles in an application.
3. Focus on Lean as a system versus individual tools and components.
4. Discuss the history and key figures surrounding the concept of waste elimination.
5. Discuss how true success in Lean implementation comes from an understanding of basic lean principles/tools, managers leading by example by implementing a strategic system, and driven by an overarching culture for continuous improvement.

TESY4530 - Principles of Lean Manufacturing - 3 - Credits

Course Overview

Course Prefix
TESY

Course Number
4530

Department
Technology, Design & Technical Ed

Course Title
Principles of Lean Manufacturing

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students meet on location, and learn from industry partners, lean manufacturing principles and how they are applied in a manufacturing facility.

Course Learning Objectives

Course Learning Outcomes

1. Understand the DMAIC Process
2. Understand and use Descriptive and Inferential Statistics to understand and improve a process
3. Understand Statistical Process Control (SPC) and how it is used to monitor and improve processes
4. Understand Process and Measurement System Capability

TESY4540 - Quality Management Systems II - 3 - Credits

Course Overview

Course Prefix
TESY

Course Number
4540

Department
Technology, Design & Technical Ed

Course Title
Quality Management Systems II

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
In this class, students learn the benefits of internal and external auditing, quality improvement techniques, risk analysis, and core quality assurance concepts, including: change management, configuration control, document control, identification, and traceability.

- BCIS1540 - Introduction to Cloud

OR

Option 2

Complete ALL of the following Courses:

- TEIT1300 - Linux Foundations
- TEIT1400 - Introduction to Cloud

Course Learning Objectives

Course Learning Outcomes

1. Apply architectural principles and best practices to make architectural decisions.
2. Use appropriate public cloud services and features to make infrastructure scalable, reliable, and highly available.
3. Select managed services to enable greater flexibility and resiliency in an infrastructure.
4. Increase performance and reduce cost of a cloud infrastructure built on a public cloud such as Amazon Web Services (AWS).
5. Use common public cloud services and features to secure user, application, and data access.
6. Apply best practices from guidelines such as the AWS Well-Architected Framework to improve cloud architectures.

TESY4750 - Network Administration - 3 - Credits

Course Overview

Course Prefix
TESY

Course Number
4750

Department
Technology, Design & Technical Ed

Course Title
Network Administration

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course focuses on network infrastructure design and development. Students apply learned skills to build and test network infrastructures in a virtual environment in the classroom. Students explore general network theory, including topology, protocols, design, and management.

Simple Requisites

Prerequisite

Type
Prerequisite

Required

Complete ALL of the following Courses:

- BCIS2631 - Network+
  OR TEIT2100 - Computer Networks

Course Learning Objectives

Course Learning Outcomes
1. Analyze Core Internet Architecture
• Describe the fundamental components of the Internet, distinguishing between the network edge (end systems, access networks, links) and the network core (packet switching, circuit switching, and network structure).
• Explain the principles of protocol layers (such as the OSI and TCP/IP models) and their associated service models in organizing network communication.
2. Master Network Performance and Behavior
• Analyze the critical performance metrics in network operation, specifically delay, loss, and throughput, and describe the factors that influence them.
• Identify and explain how network services and communication protocols function at the Application Layer (e.g., HTTP, DNS) and the Transport Layer (e.g., TCP and UDP).
3. Evaluate Data Flow and Routing
• Describe the functionality of the Network Layer by differentiating between the Data Plane (forwarding) and the Control Plane (routing protocols).
• Explain the role and operation of the Link Layer and LANs (e.g., Ethernet and ARP), and the principles governing Wireless and Mobile Networks (e.g., 802.11 Wi-Fi).
4. Apply Practical Network Analysis Skills
• Utilize packet sniffing tools (such as Wireshark) to capture, inspect, and analyze data packets to understand the inner workings of protocols like HTTP, DNS, UDP, TCP, and ICMP.
• Identify and explain common security vulnerabilities and attack vectors in networks by assessing how networks operate under attack

TESY4760 - Information Technology Management - 3 - Credits

Course Overview

Course Prefix
TESY

Course Number
4760

Department
Technology, Design & Technical Ed

Course Title
Information Technology Management

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course provides a comprehensive study of the Information Technology Infrastructure Library (ITIL) and associated IT activities such as IT service management (ITSM) and IT asset management (ITAM). It focuses on disaster recovery and business resumption of IT services.

Simple Requisites

Prerequisite

Type
Prerequisite

Required

Complete ALL of the following Courses:

- BCIS2651 - Cybersecurity/Security+
  OR TEIT2200 - Security +

Course Learning Objectives

Course Learning Outcomes

1. Comprehensive IT Service Management: Gain a deep understanding of IT service management, focusing on how it supports and aligns with business objectives, with an awareness of emergency response planning.
2. Service Lifecycle and Incident Management: Explore the IT Service Management Lifecycle, emphasizing strategies for continual improvement, and develop skills to manage and respond to organizational incidents effectively.
3. Strategic Design and Implementation of IT Services: Learn to design and introduce IT services that are strategically aligned with business needs, incorporating considerations for operational continuity.
4. Operational Management and Response Preparedness: Master the management of day-to-day IT infrastructure and cultivate the ability to coordinate rapid response mechanisms in emergency situations.
5. Role Definition and Communication in IT Management: Clearly define roles and responsibilities within IT teams, highlighting the importance of communication and coordination in both regular and crisis scenarios.
6. Business Continuity Planning: Understand the principles of business continuity, focusing on maintaining operations during various challenges, including minor outages and more significant disruptions.
7. Technology Foundations and Recovery Awareness: Recognize the essential technology components for daily operations, with an introductory understanding of disaster recovery principles and mechanisms.
8. Process Efficiency and Cost Management in IT Services: Emphasize the improvement of process efficiency and cost-effectiveness in IT service provision, including a basic framework for integrating recovery strategies in overall planning.

TESY4770 - Database Administration - 3 - Credits

Course Overview

Course Prefix
TESY

Course Number
4770

Department
Technology, Design & Technical Ed

Course Title
Database Administration

Grade Mode
Standard Letter

Repeat Status
NR

Course Description

Provides a comprehensive overview and structure for understanding database management. Topics will include SQL (Structured Query Language) creation, updates, and data retrieval, as well as database design, data security, big data, NoSQL databases, distributed databases and data warehousing.

Prerequisite

Required

Fulfill ANY of the following requirements:

Option 1

Complete ALL of the following Courses:

- TEIT1200 - A+ Core 1
- TEIT1210 - A+ Core 2

OR

Option 2

Complete ALL of the following Courses:

- BCIS1250 - A+ Core 1
- BCIS1260 - A+ Core 2

Course Learning Objectives

Course Learning Outcomes

Be capable of installing, configuring updating and managing database systems.
Manage database performance.
Configure backups and redundancy for performance and reliability.
Understand storage management and data warehouse administration concepts.
1. Master Traditional Database Concepts and Design
• Explain the fundamental structure and principles of traditional database concepts, including data, database, and database management systems (DBMS).
• Apply principles of data normalization and table relationships to design efficient and integrity-driven relational databases.
• Demonstrate an understanding of the Relational Database Model and its underlying structure, including key concepts like Query By Example (QBE) and Relational Algebra.
2. Execute Database Queries using SQL
• Write and interpret effective queries using Structured Query Language (SQL) to manipulate, retrieve, and manage data within a relational database.
• Perform hands-on labs (e.g., in Access or MindTap SAM) that demonstrate the ability to execute database creation and management tasks.
3. Implement Database Best Practices
• Analyze the characteristics of a healthy database and apply best practices for database creation, maintenance, and administration.
• Evaluate different database configurations and techniques to ensure data integrity, security, and performance.
4. Understand Emerging Trends and Career Paths
• Explain key concepts and trends in modern data management, including Data Science, Big Data, and Data Mining.
• Identify and describe the roles, responsibilities, and necessary skills for traditional and new careers in database administration.

TESY4810 - Computer Server Defense - 3 - Credits

Course Overview

Course Prefix
TESY

Course Number
4810

Department
Technology, Design & Technical Ed

Course Title
Computer Server Defense

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course covers cybersecurity principles and techniques for hardening, monitoring, and otherwise securing servers against compromise or failure.

- BCIS1320 - Linux Foundations

OR

Option 2

Complete ALL of the following Courses:

- TEIT2200 - Security +
- TEIT1300 - Linux Foundations

Course Learning Objectives

Course Learning Outcomes

1. Identify threats to Linux servers
2. Configure system settings according to best practices to secure a Linux platform
3. Demonstrate the ability to properly configure user accounts including access, roles and permissions
4. Configure filesystems' architecture, settings and encryption to protect data at rest
5. Explain how firewalls, encryption protocols, secure web services and SELinux work together to protect data in motion
6. Assess Linux kernel and associated distributions' security provisions
7. Explain the importance of best practices such as software maintenance, system monitoring, logging, and testing.
8. Analyze incident response, backup, and recovery processes and techniques.

TESY4820 - Penetration Testing - 3 - Credits

Course Overview

Course Prefix
TESY

Course Number
4820

Department
Technology, Design & Technical Ed

Course Title
Penetration Testing

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course provides a guide to operating as a penetration testing professional. It includes standards and best practices, specific hacking techniques, test design, and report writing. The course details offensive security skills needed in the cybersecurity industry.

Credit Hours

Simple Requisites

Prerequisite

Type
Prerequisite

Required

Complete ALL of the following Courses:

- BCIS2651 - Cybersecurity/Security+
  OR TEIT2200 - Security +

Course Learning Objectives

Course Learning Outcomes
1. Understand and Apply the Pen Testing Methodology
• Identify and describe the phases of a professional penetration test (e.g., Planning & Scoping, Reconnaissance, Scanning, Exploitation, Post-Exploitation, and Reporting).
• Adhere to the legal, ethical, and professional standards required for conducting security assessments, including proper scoping and "rules of engagement."
2. Perform Reconnaissance and Information Gathering
• Utilize Open-Source Intelligence (OSINT) and various scanning techniques (e.g., Nmap) to gather information about a target network, system, or application.
• Analyze network traffic, services, and protocols (e.g., TCP/IP, DNS, HTTP) to identify potential attack vectors.
3. Identify and Exploit System Vulnerabilities
• Apply common vulnerability assessment tools to discover weaknesses in operating systems (Windows and Linux), network devices, and software.
• Execute common exploitation techniques using tools like Metasploit, focusing on initial access, privilege escalation, and lateral movement.
• Demonstrate proficiency in attacking different types of targets, including wired/wireless networks and various web applications (e.g., using OWASP Top 10 vulnerabilities).
4. Conduct Post-Exploitation and Maintain Access
• Describe and implement techniques for post-exploitation, such as establishing persistence, pivoting to other network segments, and collecting sensitive data (e.g., password hashes).
• Apply basic scripting (e.g., Python, Bash) to automate tasks and create custom tools for security assessment.
5. Analyze, Communicate, and Report Findings
• Evaluate the risk level of identified vulnerabilities based on their impact and likelihood of exploitation.
• Develop clear, professional, and comprehensive penetration test reports that document findings, provide root cause analysis, and recommend actionable remediation strategies for technical and non-technical stakeholders.

TESY4830 - Network Defense and Traffic Analysis - 3 - Credits

Course Overview

Course Prefix
TESY

Course Number
4830

Department
Technology, Design & Technical Ed

Course Title
Network Defense and Traffic Analysis

Grade Mode
Standard Letter

Repeat Status
NR

Course Description

This course teaches the basics of securing and defending computer networks, including network traffic monitoring, alerting, and analysis. Students learn principles of layered defense with firewalls, intrusion detection and prevention, and server configuration and monitoring.

