World Languages and Cultures: German Emphasis - BA

Program Overview

College
College of Arts & Sciences

Department
World Languages and Cultures

Program Level
Undergraduate

About this Degree

The goal of the German program at USU is to prepare students for a high level of proficiency in professional and academic contexts.

Majors take language courses in which they develop speaking, listening, reading and writing skills; culture and literature courses where they learn about the traditions and perspectives of German-speaking communities; and business and translation courses, which offer practice-oriented preparation for the job market. They also have the option to participate in study abroad programs in Germany where they gain proficiency in German and experience exciting travel opportunities.

The faculty members in the German program have culturally diverse expertise in language, literature, and culture which helps majors gain a solid grounding in German language and culture and prepares them to function effectively in a variety of careers and as members of the international community.

- Please make sure to consult regularly with your departmental advisor to confirm what courses will be available and to work out your plan of study.
- Admitted and current students must meet with an academic advisor.
- Log on to Degree Works to check student-specific program progress.
- The highest math requirement for this degree is Quantitative Literacy (QL) course of the student's choice.

Admission Requirements for this Program

- 2.0 GPA Minimum
- Bridge Program students should begin by consulting the USU Bridge Program page.

Program Requirements

Total Credits Required In Program Coursework
30

Total Credits Required To Earn This Credential
120

Simple Requisites

Program Requirements

- **Total Credits:** 30
- **USU Credit Requirement**: At least half (50 percent) of the credits earned for this degree must be completed in upper-division USU courses having prefixes of GERM or LING. All other credits (including transfer and study abroad credits) must be approved by the program's academic advisor in order to be counted toward the major. Students who have completed Bridge Program Language courses should contact their advisor as these courses may count toward elective credits and credits toward major requirements.
- **Minimum Grade Requirement:** All courses for the major require a minimum grade of **C-** or better. Courses for the major *may not* be taken on a pass/fail basis.
- **Note:** Students with prior language credit or language experience should take the department placement test before admission to the German major or minor. Credits obtained in lower-division German courses *cannot* be applied to toward the German major or minor programs.

World Languages and Cultures: German Emphasis - BA

Type
Completion Requirement

A. Required Course (3 credits)

Complete at least 1 of the following courses:

- LING4100 - The Study of Language - 3cr.

B. Elective Courses (30 credits)

Students must complete at least 27 credits of upper-division coursework selected from the following:

Fulfill ANY of the following requirements:

Upper-division Coursework Elective Options

Complete ANY of the following Courses:

- GERM3116 - Popular Culture in the German-Speaking World - 3cr.
- GERM3117 - Stories and Storytelling: Young Voices & Cultural Identity - 3cr.
- GERM3118 - Berlin: Monuments, Multiculturalism, and Memory - 3cr.
- GERM3000 - Introduction to German Studies (DHA) - 3cr.
- GERM3040 - Advanced German Grammar & Culture (CI) - 3cr.
- GERM3050 - Advanced German Conversation (CI) - 3cr.
- GERM3300 - Contemporary German Speaking Cultures (DHA) - 3cr.
- GERM3510 - Business German (CI) - 3cr.
- GERM3540 - Techniques in Translating German Texts (CI) - 3cr.
- GERM3550 - Cultural History of German Speaking Peoples (DHA) - 3cr.
- GERM3600 - Classic German Art and Literature (DHA) - 3cr.
- GERM3610 - Contemporary German Art and Literature (DHA)9 - 3cr.
- GERM3800 - German III Study Abroad - 1cr.
- GERM3880 - Individual Readings - 1cr.
- GERM4200 - Applied German Linguistics and Phonetics - 3cr.
- GERM4610 - German Narratives - 3cr.
- GERM4650 - Trends in Modern Germany (DHA) - 3cr.
- GERM4800 - German IV Study Abroad - 1cr.
- GERM4880 - Individual Readings - 1cr.
- GERM4900 - Special Topics - 3cr.
- GERM4910 - German for Special Purposes - 3cr.
- GERM4920 - German Language Tutoring - 1cr.

NOTE:

1. GERM3800 GERMAN III STUDY ABRD, GERM3880 INDIVIDUAL READINGS, GERM4800 GERMAN IV STUDY ABRD, GERM4880 INDIVIDUAL READINGS, GERM4900 SPECIAL TOPICS, GERM4920 GERMAN LANGUAGE TUTOR - Are repeatable for additional credit.

OR

Additional Course Options

One of the following six courses is possible to complete German Major coursework:

Complete ANY of the following Courses:

- CMST3330 - Intercultural Communication (DSS) - 3cr.
- LING2100 - Languages in Global and Historical Context (BSS) - 3cr.
- LING3100 - Language in Social Context - 3cr.
- LING3200 - Introduction to Linguistics (DSS) - 3cr.
- LING4100 - The Study of Language - 3cr.
- LING4900 - Analysis of Cross-Cultural Difference - 3cr.

Open Electives

Complete the following as needed:
Total elective credit is determined by General Education courses taken, degree type selected, additional credits earned, and any additional math or other prerequisite courses needed. Please consult your Academic Advisor for details.

Additional Comments:

World Languages and Cultures: Japanese Emphasis - BA

Program Overview

College
College of Arts & Sciences

Department
World Languages and Cultures

Program Level
Undergraduate

About this Degree

The Japanese major emphasis provides intercultural competence and communication skills essential for career opportunities in the US and globally, for example in: IT, AI, engineering, research and development, international trade, banking, logistics, tourism, supply chain management, teaching, media and creative industries, or diplomacy. Students develop a deeper understanding of Japanese culture, popular culture, and traditions, as well as film, media, business culture, educational systems, and literature. Japanese proficiency allows professionals to work directly in Japan or with many worldwide companies. Graduates also pursue careers as translators, interpreters, or content localizers for gaming, media, and tech. Students develop durable, transferable skills in communication, critical thinking, and analysis.

Students with higher language proficiency and prior language experience, who test out of lower-division language courses at USU, may potentially complete degree requirements much faster. Many students also choose a World Languages & Cultures BA as a second major.

USU's Japanese program offers many unique opportunities for cultural activities, conversation and reading practice, research projects, community engagement, exchange programs in Japan, student clubs, and study abroad.

Admission Requirements for this Program

2.0 GPA minimum.

World Languages and Cultures: Japanese Emphasis - BA

Type
Completion Requirement

Required Core courses (7 credits)

Complete ALL of the following Courses:

- LING4100 - The Study of Language - 3cr.
  OR JAPN4200 - Introduction to Japanese Linguistics - 3cr.
- JAPN3010 - Japanese Third Year I - 4cr.
- JAPN3020 - Japanese Third Year II - 4cr.
- JAPN3050 - Japanese Calligraphy - 1cr.
  OR ART3050 - Japanese Calligraphy - 1cr.
- JAPN3060 - Japanese Communication - 3cr.
- JAPN3080 - Japanese Service Learning - 3cr.
- JAPN3090 - Introduction to Japanese Literature - 3cr.
- JAPN3100 - Readings in Contemporary Japanese Culture - 3cr.
- JAPN3510 - Japanese for the Business Environment - 3cr.
- JAPN3560 - Studies in Japanese Film - 3cr.

Elective Courses (23 credits)

In addition to the 7 required credits above, students must complete 23 minimum elective credits selected from the following sets of courses.

Fulfill ANY of the following requirements:

Japanese Elective Courses

Complete ANY of the following Courses:

- JAPN3080 - Japanese Service Learning - 3cr.
- JAPN3090 - Introduction to Japanese Literature - 3cr.
- JAPN3100 - Readings in Contemporary Japanese Culture - 3cr.
- JAPN3150 - Tadoku: Extensive Reading in Japanese - 1cr.
- JAPN3510 - Japanese for the Business Environment - 3cr.
- JAPN3560 - Studies in Japanese Film - 3cr.
- JAPN4200 - Introduction to Japanese Linguistics - 3cr.
- JAPN4800 - Japanese Education System - Study Abroad - 3cr.
- JAPN4920 - Japanese Language Tutoring - 1cr.

NOTE:

1. JAPN3050 JAPANESE CALLIGRAPHY/ART3050 JAPANESE CALLIGRAPHY - Repeatable for credit, up to 3 credits may count toward Japanese Major emphasis.
2. JAPN4920 JAPN LANG TUTORING - Repeatable for credit, up to 3 credits may count toward Japanese Major emphasis.

OR

Elective courses taught in English

Up to two (6 credits) of the following courses, typically taught in English, may be used toward the 23 credits of electives for the Japanese Emphasis:

Complete ANY of the following Courses:

- HIST3550 - Culture of East Asia (DHA) - 3cr.
  OR LANG3550 - Culture of East Asia (DHA) - 3cr.
- HIST4150 - Japan, Europe, and the Early Modern World - 3cr.
- LANG3570 - Narrative Ethics in Asian Literature and Film (DHA) - 3cr.
- LANG3650 - Women and Gender in East Asian Culture - 3cr.
- LING2100 - Languages in Global and Historical Context (BSS) - 3cr.
- LING3100 - Language in Social Context - 3cr.
- LING3200 - Introduction to Linguistics (DSS) - 3cr.
- LING4900 - Analysis of Cross-Cultural Difference - 3cr.

World Languages and Cultures: Linguistics Emphasis - BA

Program Overview

College
College of Arts & Sciences

Department
World Languages and Cultures

Program Level
Undergraduate

About this Degree

The Linguistics major emphasis focuses on the scientific study of language, including the underlying rules and structures that make communication possible. In addition to developing proficiency in one or more languages, students gain an understanding in theory and practice of linguistics subfields, including: Phonetics, Phonology, Morphology, Syntax, Semantics, Pragmatics, Sociolinguistics, Applied Linguistics, Language Acquisition and Second Language Acquisition, etc. Students develop durable workforce skills in analysis, data analysis, communications, critical thinking, intercultural competence, language proficiency, and more. Graduates may find career pathways in: AI/machine learning, education, research, teaching, localization, editing, forensic linguistics, tech, and more. Graduates may find jobs in education or in the private sector, or continue their studies in graduate school. Additional upper-division Linguistics courses will be added to the program soon.

Simple Requisites

Program Requirements

The Linguistics Major emphasis is 30 credits. In addition to LING4100 STUDY OF LANGUAGE, complete 21 credits in LING-prefix or other approved listed courses, including must complete required LING3100 LANGUAGE IN SOCIAL CONTEXT andLING3200 INTRO TO LINGUISTICS (DSS); and must complete 6 credits minimum in World Languages courses as outlined above (many options).

World Languages and Cultures: Linguistics Emphasis - BA

Type
Completion Requirement

Required Courses (9 credits)

Complete ALL of the following Courses:

- LING4100 - The Study of Language - 3cr.
- LING3200 - Introduction to Linguistics (DSS) - 3cr.
- LING3100 - Language in Social Context - 3cr.

Elective Courses (15 credits)

Complete ANY of the following Courses:

- LING2100 - Languages in Global and Historical Context (BSS) - 3cr.
- LING2500 - Language & Religion - 3cr.
- LING4900 - Analysis of Cross-Cultural Difference - 3cr.
- CMST3330 - Intercultural Communication (DSS) - 3cr.
- SPAN4200 - Introduction to Hispanic Linguistics - 3cr.
  OR FREN4200 - French Linguistics and Phonetics - 3cr.
  OR GERM4200 - Applied German Linguistics and Phonetics - 3cr.
  OR JAPN4200 - Introduction to Japanese Linguistics - 3cr.
- LANG3100 - A Linguistic Introduction to English - 3cr.
- LING3100 - Language in Social Context - 3cr.
- LING3200 - Introduction to Linguistics (DSS) - 3cr.
- LING3300 - Clinical Experience I - 1cr.

15 credits of elective courses if not already used to satisfy required courses above

Language Courses (6 credits)

Complete a minimum of 6 credits in one of the following:

- One single language: Complete 1 language course at the 2020/2030/2040 level (or test score of 440 minimum) **and** 1 language course at the 3XXX level or 4XXX level, with a C- or better.
- Any 2 language courses at the 3XXX or 4XXX level with a C- or better.
- Two different languages at the level of 1020/1030/1040 or higher with a C- or better (or test scores of 320 minimum).
- Two or more 3116, 3117, or 3118 Bridge program courses in high school (Spanish, Chinese, German, French, Portuguese, Russian) with a C- or better.
- **Equivalent coursework through testing:** Fulfill part or all of the credits through USU Language Proficiency Testing (50+ languages available)**. Students may choose to purchase USU credits for the credits earned through testing.**

Degree Map Narrative

- Following is just a **sample, generic plan. This plan offers just as an example a student choosing 6 credits of upper-division Spanish to fulfill the language(s) requirement, but there are many possible options and other languages or ways to fulfill the language requirement for Linguistics.**
- Specific plans for each student will differ.
- N**ew Linguistics courses will be added in future semesters as this new major emphasis expands.**
- Students with higher language proficiency, who test out of lower-division language courses at USU,

may possibly complete the degree faster (it is possible to test out of 1010, 1020, 2010, 2020).

- Students with **Bridge** program upper-division language course credits may possibly complete the degree faster.
- Some accelerated language courses (covering two semesters in one) may be available in some languages.
- Several language courses offer CI-Communications Intensive or DHA-Depth Humanities attributes.
- Meet with an academic advisor to create a specific plan that best fits your needs and goals.
- The student is ultimately responsible for knowing and completing all degree requirements.
- Contact the Department of World Languages & Cultures for Language Proficiency and Placement Testing available **in over 50+ languages.**
- Consultation with an advisor may result in an altered plan customized for an individual student.
- Check your Degree Works for requirements and completion.

World Languages and Cultures: Portuguese Emphasis - BA

Program Overview

College	Department	Program Level
College of Arts & Sciences	World Languages and Cultures	Undergraduate

About this Degree
From the US to Europe to South America, graduates in Portuguese find roles in global business, healthcare, translation and interpretation, localization, teaching and education, NGOs and non-profits, development, security, intelligence, and diplomacy spheres.

Students in the USU Portuguese program may take courses ranging from Business Portuguese to Healthcare Translation and Interpretation to Brazilian Media, and beyond. Students explore the many cultures and countries of the Lusophone (Portuguese-speaking) world. Free tutoring, an active student Portuguese Club with many cultural and culinary activities, scholarship opportunities, and study abroad opportunities in Brazil or Portugal are available for students of Portuguese at USU. Students build skills in communication, analysis, problem solving, critical thinking, and cultural competence.

Many students with prior language experience choose a World Languages & Cultures major, or World Languages & Cultures as a dual major, to further develop and showcase their language skills to employers. DLI (Dual Language Immersion)/Bridge/AP (Advanced Placement)/IB language students, returned missionaries with language experience, heritage speakers, bilingual students, members of the military with language experience, and study abroad participants, often select a World Languages & Cultures major or as a dual major. Please contact your advisor for more information.

Admission Requirements for this Program
2.0 GPA minimum

Admission Requirements for Teaching Licensure track

GPA: New freshmen: 3.0 GPA; Transfer students from other institutions or other programs at USU: 3.0 GPA. Students must maintain a minimum 3.0 through graduation. Pass the USOE background check. Complete admission core course requirements (see STEP application). World Languages and Cultures majors/minors-obtain required OPI exam score prior to admission. Students should consult the application checklist: https://cehs.usu.edu/teal/files/undergrad/step-application-checklist-06242021.pdf and https://cehs.usu.edu/teal/undergraduate-1/sec-ed and contact a TEAL Advisor.

2. SCED4300 CLINICAL EXPERIENCE II and LING5400 TEACHING MODERN LANGUAGES must be taken during the same semester.

Additional Comments:

Licensure Notification

This program typically leads to licensure and was designed to meet licensing qualifications in the state of Utah. If students wish to work in another state within the United States, they should review the qualifications for that state and the Education Licensure Compliance Table provided by School of Teacher Education and Leadership.

For more information, please contact the School of Teacher Education and Leadership at https://cehs.usu.edu/teal/

Degree Map Narrative

This is a sample generic degree map for a complete beginner just starting with the language. DLI/Bridge students who have taken one or more Bridge courses may fulfill requirements quicker. Students with prior language experience and higher proficiency may take the USU Language Proficiency Placement Exam and possibly "test out of" levels to complete degree requirements quicker and take more advanced courses. Degree Maps will not be the same for all students. All students should meet with a World Languages & Cultures Advisor for personalized degree planning.

World Languages and Cultures: Russian Emphasis - BA

Program Overview

College
College of Arts & Sciences

Department
World Languages and Cultures

Program Level
Undergraduate

About this Degree

Students in the USU Russian program may take courses ranging from Business Russian, to Russian Translation, to Medical Interpreting in Russian, and more. Students explore the many cultures and countries of the Russian-speaking world. Free tutoring, an active student Slavic Club, and scholarship and study abroad opportunities are available for students of Russian. Students build skills in communication, analysis, problem solving, critical thinking, and cultural competence. Graduates chose many career pathways with opportunities to use Russian: diplomacy, intelligence, national security, international business, STEM fields, education, NGOs, humanitarian work, and development, as well as in translation, interpretation, and localization.

Many students with prior language experience choose a World Languages & Cultures major, or World Languages & Cultures as a dual major, to further develop and showcase their language skills to employers. DLI (Dual Language Immersion)/Bridge/AP (Advanced Placement)/IB language students, returned missionaries with language experience, heritage speakers, bilingual students, members of the military with language experience, and study abroad participants, often select a World Languages & Cultures major or as a dual major. Please contact your advisor for more information.

30

Total Credits Required To Earn This Credential
120

Simple Requisites

Program Requirements

The Russian major emphasis requires 30 credits, including LING4100 STUDY OF LANGUAGE, the required core course, and RUSS 3040. **Those with prior language experience may take the USU Language Proficiency Test for placement, and may earn up to 16 USU lower-division credits. No prior language skills are required**, and students may begin a new language upon entry to the major.

World Languages and Cultures: Russian Emphasis - BA

Type
Completion Requirement

Required Courses (6 credits)

Complete ALL of the following Courses:

- LING4100 - The Study of Language - 3cr.
- RUSS3040 - Advanced Russian Grammar and Composition - 3cr.

NOTE:

1. LING4100 STUDY OF LANGUAGE - May be taken at any time, and is taught in English.

Elective Courses (24 credits)

In addition to the 6 credits above of LING 4100 and RUSS 3040, students must complete 24 minimum credits selected from the following sets of courses:

Fulfill ANY of the following requirements:

Russian Elective courses

Complete ANY of the following Courses:

- RUSS2030 - Accelerated Russian Second Year - 4cr.
- RUSS3050 - Advanced Russian Grammar and Composition - 3cr.
- RUSS3116 - Rusophone Popular Culture: Trends and Traditions - 3cr.
- RUSS3117 - Exploring Russia: East to West - 3cr.
- RUSS3400 - Russian Language through Art - 3cr.
- RUSS3100 - Healthcare Russian - 3cr.
- RUSS3300 - Contemporary Russian Language and Culture (DHA) - 3cr.
- RUSS3510 - Business Russian (CI) - 3cr.
- RUSS3540 - Russian Translation for Science, Business, and Culture - 3cr.
- RUSS3600 - Ethical Communication in Russian Life - 3cr.
- RUSS4081 - Medical Interpreting Training - 3cr.
- RUSS4920 - Russian Language Tutoring - 1cr.

Degree Map Narrative

- Following is a sample four-year plan. Please note that student-specific plans may differ.
- Meet with an academic advisor to create a specific plan that best fits your academic needs.
- The student is ultimately responsible for knowing and completing all degree requirements.
- Make sure you meet the registration requirements for each class by clicking the course link and checking any prerequisites or corequisites.
- Consultation with an advisor may result in an altered plan customized for an individual student
- Check your Degree Works for requirements and completion.

NOTES:

- Following is a **sample**, generic plan for a student who is just beginning to study the Russian language.
- **Students with higher language proficiency and prior language experience, Bridge program participants, and those who test out of lower-division language courses at USU, may potentially complete degree requirements much faster.**
- Contact the Department of World Languages & Cultures for proficiency and placement testing in Russian and 50+ other languages, including other Slavic languages.
- The department offers some accelerated language courses at the beginning and intermediate levels (RUSS1040 ACCELERATED RUSSIAN I combines coverage of RUSS1010 RUSSIAN FIRST YR I and RUSS1020 RUSSIAN FIRST YR II content; and RUSS2030 ACCELERATED RUSSIAN II combines coverage of RUSS2010 RUSSIAN SECOND YR I and RUSS2020 RUSSIAN SECOND YR II content at an accelerated pace)
- Several language or linguistics courses in the department offer Communications Intensive (CI) or Depth Humanities and Creative Arts (DHA) attributes.
- Specific plans for each student will differ. Below is just a suggested possible plan.

World Languages and Cultures: Spanish Emphasis - BA

Program Overview

College
College of Arts & Sciences

Department
World Languages and Cultures

Program Level
Undergraduate

About this Degree

Studying Spanish, from language to cultures, from literature to film, from Business Spanish to healthcare interpretation and beyond gives graduates additional skills and value added to be competitive in many career pathways both locally and globally: education and teaching, technology and AI, healthcare, legal, international business, global development, tourism and hospitality, law enforcement, intelligence, national security, creative industries, diplomacy, research and development, non-profits and NGOs, media, and much more. Students develop durable skills in communication, intercultural competence, analysis, critical thinking, and problem solving, as well as translation, interpretation, and localization. USU offers free Spanish language tutoring, a very active student Spanish Club, cultural activities, USU study abroad programs in Spain and Argentina, scholarship opportunities, credentials in healthcare and legal interpretation, and many hands-on internship/practicum opportunities in local companies and communities.

Admission Requirements for this Program

World Languages and Cultures: Spanish Emphasis - BA

2.0 GPA minimum

Admission Requirements for World Languages & Cultures BA, Spanish Emphasis *with* World Languages Education Track/Secondary School Licensure

GPA: New freshmen: 3.0 GPA for this program only; Transfer students from other institutions or other programs at USU: 3.0 GPA. Students must maintain a **minimum 3.0** through graduation. Simple Requisites

Program Requirements

World Languages and Cultures: Spanish Emphasis - BA

30 credits required

World Languages & Cultures BA, Spanish Emphasis *with* World Languages Education Track/Secondary School Licensure

65 credits required (30 program + 35 STEP)

- **Credits: 58 (30 program credits + STEP credits)**
- **GPA required for STEP program:** 3.0 GPA
- **Minimum Grade Requirement:** All courses taken for the major and all **STEP** courses require a minimum grade of **C** or better. Courses may NOT be taken on a pass/fail basis (**except** for courses designated as pass/fail, such as SCED 3300, SCED 5630, SPAN 3010, SPAN 3520, and SPAN 4920).
- To be licensed to teach in the Utah public secondary school system, students completing the World Languages Education with Secondary School Licensure must complete the additional courses (28 credits) required by the Secondary Education Program (STEP). Courses may be subject to change, and students should contact the Secondary Education Advising Office for a current course list of STEP requirements. STEP Program: https://www.usu.edu/degrees-majors/secondary-teacher-education-program-step_licensure
- SCED4300 CLINICAL EXPERIENCE II and LING5400 TEACHING MODERN LANGUAGES **must be taken during the same semester,** and should be the last courses taken for the minor. These courses should be taken the fall semester before student teaching.
- Students completing endorsements must follow all state requirements, including ACTFL OPI/Praxis test score requirements.
- World Languages Endorsement information: https://www.schools.utah.gov/licensing/endorsements/World%20Languages%20Endorsement%20Specs.pdf

World Languages and Cultures: Spanish Emphasis - BA

Type
Completion Requirement

Required Courses (6 credits)

Complete ALL of the following Courses:

- SPAN3040 - Advanced Spanish Grammar - 3cr.
  OR SPAN3060 - Advanced Spanish Conversation and Composition (CI) - 3cr.
- LING4100 - The Study of Language - 3cr.

NOTE:

1. SPAN3040 ADV SPANISH GRAMMAR or SPAN3060 ADV SPANISH CONV AND COMP (CI) can be taken concurrently with the required program courses, and be completed with a C or better.
2. LING4100 STUDY OF LANGUAGE - May be taken at any time, and is taught in English

Elective Courses (24 credits)

It is strongly recommended that all Spanish Emphasis majors complete the following 21 credits as part of the 24 required credits for Spanish: SPAN3300 INTRO TO HISPANIC LITERATURE **AND** then least one SPAN 34XX- *OR* SPAN 35XX-level course (3 credits); *AND* at least one SPAN 36XX-level course (3 credits); *AND* three (9 credits) SPAN 49XX- *OR* SPAN 5XXX-level courses.

Courses for the major may **not** be taken on a pass/fail basis, **except** for SPAN 3010, SPAN 3520, and SPAN 4920 which may be taken pass/fail.

Complete ANY of the following Courses:

- SPAN3010 - Hispanic Outreach Practicum - 1cr.
- SPAN3040 - Advanced Spanish Grammar - 3cr.
- SPAN3060 - Advanced Spanish Conversation and Composition (CI) - 3cr.