Simple Requisites

Prerequisite

Type
Prerequisite

Required

Complete ALL of the following Courses:

- BCIS2651 - Cybersecurity/Security+
  OR TEIT2200 - Security +

Course Learning Objectives

Course Learning Outcomes

1. Identify and Analyze Cybersecurity Threats
• Identify and describe the most common types of cyber threats and attacks, including Malware (Viruses, Trojans), Denial of Service (DoS) attacks, Hacking techniques, and forms of Cybercrime (Cyberstalking, fraud, and identity theft).
• Explain the motivations and methods behind advanced threat actors, such as those involved in Industrial espionage and Cyber terrorism/information warfare.
2. Implement Foundational Security Technologies
• Apply basic networking concepts and security technologies—including Firewalls, Intrusion Detection Systems (IDSs), VPNs, and Wi-Fi security—to protect devices, data, and networks.
• Utilize methods of Network scanning and vulnerability scanning to assess and secure computer systems and networks against potential threats.
• Explain the principles of Encryption (Cryptography, hashing, digital signatures) and steganography, and apply them to secure communication and data storage.
3. Develop and Apply Security Policies
• Define the purpose and structure of comprehensive Security policies, including those related to user conduct, system administration, and disaster recovery.
• Summarize the relevant legal issues and laws that impact network security and digital investigations.
4. Execute Basic Digital Forensics Procedures
• Describe the general guidelines and principles for conducting a forensic investigation to ensure the integrity of evidence.
• Demonstrate fundamental techniques for locating and recovering evidence from a PC, including analyzing system logs, using operating system utilities, and finding deleted files (with an introduction to Mobile Forensics).

TESY4850 - Scripting for IT and Cybersecurity - 3 - Credits

Course Overview

Course Prefix
TESY

Course Number
4850

Department
Technology, Design & Technical Ed

Course Title
Scripting for IT and Cybersecurity

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course explores applied programming topics such as scripting for systems administration tasks, automating processes, and interacting with other systems across a network. The course primarily utilizes Python.

  OR CS1400 - Introduction to Computer Science--CS 1
  OR DATA3500 - Introduction to Python Programming (Inactive)

Course Learning Objectives

Course Learning Outcomes

1. Identify common scripting tasks related to Information Technology and Cybersecurity.
2. Write scripts that will facilitate system setup, maintenance, and oversight.
3. Extract data from logs and automated sources for display and notification actions.
4. Identify appropriate models and technologies for IT tasks, from shell scripts to object-oriented approaches.
5. Use modules and scripting techniques appropriate for IT and cybersecurity tasks.
6. Apply appropriate data structures and algorithmic techniques to basic problems.

TESY4900 - Senior Project in Technology Systems - 1 - 6 Credits

Course Overview

Course Prefix
TESY

Course Number
4900

Department
Technology, Design & Technical Ed

Course Title
Senior Project in Technology Systems

Grade Mode
Standard Letter

Repeat Status
RP

Course Description
This course provides students with experiences outside of traditional classroom and laboratory settings to enhance their professional/vocational interests. Students complete a supervised project representative of modern industry and careers.

Instructor permission

Simple Requisites

Prerequisite

Type
Prerequisite

Required

Earn a minimum grade of C in the following:

- TESY3020 - Strategic Human Skills Development (CI)

Course Learning Objectives

Course Learning Outcomes

Your senior project is a unique educational experience and offers specific goals relative to student achievement as follows:

1. Provides the student with relevant experience toward industrial project planning and development
2. Requires the student to utilize and reflect on the courses taken and skills learned through the Technology Systems degree program related to his or her chosen career
3. Further develops the student's technical writing skills

TESY4940 - Related Occupational/Industrial Experience - 1 - 12 Credits

Course Overview

Course Prefix
TESY

Course Number
4940

Department
Technology, Design & Technical Ed

Course Title
Related Occupational/Industrial Experience

Grade Mode
Pass/Fail

Repeat Status
RP

Course Description
This course provides for enrollment in industry training conducted on university-level competencies. It is approved by the instructor upon application for a trade competency examination and work experience in the industry.

TEUA1011 - Unmanned Aircraft Systems Remote Pilot - 3 - Credits

Course Overview

Course Prefix
TEUA

Course Number
1011

Department
Technology, Design & Technical Ed

Course Title
Unmanned Aircraft Systems Remote Pilot

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course covers the rapidly expanding technology of small Unmanned Aircraft Systems (sUAS) and the legalities of flying drones. Topics include aviation safety, rules and regulations, Federal Aviation Administration (FAA) commercial certification preparation, and a flight lab component.

Credit Hours

Credit Hours Min:
3

Course Learning Objectives

Course Learning Outcomes
1. Discuss the rapidly expanding Unmanned Aircraft System (UAS) industry and prepare to enter this competitive market.
2. Describe the current regulations outlined in FAA Part 107.
3. Demonstrate proficiency related to the concepts and required information essential to pass the FAA ground exam and register as a Remote Pilot Operators.
4. Demonstrate basic flight skills.

1. Complete the FAA Part 107 Certification test.

2. Verify completion of the FAA Part 107 Certification test by uploading their score sheet.

TEUA1201 - Unmanned Aircraft Systems Introduction to Fixed-Wings - 3 - Credits

Course Overview

Course Prefix
TEUA

Course Number
1201

Department
Technology, Design & Technical Ed

Course Title
Unmanned Aircraft Systems Introduction to Fixed-Wings

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students learn the basics of small Unmanned Aircraft Systems (sUAS) fixed-wing design and construction to include flight characteristics of new or modified builds. They build, program, fly, and modify their own fixed-wing drone.

Credit Hours

Course Learning Objectives

Course Learning Outcomes

1. Explain the documentation process and how it applies to industry standards.
2. Identify sUAS components.
3. Use industry best practices in documentation, tool and equipment logs, supply upkeep, and communication processes.
4.Create and design a multi-rotor build complete with appropriate documentation.

TEUA1501 - Introduction to Unmanned Aircraft Systems Maintenance and Components - 3 - Credits

Course Overview

Course Prefix
TEUA

Course Number
1501

Department
Technology, Design & Technical Ed

Course Title
Introduction to Unmanned Aircraft Systems Maintenance and Components

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students are introduced to various tools and techniques for sUAS and UAS maintenance. Throughout the course, students utilize maintenance records and equipment logs. Students also gain factual knowledge of sUAS components, checklists, tools, tuning techniques, and building techniques.

Course Learning Objectives

Course Learning Outcomes

1. Define UX/UI design process from idea to deliverable.
2.Define Gestalt Principles.
3. Conduct user interviews and data synthesis.
4. Explore ideation processes and user empathy.
5. Create a storyboard, user flow, and paper prototypes.
6. Conduct UI analysis.
7. Create wireframes and prototypes.
8. Create site maps and effective navigation using information architecture best practices
9. Create design system and UI style guides.
10. Understand the value of grids in creating professional designs.
11. Create low, mid, and high-fidelity wireframes and prototypes.
12. Conduct usability tests and employ an iterative design process.
13. Create a case study.

TEWG1070 - Content Management Systems - 3 - Credits

Course Overview

Course Prefix
TEWG

Course Number
1070

Department
Technology, Design & Technical Ed

Course Title
Content Management Systems

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Content Management Systems (CMS) introduces the process for transforming a static site into a dynamic CMS theme. Students install the CMS locally, modify content, style the site using CSS/JS, and migrate the CMS to a live internet server.

Course Learning Objectives

Course Learning Outcomes

1. Setup a development environment.
2. Identify the primary components that make up a CMS theme.
3. Utilize CSS Preprocessing and JavaScript to add styling and functionality.
4. Create a custom child theme
5. Identify and install essential plugins.
6. Migrate the site to a live internet server.

TEWG1100 - Typography - 2 - Credits

Course Overview

Course Prefix
TEWG

Course Number
1100

Department
Technology, Design & Technical Ed

Course Title
Typography

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course introduces the history and principles of using type and words as design elements. Throughout this course, students study the history of letter forms and fonts as well as various techniques for printing documents.

Course Learning Objectives

Course Learning Outcomes

1. Identify and discuss the major technological advances in the history of printing.
2. Create wood or potato block letters and use them for printing images.
3. Discuss font styles and families and how they have evolved over time.
4. Apply typesetting terminology and techniques to documents.
5. Design a custom family of font styles.
6. Identify the principles of effective typography and font usage.

TEWG1110 - Digital Publishing - 3 - Credits

Course Overview

Course Prefix
TEWG

Course Number
1110

Department
Technology, Design & Technical Ed

Course Title
Digital Publishing

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students learn how to set up documents, work with colors, import and link graphics, draw with vectors, adjust typography, create tables, work with XML, and export PDFs. Students are introduced to transparencies, blending modes, feathered edges, and drop shadows.

3. Edit video with essential techniques.
4. Work with clips and markers.
5. Add video and audio transitions.
6. Edit video with advanced techniques.
7. Put clips in motion.
8. Edit, mix, and improve audio.
9. Add video effects.
10. Apply color correction and grading.
11. Work with composting techniques.
12. Create new graphics.
13. Export frames, clips, and sequences.

TEWG1140 - Digital Video II - 3 - Credits

Course Overview

Course Prefix
TEWG

Course Number
1140

Department
Technology, Design & Technical Ed

Course Title
Digital Video II

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students in this course develop skills using industry-standard software for digital post-production video effects. Students practice using 2D and 3D tools to create compositing, animation, and effects as motion-graphics professionals, visual effects artists, web designers, and video professionals.

1. Describe oxy fuel cutting process terms.
2. Demonstrate proper equipment setup, usage, cleaning, and break-down.
3. Discuss and conduct safety inspections of equipment and accessories.
4. List and describe oxy fuel cutting equipment.
5. Perform setup, lighting, and use of oxy fuel cutting equipment.
6. Demonstrate various cutting techniques including straight cuts, beveling, and gouging on various base metals.
7. Name key terms for GMAW.
8. Make GMAW-S (Short Circuit) Fillet Welds the 2F position.
9. Make GMAW-S (Short Circuit) Groove Welds in the 2G position.
10. Make GMAW-S (Short Circuit) V Groove Welds in the 2G position.

TEWT1010 - Measurement Systems - 1 - Credits

Course Overview

Course Prefix
TEWT

Course Number
1010

Department
Technology, Design & Technical Ed

Course Title
Measurement Systems

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
In this course, students gain an understanding of the concepts and implementation of measurement systems used by welding professionals. US customary units, metric units, and utilization of basic measurement tools are discussed.

1. Correctly read a tape measure.
2. Perform fraction and decimal conversions.
3. Perform metric and US customary unit conversions.
4. Perform basic trigonometry functions as they relate to welding and fabrication.
5. Use basic measurement systems, which are common in the welding industry, correctly by applying course concepts

TEWT1020 - Welding Symbols and Print Reading - 2 - Credits

Course Overview

Course Prefix
TEWT

Course Number
1020

Department
Technology, Design & Technical Ed

Course Title
Welding Symbols and Print Reading

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course teaches students to interpret prints and drawings, including welding symbols used in the welding and fabrication industries. Engineering drawings are introduced as the medium by which the engineer, project manager, and/or draftsman communicates instructions to production welding personnel.

1. Identify various American Welding Society (AWS) welding symbols.
2. Identify basic line types used in mechanical drawings.
3. Demonstrate basic sketching techniques and object representations.
4. Create alternate views from existing views.
5. Use drawing notes, specifications, title blocks, and bills of materials correctly.

TEWT1075 - Weld Inspection - 3 - Credits

Course Overview

Course Prefix
TEWT

Course Number
1075

Department
Technology, Design & Technical Ed

Course Title
Weld Inspection

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course introduces students to the requirements, skills, and fundamental knowledge required to become welding inspectors. Critical emphasis is placed on preparing students to eventually take the Certified Welding Inspector (CWI) exam through the American Welding Society (AWS).