- SPAN3061 - Fundamentals of Translation and Interpretation - 3cr.
- SPAN3081 - Healthcare Translation - 3cr.
- SPAN3082 - Legal and Business Translation - 3cr.
- SPAN3100 - Spanish Healthcare - 3cr.
- SPAN3116 - Spanish Pop Culture: Film, Media and Entertainment - 3cr.
- SPAN3117 - Building Identities (Breaking Down Walls, Building Identities) - 3cr.
- SPAN3118 - Literature and Film: Contemporary Issues - 3cr.
- SPAN3300 - Introduction to Hispanic Literature and Literary Analysis - 3cr.
- SPAN3400 - Introduction to Hispanic Cinema - 3cr.
- SPAN3510 - Business Spanish - 3cr.
- SPAN3520 - Business Spanish Practicum - 1cr.
- SPAN3550 - Spanish Culture and Civilization (DHA) - 3cr.
- SPAN3560 - Introduction to U.S. Latino/a Culture - 3cr.
- SPAN3570 - Hispanic American Culture and Civilization (DHA) - 3cr.
- SPAN3600 - Survey of Spanish Literature I (DHA) - 3cr.
- SPAN3610 - Survey of Spanish Literature II (DHA/CI) - 3cr.
- SPAN3620 - Survey of Hispanic American Literature I (DHA) - 3cr.
- SPAN3630 - Survey of Hispanic American Literature II (DHA) - 3cr.
- SPAN4091 - Computer Assisted Translation - 3cr.
- SPAN3640 - Introduction to U.S. Latino/a Literature - 3cr.
- SPAN3650 - Spanish Literature-Study Abroad - 1cr.
- SPAN3660 - Hispanic American Literature - Study Abroad - 1cr.
- SPAN3800 - Spanish III Study Abroad - 1cr.
- SPAN4071 - Simultaneous and Consecutive Healthcare Interpretation - 3cr.
- SPAN4072 - Simultaneous and Consecutive Legal Interpretation - 3cr.
- SPAN4081 - Medical Interpretation Training (BTG) - 3cr.
- SPAN4082 - Advanced Legal Translation and Interpretation - 3cr.
- SPAN4200 - Introduction to Hispanic Linguistics - 3cr.
- SPAN4800 - Hispanic Culture and Civilization-Study Abroad - 1cr.
- SPAN4880 - Individual Readings - 1cr.
- SPAN4900 - Topics of Spanish Cultural Production - 3cr.
- SPAN4910 - Topics of Hispanic American Cultural Production - 3cr.
- SPAN4920 - Spanish Language Tutoring - 1cr.
- SPAN4930 - Topics of U.S. Latina/o Literature and Culture - 3cr.
- SPAN5060 - Spanish for Professional and Academic Purposes - 3cr.

NOTE:

1. SPAN3040 ADV SPANISH GRAMMAR - If not already used as WL&C Major Spanish Emphasis core course.
2. SPAN3060 ADV SPANISH CONV AND COMP (CI) - If not already used as WL&C Major Spanish Emphasis core course.
3. SPAN3116 SPANISH POP CULTURE - Bridge program only.
4. SPAN3117 BUILDING IDENTITIES - Bridge program only.
5. SPAN3118 LIT AND FILM: CONTEMPORARY - Bridge program only.
6. SPAN3520 BUSINESS SPANISH PRACT - 1 credit.
7. SPAN4200 INTRO TO HISPANIC LINGUISTICS - If not used to fulfill WL&C major core course in linguistics.
8. SPAN5060 SPANISH FOR PROFESSIONS - Prerequisite for SPAN5060 SPANISH FOR PROFESSIONS; Co-requisite: one Span 36XX-level course (3 credits).

Note: Courses for the major may not be taken on a pass/fail basis, except for SPAN3010 HISPANIC OUTREACH PRACT, SPAN3520 BUSINESS SPANISH PRACT, and SPAN4920 SPANISH LANG TUTORING which may be taken as pass/fail.

World Languages & Cultures BA, Emphasis in Spanish with World Languages Education Track/Secondary School Licensure

Type
Completion Requirement

World Languages Education Track/Secondary School Licensure Required Courses (35 credits)

Courses for teaching emphases and the teaching minors may be subject to change, and students should contact the Secondary Education Advising Office for a current course list of STEP requirements.

Complete ALL of the following Courses:

- ITLS2500 - Technology Enabled Instruction - 3cr.
- LING5400 - Teaching Modern Languages - 3cr.
  AND SCED4300 - Clinical Experience II - 1cr.
- SCED3210 - Educational and Multicultural Foundations (DSS/CI) - 3cr.
- SCED5100 - Motivation and Classroom Management - 3cr.
- SCED5200 - Language, Literacy, and Learning in the Content Areas (CI) - 3cr.
- SCED5210 - Learning Theory, Curriculum, and Assessment - 3cr.
- SCED5630 - Student Teaching in Secondary Schools - 10cr.
- SCED5500 - Student Teaching Seminar - 2cr.
  OR LING5500 - Student Teaching Seminar - 2cr.
- SPED4000 - Education of Students with Disabilities - 3cr.

NOTE:

1. The special methods course is taught under LING5400 TEACHING MODERN LANGUAGES.
2. SCED4300 CLINICAL EXPERIENCE II and LING5400 TEACHING MODERN LANGUAGES must be taken during the same semester.

Additional Comments:

Licensure Notification

This program typically leads to licensure and was designed to meet licensing qualifications in the state of Utah. If students wish to work in another state within the United States, they should review the qualifications for that state and the Education Licensure Compliance Table provided by School of Teacher Education and Leadership.

For more information, please contact the School of Teacher Education and Leadership at https://cehs.usu.edu/teal/

Degree Map Narrative

- The following is a sample, generic 4-year plan for a student with no prior Spanish language experience. Student specific plans vary.
- Students with prior Spanish language experience and/or coursework should take the Language Proficiency Placement Test in the Department of World Languages & Cultures and may complete degree requirements quicker or "test out of" some courses.
- Please meet with an academic advisor. Check your Degree Works for requirements and completion information.
- Bridge program students should meet with a Dept. of World Languages & Cultures advisor because Bridge courses count for the Spanish Major emphasis and Spanish Minor.
- Check your Degree Works for requirements and completion.

World Languages and Cultures: Translation and Interpretation Emphasis - BA

Program Overview

College
College of Arts & Sciences

Department
World Languages and Cultures

Program Level
Undergraduate

About this Degree
The program in Translation and Interpretation Studies provides durable and long-lasting skills useful in healthcare, legal, business, diplomacy, and education spheres. The program integrates micro-credentials in medical interpretation, court interpretation, translation, and localization. The program offers experiential learning, with real-life, hands-on, work-based learning experiences by providing meaningful activities and community engagement. With the growing demand for qualified translators and interpreters in Utah and across the United States, this BA provides the necessary skills in fields that have high demand in the industry. Students complete industry-specific training and develop durable skills in intercultural competence, communication, localization, analysis, problem solving, and critical thinking. Faculty feature accomplished professional translators and interpreters. The active student club, Aggie Translators & Interpreters, provides valuable practice and networking opportunities. The department of World Languages & Cultures offers many opportunities for scholarships, study abroad, experiential learning, community engaged learning, and cultural activities.

The curriculum offers the choice of two tracks: one in Healthcare Translation and Interpretation, and one in Legal & Business Translation and Interpretation. Graduates of this program are poised to make a significant economic impact, filling critical roles in healthcare settings, legal proceedings, global and local business and industry, classrooms, and community services.

- Please consult regularly with your departmental advisor. Admitted and current students must meet with an advisor.
- The highest math requirement for this degree is the Quantitative Literacy (QL) of the student's choice.

Currently available for Spanish only, other languages coming soon. Courses, certificates, and community certificates are available for other languages.

World Languages and Cultures: Translation and Interpretation Emphasis - BA

Type
Completion Requirement

Prerequisite Courses (3 credits)

This course may be taken concurrently with the required program courses.

A minimum grade of C or better is required.

Complete at least 1 of the following courses:

- SPAN3040 - Advanced Spanish Grammar - 3cr.
- SPAN3060 - Advanced Spanish Conversation and Composition (CI) - 3cr.

Required Courses (12 credits)

The following classes can be taken concurrently with any other.

Complete ALL of the following Courses:

- SPAN3061 - Fundamentals of Translation and Interpretation - 3cr.
- SPAN4091 - Computer Assisted Translation - 3cr.
- SPAN4093 - Translation/Interpretation Internship - 3cr.
- LING4100 - The Study of Language - 3cr.
  OR ANTH4100 - The Study of Language - 3cr.

NOTE:

1. LING4100 STUDY OF LANGUAGE/ANTH4100 STUDY OF LANGUAGE is taught in English, and is required of all World Languages & Cultures majors

Track Option (12 credits)

Choose a track, in either Healthcare or Legal & Business

Fulfill ANY of the following requirements:

Healthcare Translation and Interpretation Track

Complete ALL of the following Courses:

- SPAN3081 - Healthcare Translation - 3cr.
  OR PORT3081 - Healthcare Translation in Portuguese - 3cr.
- SPAN3100 - Spanish Healthcare - 3cr.
- SPAN4071 - Simultaneous and Consecutive Healthcare Interpretation - 3cr.
  OR PORT4071 - Simultaneous and Consecutive Healthcare Interpretation - 3cr.
- SPAN4081 - Medical Interpretation Training (BTG) - 3cr.

OR

Legal and Business Translation and Interpretation Track

Complete ALL of the following Courses:

- SPAN3082 - Legal and Business Translation - 3cr.
- SPAN3510 - Business Spanish - 3cr.
- SPAN4072 - Simultaneous and Consecutive Legal Interpretation - 3cr.
- SPAN4082 - Advanced Legal Translation and Interpretation - 3cr.

Electives (3 credits)

Earn at least 3 credits from the following:

- CMST3330 - Intercultural Communication (DSS) - 3cr.
- LANG1050 - Language Skills and Career Design - 1cr.
- SPAN3083 - Literary Translation - 3cr.
- SPAN3300 - Introduction to Hispanic Literature and Literary Analysis - 3cr.
- SPAN3550 - Spanish Culture and Civilization (DHA) - 3cr.
- SPAN3570 - Hispanic American Culture and Civilization (DHA) - 3cr.
- SPAN4092 - Technical Communication Applied to Translation - 3cr.

Degree Map Narrative

This is just a generic, sample Degree Map for a complete beginner in Spanish. Students with prior language experience and higher proficiency in the language may complete coursework faster. Students are advised to take the USU Language Proficiency and Placement test and to meet with an advisor. Some students may "test out of" lower levels.

- Following is a sample four-year plan. Please note that student-specific plans may differ.
- Meet with an academic advisor to create a specific plan that best fits your academic needs.
- The student is ultimately responsible for knowing and completing all degree requirements.
- Make sure you meet the registration requirements for each class by clicking the course link and checking any prerequisites or corequisites.
- Consultation with an advisor may result in an altered plan customized for an individual student
- Check your Degree Works for requirements and completion.

Yoga Studies - Minor

Program Overview

College
College of Education & Human Services

Department
Kinesiology and Health Science

Program Level
Undergraduate

About this Degree

The Yoga Studies curriculum promotes a sequential approach to the study of yoga history, literature, philosophy, and practice and includes an accredited 200- & 300-hr YOGA ALLIANCE® Teacher Training Program. Pursuing completion of the 200-hr training only will not fulfill completion of the minor. There is no guarantee in which semester a particular course will be taught. Please consult with the advisor to plan your schedule.

Admission Requirements for this Program

Students from all USU majors who have at least a 2.0 overall GPA qualify to enter the Yoga Studies minor. A 2.0 overall GPA is also required for the minor to be awarded, and it may only be completed in conjunction with a bachelor's degree. Please note that this minor incurs differential tuition beyond plateau tuition rates, regardless of whether you pursue certification.

Program Requirements

Total Credits Required In Program Coursework
20

Total Credits Required To Earn This Credential
20

Simple Requisites

Program Requirements

A 2.0 overall GPA is also required for the minor to be awarded, and it may only be completed in conjunction with a bachelor's degree.

Section 1

Type
Completion Requirement

Yoga Studies Minor Core Curriculum (17 credits)

Fulfill ALL of the following requirements:

Fall Semester

Complete ALL of the following Courses:

- PE1057 - Yoga - 1cr.
- KIN3010 - Yoga Technique I - 3cr.
- KIN3011 - Introduction to Yoga Studies - 1cr.
- KIN3070 - Yoga Anatomy - 3cr.

NOTE:

1. PE1057 YOGA - Is the required Yoga Practicum course.
2. KIN3070 YOGA ANATOMY - Other anatomy-related courses cannot be substituted in place of KIN3070 YOGA ANATOMY. It is required to complete KIN3070 YOGA ANATOMY for the minor regardless if another anatomy course was already completed.

AND

Spring Semester

Complete ALL of the following Courses:

- KIN3020 - Yoga Teaching Methodology I - 3cr.
- KIN3021 - Yoga Technique II - 3cr.
- KIN3830 - The History of Yoga - 3cr.
  OR RELS3830 - The History of Yoga - 3cr.
  OR ENGL3830 - The History of Yoga - 3cr.
  OR HIST3830 - The History of Yoga - 3cr.

Section 2

Type
Completion Requirement

Yoga Studies Minor Electives (3 credits)

Earn at least 3 credits from the following:

- ENGL3060 - Mind And Body: The Rhetoric Of Health And Healing (DHA) - 3cr.
- KIN3700 - Meditation and Mindfulness: History and Practice - 3cr.
- KIN4015 - Yoga and Nature - 3cr.
- KIN5900 - Independent Study - 1cr.
- RELS3020 - Introduction to Hinduism (DHA) - 3cr.
  OR RELS3010 - Introduction to Buddhism (DHA) - 3cr.
  OR HIST3020 - Introduction to Hinduism (DHA) - 3cr.
- RELS3420 - Gods and Goddesses of India - 3cr.
- RELS3820 - Hindu Sacred Texts (CI) - 3cr.
- RELS4015 - Buddhism and the West - 3cr.
- RELS4910 - Special Topics in Religious Studies - 1cr.

NOTE:

1. KIN5900 INDEPENDENT STUDY can be a study abroad experience in India that may be available as part of this program. However, its future availability is currently uncertain. For the most up-to-date information, please contact the program director, Emily Perry.
2. RELS4910 ST: RELIGIOUS STUDIES is only approved on a case-by-case basis, when the topic is relevant to Yoga Studies (e. g., when it is taken for study abroad to India). This course is offered infrequently, and when it is offered, it is often on a topic that has little to do with yoga.

Teacher Certification

Please note, 200- & 300-hour certificates cannot be offered together at this time, it must be one or the other pending requirements met. We do not currently offer the 500-hour option. For additional information, please contact the Yoga program director.

Course Number
6810

Department
School of Accounting

Dual-Listed Courses
ACCT5810 - Applied Accounting for Entrepreneurial Success

Course Title
Applied Accounting for Entrepreneurial Success

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course provides an advanced exploration of financial, managerial, and tax accounting concepts applied to strategic and entrepreneurial decision-making. Designed for nonbusiness major students, it emphasizes interpreting and leveraging accounting information for complex business planning, performance management, and long-term business success. Additional coursework is required for those enrolled in the graduate-level course.

- ADVS1050 - Animal, Dairy and Veterinary Science Academic and Career Orientation I

Course Learning Objectives

Course Learning Outcomes

1. Explore and evaluate career opportunities across animal, dairy, equine, and veterinary industries through interaction with professionals and guest speakers.
2. Demonstrate effective networking, communication, and professional etiquette in career-related contexts.
3. Develop a personal career strategy that connects individual strengths and interests with pathways in animal, dairy, equine, and veterinary professions.

ADVS1100 - Small-Scale and Specialty Animal Production - 3 - Credits

Course Overview

Course Prefix
ADVS

Course Number
1100

Department
Animal, Dairy & Veterinary Sciences

Course Title

Small-Scale and Specialty Animal Production

Grade Mode
Standard Letter

Repeat Status
NR

Course Description

This course explores husbandry practices, sustainable management, and niche markets for small-scale, hobby, or specialty farming operations, including the production of traditional livestock (horses, cattle, poultry) and "specialty" animals (for example, rabbits, quail, guinea pigs, bees).

Credit Hours

Credit Hours Min:

Course Learning Objectives

Course Learning Outcomes

1. Explain terminology, classification, and methods used in small-scale and specialty animal production.
2. Identify management systems and practices for both traditional and specialty animals.
3. Analyze the challenges and opportunities in small-scale farming and niche markets.
4. Compare traditional livestock with specialty animals in terms of husbandry, health, and production systems.
5. Examine cultural and economic perspectives on specialty animals globally.
6. Apply principles of sustainable animal husbandry, including housing, feeding, disease management, and marketing.

ADVS1110 - Introduction to Animal Science (BLS) - 3 - Credits

Course Overview

Course Prefix
ADVS

Course Number
1110

Department
Animal, Dairy & Veterinary Sciences

Course Title
Introduction to Animal Science (BLS)

General Education Attribute
BLS

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students study the influence and contributions of animal production and its commodities toward society. This course introduces scientific principles of animal science, livestock production systems, and contemporary issues, as well as professions and careers in animal agriculture and veterinary sciences.

Course Learning Objectives

Course Learning Outcomes
1. Use appropriate terminology to describe common domestic animal species, products, and management practices.
2. Explain fundamental biological principles—including reproduction, genetics, nutrition, health, and welfare—as they apply to animal agriculture and companion animal care.
3. Compare major sectors of animal production, recognizing historical developments, current practices, and the role of animals in meeting human needs for food, fiber, and other products.
4. Evaluate credible scientific information and apply the scientific method to form evidence-based perspectives on issues in animal science and animal management.
5. Demonstrate understanding of industry standards for safe, ethical, and sustainable animal handling and product use.

ADVS1200 - Basic Horsemanship Skills - 3 - Credits

Course Overview

Course Prefix
ADVS

Course Number
1200

Department
Animal, Dairy & Veterinary Sciences

Course Title
Basic Horsemanship Skills

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course focuses on the necessary elements of horsemanship for the beginning equine student.

Course Learning Objectives

Course Learning Outcomes
1. Identify and correctly use basic equipment, tack, and terminology related to horse handling and care.
2. Demonstrate safe and effective practices for approaching, leading, grooming, and handling horses in varied settings.
3. Evaluate equine behavior, basic anatomy, gaits, fitness, and biomechanical concepts to inform appropriate horsemanship principles and their effect on athletic performance.
4. Apply foundational principles of horsemanship that promote effective communication and responsiveness between horse and handler.
5. Reflect on professional ethics and responsibilities in equine care, emphasizing safety, welfare, and continuous learning.

ADVS1600 - Riding Fundamentals I - 3 - Credits

Course Overview

Course Prefix
ADVS

Course Number
1600

Department
Animal, Dairy & Veterinary Sciences

Course Title
Riding Fundamentals I

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Lectures explore the theory necessary to be a successful rider. Students study the use of natural and artificial aids with hunt seat and western-style riding. In riding labs, students develop their riding skills and understanding of riding theory.

Course Learning Objectives

Course Learning Outcomes

1. Identify and describe major companion animal breeds, their characteristics, and normal patterns of growth, development, and behavior.
2. Demonstrate humane and safe techniques for handling, restraining, and housing companion animals, applying principles of welfare and facility management.
3. Perform and interpret comprehensive physical examinations, distinguishing between normal and abnormal clinical findings, and accurately communicating results.
4. Explain fundamental anatomical and physiological differences among companion species and how these influence health, care, and welfare.
5. Identify and discuss the etiology, clinical signs, prevention, and treatment of common infectious and noninfectious diseases in dogs and cats, including relevant zoonotic concerns.
6. Evaluate nutritional requirements and body condition in companion animals and formulate basic feeding or dietary management plans to promote optimal health.

Required

Complete ALL of the following Courses:

- ADVS2010 - Companion Animal Science and Management
- ADVS2015 - Companion Animal Science and Management Laboratory

Course Learning Objectives

Course Learning Outcomes

1. Explain the principles of hematology, serology, immunology, and clinical chemistry as they relate to the diagnosis and monitoring of animal health and disease.
2. Collect, prepare, and analyze biological samples, including blood, urine, and tissue, using standard veterinary laboratory procedures to obtain diagnostic data.
3. Identify and interpret cellular, biochemical, and morphological abnormalities in blood, urine, and other body fluids, relating findings to physiological and disease processes.
4. Recognize and characterize common parasites, fungi, and other infectious agents of veterinary importance, explaining their life cycles, diagnostic methods, and zoonotic potential.
5. Demonstrate understanding of quality control, biosafety, and ethical standards in veterinary laboratory practice, including sample handling, equipment use, and result reporting.
6. Apply diagnostic findings to case scenarios by correlating laboratory results with clinical signs to support accurate interpretation and effective communication with the veterinary team.

ADVS2065 - Clinical Laboratory Techniques Laboratory - 2 - Credits

Course Overview

Course Prefix
ADVS

Course Number
2065

Department
Animal, Dairy & Veterinary Sciences

Course Title
Clinical Laboratory Techniques Laboratory

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This laboratory course provides students training to be veterinary technicians with practical experience in performing common clinical tests in veterinary medicine.

Complete ALL of the following Courses:

- ADVS2010 - Companion Animal Science and Management
- ADVS2015 - Companion Animal Science and Management Laboratory

Course Learning Objectives

Course Learning Outcomes

1. Collect, label, and prepare diagnostic specimens using proper handling, storage, and submission procedures that maintain sample integrity and biosafety compliance.
2. Demonstrate safe and effective use of laboratory equipment—including microscopes, centrifuges, and automated analyzers—while performing quality control and adhering to OSHA and regulatory standards.
3. Perform and interpret hematological, serological, and immunological tests used in the diagnosis of health and disease in veterinary patients.
4. Conduct and evaluate clinical chemistry, parasitology, urinalysis, microbiology, and mycology procedures using both manual and automated methods.
5. Apply diagnostic results to clinical scenarios by correlating laboratory findings with animal health status and identifying potential errors or quality control issues.

ADVS2070 - Food Animal and Equine Care and Nursing - 3 - Credits

Course Overview

Course Prefix
ADVS

Course Number
2070

Department
Animal, Dairy & Veterinary Sciences

Course Title
Food Animal and Equine Care and Nursing

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course covers identifying common breeds, equine and food animal behavior, diseases, health management, restraint methods, medication administration, physical examinations, neonatal care, pain management, perioperative nursing, surgical procedures, and reproductive cycles in large animals.

- ADVS2045 - Veterinary Critical Care Nursing Laboratory

Course Learning Objectives

Course Learning Outcomes

1. Identify and describe common breeds, characteristics, and normal behaviors of equine and food animal species, applying knowledge of herd dynamics and body language to support safe handling and restraint.
2. Recognize and explain the causes, clinical signs, diagnosis, treatment, and prevention of infectious and noninfectious diseases affecting equine and food animals, including zoonotic concerns.
3. Develop and evaluate preventive health programs, including vaccination, nutrition, hoof and dental care, parasite control, and biosecurity plans tailored to species, facility type, and production goals.
4. Perform and interpret physical examinations, record and communicate findings, and apply appropriate medication and fluid therapy techniques for large animal patients.
5. Demonstrate principles of neonatal care, perioperative nursing, and pain management to promote recovery and welfare in critically ill or surgical patients.
6. Describe and assist with common surgical and reproductive procedures, recognizing technician roles, required instruments, and appropriate patient preparation and aftercare.

Course Learning Outcomes
1. Observe, interpret, and respond appropriately to equine and food animal behavior, demonstrating safe and effective handling and restraint techniques in farm and clinical settings.
2. Perform complete physical examinations on horses and ruminants, accurately assessing vital signs, hydration status, and gastrointestinal function.
3. Administer medications and fluids using correct routes and techniques, including venipuncture, intravenous catheterization, and regional or local anesthesia blocks.
4. Document clinical findings and treatment plans in a professional medical record, applying proper terminology and recordkeeping procedures.

ADVS2080 - Beef Production Practices - 3 - Credits

Course Overview

Course Prefix
ADVS

Course Number
2080

Department
Animal, Dairy & Veterinary Sciences

Course Title
Beef Production Practices

Grade Mode
Standard Letter

Repeat Status
NR

Course Description

This course explores beef cattle production from calf management to the final product. Topics include herd management, health, reproduction, and quality assurance. Students learn industry standards and practices applicable to modern beef production management. Course includes an in-person, hands-on lab.

Course Learning Objectives

Course Learning Outcomes

1. Describe and compare major sheep and goat production systems in the United States, including farm flock, seedstock, commercial range, and intensive operations.
2. Identify and evaluate common sheep and goat breeds, recognizing their behavioral characteristics, advantages, and suitability for different production systems.
3. Demonstrate sound husbandry and health management practices across different stages of production including maintenance, breeding, lambing, lactation, and weaning.
4. Apply knowledge of wool production, grading, and classing to assess fleece quality and market value.
5. Integrate knowledge of animal health, nutrition, and management to support sustainable and welfare-centered sheep and goat operations.

ADVS2100 - Weanling Behavior and Handling - 3 - Credits

Course Overview

Course Prefix
ADVS

Course Number
2100

Department
Animal, Dairy & Veterinary Sciences

Course Title
Weanling Behavior and Handling

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students gain hands-on experience with weanling behavior, as the weanlings' first handlers, and develop skills to create desired behavior in young horses, with emphasis on comprehending and applying classical behaviorism. Students prepare themselves for future courses and the equine industry.

Other Enrollment Recommendations
Students must pass the ADVS Equine Safety & Handling Canvas course in order to participate and maintain registration in this course. This will be discussed on the first day of class. A link to the safety course can also be found in the syllabus.

Course Learning Objectives

Course Learning Outcomes
1. Explain the principles of equine weaning, nutrition, vaccination, and parasite management as they relate to the health and development of young horses.
2. Observe and interpret normal weanling behavior and apply low-stress, evidence-based techniques for haltering, leading, and handling.
3. Demonstrate foundational training, grooming, and hoof care practices that promote safety, welfare, and positive early training experiences.
4. Document the progress and care of individual weanlings using appropriate recordkeeping and registration procedures.