Credit Hours

Credit Hours Min:
3

Course Learning Objectives

Course Learning Outcomes
1. Demonstrate a thorough understanding of the expectations, necessary professional qualifications, and responsibilities of a CWI.
2. Identify basic welding-specific codes, specifications, standards, and their appropriate applications within the United States, including AWS D1.1, AWS A3.0, ASME Section IX, and API 1104.
3. Develop an understanding of correct welding terminology, welding joint geometry, and welding symbols used in the industry in accordance with AWS standards.
4. Develop an understanding of common non-destructive evaluation (NDE) processes used by welding inspectors in industry, including Penetrant Testing (PT), Magnetic Particle Testing (MT), Radiographic Testing (RT), Ultrasonic Testing (UT), and Eddy Current Testing (ET).
5. Develop an understanding of common destructive testing methods used by welding inspectors in the industry, including bend testing, hardness testing,

fillet-weld break testing, tensile testing, nick-break testing, and macro-etch testing.
6. Identify common weld and base metal discontinuities and develop an understanding of effective evaluation, prevention, and repair methods.
7. Develop an understanding of common inspection tools and gages used by a welding inspector.
8. Develop an understanding of the common welding qualification documents used by an inspector, including Welding Procedure Specifications (WPS), Procedure Qualification Records (PQR), Welder Performance Qualification Records (WPQR), Mill Test Reports (MTR), and Standard 9. 9. Welding Procedure Specifications (SWPS).
10. Perform one or more weld inspections utilizing visual inspection tools and determine acceptability in accordance with the provided visual inspection acceptance criteria.
11. Perform Penetrant Testing (PT).
12. Perform Magnetic Particle Testing (MT).

TEWT1080 - Welding Metallurgy - 3 - Credits

Course Overview

Course Prefix
TEWT

Course Number
1080

Department
Technology, Design & Technical Ed

Course Title
Welding Metallurgy

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course introduces students to ferrous metals and how welding affects metal properties and microstructure. Topics of discussion include steel manufacturing, grain structures, heat-treating processes, mechanical properties of metals, iron-carbon phase diagrams, and destructive testing.

Course Learning Objectives

Course Learning Outcomes
1. Develop an understanding of basic ferrous and nonferrous metallurgy.
2. Develop an understanding of basic chemistry concepts as they pertain to metallurgy, including atoms, molecules, compounds, elements, grains, crystals, solutions, and alloys.
3. Identify the most commonly used hardness-testing methods for metallurgy, including Brinell, Rockwell, Vickers, Knoop, and superficial.
4. Perform Rockwell hardness testing on a variety of material microstructures.
5. Develop an understanding of commonly used steel manufacturing processes.
6. Develop an understanding of basic material properties concepts as they pertain to metallurgy including ductility, strength, hardness, malleability, toughness, and percent elongation.
7. Identify how common alloying elements affect a material's microstructure and mechanical properties.
8. Identify basic crystalline grain structures that exist in carbon steel including

body-centered cubic (BCC), face-centered cubic (FCC), hexagonal close-packed (HCP), and body-centered tetragonal (BCT).
9. Demonstrate the ability to interpret the iron-carbon phase diagram as well as the common phases and properties of phases that exist in carbon steel including ferrite, austenite, pearlite, cementite, martensite and their common combinations.
10. Develop an understanding of metallurgical sample preparation for various destructive and non- destructive testing methods.
11. Demonstrate an understanding of common heat-treatment processes, including quenching, tempering, annealing, and normalizing.
12. Identify common surface-hardening techniques, including carburizing, nitriding, cold-working, and localized heating.
13. Prepare a metallurgical sample for visual analysis utilizing a metallurgical sample polisher.
14. Observe various material microstructures utilizing a microscope.

TEWT1105 - Welding Qualifications - 3 - Credits

Course Overview

Course Prefix
TEWT

Course Number
1105

Department
Technology, Design & Technical Ed

Course Title
Welding Qualifications

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students will set up, weld, and test selected welder qualification plates. The course helps prepare students for the American Welding Society (AWS) D1.1 Structural Welding Code–Steel qualifications in the gas metal arc (GMAW) and shielded metal arc (SMAW) processes.

4. Perform 1F and 1G welds on non-ferrous metals with GTAW.
5. Perform 2F and 2G welds on non-ferrous metals with GTAW.

TEWT1240 - Gas Tungsten Arc Welding (GTAW) Theory - 2 - Credits

Course Overview

Course Prefix
TEWT

Course Number
1240

Department
Technology, Design & Technical Ed

Course Title
Gas Tungsten Arc Welding (GTAW) Theory

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
In this welding theory course, students develop in-depth theoretical knowledge of the GTAW process, including definitions, process advantages and limitations, electrode types and classifications, GTAW power sources, causes and solutions for GTAW discontinuities, and process troubleshooting.

Credit Hours

Credit Hours Min:

Simple Requisites

Corequisite

Type
Corequisite

Required

Enroll in the following Courses:

- TEWT1211 - Gas Tungsten Arc Welding (GTAW) I
- TEWT1212 - Gas Tungsten Arc Welding (GTAW) II

Course Learning Objectives

Course Learning Outcomes

1. Define the Gas Tungsten Arc Welding (GTAW) process in detail.
2. Identify GTAW process fundamentals.
3. Become familiar with the equipment and torch components necessary for GTAW, including collets, collet bodies, gas lenses, nozzles, and electrodes.
4. Demonstrate a thorough understanding of polarity, including the ability to select the correct polarity based on welding application, the advantages and limitations of each polarity type, and how polarity affects electrode current capacity.
5. Identify GTAW process advantages and limitations.
6. Demonstrate an understanding of GTAW electrodes including appropriate uses, tip geometries, sizing based on polarity and current, how tip geometry affects the weld pool, grinding techniques, and electrode classifications in accordance with the most current AWS standards.
7. Demonstrate an understanding of constant-current volt-amp response curves commonly used for GTAW.
8. Define the various affects of current, arc length, electrode manipulation, work angle, and travel angle on a molten weld pool using GTAW.
9. Demonstrate an understanding of GTAW shielding requirements, including appropriate shielding gasses, appropriate flow rates, lamellar flow, and purging.
10. Identify weld discontinuities common to GTAW and develop strategies to minimize, eliminate, and/or repair them.

TEWT1311 - Gas Metal Arc Welding (GMAW) I - 2 - Credits

Course Overview

Course Prefix
TEWT

Course Number
1311

Department
Technology, Design & Technical Ed

Course Title
Gas Metal Arc Welding (GMAW) I

Grade Mode
Standard Letter

Repeat Status
NR

Course Description

This course teaches set-up, operation, and practical application of GMAW. Process advantages and limitations are discussed. Students receive hands-on instruction regarding GMAW standard procedures and best practices in accordance with industry standards using short-circuiting and axial spray metal transfer modes.

Enroll in the following Courses:

- TEWT1411 - Flux Cored Arc Welding (FCAW) I
- TEWT1340 - Gas Metal Arc Welding (GMAW) and Flux-Cored Arc Welding (FCAW) Theory

Course Learning Objectives

Course Learning Outcomes

1. Demonstrate safety and best practices of GMAW-specific welding.
2. Setup and operate appropriate GMAW equipment.
3. Identify process advantages and limitations.
4. Perform 1F, 1G, 2F, and 2G welds using GMAW-S.
5. Perform 1F, 1G, and 2F welds using GMAW axial spray transfer.

TEWT1312 - Gas Metal Arc Welding (GMAW) II - 2 - Credits

Course Overview

Course Prefix
TEWT

Course Number
1312

Department
Technology, Design & Technical Ed

Course Title
Gas Metal Arc Welding (GMAW) II

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course expands students' competency in the practical application of GMAW. Shielding gas composition, selection, and appropriate flow rates are discussed. Students learn appropriate parameter selection as necessary for GMAW proficiency. The pulsed-spray (GMAW-P) metal transfer mode is introduced.

Enroll in the following Courses:

- TEWT1311 - Gas Metal Arc Welding (GMAW) I
- TEWT1411 - Flux Cored Arc Welding (FCAW) I

Course Learning Objectives

Course Learning Outcomes

1. Define the Gas Metal Arc Welding (GMAW) process in detail.
2. Define the Flux Cored Arc Welding (FCAW) process in detail.
3. Identify GMAW and FCAW process fundamentals and principles of operation.
4. Become familiar with the equipment and torch components necessary for GMAW and FCAW, including wire feeders, drive rolls, contact tips, gas diffusers, and nozzles.
5. Demonstrate an understanding of GMAW and FCAW electrodes including appropriate uses, common sizes, manufacturing standards, and electrode classification in accordance with the most current AWS standards.
6. Demonstrate an understanding of constant-voltage volt-amp response curves commonly used for GMAW and FCAW.
7. Using GMAW and FCAW, define the various effects of voltage, current, arc length, wire feed speed, electrode manipulation, work angle, and travel angle on a molten weld pool.
8. Identify and explain metal transfer modes, including short-circuiting, globular, and axial spray.
9. Become familiar with pulsed-waveform transfer modes and their appropriate uses.
10. Identify and explain the FCAW-G and FCAW-S variations of FCAW.

Complete ALL of the following Courses:

- TEWT1000 - Introduction to Welding and Cutting

Course Learning Objectives

Course Learning Outcomes
1. Demonstrate essential fabrication techniques including measuring, squaring, clamping, layout, and fixturing during the process of project completion.
2. Demonstrate an ability to thoroughly brainstorm, plan, create sketches/prints, propose, and fabricate a welded project to completion.
3. Demonstrate an ability to utilize arc welding and thermal cutting equipment during fabrication.
4. Utilize a variety of common fabrication tools and equipment to complete fabricated projects including bandsaws, drill presses, angle grinders, bench grinders, ironworkers, press-brakes, and common fabrication hand tools.
5. Demonstrate effective distortion control techniques during fabrication.
6. Identify common structural shapes utilized in fabrication.
7. Become familiar with common material identification methods, including magnetism, spark testing, and others
8. Become familiar with appropriate practices for performing weld repairs on vehicles and vehicle frames.
9. Create and/or revise a professional resume and cover letter in accordance with welding industry-recommended practices.

TEWT1730 - Professional Vocational Leadership - 2 - Credits

Course Overview

Course Prefix
TEWT

Course Number
1730

Department
Technology, Design & Technical Ed

Course Title
Professional Vocational Leadership

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course facilitates student participation in SkillsUSA welding competitions. SkillsUSA goals and objectives are discussed. Students learn common strategies and skills necessary for successful participation in the SkillsUSA Welding, Welding Fabrication, and Welding Sculpture contests.

Course Learning Objectives

Course Learning Outcomes

1. Become familiar with the SkillsUSA vocational leadership program.
2. Become a student member of SkillsUSA.
3. Develop an understanding of the SkillsUSA philosophy beyond the scope of competitions.
4. Develop an understanding of practical welding competition practices including print reading conformity, WPS conformity, scoring criteria, judging procedures, and project order of assembly.
5. Identify competition best-practices utilizing contest scoring criteria as a guiding principle.
6. Develop an understanding of how welding contests are organized, facilitated, and administered.
7. Demonstrate the ability to use the skills learned in the class to participate in multiple mock-welding contests amongst the entire class.

TEWT1815 - Welding Sculpture - 3 - Credits

Course Overview

Course Prefix
TEWT

Course Number
1815

Department
Technology, Design & Technical Ed

Course Title
Welding Sculpture

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This project-based course is designed to introduce students to artistic and sculptural welding. Oxy-fuel cutting and plasma cutting for sculptural welding applications are taught, as well as forging. Art theory is also explored, including elements and principles of design.

Credit Hours

Credit Hours
Min:
3

No Requirements

Course Learning Objectives

Course Learning Outcomes
1. Demonstrate proficiency in oxy-fuel cutting and plasma-arc cutting.
2. Develop a basic knowledge of forging.
3. Demonstrate knowledge in principles and elements of design and implement them in your projects.
4. Become familiar with the safety aspects associated with welding and general fabrication shop safety issues. Each student must complete a written safety test, at 80% or above, before being allowed to work in the shop.
5. Demonstrate ability to use equipment setup, welding technique on steel, and bending, cutting, and shaping metal using a variety of methods in order to create artistic sculptures.
6. Demonstrate competency in material preparation and finishing (grinding, sanding, oxidizing for aesthetic purposes, clear coating).
7. Demonstrate an ability to design and sketch a project, create a written plan, and weld a sculptural project to fit the requirements of a rubric.
8. Learn how to source materials for projects in a sustainable and cost-effective way.

Course Learning Objectives

Course Learning Outcomes

1. To develop a firm understanding of decorative arts and interior design trends in Western Civilization from the ancient Egyptians through the modern era.

2. To gain factual knowledge including terminology used in classifying period architecture and furnishings.

3. To promote self-understanding by comparing and contrasting cultures' beliefs and historical periods.

4. Promote a broad understanding of architectural and decorative arts, vocabulary and historical periods.

5. Develop an understanding of character and personality as expressed by individual choices in interior design.

6. To develop research and written expression skills to understand and evaluate original source material using both electronic and traditional methods.

7. To develop skills in oral presentation by participating and leading discussions in a well-reasoned and organized manner.

Can be taken concurrently with other UAS Part 107 Test Prep courses.

No Requirements

Course Learning Objectives

Course Learning Outcomes

1. Understand what "FPV" or First-Person View flight means in relation to drones/UAS.
2. Demonstrate greater knowledge in the area of FPV drone components.
3. Demonstrate skills including software configuration and successful flight of a FPV drone platform.

UAS1100 - Introduction to Unmanned Aircraft Systems - 1 - Credits

Course Overview

Course Prefix
UAS

Course Number
1100

Department
Aviation Technology

Course Title
Introduction to Unmanned Aircraft Systems

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
An introductory course exploring drone fundamentals, essential FAA regulations, safety and flight practices, emerging UAS careers, and highlights from the history of UAS. Students explore a variety of applications and pathways to enter the rapidly expanding unmanned aviation field.

UAS2700 - Unmanned Aircraft Systems Photo and Video Basics - 3 - Credits

Course Overview

Course Prefix
UAS

Course Number
2700

Department
Aviation Technology

Course Title
Unmanned Aircraft Systems Photo and Video Basics

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students learn introductory aspects of aerial photography and videography specific to drone shots. Students are then introduced to ways to apply those shots and videos into a video project. Students are briefly introduced to some editing techniques.

Course Overview

Course Prefix
UAS

Course Number
3200

Department
Aviation Technology

Course Title
Fixed-wing Design and Construction Essentials

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course focuses on small Unmanned Aircraft Systems (sUAS) fixed-wing style design and construction. Students learn techniques for designing small fixed-wing drones, moving from a 2D idea to a working 3D object. Students experience the full design and testing process.

- UAS1200 - Unmanned Aircraft Systems Introduction to Fixed-Wings

Course Learning Objectives

Course Learning Outcomes

1. Students will be introduced to UAS VTOL design, application, and construction methods.
2. Understand the firmware configuration process as it relates to VTOL UAS.
3. Practice utilizing proper tools and components to construct, configure and fly a VTOL aircraft.

UAS3250 - UAS VTOL (Vertical Take Off and Landing) - 3 - Credits

Course Overview

Course Prefix
UAS

Course Number
3250

Department
Aviation Technology

Course Title
UAS VTOL (Vertical Take Off and Landing)

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Introduces students to VTOL UAS design and construction techniques, and the components necessary to build a functional VTOL UAS. Students gain experience constructing, configuring flight testing, and repairing a VTOL UAS, and applying industry-related basic checklist and documentation skills.

Course Learning Objectives

Course Learning Outcomes

1. Identify foundational leadership and student development theories and models, then, relate these to their own experiences as first-generation college students.
2. Define the purpose of mentorship and apply purpose, foundational theories, and models to current/future on-campus jobs and leadership positions.
3. Recall and demonstrate core competencies (from AACU and Forbes):
-Teamwork and Leadership Skills
-Effective Written and Verbal Communication
-Critical-Thinking and Creative Solutions-Finding
-Proactive Behavior vs. Reactive Behavior
-Application of Knowledge and Experience (Mentorship)
-Reflection and Self-Assessment
-Intercultural Communication in a Globalized Workforce"
4.Summarize leadership, mentorship, and student development models through a written mentoring plan that can be portable to leadership positions within and outside of the AFS program.

Course Learning Objectives

Course Learning Outcomes
1. Students will identify a functional knowledge of 3-5 prominent leadership theories/practices.
2. Students will discover their own core leadership style and know the strengths/ weaknesses associated with that style.
3. Students will have a basic understanding of the role, purpose, and mission of their individual organizations, as well as all units within the Student Involvement and Leadership department.

USU2160 - Student Applied Leadership Training - 1 - 3 Credits

Course Overview

Course Learning Objectives

Course Learning Outcomes

1. Learning objectives are the very core of the internship experience. The intern, along with the work supervisor, will determine objectives/goals to be completed during the internship experience.
2. Objectives should allow the intern to learn or expand a skill, obtain new information, complete a project, solve a problem, and/or gain valuable new competencies. Once the student and work supervisor have agreed on the learning objectives, objectives will need to be reviewed with the faculty coordinator for final approval.
3. Develop clear and strategic goals that will contribute to an external organization while improving their own professional skillset.
4. Communicate with supervisors/mentors personal career goals and how it can fit within the organization.
5. Evaluate work experience and communicate how it prepares them for their future career.

Course Learning Objectives

Course Learning Outcomes

1. Students will understand the application cycle and timeline for a competitive medical school application.
2. Students will understand and begin the creation of an application portfolio of undergraduate experiences and required documents, including drafts of the personal statement, experience descriptions, and secondary essays.
3. Students will understand the nuanced elements, both academic and experiential, that make a competitive applicant.
4. Students will be able to identify and research medical graduate programs to learn specific school requirements such as prerequisites, letters of evaluation, extracurricular activities, and residency requirements, in addition to the review of school culture and mission fit, for both the application and interview processes.

Completion Requirement

GPA Requirement

Students must have a 3.0 GPA to take this course.

Course Learning Objectives

Course Learning Outcomes
Upon completion of this course students will be able to:

1. Describe the fundamental principles and core terminology associated with in vitro animal cell culture.
2. Explain the biological and technical foundations underlying primary culture establishment, cell line maintenance, and quality assurance practices.
3. Describe procedures for establishing primary cultures from tissues and organs using appropriate laboratory methods.
4. Perform standard techniques for culturing animal cells in vitro, including aseptic handling, media preparation, and routine maintenance.
5. Assess the characteristics of different cell lines by interpreting morphological, biochemical, and growth-related data.
6. Describe and explain differences between normal, transformed, primary, and continuous cell cultures.
7. Evaluate the quality, reliability, and biosafety compliance of cell culture laboratory through inspection of workflow, documentation, and experimental outcomes.
8. Determine the suitability of specific cell culture techniques for various research or industrial applications.
9. Design experimental workflows that incorporate animal cell culture techniques to address research questions or solve industry-related problems.
10. Develop optimized protocols for primary culture establishment or cell line maintenance based on experimental evidence and best practices.

Completion Requirement

Required

Complete ALL of the following Courses:

- BIOL1610 - Biology I
  OR CHEM2310 - Organic Chemistry I

OR CHEM3700 - Introductory Biochemistry

Course Learning Objectives

Course Learning Outcomes

1. Define and explain the core principles of the One Health framework, including the interconnections among human, animal, and environmental health.
2. Identify and analyze real-world examples that illustrate how human, animal, and environmental systems influence one another.
3. Apply a One Health approach to the assessment and proposed resolution of health challenges requiring multidisciplinary collaboration.
4. Describe and evaluate One Health dimensions of infectious and zoonotic diseases, food safety, antimicrobial resistance, and environmental change.
5. Discuss the human–animal bond and its relevance to physical, emotional, and societal well-being within the One Health context.
6. Strengthen professional networking and collaboration skills relevant to the One Health field.
7. Synthesize interdisciplinary scientific and policy evidence to develop more advanced One Health analyses and justify integrated solutions to complex health challenges.

Prerequisite

Required

Must earn a minimum grade of C-

Complete ALL of the following Courses:

- VCLS6200 - Research Animal Anatomy and Physiology

Course Learning Objectives

Course Learning Outcomes

Upon completion of this course students will be able to:

1. Explain the mechanisms and morphology of cellular injury, adaptation, and death.
2. Understand general concepts of vascular disorders and thrombosis.

VCLS6230 - Biomedical Sciences: Molecular Techniques - 3 - Credits

Course Overview

Course Prefix
VCLS

Course Number
6230

Department
Veterinary Clinical & Life Sciences

Dual-Listed Courses
VCLS5230 - Biomedical Sciences: Molecular Techniques

Course Title
Biomedical Sciences: Molecular Techniques

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Laboratory-oriented course designed to teach molecular biology techniques such as DNA cloning, genetic probes, polymerase chain reaction, and DNA sequencing, and basic bioinformatics. Additional coursework is required for those enrolled in the graduate-level course.

Other Enrollment Recommendations
Students are encouraged to take the following courses before taking this course:

CHEM3700 INTRO BIOCHEMISTRY

CHEM5710 GENERAL BIOCHEMISTRY II

BIOL3060 PRIN OF GENETICS (QI)

Course Learning Objectives

Course Learning Outcomes
Upon completion of this course students will be able to:

1. Explain the concepts behind and perform common molecular biology techniques.
2. Apply molecular biology techniques to answer research questions.
3. Analyze data from common techniques in the context of experimental questions.

VCLS6800 - Biomedical and Life Sciences Graduate Seminar - 1 - Credits

Course Overview

Course Prefix
VCLS

Course Number
6800

Department
Veterinary Clinical & Life Sciences

Course Title
Biomedical and Life Sciences Graduate Seminar

Grade Mode
Pass/Fail

Repeat Status
RP

Course Description
Graduate students prepare scientific oral presentations using their own research and data.

Must be a USU graduate student

Course Learning Objectives

Course Learning Outcomes
1. Exercise in science communication skills.

2. Allows students to receive feedback from faculty, staff, and students on their own research.

3. This course will prepare graduate students for scholarly presentations, beginning with forming hypotheses based on individualized research interests and finishing with presenting their own results and data findings.

VCLS6830 - Communicating and Evaluating Public Health Information: Case Studies in Environmental Health - 3 - Credits

Course Overview

Course Prefix
VCLS

Course Number
6830

Department
Veterinary Clinical & Life Sciences

Course Title
Communicating and Evaluating Public Health Information: Case Studies in Environmental Health

Grade Mode
Standard Letter

Repeat Status
RP

Course Description
Students learn to frame and deliver effective, accurate public health messages, developing an understanding of topics necessary to evaluate information accuracy. Message design and communication strategy exercises are based on environmental health topics, using environmental health disasters as case studies.

VCLS6840 - Epigenetics in Public Health - 3 - Credits

Course Overview

Course Prefix
VCLS

Course Number
6840

Department
Veterinary Clinical & Life Sciences

Course Title
Epigenetics in Public Health

Grade Mode
Standard Letter

Repeat Status
RP

Course Description
This course enables students to understand epigenetic mechanisms and critically evaluate reports of the emerging environmental origin of epigenetic disease and developmental problems relevant to public health, including cancer, aging, metabolic syndrome, reproductive health, in utero, and transgenerational exposures.

Course Learning Objectives

Course Learning Outcomes

1. Describe the molecular and biological mechanisms underlying animal diseases and their roles in disease progression.

2. Recognize and classify common gross and microscopic lesions associated with animal diseases.

3. Describe gross and microscopic lesions using appropriate medical terminology.

4. Analyze the processes of lesion development and progression in animal tissues.

5. Explain the dynamic relationships between the host, pathogens, and environmental factors that contribute to the development of animal diseases.

VCLS7142 - Agents of Infection and Immunity - 3 - Credits

Course Overview

Course Prefix
VCLS

Course Number
7142

Department
Veterinary Clinical & Life Sciences

Cross-Listed Courses
VM7142 - Agents of Infection and Immunity

Course Title
Agents of Infection and Immunity

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course focuses on the basic mechanisms of veterinary immunology with an emphasis on protective immunity against infectious diseases and the role of aberrant immune responses in disease. In this course, students acquire a functional basis in clinical immunology.