ADVS2110 - Poultry Production and Management - 3 - Credits

Course Overview

Course Prefix
ADVS

Course Number
2110

Department
Animal, Dairy & Veterinary Sciences

Course Title
Poultry Production and Management

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course explores poultry production from hatchery management to product marketing. Topics include breeding, nutrition, housing, health, and processing. Students learn industry standards and practices for managing meat and egg production. Course includes an in-person, hands-on lab.

Course Learning Objectives

Course Learning Outcomes
1. Describe the structure, terminology, and trends of the U.S. poultry industry and major production systems.
2. Explain the biological and management principles (breeding, nutrition, housing, and health) for various poultry species.
3. Apply production practices by managing a broiler flock through feeding, evaluation, and marketing stages.
4. Analyze factors affecting poultry product quality, processing, and marketability in industrial and commercial contexts.
5. Evaluate the economic, sustainability, and ethical dimensions of poultry enterprise systems, and communicate recommendations in written and oral form.

ADVS2120 - Swine Production and Management - 3 - Credits

Course Overview

Course Prefix
ADVS

Course Number
2120

Department
Animal, Dairy & Veterinary Sciences

Course Title
Swine Production and Management

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Introduces swine production and management, covering nutrition, breeding, health, records, and marketing. Students gain hands-on experience with equipment, facilities, and industry practices, building practical skills for effective herd care and decision-making in swine operations. This course includes an in-person, hands-on lab.

Course Learning Objectives

Course Learning Outcomes

1. Describe the stages of the swine production cycle and explain how management decisions in one phase affect outcomes in later stages.
2. Evaluate swine health, nutrition, and productivity through practical observation and performance data collection.
3. Apply principles of breeding, feeding, and facility management to optimize animal welfare and production efficiency.
4. Demonstrate safe and effective handling, farrowing, and record-keeping techniques consistent with modern industry standards.

ADVS2130 - Dairy Cattle Production - 3 - Credits

Course Overview

Course Prefix
ADVS

Course Number
2130

Department
Animal, Dairy & Veterinary Sciences

Course Title
Dairy Cattle Production

Grade Mode
Standard Letter

Repeat Status
NR

Course Description

This course covers dairy science and production, focusing on the life cycle of dairy animals, herd health, and management. It includes insights into dairy and beef cattle integration, sustainability, and practical farm management. This course includes an in-person, hands-on lab.

Course Learning Objectives

Course Learning Outcomes

1. Describe the dairy production lifecycle from birth to lactation, including neonatal care, heifer development, calving, and dry period management.
2. Analyze the nutritional, environmental, and management factors that influence dairy herd health and productivity.
3. Apply knowledge of nutrition, disease prevention, and facility management to design comprehensive herd management plans.
4. Evaluate the integration of dairy and beef production systems, including crossbreeding strategies and management of dairy-beef crossbred calves.

ADVS2140 - Pharmacology and Toxicology for Veterinary Technicians - 1 - Credits

Course Overview

Course Prefix
ADVS

Course Number
2140

Department
Animal, Dairy & Veterinary Sciences

Course Title
Pharmacology and Toxicology for Veterinary Technicians

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course examines veterinary drugs, medicines, and toxic agents. Topics include classes and actions of drugs, pharmacokinetics, pharmacy maintenance and record keeping, and drug dispensing laws and procedures.

Complete ALL of the following Courses:

- ADVS2020 - Companion Animal Nursing
- ADVS2025 - Companion Animal Nursing Laboratory

Course Learning Objectives

Course Learning Outcomes

1. Define and utilize terminology related to pharmacology and toxicology.
2. Discuss the four actions which define pharmacokinetics, including factors that affect drug absorption and distribution, and the different mechanisms of biotransformation and elimination.
3. List and describe the different classification of drugs used to treat and/or prevent various conditions of the different organ systems, including identifying specific examples for each drug class, describing the mechanism of action for each drug class, discussing the indications and contraindications for use, and the normal and abnormal responses to these agents.
4. Calculate the dose of oral, parenteral, and injectable drugs and solutions.
5. Describe the role of the veterinary technician in the pharmacy, including maintenance, recordkeeping, and dispensing of drugs.
6. Research common drugs used in veterinary medicine and identify pharmacokinetic parameters, including half-life, clearance, withdrawal time, bioavailability, and lethal and/or toxic dose, using a variety of printed and online formularies.
7. Identify and manage common toxicology issues in veterinary practice, including recognizing common toxic agents, household hazards, dangerous plants and understanding supportive care approaches.

ADVS2150 - Yearling Fitting and Sales Preparation - 3 - Credits

Course Overview

Course Prefix
ADVS

Course Number
2150

Department
Animal, Dairy & Veterinary Sciences

Course Title
Yearling Fitting and Sales Preparation

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course introduces the specificities of preparing a yearling for proper health and condition. Students gain hands-on experience with exercise, nutrition, and handling of yearling colts, and prepare their colts for marketing, including training for photo and video sessions.

2810

Department
Animal, Dairy & Veterinary Sciences

Course Title
Volunteerism in Equine-Assisted Services

Grade Mode
Standard Letter

Repeat Status
RP

Course Description
Students apply equine handling skills and learn basic facility maintenance as they fulfill volunteer needs of USU's equine-assisted services program. They learn principles of volunteering, horse handling, and community relations by hosting a clinic or horse show.

Course Learning Objectives

Course Learning Outcomes

1. Demonstrate safe and effective equine handling, grooming, and basic care procedures used in EAS settings.
2. Perform facility maintenance and preparation tasks that support horse welfare and client safety in equine programs.
3. Apply principles of communication, professionalism, and teamwork while assisting in clinics, lessons, or horse shows.
4. Reflect on personal learning and growth through participation and service in equine-assisted activities.

ADVS3000 - Animal Health and Hygiene - 3 - Credits

Course Overview

Course Prefix
ADVS

Course Number
3000

Department
Animal, Dairy & Veterinary Sciences

Course Title
Animal Health and Hygiene

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Introduction to basic principles of disease. Agents, mechanisms, and preventive measures for common diseases of farm animals are emphasized. This course includes an in-person, hands-on lab.

Prerequisite

Required

Complete ALL of the following Courses:

- ADVS2200 - Anatomy and Physiology of Animals

Course Learning Objectives

Course Learning Outcomes

1. Identify and describe the causes, risk factors, clinical signs, and prevention strategies for common farm animal diseases.
2. Evaluate management practices that reduce disease incidence and promote livestock health.
3. Explain fundamental principles of disease treatment and biosecurity in animal

populations.
4. Apply diagnostic reasoning to interpret case scenarios and identify likely disease conditions.
5. Perform technical procedures used in disease diagnosis and treatment as demonstrated in laboratory sessions.

ADVS3100 - Equine Evaluation and Judging - 3 - Credits

Course Overview

Course Prefix
ADVS

Course Number
3100

Department
Animal, Dairy & Veterinary Sciences

Course Title
Equine Evaluation and Judging

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course focuses on the principles of equine confirmation and performance. Students will learn to evaluate and select a horse for a suitable purpose. Students will learn to make choices, form opinions and defend their ideas. Evaluation of young horse potential, pre-purchase, common unsoundness issues will also be discussed.

Course Learning Objectives

Course Learning Outcomes

1. Evaluate and compare equine conformation and performance across breeds and disciplines using established judging criteria.
2. Analyze and justify conformation and performance rankings through written and oral reasons that demonstrate organized, evidence-based judgment.
3. Demonstrate professional confidence and accuracy in evaluating equine classes, applying appropriate terminology and industry standards.

ADVS3150 - Principles of Equine-Assisted Services - 3 - Credits

Course Overview

Course Prefix
ADVS

Course Number
3150

Department
Animal, Dairy & Veterinary Sciences

Course Title
Principles of Equine-Assisted Services

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course provides an overview of the growing field of Equine-assisted Services (EAS). It explores the various disciplines within EAS; the standards and best practices for providing EAS services; and how horses and humans interact within the EAS setting.

Course Learning Objectives

Course Learning Outcomes

1. Explain the historical, theoretical, and ethical foundations of equine-assisted services and the role of horse–human interactions in promoting wellness.
2. Differentiate among categories of equine-assisted services and describe the terminology, professional roles, and client populations associated with each.
3. Analyze clients served in equine-assisted services, integrating inclusive language and risk assessment to promote ethical, effective, and safe horse–human interactions.
4. Analyze the roles, behaviors, welfare considerations, and training needs of horses in equine-assisted services and apply best practices and industry standards to promote their physical and emotional well-being.
5. Interpret and evaluate research evidence to assess the efficacy and ethical implications of equine-assisted services for diverse populations.
6. Identify and reflect on professional competencies, legal and business practices, and personal career pathways in the equine-assisted services industry.

ADVS3170 - Techniques in Adaptive Riding - 3 - Credits

Course Overview

Course Prefix
ADVS

Course Number
3170

Department
Animal, Dairy & Veterinary Sciences

Course Title
Techniques in Adaptive Riding

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course is foundational in becoming an adaptive riding instructor. It teaches the components necessary to be an effective and safe instructor in training, including: client-centered planning, understanding precautions, contraindications, disability/ability specific riding goals, and horse selection.

Course Learning Objectives

Course Learning Outcomes

1. Demonstrate effective teamwork and communication skills essential for safe and coordinated adaptive riding sessions.
2. Identify and describe common disabilities and related considerations for lesson planning, horse selection, and rider support.

3. Select and fit appropriate tack, horses, and equipment to meet the needs and safety requirements of individual riders.
4. Design and evaluate adaptive riding lesson plans that align with therapeutic or educational goals.
5. Assess client suitability for participation in equine-assisted activities based on established safety and ethical guidelines.

ADVS3280 - Applied Animal Molecular & Cellular Biology - 4 - Credits

Course Overview

Course Prefix
ADVS

Course Number
3280

Department
Animal, Dairy & Veterinary Sciences

Course Title
Applied Animal Molecular & Cellular Biology

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course provides an introduction to different techniques related to assays commonly performed within the biotechnology industry. This course includes a lecture portion as well as a hands-on lab.

Complete ALL of the following Courses:

- BIOL1620 - Biology II (BLS)
- CHEM1220 - Principles of Chemistry II (BPS)

Course Learning Objectives

Course Learning Outcomes

1. Explain key molecular biology processes (DNA replication, transcription, translation, and regulation) in the context of animal physiology and health.
2. Describe cell structure, function, and communication mechanisms relevant to animal growth, reproduction, and disease.

3. Apply basic biotechnology techniques in a laboratory setting, including sterile handling, DNA/RNA extraction, electrophoresis, PCR, and protein detection methods.
4. Interpret experimental data from common molecular assays, connecting results to biological questions in animal science.
5. Discuss ethical considerations in animal biotechnology, such as cloning, gene editing, and diagnostic testing.
6. Demonstrate scientific professionalism through accurate lab documentation, safety practices, and collaborative teamwork.

ADVS3300 - Equine Lower Limb Form and Function - 3 - Credits

Course Overview

Course Prefix
ADVS

Course Number
3300

Department
Animal, Dairy & Veterinary Sciences

Course Title
Equine Lower Limb Form and Function

Grade Mode
Standard Letter

Repeat Status

Complete ALL of the following Courses:

- ADVS2200 - Anatomy and Physiology of Animals

Course Learning Objectives

Course Learning Outcomes

1. Identify anatomical structures of the equine lower limb and describe their functions in locomotion and weight-bearing.
2. Recognize and describe the correct use of common farrier tools and explain their applications in hoof care and maintenance.
3. Evaluate hoof balance and discuss the principles influencing soundness and performance.
4. Assess lameness in horses using an established lameness scale and discuss potential causes of common lower limb issues.
5. Demonstrate safe and effective handling techniques when lifting limbs, restraining horses, and removing shoes under supervision.

ADVS3400 - Equine Specialist in Equine-Assisted Interventions - 3 - Credits

Course Overview

Course Prefix
ADVS

Course Number
3400

Department
Animal, Dairy & Veterinary Sciences

Course Title
Equine Specialist in Equine-Assisted Interventions

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students learn the broad role played by equine specialists in equine-assisted mental health and experiential education programs. Topics include training and assessment of the therapy horse, therapeutic environments, safety procedures, understanding theories commonly used, and designing arena activities.

NR

Course Description
Students gain practical experience by assisting with the provision of Equine-Assisted Services. Supervised hours are completed at the USU Equine Experience program or another accredited center. Hours may be documented to meet certain Professional Association of Therapeutic Horsemanship International (PATH Intl.) portfolio requirements.

Completion Requirement

Required

Complete ALL of the following Courses:

- ADVS3170 - Techniques in Adaptive Riding
  OR ADVS3400 - Equine Specialist in Equine-Assisted Interventions
- ADVS3610 - Training and Conditioning of the Lesson Horse

Course Learning Objectives

Course Learning Outcomes

1. Apply foundational knowledge of equine-assisted services to safely support clients and horses in therapeutic and educational settings.
2. Demonstrate effective teamwork, communication, and professionalism while assisting in EAS sessions.
3. Assess client and horse suitability for various EAS activities, considering safety, welfare, and individual needs.
4. Design and implement lesson plans and activities that align with participant goals and best practices in adaptive riding and horsemanship.
5. Evaluate participant progress and reflect on the instructor's own role in facilitating learning and well-being through equine-assisted services.
6. Integrate principles of community-engaged learning by contributing meaningfully to an EAS program that serves the broader community.

ADVS4250 - Internship in Animal Industry - 1 - 12 Credits

Course Overview

Course Prefix
ADVS

Course Number
4250

Department
Animal, Dairy & Veterinary Sciences

Course Title
Internship in Animal Industry

Grade Mode
Standard Letter

Repeat Status
RP

Course Description
Directed and evaluated educational work experience with an animal production unit, related business, or government facility in cooperation with the Livestock Education Foundation.

Simple Requisites

Prerequisite

Type
Prerequisite

Required

Complete ALL of the following Courses:

- BIOL1610 - Biology I
- CHEM2310 - Organic Chemistry I

OR CHEM3700 - Introductory Biochemistry

Course Learning Objectives

Course Learning Outcomes
1. Define and explain the core principles of the One Health framework, including the interconnections among human, animal, and environmental health.
2. Identify and analyze real-world examples that illustrate how human, animal, and environmental systems influence one another.
3. Apply a One Health approach to the assessment and proposed resolution of health challenges requiring multidisciplinary collaboration.
4. Describe and evaluate One Health dimensions of infectious and zoonotic diseases, food safety, antimicrobial resistance, and environmental change.
5. Discuss the human–animal bond and its relevance to physical, emotional, and societal well-being within the One Health context.
6. Strengthen professional networking and collaboration skills relevant to the One Health field.

ADVS5030 - Sustainable Agricultural Production Systems with Animals - 3 - Credits

Course Overview

Course Prefix
ADVS

Course Number
5030

Department
Animal, Dairy & Veterinary Sciences

Course Title
Sustainable Agricultural Production Systems with Animals

Grade Mode

Complete ALL of the following Courses:

- ADVS1110 - Introduction to Animal Science (BLS)

Course Learning Objectives

Course Learning Outcomes
1. Explain principles of sustainable and regenerative agricultural systems as they relate to livestock production, including ecological, economic, and social dimensions informed by both global frameworks and regional priorities for the Intermountain West.
2. Analyze animal production systems using ecological concepts such as biodiversity, nutrient cycling, grazing ecology, and ecosystem function.
3. Evaluate ranch and farm management strategies for environmental stewardship, resource use efficiency, and long-term system resilience.
4. Assess sustainability challenges and trade-offs in livestock systems, including land use, water resources, grazing pressure, climate impacts, and socio-economic constraints.
5. Develop evidence-based recommendations for improving the sustainability and resilience of livestock-based agricultural operations using integrative systems thinking.

Complete ALL of the following Courses:
- ADVS4200 - Physiology of Reproduction and Lactation (CI)
  OR ADVS4560 - Principles of Animal Genetics and Breeding (QI)

may be taken concurrently

Course Learning Objectives

Course Learning Outcomes
1. Analyze current beef production scenarios and make evidence-based management decisions.
2. Integrate knowledge from breeding, reproduction, nutrition, health, economics, marketing, and rangeland management to evaluate beef cattle operations.
3. Evaluate the economic and biological impacts of alternative management strategies within the beef industry.
4. Develop innovative approaches to improving beef cattle production systems.
5. Communicate management recommendations clearly and professionally in both written and oral formats.

ADVS5090 - Sheep Management and Wool Technology - 3 - Credits

  OR ADVS4560 - Principles of Animal Genetics and Breeding (QI)

ADVS4200 PHYSIOLOGY REPROD/LACTATN (CI), ADVS4560 ANIMAL GENETICS AND BREED (QI) may be taken concurrently

Course Learning Objectives

Course Learning Outcomes
1. Describe the structure and key sectors of the U.S. sheep industry.
2. Apply knowledge of sheep breeds and fundamental biology—including reproduction, nutrition, immune function, and behavior—to make management decisions.
3. Evaluate wool characteristics and demonstrate proper handling techniques consistent with commercial classing standards.
4. Identify and assess common health, disease, parasite, and predation challenges in sheep and goat operations.

Either ADVS4200 PHYSIOLOGY REPROD/LACTATN (CI), ADVS4560 ANIMAL GENETICS AND BREED (QI) option may be taken concurrently

Course Learning Objectives

Course Learning Outcomes

1. Analyze dairy production, health, and reproductive records to assess herd performance and identify priority management issues.
2. Evaluate forage quality, ration structure, and feeding systems to judge nutritional adequacy and recommend improvements.
3. Assess facilities, cow comfort, and environmental management using structured on-farm evaluation tools.
4. Integrate data from nutrition, reproduction, health, facilities, and economics to develop practical, evidence-based recommendations for whole-farm improvement.
5. Communicate management findings clearly and professionally to producers and industry stakeholders.

Prerequisite

Required

Complete ALL of the following Courses:

- ADVS3500 - Principles of Animal Nutrition

Course Learning Objectives

Course Learning Outcomes
1. Evaluate feed analyses and nutrient profiles to determine whether rations meet the physiological requirements of beef and dairy cattle at different stages of production.
2. Formulate balanced rations by integrating forage quality, concentrate levels, fiber requirements, and metabolic constraints across production phases.
3. Identify and assess nutritional factors contributing to metabolic disorders and incorporate preventive strategies into ration design.
4. Analyze the economic implications of ration choices by evaluating input costs, nutrient density, and expected production outcomes.
5. Critically evaluate ration scenarios to identify errors, nutritional imbalances, or management issues and propose evidence-based corrections.

Course Learning Objectives

Course Learning Outcomes
Explain historical, philosophical, and cultural foundations of human–animal relationships.
2. Compare major theoretical frameworks used to interpret the human–animal bond and evaluate their explanatory value.
3. Summarize and critique empirical research on the health, psychosocial, and developmental effects of companion animals across the lifespan.
4. Analyze core principles of animal-assisted interventions and assess their impact on human wellbeing across diverse settings and populations.
5. Evaluate welfare and ethical dimensions of human–animal relationships, including issues related to animal abuse, domestic violence, and professional responsibility.
6. Locate, synthesize, and apply scholarly literature to support evidence-based perspectives on human–animal relationships.

Registration Restrictions
Junior or senior standing

Other Enrollment Recommendations
ADVS5710 CONCEPT HUMAN ANIMAL BOND and ADVS5720 AAI AND SPECIAL POPULATIONS

Course Learning Objectives

Course Learning Outcomes
1. Explain core ethical principles guiding the protection of therapy animal welfare in AAI settings.
2. Interpret behavioral indicators of stress, comfort, and engagement in therapy animals, and describe appropriate mitigation strategies.
3. Describe how a therapy animal's needs and functional abilities evolve across different life stages.
4. Explain foundational principles for supporting the physical and emotional well-being of animals working in AAI programs.

ADVS5740 - Capstone in Humans and Animal-Assisted Interventions - 3 - Credits

Course Overview

Course Prefix
ADVS

Course Number
5740

Department
Animal, Dairy & Veterinary Sciences

Dual-Listed Courses
ADVS6740 - Capstone in Humans and Animal-Assisted Interventions

Course Title
Capstone in Humans and Animal-Assisted Interventions

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
In this capstone course, students apply theoretical and practical knowledge to design, implement, and evaluate interventions, emphasizing animal welfare, multidisciplinary integration, and research methodologies to address key issues in human-animal interactions. Additional coursework is required for those enrolled in the graduate-level course.

Prerequisite

Required

Complete ALL of the following Courses:

- ADVS5710 - Conceptualizing the Human-Animal Bond
- ADVS5720 - Animal-Assisted Interventions and Special Populations
- ADVS5730 - Welfare and Behavior of Animals in Animal-Assisted Interventions

Course Learning Objectives

Course Learning Outcomes
1. Integrate concepts from human–animal interaction theory, animal welfare, and population-specific needs to design an evidence-based animal-assisted intervention.
2. Evaluate welfare, behavioral, and ethical considerations to ensure the safety and well-being of animals involved in intervention plans.
3. Apply qualitative, quantitative, or survey-based research methods to investigate a key question in the field of animal-assisted interventions.
Reflects your proposal's emphasis on methodological breadth.
4. Analyze intervention data or case findings to assess program effectiveness and identify areas for improvement.
5. Communicate intervention designs, research findings, and welfare justifications clearly and professionally to both specialist and non-specialist audiences.

ADVS5860 - Poisonous Range Plants Affecting Livestock - 3 - Credits

Course Overview

Course Prefix
ADVS

Course Number
5860

Department
Animal, Dairy & Veterinary Sciences

Cross-Listed Courses
WILD5860 - Poisonous Range Plants Affecting Livestock

Dual-Listed Courses
ADVS6860 - Poisonous Range Plants Affecting Livestock

Course Title
Poisonous Range Plants Affecting Livestock

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Introductory course on toxic plants and plant-induced diseases affecting livestock in the western U.S., combining lectures, field trips, and labs. Covers toxin mechanisms, diagnosis, treatment, and prevention. Intended for producers, educators, scientists, veterinarians, toxicologists, and diagnosticians.

Course Learning Objectives

Course Learning Outcomes

1. Identify major poisonous range plants and describe their toxic botanical, chemical, and ecological characteristics.
2. Explain mechanisms of plant toxin synthesis, metabolism, and action in grazing livestock.
3. Assess clinical signs, lesions, and biomarkers associated with toxic plant exposure and outline diagnostic approaches for common poisonings.
4. Evaluate management strategies, including grazing practices, range assessment, and animal treatments, to reduce or prevent toxic plant poisoning in livestock.

Simple Requisites

Prerequisite

Type
Prerequisite

Required

Complete ALL of the following Courses:

- BIOL1610 - Biology I

OR CHEM2310 - Organic Chemistry I
OR CHEM3700 - Introductory Biochemistry

Course Learning Objectives

Course Learning Outcomes

1. Define and explain the core principles of the One Health framework, including the interconnections among human, animal, and environmental health.
2. Identify and analyze real-world examples that illustrate how human, animal, and environmental systems influence one another.
3. Apply a One Health approach to the assessment and proposed resolution of health challenges requiring multidisciplinary collaboration.
4. Describe and evaluate One Health dimensions of infectious and zoonotic diseases, food safety, antimicrobial resistance, and environmental change.
5. Discuss the human–animal bond and its relevance to physical, emotional, and societal well-being within the One Health context.
6. Strengthen professional networking and collaboration skills relevant to the One Health field.
7. Synthesize interdisciplinary scientific and policy evidence to develop more advanced One Health analyses and justify integrated solutions to complex health challenges.

ADVS4200 PHYSIOLOGY REPROD/LACTATN (CI), ADVS4560 ANIMAL GENETICS AND BREED (QI) may be taken concurrently

Course Learning Objectives

Course Learning Outcomes

1. Analyze current beef production scenarios and make evidence-based management decisions.
2. Integrate knowledge from breeding, reproduction, nutrition, health, economics, marketing, and rangeland management to evaluate beef cattle operations.
3. Evaluate the economic and biological impacts of alternative management strategies within the beef industry.
4. Develop innovative approaches to improving beef cattle production systems.
5. Communicate management recommendations clearly and professionally in both written and oral formats.
6. Demonstrate advanced analysis of beef cattle management issues by integrating scientific literature and applying higher-level critical reasoning to justify management decisions.

ADVS4200 PHYSIOLOGY REPROD/LACTATN (CI), ADVS4560 ANIMAL GENETICS AND BREED (QI) may be taken concurrently

Course Learning Objectives

Course Learning Outcomes

1. Describe the structure and key sectors of the U.S. sheep industry.
2. Apply knowledge of sheep breeds and fundamental biology—including reproduction, nutrition, immune function, and behavior—to make management decisions.
3. Evaluate wool characteristics and demonstrate proper handling techniques consistent with commercial classing standards.
4. Identify and assess common health, disease, parasite, and predation challenges in sheep and goat operations.
5. Demonstrate advanced synthesis of scientific and industry research to analyze complex issues in sheep production or wool technology and justify management recommendations with a higher level of critical reasoning.

Complete ALL of the following Courses:

- ADVS3500 - Principles of Animal Nutrition

Course Learning Objectives

Course Learning Outcomes
1. Evaluate feed analyses and nutrient profiles to determine whether rations meet the physiological requirements of beef and dairy cattle at different stages of production.
2. Formulate balanced rations by integrating forage quality, concentrate levels, fiber requirements, and metabolic constraints across production phases.
3. Identify and assess nutritional factors contributing to metabolic disorders and incorporate preventive strategies into ration design.
4. Analyze the economic implications of ration choices by evaluating input costs, nutrient density, and expected production outcomes.
5. Critically evaluate ration scenarios to identify errors, nutritional imbalances, or management issues and propose evidence-based corrections.
6. Integrate scientific literature and advanced nutritional models to justify ration strategies and management recommendations with a higher level of analytical rigor.

ADVS6510 - Advanced Ruminant Nutrition and Emerging Technologies - 3 - Credits

Prerequisite

Required

Complete ALL of the following Courses:

- ADVS3500 - Principles of Animal Nutrition
- ADVS2200 - Anatomy and Physiology of Animals

Course Learning Objectives

Course Learning Outcomes
1. Explain how anatomy, physiology, and nutrition interact to influence nutrient digestion, absorption, and metabolism in production animals.
2. Describe and compare how carbohydrates, proteins, and lipids are metabolized to produce energy and end products such as muscle, fat, and milk.
3. Compare and contrast metabolic and nutrient utilization pathways in ruminant versus nonruminant species.
4. Critically evaluate primary scientific literature related to nutrient metabolism and utilization, and synthesize findings into written or oral reviews.
5. Demonstrate advanced integration and critical analysis of nutrient metabolism concepts by synthesizing current scientific literature to support more complex physiological interpretations and applications.

Complete ALL of the following Courses:

- ADVS2200 - Anatomy and Physiology of Animals

An equivalent undergraduate physiology course is also acceptable.

Course Learning Objectives

Course Learning Outcomes
1. Explain the physiological structure and function of major animal systems including nervous, sensory, renal, respiratory, cardiovascular, and endocrine systems.
2. Analyze homeostatic mechanisms in fluid balance, acid-base regulation, and temperature control.
3. Interpret and apply physiological principles to clinical and real-world animal health scenarios.
4. Evaluate the adaptive functions of body systems in various species and under stress or disease.
5. Integrate knowledge from multiple systems to assess whole-animal physiological responses.
6. Critically evaluate current research literature in animal physiology.
7. Design and propose experimental approaches to investigate physiological questions.
8.Communicate complex physiological concepts effectively in both written and oral formats tailored to scientific and lay audiences.

Course Learning Objectives

Course Learning Outcomes

1. Describe historical and contemporary conventions in science communication and explain how they shape the organization and dissemination of scientific knowledge.
2. Explain the processes involved in scientific publishing and grant submission, including manuscript preparation, journal submission workflows, editorial decisions, and peer review.
3. Communicate scientific concepts effectively to specialist and non-specialist audiences through clear, accurate oral and written formats.
4. Locate and use appropriate resources—such as journal guidelines, funding announcements, and public-communication tools—to develop scientific manuscripts, proposals, or outreach materials.
5. Analyze and evaluate the role of science and scientists in local, national, and global contexts, using evidence to support critical perspectives.
6. Synthesize advanced scientific and societal literature to produce deeper, more analytically rigorous communication products tailored to professional and public audiences.

ADVS6700 - Epigenetics - 3 - Credits

Course Overview

Course Prefix
ADVS

Course Number
6700

Department
Animal, Dairy & Veterinary Sciences

Course Title
Epigenetics

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Epigenetics is the study of heritable changes in gene expression that do not involve changes to the underlying DNA sequence. This course is an in-depth discussion- and literature-based treatment of the molecular mechanisms and manifestations of epigenetics in eukaryotic systems.

ADVS6710 CONCEPT HUMAN ANIMAL BOND

Course Learning Objectives

Course Learning Outcomes
1. Explain historical, philosophical, and cultural foundations of human–animal relationships.
2. Compare major theoretical frameworks used to interpret the human–animal bond and evaluate their explanatory value.
3. Summarize and critique empirical research on the health, psychosocial, and developmental effects of companion animals across the lifespan.

4. Analyze core principles of animal-assisted interventions and assess their impact on human wellbeing across diverse settings and populations.
5. Evaluate welfare and ethical dimensions of human–animal relationships, including issues related to animal abuse, domestic violence, and professional responsibility.
6. Locate, synthesize, and apply scholarly literature to support evidence-based perspectives on human–animal relationships.
7. Synthesize advanced theoretical and empirical literature to generate deeper, more critical interpretations of human–animal relationship frameworks.

Course Learning Objectives

Course Learning Outcomes

1. Integrate concepts from human–animal interaction theory, animal welfare, and population-specific needs to design an evidence-based animal-assisted intervention program.
2. Evaluate welfare, behavioral, and ethical considerations to ensure the safety and well-being of animals involved in intervention plans.
3. Apply qualitative, quantitative, or survey-based research methods to investigate a key question in the field of animal-assisted interventions and human animal interactions.
4. Analyze intervention data or case findings to assess program effectiveness and identify areas for improvement.
5. Communicate intervention designs, research findings, and welfare justifications clearly and professionally to both specialist and non-specialist audiences.
6. Demonstrate critical thinking skills throughout the development of the different components of your project.
7. Design and conduct a research project that utilizes theory-based applications of qualitative, quantitative, and survey research methodologies to explore significant questions and challenges in AAI/HAI contexts.
8. Synthesize advanced theoretical and empirical literature to justify more complex intervention designs and produce deeper analytical evaluations of program outcomes.

ADVS6800 - Graduate Student Seminar - 1 - Credits

Course Overview

Course Prefix
ADVS

Course Number
6800

Department
Animal, Dairy & Veterinary Sciences

Course Title
Graduate Student Seminar

Grade Mode
Pass/Fail

Repeat Status
RP

Course Description
Students participate in seminars on topics of interest in animal, dairy and veterinary sciences.

Course Learning Objectives

Course Learning Outcomes

1. Design and deliver a clear, well-organized oral presentation that effectively communicates research-based information to a professional audience.
2. Critically evaluate peer presentations by providing constructive, evidence-based feedback and engaging in scholarly discussion.
3. Synthesize current or emerging research in animal, dairy, or veterinary sciences and communicate its significance, methodology, and implications.

ADVS6860 - Poisonous Range Plants Affecting Livestock - 3 - Credits

Course Overview

Course Prefix
ADVS

Course Number
6860

Department
Animal, Dairy & Veterinary Sciences

Dual-Listed Courses
ADVS5860 - Poisonous Range Plants Affecting Livestock

Course Title
Poisonous Range Plants Affecting Livestock

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Introductory course on toxic plants and plant-induced diseases affecting livestock in the western U.S., combining lectures, field trips, and labs. Covers toxin mechanisms, diagnosis, treatment, and prevention. Intended for producers, educators, scientists, veterinarians, toxicologists, and diagnosticians. Additional coursework is required for those enrolled in the graduate-level course.

Lecture Hours Min:
3

Course Learning Objectives

Course Learning Outcomes
1. Identify major poisonous range plants and describe their toxic botanical, chemical, and ecological characteristics.
2. Explain mechanisms of plant toxin synthesis, metabolism, and action in grazing livestock.
3. Assess clinical signs, lesions, and biomarkers associated with toxic plant exposure and outline diagnostic approaches for common poisonings.
4. Evaluate management strategies, including grazing practices, range assessment, and animal treatments, to reduce or prevent toxic plant poisoning in livestock.
5. Investigate a clinical toxic plant case and communicate an in-depth analysis of poisoning mechanisms, diagnosis, and management in both written and oral formats.

ADVS6900 - Special Problems - 1 - 3 Credits

Course Overview

Course Prefix
ADVS

Course Number
6900

Department
Animal, Dairy & Veterinary Sciences

Course Title
Special Problems

Grade Mode
Standard Letter

Repeat Status
RP

Course Description
Readings, discussions, lectures, literature reviews, and research problems in animal, dairy, and bioveterinary sciences.

ANTH3090 - Introduction to Shamanism: Shamanic Healing for Personal and Planetary Transformation - 3 - Credits

Course Overview

Course Prefix
ANTH

Course Number
3090

Department
School of Social Sciences

Course Title
Introduction to Shamanism: Shamanic Healing for Personal and Planetary Transformation

Grade Mode
Standard Letter

Repeat Status
RP

Course Description
This course provides an introduction to methods utilized by shamanic healers as well as background information on indigenous views of relationships between matter, mind, and spirit to help students understand how shamanic healing is used in multiple settings.

Course Learning Objectives

Course Learning Outcomes

1. Understand why and how men's health differs from health of other sexes and genders – unraveling the social, cultural, and economic factors associated with men's health.
2. Explore trends in men's physical and mental health across the lifespan—how anthropologists, demographers, public health practitioners, and economists address them.
3. Analyze men's health and behaviors through the lens of evolutionary theory.
4. Address ways to improve men's health issues in public health.

ANTH4980 - History and Theories of Anthropology - 3 - Credits

Course Overview

Course Prefix
ANTH

Course Number
4980

Department
School of Social Sciences

Course Title
History and Theories of Anthropology

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Explores the epistemological foundations of anthropology. Traces the history of anthropology, including the main currents of theoretical thought, the paradigm shifts that revitalize the discipline, and the major scholars that illustrate each period. This is an advanced course that benefits from some anthropology and familiarity with the intellectual traditions of the Western World.

ANTH

Course Number
6320

Department
School of Social Sciences

Dual-Listed Courses
ANTH5320 - Zooarchaeology

Course Title
Zooarchaeology

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Advanced undergraduate and graduate course on laboratory methods in zooarchaeology. Structured to address anthropologically significant questions that can be investigated through zooarchaeological analysis, and to provide students with the basic analytical skills to address these questions. Graduate students will be required to conduct a more extensive research project and write-up.

Course Learning Objectives

Course Learning Outcomes

1. Students will learn how to effectively create and maintain community partnerships.

2. Students will gain experience in understanding best practices for assessing community values and needs related to cultural resource management.

3. Students will develop communication skills for promoting public interest in archaeology and cultural resource management.

4. Students will gain an appreciation for the role of advocacy in cultural resource management as a tool for collective action and social change.

5. Students will gain technical competence in evaluating program effectiveness.

Course Learning Objectives

Course Learning Outcomes

1. Understand the fundamental principles of museum administration.

2. Define the role and responsibilities of museum administrators.

3. Identify key stakeholders in museum administration.

4. Explore the historical development of museum administration.

5. Grasp the principles of museum governance and ethical considerations.

6. Examine the ethical responsibilities of museum administrators.

7. Understand the importance of transparency and accountability in museum

governance.

8. Analyze case studies involving ethical dilemmas in museum administration.

9. Explore legal frameworks and regulations governing museums.

10. Identify and understand key museum legislation and regulations.

11. Examine the impact of legal requirements on museum operations.

12. Develop strategies for compliance and risk management.

13. Develop financial literacy specific to museum administration.

14. Understand budgeting and financial planning for museums.

15. Analyze funding sources, including grants, sponsorships, and donations.

16. Explore strategies for revenue generation and sustainability.

17. Evaluate the economic impact of museums on communities.

18. Examine case studies on the economic contributions of museums.

19. Understand the role of museums in cultural tourism.

20. Develop strategies for community engagement and partnerships.

21. Gain insights into global museum practices and collaboration.

22. Explore international museum trends and innovations.

23. Understand the challenges and opportunities of cross-cultural collaboration.

24. Analyze case studies of successful international museum partnerships.

25. Discuss cultural heritage preservation on a global scale.

26. Examine UNESCO guidelines and initiatives for cultural heritage preservation.

27. Understand the role of museums in safeguarding cultural heritage.

28. Explore challenges related to repatriation and restitution.

Course Learning Objectives

Course Learning Outcomes

1. The learning objectives for the course are two-fold. One objective is for the students to learn about the field of behavioral economics, partly through "hands-on" participation in the seminal laboratory experiments and games that spawned the field itself, and partly through an investigation of new theories proposed by behavioral economists.
2. They will learn firsthand how these experiments and games exposed weaknesses in traditional economic theory, theory that has been used to explain human behavior and inform public policy for centuries.
3. Students will also learn about the exciting studies that have more recently been conducted by economists and psychologists to test the implications of these weaknesses.
4. Another objective is that, in the process of meeting the first objective, students will gain insight into how they formulate their own personal decisions, and how they might improve their formulations in order to lead happier and more productive lives.

APEC4310 - Agribusiness Finance - 3 - Credits

Course Overview

Course Prefix
APEC

Course Number
4310

Department
Applied Economics

Course Title
Agribusiness Finance

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course applies financial theory to the investment analysis of capital projects in agriculture. Students develop financial models utilizing Microsoft Excel and evaluate agribusiness and farm firm asset and liability management problems.

Course Learning Objectives

Course Learning Outcomes

1. Students will recognize and discuss the importance of financial management problems in agriculture.
2. Students will apply the processes of financial analysis and planning in and Agribusiness context.
3. Students will employ the relevant economic and finance principles, concepts, and tools with which to address financial problems, including (a) financial statements and their use in analysis and planning, (b) the role of liquidity and risk management in guiding financial decisions, and (c) the tools of capital budgeting for improved investment decisions.
3. Students will utilize Microsoft Excel in modeling financial decisions.
4. Students will develop expertise in using these financial management concepts and tools to apply them in the "real world" problems of agriculture.

Course Overview

Course Prefix
APEC

Course Number
6100

Department
Applied Economics

Course Title
Microeconomic Theory I

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Provides a rigorous introduction to graduate-level microeconomic theory. While the specific focus is on the theoretical construct of graduate-level microeconomic models, the broad objective of the class is to lay the foundation for empirical applications in microeconomics. To meet this broad objective, the course covers theory of the firm, consumer theory, market structure, theory of public goods and externalities, and welfare economics.

This course focuses on tools used by local and regional economic development specialists as they relate to planning and impact assessment. Specific topics will include I/O models, IMPLAN models, and computable CGE modeling approaches as they are used in a planning environment. Additional coursework is required for those enrolled in the graduate-level course.

APEC7130 - Microeconomic Theory I - 3 - Credits

Course Overview

Course Prefix
APEC

Course Number
7130

Department
Applied Economics

Cross-Listed Courses
ECON7130 - Microeconomic Theory I

Course Title
Microeconomic Theory I

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Provides a rigorous introduction to graduate-level microeconomic theory. While the specific focus is on the theoretical construct of graduate-level microeconomic models, the broad objective of the class is to lay the foundation for empirical applications in microeconomics. To meet this broad objective, the course covers theory of the firm, consumer theory, market structure, theory of public goods and externalities, and welfare economics.

Course Overview

Course Prefix
APEC

Course Number
7140

Department
Applied Economics

Course Title
Microeconomic Theory II

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Extends the theoretical foundations of microeconomics with an emphasis on model building in economics. Topics include static games of complete and incomplete information, dynamic games of complete and incomplete information, imperfectly competitive markets, risk and uncertainty, public goods, general equilibrium, and information economics.

Course Learning Objectives

Course Learning Outcomes

1. Develop Teaching Skills: Equip students with effective teaching strategies and techniques for engaging and motivating students.

2. Practical Teaching Experience: Provide hands-on experience in leading classes, giving lectures, and managing classroom activities.

3. Curriculum Development: Teach students how to create comprehensive syllabi, assignments, and assessments.

4. Feedback and Evaluation: Enable students to receive and incorporate feedback from mentors, peers, and students to improve their teaching methods.

5. Integration with Research: Help students balance teaching responsibilities with their research commitments.

6. Professional Development: Prepare students for future academic roles by enhancing their communication, organization, and instructional skills.

Completion of an upper-division Arabic course

Course Learning Objectives

Course Learning Outcomes

Students gain a deeper understanding of the Arabic language, develop essential teaching and interpersonal skills, and contribute to a stronger and more engaged learning community. The tutoring experience provides valuable durable skills and experience that can benefit future academic pursuits and professional careers.

1. Tutors will reinforce their own Arabic language proficiency and deepen their understanding of Arabic grammar, vocabulary, pronunciation, and the four language skills (listening, speaking, reading, and writing).
2. Tutors will learn to implement some techniques relevant to Arabic language instruction, such as conversational practice, role-playing exercises, and technology-assisted learning.
3. Tutors will learn to begin to identify and address some learning challenges and learning styles.
4. Tutors will develop their ability to clearly explain complex Arabic language structures to others.
5. Tutors will continue developing effective communication and leadership strategies.
6. Tutors will learn how to give basic effective and supportive feedback.

Course Learning Objectives

Course Learning Outcomes

1. Introduce students to the options available through the College of Humanities and Social Sciences in the way of majors, minors, certificates, experiential learning opportunities, and scholarships.
2. Broaden students educational experience by introducing them to and encouraging co-curricular and community engaged learning activities provided or supported by the college and USU.
3. Connect students with the people and tools that can help them intentionally design purpose for their education and career.
4. Strengthen students desire and ability to be an informed and engaged participant in the educational process.
5. Build awareness of CHaSS and USU resources to support students ability to participate in learning opportunities.
6. Create an environment that helps students establish connections and support networks.

Registration Restrictions

Students must be enrolled in the Art - BS, Art-BA, or Art Preprogram at USU.

Course Learning Objectives

Course Learning Outcomes

1. Students will be able to apply critical thinking skills in reading written histories of education/art education to identify and question interpretations of historical events and their impact on contemporary art education. (IDEA 1)
2. Students will be able to interpret ideas, events, and art educators of the past in their intellectual, social, cultural, political and economic contexts, nationally and in relation to the purposes for art education and contemporary art education practice. (IDEA 1)
3. Students will be able to demonstrate an understanding of educational movements in American history by contributing to an artistic mapping timeline that aims to identify historical themes and movements that have impacted the field of contemporary art education. (IDEA 1)

4. Students will be able to apply USBE standards of learning to develop a lesson for a secondary school environment. (IDEA 3)
5. Students will understand the professional expectations of educators and engage in reflective practices to begin the development of an artist-teacher identity. (IDEA 4)
6. Students will be able to build relationships with peers and actively engage in a variety of artistic, educational, and/or service projects that will help develop the professional competencies required of art education professionals.

Course Learning Objectives

Course Learning Outcomes

1. Students will be able to connect arts-based knowledge and skills with other fields and methods of inquiry.
2. Students will be able to develop and refine a portfolio documenting achievements as an educator, artist, scholar, leader and professional
3. Students will be able to collaboratively design and facilitate meaningful and engaging curriculum, exploring topics related to art education
4. Students will be able to build relationships with peers and actively engage in a variety of artistic, educational research and/or service projects that will help develop the professional competencies required of art education professionals
5. Students will understand that the constantly shifting landscape of arts education policy and contemporary issues at the local, state and national levels directly impacts practice a preservice art educators and will be able to develop and articulate clear perspectives on these issues
6. Students will be able to critically engage and reflect upon teaching praxis, considering the impacts of their work and self assessing strengths and areas for continued development

ART3200 - Painting II - 3 - Credits

Course Overview

Course Prefix
ART

Course Number
3200

Department
Art and Design

Course Title
Painting II

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Continuation of concepts and techniques covered in ART 2200, emphasizing more complex formal and conceptual problems.

Admission to Motion Design - MA only.

Simple Requisites

Prerequisite

Type
Prerequisite

Required

Complete ALL of the following Courses:

- ART6120 - Kinetic Brand Identity Studio
  AND ART6130 - Advanced 2D Motion Studio
  AND ART6140 - Narrative Cinematography
  AND ART6150 - 3D Motion Studio

Course Learning Objectives

Course Learning Outcomes

1. Build a body of work showcasing original and boundary-pushing motion design work.
2. Embrace creative risk-taking to produce innovative and thought-provoking motion graphics.
3. Investigate the use of generative design, mixed media, and procedural animation.
4. Develop experimental projects that challenge traditional workflows and aesthetics.
5. Explore unconventional techniques and mediums in motion design.

ART6170 - Advanced 3D Motion Studio - 3 - Credits

Course Overview

Course Prefix
ART

Course Number
6170

Department
Art and Design

Course Title
Advanced 3D Motion Studio

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course focuses on advanced 3D motion design, including modeling, animation, and physics simulations. Students explore physics dynamics, lighting, and rendering to create technically sophisticated projects with strong visual impact.

Course Overview

Course Prefix
ART

Course Number
6180

Department
Art and Design

Course Title
Motion Design Thesis

Grade Mode
Standard Letter

Repeat Status
NR

Course Description

This capstone course includes a thesis project and curated motion reel. Students conduct research, refine their work, and prepare a portfolio showcasing their strongest, industry-ready projects.

  AND ART6140 - Narrative Cinematography
  AND ART6150 - 3D Motion Studio

Course Learning Objectives

Course Learning Outcomes

1. Develop a comprehensive motion design thesis project that demonstrates mastery of the field.
2. Craft a professional-quality motion reel that highlights the strongest work completed throughout the program.
3. Conduct independent research to inform creative and technical decision-making.
4. Synthesize feedback to refine and present a portfolio-ready thesis and motion reel to peers, faculty, and industry professionals.
5. Apply advanced technical, conceptual, and problem-solving skills to create a polished final project.

ART6200 - Graduate Drawing and Painting Studio - 1 - 9 Credits

Course Overview

Course Prefix
ART

Course Number
6200

Department
Art and Design

Course Title
Graduate Drawing and Painting Studio

Course Learning Objectives

Course Learning Outcomes

1. Contributing to collaborative online fora that functions as crowd-sourced nexus of ongoing debates and information-sharing hub verifying, a. application of discipline-based analytical and critical skills to course material b. effective communication in debated perspectives with peers c. ability to reflectively engage with instructor feedback.

2. Verifying student's oral communication skills through a 5-minute presentation of exhibition premise and a 10-minute guided tour of virtual exhibition, the term project's final component, verifying, a. clarity of narration, including volume, syntax, and tone b. clarity of exhibition premise, successfully relaying disciplinary methods and course concepts c. adherence to spatial and temporal limitations d. effective to creative use of media.

3. Produce an exhibition that clearly that clearly communicates a unifying thesis and argue on behalf of its significance via numerous textual, visual, and aural components. a. write a cohesive exhibition concept/didactic b. relate the significance of artists and works selected and their contribution to exhibition c. produce an audio presentation that summarizes exhibition concept and selection to a museum- going audience Course CI Criteria CI implementation ideas are applied to student term project ("virtual exhibition") and seven online Canvas discussions as follows: 1) Producing multiple drafts on components of course term project including, a. didactic describing premise of exhibition, approximately 250 words b. proposal presentation, approx. 1000 words, approx. 10 minutes (feedback only) c. formal/iconographic analyses of 10-12 selected works, approx. 2000 words d. script for guided audio-tour of virtual exhibition, approx. 3000 words, sourced from above components, modified for aural medium e. MP4 of guided audio-visual tour of virtual exhibition, approx. 10 minutes. 2a) Providing instructor edits on component term project drafts, two stratified deadlines per component verifying, a. correct grammar, spelling, punctuation, etc. b. correct application of disciplinary methods learned in class c. compelling application of course concepts/themes, eg the intersection of sequential, visual narrative art forms (e.g., graphic narratives, manga),visual culture studies and LGBTQ+/Intersectional Art History. 2b) Providing instructor comments on 7 online discussion forums verifying, a. correct grammar, spelling, punctuation, etc. b. correct application of disciplinary methods learned in class c. compelling application of course concepts/themes, eg the intersection of visual narrative art forms (e.g., graphic narratives, manga), visual culture studies and LGBTQ+/Intersectional Art History.

4. Research and compile relevant information for the purpose of curating a "virtual exhibition" on the USU art history webpage that engages an audience using historical and contemporary issues. a. use course material to direct and develop original visual/conceptual solutions to queries b. use library sources to grow expertise on a given concept c. use individualized meetings with and edits from instructor to further vision.

5. Gaining an appreciation for and knowledge of LGBTQ+/Intersectional art history, assessed via quizzes and exams. a. attending lectures on the intersection of sequential visual narrative art forms (e.g., graphic narratives, manga, comics) and LGBTQ+/Intersectional art history and the interdisciplinary knowledge, skills and issues in doing such work in art history and visual culture studies a. reading course materials on issues in queer manga and LGBTQ+ art history in art history b. reading studies on recent political, historical, and cultural phenomena and developments in LGBTQ+/Intersectional Gender history as these pertain to art history and visual culture studies b. Debating the role of LGBTQ+/Intersectional art history in the traditional canon of art history and the more contemporary field of visual culture studies in class and in online fora. c. compare and contrast existing theories on the importance of LGBTQ+/Intersectional art history, including sequential, visual narrative art forms, both in art history and visual studies c. debate the applicability of existing models of reception to sequential, visual narrative art forms and LGBTQ+/Intersectional art history in art history and visual studies d. debate the applicability of emergent academic theories on the intersection of popular sequential, visual narrative art forms (e.g., graphic narratives, manga) and LGBTQ+/Intersectional art history.

ASL1010 - American Sign Language I - 4 - Credits

Course Overview

Course Prefix
ASL

Course Number
1010

Department
Speech and Hearing Sciences

Course Title
American Sign Language I

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course covers basic production and comprehension of American Sign Language (ASL), including vocabulary, fingerspelling, numbers, ASL structure, and grammar. Basic conversation skills, culturally appropriate behaviors, and the history and culture of Deaf communities are included. The course requires weekly lab attendance.

Course Learning Objectives

Course Learning Outcomes

1. Describe the teaching and education major pathways in Career and Technical Education including Agriculture, Family & Consumer Science, Business, and Technology and Engineering Education and non-formal education settings.
2. Identify career and workforce opportunities related to teaching, training, and education, including secondary education, community colleges, extension, workforce development, and community-based education.
3. Recognize the role of instructional strategies, learning environments, and applied skills in CTE and non-formal education contexts.
4. Explain how subject-matter expertise, communication, and leadership skills are integrated within teaching and education career pathways.
5. Reflect on personal interests, strengths, and career goals to determine potential fit with teaching in CTE and non-formal education.