Credit Hours

Credit Hours

Course Learning Objectives

Course Learning Outcomes

1. Describe the basic mechanisms of veterinary immunology and the main characteristics of viruses, bacteria, protozoa and helminths.

2. Describe protective immunity against infectious diseases and the role of aberrant immune responses in disease.

3. List the components of the innate immune system and explain their functions.

4. Describe the components of the adaptive immune system, how B and T cells develop at a cellular and molecular level, how they recognize and respond to antigen.

5.Articulate how innate and adaptive immune components cooperate during immune responses and recognize the underlying molecules, cells and mechanisms involved in this response.

6.Apply the immunological concepts to explain the basis of: defense against infection, immunization, hypersensitivity, autoimmune disease, immunodeficiency and rejection of transplanted organs.

Course Learning Outcomes

1. Recognize and demonstrate appropriate restraint, physical exams, and procedures in a variety of animal species.

2. Identify the steps of a specialized physical exam of the musculoskeletal, nervous, and cardiovascular systems.

3. Describe basic diagnostic procedures and therapeutic skills for the musculoskeletal, nervous, and cardiovascular systems.

4. Demonstrate and understand the use of basic surgical techniques and principles including asepsis, instrument handling, and suturing.

5. Recognize basic anatomical structures using radiology and ultrasound imaging of the musculoskeletal, nervous, and cardiovascular systems.

VM7002 - Clinical Skills II - 2 - Credits

Course Overview

Course Prefix
VM

Course Number
7002

Department
College of Veterinary Medicine

Course Title
Clinical Skills II

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
A continuation of Clinical Skills I, students learn and practice foundational clinical veterinary skills and techniques such as restraint, physical examination, diagnostic procedures, surgical techniques, and therapeutic skills.

Credit Hours

Course Learning Objectives

Course Learning Outcomes

1. Recognize and demonstrate appropriate restraint, physical exams, and procedures in a variety of animal species.

2. Identify the steps of a specialized physical exam of the respiratory, urinary, gastrointestinal, endocrine, and reproductive systems.

3. Describe basic diagnostic procedures and therapeutic skills in respiratory, urinary, gastrointestinal, endocrine, and reproductive systems.

4. Integrate basic surgical techniques and principles to perform basic procedures.

5. Recognize basic anatomical structures using radiology and ultrasound imaging of the respiratory, urinary, gastrointestinal, endocrine, and reproductive systems.

6. Identify the cell type and tissue of the respiratory, urinary, gastrointestinal, endocrine, and reproductive systems on histopathology slides

7. Recognize and compare the common diagnostic assays available.

8. Morphological diagnoses, recall steps of a field necropsy.

VM7003 - Clinical Skills III - 2 - Credits

Course Overview

Course Prefix
VM

Course Number
7003

Department
Veterinary Clinical & Life Sciences

Course Title
Clinical Skills III

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Building on prior Clinical Skills, students learn and practice intermediate clinical veterinary skills and techniques such as advanced physical examinations, restraint, diagnostic procedures, surgical techniques, anesthesia, analgesia, and therapeutic skills. Previously acquired skills will be reinforced and refined.

3. Describe processes of advanced physical examinations.
4. Perform and interpret diagnostic procedures including clinical pathology, systemic pathology, bacteriology, and parasitology methods.

VM7011 - Professional Skills I - 2 - Credits

Course Overview

Course Prefix
VM

Course Number
7011

Department
College of Veterinary Medicine

Course Title
Professional Skills I

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students acquire knowledge and skills in communication, clinical reasoning, evidence-based veterinary medicine, ethical decision-making, and wellness. Students communicate and collaborate in team based learning activities.

Course Learning Objectives

Course Learning Outcomes

1. Describe professional identity and the alignment of roles, responsibilities, values, ethical standards, and practices that are pertinent to the current field of veterinary medicine.

2. Identify practices proven effective and related to self-care and renewal.

3. Identify the information needed to gather a complete history and basic communication skills.

4. Outline the clinical reasoning process and develop problem lists.

5. Apply a framework for ethical decision making.

6. Use a literature search to answer questions.

VM7012 - Professional Skills II - 2 - Credits

Course Overview

Course Prefix
VM

Course Number
7012

Department
Veterinary Clinical & Life Sciences

Course Title
Professional Skills II

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Building on Professional Skills 1, this course deepens essential veterinary competencies through lectures, case studies, and discussions, covering personal wellness, clinical reasoning, communication, financial wellness, and career exploration, while examining diverse pathways like practice ownership, corporate roles, and specialties.

Course Learning Objectives

Course Learning Outcomes

1. Describe unique career pathways in Veterinary Medicine.
2. Identify strategies for Personal Financial Literacy.
3. Identify practices proven effective to promote resilience and self-care.
4. Expand knowledge of the clinical reasoning framework with integration of self-reflection.
5. Demonstrate evidence-based communication skills in collaborative learning activities.

VM7013 - Professional Skills III - 2 - Credits

Course Overview

Course Prefix
VM

Course Number
7013

Department
Veterinary Clinical & Life Sciences

Course Title
Professional Skills III

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students build on prior professional skills through small group activities and simulated client encounters, focusing on relationship-centered care, information gathering, relationship building, planning, feedback, self-reflection, and exploring our perceptions affecting our communication and case management.

Course Learning Objectives

Course Learning Outcomes
1. Recognize the various components of the cell through light microscopy and electron microscopy and be able to discuss the current fundamental concepts of cell structure and function.
2. Recognize and describe the cellular and extracellular composition of the basic tissues of the animal body and understand their functions and interrelationships.
3. Discuss how abnormalities in cell function and structure relate to malfunction of organs, tissues and disease presentation.
4. Correlate the microscopic structure with the function of the cells, tissues and organs of the animal body and logically consider the consequences of malfunction.

VM7111 - Animal Systems and the Veterinary Profession - 2 - Credits

Course Overview

Course Prefix
VM

Course Number
7111

Department
College of Veterinary Medicine

Course Title
Animal Systems and the Veterinary Profession

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course provides veterinary students the opportunity to become familiar with different animal industries and the role that veterinarians play in promoting the success and sustainability of these industries through preventative practices and advocating for animal welfare.

1. Describe the defining aspects and differences of the different animal industries (beef cattle, dairy cattle, sheep, equine, poultry, swine, etc.).

2. Utilize essential terminology for each animal industry.

3. Describe the role that veterinarians play in promoting the success and sustainability of these industries.

VM7121 - Form and Function- Musculoskeletal System - 5 - Credits

Course Overview

Course Prefix
VM

Course Number
7121

Department
College of Veterinary Medicine

Course Title
Form and Function- Musculoskeletal System

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course provides an integrated systems-based foundation in the musculoskeletal system's anatomy, histology, and physiology. This course uses a combination of lectures, active learning activities, cases, and laboratories.

Credit Hours

Course Learning Objectives

Course Learning Outcomes

1. Learn the correct vocabulary to identify microscopic and gross anatomical structures as well as develop fluency with the scientific and medical terminology, and appropriate lay terminology, to begin fostering the skills necessary to communicate with educators, peers, colleagues, and clients.

2. Recognize, describe, and be able to discuss the normal microscopic and gross anatomy of organs and organ systems and how the structure relates to their functions.

3. Discuss the current fundamental concepts of cell structure and function, control, and interactions of organs and tissues, as well as the broad aspects of physiology as they relate to physiological adaptation.

4. Use light and electron microscopy along with gross dissection to recognize and identify and correlate the components of cells, tissues, and organs of the animal body.

5. Recognize and describe the cellular and extracellular composition of the basic tissues of the animal body and understand their functions and interrelationships.

6. Begin to logically predict, explain, and visualize the consequences of dysfunction of cells, tissues, organs, and physiologic processes. Provide clinical contexts to make the importance of normal anatomic structures meaningful. It is important to know the normal anatomy before you can begin to understand the consequences of abnormal anatomy (e.g. pathology).

VM7122 - Form and Function- Nervous System - 3 - Credits

Course Overview

Course Prefix
VM

Course Number
7122

Department
College of Veterinary Medicine

Course Title
Form and Function- Nervous System

Course Learning Objectives

Course Learning Outcomes

1. Describe the molecular and biological mechanisms underlying animal diseases and their roles in disease progression.

2. Recognize and classify common gross and microscopic lesions associated with animal diseases.

3. Describe gross and microscopic lesions using appropriate medical terminology.

4. Analyze the processes of lesion development and progression in animal tissues.

5. Explain the dynamic relationships between the host, pathogens, and environmental factors that contribute to the development of animal diseases.

VM7142 - Agents of Infection and Immunity - 3 - Credits

Course Overview

Course Prefix
VM

Course Number
7142

Department
College of Veterinary Medicine

Cross-Listed Courses
VCLS7142 - Agents of Infection and Immunity

Course Title
Agents of Infection and Immunity

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course focuses on the basic mechanisms of veterinary immunology with an emphasis on protective immunity against infectious diseases and the role of aberrant immune responses in disease. In this course, students acquire a functional basis in clinical immunology.

Credit Hours

Credit Hours

Course Learning Objectives

Course Learning Outcomes
1. Describe the basic mechanisms of veterinary immunology and the main characteristics of viruses, bacteria, protozoa and helminths.
2. Describe protective immunity against infectious diseases and the role of aberrant immune responses in disease.
3. List the components of the innate immune system and explain their functions.
4. Describe the components of the adaptive immune system, how B and T cells develop at a cellular and molecular level, how they recognize and respond to antigen.
5. Articulate how innate and adaptive immune components cooperate during immune responses and recognize the underlying molecules, cells and mechanisms involved in this response.
6. Apply the immunological concepts to explain the basis of: defense against infection, immunization, hypersensitivity, autoimmune disease, immunodeficiency and rejection of transplanted organs.

Course Learning Objectives

Course Learning Outcomes
1. Describe the principles of pharmacokinetics and pharmacodynamics.
2. Instruct students to successfully perform drug dosing calculations.

VM7172 - Principles of Nutrition - 2 - Credits

Course Overview

Course Prefix
VM

Course Number
7172

Department
College of Veterinary Medicine

Course Title
Principles of Nutrition

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course provides a general introduction to physiological processes associated with nutrition, the chemical composition of feedstuffs, nutritive requirements of domestic/production animals, clinical applications of nutrition, and an introduction to formulating and balancing rations for relevant animal species.

Course Learning Objectives

Course Learning Outcomes

1. Acquire a basic vocabulary of terms used in the nutrition field.

2. Understand the relationship between nutrition, anatomy, and physiology of domestic animals.

3. Understand the six major nutrient classes and the role each plays in meeting the specific nutrient requirements of each animal and/or stage of production.

4. Know how to read and understand nutrient requirement tables and feeding guidelines for each of the different domestic animal species.

5. Understand nutrition principles and feeding practices as they apply to a practicing veterinarian.

VM7221 - The Body in Disease 1 - 7 - Credits

Course Overview

Course Prefix
VM

Course Number
7221

Department
Veterinary Clinical & Life Sciences

Course Title
The Body in Disease 1

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Building on the Form and Function courses, this course integrates systemic pathology, clinical pathology, toxicology, virology, bacteriology, parasitology, pharmacology, and imaging to form an extensive understanding of the hematopoietic and gastrointestinal systems in disease and the interaction of these disciplines.

Credit Hours

Credit Hours

Course Learning Objectives

Course Learning Outcomes

1. Describe the major gross, histologic, and clinical pathologic lesions of diseases of the hematopoietic and gastrointestinal systems.
2. Describe the life cycles and pathogenesis of infectious diseases of the hematopoietic and gastrointestinal systems, including pertinent viruses, bacteria, and parasites.
3. Describe the major toxins and associated pathogenesis of the hematopoietic and gastrointestinal systems.
4. List the major pharmacological drugs or drug categories used in the hematopoietic and gastrointestinal systems, being able to describe the pharmacodynamics and pharmacokinetics of each drug.
5. Identify normal structures and features using common imaging modalities, and describe common lesions and changes within the hematopoietic and gastrointestinal systems.

VM7222 - The Body in Disease 2 - 6 - Credits

Course Learning Outcomes

1. Describe the major gross, histologic, and clinical pathologic lesions of multisystemic diseases.
2. Describe the life cycles and pathogenesis of infectious diseases of multisystemic diseases, including pertinent viruses, bacteria, and parasites.
3. Describe the major toxins and associated pathogenesis of multisystemic diseases.
4. List the major pharmacological drugs or drug categories used multi-systemically, being able to describe the pharmacodynamics and pharmacokinetics of each drug.
5. Identify normal structures and features using common imaging modalities, and describe common lesions and changes within multisystemic diseases.

VM7242 - Anesthesia - 2 - Credits

Course Overview

Course Prefix
VM

Course Number
7242

Department
Veterinary Clinical & Life Sciences

Course Title
Anesthesia

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course discusses anesthetic techniques, equipment, and drugs for the domestic species in veterinary medicine. Students learn principles of general anesthesia, local anesthesia, risk assessment, and pain management.

Course Learning Objectives

Course Learning Outcomes

1. Describe the risk assessment performed for a healthy patient undergoing anesthesia, and adapt those principles to patients with complications or underlying disease.
2. Describe the common anesthetic drugs used in both local and general anesthesia, including pharmacodynamics, pharmacokinetics, and side effects.
3. Describe the common principles and machines used for general anesthesia, noting differences in species and inhalants used.
4. Describe the principles of local anesthetic blocks, the common locations by species, and the common drugs used in local blocks per species.
5. Describe basic and advanced pain management in both healthy and diseased patients, including pre- and post-operative care.
6. Recognize the most common complications from sedation and anesthesia and describe the appropriate response to manage or mitigate those complications.

VM7262 - Population Health - 4 - Credits

Course Overview

Course Prefix
VM

Course Number
7262

Department
Veterinary Clinical & Life Sciences

Course Title
Population Health

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course addresses animal population health and its integration with the health of the human population. Methods for managing, preventing and controlling health risks to human and animal populations will be presented in didactic teaching, active learning, and case-based learning.

Course Learning Objectives

Course Learning Outcomes
1. Describe the relationship between animal and human population health.
2. Using epidemiological statistics and critical thinking, describe the impact of disease in wild and companion animal populations and within food animal industries.
3. Describe methods for preventing and controlling health risks to human and animal populations.

VM7272 - Theriogenology I - 2 - Credits

Course Overview

Course Prefix
VM

Course Number
7272

Department
Veterinary Clinical & Life Sciences

Course Title
Theriogenology I

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course discusses the basic principles of reproductive management in the major agricultural species, particularly cattle and equids. Course directly correlates the normal physiology of each species with reproductive strategies and herd management.

Course Learning Objectives

Course Learning Outcomes
1. Describe the basic reproductive physiology of each large animal species.
2. Describe methods for equine estrus cycle manipulation and bovine ovulation synchronization.
3. Describe the parameters used to evaluate reproductive efficiency in cattle and horses.
4. Describe the components of a routine reproductive examination and a breeding soundness exam in each species .
5. Describe the components of a routine obstetric exam.

VM7350 - Skeletal Preparation - 1 - Credits

Course Overview

Course Prefix
VM

Course Number
7350

Department
College of Veterinary Medicine

Course Title
Skeletal Preparation

Grade Mode
Pass/Fail

Repeat Status
RP

Course Description
Students master techniques of skeletal preparation by undertaking and completing a project. The skeleton that is prepared becomes the property of the student. Registration is restricted to veterinary medical students.

Course Learning Objectives

Course Learning Outcomes

1. Gain factual knowledge of small ruminant parturition and post-natal care.

2. Recognize and understand the difference between a routine and a emergency parturition and between a healthy and abnormal post-natal small ruminant.

3. Perform a physical exam and evaluate the status of a periparturient small ruminant and/or neonate.

4. Administer routine post-partum and neonatal care.

5. Communicate with other veterinary professionals

VM7625 - Clinical Zoological & Wildlife Medicine - 1 - Credits

Course Overview

Course Prefix
VM

Course Number
7625

Department
Veterinary Clinical & Life Sciences

Course Title
Clinical Zoological & Wildlife Medicine

Grade Mode
Pass/Fail

Repeat Status
RP

Course Description
This elective provides hands-on experience in clinical zoo and wildlife medicine. Students collaborate with faculty at local zoological institutions and wildlife rehabilitation centers to perform preventive medicine, clinical workups, and assist in procedures with non-traditional species.

Course Learning Objectives

Course Learning Outcomes

1. Assess preventive medicine protocols for zoological and wildlife species, including vaccination strategies, parasite control, quarantine procedures, and nutritional management.
2. Explain how taxonomy, anatomy, and physiology influence the clinical presentation, diagnostic approach, and therapeutic management of zoological and wildlife species.
3. Perform systematic clinical workups of zoological and wildlife cases, including history taking, physical examination, problem list generation, and diagnostic planning.
4. Participate in and prepare for clinical procedures (e.g., restraint, anesthesia, diagnostic sampling, minor treatments) under faculty supervision with attention to animal welfare and safety.

5. Develop and practice case management skills by contributing to treatment planning, monitoring, and follow-up of clinical cases.
6. Accurately document medical information using appropriate zoological and wildlife medical record-keeping systems in compliance with institutional and legal standards.

VM7626 - Immobilization and Conservation of African Wildlife - 4 - Credits

Course Overview

Course Prefix
VM

Course Number
7626

Department
Veterinary Clinical & Life Sciences

Course Title
Immobilization and Conservation of African Wildlife

Grade Mode
Pass/Fail

Repeat Status
RP

Course Description
This study-abroad elective immerses veterinary students in South African wildlife medicine, combining lectures and hands-on training in immobilization, conservation, and clinical care, while exploring broader issues in wildlife health and experiencing Africa's unique ecosystems.

Course Learning Objectives

Course Learning Outcomes

1. Describe the history of wildlife conservation in South Africa and explain how it has shaped current veterinary and conservation practices.

2. Analyze the cultural, social, and economic implications of wildlife conservation in Africa and how these influence veterinary decision-making and community engagement.

3. Demonstrate practical skills in wildlife immobilization, handling, and basic procedures under supervision, with attention to animal welfare and safety.

4. Discuss preventive medicine and clinical care principles for free-ranging and managed African wildlife species.

5. Evaluate conservation challenges facing Southern Africa, including habitat loss, poaching, human–wildlife conflict, and emerging diseases.

6. Reflect on cultural and ecological experiences gained through wildlife viewing, community interactions, and leisure activities, integrating them into a holistic understanding of conservation medicine.

VM7651 - Zoological Medicine: Aquatic Animals - 1 - Credits

Course Overview

Course Prefix
VM

Course Number
7651

Department
Veterinary Clinical & Life Sciences

Course Title
Zoological Medicine: Aquatic Animals

Grade Mode
Pass/Fail

Repeat Status
NR

Course Description
This lecture-based elective introduces students to aquatic animal medicine, covering career paths, taxonomy, anatomy, physiology, preventive medicine, common diseases, anesthesia, procedures, and conservation across invertebrates, fish, reptiles, birds, and marine mammals, emphasizing both clinical practice and conservation challenges.

Course Learning Objectives

Course Learning Outcomes

1. Identify career opportunities in aquatic animal medicine and outline training pathways to pursue careers in zoological, research, clinical, and conservation settings.
2. Describe preventive medicine protocols for aquatic species, including husbandry, nutrition, water quality, and parasite management.
3. Explain how taxonomy, anatomy, and physiology of aquatic animals influence their clinical care, diagnostic approaches, and therapeutic options.
4. Recognize and discuss the diagnosis and management of common diseases affecting aquatic invertebrates, fish, reptiles, birds, and marine mammals.

5. Summarize principles of anesthesia and common procedures used in aquatic animal medicine, with attention to species-specific considerations.
6. Evaluate the impacts of disease on wildlife populations and describe their broader implications for conservation and ecosystem health.

VM7652 - Zoological Medicine: General Zoo Management - 1 - Credits

Course Overview

Course Prefix
VM

Course Number
7652

Department
Veterinary Clinical & Life Sciences

Course Title
Zoological Medicine: General Zoo Management

Grade Mode
Pass/Fail

Repeat Status
NR

Course Description
This lecture-based elective introduces students to zoo animal medicine, covering career paths, taxonomy, anatomy, physiology, preventive medicine, common diseases, anesthesia, procedures, and conservation for terrestrial zoo species, with emphasis on clinical and management considerations across diverse taxa.

Course Learning Objectives

Course Learning Outcomes

1. Identify career pathways in zoo and conservation medicine and outline the training and professional opportunities available in traditional zoo practice.
2. Describe preventive medicine protocols for terrestrial zoo species, including nutrition, husbandry, vaccination strategies, and parasite management.
3. Explain how taxonomy, anatomy, and physiology of major terrestrial zoo taxa influence clinical presentations, diagnostic approaches, and medical management.
4. Recognize and discuss common diseases of reptiles, birds, carnivores, primates, ungulates, proboscideans, marsupials, and other zoo-housed mammals.

5. Summarize principles of anesthesia and common procedures relevant to terrestrial zoo species, emphasizing safety, welfare, and species-specific considerations.
6. Evaluate the role of zoo medicine in conservation and describe how management of individual animal health supports broader species and ecosystem preservation

No Requirements

Course Learning Objectives

Course Learning Outcomes
1. Identify the interplays between oceanography, physiology, and ecology as disciplines and how they relate to patterns of life in the oceans.
2. Articulate the fundamental concepts in marine biology, and how we obtain knowledge about the oceans.
3. Explain how our activities impact marine ecosystems and the organisms that inhabit them.
4. Develop a sound understanding of the scientific method, and how it relates to knowledge generation.

WATS3500 - Water and Power - 3 - Credits

Course Overview

Course Prefix
WATS

Course Number
3500

Department
Watershed Sciences

Course Title
Water and Power

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course examines how control over water resources has shaped economic and political power, and how science-based management and policy can address persistent water challenges. It focuses on the Western United States, particularly Utah's Great Salt Lake and Colorado River Basins.

Credit Hours

Credit Hours Min:

Course Learning Objectives

Course Learning Outcomes
1. Demonstrate an understanding of water management and policy.

2. Demonstrate how different disciplines use alternative approaches to answer big water challenges.

3. Gain a basic understanding of relevant social and physical science methods and how they contribute to water management and policy.

4. Connect water policy to experiences.

5. Exercise capacity for critical thought.

WATS3700 - Fundamentals of Watershed Science (CI) - 3 - Credits

Course Overview

Course Prefix
WATS

Course Number
3700

Department
Watershed Sciences

Course Title
Fundamentals of Watershed Science (CI)

General Education Attribute
CI

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Study of water movement, hillslope processes, and nutrient movement in catchments, and its relevance to the properties, land use, and management of watersheds as natural resource units.

WATS4050 - Marine Global Change: Impacts and Conservation Strategies - 3 - Credits

Course Overview

Course Prefix
WATS

Course Number
4050

Department
Watershed Sciences

Course Title
Marine Global Change: Impacts and Conservation Strategies

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course explores how climate change, pollution, and human activities affect marine ecosystems. Students analyze ecological impacts, examine mitigation strategies, and discuss innovative solutions for conserving biodiversity and fostering sustainable management of global marine resources.