ASTE1008 - Exploring Agricultural Systems, Machinery, and Management - 1 - Credits

Course Overview

Course Prefix
ASTE

Course Number
1008

Department
Applied Sciences, Technology and Education

Course Title
Exploring Agricultural Systems, Machinery, and Management

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
For exploratory major students interested in learning about careers in agriculture and agricultural systems. Students are introduced to the Agricultural Systems Technology major, with an emphasis on production agriculture, systems thinking, and the integration of technology, science, business, and management.

Course Learning Objectives

Course Learning Outcomes

1. Describe the Agricultural Systems Technology major, including its focus on production agriculture, systems thinking, and preparation for agricultural careers.

2. Identify career and workforce opportunities related to Agricultural Systems Technology, including farm and ranch management, agricultural equipment and service industries, and related agricultural professions.

3. Recognize the role of technology and machinery in modern agricultural systems, without requiring prior technical experience.

4. Explain how agricultural science, business, and management skills are integrated within Agricultural Systems Technology career pathways.

5. Reflect on personal interests, strengths, and career goals to determine potential fit with the Agricultural Systems Technology major and the agricultural workforce.

ASTE1010 - Introduction to Agricultural Systems Technology - 3 - Credits

Course Overview

Course Prefix
ASTE

Course Number
1010

Department
Applied Sciences, Technology and Education

Course Title
Introduction to Agricultural Systems Technology

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Introduction to problem solving related to the areas of agricultural power and machinery, soil and water conservation, structures and animal environments, electrical circuits, and emerging technologies.

No Requirements

Course Learning Objectives

Course Learning Outcomes

1. Apply structured problem-solving methods to agricultural systems by analyzing simple and complex machines, calculating mechanical advantage and efficiency, and working through power, work, torque, and horsepower relationships used in machinery and powertrains.
2. Evaluate agricultural equipment performance by determining capacity and efficiency, accurately calibrating sprayers and application equipment, and interpreting how power is transmitted through tractors and other machinery to complete field operations effectively.
3. Assess land and environmental resources by measuring distances, areas, and slopes, completing differential leveling, and evaluating soil erosion, moisture, irrigation requirements, grain handling, and waste management systems used in agricultural operations.
4. Describe essential agricultural infrastructure and career pathways by explaining

structural design, heating and ventilation principles, basic electrical systems and motor operation, and identifying the technical skills and opportunities within agricultural systems technology careers.

ASTE1110 - Equipment Safety for Agriculture and Natural Resources - 2 - Credits

Course Overview

Course Prefix
ASTE

Course Number
1110

Department
Applied Sciences, Technology and Education

Course Title
Equipment Safety for Agriculture and Natural Resources

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course provides safety training for operating machinery and equipment for field operations, including hands-on demonstrations, pre-operation checks, and practicum assessments to develop safe skills to prevent injuries.

Course Learning Objectives

Course Learning Outcomes
Demonstrate knowledge of applicable state and federal regulations (OSHA, DOT, U.S. DOL, WPS) related to safe machinery and equipment operation for agriculture and natural resources industries

Identify operational safety systems for machinery and equipment operation

Perform pre-operational inspections of machinery and equipment

Demonstrate safe operational maneuvers for machinery and equipment

Demonstrate safe loading and transport of materials and equipment

ASTE1130 - Agricultural Machinery Systems: Planting, Tillage, and Harvest Technologies - 3 - Credits

Course Overview

Course Prefix
ASTE

Course Number
1130

Department
Applied Sciences, Technology and Education

Course Title
Agricultural Machinery Systems: Planting, Tillage, and Harvest Technologies

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course focuses on the principles of operating, maintaining, and repairing agricultural machinery used in planting, tillage, and harvesting. Emphasis is placed on equipment design, system functions, and field applications to improve efficiency, safety, and sustainability in crop production.

No Requirements

Course Learning Objectives

Course Learning Outcomes
1. To promote safety and cost awareness in the proper setup, operation, maintenance, and repair of planting and tillage equipment.
2. To develop a theoretical understanding in the application and adaptation of this equipment for various crops and methods.
3. To train the student in the techniques of proper trouble shooting, encompassing failures and maladjustment of the different machines.
4. To develop an understanding in what this equipment is presently designed to do and the changes that have taken place in the requirements of the machines related to GPS guidance and variable rate application.

ASTE1610 - Agricultural and Construction Machinery Power - 4 - Credits

Course Overview

Course Prefix
ASTE

Course Number
1610

Department
Applied Sciences, Technology and Education

Course Title
Agricultural and Construction Machinery Power

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course introduces the theory and operation of power and transmission systems used in agriculture and construction equipment. Student perform diagnostics and repairs of components via hands-on activities.

Course Learning Objectives

Course Learning Outcomes
1. Students will explore the historical and modern questions related to human purpose, happiness, and leadership.
2. Students will practice leadership and communication approaches to improve their ability to address interpersonal and community problems.
3. Students will identify how socio-cultural context shapes human interaction, leadership methods, and self-efficacy for self and others.
4. Students will use various experiential learning methods to explore how their knowledge, skills, and values can contribute to community problem-solving and a higher quality of life for themselves and others.
5. Students will gain confidence in their ability to use communication skills to identify future internship opportunities.
6. Students will develop a timeline and action plan for securing their first internship.
7. Students will identify and list paid internship opportunities that have the potential to meet their career goals.

ASTE2100 - Personal and Team Leadership - 3 - Credits

Course Overview

Course Prefix
ASTE

Course Number
2100

Department
Applied Sciences, Technology and Education

Course Title
Personal and Team Leadership

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students study leadership principles and theories, including personal leadership development, individual strengths, characteristics of effective leaders, leadership styles, team leadership, servant leadership, and leadership ethics, among others. A team capstone project includes service in the community.

Course Learning Objectives

Course Learning Outcomes
1. Explain sustainability and socioscientific issues. (SSI)
2. Examine the 17 United Nations Sustainable Development Goals. (SDGs)
3. Recognize the significance of the SDGs in addressing global challenges in the context of being a part of humanity. (BHU Criteria 1)
4. Identify key areas of focus within the SDGs, specifically different ideas of how to implement SDGs in various cultures and/or civilizations. (BHU Criteria 2)
5. Recognize the interconnectedness of the SDGs and their impact on various aspects of society as well as the personal interest of a human being. (BHU Criteria 1)
6. Analytically summarize opinions to better critically think about topics impacting humanity. (BHU Criteria 3)
7. To reflect on norms and values that underlie individual's actions and negotiate the values of sustainability while taking into account conflicts of interests and

trade-offs. (BHU Criteria 2)
8. To develop and implement interdisciplinary innovative actions that further sustainability at the local level or beyond. (BHU Criteria 4)
9. The ability to relate to and be sensitive to others while learning and to respecting their needs and perspectives. (BHU Criteria 3 &4)
10. Develop the ability to question norms, practices and opinions, while critically thinking about one's own values, perceptions and actions.
11. To reflect on the individual's role in their local and global society and motivate action in that context. (BHU Criteria 1)
12. To apply interdisciplinary problem-solving to complex SSI and develop viable options to help solve these issues. (BHU Criteria 1)

Applied Sciences, Technology and Education

Course Title

Metal Fabrication for Agriculture and Natural Resource Industries

Grade Mode
Standard Letter

Repeat Status
NR

Course Description

This course covers application of welding techniques for the agriculture and natural resource industry. Project-based focused on fabrication and maintenance meeting industry standards. Students develop skills in project planning and management.

Credit Hours

Credit Hours Min:
3

Contact Hours

Contact Hours Min:

Other Enrollment Recommendations

Prior experience in welding and CAD.

May substitute a welding certificate in lieu of TEE1640 INTRO TO WELDING. May substitute a CAD certificate in lieu of TESY1200 CAD AND DESIGN.

Simple Requisites

Prerequisite

Type
Prerequisite

Required

Complete ALL of the following Courses:

- TEE1640 - Introduction to Welding
- TESY1200 - Computer-Aided Drafting and Design

Course Learning Objectives

Course Learning Outcomes

1. Apply industry-standard safety protocols and correctly select necessary equipment and consumables for various ferrous and nonferrous welding processes.
2. Set up, operate, and troubleshoot various pieces of welding equipment (e.g., arc welding) for agricultural maintenance and construction.
3. Demonstrate proper welding techniques in various positions (flat, horizontal, vertical) and utilize hot- and cold-working methods to join or shape metal.
4. Interpret engineering plans and analyze the development and fabrication process to complete a small welding project.

Prerequisite

Required

Fulfill ANY of the following requirements:

Option 1

Complete ALL of the following Courses:

- MATH1050 - College Algebra (QL)

or higher MATH-prefix course

OR

Option 2

Complete ALL of the following Courses:

- STAT1040 - Introduction to Statistics (QL)
  OR STAT1045 - Introduction to Statistics with Elements with Algebra (QL)
  OR STAT1080 - Foundations of Data Science (QL)

or higher STAT-prefix course

OR

Option 3

Sufficient score on AP Exam equivalent to MATH 1050 or higher.

Course Learning Objectives

Course Learning Outcomes

1. Examine digital management systems used in modern agricultural production by exploring platforms for data collection, storage, and workflow organization across crops, livestock, and equipment.
2. Evaluate data related to field operations, equipment performance, and resource use by interpreting metrics such as efficiency, input use, and operational capacity through an agricultural data lens.
3. Apply problem-solving skills to manage, clean, and organize agricultural datasets using relevant software tools and data-handling techniques.
4. Utilize data analysis to inform agricultural decision-making by generating insights, building summaries and visualizations, and recommending actions based on quantitative evidence.

2. Explain and demonstrate principles of effective assessment in its variety of forms.
3. Explain foundational theories and concepts of assessment.
4. Demonstrate the use of various formative and summative assessment strategies used in CTE.
5. Demonstrate the use of traditional, performance-based and alternative assessments used in CTE.
6. Demonstrate the ability to differentiate assessment based on learning differences among students.
7. Differentiate between various grading schemes used in CTE and identify benefits and weaknesses of each.

ASTE5153 - Digital Tools for Teaching and Learning in Career and Technical Education - 3 - Credits

Course Overview

Course Prefix
ASTE

Course Number
5153

Department
Applied Sciences, Technology and Education

Course Title
Digital Tools for Teaching and Learning in Career and Technical Education

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course is designed to help students and teachers understand the role of technology and media in CTE programs and to teach them how to use media and digital technologies effectively and appropriately.

Course Learning Objectives

Course Learning Outcomes
1. Describe and discuss key skills that are needed in a digital age.
2. Identify and discuss the ways digital technology is leading to changes in teaching and learning.
3. Discuss current trends and issues of using digital technology in the classroom.
4. Explore the use of virtual reality for instruction in CTE classrooms and laboratories.
5. Explore the use of and guidelines for using video, music, gaming, social media, and other types of media as pedagogical tools in the CTE classroom.
6. Demonstrate the use of various digital technologies available for CTE teachers.

ASTE5154 - Classroom and Laboratory Management in Career and Technical Education - 3 - Credits

Course Overview

Course Prefix
ASTE

Course Number
5154

Department
Applied Sciences, Technology and Education

Course Title
Classroom and Laboratory Management in Career and Technical Education

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course focuses on principles and strategies for increasing teachers' effectiveness and satisfaction in classroom management and discipline within Career and Technical Education. This course also focuses on establishing a positive classroom learning environment, student engagement, and motivation.

Course Learning Objectives

Course Learning Outcomes
1. Students will recognize key domains in biosecurity by utilizing Meyerson et al.'s integrated concept of biosecurity, reaching across a range of fields and problem sets.
2. Students will analyze and interpret their exposure to the scientific foundations, historical developments, and contemporary forces that shape current and emerging biosecurity challenges.
3. Students will prepare oral and written statements on key policy concepts, governance frameworks, sociocultural communication, and ethical guidelines regarding biosecurity across a range of fields and disciplines.
4. Students will reflect on their role as biosecurity informants and practice communication tactics for improving problem-solving and solution development.
5. Students will demonstrate rigorous subject-area research, analysis, and writing skills to the substantive subject matter of the course.

Other Enrollment Recommendations
It is recommended that students complete ASTE5600 BIOSECURITY I/ASTE6600 BIOSECURITY I or CAI5600 BIOSECURITY I/CAI6600 BIOSECURITY I before taking this course.

Course Learning Objectives

Course Learning Outcomes
1. Students will recall key domains in biosecurity and use current case studies from across a range of fields and problem sets to synthesize the scope of risk and system resiliencies.
2. Students will compose frameworks and practice assessing the complexities of biosecurity prevention, they will formulate potential solutions for biological threats, including natural outbreaks and deliberate acts.
3. Students will prepare oral and written statements on ethical dilemmas such as public health, scientific research, private property, and individual rights regarding

biosecurity across a range of fields and disciplines.
4. Students will reflect on the average citizen's role and critically assess the roles and responsibilities of various stakeholders, such as governments, research institutions, industries, and non-governmental organizations, in promoting effective biosecurity measures.
5. Students will demonstrate rigorous subject-area research, analysis, and writing skills to the substantive subject matter of the course.

ASTE5620 - Food Security and Solutions - 3 - Credits

Course Learning Objectives

Course Learning Outcomes
1. Students will recognize the key domains of global food production (i.e., supply chains and distribution systems) and identify the security dimensions and challenges affecting food systems.
2. Students will analyze the complexities of the four pillars of food insecurity and interpret how those complexities are affected by economic, social, environmental, political, and geographical factors.
3. Students will compose frameworks and practice assessing the complexities of food security within relevant dimensions (i.e., agricultural science, climate, sociology, anthropology, international relations) that identify and synthesize weaknesses and potential interventions.
4. Students will interpret the sociocultural value of agriculture from global

perspectives.
5. Students will demonstrate rigorous subject-area research, analysis, and writing skills to the substantive subject matter of the course.

1. Design and manage volunteer programs that align with organizational mission and strategy.
2. Apply leadership and management principles to recruit, train, supervise, and retain volunteers.
3. Critically evaluate and improve volunteer engagement practices using data, theory, and reflection.
4. Demonstrate civic and ethical responsibility through meaningful community-based volunteer experience.

ASTE6260 - Environmental Impacts of Agricultural Systems - 3 - Credits

Course Overview

Course Prefix
ASTE

Course Number
6260

Department
Applied Sciences, Technology and Education

Course Title
Environmental Impacts of Agricultural Systems

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students investigate the relationship between agricultural practices and environmental quality, including control of agricultural nonpoint-source pollution.

Credit Hours

Credit Hours
Min:

No Requirements

Course Learning Objectives

Course Learning Outcomes

1. Explain Federal Laws/Regulations as they impact agricultural production and interface with environmental issues.
2. Access societal expectations of specific agricultural practices with an environmental quality lens

ASTE6300 - Advanced Teaching Strategies - 3 - Credits

Course Overview

Course Prefix
ASTE

Course Number
6300

Department
Applied Sciences, Technology and Education

Course Title
Advanced Teaching Strategies

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Explores advanced application of teaching strategies and theory, as well as the creation of innovative classroom materials. Check with major department for limitations on number of credits that can be counted for graduation.

Course Learning Objectives

Course Learning Outcomes

1. Apply the research-based teaching strategies to design a project-based learning plan that engages learners.
2. Evaluate and justify curricular design decisions through reflection on cognitive domains, learner engagement, and instructional effectiveness.
3. Create and share a professional presentation or collaborative learning experience that contributes to a community of practice.

ASTE6310 - Advanced Agriculture Teaching Methods - 3 - Credits

Course Overview

Course Prefix
ASTE

Course Number
6310

Department
Applied Sciences, Technology and Education

Course Title
Advanced Agriculture Teaching Methods

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course focuses on advanced methods of classroom teaching. This course is designed for those who have had basic teaching experience or have taken methods classes previously. It is designed to enhance and build upon practicing teachers' experiences and knowledge in order to become a more expert practitioner.

Course Learning Objectives

Course Learning Outcomes

1. Analyze the historical, philosophical, and structural foundations of Career and Technical Student Organizations (CTSOs) and their role in American education.
2. Evaluate the effectiveness and quality of CTSOs by applying established criteria and addressing current and emerging issues in the field.
3. Design and implement strategies that promote sustainable CTSO programs through effective marketing, funding, and advising practices.
4. Facilitate student leadership, personal growth, and career development by creating opportunities and materials that support meaningful engagement in CTSOs.

ASTE6320 - Classroom Management, Student Motivation, and Guidance - 3 - Credits

Course Learning Objectives

Course Learning Outcomes

1. Engage in discussions analyzing the interconnections between learner engagement and the structural elements of educational settings.
2. Construct systems for educational settings that impact of peer relationships, educator influence, and classroom management approaches on fostering inclusive and motivating learning.
3. Apply strategies that promote self-regulation, motivation, and positive behavior among learners within Career and Technical Education contexts.
4. Create a comprehensive classroom management plan that integrates principles of engagement to meet diverse learner needs in an educational setting.

ASTE6350 - Safety and Risk Management for CTE Experential Learning Opportunities - 3 - Credits

Course Overview

Course Prefix
ASTE

Course Number
6350

Department
Applied Sciences, Technology and Education

Course Title
Safety and Risk Management for CTE Experential Learning Opportunities

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Major concepts associated with the development, enactment, and execution of policy of experiential learning programs. Focus will be on the examination and development of policy. This course provides students with an understanding of safety concepts, principles, and practices as they relate to risk management for extension.

Course Learning Objectives

Course Learning Outcomes
1. Students will recognize key domains in biosecurity by utilizing Meyerson et al.'s integrated concept of biosecurity, reaching across a range of fields and problem sets.
2. Students will analyze and interpret their exposure to the scientific foundations, historical developments, and contemporary forces that shape current and emerging biosecurity challenges.
3. Students will prepare oral and written statements on key policy concepts, governance frameworks, sociocultural communication, and ethical guidelines regarding biosecurity across a range of fields and disciplines.
4. Students will reflect on their role as biosecurity informants and practice communication tactics for improving problem-solving and solution development.
5. Students will demonstrate rigorous subject-area research, analysis, and writing skills to the substantive subject matter of the course.

Other Enrollment Recommendations
It is recommended that students complete ASTE5600 BIOSECURITY I/ASTE6600 BIOSECURITY I or CAI5600 BIOSECURITY I /CAI6600 BIOSECURITY I before taking this course.

No Requirements

Course Learning Objectives

Course Learning Outcomes
1. Students will recall key domains in biosecurity and use current case studies from across a range of fields and problem sets to synthesize the scope of risk and system resiliencies.
2. Students will compose frameworks and practice assessing the complexities of biosecurity prevention, they will formulate potential solutions for biological threats, including natural outbreaks and deliberate acts.
3. Students will prepare oral and written statements on ethical dilemmas such as public health, scientific research, private property, and individual rights regarding biosecurity across a range of fields and disciplines.
4. Students will reflect on the average citizen's role and critically assess the roles and responsibilities of various stakeholders, such as governments, research institutions, industries, and non-governmental organizations, in promoting effective biosecurity measures.
5. Students will demonstrate rigorous subject-area research, analysis, and writing skills to the substantive subject matter of the course.

Course Learning Objectives

Course Learning Outcomes

1. Students will recognize the key domains of global food production (i.e., supply chains and distribution systems) and identify the security dimensions and challenges affecting food systems.
2. Students will analyze the complexities of the four pillars of food insecurity and interpret how those complexities are affected by economic, social, environmental, political, and geographical factors.
3. Students will compose frameworks and practice assessing the complexities of food security within relevant dimensions (i.e., agricultural science, climate, sociology, anthropology, international relations) that identify and synthesize weaknesses and potential interventions.
4. Students will interpret the sociocultural value of agriculture from global perspectives.
5. Students will demonstrate rigorous subject-area research, analysis, and writing skills to the substantive subject matter of the course.

Course Learning Objectives

Course Learning Outcomes

1. Apply principles of academic writing, appropriate citation styles, and bias-free language to produce clear, concise academic writing.
2. Analyze scholarly literature and summarize, evaluate, and synthesize information in academic writing.
3. Create original academic writing that demonstrates logical organization, coherent argumentation, and discipline-appropriate structure.
4. Evaluate and provide constructive feedback on peers' academic writing.

ASTE7170 - Program Planning and Evaluation Program Theory and Evaluation - 3 - Credits

Course Overview

Course Prefix
ASTE

Course Number
7170

Department
Applied Sciences, Technology and Education

Dual-Listed Courses
ASTE6170 - Program Planning and Evaluation

Course Title
Program Planning and Evaluation
Program Theory and Evaluation

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students learn the application of theory to program planning and evaluation in informal and formal environments. The content explores evaluation theory, paradigms, stakeholder influences, evaluation designs, and reporting.

Course Learning Objectives

Course Learning Outcomes
1. Design educational programs that integrate needs assessment, stakeholder input, logic models, and evidence-based objectives within formal and nonformal contexts.
2. Develop and justify evaluation plans that align questions, designs, and data collection methods to program goals and ethical research standards.
3. Interpret and communicate evaluation findings to diverse stakeholders and recommend strategies for program improvement and accountability.

ASTE7200 - Qualitative Methods - 3 - Credits

Course Overview

Course Prefix
ASTE

Course Number
7200

Department
Applied Sciences, Technology and Education

Course Title
Qualitative Methods

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course focuses on designing and conducting qualitative research related to CTE disciplines. Students practice methods for data collection, including focus groups, interviews, and document analysis. Students are introduced to mixed methods.

Prerequisite

Required

Earn a minimum grade of C in the following:
- ASTE6750 - Research Methods and Design

Course Learning Objectives

Course Learning Outcomes
1. Explain the theoretical and philosophical foundations of qualitative and mixed methods research.
2. Describe and differentiate qualitative research designs, mixed methods designs, and their approaches to sampling, data collection, and trustworthiness or validity.

3. Analyze and interpret qualitative and mixed methods data using appropriate analytical techniques.
4. Develop a mixed methods research proposal.

ASTE7300 - Mixed Methods Research - 3 - Credits

Course Overview

Course Prefix
ASTE

Course Number
7300

Department
Applied Sciences, Technology and Education

Course Title
Mixed Methods Research

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course focuses on the design and analysis of mixed methods research. Emphasis is on examining epistemological and philosophical issues, sampling, data collection, alternative designs, multiple mixed methods research models, analytic techniques, and relationships among research design, theory, and epistemology.

Course Learning Objectives

Course Learning Outcomes
1. Describe and explain current and emerging practices, trends, and processes in workforce training and development.
2. Design and implement an occupational needs analysis by developing, applying, and interpreting appropriate data collection and analysis tools.
3. Evaluate and identify training and curriculum gaps to recommend evidence-based strategies for improving workforce education and development programs.

ASTE7500 - Diffusion of Innovations - 3 - Credits

Course Overview

Course Prefix
ASTE

Course Number
7500

Department
Applied Sciences, Technology and Education

Course Title
Diffusion of Innovations

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students explore processes by which professional change agents influence the introduction, adoption, and diffusion of technological change. Course content is applicable to persons who work closely with people in formal and informal educational settings.

Course Learning Objectives

Course Learning Outcomes

1. Understand basic flight theory and the physics behind flight.
2. Understand aircraft primary and secondary flight control systems, and aerodynamic devices.
3. Understand the basic principles, aircraft performance, and safety considerations regarding weight and balance and how it relates to the center of gravity and center of lift
4. Understand the principles regarding aircraft stability and the importance thereof
5. Understand high-speed flight and Mach number
6. Understand the effect of atmospheric conditions affecting flight, specifically airspeed
7. Understand the flight principles regarding helicopters
8. Understand aircraft reciprocating and turbine powerplants

Course Learning Objectives

Course Learning Outcomes

By the end of this course, students will be able to:

1. Discover the variety and purpose of professional organizations in the aviation industry, including alumni and fraternal organizations
2. Understand the role of certification, proficiency and continuing education and training for aviation careers
3. Practice networking skills through engagement in networking events
4. Create a positive online, social and professional presence to enhance preparations for future employment
5. Know the value of an opportunities for connection in conferences, events and activities of professional organizations
6. Practice speaking, listening and interview skills through interaction with recruiters and hiring managers

7. Learn the value of internships, finding mentors and connections for continued professional development for early career professionals
8. Practice leadership in volunteer organizations while in college to gain experience, confidence and competence in presenting oneself in a professional manner

Course Learning Outcomes

1. Identify and explain the major systems of the Diamond DA40 and DA42 aircraft, including electrical, hydraulic, fuel, and engine systems.
2. Demonstrate understanding of reciprocating engine and propeller operation as they relate to aircraft performance and flight operations.
3. Describe the function and operation of primary and secondary flight controls and associated landing gear systems.
4. Explain the purpose and operation of large-aircraft systems, including cabin environmental controls and fire detection and protection systems.
5. Apply system knowledge to practical flight scenarios, interpreting aircraft indications and responding appropriately to system malfunctions or warnings.

AV2170 - Aircraft Systems - 2 - Credits

Enroll in the following Courses:

- AV2200 - Aircraft Hydraulics and Pneumatics Systems Lab

Course Learning Objectives

Course Learning Outcomes

1. Explain the function and operation of aircraft hydraulic and pneumatic systems, including key components such as pumps, valves, actuators, and accumulators.
2. Describe landing gear system configurations, including fixed and retractable landing gear, braking systems, anti-skid mechanisms, and steering components.

3. Analyze hydraulic and pneumatic system servicing and inspection requirements, including fluid selection, contamination prevention, and pressure regulation.
4. Evaluate risk management considerations related to high-pressure fluids, gases, hydraulic fluid storage, and landing gear operation safety.
5. Apply FAA regulations and industry best practices when inspecting and maintaining hydraulic and pneumatic systems.