Simple Requisites

Prerequisite

Type
Prerequisite

Required

Fulfill ANY of the following requirements:

Option 1

Complete ALL of the following Courses:

- WATS2500 - Introduction to Marine Biology (BLS)
- WATS3000 - Oceanography (DSC)

OR

Option 2

Complete ALL of the following Courses:

- GEO3300 - Geology of the World's Oceans (DSC)

Course Learning Objectives

Course Learning Outcomes

1. Subject Mastery- Gain foundational knowledge of marine global change, including key concepts, methods, and theories related to ecological impacts and conservation strategies.
Understand the principles driving marine ecosystem dynamics under global change scenarios.
2. Global and Cultural Awareness- Develop an understanding of diverse perspectives and global interconnectivity in addressing marine environmental challenges.
Explore the socio-cultural dimensions of marine conservation and the impacts of global change on diverse communities.
3. Application of Course Material- Apply scientific methods and critical thinking to solve problems and make informed decisions about marine conservation strategies.
Evaluate real-world case studies to develop actionable solutions to marine global change challenges.
4. Professional Skills and Competencies- Cultivate skills needed for careers in marine and aquatic sciences, including policy analysis, ecosystem management, and impact assessment.
Gain experience in designing and implementing research or conservation projects.
5. Team Collaboration- Develop teamwork skills by collaborating on group projects and presentations, simulating professional fieldwork and policy development processes.
6. Creative Capacities- Enhance creative problem-solving by designing innovative solutions for mitigating marine environmental challenges.
7. Broader Appreciation- Foster an appreciation for the complexity of marine ecosystems and their role in global ecological and cultural systems.
8. Communication Skills- Strengthen oral and written communication skills through presentations, essays, and discussions on marine conservation topics.
9. Research and Resource Evaluation- Learn how to locate, evaluate, and utilize scientific and policy resources to deeply explore issues in marine global change.
10. Ethical Reasoning- Develop the ability to make ethical decisions regarding marine resource management and conservation, considering environmental, social, and economic factors.
11. Critical Analysis- Analyze and critically evaluate arguments, data, and viewpoints in the context of marine global change and conservation debates.

WATS4100 - Climate Adaptation Intern Program - 3 - Credits

Course Overview

Course Prefix
WATS

Course Number
4100

Department
Watershed Sciences

Course Title
Climate Adaptation Intern Program

Grade Mode
Standard Letter

Repeat Status
RP

Course Description
This course for students in the Climate Adaptation Intern Program teaches climate change fundamentals and techniques for clear writing, then guides each student through creating a fact sheet or other product about a climate adaptation topic relevant to Utah.

Other Enrollment Recommendations
•Students must meet the following before enrollment or by the first week of class:

• Open Water SCUBA certification from an internationally recognized agency (PADI, NAUI, SSI, RAID, SDI, etc.)
• Completed AAUS Scientific Diving Medical Evaluation signed by a diving medical professional (form provided upon enrollment)
• Ability to pass a basic watermanship evaluation (400-yard swim in less than 12 minutes, 25-yard underwater swim, 10-minute survival float)
• The use of SCUBA gear meeting AAUS and institutional standards for the duration of the class

In addition to the above, it is recommended that students have the following before enrolling:

• 40 logged open-water dives
• Completion of a perfect buoyancy or peak performance buoyancy course
• Strong swimming skills and water comfort
• Experience with snorkeling, scientific equipment, or outdoor fieldwork
• Ability to work in small teams and maintain situational awareness underwater

Course Learning Objectives

Course Learning Outcomes

By the end of the course, students will be able to:

Knowledge-based outcomes

• Explain diving physics and physiology relevant to scientific diving
• Identify hazards, manage risk, and implement AAUS dive planning procedures
• Understand dive tables, computers, decompression theory, and emergency protocols
• Demonstrate familiarity with AAUS standards, forms, logs, and recordkeeping

Skills-based outcomes

• Maintain precise buoyancy, trim, and situational awareness
• Conduct underwater navigation using compass and natural references
• Perform scientific survey methods: transects, quadrats, fish surveys, substrate classification
• Execute emergency procedures including air-sharing, controlled ascents, and diver-rescue techniques
• Work effectively as part of a scientific dive team
• Deploy, use, and retrieve scientific equipment safely

Course Overview

Course Prefix
WATS

Course Number
5200

Department
Watershed Sciences

Course Title
Fish Habitats

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Examines biological and social factors influencing aquatic ecosystems and fish habitats within the context of forest management. Analyzes ecological relationships of fish habitats within forest ecosystem, and how these are influenced by forest management practices. Provides examples of forest habitat issues in major regions of North America, illustrating that both biological and social factors must be considered in developing management strategies and programs.

Other Enrollment Recommendations
Recommended to have completed a previous course in botany.

Course Learning Objectives

Course Learning Outcomes
1. Gain a basic understanding of wetland delineation and the underlying ecological, biogeochemical, and hydrological processes
2. Learn to apply wetland delineation course material in the real world when problem-solving and decision-making in the face of uncertainty are necessary

3. Develop specific skills and competencies needed by wetland professionals in the field of delineation

WATS5350 - Capstone and Professional Practice - 2 - Credits

Course Overview

Course Prefix
WATS

Course Number
5350

Department
Watershed Sciences

Course Title
Capstone and Professional Practice

Grade Mode
Standard Letter

Repeat Status
RP

Course Description
Students apply the principles, theory, and skills of watershed science to watershed and riverscape professional practice, management, and restoration. Students work with professionals on requests for proposals, planning, regulatory permitting, budget management, and contracting.

Small Watershed Hydrology (QI)

General Education Attribute
QI

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Detailed exploration of concepts of hydrologic processes in small, wildland watersheds. Concentrates on recent research findings concerning key hydrological processes. Particular attention paid to study of partitioning of water in the hydrologic cycle, sources for runoff generation, snow and snowmelt, and erosion. Features process modeling and parameter estimation techniques as related to wildland systems.

Course Learning Objectives

Course Learning Outcomes
1. Confidently read any riverscape and be able to map its core characteristics.

2. Differentiate influence of external controls (e.g., climate and catchment) vs. local controls on form and process.

3. Apply principles of geomorphic analysis to a diversity of riverscapes.

4. Recognize the primary controls on riverscape diversity, in which distinctive suites of physical and biotic processes (behavior) help shape the form and character of those landscapes.

5. Understand how hydrologic processes, give rise to hydraulic processes, which in local riverscapes determine the rates, magnitudes and occurrence of fluvial geomorphic processes.

6. Appreciate that topography is a quantitative record of landforms and apply morphometric analysis can be used to map and differentiate those landforms (i.e., geomorphic units).

7. Gain an appreciation of how geomorphic processes of erosion, deposition transport and storage of sediment shape topography and create, maintain, sculpt and destroy distinctive landforms.

8. Understand human impacts on riverscapes and fluvial forces.

9. Recognize how geomorphic analysis is used in practice to help manage riverscapes.

Course Number
6220

Department
Watershed Sciences

Course Title
Advanced Limnology

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course reviews the literature on current topics in limnology, with a particular focus on ecosystem metabolism (drivers of primary production and community respiration) and aquatic ecology across the lower trophic levels (generally excluding fish).

Course Overview

Course Prefix
WATS

Course Number
6270

Department
Watershed Sciences

Course Title
Big Ideas in Watershed Science

Grade Mode
Pass/Fail

Repeat Status
NR

Course Description
In this introductory course, students examine big ideas in watershed science and supporting disciplines of hydrology, geomorphology, biogeochemistry, and aquatic ecology. Students examine key concepts while exploring the methods, culture, and challenges of scientific inquiry.

WATS6305 - Ecology and Restoration of Plants - 3 - Credits

Course Overview

Course Prefix
WATS

Course Number
6305

Department
Watershed Sciences

Dual-Listed Courses
WATS5305 - Ecology and Restoration of Plants

Course Title
Ecology and Restoration of Plants

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course explores plant ecology (including wetland and riparian species) in the context of ecosystem restoration. It focuses on the needs of plant propagules (e.g., seeds, rhizomes, cuttings) to inform effective revegetation to meet habitat and other restoration goals. Additional coursework is required for those enrolled in the graduate-level course.

Course Learning Objectives

Course Learning Outcomes
1. Understand the fundamental principles of wetland and riparian plant ecology, including:
2. The wetland and riparian environment: hydrology, hydric soils, and biogeochemistry
3. Plant adaptations and responses to wetland conditions
4. Wetland plant population and community dynamics
5. Regeneration ecology: sexual (seeds) and asexual (clonal) reproduction
6. Analyze and critically evaluate how wetland and riparian plants can be utilized to meet restoration goals.
7. Apply ecological principles to the restoration of wetland and riparian plants.

WATS6311 - Field Botany: Wetland and Riparian Plants - 1 - Credits

6490

Department
Watershed Sciences

Dual-Listed Courses
WATS5490 - Small Watershed Hydrology (QI)

Course Title
Small Watershed Hydrology

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Detailed exploration of concepts of hydrologic processes in small, wildland watersheds. Concentrates on recent research findings concerning examining key hydrological processes. Particular attention paid to study of partitioning of water in the hydrologic cycle, sources for runoff generation, snow and snowmelt, and erosion. Features process modeling and parameter estimation techniques as related to wildland systems. Additional oral and written assignments required for graduate students.

Simple Requisites

A minimum grade of 'D' in Course WATS5622

Type
Prerequisite

Earn a minimum grade (UG) of D in the following:

- WATS5622 - Planning Low-Tech Process-Based Restoration of Riverscapes

Course Learning Objectives

Course Learning Outcomes

1. Conduct a desktop analysis in Riverscapes Studio of current conditions and recovery potential prior to visiting riverscape study site.
2. Visit field site, collect field observations, map and fly UAV and assess accuracy of desktop interpretations.
3. Combine field and desktop analyses to refine an assessment of riverscape health for current conditions, a historical baseline estimate and future recovery potential.
4. Prepare a planning assessment report and publish to Zenodo and publish supporting Riverscapes Studio Project to Data Exchange.
5. Present plan to stakeholders and peers and engage with feedback.

WATS6860 - Partnering with Beaver in Restoration Design - 1 - Credits

Course Overview

Course Prefix
WATS

Course Number
6860

Department
Watershed Sciences

Course Title
Partnering with Beaver in Restoration Design

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Covers stream/river restoration and conservation methods that partner with beaver as ecosystem engineers. Builds appreciation of beaver ecology and complex feedbacks between beaver activity, hydrogeomorphic responses, riparian vegetation and fish ecology. 1 credit; 3 day workshop.

Course Learning Objectives

Course Learning Outcomes

1. Demonstrate proficiency in oxy-fuel cutting and plasma-arc cutting.
2. Develop a basic knowledge of forging.
3. Demonstrate knowledge in principles and elements of design, and implement them in your projects.
4. Become familiar with the safety aspects associated with welding and general fabrication shop safety issues. Each student must complete a written safety test, at 80% or above, before being allowed to work in the shop.
5. Demonstrate ability to use equipment setup, welding technique on steel, and bending, cutting, and shaping metal using a variety of methods in order to create artistic sculptures.
6. Demonstrate competency in material preparation and finishing (grinding, sanding, oxidizing for aesthetic purposes, clear coating).
7. Demonstrate an ability to design and sketch a project, create a written plan, and weld a sculptural project to fit the requirements of a rubric.
8. Learn how to source materials for projects in a sustainable and cost-effective way.

WELD2400 - Print Reading for Welders - 3 - Credits

Course Overview

Course Prefix
WELD

Course Number
2400

Department
Technology, Design & Technical Ed

Course Title
Print Reading for Welders

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Designed for beginners with no blueprint experience, this course teaches view arrangement, shape analysis, pictorial sketching, line types, dimensions, tolerances, finish marks, bills of materials, and threads, emphasizing welding symbols following American Welding Society standards for accurate interpretation.

Course Learning Objectives

Course Learning Outcomes
1. This course covers an introduction to fire behavior, wildland firefighter training, and human factors on the fireline.
2. The course is a combination of on-line learning, classroom review, and field exercises.

WILD2800 - Introduction to Geographic Information Sciences - 4 - Credits

Course Overview

Course Prefix
WILD

Course Number
2800

Department
Wildland Resources

Course Title
Introduction to Geographic Information Sciences

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course introduces students to the background and theory behind geographic information systems and spatial analysis. Students learn to integrate and analyze spatial information from different geographic sources. The course includes a weekly laboratory section.

WILD3100 WILDLAND FIRE

No Requirements

Course Learning Objectives

Course Learning Outcomes

1. Synthesize and discuss published fire effects research from various wildland ecosystems.
2. Predict post-fire vegetation response based upon fire severity, soils, and ecological information.
3. Understand how post-fire recovery is influences by climate, topography and vegetation.
4. Design a post fire restoration treatment plan.