Complete ALL of the following Courses:

- AV2350 - Private Pilot Certification

Course Learning Objectives

Course Learning Outcomes

1. Ground Training: Expand on the knowledge of a Private Pilot and prepare students to be safe, competent, and professional Commercial Pilots. Gaining in-depth factual knowledge and further understand the fundamental principles of aviation, as well as how to apply the course materials in your aviation training.
2. Regulatory Knowledge: Understand and comply with aviation regulations, including airspace rules and air traffic procedures.
3. Flight Planning: Emphasize the development of critical thinking, expand cross country flight planning knowledge through the use of sectionals and digital apps, understanding FAA regulations, recognize weather factors, gain further aircraft systems familiarity, expand knowledge of emergency procedures, and develop decision-making skills through scenarios. Learning about advanced aircraft systems will include technologically advanced aircraft and high-performance aircraft.

COREQUISITES
AV2540

PREREQUISITES
Course Number 2350, Subject Code AV, Level UG, Grade UG; AND (Course Number 2450, Subject Code AV, Level UG, Grade UG; OR Course Number 2451, Subject Code AV, Level UG, Grade UG)

Course Learning Objectives

Course Learning Outcomes

1. Students will gain knowledge of instrument flying procedures and knowledge
2. Students will learn aviation instrument regulations
3. Students will learn instrument flight planning methods4- Students will learn aviation meteorology as it applies to instrument meteorological conditions
4. Students will be prepared to take the FAA written exam

AV2525 - Instrument Pilot Ground School Helicopter - 4 - Credits

Course Overview

Course Prefix
AV

Course Number
2525

Department
Aviation Technology

Course Title

Instrument Pilot Ground School Helicopter

Grade Mode
Standard Letter

Repeat Status
NR

Course Description

This course is designed to prepare students to pass the FAA oral and written examinations required for becoming instrument-rated pilots. The ground school is approved by the FAA under Part 141 of the Federal Aviation Regulations.

Enroll in the following Courses:

- AV3145 - Helicopter Flight Training Device

Course Learning Objectives

Course Learning Outcomes

1. Be a safe and proficient Instrument Rated Pilot
2. Have a thorough understanding of the Instrument ACS
3. Understand and accomplish basic instrument flight, holding patterns, approach procedures, ATC operations, cross-country flight planning, arrival procedures, understand meteorology as its related to instrument flight, airplane systems and navigation related to IFR operations, DME Arcs, and emergency procedures as related to IFR operations.

AV2530 - Instrument Flight Rules, Regulations and Procedures - 4 - Credits

Course Overview

Course Prefix
AV

Course Number
2530

Department
Aviation Technology

Course Title
Instrument Flight Rules, Regulations and Procedures

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course covers instrument flight rules (IFR) regulations and includes simulator time for non-professional pilot aviation majors. Students learn the requirements of the FAA oral and written examinations for becoming instrument-rated pilots, dispatchers and air traffic controllers.

Course Learning Objectives

Course Learning Outcomes

1. Ground Training: Expand on the knowledge of a Private Pilot and prepare students to be safe, competent, and professional Commercial Pilots. Gaining in-depth factual knowledge and further understand the fundamental principles of aviation, as well as how to apply the course materials in your aviation training.
2. Regulatory Knowledge: Understand and comply with aviation regulations, including airspace rules and air traffic procedures.
3. Flight Planning: Emphasize the development of critical thinking, expand cross country flight planning knowledge through the use of sectionals and digital apps, understanding FAA regulations, recognize weather factors, gain further aircraft systems familiarity, expand knowledge of emergency procedures, and develop decision-making skills through scenarios. Learning about advanced aircraft systems will include technologically advanced aircraft and high-performance aircraft.

Required

Complete ALL of the following Courses:

- AV2545 - Instrument Helicopter Certification

Course Learning Objectives

Course Learning Outcomes

Completion of this course is based upon compliance with 141 requirements, student proficiency and meeting course hour requirements. The student must demonstrate through knowledge exams, stage checks and show through appropriate records, that he/she meets the prerequisites in FAR part 141 and has obtained the aeronautical knowledge and flight training necessary to pass the Commercial Rating Practical Test.

The flight training consists of three stages. A stage may not be completed without meeting certain hour requirements, however those may be exceeded, if necessary, to achieve student proficiency or the overall course hour requirements.

The student must meet the total hour requirement for the course to be considered eligible for graduation from the course.

Course Learning Objectives

Course Learning Outcomes

1. This course will prepare students for the Federal Aviation Administration written exam.
2. Students will apply FAA regulations pertinent to aircraft dispatch, meteorology, weather observation, analysis and hazards, navigation, ensuring they can interpret and apply these regulations effectively in practical scenarios.
3. Students will evaluate data concerning all phases of flight. Including take-off and departure data of an airplane reviewing Air Traffic Control procedures, airports, and company procedures. Inflight data such as routing, alternates and flight plan filing. Inflight data, and arrival and approach procedures.
4. Students will understand post-flight dispatch procedures such as flight documentation.
5. Students will evaluate and participate in scenarios on abnormal and emergency aircraft procedures.

Corequisite

Required

Enroll in the following Courses:

- AV2525 - Instrument Pilot Ground School Helicopter

Course Learning Objectives

Course Learning Outcomes

1. The student will obtain the aeronautical knowledge and flight training necessary to meet the prerequisites specified in FAR part 141 for the course of training which the student is working towards.
2. Flight Maneuvers: Perform fundamental flight maneuvers, such as climbs, descents, turns, stalls and slow flight. Demonstrate proficiency in performance maneuvers, ground reference maneuvers, and takeoff and landing techniques.
3. Regulatory Knowledge: Understand and comply with aviation regulations, including airspace rules and air traffic procedures.
4. Flight Planning: Plan and execute flights, considering fuel requirements, weight and balance, and other relevant factors.

AV3200 - Flight Lab 4 (141 Commercial and CFI Training) - 3 - Credits

Course Overview

Course Prefix
AV

Course Number
3200

Department
Aviation Technology

Course Title
Flight Lab 4 (141 Commercial and CFI Training)

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students demonstrate through knowledge exams, stage checks, and appropriate records that they meet the prerequisites in FAR part 141 necessary to pass the Practical Test for the course of training which the student is working towards.

AV3000 FLIGHT LAB 3

Course Learning Objectives

Course Learning Outcomes

1. Integrate knowledge and skills from the General, Airframe, and Powerplant curricula to demonstrate comprehensive understanding of FAA Part 147 subject areas.
2. Apply FAA Practical Test Standards (PTS) and Airman Certification Standards (ACS) as guidelines for both written and practical exam preparation.
3. Demonstrate proficiency in maintenance theory, inspection procedures, and repair techniques across airframe and powerplant systems.
4. Perform hands-on lab exercises and review projects that reinforce technical accuracy, documentation practices, and regulatory compliance.
5. Evaluate and refine test-taking and troubleshooting skills to achieve readiness for FAA written and practical certification examinations.

AV3280 - Advanced Aircraft Maintenance - 3 - Credits

Course Overview

Course Prefix
AV

Course Number
3280

Department
Aviation Technology

Course Title
Advanced Aircraft Maintenance

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Advanced Aircraft Maintenance. A capstone class that through hands on review of skills gained throughout the curriculum will prepare students for FAA written exams in General, Airframe, and Powerplant studies.

AV3000 FLIGHT LAB 3

Course Learning Objectives

Course Learning Outcomes

Students will continue to develop airmanship as they log additional flight hours with increased understanding in the following knowledge areas:

1. Science: Describe basic principles of physical science as they relate to aviation, including: Properties of air, Four forces of flight, Lift and Bernoulli's principle, Newton's laws of motion.
2. Aircraft: Describe the major parts of an aircraft, including: Control surfaces (ailerons, rudder, elevators), Airfoil (leading edge, trailing edge, chord, and camber), Fuselage, empennage, horizontal stabilizer, vertical stabilizer, Flaps, strut, spinner, propeller. Yoke, rudder pedals, throttle.
3. Instruments: Identify by sight and describe the function of major flight instruments, including: Airspeed Indicator Compass, Attitude Indicator Tachometer, Altimeter Turn-and-Slip Indicator, Vertical speed indicator
4. Flight Maneuvers: Explain how pilots perform basic flight maneuvers to include roll, pitch, and yaw. Explain the manner in which control surfaces are manipulated during roll, pitch, and yaw. Summarize basic procedures used during take-offs and landings.
5. Weather: Discuss characteristics of VFR weather. Identify basic cloud types, Discuss how gliders soar using thermals, ridge and slope soaring, sea breeze soaring, and mountain wave soaring, Discuss how air currents affect lighter-than-air aircraft.

AV3310 - ROTC Flight 2 - 1 - 3 Credits

Course Overview

Course Prefix
AV

Course Number
3310

Department
Aviation Technology

Course Title
ROTC Flight 2

Grade Mode
Standard Letter

Repeat Status
RP

Course Description
This course enables ROTC cadets to continue to develop their Airmanship, aviation flight skills, and log additional flight hours; students increase knowledge of flight principles, aviation meteorology, cross country flying, aircraft systems, and emergency procedures for single-engine aircraft.

Complete ALL of the following Courses:

- AV2540 - Instrument Pilot Certification
- AV2620 - Commercial Pilot Ground School

may be taken concurrently

Course Learning Objectives

Course Learning Outcomes

1. The instructor applicants will acquire skills around how students learn differently, have different needs, goals, strengths, fears, and weaknesses.
2. The instructor applicants will learn pivotal job requirements such as: how to assess how the student is progress, adapt training as necessary, and watch out for learning plateaus.
3. This requires skill, a bit of psychology, and a decent understanding of physical reactions.
4. This is why the FAA enforces the Fundamentals of Instructing (FOI). The FOI helps new instructors understand and apply the principles of learning theory.

AV3510 - UAS Fixed Wing Design and Construction - 3 - Credits

Course Overview

Course Prefix
AV

Course Number
3510

Department
Aviation Technology

Course Title
UAS Fixed Wing Design and Construction

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students learn how a fixed wing small unmanned aircraft system (UAS) is physically designed and constructed. Students build and modify a fixed wing model aircraft and fly it multiple times during the semester.

1. Students will learn turbine helicopter systems, procedures, emergency procedures and flight regimes
2. Students will safely preflight, start, and fly a turbine helicopter
3. Students will learn additional skills applicable to turbine aircraft such as vertical reference, turbine engine gauge significance and turbine spooling

AV3885 - Helicopter Turbine Transition - 2 - Credits

Course Overview

Course Prefix
AV

Course Number
3885

Department
Aviation Technology

Course Title
Helicopter Turbine Transition

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course introduces students to turbine engines and helicopters.

Required

Complete ALL of the following Courses:

- AV2625 - Commercial Pilot Ground School Helicopter
- AV2675 - Commercial Helicopter Stage II Certification

Course Learning Objectives

Course Learning Outcomes

1. Develop and execute a customized learning plan addressing an aviation topic, project, or area of inquiry not covered in standard coursework.
2. Demonstrate self-directed learning and initiative through independent research, analysis, or practical application related to aviation theory or operations.
3. Apply critical thinking and problem-solving skills to a specific aviation issue, project, or system.
4. Synthesize and communicate findings or project outcomes in a professional written report, presentation, or other approved deliverable.
5. Connect independent study outcomes to broader aviation industry standards, practices, or emerging technologies.

AV3900 - Aviation Independent Study - 1 - 3 Credits

Course Overview

Course Prefix
AV

Course Number
3900

Department
Aviation Technology

Course Title
Aviation Independent Study

Grade Mode
Standard Letter

Repeat Status
RP

Course Description
Customized study, projects, and/or readings on topics not covered in regular courses.

Approval of proposal written by students in consultation with Instructor

No Requirements

Course Learning Objectives

Course Learning Outcomes

1. Students will explain requirements for an aircraft dispatcher certificate and the role of dispatchers in air carriers. Students will prepare comprehensive flight plans, load manifests, takeoff data, and dispatch releases for flights.
2. Students will understand basic weather theory, regional weather types, and atmospheric characteristics. Analyze and apply aviation weather information in flight planning, including pressure, wind, clouds, and hazards. Analyze weather information for proposed flight routes and destination airports, determining alternate airport requirements. Identify and apply appropriate performance adjustments related to weather hazards. Discuss weather hazards like crosswinds, turbulence, icing, thunderstorms, and volcanic ash with proficiency.
3. Students will comprehend aircraft flight principles, performance limitations, and their implications. Utilize aircraft performance data for takeoff, climb, cruise, and landing, considering weather conditions and weight balance.
4. Students will demonstrate knowledge of navigation charts, airborne instruments, and various navigation systems. Understand navigation procedures, special operations, and time/location references relevant to flight planning.
   Implement dispatcher resource management procedures and human factors in decision-making. Demonstrate situational awareness, contingency planning, and error management to prevent accidents/ incidents.

AV3960 - Aircraft Dispatcher Practical Exam Preparation - 3 - Credits

Course Overview

Course Prefix
AV

Course Number
3960

Department
Aviation Technology

Course Title
Aircraft Dispatcher Practical Exam Preparation

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This is the second of two classes providing students with the knowledge required for certification as an aircraft dispatcher. Explores factors necessary to prepare a flight plan such as weather analysis, enroute charts, dispatch release, and emergency/abnormal procedures.

Credit Hours

Credit Hours

Other Enrollment Recommendations

To qualify for the dispatcher certification an applicant must be at least 23 years old. Written and knowledge tests can be taken at 21 years of age but students will be unable to receive their dispatch certificate or work as a dispatcher until they turn 23. If students are not 23 years of age when they pass the exams, they will receive a Letter of Aeronautical Competency until they turn 23 years of age.

Course Learning Objectives

Course Learning Outcomes

1. Demonstrate advanced flight skills and proficiency necessary to compete in National Intercollegiate Flying Association (NIFA) events, including both flying and ground-based competitions.
2. Apply aeronautical knowledge in high-pressure, competitive scenarios, integrating decision-making, problem-solving, and safety practices.
3. Lead and collaborate effectively within a team environment, fulfilling officer responsibilities and supporting team objectives.
4. Plan, organize, and execute fundraising and logistical activities to support team operations and competition participation.
5. Evaluate team performance and personal progress, using feedback and competition results to improve skills, strategies, and leadership effectiveness.
6. Exhibit professionalism, time management, and ethical behavior consistent with both aviation industry standards and collegiate competition expectations.

AV4100 - National Intercollegiate Flying Association Flight Team Lab - 1 - 3 Credits

Course Overview

Course Prefix
AV

Course Number
4100

Department
Aviation Technology

Course Title
National Intercollegiate Flying Association Flight Team Lab

Grade Mode
Standard Letter

Repeat Status
RP

Course Description
The course will help students prepare for the annual flight competition through leadership experience, fundraising and technical training. Preparation for the annual NIFA competition includes both flying and ground events, and students take on responsibilities as club officers in the USU Flight Team Club.

Course Learning Objectives

Course Learning Outcomes

1. Demonstrate safe and proficient operation of USU Flight Team aircraft, including Cessna single-engine airplanes, in preparation for competition events.
2. Apply flight and ground event skills specific to the National Intercollegiate Flying Association (NIFA) SAFECON competition.
3. Complete mission-oriented flight training exercises to develop precision, situational awareness, and effective decision-making under competitive conditions.
4. Perform preflight, in-flight, and postflight procedures in accordance with FAA standards and team operational protocols.
5. Evaluate personal and team performance to identify strengths, weaknesses, and areas for improvement in both flying and ground-based competition events.
6. Exhibit professionalism, teamwork, and adherence to safety and regulatory standards while preparing for high-level aviation competitions.

AV4110 - National Intercollegiate Flying Team Certification - 1 - 3 Credits

Course Overview

Course Prefix
AV

Course Number
4110

Department
Aviation Technology

Course Title
National Intercollegiate Flying Team Certification

Grade Mode
Standard Letter

Repeat Status
RP

Course Description
Students complete orientation with USU Flying Team aircraft, flight/ground competition event skills and Cessna certification. Students may be checked out in the Cessna and fly training missions in preparation for the National Intercollegiate Flying Association SAFECON competition.

Course Learning Objectives

Course Learning Outcomes

1. Perform rapid and safe maintenance procedures to return aircraft to service in accordance with FAA standards and industry practices.
2. Apply technical knowledge of aircraft systems to diagnose, troubleshoot, and repair mechanical and avionics issues efficiently.
3. Demonstrate teamwork, delegation, and communication skills in completing maintenance tasks under time-sensitive conditions.
4. Integrate problem-solving and critical thinking to prioritize maintenance tasks and make effective operational decisions.
5. Participate in collegiate-level maintenance competitions, applying industry-standard procedures while adhering to safety protocols.
6. Evaluate performance and process efficiency, reflecting on improvements for both individual and team operations in high-pressure scenarios.

Course Learning Objectives

Course Learning Outcomes

1. The students will gain factual knowledge (terminology, classification, Methods, Trends). Each student will develop a business plan for their airline. Each student will start an online airline an operate the airline during the semester. Plan on spending at least two hours each week on your airline.

2. Students will learn the fundamental principles, generalizations, or theories of airline management. Students will have the opportunity to interview businesses and develop strengths, weaknesses, opportunities, and threat analysis.
3. Develop skills in expressing oneself in writing. Students will express their knowledge of airline management through weekly written analysis and development of a SWOT Analysis and Business Plan.

AV4280 - Aviation Management - 3 - Credits

Course Overview

Course Prefix
AV

Course Number
4280

Department
Aviation Technology

Course Title
Aviation Management

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Study of airline operations and their organizational structure. Examines functions of airline dispatcher, operations specialists, managers, and cockpit flight crew. Discussion of advanced flight planning, aircraft performance and loading considerations, and impact of weather on flight operations and routing priorities.

Course Learning Objectives

Course Learning Outcomes

1. Be able to describe the elements of human physiology, the impact of the external environment on the body in the aviation environment and how it affects human performance.
2. Be able to discuss the psychological aspects of aviation and the mental and emotional limitations of the human body.
3. Be able to apply the lessons learned from the case studies in this class to improve skills such as Crew Resource Management, Decision Making, and Risk Management.
4. Be able to describe the importance of man-machine engineering and design of hardware in the interface process.
5. Improve error management in maintenance through the application of Human Factors.

6. Demonstrate competency in writing and speaking skills through essays, assignments, and reports.
7. Gain experience in the application of teamwork to find solutions and make decisions.

Course Learning Objectives

Course Learning Outcomes
1. Students understand how to participate in a crew environment in order to prevent aviation accidents and recognize that CRM applies to all members of the aviation community. CRM skills can be applied to safely resolve situations that may not be familiar.
2. Students understand the value and responsibilities of all aviation professionals (including flight crew, cabin crew, management, dispatchers, ATC, maintenance professionals, and others) as they relate to students' targeted fields. They synergize with their fellow professionals in order to help ensure the safe completion of every flight.
3. Students have effective leadership skills that maintain a balance between asserting authority and encouraging participation. They are sensitive to others' personalities and management styles and are able to maintain a professional dynamic. They have the necessary skills for conflict resolution in both technical and human factors areas.

2. Teach, demonstrate, and evaluate multi-engine flight skills effectively to student pilots, including both left- and right-seat instructional techniques.
3. Apply the Fundamentals of Instruction (FOI) in the multi-engine flight environment to enhance student learning, performance, and decision-making.
4. Conduct preflight, in-flight, and postflight briefings that communicate lesson objectives, performance standards, and safety considerations.
5. Integrate risk management, aeronautical decision-making (ADM), and single-pilot and multi-crew resource management (SRM/CRM) into all instructional activities.
6. Prepare students for the FAA MEI practical test, assessing readiness and providing targeted instruction to meet ACS performance standards.

AV4930 - Aircraft Welding - 1 - 4 Credits

Course Overview

Course Prefix
AV

Course Number
4930

Department
Aviation Technology

Course Title
Aircraft Welding

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course is designed as a specialized welding course in aircraft welding techniques used on 4130 chrome-molly and stainless steels as well as aluminum welding for aircraft structures.

AV5150 - Fundamentals of Airport Management - 3 - Credits

Course Overview

Course Prefix
AV

Course Number
5150

Department
Aviation Technology

Course Title
Fundamentals of Airport Management

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course provides fundamentals on the history of airports, government legislation, and airport business. It includes how planning, construction, and management relate to real-world issues facing airports today, including safety and security. Students engage in an active learning simulated game component.

Course Learning Objectives

Course Learning Outcomes

1. Understand historical aviation through the lens of underrepresented populations events through reading, videos and learning from their classmates.
2. Know the significant contributors of underrepresented populations to aviation advancement.
3. Discover the barriers experienced by underrepresented populations in the aviation field.
   Understand continued barriers experienced by underrepresented populations and propose ways to break those barriers.
4. Evaluate trends and patterns of social change and seek methods to improve the diversity gap.

Course Learning Objectives

Course Learning Outcomes

1. Explain the operational requirements and business functions of a Fixed-Based Operator (FBO) at a general aviation airport.
2. Apply safety, risk management, and FAA regulatory standards in the management of FBO operations.
3. Develop marketing, sales, and customer service strategies to enhance client satisfaction and profitability.
4. Manage human resources and staff effectively to support operational efficiency and organizational goals.

5. Analyze financial and operational decisions to optimize FBO performance and sustainability within the general aviation environment. , academic inquiry, and scientific analysis.

Other Enrollment Recommendations

To be eligible for the aircraft dispatcher course, a person must be 21 years of age by Dec. 15th of the fall semester they are enrolled in the course.

Simple Requisites

Prerequisite

Type
Prerequisite

Required

Complete ANY of the following Courses:

- AV2330 - Private Pilot Ground School
  AND AV2520 - Instrument Pilot Ground School
- AV2320 - Intro to Private Pilot Requirements
  AND AV2510 - IFR and Commercial Regulations and Procedures

Course Learning Objectives

Course Learning Outcomes

1. Flight Maneuvers: Perform fundamental flight maneuvers, such as climbs, descents, turns, stalls and slow flight. Demonstrate proficiency in performance maneuvers, ground reference maneuvers, and takeoff and landing techniques.
2. Regulatory Knowledge: Understand and comply with aviation regulations, including airspace rules and air traffic procedures.
3. Flight Planning: Plan and execute flights, considering fuel requirements, weight and balance, and other relevant factors.

- AV2510 - IFR and Commercial Regulations and Procedures
- AV5700 - Aircraft Dispatcher Written Exam Preparation

***AV5700 AIRCRAFT DISPATCH WRITTEN EXAM* requires a minimum grade of C**

Course Learning Objectives

Course Learning Outcomes

1. Demonstrate advanced flight skills and proficiency necessary to compete in National Intercollegiate Flying Association (NIFA) events, including both flying and ground-based competitions.
2. Apply aeronautical knowledge in high-pressure, competitive scenarios, integrating decision-making, problem-solving, and safety practices.
3. Lead and collaborate effectively within a team environment, fulfilling officer responsibilities and supporting team objectives.
4. Plan, organize, and execute fundraising and logistical activities to support team operations and competition participation.
5. Evaluate team performance and personal progress, using feedback and competition results to improve skills, strategies, and leadership effectiveness.
6. Exhibit professionalism, time management, and ethical behavior consistent with both aviation industry standards and collegiate competition expectations.

Course Overview

Course Prefix
AV

Course Number
6110

Department
Aviation Technology

Course Title
Air Transportation

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This online course will give students a broad perspective of the Air Transportation system. Students will gain an understanding of the marketing, pricing, scheduling, fleet planning and a historical perspective of commercial aviation including current trends. Maintenance managers, technicians, operations managers, dispatchers, and pilots will understand and appreciate the scope and complexity of managing an airline. Management and operational principles specific to the airline industry will be introduced as they interrelate to the peculiarities of this unique business environment.

Course Learning Objectives

Course Learning Outcomes

1. Demonstrate comprehensive knowledge of airport operations, including airside, landside, terminal, and administrative functions.
2. Apply airport management principles to effectively plan, organize, and oversee airport operations in compliance with industry standards.
3. Analyze airport policies, procedures, and regulations to support operational efficiency, safety, and regulatory compliance.
4. Prepare for professional certification as a Certified Member (CM) by integrating knowledge of airport administration, finance, safety, planning, and management practices.
5. Develop critical thinking and problem-solving skills applicable to airport management decision-making and professional practice.

Department
Aviation Technology

Dual-Listed Courses
AV5240 - Certified Member: Airport Manager Certification Preparation

Course Title
Certified Member: Airport Manager Certification Preparation

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course prepares students to achieve the Certified Member designation with the diverse knowledge of the primary functions of how an airport operates. The CM prepares students when seeking employment within the airport management profession. Additional coursework is required for those enrolled in the graduate-level course.

Course Learning Objectives

Course Learning Outcomes

1. Analyze the historical development of the aviation industry with a focus on the challenges and contributions of underrepresented populations.
2. Identify barriers to entry and advancement in aviation careers related to gender, race, and other historically marginalized groups.
3. Evaluate strategies and initiatives that promote diversity, equity, and inclusion within various aviation professions, including piloting, maintenance, air traffic control, engineering, and UAS operations.
4. Communicate insights and reflections on the impact of underrepresented populations in shaping the aviation industry.
5. Apply understanding of historical and current diversity challenges to envision solutions or pathways for equitable participation in aviation careers.

Course Overview

Course Prefix
AV

Course Number
6310

Department
Aviation Technology

Course Title
Aviation Safety Management Systems

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course covers the foundation of a good safety program: the Safety Management Systems (SMS). The course begins with the history and evolution of safety, the principles of quality management, and then delves into the rigors of safety analysis. Topics will include hazards, risks, controls, and the tools and methods of analysis. Students will create a program for a Part 141 Flight School, and utilize taxonomies in our modern aviation system.

Course Overview

Course Prefix
AV

Course Number
6320

Department
Aviation Technology

Course Title
Airport and Ground Safety Programs

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course gives aviation students a broad understanding of the ground safety program. Students will become familiar with hazardous material management, emergency planning, ground handling procedures and ground structure protection. Other topics will include the impact of weather on ground operations, ramp and cargo operations, fuel safety and how to collect, manage and analyze safety data.

Course Title
Concrete I

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Instruction covers using a builder's level, establishing grades, setbacks requirements, and squaring a building. Principles and methods of concrete construction including forming, placement, finishing, and testing of concrete footings, walls, and slabs on residential and commercial construction.

Course Overview

Course Prefix
BCIS

Course Number
1200

Department
Technology, Design & Technical Ed

Course Title
Introduction to Operating Systems

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course will provide you with an understanding of multiple operating systems commonly found in the Information Technology field today. You will learn the theory behind operating systems and some basic to advanced components of each operating system. This course walks you through current hardware and how it interacts with operating systems. You will learn basic functions and design of file systems found in Windows, UNIX/Linux, and Macintosh operating systems. You will also learn techniques to protect users from computer viruses, malware, and spyware.

Course Overview

Course Prefix
BCIS

Course Number
2300

Department
Technology, Design & Technical Ed

Course Title
Web Programming

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This web page authoring course teaches advanced web design, emphasizing graphics, content, layout, and aesthetics. Students use JavaScript, ActiveX, CSS, XML, and PHP to create dynamic pages, web-based forms, data collection systems, and enhanced functionality and visual presentation.

Course Overview

Course Prefix
BCIS

Course Number
2340

Department
Technology, Design & Technical Ed

Course Title
Introduction to Multimedia Authoring

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course introduces students to Macromedia Authorware, using essential functions to create interactive multimedia presentations. Students develop a basic self-directed design module, gaining foundational skills in multimedia development and computer-based instructional design through hands-on practice.

BENG

Course Number
5500

Department
Biological Engineering

Dual-Listed Courses

BENG6500 - Systems Biology Modeling

Course Title

Systems Biology Modeling

Grade Mode
Standard Letter

Repeat Status
NR

Course Description

Living organisms are composed of multiple cellular components that work in an integrated fashion to support life processes. This course introduces students to network concepts and mathematical approaches used to model a cell as an integrated system. Additional coursework is required for those enrolled in the graduate-level course.

5600

Department
Biological Engineering

Dual-Listed Courses
BENG6600 - Downstream Processes in Biological Engineering

Course Title
Downstream Processes in Biological Engineering

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course covers the purification of proteins and other soluble/insoluble products from biochemical and/or chemical process streams. It emphasizes physical-chemical separation processes based on density, size, solubility, molecular interactions, etc. Additional coursework is required for those enrolled in the graduate-level course.

BENG6210 - Upstream Processing in Biomanufacturing - 3 - Credits

Course Overview

Course Prefix
BENG

Course Number
6210

Department
Biological Engineering

Course Title
Upstream Processing in Biomanufacturing

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Introduces principles and practices of upstream biomanufacturing, including cell line development, strain engineering, media optimization, bioreactor design, and process control. Students learn how to cultivate cells or microbes for the efficient and reproducible production of biopharmaceutical and industrial biomolecules.

Credit Hours

Credit Hours Min:

Lecture Hours Min:
3

Course Learning Objectives

Course Learning Outcomes

1. Develop an understanding of the overall workflow of upstream processing and be able to define and differentiate between key terminology and specific steps and be able to apply this knowledge to designing an end-to-end process.
2. Compare and contrast the characteristics and applications of commonly used host cell lines (e.g., CHO, E. coli, yeast) in biomanufacturing.
3. Compare and contrast different styles of bioreactors (traditional and single use bioreactors) and be able to select the proper equipment for differing process types.
4. Design a logical and robust inoculum train to scale a cell culture from a cryovial to a production-scale bioreactor.
5. Propose a scale-up/scale-down strategy for an upstream process, explaining the engineering principles that govern the transition from lab-scale to manufacturing scale.
6. Be able to evaluate process data to evaluate areas of concern and be able to propose solutions.
7. Evaluate emerging technologies such as PAT technologies and understand value.

BENG6220 - Mammalian Cell Culture - 3 - Credits

Course Overview

Course Prefix
BENG

Course Number
6220

Department
Biological Engineering

Course Title
Mammalian Cell Culture

Grade Mode
Standard Letter

Repeat Status
NR

Course Description

This course covers comprehensive study of mammalian cell line development strategy, diverse cell lines, their process needs, products produced, downstream processing of products, and common challenges. Aseptic techniques are also covered, as well as regulations around specific cell lines.

Course Learning Objectives

Course Learning Outcomes

1. Apply cell line development strategies and genetic engineering principles to create and select high-performing, stable production clones (in theory).
2. Analyze, contrast, and troubleshoot different common mammalian cell lines used for bioproduct manufacturing.
3. Learn principles of aseptic techniques and cGMP practices.
4. Understand the different upstream and downstream requirements for differing cell lines.

BENG6230 - Industrial Biotechnology and Biopharmaceuticals Entrepreneurship - 3 - Credits

Course Overview

Course Prefix
BENG

Course Number
6230

Department
Biological Engineering

Course Title
Industrial Biotechnology and Biopharmaceuticals Entrepreneurship

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
In this course, students learn biotech enterprise creation, from start-up to funding success. They explore how innovation and entrepreneurship in biomanufacturing drive sustainable production and the future of global health and bio-based industries.

Course Learning Objectives

Course Learning Outcomes

1. Interpret and apply FDA and International Council for Harmonisation (ICH) regulations in manufacturing settings
2. Design and evaluate quality management systems aligned with cGMP
3. Implement risk-based approaches and continuous improvement strategies
4. Demonstrate knowledge of documentation, deviation management, Quality Management Systems (QMS), and audits
5. Explain the regulatory requirements and quality control standards (e.g., cGMP, ICH guidelines) that govern upstream processing steps and documentation.

BENG6250 - Technical Writing in Life Sciences - 3 - Credits

Course Overview

Course Prefix
BENG

Course Number
6250

Department
Biological Engineering

Course Title
Technical Writing in Life Sciences

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
In this course, students develop professional writing and communication skills essential for the life sciences industry. They learn the creation of audit-ready compliance documents, SOPs, and batch records. Marketing documentation and presentation creation is emphasized.

Course Learning Objectives

Course Learning Outcomes

1. Develop and author cGMP-compliant documentation (SOPs, Batch Records, Validation Protocols) that is accurate, unambiguous, and suitable for regulatory audits
2. Apply principles of Root Cause and Risk Analysis to generate high-quality investigation reports and failure mode analysis documentation
3. Produce clear, concise Process Transfer Documentation to facilitate smooth and effective technical handover between development and manufacturing teams
4. Differentiate and create targeted professional communications, including both internal compliance reports and external-facing marketing content

BENG6260 - Downstream Processing for Biomanufacturing - 3 - Credits

Course Overview

Course Prefix
BENG

Course Number
6260

Department
Biological Engineering

Course Title
Downstream Processing for Biomanufacturing

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course introduces principles and practices of downstream biomanufacturing, focusing on the recovery, separation, purification, and formulation of biological products. Students learn how to isolate and refine biomolecules to achieve desired purity, yield, and product quality attributes.

Course Title
Microbial Fermentation

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course integrates principles and applications of microbial fermentation for biomanufacturing. Students learn strain selection, bioreactor design, process control, scale-up, and downstream integration for a variety of bioproducts.

Course Learning Objectives

Course Learning Outcomes

1. Design and optimize microbial fermentation processes for target products
2. Understand and monitor bench-scale and large-scale fermenters using process analytical tools
3. Evaluate upstream process parameters affecting yield and productivity
4. Apply scale-up principles to industrial bioprocesses
5. Communicate with industry partners to receive training from SMEs in this field

BENG6320 - Monoclonal Antibody & Vaccine Production - 3 - Credits

Course Overview

Course Prefix
BENG

Course Number
6320

Department
Biological Engineering

Course Title
Monoclonal Antibody & Vaccine Production

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Comprehensive study of all process steps, Quality Control (QC), and regulatory pathways to successfully manufacture high-value biologics. This class focuses on monoclonal antibodies (mAbs), antibody-drug conjugates (ADCs), and various modern vaccine modalities. New biologic modalities are also covered.

Course Learning Objectives

Course Learning Outcomes

1. Analyze and contrast the end-to-end manufacturing processes for monoclonal antibodies, antibody-drug conjugates (ADCs), and viral vector vaccines
2. Evaluate the regulatory approval pathways for different classes of biologics and assess the impact of Quality by Design (QbD) principles on process development
3. Propose process design improvements to enhance yield, purity, and safety, specifically addressing the challenges of continuous manufacturing in this sector
4. Communicate with industry partners to receive training from SMEs in this field

BENG6330 - Agro-bioproduct, Biorefining, Biomanufacturing - 3 - Credits

Course Overview

Course Prefix
BENG

Course Number
6330

Department
Biological Engineering

Course Title
Agro-bioproduct, Biorefining, Biomanufacturing

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course examines biomanufacturing applications in agricultural and renewable resource industries. This includes biomass conversion, enzyme catalysis, food ingredients, biofuels and bioplastics production within circular bioeconomy frameworks.

Course Learning Objectives

Course Learning Outcomes

1. Analyze feedstock properties and conversion technologies for bio-based manufacturing
2. Design integrated biorefinery processes for agricultural bioproducts
3. Evaluate sustainability metrics and life-cycle impacts
4. Propose strategies for rural bioeconomy development
5. Communicate with industry partners to receive training from SMEs in this field

BENG6340 - Nutraceutical and Pharmaceutical Product Manufacturing - 3 - Credits

Course Overview

Course Prefix
BENG

Course Number
6340

Department
Biological Engineering

Course Title
Nutraceutical and Pharmaceutical Product Manufacturing

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course explores the cGMP principles and processing steps for small molecule drugs, nutraceuticals, and cosmetics. Students learn the formulation, blending, compression, and coating techniques required to manufacture diverse dosage forms like tablets, capsules, and powders.

Credit Hours

Credit Hours
Min:

Course Learning Objectives

Course Learning Outcomes

1. Design and optimize core manufacturing processes (blending, granulation, compression, encapsulation) for various pharmaceutical and nutraceutical dosage forms (tablets, capsules, powders)
2. Evaluate and mitigate common manufacturing challenges, including batch variability, cross-contamination, and degradation of active ingredients
3. Communicate with industry partners to receive training from SMEs in this field
4. Communicate with industry partners to receive training from SMEs in this field

BENG6350 - Medical Device & In-Vitro Diagnostic Substance Manufacturing - 3 - Credits

Course Overview

Course Prefix
BENG

Course Number
6350

Department
Biological Engineering

Course Title
Medical Device & In-Vitro Diagnostic Substance Manufacturing

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course explores the design, development, and manufacturing of medical devices and in-vitro diagnostic products under regulatory frameworks such as ISO 13485 and FDA's Quality System Regulation (21 CFR Part 820).

Course Learning Objectives

Course Learning Outcomes

1. Understand the classification of medical device
2. Describe regulatory pathways for medical device and diagnostic approval
3. Apply design control and risk management principles to product development
4. Evaluate quality and validation requirements for manufacturing and testing
5. Assess compliance strategies for global device markets
6. Communicate with industry partners to receive training from SMEs in this field

BENG6370 - Biomanufacturing Laboratory Practicum - 3 - Credits

Course Overview

Course Prefix
BENG

Course Number
6370

Department
Biological Engineering

Course Title
Biomanufacturing Laboratory Practicum

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This intensive, two to three-week in-person module offers full bioprocess experience. Students select a microbial or mammalian track to execute an end-to-end bioprocess and gain hands on learning experience. Data obtained in the lab is analyzed and reported.

Course Learning Objectives

Course Learning Outcomes

1. Write and execute the protocol for a mammalian cell culture or fermentation
2. Assess data post run and offer recommendations on how process could be further improved
3. Apply aseptic principles learned in class to a laboratory setting

BENG6380 - Biomanufacturing Internship - 3 - 6 Credits

Course Overview

Course Prefix
BENG

Course Number
6380

Department
Biological Engineering

Course Title
Biomanufacturing Internship

Grade Mode
Standard Letter

Repeat Status
RP

Course Description
This course provides supervised, hands-on experience in a real-world biomanufacturing environment. Students apply theoretical knowledge to real-world operations in fermentation, biotherapeutics, vaccines, purification, quality systems, or process development at industry sites.

BENG7310 - The Secret Life of Biofilms: Engineering Principles and Research - 3 - Credits

Course Overview

Course Prefix
BENG

Course Number
7310

Department
Biological Engineering

Course Title
The Secret Life of Biofilms: Engineering Principles and Research

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Introduces biofilm research and development of quantitative descriptions of microbial growth processes, diffusive and convective solute transport, and cell attachment and detachment. Application of these approaches to the analysis of biofilms in diverse industrial, medical and natural environments is discussed.

Credit Hours

Credit Hours Min:

Registration Restrictions
Admission to Biological Engineering - PhD

Course Learning Objectives

Course Learning Outcomes
1. Understanding Fundamental Principles of Biofilms: Students will demonstrate a comprehensive understanding of the common constituents of biofilms and their significance, enabling them to analyze microbial growth in batch and chemostat systems using kinetic models. They will be able to discuss the role of transport phenomena in biofilm function and calculate diffusion time scales, interpreting their implications for diffusion limitations.
2. Knowledge of Biofilm Significance and Key Issues: Students will develop a nuanced understanding of the significance of biofilms across various contexts, including drinking water, medicine, microbially influenced corrosion, bioremediation, wastewater treatment, and biofouling. They will be equipped to identify and articulate key issues related to biofilm management and control.
3. Appreciation of Landmark Research: Students will gain insight into landmark papers in biofilm research, allowing them to obtain a broader appreciation for the

evolution of biofilm science and its impact on various fields.
4. Effective Communication of Technical Information: Students will practice tailoring their communication styles to engage different audiences, from academic peers to industry professionals and the general public.

Prerequisite

Required

Complete ANY of the following Courses:

- BENG3500 - Fluid Mechanics in Biological Engineering
  OR BENG3670 - Transport Phenomena in Bio-Environmental Systems

Course Learning Objectives

Course Learning Outcomes

1. Identify, formulate, and solve engineering problems related to thermodynamics, fluid mechanics, heat, and mass transfer and use this knowledge to design and operate chemical and biological separation processes and reactors.

2. Apply knowledge of engineering, mathematics, and science to analyze factors that are important in the design, operation, performance, and monitoring of chemical and biological processes.

BIOL2060 - Elementary Microbiology - 4 - Credits

Course Overview

Course Prefix
BIOL

Course Number
2060

Department
Biology

Course Title
Elementary Microbiology

Grade Mode
Standard Letter

Repeat Status
NR

Course Description

Students study the biology and role of microorganisms in the world around us, with emphasis on their contributions to human disease. The course includes lectures and an integral laboratory component. It is not intended for biology majors.

Prerequisite

Course Option

Prerequisite may be fulfilled by either completion of course or exam.

Fulfill ANY of the following requirements:

Course Option

Complete ANY of the following Courses:

- BIOL1010 - Biology and the Citizen (BLS)
- BIOL1610 - Biology I
- BIOL2320 - Human Anatomy
- BIOL2420 - Human Physiology
- CHEM1010 - Introduction to Chemistry (BPS)
- CHEM1110 - General Chemistry I (BPS)
- CHEM1210 - Principles of Chemistry I
- HEAL1500 - Anatomy and Physiology (BLS)
- USU1350 - Integrated Life Science (BLS)

OR

Exam Option

Fulfillment of Advanced Placement (AP) exam with a score of 3 or higher.

- AP Biology or Chemistry

BIOL2220 - General Ecology - 3 - Credits

Course Overview

Course Prefix
BIOL

Course Number
2220

Department
Biology

Cross-Listed Courses
WATS2220 - General Ecology

Course Title
General Ecology

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Study of the interrelationships among organisms and their environments, addressing where and how organisms live. Adaptation, population growth, species interactions, biodiversity, and ecosystem function are explored for a wide variety of organisms and ecosystems.

OR AP Calculus exam with a score of 3 or higher.

Course Learning Objectives

Course Learning Outcomes

1. Choose and apply mathematics to analyze particular situations.

2. Simplify complex situations, and pose new questions.

3. Write clear explanations of models identifying variables, explaining relationships, and justifying assumptions.

4. Use data visualizations and mathematical calculations in reports of model results.

5. Compare and contrast various mathematical models identifying strengths and limitations.

6. Reflect on the process of mathematical modeling.

7. Interpret model implications and make recommendations based on analysis.

8. Gain appreciation of mathematical modeling in the life sciences and be inspired to learn more.

ADVS5630 - Endocrinology (CI)

Dual-Listed Courses
BIOL6630 - Endocrinology

Course Title
Endocrinology (CI)

General Education Attribute
CI

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course explores the molecular, cellular and physiological aspects of the endocrine system in vertebrates, presented with a species comparative approach. Students learn the clinical aspects and diseases associated with dysfunction of the endocrine system.

BIOL5650 - Comparative Anatomy of the Vertebrates - 4 - Credits

Course Overview

Course Prefix
BIOL

Course Number
5650

Department
Biology

Course Title
Comparative Anatomy of the Vertebrates

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course provides a detailed introduction to the anatomy of vertebrate animals, focusing on the evolution of organ systems through time. Lectures discuss evolutionary changes and adaptive roles of anatomical structures, while laboratories involve dissection of several representative species.

  AND BIOL1615 - Biology I Laboratory
  AND BIOL1620 - Biology II (BLS)
  AND BIOL1625 - Biology II Laboratory

Course Learning Objectives

Course Learning Outcomes

1. The course is intended to provide a detailed introduction to the anatomy of vertebrates and to describe the changes in vertebrate structure through evolutionary time.

2. Gaining factual knowledge.

3. Learning fundamental principles.

4. Learning to evaluate ideas critically.

BIOL5780 - Neuroendocrinology: Hormones and Behavior - 3 - Credits

Course Overview

Course Prefix
BIOL

Course Number
5780

Department
Biology

Course Title
Neuroendocrinology: Hormones and Behavior

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course delves into the complex interplay between hormones, brains, and behavior. Additional coursework is required for those enrolled in the graduate-level course.

  AND BIOL1615 - Biology I Laboratory
- BIOL1620 - Biology II (BLS)
  AND BIOL1625 - Biology II Laboratory

Course Learning Objectives

Course Learning Outcomes

1. Describe the mechanisms of actio of hormones in the brain.
2. Understand the ways in which hormones influence complex behaviors.
3. Connect neurobiological discoveries in animals to our understanding of the role of hormones in human biology, health, and behavior.

BIOL5790 - Protein Structure/Function and Purification - 3 - Credits

Course Overview

Course Prefix
BIOL

Course Number
5790

Department
Biology

Cross-Listed Courses
BENG5790 - Protein Structure/Function and Purification, CHEM5790 - Protein Structure/Function and Purification

Dual-Listed Courses
BIOL6790 - Protein Structure/Function and Purification

Course Title
Protein Structure/Function and Purification

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Protein biosynthesis, modification, folding, structure, and stability, protein purification and protein analysis are discussed. Students develop an original research proposal through oral and written presentations. Additional coursework is required for those enrolled in the graduate-level course.

BIOL6780 - Community Ecology and Analysis - 3 - Credits

Course Overview

Course Prefix
BIOL

Course Number
6780

Department
Biology

Course Title
Community Ecology and Analysis

Grade Mode
Standard Letter

Repeat Status
RP

Course Description
Students learn fundamental concepts in community ecology, paired with analytical tools to conduct appropriate analyses. Methods may include multivariate analyses, ordination, time series analyses, network theory and analysis, rarefaction, diversity metrics, phylogenetic regression, and mixed-effects generalized linear modeling.

BIOL6790 - Protein Structure/Function and Purification - 3 - Credits

Course Overview

Course Prefix
BIOL

Course Number
6790

Department
Biology

Cross-Listed Courses
BENG6790 - Protein Structure/Function and Purfication, CHEM6790 - Protein Structure/Function and Purification

Dual-Listed Courses
BIOL5790 - Protein Structure/Function and Purification

Course Title
Protein Structure/Function and Purification

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Protein biosynthesis, modification, folding, structure, and stability, protein purification and protein analysis are discussed. Students develop an original research proposal through oral and written presentations. Additional coursework is required for those enrolled in the graduate-level course.

CAI5020 - Cybersecurity and the Citizen - 3 - Credits

Course Overview

Course Prefix
CAI

Course Number
5020

Department
College of Arts & Sciences

Course Title
Cybersecurity and the Citizen

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course introduces students to cybersecurity concepts and challenges at the policy, societal, business, and individual levels. It offers students from non-technical backgrounds a foundation for understanding cybersecurity issues and students from technical backgrounds a broader social context for cybersecurity.

Course Learning Objectives

Course Learning Outcomes
1. Introduce students without prior experience in the field to fundamental principles and concepts in cybersecurity.

2. Provide students from non-technical backgrounds a foundation for understanding cybersecurity issues and provide students from technical backgrounds a broader social and business context for cybersecurity challenges.

3. Instruct students on the complex interactions between cybersecurity challenges at the international, national, industry, community, and individual levels.

4. Equip students to employ basic cybersecurity and cyber hygiene best practices in their own lives.

CAI5200 - Threats and Resilience in the Knowledge Century - 3 - Credits

Department
College of Arts & Sciences

Dual-Listed Courses
CAI6200 - Threats and Resilience in the Knowledge Century

Course Title
Threats and Resilience in the Knowledge Century

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course will expose students to a survey of emergent security challenges across multiple disciplines including artificial intelligence, cybersecurity, biotechnology, and climate science. Students are introduced to threat modeling and will evaluate principles and practices of resistance and resilience against identified challenges. Additional coursework is required for those enrolled in the graduate-level course.

CAI

Course Number
6500

Department
College of Arts & Sciences

Dual-Listed Courses
CAI5500 - Strategic Intelligence

Course Title
Strategic Intelligence

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course introduces students to the intelligence analysis cycle and foundational strategic intelligence tradecraft. Students have the opportunity to learn the principles of strategic intelligence and apply analysis techniques to topical projects. Additional coursework is required for those enrolled in the graduate-level course.

Other Enrollment Recommendations

The 1 credit section is intended for students who are not part of the Climate Adaptation Sciences (CAS) Specilization/Program.

The 2 credit section is intended for students completing the Climate Adaptation Specilization

Course Learning Objectives

Course Learning Outcomes

By the end of this course, students will be able to:

1. Explain the basics of the science of climate change and its impacts at the global, national, and local levels—especially in Utah.
2. Analyze long-term climate trends and distinguish between natural variability and human-driven change.
3. Summarize how climate change is understood by the public and communicated across different sectors.
4. Identify key players in climate adaptation, including business, scientists, policymakers, and community leaders.
5. Explain how climate projections are generated and interpret data from Global Climate Models (GCMs), including CMIP6 and downscaling techniques.
6. Apply systems thinking to explore the interconnectedness of climate, natural systems, economy, and society.
7. Evaluate the roles of climate justice, mitigation, and adaptation, and recognize the risks of maladaptation.
8. Collaborate in interdisciplinary teams and partner with scientists, managers, and policy makers to solve real-world problems

Course Learning Objectives

Course Learning Outcomes
By the end of this course, students will be able to:

1. Use climate projections data to assess and describe plausible, relevant impacts of future climate change on society.
2. Identify needs or uses for future climate data and impact assessments, and design user-friendly content that supports those applications.
3. Formulate research questions about their project outcomes and design and execute a plan to evaluate the product(s) they develop.
4. Identify how disciplinary knowledge in their respective fields of expertise can be applied to support a team-based project and work together effectively to devise and carry out a project plan.
5. Synthesize feedback from actual and potential users, and operationalize that feedback to improve their plans and products.

Course Learning Outcomes

By the end of this course, students will be able to:

1. Collaborate effectively in interdisciplinary research teams to advance the project initiated in the Fall semester.
2. Apply project management skills to define, maintain, and adapt research timelines.
3. Develop and refine a full research proposal that integrates scientific rigor, clear objectives, and actionable outcomes.
4. Communicate scientific findings through writing, presentations, and discussions tailored to diverse audiences.
5. Engage meaningfully with stakeholders and policymakers to connect research outcomes with decision-making processes.
6. Design and iterate a climate data product or service that addresses real-world needs and reflects interdisciplinary insights.
7. Synthesize knowledge across disciplines to strengthen the relevance and impact of climate adaptation research.

Course Number
3070

Department
College of Arts & Sciences

Course Title
Unveiling the Anthropocene (DSC/QI)

General Education Attribute
DSC, QI

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
The course tells the scientific story of humanity's intensifying impacts on the planet, and possible future paths. Students explore re-interpreting these stories in their own individual and artistic voices. Emphasis is on complex systems, data visualization, and artistic storytelling.

Course Number
3080

Department
College of Arts & Sciences

Course Title
Physics of Artistic Expression; Sound and Color (DSC/QI)

General Education Attribute
DSC, QI

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
The goal of this course is to help students gain an appreciation for the physics behind sound, music, art, and color. Students will gain experience working with mathematical equations and learn to use the language of physics.