WILD6060 - Applied Bayesian Analysis of Ecological Data - 3 - Credits

Course Overview

Course Prefix
WILD

Course Number
6060

Department
Wildland Resources

Course Title
Applied Bayesian Analysis of Ecological Data

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course focuses on Bayesian statistical methods and their application to ecological data. Concepts discussed during lectures are reinforced through lab exercises focused on implementing statistical models using modern software tools (e.g., R, JAGS, NIMBLE).

Credit Hours

Credit Hours
Min:

Other Enrollment Recommendations
Students should have at least one semester of both graduate-level basic ecology and introductory statistics. (Suggestions include WILD6500 DESIGN/ANALYSIS USING R and WILD6600 GRADUATE ECOLOGY) In addition, students should be proficient with R and RStudio.

Course Learning Objectives

Course Learning Outcomes
The primary objective of this course is to give you the tools to tackle your research questions using rigorous statistical models appropriate for your data. In particular, you will leave this course with:

· A firm understanding of the foundational principles underlying common ecological models

· The ability to express mathematical/statistical models as they apply to common ecological datasets

· The ability to convert those models into working code for Bayesian data analyses

· The confidence needed to design, analyze, and report original ecological research using

WILD6100 - Scientific Communication for Natural Resource Professionals - 3 - Credits

Course Overview

Course Prefix
WILD

Course Number
6100

Department
Wildland Resources

Course Title
Scientific Communication for Natural Resource Professionals

Grade Mode
Standard Letter

Repeat Status

Prerequisite

Required

Complete ALL of the following Courses:

- WILD6500 - Design and Analysis of Ecological Research Using R

Course Learning Objectives

Course Learning Outcomes
1. Be familiar with generalized linear models for unbounded and bounded counts.
2. Be able to fit and assess Poisson, negative binomial, binomial, and conditional logit models in R.
3. Understand how the model of the variance enters into generalized least squares estimation, and understand how the constant variance and independence assumptions are structured in generalized least squares.
4. Differentiate among model assumptions when the covariance matrix is a) an identity matrix, b) a diagonal matrix, c) a block-diagonal matrix, d) an autoregressive structure.
5. Understand how to structure the covariance matrix to account for non-constant variance and temporal autocorrelation and be able to fit these models using the nlme package in R.
6. Understand the basics of hierarchical modeling and be able to identify key aspects of hierarchy within a study design.
7. Fit and assess hierarchical models in R.

WILD6580 - Management and Manipulation of Ecological Data Using R - 1 - Credits

Course Overview

Course Prefix
WILD

Course Number
6580

Department
Wildland Resources

Course Title
Management and Manipulation of Ecological Data Using R

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course provides instruction on the underpinnings of the R computing and statistical environment, as well as how to manage and manipulate data in the R environment.

WILD6600 - Graduate Ecology - 3 - Credits

Course Overview

Course Prefix
WILD

Course Number
6600

Department
Wildland Resources

Course Title
Graduate Ecology

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course offers a graduate-level introduction to concepts and models surrounding population and metapopulation dynamics, consumer-resource interactions, competition, and biodiversity. Students build ecological literacy while developing mathematical modeling skills and translating theory to their own projects.

WILD6700 - Restoration Ecology - 4 - Credits

Course Overview

Course Prefix
WILD

Course Number
6700

Department
Wildland Resources

Dual-Listed Courses
WATS6700 - Restoration Ecology

Course Title
Restoration Ecology

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Provides an understanding of ecological restoration, how to determine restoration goals, how to establish targets, and how to determine what are good measures of success. Teaches restoration implementation, best practices for restoration monitoring, and how to develop and sustain community support for restoration.

Course Overview

Course Prefix
WILD

Course Number
6710

Department
Wildland Resources

Course Title
Landscape Ecology

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
The course focuses on landscape-scale patterns and processes, and ways of understanding ecological complexity. It explores underpinnings of larger-scale ecology and emphasizes gaining hands-on experience applying landscape ecology concepts with data in R.

Ability to demonstrate geospatial skills using R

Simple Requisites

Prerequisite

Type
Prerequisite

Required

Fulfill ANY of the following requirements:

Option 1

Complete ALL of the following Courses:

- GEOG5300 - Geospatial Analysis with R
  OR GEOG6300 - Geospatial Analysis with R

may be taken concurrently

OR

Option 2

Complete ALL of the following Courses:

- NR6950 - Geospatial Analysis for Natural Resource Management

may be taken concurrently

WILD6720 - Advanced Conservation Biology - 3 - Credits

Course Overview

Course Prefix
WILD

Course Number
6730

Department
Wildland Resources

Course Title

Forest Community Ecology

Grade Mode
Standard Letter

Repeat Status
NR

Course Description

Community ecology of forest ecosystems. Quantitative methods of community description. Analytic treatment of scientific literature and an emphasis on critical scientific writing. Role of limiting factors, competition, and disturbance in determining community composition, structure, and dynamics.

Course Number
6750

Department
Wildland Resources

Dual-Listed Courses
WILD5750 - Applied Remote Sensing

Course Title
Applied Remote Sensing

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Covers the application of remote sensing to landcover mapping and resource monitoring at a quantitative level. Students instructed on the effects of atmosphere and surface interaction on the reflectance collected by electro-optical sensors, as well as on the proper use and interpretation of various calibration and classification algorithms.

Course Overview

Course Prefix
WILD

Course Number
6770

Department
Wildland Resources

Course Title
Community Ecology

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students learn theory and concepts of plant community ecology. They explore plant community composition, distribution in space, and dynamics in time. Species environmental response models, competition theory, statistical predictive models, and concepts of multivariate analysis in plant ecology are discussed.

6800

Department
Wildland Resources

Dual-Listed Courses
WILD7800 - Wildland Resources Departmental Seminar

Course Title
Wildland Resources Departmental Seminar

Grade Mode
Pass/Fail

Repeat Status
RP

Course Description
Review of current research by graduate students and faculty. Exposes students to new developments in research and management in the fields of wildland resources. Features participation by students, faculty, and guest lecturers. Graduate students are required to register for one semester of seminar credit but are encouraged to attend as many seminars as possible throughout their academic experience.

Course Overview

Course Prefix
WILD

Course Number
6880

Department
Wildland Resources

Course Title
Space-Use Ecology

Grade Mode
Pass/Fail

Repeat Status
NR

Course Description
This course provides graduate students with a basic understanding of hypotheses-driven analyses of organismal positional data (telemetry, surveys, traps, cameras, etc.) in an ecological context. The course also increases capacity for analysis implementation.

- ASTE3440 - Science, Technology, and Modern Society (DSC)
- ANTH3240 - Anthropology of Disease (DSC)
- ANTH3225 - Sex, Evolution, and Health (DSC)

Breadth Life Sciences (BLS) Course

- HEAL1500 - Anatomy and Physiology (BLS)
- CIVC1520 - Farm to Future: Sustainable Food Systems (BLS)
- CIVC1510 - Our Place in the Natural World (BLS)
- CIVC1500 - The Science of You: Health and the Human Body (BLS)
- BIOL1620 - Biology II (BLS)
- WATS2500 - Introduction to Marine Biology (BLS)
- WATS1200 - The Natural World and Our Place Within It (BLS)
- PSC1800 - Introduction to Horticulture (BLS)
- NDFS1020 - Science and Application of Human Nutrition (BLS)
- LAEP1040 - Introduction to Environmental Planning and Sustainable Development (BLS)
- ENVS1350 - Introduction to Environmental Science (BLS)
- BIOL1010 - Biology and the Citizen (BLS)
- ANTH1020 - Biological Anthropology (BLS)
- ADVS1110 - Introduction to Animal Science (BLS)
- USU1350 - Integrated Life Science (BLS)

Quantitative Literacy (QL) Course

- STAT1080 - Foundations of Data Science (QL)
- MATH1051 - Classical Algebra for Teachers (QL)
- MATH1030 - Quantitative Reasoning (QL)
- CIVC1020 - Financial Foundations for Life and Society (QL)
- CIVC1010 - Data and the Stories They Tell (QL)
- CIVC1000 - Math for Real World Problems (QL)
- STAT2300 - Business Statistics (QL)
- MATH1220 - Calculus II (QL)
- MATH1210 - Calculus I (QL)
- MATH1100 - Calculus Techniques (QL)
- MATH1050 - College Algebra (QL)

Breadth American Institutions (BAI) Course

- ECON2020 - Introduction to Macroeconomics (BAI)
- ECN1500 - Introduction to Macroeconomics
- CIVC1220 - "Promote the General Welfare": The American Economy (BAI)
- CIVC1210 - “A More Perfect Union”: American History (BAI)
- CIVC1200 - “The Blessings of Liberty”: American Government (BAI)
- POLS1100 - United States Government and Politics (BAI)
- HIST2710 - United States 1877-Present (BAI)
- HIST2700 - United States to 1877 (BAI)
- HIST1700 - American History (BAI)
- APEC1600 - Natural Resources and American Economic Institutions (BAI)
- USU1300 - U.S. Institutions (BAI)
- HONR1300 - U.S. Institutions (H) (BAI)
- GEBAI - BREADTH AMER INSTITUTION

Breadth Creative Arts (BCA) Course

- THEA1513 - Stagecraft (BCA)
- CIVC1624 - Writing and the Creative Life (BCA)

- CIVC1622 - Visual Arts and the Creative Life (BCA)
- CIVC1620 - Music and the Creative Life (BCA)
- CIVC1610 - Design Thinking (BCA)
- CIVC1600 - Thinking Through the Arts (BCA)
- THEA1033 - Beginning Acting (BCA)
- THEA1023 - Introduction to Film (BCA)
- THEA1013 - Understanding Theatre (BCA)
- THEA1000 - Acting I: Introduction to Acting (BCA)
- MUSC1195 - Global Perspectives in Performance (BCA)
- MUSC1110 - Music Theory I (BCA)
- MUSC1105 - Fundamentals for Music Majors (BCA)
- MUSC1100 - Fundamentals of Music for Non-Music Majors (BCA)
- MUSC1050 - Contemporary Pop A Cappella: Context, Arranging, and Performance (BCA)
- MUSC1010 - Introduction to Music (BCA)
- LAEP1030 - Introduction to Landscape Architecture (BCA)
- IAD1750 - Design in Everyday Living (BCA)
- HONR1330 - Civilization: Creative Arts (H)(BCA)
- DANC1010 - Dance in Culture (BCA)
- ART1020 - Drawing I (BCA)
- ART1010 - Exploring Art (BCA)
- USU1330 - Civilization: Creative Arts (BCA)

Requirement Sets

Business Acumen (46-47 credits)

Simple Requisites

Business Acumen (46-47 credits)

Type

Completion Requirement

Required

Complete ALL of the following Courses:

- ACCT2010 - Financial Accounting Principles
- ACCT2020 - Managerial Accounting Principles
- BUS3200 - Professional Communication with AI (CI)
- DATA1100 - Excel for Business Analysis
- DATA2100 - Data and Information in Business
- DATA3100 - Making Decisions with Data
- DATA3300 - Introduction to Modern Data Analytics (QI)
- ECN1500 - Introduction to Macroeconomics
- ECN2010 - Introduction to Microeconomics (BSS)
- FIN3200 - Corporate Finance (QI)
- FIN3300 - Investments
- MGT3050 - Foundations of Business: Capitalism, Markets, and Innovation
- MGT3350 - Legal and Ethical Environment of Business
- MGT3700 - Operations Management
- MSLE3500 - Fundamentals of Marketing
- MSLE3800 - Leadership
- MSLE3890 - Systems Strategy and Problem Solving

Accounting majors require a B grade or higher in ACCT2010

Finance, International Business, and Management (Wealth Management emphasis) majors require a B- grade or higher in FIN3200

International Business and Management (Operations and Supply Chain Management emphasis) majors require a B- grade or higher in MGT3700

International Business majors require a B- grade or higher; Marketing majors require a B- grade or higher in MSLE 3500