Complete ALL of the following Course Sets:

- Breadth Physical Sciences (BPS) Course
- Quantitative Literacy (QL) Course

Course Learning Objectives

Course Learning Outcomes
1. Understand science in general as a process.

2. Learn to apply scientific methods and reasoning to solve problems.

3. Gain a fundamental understanding of the underlying principles of physics of sound and color.

4. Become well-versed in using plots, graphs, and tables to analyze data.

5. Become comfortable using the language of physics.

CCA3330 - Arts Symposium (DHA) - 2 - Credits

Course Overview

Course Prefix
CCA

Course Number
3330

Department
College of Arts & Sciences

Course Title
Arts Symposium (DHA)

General Education Attribute
DHA

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students attend a number of cultural events offered at USU and in the community, as well as write critiques of the events. Note: CCA 3330 may be applied to the depth requirements, but not to the breadth requirements. Two credits of CCA 3330 are needed to fulfill the DHA requirement.

Course Learning Objectives

Course Learning Outcomes

1. Explore the evolution of civil engineering from ancient times to modern era.
2. Assess the design, construction, and social impact of both ancient and modern infrastructure.
3. Compare and contrast ancient Roman engineering techniques with contemporary practices.
4. Gain insights into the preservation and integration of ancient infrastructure within modern society.
5. Examine the connections between transportation, structures, geotechnical engineering, environmental, and hydraulic engineering in the context of sustainability.
6. Gain practical understanding of how infrastructure is developed through site visits to infrastructure projects, environmental sites, and engineering facilities.
7. Consider the influence of culture on infrastructure development.
8. Consider the impact of ancient and modern engineering trends to anticipate future advancements.

CEE

Course Number
3670

Department
Civil & Environmental Engineering

Cross-Listed Courses
BENG3670 - Transport Phenomena in Bio-Environmental Systems

Course Title
Transport Phenomena in Bio-Environmental Systems

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Biological and environmental engineering students learn principles, concepts, modes, and methods of calculating heat and mass transfer. Emphasis is on contaminant and nutrient flux, their state transformations, and evaluating options for production, clean-up, and control of bio-environmental systems.

OR MAE3420 - Fluid Mechanics

CEE3780 - Solid and Hazardous Waste Management - 3 - Credits

Course Overview

Course Prefix
CEE

Course Number
3780

Department
Civil & Environmental Engineering

Course Title
Solid and Hazardous Waste Management

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Introduction to integrated management of municipal and industrial solid waste; household, commercial, and industrial hazardous waste; and resource recovery, recycling, and sustainability principles. Three lectures augmented by computer modeling and field trip experiences related to modern solid and hazardous waste management principles.

Course Overview

Course Prefix
CEE

Course Number
3880

Department
Civil & Environmental Engineering

Course Title
Civil and Environmental Design I

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This is the first of a three-semester senior design sequence focused on civil engineering project management, economics, and acquiring work. Students self-organize into teams to identify projects, draft proposals, and plan, schedule, and manage projects.

CEE

Course Number
3890

Department
Civil & Environmental Engineering

Course Title
Environmental Engineering Design I

Grade Mode
Standard Letter

Repeat Status
NR

Course Description

Introduction to senior environmental engineering students' integrated design experience. Design project identified and proposal for its completion during the senior year is produced, under mentoring of course instructor. Emphasizes project identification, project scoping, manpower and materials budgeting, project scheduling, and completion of design proposal.

Course Number
4000

Department
Civil & Environmental Engineering

Course Title
Municipal Engineering

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course provides an overview of municipal engineering, focusing on planning, design, construction, and maintenance of municipal infrastructure. Topics include water supply, wastewater, stormwater, transportation systems, land development, urban planning, zoning, legal aspects, and public involvement.

Course Learning Objectives

Course Learning Outcomes
1. Explore the role of municipal engineering in urban development and public infrastructure.
2. Understand the design, construction, and maintenance of critical public infrastructure, such as roads, water supply systems, and sewer networks.
3. Integrate engineering practices from different disciplines, including transportation, water resources, and structural engineering.
4. Gain insights into city planning, zoning laws, public safety regulations, and their effect on infrastructure projects.
5. Examine the integration of transportation, environmental, geotechnical, and hydraulic engineering in urban development.
6. Gain practical understanding of infrastructure development through guest lectures, case studies and site visits to public works projects.
7. Consider the impact of sustainability and environmental standards on municipal engineering decisions.
8. Prepare for the FE and PE exams by developing knowledge and skills aligned with professional licensure requirements.

CEE4200 - Engineering Economics - 3 - Credits

Course Overview

Course Prefix
CEE

Course Number
4200

Department
Civil & Environmental Engineering

Course Title
Engineering Economics

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course consists of applications of the mathematics of finance, statistics, and probability to engineering decision making. It should be taken during the junior year of the engineering curriculum.

Dual-Listed Courses
CEE6265 - Active Transportation

Course Title
Active Transportation

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course introduces students to principles and methods in the planning, design, and operation of active transportation modes (walking, bicycling, micromobility) and facilities. Topics covered include user characteristics, facility design, traffic operations, facility analysis, data, planning, and policy. Additional coursework is required for those enrolled in the graduate-level course.

5885

Department
Civil & Environmental Engineering

Dual-Listed Courses
CEE6885 - Precast/Presetressed Concrete

Course Title
Precast/Prestressed Concrete

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students learn fundamentals of precast and prestressed concrete, exploring the application of first principles to various problems. Topics include prestress losses, initial and long-term deflection, transfer and development length, and indeterminate structures, emphasizing flexure and shear design of prestressed beams. Additional work is required for those enrolled in the graduate-level course.

Other Enrollment Recommendations
It is recommended that students complete an introductory statistics course (such as STAT1080 FOUNDATIONS OF DATA SCI (QL) or similar).

Simple Requisites

Prerequisite

Type
Prerequisite

Required

Complete ALL of the following Courses:

- MATH1050 - College Algebra (QL)

or equivalent

Course Learning Objectives

Course Learning Outcomes
1. To establish the importance of the various state of the art monitoring devices used in modern farming operations and the programming steps required.
2. To develop an understanding in the efficient adjustment and set up of the different monitoring and yield mapping methods used on modern farming operations.
3. To gain hands-on experience in parsing and understanding of agronomic data from in-field sensing techniques.
4. To train the student in the methods of proper troubleshooting and the most productive way in developing efficient machine operation.
5. To determine and communicate effective management decisions based on sensor data.

CEE6000 - Irrigation and Drainage of Agricultural Lands - 3 - Credits

- CEE3210 - Introduction to Transportation Engineering

CEE6230 - Geometric Design of Highways - 3 - Credits

Course Overview

Course Prefix
CEE

Course Number
6230

Department
Civil & Environmental Engineering

Dual-Listed Courses
CEE5230 - Geometric Design of Highways

Course Title
Geometric Design of Highways

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Principles of highway location and planning, with full consideration of economic, environmental, and other impacts. Capacity analysis of intersections and highways, passing-lane design, and risk-cost based horizontal and vertical alignment design. Introduction to design software through coursework and term projects. Additional coursework is required for those enrolled in the graduate-level course.

CEE

Course Number
6240

Department
Civil & Environmental Engineering

Dual-Listed Courses
CEE5240 - Transportation Planning

Course Title
Transportation Planning

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course examines travel demand forecasting, data collection, and survey analysis techniques. It also studies trip generation, distribution, mode choice, and route assignment models, focusing on transportation-land use interactions and the societal impacts of planning and policies on travel demand. Additional coursework is required for those enrolled in the graduate-level course.

CEE6245 - Travel Behavior - 3 - Credits

Course Overview

Course Prefix
CEE

Course Number
6245

Department
Civil & Environmental Engineering

Course Title
Travel Behavior

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course discusses multidisciplinary theories and perspectives on travel behaviors and decisions, including built environment, socio-demographic, and psychological factors and influences. This course also addresses evolving travel behavior data collection and analysis methods used in both research and practice.

CEE

Course Number
6255

Department
Civil & Environmental Engineering

Dual-Listed Courses

CEE5255 - Transportation Safety

Course Title

Transportation Safety

Grade Mode
Standard Letter

Repeat Status
NR

Course Description

This course focuses on traffic safety topics, including crash data, human factors, safety management, safety countermeasures, and societal impacts. Students also learn and apply data analysis skills to understand crash prediction methods, including safety performance functions and crash modification factors. Additional coursework is required for those enrolled in the graduate-level course.

CEE6281 - Systems Approach to Electrified Transportation - 3 - Credits

Course Overview

Course Prefix
CEE

Course Number
6281

Department
Civil & Environmental Engineering

Cross-Listed Courses
ECE6281 - Systems Approach to Electrified Transportation

Course Title
Systems Approach to Electrified Transportation

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students learn to analyze electrified transportation using a systems-of-systems framework, examining interactions among vehicles, charging infrastructure, power grids, policy, economics, and societal impacts.

Credit Hours

Credit Hours
Min:
3

Contact Hours

Contact Hours

Lecture Hours
Min:
3

Course Learning Objectives

Course Learning Outcomes

1. Examine the relationships between the various systems involved in transportation electrification.
2. Examine how transportation electrification challenges typical ways of planning and operating electric power and transportation systems.
3. Evaluate the emerging adoption and policy landscape surrounding electric vehicles and charging infrastructure.
4. Assess the evolving effects of transportation electrification on the environment, human health, the economy, and society.
5. Analyze data related to specific problems in transportation electrification.

CEE6282 - AI-Enabled Electrified Transportation Networks - 3 - Credits

Course Overview

Course Prefix
CEE

Course Number
6282

Department
Civil & Environmental Engineering

Cross-Listed Courses
ECE6282 - AI-Enabled Electrified Transportation Networks

Course Title
AI-Enabled Electrified Transportation Networks

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students learn to model and optimize electrified transportation networks using data-driven and artificial intelligence methods, including demand estimation, infrastructure planning, and policy-aware system analysis.

Credit Hours

Credit Hours Min:
3

Contact Hours

Contact Hours Min:
3

Billing Hours

Billing Hours Min:

Lecture Hours

Lecture Hours Min:
3

Other Enrollment Recommendations
Students should have introductory programming experience or equivalent technical background.

Course Learning Objectives

Course Learning Outcomes
Upon successful completion of this course, students will be able to:

1. Identify key components and performance metrics of electrified transportation networks.
2. Develop computational models to estimate electric vehicle and electric transit charging demand.
3. Apply machine learning and AI techniques to transportation electrification planning and optimization problems.
4. Analyze the influence of policy and equity considerations on network design and deployment decisions.
5. Evaluate model results to support infrastructure planning and operational decision-making.

CEE6283 - Urban Sustainability and Energy Modeling - 3 - Credits

Course Overview

Course Prefix
CEE

Course Number
6283

Department
Civil & Environmental Engineering

Cross-Listed Courses
ECE6283 - Urban Sustainability and Energy Modeling

Course Title
Urban Sustainability and Energy Modeling

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students learn to model urban energy systems by integrating transportation electrification, building energy use, renewable generation, economics, and sustainability considerations to support data-informed planning decisions.

Other Enrollment Recommendations
It is recommended that students have background in quantitative reasoning.

Course Learning Objectives

Course Learning Outcomes
Upon successful completion of this course, students will be able to:

1. Explain the interactions among transportation, building energy use, power systems, and urban sustainability goals.
2. Construct urban-scale energy models incorporating electrified transportation, buildings, and renewable resources.
3. Analyze spatiotemporal energy demand patterns and their implications for planning and operations.
4. Interpret modeling results within economic, environmental, and equity contexts.
5. Develop integrated sustainability strategies informed by quantitative energy modeling.

CEE6284 - Advanced Energy Systems and Grid Modernization - 3 - Credits

Course Overview

Course Prefix
CEE

Course Number
6284

Department
Civil & Environmental Engineering

Cross-Listed Courses
ECE6284 - Advanced Energy Systems and Grid Modernization

Course Title
Advanced Energy Systems and Grid Modernization

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students learn to design and implement modern energy management systems using industry protocols and Artificial Intelligence (AI) techniques to support grid modernization, electrified transportation, and distributed energy resources.

Other Enrollment Recommendations
ECE6281 SYS APPROACH TO ELECT. TRANS., or CEE6281 SYS APPROACH TO ELECT. TRANS., or equivalent background.

Course Learning Objectives

Course Learning Outcomes
1. Develop practical skills in software development for hardware-in-the-loop projects related to grid modernization.
2. Implement OCPP 1.6.1 and 2.0.1, focusing on their purpose, usage, and cyber-physical security aspects.
3. Utilize OpenADR as an effective energy management system for grid-to-site control and resource management.
4. Build fundamental energy management systems using OCPP, OpenADR, and real-time price signals.
5. Apply AI techniques, including Q-learning, reinforcement learning, and Transformer models, to create intelligent EMS solutions for predicting and managing energy demands and resources.

CEE6290 - Transportation Network Analysis - 3 - Credits

Course Overview

Course Prefix
CEE

Course Number
6290

Department
Civil & Environmental Engineering

Dual-Listed Courses
CEE5290 - Transportation Network Analysis

Course Title
Transportation Network Analysis

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Course introduces transportation network analysis and mobility optimization, covering representation, topology, shortest path algorithms, optimal traffic assignment, route choice, demand–supply interactions, and network design. Explores emerging computational methods using GPS, maps, and sensors. Additional coursework required for graduate enrollment.

6500

Department
Civil & Environmental Engineering

Dual-Listed Courses
CEE5500 - Open Channel Hydraulics

Course Title
Open Channel Hydraulics

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course covers theory and applications of open channel flows under steady uniform and gradually varied flow conditions for both subcritical and supercritical flows in canals and natural channels. Additional coursework is required for those enrolled in the graduate-level course.

Course Learning Objectives

Course Learning Outcomes

1. Students will learn applications of computer vision for visual sensing in both natural and built environments across environmental, civil, and agricultural domains.
2. Students will learn to work with real data and understand the practical applications of both long-standing and cutting-edge computer vision techniques.

CEE6580 - Intermediate Fluid Mechanics - 3 - Credits

Course Overview

Course Prefix
CEE

Course Number
6580

Department
Civil & Environmental Engineering

Course Title
Intermediate Fluid Mechanics

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Survey of mathematical methods used in fluid mechanics, including: potential flow solutions (complex variables), laminar flow and turbulent flow solutions, boundary layer theory, and introduction to dispersion in fluid.

CEE7000 - Groundwater Systems Engineering II - 4 - Credits

Course Overview

Course Prefix
CEE

Course Number
7000

Department
Civil & Environmental Engineering

Course Title
Groundwater Systems Engineering II

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
System analysis techniques applied to aquifer and stream/aquifer management. Development of economically, quantitatively, and environmentally optimal strategies for alternative water policies. Modeling techniques for managing aquifer systems under volumetric, economic, and environmental management goals.

Other Enrollment Recommendations
This course is designed for students whose major does not require the more mathematically intensive CHEM 1210 or CHEM 1220 courses.

It is recommended that students take MATH 1050 (can take concurrently) for this course.

Simple Requisites

Prerequisite

Type
Prerequisite

Required

Prerequisites may be fulfilled through coursework or exam.

Fulfill ANY of the following requirements:

Course Options

A grade of C- or better is required in MATH0995 COLLEGE MATHEMATICS PREP.

Complete ANY of the following Courses:

- MATH0995 - College Mathematics Preparation
- MATH1050 - College Algebra (QL)

OR

Exam Option

Complete any of the following exams with a qualifying score:

- ALEKS Math Placement score of 46 or better
- ACT of 23 or equivalent

CHEM1115 - General Chemistry I Laboratory - 1 - Credits

Course Overview

Course Prefix
CHEM

Course Number
1115

Department
Chemistry & Biochemistry

Course Title
General Chemistry I Laboratory

Grade Mode
Standard Letter

Repeat Status
NR

Course Description

Experiments are chosen to illustrate and clarify concepts taught in the lecture portion of CHEM 1110. Hands-on experience with the techniques of chemistry such as using crucibles, vernier calipers, funnels, semipermeable membranes to study osmosis and diffusion, an indicator derived from red cabbage to study acid/base properties of solutions and so forth. Upon completion of the laboratory experience, students will have a better idea of laboratory manipulations needed to acquire the data they use in the nursing profession.

Prerequisite can be fulfilled through either course or qualifying examination.

Fulfill ANY of the following requirements:

Course Option

Earn a minimum C- of undefined in the following:

- MATH0995 - College Mathematics Preparation
  OR MATH1050 - College Algebra (QL)
  OR MATH1210 - Calculus I (QL)

OR

Exam Option

Complete any of the following exams:

- ALEKS exam score of 46 or higher
- ACT Math score of 23 or equivalent SAT Math Section Score
- Sufficient score on the AP Exam equivalent to Math 1050 or higher

Course Learning Objectives

Course Learning Outcomes

Review math and learn to do calculations while working everyday examples of problems in health and medicine using metric units.

1. Understand the relationship of isotopes to the atomic mass of an element on the periodic table.
2. Understand the relationship between electron arrangement, group number, and periodic law.
3. Understand different types of radiation, radiation protection, balancing of nuclear equations, and the fusion and fission processes.
4. Learn the relationship between group numbers, valence electrons, and the formation of ionic and covalent compounds.
5. Write ionic formulas and names of compounds with polyatomic ions.
6. Use VSEPR theory to determine the shape, bond angles, and polarity of a molecule.
7. Classify an equation as a combination, decomposition, replacement, combustion, and/or oxidation-reduction.
8. For a given mass of a substance in a reaction, use the appropriate mole factors and molar masses to calculate the mass of a reactant or product.
9. Understand solubility and determine whether a salt will dissolve in water.
10. Calculate the percent concentrations and molarity of a solution.
11. Describe the behavior of a red blood cell in hypotonic, isotonic, and hypertonic solutions.
12. Describe the characteristics of acids and bases.
13. Classify bases/acids as strong or weak.
14. Describe the function of a buffer. Describe the properties, reactions, and names of alkanes, alkenes alkynes. alcohols, phenols, thiols, ethers, aldehydes, ketones, carboxylic acids, esters, amines, amides, and be able to draw their condensed structural and line-angle formulas.
15. Identify chiral and achiral carbon atoms in an organic molecule. Use Fischer projections to identify and draw the D and L enantiomers of monosaccharides.
16. Draw the Haworth structures for monosaccharides.
17. Learn the physical and chemical properties of saccharides.
18. Describe the classes of lipids and learn how to identify lipids as being saturated or unsaturated.
19. Learn the chemical properties of lipids, the structural features of phospholipids and steroids, and describe the composition and function of the cellular lipid bilayer.

20. Describe the primary, secondary, tertiary, and quaternary structure of a protein.
21. Describe enzymes and their roles in enzyme-catalyzed reactions.
22. Describe the components that make up the nucleic acids of DNA and RNA.
23. Describe the primary structure of RNA and DNA, the double helix of DNA, and the process of DNA replication.
24. Identify the different types of RNA and the synthesis of mRNA.
25. Use the genetic code to write the amino acid sequence for a segment of mRNA.

Course Learning Objectives

Course Learning Outcomes

1. Gaining a basic understanding of standard molecular biology techniques typically used in biochemistry labs (e.g., factual knowledge, principles, generalizations, theories).

2. Learning to apply course material in a "real-life' research setting (to improve thinking, problem-solving, and decisions).

3. Developing specific skills, competencies, and points of view needed by professionals in the field most closely related to this course.

4. Acquiring skills in working with others as a member of a team.

Course Overview

Course Prefix
CHEM

Course Number
6780

Department
Chemistry & Biochemistry

Course Title

Biochemical Basis of Gene Expression: Nucleic Acid Protein Interactions

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students study nucleic acid structure and function in both prokaryotic and eukaryotic systems. They learn the general mechanisms proteins use to recognize nucleic acid sequence, and methods for probing nucleic acid structure and function and analyzing protein-nucleic acid interactions.

Complete ALL of the following Courses:

- CHIN2020 - Chinese Second Year II

(or equivalent proficiency testing score of 500+)

CHIN4800 - Chinese IV Study Abroad - 1 - 4 Credits

Course Overview

Course Prefix
CHIN

Course Number
4800

Department
World Languages and Cultures

Course Title
Chinese IV Study Abroad

Grade Mode
Standard Letter

Repeat Status
RP

Course Description
Intensive study in a Chinese-speaking country, advancing proficiency in the four language skills and multicultural knowledge at the fourth-year level.

Course Overview

Course Prefix
CHIN

Course Number
4920

Department
World Languages and Cultures

Course Title
Chinese Language Tutoring

Grade Mode
Standard Letter

Repeat Status
RP

Course Description
Allows students to develop tutoring skills by assisting professors in lower-division courses or fulfilling instructional duties for a comparable amount of time in the language laboratory, public schools, or similar activities with departmental approval. May be repeated to a maximum of 3 credits.

CMST6300 - Seminar on Culture and Difference - 3 - Credits

Course Overview

Course Prefix
CMST

Course Number
6300

Department
Communication & Media

Course Title
Seminar on Culture and Difference

Grade Mode
Standard Letter

Repeat Status
RP

Course Description
This course explores the interconnected relationship between culture, difference, and communication. It examines how communicative practices create and sustain cultural realities. Students explore ways to effectively communicate across human difference.

Course Learning Objectives

Course Learning Outcomes

1. **Identify** career paths and opportunities in computer science and software engineering through exposure to industry professionals
2. **Understand** the connection between academic coursework and real-world software development practices
3. **Develop** a plan for academic and professional growth aligned with industry expectations and career goals

CS1400 - Introduction to Computer Science--CS 1 - 4 - Credits

Course Overview

Course Prefix
CS

Course Number
1400

Department
School of Computing

Course Title
Introduction to Computer Science--CS 1

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Introduction to science of problem solving, programming, program development, algorithm analysis, and data structures. Students learn to develop correct software in a current programming language environment.

  OR STAT1080 - Foundations of Data Science (QL)

OR

Exam Option

ACT/SAT or AP Exam

- Math ACT score of 25 or higher or equivalent SAT score
- AP Calculus AB score of 3 or higher

Course Learning Objectives

Course Learning Outcomes

1. **Write** programs using fundamental programming constructs including variables, data types, control structures, and functions
2. **Apply** problem-solving strategies to break down problems into algorithmic solutions
3. **Debug** and test programs to identify and correct errors
4. **Explain** how programs execute and how data flows through a program
5. **Implement** common data structures (arrays, lists, stacks, queues, trees)
6. **Design** and develop object-oriented programs using classes, inheritance, and polymorphism
7. **Apply** recursive thinking and recursive algorithms to solve programming problems

CS1440 - Software Engineering Fundamentals - 3 - Credits

Course Overview

Course Prefix
CS

Course Number
1440

Department
School of Computing

Course Title
Software Engineering Fundamentals

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
CS1440 helps students become good software developers using the basic programming concepts acquired in CS 1400. This class is not focused on learning features or constructs of a programming language; rather, it teaches principles and practices that help manage complexity, improve software quality, and leverage existing or new technologies.

Course Learning Objectives

Course Learning Outcomes

1. **Explain** the fundamental differences, strengths, and limitations of relational and graph databases.
2. **Design and implement** relational schemas and graph data models for real-world applications.
3. **Write and optimize** SQL and graph queries to store, retrieve, and traverse data efficiently.
4. **Analyze and select** appropriate database technologies based on application requirements and data access patterns.
5. **Build and integrate** applications that use relational and/or graph databases to solve a practical problem.

Prerequisite

Required

Earn a minimum grade of C- in the following:

- CS2420 - Algorithms and Data Structures--CS 3 (QI)

CS5050 - Advanced Algorithms - 3 - Credits

Course Overview

Course Prefix
CS

Course Number
5050

Department
School of Computing

Dual-Listed Courses
CS6050 - Advanced Algorithms

Course Title
Advanced Algorithms

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students study algorithms and their analysis, including: design by induction, algorithms involving sequences and sets, graph algorithms, geometric algorithms, algebraic algorithms, reductions, NP-completeness, and parallel algorithms. Additional coursework is required for those enrolled in the graduate-level course.

CS

Course Number
5060

Department
School of Computing

Dual-Listed Courses
CS6060 - Decision Making: Algorithms Under Uncertainty (Inactive)

Course Title
Decision Making: Algorithms Under Uncertainty

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
Students develop end-to-end tools for decision making under uncertainty. Key concepts include detecting uncertainty, working with little to no data, rapid adaption, and decision-making algorithms in multiple fields (robotics, fintech, economics, sociology). Course material is applied in real-world projects. This is a TEAMWORK course. Additional coursework is required for those enrolled in the graduate-level course.

NR

Course Description
Students learn concepts of object-oriented software development (OOSD) and how to use those concepts during design, implementation, and testing to improve software quality. The course focuses on core OO principles, design solutions to reoccurring problems, best practices, and pitfalls.

CS

Course Number
6615

Department
School of Computing

Dual-Listed Courses
CS5615 - Natural Language Processing

Course Title
Natural Language Processing

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course offers students an introduction to the field of NLP, providing a comprehensive overview of state-of-the-art methods within this domain. Integrating hands-on sessions, the course aims to equip students with fundamental knowledge of AI and natural language. Additional coursework is required for those enrolled in the graduate-level course.

CS5620 - AI Applications In Education

Course Title
AI Applications In Education

Grade Mode
Standard Letter

Repeat Status
NR

Course Description
This course introduces students to cognitive modeling, learner modeling, intelligent tutoring systems, adaptive educational systems, and natural language processing for automated feedback. Coursework involves using AI tools for prototype development and a course project of the student's own design. Additional coursework is required for those enrolled in the graduate-level course.
